If you asked me what are the two best books on the Crusades, I would answer God's Battalions: The Case for the Crusades by Baylor professor Rodney Stark and The Concise History of the Crusades by Professor Thomas F. Madden. If you get this question a lot from atheists, then I recommend you pick these up. Anything by Rodney Stark is useful for Christians, in fact.

# New study: 50 percent of divorced people wish they had never ended their marriage

**Wintery Knight** · 7 February 2015 · Archived copy · Original

The study was reported in the UK Daily Mail.

Excerpt:

> The decision to divorce is always going to be difficult, and for many there can be good reason to end a marriage.
>
> Yet, 50 per cent of divorcees have regrets about their break-up, a study revealed. Researchers found that after the dust settled, 54 per cent experienced second thoughts about whether they had made the right decision, with many realising they miss or still love their ex-partner.
>
> For some, the regrets have been so severe that 42 per cent have had moments where they considered giving their relationship another go, with a large percentage actually making the effort to try again and 21 per cent of those still together now.
>
> […]A spokesman for the survey, who asked 2,000 UK men and women that have either divorced or called time on a long-term relationship of more than five years, says: 'Getting divorced is a huge step for any relationship, and sometimes, the words 'I want a divorce' can be said in the heat of an argument.
>
> But once you calm down and really think about things, many realise it's the last thing they want, but by then, you can feel it's too late to take it back.
>
> And even if you don't regret it immediately, dealing with the aftermath of a break-up can lead to more second thoughts. But it's great to see some have managed to talk about their regrets and give things another go.'
>
> The study found one in five said the regrets started straight away, with another 19 per cent having second thoughts within a week of saying the D-word.
>
> ### TOP TEN REASONS FOR REGRETTING A DIVORCE
>
> 1. Missing an ex-partner
> 2. Feeling like a failure
> 3. Still being in love with an ex-partner
> 4. Realising they were being unreasonable
> 5. Feeling lonely
> 6. Discovering the grass isn't always greener
> 7. An ex-partner finding someone new
> 8. Realising they are not better off on their own
> 9. Damaging the relationship with their children
> 10. Children's lives being affected
>
> But for some, it took longer with more than one in ten admitting it took a year or more for them to wish they hadn't left their partner.
>
> Others admitted they wished they could take things back when the divorce officially came through. Especially when they have worked to divide their assets or started telling people they were calling it quits.

This study fits together well with another study that I blogged about before.

The article is by Mona Charen, and the study is by the Institute for American Values. It's an older article, but I was reading a book that mentioned the study, so I thought I would blog on it.

Excerpt:

> Now, the Institute for American Values (www.americanvalues.org) has released a new study with some intriguing data about the effects of divorce on the unhappy couples themselves. It seems that another great myth is about to tumble – the myth that at least divorce makes unhappily married adults happier.

> According to the survey, conducted by a team of family researchers, unhappily married adults who divorced were no happier five years after the divorce than were equally unhappy couples who remained together. And two-thirds of unhappily married people who remained married reported marriages that were happy five years later. Even among those who had rated their marriages as "very unhappy," nearly 80 percent said they were happily married five years later. These were not bored or dissatisfied whiners. They had endured serious problems, including alcoholism, infidelity, verbal abuse, emotional neglect, depression, illness, and work and money troubles.
>
> Even more surprising, unhappy spouses who divorced actually showed slightly more depressive symptoms five years later than those who didn't. (They did, however, report more personal growth.) And – make of this what you will – the divorced sample reported a good deal more alcohol consumption than the married group.
>
> […]**The data show that if a couple is unhappy, the chances of their being happily married five years hence are 64 percent if they stay together but only 19 percent if they divorce and remarry. (The authors acknowledge that five years is a relatively short period and many divorced people will eventually remarry, some happily.)**
>
> How did the unhappy couples turn their lives around? The study found three principal techniques. The first was endurance. Many couples do not so much solve their problems as transcend them. By taking one day at a time and pushing through their difficulties, many couples found that time itself often improved matters. Moreover, these couples maintained a negative view of the effects of divorce. "The grass is always greener," explained one husband, "but it's Astroturf."
>
> Others were more aggressive. Those the researchers labeled the "marital work ethic" types tackled their problems by arranging for more private time with one another, seeking counseling (from clergy or professionals), receiving help from in-laws or other relatives, or in some cases, threatening divorce or consulting a divorce lawyer.
>
> In the third category were the "personal happiness seekers" who found other ways to improve their overall contentment even if they could not markedly improve their marital happiness.
>
> Certainly the survey found some marriages that were impossible to save and some divorced couples who were happier than those who had remained married. That is as one would expect.
>
> **But the most telling aspect of this research is the light it sheds on the importance of the attitude toward marriage. Those who enter marriage with a dim (some might say accurate) view of divorce and a strong religious or other motivation for avoiding it are not only less likely to divorce; they are also less likely to be unhappy. That is the arresting news here. We've known that commitment was good for the children of such marriages. We've known that commitment was good for society. But until now, it was not clear that commitment actually made married couples themselves more likely to be happy.**

I think the last point is a good point. Right now, a lot of young people are choosing mates based on superficial criteria (looks, money, popularity). The purpose of marriage is, in their opinion, to be happy. And their spouse's job is to make them happy. That's their view of marriage. But this ignores the realities of what marriage is about.

Marriage is not a contract, it's a covenant. People who marry ought to be getting into it because they want the responsibility of loving another sinner in close quarters. It's not about feelings and life enhancement. The most important thing to look for in a spouse is their ability to love self-sacrificially and to make and sustain long-term commitments. Both of these capabilities are damaged the more a person goes through painful serial break-ups, because people become unable to trust and instead withhold love and commitment for their own safety.

# We need to be able to tell women right and wrong

**Wintery Knight** · 7 February 2015 · Archived copy · Original

*Disclaimer: in this post, when I refer to women, I mean young, unmarried women influenced by feminism.*

I want to give several cases of women behaving badly and then make a general point about whether we are doing the right thing when we decline to criticize women for fear of offending them, and instead point the finger of blame at men, however ridiculous it is to do that.

First case – wife threatens divorce unless husband agrees to abort Down's syndrome baby:

> "When I walked into the room they all turned to me and said 'Leo has Down syndrome," he told ABC News. "I had a few moments of shock."
>
> […]"They took me in see him and I looked at this guy and I said, he's beautiful — he's perfect and I'm absolutely keeping him."
>
> Soon Forrest walked into his wife's hospital room with Leo in his arms.
>
> Her reaction was unlike one he ever expected.
>
> "I got the ultimatum right then," he said. "She told me if I kept him then we would get a divorce."
>
> […]One week after his birth, Leo's mom filed for divorce.

Second case – woman abandons her 5-month old baby to go on a two-week partying binge:

> Alena Itapova, 19, who has been nicknamed 'Monster Mum' in Russian media for letting baby Veronika die, tried to blame her parents during appeals but ultimately was found guilty. Russian judges refused her appeal and instead increased her sentence. Itapova claimed the baby's death was her parents' fault for not teaching her how to properly raise a baby.
>
> During a trial last year, Itapova admitted to leaving her baby alone in her apartment while she disappeared for two weeks. She found her daughter dead when she returned.

Third case – a woman writing for Think Progress bemoans Republican efforts to ban dismemberment abortions:

> "Immediately, when I heard the title of these bills, I had to take a deep breath and calm down," Dr. Anne Davis, the consulting medical director for Physicians for Reproductive Health and an OB-GYN who provides abortions, told ThinkProgress. "This is a familiar tactic, similar to the other types of bans we've seen. It seems the strategy is to take language that provokes emotional responses and then to argue that, because there's an emotional reaction to something, it should be illegal."

Fourth case – Cathy Young interviews a man accused of rape and finds evidence that contradicts the accuser's story:

> Sulkowicz has said in interviews that she was too embarrassed and ashamed to talk to anyone about the rape, let alone report it; an account of her mattress protest by *New York Times* art critic Roberta Smith says that she "suffered in silence" in the aftermath of the assault. Yet Nungesser says that for weeks after that night, he and Sulkowicz maintained a cordial relationship, and says she seemingly never indicated that anything was amiss.
>
> Nungesser provided The Daily Beast with Facebook messages with Sulkowicz from August, September, and October 2012. (In an email to The Daily Beast, Sulkowicz confirmed that these records were authentic and not redacted in any way; while she initially offered to provide "annotations" explaining the context on the messages, she then emailed again to say that she would not be sending them.) On Aug. 29, two days after the alleged rape, Nungesser messaged Sulkowicz on Facebook to say, "Small shindig in our room tonight—bring

> cool freshmen."

Despite not being able to present the friendly Facebook messages from two days after the rape at the university trial, he was exonerated. She declined to press criminal charges. Making a false charge to the police is a crime. But she can make a false charge and carry a mattress around on campus, and get her victimhood celebrated by United States senators.

And finally fifth case, false rape accusation investigated by the police, charges dismissed because sex proven consensual.

So what's the point of all this?

The point of all this is that I think that we are letting women getting away with too much. Instead of standing up to their poor decision-making and outright lying (in the rape cases that have been in the news lately), we coddle them and make them out to be victims, and blame the bad men they freely choose to have relationships with when they mess up their lives. They have to take responsibility for their own poor decisions, and make different decisions going forward. There isn't enough money in the world to give them to make up for all the mistakes they are making.

When a women makes decisions in her life to drink, move away from parents, shack up with bad men, take drugs, contract STDs, vote for higher taxes and bigger government, run up student loan debts, drop out of school, get pregnant before marriage, have abortions, go on welfare, choose younger unemployed boyfriends, choosing violent boyfriends, move in with men before marriage, get frivolous divorces for "unhappiness", put kids in non-family daycare when they are under two years old, make fake domestic violence charges, make false rape accusations, deprive children of their father, withhold sex from their husbands all the time for no good reason, disrespecting men, disrespecting masculine traits, etc. then we ought to be confident enough to tell them NO and IT'S WRONG.

We should not let them direct the conversation away from their own mistakes so they can blame others and justify continued irresponsible, selfish behavior because it "feels right" to them. Women are making really bad decisions these days, and it seems like men have lost all confidence to be able to tell them NO and IT'S WRONG. It's so easy for a woman who is behaving badly to just find people who will agree with her and give her sympathy for her bad decisions. Men and women both seem to love to agree with women who are wrecking their lives and causing problems for everyone else around them.

We need to stop condoning and rationalizing their poor decisions. The harm that women cause is very real, and the costs for "fixing" their mistakes through government programs and charity are ballooning. In the UK, we are now seeing taxpayer-funded breast implants and IVF, in some provinces in Canada, taxpayer-funded IVF, and here at home – free contraceptives and abortion-inducing drugs. We cannot keep paying for lives that are ruined by decision-making dominated by emotions, cultural standards and peer-pressure.

Just because a woman is pretty and sounds nice, that doesn't make her exempt from the moral law. It's not even good for a woman, in the long run, to surround herself with people (men and women) who tell her to "follow her heart" – I can guarantee that that her yes-men and yes-women won't want to deal with the mess she creates by following her heart, when it all blows up in her face. The biggest problem I see is apparently moral Christian men being so desperate for attention and/or sex that they give up the role of being the moral leader so that the woman will prefer them to men who would hold them accountable.

# Hillary Clinton's fake Bosnia gunfire story and her abortion award

**Wintery Knight** · 8 February 2015 · Archived copy · Original

What difference does foreign policy make? I married Bill. It's my turn!

First story has to do with this strange habit that people on the left have to lie about their life experiences to make themselves seem more accomplished and interesting.

From Investors Business Daily:

> Investigative reporter Sharyl Attkisson reminds us the secretary of state who blamed Benghazi on a video once made up a story about courage under fire in Bosnia. Maybe Brian Williams can be her 2016 running mate.
>
> 'Nothing in life," Winston Churchill once famously said, "is so exhilarating as to be shot at without result," except perhaps in the minds of network anchors like NBC's Brian Williams and political candidates such as Hillary Clinton, who also claimed a brush with death in a war zone on her resume. Perhaps they can swap war stories.
>
> Former CBS reporter Sharyl Attkisson reminded the world of Hillary's tale of heroism in an interview with CBS Philadelphia affiliate WPHT morning host Chris Stigall last November, a tale told by the former first lady in her 2008 run against one Barack Obama.
>
> "I had come home from an overseas trip vacation, and my husband says, 'When you went to Bosnia 12 years ago with the first lady, were you shot at?,' and I'm like, 'No, I think I would know if I were shot at,'" Attkisson told Stigall of the 1996 trip to Bosnia with Hillary, first daughter Chelsea and celebrities Sinbad and Sheryl Crow.
>
> Candidate Clinton claimed in a 2008 speech in Washington and several subsequent interviews that she and Chelsea were forced to run for cover under hostile fire shortly after landing in Tuzla, Bosnia.
>
> "I remember landing under sniper fire," Clinton said. "There was supposed to be some kind of greeting ceremony at the airport, but instead we just ran with our heads down to get into the vehicles to get to our base."
>
> Her harrowing tale never happened, and Mrs. Clinton's faulty memory also forgot that there was a reporter on the trip who was taking notes and had a video of the event.
>
> "The video showed," Attkisson said, "and I thought this was a pretty good way to explain it — I put her in a box saying, 'We got off the plane and had to duck and run for cover and there was sniper fire' and then I show the video of what was really happening, and she's getting off the plane and she's waving, shaking hands with a little school girl."

Second story from Life News.

They write:

> As if we needed any more evidence that potential 2016 presidential nominee Hillary Clinton is not a moderate, it was announced today that EMILY's List, an extreme pro-abortion organization, will be honoring her with one of their most cherished awards:
>
> EMILY's List, which works to elect Democratic women who support abortion rights, said Tuesday that Clinton would appear at its 30th anniversary awards gala in Washington on March 3. The former secretary of state will receive the group's We Are EMILY Award to honor her leadership "as a fighter for women and families," said Stephanie Schriock, the group's president.
>
> […]Clinton's pro-abortion agenda goes beyond accepting awards. In 1993, when she was attempting to transform the health care industry, she said that under her plan, abortion services "would be widely available." Then, in 1999, she delivered a speech to NARAL, the National Abortion Rights Action League, in Washington, D.C., stating her goal of "keeping abortion safe, legal and rare into the next century."

I'll be featuring lots of stories about her through 2015 and 2016, so we can all learn all about her.

# Irish woman explains why she got an abortion: “I wanted to travel”

**Wintery Knight** · 8 February 2015 · Archived copy · Original

Abortion lady and her partner
This is from Life News.

Excerpt:

> A young Irish woman has spoken of the trauma she endured by travelling to the UK for an abortion.
>
> Cork woman Tara (24) has told how she and her partner Steve felt they had no choice but to travel eight hours – almost 590 kilometres – to an abortion clinic in west London.
>
> Tara, who does not give her surname, appears in a BBC Three documentary “Abortion: Ireland’s Guilty Secret?” to tell her story and why she’s pro-choice.
>
> Under the Protection of Life During Pregnancy Act, it is an offence to “intentionally destroy unborn human life” and those found guilty face a maximum jail term of 14 years.
>
> **Tara, who had an abortion because she wanted to travel** and she wasn’t yet ready, tells reporter Alys Harte that the Government here is “ignoring” her right to choice.
>
> “I’m really angry. I’m angry that they are ignoring women basically at the moment.”
>
> “They shouldn’t have control over my uterus. I deserve that choice and it was taken away from me by my Government.”
>
> “You deserve to be treated as a human and not as a criminal more than anything else,” she said.
>
> The stress of travelling abroad to have an abortion was “not really pleasant”, Tara added.
>
> “This could’ve been so simple. This could’ve been something I could’ve done two weeks ago basically when I found out.”
>
> “It’s not really pleasant for anyone to have to go through the fact that you have to leave home and fly across the water and do something that is such a simple procedure. It definitely adds to the stress of it.”
>
> Tara is one of around 4,000 Irish women who travel to the UK every year for abortions because it is illegal to do so in Ireland.
>
> The country’s abortion laws will be the subject of a special report this year by Amnesty International.

> Ireland is one of five countries chosen by Amnesty as "emblematic of global abuses of sexual and reproductive rights".
>
> The report aims to include testimonies from Irish women who have had abortions and explore issues such as the "prohibitive" high cost of travel, particularly for young women and socio-economically marginalised groups such as asylum seekers, undocumented migrants and Travellers.
>
> The criminalisation of termination of pregnancy which results from rape, incest or sexual violence will also be reviewed as part of the My Body My Rights Campaign.
>
> Tara claims that Ireland is behind its other Western counterparts on the abortion issue.
>
> **"The rest of the world can see that this is wrong but we're in a western society and yet it hasn't changed yet."**

I think the picture that goes with the story is really telling. Look at the man that she chose… hoop earrings, tattoos, piercings. He is her "partner" – not her husband. He is there for recreation, not to provide for her or lead her on moral/spiritual issues. They are having sex, but it's doubtful that he has the discipline to provide for a family. Yet she is giving him all of herself anyway, because it's fun to have recreational sex. Marriage isn't fun though – marriage is boring. Marriage is work. Marriage is self-sacrifice. She is only 24! It's too early to think of marriage. Now is the time for having fun, seeking thrills and traveling. It's time for adventures! Not for prudence and caution. And if a child comes along who wants to stop her fun, then that child just has to die. And he is all for it!

I think this story goes very well with the mean post I wrote earlier expressing my frustration with how we as a society seem to have lost the ability to tell young, unmarried women "NO" when they want to act selfishly and/or unwisely. Look at the man she chose! He is not the kind of man who would tell her NO for anything she is doing wrong. He wants the sex, and he is willing to keep his mouth shut to get it. He's not looking for a competent partner to support him in some enterprise. They are both more interested in recreational sex than they are in marriage and personal responsibility. I sincerely doubt that this man is financially prepared to be a protector and provider – he chose a woman who just killed his child! And she chose him because she could get his attention and acceptance, but without having to be judged or led by him in any way.

Why would she choose this man? A person who understands morality subjectively will try to surround herself with people who will always tell her that she is doing the right thing – no matter what she is doing. "Follow your heart". She will also seek to silence anyone from telling her that what she is doing is wrong. She will also vote for laws that will punish people who say in public that what she is doing is wrong. With respect to abortion, that means no clinic protesters, no graphic images from protesters, no mandatory ultrasounds, no public expressions of Christianity. Anything that makes her feel that a majority of people are opposed to her has to be tuned out or silenced by force of government. The most important question that a subjective-morality person asks is "what will people think of me if I do this?" And also "I want to do this, how can I make more people agree with me?"

If we want women to stop making poor decisions with their lives, then we have to speak up and be convincing on issues like abortion, and to teach them to be careful about surrounding themselves with people who are using them, and who will agree with any crazy thing they want to do in order to keep using them.

One last point about this woman. When I look at her picture, I think about her future. I think about whether the man she has chosen is wasting her youth, and whether she understands that men like that do not stick around when a woman gets older. In order to get a man to commit to a woman past the time where she is at her peak of physical attraction, she has to do two things. First, she has to be developing her own skills and accomplishments. Second, she has to choose a man who s trying to achieve something that requires those skills and accomplishments. That's what causes a man to fall in love and remain devoted to one woman into old age. But this woman is not looking to improve her skills and to get achievements that a good man would find valuable. Instead, she is choosing the easy road. Giving her physical beauty to the wrong man, in order to have fun and thrills today – and there's no plan for tomorrow.

And as she ages, she will probably find herself without a man who is dedicated to providing for her, and will instead vote for government to take that role in her life. That means higher taxes, more government spending and borrowing, more debt for the next generation, and fewer young men who can afford to marry and have kids. That's why we need to tell the women of today NO when they want to behave selfishly, and be guided by their emotions.

# Should we care that Democrats ran up the debt from 8.5 to 18.1 trillion?

**Wintery Knight** · 9 February 2015 · Archived copy · Original

In 2007, Democrats seized control of the House and Senate after winning the 2006 mid-term elections. The last Republican budget through 2007 had a 160 billion deficit. What followed next was years and years of trillion dollar deficits under Nancy Pelosi and Harry Reid. The Republicans only gained back the House in 2011, and the Senate in 2015.

Here's what happened to the deficit while the Democrats had control of spending:

National Debt and Deficit 2007-2013

Now let's take a look why this is a problem going forward, especially for young people. We'll use this article from the Wall Street Journal.

It says:

> The U.S. has come a long way since the days of trillion-dollar deficits, just a few years ago. The **White House** projects 2016 will have the smallest budget deficit in eight years. Yet the budgetary impact of the debt that's been accumulated–$18 trillion in total, $13 trillion of that owed to the public–will reassert itself.
>
> Currently, the government's interest costs are around $200 billion a year, a sum that's low due to the era of low interest rates. Forecasters at the White House and **Congressional Budget Office** believe interest rates will gradually rise, and when that happens, the interest costs of the U.S. government are set to soar, from just over $200 billion to nearly $800 billion a year by decade's end.
>
> By 2021, the government will be spending more on interest than on all national defense. according to White House forecasts. And one year later, interest costs will exceed nondefense discretionary spending–essentially every other domestic and international government program funded annually through congressional appropriations. (The largest part of the budget is, and will remain, the mandatory spending programs of Social Security, Medicare and Medicaid. Mandatory spending is over $2 trillion and is set to double to $4 trillion by 2025.)

The advice I would give to young people just entering college is to make sure that you don't vote for more spending and borrowing. Because you're the ones who are going to have to pay it off!!! Also, don't waste your money on a discipline for which there are no jobs. Stay away from anything that is not STEM – science, technology,

engineering, and math. Try not to borrow money. One lady I know just completed a couple of years of community college, before heading into a computer science program at a university. That is smart – I really recommend that.

Be willing to move if a good job presents itself, because earning money now before the storm is really important. Work while it's day, in other words. Try not to stay in school any longer than you have to, because work experience is usually worth as much or more than school, and you get paid to work – you don't get paid to go to school. Don't think that things are going to be as good as thy are now, or that things are good enough to take unnecessary risks. This probably isn't the time to "follow your heart" unless your heart is telling you to take the job that pays the most, regardless of how much you like it.

It's very important to start saving as early as possible so that you can take advantage of interest rates when they go up to earn interest. The earlier you start to save, the more you earn in interest. The key is to never miss a chance to earn and save. Always keep working, and never go to school unless you really need to and you are sure that it will produce a return on investment. Your priority has to be working and saving, and not spending money on frivolous things like travel or thrills. We are not at the right time in history for concentrating on sky-diving, zip-lining and surfing. Now is the time for saving.

# It's Sex Week on major university campuses

**Wintery Knight** · 9 February 2015 · Archived copy · Original

Time for students to learn all about drunken immoral pre-marital sex, thanks to your tax dollars.

Let's start with the College Fix's report on the "Sex Ed Warrior Queen".

They write:

> When Megan Andelloux comes to campus, no object is off-limits for being sexualized – including a genitalia-themed puppet.
>
> The clinical sexologist and former Planned Parenthood educator, known professionally as "Oh Megan" and a self-described "Sex Ed Warrior Queen," encouraged Vanderbilt University students to masturbate in their seats even as she spoke during an interactive sex workshop Tuesday on campus.
>
> "Want to Be Brilliant in Bed?" was sponsored by the Margaret Cuninggim Women's Center…
>
> She led a workshop at the University of Tennessee last year that described an orgasm as a "political act," as *The College Fix* reported.
>
> […]Andelloux did not shy away from graphic details or descriptions of "sexual adventures" throughout her workshop.
>
> […]Andelloux also expertly demonstrated how to put on a condom using only her mouth, according to a female student who stayed for the entire two-hour workshop and asked not to be named.

Very important to note sexualizing college students is a "political act" sponsored by the Women's Center. That's where this stuff comes from – feminists. And this is what universities do with their money – it's not to teach you how to program in Java or C#, it's to make you accept the left's view of sexuality and reproduction.

Next up, Campus Reform reports on feminism at the University of Utah.

They write:

> Students at the University of Utah can win a year's supply of birth control, including pills or a vasectomy, this week during Sex Week events.
>
> According to a promotional flyer from the public school, U of U's Center for Student Wellness, Students for Choice, and Planned Parenthood have partnered for this year's Sex Week, beginning on Feb., 9.
>
> "The more events you attend, the more chances you'll have to win a year's supply of the birth control or STD protection of your choice," the flyer reads.
>
> The flyer says that the birth control options are limited to those offered at Planned Parenthood, which are: 365 condoms, a 12-month supply of pills, one Intrauterine Device (IUD), four Depo-Provera shots, one diaphragm, one vasectomy, 12 NuvaRings, 52 OrthoEvra patches, one Implanon, or information on fertility awareness methods.
>
> The events include a wellness fair, panel discussions, and a showing of " Obvious Child," a movie about a young woman who chooses to get an abortion.
>
> […]Katie Stiel, program manager at the Center for Student Wellness, told Fox 13 that Students for Choice "went through the appropriate channels" to get funding for the events and it would not be removed from campus or cancelled.

Note that Christian clubs and pro-life clubs are being de-funded and disbanded by student governments, but using taxpayer dollars for this is no problem!

Last one is actually not about Sex Week, it's about feminism magazines.

This is from the Federalist:

> True confession: Until last week, I had never read *Cosmopolitan* magazine. I actually kind of like fashion magazines, as a genre: The more spacey-eyed, pouting women in $900 shoes slumping against helicopters parked on yachts the better, I always say! That said, I tend to shrink from those fuschia-flecked, scantily clad drugstore nightmare sheets that screech at me to "HAVE BREAK THE BED SEX!!" when I'm just trying to mind my own business and buy some freaking dental floss.

> The genius of Cosmo, of course—and, I suspect, the reason it's the most popular magazine for young women in America—is that it will breezily suggest 131 creative ways to WEAR NOTHING BUT THAT FREAKING DENTAL FLOSS whilst you DRIVE YOUR MAN BATTY IN THE BOUDOIR. So with Sex Week arriving at the Federalist, I decided to enter uncharted territory. I would not only read Cosmo, but *I would try its sex tips!*

Here is her conversation with her husband:

> ME: Here's one. [Reads headline aloud.] "I Basted My Boyfriend Like a Sexy Thanksgiving Turkey!"
>
> I did garner some male feedback on Cosmo's rather earnest and disturbing sex-advice column.
> HIM: Um.
>
> ME: "I Took My Boyfriend to A Dominatrix!"
>
> HIM: Nope. [Refrains from making eye contact, which is puzzling, as I did not just order a fancy and intimidating Cotes Du Rhone.]
>
> ME: "I Covered Myself in Food For Sex!"
>
> HIM: [Looking up.] Hey, didn't George Constanza do that once on "Seinfeld"? No, no, wait. He just wanted to eat a sandwich while having sex.
>
> [LONG PAUSE.]
>
> HIM: This is getting ridiculous.
>
> ME: "I Tried All the Sex From 'Fifty Shades of Grey' in 1 Weekend!"
>
> HIM: Who are these people?

That article made me laugh.

If you're a young marriage-minded man of some means, and your heart is set on marriage and children, you will have to search far and wide to find a young, unmarried woman who desires the same. Young unmarried women don't want marriage and children, they want free birth control and kinky sex. It's "adventurous" and marriage with children is "boring".

# Can the secular left rationally ground human rights like freedom of speech?

**Wintery Knight** · 9 February 2015 · Archived copy · Original

[image]
Cheryle Abatte, Marquette University
Let's start this post with an example of the secular left trampling natural rights.

Here's the story from the College Fix:

> It has been a rough three months for Marquette University professor and acerbic blogger John McAdams.
>
> Because McAdams criticized a graduate teaching instructor for silencing an undergraduate owing to his traditional views on marriage, the school informed him last week his tenure is being revoked and he'll be fired.
>
> Though academic observers debated whether McAdams should have named and shamed now-former Marquette grad student Cheryl Abbate – which led to his temporary banishment from campus and canceled classes – even McAdams' critics are warning the university it's setting a terrible precedent.

They didn't fire the grad student for telling her student that pro-marriage views were not welcome at a Catholic university. They fired the professor who made that threat conversation public. The student is not the victim of discrimination, the administrators said – the real victim is the left-wing fascist grad student.

Like I said before, make sure you have money saved when they come after you, because you might as well trust in the tameness of a wolf than the morality of a leftist university administrator. That's the real lesson for Christians from stories like this.

So why is it that people on the left don't respect natural rights like the right to free speech?

Well, it's because human rights are NOT rationally grounded in the atheistic worldview that dominates the university.

Frank Turek explains in The Stream.

He writes:

> Atheist Richard Dawkins has declared, "The universe we observe has precisely the properties we should expect if there is at the bottom, no design, no purpose, no evil and no good. Nothing but blind pitiless indifference. . . . DNA neither knows nor cares. DNA just is, and we dance to its music."
>
> But Dawkins doesn't act like he actually believes that. He recently affirmed that a woman has the right to choose an abortion and asserted that it would be "immoral" to give birth to a baby with Down syndrome. According to Dawkins, the "right to choose" is a good thing and giving birth to Down Syndrome children is a bad thing.
>
> Well, which is it? Are there really good and evil, or are we just moist robots dancing to the music of our DNA?
>
> Atheists like Dawkins are often ardent supporters of rights to abortion, same-sex marriage, taxpayer-provided healthcare, welfare, contraceptives, and several other entitlements. But who says those are rights? By what objective standard are abortion, same-sex marriage, same-sex adoption, taxpayer-provided healthcare, and the like, moral rights? There isn't such a standard in the materialistic universe of atheism. So atheists must steal the grounds for objective moral rights from God while arguing that God doesn't exist.
>
> […]Atheists are caught in a dilemma. To simplify a bit, if God doesn't exist, then everything is a matter of human opinion and objective moral rights don't exist, including all those that atheists support. If God does exist, then objective moral rights exist. But those rights clearly don't include cutting up babies in the womb,

> same-sex marriage, and their other invented absolutes contrary to every major religion and natural law.
>
> Now, an atheist might say, “In our country, we have a constitution that the majority approved. We have no need to appeal to God.” True, you don’t have to appeal to God to write laws, but you do have to appeal to God if you want to ground them in anything other than human opinion. Otherwise, your “rights” are mere preferences that can be voted out of existence at the ballot box or at the whim of an activist judge or dictator. That’s why our Declaration of Independence grounds our rights in the Creator. It recognizes the fact that even if someone changes the law or the political order you still have certain rights because they come from God, not man.
>
> However, my point isn’t about how we should put objective God-given rights into human law. My point is, without God there are no objective human rights. There is no right to abortion or same-sex marriage. Of course, without God there is no right to life or natural marriage either!
>
> In other words, no matter what side of the political aisle you’re on — no matter how passionate you believe in certain causes or rights — without God they would be without foundation. Human rights would amount to no more than your subjective preferences. So atheists can believe in and fight for rights to abortion, same-sex marriage, and taxpayer-provided entitlements, but they can’t justify them as truly being rights.

So although they may be willing to assume natural rights when pushing their own pet causes, those rights are not rationally grounded, and they will disappear when they have to decide what to do with people they don’t like. That’s why atheists like Stalin, Mao and Pol Pot were responsible for killing tens of millions of inconvenient people. That’s why atheists are at the forefront of the abortion cause today. They can’t ground natural rights, and when push comes to shove, they shove them aside in order to get their way. It starts out with the thrusting aside of free speech, and then it goes on to the right to life for the unborn, then the right to life of the born. When stressed, secular leftists will act in line with their own convictions. (Or lack thereof)

# Bobby Jindal's education reform vs Jeb Bush's big government Common Core

**Wintery Knight** · 10 February 2015 · Archived copy · Original

Louisiana Governor Bobby Jindal

The radically leftist National Journal compares and contrasts the education policies of Louisiana Governor Bobby Jindal with former Florida Governor Jeb Bush.

They write:

> Louisiana Gov. Bobby Jindal is in Washington Monday to unveil a series of education reforms as part of his 2016 presidential preparations. But his proposals call for scaling back Washington's role in education while promoting increased parental choice for children's schools, better measures to assess teacher performance, and more autonomy for individual schools over their own operations.
>
> […]Through his policy-focused nonprofit AmericaNext, Jindal will be delivering his education proposals at a *Christian Science Monitor* Breakfast Monday morning, speaking at an educational forum hosted by South Carolina GOP Sen. Tim Scott and meeting with conservative writers to discuss the plan at the Heritage Foundation. He has previously released detailed policy papers on health care, foreign policy, and energy.
>
> Jindal's education report is a balancing act between calling for higher standards and improved accountability, while limiting the role of the federal government to offer policies to solve the problem. Jindal argues that if parents have more choice in where to send their kids to school—be it local public schools, charter schools, or using vouchers for private or parochial education—the renewed competition will itself force public schools to do a better job. His report calls for less-regimented testing requirements, even as he supports stronger state accountability measures so parents can determine the best schools for their children.
>
> "The federal government should absolutely not be offering incentives, mandates, or coercing states to adopt a national curriculum—whether it's Common Core or the next iteration of it," Jindal said. "We don't think curriculum decisions should be made at the national level. I'm all for rigor, I'm all for standards, but ultimately, I trust parents. I trust choice and competition. I don't want a top-down, one-size-fits-all approach." To that end, Jindal said he favors rolling back the mandates in George W. Bush's No Child Left Behind law.
>
> If he runs for president, Jindal is expected to make education a central part of his message. In the report, he touts the success of the New Orleans school system as a model of his school-choice pitch. After Hurricane Katrina, the city's educational system was entirely revamped and turned over to the state-run Recovery School District. They allowed schools to be run independently; now more than 90 percent of students in the city attend charter schools. The results have been one of the country's biggest educational success stories—the graduation

> rates have skyrocketed and the city's passing rate on state tests now rival the statewide averages.
>
> Many of Jindal's school-choice proposals are an extension of the New Orleans experience. He calls for expanding the number charter schools, urges states to remove the caps on the number of charter schools allowed, and argues that principals should play a more active role in their schools' direction than local school boards.
>
> "Those on the left who believe in government power don't trust the American people. In terms of education, the best way to drive excellence is to trust the parents. Parents know their kids best, they want what's best for their children, and if you allow them to vote with their feet, they will then have the chance to give the best education for their kids. And we've seen that in New Orleans," Jindal said.
>
> All told, Jindal's preferred policies are in line with what many leading educational reformers are arguing. He believes strongly that teacher quality is the strongest school-based factor in a student's education, and he believes talented teachers should be rewarded for their work. He rails against the seniority system that keeps the most veteran teachers protected from scrutiny. He is dismissive of requiring teachers to hold educational degrees, preferring recruits that have expertise in the areas they teach. And he is bullish about the role technology can play in improving educational outcomes.
>
> […]But the political red meat of his proposals is directed squarely at Bush. The biggest differences between the two come from the federal role in education and over testing—two areas where the educational establishment is growing disconnected from public opinion. By calling for less testing, Jindal is taking the sides of parents who believe the sheer number of tests is crowding out time for creative endeavors—like art and music—and forcing teachers to drily teach to the test. On that front, Jindal's critiques echo many liberals on the issue and contrast with the Bush view that progress is best measured through standardized tests.
>
> So it's ironic that, despite the report's depth, Jindal's advisers are hoping to reap the biggest political gain from conservatives by attacking Common Core and calling "the federal government [not to] touch curricula with a 10,000-foot pole." It's designed to clearly contrast his version of educational reform with Jeb Bush's. "Our fundamental disagreement is on who is or should be in control of testing and curriculum. Locals v. federal. And make no mistake, the federal role in education is a huge fault line [between Jindal and Bush]," said a senior Jindal adviser.

If Jeb Bush gets the nomination, it will be like electing a Democrat on education issues – he favors big government control of education, and standardized tests controlled at the federal level. We would be much better off choosing a small-government approach like Bobby Jindal's approach, an approach that is consistent with conservative principles and is proven to work.

# Homeschooling family from Alabama gets 7 of their 10 kids into college by age 12

**Wintery Knight** · 10 February 2015 · Archived copy · Original

They call them the Brainy Bunch
Here's a wonderful story to cheer everyone up from the Christian Post.

They write:

> An impressive seven of 10 homeschooled children from a Christian family in Montgomery, Alabama, which now boasts a doctor and New York City architect among them, all started college by the time they were 12; and now their parents have written a book about how they managed to pull off such staggering academic success.
>
> The parents of the 10 children, Mona Lisa and Kip Harding, are described as high school sweethearts on a website dedicated to *The Brainy Bunch Book*.
>
> "After four kids, they decided to turn to homeschooling, and their success paved the way for their children to start college by the age of 12, and go on to great careers in medicine, engineering, architecture and more," explaines the website.
>
> **Hannah, 26, is the oldest Harding child. She earned her bachelor of science in mathematics from Auburn University Montgomery and a master's degree in mathematics by the time she was 19. She is now working on a PhD in material science.**
>
> **Rosanna, 24, is now an architect in New York City and became the youngest member in the American Institute of Architects at age 23. Serena, 22, earned her bachelor's degree in biology from Huntingdon College at 17, and became one of America's youngest female doctors at 22. She is now a resident at the Naval Hospital in Bethesda.**
>
> **Their brother Heath, 17, has an master's in computer science. He earned a BA in English at 15, and he is currently working at building his tutoring and online computer business. Keith, who is 15, is pursuing a bachelor's in music at Faulkner University. Seth, just 13, is a history major at Huntingdon College, while Katrinnah, 10, is a student at Faulkner University.**
> **Their other siblings, Mariannah, 8; Lorennah, 5, and Thunder, 3, are still being homeschooled.**
>
> In an interview with KSL Kip and Mona Lisa noted that their children aren't geniuses. They simply found a way to accelerate their learning by making it fun. One-on-one sessions with the mother who is working on her bachelor's degree at home also helped immensely.
>
> "One teacher has 30 students on average," said Kip. "We can do better than that. Kids get left behind in a

> classroom. … This is where homeschooling really takes off because those kids are getting extra attention. And who's more loving than a mom and dad teaching them things?"
>
> And for parents considering homeschooling, Mona Lisa had some sage advice.
>
> "I personally would like to tell the moms that if moms read, they can teach their child to read," she said.
>
> "Then their kids have the ability to teach themselves. I basically teach them to love reading and the basics of math, and from there, they can have a lot of their own answers. … The model at home is more a tutoring model."
>
> Despite their success, however, Kip acknowledged the importance of teachers in a traditional classroom setting.
>
> "Teaching is a hard job and teachers still have a place," said Kip. "But government money comes with strings attached. … We're just relying on God and he keeps coming through and it's working out well. Truly, we're just average."

Sigh! I would really like to have executed a plan like this, but before you can, you have to find a woman who thinks that marriage and children are more important than binge-drinking, hooking-up, and flying around the world to be photographed with malnourished children, etc. I think Christian men do have a plan for making their marriages into a project that gets results like this, but you can't do it unless you find a woman who is willing to do the work that's required. Finding one who wants to have kids and manage their progress so that they will have an influence in the world is much harder than it ought to be.

# New study: children of same-sex parents have twice as many emotional problems

**Wintery Knight** · 10 February 2015 · Archived copy · Original

Here's a report from MercatorNet on a new peer-reviewed study published in the British Journal of Education, Society & Behavioural Science.

Mercator writes:

> Fresh research has just tossed a grenade into the incendiary issue of same-sex parenting. Writing in the British Journal of Education, Society & Behavioural Science, a peer-reviewed journal, American sociologist Paul Sullins concludes that children's "Emotional problems [are] over twice as prevalent for children with same-sex parents than for children with opposite-sex parents".
>
> He says confidently: "it is no longer accurate to claim that no study has found children in same-sex families to be disadvantaged relative to those in opposite-sex families."
>
> This defiant rebuttal of the "no difference" hypothesis is sure to stir up a hornet's next as the Supreme Court prepares to trawl through arguments for and against same-sex marriage. It will be impossible for critics to ignore it, as it is based on more data than any previous study — 512 children with same-sex parents drawn from the US National Health Interview Survey. The emotional problems included misbehaviour, worrying, depression, poor relationships with peers and inability to concentrate.
>
> After crunching the numbers, Sullins found opposite-sex parents provided a better environment. "Biological parentage uniquely and powerfully distinguishes child outcomes between children with opposite-sex parents and those with same-sex parents," he writes.

But is it caused by lack of acceptance and homophobia?

> The most widely-accepted explanation of poor emotional and behavioural results amongst children in same-sex households is homophobia. Supporters of same-sex parenting attribute poor emotional well-being to stigmatization. These kids are damaged, it is said, because they have been singled out, teased and bullied. If their peers were less homophobic, things would be different.
>
> But Sullins dismisses this. "Contrary to the assumption underlying this hypothesis, children with opposite-sex parents are picked on and bullied more than those with same-sex parents."
>
> This sounds surprising, but in another paper, published last year in the British Journal of Medicine and Medical Research and based on the same data, Sullins found that children of same-sex parents are more at risk of ADHD. And if they had ADHD, they were over seven times more likely to suffer stigmatization because of their impaired interpersonal coping skills. In other words, if kids from homes with same-sex parents are bullied more, it's because they lack interpersonal skills, not because their parents are gay or lesbian.
>
> Bullying is toxic, but it's important to find out whether kids are being bullied because they're different or because their parents are different.

That's it for that study.

Let's go back and look at the previous one, from Canada.

The Public Discourse reports on a recent study out of Canada.

Excerpt:

> A new academic study based on the Canadian census suggests that a married mom and dad matter for children.

> Children of same-sex coupled households do not fare as well.
>
> There is a new and significant piece of evidence in the social science debate about gay parenting and the unique contributions that mothers and fathers make to their children's flourishing. A study published last week in the journal *Review of the Economics of the Household*—analyzing data from a very large, population-based sample—reveals that the children of gay and lesbian couples are only about 65 percent as likely to have graduated from high school as the children of married, opposite-sex couples. And gender matters, too: girls are more apt to struggle than boys, with daughters of gay parents displaying dramatically low graduation rates.
>
> Unlike US-based studies, this one evaluates a 20 percent sample of the Canadian census, where same-sex couples have had access to all taxation and government benefits since 1997 and to marriage since 2005.
>
> […]Three key findings stood out to Allen:
>
> children of married opposite-sex families have a high graduation rate compared to the others; children of lesbian families have a very low graduation rate compared to the others; and the other four types [common law, gay, single mother, single father] are similar to each other and lie in between the married/lesbian extremes.
>
> Employing regression models and series of control variables, Allen concludes that the substandard performance *cannot* be attributed to lower school attendance or the more modest education of gay or lesbian parents. Indeed, same-sex parents were characterized by higher levels of education, and their children were more likely to be enrolled in school than even those of married, opposite-sex couples. And yet their children are notably more likely to lag in finishing their own schooling.
>
> […]The truly unique aspect of Allen's study, however, may be its ability to distinguish gender-specific effects of same-sex households on children. He writes:
>
> the particular gender mix of a same-sex household has a dramatic difference in the association with child graduation. Consider the case of girls. . . . Regardless of the controls and whether or not girls are currently living in a gay or lesbian household, the odds of graduating from high school are considerably lower than any other household type. Indeed, girls living in gay households are only 15 percent as likely to graduate compared to girls from opposite sex married homes.
>
> Thus although the children of same-sex couples fare worse overall, the disparity is unequally shared, but is instead based on the combination of the gender of child and gender of parents. Boys fare better—that is, they're more likely to have finished high school—in gay households than in lesbian households. For girls, the opposite is true. Thus the study undermines not only claims about "no differences" but also assertions that moms and dads are interchangeable. *They're not.*

Here's the study.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That's not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That's not good for children either. So we have three reasons to think that normalizing gay relationships as "marriage" would not be good for children.

# Obama: Kosher deli attack was “random”, Iran developing nuclear weapons “contrary to their faith”

**Wintery Knight** · 11 February 2015 · Archived copy · Original

This is from the Weekly Standard.

They write:

> President Obama referred to the Islamic terrorists who killed several French Jews last month as people who “randomly shoot a bunch of folks in a deli in Paris” in an interview with liberal website Vox.com. In Tuesday’s press briefing, ABC News correspondent Jonathan Karl asked White House press secretary Josh Earnest to clarify the president’s position on the terrorists’ motivation to attack the kosher supermarket.
>
> “Does the president have any doubt that those terrorists attack that deli because there would be Jews in that deli?” Karl asked.
>
> “It is clear from the terrorists and the writings that they put out afterward what their motivation was,” Earnest responded. “The adverb that the president chose was used to indicate that the individuals who were killed in that terrible, tragic incident were killed not because of who they were but because of where they randomly happened to be.”
>
> “These individuals were not targeted by name,” Earnest added.
>
> “Not by name, but by religion, were they not?” Karl asked.
>
> “There were people other than just Jews who were in that deli,” Earnest said.
>
> **After Karl asked again if there was any doubt by the president that the shop was attacked because of the likelihood the terrorists would be able to kill Jews, Earnest finally said, “No.”**
>
> […]State Department spokeswoman Jen Psaki was pressed on this question as well, and she refused to speak about the motive behind the attack.

It was random! It was the Crusaders! Pretty sure.

Here’s Josh Earnest:

And Jen Psaki:

But we’re not done yet. No, now Obama is telling us that Iran promises not to develop nuclear weapons because it’s “contrary to their faith”.

Real Clear Politics has the transcript:

> At a joint news conference with German Chancellor Angela Merkel President Obama addressed the ongoing nuclear negotiations with Iaran. According to the Supreme Leader of Iran, said Obama, “it would be contrary to their faith to obtain a nuclear weapon.”

> PRESIDENT OBAMA: The issues now are sufficiently narrowed and sufficiently clarified where we’re at a point where they need to make a decision. We are presenting to them in a unified fashion, the P5+1 supported by a coalition of countries around the world are presenting to them a deal that allows them to have peaceful nuclear power but gives us the absolute assurance that is verifiable that they are not pursuing a nuclear weapon.
>
> And if in fact what they claim is true, which is they have no aspiration to get a nuclear weapon, that in fact, according to their Supreme Leader, it would be contrary to their faith to obtain a nuclear weapon, if that is true, there should be the possibility of getting a deal. They should be able to get to yes. But we don’t know if

> that's going to happen.

Although Iran has been caught cheating on nuclear deals before, this time they really promise to be good. For realsies! Pinky swear!

# Five reasons why Christians ought to care about economics

**Wintery Knight** · 11 February 2015 · Archived copy · Original

This is from the Acton Institute blog.

The five:

1. The Bible Deals with Economic Issues
2. Economics Helps Us Understand the Public Square
3. It Expands Our Model of Discipleship
4. It Enhances Our Theology of Work
5. It Illuminates the Theological Implications of Politics

I want to choose just one of these, but I have to choose two, because they rock my socks off:

**2. Economics Helps Us Understand the Public Square**

> Second, an understanding of economics and especially of political economy can help us understand what is going on in the world around us. The general election…is impossible to follow without some understanding of the implications of Obamacare and its impact on Medicare, the federal deficit, and the long-term effects of continued deficit spending. The posturing on the part of Republicans and Democrats sometimes seems like little more than rhetoric, but the one who understands what is really at stake can help lead people to a better understanding of their responsibility in the public square.

**3. It Expands Our Model of Discipleship**

> Third, an understanding of economics can help us pastor our people more effectively by pointing to the need for a more comprehensive model of Christian discipleship. Many people in our churches just don't grasp that wealth is produced through work, how that in itself is a blessing to others, and then what God calls them to do with their wealth, even if they have very little of it. Taking a money management course is important to becoming a mature steward, but what most need more than that is a framework for understanding how politics, economics, and citizenship responsibilities fit into a broader discipleship model of life stewardship. In other words, they need an introduction to biblical oikonomia ("the law of the house"). And this applies to pastors and seminary professors every bit as much as it does to members of the congregation. A good place to start is by imparting some understanding of supply and demand, of fruitfulness and pay, and of how investments work (just to give a small sampling), because this will help God's people to grasp better the role they play every day in the broad sweep of God's mission in the world.

And now a comment from me about 2 and 3:

I wasn't raised in the church and I don't think of God the way that church people do. I think of God as my boss. I don't expect God to micromanage according to some mysterious plan that I can only sense through my emotions. What he does is communicate his character and his goals in the Bible, and then he leaves it up to me to decide how to *steward my resources* in order to *produce a return on his investment.* That's why economics, business and investing are all important to me. If I can understand how the world works, then I know how to make decisions that will help me to achieve good results, like mentoring people and supporting Christian scholars. It's just like fixing a car or building a house. The more you know about how things work, the better it is. Feelings and intuitions have no place in decision-making, it's knowledge all the way.

Here's Matthew 25:14-30.

Look:

[14] “For it will be like a man going on a journey, who called his servants and entrusted to them his property.

[15] To one he gave five talents, to another two, to another one, to each according to his ability. Then he went away.

[16] He who had received the five talents went at once and traded with them, and he made five talents more.

[17] So also he who had the two talents made two talents more.

[18] But he who had received the one talent went and dug in the ground and hid his master’s money.

[19] Now after a long time the master of those servants came and settled accounts with them.

[20] And he who had received the five talents came forward, bringing five talents more, saying, ‘Master, you delivered to me five talents; here I have made five talents more.’

[21] His master said to him, ‘Well done, good and faithful servant. You have been faithful over a little; I will set you over much. Enter into the joy of your master.’

[22] And he also who had the two talents came forward, saying, ‘Master, you delivered to me two talents; here I have made two talents more.’

[23] His master said to him, ‘Well done, good and faithful servant. You have been faithful over a little; I will set you over much. Enter into the joy of your master.’

[24] He also who had received the one talent came forward, saying, ‘Master, I knew you to be a hard man, reaping where you did not sow, and gathering where you scattered no seed,

[25] so I was afraid, and I went and hid your talent in the ground. Here you have what is yours.’

[26] But his master answered him, ‘You wicked and slothful servant! You knew that I reap where I have not sown and gather where I scattered no seed?

[27] Then you ought to have invested my money with the bankers, and at my coming I should have received what was my own with interest.

[28] So take the talent from him and give it to him who has the ten talents.

[29] For to everyone who has will more be given, and he will have an abundance. But from the one who has not, even what he has will be taken away.

[30] And cast the worthless servant into the outer darkness. In that place there will be weeping and gnashing of teeth.’

He’s the boss, and we are here to freely decide what we are going to do about it. If you want to do a good job, then it makes sense to do what everyone else does – learn how things work so that you can make good decisions. If I could give one other piece of advice, it would be to not put mysticism and feelings on the same level as reason and evidence. It doesn’t work in the normal workday world, and it doesn’t work when you are planning out the overall course of your life, either. Cautious works. Cautious gets results.

# Dr. George Yancey: The Nature and Consequences of Christianophobia

**Wintery Knight** · 11 February 2015 · Archived copy · Original

Dr. George Yancey recently did a presentation at the Reasonable Faith group at UT Dallas.

Here's the lecture: (40 minutes)

About the speaker:

> Dr. George Yancey is a Professor of Sociology at the University of North Texas. He is the author of Christian works such as One Body, One Spirit: Principles of Successful Multiracial Churches (InterVarsity Press), Beyond Racial Gridlock: Embracing Mutual Responsibility (InterVarsity Press), co-author of United by Faith: The Multiracial Congregation as an Answer to the Problem of Race (Oxford University Press) and co-author of Transcending Racial Barriers (Oxford University Press). He has also authored several research articles on the topics of interracial marriage and multiracial churches. Along those lines he is also the author of Multiracial Families (Routledge) which explores the current literature on different aspects of interracial families and Neither Jew Nor Gentile (Oxford University Press) which explores racial issues on Protestant college campuses.

His BS and MS are in economics. His PhD is in sociology.

Summary of the lecture:

- Is discrimination against Christians real?
- Which groups draw the most animosity?
- What are the characteristics of those who most oppose conservative Christians?
- What do cultural progressives think about conservative Christians?
- Is the animosity against conservative Christians reasonable, or is it hatred / fear?
- What kinds of stereotypes dominate animosity towards Christians?
- Does animosity towards Christians affect hiring decisions in academia?
- Why is the problem of Christianophobia not being addressed?

His latest book is So Many Christians, So Few Lions.

I was thinking about this lecture, and I was thinking, what would I do if I ran into one of these people who were really angry with me and wanted to feed me to lions, gas me, or murder me in other nasty ways. And I guess my only answer would be to speak to them and have them defend their beliefs without allowing them to pigeonhole me with a label. Maybe just focus on one particular issue like media bias or the origin of the universe, and try to focus on evidence rather than state my conclusion. Come to think of it, if you can name people on both sides and give evidence for both sides, that seems to work really well.

The more secular and left-wing the opponent, the more you have to stick with discussing ONLY evidence, and never say your view. So, you can say "how do you work this cosmic microwave background radiation in with your worldview?" but you can't say, "I'm a conservative evangelical Christian, and you should come to church with me". The secular progressives seem to be very concerned that Christians vote blindly for political leaders that restrict their freedoms, so again, don't talk about policies, talk about the reasons on both sides for those policies. For example, do this "what is the morally significant difference between an unborn human and a born human that confers a right to life?" rather than "I'm pro-life and you should be pro-life too, or I'll put you in jail".

I have had conversations with people on the secular left who could not name a single reason for any of my beliefs.

For example, gun ownership – they had no idea that people own guns for self-defense. Or capital punishment – they had no idea that there is a deterrent effect on other people contemplating violence crimes. They simply cannot express the view of their opponents or the reasons why their opponents hold those views. Maybe that's partly their fault for being lazy and insular, but it might also be our fault, too, for not knowing the reasons. I know that when I explain the reasons to them (on both sides) and say that this is the evidence that needs to be debated, then they do often calm down. I think that their perception that we are irrational and faith-based scares them.

I think it's a good idea to become aware of what the research says about secular progressive attitudes towards Christians so that we know how to act around them to avoid setting them off. When you are dealing with people who have this extreme hatred of you, you probably want to chip away at them rather than just be who you are right up front. There doesn't seem to be a lot of tolerance here, which is so strange coming from the crowd that talks the most about tolerance. We are the only ones who they think it's ok to fire, fine, imprison, etc.

# Pro-gay-marriage atheist progressive Craig Hicks charged with murder of three Muslims

**Wintery Knight** · 12 February 2015 · Archived copy · Original

First the facts, from the leftist New York Times.

They write:

> It was a little after 5 p.m., a quiet time in a quiet neighborhood, before many people had returned home from work on Tuesday, when two women called 911 to report multiple gunshots and screams echoing through a condominium complex here near the University of North Carolina.
>
> By the time the police arrived, three people were dead — a newlywed couple and the woman's sister. They were young university students, Muslims of Arab descent, and high achievers who regularly volunteered in the area. A neighbor, a middle-age white man, was missing — then under arrest and charged with three counts of murder.
>
> […]Mr. Hicks, appeared to have a deep dislike of all religion. On his Facebook page, nearly all of his posts expressed support for atheism, criticism of Christian conservatives or both.
>
> Last month, he posted a photo that said, "Praying is pointless, useless, narcissistic, arrogant, and lazy; just like the imaginary god you pray to."
>
> […]His wife also pointed out his support for gay rights and the right to abortion.

Let's take a look at what's on his Facebook page:

> Though no motive for the shooting has been confirmed, local media is reporting that social media sites connected to Hicks might offer a clue. Hicks is a self-described "anti-theist" who lashed out against all religions. Apparently he is associated in some way with United Atheists of America and uses social media to lash out at both "radical Christians and radical Muslims." He also describes himself as a fan of atheist author Richard Dawkins.
>
> TV programmes liked by Hicks include The Atheist Experience, Criminal Minds and Friends, while he describes himself as a fan of Thomas Paine's The Age of Reason and Richard Dawkins' The God Delusion.
>
> Hicks' pictures largely consist of images with text mocking religion and supporting atheism, but include images of himself and his wife at Disneyland, what he describes as his "loaded 38 revovler", and himself separately on a quad bike and wearing a suit.
>
> According to his Facebook "likes," Hicks is a man of the left:
>
> His Facebook Likes included the Huffington Post, Rachel Maddow, the Southern Poverty Law Center, Freedom from Religion Foundation, Bill Nye "The Science Guy," Neil deGrasse Tyson, Gay Marriage groups and similar progressive pages.
>
> More:
>
> Hicks is a vehement atheist, according to his Facebook page, where he frequently posts anti-religion musings.
>
> Hicks frequently posted quotes of prominent comedians and atheists, including the prominent British atheist, professor and author Richard Dawkins.

Richard Dawkins had previously expressed his goal of destroying Christianity. Since he turned down the opportunity to debate William Lane Craig multiple times, he must have some other meaning for "destroy Christianity" than "defeat Christianity utterly in a debate".

I found it interesting that the Southern Poverty Law Center was one of his Facebook likes, since they were connected to a previous episode of domestic terrorism – the attack on the Family Research Council.

Remember?

From CBN News.

Excerpt:

> Wednesday's shooting at the headquarters of the Family Research Council, a group known for standing for conservative and Christian values, is raising debate about the rhetoric surrounding hot topic issues like gay marriage.
>
> In 2010, the Southern Poverty Law Center labeled the Family Research Council a 'hate group,' alongside neo-Nazis, Ku Klux Klan members, black separatists, and others.
>
> The SPLC said it put the conservative group on the list not because the FRC believes homosexuality is wrong, but for "the propagation of known falsehoods in an effort to defame gay people."
>
> "I don't expect everyone to agree with some of the things that we assert about the homosexual lifestyle, but we do present evidence in support of those assertions, and they are certainly not falsehoods or fabrications," FRC Senior Fellow for Policy Studies Peter Sprigg said in defense.

The shooter, Corkins, was a big admirer of the well-known atheist philosopher Nietzche:

> "His parents told the FBI that Corkins "has strong opinions with respect to those he believes do not treat homosexuals in a fair manner."
>
> Corkins definitely comes from the left side of the political spectrum.
>
> According to the Washington Post: "Allan P. Chan, 28, a former George Mason student, said he met Corkins at a campus gym about six years ago. They worked out together, lifting weights, and began to socialize and watch television together. Chan described Corkins as secretive and somewhat odd. Corkins's Facebook page included no photos, not even his own, and he displayed an intense interest in the 19th-century German philosopher Friedrich Nietzsche."

Corkins was convicted of domestic terrorism for the attack.

So the common denominator for both of these shooters seems to be left-wing politics and atheism. Quite different from what the mainstream media would have you believe.

I have lots of strong opinions. But when I approach people who disagree with me, my goal isn't to silence, coerce or overpower them. That's what secular leftists want to do to their opponents, often using the power of government. In my case, I'm a Christian theist. My job is to imitate Jesus' way of dealing with his opponents. That's more like showing them evidence and trying to reason with them about it. Persuasion is standard operating procedure for Christians. Not so for atheists on the political left.

# South Carolina and West Virginia House Republicans vote for Pain Capable abortion ban

**Wintery Knight** · 12 February 2015 · Archived copy · Original

Let's start with South Carolina. (H/T Mary from Marin)

Life News reports:

> The South Carolina state House has approved a pro-life bill to ban abortions after 20 weeks, because research shows unborn children can feel intense pain.
>
> Called the Pain-Capable Unborn Child Protection Act (H3114) the measure received an 80-27 vote in the House and now moves to the state Senate. More than 18,000 'very late term' abortions are performed every year on perfectly healthy unborn babies in America.
>
> During the committee hearing, experts talked about unborn children and the pain they feel in abortions.
>
> Dr. Stuart Hamilton, M.D., a Columbia University trained pediatrician and long-time supporter of pro-life legislation, described fetal development for members of the committee. He said he agrees with scientific research demonstrating the unborn child can feel pain at 20 weeks after fertilization.
>
> "There is evidence for the probable appreciation of pain by 20 weeks gestation after fertilization," Dr. Hamilton told the subcommittee. "Anatomically at 20 weeks, the examination of the nervous system displays the appropriate tracks in the central nervous system and the peripheral nerve fibers that are designed to transmit and carry pain impulses." He went on to explain that at the age of 16 weeks, the baby's body shows "substantial neurological maturation." Even at 12 weeks, he said, "The immature constituents of these pathways are clearly visible with magnification."
>
> A father-son team of physicians also spoke in favor of the bill. Dr. Tom Austin, M.D., a retired neonatologist, and former director of Neonatology at the USC School of Medicine, defined pain as "a noxious insult that one attempts to avoid or repel." In his practice he treated babies prematurely born at 18 to 22 weeks. "They did show response to stimuli," he said. "They would respond, move, recoil."
>
> […]The bill relies on the science of fetal pain to establish a Constitutional reason for Congress to ban abortions late in pregnancy. The science behind the concept of fetal pain is fully established and Dr. Steven Zielinski, an internal medicine physician from Oregon, is one of the leading researchers into it. He first published reports in the 1980s to validate research showing evidence for it.
>
> He has testified before Congress that an unborn child could feel pain at "eight-and-a-half weeks and possibly earlier" and that a baby before birth "under the right circumstances, is capable of crying."
>
> He and his colleagues Dr. Vincent J. Collins and Thomas J. Marzen were the top researchers to point to fetal pain decades ago. Collins, before his death, was Professor of Anesthesiology at Northwestern University and the University of Illinois and author of Principles of Anesthesiology, one of the leading medical texts on the control of pain.
>
> "The functioning neurological structures necessary to suffer pain are developed early in a child's development in the womb," they wrote.
>
> "Functioning neurological structures necessary for pain sensation are in place as early as 8 weeks, but certainly by 13 1/2 weeks of gestation. Sensory nerves, including nociceptors, reach the skin of the fetus before the 9th week of gestation. The first detectable brain activity occurs in the thalamus between the 8th and 10th weeks. The movement of electrical impulses through the neural fibers and spinal column takes place between 8 and 9 weeks gestation. By 13 1/2 weeks, the entire sensory nervous system functions as a whole in all parts of the body," they continued.

And now. Life News on West Virginia: (H/T Mary from Marin)

> The West Virginia state House today passed a bill to ban abortions after 20 weeks by an 87-12 margin. The vote came on the same day West Virginians for Life held a rally at the state capitol.
>
> More than 18,000 'very late term' abortions are performed every year on perfectly healthy unborn babies in America.
>
> […]One leading expert in the field of fetal pain, Dr. Kanwaljeet S. Anand at the University of Tennessee, stated in his expert report commissioned by the U.S. Department of Justice, "It is my opinion that the human fetus possesses the ability to experience pain from 20 weeks of gestation, if not earlier, and the pain perceived by a fetus is possibly more intense than that perceived by term newborns or older children."
>
> "The neural pathways are present for pain to be experienced quite early by unborn babies," explains Steven Calvin, M.D., perinatologist, chair of the Program in Human Rights Medicine, University of Minnesota, where he teaches obstetrics.
>
> Dr. Colleen A. Malloy, Assistant Professor, Division of Neonatology at Northwestern University in her testimony before the House Judiciary Committee in May 2012 said, "[w]hen we speak of infants at 22 weeks LMP [Note: this is 20 weeks post fertilization], for example, we no longer have to rely solely on inferences or ultrasound imagery, because such premature patients are kicking, moving, reacting, and developing right before our eyes in the Neonatal Intensive Care Unit."
>
> "In today's medical arena, we resuscitate patients at this age and are able to witness their ex-utero growth and development. Medical advancement and technology have enabled us to improve our ability to care for these infants…In fact, standard of care for neonatal intensive care units requires attention to and treatment of neonatal pain," Dr. Malloy testified. She continued, "[t]hus, the difference between fetal and neonatal pain is simply the locale in which the pain occurs. The receiver's experience of the pain is the same. I could never imagine subjecting my tiny patients to horrific procedures such as those that involve limb detachment or cardiac injection."

What excites me about these pieces of legislation is the debates, and how our side has all the evidence. I like to talk about the evidence for and against Christian theism. It's great when you can talk about evidence from cosmology, biology and so on. Real experimental evidence is a wonderful sword to wield in a debate. And that's what is fun about the pro-life movement. The more science advances, the more evidence we have to show that even pro-abortion people should not want to kill them. There are a lot of lefties out there who won't eat meat because they are concerned about the pain that animals feel. Well guess what lefties? Unborn babies feel pain, too. We have the science to prove it.

# Stephen C. Meyer lectures on intelligent design and the origin of life

**Wintery Knight** · 12 February 2015 · Archived copy · Original

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell".

You can get an MP3 of the lecture here. (30 MB)

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator
- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive

- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

**Proteins are constructed from a sequence of amino acids:**

A sequence of amino acids forming a protein

**Proteins sticking onto the double helix structure of DNA:**

Some proteins sticking onto the sugar phosphate backbone

I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

UPDATE: There is a good breakdown of some of the slides with helpful flow charts here on Uncommon Descent.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# Obama's executive amnesty will make it easier for non-citizens to vote in elections

**Wintery Knight** · 13 February 2015 · Archived copy · Original

This is from the Washington Times.

Excerpt:

> President Obama's temporary deportation amnesty will make it easier for illegal immigrants to improperly register and vote in elections, state elections officials testified to Congress on Thursday, saying that the driver's licenses and Social Security numbers they will be granted create a major voting loophole.
>
> While stressing that it remains illegal for noncitizens to vote, secretaries of state from Ohio and Kansas said they won't have the tools to sniff out illegal immigrants who register anyway, ignoring stiff penalties to fill out the registration forms that are easily available at shopping malls, motor vehicle bureaus and in curbside registration drives.
>
> Anyone registering to vote attests that he or she is a citizen, but Ohio Secretary of State Jon Husted said mass registration drives often aren't able to give due attention to that part, and so illegal immigrants will still get through.

Oh, but it gets better – they also get tax refunds for years where they worked illegally:

> IRS Commissioner John Koskinen told Congress on Wednesday that even illegal immigrants who didn't pay taxes will be able to claim back-refunds once they get Social Security numbers under President Obama's temporary deportation amnesty.
>
> […]Mr. Obama's new deportation policies, which carve most illegal immigrants out of danger of being removed, and could proactively grant as many as 4 million illegal immigrants work permits and Social Security numbers, are increasingly under fire for ancillary consequences such as tax credits and competition for jobs.
>
> Mr. Koskinen, testifying to the House oversight committee, said the White House never asked him or anyone else at the IRS about the potential tax effects of his amnesty policy.
>
> […]He also clarified his testimony to the Senate last week, where he acknowledged illegal immigrants who had paid taxes using substitute Social Security numbers but who gain real Social Security numbers when they are approved for the amnesty can apply for back-refunds of the Earned Income Tax Credit.
>
> On Wednesday, he said even illegal immigrants who didn't pay taxes will be able to apply for back-credits once they get Social Security numbers.
>
> The EITC is a refundable tax credit, which means those who don't have any tax liability can still get money back from the government.
>
> "Under the new program, if you get a Social Security number and you work, you'll be eligible to apply for the Earned Income Tax Credit," Mr. Koskinen said.
>
> He said that would apply even "if you did not file" taxes, as long as the illegal immigrant could demonstrate having worked off-the-books during those years.
>
> That expands the universe of people eligible for the tax credit by millions. He said only about 700,000 illegal immigrants currently work and pay taxes using an Individual Taxpayer Identification Number, but as many as 4 million illegal immigrants could get a stay of deportation and work permits under the temporary amnesty, which would mean they would be eligible to claim back-refunds if they worked those years.

I just don't like it when I see Democrats making it harder for people who play by the rules and easier for people

who break the rules. It's things like this executive amnesty that discourage me from working and getting married. If the government just views me a chump who they can tax with impunity in order to buy votes from the people who get more from government than they put into it, then why should I try to do anything? I feel used. I'm being pressed to work to pay their taxes, then they turn around and give the money to people who break all the rules. Since young, unmarried women are the ones who vote for high taxes and bigger government, it makes me think I should get married at all. Why try to do anything when your government is trying to wreck all your plans anyway? Nobody seems to care about the man who works hard and plays by the rules.

# The Wintery Knight's favorite Bible verses

**Wintery Knight** · 13 February 2015 · Archived copy · Original

I was asked by the Dina to post Bible verses for a week on my Facebook page, so I chose 8 of them.

If you haven't seen me posting them this week on my Facebook page, here they are:

Psalm 27:14:

> [11] Teach me Your way, O Lord,
> And lead me in a level path
> Because of my foes.
> [12] Do not deliver me over to the desire of my adversaries,
> For false witnesses have risen against me,
> And such as breathe out violence.
> [13] *I would have despaired* unless I had believed that I would see the goodness of the Lord
> In the land of the living.
> **[14] Wait for the Lord;**
> **Be strong and let your heart take courage;**
> **Yes, wait for the Lord.**

1 Corinthians 4:2:

> 1 This is how one should regard us, as servants of Christ and stewards of the mysteries of God.
>
> **2 Moreover, it is required of stewards that they be found faithful.**
>
> 3 But with me it is a very small thing that I should be judged by you or by any human court. In fact, I do not even judge myself.
>
> 4 For I am not aware of anything against myself, but I am not thereby acquitted. It is the Lord who judges me.

Matthew 5:13:

> 10 "Blessed are those who have been persecuted for the sake of righteousness, for theirs is the kingdom of heaven.
>
> 11 "Blessed are you when people insult you and persecute you, and falsely say all kinds of evil against you because of Me. 12 Rejoice and be glad, for your reward in heaven is great; for in the same way they persecuted the prophets who were before you.
>
> **13 "You are the salt of the earth; but if the salt has become tasteless, how can it be made salty again? It is no longer good for anything, except to be thrown out and trampled under foot by men.**
>
> 14 "You are the light of the world. A city set on a hill cannot be hidden;
>
> 15 nor does anyone light a lamp and put it under a basket, but on the lampstand, and it gives light to all who are in the house.

2 Timothy 2:4:

> 1 You therefore, my son, be strong in the grace that is in Christ Jesus.
>
> [2] The things which you have heard from me in the presence of many witnesses,entrust these to faithful men who will be able to teach others also.

> [3] Suffer hardship with *me*, as a good soldier of Christ Jesus.
>
> **[4] No soldier in active service entangles himself in the affairs of everyday life, so that he may please the one who enlisted him as a soldier.**
>
> [5] Also if anyone competes as an athlete, he does not win the prize unless he competes according to the rules.

Daniel 3:18:

> [13] Then Nebuchadnezzar in rage and anger gave orders to bring Shadrach, Meshach and Abed-nego; then these men were brought before the king.
>
> [14] Nebuchadnezzar responded and said to them, "Is it true, Shadrach, Meshach and Abed-nego, that you do not serve my gods or worship the golden image that I have set up?
>
> [15] Now if you are ready, at the moment you hear the sound of the horn, flute, lyre, trigon, psaltery and bagpipe and all kinds of music, to fall down and worship the image that I have made, *very well*. But if you do not worship, you will immediately be cast into the midst of a furnace of blazing fire; and what god is there who can deliver you out of my hands?"
>
> [16] Shadrach, Meshach and Abed-nego replied to the king, "O Nebuchadnezzar, we do not need to give you an answer concerning this matter.
>
> [17] If it be *so*, our God whom we serve is able to deliver us from the furnace of blazing fire;and He will deliver us out of your hand, O king.
>
> **[18] But *even* if *He does* not,let it be known to you, O king, that we are not going to serve your gods or worship the golden image that you have set up."**

Esther 4:14:

> [10] Then Esther spoke to Hathach and ordered him *to reply* to Mordecai:
>
> [11] "All the king's servants and the people of the king's provinces know that for any man or woman who comes to the king to the inner court who is not summoned, he has but one law, that he be put to death, unless the king holds out to him the golden scepter so that he may live. And I have not been summoned to come to the king for these thirty days."
>
> [12] They related Esther's words to Mordecai.
>
> [13] Then Mordecai told *them* to reply to Esther, "Do not imagine that you in the king's palace can escape any more than all the Jews.
>
> **[14] For if you remain silent at this time, relief and deliverance will arise for the Jews from another place and you and your father's house will perish. And who knows whether you have not attained royalty for such a time as this?"**

Philippians 1:9:

> [3] I thank my God in all my remembrance of you,
>
> [4] always offering prayer with joy in my every prayer for you all,
>
> [5] in view of your participation in the gospel from the first day until now.
>
> [6] *For I am* confident of this very thing, that He who began a good work in you will perfect it until the day of Christ Jesus.
>
> [7] For it is only right for me to feel this way about you all, because I have you in my heart, since both in my

> imprisonment and in the defense and confirmation of the gospel, you all are partakers of grace with me.
>
> [8] For God is my witness, how I long for you all with the affection of Christ Jesus.
>
> **[9] And this I pray, that your love may abound still more and more in real knowledge and all discernment,**
>
> [10] so that you may approve the things that are excellent, in order to be sincere and blameless until the day of Christ;
>
> [11] having been filled with the fruit of righteousness which *comes* through Jesus Christ, to the glory and praise of God.

Numbers 13:30:

> [25] When they returned from spying out the land, at the end of forty days,
>
> [26] they proceeded to come to Moses and Aaron and to all the congregation of the sons of Israel in the wilderness of Paran, at Kadesh; and they brought back word to them and to all the congregation and showed them the fruit of the land.
>
> [27] Thus they told him, and said, "We went in to the land where you sent us; and it certainly does flow with milk and honey, and this is its fruit.
>
> [28] Nevertheless, the people who live in the land are strong, and the cities are fortified *and* very large; and moreover, we saw the descendants of Anak there.
>
> [29] Amalek is living in the land of the Negev and the Hittites and the Jebusites and the Amorites are living in the hill country, and the Canaanites are living by the sea and by the side of the Jordan."
>
> **[30] Then Caleb quieted the people before Moses and said, "We should by all means go up and take possession of it, for we will surely overcome it."**

I know I have some commenters who LOVE to post a million Bible verses in their comments, so if you want to post your favorite Bible verses in the comments, try to be restrained. I'd like to see which ones my readers like best though.

# Stephen C. Meyer: does the Big Bang cosmology support the existence of God?

**Wintery Knight** · 13 February 2015 · Archived copy · Original

Here's the 66-minute video featuring Dr. Stephen C. Meyer, who holds the Ph.D in philosophy of science from Cambridge University, and other degrees in the hard sciences.

The lecture starts really, really slowly. You can just fast-forward to the 12 minute mark, or you might die of boredom.

Topics:

- Up until the the last 100 years or so, everyone agreed that the universe was eternal
- This is at odds with the traditional Christian view that God created the universe
- Materialism, the view that matter is all there is, requires eternally existing matter
- Discovery #1: Hubble discovers that the universe is expanding (redshift observation)
- The expanding universe was resisted by proponents of the eternal universe, like Einstein
- Some naturalists even proposed speculative static models like the steady-state model
- However, not of the speculative models fit with observations and experimental results
- Discovery #2: Penzias and Wilson discover the cosmic microwave background radiation
- Measurements of this background radiation confirmed a prediction of the Big Bang theory
- The steady-state theory was falsified of by the discovery of this background radiation
- The oscillating model was proposed to prevent the need for an absolute beginning
- But the oscillating model is not eternal, it loses energy on each "bounce"
- A paper by Alan Guth and Marc Sher from 1982 proved that our universe will not bounce
- In addition, experiments reveal that the universe will expand forever, and not contract
- The beginning of the universe is more at home in a theistic worldview than an atheistic one
- The beginning of the universe fits in well with the Bible, e.g. – Genesis 1, Titus 1, etc.

In case you are wondering about what the evidence is for the Big Bang, here are 3 of the evidences that are most commonly offered:

> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

By the way, Dr. Meyer also does a great job of explaining the problem of proteins, DNA and the origin of life in this lecture. And you can hear him defend his views in this debate podcast with Keith Fox and in this debate podcast with Peter Atkins. He does a great job in these debates.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory

- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# William Lane Craig lectures on naturalistic alternatives to the Big Bang

**Wintery Knight** · 14 February 2015 · Archived copy · Original

Here's the lecture, which was given in 2004 at the University of Colorado, Boulder.

This lecture might be a little advanced for beginners, but if you stretch your mind first, you shouldn't tear anything. (Note: standard disclaimers apply if you do tear something!)

The description of the video states:

> This is quite simply one of the best lectures William Lane Craig (a philosopher of science) has given. Craig explores the origins of the universe. He argues for a beginning of the universe, while refuting scientific models like the Steady State Theory, the Oscillating Theory, Quantum Vacuum Fluctuation Model, Chaotic Inflationary Theory, Quantum Gravity Theory, String Theory, M-Theory and Cyclic Ekpyrotic Theory.

And here is the description of the lecture from Reasonable Faith:

> A Templeton Foundation lecture at the University of Colorado, Boulder, laying out the case from contemporary cosmology for the beginning of the universe and its theological implications. Includes a lengthy Q & A period which features previous critics and debate opponents of Dr. Craig who were in attendance, including Michael Tooley, Victor Stenger, and Arnold Guminski.

Craig has previously debated famous atheists Stenger and Tooley previously. And they both asked him questions in the Q&A time of this lecture. Imagine – having laid out your entire case to two people who have debated you before and who know your arguments well. What did they ask Craig, and how did he respond?

**The scientific evidence**

The Big Bang cosmology that Dr. Craig presents is the standard model for how the universe came into being. It is a theory based on six lines of experimental evidence.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

If you are looking for some detail on these evidences, here's a re-cap of the three main evidences for the Big Bang cosmology from Caltech. (Numbers 2, 3 and 5 from the list above)

Excerpt:

> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theory that describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary

> since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> […]Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

It's probably a good idea to be familiar with these if you are presenting this argument, because experimental science is a reliable way of knowing about reality.

**Published research paper**

This lecture by Dr. Craig is based on a research paper published in an astrophysics journal, and was delivered to an audience of students and faculty, including atheist physicist Victor Stenger and prominent atheist philosopher Michael Tooley, at the University of Colorado at Boulder.

Here's the peer-reviewed article that the lecture is based on.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

If you want something to post on your Twitter or Facebook that is much shorter than this lecture, then you should check out this quick 4-minute explanation of the kalam argument.

# How much do we pay as a society for removing the rules around love and marriage?

**Wintery Knight** · 14 February 2015 · Archived copy · Original

Dina sent me this UK Daily Mail article.

It says:

> The cost of family breakdown to the country has shot up by more than £10 billion a year since 2009, a study found yesterday.
>
> It put the price to taxpayers in 2015 of clearing up the damage after families fail and looking after the separated adults and children at £47.31 billion.
>
> The bill takes in the cost of benefits, health and social care, housing, policing and the courts, and the price of failure in the education system of children hurt by divorce or the parting of their parents.
>
> The Relationships Foundation think tank said that the money spent because of family breakdown amounts to three per cent of the economic product of the country and each taxpayer will have to contribute £1,546.
>
> The bill has risen from £37.03 billion since the costs were first calculated in 2009. Over the past year alone, despite falling costs for policing, vandalism and disciplinary problems in schools attributable to family breakdown, the cost has risen by £1.55 billion.

Now the further along we go into the sexual revolution, the more the rules slip off and the more the costs go up. But don't try to tell any secular leftists that marriage is necessary to keep government small and tax bills low – they are so committed to "anything goes" moral relativism when it comes to sex that no restrictions of any kind are acceptable to them.

Let's see some more numbers from the United States.

> Divorce and out-of-wedlock childbearing cost U.S. taxpayers more than $112 billion a year, according to a study commissioned by four groups advocating more government action to bolster marriages.
>
> Sponsors say the study is the first of its kind and hope it will prompt lawmakers to invest more money in programs aimed at strengthening marriages. Two experts not connected to the study said such programs are of dubious merit and suggested that other investments — notably job creation — would be more effective in aiding all types of needy families.
>
> There have been previous attempts to calculate the cost of divorce in America. But the sponsors of the new study, being released Tuesday, said theirs is the first to gauge the broader cost of "family fragmentation" — both divorce and unwed childbearing.
>
> The study was conducted by Georgia State University economist Ben Scafidi. His work was sponsored by four groups who consider themselves part of a nationwide "marriage movement" — the New York-based Institute for American Values, the Institute for Marriage and Public Policy, Families Northwest of Redmond, Wash., and the Georgia Family Council, an ally of the conservative ministry Focus on the Family.
>
> […]Scafidi's calculations were based on the assumption that households headed by a single female have relatively high poverty rates, leading to higher spending on welfare, health care, criminal justice and education for those raised in the disadvantaged homes. The $112 billion estimate includes the cost of federal, state and local government programs, and lost tax revenue at all levels of government.

Now I blog a lot about the kinds of behaviors that cause marriages to break down – all of which are pushed by radical feminists. We have the sexual revolution, recreational premarital sex, no fault divorce, single mother

welfare, and so on – all of these things make it easier for people to break up and harder for them to see relationships as self-sacrificial and permanent. Opening the door to gay marriage is just another redefinition that will remove marital norms like permanence and exclusivity. The more unstable marriage is, the more it creates expensive litigation. The more children grow up without fathers and/or mothers, the more we have to pay in social programs.

Love is a serious business.

# David Axelrod: Obama lied about gay marriage in 2008 in order to get elected

**Wintery Knight** · 15 February 2015 · Archived copy · Original

This is from Life Site News.

Excerpt:

> A former senior adviser to President Obama has confirmed what his most strident critics have said all along: Barack Obama lied to the American people about opposing gay "marriage" to boost his chances of winning the 2008 presidential elections.
>
> David Axelrod, a veteran of Chicago left-wing politics who advised Obama during the campaign, makes the admission in a new book *Believer: My Forty Years in Politics*, which hits book shelves today.
>
> Obama first indicated his support for redefining marriage while running for state office in Illinois in 1996, filling out a questionnaire that said, "I favor legalizing same-sex marriages, and would fight efforts to prohibit such marriages."
>
> Candidate Obama wanted to publicly broadcast his views during his campaigns for national office but was afraid the position – then radically unpopular – would end his chances of becoming president. Axelrod writes that campaign manager Jim Messina warned Obama that backing same-sex "marriage" could cost him the electoral votes of North Carolina.
>
> Instead, both he and Hillary Clinton said they held to the traditional definition of marriage, although they supported "civil unions" for homosexuals.
>
> During a 2008 debate, Obama told Saddleback Church megapastor Rick Warren, "I believe that marriage is the union between a man and a woman. Now, for me as a Christian, it is also a sacred union. God's in the mix."
>
> But Axelrod reveals in his new book that, after proclaiming his support for marriage at one campaign event, Obama dismissed his rhetoric as nothing more than a bout of "bullsh—ing."
>
> Axelrod said that the candidate agreed to conceal his views, but "Obama never felt comfortable with his compromise and, no doubt, compromised position. He routinely stumbled over the question when it came up in debates or interviews."
>
> When others asked about Obama's 1996 campaign statement, his supporters played it off as a campaign snafu. White House Communications Director Dan Pfeiffer said in 2011, "That questionnaire was actually filled out by someone else."
>
> As a candidate, he walked a thin line, stating his support for traditional marriage – but opposing any efforts that would legally codify that belief and backing government policies that would grant greater acceptance (and benefits) to homosexuals. In 2008, he dismissed opposition to homosexuality as based on "an obscure passage in Romans."
>
> Obama did, in fact, carry North Carolina in 2008 on his way to the White House, where he chose to bide his time until he could come out in favor of gay "marriage."

I can remember like yesterday talking to two black Christians in the parking lot outside my office after work about Obama, just before the 2008 elections. Both of them went to church, and both claimed to be evangelical Christians. One in particular loved the writing of Alistair Begg and read lots of Reformed theology. I asked them who they were voting for, and they said "we are voting for Obama". I told them both about his votes on the Born-Alive Infant Protection Act in Illinois (he voted in favor of infanticide multiple times), his 1996 position in support of gay marriage, his support for cap and trade carbon taxes, his weak stance on national security, and more. I told them that if we ever hoped to repeal Roe v. Wade, that we could not elect this man President. I told him he would pick

two pro-abortion Supreme Court judges, at least (and he already has picked two, and will get more in all likelihood). They told me I was wrong about everything and that Obama was pro-life, pro-marriage and really tough on Islamic terrorism.

I also spoke to a black Christian woman in my office. She loved to read books on Bible Study and theology so that she could teach in the church. She even knew some basic apologists, something that the two black guys did not know. She was a much more avid reader than the two guys, who seemed to be more focused on sports, movies and music. She also voted for Obama. I remember her saying she would vote for him, and I could not believe my ears. She was very strong on being pro-life and pro-marriage.

| | % Electorate | 2008 Obama | McCain |
|---|---|---|---|
| **Minority Religious Groups** | | | |
| Black Protestants | 11 | 95 | 5 |
| Other Faiths | 5 | 81 | 19 |
| Hispanic Catholics/Other Christians | 6 | 74 | 26 |
| Hispanic Protestants | 5 | 52 | 48 |
| | | | |
| Unaffiliated | 12 | 75 | 27 |
| | | | |
| **White Catholics** | | | |
| Modernist Catholics | 7 | 66 | 34 |
| Centrist Catholics | 6 | 34 | 66 |
| Traditionalist Catholics | 6 | 39 | 61 |
| | | | |
| **White Mainline Protestants** | | | |
| Modernist Mainline Protestants | 6 | 61 | 39 |
| Centrist Mainline Protestants | 6 | 51 | 49 |
| Traditionalist Mainline Protestants | 4 | 32 | 68 |
| | | | |
| Other Christians | 3 | 28 | 72 |
| | | | |
| **White Evangelical Protestants** | | | |
| Modernist Evangelical Protestants | 3 | 45 | 55 |
| Centrist Evangelical Protestants | 9 | 31 | 69 |
| Traditionalist Evangelical Protestants | 15 | 11 | 89 |
| | | | |
| **ALL** | 100 | 54 | 46 |

Should Christians have voted for Obama?

I was one of the 5 percent who did not vote for Obama in 2008, despite having dark skin just like my 3 co-workers who voted for him. Those conversations with those three people will stay with me till the day I die. I don't think I have ever really understand how much people could suppress evidence in order to keep their beliefs before, until I spoke to those people. When I asked them if they were conservative Christians, they told me that they were. I went to a barbecue at one of their houses and saw bookshelves filled with Christian books. And yet they voted for a radical on abortion and a supporter of gay marriage, even when I told them about Obama's voting record.

Skin color doesn't matter to me when I am picking a candidate, but to some people it mattered more than facts.

# Four ways that the progress of experimental science conflicts with atheism

**Wintery Knight** · 15 February 2015 · Archived copy · Original

When people ask me whether the progress of science is more compatible with theism or atheism, I offer the following four basic pieces of scientific evidence that are more compatible with theism than atheism.

Here are the four pieces of evidence best explained by a Creator/Designer:

1. the kalam argument from the origin of the universe
2. the cosmic fine-tuning (habitability) argument
3. the biological information in the first replicator (origin of life)
4. the sudden origin of all of the different body plans in the fossil record (Cambrian explosion)

And I point to specific examples of recent discoveries that confirm those four arguments. Here are just a few of them:

1. An explanation of 3 of the 6 experimental evidences for the Big Bang cosmology (From an article from Caltech)
2. Examples of cosmic fine-tuning to allow the existence of conscious, embodied life (From the New Scientist)
3. Evidence that functional protein sequences are beyond the reach of chance, (from Doug Axe's JMB article)
4. Evidence showing that Ediacaran fauna are not precursors to the Cambrian fossils, (from the journal Nature)

Atheists will typically reply to the recent scientific discoveries that overturned their speculations like this:

1. Maybe the Big Bang cosmology will be overturned by the Big Crunch/Bounce so that the universe is eternal and has no cause
2. Maybe there is a multiverse: an infinite number of unobservable, untestable universes which makes our finely-tuned one more probable
3. Maybe the origin of life could be the result of chance and natural processes
4. Maybe we will find a seamless chain of fossils that explain how the Cambrian explosion occurred slowly, over a long period time

Ever heard any of these responses?

Below I list some resources to help you to respond to the four responses of atheists to the experimental data.

**1) The Big Crunch/Bounce has been disproved theoretically and experimentally.**

Theoretically:

> Nature 302, 505 – 506 (07 April 1983); doi:10.1038/302505a0
>
> The impossibility of a bouncing universe
>
> ALAN H. GUTH* & MARC SHER†
>
> *Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, USA
>
> †Department of Physics, University of California, Irvine, California 92717, USA
>
> Petrosian1 has recently discussed the possibility that the restoration of symmetry at grand unification in a closed contracting Robertson–Walker universe could slow down and halt the contraction, causing the universe to bounce. He then went on to discuss the possibility that our universe has undergone a series of such bounces.

> We disagree with this analysis. One of us (M.S.) has already shown2 that if a contracting universe is dominated by radiation, then a bounce is impossible. We will show here two further results: (1) entropy considerations imply that the quantity S (defined in ref. 1 and below), which must decrease by ~1075 to allow the present Universe to bounce, can in fact decrease by no more than a factor of ~2; (2) if the true vacuum state has zero energy density, then a universe which is contracting in its low temperature phase can never complete a phase transition soon enough to cause a bounce.

Experimentally:

> The universe is not only expanding, but that expansion appears to be speeding up. And as if that discovery alone weren't strange enough, it implies that most of the energy in the cosmos is contained in empty space — a concept that Albert Einstein considered but discarded as his "biggest blunder." The new findings have been recognized as 1998's top scientific breakthrough by Science magazine.
>
> […]The flood of findings about the universe's expansion rate is the result of about 10 years of study, said Saul Perlmutter, team leader of the Supernova Cosmology Project at Lawrence Berkeley National Laboratory.
>
> Perlmutter and others found such a yardstick in a particular kind of exploding star known as a Type 1A supernova. Over the course of several years, the astronomers developed a model to predict how bright such a supernova would appear at any given distance. Astronomers recorded dozens of Type 1A supernovae and anxiously matched them up with redshifts to find out how much the universe's expansion was slowing down.
>
> To their surprise, the redshift readings indicated that the expansion rate for distant supernovae was lower than the expansion rate for closer supernovae, Perlmutter said. On the largest scale imaginable, the universe's galaxies appear to be flying away from each other faster and faster as time goes on.
>
> "What we have found is that there is a 'dark force' that permeates the universe and that has overcome the force of gravity," said Nicholas Suntzeff of the Cerro Tololo Inter-American Observatory, who is the co-founder of another group called the High-z Supernova Search Team. "This result is so strange and unexpected that it perhaps is only believable because two independent international groups have found the same effect in their data."

There has only been one creation of the universe, and the universe will never reverse its expansion, so that it could oscillate eternally. That view is popular, perhaps in part because many people watched videos of Carl Sagan speculating about it in public school classrooms, but all it was was idle naturalistic speculation, (Sagan was a naturalist, and held out hope that science would vindicate naturalism), and has been contradicted by good experimental science. You should be familiar with the 3 evidences for the Big Bang (redshift, light element abundances (helium/hydrogen) and the cosmic microwave background radiation. There are others, (radioactive element abundances, second law of thermodynamics, stellar lifecycle), but those are the big three. Point out how the experimental evidence for the Big Bang has piled up, making the problem even worse for the eternal-universe naturalists.

**2) The multiverse has not been tested experimentally, it's pure speculation.**

Speculation:

> Multiverse thinking or the belief in the existence of parallel universes is more philosophy or science fiction than science. "Cosmology must seem odd to scientists in other fields".
>
> George Ellis, a well-known mathematician and cosmologist, who for instance has written a book with Stephen Hawking, is sceptical of the idea that our universe is just another universe among many others.
>
> A few weeks ago, Ellis, professor emeritus of applied mathematics at the University of Cape Town, reviewed Brian Greene's book The Hidden Reality: Parallel Universes and the Deep Laws of the Cosmos (Knopf/Allen

> Lane, 2011) in the journal Nature. He is not at all convinced that the multiverse hypothesis is credible: ”Greene is not presenting aspects of a known reality; he is telling of unproven theoretical possibilities.”
>
> According to professor Ellis, there is no evidence of multiverses, they cannot be tested and they are not science.
>
> Ellis is not the only multiverse sceptic in this universe. A few months ago, science writer John Horgan wrote a column in Scientific American, expressing his doubt in multiverses.

When you get into a debate, you must never ever let the other side get away with asserting something they have no evidence for. Call them on it – point out that they have no evidence, and then hammer them with evidence for your point. Pile up cases of fine-tuning on top of each other and continuously point out that they have no experimental evidence for their speculations. Point out that more evidence we get, the more cases of fine-tuning we find, and the tougher the problem gets for naturalists. There is no evidence for a multiverse, but there is evidence for fine-tuning. TONS OF IT.

**3) Naturalistic theories for the origin of life have two problems: can’t make the amino acids in an oxydized atmosphere and can’t make protein and DNA sequences by chance in the time available.**

Building blocks:

> The oxidation state of Hadean magmas and implications for early Earth’s atmosphere
>
> Dustin Trail, E. Bruce Watson & Nicholas D. Tailby
>
> Nature 480, 79–82 (01 December 2011) doi:10.1038/nature10655
>
> […]These results suggest that outgassing of Earth’s interior later than ~200?Myr into the history of Solar System formation would not have resulted in a reducing atmosphere.

Functional protein sequences:

> J Mol Biol. 2004 Aug 27;341(5):1295-315.
>
> Estimating the prevalence of protein sequences adopting functional enzyme folds.
>
> Axe DD.
>
> The Babraham Institute, Structural Biology Unit, Babraham Research Campus, Cambridge CB2 4AT, UK. doug.axe@bbsrc.ac.uk
>
> Proteins employ a wide variety of folds to perform their biological functions. How are these folds first acquired? An important step toward answering this is to obtain an estimate of the overall prevalence of sequences adopting functional folds.
>
> […]Starting with a weakly functional sequence carrying this signature, clusters of ten side-chains within the fold are replaced randomly, within the boundaries of the signature, and tested for function. The prevalence of low-level function in four such experiments indicates that roughly one in 10(64) signature-consistent sequences forms a working domain. Combined with the estimated prevalence of plausible hydropathic patterns (for any fold) and of relevant folds for particular functions, this implies the overall prevalence of sequences performing a specific function by any domain-sized fold may be as low as 1 in 10(77), adding to the body of evidence that functional folds require highly extraordinary sequences.

So atheists are in double jeopardy here. They don’t have a way to build the Scrabble letters needed for life, and they don’t have a way to form the Scrabble letters into meaningful words and sentences. Point out that the more research we do, the tougher the problem gets to solve for naturalists, and the more it looks like an effect of intelligence. Write out the calculations for them.

**4) The best candidate to explain the sudden origin of the Cambrian era fossils was the Ediacaran fauna, but those are now recognized as not being precursors to the Cambrian fossils.**

Science Daily reports on a paper from the peer-reviewed journal Science:

> Evidence of the single-celled ancestors of animals, dating from the interval in Earth's history just before multicellular animals appeared, has been discovered in 570 million-year-old rocks from South China by researchers from the University of Bristol, the Swedish Museum of Natural History, the Paul Scherrer Institut and the Chinese Academy of Geological Sciences.
>
> […]This X-ray microscopy revealed that the fossils had features that multicellular embryos do not, and this led the researchers to the conclusion that the fossils were neither animals nor embryos but rather the reproductive spore bodies of single-celled ancestors of animals.
>
> Professor Philip Donoghue said: "We were very surprised by our results — we've been convinced for so long that these fossils represented the embryos of the earliest animals — much of what has been written about the fossils for the last ten years is flat wrong. Our colleagues are not going to like the result."
>
> Professor Stefan Bengtson said: "These fossils force us to rethink our ideas of how animals learned to make large bodies out of cells."

The trend is that there is no evolutionary explanation for the body plans that emerged in the Cambrian era. If you want to make the claim that "evolution did it", then you have to produce the data *today*. Not speculations about the future. The data we have today says no to naturalism. The only way to affirm naturalistic explanations for the evidence we have is *by faith*. But rational people know that we need to minimize our leaps of faith, and go with the simplest and most reasonable explanation – an intelligence is the best explanation responsible for rapid generation of biological information.

**Conclusion**

I do think it's important for Christians to focus more on scientific apologetics and to focus their academic careers in scientific fields. So often I look at Christian blogs, and I see way too much G. K. Chesterton, Francis Chan and other untestable, ineffective jibber-jabber. We need to bring the *hard* science, and stop making excuses about not being able to understand it because it's too hard. It's not too hard. Everyone can understand Lee Strobel's "The Case for a Creator". That's more than enough for the average Christian on science apologetics. We all have to do our best to learn what works. You don't want to be anti-science and pro-speculation like atheists are. I recommend reading Uncommon Descent and Evolution News every day for a start.

# Why didn't Scott Walker finish his fourth year of college at Marquette University?

**Wintery Knight** · 16 February 2015 · Archived copy · Original

Wisconsin Governor Scott Walker

The Weekly Standard explains the terrible scandal – he got a job offer in his fourth year of college, and he took it.

Excerpt:

> As Scott Walker surges in the 2016 GOP primary polls, Democrats and the mainstream media have taken a newfound interest in the well-known fact that the Wisconsin governor never received a college degree.
>
> […]Walker's story about his departure from college has always been straightforward: He attended Marquette University in Milwaukee from 1986 to 1990, but in the spring of his fourth year he left Marquette "in good standing" in order to take a full-time job at the American Red Cross. He intended to finish, but couldn't find the time.
>
> […]When he arrived at college, Walker threw himself into student government and campus politics, but was uninterested in class. The *Post* reports:

> Even in politics class, Walker could appear disengaged.
>
> "He seemed utterly bored," said Michael Fleet, who taught him in a class on the politics of the Third World. Fleet said he'd hoped to get Walker into debates with the liberals in the room. But it didn't work. Walker would only give occasional short speeches that made conservative arguments.
>
> So Walker abandoned the pursuit of a political science degree not only to take a full-time job at the American Red Cross but also to launch his political career. In the fall of 1990, Walker ran his first campaign for the Wisconsin legislature. He knocked on 13,000 doors only to lose badly, but his longshot campaign set him up for a winning campaign in another legislative district in 1993. In 2002, he was elected (and re-elected twice) as county executive in overwhelmingly Democratic Milwaukee county and went on to win three gubernatorial elections between 2010 and 2014.

Look, I studied computer science, and I thought that was interesting, but if I were studying political science, I would quit it too – if someone offered me a job. Non-STEM programs are a waste of time and money, compared to a real job. The job experience is worth more. And if he left to work, then he could start running for office as soon as he stopped studying full-time. I think people on the left forget how much college costs compared to a job. If you

are paying $15K a year for college, then making $45K instead is quite a swing in a positive direction.

I think people in the media are starting to go after Scott Walker, now, so everything gets put under a microscope.

The Weekly Standard also wrote about a New York Times hit piece on Walker that actually *lied* about his record.

Take a look:

> *New York Times* columnist Gail Collins writes about Wisconsin governor Scott Walker's recent speech in Iowa:
>
> Mainly, though, The Speech was about waging war on public employee unions, particularly the ones for teachers. "In 2010, there was a young woman named Megan Sampson who was honored as the outstanding teacher of the year in my state. And not long after she got that distinction, she was laid off by her school district," said Walker, lacing into teacher contracts that require layoffs be done by seniority.
>
> All of that came as a distinct surprise to Claudia Felske, a member of the faculty at East Troy High School who actually was named a Wisconsin Teacher of the Year in 2010. In a phone interview, Felske said she still remembers when she got the news at a "surprise pep assembly at my school." As well as the fact that **those layoffs happened because Walker cut state aid to education** [emphasis added].

Only one problem with that:

> [T]he big error in Collins's piece is her claim that "those layoffs happened because Walker cut state aid to education." **As you can see in the excerpt above, Collins is talking about teacher layoffs that occurred in 2010. Walker did not become governor until 2011.**
>
> The truth is that Walker's reforms actually saved teachers' jobs. Right before the 2012 Wisconsin recall election, Walker's Democratic opponent Tom Barrett couldn't name a single school that had been hurt by Walker's policies. When Walker's 2014 Democratic opponent Mary Burke was asked to name any schools hurt by Walker's collective bargaining reform, she relayed an anecdote she'd heard secondhand about one school. Burke's story didn't check out, and the superintendent of that school wrote a letter telling Burke she didn't know what she was talking about.

The New York Times updated their article after two days, with a correction that didn't go far enough, in my opinion.

Meanwhile, the knock on Walker is that he is not able to raise as much money as the RINO candidates.

The Wall Street Journal says boo to that:

> Several GOP fundraisers from the financial-services industry and other Manhattan business sectors are hosting donor events for Mr. Walker, a likely presidential candidate, when he visits New York next week. The events show that while former Florida Gov. Jeb Bush and New Jersey Gov. Chris Christie have strong support in New York money circles, neither has a lock on the city's big-dollar donors." The report continues, "Several fundraisers who backed GOP nominee Mitt Romney in 2012 are now helping Mr. Walker, who is best known for challenging Wisconsin public-sector unions and winning three statewide elections in a presidential swing state."

How is Walker doing in the polls? The International Business Times reports on a new Fox News poll:

> Wisconsin Gov. Scott Walker is at the head of the class among possible 2016 Republican presidential candidates, according to a new Fox News poll. In a survey that asked respondents to assign letter grades to 10 Republicans who may mount a campaign, Walker received an average grade of "B." Retired neurosurgeon Ben Carson and U.S. Sen. Marco Rubio, R-Fla., both received "B-" averages.

> […]Besides leading the Republican field in average grade, Walker also received the highest share of "A" grades among Republican voters at 18 percent. He was followed by Carson at 15 percent and former Arkansas Gov. Mike Huckabee at 12 percent. Ohio Gov. John Kasich got the lowest percentage of "A" grades among the 10 possible GOP candidates at 5 percent, while New Jersey Gov. Chris Christie got the highest percentage of "F" grades at 13 percent.
>
> […]The Fox News poll of 1,044 registered voters was conducted between Feb. 8 and Feb. 10. It has a margin of error of 3 percentage points.

If you want to hear a great introductory podcast on Scott Walker, I recommend listening to this 10-minute podcast on Scott Walker from the Weekly Standard. Get to know your Republican candidates now, don't wait for the mainstream media to pick another Romney for you.

If you want to learn more about Scott Walker, I recommend Walker's new book. I actually got the audio version, and it's read by Governor Walker himself.

# Differences between moving in together / living together and getting married?

**Wintery Knight** · 16 February 2015 · Archived copy · Original

Marriage and family

Dad sent me this article from the Daily Signal. Let's look at it, then I'll give my opinion on this research.

Five points:

1. Cohabiting couples are more prone to break up (and break up for good) than married couples
2. Even after marrying, women who cohabitated prior to marriage are more apt to separate or divorce than those who did not.
3. Men who cohabit tend to make less money than their married counterparts
4. Among young mothers, married women are more financially secure than cohabiting women
5. Cohabiting couples report more depression and more alcohol problems than married couples

The key points for me:

> **1. Cohabiting couples are more prone to break up (and break up for good) than married couples.** In the May 2003 issue of the Journal of Marriage and Family Study, Georgina Binstock and Arland Thornton found that, in the first year of living together, couples who cohabited were eight times more likely to end their relationships than those who were married. In the second and third years, those rates decreased to four and three times more likely, respectively. And when it comes to getting back together after a breakup, cohabiting couples were about a third less likely to get back together again.
>
> **2. Even after marrying, women who cohabitated prior to marriage are more apt to separate or divorce than those who did not.** One study demonstrated that for women who lived with their partners before marriage, it was 33 percent more likely for their marriages to result in separation or divorce.
>
> **5. Cohabiting couples report more depression and more alcohol problems than married couples.** Even when controlling for race, age and gender, cohabiting individuals reported higher levels of depression than married ones, 2.8 points according to one study. In another study, cohabiting individuals were three times more likely to report having problems with alcohol consumption than those who were married, as well as 25 percent more problems than single people who did not cohabit. Cohabiting women indicated more alcohol problems than married women—and men who cohabited said they had more alcohol problems than both married *and* single men.

This article from the UK Daily Mail that Dina sent me says that 9 in 10 children being born now will see their

parents split by the time the children reach 16.

It says:

> Nearly nine out of ten babies born to co-habiting parents this year will have seen their family break up by the time they reach the age of 16, says a study.
>
> Half of all children born this year will not be living with both natural parents when they reach their mid-teens, and almost all those who suffer family breakdown will be the children of unmarried parents, added the report.
>
> The study, based on figures from the national census and large-scale academic surveys, extrapolates from current trends and calculates that just 9 per cent of babies born to cohabiting couples today will still have their parents living together by the time they are 16.
>
> The report adds that the declining popularity of marriage and the rise of co-habitation will damage the lives of increasing numbers of children.
>
> The figures were produced by researcher Harry Benson, of the Marriage Foundation think tank, who said: 'The report provides solid evidence that married parents are more stable than unmarried parents.
>
> […]The study by the think tank, which is headed by High Court family division judge Sir Paul Coleridge, was based on findings from the census of 2001 and recent results from Understanding Society, a government-backed survey which charts the lives of people in 40,000 homes.
>
> The report said that in 2001, four out of ten teenagers aged 15 were not living with both parents, and among the parents of 15-year-olds who stayed together, 97 per cent were married.

The article is from 2013, but I don't see why things would have gotten any better. We are even more supportive as a society now of adult selfishness and less inclined to take care in our courting so that children are not deprived of fathers and/or mothers through our poor decision making.

So I've had experiences mentoring two women who started off as Christian, fell away from Christianity, then returned to the faith. Both of them spend time cohabitating with atheist men. So when I read numbers like the ones above, I want to warn Christian parents. You should not assume that your daughter will always be a Christian when you are raising them. You have to talk to them about these issues and share these numbers with them. Although you can start by telling them what the Bible says, you have to go on from there to explain what a romantic relationship looks like between Christians, and what happens to people who reject the Bible and start having premarital sex.

I am writing this as a virgin who had no trouble with the Bible. I take the rules on sexuality seriously. I am saving my first kiss on the lips for my engagement. But the reason why this is so easy for me, and so hard for others is because I am being bounded by evidence. I am not making decisions while drunk. I am not embracing a cultural view of what a good romantic partner is. I am not getting my moral rules and boundaries from my peers or from the culture. There is a lot more to building your defenses than just quoting the Bible. Lots of people quote the Bible, but they still end up raising fatherless children or having abortions. Parents, take the time to teach them the evidence.

# William Lane Craig explains the purpose of prayer

**Wintery Knight** · 16 February 2015 · Archived copy · Original

This is from a recent Q&A from his web site Reasonable Faith.

Here's the question:

> My question is this: what is the point of prayer? Here prayer is defined as an attempt to communicate with God.
>
> God either can read our thoughts or he cannot. If he can read our thoughts, there is surely no need to try to transmit or broadcast them to him as he already knows what they are. If he cannot read our thoughts, then any thought-based effort to contact him is futile. It doesn't matter what type of prayer it is (eg petition, thanksgiving, repentance), there is no point in making any effort to send it up to him.
>
> Of course, Christianity generally holds that God is omniscient and therefore able to read our thoughts, so the first of these scenarios would be the applicable one. The characteristic of omniscience makes the concept of prayer all the more redundant as it means God already knows any information that might be communicated to him, and exactly what the best thing is to do about it, so prayer could not in any way influence his decisions.
>
> I am well aware that the Bible commands us to pray in numerous instances, but in the light of this argument this strikes me as an incredibly arbitrary thing for a good God to command, and thus makes the reliability of the Bible all the more questionable to me.
>
> Currently it seems to me that the idea of prayer is most sensibly explained as an addictive placebo that gives people a greater sense of control over their circumstances than they actually have.

Dr. Craig's response is long, but here is the key part:

> Yes, God can read our thoughts. So how is that problematic for the spiritual discipline of prayer? You say, "*there is surely no need to try to transmit or broadcast them to him as he already knows what they are.*" Hold on, Joe! Seriously, do you think prayer is a matter of providing God *information*? You defined prayer as communication with God. You don't communicate with another person through a third-person relationship. You enter into what has been called an "I-thou" relationship. You speak *to* another person, not just about that person. Your girlfriend or wife would be decidedly unimpressed if you rationalized never telling her "I love you" on the grounds that she already knows that! Anybody that obtuse is on his way to a break-up! Two people who are in love with each other want to speak to each other, to build an intimate relationship with each other.
>
> So, sure, God reads my mind, and that enables me to pray to Him at any moment, even when audible prayers would be inappropriate. I can shoot up a thought-prayer, "Thank you, Lord!" or "God, give me wisdom!" at a moment's notice. This is what people in a relationship do. Can you imagine anyone so obtuse as to say, "I don't have to thank John for what he did for me because he already knows I'm grateful"? Or "I don't have to apologize to Susan because she already knows I'm sorry"?
>
> Moreover, did it not occur to you that such personal communication may be good for you? I-thou relationships open you up as a person, to make you a more loving, transparent, and vulnerable person. Prayer to God is the same way. God knows what is good for us and so wants us to talk to Him.

But in addition to that – yes, God can answer prayers:

> You have a second, different objection to prayer: "*omniscience makes the concept of prayer all the more redundant as it means God already knows any information that might be communicated to him, and exactly what the best thing is to do about it, so prayer could not in any way influence his decisions.*" This is an objection to the

> efficacy of prayer. What the objection overlooks is that God can take prayers (or the lack thereof) into account in His providential planning of the world. Knowing that Joe would freely pray in a certain set of circumstances, God may actualize a world in which Joe's prayers are answered; but had God known that Joe would not pray, God may have actualized something else instead. Prayers, then, are not an effort to change God's mind. Rather God takes account of prayers in choosing which world to actualize. Prayers thus make a *counterfactual* difference: if I were not to pray, then something else would have been the case instead. Knowledge of this sort is called "middle knowledge," and there's a lot on this website about this fascinating topic.

I have to tell you that in a poll of some of my male apologist friends, we all struggle with prayer. I can't say why they struggle with prayer, but in my case it's just that I have trouble understanding how big God is and how much more he can do – especially when there are so many problems and I can't work on them all myself. My personality is very practical. If something needs to be done, I do it. If something needs to be said, I say it. The best thing to do when any dragon appears is to attack it. The best thing to do when a princess is in distress is to rescue her. I do not call for help when there is anything for me to do. Prayer is like a last resort!

Having said that, I do understand that God wants to partner with me and that means that my perception of him changes as I work my way through the standard prayer practices… acknowledging who God is, thanking him for what I have, asking him for what I need, asking him to defend himself and act to make people aware of him and his character, etc. I do struggle with it, though. It's not as easy for me to do as go to church or read the Bible. Apologetics, of course, is no problem for me! I wish someone would encourage me to pray.

I think the middle knowledge point he raised is key, though – God, prior to creating the world *can* factor in all of your prayers that you freely pray, because he foreknows everything you will do in the circumstances (time and place) that he places you in. So, have confidence. Even if he doesn't answer you the way you expect, your prayers were heard.

Aside from all that, I do think that God is pleased when I pray about my concerns to him. It shows him how I am changing, and have his priorities in my mind, and not my own. If you are interested in pleasing God, then talking to him about your concerns and priorities is a good thing to do, especially as your concerns and priorities become more like his.

# Will Democrats blame global warming or the Crusades for the murder of 21 Christians?

**Wintery Knight** · 17 February 2015 · Archived copy · Original

Breitbart reports on a new video from Islamic State: (H/T Ari)

> A newly released video by Islamic State (ISIS) terrorists showing the mass beheading of 21 Christians condemns the faith's believers as "crusaders."
>
> "All crusaders: safety for you will be only wishes, especially if you are fighting us all together," a man on the video says with a North American English accent. "The sea you have hidden Sheikh Osama Bin Laden's body in, we swear to Allah we will mix it with your blood."
>
> The five-minute video, which includes the caption, "The people of the cross, followers of the hostile Egyptian church," shows Egyptian Coptic Christian men on their knees in orange jumpsuits having their heads severed by black-clad terrorists.
>
> President Barack Obama has yet to comment on the mass beheading of Christians by Islamic State terrorists, since he was golfing on Sunday at a private golf course owned by billionaire Larry Ellison.
>
> The release of the Islamic State's Christian beheading video comes a week-and-a-half after Obama infuriated Christians by using the occasion of the National Prayer Breakfast to lecture Christians not to get on their "high horse" about Islamic State terrorists burning a caged Jordanian pilot because "during the Crusades and the Inquisition, people committed terrible deeds in the name of Christ."

The Democrats also declined to specify that the victims of this attack were Christians. That's the same thing he did when he described the Jewish victims of Islamic terrorism as "a bunch of folks" who were "randomly shot". Radical Islam is not the problem that Democrats are trying to solve, you know. Obama likes to call this sort of thing "senseless violence" or "workplace violence" in order to avoid impugning radical Islam. The State Department is now saying that radical Islam's root cause is that we don't give them "job opportunities".

Democrats would prefer to ignore radical Islamic terrorism and focus on the real threat.

CNS News explains:

> Not radical Muslim terrorism, not an unsecured border, not an ever-growing federal debt that now exceeds $18 trillion, not the fact that 109 million live in households on federal welfare programs. These are not the greatest threats facing us today.
>
> "No challenge–no challenge–poses a greater threat to future generations than climate change," President Obama declared in his State of the Union Address on Tuesday night.
>
> […]President Obama then said that the U.S. military is saying that "climate change" is causing immediate risks to our national security–although he did not explain exactly what this meant or how the "Pentagon" had arrived at this conclusion.
>
> "The Pentagon says that climate change poses immediate risks to our national security," said Obama. "We should act like it."

Global warming alarmism really means increased regulation of business and consumer activity – that's the greatest threat we face, according to Democrats. I think what we are seeing is a fundamental lack of seriousness on global security and foreign policy by the golfer-in-chief and his panel of cultural relativist advisors.

This article from the left-leaning Atlantic makes the point that ISIS/ISIL *is very much Islamic*:

> The reality is that the Islamic State is Islamic. *Very* Islamic. Yes, it has attracted psychopaths and adventure seekers, drawn largely from the disaffected populations of the Middle East and Europe. But the religion preached by its most ardent followers derives from coherent and even learned interpretations of Islam.
>
> Virtually every major decision and law promulgated by the Islamic State adheres to what it calls, in its press and pronouncements, and on its billboards, license plates, stationery, and coins, "the Prophetic methodology," which means following the prophecy and example of Muhammad, in punctilious detail.
>
> […]Every academic I asked about the Islamic State's ideology sent me to [Princeton scholar Bernard Haykel]. Of partial Lebanese descent, Haykel grew up in Lebanon and the United States, and when he talks through his Mephistophelian goatee, there is a hint of an unplaceable foreign accent.
>
> According to Haykel, the ranks of the Islamic State are deeply infused with religious vigor. Koranic quotations are ubiquitous. "Even the foot soldiers spout this stuff constantly," Haykel said. "They mug for their cameras and repeat their basic doctrines in formulaic fashion, and they do it *all the time*." He regards the claim that the Islamic State has distorted the texts of Islam as preposterous, sustainable only through willful ignorance. "People want to absolve Islam," he said. "It's this 'Islam is a religion of peace' mantra. As if there is such a thing as 'Islam'! It's what Muslims do, and how they interpret their texts." Those texts are shared by all Sunni Muslims, not just the Islamic State. "And these guys have just as much legitimacy as anyone else."
>
> All Muslims acknowledge that Muhammad's earliest conquests were not tidy affairs, and that the laws of war passed down in the Koran and in the narrations of the Prophet's rule were calibrated to fit a turbulent and violent time. In Haykel's estimation, the fighters of the Islamic State are authentic throwbacks to early Islam and are faithfully reproducing its norms of war. This behavior includes a number of practices that modern Muslims tend to prefer not to acknowledge as integral to their sacred texts. "Slavery, crucifixion, and beheadings are not something that freakish [jihadists] are cherry-picking from the medieval tradition," Haykel said. Islamic State fighters "are smack in the middle of the medieval tradition and are bringing it wholesale into the present day."

Democrats are not just unserious about radical Islam, but in Ukraine, too.

Please do read this column from Charles Krauthammer:

> Take Russia. The only news out of Obama's one-hour press conference with Angela Merkel this week was that he still can't make up his mind whether to supply Ukraine with defensive weapons. The Russians have sent in T-80 tanks and Grad rocket launchers. We've sent in humanitarian aid that includes blankets, MREs and psychological counselors.
>
> How complementary: The counselors do grief therapy for those on the receiving end of the T-80 tank fire. "I think the Ukrainian people can feel confident that we have stood by them," said Obama at the news conference.
>
> Indeed. And don't forget the blankets. America was once the arsenal of democracy, notes Elliott Abrams. We are now its linen closet.
>
> Why no anti-tank and other defensive weapons? Because we are afraid that arming the victim of aggression will anger the aggressor.
>
> […]This passivity — strategic, syntactical, ideological — is more than just a reaction to the perceived overreach of the Bush years. Or a fear of failure. Or bowing to the domestic left. It is, above all, rooted in Obama's deep belief that we — America, Christians, the West — lack the moral authority to engage, to project, i.e., to lead.

I play wargames quite often, and in my experience I find that T-80s are very capable, especially against the Ukraine. The main armament is a very good 125 mm gun with an auto-loader, and unlike the M1A2 Abrams, it does have

anti-tank guided missiles. It also has reactive armor, making it resistant to ordinary man-portable anti-tank weapon systems. Yes, it doesn't have the fire control or speed of the Abrams, but it is a very good tank. It has a very nice low-profile turrent that is hard to hit with unguided anti-tank missiles, especially when it is hull-down.

You are not going to be able to take out one of these from the front with a grenade or a light anti-tank weapon. You will need specialized anti-tank capability, either a well-equipped tank, or a shoulder-fired ATGM (e.g. – Javelin) or a TOW ATGM. In short, we need to arm Ukraine if we expect them to be able to deter a force equipped with T-80 tanks. This is not even to mention what is needed for Ukraine to be able to deal with Russian close-air support helicopters (Mi-28 / Ka-50, etc.) and/or strike aircraft (Su-34).

We really need to think carefully about foreign policy when we vote in elections – weakness and indecisiveness emboldens aggressors. The price of cutting our military budget in favor of Obamacare, green energy, welfare and other crap is that we can no longer reach into hotspots all over the world and prevent small threats from growing into bigger ones. We lose our ability to deter aggression and stop wars before they happen.

# Christian mothers value family over their relationship with Jesus

**Wintery Knight** · 17 February 2015 · Archived copy · Original

Here is a shocking article from Church for Men blog. Please read, then read my comments below.

Excerpt:

> When forced to choose their top priority in life, Christian women overwhelmingly pick family over faith, according to a survey from Barna Research. Five times more women chose "being a mother or parent" than chose "being a follower of Christ," as their most important role in life.
>
> These stunning survey results give us a clue as to why Christianity is so rapidly changing into a family-centered faith; why Christian culture is feminizing; and why the gender gap in many denominations continues to grow.
>
> The researchers wrote:
>
> [Women's] spiritual lives are rarely their most important source of identity. That role is taken up by the strong priority Christian women place on family.
>
> The preeminence of family was most overt for Christian women when it came to naming the highest priority in their lives. More than half (53%) says their highest priority in life is family. By contrast, only one third as many women (16%) rate faith as their top priority, which is less than the cumulative total of women who say their health (9%), career performance (5%) or comfortable lifestyle (5%) are top on their list of life objectives.
>
> Despite the characterization of women as intricately connected to their peers, only 3% of Christian women say their friends are their top priority, equal to those who place finances (2%) and leisure (1%) at the top.
>
> Women's sense of identity very closely follows their priorities, with 62% of women saying their most important role in life is as a mother or parent. Jesus came next: 13% of Christian women believe their most important role in life is as a follower of Christ. In third place is their role as wife (11%).
>
> Any other roles women identify with came in at similarly low rankings and far below that of a parent, including that of employee or executive (3%), that of church member (2%) and that of friend or neighbor (2%). American citizen, teacher and caregiver all rank with one percent each.
>
> The researchers continue:
>
> Perhaps not surprisingly given where they place their identity, Christian women also point to family-related objectives as their most important goal in life. Raising their children well is the highest goal for Christian women (36%). While, roughly one quarter of Christian women identify faith-oriented goals as most important (26%).
>
> Though women consider themselves family-driven, their marriages may be suffering from a lack of intentionality: only 2% of Christian women say their most important goal in life is to enhance their relationship with their significant other. Marriage comes in below several other goals, including health (6%), career (5%), lifestyle (4%), personal growth (4%), morality (4%) and financial objectives (3%). Only goals related to personal appearance, relationships outside the home and travel come in lower than marital goals.

And I will include one paragraph from the author of the post:

> While the Bible certainly endorses interpersonal harmony, Scripture is not chock-full of happy relationship advice. When Jesus spoke of relationships he usually predicted their demise (Matt. 10:34-35), or promised rewards for people who abandoned their loved ones (Luke 18:29-30). God takes no delight in dysfunctional relationships, but neither did he send his son so you could be at peace with your kids.

I have to quote that because I rebelled against both my parents in order to become an evangelical Protestant. First one in the family.

Now I have something to say about this survey data.

I get a lot of flak for my 10 courting questions that are designed to evaluate a woman's worldview prior to any commitment being made. Men and women alike often tell me to lower my standards. The idea that the marriage is supposed to serve God is losing traction with most young evangelicals today.

The 10 courting questions are designed to help a Christian man make sure that his wife is going to support him in serving God and making the relationship count for God. They are also designed to make sure that his wife will do everything possible to guarantee that his children remain Christians throughout their lives. The simple fact of the matter is that men are away at work most of the time doing stuff to make money. The man's wife is the one who is going to be at home doing the more important work of making sure that his children learn about God, and can resist the culture.

The danger you want to avoid is a situation where your wife is not able to explain to the children how Christianity is rooted in reason and evidence. Your wife needs to be informed and passionate about Christian apologetics, public knowledge related to the Christian worldview, and public policies that affect the execution of a Christian life plan. If she divorces Christianity from truth, then she will not be able to answer the questions of your children, or deal with their doubts, or anticipate threats to their faith (e.g. – the pluralism/relativism at the university), or help them to resist secular popular culture, or explain non-Biblical reasons for various Christian views now unpopular with the culture, e.g. – premarital sex, gay marriage, global warming socialism. And so on.

If your children are raised to think that Christianity is an arbitrary set of rules that cannot be debated or questioned, all in the name of family happiness and respectability, then as soon as they get to university, they will rebel. So the first priority can never be "family cohesion" – the first priority has to be truth. Christianity is not a tool to achieve happiness in the home, or respectability with the neighbors. Having family as a priority can cause questions and doubts about Christian truth claims to be swept under the rug. That works for a while, but as soon as the kids hit university, they will drop their Christian faith like a hot potato. A better idea is to focus more on truth and open discussion, and let all the doubts and questions and discomfort about being different come out in the open while the kids are growing up.

Christian men, choose your wife wisely. She has to be a thinker. She has to be a fighter. And you have to lead her during the courtship to take Christian worldview and apologetics seriously.

The survey above made me think of this phone call – listen carefully to the mother's response to her son's atheism: "How dare you embarrass the family, what will the neighbors think?". Have a listen – does this response ring true to you?

It's all about family (and how the family is perceived in the community), and nothing about truth. Nothing about knowledge.

# The many meanings of the word “evolution”

**Wintery Knight** · 17 February 2015 · Archived copy · Original

This is from an essay by Stephen C. Meyer and Mike Keas. (H/T Justin Taylor)

Meyer and Keas caution people about answering questions about evolution until the term is clearly defined.

Here are their 6 meanings of the word:

1. Evolution as Change Over Time
2. Evolution as Gene Frequency Change
3. Evolution as Limited Common Descent
4. Evolution as a Mechanism that Produces Limited Change or Descent with Modification
5. Evolution as Universal Common Descent
6. Evolution as the “Blind Watchmaker” Thesis

Here is one that everyone accepts:

> **2. Evolution as Gene Frequency Change**
>
> Population geneticists study changes in the frequencies of alleles in gene pools. This very specific sense of evolution, though not without theoretical significance, is closely tied to a large collection of precise observations. The melanism studies of peppered moths, though currently contested, are among the most celebrated examples of such studies in microevolution. For the geneticist, gene frequency change is “evolution in action.”

And one that is controversial:

> **6. Evolution as the “Blind Watchmaker” Thesis**
>
> The “blind watchmaker” thesis, to appropriate Richard Dawkins’s clever term, stands for the Darwinian idea that all new living forms arose as the product of unguided, purposeless, material mechanisms, chiefly natural selection acting on random variation or mutation. Evolution in this sense implies that the Darwinian mechanism of natural selection acting on random variations (and other equally naturalistic processes) completely suffices to explain the origin of novel biological forms and the appearance of design in complex organisms. Although Darwinists and neo-Darwinists admit that living organisms appear designed for a purpose, they insist that such “design” is only *apparent*, not real, precisely because they also affirm the complete sufficiency of unintelligent natural mechanisms (that can mimic the activity of a designing intelligence) of morphogenesis. In Darwinism, the variation/selection mechanism functions as a kind of “designer substitute.” As Dawkins summarizes the blind watchmaker thesis: “Natural selection, the blind, unconscious, automatic process which Darwin discovered and which we now know is the explanation for the existence and apparently purposeful form of all life, has no purpose in mind. It has no mind and no mind’s eye.”

For discussion purposes, I accept 1-4, which I think are consistent with the evidence. I deny 5 and 6 because they are inconsistent with the evidence.

It’s a good article to read to prepare yourself to discuss this with someone who is antagonistic to design. They may offer evidence for one definition of evolution that everyone accepts, then take it to be proof of a much more controversial definition of evolution. You have to get the definition clear first.

One last piece of advice. If you ever get asked this “do you believe in evolution” question – say, by a secular leftist anxious to label you as a moron – then you might consider going on the offensive, using this list of alternate

science-related questions that actually affect public policy from David Harsanyi. Put your questioner on the defensive.

# New study: EPA carbon emission regulations eliminate 586,000 manufacturing jobs

**Wintery Knight** · 18 February 2015 · Archived copy · Original

Why don't we build anything in America any more?

Well, we do build many things, but if the question is changed to "why aren't we building more?" then the answer is that the costs of building things in America are much higher than building them elsewhere. One reason is that we have the highest corporate tax rate in the world. Another reason is that we pass regulations that make it expensive to make anything here.

Here is a report from the Daily Signal about a new study by the Heritage Foundation.

They write:

> A new study predicts that more than a half million manufacturing jobs will be eliminated from the U.S. economy as a result of the Obama administration's proposed regulations to curb carbon dioxide emissions.
>
> "Every state would experience overwhelming negative impacts as a result of these regulations, but especially those with higher-than-average employment in manufacturing and mining," said Nick Loris, a co-author of study, which was completed by energy experts at The Heritage Foundation—the parent organization of The Daily Signal.
>
> The researchers projected how many manufacturing jobs would be eliminated in each state and congressional district as a consequence of the carbon plan, which is the centerpiece of President Obama's effort to combat climate change.
>
> The results show that 34 states would lose three to four percent of manufacturing jobs by 2023, and nine other states would lose more.
>
> In Ohio alone, 31,747 jobs would be lost.
>
> The study predicts that the Midwest would be hit the hardest, with Illinois, Indiana, Michigan, Ohio and Wisconsin losing more than 20,000 jobs each.
>
> […]The analysis comes just months before the Environmental Protection Agency is set to finalize its carbon regulations covering new, existing and modified/reconstructed power plants by mid summer of 2015.
>
> Heritage's study looked at the totality of the Obama administration's efforts to limit carbon dioxide emissions—from motor vehicles and power plants, both new and existing.
>
> The EPA's plan forces states to cut power-industry emissions by 30 percent in 2030 from 2005 levels.

We have to save the planet!!!1!!

Meanwhile, in Boston:

It's global warming! The EPA must save us!

So, the next time anyone asks you why we don't build anything anymore, tell them it's because they voted for Democrats, and how this resulted in higher taxes and more burdensome regulations. Higher taxes and more regulation causes companies to close down here at home and move elsewhere, or they just scale back here and expand elsewhere. Democrats cause American jobs to go overseas, raising the unemployment rate. That's why our labor force participation hasn't been this low for *decades*. It's basic economics.

# For the fifth year in a row, Bobby Jindal's state of Louisiana declared "most pro-life"

**Wintery Knight** · 18 February 2015 · Archived copy · Original

Louisiana Governor Bobby Jindal

Here's my other "first pick" in the GOP primary.

Life News reports:

> In January, for the fifth year in a row, Louisiana was declared the most pro-life state in the nation by American's United for Life (AUL). Since pro-life Governor Bobby Jindal has been in office for the past six years, it would be fair to say his leadership, at least in part, has created a more pro-life Louisiana.
>
> After AUL made their announcement, Jindal said, "Louisiana was named the most pro-life state for the fifth year in a row. In Louisiana, we promote a culture of life and protect the weakest and most vulnerable among us."
>
> During Jindal's time in office he's signed countless pieces of pro-life legislation as well as limited Obamacare by prohibiting the coverage of elective abortion in health care plans. This is exactly why many pro-life advocates and Republican voters would be thrilled if Jindal ran for president in 2016. In the Decatur Daily, journalist Cal Thomas reported that Jindal said he'd decide in "two to three months" whether to run for president.
>
> The pro-life legislation Jindal's signed include everything from bills that ban abortion at 20-weeks and stop coerced abortions— to legislation that requires abortion facilities to provide ultrasounds prior to an abortion and ensures that medical professionals don't have to participate in abortion.
>
> In 2014, Jindal signed Louisiana Right to Life's flagship legislation, the Unsafe Abortion Protection Act (HB 388), which could close three of the five abortion clinics in the state. HB 388 requires that abortion providers have admitting privileges within 30 miles of a local hospital; clarifies that informed consent protections apply to both surgical abortion, as well as to RU-486 chemical abortions; and that facilities that perform more than five abortions maintain proper licensing. After the passage of the HB 388 through the Louisiana Legislation, Gov. Jindal said, "This bill will give women the health and safety protections they deserve."
>
> Earlier this year, *The Washington Times* reported that Jindal blasted U.S. House Republicans after they pulled a bill that bans abortions after 20 weeks of pregnancy. He said, "The American people elected a Republican majority to support the pro-life movement and champion conservative principles. I hope they reconsider."
>
> In January, the Louisiana Department of Health and Hospitals, which serves under Jindal's administration,

> announced that they are blocking abortions at an abortion facility Planned Parenthood is building in New Orleans. Originally, their facility was supposed to open by the end of 2014; however, due to opposition from pro-life Louisianans, including Louisiana Right to Life, the Jindal administration and the Archdiocese of New Orleans, their efforts have been stalled.
>
> The Executive Director of Louisiana Right to Life, Benjamin Clapper, told the Washington Post more about Jindal's commitment to protecting unborn life. He said, "He's not just been pro-life behind closed doors. He's also been proudly pro-life across our state." American's United for Life also told the Post that during Jindal's time in office, Louisiana has been the most pro-life it has ever been.
>
> Remarkably, Jindal has always been completely honest about his pro-life views.
>
> In 2003, he said, "In my first race in 2003, at one of my first fundraisers, my first question was from a fairly liberal woman who asked me my position on abortion. I told her I was pro-life. I remember thinking I was going to have to return all the money I had raised! But amazingly, she became a financial supporter despite our differences over abortion. It turns out she already knew I was pro-life; she just wanted to see if I would be honest about my position or if I would waffle in order to get her money."
>
> According to the National Right to Life Committee, Jindal had a 100-percent voting record during three years as member of the U.S. House of Representatives. Additionally, Louisiana Right to Life has honored Gov. Jindal on numerous occasions for his pro-life stand in the Pelican State. In January, as Jindal left the stage after speaking at their annual pro-life rally Clapper said, "Bobby Jindal is the most pro-life governor in the history of Louisiana."

My other "first pick" Scott Walker is now leading his competitors by 14% in the latest Iowa poll. He has 24% of the votes.

If I were going to compare the two of them, I would say that Walker is pro-life, was leader of a pro-life club in college, got some pro-life laws passed, and that those pro-life laws definitely reduced the number of abortions in his state. However, I think his focus is on taking on the big groups on the left like the public sector unions, the welfare collectors, the secular leftists at the public universities who go after conservatives. Walker is in a blue state, so he basically runs as a fiscal conservative, and then when he wins, which he always does, he brings his social conservatism with him, and does the best he can. But he wins because he is 1) a fighter and 2) competent at all things fiscal. The knock on Walker right now is his immigration plan – he is very vague about what he would do, and conservatives want to know where he stands.

Jindal is different. Not only is he better educated than Walker (Rhodes scholar at Oxford), but he is a policy expert in education and health care policy. He is also very outspoken on foreign policy and social issues. I think his ability to stick to his convictions no matter what is the same as Walker, but he is much more open about his full range of views, instead of just presenting himself as a policy expert and a guy who can get the job done. Jindal is heavily into consumer-driven health care and school choice. The knock on Jindal right now is his budget deficit and high disapproval rating in his home state – he hasn't gotten together the fiscal record right now to stack up against Scott Walker. For a man like Bobby Jindal, though, every crisis is an opportunity. This is his chance to define himself by cutting spending and waste.

We should know by the end of February what Governor Jindal intends to do to close that $1.6 billion shortfall.

# Are secular leftists on campus interested in discussing different viewpoints?

**Wintery Knight** · 18 February 2015 · Archived copy · Original

A few stories that lead me to think that they are not.

First, Campus Reform writes:

> A female student was threatened by feminist and LGBT organizations at the University of North Carolina – Wilmington after she invited them to attend a pro-life event.
>
> Madison Marston sent personal email invitations to UNCW's National Abortion and Reproductive Rights Action League (NARAL), PRIDE, and the Women's and Gender Studies Student Association (WSSA), to extend an invitation to Ratio Christi's "Abortion and Human Equality: A Pro Life Defense of the Unborn" discussion. The three organizations collectively declined while threatening Marston for sending the invitation.
>
> "Each of the leaders of PRIDE, NARAL and WSSA ask that you no longer contact us directly," the email, obtained by *Campus Reform* said. "As a student organization, your events are on the CAIC calendar, part of Hawk e-News, and disseminated in a variety of other ways, which is sufficient for us to be aware of them. We do not need, nor want, these invitations. If you continue to attempt to contact any of us, we will take further action."
>
> In the email, the organizations said they already had a separate event scheduled for that same date but also said they will not participate in any debates with the Christian apologetics organization as they do not share the same beliefs when it comes to abortion and LGBT issues.
>
> "As such, we have no desire to debate them with you or your organization," the organizations said in the email.
>
> […]"We have no desire to attend any event sponsored by your organization and its narrow beliefs steeped in religious bigotry and intolerance."
>
> […]Ratio Christi's event, scheduled for Feb., 26, will host Adams, an outspoken conservative professor at UNCW, "to present a scientific and philosophical argument on the topic of abortion," according to the event's press release obtained by *Campus Reform*.
>
> The free event has a Q&A portion concluding Adams' talk, during which Marston, a biology and chemistry major, was hoping the other student organizations could participate.
>
> "I had naively thought UNCW's pro-choice student organizations would jump at any and every opportunity to participate in events on the topic of abortion," Marston told *Campus Reform* in an interview. "Or at least, I thought they would be somewhat interested in having a platform to defend their views. If they believe so strongly that abortion is a woman's right—why are they afraid to defend their belief?"
>
> […]UNCW's College Democrats also declined the invitation to attend the event as "our party's views do not align with the views of the speaker."

I think the pro-abortion folks, the LGBT folks and the Democrats are not so much interested in debate as they are in coercing anyone who disagrees with them.

Next article is from Fox News.

They write:

> Students at Acalanes High School were given a handout with LGBT terminology – including words like pan-sexual, demi-boy and gray gender.

> Teenagers at a California high school were publicly shamed for disagreeing with speakers allowed to push an LGBT agenda during an English class, according to several upset parents.
>
> The Queer Straight Alliance at Acalanes High School, in Lafayette, lectured students in several ninth-grade English classes on Jan. 29 about LGBT issues, according to Brad Dacus, president of the Pacific Justice Institute, which is representing the parents.
>
> During the class, the students, ages 14 and 15, were instructed to stand in a circle. Then, they were grilled about their personal beliefs and their parents' beliefs on homosexuality, PJI alleges.
>
> "The QSA had students step forward to demonstrate whether they believed that being gay was a choice and whether their parents would be accepting if they came out as gay," PJI attorney Matthew McReynolds said. "Students who did not step forward were ridiculed and humiliated."
>
> PJI is a law firm that specializes in religious liberty cases. They are representing several families who had children in the freshman classes — some of whom also are angry because there was no parental notification of the LGBT lecture.
>
> "Singling out students for ridicule based on their moral or political beliefs is a Marxist tactic that should have no place in the United States of America," Dacus said.

Yes, and Christian parents are paying for it by force – there is no school choice. You are forced to pay for this, whether you use it or not.

And finally, an essay on the bullying of Christians and conservatives that happens in schools, from ISI Review.

Excerpt:

> "The new intolerance" is shorthand for the chilled public atmosphere in which religious believers now operate. Many people of faith face unique burdens that would have been unthinkable even a couple of decades ago: burdens of ostracism, of losing the good opinion of their neighbors, of being trash-talked in the public square. Some even face the loss of livelihood or the constant threat and reality of litigation; for a primer, see the hounding last spring of Mozilla CEO Brandon Eich for his donation years earlier on behalf of traditional marriage.
>
> Although this new intolerance has begun to attract attention and debate, the connection between that phenomenon and the rise in unbelief among twenty-somethings remains to be explored. And the scrutiny is overdue. It is well known, and well documented by social science, that many students, not only in America but all over, lose their religion in college. The interesting question is why.
>
> […]Students, like any other human beings, cannot help being sensitive to atmospherics. Let's think again of the new force that drives a CEO out of his post for having donated to defend traditional marriage. If the new intolerance can penalize an "alpha" like him so dramatically, how much more menacing must it be to people just starting out, whose futures and livelihoods depend so heavily on the opinion of their peers?
>
> […]It's time to air the idea that college students do not stay out of church or synagogue because their education leads them to enlightened conclusions about the big questions. No, the more likely dynamic is that thanks to the new intolerance, the social and other costs of being a known believer in the public square mount by the year—and students take note. Hence intimidation on the quad, multiplied over many years and campuses, is an unseen engine of secularization.

This intimidation didn't work on me, but I have met Christian women who were very sensitive to peer approval when they got to college. They went from Bible verse memorization to shacking up to abortion to divorce. They started to drift because of the peer-shaming and the professor-shaming, and then it is *cemented* by the *repeated experiences* of binge-drinking, hooking up and shacking up. The repeated experience of putting aside God and

moral boundaries in order to have fun forms a new worldview at a deep level, and it continues as they age.

Even if they come back to the Christian faith at a superficial (emotional, devotional) level, the underlying worldview is hard to fix. Attempts to re-orient them towards an effective Christian life that addresses the real problems that Christians are facing today in the culture will not be accepted. The self-centered life-plan that was formed in college remains intact, with just a veneer of piety on top to justify it when it's called into question.

# Victor Davis Hanson: Five mistakes Democrats made in the Middle East

**Wintery Knight** · 19 February 2015 · Archived copy · Original

This National Review article is by military historian Victor Davis Hanson.

Here are the 5 mistakes:

1. Iran
2. Iraq
3. Libya
4. Egypt
5. Israel

All of the areas are important, but I want to focus on the one that I think is going to hurt us the most: Iran.

Dr. Hanson writes:

> Sanctions were starting to squeeze Iran, which had been unable to absorb Shiite-dominated Iraq. Unrest in Iran was rising, spearheaded by pro-Western young reformers. Less than a month after Barack Obama's inauguration, over a million Iranians hit the streets to protest their country's rigged elections. The Europeans were beginning to understand that a nuclear Iran posed a greater threat of nuclear blackmail to the EU than to the U.S.
>
> Poland and the Czech Republic had agreed to partner with the U.S. in creating an anti-ballistic missile system to deter Iran's growing missile program. The U.S. and its friends occasionally sent armadas slowly through the Strait of Hormuz to remind Iran that we were determined that international waters would always remain international.
>
> So what happened?
>
> The new Obama administration kept silent as the pro-Western Iranian protests deflated. In herky-jerky style, Obama at first upped the sanctions as Tehran ignored his serial empty deadlines on curbing enrichment. Then, unilaterally and without much warning, Obama relaxed sanctions. He reopened negotiations, even as Iran's centrifuges multiplied. Currently, Iran is on the cusp of nuclear acquisition, and it quietly advises its supporters that the U.S. is both weak and naïve — and will soon be gone from the region.
>
> Tehran is creating a sort of Co-Prosperity Sphere at the expense of Sunni and Western interests, as it sabotages Iraq, Yemen, Syria, and Lebanon. There is no longer talk of regional U.S.-led missile defense.
>
> In brilliantly diabolical fashion, Iran has maneuvered a deer-in-the-headlights U.S. into an embarrassing de facto alliance with it against ISIS in Iraq and Syria. The partnership was designed by Tehran to save the pro-Iranian Assad government, to bolster Hezbollah, to relieve diplomatic pressures on its own nuclear-enrichment program, and to increase tensions between the U.S. and the Sunni moderate states like Jordan and the Gulf monarchies.
>
> There has never been a greater likelihood than there is now, under Obama, that Iran will get the bomb, that it will create a radical theocratic Shiite alliance from Yemen to Iraq to Syria to Lebanon, and that it will direct Hamas and Hezbollah to start another war against Israel — this time backed by an Iranian nuclear deterrent.

Right now, people are making a lot of noise about Islamic State, and that is a significant threat in the near term. But that will not be nearly as bad as the development of nuclear weapons by Iran. They have already stated that they want to wipe Israel off the map. With our porous southern border, we should expect to be targeted as well. Iran has had their Al Quds special forces deployed to Venezuela for years now.

The Washington Times reported this in 2010:

> Iran is increasing its paramilitary Qods force operatives in Venezuela while covertly continuing supplies of weapons and explosives to Taliban and other insurgents in Afghanistan and Iraq, according to the Pentagon's first report to Congress on Tehran's military.
>
> The report on Iranian military power provides new details on the group known formally as the Islamic Revolutionary Guards Corps-Qods Force (IRGC-QF), the Islamist shock troops deployed around the world to advance Iranian interests. The unit is aligned with terrorists in Iraq, Afghanistan, Israel, North Africa and Latin America, and the report warns that U.S. forces are likely to battle the Iranian paramilitaries in the future.
>
> The Qods force "maintains operational capabilities around the world," the report says, adding that "it is well established in the Middle East and North Africa and recent years have witnessed an increased presence in Latin America, particularly Venezuela."
>
> […]The report gives no details on the activities of the Iranians in Venezuela and Latin America. Iranian-backed terrorists have conducted few attacks in the region. However, U.S. intelligence officials say Qods operatives are developing networks of terrorists in the region who could be called to attack the United States in the event of a conflict over Iran's nuclear program.
>
> […]The report links Qods force operatives and the larger IRGC to some of the deadliest terrorist attacks of the past 30 years: the bombing of the U.S. Embassy in Beirut in 1983, the bombing of a Jewish center in Argentina in 1994, the 1996 Khobar Towers bombing in Saudi Arabia and many insurgent attacks in Iraq since 2003.

That was 2010, but fast forward to 2011, and we have Iran attempting to assassinate the Saudi ambassador on U.S. soil.

The radically leftist Huffington Post reported this in 2011:

> When Attorney General Holder announced today that federal authorities had thwarted a "made for Hollywood" murder-for-hire plot by alleged Iranian-linked operatives tied to Mexico drug cartels to assassinate the Saudi ambassador to the U.S, it came as no surprise to counter-terrorism experts familiar with Iran's terrorist activities in Latin America. Iran's terror plotting south of the border has been a well-known fact — orchestrated by the Al Quds paramilitary wing of Iran's Revolutionary Guard Corps (IRGC), a terrorist organization very well versed in the the art of the tango and tortillas for some time.
>
> For over two decades, Al Quds operatives and their proxies from terrorist organizations throughout the Middle East have been deployed throughout Iran's embassies in Latin America — most recently in Venezuela and Mexico.
>
> Starting in the late 1980s and early 1990s, using Hezbollah as initial cover, Al Quds masterminds began populating the "failed state" region in Latin American known as the Tri-Border Area (TBA) of Argentina, Brazil and Paraguay as a base from which to train Islamic extremists. The 1992 and 1994 attacks against Jewish and Israeli interests in Buenos Aires originated in the TBA. A veritable Star Wars bar scene of terrorists have reportedly been trained by Al Quds in the TBA and have taken shelter at one time or another there, including Iran proxy terrorists belonging to Hezbollah, Hamas, and al-Gama al Islamiya — all under the watchful patronage of Iran's Al Quds operatives.
>
> The TBA is ideal for laundering terrorist identities because once an operative enters Paraguay he/she can just drive into Brazil and return without the need for showing a passport.

Obama has been as serious about this threat from Iran as he has been about prosecuting the IRS for targeting Tea Party organizations, as he has been about defending the Defense of Marriage Act in court, as he has been about lowering the costs of health care, and so on. He wants to be on the golf course or giving speeches where he jabs his Republican opponents.

With respect to this Iran problem, Obama's policy has been to effectively tell them go ahead and build the nuclear weapons. We are not going to be able to just make 8 years of clowning around disappear. This is going to hurt. People are going to die.

# Alliance Defending Freedom will defend Atlanta fire chief fired for his Christian faith

**Wintery Knight** · 19 February 2015 · Archived copy · Original

This report is from the Daily Signal.

Excerpt:

> Former Fire Chief Kelvin Cochran filed today a federal lawsuit against the city of Atlanta and its Mayor Kasim Reed alleging they terminated his employment because of his belief in traditional marriage.
>
> The lawsuit, filed in the U.S. District Court for the Northern District of Georgia, Atlanta Division, states Cochran's was fired "solely" because:
>
> …[Cochran] holds religious beliefs concerning same-sex marriage and homosexual conduct that are contrary to the mayor's and the city's views on these subjects, and because he expressed those beliefs in the non-work-related, religious book he self-published.
>
> Cochran had been a firefighter since 1981 and was appointed Atlanta's fire chief in 2008. In 2009, President Obama appointed him as U.S. Fire Administrator for the United States Fire Administration in Washington, D.C. In 2010, he returned to serve as Atlanta's fire chief.
>
> Cochran is a devout Christian and active in his community as a member of Elizabeth Baptist Church, where he serves as a deacon and teacher.
>
> On Jan. 6, 2015, after writing and self-publishing a book which briefly mentions homosexuality as one among many sexual sins from a Christian perspective, the city of Atlanta and Mayor Reed suspended Cochran without pay, subjected him to "sensitivity training" and ultimately fired him.
>
> Although a city investigation found that Cochran has not discriminated against anyone throughout his career as fire chief of Atlanta, the city still fired him, citing the need for tolerance of diverse views.
>
> "I respect each individual's right to have their own thoughts, beliefs and opinions, but when you're a city employee and those thoughts, beliefs and opinions are different from the city's, **you have to check them at the door**," said City Councilman Alex Wan, a leader in the campaign to oust Cochran, to the Atlanta Journal-Constitution in November.
>
> Alliance Defending Freedom, a non-profit legal organization that advocates for the right of people to freely live out their faith, is defending Cochran in his lawsuit against the city and mayor of Atlanta.

Please watch the 5-minute video above. The city councilman Alex Wan is openly gay, by the way.

If you want to help out with Cochran's legal defense (and this is a case we really, really need to win) then you can go to the Alliance Defending Freedom page here and read more about the case, and donate, if you feel that this is a team you want to partner with. Even if you don't donate, share the story in social media, because a lot of people need to understand what happens when gay rights activism conflicts with religious liberty. It goes to court, and that's when Alliance Defending Freedom makes their stand.

Listen. If you are looking to steer your kids into a career that will make a difference, consider trying for an Alliance Defending Freedom lawyer. These guys go to bat for all of us, and if you work your parenting well, you might be able to make a child grow up who will make a difference.

And subscribe to the Alliance Defending Freedom podcast.

# Florist may lose her business, home and savings for refusing to service gay wedding

**Wintery Knight** · 20 February 2015 · Archived copy · Original

I remember reading a blog post by very well known atheist from Washington just after his state legalized same-sex marriage. He said he was very proud of his state. Now we get to find out what he was so proud of.

The story is reported by Alliance Defending Freedom.

They write:

> A state judge has determined that the government can force a floral designer to do custom design work and provide wedding support services even if she has a religious conviction that marriage is between one man and one woman. Barronelle Stutzman was found guilty for referring her friend and long-time customer to another florist because the customer wanted her to design floral arrangements and provide services for a same-sex wedding. Barronelle's referral ensured the customer received the services he wanted, but has been labeled "discrimination" under Washington law.
>
> The court also ruled that both the state and the couple may collect damages and attorneys' fees not only from the floral shop, but also from Stutzman personally.
>
> The court said:
>
> "On the evening of November 5, 2012, there was no conflict … The following evening, after the … enactment of same-sex marriage, there would eventually be a direct and insoluble conflict between Stutzman's religiously motivated conduct and the laws of the State of Washington**. Stutzman cannot comply with both the law and her faith if she continues to provide flowers for weddings as part of her duly-licensed business, Arlene's Flowers.**"
>
> For simply abiding by her faith and a view of marriage held sacred for centuries, the 70-year-old grandmother not only may lose her business, but also her home and savings. Contrast this reality to the same-sex couple, who not only obtained exactly what they needed for their ceremony, but were offered free flowers and wedding services by a multitude of florists. Yet the state attorney general sued her and then the couple, represented by the ACLU, filed a second lawsuit.
>
> Barronelle's referral showed kindness and tolerance to her customer, doing as much as she could without violating her conscience. But apparently there is no tolerance for her religious beliefs about marriage.
>
> "America would be a better place if citizens respected each others' differences and the government still protected the freedom to have those differences," said Barronelle. "Instead, the government is coming after me and everything I have just because my beliefs are different from the government's. I just want the freedom to live and work faithfully and to believe what God says about marriage without fear of punishment, just as others have the freedom to believe and say what they want to about marriage."
>
> "The message of these rulings is unmistakable: there is no tolerance for those who disagree with the state's view of marriage," said ADF Senior Counsel Kristen Waggoner, who argued before the court in December. "The couple had no problem getting the flowers they needed. In fact, they received several offers for free flowers. So, where's the tolerance for Barronelle Stutzman? It's hard to believe that Barronelle should prepare to have everything she has earned and built seized by the state just because of her beliefs about marriage."

If you don't *celebrate* same-sex marriage, then the courts will come after you and take everything you have to *make you* celebrate same-sex marriage. This is called *tolerance*. And it is sold to the public with the well-known gay rights motto *"Celebrate Diversity"*.

There is nothing in the atheistic worldview that has a problem when Christians have their consciences violated by

government coercion. This is the atheist thing – using power to force others to tell them that their man-made hedonistic moralities are actually valid and true. They are really comfortable with government forcing religious individuals to violate their consciences. And forcing them to do a lot more, too. This is just the beginning. When you believe that morality is make-believe that varies by time or place, instead of something objective built into the universe by its Creator and Designer, then anything is possible. *Anything* is possible. Far from being an unexpected diversion from atheism, this is atheism put into practice. Might makes right. Survival of the fittest. There is no place for a "human right" to free speech in an accidental, materialistic universe.

To end this post on a happy note, I'm going to post a picture of Kristen Waggoner, and her bio, just to remind us who the hero of the story was.

Here she is:

Kristen Waggoner, Alliance Defending Freedom

Her bio:

> Kristen K. Waggoner serves as senior vice president of legal services with Alliance Defending Freedom, leading the organization's legal advocacy efforts. She is a Martindale-Hubbell AV peer-review rated attorney who clerked for Justice Richard B. Sanders of the Washington Supreme Court after law school and served in private practice in Seattle for nearly 20 years. Waggoner is admitted to the state bars in Washington, Florida, and Oregon. She is also admitted to the U.S. Supreme Court, the U.S. Courts of Appeals for the 1st and 9th Circuits, and the U.S. District Courts for the Western and Eastern Districts of Washington.

It takes a lot to make one Kristen Waggoner – her parents must be proud of her. She tried her best, and it was good for us that she tried. There's always the appeal. But even if we win that, the point was made – if you're a Christian, then you'd better act like an atheist in public. Or else. You have to have their "morality" such as it is forced on you. Or else. We have been intimidated. To think that this happened in a country that was founded by theists, many of them Christians. It makes me sad.

There was a good episode of the Alliance Defending Freedom podcast on this story, which you can download the MP3 file here.

# New study: children's educational outcomes are closely linked to their mother's

**Wintery Knight** · 20 February 2015 · Archived copy · Original

Marriage and family

Well, I guess everyone who has read my courting questions knows that as a condition of entering into a marriage plan with me, I ask that the woman go on to graduate school and also work for a few years. I ask this because she is going to be in charge of the children all day, at least until we put them into private school, (if we do that), or longer if we go with homeschooling all the way. That means not only does she have to be good at math, science and everything else important, but she also has to know how to apply to college, how to apply to grad school, and how to get a job and survive in the workplace.

The mother of the children is the chief of staff of the home, and she has a more important job than the man. Raising the children is – *truly* – more important to God than the nature and pay of the man's work. The man has to go to work to provide, but that is not normally going to have the impact for God that raising the next Alliance Defending Freedom attorney will have. I intend for my marriage to be (in part) an engine for the manufacture of effective, influential Christian scholars and/or professionals, and that means I expect the VP of the parenting division to be *excellent.*

So… is there any more reason to asking marriage candidates to go to graduate school and to work?

Yes, and a new study reported in Family Studies explains why:

> A new paper by Jessica F. Harding, Pamela A. Morris, and Diane Hughes in the *Journal of Marriage and Family* proposes studying the ways in which mothers' education affects children's outcomes through a three-part framework: mothers' human capital, cultural capital, and social capital.
>
> […]In the realm of parenting, a college degree (or the knowledge and skills it stands for) seems to make people interact with their kids differently. Take the famous thirty-million word gap, for example: some scholars estimate that children of parents on welfare hear 30 million fewer words by the age of four than the children of professional parents.
>
> The gap is not only about quantity, but quality: Better educated parents also use a wider vocabulary, and they dole out affirmations (not just complimenting kids, but repeating and building on what they say) more generously than less educated parents. Learning lots of words early in life is tied to better academic outcomes down the road, so parents' early conversations with kids have long-lasting implications.
>
> Mothers' education also matters later in childhood: College-educated mothers are "able to more appropriately tailor cognitively stimulating activities to their children's developmental level," the researchers document, and they are more equipped to help kids do homework and study for tests.

> […]Cultural capital revolves around "preferences and behaviors that, although not inherently better than others, are relevant for educational success because they are sanctioned in a particular society's educational settings." Think visiting museums and taking music lessons—the sort of activities that upper-middle class parents emphasize. Participating in such activities "has been associated with teacher-reported academic outcomes for children and adolescents in a number of studies that have adjusted for other factors," and it bolsters high school students' college applications.
>
> Cultural capital also helps kids to navigate the education system successfully: more educated mothers are more comfortable with schools, so they are more likely to advocate for their kids there (say, requesting that their child be assigned a certain well-regarded teacher) and to teach their kids how to advocate successfully for themselves (for instance, telling a child how to request the opportunity to re-take a failed test).
>
> […]Social capital encompasses "interactions that take place between mothers and people in their social networks or between people in mothers' social networks and children." It's about mothers' relationships to and connections with other people (whereas cultural capital has to do with mothers' "abilities to use behaviors that aid in navigating . . . social and institutional relationships"). College-educated mothers are more likely to be part of social networks containing "knowledge, skills, and resources that are relevant to children's academic success," the researchers propose. For instance, their relatives, colleagues, and friends are likely to also have college degrees, meaning mothers can easily pick up tips about the best schools or gain advice about the college application process. Plus, their children will be surrounded by highly educated role models; in their circles, graduating from college will be an expectation, not an aspiration.

Everything I do in relationships is grounded in studies like this one. I work backwards from what God wants, to what the challenges in the society are, to what the children need, to what each spouse does in the marriage for each other and for the kids, to how each spouse prepares for marriage roles. Then, I look at the studies to find out the best way to achieve the goals. It's all very serious – no getting drunk, hooking up, or partying.

I was preparing to be a husband and father from the time I started high school. Choosing STEM courses, passing on fluff courses. I hated doing hard things that made me look stupid, but I *had to do them*. We – me and my future wife and kids – would *need the money*. Same thing with chastity – I wanted my wife to have assurances that I could be faithful, so I never had sex outside of marriage (never went near the line). And on and on.

Marriage-minded women ought to be doing the same. Work your chastity, yes. But also study hard things, get hard jobs, and study economics, politics, apologetics and everything else a family will need. Find out what children are like. Find out how to cook. Find out how to encourage a man. Find out how to homeschool. Find out how to argue logically. Your successful marriage starts the day you turn your emotions off, and turn on your mind.

Marriage is *hard work*. You can't just go crazy in your teens, 20s and 30s and then jump off at the last second into the perfect marriage. You have to build up to it – think where you want to go, and take steps every day that will get you there. It's much better to learn about how marriage and parenting works from good books, good studies and the experience of wise, older people with long-lasting marriages. Don't follow the culture, it's crap.

# Why does the cause of the universe have to be a person / mind?

**Wintery Knight** · 20 February 2015 · Archived copy · Original

Must the cause of the universe be a person?

Here's a post from my friend Fred Woodbridge, who blogs at IFCONFIG blog, where he quotes from Dr. Craig's book "Reasonable Faith". The quote contains three arguments for why the cause of the universe must be personal.

Quote:

> **First**, as Richard Swinburne points out [in *The Existence of God]*, there are two types of causal explanation: scientific explanations in terms of laws and initial conditions and personal explanations in terms of agents and their volitions. For example, if I come into the kitchen and find the kettle boiling, and I ask Jan, "Why is the kettle boiling?" she might answer, "The heat of the flame is being conducted via the copper bottom of the kettle to the water, increasing the kinetic energy of the water molecules, such that they vibrate so violently that they break the surface tension of the water and are thrown off in the form of steam." Or she might say, "I put it on to make a cup of tea. Would you like some?" The first provides a scientific explanation, the second a personal explanation. Each is a perfectly legitimate form of explanation; indeed, in certain contexts it would be wholly inappropriate to give one rather than the other. Now a first state of the universe cannot have a scientific explanation, since there is nothing before it, and therefore it cannot be accounted for in terms of laws operating on initial conditions. It can only be accounted for in terms of an agent and his volitions, a personal explanation.
>
> **Second**, the personhood of the cause of the universe is implied by its timelessness and immateriality. The only entities we know of which can possess such properties are either minds or abstract objects, like numbers. But abstract objects do not stand in causal relations. Indeed, their acausal nature is definitive for abstract objects; that is why we call them abstract. Numbers, for example, cannot cause anything. Therefore, the transcendent cause of the origin of the universe must be of the order of mind.
>
> **Third**, this same conclusion is also implied by the fact that we have in this case the origin of a temporal effect from a timeless cause. We've concluded that the beginning of the universe was the effect of a first cause. By the nature of the case, that cause cannot have any beginning of its existence or any prior cause. Nor can there have been any changes in this cause, either in its nature or operations, prior to the beginning of the universe. It just exists changelessly without beginning, and a finite time ago it brought the universe into existence. Now this is exceedingly odd. The cause is in some sense eternal and yet the effect which it produced is not eternal but began to exist a finite time ago. How can this be? If the necessary and sufficient conditions for the production of the effect are eternal, then why isn't the effect eternal? How can all the causal conditions sufficient for the production of the effect be changelessly existent and yet the effect not also be existent along with the cause? How can the cause exist without the effect?
>
> One might say that the cause came to exist or changed in some way just prior to the first event. But then the cause's beginning or changing would be the first event, and we must ask all over again for its cause. And this cannot go on forever, for we know that a beginningless series of events cannot exist. There must be an absolutely first event, before which there was no change, no previous event. We know that this first event must have been caused. The question is: How can a first event come to exist if the cause of that event exists changelessly and eternally? Why isn't the effect co-eternal with its cause?
>
> To illustrate: Let's say the cause of water's freezing is subzero temperatures. If the temperature were eternally below zero degrees Centigrade, then any water around would be eternally frozen. If the cause exists eternally, the effect must also exist eternally. But this seems to imply that if the cause of the universe existed eternally, the universe would also have existed eternally. And this we know to be false.
>
> One way to see the difficulty is by reflecting on the different types of causal relations. In event/event causation,

> one event causes another. For example, the brick's striking the window pane causes the pane to shatter. This kind of causal relation clearly involves a beginning of the effect in time, since it is a relation between events which occur at specific times. In state/state causation one state of affairs causes another state of affairs to exist. For example, the water's having a certain surface tension is the cause of the wood's floating on the water. In this sort of causal relation, the effect need not have a beginning: the wood could theoretically be floating eternally on the water. If the wood begins to float on the water, then this will be a case of event/event causation: the wood's beginning to float is the result of its being thrown into the water. Now the difficulty that arises in the case of the cause of the beginning of the universe is that we seem to have a peculiar case of state/event causation: the cause is a timeless state but the effect is an event that occurred at a specific moment in the finite past. Such state/event causation doesn't seem to make sense, since a state sufficient for the existence of its effect should have a state as its effect.
>
> There seems to be only one way out of this dilemma, and that is to say that the cause of the universe's beginning is a personal agent who freely chooses to create a universe in time. Philosophers call this type of causation "agent causation," and because the agent is free, he can initiate new effects by freely bringing about conditions which were not previously present. For example, a man sitting changelessly from eternity could freely will to stand up; thus, a temporal effect arises from an eternally existing agent. Similarly, a finite time ago a Creator endowed with free will could have freely brought the world into being at that moment. In this way, the Creator could exist changelessly and eternally but choose to create the world in time. By "choose" one need not mean that the Creator changes his mind about the decision to create, but that he freely and eternally intends to create a world with a beginning. By exercising his causal power, he therefore brings it about that a world with a beginning comes to exist. So the cause is eternal, but the effect is not. In this way, then, it is possible for the temporal universe to have come to exist from an eternal cause: through the free will of a personal Creator.
>
> On the basis of a conceptual analysis of the conclusion implied by the kalām cosmological argument, we may therefore infer that a personal Creator of the universe exists, who is uncaused, beginningless, changeless, immaterial, timeless, spaceless, and unimaginably powerful. This, as Thomas Aquinas was wont to remark, is what everybody means by "God."

There are lots of good objections to the kalam cosmological argument. A person could object to the notion of timeless person is incoherent, or say that the notion of an unembodied mind is incoherent, or that we don't know that non-physical minds can cause effects in the physical world, or that matter can't come into being out of nothing, or that even if effects in the physical universe have causes that doesn't mean the universe as a whole has to have a cause, or that the notion of causation doesn't make sense unless time has already started. These are objections that Dr. Craig answered in his debate with Peter Millican, so if you hear these objections, I recommend watching that debate.

# New study: record high 30.3 percent of millenials live with a parent

**Wintery Knight** · 21 February 2015 · Archived copy · Original

Those on the left assure us that the secret to creating more jobs is making it easier for more people to go to college. We have to keep taxing job creators and workers, they say, so that we can pay for more people to get a college indoctrination. I mean education! Well, we have been trying that approach for some time – tax the private sector, make it cheaper for people to go to college. And the result is that we now have a record high number of young adults with college degrees, and a record high number of young adults living in poverty and a record high number of young adults living at home.

The article from Campus Reform tells us where we are now.

They write:

> An all-time high of 30.3 percent of millennials are living with a parent, according to data released from the U.S. Census Bureau's study, "Young Adults: Then and Now."
>
> The study, released Dec., 4, 2014, and tracks the young adult population from the 1980, 1990, and 2000 Censuses and the 2009-2013 American Community Survey, gathering data about salary, education level, transportation habits, and more than 40 other topics.
>
> Millennials are living at home, and more are living in poverty with lower rates of employment than their predecessors.
>
> According to the report, millennials are more likely to live at home than any other generation of young adults. In 1980, 22.9 percent of young adults lived with a parent, while in 1990 the percentage increased to 24.2 percent. In 2000, the percentage decreased to 23.2 percent, but by 2013 it hit a record-level by jumping more than 7 percentage points.
>
> Millennials are living at home, and more are living in poverty with lower rates of employment than their predecessors. According to the study, one in five young adults live in poverty, up from one in seven in 1980. Currently, the study claims 65 percent of millennials are employed compared to the 1980 number of 69 percent.
>
> Yet, 22 percent of young adults have a college degree, compared to only 16 percent in 1980.

The troubling thing about this for me is how much millenials keep voting, again and again, for higher taxes and more regulations. On the one hand, they want to vote against evil corporations. Tax them more! Regulate them, to save the planet! Then, a split-second later, they go and ask these corporations that they've been taught to bash for work. There is work for them, all right – in other countries with lower taxes and less regulation.

Anyway, we want to be positive, so again, I'm going to provide people with useful information.

First, study STEM programs:

> 1. Petroleum Engineering – Starting Salary: $103,000 / Mid-Career Salary: $160,000
> 2. Actuarial Mathematics – Starting Salary: $58,700 / Mid-Career Salary: $120,000
> 3. Nuclear Engineering – Starting Salary: $67,600 / Mid-Career Salary: $117,000
> 4. Chemical Engineering – Starting Salary: $68,200 / Mid-Career Salary: $115,000
> 5. Aerospace Engineering – Starting Salary: $62,800 / Mid-Career Salary: $109,000
> 6. Electrical Engineering – Starting Salary: $64,300 / Mid-Career Salary: $106,000
> 7. Computer Engineering – Starting Salary: $65,300 / Mid-Career Salary: $106,000
> 8. Computer Science – Starting Salary: $59,800 / Mid-Career Salary: $102,000

> 9. Physics – Starting Salary: $53,100 / Mid-Career Salary: $101,000
> 10. Mechanical Engineering – Starting Salary: $60,900 / Mid-Career Salary: $99,700

And you should also start investing early, and keep investing:

> The good news is there are now more millionaires than ever. But when it comes to retirement, is a million dollars enough?
>
> "If they want to be financially independent, retire at 65 and be able to have an income of $40,000 a year in retirement for 30 years, then it's likely that they're going to need a million dollars to retire to generate that lifestyle," said Bruce Allen, an independent wealth advisor.
>
> Living comfortably on $40,000 a year in retirement, which would require a $1 million nest egg by the time you reach the retirement age, will depend on your expenses, investment returns and health-care costs.
>
> […]Many retirees make it work with less. According to Census data, the median household income for those 65 and older is $34,000, but that's almost half the $66,000 for ages 55 to 64. In order to preserve that preretirement standard of living, financial experts say you'll need more than a million dollars.

And the last piece of advice I would be this – if you are a young person, you should be looking into understanding how to save and invest, and you should be reading unbiased financial news. It's not enough to hope that the government is going to bail you out. In all likelihood, the government will be coming to you in 15 years, looking for *you* to bail *them* out of *their* obligations to pay the pensions and health care costs of retirees. You should not take pride in being ignorant of economics and politics. This is *your* problem. Wishing and hoping that things will be OK will not make these challenges go away. Just because your friends, your favorite musicians, your favorite authors, your co-workers, etc. are not talking about these issues to you, it does not mean that these challenges don't apply to you. They *do* apply to you. And just getting good grades now is NOT a guarantee that you will be OK later. You're going to be expected to do more with less in a way that your parents never had to do. They are leaving you a worse financial world than they received.

# Douglas Groothuis' exhortation to Christians to study apologetics

**Wintery Knight** · 21 February 2015 · Archived copy · Original

Dr. Groothuis' article lays out 6 "enemies" to the task of apologetics. I'll look at the first 4.

**Enemy #1: We don't defend God's existence and character to other people**

If we really cared about God like we say we do, then we would care enough to defend his reputation in public. If we really loved our neighbor and believed that they need to follow Jesus in order to be reconciled with God, we would tell them that. But we don't really care enough about God when his reputation is slammed in public. That's what being a good friend to God and to our neighbor requires.

Groothuis writes:

> Too many Christians don't seem to care that Christianity is routinely ridiculed as outdated, irrational, and narrow-minded in our culture. They may complain that this "offends" them (just as everyone else is complaining that one thing or another "offends" them), but they do little to counteract the charges by offering a defense of the Christian world view in a variety of settings. Yet Scripture *commands* all Christians to have a reason for the hope that is within them and to present this with gentleness and respect to unbelievers (1 Peter 3:15).
>
> Our attitude should be that of the Apostle Paul who was "greatly distressed" when he beheld the idolatry of sophisticated Athens. This zeal for the truth of God led him into a fruitful apologetic encounter with the thinkers gathered to debate new ideas (see Acts 17). It should for us as well. Just as God "so loved the world" that he sent Jesus to set us right with God (John 3:16), Jesus' disciples should so love the world that they endeavor to reach the lost by presenting the Gospel and answering objections to the Christian faith (John 17:18).

**Enemy #2: We separate Christianity from the reasons and evidence that ground it**

Many Christians alter their theology in order to "get along" with other religions that conflict with ours. Instead of wrestling with the competing truth claims of other religions, some Christians just change the nature of our religion so that it is just our personal preference or cultural narrative, instead of being about truth. If the Bible claims that Jesus rose from the dead, we reinterpret that historically testable claim so that it's only true *for us.* If the Bible says that the universe began to exist, we reinterpret that scientifically testable claim so that it is only true *for us.*

Groothuis says:

> For some Christians, faith means belief in the absence of evidence and argument. Worse yet, for some faith means belief *in spite of* evidence to the contrary. The more irrational our beliefs, the better–the more "spiritual" they are… When Christians opt for irrationalism, they become just another "religious option," and are classified along with Heaven's Gate, the Flat Earth Society, and other intellectually impaired groups.

**Enemy #3: We don't take the time to study the reasons and evidence we have**

We don't make time for preparing a defense for our beliefs by leveraging the resources produced by Christian scholars.

Groothuis says:

> Many Christians are not aware of the tremendous intellectual resources available to defend "the faith that was once for all entrusted to the saints" (Jude 3). This is largely because many major churches and parachurch organizations virtually ignore apologetics… Few evangelical sermons ever address the evidence for the

> existence of God, the resurrection of Jesus, the justice of hell, the supremacy of Christ, or the logical problems with nonChristian worldviews. Christian bestsellers, with rare exceptions, indulge in groundless apocalyptic speculations, exalt Christian celebrities (whose characters often do not fit their notoriety), and revel in how-to methods.

**Enemy #4: We would rather be liked by people than be a friend to God**

Somehow, we have gotten the idea that the purpose of Christianity is for us to be happy. Being popular and accepted by non-Christians makes us feel happy. Moral judgments are divisive, so we avoid making those. Exclusive salvation is divisive, so we avoid exclusivity. All of this so that our lives will be easier and happier.

Groothuis says:

> In our pluralistic culture, a “live and let live” attitude is the norm, and a capitulation to social pressure haunts evangelicalism and drains its convictions. Too many evangelicals are more concerned about being “nice” and “tolerant” than being biblical or faithful to the exclusive Gospel found in their Bibles. Not enough evangelicals are willing to present and defend their faith in challenging situations, whether at school, at work, or in other public settings. The temptation is to privatize faith, to insulate and isolate it from public life entirely. Yes, we are Christians (in our hearts), but we have difficulty engaging anyone with what we believe and why we believe it. This is nothing less than cowardice and a betrayal of what we say we believe.

You can read the rest of the article here.

# The global shift away from marriage and child-bearing

**Wintery Knight** · 22 February 2015 · Archived copy · Original

Nicholas Eberstadt explains what's happening to marriage and parenting, in this Wall Street Journal article.

I just want to pull out the parts that seem interesting.

Why is it happening?

> All around the world today, pre-existing family patterns are being upended by a revolutionary new force: the seemingly unstoppable quest for convenience by adults demanding ever-greater autonomy. We can think of this as another triumph of consumer sovereignty, which has at last brought rational choice and elective affinities into a bastion heretofore governed by traditions and duties—many of them onerous. Thanks to this revolution, **it is perhaps easier than ever before to free oneself from the burdens that would otherwise be imposed by spouses, children, relatives or significant others with whom one shares a hearth.**

People are rejecting responsibilities, expectations, and obligations because they are selfish.

When he talks about Europe, he offers an explanation for this:

> Now consider Europe, where the revolution in the family has gained still more ground. European demographers even have an elegant name for the phenomenon: They call it the Second Demographic Transition (the First being the shift from high birth rates and death rates to low ones that began in Europe in the early industrial era and by now encompasses almost every society). In the schema of the Second Demographic Transition, long, stable marriages are out, and divorce or separation are in, along with serial cohabitation and increasingly contingent liaisons. **Not surprisingly, this new environment of perennially conditional, no-fault unions was also seen as ushering in an era of more or less permanent sub-replacement fertility.**
>
> According to Eurostat, the European Union's statistical agency, the probability of marriage before age 50 has been plummeting for European women and men, while the chance of divorce for those who do marry has been soaring. In Belgium—the birth-land of the scholars who initially detected this Second Transition—the likelihood of a first marriage for a woman of reproductive age is now down to 40%, and the likelihood of divorce is over 50%. This means that in Belgium the odds of getting married and staying married are under one in five. A number of other European countries have similar or even lower odds.
>
> Europe has also seen a surge in "child-free" adults—voluntary childlessness. The proportion of childless 40-something women is one in five for Sweden and Switzerland, and one in four for Italy. In Berlin and in the German city-state of Hamburg, it's nearly one in three, and rising swiftly. Europe's most rapidly growing family type is the one-person household: the home not only child-free, but partner- and relative-free as well. In Western Europe, nearly one home in three (32%) is already a one-person unit, while in autonomy-prizing Denmark the number exceeds 45%. The rise of the one-person home coincides with population aging. But it is not primarily driven by the graying of European society, at least thus far: Over twice as many Danes under 65 are living alone as those over 65.

"Perenially conditional, no-fault unions". That means that either party can leave at any time, for any reason.

Who is hurt most when marital stability declines?

Kids:

> Our world-wide flight from family constitutes a significant international victory for self-actualization over self-sacrifice, and might even be said to mark a new chapter in humanity's conscious pursuit of happiness. But these

> voluntary changes also have unintended consequences. The deleterious impact on the hardly inconsequential numbers of children disadvantaged by the flight from the family is already plain enough. So too the damaging role of divorce and out-of-wedlock childbearing in exacerbating income disparities and wealth gaps—for society as a whole, but especially for children. Yes, children are resilient and all that. But the flight from family most assuredly comes at the expense of the vulnerable young.

And the elderly:

> That same flight also has unforgiving implications for the vulnerable old. With America's baby boomers reaching retirement, and a world-wide "gray wave" around the corner, we are about to learn the meaning of those implications firsthand.
>
> In the decades ahead, ever more care and support for seniors will be required, especially for the growing contingent among the elderly who will be victims of dementia, or are childless and socially isolated. Remember, a longevity revolution is also under way. Yet by some cruel cosmic irony, family structures and family members will be less capable, and perhaps also less willing, to provide that care and support than ever before.

I did a quick search for pro-marriage policies and came across an article from USA Today. The author wanted to bash a legislator's pro-marriage ideas, and to do that she found a single mother to quote who disagrees with pro-marriage policies.

Look:

> Indianapolis mother Amanda Louden, 46, has seen parenthood from both married and unmarried standpoints.
>
> She had three sons with her former husband, deciding to marry to be traditional about it and for the convenience of everyone having the same last name. Louden later divorced her husband and had another son with her then-boyfriend.
>
> And she says she doesn't think marriage made that much of a difference in raising her children.
>
> "It's really an oversimplification to say that single parenting is bad," Louden said. "Intact families where both parents are involved in their children's lives, that's good. I'm in favor of that. But let's not demonize families that don't have that. It's demonizing people who are doing whatever they can."
>
> The father of her youngest son didn't seem ready or interested in a live-in family role, she said. He became less involved and eventually stopped visiting.
>
> Louden is now raising four sons on her own as a single mother. She disagrees that children with married parents are somehow automatically "better" than hers.

If we are serious about marriage, we are going to have to change attitudes like that. We have to get used to responding to people who say that marriage doesn't matter with real, peer-reviewed evidence. Broken families arise when people think that there are no best practices that should affect their decision making beyond "follow your heart". Following your heart get *no disapproval* at all from the culture. Young people often don't have friends who will challenge them when they are about to make a bad decision. Young people will often seek out peers who agree with them, and avoid parents and other responsible adults who disagree. Peer-approval – that's how disasters happen. The only way to stop people from messing up their lives is to tell them before they mess up their lives – and that means breaking through "follow your heart" as gently and effectively as possible.

One reason why so many marriages break up is recreational premarital sex.

CNS News explains:

> The seeds of this sexual maturity are sown in early childhood, when a child's married parents model faithful love of each other, guide him or her through modesty to a criteria of selecting a spouse and courting the right young man or woman, eventually leading to marriage and a family of their own. Without this guidance—without married parents who have modeled a healthy, monogamous relationship since the child's birth—children generally get lost in pre-marital sex, leading to multiple sexual partners before marriage, in turn leading most into cohabitation and later divorce or permanent single parenthood. The culture has lost its sense of sexual morality.
>
> […][M]ost people do want marriage for themselves and for society; unfortunately, most have severed the connection between premarital chastity and later marriage stability, not knowing that the more sexual partners before marriage the greater the likelihood of divorce. **Ninety-five percent of those whose only sexual partner ever is their spouse are still in their first marriage after five years. This figure drops to 62 percent for women who had one sexual partner other than their husband (before they married), and drops down further to 50 percent for those who had two such sexual partners before marrying their husband.**
>
> Therefore, if the nation wants stable marriage, we first must reinvest in shepherding youth to be chaste. This has become more and more difficult for parents as the sexual principles of radical feminism and sexual autonomy pervades our courts, schools, colleges and media, and sadly, even to some extent in our churches.

Yes, *in our churches.*

But there's more to restoring marriage than just confrontation at the one-on-one level. From a policy point of view, we should be voting for policies that promote marriage and child-bearing within marriage. I think we should be giving rewards to married couples who stay together and have children, not to people who want to try any other crazy arrangement that isn't as good for kids. Not every association of people is as stable and healthy as marriage, and the government shouldn't be treating these alternatives as we treat the real thing.

You can look over a list of pro-marriage policy ideas here.

# New study: homeschooled children less likely to leave their faith

**Wintery Knight** · 22 February 2015 · Archived copy · Original

Lindsay, a super-mom who homeschools her kids with her super-husband Doug, sent me this article from Christian News.

Quick blurb:

> The recently-released findings from an in-depth study of nearly 10,000 young adults show that Millennials who were homeschooled are less likely to leave the faith than individuals who attended private or public schools.
>
> Late last month, Generations with Vision and the National Home Education Research Institute published the results of their Gen2 Survey. The study explores the correlations between different educational methods and the spiritual decisions of Millennials who were raised in the church.
>
> "The purpose of the study is to examine these adults who were churched growing up and to understand the key influences which either encouraged or deterred them from believing and practicing the faith of their parents," said the survey's director and lead researcher, Dr. Brian Ray.
>
> Using a sample size of 9,369 18-to 38-year-olds who were churched while growing up, the Gen2 Survey collected data on Millennials' educational backgrounds, worldviews, and religious beliefs. The study found that individuals who were homeschooled, attended church regularly, and had good relationships with their parents were most likely to remain involved in the Christian faith.

> "Having a strong relationship with the child's mother and father, attending church as a child, and years homeschooled were all clearly positively associated with Millennials' basic Christian orthodoxy, broader biblical beliefs, Christian behaviors (e.g., attending church, keeping sex in marriage, prayer, not using pornography), satisfaction in life, civic and community involvement, and having beliefs similar to one's parents," Ray stated.
>
> 87% of study participants who were homeschooled said they have strong Christian beliefs. Conversely, Millennials who were enrolled in public schools or private Christian schools were more likely to walk away from the faith later in life.
>
> "Number of years in Christian school and number of years in public school were negatively associated with most of the adult beliefs and behaviors just mentioned," Ray explained.
>
> Statistically, homeschooled young adults were six times as likely to be believers and seven times as likely to be stronger in their Christian beliefs as Millennials attending private schools. Homeschooled Millennials were also two times as likely to be stronger in Christian beliefs as those who attended Christian schools or public schools.

I find that when I court Christian women, they pretty much have the idea that kids are like skydiving, ziplining or surfing. They are fun, and if you make a plan to make them achieve anything, then that is bad because it's less fun. Sometimes they try to dress it up in emotional or religious language when they are explaining it to others, but under cross-examination, it really turns out to be "marriage and parenting are better when we do whatever I feel like moment by moment". If the man does not step up during the courtship with the research and get agreement on issues like homeschooling, then he needs to shut it down and move on. Women who are guided by their feelings instead of studies in decisions about how to parent are not safe to marry. Either they accept the the best practices from research, or they are out of the running.

So if a couple determines that they are going to have no strict approach to how to parent the kids and no goals and no information about what works, then they should not be surprised their children fall away from the faith. Either you are aware of who is teaching your kids, and what they are teaching them, or you are not. It is no coincidence

that the secular left pushes for earlier and earlier starts to schooling and more and more free college. They know that the more they get the kids away from their parents and in with peers of the same age and secular leftist professors and teaches, the more those kids are likely to adopt their values – not the values of their parents.

# Study: creating jobs in poor countries doesn't reduce terrorism

**Wintery Knight** · 23 February 2015 · Archived copy · Original

He's better at golf than foreign policy

Remember last week when the Obama administration told us that terrorism is caused by poverty and joblessness?

Let's take a look at the research and see if this is true.

Here's the working paper, authored by a Harvard University scholar from the John F. Kennedy School of Government.

And here's the abstract:

> This article provides an empirical investigation of the determinants of terrorism at the country level. In contrast with the previous literature on this subject, which focuses on transnational terrorism only, I use a new measure of terrorism that encompasses both domestic and transnational terrorism. **In line with the results of some recent studies, this article shows that terrorist risk is not significantly higher for poorer countries, once the effects of other country-specific characteristics such as the level of political freedom are taken into account.** Political freedom is shown to explain terrorism, but it does so in a non-monotonic way: countries in some intermediate range of political freedom are shown to be more prone to terrorism than countries with high levels of political freedom or countries with highly authoritarian regimes. This result suggests that, as experienced recently in Iraq and previously in Spain and Russia, transitions from an authoritarian regime to a democracy may be accompanied by temporary increases in terrorism. Finally, the results suggest that geographic factors are important to sustain terrorist activities.

More from the body:

> However, recent empirical studies have challenged the view that poverty creates terrorism. Using U.S. State Department data on transnational terrorist attacks, Krueger and Laitin (2003) and Piazza (2004) find no evidence suggesting that poverty may generate terrorism. In particular, the results in Krueger and Laitin (2003)

> suggest that among countries with similar levels of civil liberties, poor countries do not generate more terrorism than rich countries. Conversely, among countries with similar levels of civil liberties, richer countries seem to be preferred targets for transnational terrorist attacks.

I know this is shocking – this the same administration that told us that insuring more people for more stuff would lower health care premiums… and that anyone who though that Russia was a threat was crazy… and that pulling out of Iraq would stabilize the region… could they be wrong about this Jobs for Terrorists program, too? The study seems to say they are wrong again.

But wait, there's more. We actually know about some terrorists from their terrorist attacks, and we can see if they were as poor and uneducated as the Obama administration tells us they are.

This article is from The Stream.

It says:

> According to scholar Scott Atran, a research director in Paris who is part of a NATO group studying suicide terrorism, there is no link between poverty and terrorism. Forensic psychiatrist and former foreign service officer Marc Sageman studied 172 participants in jihad for his book, *Understanding Terror Networks,* and came to the same conclusion. Princeton economist Claude Berrebi found that members of Palestinian terrorist organizations were frequently better educated and better off economically than the Palestinian Arab population as a whole.
>
> Islamic terrorists tend to come from cosmopolitan backgrounds, are fluent in multiple languages and have advanced computer skills. Their privileged status enables them to accomplish such horrific acts undercover, often without being detected.
>
> Osama bin Laden was the son of a billionaire construction magnate, who had close ties to the Saudi royal family. The younger bin Laden inherited $25–30 million of his family's wealth. He studied economics and business administration at King Abdulaziz University.
>
> Bin Laden's top deputy, Ayman al-Zawahiri, who replaced him as the leader of al Qaeda, came from wealthy Egyptian parents. His father was a surgeon and medical professor, and his mother came from a politically active, financially successful clan. Al-Zawahiri also became a surgeon, even obtaining a master's degree in surgery.
>
> The leader of the 9/11 terrorist attacks, Mohammad Atta, studied architecture in Cairo, Egypt, then entered an urban planning graduate program at the Technical University of Hamburg-Harburg in Germany. His father was a lawyer and his mother came from a wealthy farming and trading family.
>
> The "underwear bomber," Umar Farouk Abdulmutallab, is the son of a wealthy Nigerian banker and businessman. His father was the chairman of First Bank of Nigeria and has been described by the UK paper*The Times* as "one of the richest men in Africa." Umar studied at several universities, including University College London, where he studied Engineering and Business Finance and earned a degree in mechanical engineering.
>
> One of the 2005 London bombers left an estate valued at over $150,000. Dawood Ibrahim, who coordinated the 1993 Mumbai bombings, is worth somewhere between $6 and $20 billion. Ibrahim despised his father's successful banking profession, condemning it as "immoral" and "un-Islamic" for charging interest, and urged him to quit.

Now, my understanding is that when we elect politicians to run the economy, foreign affairs, etc. that we are picking people who understand the issues – not merely people who give speeches that sound nice. If I am hiring someone to fix my car, I don't want to hear his pet theory about how gremlins are causing the leak. I want people who can see the world clearly, apart from any political correctness or anti-American bias, so that the problems get

solved. I want the problems solved effectively and cheaply – that's what I am used to in the private sector, where competence matters. It seems to me that the next time we have an election, we ought to elect someone who can do the work – not someone who just talks a lot of counter-factual nonsense.

# New study: federal control of land hurts job growth in oil and gas industry

**Wintery Knight** · 23 February 2015 · Archived copy · Original

The Daily Signal reports on a new study from the Heritage Foundation.

They write:

> Current government regulations imposed by the Bureau of Land Management are harming energy production and holding back the U.S. economy, a new study reveals.
>
> "While federally owned lands are also full of energy potential, a bureaucratic regulatory regime has mismanaged land use for decades," write The Heritage Foundation's Katie Tubb and Nicolas Loris.
>
> The report focuses on the Federal Lands Freedom Act, introduced by Rep. Diane Black, R-Tenn., and Sen. James Inhofe, R-Okla. It is designed to empower states to regain control of their lands from the federal government in order to pursue their own energy goals. That is a challenge in an oil-rich state like Colorado.
>
> "We need to streamline the process as there are very real consequences to poor [or nonexistent] management," Tubb, a Heritage research associate, told The Daily Signal.
>
> "Empowering the states is the best solution. The people who benefit have a say and can share in the benefits. If there are consequences, they can address them locally with state and local governments that are much more responsive to elections and budgets than the federal government."
>
> Emphasizing the need to streamline the process, Tubb pointed to the findings in the new report.
>
> "The Bureau of Land Management estimates that it took an average of 227 days simply to complete a drill application," Tubb said.
>
> That's more than the average of 154 days in 2005 and more than seven times the state average of 30 days, according to the report.
>
> The report blames this increase in the application process on the drop in drilling on federal lands.
>
> "Since 2009," Tubb and Loris write, "oil production on federal lands has fallen by nine percent, even as production on state and private lands has increased by 61 percent over the same period."
>
> Despite almost "43 percent of crude oil coming from federal lands," government-owned lands have seen a 13-point drop in oil production, from 36 percent to 23 percent.

So, if we were interested in more job creation (and lower gas prices) then what we would be doing is letting oil and gas companies hire more people and extract more oil. Streamlining the process for new new drilling permits would help a lot. Right now, we still have a very low level of labor force participation. If we want companies to hire more people, we need to make it easier for them to do it. That means a less anti-business climate.

# Brian Godawa: what "The Imitation Game" tells us about homosexuality

**Wintery Knight** · 23 February 2015 · Archived copy · Original

I usually only go to see about one movie in the theaters per year, because I don't share the same worldview as most people in Hollywood, and I share Plato's concern about the power of drama to move me to accept their worldview through my emotions. Art is wonderful when it tells the truth, but most of what comes out of Hollywood doesn't tell the truth.

This related blog post is from Brian Godawa's blog. I thought it was very interesting.

He writes:

> The story of Alan Turing, the brilliant yet troubled mathematician who led the cryptographic team that defeated the Nazi Enigma code in WWII and created the world's first computer.
>
> Wow, this Oscar season offers a slew of amazing performances. This one by Benedict Cumberbatch as Turing is a riveting and pathos filled drama that views like a gay version of the Oscar winning *A Beautiful Mind*.
>
> This movie is a riveting, solid, well-told story. Brilliant in its machinations and exciting in its imagination. It explores the nuance of moral decisions in war, the complexity of social classes and issues, the alienation of mental illness, and the pain and irony of genius.
>
> Who could have thought that there could be such exciting suspense, such heart-stirring pity, and such powerful moments of cheerful dramatic victories in a movie about a group of weird nerds penciling out mathematics and building a computer? But *The Imitation Game* is all that.
>
> And it's a brilliant artistic masterpiece for the homosexual agenda.

How so?

> *The Imitation Game* is a similar timely metaphor. It tells the story of an oddball man who was rejected by the very society that he saved because of his genius. A tragedy of greatness. It is about breaking down our personal and social prejudices by showing that the very kind of people we often reject are the ones who do great things, such as, oh, save the world. History definitely bears out the repeated theme of the movie, "Sometimes, it's the very people that no one imagines anything of that do the things no one can imagine." Society too often rejects the misfits, who may offer the most to bring balance to the world. And who of us doesn't at some time in our lives feel like such misfits and oddballs who feel out of place?
>
> […]**Storytelling does not make logical arguments so much as emotional arguments. It *incarnates* logic or worldviews which touches us existentially as storied human beings. Story makes its most powerful connections emotionally through such rhetorical techniques as *montage*. The concept is that by placing two or more disparate images or storylines next to each other, viewers make emotional connections between those things, whether or not they are logically connected.**
>
> […][The movie] shows us Alan's alleged autistic Asperger's type social awkwardness. Well, who among us would not feel sorry for such innocent suffering? The poor guy can't help it, and he's really quite sweet underneath that rudeness and lack of emotion and sensitivity. Heck, understanding people is like cracking a code for him. And of course, it is precisely that autism that blesses him with the mathematical brilliance to break the Enigma code of the Germans that ended the war early and saved millions of lives. But that is not all. That autism that we would see as "abnormal" resulted in figuring out the world's first computer, one of mankind's greatest achievements.
>
> So, you can see the litany of injustices that are laid out, with which the viewers could not disagree.

> […]Americans are suckers for the underdog. If you want to engender sympathy for a character, make them suffer persecution, unfairness, injustice. In other words, make them a victim.
>
> […]The thematic cleverness of *The Imitation Game* lies in its montage connection of Turing's homosexuality with his genius and with all these other civil rights issues with which we have all come to agree upon. The movie creates a touching tragic homosexual love story from Turing's past to show his deep pain of loss. And then it lays it on heavy with a bookend story of Turing's tragic arrest and conviction of his homosexual acts in a time and place in British history where it was illegal. Who wouldn't feel sorry for the suffering of chemical castration that he had to endure as a legal penalty? Again, more victimization, more emotional sympathy.
>
> It will never occur to many viewers that there is no rational justification for claiming sexual behavior as an innate civil right, that there is no logical or rational connection between Turing's homosexuality and his genius, his saving the world, or other civil rights protections. There doesn't have to be. An *emotional* connection was made through montage and analogy, and that is just as powerful on the viewer's psyche. Emotionally, the viewer *feels* the connection of Turing's homosexual identity with greatness and with saving the world. The irrational, yet emotional conclusion is that to be against homosexuality is to be against greatness and saving the world.

When I talk about movies, video games and other forms of entertainment with Christians, I am often told that I am analyzing too much and I need to enjoy art for art's sake. But my mind works more like Godawa's does. I am always disregarding the obvious stuff that is happening on the screen, and thinking about what the artist is trying to get me to believe. If it's good stuff, like in the BBC production of "North and South", then after a few minutes of watching and thinking, I lower my guard and enjoy. But if it's bad stuff, then the guard stays up, and it's no fun for me at all. I don't play video games where there is a heavy-handed anti-conservative or anti-Christian message, either. Certainly I am not going to pay to be told by Hollywood leftists that my Christian / conservative views are wrong, when all they use to persuade me are emotional tricks.

Something to think about when you decide where to spend your money.

# Conservative MP's bill to ban sex-selection abortions is defeated

**Wintery Knight** · 24 February 2015 · Archived copy · Original

Conservative MP Fiona Bruce

The leftist BBC reports.

Excerpt:

> MPs have defeated a cross-party bid to clarify in law that abortion on the grounds of gender alone is illegal in the UK.
>
> Conservative MP Fiona Bruce, who spearheaded the move, said the law was being "interpreted in different ways".
>
> But her proposal was defeated by 292 to 201. A review of the extent of sex selective abortion was agreed to.
>
> […]Her amendment would not have changed the law, but sought to update 1967 legislation that was drafted before it was possible to identify the sex of a foetus.
>
> […]Making the case for the change, the Congleton MP said her amendment would "clarify beyond doubt in statute that sex selective abortion is illegal in UK law".

Now you might think that the Labour Party and the Liberal Democrats would be against killing unborn girls, just because they are the "wrong" sex.

But you'd be wrong. The Shadow Secretary Yvette Cooper wrote to all the Labour MPs urging them to vote against the bill.

Life News says:

> "Mrs Bruce has provoked furious opposition from the most radical elements in the pro-abortion lobby, who have now been joined by pro-abortion MPs like Yvette Cooper, Jenny Willott and Sarah Newton in attempts to block the condemnation of aborting baby girls," he said.
>
> "Most pro-abortion MPs were initially content to ignore this move because they know it will not change the law. However, the mere restatement of the law has split the ranks of the pro-abortion lobby, dividing feminists who recognise that it is used predominantly to abort girls, from feminists who regard the right to demand an abortion for any reason or no reason as the touchstone of feminist orthodoxy," Tully explained. "The more extreme lobby regard the unborn child as a non-entity and won't face the fact that each baby is either a boy or a girl. Aborting baby girls demeans all women, just as aborting babies because of their disability or racial characteristics demeans others like them. The truth is that every abortion demeans all of us."
>
> He concluded: "Ms Cooper's statement undermines claims that Labour MPs are free to vote according to

> conscience on this issue.  As shadow Home Office Secretary, she has intervened not simply to tell Labour MPs to support abortion, but to support one of the most blatant abuses of the law."

Cooper is a high-ranking Labour MP. Jenny Willott is a Liberal Democrat MP. Sarah Newton is a Conservative MP.

In the UK, the crime is not even being prosecuted.

From the UK Telegraph.

Excerpt:

> Britain's top law officer is to come under pressure in the House of Commons this week to say why the Crown Prosecution Service decided not to prosecute over the gender selection abortion scandal.
>
> Dominic Grieve, the attorney general, will face questions from Tory MPs who want the Government to tighten up the 1967 Abortion Act in the wake of the scandal.

> The comments come as Britain's most senior prosecutor prepares to release a paper justifying his decision not to prosecute two doctors over an abortion scandal.

So, there was definitely a need for the law, since no one was being prosecuted for breaking it. And the measure strengthening the language was defeated – which tells me that they like things just the way they are now.

# Paul Copan explains some responses to postmodernism

**Wintery Knight** · 24 February 2015 · Archived copy · Original

Four articles from Paul Copan over at the UK site "BeThinking". Each article responds to a different slogan that you might hear if you're dealing with non-Christians on the street.

**"That's just your interpretation!"**

Some of his possible responses:

- Gently ask, 'Do you mean that your interpretation should be preferred over mine? If so, I'd like to know why you have chosen your interpretation over mine. You must have a good reason.'
- Remind your friend that you are willing to give reasons for your position and that you are not simply taking a particular viewpoint arbitrarily.
- Try to discern if people toss out this slogan because they don't like your interpretation. Remind them that there are many truths we have to accept even if we don't like them.
- 'There are no facts, only interpretations' is a statement that is presented as a fact. If it is just an interpretation, then there is no reason to take it seriously.

More responses are here.

**"You Christians are intolerant!"**

Some of his possible responses:

- If you say that the Christian view is bad because it is exclusive, then you are also at that exact moment doing the very thing that you are saying is bad. You have to be exclusive to say that something is bad, since you exclude it from being good by calling it bad.
- There is a difference, a clear difference between tolerance and truth. They are often confused. We should hold to what we believe with integrity but also support the rights of others to disagree with our viewpoint.
- Sincerely believing something doesn't make it true. You can be sincere, but sincerely wrong. If I get onto a plane and sincerely believe that it won't crash then it does, then my sincerity is quite hopeless. It won't change the facts. Our beliefs, regardless of how deeply they are held, have no effect on reality.

More responses are here.

**"That's true for you, but not for me!"**

Some of his possible responses:

- If my belief is only true for *me*, then why isn't your belief only true for you? Aren't you saying you want me to believe the same thing you do?
- You say that no belief is true for everyone, but you want everyone to believe what you do.
- You're making universal claims that relativism is *true* and absolutism is *false*. You can't in the same breath say, 'Nothing is universally true' *and* 'My view is universally true.' Relativism falsifies itself. It claims there is *one* position that is true – *relativism!*

More responses are here.

**"If you were born in India, you'd be a Hindu!"**

Some of his possible responses:

- Just because there are many different religious answers and systems doesn't automatically mean pluralism is correct.

- If we are culturally conditioned regarding our religious beliefs, then why should the religious pluralist think his view is *less* arbitrary or conditioned than the exclusivist's?
- If the Christian needs to justify Christianity's claims, the pluralist's views need just as much substantiation.

More responses are here.

And a bonus: "How do you know you're not wrong?".

# Overview of the fine-tuning argument and some objections to it

**Wintery Knight** · 24 February 2015 · Archived copy · Original

There are four posts in the series, so far. I think Allen might be done, so I'm going to link to all four and snip something I like from each one.

The first post is on whether the fine-tuning is real, and whether a multiverse explains the fine-tuning so that there is no need for a cosmic Designer.

I just have to choose this quote from the atheist Stephen Hawking on the fine-tuning:

> The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life. For example, if the electric charge of the electron had been only slightly different, stars would have been unable to burn hydrogen and helium, or else they would not have exploded. It seems clear that there are relatively few ranges of values for the numbers [i.e. the constants of nature] that would allow for development of any form of intelligent life.

And from Luke Barnes, who I've mentioned before on this blog:

> In my years of researching this topic, I'm amazed at how few scientists who have studied the fine-tuning details disagree with this core claim that the subset of life-permitting physics is a tiny fraction among possibilities. Since Luke Barnes is a top researcher on this topic, consider his input on the level of acceptance of the fine-tuning claim: *"I've published a review of the scientific literature, 200+ papers, and I can only think of a handful that oppose this conclusion, and piles and piles that support it.*[3]*"*

And on the multiverse as a way to escape the fine-tuning:

> The key issue though is that for the multiverse to be an adequate explanation for the fine-tuning it requires the conjunction of several hypotheses for which we lack *any* empirical evidence:
>
> 1. A universe-generating mechanism that generates a plethora of universes
> 2. That this mechanism doesn't itself require fine-tuning
> 3. The many-worlds interpretation of quantum physics
> 4. The ability to *widely* vary constants in those universes. If you think that it's a foregone conclusion that String Theory/M-Theory[8] will come to the rescue in this area, you should watch this video clip by Oxford physicist Roger Penrose where he exclaims that "it's not even a theory … it's a collection of hopes".
>
> Occam's razor therefore does seem to favor design over the multiverse. When one accounts for the extensive problems in affirming premise 2 and how these multiverse theories make predictions incompatible with our universe, the hypothesis that God designed the physics of the universe to bring about life is more plausible.

Here's the second post, where he explains the fine-tuning argument philosophically, and gives an example of one of the constants that has to be fine-tuned in order to support complex, embodied intelligence of any kind.

The cosmological constant:

> The inference to design will be more easily recognized if we shed some light as to the specialness of the required values. Consider the size of the bull's eye and wall based on just 1 parameter – the cosmological constant. There is a natural range for possible values for this constant because there are known contributions that are $10^{120}$times larger than the overall net value. (There is a near perfect but inexact cancellation of contributions accurate to 120 decimal places). Let's use the most conservative numbers in the physics literature

> that indicate a fine-tuning to 1 part in $10^{53}$. If the cosmological constant, which governs the expansion rate of the universe, had been larger than its current value by this tiny fraction, then the universe would have expanded so fast that no stars or planets would have formed and therefore no life. If the value were smaller by this amount then the universe would have rapidly collapsed before the universe cooled sufficiently to allow for stable information storage which is required by any self-replicating system such as life.

In the third post, he responds to objections to the fine-tuning argument. One objection you hear from atheists who don't understand the science is that any selection of constants and quantities is as likely as any other, so our life-permitting set is just random. Now, first off, there are only 10 to the 80 atoms in the visible universe, so if the cosmological constant is fine-tuned to 1 in 10 to the 120, it's not rational to say "it just happened randomly".

But here is Allen's response:

> However, the assumption that any set of constants is just as likely as any other is the very thing that we want to know. Starting off with that as an *assumption* begs the question against design. As Luke Barnes articulates in this excellent podcast dealing with responses to the fine-tuning claim, suppose we're playing poker and every time I deal I get a royal flush. If this continues to happen, you become increasingly convinced that I'm likely to be cheating. If I responded to an accusation of cheating by just saying "well any set of 5 cards is just as likely as any other so you can't accuse me of cheating" you would be rational to reject this explanation. The question is not "how likely is any set of 5 cards?" but rather "how likely is it I'm cheating if I just dealt myself 10 straight royal flushes?" This question accounts for the possibility that I'm cheating which would almost certainly be true in this scenario. So the right fine-question is "given the fine-tuning evidence, how likely is it that the constants were set at random?" The values for physical constants conform to a very particular pattern – that which supports life. The fact that we have so many finely-tuned constants makes it unlikely that they were all set at random (at least in the single universe scenario and I've already shown some of the problems/challenges in multiverse explanations.)

Every 5-card hand that you draw is equally unlikely, but the royal flush is the highest hand in the game and *always wins.* Every hand you draw is unlikely, but whatever you draw is overwhelmingly likely to not be a royal flush.

Finally, the fourth post deals with the objection that the constants and quantities could not have been other than they are.

He quotes physicist John Barrow giving 5 reasons why the constants can vary, and then this:

> Even if the constants and laws of physics couldn't vary, there is even more reason to think that there were many physically possible sets of initial conditions. Paul Davies states this emphatically:
>
> "Even if the laws of physics were unique, it doesn't follow that the physical universe itself is unique…the laws of physics must be augmented by cosmic initial conditions…there is nothing in present ideas about 'laws of initial conditions' remotely to suggest that their consistency with the laws of physics would imply uniqueness. Far from it…it seems, then, that the physical universe does not have to be the way it is: it could have been otherwise.[4]"
>
> John A. Wheeler agrees: "Never has physics come up with a way to tell with what initial conditions the universe was started off. On nothing is physics clearer than what is not physics."

The constants and quantities are not determined by physics. They were *selected* by whoever created nature in the first place.

So that's the series. I noticed that he kept linking to this Common Sense Atheism podcast featuring famous cosmologist Luke Barnes. I listened to it and wrote a summary of it in this post.

# Common Core and amnesty supporter Jeb Bush adds gay activist to staff

**Wintery Knight** · 25 February 2015 · Archived copy · Original

This is from SteveDeace.com.

He writes:

> Jeb Bush may be destroying any hope of becoming the GOP standbearer in 2016, but he's well on his way to throwing one hell of a gay pride parade.
>
> First he hired David Kochel, an aggressive advocate of homosexual marriage and a former Romney hack, as one of his top campaign advisors.
>
> And now Tim Miller, the openly gay executive director of America Rising PAC, has been hired has the Bush campaign's communications director.
>
> Bush has good company, though, when it comes to letting the fox into the hen house on marriage politics. Miller previously served as spokesman at the Republican National Committee and for the presidential campaigns of John Huntsman and John McCain.
>
> Miller, 33, is not shy about promoting his gay lifestyle on social media, and "loves to mock conservatives" who defend marriage being between one man and one woman, according to a website that promotes homosexuality.

I checked on the hires to make sure, and yes, it's true (Jim Miller, David Kochel). It makes me think that Bush is a squish on defending marriage, and the religious liberty of conscientious objectors to the gay agenda. This is a sure sign that Jeb Bush would evolve to support gay marriage if elected President. He's not reliable on social issues.

Jeb Bush is also in favor of federal control of education policy ("Common Core"):

> No Republican is tied to Common Core in the way Jeb Bush is. The governor, through his leadership of the non-profit Foundation for Excellence in Education, played a notable role in the creation and promotion of the standards and he has stood by them ever since. At an education reform conference in November, his keynote address included a firm defense of the Core, which he said ought to represent "the new minimum" for academic standards in the U.S.
>
> […]An October Gallup poll found that nearly 60 percent of Republican parents oppose the standards while under 20 percent support them, and the numbers have been steadily getting worse. With Bush beating out every other potential primary opponent except Mitt Romney in recent primary polls, the pressure to constantly attack him is irresistible.

I think that we should abolish the Department of Education, or at least give parents more choice.

Jeb Bush is also in favor of amnesty and opposed to border security:

> Former Florida Gov. Jeb Bush, one of the Republican Party's talked-about candidates for president, commented in an April 2013 video: Amnesty for some seems a sound idea. And now, some in the conservative camp are expressing shock.
>
> His remarks, at a conference with the Hispanic Leadership Network and interview with Univision, included an expressed view that DREAMers — the children of parents who came to the country illegally — should have an "accelerated path" to citizenship and that it was "ridiculous" to think otherwise, CNN reported.
>
> "I've never felt like the sins of the parents should be ascribed to the children, you know," Mr. Bush said on the 2013 video. "If your children always have to pay the price for adults' decisions they make — how fair is that?

> For people who have no country to go back to — which are many of the DREAMers — it's ridiculous to think that there shouldn't be some accelerated path to citizenship."
>
> He also commented that "it's not possible in a free country to completely control the border without us losing our freedoms and liberties," CNN said.

I think we should secure the border and not give illegal immigrants a path to citizenship unless they come in through legal immigration. I do favor work permits, but that's not Bush's position. He favors amnesty.

He's certainly not my candidate in the 2016 GOP primary. Way too far to the left for me.

**The latest polls**

Here are the latest polls from Real Clear Politics:

**Tuesday, February 24**

| Race | Poll | Results | Spread |
|---|---|---|---|
| 2016 Republican Presidential Nomination | PPP (D) | Bush 17, Walker 25, Huckabee 10, Carson 18, Paul 4, Christie 5, Rubio 3, Cruz 5, Perry 3, Jindal , Santorum , Kasich | Walker +7 |

**Monday, February 23**

| Race | Poll | Results | Spread |
|---|---|---|---|
| Texas Republican Presidential Primary | UT/Texas Tribune | Cruz 20, Walker 19, Bush 9, Carson 9, Perry 8, Huckabee 5, Paul 4, Rubio 4, Christie 2, Jindal 1, Kasich 1, Santorum 1 | Cruz +1 |

**Thursday, February 19**

| Race | Poll | Results | Spread |
|---|---|---|---|
| California Republican Presidential Primary | Field | Walker 18, Bush 16, Paul 10, Carson 8, Rubio 7, Huckabee 5, Cruz 5, Perry 4, Christie 3, Jindal 1 | Walker +2 |
| South Carolina Republican Presidential Primary | PPP (D) | Bush 19, Walker 18, Graham 13, Carson 13, Huckabee 12, Christie 7, Paul 5, Rubio , Perry 3, Cruz 3, Santorum | Bush +1 |

Polls from Real Clear Politics

Still early on, but looking good for Scott Walker. Right now, I like Walker, Jindal and Perry in that order. Cruz is good but lacks the accomplishments I am looking for in a candidate.

# As senator, Hillary Clinton paid women 72 cents for every dollar she paid men

**Wintery Knight** · 25 February 2015 · Archived copy · Original

Hillary Clinton and Planned Parenthood

I already knew that Hillary Clinton was pro-gay-marriage, and radically pro-abortion, but it turns out that she is a hypocrite on women's issues, as well.

The Washington Times reports:

> During her time as senator of New York, Hillary Rodham Clinton paid her female staffers 72 cents for every dollar she paid men, according to a new Washington Free Beacon report.
>
> From 2002 to 2008, the median annual salary for Mrs. Clinton's female staffers was $15,708.38 less than what was paid to men, the report said. Women earned a slightly higher median salary than men in 2005, coming in at $1.04. But in 2006, they earned 65 cents for each dollar men earned, and in 2008, they earned only 63 cents on the dollar, The Free Beacon reported.
>
> […]Mrs. Clinton has spoken against wage inequality in the past. In April, she ironically tweeted that "20 years ago, women made 72 cents on the dollar to men. Today it's still just 77 cents. More work to do. #EqualPay #NoCeilings."

Meanwhile, she is making "equal pay for women" her top priority.

CBS News reports:

> Hillary Clinton lamented the number of women in the fields of science, technology, engineering and math at a Silicon Valley women's conference on Tuesday, and called for more action to close the wage gap.
>
> […]In advocating for closing the pay gap, Clinton also endorsed the impassioned plea for wage equality made by Patricia Arquette in her Oscars acceptance speech for Best Supporting Actress.
>
> "Up and down the ladder many women are paid less for the same work, which is why we all cheered at Patricia Arquette's speech at the Oscars — because she's right, it's time to have wage equality once and for all," Clinton said.

All right, let's take a look at the facts on the so-called "pay gap" between men and women.

**The facts**

This article is from the very left-wing Slate, of all places.

Excerpt:

> The official Bureau of Labor Department statistics show that the median earnings of full-time female workers is 77 percent of the median earnings of full-time male workers. But that is very different than "77 cents on the dollar for doing the same work as men." The latter gives the impression that a man and a woman standing next to each other doing the same job for the same number of hours get paid different salaries. That's not at all the case. "Full time" officially means 35 hours, but men work more hours than women. That's the first problem: We could be comparing men working 40 hours to women working 35.

> How to get a more accurate measure? First, instead of comparing annual wages, start by comparing average weekly wages. This is considered a slightly more accurate measure because it eliminates variables like time off during the year or annual bonuses (and yes, men get higher bonuses, but let's shelve that for a moment in our quest for a pure wage gap number). By this measure, women earn 81 percent of what men earn, although it varies widely by race. African-American women, for example, earn 94 percent of what African-American men earn in a typical week. Then, when you restrict the comparison to men and women working 40 hours a week, the gap narrows to 87 percent.

> But we're still not close to measuring women "doing the same work as men." For that, we'd have to adjust for many other factors that go into determining salary. Economists Francine Blau and Lawrence Kahn did that in a recent paper, "The Gender Pay Gap.""They first accounted for education and experience. That didn't shift the gap very much, because women generally have at least as much and usually more education than men, and since the 1980s they have been gaining the experience. The fact that men are more likely to be in unions and have their salaries protected accounts for about 4 percent of the gap. The big differences are in occupation and industry. Women congregate in different professions than men do, and the largely male professions tend to be higher-paying. If you account for those differences, and then compare a woman and a man doing the same job, the pay gap narrows to 91 percent. So, you could accurately say in that Obama ad that, "women get paid 91 cents on the dollar for doing the same work as men."

I believe that the remainder of the gap can be accounted for by looking at other *voluntary* factors that differentiate men and women.

The Heritage Foundation says that a recent study puts the number at 95 cents per dollar.

Excerpt:

> Women are more likely than men to work in industries with more flexible schedules. Women are also more likely to spend time outside the labor force to care for children. These choices have benefits, but they also reduce pay—for both men and women. When economists control for such factors, they find the gender gap largely disappears.
>
> A 2009 study commissioned by the Department of Labor found that after controlling for occupation, experience, and other choices, women earn 95 percent as much as men do. In 2005, June O'Neil, the former director of the Congressional Budget Office, found that "There is no gender gap in wages among men and women with similar family roles." Different choices—not discrimination—account for different employment and wage outcomes.

A popular article by Carrie Lukas in the Wall Street Journal agrees.

Excerpt:

> The Department of Labor's Time Use survey shows that full-time working women spend an average of 8.01 hours per day on the job, compared to 8.75 hours for full-time working men. One would expect that someone who works 9% more would also earn more. This one fact alone accounts for more than a third of the wage gap.
>
> […]Recent studies have shown that the wage gap shrinks—or even reverses—when relevant factors are taken into account and comparisons are made between men and women in similar circumstances. In a 2010 study of single, childless urban workers between the ages of 22 and 30, the research firm Reach Advisors found that women earned an average of 8% more than their male counterparts. Given that women are outpacing men in educational attainment, and that our economy is increasingly geared toward knowledge-based jobs, it makes sense that women's earnings are going up compared to men's.

When women make different choices about education and labor that are more like what men choose, they earn just as much or more than men.

# What does social science tell us about children raised by gay couples?

**Wintery Knight** · 25 February 2015 · Archived copy · Original

The Public Discourse has a post about a new book that summarizes what we know so far.

Here is the introduction:

> An important new collection of peer-reviewed scholarly papers entitled *No Differences? How Children in Same-Sex Households Fare* has just been released by the Witherspoon Institute. The papers included and summarized in the book all study the nexus between children's well-being and the structure of the families in which they are raised. In particular, the authors focus on the efficacy of families in which the adults are involved in a physically intimate same-sex relationship.

Here are the chapters:

1. Loren Marks: survey existing studies on parenting by same-sex couples
2. Mark Regnerus: large-scale study comparing standard parenting vs same-sex couple parenting
3. Douglas Allen, Catherine Pakaluk, and Joseph Price: analysis of studies based on census data
4. Douglas Allen: study of educational outcomes of children raised by same-sex couples
5. Walter Schumm: evaluation of the methodology of the Regnerus study
6. Walter Schumm: analysis of the stability of standard relationships vs same-sex relationships

Here's the blurb on one of the chapters:

> The first paper included in the volume, by Loren Marks, examines the foundations of the position taken by the American Psychological Association (APA) on what it calls "lesbian and gay parenting." The 2005 APA monograph setting forth that organization's position asserts that the question of whether the childrearing efficacy of parents in same-sex relationships is at least the equal of that of heterosexual couples is settled, and that the serious academic literature speaks with a single voice on the matter.
>
> Marks reviews an extensive literature on the topic and finds that most of the studies on the subject rely on "convenience samples": groups of respondents that cannot be considered cross-sections of the population at large. Convenience samples are a staple of the literature because same-sex parenting is rare, and so recruiting same-sex parents for a study generally involves placing ads at day-care centers and in publications aimed at the LGBT population, or contacting people by way of their network of friends. While they can provide a useful window on the experience of parents in same-sex relationships, Marks notes that convenience samples suffer from two generic problems. First, the sample sizes are very small; one of the better studies might include a dozen or two lesbian families and a comparable number of heterosexual families. In such a small sample, only enormous differences in children's outcomes will rise to the level of statistical significance. Technically speaking, estimates of the difference between outcomes for same-sex parents and those for heterosexual couples suffer from low "power." Moreover, because convenience samples do not constitute a random cross-section of the population, they are not representative, and so estimates based on them suffer from a problem known to statisticians as "bias."
>
> Marks also notes that many of the small studies either fail to identify a comparison group of heterosexual parents, or they compare educated and affluent lesbian couples to single heterosexual parents. He suggests that better comparison groups might consist of married heterosexual parents or of all heterosexual parents. Certainly that would be the case if one wanted to maintain that there was no difference between the status quo outcomes for children of parents in same-sex relationships and those of heterosexual married parents, as some

> have seemed to want to do.
>
> Marks highlights three studies that avoid small convenience samples and work with much larger random samples, two of which can be found in the new volume, in the chapter by Mark Regnerus and the chapter by Douglas Allen, Catherine Pakaluk, and Joseph Price.

I took a quick look at Loren Marks' bio:

> Loren Marks holds the Kathryn Norwood and Claude Fussell Alumni Professorship in the LSU College of Human Sciences and Education where he teaches family studies classes and conducts research on family relationships. He currently serves as Program Director for Child and Family Studies in Louisiana State University's School of Social Work. Marks received his B.S. and M.S. degrees from BYU, and his Ph.D. from the University of Delaware. Since beginning his work at LSU in 2002, Dr. Marks has centered his research efforts on religion and families, and has published more than 70 articles or chapters, as well as the book *Sacred Matters* (with Wes Burr and Randy Day). He has also studied children's outcomes in various family forms—and strong African American families. His research has received national media attention from outlets including *The New York Times*, *The Washington Times, The Boston Globe,* and *The Wall Street Journal*. Loren was honored with college-level teaching awards in 2005, 2009, and 2013. In 2011-2012, LSU nominated him for the national Carnegie (CASE) Professor of the Year Award—and nominated him again in 2014. He is Co-Director (with Dr. David Dollahite) of the American Families of Faith Project that includes about 200 Christian, Jewish, and Muslim families from all eight regions of the United States. Findings from this ongoing project have resulted in over 50 scholarly articles/chapters and two in progress books.

The Kindle edition of the book is currently $7.99. The volume is basically one stop shopping for this issue, so if you ever debate on this, get the book.

The best philosophical book on the definition of marriage is "What is Marriage?" by Girgis, Anderson and George.

I think if you are interested in same-sex marriage as a policy issue, you should get both of these books first.

# Barronelle Stutzman turns down deal from Washington attorney general

**Wintery Knight** · 26 February 2015 · Archived copy · Original

The attorney general offered her a lighter punishment in exchange for denying her Christian faith… and she surprised him by saying no.

Here is her full response:

> Dear Mr. Ferguson,
>
> Thank you for reaching out and making an offer to settle your case against me.
>
> As you may imagine, it has been mentally and emotionally exhausting to be at the center of this controversy for nearly two years. I never imagined that using my God-given talents and abilities, and doing what I love to do for over three decades, would become illegal. Our state would be a better place if we respected each other's differences, and our leaders protected the freedom to have those differences. Since 2012, same-sex couples all over the state have been free to act on their beliefs about marriage, but because I follow the Bible's teaching that marriage is the union of one man and one woman, I am no longer free to act on my beliefs.
>
> Your offer reveals that you don't really understand me or what this conflict is all about. It's about freedom, not money. I certainly don't relish the idea of losing my business, my home, and everything else that your lawsuit threatens to take from my family, but my freedom to honor God in doing what I do best is more important. **Washington's constitution guarantees us "freedom of conscience in all matters of religious sentiment." I cannot sell that precious freedom. You are asking me to walk in the way of a well-known betrayer, one who sold something of infinite worth for 30 pieces of silver. That is something I will not do.**
>
> I pray that you reconsider your position. I kindly served Rob for nearly a decade and would gladly continue to do so. I truly want the best for my friend. I've also employed and served many members of the LGBT community, and I will continue to do so regardless of what happens with this case. You chose to attack my faith and pursue this not simply as a matter of law, but to threaten my very means of working, eating, and having a home. If you are serious about clarifying the law, then I urge you to drop your claims against my home, business, and other assets and pursue the legal claims through the appeal process. Thanks again for writing and I hope you will consider my offer.
>
> Sincerely,
>
> Barronelle Stutzman

The attorney general is a Democrat, of course, and Washington is a very blue state. The whole case is troubling, but it's really troubling that Stutzman is paying Ferguson's salary through her taxes. She is paying him to do this to her. It's always a scary thing to me when Christians have to have their consciences trampled at the hands of a government that they pay taxes to employ. I am sorry for Barronelle. I don't think that she should have to celebrate something she disagrees with.

If there is one thing that troubles me about her statement, it's that she cashes out her opposition to gay marriage in purely religious terms, and I think that's not he right approach. The right approach is to talk about how children suffer when they are denied their mother or their father or both, how same-sex marriage undermines marital norms of exclusivity and permanence, how same-sex marriage undermines religious liberty, etc. But still, it's important that she fight this and that everyone understands how same-sex marriage changes society.

# California State University system effectively bans Christian clubs

**Wintery Knight** · 26 February 2015 · Archived copy · Original

I blogged on the stories of some of these groups when they were de-recognized for "discriminating" against non-Christians.

Now we hear from the College Fix about what happened next.

Excerpt:

> This school year, CSU administrators labeled campus Christian groups that refuse to allow non-Christians to lead them "discriminatory." As a result, Christian clubs at Cal State universities that refused to change their constitutions and check boxes saying they would allow non-Christians as leaders have been officially derecognized by their campus communities.

> They've been scrubbed from campus websites and directories. They cannot take part in events that help campus clubs recruit new members and gain visibility. They are charged a more expensive, outsider fee to rent rooms on campus – straining their already tight coffers. They've lost a chance to receive a portion of student fees collected to help clubs on campuses thrive.
>
> […]Before Cal Poly's Cru chapter was derecognized, student Bible study leaders normally had 10 to 20 people come to their weekly Bible Studies. More recently, only two people showed up, Cal Poly senior Courtney Shipp, a former Cru member, told *The College Fix*.
>
> And Greg Jao, InterVarsity Christian Fellowship's national field director, told *The College Fix* that Chico State's chapter – one of the bigger InterVarsity chapters – lost 50 members due to the new policy.
>
> […]At Cal Poly, Cru can no longer reserve a room on campus as an organization, and must reserve rooms as an outside organization. That cost went from zero to $6,000 a year under the new policy, he said.
>
> Josh Otto, Chico State's Cru director, told *The College Fix* that the cost for them to reserve a room went from being for free for the entire year to $900 for one-time use.
>
> […]Leaders of Cru, formerly known as Campus Crusade for Christ, as well as the two other Christian clubs at San Luis Obispo that were derecognized – InterVarsity Christian Fellowship and Chinese Christian Fellowship – have insisted that they couldn't allow any non-Christians to be leaders.
>
> "We have no issue with anybody of any kind of race, religion coming to our weekly meetings and being a part of who we are," San Luis Obispo Missionary Leader Jamey Pappas said. "It's a question of who's going to be leading our students in a Bible Study, mentoring them individually, or deciding what kind of content goes into our weekly meeting, and we want people who agree with what we're about."
>
> […]At Chico, the Cru chapter used to receive $1,000 in funding from student government when they were recognized on campus. They will no longer receive that funding.
>
> […]"Two of my roommates are Bible Study leaders of Cru and they each have between ten and fifteen students that they are working with," Shipp said. "Last week, Melanie Reis had no one show up to her Bible Study. Sarah Sampson only had two girls."
>
> […]Making matters worse, Chico Cru also suffered a drop in attendance since they had to move their weekly meetings to a church seven blocks away from campus. Most of the losses were due to freshmen being unable to go to the meetings off-campus.
>
> "We probably lost about 50 people," Otto said. "We were about 160, 170 before that. Now we're down to 120."

Now think of this – the students have to pay the same fees to the university that are then used to fund other

organizations on campus. But they don't get the same access to the facilities. Does that seem right to you? And this is happening in 23 California State universities, according to the article. I am surprised that there hasn't been a lawsuit yet, but it's a bad sign to me – it makes me think that this is going to stick and even spread.

# Clinton Foundation receives millions in donations from regimes that oppress women

**Wintery Knight** · 27 February 2015 · Archived copy · Original

What difference does foreign policy make?
This is from the leftist Washington Post, of all places.

They write:

> The Clinton Foundation accepted millions of dollars from seven foreign governments during Hillary Rodham Clinton's tenure as secretary of state, including one donation that violated its ethics agreement with the Obama administration, foundation officials disclosed Wednesday.
>
> Most of the contributions were possible because of exceptions written into the foundation's 2008 agreement, which included limits on foreign-government donations.
>
> The agreement, reached before Clinton's nomination amid concerns that countries could use foundation donations to gain favor with a Clinton-led State Department, allowed governments that had previously donated money to continue making contributions at similar levels.
>
> The new disclosures, provided in response to questions from The Washington Post, make clear that the 2008 agreement did not prohibit foreign countries with interests before the U.S. government from giving money to the charity closely linked to the secretary of state.
>
> In one instance, foundation officials acknowledged they should have sought approval in 2010 from the State Department ethics office, as required by the agreement for new government donors, before accepting a $500,000 donation from the Algerian government.
>
> […]**While the foundation has disclosed foreign-government donors for years, it has not previously detailed the donations that were accepted during Clinton's four-year stint at the State Department.**
>
> […]**Some of the donations came from countries with complicated diplomatic, military and financial relationships with the U.S. government, including Kuwait, Qatar and Oman.**
>
> […]**The Washington Post reported last week that foreign sources, including governments, made up a third of those who have given the foundation more than $1 million over time. The Post found that the foundation, begun by former president Bill Clinton, has raised nearly $2 billion since its creation in 2001.**
>
> […]Foreign governments and individuals are prohibited from giving money to U.S. political candidates, to prevent outside influence over national leaders. But the foundation has given donors a way to potentially gain favor with the Clintons outside the traditional political limits.

> […]Foreign governments had been major donors to the foundation before President Obama nominated Clinton to become secretary of state in 2009. **When the foundation released a list of its donors for the first time in 2008, as a result of the agreement with the Obama administration, it disclosed, for instance, that Saudi Arabia had given between $10 million and $25 million.**
>
> In some cases, the foundation said, governments that continued to donate while Clinton was at the State Department did so at lower levels than before her appointment.
>
> […]Qatar, for instance, spent more than $5.3 million on registered lobbyists while Clinton was secretary of state, according to the Sunlight Foundation.The country's lobbyists were reported monitoring anti-terrorism activities and efforts to combat violence in Sudan's Darfur region. Qatar has also come under criticism from some U.S. allies in the region that have accused it of supporting Hamas and other militant groups. Qatar has denied the allegations.

Now I know that Hillary Clinton says that she is very concerned about women's rights, but then one has to wonder how well she translates those happy sounding words in her speeches into actions with these nations like Saudi Arabia. I don't think that the women in these countries saw much help from Hillary when she was Secretary of State. Maybe a few tweets on Twitter? Twitter diplomacy? I wonder if she was quiet about the human rights abuses because of the donations she was getting. I wonder if it will work to make her President in 2016.

# IPCC chief resigns over scandals, declares global warming “is my religion”

**Wintery Knight** · 27 February 2015 · Archived copy · Original

Al Gore and Rajendra Pachauri

This is from the pro-global-warming Scientific American.

It says:

> Rajendra Pachauri, chairman of the Intergovernmental Panel on Climate Change (IPCC), resigned today following accusations of sexual harassment by a former employee at the energy think tank he heads in New Delhi.
>
> The United Nations’ climate science body, which is currently meeting in Nairobi, Kenya, will now be headed temporarily by Vice Chairman Ismail El Gizouli.
>
> Pachauri, 74, did not travel to Nairobi this week for the IPCC meeting due to a police investigation into a complaint filed Feb. 13 by a 29-year-old employee. According to to the complaint, she accused Pachauri of sending text messages and emails since September 2013 that were inappropriate (*ClimateWire*, Feb. 19).
>
> Since then, at least one other former employee has leveled similar accusations at Pachauri through Indian media.
>
> […]Pachauri’s term as chairman of IPCC was due to expire in October 2015. He has served as head of the panel since 2002, and in 2007 was awarded the Nobel Peace Prize with former U.S. Vice President Al Gore.
>
> “For me the protection of Planet Earth, the survival of all species and sustainability of our ecosystems is more than a mission,” he wrote. “It is my religion and my dharma [duty].”

It’s his “religion”. That apparently means you can believe anything you want and it’s untestable, and completely divorced from evidence. This guy would make a lousy Christian if that’s his view of what religion is.

Remember when he lied about Himalayan glaciers, as the radically leftist UK Guardian reported:

> Rajendra Pachauri, the head of the international body which produces key reports to advise governments on climate change, today defended the use of “grey literature” which is not published in scientific journals.
>
> The Intergovernmental Panel on Climate Change (IPCC) has come under fire after a high-profile mistake was exposed in its most recent assessment of the scale and impacts of global warming — a claim the Himalayan glaciers would melt by 2035.
>
> The claim came from a report by charity WWF and was based on remarks made by an Indian scientist which

> were never published in a scientific, peer-reviewed journal.

Here is a reaction to the news from climate skeptic Marc Morano:

> If Pachauri had any decency, he would have resigned in the wake of the Climategate scandal which broke in 2009. Climategate implicated the upper echelon of UN IPCC scientists in attempting to collude and craft a narrative on global warming while allowing no dissent. Or Pachauri could have resigned when he wished skeptics would rub asbestos on their faces or conceded that the IPCC was at the 'beck and call' of governments. There were so many opportunities to to the right thing and fade away. But it took the proceedings of the Indian court system over the allegations of sexual harassment to finally bring Pachauri down. Things can only be looking up for the UN IPCC now that it has ridded itself of this political and ethical cancer.

Pachauri couldn't be brought down for lying about the science, because that's what the whole thing is about – that's his job. He would have been fired by the UN if he had started to tell the truth about global warming nonsense.

So global warming is his religion, and guess what? This religion comes complete with witch-hunts!

Check out this article from the Daily Caller. (H/T Joshua P.)

Excerpt:

> An investigation by Democratic lawmakers into the sources of funding for scientists who challenge details of the greater global warming narrative has already forced one scientist to call it quits.
>
> University of Colorado climate scientist Dr. Roger Pielke, Jr. has been targeted by Arizona Democratic Rep. Raul Grijalva, the ranking liberal on the House Natural Resources Committee, for his research challenging the claim that global warming is making weather more extreme.
>
> This investigation, and other attacks, have forced Pielke to stop researching climate issues. He said the "incessant attacks and smears are effective, no doubt, I have already shifted all of my academic work away from climate issues."
>
> "I am simply not initiating any new research or papers on the topic and I have ring-fenced my slowly diminishing blogging on the subject," Pielke wrote on his blog.
>
> Pielke is one of seven academics under Grijalva's investigation for allegedly taking money from the fossil fuels industry in exchange for research. Pielke says he's never been funded by fossil fuels interests — a fact to which Grijalva already knows since Pielke disclosed as much when he testified before Congress.
>
> […]So what's Pielke's connection to all of this? Grijalva's staff wrote that Pielke "has testified numerous times before the U.S. Congress on climate change and its economic impacts." One "2013 Senate testimony featured the claim, often repeated, that it is 'incorrect to associate the increasing costs of disasters with the emission of greenhouse gases.'"
>
> Why is Pielke a target? Because White House science czar John Holdren has "highlighted what he believes were serious misstatements by Prof. Pielke," according to Grijalva's letter to the University of Colorado.
>
> "Congressman Grijalva doesn't have any evidence of any wrongdoing on my part, either ethical or legal, because there is none," Pielke wrote. "He simply disagrees with the substance of my testimony – which is based on peer-reviewed research funded by the US taxpayer, and which also happens to be the consensus of the IPCC (despite Holdren's incorrect views)."
>
> Holdren said Pielke's views were "outside the mainstream." Pielke presented evidence to the Senate that global warming is not causing weather, like hurricanes and floods, to become more frequent or extreme. Holdren, disagreed, and singled out Pielke in a six page statement saying that global warming was making the weather worse.

> The main problem with Holdren's argument is that the United Nations Intergovernmental Panel on Climate Change — which Holdren himself often defers to — has said the evidence favors Pielke's argument that weather has not gotten more extreme.

I find it ironic that John Holdren is calling Pielke "outside the mainstream". Recall that Holdren has the bizarre view that a world police force is necessary to oversee forced abortions and compulsory sterilizations. The man's a psychopath, in short. Exactly the kind of man who would be selected as "science czar" by Democrat Barack Obama.

# New study: college students becoming less religious, more depressed

**Wintery Knight** · 27 February 2015 · Archived copy · Original

Just how much honor and meaning is there in binge drinking, hooking up and talking about who is the biggest victim?

Campus Reform reports:

> According to research conducted by University of California-Los Angeles, 27 percent of college freshmen no longer identify with a certain religion—the highest this trend has seen in 40 years.
>
> According to the study conducted in 2014, among college freshman, 30 percent of men and 25.4 percent of women responded with "none" when asked a religious preference. This is an increase from a 1971 study that recorded 17.3 percent of men and 13.5 percent of women who responded with "none" as their selection.
>
> […]The same study also showed a profound increase in depression among college freshmen. There is an epidemic of "emotional health issues" within the same students, the study also found.

In speaking with Christians who left their faith in college, I have found that it's typically not cognitive. They wanted to have a good time after escaping from the nest, and they just dropped Christianity and started drinking a lot and having a lot of sex with a lot of people they barely knew. "Everyone" was doing it – it was fun and thrills, and who cares how it impacts your future and your ability to serve God or get married?

Now I want this to be a positive post, so I'll link to J. Warner Wallace who has the solution to the problem.

He writes:

> In my last post, I summarized the studies and publications that describe the flight of young people from the Church. A compelling cumulative circumstantial case can be made to support the fact that young college aged Christians are walking away from Christianity in record numbers. What can we do about it? What *can* be done? Whenever people ask me this question, I always say the same thing. STOP TEACHING YOUNG CHRISTIANS. Just stop it. Whatever Christendom is doing in its effort to teach it's young, the effort appears to largely be a failure. In fact, Ken Ham (in his book, *Already Gone:Why Your Kids Will Quit Church and What You Can Do To Stop It*) found that young Christians who faithfully attended Bible classes were actually more likely to question the authority of Scripture, more likely to defend the legality of abortion, same-sex marriage, and premarital sex, and more likely to leave the church! What's going on here? I think I know. It's time to stop teaching ouryoung people; it's time to start training them.

> There's a difference between teaching and training. Training is teaching in preparation for a battle. Boxers train for upcoming fights. In fact, boxers are sometimes known to get fat and lazy until the next fight is scheduled. Once the date has been signed, fighters begin to train in earnest. Why? Because they know that they are going to eventually get in the ring and face an aggressive opponent. We train when we know we are about to encounter a battle. Imagine for a moment that you are enrolled in an algebra class. If the teacher assured you that you would never, ever be required to take a test, and that you would pass the class regardless of your level of understanding, how hard do you think you would study? How deeply do you think you would come to understand the material? How committed do you think you would be to the material?

> The problem we have in the Church today is *not* that we lack good teachers. There are many excellent teachers

> in the Church. The problem is that none of these teachers are scheduling battles. Make no mistake about it, there are battles looming for each and every young Christian in the Church today, but church leaders are not involved in the scheduling of these battles. The battles are waiting for our sons and daughters when they get to University (or enter the secular workplace). The Church needs to be in the business of scheduling battles and training our young people for these battles. Teaching without a planned battle is little more than "blah, blah blah." This is the problem with traditional Sunday School programs. They are often well-intended, informative and powerfully delivered. But they are impotent, because our young people have no sense of urgency or necessity. There is no planned battle looming on the horizon and the battle of University life is simply too far away to be palpable. It's time to address the problem not with our *classes* but with our *calendar*. It's time to start scheduling battles so our teaching becomes training.

Just stop it!

I think that's good advice – but I don't think that Christian parents or Christian pastors are following it as much as we need to be.

# British paratrooper awarded Victoria Cross for rescuing comrade from 20 Taliban

**Wintery Knight** · 28 February 2015 · Archived copy · Original

Lance Corporal Joshua Leakey

The story is from Breitbart:

> A British paratrooper has become the first living soldier to receive the most prestigious military award in Britain and the Commonwealth for the Afghanistan war, and the second in his family, after he repeatedly exposed himself to enemy fire to help a fallen comrade, and bring machine gun fire down on his enemy.
>
> While many in the UK yesterday enjoyed the 'Brit' music awards, Lance Corporal (L/Cpl) Joshua Leakey was received an award of an entirely different kind today as he had a Victoria Cross pinned on his chest by the Chief of the General Staff. At the ceremony, a senior officer read from his citation: "Drawing the majority of the enemy fire, with rounds splashing around him, L/Cpl Leakey overcame his fatigue to re-site the gun and return fire. This proved to be the turning point.
>
> "Inspired by his actions, and with a heavy weight of fire now at their disposal, the force began to fight back with renewed ferocity. Displaying gritty leadership well above that expected of his rank L/Cpl Leakey's actions single-handedly regained the initiative and prevented considerable loss of life."
>
> **L/Cpl Leakey, a member of the elite Paratrooper regiment first broke cover to give first aid to a fallen United States Marine, and continued to expose himself to fire as he recovered and fired from two machine guns, running up and down a hill in the high heat of the Afghan summer. Although he ran through machine gun fire and exploding grenades three times, he survived and was able to engage 20 Taliban fighters and save the life of the American officer.**
>
> Despite his selfless heroism and exceptional rarity of the award, Leakey modestly brushed off the ceremony, remarking that it was "just another day in the office". Speaking to journalists after the ceremony, he said: "I am here, I have got all my limbs, my heath, friends and family. This awards is brilliant but it's something I am accepting on behalf of my regiment and battalion, of which I am so proud.
>
> "My big hope is that I can go back on Monday morning and say, 'sorry I was away, what's next?' I am not going to let this define me. It was just another day at the office. It was a memorable patrol but that's what happened.
>
> "The job of the Parachute regiment is to take the fight to the enemy and that's what we had to do on that day."

His cousin won the same medal in World War II – *posthumously.*

The Victoria Cross is like our Medal of Honor – the highest award there is:

The Victoria Cross: "For Valour"
I decided to look it up to see why it is awarded:

> The Victoria Cross (VC) is the highest military decoration awarded for valour "in the face of the enemy". It takes precedence over all other orders, decorations and medals. It may be awarded to a person of any rank in any service and civilians under military command, and is presented to the recipient by the British monarch during an investiture held at Buckingham Palace. It is the joint highest award for bravery in the United Kingdom with the George Cross, which is the equivalent honour for valour not in the face of the enemy.

The word "valor" means:

> boldness or determination in facing great danger, especially in battle; heroic courage; bravery:

I got this story from Mark Steyn, and he had a sobering comment on it:

> I would like to think he was "a normal bloke". But I worry these days that your "normal bloke" is fretting about micro-agressions in the safe space at Wesleyan University. The gulf between those who fight and those they fight for has never seemed wider.

Just think of what the UK is like today, and compare and contrast that with this man.

You can read about some of the other men who have been awarded the Victoria Cross here.

# Jeb Bush's bussed-in supporters applaud driver's licenses and in-state tuition for illegals

**Wintery Knight** · 28 February 2015 · Archived copy · Original

Jeb Bush and Barack Obama

Did you know that Jeb Bush supports driver's licenses and in-state tuition for illegal immigrants?

> He faced questions about his tenure as governor of Florida, when he tried to provide driver's licenses to illegal immigrants and, later, supported letting undocumented students pay in-state tuition at state colleges.
>
> Bush drew some boos, but stuck to his position that illegal immigrants have to be brought into the American fold.
>
> "I know there's disagreement here," he conceded.

Not all CPAC attendees boo'd Bush's leftist speech at CPAC – some just walked out of the room.

But Breitbart reports that some neither left the room, nor boo'd him – who were they?:

> Perhaps in fear that he didn't have enough backers willing to show up on their own, Florida Gov. Jeb Bush's campaign organized to bus supporters to the Conservative Political Action Conference (CPAC) to cheer during his appearance on stage and vote for him in the straw poll.
>
> The New York Times' Jonathan Martin writes that Bush brought people in from Washington, D.C.: "Mr. Bush's supporters organized caravans of his Washington backers to attend his speech, and they cheered whenever anyone else booed," Martin wrote.
>
> Those same bused in cheerers also will likely be expected by Bush's campaign to vote for him in the famed straw poll.
>
> Betsy Woodruff at the liberal outlet Slate also obtained emails that prove Bush's team was busing in supporters from K Street.
>
> "Emails provided to Slate show that backers of the former Florida governor are busing supporters from downtown Washington D.C. to CPAC in National Harbor, Maryland, and organizing to get them day passes

> into the event," Woodruff wrote.
>
> One person behind the effort to bus in Bush backers, Woodruff confirmed, was former George W. Bush advance man Fritz Brogan. "A Bush insider confirmed to Slate that Bush's Right to Rise PAC is helping organize the transportation," Woodruff wrote.

And the Bush leftists are lying about it, too:

> Before CPAC, when asked if Bush's supporters would be paid and bused in, Bush spokeswoman Kristy Campbell denied it flatly. She said in an email that she "can confirm that we are not trying to play in the straw poll – despite what anyone else is telling you."
>
> Campbell, Bush's spokeswoman, told Breitbart News on Saturday afternoon: "We aren't trying to play in the straw poll. Some supporters in the DC area who were planning to attend CPAC expressed concerns about getting over to the Gaylord. We helping by providing some limited transportation on Friday only (specific to the time of the Governor's speech.)"

Maybe there is still time for him to switch parties and run against Hillary? Run to her left, I mean. Maybe he can be Elizabeth Warren's running mate or vice versa.

I went back to look at Bush's CPAC speech from 2013.

Here's what he said:

> Former Florida Gov. Jeb Bush beseeched a gathering of conservatives in remarkably frank terms on Friday night to change the course of the Republican Party and to become a more diverse, welcoming and understanding party to minorities and low-income Americans.
>
> Bush, speaking at the Conservative Political Action Conference annual dinner, made the heart of his speech a call to the GOP to "learn from past mistakes." He made his case in some of the bluntest language he has used.
>
> "All too often we're associated with being 'anti' everything," Bush said. "Way too many people believe Republicans are anti-immigrant, anti-woman, anti-science, anti-gay, anti-worker, and the list goes on and on and on. Many voters are simply unwilling to choose our candidates even though they share our core beliefs, because those voters feel unloved, unwanted and unwelcome in our party."
>
> […]In his book, written last year, he said he favored a path to residency, but not a path to citizenship for undocumented immigrants. He changed that position in interviews after it was pointed out that the current plan in the Senate includes citizenship.
>
> Bush penned an op-ed in The Wall Street Journal that went live online Friday, in which he again voiced support for a path to citizenship. But while his speech Friday night used much of the content from his op-ed, he cut the lines about the path to citizenship and made only passing mention of immigration reform.

This is what these points mean, in my opinion:

- He's very concerned that he not be perceived as anti-immigrant = AMNESTY.
- He's very concerned that he not be perceived as anti-woman= ABORTION.
- He's very concerned that he not be perceived as anti-science= GLOBAL WARMING.
- He's very concerned that he not be perceived as anti-gay = SAME-SEX MARRIAGE.
- He's very concerned that he not be perceived as anti-worker = SOCIALISM.

He wants to make sure that Democrats approve him – that's his primary concern. He wants to be liked by people on the secular left.

Bush likes to portray himself as very concerned about the poor, but what would he know about poverty?

Look:

> In 1999, Columba Bush, the famously private wife of then-Florida Gov. Jeb Bush, was detained and fined by federal customs officials for misrepresenting the amount of clothing and jewelry she had bought while on a solo five-day shopping spree in Paris.
>
> The incident left the Florida first lady deeply mortified and her husband politically chagrined. Jeb Bush said the first lady had misled customs officials because she did not want him to know that she had spent about $19,000 on the trip.
>
> “The embarrassment I felt made me ashamed to face my family and friends,” Columba Bush said in a July 1999 speech to the Central Florida Make-a-Wish Foundation, not long after the incident. “It was the worst feeling I’ve ever had in my life.”
>
> The ordeal did not stop her from spending freely, however. Less than a year later, she took out a loan to buy $42,311.70 worth of jewelry on a single day, according to records filed with the state of Florida by Mayors Jewelers.
>
> That purchase was part of a pattern by Columba Bush of borrowing to buy tens of thousands of dollars of jewelry at a time from the South Florida store over a 14-year period. Documentation available online, which does not include the details of two transactions made less than six weeks apart in 1995, shows that she spent a total of more than $90,000 at the store.

No wonder the CPAC conservatives were booing him – they probably don’t make $90,000 in a year of working.

However the leftist mainstream media is very much in favor of Jeb Bush:

- CNN: Jeb Bush survives — and thrives — at CPAC
- Washington Post: Jeb Bush was very, very good at CPAC today
- Politico: Jeb Bush survives at CPAC
- Bloomberg: The Conservative Contempt Awaiting Jeb Bush at CPAC
- NPR: Jeb’s Rowdy Supporters Help Him Escape The CPAC Lion’s Den
- National Journal: Jeb Bush Survives CPAC

From a left-wing media point of view, Bush did a great job at CPAC. They love him! But then, they love amnesty, Common Core and Obamacare, just like he does.

# New study: scientists discover that inverted retina / blind spot is not a “bad design”

**Wintery Knight** · 1 March 2015 · Archived copy · Original

Here’s what atheist Richard Dawkins says about the inverted retina:

> Any engineer would naturally assume that the photocells would point towards the light, with their wires leading backwards towards the brain. He would laugh at any suggestion that the photocells might point away from the light, with their wires departing on the side *nearest* the light. Yet this is exactly what happens in all vertebrate eyes. Each photocell is, in effect, wired in backwards, with its wires sticking out on the side nearest to the light. This means that the light, instead of being granted an unrestricted passage to the photocells, has to pass through a forest of connecting wires, presumably suffering at least some attenuation and distortion (actually probably not much but, still, it is the *principle* of the thing that would offend any tidy-minded engineer!)
>
> Source: Dawkins, Richard (1986). *The Blind Watchmaker*. London: Penguin Books; pp. 93-94.

Now let’s look at a new study reported in Science Daily.

They write:

> From a practical standpoint, the wiring of the human eye — a product of our evolutionary baggage — doesn’t make a lot of sense. In vertebrates, photoreceptors are located behind the neurons in the back of the eye — resulting in light scattering by the nervous fibers and blurring of our vision. Recently, researchers at the Technion — Israel Institute of Technology have confirmed the biological purpose for this seemingly counterintuitive setup.
>
> “The retina is not just the simple detector and neural image processor, as believed until today,” said Erez Ribak, a professor at the Technion — Israel Institute of Technology. “Its optical structure is optimized for our vision purposes.” Ribak and his co-authors will describe their work during the 2015 American Physical Society March Meeting, on Thursday, March 5 in San Antonio, Texas.
>
> Ribak’s interest in the optical structure of the retina stems from his previous work applying astrophysics and astronomy techniques to improve the ability of scientists and ophthalmologists to view the retina at high detail.
>
> Previous experiments with mice had suggested that Müller glia cells, a type of metabolic cell that crosses the retina, play an essential role in guiding and focusing light scattered throughout the retina. To test this, Ribak and his colleagues ran computer simulations and in-vitro experiments in a mouse model to determine whether colors would be concentrated in these metabolic cells. They then used confocal microscopy to produce three-dimensional views of the retinal tissue, and found that the cells were indeed concentrating light into the photoreceptors.
>
> “For the first time, we’ve explained why the retina is built backwards, with the neurons in front of the photoreceptors, rather than behind them,” Ribak said.

You can read more on some other reasons why the inverted retina is not a bad design in this article by agnostic scientist Michael Denton. But this study is a good reminder of why Christians need to keep up with science and how we need to talk about science.

**The importance of having a narrative**

All Christians should be familiar with the following basic pieces of evidence which fit the war between science and naturalism narrative:

1. The origin of the universe

2. The cosmic fine-tuning
3. The origin of life (biological information)
4. The sudden origin of the Cambrian phyla
5. The habitability/observability correlation

It's very important to present these five basic evidences to non-Christians in the historical context. And here is the story you must tell: "In the beginning, there was the naturalism, and the naturalism tried to argue from ignorance that God was not Creator and God was not Designer. And then came the science, and now people have to give up their naturalism in order to not be crazy and irrational". That's the narrative you use when talking to non-Christians about science.

In the beginning was the naturalism:

1. In pre-scientific times, atheists maintained that the universe was eternal
2. In pre-scientific times, atheists maintained that a life-permitting universe was as likely as a life-prohibiting universe
3. In pre-scientific times, atheists maintained that the cell was a simple blob of jello that could spontaneously emerge in some warm pond
4. In pre-scientific times, atheists maintained that the sudden origin of the Cambrian phyla would be explained by subsequent fossil discoveries
5. In pre-scientific times, atheists maintained that there was nothing special about our galaxy, solar system, planet or moon

But then science progressed by doing experiments and making observations.

Here are some examples of discoveries that undermined the primitive atheism:

1. Scientists discovered redshift and the cosmic microwave background radiation (evidence for a cosmic beginning) and more!
2. Scientists discovered the fine-tuning of gravity and of the cosmological constant and more!
3. Scientists discovered protein sequencing and exposed the myth of "junk DNA" and more!
4. Scientists discovered an even shorter Cambrian explosion period and the absence of precursor fossils and more!
5. Scientists discovered galactic habitable zones and circumstellar habitable zones and more!

Atheism, as a worldview, is not rooted in an honest assessment about what science tells us about reality. Atheism is rooted in a religion: naturalism. And the troubling thing we learn from looking at the history of science is that this religion of naturalism is insulated from correction from the progress of science. Nothing that science reveals about nature seems to be able to put a dent in the religion of naturalism, at least for most atheists. Their belief in naturalism is so strong that it repels all scientific evidence that falsifies it. Atheists simply don't let science inform and correct their worldview.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines

- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

# Mike Licona explains the As, Bs, Cs, Ds and Es of New Testament reliability

**Wintery Knight** · 1 March 2015 · Archived copy · Original

Mike Licona is one of my favorite Christian apologists, and here is an excellent lecture to show you why.

In the lecture, he explains why the four biographies in the New Testament should be accepted as historically accurate: (55 minutes)

Summary:

- What a Baltimore Ravens helmet teaches us about the importance of truth
- What happens to Christians when they go off to university?
- The 2007 study on attitudes of American professors to evangelical Christians
- Authors: Who wrote the gospels?
- Bias: Did the bias of the authors cause them to distort history?
- Contradictions: What about the different descriptions of events in the gospels?
- Dating: When were the gospels written?
- Eyewitnesses: Do the gospel accounts go back to eyewitness testimony?

This is basic training for Christians. It would be nice if every Christian was equipped in church to be able to make a case like this.

# Obama administration giving away the store in nuclear deal with Iran

**Wintery Knight** · 2 March 2015 · Archived copy · Original

Map of Iran Nuclear Facilities
(Source: BBC)

The Wall Street Journal reports.

Excerpt:

> Secretary of State John Kerry told Congress this week that no one should pre-judge a nuclear deal with Iran because only the negotiators know what's in it. But the truth is that the framework of an accord has been emerging thanks to Administration leaks to friendly journalists. The leaks suggest the U.S. has already given away so much that any deal on current terms will put Iran on the cusp of nuclear-power status.
>
> The latest startling detail is Monday's leak that the U.S. has conceded to Iran's demand that an agreement would last as little as a decade, perhaps with an additional five-year phase-out. After that Iran would be allowed to build its uranium enrichment capabilities to whatever size it wants. In theory it would be forbidden from building nuclear weapons, but by then all sanctions would have long ago been lifted and Iran would have the capability to enrich on an industrial scale.

Is Iran our friend? Not really:

> That is some gamble on a regime that continues to sponsor terrorist groups around the world, prop up the Assad regime in Syria, use proxies to overthrow the Yemen government, jail U.S. reporter Jason Rezaian on trumped-up espionage charges, and this week blew up a mock U.S. aircraft carrier in naval exercises near the Strait of Hormuz.

Charles Krauthammer comments:

> News leaked Monday of the "sunset clause." President Obama had accepted the Iranian demand that any restrictions on its program be time-limited. After which, the mullahs can crank up their nuclear program at will and produce as much enriched uranium as they want.
>
> Sanctions lifted. Restrictions gone. Nuclear development legitimized. Iran would re-enter the international community, as Obama suggested in an interview last December, as "a very successful regional power." A few years — probably around 10 — of good behavior and Iran would be home free.
>
> The agreement thus would provide a predictable path to an Iranian bomb. Indeed, a flourishing path, with trade

> resumed, oil pumping and foreign investment pouring into a restored economy.
>
> Meanwhile, Iran's intercontinental ballistic missile program is subject to no restrictions at all. It's not even part of these negotiations.
>
> Why is Iran building them? You don't build ICBMs in order to deliver sticks of dynamite. Their only purpose is to carry nuclear warheads. Nor does Iran need an ICBM to hit Riyadh or Tel Aviv. Intercontinental missiles are for reaching, well, other continents. North America, for example.
>
> […]The deal now on offer to the ayatollah would confer legitimacy on the nuclearization of the most rogue of rogue regimes: radically anti-American, deeply jihadist, purveyor of terrorism from Argentina to Bulgaria, puppeteer of a Syrian regime that specializes in dropping barrel bombs on civilians.

Based on past deals, we shouldn't be surprised by this news.

This Heritage Foundation article re-caps our negotiating blunders.

> What makes these deals even worse is that they are all about constraining us, not the other guy. New START didn't require Russia to destroy a single nuclear missile: it only reduced the size of the U.S. stockpile. The Arms Trade Treaty won't stop the lawless and incompetent nations of the world from selling arms irresponsibly, but our lawyers will guarantee that it restrains us.
>
> The essence of the Syrian deal was that it saved the U.S. from having to carry out Secretary of State John Kerry's "unbelievably small" retaliatory strike on the Assad regime, which gets to remain in power. The Iran carve-up removes the lingering threat of any U.S. military action and makes Israeli action all but unthinkable, while the Iranians keep on enriching uranium and can zoom up to weapons-grade levels far faster than we can reimpose sanctions.
>
> The administration is more afraid of having to respond to an Iranian nuclear breakout than it is of a breakout itself. The deal has bought only a six-month delay in the Iranian program, at the cost of easing UN sanctions the U.S. had carefully built up since 2006.
>
> At the core of the accords is the belief that the U.S. is the nation that needs to be restrained. That is why they involve big concessions from us in exchange for far less from the other side. Since we are the problem, we are the ones who need to give things up to get a deal.

And what about the global warming deal with China?

We got fleeced there, too:

> When the United States and China announced a surprise carbon-emissions deal, the environmental Left squealed in delight. Al Gore declared it "groundbreaking progress from the world's largest polluter" (i.e., China), while John Kerry patted himself on the back in the New York Times, gushing about how "the world's most consequential relationship has just produced something of great consequence in the fight against climate change." Despite the extraordinary fanfare, there's abundant reason for skepticism.
>
> Though the announcement is politically expedient for both Barack Obama and Xi Jinping, China almost certainly won't take significant steps to reduce carbon emissions.
>
> […]Beijing hasn't actually agreed to much: It will try to "stop increasing" carbon emissions by 2030 — which is a slanted way of saying its emissions will continue to grow for another 16 years — and derive 20 percent of its energy from renewables by then, up from about 10 percent now. Though these goals may be codified into Chinese law, the CCP does not have a reputation for respecting the rule of law. And the United States and the international community won't have any way of enforcing these goals. No wonder Reuters called it a "largely symbolic plan."
>
> […]Critics of the president's environmental policies have noted that even the most stringent emissions

> reductions from the First World won't have much of an impact unless the developing world also cuts back. The environmental Left is marketing the new U.S.–China deal as a way to eliminate that objection and plow forward with the president's hardline proposals for carbon regulations. "Now there is no longer an excuse for Congress to block action on climate change," Senator Barbara Boxer said in today's New York Times. "The biggest carbon polluter on our planet, China, has agreed to cut back on dangerous emissions, and now we should make sure all countries do their part because this is a threat to the people that we all represent."
>
> Boxer ignores the myriad other valid objections to the Obama administration's proposed regulations, which seek to cut carbon emissions 30 percent from their 2005 levels by 2030. In reality, it's bad policy because, despite enormous economic cost, it would yield very few environmental benefits.

And of course we have the complete surrender to Russia in the Arctic.

We are cutting deals with every bad actor on the planet that will undermine our interests at home and abroad for years to come. And why? Well, it's because Democrats think that United States is more of a threat to world peace than a force for good, and so they think the best way to save the planet is to strengthen countries like Russia, Iran and China. I think in one way this plan will work – Democrats will feel as if they are doing something, and they will congratulate themselves on their moral superiority. But as far as actually achieving good results? It's not going to happen.

# E-mails: Hillary Clinton's top aides knew in minutes that Benghazi was a terrorist attack

**Wintery Knight** · 2 March 2015 · Archived copy · Original

National Review reports on released e-mails from a FOIA request by Judicial Watch.

He says:

> From the very first moments of the terrorist attack on the U.S. compound in Benghazi on September 11, 2012, then-Secretary of State Hillary Clinton and her top aides were advised that the compound was under a terrorist attack. In fact, less than two hours into the attack, they were told that the al-Qaeda affiliate in Libya, Ansar al-Sharia, had claimed responsibility.
>
> These revelations and others are disclosed by a trove of e-mails and other documents pried from the State Department by Judicial Watch in a Freedom of Information Act lawsuit. The FOIA litigation focuses on Mrs. Clinton's involvement in the government actions before, during, and after the Benghazi attack, in which Christopher Stevens, the U.S. ambassador to Libya, was murdered by terrorists. Also killed in the attack were State Department information management officer Sean Smith, and two former Navy SEALs, Tyrone Woods and Glen Doherty, who were contract security employees and who had fought heroically, saving numerous American lives. At least ten other Americans were wounded, some quite seriously.
>
> At 4:07 p.m., just minutes after the terrorist attack began, Cheryl Mills, Secretary Clinton's chief-of-staff, and Joseph McManus, Mrs. Clinton's executive assistant, received an e-mail from the State Department's operations center (forwarded to her by Maria Sand, a special assistant to Secretary Clinton). It contained a report from the State Department's regional security officer (RSO), entitled "U.S. Diplomatic Mission in Benghazi is Under Attack." The e-mail explained that approximately 20 armed people had fired shots at the diplomatic mission, that explosions had been heard as well, and that Ambassador Stevens was believed to be in the compound with at least four other State Department officials.
>
> About a half-hour later, another e-mail — this one from Scott Bultrowicz, then director of diplomatic security (DSCC) — related:
>
> 15 armed individuals were attacking the compound and trying to gain entrance. The Ambassador is present in Benghazi and currently is barricaded within the compound. There are no injuries at this time and it is unknown what the intent of the attackers is. At approximately 1600 [4 p.m.] DSCC received word from Benghazi that individuals had entered the compound. At 1614 [4:14 p.m.] RSO advised the Libyans had set fire to various buildings in the area, possibly the building that houses the Ambassador [REDACTED] is responding and taking fire.
>
> At 6:06 p.m., another e-mail that went to top State Department officials explained that the local al-Qaeda affiliate had claimed responsibility for the attack:
>
> Ansar al-Sharia Claims Responsibility for Benghazi Attack (SBU): "(SBU) Embassy Tripoli reports the group claimed responsibility on Facebook and Twitter and call for an attack on Embassy Tripoli"
>
> Despite this evidence that her top staffers were informed from the start that a terrorist attack was underway and that an al-Qaeda-affiliated terrorist group had claimed credit for it, Secretary Clinton issued an official statement claiming the assault may have been in "response to inflammatory material posted on the Internet."

Here she is lying to the American people on camera about the nature and cause of the attack:

You'll remember that she repeated the lie again to the family of the victims.

Should we elect a liar to be President in 2016?

# Richard Dawkins: prevent parents from teaching their faith onto their kids

**Wintery Knight** · 2 March 2015 · Archived copy · Original

Richard Dawkins explains morality on atheism
This is from the radically leftist Huffington Post UK.

Excerpt:

> Prominent atheist Richard Dawkins has argued that children with religious parents must be protected from indoctrination.
>
> Dawkins expressed concerns to the Irish Times that parents are given too much leeway when it comes to their children's education. The biologist, who is backing a campaign by Atheist Ireland to overhaul education, spoke ahead of a talk at Trinity College in Dublin.
>
> He said: "There is a balancing act and you have to balance the rights of parents and the rights of children and I think the balance has swung too far towards parents.
>
> "Children do need to be protected so that they can have a proper education and not be indoctrinated in whatever religion their parents happen to have been brought up in."
>
> Physicist Lawrence Krauss who was also present for the interview agreed, but stressed he believed state education should be held to different standards than private schools.
>
> He said: "If the state is going to provide education, it has an obligation to try and educate children. That means parents have a limited — it seems to me — limited rights in determining what the curriculum is. The state is providing the education, it's trying to make sure all children have equal opportunity."
>
> He added: "Parents, of course, have concerns and 'say' but they don't have the right to shield their children from knowledge.
>
> "That is not right, any more than they have the right to shield their children from healthcare or medicine.
>
> "And those parents who do that are often tried – at least in my country – and imprisoned when they refuse to allow their children to get blood transfusions or whatever is necessary for their health. And this is necessary for their mental health."

So Richard Dawkins is too cowardly to debate Christianity with William Lane Craig, but he is willing to use the power of big government to force parents not to explain to their children why Christianity is true, and what Christianity teaches.

Why does Dawkins want to prevent parents from teaching their kids about religion? I think the answer is that he doesn't like that religious people can make moral judgments. If there is no God, then there is no rational basis for saying that anything is objectively right or wrong.

This is in fact Dawkins' own view. Dawkins has previously written this:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time

> of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

Dawkins' view is that nothing is really good or bad objectively. Cultures just evolve certain conventions, and those conventions vary arbitrarily by time and place. There's nothing really right or wrong in the universe. Just do what you like as long as you don't get caught – or change the laws so that the evil you want to do is legal. You can even force people to pay the costs of it. Heck, you can even use the courts to force them to celebrate what you do. It's all up in the air for an atheist.

Richard Dawkins himself is in favor of infanticide:

In the past, Dawkins has also spoken positively about adultery.

So this is probably why Dawkins is in favor of using government to prevent parents from teaching their kids that God exists. If you think that morality is an illusion, then you do what feels right to you, hurting the weak if necessary. That is what Darwinism teaches, in fact – survival of the fittest, the strong use and destroy the weak. And if anyone disagrees – well, that's what big government is for. And that's why atheism is often wedded to big government – they need the big government to force people with different views to do what they want them to do. Atheists like Dawkins want to do what feels good to them, and they don't want to be judged for it. Not all atheists are like Dawkins, but he is favored by them for a reason – he represents a large number of them.

# Hillary Clinton used her private e-mail account to conduct State Department business

**Wintery Knight** · 3 March 2015 · Archived copy · Original

Wow. The ultra leftist New York Times just dropped a bomb on Hillary's 2016 hopes.

Read it:

> Hillary Rodham Clinton exclusively used a personal email account to conduct government business as secretary of state, State Department officials said, and may have violated federal requirements that officials' correspondence be retained as part of the agency's record.
>
> Mrs. Clinton did not have a government email address during her four-year tenure at the State Department. Her aides took no actions to have her personal emails preserved on department servers at the time, as required by the Federal Records Act.
>
> It was only two months ago, in response to a new State Department effort to comply with federal record-keeping practices, that Mrs. Clinton's advisers reviewed tens of thousands of pages of her personal emails and decided which ones to turn over to the State Department. All told, 55,000 pages of emails were given to the department. Mrs. Clinton stepped down from the secretary's post in early 2013.
>
> Her expansive use of the private account was alarming to current and former National Archives and Records Administration officials and government watchdogs, who called it a serious breach.
>
> "It is very difficult to conceive of a scenario — short of nuclear winter — where an agency would be justified in allowing its cabinet-level head officer to solely use a private email communications channel for the conduct of government business," said Jason R. Baron, a lawyer at Drinker Biddle & Reath who is a former director of litigation at the National Archives and Records Administration.
>
> […]Under federal law, however, letters and emails written and received by federal officials, such as the secretary of state, are considered government records and are supposed to be retained so that congressional committees, historians and members of the news media can find them. There are exceptions to the law for certain classified and sensitive materials.

The problem is, of course, that personal e-mails are not securely transmitted or securely stored. This is an *incredible blunder* that put our national security at risk.

Why did she do it? The leftist Washington Post has the answer:

> The New York Times reported Monday night that, during her tenure at the State Department, Hillary Clinton never used her official email account to conduct communications, relying instead on a private email account. As the Times notes, only official accounts are automatically retained under the Federal Records Act, meaning that none of Clinton's email communication was preserved.

She did it so that there would be no record of her e-mail communications should there be any investigations or inquiries. It's sort of like Lois Lerner claiming that the dog ate her hard drive, and the hard drives of all her friends in the IRS. Only this is *worse than that.* At least we could get the Lois Lerner e-mails back from back-ups.

Ed Morrissey of Hot Air reacts:

> According to the New York Times, Hillary Clinton *never used the official e-mail system at all*. When the time came to produce e-mails for the Benghazi probe, her aides "found" 300 or so that they chose to reveal years after the event — with no guarantee that these represent the entire record, or even a significant portion of it.

> Clearly, Hillary had contempt for the mechanisms that provide transparency and accountability for government operations and officials. If any of her communications involved sensitive or classified material, Hillary may have broken more laws than just those dealing with archival of official records. This could very well be *huge*, and not just in relation to the 2016 election. Just what may have been gleaned by hostile intelligence services? What else may Hillary have been doing while at State? Congress needs to get to the bottom of this ASAP — and the Benghazi select committee should put Hillary Clinton under oath to demand answers about this.

Morrissey notes that the personal e-mail was set up *the day of her Senate confirmation hearings* for Secretary of State. This was not an accident, this was intentional. Planned. Deliberate. She did not want her e-mails to be on record. And we would never know about this except because Republicans set up a select committee to investigate. We are only finding these things out because of Trey Gowdy's ongoing Benghazi investigation. Give the man credit. He was the right man for the job, and we are finally getting the answers we sought… a little bit at a time.

# New study: marrying in your mid-to-late 20s confers benefits

**Wintery Knight** · 3 March 2015 · Archived copy · Original

Marriage and family

This is from moderate Brad Wilcox, writing in the leftist Washington Post.

He writes:

> These days, 20something marriage has gotten a reputation for being a bad idea. That's partly because parents, peers, and the popular culture encourage young adults to treat their twenties as a decade for exploration and getting one's ducks in a row, not for settling down. In the immortal words of Jay-Z, "Thirty's the new twenty."
>
> Indeed, the median age-at-first marriage has climbed to nearly 30 for today's young adults, up from about 22 in 1970. Of course, there's an upside to that. As my coauthors and I report in Knot Yet: the Benefits and Costs of Delayed Marriage in America, women who put off marriage and starting a family earn markedly more money than their peers who marry earlier.
>
> But if you'd like to maximize your marital happiness, your odds of having a couple of kids, and of forging common memories and family traditions, you might not want to delay marriage if the right person presents his or herself in your mid-to-late 20s. A University of Texas study found the highest-quality unions were forged by couples who married during that period.

He then goes over some of the benefits.

Here's one that stuck out to me:

> First, you are more likely to marry someone who shares your basic values and life experiences, and less likely to marry someone with a complicated romantic or family history. Those who marry in their twenties, for instance, are more likely to marry someone who isn't previously married and shares their level of educational attainment as well as their religious faith. Marrying at this stage in your life also allows couples to experience early adulthood together. In the words of Elizabeth Gilbert, a 31-year-old woman who married in her mid-twenties, "My husband and I got to grow up together—not apart. We learned sacrifice, selflessness, compromise, and became better people for it."

And:

> Women who marry in their 20s generally have an easier time getting pregnant, and having more than one child, than their peers who wait to marry in their thirties. You'll also be around to enjoy the grandchildren for longer.

Marrying earlier is also nice because you get that "honeymoon" period before you have to start having kids. If you want to have 1-2 kids, you'll need 3-4 years. You will want to have at least 2 years of "honeymoon" time to iron out differences and just enjoy married life. Children are challenging, and they will add more stress to the marriage. You don't want to marry at 33 and start having kids before that 2 year settling-down period is finished. If marriage really is valuable, then it doesn't make sense to put off building it together. The sooner your start, the more you can build. The more you can learn from each other. The more kids you can have.

Related to this study is a 15-minute TED.com lecture that talks about how people should be *preparing for their marriages* during their 20s instead of pursuing fun and thrills. (H/T Lindsay)

The transcript says this:

> Okay, now that sounds a little flip, but make no mistake, the stakes are very high. When a lot has been pushed to your 30s, there is enormous thirtysomething pressure to jump-start a career, pick a city, partner up, and have two or three kids in a much shorter period of time. Many of these things are incompatible, and as research is just starting to show, simply harder and more stressful to do all at once in our 30s.
>
> The post-millennial midlife crisis isn't buying a red sports car. It's realizing you can't have that career you now want. It's realizing you can't have that child you now want, or you can't give your child a sibling. Too many thirtysomethings and fortysomethings look at themselves, and at me, sitting across the room, and say about their 20s, "What was I doing? What was I thinking?"
>
> […]Here's a story about how that can go. It's a story about a woman named Emma. At 25, Emma came to my office because she was, in her words, having an identity crisis. She said she thought she might like to work in art or entertainment, but she hadn't decided yet, so she'd spent the last few years waiting tables instead. Because it was cheaper, she lived with a boyfriend who displayed his temper more than his ambition.
>
> […]First, I told Emma to forget about having an identity crisis and get some identity capital. By "get identity capital," I mean do something that adds value to who you are. Do something that's an investment in who you might want to be next. I didn't know the future of Emma's career, and no one knows the future of work, but I do know this: Identity capital begets identity capital. So now is the time for that cross-country job, that internship, that startup you want to try. I'm not discounting twentysomething exploration here, but I am discounting exploration that's not supposed to count, which, by the way, is not exploration. That's procrastination. I told Emma to explore work and make it count.

I think that's good advice. Have the goal of getting married through high school and college and the early working years. Do hard things to prepare yourself to for the *hard work* that marriage requires. The reason why so many people are divorcing is because they are trying to pursue happiness through their 20s, then jumping off into marriage after their lives have been wrecked by drinking, promiscuity, debts, self-centeredness and painful break-ups. That's completely the wrong way to go about getting married.

Usually, when I meet a person who has not achieved as much as he/she wants to have done, I try to encourage the person to study hard things. Update their resume. Apply for better jobs. Start saving more money. Try to serve others. Take on more responsibilities, even if they are not fun. Usually, people understand why I am asking them to do hard things. Because the only way to develop "identity capital" is by saying "NO" to the desire for happiness, and "YES" to doing hard things. No, you can't study philosophy. Yes, you have to study computer science. No you can't work as a waitress. Yes, you have to apply for an office job. No, you can't delay paying off your debts. Yes, you have to start investing $100 a month.

Structure and boundaries seem difficult to young people – like they are going to lose their ability to have fun. But in the long run, building something worthwhile is more important than short-term fun and thrills.

# William Lane Craig: find a wife who is interested in your field of study or ministry

**Wintery Knight** · 3 March 2015 · Archived copy · Original

Marriage and family

Blake sent me this question and answer from Dr. William Lane Craig's Reasonable Faith web site.

The question is this:

> Dear Dr. Craig,
>
> As one who has recently discovered the realm of apologetics in the past couple years, you were one of the first I had come to know, and it has been a pleasure reading some of your material and watching your debates. I am currently only a junior in college and am studying philosophy and religious studies and love it, and hope to attend seminary in the future and get my masters in apologetics, God willing.
>
> My question for you is not necessarily a theological or philosophical question but a question that I am hoping I could get some pastoral advice from you about that I feel you are perhaps the best suited to answer. I recently got married this past summer to an amazing woman I met at a one year bible college I attended a couple years ago and it has been great. But between transferring to a new (secular) school and being constantly busy with school and work I feel like my relationship with God is constantly on the backburner, as I am not getting into the word nearly as much as I used to and my prayer life is nearly nonexistent, and because of this my relationship with my wife is not where it should be either.
>
> I love my major and I love my wife, but they don't seem to overlap very well, as my studies are normally more time intensive than hers and also she see's my talking about it more as an annoyance than anything. I guess why I am writing you is because I am getting so spiritually burnt out and need advice on how to ignite/maintain my relationship with God and keep a healthy relationship with my wife and if having an aspiration of being an apologist is worth it. Not only does everyone else not see why I have picked the path I have because they see philosophy as impractical and I won't be able to support a family with such an aspiration, but the path itself is difficult as I do not have many other fellow Christians in my classes and so I am being practically scorned in all directions. I often ask myself if it is worth it and if I should find some other path that would be more conducive to married life and family life that her and I hope to start in the foreseen future.

> Dr. Craig is there a light at the end of the tunnel? Even if I make it through my undergraduate years, will seminary be any easier? I hope to seek out a spiritual mentor in the future but am still getting acquainted with our new local church and would love to have some direction until then. Thanks for your help and your great ministry!
>
> Wesley

I just want to quote the first part of Dr. Craig's answer, then I'll comment briefly below.

> Obviously, Wesley, not knowing you or your wife, I cannot counsel you adequately. Indeed, I'd urge you to treat this crisis with the utmost seriousness by finding a pastoral counselor or older married couple whom you both trust who can advise you on how to go forward.
>
> Before I respond to your concerns, Wesley, I want to alert other readers to the importance of what Wesley has to say. He has married a woman, who, though "amazing," does not share his interest in or burden for philosophy and apologetics and so finds his talking about such things an annoyance. **I strongly urge those of you who are single to make having a shared interest in your field of study and ministry a top criterion in selecting a spouse. It doesn't matter how beautiful she is or what a great cook she is if she has no interest in your field of study and so sees talking about things that you are passionate about as an annoyance.**

That's enough Dr. Craig – now it's time for my comments (which disagree with his in places).

First of all, if you are thinking of studying philosophy or New Testament, etc. then you either need to do it full-time and give up marriage and family, or do it part-time and make your main job a STEM job. I have a friend who has actually done the "full time STEM, part-time philosophy/New Testament" plan, and he has 3 Masters degrees (done part-time) and is completing a PhD (part-time) – and has not a stitch of debt. He is in his 30s. He does not intend to marry, so he is more focused on getting these degrees than saving up for his marriage. His first priority is to put points on the scoreboard, and he doesn't see marriage as a way to help him do that.

Second, if you are a man with a plan whom God has invested with certain resources – degrees, finances, good health, etc. – then *you cannot throw it all away for the wrong woman.* Talk to the woman you want to marry, and see if she:

1. has cultivated characteristics that are useful in a wife and mother (chastity, sobriety, self-denial, hard work, frugality, etc.)
2. has rejected feminism and understands the roles, responsibilities and needs of men, women and children
3. accepts that the purpose of the relationship is to pool resources and cooperate in order to serve God better – not her and not you
4. accepts that following a plan is a produces better results than chasing culturally-determined notions of happiness
5. is able to identify threats to Christianity in the culture and has studied and prepared to respond to them
6. is able to acknowledge and understand what her husband is trying to achieve and respect his preparations and plans

One positive way to learn how to make good decisions about women is to take some time out to study economics, politics, etc. and develop a marriage plan that has realistic measurable goals and a realistic interim steps to reach them. That project plan enables you to prepare yourself for marriage and your male roles (provider!) by getting the right skills and resources. And it also allows you to lead a woman so that she can develop herself to be ready for marriage *to you*. I hope that she would already have done a lot of the work by herself, (chastity, STEM degree, debt-free, good job, apologetics, conservative politics), before she even meets you. Then what's left is just the final alterations to each of you so the fit is hand in glove.

I have always believed that I could lead any woman and make her more suitable for being a good wife and mother, no matter how badly she had screwed up her life before. So long as she takes responsibility for her own decisions, does not blame anyone else for her mistakes, and is *willing* to grow. That is the only way that she will be a suitable helper and the mother of effective, influential children. I think the women I have mentored would agree that however far we got, I left them better than when I found them. But some women do not want to be better, and that's the kind you need to avoid in order to avoid squandering your resources that God has entrusted to you to produce a return for him.

A good marriage cannot be finessed with emotions and intuitions and pursuing fun and thrills. It cannot be undertaken by people who refuse to grow up. It takes planning and work. You can't go to an Olympic ski jump, put on skis for the first time and slide down the ramp and stick the landing the first time. You have to train and practice first – a lot.

Nobody ever showed up at the Olympics and got a gold medal by doing what was easy and fun at every opportunity, throughout their teens and 20s.

My courting questions would have been very useful for detecting whether a woman is willing to develop herself so that she will be a good wife and mother. I don't think that the wife described in the original question above would have passed any of these questions. It's not the time to start asking these questions after you are already married, either. It was a huge mistake to be swayed by appearance, youth and fun. It was the man's mistake – he chose her. Don't you make the same mistake as this guy.

# 58 Democrats boycott Benjamin Netanyahu's address to Congress on Iran

**Wintery Knight** · 4 March 2015 · Archived copy · Original

Israeli prime minister Benjamin Netanyahu spoke before the U.S. Congress on Tuesday, and below you can find a round-up of reactions.

Here's The Daily Signal summarizing why Netanyahi opposes the deal:

> Netanyahu made the case before Congress that the White House's efforts to negotiate a deal with Iran have about as much in common with the Camp David Accords as an SNL skit has with a State of the Union Address. The administration's proposal is anything but a realistic plan for peace.
>
> A real peace plan would demonstrate that all sides were committed to not adding more nuclear weapons powers to the Middle East. The deal as it stands does the opposite—it preserves the nuclear option for Iran—and as result will prompt other regional powers to hedge their bets and prepare to go nuclear as well rather than live in Tehran's nuclear shadow.
>
> The proposed multi-year moratorium doesn't end concerns that Iran will build a bomb and put nuclear warheads on long-range missiles. Rather, under the agreement, Tehran can walk up to the edge of becoming a declared armed-nuclear state with a robust missile force and sit there. That hardly sets the condition for sure peace in our time.
>
> Meanwhile, even the shaky stalemate proposed by the agreement rests on the assumption that Tehran won't follow North Korea's path to breakout status by cheating on the agreement and then abrogating the deal when it no longer suits the regime.
>
> At the same time the price for Obama's peace comes pretty high. Tehran demands significant and immediate sanctions relief. That means more money for a corrupt regime with one of the world's worst human records to perpetuate strangled hold over the people of Iran.
>
> Obama's deal also means more money for Tehran to prop-up the likes of Hezbollah, Assad, Hamas, the Houthi rebels in Yemen and murderous unaccountable Shia militias in Iraq (which are as big a threat to the future of the country as ISIS). As one of the world's premier state-sponsors of terrorism, enabling and emboldening Iran's efforts to reshape the region by force of arms and slaughtering innocents doesn't make the prospects for peace in the region any brighter.
>
> All the partisan controversy and vitriol over Netanyahu's speech cannot obscure that the White House has no good answers to the legitimate concerns he raised.

Breitbart News summarizes how the speech was received:

> Prime Minister Benjamin Netanyahu delivered a passionate, inspiring, thoughtful, and "game changing" speech before the American Congress which lasted for about 45 minutes, during which time he was applauded 43 times, often for 15 seconds at a time. His words elicited many standing ovations.
>
> The only other foreign leader to have spoken to Congress three times was Winston Churchill, the British Prime Minister. In honor of that, Speaker of the House, John Boehnerplans to present Netanyahu with a bust of Churchill.
>
> Netanyahu received wild applause when he said: "The world should demand that Iran do three things. First, stop its aggression against its neighbors in the Middle East. Second, stop supporting terrorism around the world. And third, stop threatening to annihilate my country, Israel, the one and only Jewish state."
>
> Israel's Prime Minister again received rather thunderous applause and a standing ovation when he noted that

> Holocaust survivor Elie Wiesel was in the audience—and when he said: “My friend, standing up to Iran is not easy. Standing up to dark and murderous regimes never is. Elie, your life and work inspires to give meaning to the words, ‘never again!’ And I wish I could promise you, Elie, that the lessons of history have been learned. I can only urge the leaders of the world not to repeat the mistakes of the past.”
>
> At this point Congress outdid itself in term of applause and a standing ovation.
>
> PM Netanyahu was greeted with a thunderous ovation when he first arrived and again after he was introduced.

And here’s Dennis Prager, writing at Investors Business Daily, explaining why Obama refused to meet with Netanyahu:

> The prime minister of Israel is at the forefront of the greatest battle against evil in our time — the battle against violent Muslims. No country other than Israel is threatened with extinction, and it is Iran and the many Islamic terror organizations that pose that threat.
>
> It only makes sense, then, that no other country feels the need to warn the world about Iran and Islamic terror as much as Israel.
>
> That’s why, when Benjamin Netanyahu speaks to the United Nations about the threat Iran poses to his country’s survival and about the metastasizing cancer of Islamist violence, he unfortunately stands alone.
>
> Virtually everyone listening knows he is telling the truth. And most dislike him for it. Appeasers hate those who confront evil.
>
> Given that this president is the least likely of any president in American history to confront evil — or even identify it — while Benjamin Netanyahu is particularly vocal and eloquent about both identifying and confronting evil, it is inevitable that the former will resent the latter.

Here is the list of 58 Democrats (House and Senate) who walked out of the speech.

> And a number of top Democrats — including Vice President Joe Biden, whose job description includes the title President of the Senate — didn’t attend.
>
> […]At least 50 Democratic House members and eight senators who caucus with the Democrats said in recent weeks they wouldn’t attend the speech, many in protest to a move that they say is an affront to the president.

The full transcript of the speech has been posted by The Weekly Standard.

# Scott Walker: if sent a bill banning abortions after 20 weeks, “I will sign that bill”

**Wintery Knight** · 4 March 2015 · Archived copy · Original

I’m Scheming Unborn Baby, and I approve this decision

Life News reports on some good news:

> Wisconsin Gov. Scott Walker is a likely pro-life candidate for the Republican nomination for president and he burnished those pro-life credentials today by issuing a letter saying he would sign a bill to ban abortions after 20 weeks.

> “As the Wisconsin legislature moves forward in the coming session, further protections for mother and child are likely to come to my desk in the form of a bill to prohibit abortions after 20 weeks. I will sign that bill when it gets to my desk and support similar legislation on the federal level. I was raised to believe in the sanctity of life and I will always fight to protect it.”
>
> The letter adds:
>
> Life is a value I learned from my parents, and it’s a value I have cherished every day, predating my time in politics. My policies throughout my career have earned a 100% rating with pro-life groups in Wisconsin. Just in my first term I signed numerous pieces of pro-life legislation and I will continue working for every life.
>
> In my past four years as governor, we have made substantial progress in the fight for our pro-life values in Wisconsin. We defunded Planned Parenthood. We prohibited abortion from being covered by health plans in a health exchange. We passed legislation assuring the women and their unborn child are better protected under law – through placing stringent requirements on medical professionals and requiring the provision of thorough and vital information to the mother.
>
> I was raised to believe in the sanctity of life and I will always fight to protect it.

> Pro-life groups were delighted by Walker's letter.
>
> "Wisconsin Right to Life is very happy to hear that Governor Walker intends to sign a bill that would protect unborn children who are capable of feeling pain," stated Heather Weininger, Executive Director of Wisconsin Right to Life. "In light of this excellent news, we urge the Wisconsin State Legislature to pass a bill to protect pain-capable unborn children as soon as possible."
>
> In 2013, Gov. Walker signed an ultrasound bill (Senate Bill 206, also known as Sonya's Law) that ensures that women seeking abortions are given the opportunity to see their unborn children through ultrasound. The legislation also requires abortionists to have admitting privileges within thirty miles of their facility. This is the kind of pro-woman, pro-life bill that not only has proven to save the lives of unborn babies, but it has closed down abortion clinics that can't comply with basic health and safety requirements. Sure enough, abortion centers in Wisconsin closed down after Walker signed the bill into law.
>
> […]Since Governor Walker took office in January 2011, the pro-life movement in Wisconsin has made monumental gains. Walker signed into law a state budget that included a provision to prohibit the UW Hospital Authority from being involved in performing abortions and from using taxpayer dollars to pay medical students to learn how to perform abortions. Walker steered Wisconsin Well Woman funds to local counties instead of Planned Parenthood.
>
> Governor Walker also signed bills that allow Wisconsin to opt out of abortion funding under Obamacare, to protect pregnant women from coerced abortions and to prohibit RU486 chemical web cam abortions.

Life News reminded us in 2014 that what Scott Walker did got results for unborn babies:

> Last year, abortions in Wisconsin dropped 4.4 percent and they declined 7.4 percent the year before. Now, Wisconsin Right to Life informs LifeNews abortions in the Badger State are down another 16 percent.
>
> "Last week, Wisconsin abortion providers stated under oath that abortions have decreased from 6,927 in 2012 to roughly 5,800 in 2013," stated Barbara L. Lyons, Executive Director of Wisconsin Right to Life. "This is another sharp decline of approximately 16%, continuing Wisconsin's record as having some of the lowest abortion numbers in the country."
>
> […]The abortion drop comes after pro-life Governor Scott Walker signed multiple pro-life bills into law.

I like to see results. A lot of people talk pro-life, and even vote pro-life – but very few sign pro-life bills into law and take the heat for doing so. I like what I've seen so far from Scott Walker. But I am very demanding, and very hard to please. I want to know what Scott Walker has done for unborn babies *lately*!

Yes, I realize that Wisconsin is a blue state, and that Wisconsin has voted for the Democrat candidate in every presidential election since 1988! So getting this pro-life bill signed there would be a tall order. But this is what people expect from Scott Walker. He is in first place in the GOP primary polls because Republican voters know that he regularly does the impossible. He takes on tough problems and he finds conservative solutions to them.

I am sick and tired of seeing Democrats get elected and then aggressively enacting their agenda. When we elect Republicans, I expect them to enact Republican priorities. Look at what is happening in the House with the executive amnesty capitulation. Before that we had the failure to vote on the Pain Capable Unborn Child Protection Act. And before that the Cromnibus debacle. I'm sick of it. Scott Walker has a history of taking on big challenges and winning. He can do it! And it would give pro-lifers even more reasons to vote for him than they already have.

# Do college students care about truth? What do they think truth is?

**Wintery Knight** · 4 March 2015 · Archived copy · Original

What is truth?

If I want to understand what college students think about truth, I ask my friend Eric Chabot. He is the Ratio Christi ninja at Ohio State University. He can tell you more about what college kids think about ultimate issues than probably anyone else you know.

Here is his latest blog post at Think Apologetics.

He introduces the topic like this:

> Over the last ten years I have done outreach on a major college campus (The Ohio State University which has 56,000 students). I have had hundreds of spiritual conversations with students and direct an apologetics ministry called Ratio Christi Student Apologetics Alliance. It is no secret that many apologists have written books on the Truth question. In other words, the statement "we are living in postmodern times" has almost become cliche in today's society. Hence, because of the impact of post-modernism, many seem to assume that college students are not interested in objective truth. So the supposed fallout is that people are not asking whether Christianity is true. Given my experience on the campus, I will respond to this issue. So the good news is that I am truly speaking from personal experience.
>
> I will go ahead and give some definitions of truth here.

Eric likes to complain about pragmatism most, so he quotes a definition of the pragmatic view of truth:

> #1 Truth is not "what works." One popular theory is the pragmatic view of William James and his followers that truth is what works. According to James, "Truth is the expedient in the way of knowing. A statement is known to be true if it brings the right results. It is the expedient as confirmed by future experience." That this is inadequate is evident from its confusion of cause and effect. If something is true it will work, at least in the long run. But simply because something works does not make it true. This is not how truth is understood in court. Judges tend to regard the expedient as perjury. Finally, the results do not settle the truth question. Even when results are in, one can still ask whether the initial statement corresponded to the facts. If it did not, it was not true, regardless of the results.

And here are a couple more definitions that he encounters from the college kids:

> #5 Truth is not “what feels good.” The popular subjective view is that truth gives a satisfying feeling, and error feels bad. Truth is found in our subjective feelings. Many mystics and new age enthusiasts hold versions of this faulty view, though it also has a strong influence among some experientially oriented Christian groups. It is evident that bad news can be true. But if what feels good is always true, then we would not have to believe anything unpleasant. Bad report cards do not make a student feel good, but the student refuses to believe them at his or her academic peril. They are true. Feelings are also relevant to individual personalities. What feels good to one may feel bad to another. If so, then truth would be highly relative. But, as will be seen in some detail in the next article, truth cannot be relative. Even if truth makes us feel good—at least in the long run—this does not mean that what feels good is true. The nature of truth does not depend on the result of truth.
>
> #6 Truth is not “what is existentially relevant.” Following Soren Kierkegaard and other existential philosophers, some have insisted that truth is what is relevant to our existence or life and false if it is not. Truth is subjectivity. Kierkegaard said: truth is livable. As Martin Buber stated, truth is found in persons, not in propositions. However, even if truth is existential in some sense, not all truth fits into the existential category. There are many kinds of truth, physical, mathematical, historical, and theoretical. But if truth by its very nature is found only subjectively in existential relevance, then none of these could be truth. What is true will be relevant, but not everything relevant is true. A pen is relevant to an atheist writer. And a gun is relevant to a murderer. But this does not make the former true nor the latter good. A truth about life will be relevant to life. But not everything relevant to one’s life will be true.

So what do students think?

> The most popular view today seems to be #1 (a pragmatic view of truth) and then coming in second place is a tie between #5 and #6 (“Truth is what feels good” and “Truth is what is existentially relevant”).
>
> Many, many, students are viewing the Christian faith as something that helps them have a better life. In other words, they are not asking whether it is objectively true. Comments like “I don’t see what difference Jesus would make in my life” and “I don’t think it is relevant whether God exists or Jesus is the Son of God” are somewhat common.
>
> This shouldn’t be surprising given our entire culture is built on pragmatism. After all, people go to college to get a job that will work for them and help them get a good job. Furthermore, the Church has been embracing pragmatism for a long time. John MacArthur wrote an article called Church Pragmatism a long time ago. Not much has changed.

I don’t think there’s anything wrong with getting a good job when you’re finished college, as long as when you get that job you proceed to study everything else that matters. This is especially important for Christian men, who shoulder the load of providing for a family and the people around them. But I get his point.

The rest of Eric’s post offers a solution for how Christians can deal with pragmatism. My solution is to investigate their overall worldview and then introduce evidence that conflicts with their stated beliefs. For example, the kalam cosmological argument and the cosmic fine-tuning argument. It works better if you really can speak about the scientific or historical evidence for Christianity with authority. Just say to them that it’s fine with you if they want to believe things that aren’t truth because they are comfortable with them, but sometimes that will have disastrous consequences. The best way to puncture the self-confidence that pragmatic people have is to show them that at least some of their beliefs are flat out false. They can say that they don’t care, but at least they can’t say that what they believe is true.

# Eric Holder's DOJ finds officer Darren Wilson innocent in Michael Brown shooting

**Wintery Knight** · 5 March 2015 · Archived copy · Original

Ferguson protesters shut down highway

Normally, I would not post on this, but I think I must because of the way that the mainstream media and the culture as a whole swallowed a narrative that bashes police officers, and by extension the rule of law, and even the responsibility that criminals bear for their own actions.

Hot Air introduces the Department of Justice's findings:

> The DOJ — Eric Holder's DOJ — is clear as can be that it thinks Wilson was justified in shooting Michael Brown.
>
> […][The DOJ report] was a considered argument that not only is Wilson not guilty of a federal civil rights charge, he's not guilty of a criminal offense of any sort. Had Wilson gone to trial, he could have submitted this as his motion to dismiss and the court might well have torpedoed the indictment before opening arguments.

Hot Air extracts some of the most interesting parts of the report, and I am injecting some photos of "hands-up" Democrats in between the findings.

Page 82:

> Wilson's version is further supported by disinterested eyewitnesses Witness 102, Witness 104. Witness 105. Witness 108. and Witness 109. among others. Those witnesses all agree that Brown ran or charged toward Wilson and that Wilson shot at Brown only as Brown moved toward him. Although some of the witnesses stated that Brown briefly had his hands up or out at about waist-level, none of these witnesses perceived Brown to be attempting to surrender at any point when Wilson fired upon him. To the contrary, several of these witnesses stated that they would have felt threatened by Brown and would have responded in the same way Wilson did. For example. Witness 104 stated that as Wilson ran after Brown yelling "stop, stop. stop." Brown finally turned around and raised his hands "for a second." However. Brown then immediately balled his hands into fists and "charged" at Wilson in a "tackle run." Witness 104 stated that Wilson fired only when Brown moved toward him and that she "would have fired sooner." Likewise. Witness 105 stated that Brown turned around and put his hands up "for a brief moment." then refused a command from Wilson to "get down" and instead put his hands "in running position" and maned running toward Wilson. Witness 105 stated that Wilson

> shot at Brown only when Brown was moving toward him. These witnesses' accounts are consistent with prior statements they have given, consistent with the forensic and physical evidence, and consistent with each other's accounts. Accordingly. we conclude that these accounts arc credible.

Democrats:

Democrats say "hands up!"

Page 84:

> When the shootings are viewed, as they must be, in light of all the surrounding circumstances and what Wilson knew at the time, as established by the credible physical evidence and eyewitness testimony, it was not unreasonable for Wilson to fire on Brown until he stopped moving forward and was clearly subdued. Although, with hindsight. we know that Brown was not armed with a gun or other weapon, this fact does not render Wilson's use of deadly force objectively unreasonable. Again. the key question is whether Brown could reasonably have been perceived to pose a deadly threat to Wilson at the time he shot him regardless of whether Brown was armed. Sufficient credible evidence supports Wilson's claim that he reasonably perceived Brown to be posing a deadly threat. First. Wilson did not know that Brown was not armed at the time he shot him, and had reason to suspect that he might be when Brown reached into the waistband of his pants as he advanced toward Wilson. S
>
> […]While Brown did not use a gun on Wilson at the SUV, his aggressive actions would have given Wilson reason to at least question whether he might be armed, as would his subsequent forward advance and reach toward his waistband. This is especially so in light of the rapidly-evolving nature of the incident. Wilson did not have time to determine whether Brown had a gun and was not required to risk being shot himself in order to make a more definitive assessment.

Democrats:

Another Democrat says “hands up”

Here’s a witness who was disqualified:

> Witness 101 is a 22-year-old black male who was walking in the middle of Canfield Drive with Brown when they encountered Wilson. Witness 101 made multiple statements to the media immediately following the incident that spawned the popular narrative that Wilson shot Brown execution style as he held up his hands in surrender. These media interviews occurred prior to Witness 101 giving his two statements. First, FBI and SLCPD jointly interviewed Witness 101 on August 13. 2014. in the presence of Witness 101’s mother. Witness 101’s two attorneys, and an individual who explained that he was in charge of Witness 101’s personal security. Witness 101 subsequently testified before the county grand jury.

After pointing out all the inaccuracies and inconsistencies in his testimony, the report concludes:

> Witness 101 has a misdemeanor conviction for a crime of dishonesty likely admissible in federal court as impeachment evidence. As described above, material parts of Witness 101’s account are inconsistent with the physical and forensic evidence. internally inconsistent from one part of his account to the next, and inconsistent with other credible witness accounts that are corroborated by physical evidence. It is also unclear whether Witness 101 had the ability to accurately perceive the shootings. Witness 101 likely crouched down next to a white Monte Carlo as Wilson chased Brown. The Monte Carlo was facing west with a view of the passenger side of the SUV. Brown ran in the opposite direction that the Monte Carlo was facing. Witness accounts vary as to whether Witness 101 was ducking for cover on the passenger side of the Monte Carlo with his back to the shooting, or whether he fled the scene prior to the final shots being fired. Both Witness 101’s inconsistencies and his ability to perceive what happened, or lack thereof, make his account vulnerable to effective cross-examination and extensive impeachment. Accordingly, after a thorough review of all of the evidence, federal prosecutors determined material portions of Witness 101’s account lack credibility and therefore determined that his account does not support a prosecution of Darren Wilson.

Now, I want you to think about what it meant that the mainstream media in this country, and their allies in the Democrat party, were able to cause riots, vandalism, crime, and all manner of unrest because of a lie. Did you fall for it? Do you know anyone who did? I would like to think that the same people who went rioting will hear about this from their favorite media propagandists, but I don’t they they will. After all, getting to the truth is the last thing the media wanted to do. They won’t cover the correction to their lies. They wanted to cause divisions, and prop up the Democrat party as the savior of colored people.

I recommend that everyone watch this 15-minute TED.com talk with Sharyl Attkisson: (H/T Drew)

For the record, my skin color is about the same as Sheila Jackson Lee, above.

# Right-to-work states gained jobs three times faster than forced union states

**Wintery Knight** · 5 March 2015 · Archived copy · Original

Gallup poll on right-to-work, August 2014

This is from economist Stephen Moore writing in Investors Business Daily.

He writes:

> Wisconsin is poised this week to become the 25th "right-to-work state," ending forced unionization and allowing individual workers to decide if they want to join a union or not.
>
> The Wisconsin Senate just recently passed right-to-work, and our sources in Madison say that the House, which is controlled by Republicans, will enact a similar law in the days ahead.
>
> Republican Gov. Scott Walker, a leading presidential candidate, is sure to sign the bill when it gets to his desk. "This isn't anti-union," insists Walker. "It restores worker rights and brings jobs back to Wisconsin."
>
> Some 3,000 liberal protesters stormed the Capitol in Madison over the weekend to reverse the momentum for the new law. This isn't Walker's first dust-up with union bosses. Four years ago, nearly 100,000 activists grabbed nationwide headlines when they protested his reforms in Wisconsin's collective bargaining process with public employee unions.
>
> If the new law passes, Wisconsin would join two other blue-collar, industrial Midwestern states — Michigan and Indiana — to recently adopt right-to-work. "If you had told me five years ago that right-to-work would become law in Indiana, Michigan and Wisconsin, I wouldn't have thought it was even remotely possible," says economist Arthur Laffer.
>
> Laffer and I have conducted substantial economic research showing three times the pace of jobs gains in right-to-work states than in the states with forced union rules that predominate in deep blue states such as California, New York and Illinois.
>
> In the 2003-13 period, jobs were up by 8.6% in right-to-work states, and up only 3.7% in forced union states. Most of the southern states, with the exception of Kentucky, are right-to-work
>
> Many auto jobs in recent decades have moved out of Michigan and Ohio and into states such as Texas, Alabama and South Carolina, due in part to right-to-work laws in Dixie.
>
> But as union power recedes in the Midwestern states, many of the region's governors see factory jobs returning to their backyards. "Right to work is already lowering unemployment in Indiana and causing a manufacturing revival here," says Gov. Mike Pence.

Companies are more attracted to right-to-work states, and that means more jobs become available.

Here is Congressional testimony from James Sherk, senior policy analyst in labor economics at The Heritage Foundation. I really recommend bookmarking this article. Even though it is very long, it is up-to-date and comprehensive. I am linking to it because he responds to objections to right-to-work laws raised by unions.

Do right-to-work laws hurt the middle class?:

> **Union Strength and the Middle Class.** Unions and their supporters frequently claim the opposite: that unions helped build the middle class and weaker unions hurt all workers—not just union members. To make this point they often juxtapose the decline of union membership since the late 1960s with the share of income going to the middle class. The Economic Policy Institute did exactly this when criticizing the possibility of RTW in Wisconsin. These comparisons suffer from two problems. First, the absolute standards of living for middle-class workers have risen substantially over the past generation. Inflation-adjusted market earnings rose by one-fifth for middle-class workers between 1979 and 2011. After-tax incomes rose at an even faster pace. Middle-class workers today enjoy substantially higher standards of living than their counterparts in the 1970s.
>
> Secondly, these figures conflate correlation with causation. During the time period EPI examined union membership correlates well with their measure of middle-class income shares. Extending the graph back another two decades eliminates this correlation. U.S. union density surged in the late 1930s and during World War II. It peaked at about a third of the overall economy and private-sector workforce in the mid-1950s. During this time period America had few global competitors. From the mid-1950s onward global competition increased and U.S. union membership steadily declined. Between 1954 and 1970 union density dropped from 34.7 percent to 27.3 percent. Unions lost over a fifth of their support in just over a decade and a half.
>
> During this period middle-class income and living standards grew rapidly. No one remembers the 1950s and 1960s as bad for the middle class, despite the substantial de-unionization that occurred. Over a longer historical period changes in U.S. union strength show little correlation with middle-class income shares. Liberal analysts come to their conclusion by looking only at the historical period in which the two trends align.

Do right-to-work states have lower wages?:

> **Unions Argue RTW Hurts Wages.** In the same vein, unions argue that RTW laws lower wages. As the Wisconsin AFL-CIO recently claimed:

> These anti-worker Right To Work laws just force all working families to work harder for lower pay and less benefits, whether they're in a union or not. The average worker makes about $5,000 less and pensions are lower and less secure in Right to Work states.

> This statement contains a degree of truth: average wages in right-to-work states are approximately that much lower than in non-RTW states. This happens because right-to-work states also have below-average costs of living (COL). Virtually the entire South has passed RTW, but no Northeastern states have passed an RTW law. The Northeast has higher COL and higher average wages; the South has lower living costs and lower wages.
>
> […]All but one right-to-work state has living costs at or below the national average. All ten of the states with the highest COL have compulsory union dues. Analyses that control for these COL differences have historically found that RTW has no deleterious effects on workers' real purchasing power.
>
> Recently the Economic Policy Institute has claimed that workers in RTW states make 3 percent less than workers without RTW protection, even after controlling for living costs. Heritage replicated this analysis and found that EPI made two major mistakes: it included improper control variables and did not account for measurement error in their COL variables. These mistakes drive their results. Correcting these mistakes shows

> that private-sector wages have no statistically detectable correlation with RTW laws. The supplement and the appendices to this testimony explain the technical details of this replication. Properly measured, RTW laws have no effect on wages in the private sector.

Although the history of unions shows that unions were a valuable and necessary check on the power of greedy corporations in times past, today unions are using the dues they collect from workers to elect Democrats. The vast majority of political contributions made by the big unions go to Democrats.

Here's one example, using the Service Employees International Union numbers:

Service Employees International Union
(Click for larger image)

So if you oppose what Democrat politicians are doing, it makes sense to free workers from being forced to pay union dues for causes that are against their values. The average rank-and-file member of a union does not share Democrat values on things like abortion and gay marriage, in my opinion. Why should they be forced to pay union dues that go to elect politicians who oppose their values?

# What do ancient non-Christian sources tell us about the historical Jesus?

The Annals, by Roman historian Tacitus

This article from Biblical Archaeology covers all the non-Christian historical sources that discuss Jesus.

About the author:

> Lawrence Mykytiuk is associate professor of library science and the history librarian at Purdue University. He holds a Ph.D. in Hebrew and Semitic Studies and is the author of the book Identifying Biblical Persons in Northwest Semitic Inscriptions of 1200–539 B.C.E. (Atlanta: Society of Biblical Literature, 2004).

Here are the major sections:

- Roman historian Tacitus
- Jewish historian Josephus
- Greek satirist Lucian of Samosata
- Platonist philosopher Celsus
- Roman governor Pliny the Younger
- Roman historian Suetonius
- Roman prisoner Mara bar Serapion

And this useful excerpt captures the broad facts about Jesus that we get from just the first two sources:

> We can learn quite a bit about Jesus from Tacitus and Josephus, two famous historians who were not Christian. Almost all the following statements about Jesus, which are asserted in the New Testament, are corroborated or confirmed by the relevant passages in Tacitus and Josephus. These independent historical sources—one a non-

> Christian Roman and the other Jewish—confirm what we are told in the Gospels:31
>
> 1. He existed as a man. The historian Josephus grew up in a priestly family in first-century Palestine and wrote only decades after Jesus' death. Jesus' known associates, such as Jesus' brother James, were his contemporaries. The historical and cultural context was second nature to Josephus. "If any Jewish writer were ever in a position to know about the non-existence of Jesus, it would have been Josephus. His implicit affirmation of the existence of Jesus has been, and still is, the most significant obstacle for those who argue that the extra-Biblical evidence is not probative on this point," Robert Van Voorst observes.32 And Tacitus was careful enough not to report real executions of nonexistent people.
>
> 2. His personal name was Jesus, as Josephus informs us.
>
> 3. He was called Christos in Greek, which is a translation of the Hebrew word Messiah, both of which mean "anointed" or "(the) anointed one," as Josephus states and Tacitus implies, unaware, by reporting, as Romans thought, that his name was Christus.
>
> 4. He had a brother named James (Jacob), as Josephus reports.
>
> 5. He won over both Jews and "Greeks" (i.e., Gentiles of Hellenistic culture), according to Josephus, although it is anachronistic to say that they were "many" at the end of his life. Large growth in the number of Jesus' actual followers came only after his death.
>
> 6. Jewish leaders of the day expressed unfavorable opinions about him, at least according to some versions of the Testimonium Flavianum.
>
> 7. Pilate rendered the decision that he should be executed, as both Tacitus and Josephus state.
>
> 8. His execution was specifically by crucifixion, according to Josephus.
>
> 9. He was executed during Pontius Pilate's governorship over Judea (26–36 C.E.), as Josephus implies and Tacitus states, adding that it was during Tiberius's reign.
>
> Some of Jesus' followers did not abandon their personal loyalty to him even after his crucifixion but submitted to his teaching. They believed that Jesus later appeared to them alive in accordance with prophecies, most likely those found in the Hebrew Bible. A well-attested link between Jesus and Christians is that Christ, as a term used to identify Jesus, became the basis of the term used to identify his followers: Christians. The Christian movement began in Judea, according to Tacitus. Josephus observes that it continued during the first century. Tacitus deplores the fact that during the second century it had spread as far as Rome.

I remember reading the 1996 book by Gary Habermas entitled "The Historical Jesus: Ancient Evidence for the Life of Christ". This book is a little before the time of most of you young Christian apologists, but back before the time of Lee Strobel and J. Warner Wallace, this is the stuff we all read. Anyway, in the book he makes a list of all that can be known about Jesus from external sources. And fortunately for you, you don't have to buy the book because you can read chapter 9 of it right on his web site.

From Tacitus he gets this:

> From this report we can learn several facts, both explicit and implicit, concerning Christ and the Christians who lived in Rome in the 60s A.D. Chronologically, we may ascertain the following information.
>
> (1) Christians were named for their founder, Christus (from the Latin), (2) who was put to death by the Roman procurator Pontius Pilatus (also Latin), (3) during the reign of emperor Tiberius (14 37 A.D.). (4) His death ended the "superstition" for a short time, (5) but it broke out again, (6) especially in Judaea, where the teaching had its origin.
>
> (7) His followers carried his doctrine to Rome. (8) When the great fire destroyed a large part of the city during the reign of Nero (54 68 A.D.), the emperor placed the blame on the Christians who lived in Rome. (9) Tacitus reports that this group was hated for their abominations. (10) These Christians were arrested after pleading

> guilty, (11) and many were convicted for “hatred for mankind.” (12) They were mocked and (13) then tortured, including being “nailed to crosses” or burnt to death. (14) Because of these actions, the people had compassion on the Christians. (15) Tacitus therefore concluded that such punishments were not for the public good but were simply “to glut one man’s cruelty.”

And from Josephus he gets this:

> (1) Jesus was known as a wise and virtuous man, one recognized for his good conduct. (2) He had many disciples, both Jews and Gentiles. (3) Pilate condemned him to die, (4) with crucifixion explicitly being mentioned as the mode. (5) The disciples reported that Jesus had risen from the dead and (6) that he had appeared to them on the third day after his crucifixion. (7) Consequently, the disciples continued to proclaim his teachings. (8) Perhaps Jesus was the Messiah concerning whom the Old Testament prophets spoke and predicted wonders. We would add here two facts from Josephus’ earlier quotation as well. (9) Jesus was the brother of James and (10) was called the messiah by some.

So when you are reading the New Testament, these facts are the framework that you read within. It’s a good starting point when dealing with people who have never looked into who Jesus was and what he taught and what his followers believed about him, right from the start.

# Media silent on DOJ report that refutes their “hands up, don’t shoot” myth

**Wintery Knight** · 6 March 2015 · Archived copy · Original

CNN clowns lie about Ferguson “hands up, don’t shoot”

Yesterday, I reported on how the Department of Justice had found officer Darren Wilson innocent, and asserted that the mainstream media that spread lies about him would not correct their lies.

Newsbusters reported on how the mainstream media reported on the DOJ report.

Excerpt:

> “Hands Up, Don’t Shoot” has been the rallying cry of Ferguson protesters since officer Darren Wilson fatally shot Michael Brown on a Missouri street last August. Brown, the “gentle giant,” was shot while trying to surrender or de-escalate his encounter with Wilson. It was an article of faith on the left, and the three networks used the phrase 140 times in their coverage of Ferguson.
>
> **Now, the DOJ report and Attorney General Eric Holder have admitted that the catch phrase was based on false witness accounts. None of the networks apologized or admitted their own reporting spread that false narrative. Instead, they focused on DOJ’s assertions of racism in the Ferguson police department.**
>
> **In a press conference yesterday, AG Holder admitted that a false account of events had mysteriously gained popularity with the public, but he wouldn’t admit the media had some small part in this. “I recognize that the findings in our report may leave some to wonder how the department’s findings can differ so sharply from some of the initial, widely reported accounts of what transpired,” he said, “It remains not only valid – but essential – to question how such a strong alternative version of events was able to take hold so swiftly, and be accepted so readily.”**
>
> **Er, it might have something to do with people in the media and government (Holder very much included) being all too eager to believe, or at least cynically parrot that “alternative version.” For example, the “Hands Up, Don’t Shoot” phrase was mentioned 34 times by NBC, 51 by ABC and 55 by CBS from August 9, 2014 to March 3, 2015.**
>
> **But only the CBS *Evening News*, which gave 42 seconds to clearing Wilson, noted that there was “no credible evidence Brown had his hands up attempting to surrender.”**
>
> […]It’s not just the broadcast news that was complicit in spreading false information and adding fuel to the fire in the Ferguson case. Shockingly, a CNN panel even participated in siding with the protesters by hosting their own, “Hands Up” protest after the grand jury found Wilson not guilty of any criminal charges in December.

You can see the CNN panel raising their hands in order to spread the “hands up, don’t shoot” lie in the photo above.

**Is media bias real?**

From the Washington Examiner, a study of the political contributions made by the mainstream media.

Excerpt:

> Senior executives, on-air personalities, producers, reporters, editors, writers and other self-identifying employees of ABC, CBS and NBC contributed more than $1 million to Democratic candidates and campaign committees in 2008, according to an analysis by *The Examiner* of data compiled by the Center for Responsive Politics.
>
> The Democratic total of $1,020,816 was given by 1,160 employees of the three major broadcast television networks, with an average contribution of $880.
>
> By contrast, only 193 of the employees contributed to Republican candidates and campaign committees, for a total of $142,863. The average Republican contribution was $744.
>
> […]The data on contributions by broadcast network employees was compiled by CRP at the request of *The Examiner* and included all 2008 contributions by individuals who identified their employer as one of the three networks or subsidiaries. The data does not include contributions by employees of the three networks who did not identify their employer.
>
> The CRP is the organization behind OpenSecrets.org, the web site that for more than a decade has put campaign finance data within reach of anybody with an Internet connection.
>
> President Obama received 710 such contributions worth a total of $461,898, for an average contribution of $651 from the network employees. Republican presidential nominee Sen. John McCain received only 39 contributions totaling $26,926, for an average donation of $709.

And more from a study done by the radically leftist MSNBC.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004 through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.
>
> The donors include CNN’s Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O’Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal’s weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV’s former presidential campaign correspondent.

I think that we need to be really careful when we watch the mainstream media news channels. It’s not good to willingly subject ourselves to lies that we find comfortable – that fit within our already-established prejudices. As you can see from the handling of the DOJ report on Ferguson, we should be skeptical of what we hear from the news media.

# Atheist struggles with the problem of rationally grounding moral values and duties

**Wintery Knight** · 6 March 2015 · Archived copy · Original

Which worldview rationally grounds morality?

An atheist named John Gray wrote a piece in the radically leftist UK Guardian that's been getting a lot of attention from Christians.

Here's Gray:

> Awkwardly for these atheists, Nietzsche understood that modern liberalism was a secular incarnation of these religious traditions. [. . .] Nietzsche was clear that the chief sources of liberalism were in Jewish and Christian theism: that is why he was so bitterly hostile to these religions. He was an atheist in large part because he rejected liberal values. To be sure, evangelical unbelievers adamantly deny that liberalism needs any support from theism. If they are philosophers, they will wheel out their rusty intellectual equipment and assert that those who think liberalism relies on ideas and beliefs inherited from religion are guilty of a genetic fallacy. Canonical liberal thinkers such as John Locke and Immanuel Kant may have been steeped in theism; but ideas are not falsified because they originate in errors. The far-reaching claims these thinkers have made for liberal values can be detached from their theistic beginnings; a liberal morality that applies to all human beings can be formulated without any mention of religion. Or so we are continually being told. **The trouble is that it's hard to make any sense of the idea of a universal morality without invoking an understanding of what it is to be human that has been borrowed from theism.**

Here's Maverick Philosopher to explain why the atheist has this intuition:

> Consider *equality*. As a matter of empirical fact, we are not equal, not physically, mentally, morally, spiritually, socially, politically, economically. By no empirical measure are people equal. We are naturally unequal. And yet we are supposedly equal *as persons*. This equality as persons we take as requiring equality of treatment. Kant, for example, insists that every human being, and indeed very rational being human or not, exists as an end in himself and therefore must never be treated as a means to an end. A person is not a thing in nature to be used as we see fit. For this reason, slavery is a grave moral evil. A person is a rational being and must be accorded respect just in virtue of being a person. And this regardless of inevitable empirical differences among persons. Thus in his third formulation of the Categorical Imperative in his 1785 *Foundations of the Metaphysics of Morals*, Kant writes:
>
> Act so that you treat humanity, whether in your own person or in that of another, always as an end and never as

> a means only. (*Grundlegung* 429)
>
> In connection with this supreme practical injunction, Kant distinguishes between price and dignity. (435) "Whatever has a price can be replaced by something else as its equivalent; on the other hand, whatever is above all price, and therefore admits of no equivalent, has dignity." Dignity is intrinsic moral worth. Each rational being, each person, is thus irreplaceably and intrinsically valuable with a value that is both infinite — in that no price can be placed upon it — and the same for all. The irreplaceability of persons is a very rich theme, one we must return to in subsequent posts.
>
> These are beautiful and lofty thoughts, no doubt, and most of us in the West (and not just in the West) accept them in some more or less confused form. But what do these pieties have to do with reality? Especially if reality is exhausted by space-time-matter?
>
> Again, we are not equal by any empirical measure. We are not equal as animals or even as rational animals. (Rationality might just be an evolutionary adaptation.) We are supposedly equal as persons, as subjects of experience, as free agents. But what could a person be if not just a living human animal (or a living 'Martian' animal). And given how bloody many of these human animals there are, why should they be regarded as infinitely precious? Are they not just highly complex physical systems? Surely you won't say that complexity confers value, let alone infinite value. Why should the more complex be more valuable than the less complex? And surely you are not a species-chauvinist who believes that *h. sapiens* is the crown of 'creation' because we happen to be these critters.
>
> If we are unequal as animals and equal as persons, then a person is not an animal. What then is a person? And what makes them equal in dignity and equal in rights and infinite in worth?

When it comes to discussing morality, we aren't interested in what people *can do* if they feel like it. We are not interested in feelings at all. We are interested in whether a worldview provides a rational grounding for the moral value of human beings, and the moral duties we have towards other human beings.

In the past, I've written that morality can only be *rationally* grounded by a worldview that includes the following 5 concepts:

> 1) Objective moral values
>
> There needs to be a way to distinguish what is good from what is bad. For example, the moral standard might specify that being kind to children is good, but torturing them for fun is bad. If the standard is purely subjective, then people could believe anything and each person would be justified in doing right in their own eyes. Even a "social contract" is just based on people's opinions. So we need a standard that applies regardless of what people's individual and collective opinions are.
>
> 2) Objective moral duties
>
> Moral duties (moral obligations) refer to the actions that are obligatory based on the moral values defined in 1). Suppose we spot you 1) as an atheist. Why are you obligated to do the good thing, rather than the bad thing? To whom is this obligation owed? Why is rational for you to limit your actions based upon this obligation when it is against your self-interest? Why let other people's expectations decide what is good for you, especially if you can avoid the consequences of their disapproval?
>
> 3) Moral accountability
>
> Suppose we spot you 1) and 2) as an atheist. What difference does it make to you if you just go ahead and disregard your moral obligations to whomever? Is there any reward or punishment for your choice to do right or do wrong? What's in it for you?
>
> 4) Free will
>
> In order for agents to make free moral choices, they must be able to act or abstain from acting by exercising

> their free will. If there is no free will, then moral choices are impossible. If there are no moral choices, then no one can be held responsible for anything they do. If there is no moral responsibility, then there can be no praise and blame. But then it becomes impossible to praise any action as good or evil.
>
> 5) Ultimate significance
>
> Finally, beyond the concept of reward and punishment in 3), we can also ask the question "what does it matter?". Suppose you do live a good life and you get a reward: 1000 chocolate sundaes. And when you've finished eating them, you die for real and that's the end. In other words, the reward is satisfying, but not really meaningful, ultimately. It's hard to see how moral actions can be meaningful, ultimately, unless their consequences last on into the future.

Atheism can ground none of these. Christian theism grounds all five of them.

And it's because of this fact that people look on atheism as a flight from morality, rather than a serious grappling with the moral life. When Christian theists hear about stories like Dr. Richard Carrier announcing that he's been cheating on his wife, who supported his atheistic ministry for years while he did essentially nothing productive, we are not surprised. He's only following the advice of Dr. Richard Dawkins, who is a big advocate for adultery. And then there is atheist apologist John Loftus – adultery is what got him started in atheism.

Self-sacrificial, incumbent morality makes as much sense on atheism as astrophysics makes to fishes. It's a complete reduction of the question "what ought I to do in order to be good?" to "what pleasurable things can I get away with doing in this time and place?" Anything. Goes.

# What if you only had four minutes to defend Israel's attack on the Canaanites?

**Wintery Knight** · 6 March 2015 · Archived copy · Original

"Questioning the Bible" by Jonathan Morrow

Jonathan Morrow is giving you just four minutes to respond to a well-known challenge to belief in the Christian God.

Can you handle it?

If not, here is a podcast to help you get ready.

Description:

> ***Is the God of the Old Testament violent and bloodthirsty? Did God really command genocide? Why did Israel attack the Canaanites?*** These are just a few of the tough questions I tackle in this episode of the think Christianly podcast. Learn how to respond to one of the most challenging and emotional objections to Christianity in under 10 minutes.

Summary:

- quotes Richard Dawkins to set up the objection
- response: does God have the authority to give and take life?
- response: after the Fall, things in the world are not the way they are supposed to be
- response: Old Testament commands for the Jews to judge other nations are specific to them in that time
- response: "genocide" and "ethnic cleansing" are not accurate descriptions of the attack on Canaan
- response: the attack on the Cannanites takes place in the context of redeeming the whole world

Here is the Christian Post article he was interviewed for, where he had to answer:

> Jonathan Morrow, author of *Questioning the Bible: 11 Major Challenges to the Bible's Authority*, says readers are often perplexed by Old Testament scripture because "sometimes we just picture a God where anger and love

> can't co-exist." Yet he explains, "We all have seen people who have been taken advantage of and that makes us angry [because] we love them. So those emotions can co-exist."
>
> […]Along that same line, Morrow clarifies that God's instructions to the Israelite army in Deuteronomy 20 to destroy the people occupying the land of Canaan is "about judgment, not genocide."
>
> "The Bible teaches clearly that all people are sinful and in rebellion, kind of living in open rebellion against God, and God is just to judge anyone," says Morrow. "But in this particular case with the Canaanites, there's several things going on there, but one of those things was the wickedness of the people which was well documented – child sacrifices to Moloch and others, and bestiality and a lot wickedness."
>
> He says this judgment was necessary because "Israel's national survival was crucial so that the Messiah – we would know Jesus as the Messiah – and God's saving purposes of redemption to the world could one day be born because if the Messiah was supposed to come through the lineage of Israel and Israel co-mingled with this wicked people and was ultimately destroyed, that promise of hope and blessing to the whole world could not have been realized."
>
> […]Morrow recognizes that Old Testament questions are particularly challenging. "We live in a sound bite culture and so this is one of those questions where it kind of gets thrown out for people, why does God command genocide, and that's really easy to say and then it takes some time to respond to because there's some context."
>
> Morrow says his sound bite answer is: "These passages are about judgment; they're not about genocide."
>
> However, he encourages believers to find out the asker's real interest in this question. "I would ask them, you know, it sounds like this is a pretty emotional question for you, why is that. Let them talk about it some so you can better understand because that's the goal. We're not just trying to win an argument; we're trying to understand and help people."
>
> It the asker is after truth, Morrow advises Christians to "ask them … are you interested in kind of walking through and getting kind of messy about looking at the evidence for this because I'd love to share that with you, and sometimes they'll go, 'yeah, that'll be great.'"
>
> Other times, Morrow says, the asker is simply looking for "space and distance from God and this question allows them to put space between them and God."

By the way, Morrow and McDowell's basic apologetics book – "Is God Just a Human Invention?" – is my first pick when mentoring new people in apologetics.

UPDATE: J.W. Wartick has reviewed the 11 Questions book on his blog.

# U.S. millennials perform horribly on technology tests compared to other countries

**Wintery Knight** · 7 March 2015 · Archived copy · Original

Education spending has tripled since 1970
This is from the leftist Washington Post.

Excerpt:

> There was this test. And it was daunting. It was like the SAT or ACT — which many American millennials are no doubt familiar with, as they are on track to be the best educated generation in history — except this test was not about getting into college. This exam, given in 23 countries, assessed the thinking abilities and workplace skills of adults. It focused on literacy, math and technological problem-solving. The goal was to figure out how prepared people are to work in a complex, modern society.
>
> And U.S. millennials performed horribly.
>
> That might even be an understatement, given the extent of the American shortcomings. No matter how you sliced the data – by class, by race, by education – young Americans were laggards compared to their international peers. In every subject, U.S. millennials ranked at the bottom or very close to it, according to a new study by testing company ETS.
>
> "We were taken aback," said ETS researcher Anita Sands. "We tend to think millennials are really savvy in this area. But that's not what we are seeing."
>
> The test is called the PIAAC test. It was developed by the Organization for Economic Co-operation and Development, better known as the OECD. The test was meant to assess adult skill levels. It was administered worldwide to people ages 16 to 65. The results came out two years ago and barely caused a ripple. But recently ETS went back and delved into the data to look at how millennials did as a group. After all, they're the future – and, in America, they're poised to claim the title of largest generation from the baby boomers.
>
> U.S. millennials, defined as people 16 to 34 years old, were supposed to be different. They're digital natives. They get it. High achievement is part of their makeup. But the ETS study found signs of trouble, with its authors warning that the nation was at a crossroads: "We can decide to accept the current levels of mediocrity and inequality or we can decide to address the skills challenge head on."
>
> The challenge is that, in literacy, U.S. millennials scored higher than only three countries.
>
> In math, Americans ranked last.

> In technical problem-saving, they were second from the bottom.
>
> "Abysmal," noted ETS researcher Madeline Goodman. "There was just no place where we performed well."
>
> Nope. U.S. millennials with master's degrees and doctorates did better than their peers in only three countries, Ireland, Poland and Spain. Those in Finland, Sweden and Japan seemed to be on a different planet.
>
> Top-scoring U.S. millennials – the 90th percentile on the PIAAC test – were at the bottom internationally, ranking higher only than their peers in Spain. The bottom percentile (10th percentile) also lagged behind their peers.

Now the problem can't be to spend more money on education – we already spend more money than all the other countries.

Excerpt:

> The United States spent more than $11,000 per elementary student in 2010 and more than $12,000 per high school student. When researchers factored in the cost for programs after high school education such as college or vocational training, the United States spent $15,171 on each young person in the system — more than any other nation covered in the report.
>
> That sum inched past some developed countries and far surpassed others. Switzerland's total spending per student was $14,922 while Mexico averaged $2,993 in 2010. The average OECD nation spent $9,313 per young person.

So the solution has to be something else. What could it be? Previously, I linked to some ideas from Bobby Jindal. I think that's the direction that we need to go in if we are to solve the problem. It's pretty clear that raising taxes and throwing more money at teachers who can never be fired no matter how badly they perform is not the answer. It's probably a good idea for kids to focus less on indoctrinating kids in leftist ideology, e.g. – sex education, postmodern skepticism and moral relativism. It's probably a better idea for parents to take more responsibility for raising their kids and making sure that they do their homework and develop a love of learning. But that would require that we teach children as projects and have goals for them that we push them towards.

# 373 children were victims of UK Muslim sex trafficking gang in Oxfordshire

**Wintery Knight** · 7 March 2015 · Archived copy · Original

The UK Labour Party
This is reported by the ultra-leftist BBC, so they are very politically correct.

They write:

> As many as 373 children may have been targeted for sex by gangs of men in Oxfordshire in the last 16 years, a serious case review found.
>
> The investigation came after a sadistic sex gang of seven men were jailed in 2013 for abusing six girls in Oxford, between 2004 and 2012.
>
> Thames Valley Police and Oxfordshire County Council made "many errors" in that case and could have acted sooner.
>
> A victim of the gang said the issue had been "swept under the carpet".
>
> Of the 373 cases, the council said about 50 victims were boys.
>
> […]The report also called for research into why a significant proportion of people convicted in these kind of cases are of "Pakistani and/or Muslim heritage".
>
> In the Oxford case, known as Operation Bullfinch, two of the men were of east African origin and five of Pakistani origin.

Part of the problem with dealing with problems caused by unrestricted immigration from Muslim countries (e.g. – gang raping, sex-trafficking, terrorism) is that the leftist political parties don't dare take action for fear of offending Muslims.

You'll recall that our own State Department and President have both made statements to the effect that Islamic terrorists are only committing acts of terrorism because they are poor. Presumably, they also think that poor Christians and Jews would do the same if they were poor. It has nothing at all to do with an anti-West culture that is rooted in radical Islam. The solution – according to the secular left – is to give them jobs.

Let's take a look at the story of Jihad John to see how well that worked:

> Jihadi John family's 20 years on benefits: How it's cost taxpayers up to £400k to house fanatic and his relatives in upmarket areas
>
> - Mohammed Emwazi's family granted asylum in 1996 after leaving Kuwait

> - They have since lived in five homes, one of which was worth £450 per week
> - Neither his father Jasem, 51, nor mother Ghaneya worked while in Britain
> - Westminster City Council is still paying rent on family's £600,000 flat
> - One landlord described the family as 'parasites' and 'tenants from hell'
> - MPs blasted family for 'abusing hospitality' and say payouts are 'disgrace'
>
> Jihadi John and his asylum-seeking family have milked the British benefits system for 20 years, the Mail can reveal today.
>
> Housing the Islamic State executioner and his relatives in affluent parts of London has cost taxpayers up to £400,000.
>
> One landlord said Mohammed Emwazi's family were 'parasites' and 'tenants from hell'. Incredibly, they are still believed to be pocketing £40,000 a year in handouts despite there being no sign of them in Britain.
>
> Emwazi's father Jasem, who has six children, is back in his native Kuwait – the country he claimed he fled fearing for his life.
>
> Westminster City Council is still paying the rent on the family's £600,000 flat even though the rules say housing benefit should normally be stopped after 13 weeks.
>
> […]The Mail investigation can also reveal that:
>
> - The family fled Kuwait after the first Gulf War, claiming persecution because they were seen to favour the Iraqi invasion in 1990;
> - They claimed asylum in the UK and won refugee status in 1996;
> - Five years later they were made British citizens and then started travelling back to Kuwait;
> - The family have claimed hundreds of thousands of pounds in benefits in Britain since their arrival in the country and lived in homes costing £450 a week;
> - Emwazi's father is now back working in Kuwait while the family continues to receive state assistance for the home in Queen's Park.
>
> The owner of a house in Little Venice where they lived for four years said Westminster City Council paid £450 a week in rent for the family – £23,400 a year.
>
> Two more of the five owners of homes they have lived in have confirmed their rent was paid by the council or through a housing association.
>
> Assuming the same £23,400-a-year cost, then the bill over 20 years is £468,000.

I think what the secular left really means by "give them jobs" is "give them money for doing nothing", i.e. – welfare. Political correctness is an ideology for wealthy elites, but it's not so good for the poor people who actually have to deal with the consequences of the bad policies.

Now if you ask the Labour Party, who created these generous immigration policies and welfare programs, about their policies, they will tell you that this is all working as designed. It's a feature, not a bug. They feel very good about themselves, calling good evil, and evil good. They are very generous handing out money they didn't work for to people who then use it to kill the people who worked for the money. This is morally good, according to the secular left.

If we are really going to get serious about the problem, maybe we need leaders who aren't so politically correct.

# Police will charge gay activist Adam Hoover with faking his own abduction

**Wintery Knight** · 8 March 2015 · Archived copy · Original

This was reported by NBC News.

They say:

> A suburban Cincinnati gay rights activist was charged with a misdemeanor early Tuesday after police say he falsely claimed online that he was kidnapped and thrown in the trunk of his car, NBC affiliate WLWT reported. In a post on Facebook and Twitter just before 12:30 a.m. ET, Adam Hoover alerted his friends and followers that he was in danger. He said he was using social media instead of dialing 911 because he didn't want to be heard.
>
> "Please help me I'm in the trunk of my ford escort red 2000 gbh 2812," the 20-year-old wrote. "They said they are going to kill my family please call 911 I don't want them to hear me." He included his mother's phone number and his family's address. "Please please call. I don't want to die," he added.
>
> The plea for help spread quickly on social media and sparked an immediate search in the Cincinnati area. But after investigating, Green Township police and the Hamilton County Sheriff's Office believe the kidnapping was a hoax. Authorities discovered Hoover's car abandoned on a highway near the Ohio-Indiana border, WLWT reported. He was seen coming out of a nearby home with police and was unharmed, according to the station. Police didn't immediately release a motive for why Hoover allegedly faked his own abduction.

What was interesting about this story is that the local paper considered spiking the story rather than make this gay activist look bad.

Newsbusters explains:

> In its two reports on the story Tuesday evening and Wednesday morning, the *Cincinnati Enquirer* posted the following introductory note:
>
> We decided to publish this story because it dealt with a prominent local figure who posted claims in a very public setting. We understand and respect Mr. Hoover's privacy, but we also believe it's important to cover public figures and events that potentially have an impact on public safety resources.
>
> By indicating that a "decision to publish" was made, the *Enquirer* has undeniably and outrageously admitted that it considered not reporting the results of a story which had already gone viral. Why?
>
> It would seem that a factor contributing to that reluctance is that Hoover, according to local TV station WLWT, "is a founder of Marriage Equality Ohio, which he helped create in 2010." (The Enquirer's Wednesday report says that"Hoover started working for Marriage Equality Ohio in 2011 and has done most of the promotion work for the organization since then.")
>
> Thus, there appear to have been discussions in the *Enquirer* newsroom about how reporting on Hoover might hurt his cause. It's also reasonable to believe that the paper was pressured by outsiders and/or parent company Gannett to either not cover Hoover's hoax or to downplay it as much as possible. The introductory note at its two stories comes off as a de facto "Sorry, we wish we could ignore this, but we can't, so please-please-please don't hate us for it" apology to those who would have wanted the story suppressed.
>
> **If there was pressure to downplay the story, those who exerted it appear to have gotten their way, as headlines relating to Hoover disappeared quite quickly from the *Enquirer*'s home page.**
>
> It's hard to imagine that the *Enquirer* would have been so deferential if the person faking his abduction had been an advocate on the other side of the same-sex "marriage" issue.

So the headlines eventually disappeared from their web site. Interesting.

You can read about more fake hate crimes against gays from Life Site News.

There was another story like this one in the news, recently. This one concerns Wikileaks leaker Bradley Manning.

Excerpt:

> "After carefully considering the recommendation that (hormone treatment) is medically appropriate and necessary, and weighing all associated safety and security risks presented, I approve adding (hormone treatment) to Inmate Manning's treatment plan," Col. Erica Nelson, the commandant of the Fort Leavenworth Disciplinary Barracks in Kansas, wrote in a Feb. 5 memo.
>
> **Formerly named Bradley Manning, the soldier was convicted of sending classified documents to anti-secrecy website WikiLeaks. Manning is serving a 35-year prison sentence and is eligible for parole in about seven years.**
>
> At Manning's trial, her attorneys argued she had been disillusioned by the wars in Iraq and Afghanistan and believed the release of the documents, including diplomatic cables and military reports, should be seen by the public.
>
> Manning sued the federal government for access to the treatment. The Army referred questions about Manning to the Department of Justice, which has been handling the case. Nicole Navas, a Justice Department spokeswoman, declined to comment, saying the government's position is detailed in court filings.
>
> The American Civil Liberties Union, which represents Manning in the case, did not have an immediate comment on the Army's memo.
>
> Manning had asked for hormone therapy and to be able to live as a woman. Transgender individuals are not allowed to serve in the U.S. military and the Defense Department does not provide such treatment. The Department of Veterans Affairs, however, does provide the treatment for veterans.

That's the same Department of Veterans Affairs that provides such poor care for veterans who actually fought in wars, rather than for people like Manning, who just gave away our military secrets. If the government is in control of health care, then the government gets to decide who gets treated. Their idea of who deserves health care might not be the same as the taxpayers who pay for it, but oh well.

# E-mails released by Clinton: there are “months, and months, and months” missing

**Wintery Knight** · 8 March 2015 · Archived copy · Original

The Daily Signal reports:

> During an appearance on CBS News’ “Face the Nation” today, Rep. Trey Gowdy said there are “huge gaps” in the emails he has received from former Secretary of State Hillary Clinton related to the attack on the U.S. consulate in Benghazi, Libya, on Sept. 11, 2012.
>
> “There are gaps of months and months and months,” Gowdy told CBS News’ Bob Schieffer.
>
> The South Carolina Republican, who is leading the House’s Benghazi investigation, said he has nearly 800 pages of Clinton’s emails, but none from her 2011 trip to Libya.
>
> Gowdy mentioned the “iconic” photo of then-Secretary Clinton during that trip, looking at her “handheld device.”
>
> “We have no emails from that day. In fact, we have no emails from that trip. So, it strains credibility to believe that if you’re on your way to Libya to discuss Libyan policy that there’s not a single document that’s been turned over to Congress. So there are huge gaps,” said Gowdy.
>
> Gowdy said Clinton doesn’t get to determine what does or does not constitute “public record.”
>
> “I continue to naively believe that people have a right to expect their government to tell them the truth in the aftermath of a tragedy,” said Gowdy.
>
> Gowdy said in the absence of “all” of Clinton’s emails, he wouldn’t be making a “selective release” of the ones he does have.

The important thing to realize about this is that because the e-mails were stored on Clinton’s servers, she can just delete the ones she doesn’t want us to see and we will never see them. There are no back-ups. Now unless you believe she is some sort of saint who couldn’t misuse this situation to hide immoral and or illegal actions, this is very disturbing. Remember that the Clinton Foundation is taking in millions of dollars from foreign governments, as I wrote about before. Who knows what she was offering in exchange for these donations? Since we have no access to her e-mails, we will probably never know. That’s why federal employees are obligated by law to use their secure, backed-up e-mail accounts – to avoid corruption and fraud.

Obama is saying he had no idea that her e-mail address was not a secure, backed-up State Department e-mail address:

> President Obama says he first learned from news reports that his former secretary of state, Hillary Clinton, used a private email account during her tenure, amid reports the White House and State Department may have known as far back as last August that Clinton did not use government email.
>
> “The same time everybody else learned it, through news reports,” Obama told CBS’ Bill Plante, in response to a question of when the president learned of Clinton’s use of a private email account for conducting government business.

This is actually the same line he has used for the many, many scandals afflicting his corrupt administration:

> The Obama administration has been engulfed in an unending stream of scandals — and President Barack Obama learned of most of them through news reports.
>
> From the 2012 Benghazi attacks that killed four Americans, to the IRS targeting conservative nonprofit groups,

> to the revelations about veterans dying while waiting for care because of falsified lists at the Department of Veterans Affairs, the president and his top aides have admitted that they found out about them in the media.
>
> “I first learned about it from the same news reports that I think most people learned about this,” Obama said in June 2013 when he was asked about the IRS scandal. “I think it was on Friday.”

Is this corruption a problem?

I think if you are one of the people who vote Democrat because they are essentially paying you to vote for them through government programs, then this isn’t a problem. It’s not even a problem for the clueless millennials who also vote for him, even though they are the ones who are going to be stuck with the bill for the bribes. If you’re a single mother by choice who is getting welfare from the government, then you’ll keep voting Democrat to keep the money coming. But the loan will be paid back by your fatherless child. What a world.

# Planet Fitness expels woman for judging transexual man in women's locker room

**Wintery Knight** · 9 March 2015 · Archived copy · Original

Here's the local news story from WNEM. (H/T Ari)

Excerpt:

> It's a business that sells itself on being non-judgmental but Planet Fitness has allegedly revoked the membership of a woman for complaining.
>
> Yvette Cormier, a member at the Midland location, says she had no idea what that meant until a few days ago.
>
> "I was stunned and shocked. He looked like a man.. He did not look like a woman," Cormier said. Cormier is talking about a transgender woman who walked into the woman's locker room while she was getting undressed. She says she couldn't believe her eyes.
>
> "This is very unprofessional. This is very scary," Cormier said.
>
> Not knowing why the person was in the women's locker room, Cormier said she immediately complained to the front desk and eventually to corporate offices.
>
> "They told me the same thing, that he was allowed in there because that's the sex he wants to be," Cormier said.
>
> Cormier said she understands that some men self-identify as women and some women self-identify as men, but said the person looked like a man and that caught her off guard.
>
> Cormier lost her membership for violating the company's no judgement zone policy.
>
> Moving forward, Cormier said she isn't concerned with getting her membership back. Her concern now is to warn other women at this gym to make them aware of this policy, because she says Planet Fitness failed to warn her.
>
> The company told TV5 that Cormier's concerns about the policy regarding gender identity was inappropriate and disruptive by complaining to other members at the gym.
>
> Representatives with Planet Fitness issued this statement:
>
> *"Planet Fitness is committed to creating a non-intimidating, welcoming environment for our members. Our gender identity non-discrimination policy states that members and guests may use all gym facilities based on their sincere self-reported gender identity.*
>
> In expressing her concerns about the policy, the member in question exhibited behavior that club management deemed inappropriate and disruptive to other members, which is a violation of the membership agreement and as a result her membership was canceled"

They are non-judgmental! They kicked this woman out of their gym because she did not want a man in the women's (and girls!) locker room. But that's not judgmental. She is welcome there, just like anyone else, except not really.

What does this policy really mean? Well, it means that any man can walk into the women's locker room and expose himself naked to women – and girls! – so long as he "self-identifies" as a woman. And just keep in mind that this could easily be a registered sex-offender. And what Planet Fitness is saying is this – if you don't stand up and salute this, then you are a bigoted hatemonger who needs to be excluded from their gym. They don't want you.

Dennis Prager has an article that explains what is behind stories like this.

He writes:

> Most Americans do not realize that, as large as the issue of same-sex marriage is (and it is very large), there is an even larger issue at stake in the same-sex marriage debate.
>
> That issue is whether gender matters: Do male and female, man and woman, matter?
>
> In the brief span of about 40 years, a war against the male-female distinction has been waged. And it has been largely successful.
>
> […]It began with modern feminism, a movement that has influenced vast numbers of men and women born after World War II. It was the movement's goal of women's equality that led to its denial of innate male-female differences. First, feminists feared than any acknowledgement of male-female differences would lead back to male-female roles. Second, they increasingly tended to equate "equal" with "same."
>
> Feminism convinced a generation of men and women, especially those attending college and graduate school, that (to cite one well-known example) the only reason boys play with trucks and girls play with dolls and tea sets is due to a sexist upbringing. Without sexist assumptions about boys' and girls' alleged differences, boys would just as happily play with dolls and tea sets and girls would just as happily play with trucks.
>
> […]The next societal force working to erase the significance of the sexes was the gay rights movement. The very premise of the movement is that the only thing that matters in sexual relations is that consenting adults engage in it. Whether men and women make love to one another or to members of their own sex makes no difference. Gender doesn't matter.
>
> And if gender doesn't matter, then it doesn't matter with regard to parents: It makes no difference whether children have two mothers, two fathers or a mother and a father. Schools such as New York's progressive Rodeph Sholom Day School, in 2001, even banned any celebration of Mother's Day or Father's Day among its elementary school students.
>
> Catholic Charities, the nation's oldest ongoing adoption services, were forced out of the adoption business in states like Massachusetts and Illinois — because they placed children for adoption only with a married man and woman. Progressives consider such a sentiment — that, all things being equal, it is better for a child to have a mother and a father — as bigoted and absurd. Since the sexes aren't different, a mother provides nothing that two fathers can't provide, and a father provides nothing that two mothers can't provide.

Prager is Jewish, and he adds this specific to Jewish Scriptures:

> The Torah went out of its way to assert the monumental importance of gender distinctions. When God created the first human beings, the Torah tells us, "Male and female He created them." Only of humans does the creation story make this statement; gender distinctions don't matter among animals except with regard to procreation. And the Torah prohibits men from wearing women's clothing and women from wearing that which represents manhood.

Do you think that men and women are different, and that it's a good thing that they come together in marriage to work together as a unit? If so, be aware that you are in the cross-hairs of the radical feminism / gay rights agenda.

# Clinton Foundation: all eight of the highest paid executives are men

**Wintery Knight** · 9 March 2015 · Archived copy · Original

Previously, I blogged about how Hillary Clinton pays the women on her staff 72 cents for every dollar she pays the men on her staff.

This is from The Weekly Standard.

They write:

> In late February, Hillary Clinton, a self-proclaimed champion of women's rights and gender equity, came under fire for a *Washington Free Beacon* analysis that showed women on Mrs. Clinton's staff during her tenure in the Senate were paid an average of 72 cents on the dollar compared to male staff. Now, an analysis of the latest IRS filing for the foundation that bears her name, the Bill, Hillary, and Chelsea Clinton Foundation, shows a similar compensation disparity between men and women employees. Although compensation figures are available for only a limited number of Foundation personnel, the 2013 Form 990 filed with the IRS shows that out of eleven highly compensated individuals listed, the top eight are all men.
>
> […]A further analysis of the four most recent 990 filings shows that a "gender gap" among highly compensated employees at the Clinton Foundation has been relatively consistent over time, with the gap actually widening for the years considered in this analysis. The number of women represented in the highly compensated group has seen a decrease over the same time period.
>
> The data is summarized below showing the year, the average compensation of the highly compensated men versus that of the highly compensated women, the number of men versus women in the highly compensated group of individuals listed on the 990s, and the percentage on the dollar that those men were paid versus the women:
>
> > 2010 – $210,000 vs. $149,000 (four men vs. five women) – 71%
> >
> > 2011 – $190,000 vs. $147,000 (five men vs. four women) – 77%
> >
> > 2012 – $257,000 vs. $166,000 (five men vs. three women) – 65%
> >
> > **2013 – $294,000 vs. $185,000 (eight men vs. three women) – 63%**
>
> Again, this analysis does not consider all employees of the Clinton Foundation, but only those required to be listed on the 990 IRS tax form. The total pay of the highly compensated employees for 2013 totals only $2.9 million versus total salaries and compensation for all employees of $29 million.

We don't have the numbers for all the employees, but I would expect it would be comparable to the 72 cents on the dollar she pays her female staffers.

You can read all about what the Clinton Foundation does in my previous post, but a one-line summary is that they take millions of dollars from foreign countries. While Hillary is Secretary of State. It's the Clinton Foundation. Taking money from foreign countries. And she wants to run for President.

# Walter Bradley: three scientific evidences that point to a designed universe

**Wintery Knight** · 9 March 2015 · Archived copy · Original

Dr. Walter L. Bradley

Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor.

Here's a bio:

> Walter Bradley (B.S., Ph.D. University of Texas at Austin) is Distinguished Professor of Engineering at Baylor. He comes to Baylor from Texas A&M University where he helped develop a nationally recognized program in polymeric composite materials. At Texas A&M, he served as director of the Polymer Technology Center for 10 years and as Department Head of Mechanical Engineering, a department of 67 professors that was ranked as high as 12th nationally during his tenure. Bradley has authored over 150 refereed research publications including book chapters, articles in archival journals such as the Journal of Material Science, Journal of Reinforced Plastics and Composites, Mechanics of Time-Dependent Materials, Journal of Composites Technology and Research, Composite Science and Technology, Journal of Metals, Polymer Engineering and Science, and Journal of Materials Science, and refereed conference proceedings.
>
> Dr. Bradley has secured over $5.0 million in research funding from NSF grants (15 yrs.), AFOSR (10 years), NASA grants (10 years), and DOE (3 years). He has also received research grants or contracts from many Fortune 500 companies, including Alcoa, Dow Chemical, DuPont, 3M, Shell, Exxon, Boeing, and Phillips.
>
> He co-authored The Mystery of Life Origin: Reassessing Current Theories and has written 10 book chapters dealing with various faith science issues, a topic on which he speaks widely.
>
> He has received 5 research awards at Texas A&M University and 1 national research award. He has also received two teaching awards. He is an Elected Fellow of the American Society for Materials and the American Scientific Affiliation (ASA), the largest organization of Christians in Science and Technology in the world. He is President elect of the ASA and will serve his term in 2008.

You can read more about his recent research in this article from Science Daily.

Below, I analyze a lecture entitled "Is There Scientific Evidence for an Intelligent Designer?". Dr. Bradley explains how the progress of science has made the idea of a Creator and Designer of the universe more acceptable than ever before.

The MP3 file is here.

**Evidence #1: The design of the universe**

1. The correspondence of natural phenomena to mathematical law

- All observations of physical phenomena in the universe, such as throwing a ball up in the air, are described by a few simple, elegant mathematical equations.

2. The fine-tuning of physical constants and rations between constants in order to provide a life-permitting universe

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants and ratios: (there are more examples in the lecture)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would NOT be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – “carbon-based life), but the bonds are not so tight that they can’t be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

3. Fine-tuning to allow a habitable planet

- A number of factors must be fine-tuned in order to have a planet that supports life
- Initial estimates predicted abundant life in the universe, but revised estimates now predict that life is almost certainly unique in the galaxy, and probably unique in the universe.
- Even though there are lots of stars in the universe, the odds are against *any* of them supporting complex life.
- Here are just a few of the minimal requirements for habitability: must be a single star solar system, in order to support stable planetary orbits, the planet must be the right distance from the sun in order to have liquid water at the surface, the planet must sufficient mass in order to retain an atmosphere, etc.

The best non-theistic response to this argument is to postulate a multiverse, but that is very speculative and there is

no experimental evidence that supports it.

**Evidence #2: The origin of the universe**

1. The progress of science has shown that the entire physical universe came into being out of nothing (= “the big bang”). It also shows that the cause of this creation event is non-physical and non-temporal. The cause is *supernatural*.

- Atheism prefers an eternal universe, to get around the problem of a Creator having to create the universe.
- Discovery #1: Observations of galaxies moving away from one another confirms that the universe expanded from a single point.
- Discovery #2: Measurements of the cosmic background radiation confirms that the universe exploding into being.
- Discovery #3: Predictions of elemental abundances prove that the universe is not eternal.
- Discovery #4:The atheism-friendly steady-state model and oscillating model were both falsified by the evidence.
- And there were other discoveries as well, mentioned in the lecture.

The best non-theistic response to this argument is to postulate a hyper-universe outside of ours, but that is very speculative and there is no experimental evidence that supports it.

**Evidence #3: The origin of life**

1. The progress of science has shown that the simplest living organism contains huge amounts of biological information, similar to the Java code I write all day at work. This is a problem for atheists, because the sequence of instructions in a living system has to come together all at once, it cannot have evolved by mutation and selection – because there was no replication in place prior to the formation of that first living system!

- Living systems must support certain minimum life functions: processing energy, storing information, and replicating.
- There needs to be a certain amount of complexity in the living system that can perform these minimum functions.
- But on atheism, the living system needs to be simple enough to form by accident in a pre-biotic soup, and in a reasonable amount of time.
- The minimal functionality in a living system is a achieved by DNA, RNA and enzymes. DNA and RNA are composed of sequences of proteins, which are in turn composed of sequences of amino acids.

Consider the problems of building a chain of 100 amino acids

- The amino acids must be left-handed only, but left and right kinds are equally abundant in nature. How do you sort out the right-handed ones?
- The amino acids must be bound together using peptide bonds. How do you prevent other types of bonds?
- Each link of the amino acid chain needs to be carefully chosen such that the completed chain with fold up into a protein. How do you choose the correct amino acid for each link from the pool of 20 different kinds found in living systems?
- In every case, a human or other intelligence could solve these problems by doing what intelligent agents do best: *making choices.*
- But who is there to make the choices on atheism?

The best current non-theistic response to this is to speculate that aliens may have seeded the Earth with life at some point in the past.

The problem of the origin of life is not a problem of chemistry, it is a problem of engineering. Every part of car

functionality can be understood and described using the laws of physics and chemistry. But an intelligence is still needed in order to assemble the components into a system that has the minimal requirements for a functioning vehicle.

# Scott Walker signs right-to-work: workers not forced to join a union in order to work

**Wintery Knight** · 10 March 2015 · Archived copy · Original

Gov. Scott Walker signs right-to-work bill

He has a diary up at Red State, the grassroots conservative web site, where he explains why he did it.

He writes:

> When I took office as governor of Wisconsin in 2011, I called together our new Republican majority in the legislature and told them it was time to "put up or shut up." As the elected leaders of our state, we owed it to our fellow Wisconsinites to follow through with our promises and to tackle the big issues head on.
>
> Our first order of business was reclaiming power for the people of our state. For too long, the big government union bosses had called the shots in our state capital.
>
> At the time, Wisconsin faced a $3.6 billion budget shortfall. We needed to reduce spending, yet collective bargaining by public employees had limited the ability of taxpayers and local governments to control that spending. Taxpayers picked up the tab for all pension contributions and most health insurance contribution. The unions even had a virtual monopoly on schools' health insurance business by having negotiated requirements to use a union-owned insurance company. Unions didn't even have to collect their own dues—taxpayers footed the bill for that too.
>
> To change all this, we enacted legislation that became known as Act 10.This is the bill that prompted all the protests in our capitol building and even in front of my personal home. But for all the attention, it was really pretty commonsense legislation.
>
> With Act 10, we reformed the collective bargaining laws so that public employees now make modest contributions to their healthcare and pensions—much like private sector employees. Public employees can now decide for themselves whether to join a union. And while unions can still collectively bargain for wages, they can't bargain over things like the size of bulletin boards or getting paid time off for union business.
>
> Act 10 also allowed local governments and districts to pay employees based on merit and not just seniority. Teachers can get raises and promotions for a doing a good job—not just being there the longest. Taxpayers get a better deal because local governments can shop around for the most affordable employee insurance plans.
>
> Because Act 10 freed up funds for school districts, fewer have had to lay off teachers. In fact, the three districts with the most teacher layoffs following Act 10 were ones that did not adopt the reforms.
>
> In short, Act 10 ensured that the state government treated taxpayers fairly and spent tax dollars more effectively. While the D.C.-based special interests have attacked us for it, the people of Wisconsin like what they see. We have been re-elected three times in four years.
>
> Now we are once again presented with another chance at big and bold reform—taking on the special interests a

> second time. Yesterday, the Wisconsin state Senate passed Freedom to Work legislation, which will mean no Wisconsin worker can be forced to join a union as a condition of employment. I will sign the bill into law.
>
> I've supported Freedom to Work for years, dating back to my time in the state legislature when I co-sponsored it. And now the people of Wisconsin have voiced their support through their state Senators and representatives. According to polling, 69 percent of Wisconsinites support the policy, and a majority of union households—51 percent—also support the law.
>
> Here's why I'm signing Freedom to Work in Wisconsin: it is good for economic growth. In the last decade, forced unionization states have had about half the rate of wage growth, job growth and manufacturing growth as Right to Work states. Adjusted for cost of living, employees in forced unionization states have almost $2,000 less disposable income. Bottom line, this reform is pro-freedom and pro-work for Wisconsin.

Here's the right-to-work map now:

Right to Work Map 2015

Please see below to learn more about Scott Walker. If you look over the stories below, you can see how he took an incremental approach to getting the support for this law. First, reformed collective bargaining, to prevent unions signing deals with health care providers they own, etc. Second, cut off automatic deduction of union dues, to force unions to spend their own money to collect the dues, further limiting their ability to interfere in politics. Third, pass this right-to-work law, to allow conservative blue-collar mid-Westerners to work a job without having to shell out money to the unions. The law passed with a majority of union households supporting it. They want their take-home pay! Walker is sitting in a blue state that has gone for Democrats in every presidential election since 1984. He knows how to get conservative reforms passed – by chipping away at his opponents and building consensus.

**Get caught up!**

The Weekly Standard has an excellent re-cap on Walker's accomplishments as governor. If you don't know Walker's history in Wisconsin, please read it!

One snippet:

> Which is that Scott Walker is a very bad man. And not merely because he opposes the progressive agenda and would like to roll back its successes. Hell, all kinds of right wing pols want to do *that.* Or say they do, anyway. You shake a Republican tree and half-a-dozen of them fall to the ground, talking about repealing this and defunding that. But Scott Walker is unusual, maybe even unique, and recalls the old joke about the graduate student out doing sociological research on religion in the rural South. He comes upon an old son of the soil and

> after a bit of conversation to soften him up, says delicately, “I’m wondering, sir, since you are a religious man, if you believe in Baptism by immersion.”
>
> The old fellow squints and spits and says. “Believe in it? Hell, sonny, I seen it done.”
>
> When it comes to rolling back the progressive agenda, you see, Walker has actually done it. That’s what the recall election was about. His enemies, many of whom still bear the tread marks of his tires on their backs, know that he is not another hapless Republican who makes it his business to raise taxes to pay for the excesses of the other party and calls that good government. Instead of enabling bloated government, he takes it on.
>
> Walker’s appeal, one suspects, is based on a sense among the demoralized citizenry that government at all levels lives high, doesn’t deliver, and fears no man.

There is a reason that people like this guy. He talks moderate, and then mauls his opponents in horrible ways. I almost feel sorry for them, except not really. We have an $18.5 trillion dollar debt, and we need to have a grown-up at the helm in 2016.

# Western woman explains how radical Islamists convinced her to join them

**Wintery Knight** · 10 March 2015 · Archived copy · Original

This is from the Blaze, but it links to the BBC.

They write:

> What prompts young women in England to consider joining the Islamic State? According to one woman who claims that she was radicalized by Muslim men in her home country of England, flattery and a sexual attraction had a great deal to do with it. And it all started with three words.
>
> Speaking to a BBC reporter, a woman in her 20s, with her identity masked for her own protection, told the story of how she was first contacted and eventually drawn into radical thinking when she was a teenager.
>
> All of the radicalization explained in the video happened before the formal establishment of the Islamic State. However, it is believed the organization and its supporters are using similar tactics today.
>
> How was this woman drawn into the world of radicalized Muslim thinking? She tells the BBC she was just 17-years-old at the time a Muslim man approached her via social media: "It was on Facebook, I was just approached one day online by him, and he said, 'You're very attractive.'"
>
> The online recruiter also told her, "Now's your time to cover that beauty because you're so precious."
>
> The woman, called "Ayesha" by the reporter, said the order to cover up was "borderline harassment" but also said that it worked in getting her attention.
>
> She began checking out online videos posted by various radical Islamic groups and admits she was looking to find "eye candy." Apparently, her search was fruitful.
>
> "Ayesha" told the BBC, "In all the YouTube videos, for some reason, they were all really really attractive."

Reminds me of what Michelle Malkin wrote about a while back.

She writes:

> I would like to declare a war on women — namely, all those cringe-inducing ninnies who lust after every celebrity criminal defendant with big muscles, tattoos, puppy-dog eyes or Hollywood hair.
>
> You know who I'm talking about, right? America's Bad Boy groupies. They'reon the courthouse steps with their "Free Jahar" signs, cooing over how "hot" and "cute" the bloodstained Boston Marathon bombing suspect is. He "can blow me up with babies," one moral reprobate quipped shortly after his capture. "I'm not gonna lie, the second bombing suspect, Dzhokhar Tsarnaev, is hot. #sorrynotsorry," another young girl boasted.
>
> Among the callous accused killer's victims, in case you'd forgotten: 8-year-old boy Martin Richard, who had been cheering on his dad and other family friends at the race. But who cares about an innocent dead child blown to bits by pressure cooker bombs in the name of Allah? *Jahar is HAWT!*
>
> Far from a minuscule fringe, the Ja-harem is a growing social media phenomenon. Its members mimic Justin Bieber's Beliebers, adopting the last name of their Tiger Beat terrorist and doodling hearts around his mug shot. In heat or in jest, these depraved females continue to spread viral photos, memes and hashtags of their Islamist Idol. One woman showed up at Tsarnaev's court appearance Wednesday donning a "Free the Lion" T-shirt. Another sported a "Dzhokhar Tsarnaev is innocent" tee, while her gal pal shouted, "Exonerate!"
>
> For those ladies who prefer jocks to jihadis, there's accused murderer/NFL star Aaron Hernandez. He's "fine as wine," one woman lusted. He's "too damned sexy to go to prison," another lamented. "He can come to jail at my house," sighed yet another. In response to one of gangsta Hernandez's Glock-wielding Instagram pics, one

> sick chick slavered, “Soooo hot with the combination handgun-mirror selfie.”
>
> Fugitive cop-killer Christopher Dorner also had his own fan club. Parked in front of their TV sets, women cheered on the “kinda sexy” homicidal maniac as he terrorized Southern California before perishing in a cabin inferno. “I’d honestly hide Dorner in my house,” one fan girl enthused. Tens of thousands “liked” Dorner’s various support pages on Facebook.
>
> […]They’re your neighbors and relatives, suburban gals like Colleen “Jihad Jane” LaRose and Jamie “Jihad Jamie” Paulin-Ramirez of Colorado, who agreed to wed Muslim terrorists and conspired to kill Swedish cartoonist Lars Vilks. Paulin-Ramirez dragged her 6-year-old (whom she renamed “Walid”) to Ireland to assist with the plot. Family members said she was “easily influenced” and that “any man that came along … she kind of followed like a lost puppy.”

So it turns out that what matters to some young, unmarried women is how the man looks. And maybe what her friends think of him. Sigh!

Here’s a study on this from the UK Daily Mail.

Excerpt:

> It takes a woman just three minutes to make up her mind about whether she likes a man or not, a study has revealed.
>
> The average female spends the time sizing up looks, physique and dress-sense as well as taking in scent, accent and eloquence of a potential suitor.
>
> Women also quickly judge how he interacts with her friends and whether he is successful or ambitious.
>
> It also emerged most women believe 180 seconds is long enough to gauge whether or not he is Mr Right, or Mr Wrong.
>
> The study also found women rarely change their mind about a man after their initial reaction – and believe they are ‘always right’ in their assumptions and judgments.
>
> The report which was commissioned among 3,000 adults to mark the release of Instinct, a new book by Ben Kay.
>
> Kay said: ‘I think a lot of people believe in trusting their instincts when dating. It makes it seem more magical, like it’s coming from somewhere deeper.

I am not sure if this method of choosing mates should be used by Christian men and women. If the goal of a relationship is to please God and serve him, then our feelings should not be the guide. God is the customer of the relationship, not the woman, and not the man. Pleasing God needs to be done intelligently, with preparation, and respecting strict moral boundaries, if it is going to stand the chance of being effective at achieving his goals.

# New study: outstanding student loans reduce a woman's odds of marrying

**Wintery Knight** · 10 March 2015 · Archived copy · Original

First, the study, which was published in *Demographic Research.*

Abstract:

> BACKGROUND
>
> With increasing levels of student loan debt, the path to economic stability may be less smooth than it was for earlier generations of college graduates. This paper explores this emerging trend by assessing whether or not student loan debt influences family formation.
>
> OBJECTIVE
>
> The objective of this study is to examine whether student loan debt delays marriage in young adulthood, whether or not the relationship between student loan debt and marriage differs for women and for men, and if this relationship attenuates during the years immediately after college graduation.
>
> METHODS We estimate a series of discrete-time hazard regression models predicting the odds of first marriage as a function of time-varying student loan debt balance, using a nationally representative sample of bachelor's degree recipients from the 1993 Baccalaureate and Beyond Longitudinal Study (N = 9,410).
>
> **RESULTS We find that the dynamics of loan repayment are related to marriage timing for women, but not for men. Specifically, an increase of $1,000 in student loan debt is associated with a reduction in the odds of first marriage by 2 percent a month among female bachelor degree recipients during the first four years after college graduation. This relationship attenuates over time.**
>
> CONCLUSION Our study lends support to the proposition that the financial weight of monthly loan repayments impedes family formation in the years immediately following college graduation – however, only for women. This finding questions traditional models of gender specialization in family formation that emphasize the economic resources of men.

I think that a woman who is serious about studying something that will allow her to get a job related to her field so she can quickly pay off her loans in the first few years is a very good sign of RESPECT for a man, and for his role as primary/sole provider. Men choose tough majors / trades for a reason, and they do tough jobs for a reason. When a woman chooses something hard to study and then chooses a hard job to do to pay off her loans, it's showing to her man that she respects what he is doing to provide for the family. I think this is something that parents need to encourage young women to do, but so often parents focus too much on spiritual / emotional concerns instead of practical wisdom when leading their kids.

When a woman asks a man to work to pay for the marriage – with all the costs of home, furniture, diapers, tuition, etc. – she is asking him for a commitment to work until he is 65. That is a lot to ask, and it is very hard to accept this from a woman who doesn't understand the difficulty of earning and saving money.

So what do I recommend to a woman? I recommend she do a STEM degree, pay off her debts, guard her chastity, marry young when she is fertile, have a few years of work to pay off student loans and get used to the workplace, demonstrate ability in apologetics and mentoring others, etc. A wife needs to have a lot more skills than just being pretty and young. There are things she has to do in the marriage – things that take preparation. The more accustomed she is to hard work and self-sacrifice, the easier she will take to her role in the marriage. Women who are used to having to do hard things that they don't feel like doing make the best wives and mothers. It's something that a woman can grow into, if she lets herself be challenged to grow.

My friend Amy is fond of telling me that people usually adapt to their friends. So if all your friends are very

spiritual and impractical, and they don't have jobs or savings, then chances are you'll be like them, too. To get out of debt, don't take financial advice from people who, in their own lives, show no evidence of knowing what to study, how to find a job, how to save money, and so on. Instead of pushing away the people who "rain on your parade" with wisdom, grab them and keep them close. Watch what they do. Talk to them about your finances. Rely on them to hold you accountable for choosing a good major, updating your resume, and continuously growing your salary, through annual raises or job changes. That's how you get better.

I don't say these things in order to make women feel bad, or limit their freedom unnecessarily. I tell women to make good decisions to prepare for marriage, to practice self-denial and self-sacrifice, to choose the right men, to not be scared away by strong providers and men with moral and religious convictions. Although on one level, women can be scared off by men who have firm and definite convictions, they need to understand that these men are the most reliable men to marry. Men who don't make demands on women usually don't respond well to demands that women make on them. A strict moral and theological framework can seem scary to a woman – she might feel scared that she could be rejected. But it's exactly these convictions that ground a man's ability to keep loving her, to stick with her, and to encourage and support her as she grows.

Instead of being frightened by men who ask her to do good things, she should view it as an asset, not a liability. And the more she listens to his leading and grows, the more independent and capable she will be. She will *feel better* about doing hard things and playing a role. Better than she would feel about always choosing the easy way and then finding herself without accomplishments. Demanding men can be bad, but not if the demands they make are to build the woman up. The demand that a woman be serious about paying her debts with a real plan might seem scary to some women, but the study shows that this is good advice for her to be more attractive – to *any man* who might want to marry her.

# Hillary Clinton deleted 32,000 e-mails, refuses to turn over her home-based server

**Wintery Knight** · 11 March 2015 · Archived copy · Original

The Washington Times reports on her press conference, which only featured questions from reporters handpicked by her spokesman Nick Merrill.

Excerpt:

> Former Secretary of State Hillary Rodham Clinton deleted nearly 32,000 emails she deemed private from her time in the Obama administration and refused Tuesday to turn over her personal email server, insisting she "fully complied" with the law and that voters will have to trust her judgment.
>
> Answering questions for the first time about her emails, Mrs. Clinton said she's turned over to the State Department 55,000 pages of emails she deemed work-related, but said she got rid of the rest last year. She defended her decision to keep control of her emails by using a private account, saying previous secretaries did the same thing, and saying it was more "convenient" for her this way.
>
> "I wanted to use just one device for both personal and work emails instead of two," she said in a hastily called press conference after she spoke at the U.N. Conference on Women.

She lied about Benghazi, claiming it was a protest caused by a Youtube video. So we know that she is capable of lying for gain.

Well, is she telling the truth this time?

> But her explanations are already coming under fire. One conservative group, America Rising PAC, said Mrs. Clinton has previously said she keeps both a BlackBerry and an iPhone.
>
> Mrs. Clinton also said the email server was set up for her husband, former President Clinton, but his office told The Wall Street Journal that he has only sent two emails in his life, and both were during his time as president, which ended in 2001, or eight years before the private server was created.

It's not a "conservative group" that said that she had two devices – it's Clinton herself:

Read about that video here.

She deleted half her e-mails:

> Of the 62,320 emails in her account, her office said 30,490 were deemed public business, while the remaining 31,830 were deemed private.

And she won't let anyone see the private server she kept in her home:

> Congressional Republicans said Mrs. Clinton shouldn't take credit for turning over her emails since it was only done under pressure from the House committee probing the 2012 Benghazi terrorist attack.
>
> […]The former first lady flatly rejected turning over her server, saying she's already done enough in her mind to comply with her obligations.

This is just plain stupid:

> Some cybersecurity analysts have said maintaining a private server was an invitation to hacking, but Mrs.

> Clinton said the system was kept on property guarded by the Secret Service, and she asserted there "were no security breaches."

Secret Service people walking around outside a home do not prevent penetration attacks.

We have to have the actual server and check to see whether it was secure or not. If she doesn't give it to us, along with ALL the e-mails, then we don't know whether it's been compromised, and we don't know what the enemies of the United States would have seen in the event of a breach of security. This is not a case where we can "trust" her – we have to *know for certain.*

Another thing – why is she printing out e-mails and giving it to the State Department for them to then give it to Trey Gowdy's Select Committee? Why not just give them the server? It's not easy to conduct an automated search on pieces of paper, that's why. She is deliberately slowing down the Benghazi investigation by refusing to provide searchable electronic copies.

The concerns about a security breach are not idle. We already KNOW FOR CERTAIN that State Department e-mails were hacked.

> In March 2013, an adviser to Clinton, Sidney Blumenthal, had his e-mail hacked by "Guccifer" — the Romanian hacker perhaps best known for revealing George W. Bush's paintings to the world. At the time, Gawker reported that Blumenthal was communicating with an account that appeared to belong to Clinton at the "clintonemail.com" domain. The content of some of those e-mails was published by RT.com.

The hacked e-mails are the reason why we know that she intentionally set up her domain on the day she took office. This was not done by accident – it was deliberate.

What difference does national security make?

Investor's Business Daily reminds us other mysteries that the e-mails would shed light on:

> **What we do know, as Catherine Herridge of Fox News has reported, is that emails scattered through those obtained by Judicial Watch via a Freedom of Information Act lawsuit show that there existed a "Benghazi Group," a code phrase used inside the State Department for a Benghazi damage-control operation led by Clinton aides Cheryl Mills and Philippe Reines, who has been described as Hillary Clinton's "gatekeeper."**
>
> **The two ran interference for Hillary during the 2012 Benghazi attack and were involved in what has been dubbed "Operation Basement" — going through documents and emails and turning over only those not damaging Hillary Clinton's reputation or political future.**
>
> **"Cheryl Mills was instrumental in seeing the big lie was put out there," says Judicial Watch head Tom Fitton. "What's notable thus far is we received no emails from or to (Clinton). You have to wonder**

> **whether these aides went offline and were using secret accounts to communicate with her about the Benghazi attack."**
>
> **You also have to wonder if Hillary and her State Department staff were also busy concocting the inflammatory Benghazi video lie.**
>
> **Ron Fournier of the National Journal advises that the emails may help us "follow the money" that has flowed into Clinton Foundation coffers, a tale of possible "pay for play" involving unknown promises in exchange for donations.**
>
> **Fournier writes that "Hillary Clinton's secret communications stash is a bombshell" whose "greatest relevancy is what the emails might reveal about any nexus between Clinton's work at State and any donations to the Bill, Hillary and Chelsea Clinton Foundation from U.S. corporations and foreign nations."**

But there is more here than just the Benghazi cover-up and the Clinton Foundation donations – there are real national security concerns. We need to get our hands on that server and all the e-mails in order to know whether we have a breach, and if so, what has been breached. It is *incredibly unprofessional* and a *firing offence* (in my opinion) for her to tell us "just trust me". That is not in the best interest of the security of the United States. And it shows why we ought not take Hillary Clinton seriously as a candidate for the Office of the Presidency. She is in it for herself, not for the good of her country. This is all about her – her ambitions.

UPDATE: Two of her top aides were also using personal e-mails, not State Department e-mails.

# Did Republican senators do anything wrong by writing a letter to Iran's leaders?

**Wintery Knight** · 11 March 2015 · Archived copy · Original

Map of the Middle East

Stephen Hayes is the foreign policy expert for the Weekly Standard and he has some facts that undermine the left-wing media narrative.

He appeared on the Special Report panel, and thanks to Newsbusters, you can see the video of it on their web site, and read the transcript.

Hayes also had a longer form article posted at The Weekly Standard:

> In a tweet this morning, NBC News senior political editor Mark Murray writes: "With GOP Senators' Iran Move, Politics Goes Beyond the Water's Edge." 47 Republican Senators sent to the Supreme Leader of Iran reminding him that Congress is not bound by deals that Congress does not approve. The article Murray links to describes this as "stunning" and "unprecedented" and implies that the letter constitutes a breach of protocol so significant that it ends the long tradition of bipartisan foreign policy.
>
> This is utterly preposterous.
>
> The only way to reach such a conclusion is to ignore efforts by Democrats to undermine George W. Bush.
>
> In September 2002, David Bonior, the second-ranking Democrat in the House of Representatives, flew to Baghdad in an attempt to undermine George W. Bush's case for war in Iraq on a trip paid for by Saddam Hussein's regime. Bonior, accompanied by Representatives Jim McDermott and Mike Thompson, actively propagandized for the Iraqi regime. McDermott, asked whether he found it acceptable to be used by the Iraqi regime, said he hoped the trip would end the suffering of children. "We don't mind being used," he said.
>
> In 2004, the Democratic Party offered its full embrace of Michael Moore's fantastical conspiracy theory,*Fahrenheit 9/11*. Minority Leader Tom Daschle, DNC chairman Terry MacAullife and assorted Democratic heavyweights flocked to a special screening of the film in Washington, DC, where they offered unreserved praise.
>
> In 2007, House Speaker Nancy Pelosi traveled to Damascus, Syria, in an open attempt to undercut White House efforts to isolate Syrian dictator Bashar Assad. Pelosi amplified Assad's claims that he was ready for peace talks with Israel and wanted Syria to rejoin the international community.

> The letter from Senate Republicans provides a stark contrast from these efforts. It is a straightforward, fact-based description of the U.S. constitutional system and the role Congress plays in international agreements and treaties.
>
> It takes a selective reading of that history to conclude that this letter, as opposed to previous efforts by congressional Democrats, means the end of bipartisan foreign policy.

I think it's wonderful that Republicans are doing everything possible to try to put the brakes on the Obama administration's efforts to lift sanctions on Iran so that they can proceed to develop nuclear weapons at a faster pace. As you know, the Obama administration was accused by former U.N. ambassador John Bolton of leaking details of a planned strike on Iranian nuclear assets by Israel. So we know *exactly* where their allegiance lies, here. (This article says it was actually Hillary Clinton who did the leaking that scratched the strike plan) This is not a mystery – we need to judge the Obama administration by their actions.

I had to post on this because one of my co-workers asked me to respond to this story, as well as tell him the Republican alternative to Obamacare (he is not into health care policy that's to the right of center). Here's the alternative to Obamacare, you. (That's Wall Street Journal, Newsmax overview of the plan here) Those are recent articles, but you can find the official policy explained in detail on Paul Ryan's Congressional web site.

# Was early Earth's atmosphere suitable for creating the building blocks of life?

**Wintery Knight** · 11 March 2015 · Archived copy · Original

The Miller-Urey experiments

Biochemist Dr. Fazale Rana of Reasons to Believe offers some evidence.

Excerpt:

> Today, the Miller-Urey experiment is considered to be irrelevant to the origin-of-life question. Current understanding of the composition of early Earth's atmosphere differs significantly from the gas mix used by Miller. Most planetary scientists now think that the Earth's primeval atmosphere consisted of carbon dioxide, nitrogen, and water vapor. Laboratory experiments indicate that this gas mixture is incapable of yielding organic materials in Miller-Urey-type experiments.
>
> In May 2003 origin-of-life researchers Jeffrey Bada and Antonio Lazcano, long-time associates of Miller, wrote an essay for Science (May 2, 2003, pp. 745-746)commemorating the 50-year anniversary of the publication of Miller's initial results.They pointed out that the Miller-Urey experiment has historical significance, but not scientific importance in contemporary origin-of-life thought. Bada and Lazcano wrote:
>
> Is the "prebiotic soup" theory a reasonable explanation for the emergence of life? Contemporary geoscientists tend to doubt that the primitive atmosphere had the highly reducing composition used by Miller in 1953.
>
> In his book Biogenesis, origin-of-life researcher Noam Lahav passes similar judgment:
>
> The prebiotic conditions assumed by Miller and Urey were essentially those of a reducing atmosphere. Under slightly reducing conditions, the Miller-Urey reaction does not produce amino acids, nor does it produce the chemicals that may serve as the predecessors of other important biopolymer building blocks. Thus, by challenging the assumption of a reducing atmosphere, we challenge the very existence of the "prebiotic soup", with its richness of biologically important organic compounds.
>
> For many people, the generation of amino acids from simple chemical compounds thought to be present in early Earth's atmosphere meant that life could originate all on its own without the need for a Creator. Work done on the early planetary conditions of Earth in the intervening decades between Miller's famous experiment and his death, however, have invalidated this famous experiment and its support for an evolutionary explanation for life's origin, in spite of what textbooks report.

The IDEA Center has a nice summary of origin-of-life research that explains why scientists no longer accept the idea that the building blocks of life can be formed by sparking the gasses that were present on the early Earth.

Miler and Urey used the wrong gasses:

> Miller's experiment requires a reducing methane and ammonia atmosphere, however geochemical evidence says the atmosphere was hydrogen, water, and carbon dioxide (non-reducing). The only amino acid produced in a such an atmosphere is glycine (and only when the hydrogen content is unreasonably high), and could not form the necessary building blocks of life.

Miller and Urey didn't account for UV of molecular instability:

> Not only would UV radiation destroy any molecules that were made, but their own short lifespans would also greatly limit their numbers. For example, at 100ºC (boiling point of water), the half lives of the nucleic acids Adenine and Guanine are 1 year, uracil is 12 years, and cytozine is 19 days (nucleic acids and other important proteins such as chlorophyll and hemoglobin have never been synthesized in origin-of-life type experiments).

Miller and Urey didn't account for molecular oxygen:

> We all have know ozone in the upper atmosphere protects life from harmful UV radiation. However, ozone is composed of oxygen which is the very gas that Stanley Miller-type experiments avoided, for it prevents the synthesis of organic molecules like the ones obtained from the experiments! Pre-biotic synthesis is in a "damned if you do, damned if you don't" scenario. The chemistry does not work if there is oxygen because the atmosphere would be non-reducing, but if there is no UV-light-blocking oxygen (i.e. ozone – $O_3$) in the atmosphere, the amino acids would be quickly destroyed by extremely high amounts of UV light (which would have been 100 times stronger than today on the early earth).This radiation could destroy methane within a few tens of years, and atmospheric ammonia within 30,000 years.

And there were three other problems too:

> At best the processes would likely create a dilute "thin soup," destroyed by meteorite impacts every 10 million years. This severely limits the time available to create pre-biotic chemicals and allow for the OOL.

> Chemically speaking, life uses only "left-handed" ("L") amino acids and "right-handed" ("R)" genetic molecules. This is called "chirality," and any account of the origin of life must somehow explain the origin of chirality. Nearly all chemical reactions produce "racemic" mixtures–mixtures with products that are 50% L and 50% R.

Two more problems are not mentioned in the article. A non-peptide bond anywhere in the chain will ruin the chain. You need around 200 amino acids to make a protein. If any of the bonds is not a peptide bond, the chain will not work in a living system. Additionally, the article does not mention the need for the experimenter to *intervene* in order to prevent interfering cross-reactions that would prevent the amino acids from forming. That's another problem with the origin of life – experiments show that getting the building blocks requires an intelligence to intervene.

Now keep in mind that even if you get the building blocks, you are left with the sequencing problem – but that's another topic for another day.

# We have single-payer health care already in the VA system – is it working?

**Wintery Knight** · 12 March 2015 · Archived copy · Original

VA health care wait times

This is health care policy expert Sally Pipes, writing in Investors Business Daily.

She writes:

> A new report from the Government Accountability Office has confirmed that the Department of Veterans Affairs can't take care of those it's supposed to serve.
>
> The GAO has placed the VA's health system on the "high risk" list of federal programs that are vulnerable to "fraud, waste, abuse, and mismanagement." The agency is still struggling to recover from an 8-month-old internal audit that revealed that returning soldiers had to wait more than 90 days for care. Some patients died while waiting.
>
> The GAO's findings apply far beyond the VA. The agency's problems — which include long wait-times and out-of-control costs — demonstrate what happens in any government-run, single-payer health care system.
>
> The VA's failings ought to give pause to the liberal politicians and policy analysts who would love to introduce single-payer health care for all Americans. But they don't seem to have heeded the GAO report. Within a week of its release, Rep. John Conyers, D-Mich., called for "Medicare for All."
>
> Champions of socialized medicine used to point to the VA as proof that single-payer worked. In 2011, economist Paul Krugman called it "a huge policy success story, which offers important lessons for future health reform." In a 2009 debate with me, Princeton professor Uwe Reinhardt said that there's an example of a single-payer system in the U.S. that works — the VA.
>
> The VA offers lessons about health reform — just not the ones single-payer's proponents have in mind.
>
> Defenders of government-run health care claim that it will control costs by cutting out middlemen such as insurance companies. The evidence shows otherwise. According to the GAO, the VA budget more than doubled between 2002 and 2013 even as enrollment increased by less than a third.
>
> Single-payer's "guarantee" of access to high-quality care is a myth, too.
>
> "Despite these substantial budget increases," the GAO report says, "for more than a decade there have been numerous reports … of VA facilities failing to provide timely health care."
>
> Over the last decade, more than 63,000 veterans have been unable to get a doctor's appointment. At least 40 veterans have died because of long waits.
>
> Things aren't likely to get better anytime soon. The VA has yet to act on more than 100 GAO

> recommendations for improving care.
>
> Last summer, lawmakers allocated $10 billion to a program intended to reduce wait times by permitting veterans to see private doctors outside the VA system. So far, the agency has only authorized 31,000 vets to seek private care — out of a possible 8.5 million.
>
> That has to change — 88% of veterans say that they want the ability to choose where they receive their care.

However, there is one military person who is getting health care – convicted traitor Bradley Manning. He's getting *sex-change surgery* while he is in jail for leaking national security secrets to our enemies. He won't have to wait at all for his health care. This is what happens when you take money out of your wallet, give it to the government, and then hope that when you get sick, someone in the government will decide that you are worthy of treatment. Which you aren't, unless they want your vote.

It's not just the VA health care system – government-run health care doesn't work in other places:

> The United Kingdom's National Health Service, for instance, is notorious for denying patients everything from certain cancer medications to hip replacements.
>
> The program is also financially unsustainable. According to its own medical director, Bruce Keogh, "if the NHS continues to function as it does now, it's going to really struggle to cope because the model of delivery and service that we have at the moment is not fit for the future."
>
> **In Canada's single-payer system, the average wait time between referral from a general practitioner and the actual receipt of treatment by a specialist was more than four months in 2014. That's nearly double the wait time of two decades ago.**

The Canadian system is the one that Democrats want to emulate – but Canada's rich left-wing politicians come here when they want care. They don't want to wait in line. Why should we want to wait in line? We need to prefer consumer-driven health care over government-controlled health care.

# Tad Hopp accumulates six figures of college debt, wants taxpayer bailout

**Wintery Knight** · 12 March 2015 · Archived copy · Original

[image]
From: theawkwardyeti.com
Here's an interesting editorial from a "Christian" left blog. (H/T Acton Institute via Lindsay)

The author, Tad Hopp is graduating a PCUSA seminary – an extremely liberal, left-wing denomination.

He writes:

> I graduated college in 2007.
>
> […] I majored in English, not exactly what most people consider a 'marketable' or 'practical' degree…
>
> […]I went to a somewhat expensive private school…
>
> […]I did what many students in their last year of high school do: I went to the school where I felt I was being called…
>
> […]I do not regret my four years at my undergraduate institution one bit.
>
> [….]When I graduated college, I owed nearly $50,000 in student loan debt and was unemployed for almost six months before I finally found a low-paying office job.
>
> […]"Can't find a job? Well, you should have majored in something more 'practical', like economics or business or medicine." Yeah, that *would* be great…if those were the subjects where my skills and passions lie. They're not.
>
> […]I felt called to go to seminary.
>
> […]I will graduate seminary with close to six figures worth of student loan debt.

Let's take stock of what he's said so far:

- he studied English, a language that he already spoke, which has one of the lowest employment rates
- he was warned by people who knew something about earning and saving money not to study English
- he went to a school he couldn't afford to go to, and he graduated with $50,000 in debt
- he went to seminary, another subject that doesn't pay, and added another $50,000 or so of debt
- he says that he doesn't have to study subjects that lead to a career because he isn't "passionate" about them
- he "followed his heart" by going to the school that he had mystical, emotional, intuitions about = "calling"

My advice to Tad at this point would be for him to take the Bible seriously when it says this:

2 Thessalonians 3:10:

10 For even when we were with you, we used to give you this order: if anyone is not willing to work, then he is not to eat, either.

And 1 Timothy 5:8:

8 But if anyone does not provide for his own, and especially for those of his household, he has denied the faith and is worse than an unbeliever.

Now, for a Bible-believing Christian, these are inerrant and cannot be denied. But we have to go *outside the Bible* and learn how the world really works in order to figure out how to achieve those stated goals. Why should anyone hire us? What is working really about?

But even before looking at economics, Tad needs to push away all his friends who tell him to "follow his heart" and stick close by his friends who understand economics, who have jobs already, who have savings already, and so on. Don't look for advice from dreamers, you look to advice from doers – people who can read the times, run the numbers and who have *demonstrated* the ability to create plans that work to achieve *results* that please God. When it comes to planning about the future, look at the past accomplishments. Weaving a happy narrative sounds nice, but judge future predictions based on past performance.

I would recommend that Tad read an economist like Thomas Sowell, especially on work, prices, etc., and realize that work means providing value to others. It then follows that he is obligated by the Bible to NOT "follow his heart", but to instead do something that *offers value* to his fellow man. Prices are a way of determining what is most valued by your fellow man. And we know what careers have the highest value:

> Petroleum Engineering – Starting Salary: $103,000 / Mid-Career Salary: $160,000
> Actuarial Mathematics – Starting Salary: $58,700 / Mid-Career Salary: $120,000
> Nuclear Engineering – Starting Salary: $67,600 / Mid-Career Salary: $117,000
> Chemical Engineering – Starting Salary: $68,200 / Mid-Career Salary: $115,000
> Aerospace Engineering – Starting Salary: $62,800 / Mid-Career Salary: $109,000
> Electrical Engineering – Starting Salary: $64,300 / Mid-Career Salary: $106,000
> Computer Engineering – Starting Salary: $65,300 / Mid-Career Salary: $106,000
> Computer Science – Starting Salary: $59,800 / Mid-Career Salary: $102,000
> Physics – Starting Salary: $53,100 / Mid-Career Salary: $101,000
> Mechanical Engineering – Starting Salary: $60,900 / Mid-Career Salary: $99,700

English and seminary are dead last on the list – he literally could not have chosen worse than he did. I don't mind if a woman studies these things, but Tad is a man – he has the Biblical obligation to be the primary provider, as we saw in the verse above.

More Tad:

> Is the PCUSA doing anything to address this crisis?
>
> […]What has our government done to address this issue?
>
> […]I, like so many in my generation, voted for Obama…
>
> […]It seems to me that we've bought into the lie that student loan debt is brought on by the individual person…
>
> […]You know what I think might stimulate the economy? Automatically cancelling every single outstanding student loan!
>
> […]If we can spend $640 billion dollars on defense spending, why can't we find the money to better support public education?

It's important to understand that an English degree and a seminary degree do not prepare a person to make statements on economics and government. Tad has never studied these things, has no experience in them. He cannot state what the impact of his suggestions would be to all groups, i.e. – he cannot answer "and then what happens?" for every impacted group. Thinking economically is a valuable skill, but as Tad's personal life shows, it's not an area he is really knowledgeable about. But he wants to shift money from defense spending (which he knows nothing about) so that he can have a personal bailout. I personally doubt that taxpayers would be better served by paying for his English degree and liberal seminary degree than they would be if a peace-loving democracy could project power abroad to deter aggression from countries like North Korea, Iran, Russia, China and Syria.

Here is the solution to Tad's problems:

- we need to put Tad to work in a minimum wage job and confiscate his entire salary, until his loans are paid off.
- we need to put Tad on a watch list such that he is never allowed to borrow money from anyone ever again.
- once Tad's loans are paid off, he should be taxed on his future earnings at the top tax rate for the rest of his life. The money we tax from him can fund education – that's what he said he wanted.
- Tad and his household should all be barred from collecting any money for unemployment, welfare or other social programs.

That's the only bailout Tad should get. It would actually be in his best interest that he encounter real life as quickly as possible, because the longer he waits, the harder it's going to be for him to recover to independence. He needs to stop his crazy retreat from adult responsibilities, and start working and saving now. I would say that at this point, marriage and parenting is out of the question for him (in another post, he comes out as gay, so that also complicates things). And he can thank the politics of the secular left for marriage and family being less affordable now, thanks to laws like Obamacare, which *raised* the cost of health care by thousands of dollars. I found it interesting that he actually did work at some point but he mocked the job as a "dead-end job" – as if it was beneath him.

I know some of you will be thinking, "but God called him things and so of course God is going to bail him out with $100,000 for his student loans". But the thing is, God doesn't usually work like that. First, I don't accept that he is a Christian at all. Second, just because you have feelings that your plan will work, that isn't a calling. The truth is that you certainly can assess the feasibility of things that you feel "called" to do, and if the plan looks crazy, then don't do it. If you find yourself at odds with wise, practical people when explaining your calling to them, then you're probably doing it wrong.

# Democrats holding up Republican bill that gets tough on sex-trafficking

**Wintery Knight** · 13 March 2015 · Archived copy · Original

Life News reports:

> Senate Democrats today continued to block a bill to help human trafficking victims because the measure won't pay for their abortions.
>
> The legislation passed through the Senate Judiciary Committee without any problems but, now that it's slated for consideration on the floor of the U.S. Senate, pro-abortion activists are raising a stink about how funds for restitution for human trafficking victims won't pay for abortions. The objection is offensive to victims of human trafficking and millions of girls and young women around the world who are victimized by it, putting abortion ahead of meeting their needs.
>
> Senate Majority Whip John Cornyn, a pro-life Republican, is the lead sponsor of the measure to help human trafficking victims and aides to pro-abortion Democrats apparently missed the fact, during the committee hearing, that Cornyn crafted the bill in a way to help women as opposed to making Americans pay for abortions.
>
> This week, Senate Democrats falsely claimed Republicans snuck in the language in the bill to prevent abortion funding. Challenging them on their assertion Senate Republican Leader Mitch McConnell offers Democrats a chance to vote on the abortion funding provision if they were that opposed to keeping the provision in the bill. Senate Democrat Leader Harry Reid objected.
>
> "It's unconscionable that Democrats would put politics above such important legislation. The politics have to stop," Sen. John Thune said in response.
>
> Leading pro-life groups are taking Democrats to task for putting abortion funding ahead of sex trafficking victims.

In the video above, Iowa Senator Joni Ernst explains the situation:

> First, thank you all for coming today, and Senator Cornyn thank you very much for working so diligently on this legislation. Again, thank you for being here.
>
> As the mother of three beautiful daughters, and as someone who as a young woman volunteered my time, my energy at a women's crisis shelter that dealt with many of these forms of abuse, this is important legislation. This legislation is near and dear to my heart. So it is very disheartening to see the partisan politics, the political theatrics that we are seeing this week with this important legislation. Human trafficking cannot be allowed to continue. It shouldn't exist. And this is essentially modern-day slavery.We have the opportunity to do something about it, and we must do something about it.
>
> Senate Democrats in the Judiciary Committee voted unanimously to bring this bill forward, and as my colleagues have stated the language that is found in this bill is nothing new. This is language that has existed for 39 years. So essentially, what they are saying is, 'It was hidden, it was hidden.' It was not hidden. This is language that again has been in existence. We're maintaining the status quo with this legislation.
>
> So Senate Democrats, either failed to read that bill or again they are just playing partisan politics and political theatrics with an important issue. Again, as a mother, as a grandmother, we cannot allow our children to be victimized. And now that we have the opportunity to do something about it, we must push this issue, and we must bring this bill forward for a vote. I want to emphasize again that Senate Democrats voted unanimously to bring this bill out of committee, and as stated earlier, there were 10 co-sponsors, Democratic co-sponsors of this bill.

> So, I am imploring our Senate Democrats to stop the theatrics. Let's take the opportunity to do something very important for not only our nation's children, but other children that are being brought into the United States. Let's enforce these laws, let's bring forward stiffer penalties, and let's protect our children. Again, thank you for being here this afternoon.

Democrat legislators vote against bills that say that taxpayer-funding should not be used to fun abortions. If Democrats have to choose between prosecuting sex-traffickers and taxpayer funding of abortion, they'll take the latter.

# Could Hillary Clinton be sent to prison because of her secret e-mail server?

**Wintery Knight** · 13 March 2015 · Archived copy · Original

Your puny laws don't apply to Queen Hillary!
The first way is in the Washington Times.

Excerpt:

> The Obama administration will soon find itself in court having to explain to federal judges why it never told anyone former Secretary of State Hillary Rodham Clinton used a secret email address, potentially spoiling dozens of open records requests, experts said Wednesday.
>
> **And Mrs. Clinton could face up to three years in prison per message if she is found to have broken her word and handled classified information on the secret account, one open records expert told The Washington Times.**
>
> The legal challenges have already begun, with The Associated Press filing a federal lawsuit saying the State Department has foiled five years' worth of requests for Mrs. Clinton's emails, but never told them or the court that she kept her own server — meaning that her emails weren't being searched.

The article points out that because Clinton had a secret, personal e-mail server, it will be difficult to prove that she handled classified information unless someone on the other end of one the e-mails shows up.

The State Department itself could face sanctions for refusing to own up to the existence of Hillary's personal e-mail server when processing Freedom of Information Act requests:

> Tom Fitton, president of Judicial Watch, which for years has battled for access to State Department records, said they are already preparing to ask several federal courts to review whether the Obama administration was skirting the law by not including Mrs. Clinton's email server in its searches for documents.
>
> "We had hundreds of requests. The State Department knew from the beginning these records weren't being searched, and no one told us about it, no one told the courts about it," Mr. Fitton said.
>
> […]The Associated Press filed a lawsuit Wednesday that could test the limits of the government's ability to go after emails. Despite five years of questions, the State Department never said it didn't have control over Mrs. Clinton's emails, the AP said, suggesting that officials were breaking the spirit of open records when they said they were conducting searches for records.
>
> "State's failure to ensure that Secretary Clinton's governmental emails were retained and preserved by the agency, and its failure timely to seek out and search those emails in response to AP's requests, indicate at the

> very least that State has not engaged in the diligent, good-faith search that FOIA requires," the news organization said in its lawsuit, filed in federal district court in Washington, D.C.

The second way that Hillary Clinton could go to prison is described at Fox News:

> A former Justice Department lawyer says Hillary Clinton, despite her claims that she broke no rules or laws, may have committed a violation in leaving the State Department without turning over all official emails and records.
>
> Shannen Coffin, a senior lawyer under the George W. Bush administration, pointed to a "separation" form that he said officials are supposed to sign upon leaving the department.
>
> His argument: If she signed the form, she probably gave a false statement and broke the law; if she didn't, she ran afoul of department policy.
>
> The form — OF109 — certifies that the person who signs it has turned over all "classified or administratively controlled" materials, as well as all "unclassified documents and papers" relating to official government business.
>
> It's unclear whether Clinton indeed signed that document. But Coffin told Fox News, "If that's the case, there's no question [she broke the law]."
>
> "Making a false statement in this context, knowingly and willfully — which I can't imagine anything more knowing and willful than knowing you have 55,000 records sitting in your home — if you do that, it is a felony," he told Fox News' "The Kelly File."
>
> The form cites "criminal penalties" for knowingly falsifying or concealing information.
>
> "Every employee at the State Department has to sign this little piece of paper when they leave," Coffin said. And if Clinton did not sign that document, he added, "why not?"

Here's the video:

National Review reports that the State Department spokeswoman declined to produce the form:

> State Department spokeswoman Jen Psaki couldn't tell reporters on Thursday if Hillary Clinton signed an official records form presented to all employees as they leave the department — a crucial question in determining whether the former Secretary of State committed a felony by failing to turn over government e-mail records.
>
> […]"A former DOJ attorney has asked if, under department policy, Secretary Clinton — like all officials here in this building, when they depart or separate from this office, has to sign something called a form OF-109," a reporter asked Psaki on Thursday. "It's a separation statement declaring that when you leave office, you turn over not just classified materials, but any documents for official purposes. Did she sign –"
>
> "I think this has been asked," Psaki interrupted. "It was more than two years ago. I don't have an update on that specific question at this point."

Here's the video:

Select Committee chair Trey Gowdy is continuing his Benghazi investigation, and the chair of the National Security Subcommittee of the Committee on Oversight and Government Reform Ron DeSantis is thinking of starting his own investigation of Hillary.

He said this on the Hugh Hewitt show:

> HH: I want the audience to know Congressman DeSantis is a Harvard Law grad as well as a veteran of the

> Armed Services, and knows of which he speaks when it comes to national security. And I believe you were on the National Security Subcommittee of Government Oversight, are you not?
>
> RD: I'm the chairman, Hugh, so this is right up our alley. And we're definitely going to pursue the security aspect of this, because, and I think it's been written up pretty well in some of the blogs, the State Department has been hacked before. And they have a lot of resources that they put into to maintaining the integrity of that system. If she used Google or Microsoft or one of those, they put in some resources, too. She set up her own system, and so the question is did she invest any of her personal resources to make sure that this had integrity and was not susceptible to being hacked? And those are answers that we're going to find out.
>
> HH: How are you going to go about pursuing that, Congressman DeSantis, because I know Trey Gowdy's got the Select Committee. But their scope begins really with our invasion of Libya, or our intervention in Libya. And the scope of her breaking of official norms begins the day she enters into office if not before with this private email server.
>
> RD: No doubt about it, and I think we're going to defer for the Libya stuff to Chairman Gowdy. He's been working on that. **But I'm going to urge our chairman, Jason Chaffetz, to use the full committee and as well as my subcommittee to look at all of what she did for her four year period, because we need to know whether there was any type of compromise of sensitive military. You see, in the military, if you send something over unclassified channels that is classified, it does not matter whether somebody actually intercepted. You assume that there's been a security breach, and you change your affairs accordingly. And I find it hard to believe that she would have had four years as Secretary of State and not discussed sensitive matters over that email. And I think the American people deserve answers to those questions.**

Defense analyst Frank Gaffney says that there is no way that Hillary's claim that she never sent or received classified information is true. So we have to wait for those investigations to find them, then we can hold her accountable.

# Can atheists be moral? Sean McDowell and James Corbett debate

**Wintery Knight** · 13 March 2015 · Archived copy · Original

I got the audio for this debate from Apologetics 315, linked below.

Here is the MP3 file.

Sean's case is similar to the one I make, but he only has 3 minimal requirements for morality.

First, he explains the difference between objective and subjective truth claims, and points out that statements of a moral nature are meaningless unless morality is objective. Then he states 3 things that are needed in order to ground objective morality.

1. an objective moral standard
2. free will
3. objective moral value of humans

The question of the foundations of morality is without a doubt the easiest issue for beginning apologists to discuss with their neighbor. If you're new, then you need to *at least* listen to his opening speech. He's an excellent speaker, and his rebuttals are very, very smooth. The citations of atheist philosophers like Walter Sinnott-Armstrong, e.g. – to show that "religious" wars had *nothing* to do with religion, really hurt his opponent. He seems to cite prominent atheists like Thomas Nagel, Richard Taylor, Michael Shermer, etc., constantly in order to get support for his assertions. That took preparation. McDowell was very calm in this debate. It's very hard to stay calm when someone is disagreeing with you in front of a crowd, but McDowell did a great job at that. He also seemed to be really prepared, because his rebuttals were crisp and concise.

For those of you who want to understand how these things work, listen to the debate. There is a period of cross-examination if you like that sort of thing. I do!

# Pastor hires two prostitutes and takes them to a hotel room – what happens next?

**Wintery Knight** · 14 March 2015 · Archived copy · Original

*This post has some mature subject matter. Reader discretion is advised.*

This story is from Christian Today.

Here's the setup:

> Last weekend I hired some prostitutes for the first time in my life – two young ladies for the whole night.
>
> Because I'm a preacher and didn't want people to know what I was doing, I asked a trusted friend, Cossette, to hire these women and bring them to a hotel where I would join them. I also didn't want an absurdly inflated price because of being white, so she could hopefully negotiate ahead of time a more reasonable fee. Neither of us really knew how these things worked, and we were both a little nervous. What on earth is the going rate? Would anyone spot us?
>
> If I were exposed, caught with them, then my whole credibility and reputation would be destroyed in this country where I've invested 16 years…
>
> Cossette and I had our plan lined up. She met them in Bwiza, a few miles away, and brought them over by taxi to our part of town, Kinindo – as far as I know, prostitutes don't operate in our more respectable suburb. She called me when they had arrived and checked in at the hotel nearby, and after reading bedtime stories and putting my kids to bed I went down to meet them.

> I joined them at the table in the restaurant. They were fashionably dressed and wore lots of make-up. One was on the skinny side, the other more chunky, both pretty. They were definitely nervous but were trying hard to look relaxed. Divine and Arlette, 21 and 22 years old respectively.
>
> Their mechanical smiles broke my heart. I sat down and introduced myself. I told them how I wanted them to have the night off. They could order whatever they wanted, enjoy a hot shower, and then have a night of deep rest. The only rule was not to solicit any of the hotel guests. I would be back in the morning to pay them, and after breakfast together, they could go.
>
> I lay in bed that night next to my wife and couldn't stop thinking about Divine and Arlette, and of the thousands of women within a few miles of us who right at that moment would be enduring some random customer having sex with them. I hate the sex trade with a passion, in no small part because I have a mother, a sister, a wife, a daughter, and each one of them would probably have ended up doing the same thing had they been dealt the same hand in life as Divine and Arlette, and countless others.
>
> Morning came and we met over breakfast. I'd kept the previous night's conversation short because they would obviously have found it totally weird and been full of distrust. But at least now their guards were somewhat down. I didn't want to probe too much, and told them they didn't have to answer any of my questions if they didn't want to. I said I thought that as little girls they didn't dream that one day they'd grow up to be prostitutes. Sometimes terrible things happen in life, and you're forced into difficult choices. But maybe things could change – if they wanted to.

Read the whole thing, because my comments have spoilers!

This part deserves a comment:

> I asked them what their dreams were. They said they wanted to run a small business, or maybe go into

> marketing. I told them we had prayed that God would lead Cossette to the right ladies to help. Of the thousands of prostitutes out there, she'd come across the two of them. Maybe it was a coincidence, or maybe God was in it. I imagined out loud how, if they made good choices from now on, that in ten years – who knows – they could be running a healthy business at the market, happily married with a few kids. Divine's eyes lit up at the thought. Dared she believe…?

I think it's an excellent idea to listen to the stories of people who have made mistakes in their lives, to see if they are at the point where they are willing to listen to an alternative and talk about it. I actually worry that he could get into trouble, but I think he did this in a very careful way, with witnesses. Another part I liked is that he sat down and made a financial plan with them to figure out how they were going to move forward.

I think this BBC story is a useful foil. It talks about rape in India, where poor women are devalued.

It says:

> One of the men I interviewed, Gaurav, had raped a five-year-old girl. I spent three hours filming his interview as he recounted in explicit detail how he had muffled her screams with his big hand.
>
> He was sitting throughout the interview and had a half-smile playing on his lips throughout – his nervousness in the presence of a camera, perhaps. At one point I asked him to tell me how tall she was. He stood up, and with his eerie half-smile indicated a height around his knees.
>
> When I asked him how he could cross the line from imagining what he wanted to do, to actually doing it – given her height, her eyes, her screams – he looked at me as though I was crazy for even asking the question and said: "She was beggar girl. Her life was of no value."

No Christian could ever say those things or act like that. Christianity teaches that everyone was made to know God and has value because they are made in God's image, and for that special purpose. No one is too unimportant to achieve that purpose – everyone has equal value with respect to that purpose. Christians take seriously the obligation not to act towards another person in any way that would dissuade them from that intended relationship with God.

# Book review of Frank Turek's "Stealing from God"

**Wintery Knight** · 14 March 2015 · Archived copy · Original

This book review was posted at Apologetics 315.

It says:

> From the very onset of the book, it is clear that Turek has the so-called "new atheists" in his crosshairs and his main contention is that "atheists are using aspects of reality to argue against God that wouldn't exist if atheism were true. In other words, when atheists give arguments for their atheistic worldview, they are stealing from a theistic worldview to make their case. In effect, they are stealing from God in order to argue against Him." [p. xviii]
>
> […]The author explains that since stealing is a crime, and atheists are stealing from God to make their case, the book will use CRIMES [1] as an acrostic to demonstrate the intellectual crimes atheists are committing. Each letter in CRIMES is representative of "one or more aspects of reality that wouldn't exist if atheism were true." [xviii]
> They are:
> C = Causality
> R = Reason
> I = Information and Intentionality
> M= Morality
> E = Evil
> S = Science

Now look here. I am not one of these weird presuppositionalists who tries to "argue" for God by assuming he's exists already. I do like to use evidence, so I can convince people who don't already believe in God. But if an atheist tries to argue back and is basing his arguments on assumptions that are grounded by theism and not by atheism, then I am ready to point that out.

Here is one case:

> In Chapter 4, this reviewer was interested to see how the author would handle the issue of morality. After all, arguments such as the cosmological argument and the argument from information are based upon scientific evidence and philosophical argument, but the moral argument gets personal!
>
> Turek begins the chapter by contending that objective moral values indeed exist and that God is necessary to ground them. He then continues by taking Sam Harris and his book The Moral Landscape to task and points out Harris' key mistake in assessing the objective morality:

> Why does a moral law exist at all, and why does it have authority over us…The Moral Landscape give us no answer. It's a nearly three-hundred-page long example of the most common mistake made by those who think objective morality can exist without God. Harris seems to think that because we can know objective morality (epistemology), that explains why objective morality exists in the first place (ontology). [p. 100]

> The author continues by arguing that evolution cannot explain morality, dealing with the infamous "Euthyphro dilemma," and contending that for atheists to offer a moral objection against God, they need God to do it.

There can be no statements about the supposed "immorality" of God without assuming a standard of objective morality by which you judge God. But then, the very standard you use to judge God could not exist unless God was

there to make a standard of right and wrong that was independent of human opinions.

There was a good recent CRI article dealing with atheist attempts to ground morality, where the evolutionary accounts are evaluated.

Here's a bit:

> Paul Copan argues that evolutionary naturalism can *describe* how people behave, but it cannot*prescribe* how people *should* behave.[15] In order to say that an action is good or evil, one needs an objective and universal moral standard that transcends individual people and individual societies. It must also be personal in nature. Moral standards deal with right and wrong, what*should* and *should not* be done. That implies a choice that requires personality and consciousness. A transcendent moral standard would therefore need to be grounded in a conscious, personal, and transcendent reality. Christians find this in God—the only place where such a standard can be found.[16]
>
> If God does not exist, then as Francis Schaeffer explains, ethics merely explain what *is* rather than what *should be*. There is then no objective difference between kindness and cruelty because there is no standard.[17] The very terms "kind" and "cruel" would be meaningless. As Norman Geisler and Frank Turek argue, atheists rule out a transcendent Lawgiver in advance:18 This creates a problem: "While they may *believe* in an objective right and wrong, they have no way to *justify* such a belief (unless they admit a Moral Law Giver, at which point they cease to be atheists)" (emphasis in original).[19]

As soon as an atheist says that there is a way that things ought to be *objectively* rather than just their personal opinion, they have used God to disprove God.

# Report: In 2008, then-Senator Obama sent emissary to Iran to undermine Bush

**Wintery Knight** · 15 March 2015 · Archived copy · Original

A group of 47 senators sent an open-letter to the leaders of Iran reminding them that treaties that are negotiated by the President have to be approved by Congress. This is in fact how the Constitution works.

The Democrats are furious that anyone is questioning their self-confessed "bad deal" with Iran.

Breitbart News explains:

> President Obama set his Vice Presidential attack dog on the forty-seven GOP senators who dared send their March 9th letter to Iran's leadership warning them any deal signed with Team Obama may be short-lived when a new president comes to office.
>
> But Biden, like his boss, fails to do his homework before making outlandish statements or else chooses conveniently to overlook the facts.
>
> Livid over the GOP letter, Biden proclaimed: "In thirty-six years in the United States Senate, I cannot recall another instance in which Senators wrote directly to advise another country."
>
> Directing his venom at the Senate's Republican majority, Biden claimed the GOP letter was "expressly designed to undercut a sitting President in the midst of sensitive international negotiations…(an act) beneath the dignity of an institution I revere."

Well, how about it? Has any other senator undermined diplomatic efforts by a President?

Well, yes – Obama himself, when he was a senator:

> According to Pajamas Media columnist Michael Ledeen, in 2008, a Democratic senator sent a personal emissary to Tehran encouraging the mullahs not to sign an agreement with the outgoing Bush Administration as negotiations would take on a much friendlier tone following President Bush's departure from office.
>
> That senator was a presidential candidate at the time. His name was Barack Obama.

The plain truth is that Obama wants a nuclear Iran. That's what this deal is about – undermining U.N. sanctions against Iran, and removing U.S. sanctions against Iran.

The leftist Washington Post explains:

> We surmised yesterday that the Obama administration had the idea to go to the United Nations to pass by resolution what Congress would never agree to: a lifting of sanctions on Iran in exchange for a nearly worthless deal in which Iran would keep thousands of centrifuges and get a 10-year glide path to nuclear breakout.
>
> […]For quite some time, former U.N. spokesman Richard Grenell has been warning that this is exactly what is coming down the pike. Last year Grenell wrote: "President Obama's Geneva proposal to the permanent members of the United Nations Security Council allowing Iran to enrich some uranium violates previous UN resolutions demanding the Islamic Republic stop 'all' uranium enrichment activity. To avoid a violation of current UN resolutions, the permanent members must ask the entire Security Council to vote to weaken and supersede their previous demands." He continued, "The UN's four rounds of hard-fought sanctions on Iran and several other resolutions demanding compliance call for a full suspension of all enrichment activities, including research and development, then full verification of that suspension before negotiations on a permanent diplomatic solution begin. The sequencing was strategic. It was designed to build international confidence in a secretive country's deceitful past." But Obama deliberately departed from these restrictions, so he has always

> planned to go back. Otherwise, his deal would be *in violation* of existing international law.
>
> That brings us to U.S. law. The U.N. resolutions don't automatically become law, the administration was forced to concede. But under *current*U.S. sanctions law, the president can waive them. And that is just what Obama intends to do. He will get the U.N. to water down international sanctions while he suspends U.S. sanctions.
>
> Obama's legacy becomes demolition of the sanctions regime and an opening for Iran to either make a dash for breakout or to wait 10 years and get its stamped permission slip. The word for this is "containment." The next president can reverse the waiver, but the Iranian economy will be on the road to recovery and the next president's options will be severely limited. Iran might even have a bomb by then.

So Obama is trying to undo U.N. sanctions against Iran, drop U.S. sanctions against Iran – for what? What is the purpose of helping Iran to develop nuclear weapons? Why would anyone interested in world peace want to do that?

# Navy chaplain removed from unit for teaching Biblical views on sex and marriage

**Wintery Knight** · 15 March 2015 · Archived copy · Original

This is from the Daily Signal.

Excerpt:

> A former Marine and current Navy chaplain has been removed from his unit after sharing the teachings of his faith tradition in private, pastoral settings.
>
> Lt. Cmdr. Wes Modder, a chaplain at the Base Chapel Naval Weapons Station at Joint Base in South Carolina, is an ordained minister with the Assemblies of God.
>
> According to his legal team, a "handful" of individuals complained about his views on issues like atheism, homosexuality and sexual relationships outside of marriage.
>
> According to Military Times, after the complaints, **Modder's commanding officer wrote in a "detachment for cause" letter that states Modder is "unable to function in the diverse and pluralistic environment" of the United States Navy.**

It's such a diverse environment that if you disagree with the secular leftist view of sex and marriage, then you can't say anything. And we are paying taxes to pay for these people to violate the basic human rights of Christian employees. It's not just happening to Christian business owners who refuse to celebrate gay marriage, now. It's just regular Christians workers, too.

More:

> His commanding officer has requested that Modder be removed from the promotion list (despite his ranking as "Early Promote," the highest rating), separated from his unit, and brought before a Board of Inquiry.
>
> The same commanding officer previously wrote in Modder's fitness report in October of 2014 that Modder was the "best of the best" and recommended him for promotion.
>
> The board could force Modder, who previously served as a Marine in Operations Desert Shield and Desert Storm, out of the Navy. His case is currently under review.

I thought this was useful to see what pressures authentic Christians face as they try to earn the money they ned to provide for their families in an increasingly secular environment:

> Mike Berry, the senior counsel and director of military affairs at the Liberty Institute, is handing Modder's case.
>
> […]"He's in a catch-22 between his faith and his career," said Berry.
>
> Berry said that Modder offered everyone who sought his guidance a "disclaimer" that he was speaking to them as an ordained Christian minister, stressing that Modder offered "spiritual advice" and "Biblical truth" according to his faith tradition in "private" sessions, not merely "unsolicited opinions."
>
> But after the complaints of a "handful" of individuals, Modder's future in the Navy is in jeopardy.
>
> […]Modder is also approaching his 20-year anniversary of military service. If his case is not resolved by Sept. 1, his pension and retirement benefits could also be in jeopardy.

Seems like he was very careful, but that did not protect him from the complaints of a handful of individuals who wanted to get rid of him for disagreeing with them. And of course Modder's commanding officer has to deal harshly

with him, or he will not be promoted. This is the new secular Inquisition.

Now, try to think with me about how many people are teaching their views on sex and marriage, and using taxpayer dollars to do it. Public school teachers, Planned Parenthood… Heck, in Ontario, Canada, the Liberty Party's sex education curriculum was developed by a convicted child pornographer. And yet Christian chaplains are the ones who have to face discrimination for stating their views.

# Scott Walker and Jeb Bush meet GOP voters in New Hampshire

**Wintery Knight** · 16 March 2015 · Archived copy · Original

Wisconsin Governor Scott Walker

This is from left-leaning ABC News.

Excerpt:

> Jeb Bush and Wisconsin Gov. Scott Walker are two possible presidential candidates who were in New Hampshire this weekend for the same reason: to introduce themselves to voters. Though there were some similarities in the schedules of the two would-be front-runners, the men received starkly different reactions.
>
> The former Florida governor faced the challenge of not only using his family name to his advantage but adapting his issues on hot-button topics like the Common Core and immigration to appeal to the Granite State's conservative voters. The Wisconsin governor simply had to tell his personal story to motivate his audience.
>
> The enthusiasm that Walker earned at his address to the 2016 Kickoff Grassroots Training Session hosted by the New Hampshire GOP Saturday was missing at the house party held for Bush Friday night. At the house party, the crowd of roughly 100 invited guests and upward of 60 media attendees packed the home of Fergus Cullen, the state's former GOP chairman, forcing everyone to stand throughout because there was simply no room to sit down.
>
> On Saturday, the high school auditorium filled with volunteer activists for Walker's speech all had a seat but chose to get on their feet multiple times throughout his nearly 45-minute speech.
>
> Another show of support at Walker's event that was lacking at Bush's was a smattering of "hallelujah" affirmations throughout his talk.
>
> "I think he's a man of great courage," Denis Cronin told ABC News after Walker's speech. "I thought he was great. Very articulate."
>
> Walker generated more passion – on both sides – because of his fight against unions in Wisconsin. There were several dozen union workers protesting outside the high school where Walker held his event Saturday, though they dispersed when it started lightly snowing an hour before the governor arrived.
>
> There were no such protests at either public Bush function, only interest in seeing the next member of the political family try to win over Granite State voters.
>
> "He's somebody you have to see and listen to him, but I don't agree with a lot of his immigration stuff," said Ken Hawkins, a former state representative who spoke to ABC News before Walker's speech at the New

> Hampshire GOP event.
>
> "I think that people are tired of Bushes just like they're tired of Clinton's just like they were tired of Kennedy's," Hawkins said.
>
> The son and brother of former presidents is going to have a tougher time portraying himself as an "everyman" than the son of a preacher who flipped burgers growing up and whose sons went to public school. Walker talked about his love of Kohl's cash, boasting that he bought the sweater he was wearing for $1 Friday, while Bush talked about a conversation he had with the founder of Uber and how new self-serve soda machines at his movie theater in South Coral Gables, Florida, will lead to fewer low-income jobs.
>
> **When it comes to policy, Bush has the hurdle of reaffirming himself as a conservative in spite of his support for immigration overhaul and Common Core education standards.**

"Immigration overhaul" is ABC News language meaning amnesty.

More:

> In tackling those particular issues, he won the support of moderate Republicans or self-proclaimed independents — like Brian Lenzi, who attended the party at Cullen's house and thought Bush "presented himself very well" – but will lose conservatives at the same time.
>
> "I think based on what I am hearing, he's trying to appeal to the center and that's not what I'm looking for," fellow Cullen party attendee Fenton Groen told ABC News.

A new poll of GOP voters finds Rubio in first place, Walker second. But Rubio has much higher negatives than Walker – probably because Rubio supported an amnesty deal.

The Washington Times explains:

> Potential Republican primary voters appear most open to supporting Sen. Marco Rubio of Florida and Wisconsin Gov. Scott Walker for president in a new poll that shows overall voters are clamoring for "change" even more than they were in 2008.
>
> **Fifty-six percent of Republicans said they could see themselves supporting Mr. Rubio, and 53 percent said the same for Mr. Walker, according to the NBC News/Wall Street Journal poll. Twenty-six percent said they could not see themselves supporting Mr. Rubio, and 17 percent said the same of Mr. Walker.**
>
> Fifty-two percent said they could see themselves supporting former Arkansas Gov. Mike Huckabee, but four in 10 say they could not see themselves supporting him.
>
> Forty-nine percent said they could see supporting former Florida Gov. Jeb Bush and Sen. Rand Paul of Kentucky, with 42 percent saying they could not see themselves supporting Mr. Bush and 40 percent saying the same of Mr. Paul.

I think right now it's pretty clear that Walker is the most electable conservative candidate although I am hoping to see more from Bobby Jindal and Ted Cruz in the future.

# Muslim student wants to censor showing of “American Sniper” on campus

**Wintery Knight** · 16 March 2015 · Archived copy · Original

Muslim student Farah El-Jayyousi

This is from The College Fix.

It says:

> [A] Muslim student activist who declared showing the film on campus would make her feel “unsafe” and demanded an “apology and explanation” as to how and why the movie was even selected for Mizzou audiences.
>
> The uproar was taken quite seriously, and prompted the student government to conduct a meeting to determine whether the flick should be shown.
>
> “This film is blatant racist, colonialist propaganda that should not be shown under any circumstances and especially not endorsed by a branch of student government that purports to represent me and have my best interests in mind,” student Farah El-Jayyousi had stated.
>
> She made the comments in a letter to the editor to the campus newspaper earlier this month, denouncing the decision to show the blockbuster – the highest grossing film of 2014. El-Jayyousi accused the movie of dehumanizing Muslims and glorifying the murder of Iraqis, and referred to Chris Kyle, the Navy SEAL featured in the film, as “a killer with no regard for human life.”

What do you think she is studying to have such blindness to the violence and anti-woman discrimination in the Middle East? She is double-majoring in psychology and women’s and gender studies. Of course!

Let’s just see what sort of violence happens in the Middle East.

This is from the leftist BBC about the conflict in Syria:

> Some 6,000 women have been raped since the start of the conflict in March 2011, the Euro Mediterranean Human Rights Network (EMHRN) says.
>
> A spokeswoman for the group said these women were then socially stigmatised, and often forced to flee their homes.
>
> Women are being targeted by snipers and used as human shields, often with their children, the report also says.

> Violence against Women, a Bleeding Wound in the Syrian Conflict is based on interviews with victims and medical staff in the first half of 2013.
>
> The report describes how hundreds of Syrian women have been subjected to arbitrary arrests and enforced disappearances and have undergone various forms of torture, in state detention facilities.
>
> […]The report also says the kidnapping of women has also become a strategy of exchanging prisoners and exacting revenge, and that the nature of the crimes – rape and gang-rape – leaves many women isolated.

That's not a concern to our Muslim student. She is more concerned about soldiers who go to the Middle East to try to liberate women from the rule of regimes that genitally mutilate them, honor-murder them, keep them illiterate, stone them, rape them, imprison them and "marry" them when they are still children. And so on. That's what she is learning to parrot at an American university. And of course she learns that sex-selection abortions are the height of women's rights, too.

Imagine if a Christian student went to a Muslim university (is there one that accepts women in Afghanistan? Oh right, there isn't) and wrote a similar article, but against the practice of genital mutilation in Mali, for example. What would happen to her, do you think? Exactly. But that's not a concern to our intrepid Muslim student. It must take some powerful self-deluding to be this self-contradictory, but that's why we have non-STEM departments in universities, isn't it?

# Famous gay fashion designers express opposition to gay marriage

**Wintery Knight** · 16 March 2015 · Archived copy · Original

This is reported by Breitbart News.

Excerpt:

> Domenico Dolce and Stefano Gabbana, founders of the eponymous fashion house, have come out strongly against gay marriage, the notion of gay families, and the use of surrogacy to procreate.
> The billionaire pair, who used to be romantically linked, gave an interview with the Italian magazine Panorama, in which they said, "The only family is the traditional one. No chemical offspring and rented uterus. Life has a natural flow; there are things that cannot be changed."
>
> They also said, "Procreation must be an act of love."
>
> "I call children of chemistry, synthetic children. Uteri for rent, semen chosen from a catalogue," Dolce stated.
>
> Gabanna said, "The family is not a fad. In it there is a supernatural sense of belonging."
>
> The pair have long been outspoken about gay marriage. In 2013, when the LondonTelegraph asked them if they had ever considered getting married, they answered, "What? Never!" Dolce said, "I'm a practicing Catholic."
>
> Gabbana told the Daily Mail in 2006, "I am opposed to the idea of a child growing up with two gay parents."
>
> LGBTNews in Italy is already calling for a boycott of Dolce and Gabbana.
>
> It is not unusual for gay men in Europe to oppose gay marriage. In fact, a group of gay men in France, calling themselves Les Hommen, have been an ongoing feature of traditional marriage protests in France. Les Hommen invaded the French Open, stripped to the waist, with pro-marriage slogans written on their chests. Gay Star News suggested it was "the most homoerotic anti-gay protest ever."

First Things has a quick review of their success story:

> Domenico and Stefano were for years perhaps the globe's most prominent gay power couple. In the tightly knit, family-based, quasi-aristocratic world of Italian fashion, these two men came from nowhere to make a name for themselves that the whole world would recognize. In a 2005 New Yorker article, John Seabrook marveled at their success:
>
> Unlike the Guccis, Pradas, Puccis, Zegnas, Ferragamos, and Fendis, Dolce and Gabbana do not come from families with long pedigrees in the production and sale of luxury goods. . . . They began as outsiders, with their noses pressed to the windows of the fashion world. Their business and their distinctive style are based not so much on family history and artisanal traditions as on their relationship with each other. And the only reason that Dolce and Gabbana are creative and business partners at all is that they were romantic partners first.
>
> The two men have long approached political orthodoxies with the same brashness and iconoclasm that guide their fashion sensibility. In 2006, Gabbana told the Daily Mail, "I am opposed to the idea of a child growing up with two gay parents." Such statements have yet to affect Dolce & Gabbana's business, but as gay rights make gains there is likely to be less freedom to speak for those who oppose them—even if those speaking are gay men.
>
> Already the new interview has prompted opposition, with the website LGBT News Italia calling for a boycott like the one launched against Barilla pasta after its chairman made similar comments. I tend to loathe the sub-democratic habit of expressing political preferences through consumer choices, but it would be hard to object to the victory won for elegance if conservatives were to start wearing D&G in solidarity with these two brilliant, independent-minded Italians.

I just want to say that I have absolutely no problem with these two guys. I think they should be allowed to believe what they want, act how they want, speak how they want and even have private commitment ceremonies if they want. All I want from them is that I be allowed to say the same things that they say in public, and not face the wrath of the secular leftist state and their powerful LGBT allies. I would like to also have the freedom to not celebrate or endorse anything that gay people do in word or deed.

I hope that a lot of gay people like these two guys will speak out for freedom like this, and in favor of natural marriage and family. I don't expect any gay people to endorse my sexual orientation, which is premarital chastity and postmarital exclusive fidelity. But I do expect them to *tolerate* me, just like these two guys seem to be able to do. I could probably be friends with these two guys, except that I don't care about fashion. But on gay marriage, these two guys really get it, and they get it better than most Christians and conservatives. Is it that hard to make a simple defense of natural marriage? I think not.

# Did Eric Holder's hate speech incite violence against Ferguson cops?

**Wintery Knight** · 17 March 2015 · Archived copy · Original

The Lt. Governor of Missouri says that attorney general Eric Holder incited the Ferguson mobs "many times".

Breitbart News reports:

> Sunday on Fox News Channel's "America's News HQ," Lt. Governor Peter Kinder (R-MO) said Attorney General Eric Holder "on many occasions" seemed to "be inciting the mob."
>
> Kinder said, "He is sounding the right notes today, this afternoon. I just wish he had been more judicious and measured in his comments since the August 9. Because Mr. Holder came in and seemed on many occasions to be inciting the mob. He seemed to be putting his weight on the one side of the scales of justice and not backing up law enforcement. And if he is now, you know, backing up law enforcement mode, then I will be among those cheering him. And I hope that's the way he is from now on."
>
> When asked if he had spoken to Mr. Holder directly, Kinder said, "No, no, no, he doesn't bend to speak with people like me. He comes into town and meets with one side. He met with the family of Michael Brown, and that's fine that he met with them. But, he did not meet with the family of officer Darren Wilson or with his brother and sister officers to say I'm backing you up. "

Let's review what Eric Holder's boss Obama did in the wake of the Ferguson shooting.

Frontpage magazine recalls the violence from the protests:

> Despite Obama's superficial condemnations of violence, at least 25 businesses were set ablaze, many of which are total losses—and most of which were minority owned. Ten cars were burned at a dealership, and a "lot of gunfire," as Ferguson Asst. Fire Chief Steve Fair put it, made maintaining control of the streets highly problematic, if not impossible. Reporters were assaulted, the store Michael Brown robbed prior to his confrontation with Wilson was looted, and at least 61 people have been arrested. "What I've seen tonight is probably much worse than the worst night we ever had in August, and that's truly unfortunate," said St. Louis County Police Chief Jon Belmar Monday at a 1:30 a.m press conference. Belmar further noted that there was "nothing left" along West Florissant between Solway Avenue and Chambers Road, that he heard at least 150 gun shots, and that he was surprised he and Missouri Highway Patrol Captain Ron Johnson, who "got lit up," as they drove through the area, weren't hit by that gunfire.
>
> "We talked about peaceful protest, and that did not happen tonight," Johnson said. "We definitely have done something here that's going to impact our community for a long time…that's not how we create change."

Now Obama met with Al Sharpton and the other protest leaders in the White House before these protests, before the police officers were whot last week. So either he is incapable of leading or he actually wanted the violence, vandalism and shooting that followed.

And keep in mind that the DOJ's own report on the shooting found the police officer *completely innocent*, as did the grand jury report before the DOJ report. So there was no reason for all these violent protests and now shootings of police officers – except that it caused Democrat constituencies to believe that they need to vote Democrat to save them from a "threat" that turns out not to exist. The real threat to black citizens is, of course, black-on-black crime. And the real solution to that threat is to reduce government payments to women who have children before they marry, while raising them for married couples who have children. In any case, low-information Democrat voters probably do not even know about the DOJ findings, and that's why the shootings continue. The mainstream news media is almost entirely composed of Democrats, and they have no interest in telling the truth about the DOJ

report.

Race relations have plummeted in this country since Obama was elected and chose Eric Holder as his attorney general, and what do you expect? They are a couple of race hustlers. These are not problem solvers, they are problem creators.

# Don’t let unmet needs block you from honoring your obligations to God

**Wintery Knight** · 17 March 2015 · Archived copy · Original

Theology that hits the spot

I’m still reading the devotional book (Paul Tripp’s “New Morning Mercies”) that Dina asked me to read. I will be reading it all year. I find that about one devotion a week is useful, the rest are fluff. However, because she is willing to keep asking me how I am doing with it, and also listen to me complain and criticize, I am keeping up with it.

I wanted to blog about the March 17th devotion.

Here it is:

> If you put too many things in your need category, you will end up frustrated with life, hurt by others, and doubting God’s goodness.
>
> It really is one of the sloppiest words used in human culture. If need means “essential for life,” then the vast majority of the things we say that we need we don’t actually need. You know this if you have children or are around children. Let’s say you’re a parent and you have taken your child to the mall (which is your first mistake). As you’re walking through the mall, your child sees the sneaker store and immediately makes a left-hand turn. Now, with nose pressed against the window of the store, he says, “Mom, I neeeeeeed those sneakers.” You look down at his feet, which are encased in perfectly good shoes, and you say: “No, I’m not getting you those sneakers. You already have perfectly good shoes.” Now, when you say this, your child does not think: “What a wise mother I have been blessed with. She has seen through my distorted sense of need, has recognized selfish desire, and has lovingly rescued me from me.” No, your child lashes out against you: “You always say ‘no’ to me. I don’t know why I have to have the one mom who hates sneakers.” Then your child refuses to relate to you for the rest of the time that you are in the mall.
>
> When you tell yourself that something is a need, three things folio’ First, you feel entitled to the thing, because, after all, it is a need. Second, because it is a need, you feel it’s your right to demand it. And third, you then judge the love of another person by his or her willingness to deliver the thing. This not only happens in our relationships with one another, but more important, it happens in our relationship with God. When you name something as a need and God doesn’t deliver it, you begin to doubt his goodness. What is deadly about this is that you simply don’t run for help to someone whose character you’ve come to doubt.
>
> In Matthew 6:32, Jesus reminds us that we have a heavenly Father who knows exactly what we need. There is comfort and confrontation in Jesus’s words. The confrontation is this: the reason Jesus reminds us that we have

> a Father who has a clear understanding of our true needs is because we don't have such an understanding. We constantly get needs and wants confused, and when we do, we are tempted to question the love of our heavenly Father. The comfort is that, by grace, we have been made to be the children of the wisest, most loving Father that the universe has ever known. He is never, ever confused. He knows our every need because he created us. We can rest in the grace that has made us his children, knowing that our place in his family guarantees that we will have what we need.
>
> For further study and encouragement: Psalm 145

I'm posting this because it applies to me. I have a need for recognition and acknowledgement from Christian women, and for a very long time in my life, I had to do without it, despite making what I considered to be all the right moves. I don't think anyone would say that I was not a successful person, and not a successful man. But I think something has changed in the culture that makes it harder to get appropriate recognition from women, even if you do all the right things. So I had to face this problem of having an unmet need for most of my life, until I started blogging and met tons and tons of women who recognized and acknowledged me. (My love language is words of encouragement)

I think the best thing I can say about this is that it hasn't affected my willingness to serve God. I remember having a conversation with an atheist woman who expected God to meet all her needs. She expected him to appear to her and explain why she had certain bad experiences. And of course he didn't appear, because it's a suffering religion. The founder of the religion did everything right, and he still suffered. You can do everything right as a Christian, and still suffer. When you are suffering really badly from unmet needs, the best you can do is decide to keep faith with God and not let your unmet needs cause you to dump him.

So I guess my advice to all of you is to say that I am right with you having an unmet need. But if I can keep doing my job for God, then you can do it, too. You can have needs. You can ask for them to be met. You can talk to God about it. But it still may not be forthcoming. And then you have a decision to make. Make the decision I made, and resolve to keep serving regardless of whether your needs get met.

# William Lane Craig debates Lawrence Krauss in Melbourne, Australia: Does God Exist?

**Wintery Knight** · 17 March 2015 · Archived copy · Original

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

**Summary**

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

**Dr. Craig's opening speech.** (4:50)

1. The kalam cosmological argument:
    - God is the best explanation of the origin of the universe
    - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
    - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning
    - Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
    - Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
    - Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
    - A mind is the best explanation for the origin of the universe
2. The unreasonable effectiveness of mathematics:
    - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
    - Mathematical objects can either be abstract objects or useful fiction
    - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
    - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
    - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
    - These constants and quantities have to be set within a narrow range in order to permit intelligent life
    - There are three explanations for this observation: law, chance or design
    - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter

- Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
- We do not observe what the world ensemble hypothesis predicts that we should observe
- Design is the best explanation for finely-tuned constants and quantities

4. The existence of objective moral values and duties
   - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
   - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
   - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
   - The best explanation for the existence of objective moral values and duties is that God exists
5. The historicity of the resurrection of Jesus
   - There are three widely-accepted facts that are best explained by the resurrection hypothesis
   - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
   - Naturalistic attempts to explain these 3 boilerplate facts fail
   - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
   - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

**Dr. Krauss' opening speech.** (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I
   - There have been lots of different gods created by people through history
   - We've gotten rid of all of them by understanding how the universe works by doing science
   - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
   - Newtonian physics refutes the idea that angels push planets around
   - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)
   - Biochemistry hasn't explained how life originated, but we will have the solution soon
   - Physics shows us that matter can be created and destroyed without need a God
   - Physics shows us that universes can be created and destroyed "no problem"
3. Religious pluralism II
   - Since we have been able to disprove all the gods we've invented, why hang on to the last one
   - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
   - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
   - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
   - Peasants had a very low level of knowledge about the world and they believed in God
   - But our level of knowledge has increased over time, so we shouldn't believe in God now
   - Peasants thought that the Earth orbited the Sun, but this is now known to be false

- The Scriptures said that the Earth orbited the Sun, but now we know that's false from science

7. Christianity plagiarizes from other religions I
   - There is nothing new or special about Jesus
   - He's just as unpleasant as all the other gods
   - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
   - I'll bet most Catholics don't really believe in transubstantiation
   - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
   - Dionysus, Osiris, etc.
10. There is no evidence for the resurrection
    - The stories about Jesus were written "decades or hundreds of years after the fact"
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That's like saying that all alien abductions experts agree that alien abductions happened
    - It's unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume's argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn't demand that we trust him, esteem him and consider his character when we make decisions
    - The atoning death of Jesus for the sins of the world also makes no sense
14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who "uses the exact same arguments" that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms "is that morally wrong? I can't say it is frankly" (37:24)
16. Dr. Craig is irrational
    - "I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan"
    - "Any argument that validates God is reasonable to him"
    - "And any argument against it is not only unreasonable but wrong and worth distorting"

    - “Because it must be wrong – he’s decided the answer in advance”
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - “So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK”
    - It’s not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn’t work in all cases
    - “Dr. Craig is so convinced that these arguments must be true that he won’t listen to the fact that they’re not”
20. Darwinian evolution explains the fine-tuning
    - “Life was fine tuned – we got rid of it with Darwin”
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - “We get back aches” therefore “This argument that [the universe] is fine-tuned for life is nonsense”
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments
    - Look, you can construct arguments that are clearly wrong
    - Premise 1: “All mammals exhibit homosexual behavior”
    - Premise 2: “William Lane Craig is a mammal”
    - Seems to be saying that logical arguments can prove false things “it’s nonsense”
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig’s faith is so strong that it causes him to distort what this group said

**Discussion:** (44:35)

I will not be summarizing everything that was said, just a few main points.

***The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see.*** Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can’t even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don’t work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don’t have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) “All the evidence suggests that the universe had a beginning but WE DON’T

KNOW!!!!!!!" (raising his voice)

- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you  agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this:  (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

**Audience Q and A:** (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: "I'm going to come to the defense of philosophy for the first time". Craig: "That's amazing!" Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

# Hillary Clinton never signed separation form that required her to turn over all e-mails

**Wintery Knight** · 18 March 2015 · Archived copy · Original

National Review reports:

> **After days of fending off the question, State Department spokeswoman Jen Psaki admitted on Tuesday that the department has no record of former Secretary of State Hillary Clinton signing a separation form that could open her up to perjury charges.**
>
> **Form OF-109 is a document required to be signed by all State Department employees as they exit the department. In it, the employee claims, under penalty of perjury, that he or she has turned over all relevant communications to the government at the time of his or her departure.**
>
> **By turning over her private e-mails at the end of 2014, two years after leaving office, Clinton violated that agreement — if, in fact, she signed it.**
>
> On Tuesday, the State Department finally indicated that she did not — or at least, they have no records of her doing so. "We have reviewed Secretary Clinton's official personnel file and administrative files, and do not have any record of her signing the OF-109," Psaki said on Tuesday. "It is not clear that this form is used as part of a standard part of check-out across the federal government, or even at the State Department. So we're certainly looking into that."
>
> AP reporter Matt Lee pressed Psaki, asking why the department had previously intimated that the form was "required" and if Clinton's non-signature violated any rules.
>
> "It's not a violation of any rule, no," she said, saying that signing the form may not be a common departure practice and that "there are differences between regulations and, certainly, recommendations."
>
> "The form exists, certainly," Psaki said. "Beyond that, I don't have more statistics on what percentage of State Department employees sign on departure from the building."
>
> "Yes, the form exists, and it exists for a reason," Lee replied. "It doesn't exist simply because someone thought, 'Hey, let's have a form that someone has to sign!' It exists for a reason, and probably a pretty good reason, right?"
>
> "Well, there are probably hundreds of forms in the federal government that exist — thousands, tens of thousands of forms that exist," Psaki said. "So I don't know that I would over-emphasize the existence of a form."

They don't have a record of her signing a required form. Everyone is supposed to sign that form before leaving the State Department. If the signed form were recovered, then she would be guilty of perjury for keeping a private e-mail server and deleting the e-mails. Add the missing e-mails to the millions of dollars of donations to the Clinton Foundation, and you have the makings of a serious, serious scandal.

Your puny laws don't apply to Queen Hillary!

My absolute favorite liberal journalist is Ron Fournier, who writes for the very left-wing National Journal.

He says this is a big deal:

> *National Journal* Senior Political Columnist and Editorial Director Ron Fournier said that Democrats are "scared to death" over the scandals regarding donations to the Clinton Foundation and Hillary Clinton's emails on Monday's "Special Report" on the Fox News Channel.
>
> "Don't buy the spin, they [Democrats] are scared to death. And there's a lot of them who are already starting to think 'is she really the best candidate for us?'…Their bench, compared to the Republican bench is awfully, awfully thin. And there's a lot of Democrats, by the way, who are saying 'follow the money.' A lot of Democrats are really worried about the Foundation, that's what they're really worried about" he stated.
>
> Earlier, Fournier said that the Clinton Foundation's acceptance of Chinese donations is "a big issue. There's a lot of other ways the Chinese government, and the Saudis, and the [Qataris] — there are other ways that they can help the world if that's what they want to do. They're giving their money to the Clinton Foundation for a reason. They want something out of it. So I know, what I really want to see in these e-mails is any e-mail that mentions the Foundation and mentions one of the donors."

Watch:

This should sink Hillary Clinton as a candidate, and it will, so long as the heat stays on.

**White House turns its back on transparency**

You might recall that previously, Barack Obama told us that his administration would be the most transparent ever:

But the White House is now refusing to comply with Freedom of Information Act (FOIA) requests:

> The White House is exempting an office from compliance with the Freedom of Information Act, angering open-government advocates, who accuse President Barack Obama of not living up to his pledge to run the "most transparent administration in history."
>
> The White House said Tuesday that the move to exclude the White House Office of Administration from the federal open-access law reflected a court ruling that predated the Obama administration and wouldn't have any effect on its commitment to open records and its compliance with requests for records.
>
> "This is a matter of just cleaning up the records that are on the books," White House Press Secretary Josh Earnest said. "It has no impact at all on the policy that we had maintained from the beginning to comply with the Freedom of Information Act, when it's appropriate."
>
> The move, announced Tuesday in the Federal Register, came as news organizations marked Sunshine Week to showcase the public's right to know, and it drew sharp criticism from advocates who already give the

> administration poor marks for news-media access.
>
> “This is another example of the White House position avoiding transparency,” said John Wonderlich, policy director of the nonprofit Sunlight Foundation. “Instead of creating more and better access to information, it’s trying to control it.”
>
> “The president has routinely failed to deliver on his promise,” said Sen. John Cornyn, R-Texas, who’s proposed a law that would reduce the use of exemptions to withhold information from the public.

The most transparent administration in history? Not a smidgeon of corruption? Not so much.

# Should blacks vote for Democrats? Do liberal policies help young black men?

**Wintery Knight** · 18 March 2015 · Archived copy · Original

I want to quote from two black economists – my two favorite economists – to answer some questions.

First, Thomas Sowell.

Economist Thomas Sowell
Is minimum wage good for young blacks?

He writes:

> Low-income minorities are often hardest-hit by the unemployment that follows in the wake of minimum wage laws. The last year when the black unemployment rate was lower than the white unemployment rate was 1930, the year before there was a federal minimum wage law.
>
> The following year, the Davis-Bacon Act of 1931 was passed, requiring minimum wages in the construction industry. This was in response to complaints that construction companies with non-union black construction workers were able to underbid construction companies with unionized white workers (whose unions would not admit blacks).
>
> Looking back over my own life, I realize now how lucky I was when I left home in 1948, at the age of 17, to become self-supporting. The unemployment rate for 16- and 17-year-old blacks at that time was under 10%. Inflation had made the minimum wage law, passed 10 years earlier, irrelevant.
>
> But it was only a matter of time before liberal compassion led to repeated increases in the minimum wage to keep up with inflation. The annual unemployment rate for black teenagers has never been less than 20% in the past 50 years, and has ranged as high as over 50%.
>
> You can check these numbers in a table of official government statistics on page 42 of professor Walter Williams' book "Race and Economics."
>
> Incidentally, the black-white gap in unemployment rates for 16-year-olds and 17-year-olds was virtually nonexistent back in 1948. But the black teenage unemployment rate has been more than double that for white teenagers for every year since 1971.

Second, Walter Williams.

Economist Walter Williams
Is voting for black leaders good for blacks?

He writes:

> Black leaders stress the importance of political power and getting out the vote, but we might ask how important political power is to the ordinary black person. As a start toward answering that question, we might examine black life in cities where blacks hold considerable political power.
>
> Detroit is the nation's most dangerous city. Rounding out Forbes magazine's 2013 list of the 10 most dangerous cities are Oakland, Calif.; St. Louis; Memphis, Tenn.; Stockton, Calif.; Birmingham, Ala.; Baltimore; Cleveland; Atlanta; and Milwaukee.
>
> According to a recent American Community Survey by the U.S. Census Bureau, the 10 poorest cities with populations of more than 250,000 are Detroit, with 33% of its residents below the poverty line; Buffalo, N.Y., 30%; Cincinnati, 28%; Cleveland, 27%; Miami, 27%; St. Louis, 27%; El Paso, Texas, 26%; Milwaukee, 26%; Philadelphia, 25%; and Newark, N.J., 24%.
>
> In addition to poverty, there is grossly inferior education and high welfare dependency in these cities.
>
> The most common feature of these cities is that for decades, all of them have had Democratic administrations. Some cities — such as Detroit, Buffalo, Newark and Philadelphia — haven't elected a Republican mayor for more than a half-century.
>
> What's more is that in most of these cities, blacks have been mayors, chiefs of police, school superintendents and principals, and have dominated city councils.
>
> […]Let's be clear about what I am saying and not saying. I am not suggesting that there's a causal relationship between crime, poverty and squalor on the one hand and Democratic and black political power on the other. Nor am I suggesting that blacks ought to vote Republican.
>
> What I am saying is that if one is strategizing on how to improve the lives of ordinary — and particularly the poorest — black people, he wants to leave off his high-priority to-do list the election of Democrats and black politicians. Also to be left off the to-do list is a civil rights agenda.
>
> Perhaps the biggest roadblock to finding solutions is the widely held vision that the major problem confronting blacks is discrimination. I am not arguing that every vestige of discrimination has been eliminated. I am arguing that the devastating problems facing a large proportion of the black community are not civil rights problems. The solutions will not be found in the political or civil rights arena.

And third, more Walter Williams.

Is focusing on the few cases where a white police officer shoots a black man good for blacks?

He writes:

Excerpt:

> Each year, roughly 7,000 blacks are murdered. Ninety-four percent of the time, the murderer is another black person.
>
> According to the Bureau of Justice Statistics, between 1976 and 2011, there were 279,384 black murder victims. Using the 94-percent figure means that 262,621 were murdered by other blacks.
>
> Though blacks are 13 percent of the nation's population, they account for more than 50 percent of homicide victims. Nationally, the black homicide victimization rate is six times that of whites, and in some cities, it's 22 times that of whites.
>
> Coupled with being most of the nation's homicide victims, blacks are most of the victims of violent personal crimes, such as assault and robbery.
>
> The magnitude of this tragic mayhem can be viewed in another light. According to a Tuskegee Institute study, between 1882 and 1968, 3,446 blacks were lynched at the hands of whites. Black fatalities during the Korean War (3,075), Vietnam War (7,243) and all wars since 1980 (8,197) come to 18,515, a number that pales in comparison with black loss of life at home.
>
> It's a tragic commentary to be able to say that young black males have a greater chance of reaching maturity on the battlefields of Iraq and Afghanistan than on the streets of Philadelphia, Chicago, Detroit, Oakland, Newark and other cities.

Not everyone who runs around crying "racism, racism" is interested in helping blacks to do as well as other racial groups.

Blacks will do well, just as they used to do, when the political parties in power embrace free-market capitalist policies, such as lowering the minimum wage, or scrapping it entirely. Blacks will do well, just as they used to do, when we strengthen and subsidize natural marriage – by repealing no-fault divorce and reforming welfare for single mothers. Blacks will do well, just as they used to do, when we make public schools more responsive to parents, and less responsive to teacher unions. And so on.

# What are the arguments for the historicity of the empty tomb story?

**Wintery Knight** · 18 March 2015 · Archived copy · Original

Investigating the historical Jesus

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection.

**The word resurrection means bodily resurrection**

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

**There are multiple early, eyewitness sources for the empty tomb**

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think otherwise. As E. L. Bode observes, the notion of the

> occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

A few quotes from atheist historians not from Dr. Craig's article: (thanks to Eric of Ratio Christi OSU)

> Michael Goulder (Atheist NT Prof. at Birmingham) "…it goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion." ["The Baseless Fabric of a Vision," in Gavin D'Costa, editor, Resurrection Reconsidered (Oxford, 1996), 48.]
>
> Gerd Lüdemann (Atheist Prof of NT at Göttingen): "…the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus…not later than three years… the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE." [The Resurrection of Jesus, trans. by Bowden (Fortress, 1994), 171-72.]
>
> Robert Funk (Non-Christian scholar, founder of the Jesus Seminar): "…The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about 33 C.E. On the assumption that Jesus died about 30 C.E., the time for development was thus two or three years at most." [Roy W. Hoover, and the Jesus Seminar, The Acts of Jesus, 466.]

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s. For example, the atheist scholar James Crossley dates Mark some time in the 40s. (See the debate below)

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

So we are dealing with very early sources for the empty tomb.

**Lack of legendary embellishments**

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

**The eyewitness testimony of the women**

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover the empty tomb. The fact that women, whose testimony was worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

**The earliest response from the Jewish high priests assumes the empty tomb**

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

**See it used in a debate**

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

# Woman raised by two lesbian parents speaks out: I missed my Dad

**Wintery Knight** · 19 March 2015 · Archived copy · Original

Heather Barwick

This is from The Federalist. Just so you know, the author is a former same-sex marriage advocate.

She writes:

> Gay community, I am your daughter. My mom raised me with her same-sex partner back in the ’80s and ’90s. She and my dad were married for a little while. She knew she was gay before they got married, but things were different back then. That’s how I got here. It was complicated as you can imagine. She left him when I was two or three because she wanted a chance to be happy with someone she really loved: a woman.

> My dad wasn’t a great guy, and after she left him he didn’t bother coming around anymore.
>
> Do you remember that book, “Heather Has Two Mommies”? That was my life. My mom, her partner, and I lived in a cozy little house in the ‘burbs of a very liberal and open-minded area. Her partner treated me as if I was her own daughter. Along with my mom’s partner, I also inherited her tight-knit community of gay and lesbian friends.

But now she opposes same-sex marriage because it became apparent to her through her own life experience and the experience of having children that children need a mother and father.

She writes:

> Growing up, and even into my 20s, I supported and advocated for gay marriage. It’s only with some time and distance from my childhood that I’m able to reflect on my experiences and recognize the long-term consequences that same-sex parenting had on me. And it’s only now, as I watch my children loving and being loved by their father each day, that I can see the beauty and wisdom in traditional marriage and parenting.

> Same-sex marriage and parenting withholds either a mother or father from a child while telling him or her that it doesn’t matter. That it’s all the same. But it’s not. A lot of us, a lot of your kids, are hurting. My father’s absence created a huge hole in me, and I ached every day for a dad. I loved my mom’s partner, but another mom could never have replaced the father I lost.
>
> I grew up surrounded by women who said they didn’t need or want a man. Yet, as a little girl, I so desperately wanted a daddy. It is a strange and confusing thing to walk around with this deep-down unquenchable ache for

> a father, for a man, in a community that says that men are unnecessary. There were times I felt so angry with my dad for not being there for me, and then times I felt angry with myself for even wanting a father to begin with. There are parts of me that still grieve over that loss today.

> I'm not saying that you can't be good parents. You can. I had one of the best. I'm also not saying that being raised by straight parents means everything will turn out okay. We know there are so many different ways that the family unit can break down and cause kids to suffer: divorce, abandonment, infidelity, abuse, death, etc. But by and large, the best and most successful family structure is one in which kids are being raised by both their mother and father.

I recommend reading the whole thing.

Dawn Stefanowicz said similar things about her experience raised by her Dad and his gay partner in this interview posted on MercatorNet. This is mature subject matter.

It says:

> **MercatorNet:** How did you feel about what was going on around you?
>
> **Stefanowicz**: You become used to it and desensitised. I was told at eight years old not to talk about this but I knew that something was wrong. I was not thinking "this is right or wrong" but I was disturbed by what I was experiencing. I was unhappy, fearful, anxious and confused. I was not allowed to tell my father that his lifestyle upset me. You can be four-years-old and questioning, "Where is Daddy?" You sense women are not valued. You think Daddy doesn't have time for you or Daddy is too busy to play a game with you. All this is hard because as a child this is the only experience you have.
>
> **MercatorNet:** How did this affect your relationship with others?
>
> **Stefanowicz**: I had a hard time concentrating in school on day-to-day subjects and with peers. I felt insecure. I was already stressed out by an early age. I'm now in my 40s. You're looking at life-long issues. There is a lot of prolonged and unresolved grief in this kind of home environment and with what you witness in the subcultures.
>
> It took me until I was into my 20s and 30s, after making major life choices, to begin to realise how being raised in this environment had affected me. Unfortunately, it was not until my father, his sexual partners and my mother had died, that I was free to speak publicly about my experiences.

And:

> **MercatorNet:** Why do so few children speak out?
>
> **Stefanowicz:** You're terrified. Absolutely terrified. Children who open up these family secrets are dependent on parents for everything. You carry the burden that you have to keep secrets. You learn to put on an image publicly of the happy family that is not reality. With same-sex legislation, children are further silenced. They believe there is no safe adult they can go to.

As I've written here before there are several completely non-religious reasons to oppose same-sex marriage. But the one that is surely the easiest to understand is that children need a mother and a father, and when they don't have both they miss having both. In general, children do better with their mom and dad close by as they they are growing up. That's a very good reason to promote the traditional definition of marriage – one man, one woman, for life. Period. I don't want to have any part in depriving children of the safety and security of their mothers and fathers. It's a scary thing to grow up in the world and not have two people who are YOURS. Who are interested in your development, and whose bond to you is irrevocable and undeniable.

# What can Winston Churchill teach us about deterring aggression?

**Wintery Knight** · 19 March 2015 · Archived copy · Original

Winston Churchill on appeasement

Famous economist Thomas Sowell explains.

He writes:

> Despite Churchill's legendary status today, he was not merely ignored but ridiculed at the time, when he was repeatedly warning in vain. Knowing that his warnings provoked only mocking laughter in some quarters, even among some members of his own party, he said on March 14, 1938 in the House of Commons, "Laugh but listen."
>
> Just two years later, with Hitler's planes bombing London, night after night, the laughter was gone. Many at the time thought that Britain itself would soon be gone as well, like other European nations that succumbed to the Nazi blitzkrieg in weeks (like France) or days (like Holland).
>
> How did things get to such a desperate situation, with Britain alone continuing the fight, and struggling to survive, against the massive Nazi war machine that now controlled much of the material resources on the continent of Europe?
>
> Things got that desperate by following policies strikingly similar to the policies being followed by the Western democracies today, including some of the very same notions and catchwords being used today.
>
> Just recently, a State Department official in the Obama administration said that Americans have remained safe in a nuclear age, not because of our own nuclear arsenal but because "we created an intricate and essential system of treaties, laws and agreements."
>
> If "treaties, laws and agreements" produced peace, there would never have been a Second World War. The years leading up to that monumental catastrophe were filled with international treaties and arms control agreements.
>
> The Treaty of Versailles, which ended the First World War, imposed strong restrictions on Germany's military forces — on paper. The Washington Naval Agreements of 1922 imposed restrictions on all the major naval powers of the world — on paper. The Kellogg-Briand pact of 1928 created an international renunciation of war — on paper.
>
> The Munich agreement of 1938 produced a paper with Hitler's signature on it that British Prime Minister Neville Chamberlain waved to the cheering crowds when he returned to England, and said that it meant "Peace for our time." Less than a year later, World War II began.
>
> Winston Churchill never bought any of this. He understood that military deterrence was what preserved peace. With England playing a leadership role in Europe, "England's hour of weakness is Europe's hour of danger," he

> said in the House of Commons in 1931.
>
> […]While Russia and China increased the share of their national output that went to military spending in 2014, the United States reduced its share. Churchill deplored the "inexhaustible gullibility" of disarmament advocates in 1932. That gullibility is still not exhausted in 2015.
>
> "Not one of the lessons of the past has been learned, not one of them has been applied, and the situation is incomparably more dangerous," Churchill said in 1934. And every one of those words is more urgently true today, in a nuclear age.

Here's another article by Thomas Sowell that explains it more.

Excerpt:

> In France, after the First World War, the teachers' unions launched a systematic purge of textbooks, in order to promote internationalism and pacifism.
>
> Books that depicted the courage and self-sacrifice of soldiers who had defended France against the German invaders were called "bellicose" books to be banished from the schools.
>
> Textbook publishers caved in to the power of the teachers' unions, rather than lose a large market for their books. History books were sharply revised to conform to internationalism and pacifism.
>
> The once epic story of the French soldiers' heroic defense against the German invaders at Verdun, despite the massive casualties suffered by the French, was now transformed into a story of horrible suffering by all soldiers at Verdun— French and German alike.
>
> In short, soldiers once depicted as national heroes were now depicted as victims— and just like victims in other nations' armies.
>
> […]France, where pacifism and internationalism were strongest, became a classic example of how much it can matter.
>
> During the First World War, France fought on against the German invaders for four long years, despite having more of its soldiers killed than all the American soldiers killed in all the wars in the history of the United States, put together.
>
> But during the Second World War, France collapsed after just six weeks of fighting and surrendered to Nazi Germany.
>
> At the bitter moment of defeat the head of the French teachers' union was told, "You are partially responsible for the defeat."
>
> Charles de Gaulle, Francois Mauriac, and other Frenchmen blamed a lack of national will or general moral decay, for the sudden and humiliating collapse of France in 1940.

Is the same thing happening in our public schools? Are our children taught to think that wars can be prevented by unilaterally disarming?

The lesson we need to learn from history is that the way to stop wars is by making the people who want to start them understand that there will be a price to pay if they start a war. That means that we need a certain amount of military power, and that we should have demonstrated that we are willing to use it. That is counter-intuitive to people on the left who cannot imagine that evil tyrants really are evil tyrants. They want to believe that problems can be solved with talk, but history teaches that talk is cheap.

# Do Democrats want to deport illegal aliens who commit serious crimes?

**Wintery Knight** · 20 March 2015 · Archived copy · Original

Jeb Bush and Barack Obama support amnesty

Let's start with the raw numbers from CNS News.

They write:

> According to weekly detention and departure reports from U.S. Immigration and Customs Enforcement, there were 167,527 non-detained convicted criminal aliens in the United States as of Jan. 26 of this year, a congressional hearing revealed Thursday.
>
> House Oversight and Government Reform Chairman Jason Chaffetz (R-Utah.) read the statistic aloud Thursday durin a hearing examining ICE's priorities and procedures for removing criminal aliens currently living in the United States.
>
> "In that report, it said that there are 167,527 non-detained, final-order convicted criminals on the loose in the United States," Chaffetz pointed out while questioning ICE Director Sarah Saldana."These are people that are here illegally, get caught, convicted, and you release back out into the public," he said, adding that some of the crimes committed by those who have been released include homicide, sex crimes, child pornography, drunk driving, robbery and kidnapping.
>
> The federal government announced Wednesday that ICE had released about 30,000 convicted criminal aliens from ICE custody in 2014 alone, according to The Washington Times, which first reported the statistic.
>
> […]During the hearing, Saldana said that ICE releases criminal aliens back into the community based on the agency's "discretionary control."
>
> […]"So you don't automatically deport them, then?" Chaffetz asked.
>
> "Automatically, sir? No," Saldana responded, adding that "the law gives us that discretion."
>
> "And so when we say, if you're a criminal, you'll be deported, that's not necessarily true," Chaffetz said.
>
> "It is true, sir. It's in–"

> "After they get released back into the public for untold number of times?" Chaffetz asked.
>
> "It does happen. It does happen, yes, and that's exactly what we're here to do," Saldana admitted.
>
> "What does happen? That they get released?" Chaffetz asked.
>
> "Yes," Saldana said, "Even criminals that are released."
>
> "Those people were released under the laws of the United States," Saldana added, explaining that according to "due process," it can easily take "months and even years to deport folks."

Meanwhile, the Washington Times reports on some criminals who were amnestied by Obama's executive action.

Excerpt:

> Nearly two dozen of the illegal immigrants picked up in a nationwide sweep for criminal aliens earlier this month had previously been approved for President Obama's deportation amnesty, the Homeland Security Department said Wednesday.
>
> All 23 were part of Mr. Obama's original program for so-called Dreamers, which began in 2012 and which had granted tentative legal legal status to nearly 640,000 as of the end of last year.
>
> Of the 23, 15 were still actively part of the amnesty, while eight had been approved once but had not gotten their status renewed after the first two-year period expired.
>
> […]Homeland Security spokeswoman Marsha Catron said 14 of the 15 Dreamers who were still part of "deferred action" were convicted of their crimes after they were approved. The other one had a has a pending criminal charge but hadn't yet been convicted or acquitted.

Now I am all in favor of legal immigration and even naturalization of skilled workers who come here on work permits and prove over a long period time that they can 1) keep a job, 2) avoid committing crimes, and 3) not collect any benefits from the government. But I am really at a loss to understand why the United States shows almost no interest in getting skilled immigrants to settle down, but a great interest in giving special benefits to illegal immigrants who commit serious crimes. It really makes no sense to me – it's not fair. It's really a mystery to me how a "Republican" presidential candidate like Jeb Bush can be in favor of amnesty when this is what amnesty actually does, in practice. Why is Bush even running as a Republican? He should be challenging Hillary Clinton for the Democrat nomination.

# What is it like to be a donor-conceived child?

**Wintery Knight** · 20 March 2015 · Archived copy · Original

Marriage and family

Yesterday, I wrote about children who are raised by same-sex parents. Today I want to link to an article written by two donor-conceived children.

The thing about donor-conceived children is this – the child's natural father and/or mother's absence has been bought and paid for by the adopting couple. One or both of the people who conceived the child is being *paid by the adopter to go away*.

From the article:

> [M]y mother informed me of my true parentage when I was 14, and it was, as they say, irrevocable. My mother's then-husband had waited until they divorced to permit her to tell me, and the revelation of his not being my biological father clarified an overwhelming amount of issues between us. For a multitude of reasons—his background, my personality and beliefs, our lack of biological connection—the cards were stacked against our having a conventional, loving father-daughter relationship. And we didn't.

> One of the greatest tragedies of donor conception is the loss of belonging: to family, to a culture. Essentially, one becomes malleable like an infant. I crave a home. I see myself as I travel in many directions—doing anything in order to find one.
>
> Through the storytelling of other donor-conceived individuals, and scientific research pertaining to third-party reproduction and genetics, I have discovered that my situation is by no means unique, and I now understand the scientific explanations as to why my social father and I—up to a certain point—were unable to bond. It is natural for me to desire my father, for evolution has blessed those that secure such a bond with better survival rates.
>
> The lack of my biological father's presence is a devastating reality, a burden I will likely bare my entire existence. And now, knowing the truth of my conception, when I remember my past I remember everything that was absent from it.

The study she linked to in that paragraph says this:

> It is on these grounds that we hypothesized, many years ago, that any and all sorts of abuse and exploitation would be seen to occur at higher rates in steprelationships than in genetic parent-child relationships, and that the differences would persist when possible confounds such as socio-economic status were controlled for…

> This hypothesis has since been abundantly supported in our own research and in that of many others. This differential (mis)treatment is what we refer to as the "Cinderella effect".
>
> […][I]n several countries, stepparents beat very young children to death at per capita rates that are more than 100 times higher than the corresponding rates for genetic parents.
>
> […]The evidence for Cinderella effects in nonlethal abuse is much more extensive than that for homicides. Numerous studies from a diversity of countries indicate that stepparents perpetrate both nonlethal physical assaults and sexual abuse at much higher rates than genetic parents.
>
> […][S]teprelationships are difficult, and those who make it their business to help stepfamilies in distress are unanimous in cautioning that it is a mistake to expect that a stepparent-stepchild relationship is, or will with time become, psychologically equivalent to a birthparent-child relationship… Research tells the same story. Duberman (1975)… interviewed a select sample of well-established, "successful", middle class, registered-marriage U.S. stepfamilies, and reported that only 53% of the stepfathers and 25% of the stepmothers felt able to say that they had any "parental feeling" (much less "love") for their stepchildren.

It's a well-known fact that mothers in particular have trouble treating their adopted children as well as their naturally-born children. This should be a caution to those women who want to put off marriage through their 20s and 30s, thinking that they can always adopt. Until you study the issues, it's hard to know how to make a plan that takes into account the what children need in order to be happy, healthy and effective. Research should be consulted in order to make plans that will *actually work*.

More from the original article:

> In the study "My Daddy's Name Is Donor," it was found that, "Regarding troubling outcomes, even with controls, the offspring of lesbian couples who used a sperm donor to conceive appear more than twice as likely as those raised by their biological parents to report struggling with substance abuse," an alarming result displaying the reality of being raised without both genetic parents.
>
> Some suggest that spending more money on making children means that they are more loved. Our children are *definitively wanted*, they say.

> "The baby doesn't care anything about the money," says marriage and family therapist Nancy Verrier, regarding the issues surrounding surrogacy. "That's not what hurts the baby. The baby is hurt by the separation, by the loss of that mother that it knows." This ever-present realization of loss remains with both mother and child throughout their lives. Nature has ensured that mothers and children attach to one another, as it is a trait necessary to our survival; without motivation to love or instinctively care for her child, why would a mother protect her children from potential danger? She wouldn't, and that would have heralded the end of our species. With this biological connection so immediate and meaningful, why doesn't society view maintenance of that connection as more imperative?

The answer is that we are becoming more secular as a society as belief in God and therefore in objective morality declines. We are elevating the need to pursue happiness in this life over respect for objective morality. That's why laws are changing to promote adult selfishness over the needs of children. Abortion, no-fault divorce, same-sex marriage… these are all elements of the secular worldview which wants to avoid the demands that children place on us. We want to have fun – not be saddled with moral obligations to others, that diminish our fun. We as a society have decided – whether we admit it or not – that the universe is an accident, that morality is an illusion, that responsibilities must be avoided, and that this life is all we have.

It's amazing how widespread this attitude is, not just among atheists, but among Christians as well. Usually, the Christians just put a little spiritual spin on it though – "God told me to pursue my calling, so you can't assess the

feasibility and destructive impact of my choice". That works to fool many "spiritual" people who put more faith in feelings than competence, but it doesn't work to prevent the destructiveness of not thinking things through.

# Report: UK moms with children as likely to work as women with no children

**Wintery Knight** · 20 March 2015 · Archived copy · Original

Stay-at-home moms in the UK at 25%

Dina sent me this stunning article from the UK Daily Mail.

It says:

> Mothers are now as likely to go out to work as women without children, figures showed yesterday.
>
> The historic landmark reached last year means just one mother in four stays at home to raise children.
>
> Figures from the Office for National Statistics showed 74.1 per cent of mothers with children under 16, or between 16 and 18 if they are still at school, are regarded as 'participating in the labour market'.
>
> By comparison, 75 per cent of women without dependent children were either in work or looking for a job last year.
>
> […]The new estimates are based on the large-scale Labour Force Survey covering women who either have jobs or are unemployed and looking for work. The ONS report said benefit changes that have pressed single parents into looking for work may have influenced the change.
>
> It added: 'Other government policies, for example to fund 570 hours of free early education childcare a year in England for all three to four-year-olds, will have provided additional incentives to engage with the labour market.'
>
> The biggest change has been among mothers of children under five. In 1996, 1.6 million of them were in the labour market, compared with 2.1 million last year. This represents a rise from 54.5 per cent of mothers of under-fives in work in 1996 to 65 per cent now.

There are three things I want to say about this.

First, it's undeniable that daycare is not optimal for a child when compared with having a stay-at-home mom for the early years of childhood. That's not my opinion, it's a fact. Part of preparing to get married and have kids is understanding what marriage requires and what children need. Don't rely on the government to provide for your kids, they are only interested in putting you to work so they can get your income taxes. That's especially true for big-government leftist parties that want to weaken marriage and the traditional family in any case.

Second, it's undeniable that government programs can make the choice to stay home or not more or less financially feasible. Make sure when you vote that you vote for smaller government and lower taxes. The bigger the government, the less money you have to run your own family game plan. Social programs exist so that the government can buy votes from people by transferring wealth from those who work to those who don't. If you work and want to have a family, then vote for your family, not for big government.

Third, single men and women need to factor in the costs of a stay-at-home mom into their marriage plan *early*. Your 20s are not the time for you to waste money on alcohol, parties, contraceptives, and recreational sex with hawt atheists. Your pre-marriage years should be the time when you to get used to hard work and save a nest egg. If the needs of your future children are important to you, then you study STEM subjects or a trade in school, you get a real job after college, you pay off your student loans, and you start saving money for your marriage *as soon as possible*. Again, you can't "feel" your way to a good marriage. Recklessness is not going to work.

# How secular leftists misuse science to normalize sexual anarchy

**Wintery Knight** · 21 March 2015 · Archived copy · Original

Jay Richards tweeted this article Touchstone magazine.

Here's part of it:

> Here is how the Mead Method works. It has four easily memorized steps. You begin by proving that some behavior is natural, in the sense of being enjoyed by primitive people, who are assumed to be far closer to the basic human realities than we are. As the *Chronicle*'s writer put it:
>
> Less than 50 years ago, Canela women, who live in Amazonian Brazil, enjoyed the delights of as many as 40 men one after another in festive rituals. When it was time to have a child, they'd select their favorite dozen or so lovers to help their husband with the all-important task. Even today, when the dalliances of married Bar ladies in Colombia and Venezuela result in a child, they proudly announce the long list of probable fathers.
>
> Then you find some way to show that the behavior works. If to our overdeveloped modern eyes it looks like self-indulgence or sluttishness, it is actually a rational and effective way of living. An anthropologist quoted in the article claims that the more possible fathers a child has, the more men will take care of him and his mother. As the writer put it, "Fooling around appears to have helped our ancestral mothers equip their little ones for success—the sexual equivalent of reading to them every night or enrolling in the after-school chess club."
>
> Having established to your satisfaction that the behavior is not only natural but effective, you then declare that all such behaviors are just social constructions anyway and ours (the modern, still sort of Christian way) is really not nearly so common as we would like to think. To do this the writer quotes an anthropologist who studied tribes in Paraguay and Tanzania, who said, "This model of the death-do-us-part, missionary-position couple is just a tiny part of human history. The patterns of human sexuality are so much more variable."
>
> At this point, the case is often strengthened by caricaturing the present. That "missionary-position couple" is supposed, I think, to suggest "dull." It can be strengthened even more by not stopping to ask what the patterns found in history might actually be. Perhaps there are only a few patterns, and contemporary marriage an expression (as it seems to be) of a dominant mode by which human societies try to restrain the destructive effects of human sexual desire and direct it to social ends.
>
> Finally, you imply, without quite saying it, that the primitive behavior would work just as well for us, it being (though a social construction) more natural and all. The writer does this with quotes, like this one from a William Crocker of the Smithsonian Institution: "Multiple lovers, that's just part of the life. It's recreation, just like races and running. It's all done in the spirit of joy and fun."
>
> The Margaret Mead Method, in either its original or modified form, is a very useful method . . . if you're a creep. It proves—to the standard of the man with his pants halfway off and the woman who has gotten a better offer than her husband the couch potato will make, anyway—that sexual libertinism is natural and sexual restraint unnatural, and since being natural is always good, you ought to let go and have fun, just like the jolly party girls of the South American tribes.
>
> This is why *Coming of Age in Samoa* made Mead famous. You want to have an affair with the babe next door? Well, those darling little Samoans living in a state of nature are doing it all the time, and look how happy and fulfilled and innocent they are. Margaret Mead said so. It's scientific. You feel guilty? You're a modern man afflicted with Judeo-Christian guilt, but just ignore it—socially constructed and unnatural as it is—and enjoy the pleasures nature and evolution have provided for you.
>
> I am afraid this is the idea these stories almost always promote, whatever insights into the nature of a fallen creation they provide. They begin with reports of young Samoans having free and joyful sex among the palm trees, and end with middle-aged Barney desperately betraying his wife at the Hampton Inn.

Now this is supposed to be a hopeful, helpful blog post, so let me give you some advice.

There are things you can do to get around the older people who try to sell you this in school and in the culture. You have to do your own research, and learn the consequences of getting rid of the rules around sexual conduct before you break them.

First, read Romans 1, and understand that people who are doing evil things feel better about what they are doing if they can get you to approve of it, celebrate it, and subsidize it. So keep that in mind when people are telling you that something wrong is “right”.

Second, understand that people who are teaching you in school often portray themselves one way in class, but in actual fact, their private lives are totally messed up. It’s tempting to give them more respect than they deserve.

Third, it’s good to be think critically about what you see in the culture, and to read history in order to gain a perspective that allows you to judge what is seen as normal in your own time.

Fourth, it’s good to read studies to find out what happens next, should you take some course of action that is “normal”. For example, it’s a very good idea to research the link between the number of premarital sexual partners and divorce rate.

Fifth, you should be skeptical of people who misuse science in order to push an agenda. Just understand where they are going and then see if they might not be abusing science to get there. It happens all the time – just look at how global cooling / global warming has been used to justify increased control of energy development and consumption by government.

# Study: non-family daycare linked to anti-social behavior in children

**Wintery Knight** · 21 March 2015 · Archived copy · Original

From the UK Telegraph.

Excerpt:

> Academics at Oxford University discovered that exposure to some forms of early education contributed to bad behaviour and could be linked to emotional problems.

> The study, based on an analysis of infants from almost 1,000 families, showed that the strongest influence on children came from within the home itself.
>
> Children raised in poor families with high levels of parental stress or mental health problems were most at risk of developing emotional problems by the time they started school, it emerged.
>
> The research also uncovered trends relating to children who were in formal child care — away from their parents.

> The disclosure will revive debate over the best way to raise children amid a surge in the number of under-fives enrolled in nurseries and with childminders in the past 20 years. Figures from the Department for Education show that 441,000 children under five are in day nurseries while another 272,000 are being looked after by childminders.
>
> […]In the Oxford study, researchers recruited 991 families with children aged three months. Mothers had an average age of 30.
>
> Researchers assessed children at the age of four through questionnaires about their behaviour and emotions completed by teachers and parents. They also observed care provided by mothers and observed non-parental care for at least 90 minutes for those children placed in formal childcare settings.
>
> The report, published in the journal Child: Care, Health and Development, said that "children who spent more time in group care, mainly nursery care, were more likely to have behavioural problems, particularly hyperactivity".
>
> The study, led by Prof Alan Stein, of Oxford's Department of Child and Adolescent Psychiatry, found that "spending more time in day care centres, over the total period was a predictor of total problem scores".
>
> "Children who spent more time in day care centres were more likely to be hyperactive," it said. "Children receiving more care by childminders were more likely to have peer problems."
>
> The authors added: "The findings in relation to childminding suggest that it might be out of home care rather than group care that raises the risk of behavioural difficulties."
>
> The researchers also tracked other forms of early years care and found benefits to different approaches.
>
> They found that children who spent more time in pre-school playgroups – normally for a few hours a day, rather than a full-time nursery – had fewer problems.
>
> More time with a nanny in parents' own home predicted higher levels of "pro-social behaviour", showing willingness to help others, it emerged.
>
> The study said: "These findings suggest that interventions to enhance children's emotional and behavioural development might best focus on supporting families and augmenting the quality of care in the home."

A study like this will be useful when debating people with open minds, but hardcore feminists and socialists, who want women to work in order to fund bigger government, will not be moved. Because for them, it's not about evidence. It's about ideology. That's why we have to be careful about letting people like that get elected.

# Why are Asian mothers so much better at raising high-performing children?

**Wintery Knight** · 22 March 2015 · Archived copy · Original

Consider this article in the Wall Street Journal.

But first – a little bit about Amy Chua, the author of the article:

> Amy Chua is the John M. Duff Professor of Law at Yale Law School. Her first book *World on Fire: How Exporting Free Market Democracy Breeds Ethnic Hatred and Global Instability* was a *New York Times* bestseller, was selected by both the *Economist* and the *Guardian* as one of the Best Books of 2003 and translated into eight languages. Her second book, *Day of Empire: How Hyperpowers Rise to Global Dominance – and Why They Fall* was a critically acclaimed Foreign Affairs bestseller. Amy Chua has appeared frequently on radio and television on programs such CNN Headline News, C-Span, The Lehrer News Hour, Bloomberg Television, and Air America. Her writings have appeared in the *New York Times*, the *Washington Post*, the *Financial Times, Harvard Business Review*, and the *Wilson Quarterly*. She lives with her husband, two daughters, and two Samoyeds in New Haven, Connecticut.

And now, an excerpt from the piece itself:

> A lot of people wonder how Chinese parents raise such stereotypically successful kids. They wonder what these parents do to produce so many math whizzes and music prodigies, what it's like inside the family, and whether they could do it too. Well, I can tell them, because I've done it.
>
> […]Despite our squeamishness about cultural stereotypes, there are tons of studies out there showing marked and quantifiable differences between Chinese and Westerners when it comes to parenting. **In one study of 50 Western American mothers and 48 Chinese immigrant mothers, almost 70% of the Western mothers said either that "stressing academic success is not good for children" or that "parents need to foster the idea that learning is fun." By contrast, roughly 0% of the Chinese mothers felt the same way. Instead, the vast majority of the Chinese mothers said that they believe their children can be "the best" students, that "academic achievement reflects successful parenting," and that if children did not excel at school then there was "a problem" and parents "were not doing their job." Other studies indicate that compared to Western parents, Chinese parents spend approximately 10 times as long every day drilling academic activities with their children. By contrast, Western kids are more likely to participate in sports teams.**
>
> What Chinese parents understand is that nothing is fun until you're good at it. To get good at anything you have to work, and children on their own never want to work, which is why it is crucial to override their preferences. This often requires fortitude on the part of the parents because the child will resist; things are always hardest at the beginning, which is where Western parents tend to give up. But if done properly, the Chinese strategy produces a virtuous circle. Tenacious practice, practice, practice is crucial for excellence; rote repetition is underrated in America. Once a child starts to excel at something—whether it's math, piano, pitching or ballet—he or she gets praise, admiration and satisfaction. This builds confidence and makes the once not-fun activity fun. This in turn makes it easier for the parent to get the child to work even more.

And here are her three main points:

> Chinese parents demand perfect grades because they believe that their child can get them. If their child doesn't get them, the Chinese parent assumes it's because the child didn't work hard enough. That's why the solution to substandard performance is always to excoriate, punish and shame the child. The Chinese parent believes that

> their child will be strong enough to take the shaming and to improve from it. (And when Chinese kids do excel, there is plenty of ego-inflating parental praise lavished in the privacy of the home.)
>
> […]Chinese parents believe that their kids owe them everything. The reason for this is a little unclear, but it's probably a combination of Confucian filial piety and the fact that the parents have sacrificed and done so much for their children. (And it's true that Chinese mothers get in the trenches, putting in long grueling hours personally tutoring, training, interrogating and spying on their kids.) Anyway, the understanding is that Chinese children must spend their lives repaying their parents by obeying them and making them proud.
>
> […]Chinese parents believe that they know what is best for their children and therefore override all of their children's own desires and preferences. That's why Chinese daughters can't have boyfriends in high school and why Chinese kids can't go to sleepaway camp. It's also why no Chinese kid would ever dare say to their mother, "I got a part in the school play! I'm Villager Number Six. I'll have to stay after school for rehearsal every day from 3:00 to 7:00, and I'll also need a ride on weekends." God help any Chinese kid who tried that one.
>
> […]Here's a story in favor of coercion, Chinese-style.

Now you go read the whole article to find out the three differences and read the coercion story. Read the coercion story now!

And what do we learn from it? Well, what I learned is that if we Christians want to have any hope of having an influence in the public square, then we will have to marry well, and we will have to train our children like Amy does. We should not be thinking of marriage as a way to have feelings and to gain happiness and fulfillment. Marriage should be about service to God. And one of the ways we serve is by producing children who will have an influence. I think that parents in the West tend to have the idea that the world is a safe place, and that we should try to please our children and make them like us – so that everyone will be happy. But there is one person who will not be happy if we focus on ourselves instead of serving God. Do you know who that might be?

One thing I would say in criticism of Amy is that she seems to only care about grades – which are assigned by teachers who are not necessarily going to have the same goals as a Christian parent. Teachers have their own agenda, and will happily give a child an F for espousing a belief in abstinence, or for talking about the Big Bang or protein sequence specificity, or for mentioning Climategate and dissent from man-made catastrophic global warming. If the class is math or computer science, then the children should be required to be the best. If the class is on hating America, then maybe the child should be going to a different school or being homeschooled. (Assuming that the Democrats have not banned all private schooling and homeschooling, which their masters in the teacher unions would dearly love to do).

My advice for men is this: Have a plan for marriage and parenting. Make decisions your whole life to implement that plan. Choose a wife based on the criteria of the job of marriage. And raise your children to have an influence for Christ.

If you cannot find a wife who actually puts serving God over her own feelings and desires, remain chaste and do not marry. There is no point in getting married unless marriage and parenting can serve God. The point of marriage is not to have a big wedding. The point of marriage is not to make women happy and fulfilled. The point of marriage is not for the woman to neglect her children while focusing on her career. The point of marriage is not to blindly hand children off to the schools to be indoctrinated as they obtain non-STEM degrees.

# New study: separating from mother causes children to have higher anxiety and fear

**Wintery Knight** · 22 March 2015 · Archived copy · Original

The Wall Street Journal reports on a new study.

It says:

> We learn to be afraid. One of the oldest discoveries in psychology is that rats will quickly learn to avoid a sound or a smell that has been associated with a shock in the past—they not only fear the shock, they become scared of the smell, too.
>
> **A paper by Nim Tottenham of the University of California, Los Angeles in "Current Topics in Behavioral Neurosciences" summarizes recent research on how this learned fear system develops, in animals and in people. Early experiences help shape the fear system. If caregivers protect us from danger early in life, this helps us to develop a more flexible and functional fear system later. Dr. Tottenham argues, in particular, that caring parents keep young animals from prematurely developing the adult system: They let rat pups be pups and children be children.**
>
> Of course, it makes sense to quickly learn to avoid events that have led to danger in the past. But it can also be paralyzing. There is a basic paradox about learning fear. Because we avoid the things we fear, we can't learn anything more about them. We can't learn that the smell no longer leads to a shock unless we take the risk of exploring the dangerous world.
>
> Many mental illnesses, from general anxiety to phobias to posttraumatic-stress syndrome, seem to have their roots in the way we learn to be afraid. We can learn to be afraid so easily and so rigidly that even things that we know aren't dangerous—the benign spider, the car backfire that sounds like a gunshot—can leave us terrified. Anxious people end up avoiding all the things that just might be scary, and that leads to an increasingly narrow and restricted life and just makes the fear worse. The best treatment is to let people "unlearn" their fears—gradually exposing them to the scary cause and showing them that it doesn't actually lead to the dangerous effect.
>
> Neuroscientists have explored the biological basis for this learned fear. It involves the coordination between two brain areas. One is the amygdala, an area buried deep in the brain that helps produce the basic emotion of fear, the trembling and heart-pounding. The other is the prefrontal cortex, which is involved in learning, control and planning.
>
> Regina Sullivan and her colleagues at New York University have looked at how rats develop these fear systems. Young rats don't learn to be fearful the way that older rats do, and their amygdala and prefrontal systems take a while to develop and coordinate. The baby rats "unlearn" fear more easily than the adults, and they may even approach and explore the smell that led to the shock, rather than avoid it.
>
> **If the baby rats are periodically separated from their mothers, however, they develop the adult mode of fear and the brain systems that go with it more quickly. This early maturity comes at a cost. Baby rats who are separated from their mothers have more difficulties later on, difficulties that parallel human mental illness.**
>
> Dr. Tottenham and her colleagues found a similar pattern in human children. They looked at children who had grown up in orphanages in their first few years of life but then were adopted by caring parents. When they looked at the children's brains with functional magnetic resonance imaging, they found that, like the rats, these children seemed to develop adultlike "fear circuits" more quickly. Their parents were also more likely to report that the children were anxious. The longer the children had stayed in the orphanages, the more their fear system developed abnormally, and the more anxious they were.

Whenever I read books about daycare, the word “anxiety” is the one that seems to be the most common.

It’s important for the mother to stay at home, and plans should be made before the marriage to make that financially feasible. The plans should start for each parent when they are deciding what the study, where to work, and so on. A working mother who puts her child in daycare will have to exercise extra care to make sure that the child is OK. And this becomes even harder to do when her stress levels go up from work. You can’t bond with a child if you can’t stop screaming obscenities and/or being violent because of work stress.

Another risk factor for anxiety is demanding a lot from a child (say, academically) but not taking the steps to monitor daily progress and provide daily assistance. Think of it as a scale from report-card-day tantrums all the way to daily monitoring and helping with homework. The closer the parents are to the report card day tantrums side of things, the more anxiety if is going to cause the child. Yes, it’s important for children to do well in school so that they can get jobs later. But tantrums don’t achieve anything except to scare them away from learning. Daily monitoring and listening is a better way to create the connection that reduces the child’s anxiety.

# Brookings Institution: a $1.2 billion social program that doesn't work

**Wintery Knight** · 23 March 2015 · Archived copy · Original

This is a surprising article coming from the leftist Brookings Institution.

They write:

> Afterschool programs, or out-of-school time programs, burst into view in the late 1990s. The federal government—flush with budget surpluses of hundreds of billions—began spending more on the 21st Century Community Learning Centers (CCLC) program. The program was created by the 1994 Improving America's Schools Act and had languished as an obscure provision to promote schools as community resources. Initially, the program received no appropriation, until Congress appropriated $40 million for it in 1998.
>
> Spending exploded after the program pivoted to support afterschool programs. By 2002, the program's appropriation was $1 billion. For a federal program to grow from $40 million to $1 billion in a few years happens rarely. The agency overseeing the program, the U.S. Department of Education, partnered with the Charles Stewart Mott Foundation to underwrite conferences and technical assistance for program providers, pumping millions more into the program.
>
> In 1999, the Department of Education contracted with Mathematica Policy Research to evaluate the 21st Century program. The evaluation had elements that were both rigorous and representative. The elementary school part of the study was designed as an experiment; the middle school part was designed as a random sampling of programs around the country, with students participating in the program matched with students in neighboring schools (or the same school, in rural areas) that were not participating in the program. The evaluation collected data on a wide range of outcomes including grades, test scores, attendance, and behavior.[1]
>
> Ultimately, the evaluation reported on how the program affected outcomes. **In a series of reports released between 2003 and 2005 (here, here, and here), the answers emerged: the program didn't affect student outcomes. Except for student behavior, which got *worse.* And small samples were not an issue explaining why findings were insignificant. The national evaluation included about 2,300 elementary school students and 4,400 middle school students. The results were insignificant because the estimates of program effects hovered around zero.**
>
> In the face of these results, one course of action would have been to at least reduce program spending, if not eliminate the program altogether. The Bush administration proposed a reduction of $400 million in the program budget, advocates rallied to the cause, Arnold Schwarzenegger got involved, and ultimately Congress left program spending unchanged. To this day, the program spends more than a billion dollars each year.
>
> If the national evaluation was thought to be unreliable or errant, a sensible next step would be to do another, possibly with different focuses or features. That hasn't happened. Or perhaps the evaluation findings were dismissed because other research has shown that afterschool programs are effective. It hasn't. Echoing a previous 2006 review by Zief, Lauver, and Maynard, a 2015 review of dozens of studies that were published up to 2014 concluded that "mean effects were small and non-significant for attendance and externalizing behaviors."[2](This is how researchers say the evidence shows that after school programs do not improve attendance or behavior.)
>
> Two other pieces of evidence add to this picture. **First, the U.S. Department of Education continues to collect and summarize the program's annual performance reports (each state reports on its programs to the Department). Its most recent summary noted that 'nearly all of the performance targets for the 2009-2010 reporting period were not reached.' Second, a recent federal study of supplemental services programs found no effects on academic outcomes.** The study examined programs that are required to be offered by schools that do not meet target levels of adequate yearly progress under No Child Left Behind. They

> are tutoring and academic support service programs offered outside the regular school day that have a stronger academic focus than the 21st Century programs (which can offer snacks, recreation, and youth development activities), and yet they still did not improve academic outcomes.

I am linking to this because I want people to understand that not every problem has to be solved by the government. It is *possible* that when politicians tell us that they want to solve a problem by taxing us and spending our money, it's possible that what they spend our money on *does not work*. Normally, when it comes to government spending on children,it's very hard to cut spending because compassionate people do not want to take money away "from the children". Most Democrat voters do not even realize that money spent by the government either comes from taxation or borrowing from the next generation does not work, it can be very hard to cut funding for those those programs, because the powerful pro-government party has no interest in cutting government spending in *any area*. They get contributions from people who are very interested in big government.

# New study: what you study in college matters more than where you go to college

**Wintery Knight** · 23 March 2015 · Archived copy · Original

What you study matters more (click for larger image)

This study was reported by the leftist The Economist.

They write:

> A new report from PayScale, a research firm, calculates the returns to a college degree. Its authors compare the career earnings of graduates with the present-day cost of a degree at their alma maters, net of financial aid. College is usually worth it, but not always, it transpires. And what you study matters far more than where you study it.
>
> Engineers and computer scientists do best, earning an impressive 20-year annualised return of 12% on their college fees (the S&P 500 yielded just 7.8%). Engineering graduates from run-of-the-mill colleges do only slightly worse than those from highly selective ones. Business and economics degrees also pay well, delivering a solid 8.7% average return. Courses in the arts or the humanities offer vast spiritual rewards, of course, but less impressive material ones. Some yield negative returns. An arts degree from the Maryland Institute College of Art had a hefty 20-year net negative return of $92,000, for example.

I think if you are looking for a great way to be out of debt before you are 30, it's a great idea to do your first few years at community college, get rid of all your generic prerequisite courses, then move on to college/university to do your computer science/engineering courses, and then graduate.

Here is the nightmare scenario: you go study a non-stem major at an expensive university, come out with a ton of debt and *NO JOB* in your field. A much better solution is to go to a less-expensive, less-presitigious school that has a good STEM program in the area you want, and then get in and get out as quickly as possible. Make sure that you either do internships or work in the summer *in your field*. At this point, you should be willing to pay your employer for letting you work for them, or volunteer – you want to get a company name on your resume, and a name added to your references before you graduate and start looking for a real full-time job. Any pay they give you should be considered a bonus – that's how important it is to work in your field before graduating. The before-graduation work experience will help you to know what skills are in demand, too – which will improve your course selection. You might even be able to get a mentor from the company you work for to advise you.

The longer you go without working related to your field, the harder it is to be competitive in the job market. It's very important to get debt paid off – especially now, because interest rates are going to be rising soon. You

definitely want to start investing as soon as possible, so you can use that interest rate in your favor as you head towards retirement. It's a rocky road ahead with an $18.5 trillion debt, a demographic challenge from the large number of retirees, and the decline of marriage and family. It makes sense to focus on financial issues as early as possible, and have a good plan.

# Has the Creator of the universe ever spoken to us?

**Wintery Knight** · 23 March 2015 · Archived copy · Original

Has God every reached out to humanity?

People often ask the question, “why must I believe in Jesus and only Jesus in order to be rightly related to God?”

Indeed. Why should we care about the teachings of Jesus more than any other religious leader. Well, we know from scientific evidence that the universe had a beginning, and hence a Creator. We know from the fine-tuning argument that there is a Designer of the cosmos, as well. So the question becomes, has there ever been a human being who could give us accurate information about who the Creator and Designer is?

It turns that there is such a person, and we know it because we have evidence that this person rose from the dead – a feat only possible if the Creator and Designer wanted to draw attention to this person, and to his teachings. The account of this is recorded in a collection of ancient writings called the New Testament, which can be investigated using the ordinary rules of ancient historiography. Although much of what is written in the New Testament cannot be proven historical, a few facts that are reported there pass the mainstream historical tests. From those facts, we can infer that God was putting his stamp of approval on the teachings of a very important person.

**The man who returned from the dead**

Dr. Craig’s famous minimal facts case for the resurrection has been posted at the Christian Apologetics Alliance. He presents 4 facts admitted by the majority of New Testament historians, and then he supplies multiple pieces of evidence for each fact.

Here are the four facts:

- FACT #1: *After his crucifixion, Jesus was buried in a tomb by Joseph of Arimathea.*
- FACT #2: *On the Sunday following the crucifixion, Jesus’ tomb was found empty by a group of his women followers.*
- FACT #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead.*
- FACT #4: *The original disciples believed that Jesus was risen from the dead despite their having every predisposition to the contrary.*

He shows how each fact is supported reasons which pass the standard historical rules used by ancient historians.

Here’s the detail on fact #3, the post-mortem appearances.

> FACT #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead.*

> This is a fact which is almost universally acknowledged among New Testament scholars, for the following reasons:
>
> 1. The list of eyewitnesses to Jesus' resurrection appearances which is quoted by Paul in I Cor. 15. 5-7 guarantees that such appearances occurred. These included appearances to Peter (Cephas), the Twelve, the 500 brethren, and James.
>
> 2. The appearance traditions in the gospels provide multiple, independent attestation of these appearances. This is one of the most important marks of historicity. The appearance to Peter is independently attested by Luke, and the appearance to the Twelve by Luke and John. We also have independent witness to Galilean appearances in Mark, Matthew, and John, as well as to the women in Matthew and John.
>
> 3. Certain appearances have earmarks of historicity. For example, we have good evidence from the gospels that neither James nor any of Jesus' younger brothers believed in him during his lifetime. There is no reason to think that the early church would generate fictitious stories concerning the unbelief of Jesus' family had they been faithful followers all along. But it is indisputable that James and his brothers did become active Christian believers following Jesus' death. James was considered an apostle and eventually rose to the position of leadership of the Jerusalem church. According to the first century Jewish historian Josephus, James was martyred for his faith in Christ in the late AD 60s. Now most of us have brothers. What would it take to convince you that your brother is the Lord, such that you would be ready to die for that belief? Can there be any doubt that this remarkable transformation in Jesus' younger brother took place because, in Paul's words, "then he appeared to James"?
>
> Even Gert Ludemann, the leading German critic of the resurrection, himself admits, "It may be taken as historically certain that Peter and the disciples had experiences after Jesus' death in which Jesus appeared to them as the risen Christ."3

Yes, Gerd Ludemann is actually an atheist new Testament historian, and he has even debated Dr. Craig on the resurrection – not once, but *twice*. That's the kind of evidence Dr. Craig uses in his case.

So, if you are undertaking an investigation to see if the God who creates and designs the universe has anything to say to you, a good place to start is seeing what this guy Jesus had to say to you. No faith required.

# Obama told us that Yemen was a success of his foreign policy

**Wintery Knight** · 24 March 2015 · Archived copy · Original

The Wall Street Journal reports:

> The Obama administration's calculated gamble during the past three years in Yemen has crumbled in recent days, leaving the country on the brink of a civil war with U.S. troops involved in counterterror operations withdrawing amid intense fighting.
>
> What happened in Yemen, according to descriptions by current and former officials and experts, was a miscalculation about the changes unleashed by the Arab Spring revolutions. It involved an overreliance by Washington on a promising new leader who ultimately was unable to hold off rival forces and tensions, they said.
>
> As a result, a country President Barack Obama last year cited as a model of American counterterrorism success has now descended into chaos, with U.S. influence and drone strikes no match for at least four sides at war with one another.
>
> "In many ways, this is all the Thanksgiving Dinner from hell," said Jon Alterman, a former State Department official and director of the Middle East program at the Center for Strategic and International Studies. "It is people who have been dealing with each other for a long time, none are satisfied, and the fight has broken out. And the first thing is figuring out who the different sides are."
>
> The U.S. and allies such as Yemen's neighbor Saudi Arabia had tried to take advantage of the Arab Spring revolution in Yemen in 2011. They supported a new, friendly regime led by President Abed Rabbo Mansour Hadi.
>
> The White House hailed Mr. Hadi's leadership and—with his cooperation—carried out dozens of drone strikes against the country's al Qaeda offshoot. Meanwhile, they collected intelligence and training Yemeni forces to battle the terrorist group al Qaeda in the Arabian Peninsula, or AQAP.
>
> But the Obama administration limited its involvement with others in Yemen, and was largely removed from numerous tribal leaders and the rising rebel group known as the Houthis, according to former U.S. officials and foreign policy experts. The success of the White House's involvement with Yemen relied largely on Mr. Hadi staying in power, they said, adding that the White House had few alternatives. That is why the U.S. approach was upended last month when Shiite-linked Houthi rebels, believed to be backed by Iran, seized control of Yemen's capital and forced Mr. Hadi to flee. Forces loyal to Mr. Hadi are now warring against the Houthis, and U.S. officials believe, against his predecessor, Ali Abdullah Saleh.
>
> The Yemeni president has asked Gulf countries to intervene militarily against the Houthis as they advance toward his base in the southern city of Aden, according to Saudi media reports quoting Mr. Hadi's foreign minister. Over the past few days, the Houthis have been advancing southward into the major southern city of Taiz, where they have encountered resistance and large street protests against them. Houthi gunmen fired live ammunition and tear gas on Monday into crowds of demonstrators in the city, wounding at least seven people. Meanwhile, militants claiming allegiance to Islamic State carried out dramatic suicide attacks in an area that had traditionally been the safe haven for rival AQAP, which some believe could trigger competitive jihadist attacks.
>
> The Houthis had already taken over the airport and some government buildings in Taiz and erected checkpoints in the southern city when the violence flared, said local government officials and protest organizers, who reported the casualties.
>
> […]Before political chaos erupted earlier this year, the U.S. had everything invested in Mr. Hadi. Central Intelligence Agency Director John Brennan was a key liaison to the country when he served as a top White House counterterrorism aide in the first years of the Obama administration. His replacement, Lisa Monaco,

> had kept in constant contact with Mr. Hadi since then.
>
> In September, President Obama hailed Yemen as a success story in its counterterrorism approach, saying the country's aggressive pursuit of terrorists would prevent the spread of Islamic State.

Look at the stupidity of Samantha Power:

> **Samantha Power, the U.S. ambassador to the United Nations, said Sunday that all parties in Yemen should agree to U.N.-backed negotiations and "refrain from any further unilateral and offensive military actions."**
>
> "We are supporting all the right [United Nations] resolutions, but most of the people in Yemen could care a flying fig for a U.N. resolution," said Barbara Bodine, who was U.S. Ambassador to Yemen at the time of the USS Cole attack.

The Obama administration simply cannot take evil seriously – they keep thinking that everyone in the world is like them, and it's killing our foreign policy. Obama keeps making promises that him and his party of amateurs and academics cannot keep.

Neville Chamberlain Obama: peace in our time

If you like your doctor, you can keep your doctor. If you like your health plan, you can keep your health plan. If you like your IRS e-mails, you can keep your IRS e-mails. If you like your Tea Party charitable status, you can keep your Tea Party charitable status. If you like your Ukraine, you can keep your Ukraine. If you like your traditional marriage, you can keep your traditional marriage. If you like your State Department transparency, you can keep your State Department transparency. If you like your European missile defense, you can keep your European missile defense. If you like your 12 carrier strike groups, you can keep your 12 carrier strike groups. If you like your full-time work week, you can keep your full-time work week. If you like your health care for veterans, you can keep your health care for veterans. If you like your $8 trillion dollar debt, you can keep your $8 trillion dollar debt. If you like your coal plant, you can keep your coal plant. If you like your race relations, you can keep your race relations. If you like your freedom to not buy others abortion drugs, you can keep your freedom to

not buy others abortion drugs. If you like your F-22 stealth fighter, you can keep your F-22 stealth fighter. If you like your Israel, you can keep your Israel.

We can fix the spending, we can fix the laws, we can fix the fraud, we can fix the corruption, we can repeal Obamacare… but the foreign policy blunders will be very, very hard to fix.

# Why is it so hard to reason with college-educated millenials about spiritual things?

**Wintery Knight** · 24 March 2015 · Archived copy · Original

Why is it hard to reason with students?

The first article today is from lesbian feminist Camille Paglia. She is a university professor, but liberal (in the classical sense) in her outlook.

An hour-long interview is posted at Reason, and there's a transcript.

Camille says:

> reason: Clarify what's the difference between a legitimate gripe and whining?
>
> Paglia: Well, in my point of view, no college administration should be taking any interest whatever in the social lives of the students. None! If a crime's committed on campus, it should always be reported to the police. I absolutely do not agree with any committees investigating any charge of sexual assault. Either it's a real crime, or it's not a real crime. Get the hell out. So you get this expansion of the campus bureaucracy with this Stalinist oversight. But the students have been raised with helicopter parents. They want it. The students of today—they're utterly uninformed, not necessarily at my school, the art school, I'm talking about the elite schools.
>
> reason: So it's those kids over at that other school.
>
> Paglia: It's the grade grubbers, the bright overachievers. I'm not at that kind of school [here at University of the Arts in Philadelphia] . I'm at a school of arts and communication where people already have a vocational trend. To be admitted here, you have to already have demonstrated a vocational aptitude. I'm talking about the Ivy League. **Now, I've encountered these graduates of Harvard, Yale, the University of Pennsylvania, and Princeton, I've encountered them in the media, and people in their 30s now, some of them, their minds are like Jell-O. They know nothing! They've not been trained in history. They have absolutely no structure to their minds. Their emotions are unfixed. The banality of contemporary cultural criticism, of academe, the absolute collapse of any kind of intellectual discourse in the U.S. is the result of these colleges, which should have been the best, have produced the finest minds, instead having retracted into caretaking. The whole thing is about approved social positions in a kind of misty, love of humanity without any direct knowledge of history or economics or anthropology.**
>
> reason: Maybe the university is not the place where that sort of stuff is happening anymore. So, for instance,

> you have think tanks that do a lot of economic or policy work. You have popular historians who are not academic. Fiction and poetry, even as there's been a rise in for decades now of creative writing programs and what not. Nobody looks to the university to be cutting edge on almost anything really, so maybe it's just that you picked the wrong hors. Maybe you should have followed the campus radicals' suggestion and not gone into academia?
>
> Paglia: [As a] writer of cultural criticism, I find that I'm happiest when I'm writing for the British press, and I write quite a bit for The Sunday Times magazine in London. I find that the general sense of cultural awareness means that I can have an authentic discourse about ideas with international journalists from Brazil or Germany or Italy or Norway or Canada even—somewhat, but they have a P.C. problem themselves. I can feel the vacuum and the nothingness of American cultural criticism at the present time. It is impossible—any journalist today, an American journalist, you cannot have any kind of deep discussion of ideas.

The students at the Ivy league universities are so insulated from "vocation" (working for money) and so indoctrinated in political correctness, that they cannot have a civil conversation about ideas. All they can do is state their own views, and if you disagree with them, then they call you names then retreat to "safe spaces", where all unpleasant communication is blocked . They can't even explain why they hold their own views except they have been taught to believe that all smart people believe them. They are *traumatized* by dissent, and they are not able to critically assess arguments and evidence.

Here's a second article by Eleanor Taylor writing in the ultra-leftist New York Times.

She writes:

> KATHERINE BYRON, a senior at Brown University and a member of its Sexual Assault Task Force, considers it her duty to make Brown a safe place for rape victims, free from anything that might prompt memories of trauma.
>
> So when she heard last fall that a student group had organized a debate about campus sexual assault between Jessica Valenti, the founder of feministing.com, and Wendy McElroy, a libertarian, and that Ms. McElroy was likely to criticize the term "rape culture," Ms. Byron was alarmed. "Bringing in a speaker like that could serve to invalidate people's experiences," she told me. It could be "damaging."
>
> Ms. Byron and some fellow task force members secured a meeting with administrators. Not long after, Brown's president, Christina H. Paxson, announced that the university would hold a simultaneous, competing talk to provide "research and facts" about "the role of culture in sexual assault." Meanwhile, student volunteers put up posters advertising that a "safe space" would be available for anyone who found the debate too upsetting.
>
> **The safe space, Ms. Byron explained, was intended to give people who might find comments "troubling" or "triggering," a place to recuperate. The room was equipped with cookies, coloring books, bubbles, Play-Doh, calming music, pillows, blankets and a video of frolicking puppies, as well as students and staff members trained to deal with trauma. Emma Hall, a junior, rape survivor and "sexual assault peer educator" who helped set up the room and worked in it during the debate, estimates that a couple of dozen people used it. At one point she went to the lecture hall — it was packed — but after a while, she had to return to the safe space. "I was feeling bombarded by a lot of viewpoints that really go against my dearly and closely held beliefs," Ms. Hall said.**
>
> **Safe spaces are an expression of the conviction, increasingly prevalent among college students, that their schools should keep them from being "bombarded" by discomfiting or distressing viewpoints. Think of the safe space as the live-action version of the better-known trigger warning, a notice put on top of a syllabus or an assigned reading to alert students to the presence of potentially disturbing material.**

I have had the opportunity to interact with people who went through the college system in non-STEM programs. The combination of binge-drinking, hooking-up, co-habitating, and indoctrination in secular leftist ideologies like feminism, postmodernism, moral relativism really seems to break down their ability to reason calmly with someone who disagrees with them. They become very brittle and defensive when their indoctrinated views are confronted with critical thinking. I think the indoctrinated views were accepted largely because of emotions, intuitions and peer-pressure, so any kind of questioning using reason, evidence, wisdom and experience are met with this fight-or-flight response. People who are wiser and more experienced aren't allowed to speak in the "safe space".

There are two ways I see this playing out. On the one hand, any attempt to lead the thinking of an indoctrinated person is going to be met with insults. For example, trying to teach basic economics is going to be called "manipulation". Or, trying to tell them to that they have an obligation to behave a certain way towards others is going to be dismissed because others have to take "personal responsibility". These are just smokescreens that cover the fact that indoctrinated millenials cannot be reasoned with, cannot be led, cannot be told to do the right thing. When challenged, they block all communication and retreat to a "safe space" where their similarly indoctrinated friends are there to reassure them. Unfortunately for them, reality has a way of breaking through the illusions in the long run.

# Police conclude that University of Virginia rape story was fabricated

**Wintery Knight** · 25 March 2015 · Archived copy · Original

Should we blame women who make false rape charges?

This is the Associated Press story.

They write:

> A four-month police investigation into an alleged gang rape at the University of Virginia that Rolling Stone magazine described in graphic detail produced no evidence of the attack and was stymied by the accuser's unwillingness to cooperate, authorities said Monday.
>
> The article, titled "A rape on campus," focused on a student identified only as "Jackie" who said she was raped at the Phi Kappa Psi fraternity more than two years earlier.
>
> It described a hidden culture of sexual violence fueled by binge drinking at the college. Police said they found no evidence of that either.
>
> […][Police chief] Longo said Jackie's first mention of an alleged assault came without key details, during a meeting she had with a dean about an academic issue in May 2013. The dean brought in police, but the case was dropped because Jackie didn't want them to investigate, Longo said.
>
> In any case, the "sexual act" she described that year was "not consistent with what was described" in the Rolling Stone article.
>
> Almost immediately, news organizations found discrepancies that prompted the magazine to print an apology.
>
> University of Virginia President Teresa Sullivan asked police to investigate, and they called Jackie in for another interview. She showed up with a lawyer and again refused to talk.
>
> […]Investigators spoke to about 70 people, including friends of the accuser and fraternity members, and spent hundreds of hours on the investigation, Longo said. None provided any evidence supporting the claim of a gang rape at the Phi Kappa Psi house. They gathered ample evidence casting doubt on Jackie's claims, he said.
>
> […]The fraternity called the article defamatory and said it was exploring its legal options.

Here's the law:

> § 18.2-209. False publications.
> Any person who knowingly and willfully states, delivers or transmits by any means whatever to any publisher, or employee of a publisher, of any newspaper, magazine, or other publication or to any owner, or employee of an owner, of any radio station, television station, news service or cable service, any false and untrue statement, knowing the same to be false or untrue, concerning any person or corporation, with intent that the same shall be published, broadcast or otherwise disseminated, shall be guilty of a Class 3 misdemeanor.

> Code 1950, § 18.1-407; 1960, c. 358; 1975, cc. 14, 15; 1978, c. 359.

I blogged previously on the three UVA students who challenged the original Rolling Stone story.

# What are some of the arguments against gay marriage?

**Wintery Knight** · 25 March 2015 · Archived copy · Original

Marriage and family

Here are 10 from the Family Research Council. (H/T Dangerous Idea)

The list:

1. **Children hunger for their biological parents.**
2. **Children need fathers.**
3. **Children need mothers.**
4. **Evidence on parenting by same-sex couples is inadequate.**
5. **Evidence suggests children raised by homosexuals are more likely to experience gender and sexual disorders.**
6. **Same-sex "marriage" would undercut the norm of sexual fidelity within marriage.**
7. **Same-sex "marriage" would further isolate marriage from its procreative purpose.**
8. **Same-sex "marriage" would further diminish the expectation of paternal commitment.**
9. **Marriages thrive when spouses specialize in gender-typical roles.**
10. **Women and marriage domesticate men**.

The eleventh one they missed is that a husband's leadership is beneficial to a woman because it gives her direction and balances her emotional highs and lows. It's not politically correct to say what women need from men in marriage, but it's true. Just like men, women have weaknesses that can be corrected and compensated for by the opposite sex. The twelfth one they missed is that same-sex marriage is incompatible with religious liberty, as recent court cases have shown.

Anyway, here are the details on #7:

> **7. Same-sex "marriage" would further isolate marriage from its procreative purpose.**
>
> Traditionally, marriage and procreation have been tightly connected to one another. Indeed, from a sociological perspective, the primary purpose that marriage serves is to secure a mother and father for each child who is born into a society. Now, however, many Westerners see marriage in primarily emotional terms.
>
> Among other things, the danger with this mentality is that it fosters an anti-natalist mindset that fuels population decline, which in turn puts tremendous social, political, and economic strains on the larger society. Same-sex marriage would only further undercut the procreative norm long associated with marriage insofar as it establishes that there is no necessary link between procreation and marriage.

> This was spelled out in the *Goodridge* decision in Massachusetts, where the majority opinion dismissed the procreative meaning of marriage. It is no accident that the countries that have legalized or are considering legalizing same-sex marriage have some of the lowest fertility rates in the world. For instance, the Netherlands, Sweden, and Canada have birthrates that hover around 1.6 children per woman–well below the replacement fertility rate of 2.1.

I chose this one because I wanted to comment.

I think it's common today for men and women to not put the production and development of children *at the center* of their marriage plans. They are not working a financial plan to prepare for children. They are not developing the skills they need to mentor and nurture others. They are resentful of any demands placed on them that restrict their freedom. And they want marriage to be about fun and self-fulfillment. This is not compatible with children, however. And that's the point. The more we redefine marriage to be about adult selfishness – first with no-fault divorce, then with same-sex marriage – the less emphasis there is on the pre-marital preparations for making and raising children.

If you want to know what you should be doing with your life before marriage, then think of the process of having children and raising children. Think of how much it costs, what skills you will need, and how your character has to be trained. Many of the things that you see young people doing these days – binge drinking, hooking up, running up debt, cohabitating, avoiding things that are hard to do – are not preparing their character for the responsibilities, expectations and obligations that people face when they have children.

Suppose you have a friend who is not good at driving a manual transmission car or not good at weight lifting or not good at doing apologetics – are you able to help them do it, or are you incapable of taking responsibility? If you can't take responsibility for helping an adult, you certainly can't take responsibility for a child – children are much less capable. Now are you able to say no to doing things for your own happiness? If you are not able to give up your own happiness – and this is a thing that gets easier as you practice more – then you're liable to look on your duties to your children with resentment – that you are being "manipulated" into it. You don't suddenly learn how to put up with children just by walking down the aisle at a wedding. It takes training to get good at being generous with your time, money and effort. It takes practice.

In fact, a smart man who is courting a woman would be trying to get her to practice the behaviors of a wife and mother before he marries her. And the same for a smart women who is being courted by a man. For example, a man has to comfortable giving things to the people around him – he can't be resentful about it. Even when he doesn't particularly like those people, he has to focus on their needs, think about where he is trying to lead them, and then work a plan to provide for their needs so they get where he wants them to go. If a man doesn't like the feel of caring for others who may not be grateful – or who may even hate him – then he should take steps to prepare his character to learn to like it. When a little kid says "I hate you!" to his father, who is paying thousands of dollars for him to grow up, it's not an easy thing. Always being selfish before you marry is not good preparation for what children will demand of you. This is something I struggle with personally – being content to invest in others who turn out to be ungrateful, and even destructive.

So I think this focus on parenting is a wonderful way for people to work backwards from the goal (healthy, happy, successful children) to the interim tasks and required skills. It helps us to get away from thinking that marriage is about us – our happiness, our needs. Unfortunately, not everyone who runs around telling people that they want to get married "some day" is really taking steps to prepare for marriage and parenting right now. Marriage is a commitment to *self-sacrificially* love another person – however much they change – for the rest of their lives, and to love any children who appear, too. People don't like to read about marriage and think it through. But just saying "I want to marry someday" is not a proof of preparation for marriage, as the divorce rate attests. To get married, you have to train yourself to think of others, and to do hard things that don't make you feel "free" or "happy". There is no path to a successful marriage that does not involve responsibilities, expectations and obligations for husband *and* wife. It's not "happily ever after". It's hard work!

# Are Latter Day Saints (LDS) doctrines supported by philosophy, science and history?

**Wintery Knight** · 25 March 2015 · Archived copy · Original

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

**The scientific evidence**

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end."
> ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It is based on several lines of evidence, and is broadly compatible with Genesis. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo*."
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

**Philosophical problems**

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that although Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

**The historical evidence**

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years

> too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

**Further study**

There is a very good podcast featuring J. Warner Wallace that summarizes some other theological problems with Mormonism that I blogged about before. And if you want a nice long PDF to print out and read at lunch (which is what I did with it) you can grab this PDF by Michael Licona, entitled "Behold, I Stand at the Door and Knock".

# Obama traded 5 Taliban commanders for a soldier now accused of desertion

**Wintery Knight** · 26 March 2015 · Archived copy · Original

The Weekly Standard reports:

> Bowe Bergdahl, the American soldier held captive in Afghanistan by Taliban-affiliated terrorists for nearly five years, will be charged with desertion. Bergdahl was returned to the United States last year in exchange for five Taliban commanders being held at the detention facility at Guantanamo Bay.

Previously, the Weekly Standard reported how his fellow soldiers called him a deserter:

> In an appearance on ABC's *This Week* on Sunday, National Security Adviser Susan Rice claimed that Bergdahl "wasn't simply a hostage, he was an American prisoner of war, taken on the battlefield." She added: "He served the United States with honor and distinction."
>
> "That's not true," says Specialist Cody Full, who served in the same platoon as Bergdahl, and whose tweets over the weekend as @CodyFNfootball offered an early firsthand account of Bergdahl's departure. "He was not a hero. What he did was not honorable. He knowingly deserted and put thousands of people in danger because he did. We swore to an oath and we upheld ours. He did not."
>
> "He walked off—and 'walked off' is a nice way to put it," says Specialist Josh Cornelison, the medic in Bergdahl's platoon. "He was accounted for late that afternoon. He very specifically planned to walk out in the middle of the night."
>
> "He was a deserter," says Specialist Full. "There's no question in the minds of anyone in our platoon."

But Democrat Susan Rice disagrees:

The Weekly Standard:

> President Obama's national security adviser, Susan Rice, said on ABC that Bowe Bergdahl "served the United States with honor and distinction" and that "Sergeant Bergdahl wasn't simply a hostage; he was an American prisoner of war captured on the battlefield."
>
> […]"He is going to be safely reunited with his family. He served the United States with honor and distinction. And we'll have the opportunity eventually to learn what has transpired in the past years, but what's most important now is his health and well being, that he have the opportunity to recover in peace and security and be reunited with his family. Which is why this is such a joyous day."
>
> Elsewhere in the interview, Rice says, "Sergeant Bergdahl wasn't simply a hostage; he was an American prisoner of war captured on the battlefield." She adds, "We have a sacred obligation that we have upheld since the founding of our republic to do our utmost to bring back our men and women who are taken in battle, and we did that in this instance."

"Captured on the battlefield"? "Sacred obligation"?I guess we should not be surprised since she also blamed Benghazi on a Youtube video when it was known from the first instant that it was a terrorist attack defended the swap.

What difference does it make?

But other Democrats praised the terrorists-for-deserter swap as well:

> **Hillary Clinton, Obama's former secretary of state, defended the deal in the days following. Clinton dismissed claims at the time that Bergdahl had deserted as "irrelevant." "We bring our people home," she said. Obama's national security adviser Susan Rice said Bergdahl had served with "honor and distinction."**

> Congressional leaders were effusive in their praise as well.
>
> "Today is a joyful day for our nation," said House minority leader Nancy Pelosi in a May 31 statement. "As Sgt. Bergdahl returns home, we join in celebrating his safe return, and in expressing our gratitude for the relentless dedication of all the service members, intelligence officers, and diplomats who worked so hard to make this day a reality."
>
> Senator Harry Reid of Nevada, then the majority leader, took to the Senate floor on June 4 to castigate Republicans criticizing the exchange. "As the president said, this is not a victory for him. It is a victory for the United States military and our country," said Reid.

Here's Megyn Kelly interviewing the State Department spokeswoman about the charges:

As Megyn Kelly says in the clip at the top, at least 3 of the 5 released Taliban commanders have tried to reconnect with terrorist networks:

> **At least three of the five Taliban leaders traded last year for Sgt. Bowe Bergdahl have tried to plug back into their old terror networks, a government official familiar with the intelligence told Fox News, describing it as an attempt to "re-engage."**
>
> […]The director of the Defense Intelligence Agency recently told Congress that, after that expiration, all his officers can do is warn the U.S. government if the men return to the battlefield.
>
> "I've seen nothing that causes me to believe these folks are reformed or [have] changed their ways or intend to re-integrate to society in ways to give me any confidence that they will not return in trying to do harm to America," Rep. Mike Pompeo, R-Kan., a member of the House intelligence committee, told Fox News.
>
> The official who described the attempts by three to make contact did not identify the men by name. But the evidence came to light through intelligence from liaison services and monitored communications available to the U.S. government.
>
> A defense official did not dispute the claim, emphasizing that one of the men has come "very close, trying to provide advice, council or inspiration" to his terror network, while the other two had not crossed that line.

As Hillary Clinton would say, “what different at this point does it make?”. I guess if you are a Democrat, trading five of our strongest enemies for a deserter makes a lot of sense, how dare we voters think otherwise?

# Kansas Republicans pass law banning dismemberment abortions

**Wintery Knight** · 26 March 2015 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve this message

This good news story of the day is from Life News.

They write:

> The state of Kansas has been a haven for late-term abortions for decades and pro-life advocates there successfully lobbied the legislature to approve new legislation that would help put an end to some of them.
>
> In a move that it tells LifeNews.com will transform the landscape of abortion policy in the United States, National Right to Life announced a major new component of the right to life movement's 2015 legislative agenda with introduction in Kansas of the Unborn Child Protection from Dismemberment Abortion Act. The pro-life group says the wave of pro-life victories in the 2014 election helped set the stage for this first-of-its-kind legislation, which would protect unborn children from the brutality of dismemberment abortion.
>
> "Dismemberment abortion kills a baby by tearing her apart limb from limb," said National Right to Life Director of State Legislation Mary Spaulding Balch, J.D. "Before the first trimester ends, the unborn child has a beating heart, brain waves, and every organ system in place. Dismemberment abortions occur after the baby has reached these milestones."
>
> Now, Kansas has approved the bill.
>
> This morning by a voice vote, the Kansas House gave first round approval to landmark pro-life legislation, Senate Bill 95,"The Unborn Child Protection from Dismemberment Abortion Act."
>
> Kansans for Life Executive Director, Mary Kay Culp, thanked legislators for their diligence in tackling the issue, and enacting a sound law crafted to withstand constitutional scrutimy, that will stop a horrific procedure.
>
> "With the introduction of the bill by lead sponsor, Sen. Garrett Love (R-Montezuma), and 24 Senate co-sponsors, the bill generated immediate grass-roots support and passed the Kansas Senate, 31-9. After a final vote in the House, (possibly later today), SB 95 will head to Gov. Sam Brownback, who has promised his

> signature," Culp said.
>
> Culp explained that SB 95 bans a particularly gruesome abortion method in which a living unborn child in her mother's womb is ripped apart by an abortionist using sharp metal tools. In the words of U.S. Supreme Court Justice Anthony Kennedy, the unborn child, "dies just as a human adult or child would: It bleeds to death as it is torn limb from limb."[Stenberg v. Carhart, 530 U.S. 914, 958-959].
>
> The bill was carried on the House floor by Rep. Steve Brunk (R-Wichita), with assistance on legal areas by former judge, Rep. John Rubin (R-Shawnee) – both pro-life leaders in the House.

This is not the first time that Kansas governor Sam Brownback has come through for pro-lifers.

Kansas governor Sam Brownback

Here are some of his other achievements:

- Brownback Signs Comprehensive Pro-Life Bill
- Brownback Signs Key Pro-Life Conscience Bill
- Brownback Signs Bill Protecting Pro-Life Pharmacists
- Brownback Puts Pro-Life Attorney on State Health Board
- Brownback Signs Bill De-Funding Planned Parenthood
- Brownback Signs Abortion Inspection, Ultrasound Bill
- Brownback Signs Fetal Pain-Abortion Ban

As you might expect, abortions are down in Kansas.

I am a 3-point conservative, not just a social conservative. It really matters to me that a politician support fiscal conservatism and foreign policy conservatism as well. I never used to like Sam Brownback much because he used to be more fiscally liberal. But that all changed when he became governor of Kansas and turned into this tax-cutting machine – and he's cutting government spending, too. Now I can't find a thing wrong with him. He saves unborn babies and returns money to taxpayers, so they can afford to get married and to raise children. Families need the money more than government does.

I think if you're going to make a Democrat cry, it makes sense to make them cry *a lot*. So why not do *all* the things that they don't want you to do?

# Is the acceleration of the universe's expansion compatible with Hinduism?

**Wintery Knight** · 26 March 2015 · Archived copy · Original

Science and Religion

First, a news story – and then we'll see how the accelerating universe relates to the existence of God.

Excerpt:

> Three astrophysicists who discovered that the universe's expansion is accelerating rather than decelerating, as had been expected, win the Nobel Prize in physics.
>
> Adam Riess was sure he'd spotted a blatant error in his results. It was 1997, and the young post-doc's measurements of distant, exploding stars implied that the universe was expanding at a faster and faster rate, instead of slowing down, as he had expected.
>
> It wasn't an error at all. Instead, what was at fault were some basic assumptions about the workings of the universe.
>
> On Tuesday, the Johns Hopkins University astrophysicist received the Nobel Prize in physics for the revolutionary discovery and its implications, along with team leader Brian Schmidt of Australian National University and astrophysicist Saul Perlmutter of UC Berkeley and Lawrence Berkeley National Laboratory, who had reached the same conclusion independently.
>
> At the time of their work, astrophysicists believed that the rate of expansion of the universe — set in motion by the Big Bang 13.7 billion years ago — would be slowing down as matter was pulled together by gravity. The goal at the time was to figure out how rapid the deceleration was.
>
> What the two teams found instead was that the expansion of the universe was accelerating — an observation that could best be explained by the existence of a mysterious "dark energy" that pushes matter farther and farther apart.
>
> Many scientists had thought that, just as the universe started with the Big Bang, it would end with a Big Crunch — with gravity pulling all the matter in the universe inward.

Does anyone remember that week that I wrote those posts about "Why I am not a… <insert some religion here>"? I explained why I was not all kinds of different religions and denominations, including Roman Catholicism, Calvinism, Hinduism, Judaism, Islam, etc. Everyone was offended and we fought about it. Ah, I remember it well.

Now let's apply science to the Hindu religion and see if they go together, especially this new discovery about the expansion of the universe.

**Why I am not a Hindu**

1. Hindu cosmology teaches that the universe cycles between creation and destruction, through infinite time.
2. The closest cosmological model conforming to Hindu Scriptures is the eternally “oscillating” model of the universe.
3. The “oscillating” model requires that the universe exist eternally into the past.
4. But the evidence today shows the the universe, and time itself, had a beginning at the big bang.
5. The “oscillating” model requires that the expansion of the universe reverse into a collapse, (= crunch).
6. In 1998, the discovery of the year was that the universe would expand forever. There will be no crunch.
7. Therefore, the oscillating model is disconfirmed by observations.
8. The oscillating model also faces theoretical problems with the “bounce” mechanism.

So that’s one reason why I am not a Hindu. And now we have more scientific confirmation that there is no cycle of universes coming into being and going out of being.

The absolute origin of the universe out of nothing is also incompatible with Buddhism and Mormonism and maybe other religions. They also require an eternally existing universe.

**And modern cosmology disagrees with atheism, too**

I think it’s important for all of you to be familiar with the scientific evidence for the Big Bang. It will help you with your cosmological argument, and it will help you to refute many, many other religions that require eternal universes, including atheism.

I wrote about how the Big Bang cosmology falsifies atheism before.

Excerpt:

> According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: “Religious humanists regard the universe as self-existing and not created.”). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing*. The Big Bang has been confirmed by experimental evidence such as redshift measurements, light element abundances and the cosmic microwave background radiation. This falsifies eternal models of the universe, which are *required* by atheist Scriptures.

The experimental evidence that confirms the Big Bang creation out of nothing falsifies many worldviews. Those who care about evidence will have to choose some other religion that is compatible with what we know from science today.

# How to respond to complaints about Indiana's new religious freedom law

**Wintery Knight** · 27 March 2015 · Archived copy · Original

Good news to start your day!
First, the story, from the Daily Signal:

> A bill known as the Religious Freedom Restoration Act has been signed into law by the governor.
>
> Supporters of Indiana Senate Bill 101 say that the law protects the free practice of religion, and opponents say the law will allow gay and lesbian individuals to be discriminated against.
>
> **For example, the law could permit business owners who felt that being forced to serve a certain customer in a particular case violated their religious beliefs to appeal to a judge. The courts would then decide if their objection was valid or not.**
>
> The bill was passed by the House 63-31 on Monday, and was approved by the Senate 40-10.
>
> Gov. Mike Pence, R-Ind., approved the legislation today.
>
> "Indiana is rightly celebrated for the hospitality, generosity, tolerance and values of our people, and that will never change," Pence said in a statement. "Faith and religion are important values to millions of Hoosiers and with the passage of this legislation, we ensure that Indiana will continue to be a place where we respect freedom of religion and make certain that government action will always be subject to the highest level of scrutiny that respects the religious beliefs of every Hoosier of every faith."

This is the key part:

> **Sarah Torre, a policy analyst at The Heritage Foundation, told The Daily Signal that the bill is modeled off of the federal Religious Freedom Restoration Act of 1993, which passed with bipartisan support and was signed into law by President Bill Clinton.**
>
> The federal law "prohibits substantial burdens on religious exercise unless the government can show a compelling interest in burdening religious liberty and does so through the least restrictive way possible," said Torre. "Protections for religious freedom, like the one passed in Indiana, provide a commonsense way to balance the fundamental right to religious liberty with compelling government interests."
>
> **Torre said that it's important to note that the law "doesn't allow individuals to do whatever they wish in the name of religion:"**

> "The law is simply a commonsense way of balancing government interests with the fundamental freedom of individuals to live out their faith. There will be times when a state or federal government can show it has a compelling reason for burdening religious expression—to ensure public safety, for instance. But Religious Freedom Restoration Acts set a high bar for the government to meet in order to restrict religious freedom."
>
> Such legislation at the state and federal level merely protects First Amendment rights, according to Torre.
>
> "A robust conception of religious liberty provides every person the freedom to seek the truth, form beliefs, and live according to the dictates of his or her conscience—whether at home, in worship, or at work," said Torre.
>
> **Torre added that 19 other states have similar laws.**

And if that were not enough, here is an Indianapolis Star editorial from law professor at Indiana University School of Law – *who supports same-sex marriage* – who is in favor of Indiana passing the bill.

He writes:

> I am a supporter of gay rights, including same-sex marriage. But as an informed legal scholar, I also support the proposed Indiana Religious Freedom Restoration Act (RFRA).
>
> […]The bill would establish a general legal standard, the "compelling interest" test, for evaluating laws and governmental practices that impose substantial burdens on the exercise of religion. This same test already governs federal law under the federal RFRA, which was signed into law by President Bill Clinton. And some 30 states have adopted the same standard, either under state-law RFRAs or as a matter of state constitutional law.
>
> […]But granting religious believers legal consideration does not mean that their religious objections will always be upheld. And this brings us to the issue of same-sex marriage.
>
> Under the Indiana RFRA, those who provide creative services for weddings, such as photographers, florists or bakers, could claim that religious freedom protects them from local nondiscrimination laws. Like other religious objectors, they would have their day in court, as they should, permitting them to argue that the government is improperly requiring them to violate their religion by participating (in their view) in a celebration that their religion does not allow.
>
> But courts generally have ruled that the government has a compelling interest in preventing discrimination and that this interest precludes the recognition of religious exceptions. Even in the narrow setting of wedding-service providers, claims for religious exemptions recently have been rejected in various states, including states that have adopted the RFRA test. A court could rule otherwise, protecting religious freedom in this distinctive context. But to date, none has.
>
> In any event, most religious freedom claims have nothing to do with same-sex marriage or discrimination. The proposed Indiana RFRA would provide valuable guidance to Indiana courts, directing them to balance religious freedom against competing interests under the same legal standard that applies throughout most of the land. It is anything but a "license to discriminate," and it should not be mischaracterized or dismissed on that basis.

What the secular leftists in the media are saying is that the law gives religious people the right to reject any customer for any reason. Big businesses, which are overwhelmingly leftist, are also reacting the same way. The truth – as we saw above – is nothing like what the secular leftists are saying. The law is simply an echo of a federal law that already exists and was signed by Bill Clinton. Well done, Indiana. Well done, Republican legislators. Well done, Governor Mike Pence.

# If you accept Jesus and become a Christian, will God make you happy?

**Wintery Knight** · 27 March 2015 · Archived copy · Original

Navy SEAL Matthew "Axe" Axelson

This is a wonderful, wonderful post from Amy Hall, who writes for the Stand to Reason blog.

She writes:

> I had a brief interaction with an atheist on Twitter a couple of weeks ago that unexpectedly turned to the issue of suffering when she said:
>
> You clearly never had a time you were hurt. I don't mean sick. I don't mean heart broken. I mean literally a near death experience or rape or abusive relationship…. You can keep floating on a [expletive] cloud thinking Jesus will do everything for you but it's a lie. What makes you so special?
>
> That surprised me at first because it didn't seem to have anything to do with the tweet she was responding to, and I was confused as to why she would assume I'd never been through anything traumatic. But then in subsequent tweets, when she revealed she had been raped, it became clear that her trauma had played a central role in her becoming an outspoken, obviously angry "antitheist." She's a self-described antitheist now because she thinks Christianity teaches Jesus "will do everything for you" to give you a perfect life, and now she knows that's a lie. The rape proved her understanding of Christianity false.
>
> So it made sense for her to reason that since I believe Christianity is true, I must still be under the delusion that Jesus is making my life special, which means I obviously never encountered any evil or suffering to shake that delusion.

All right, readers. I don't want any of you to be thinking that if you become a Christian that these things should be expected to happen:

- you will feel happy all the time
- you will be able to sense God's secret plan for your life through your feelings
- God's secret plan for your life will automatically work, even though it's crazy
- God will give you a perfect spouse and lots of money without you having to do any work
- you get permission to do things that that make you happy, even if they are expressly forbidden by the Bible
- you don't have to do anything that makes you feel bad (e.g. – go to work), because God wants you to be happy

No! Where do people get this idea that if they convert to Christianity, then God will become their cosmic butler?

Amy has the answer: (emphasis mine)

> Hear me, everyone: **This is a failure of the church.**
>
> A friend of mine who was deeply suffering once said to me that many Christians are in for "an epic letdown" when they realize their preconceived notions about what God is expected to do for us are false. Pastors who preach a life-improvement Jesus are leading people down this precarious path to disillusionment.
>
> If suffering disproves your Christianity, you've missed Christianity. The Bible is filled with the suffering of those whom God loves. The central event of the Bible is one of suffering. Love involves suffering. "We know love by this, that He laid down His life for us; and we ought to lay down our lives for the brethren." That means suffering.

It's the church. It's all the singing about happy things and having of happy feelings and happy preaching designed to make us feel good. I would say the comforting devotional reading doesn't help to make us any tougher or more practical, either. People seem to use Bible study and devotion as a way to artificially create good feelings of happiness, peace and comfort, instead of just *doing hard things to serve God*. I don't think it's a "spiritual" Christian thing to read A. W. Tozer, etc. just so that you can feel comforted and spiritual. That stuff just gives you a false sense of safety about your precarious situation. God's job is not to prevent you from suffering. In fact, even if you make really smart, practical decisions, you can expect to get creamed *anyway*.

Please take 15 minutes and read the book of 1 Peter in the New Testament.

Here's a summary from GotQuestions.org:

> **Purpose of Writing:** 1 Peter is a letter from Peter to the believers who had been dispersed throughout the ancient world and were under intense persecution. If anyone understood persecution, it was Peter. He was beaten, threatened, punished and jailed for preaching the Word of God. He knew what it took to endure without bitterness, without losing hope and in great faith living an obedient, victorious life. This knowledge of living hope in Jesus was the message and Christ's example was the one to follow.
>
> **Brief Summary:** Though this time of persecution was desperate, Peter reveals that it was actually a time to rejoice. He says to count it a privilege to suffer for the sake of Christ, as their Savior suffered for them. This letter makes reference to Peter's personal experiences with Jesus and his sermons from the book of Acts. Peter confirms Satan as the great enemy of every Christian but the assurance of Christ's future return gives the incentive of hope.
>
> **Practical Application:** The assurance of eternal life is given to all Christians. One way to identify with Christ is to share in His suffering. To us that would be to endure insults and slurs from those who call us "goodie two shoes" or "holier than thou." This is so minor compared to what Christ suffered for us on the Cross. Stand up for what you know and believe is right and rejoice when the world and Satan aim to hurt you.

Recently, I blogged about how suffering is compatible with an all-powerful God, so you might want to read that too if you missed it.

# Scott Walker discusses foreign policy and national security with Hugh Hewitt

**Wintery Knight** · 27 March 2015 · Archived copy · Original

Wisconsin Governor Scott Walker

Hugh Hewitt is a horrible RINO Republican establishment guy (backed Romney), but I sometimes listen to his show.

I got this audio and transcript from Hugh Hewitt's blog.

The MP3 file is here. (19 minutes)

And here are the relevant parts of the transcript:

> HH: You mentioned today, you called it "the safety issue," not the "national security issue," that sort of brings, explain to people why you use that terminology.
>
> SW: I do, because I think it's come to the forefront not so much because "national security," that, to me, as I said [at lunch], is on page 6A of the newspaper where only a handful of us read into that. But when people see the videos, when they see the Jordanian burned alive in a cage, when they see the Egyptian Christians who were beheaded, when they see some of these other folks from around the world, including James Foley, who went to Marquette University where my son's a junior, and suddenly, that becomes very real to everyday Americans.
>
> HH: One of the beheaded Islamic State videos.
>
> **SW: Absolutely, whose parents are actually from New Hampshire, not far from where I was at a weekend ago, and you just realize, you can see it on your phone, you can see it on your iPad. You don't need the filter of the network news or the daily newspaper to tell you how bad this is. It suddenly becomes an issue of safety, because that's not something, national security, foreign policy is something over there. Safety is something you feel inside your chest, you feel in your heart. And I think increasingly, Americans feel a sense of concern that particularly if they have family members or loved ones that ever want to travel again, they see France, they see Canada, they see other places around the world, not just the Middle East, and it's a safety issue. And they, and then I would just add to this, as they look at this more closely, they see a president whose drawn a line in the sand and crossed it, who called ISIS just a year ago the "jayvee squad," who called Yemen last fall a success story, who calls Iran now a place where we can do business. Think about how screwed up that is. I remember the movie in the 80s, Trading Places…**

HH: Right.

SW: …you know, with Dan Akroyd and Eddie Murphy, it's like Iran and Israel are trading places in the sequel. In the eyes of this president, our ally is supposed to be Israel. Our adversary has been historically Iran. And yet this administration completely does it the other way around. We need to call radical Islamic terrorism for what it is, and a commander-in-chief who's willing to act.

HH: Now I asked maybe one of your potential competitors yesterday, Senator Marco Rubio, who I know is a friend of yours.

SW: Good guy, yeah.

HH: I asked him yesterday would you disown and agreement that this president signs with Iran that leaves Iran uranium enrichment. What's Scott Walker think about the deal, because that's the outline, it appears?

SW: Absolutely.

HH: Would you reject that deal if you took the Oval Office?

**SW: Absolutely, on Day One. I mean, to me, it is, the concept of a nuclear Iran is not only problematic for Iran, and certainly for Israel, but it opens the doors. I mean, the Saudis are next. You're going to have plenty of others in the region. People forget that even amongst the Islamic world, there is no love lost between the Saudis and the Iranians. And so they're going to want to have a nuclear weapon if the Iranians have a nuclear weapon. This is something that just escalates right before our eyes. And the fact that this administration began these discussions essentially conceding that they're going to allow enrichment to go forward with the Iranians just shows you that they don't have the same level of concern that I think I and Senator Rubio and many others out there have, that a nuclear Iran is a problem for the entire world, not just for Israel.**

HH: Does the rising of these headlines, Saudi Arabia may be going to war with Yemen before this broadcast is over, if some of these Reuters reports are true.

SW: Right.

HH: And the Quds Force general is in Tikrit, right? So the world's on fire. Does this hurt a governor's claim to the presidency and elevate perhaps senators who have been there or other people who have been abroad and done that sort of thing? Or does it help you?

SW: Well, I think leadership is the fundamental ingredient that's important in anything, particularly when it comes to foreign policy. And I won't belittle any of the other would-be candidates. I would say, though, that my lifetime, the most significant president when it comes to foreign policy was a former governor, Ronald Reagan. The most faulty president, I would argue, when it comes to foreign policy and national security is a first term senator by the name of Barack Obama, who was on the Foreign Affairs Committee. And so, just those qualifications alone aren't enough. Now again, I think Senator Rubio and I are very much aligned on these issues. I agree with a number of my other colleagues who might be prospective candidates should I and others get into the race in the future. What people need to look at is what do you bring to the table, who do you surround yourself with, what kind of leadership style do you have, and people, I think in this case in particularly, not just in the travels and the studies, need to know how you think. In this case, I think Americans more than anything want a commander-in-chief of the future who does a couple of things – 1) calls out radical Islamic terrorism for what it is, and says we will do whatever it takes to take the fight to them before they bring the fight to us, because unlike the Cold War, when containment was enough, when the Soviet Union and the United States could have leaders like Gorbachev and Reagan talking about containment, that's not enough. When you have, not only with ISIS and al Qaeda, but you have an Iran, you have other places around the world groups that that want to not only annihilate Israel, but annihilate us in America, it's like a virus. You've got to eradicate it. You can't take out part of it, or it will come back.

HH: You also have people like Putin, Governor Walker…

> SW: Absolutely.
>
> HH: …who are pushing everywhere, and we've got Baltic allies. And people are wondering whether or not we'd actually come to their defense if Putin pushes into Estonia or Latvia or Lithuania. What do you think?
>
> **SW: We absolutely have to. I mean, NATO is the strongest military alliance we've had in history. It was part of, through Reagan's leadership, but certainly part of the ingredient that allowed us to win the Cold War without firing a shot. If we don't defend NATO members in a scenario like that, now I think we preempt that by showing strength in even dealing with Ukraine, which is not a NATO member, but is very much geographically aligned with what we're talking about. Remember, Putin isn't just aggressive for the sake of being aggressive. He's a nationalist. He believes in the history of Russia and the old Soviet Union. Part of what you see here is the old Lenin adage that you probe with bayonets. If you find mush, you proceed. If you find steel, you withdraw. Well, in Ukraine, he's found mush, and he's found mush not only from the United States, but from others like, others and NATO partners out there. If it were to extend, and my belief is we need a president who's going to act aggressively by giving lethal force to the Ukrainians and others to try to preempt that from happening. But a couple of weeks ago, I met with the president of Estonia. Certainly, we saw a week ago the Lithuanian leadership is literally giving out literature telling their own citizens what to do if Russians invade. Latvia, I just talked to someone the other day whose mother immigrated here from Latvia, and in each of those Baltic states, there are real serious concerns about what happens if we don't deal with this in Ukraine. We need American leadership not just for America's sake, but for the world.**

If you find that interesting, listen to the whole thing or read the transcript. He also talks about education reform, if you're into that. I am.

We don't talk much about foreign policy as Christians, but it is important for us to understand it in order to promote the good, and achieve good results. We can't just be led by our feelings, we have to do what works, and that requires understanding how the world works.

# SATIRE: Unemployed Gender Studies Major Sues 'The Patriarchy'

**Wintery Knight** · 28 March 2015 · Archived copy · Original

From the Daily Currant.

Excerpt:

> An unemployed gender studies major from Eugene, Ore. sued "The Patriarchy" today in federal court for refusing to give her a job.
>
> In a 25-page brief, attorneys for Sarah Miller-Jones, 24, argue that gender discrimination from the patriarchy has prevented their client from finding gainful employment since she graduated from university three years ago.
>
> The suit seeks $2 million in compensation and $139 million in punitive damages, which together equal $1 from every adult man in America.
>
> "Despite the fact that Ms. Miller-Jones graduated with a 2.8 GPA from the prestigious University of Oregon, she has been unable to find a job fitting her qualifications," the document reads.
>
> "Ms. Miller-Jones has been on unemployment benefits for 18 months. And despite extensive coursework in Zambian feminist hip-hop she has only received six job offers — all of which were for entry-level call center and health care positions.
>
> "It is outrageous that the patriarchy refuses to offer our client a decent career. She has applied for over 20 positions in the recording, publishing and television industries and has been rejected every single time.
>
> "We all know that terms like 'no experience' and 'lack of relevant education' are codewords the patriarchy uses to keep keep women in their place. But Ms. Miller-Jones refuses to be a housewife or a nurse. She deserves a real job."
>
> Millions of young Americans who recently graduated from university are finding themselves working in jobs below their educational level.
>
> Media reports have tended to blame the slow recovery from the Great Recession for the trend. However, an equally important factor is the fact that the American university system turns out too few graduates with employable skills.
>
> There are an estimated 3 million open jobs in the United States that go unfilled due to a lack of qualified candidates. Many of these jobs are in science and engineering, while the most popular majors for U.S. college graduates are in psychology and the liberal arts.
>
> According to a former employer, Miller-Jones' gender studies degree actually hurt her employability. Gilbert Grass manages a call center for a local credit union in Eugene and says he regrets hiring her straight out of college.
>
> "She refused to use the words 'he' or 'she' when talking to customers," he says. "That lead to a lot of confusion. And she once gave a customer who called to check her bank balance a 20-minute lecture on how the film *Toy Story* perpetuated gender-specific archetypes of heroism.

I'm sorry, but this just makes me laugh so hard. I just want to remind everyone that this is satire. Not real! Not real!

# William Lane Craig debates Austin Dacey: Does God Exist?

**Wintery Knight** · 28 March 2015 · Archived copy · Original

Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

**The debaters:**

- William Lane Craig
- Austin Dacey

**The video:** (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

**Dr. Craig's opening statement:**

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

**Dr. Dacey's opening argument:**

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

**One final point:**

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

# Are evangelism and human responsibility for sin rational in Calvinism?

**Wintery Knight** · 29 March 2015 · Archived copy · Original

Here is a quote from Dr. Craig that seems to get Calvinists so angry:

> "The counterfactuals of creaturely freedom which confront Him are outside His control. He has to play with the hand He has been dealt."
>
> (Source)

Calvinists have told me that this quotation from Dr. Craig is "heretical" or "borderline heretical". They are claiming that Dr. Craig thinks that God is lacking in power somehow. But why is God's power limited, according to this quote?

Well, it's because God respects FREE WILL. That quote is simply Dr. Craig's way of saying that God does not override the free will of his creatures.

So let's make sense of Craig's statement. Either there is determinism and God causes people to act, or humans have free will and they cause themselves to do things. If you do not cause yourself to act, then you are not responsible for what you do. Just think for a minute. If I push you into someone and you fall into them and then they fall off a cliff, then are you a murderer? No – I would be, because I am the cause. The Bible teaches that God has chosen to limit his power so that that people have genuine responsibility for their actions, and that means they have genuine free will. Humans can only be responsible for their sins if they have the ability to do other than they do, and this is the traditional Christian view.

It's true that human beings are totally depraved as a result of the fall, and do not want God in their lives, but they are responsible because God wants them to be saved, and it is their free choice that prevents it. Rather than force humans to love him against their will, God lets them resist him, and so they are responsible for their sin.

Dr. Craig cites the famous Calvinist D. A. Carson (who I like) explaining some of the themes of the Bible that affirm robust free will and human responsibility:

> The classical Reformed [scholars]… acknowledge that the reconciliation of Scriptural texts affirming human freedom and contingency with Scriptural texts affirming divine sovereignty is inscrutable. D. A. Carson identifies nine streams of texts affirming human freedom: (1) People face a multitude of divine exhortations and commands, (2) people are said to obey, believe, and choose God, (3) people sin and rebel against God, (4) people's sins are judged by God, (5) people are tested by God, (6) people receive divine rewards, (7) the elect are responsible to respond to God's initiative, (8) prayers are not mere showpieces scripted by God, and (9) God literally pleads with sinners to repent and be saved (*Divine Sovereignty and Human Responsibility: Biblical Perspectives in Tension,* pp. 18-22). These passages rule out a deterministic understanding of divine providence, which would preclude human freedom.

On Calvinism, however, all of these 9 features of reality, supported by dozens and dozens of Bible passages, are all false. On Calvinism, God is the sole causal agent. There is no free will. People go to Heaven or Hell as a choice of God. People can only perform good actions if God acts unilaterally to "regenerate" them, making obedience to God possible. Calvinism teaches that God and his agents are constantly exhorting and commanding things that they literally cannot do because they are unregenerate, and the only way to get regenerate is for God to regenerate them, *against their will*. And they can't resist that.

So let's make sense of D.A. Carson's list of 9 items:

1. On Calvinism, when God or his agents exhort or command people to perform good actions, it's meaningless because God has to unilaterally regenerate them first, so that they can perform the good actions.
2. On Calvinism, when God or his agents tell people to obey, believe and choose God, it's meaningless because God has to unilaterally regenerate them first, so they can obey, believe and choose God.
3. On Calvinism, when people sin and rebel against God, it's like people are soda cans that God shakes up some of them, and then pops the tabs on all of them and the ones he shook up fizz.
4. On Calvinism, when God judges people for sinning, it's like God sends the cans who don't fizz to Hell for eternity, even though he unilaterally chose not to shake them, which is the only way they could fizz.
5. On Calvinism, when God tests people, it's meaningless, because there is no way they can pass the tests unless God unilaterally regenerates them first, so they can pass the test.
6. On Calvinism, when people receive divine rewards, it's meaningless, because all the credit goes to God for regenerating them. They are just fizzing because he shook the can.
7. On Calvinism, when people respond to God's initiative, it's meaningless, because God's regeneration is irresistible and irrevocable. They can do nothing other than fizz when he shakes the can.
8. On Calvinism, when people pray, it's meaningless, because God unilaterally decides whether to regenerate people or not, and all their fizzing comes solely from his decision to shake or not shake the can.
9. On Calvinism, when God pleads with sinners to repent and be saved, it's meaningless, because God has to unilaterally regenerate them before they can repent.

Here's William Lane Craig to explain it further in an answer to a question of the week from Dr. Craig's Reasonable Faith web site.

5 problems:

1. *Universal, divine, causal determinism cannot offer a coherent interpretation of Scripture.*
2. *Universal causal determinism cannot be rationally affirmed.*
3. *Universal, divine, determinism makes God the author of sin and precludes human responsibility.*
4. *Universal, divine, determinism nullifies human agency.*
5. *Universal, divine determinism makes reality into a farce.*

If God's choice, to regenerate or not, causally determines whether we can respond to him, or not, then that is *determinism*. And it makes our lives *meaningless* because we are not responsible for anything we do. Life is a puppet show, and there is only one person pulling the strings. Evangelism makes no sense, because God decides unilaterally and irrevocably who is saved. When I explain this to Calvinists, their response is that God commands us to evangelize, so we must even if it *makes no sense on their view.*

A Calvinist might respond to this defense of free will and human responsibility with passages from Romans 8 and 9, but those are best understood as speaking about corporate election, rather than unilaterally-determined selection. Membership in the elect group is based on people responding to God's drawing of them to him. That interpretation fits with the rest of the Bible, which is uniformly affirmative of human free will and human responsibility. Concerns about diminished divine sovereignty are resolved by middle knowledge, in which God chooses to actualize exactly the world that achieves his sovereign will out of all the possible worlds, and he saves exactly the people he chooses to save – but without violating their free will. Yes, it's cosmic entrapment, but at least the cosmic entrapment does not violate the free will of the creatures, which would render then irresponsible for their own sins.

Disclaimer: I don't think that this is an issue that should divide Christians, and I do think that Calvinists are most definitely Christians. And that they are very devout and intelligent Christians, too.

If you are looking for a good book on this issue, I recommend Kenneth Heathley's "Salvation and Sovereignty", which is a thorough discussion of the problem of divine sovereignty and human freedom.

# Is marriage boring? Why are some women bored by marriage?

**Wintery Knight** · 29 March 2015 · Archived copy · Original

***In this post, when I refer to women, I am referring to young, unmarried women under the age of 35 who have been influenced by feminism to reject goal-directed marriage.***

My pastor gave a sermon recently where he talked about 2 Tim 2:3, and he emphasized that in order to be useful for God, you have to be willing to "flee from youthful lusts".

2 Tim 2:20-23:

[20] Now in a large house there are not only gold and silver vessels, but also vessels of wood and of earthenware, and some to honor and some to dishonor.

[21] Therefore, if anyone cleanses himself from these *things*, he will be a vessel for honor, sanctified, useful to the Master, prepared for every good work.

[22] Now flee from youthful lusts and pursue righteousness, faith, love *and* peace, with those who call on the Lord from a pure heart.

[23] But refuse foolish and ignorant speculations, knowing that they produce quarrels.

The pastor asked everyone to consider what they were like when they were young, but not to yell it out for everyone to hear. Then he listed out some of the characteristics of youth. They are impractical. They are thrill-seekers. They are self-centered. They want to pursue selfish pleasures. They want to be the center of attention.

**My marriage plan is boring**

As I was listening to the sermon, it reminded me of my experiences dealing with Christian women in campus clubs and churches. My approach with Christian women was always to lay out my plans, and then explain what I had already done to prepare for those plans, and then ask them to build skills in a mentoring relationship with me, while deciding whether we were compatible for marriage. It's understood that I am presenting a complementarian plan here, that I would be the leader of the marriage and family. The customer of the marriage would of course be God, and not my wife or I, nor the children.

Let's just quickly review what I would tell them and see if it's boring or not.

So here's the plan:

1. Influence the church with apologetics (teach apologetics classes, bring in speakers, organize conferences, etc.)
2. Influence the university with apologetics (support campus clubs, bring in speakers, organize conferences, open house to students, etc.)
3. Influence the public square (advocate for pro-family policies, lower taxes, smaller government, religious liberty, peace through strength, etc.)
4. Raise effective and influential children who are excellent students and who are motivated to enter fields that matter and earn PhDs.

And here are some things I learned over the years from presenting this plan to marriage candidates.

**Red flags when choosing a candidate**

I really recommend that if you are looking for a wife, you should prefer to interview women who did not have a "wild" period of drinking, hooking up and cohabitation with atheists. Chastity really does matter – even if the woman became unchaste as a non-Christian before returning to Christianity, it will affect her ability to trust you, be vulnerable to you, let you lead her, be content with marriage and family, and in some cases to even remain faithful to you. In my experience the damage done from recreational premarital sex is still detectable after the conversion,

and the women involved are unable to articulate why what they did was wrong, and what has been lost. In short, they are not remorseful.

Make sure she has done hard things in her life that have taught her that objective reality trumps her feelings and intuitions. You should prefer a woman with a STEM degree or a trade certification, no student loans, a job related to her degree, savings of her own – and someone who is not still living at home at age 30. If you want to put God first in the marriage, then you want to avoid someone who wants to redirect your time and money to fun and thrill-seeking.

You need to find a woman who is not "bored" by the duties and challenges of being a wife and mother. And you need to make sure to stress her with challenges during the courtship to make sure that she understands that marriage is about serving God, not about serving herself. When a woman has made all of her decisions using her emotions, and has achieved nothing, it does not bode well for her ability to make plans, stick to plans and achieve goals. It also does not help her to respect your plans and achievements. She will look at all your strengths (education, profession, savings, Christian influence) and think it is nothing impressive unless she has experienced sacrifice to achieve goals herself.

The main point is that a woman who has never had to do anything hard and achieve goals over the long-term has NO RESPECT for men who have done these things. Respect is what you need in order to lead. And you need to be in the lead in order for the marriage to work.

You want to avoid a woman who complains that home life is boring, that predictability and routine and safety are boring. You want to avoid a woman who disdains the humdrum of day-to-day earning money in an office building and saving money rather than blowing it on expensive things and one-shot thrills. You want to avoid women who rebels just for the sake of rebelling. You want to avoid women who resent anyone who tells them to be prudent, cautious, modest, etc. You want to avoid women who don't get along with their fathers, who don't see the value of benevolent authority. You want to avoid women who don't have a track record of doing the hard work needed to achieve goals (e.g. – women who avoid STEM degrees). You want to prefer a woman who has the desire for achievement in the service of God more than the desire for pleasure or attention. You want to pick someone with a demonstrated ability to care for and nurture others in a goal-directed way, not someone whose relationships are more about getting her needs met.

**The perception of "spiritual maturity"**

Many Christian women who have been raised in a Christian home, who have prayed, done Bible studies, read A.W. Tozer, listened to sermons, and gone to AWANA and Sunday school have a very warped view of spiritual maturity. What the Christian home and the church teaches young women is that religion should be about their feelings. Private devotional reading and Bible study are much better (in their eyes) than preparing for public debates or sponsoring public lectures at a university. This is the feminized view of spiritual maturity that you find in the church, and this is how many Christian women judge the spiritual maturity of men.

I recommend that you find a woman who has an outward-focused practical view of Christianity and who respects action and results, not private piety and feelings. A great test for "outward-focusedness" in a woman is whether she has ability in evidential apologetics, especially science and to a lesser degree, history. Apologetics has value in Christianity because it is the thing that makes you resistant to suffering and disappointment with God. And the more evidence-based it is, the better. Reading "Signature in the Cell" is millions of times more effective than anything written by people like C.S. Lewis or G.K. Chesterton.

**Is marriage primarily about the woman's happiness?**

Here is my list of courting questions that I use to detect women who will be bored by marriage. If you suspect that a woman is more focused on her own happiness than making the marriage count for God, then you just have to ask her these questions. If she gets angry and refuses to answer or learn how to answer them, then she's self-centered and wants fun and thrills. Move on to the next one.

Understand that some young, unmarried women today who identify as Christian have these fun-seeking, thrill-seeking skeletons in their closets and that it seriously undermines their ability to perform “boring” marriage and parenting roles. Do not listen to them when they say they want to be married “some day” when all they are doing *now* is seeking pleasure apart from marriage and family as their fertility clock ticks away. Then they don’t really want it. Women say “some day” because they want to present themselves to others a certain way, but some women say that while really just wanting to indulge their emotions, have a good time, and never sacrifice for the future.

Many Christian women tend to draw their their standards for what will make them happy from the culture and from their peers. Whatever they claim to believe on Sunday, their actions the rest of the time are going to be inline with the culture and their peers. So pay attention to their actions, not their words. The words are designed to paint a picture for others to think well of them, but the actions show what their priorities really are.

# Adult children of gay parents testify against same-sex marriage at Supreme Court

**Wintery Knight** · 30 March 2015 · Archived copy · Original

Marriage and family

This story is from the Washington Times. (H/T William)

They write:

> Six adult children of gay parents have filed briefs with the U.S. Supreme Court to dissuade the justices from legalizing same-sex marriage, citing their childhood experiences.
>
> The group and their attorney — David Boyle of Long Beach, California — were in Washington on Friday to visit congressional offices and meet with scholars and advocacy groups. Mr. Boyle and five of the adult children sat for a short interview with The Washington Times.
>
> "We don't have childhoods," said Dawn Stefanowicz, who grew up with two brothers in a chaotic world dominated by their gay father and his many lovers.
>
> "There were no safe boundaries in my home," said Denise Shick, who explained in her amicus brief how her transgender father spied on and fondled her, stole her clothes and tried to step into her shoes because, as a girl blossoming into womanhood, she was the very thing he wanted to be.
>
> Robert Oscar Lopez, founder and president of the International Children's Rights Institute, noted that judges often have asked attorneys if gay marriage "harms" anyone. The answer to that question is in the briefs and other publications, said Mr. Lopez, who was raised by his lesbian mother and her partner. He filed a brief with colleague B.N. Klein, who grew up with her lesbian mother and her partners.
>
> The briefs reveal children's struggles with gender confusion, pressures to conform to gay values and attitudes, and feelings of isolation and sadness without being able to talk about those things with anyone.
>
> The inconsolable longing for the "missing" parent is another common theme.
>
> "When you have kids, all of a sudden it hits you," said Mr. Lopez, who reconnected with his biological father in his late 20s.
>
> If the Supreme Court "rules to redefine marriage, it rules to redefine parenthood as well," Katy Faust and Heather Barwick wrote in a joint brief.
>
> The women, who both grew up with loving lesbian mothers, said they realized gay marriage is wrong for kids when they saw their husbands interact with their children.
>
> "Adult desires do not trump child rights," Ms. Faust said.

> There's "no reason to write out of civil code the need for a mother and a father," she said. "This court must either side with adult desires or side with children's rights. But it cannot do both."

Indeed – that is the issue. It's a conflict between adult selfishness and children's needs.

I found a very moving long-form essay at The Public Discourse by one of the women mentioned in the news story above.

Denise Shick writes:

> What was your biggest concern when you were nine years old? Was it trying to memorize your multiplication tables? Was it that the school cafeteria might serve your least favorite vegetable at lunch? Perhaps it was something more serious; perhaps your parents were talking of getting divorced. My biggest concern at age nine was how to keep my daddy's secret, the one he revealed to me as we sat alone on a hill near our home. In a sense, I lost my dad that day, when he told me he wanted to become a woman.
>
> […]His confessions left me confused and hurt. After all, I just wanted a dad who would love and cherish me, who would make me feel special as a daughter. I felt rejected and abandoned by my own father. By the time I was eleven, my dad had begun to abuse me emotionally and sexually. Even so, I continued to keep my dad's secret locked away, deep down in my heart.
>
> My dad created a home environment that made me feel as if I was walking on pins and needles. His resentment over my possession of what he so deeply desired for himself—a woman's body—turned into anger and abuse. As his desires intensified, he began to borrow my clothing. Many times I discovered my underclothes and tops under bathroom towels, or in the attic—often in places I had not been. I learned to organize my clothes just so, in order to know if he had been in my dresser drawers. When I confirmed that he'd worn an article of my clothing, I simply could not bring myself to ever wear that item again.
>
> As an adolescent, I had to be careful about how I dressed. I always had to ask myself how he would react to my outfit. Would it make him so envious that he'd "borrow" it (without my consent, of course)? I began to hate my body. It was a constant reminder of what my father wanted to become. When I began to wear makeup, I had to block out the images I had of him applying makeup or eye shadow or lipstick. He was destroying my desire to become a woman.
>
> I looked elsewhere for comfort. Attending school dances and overnights at friends' homes gave me opportunities to seek some emotional escape through alcohol. Even on school days, a friend and I sometimes met in a school restroom to share bottles of Jack Daniel's. I desperately tried to fit in, but the truth is I was hurting.
>
> I was so hungry to have my father's love and attention that I tried to fill that void in other ways. I had thirteen boyfriends in seventh grade alone. I also tried, futilely, to soothe my hurting heart with alcohol. By age fifteen, I was struggling with my own sexuality and gender. I began to seriously consider taking drugs, but God had another plan.

I really recommend reading her essay from top to bottom if you want to understand the same-sex marriage issue. The guy who rescues her from her father (and the mother who chose to marry him) is an absolute hero, in my opinion.

Anyway, back to same-sex marriage. The last time we redefined marriage, we removed the presumption of permanence by allowing any spouse to end the marriage for any reason, or no reason at all. We were told by two left-wing constituencies – the feminists and the trial lawyers – that no-fault divorce would have a neutral or even a positive effect on children. Well, we now know that this was a pack of lies. The feminists wanted to destroy the "unequal roles" of marriage, and the trial lawyers wanted to get rich from divorce trials. The primary losers was the generation of children whose parents divorced instead of working out their problems. Now, the same social

engineers are at it again with same-sex marriage. I hope we win this one, but since we elected Barack Obama, we lost two picks on the Supreme Court. Without those two picks, we don't have much hope.

# How schools of social work stifle conservative views in the name of diversity

**Wintery Knight** · 30 March 2015 · Archived copy · Original

Here's a great story from The Weekly Standard. It's hard for me to slice it up so I can make the point of the article, but I'll try, and if you like it, you go read the whole thing.

The author Devorah Goldman says this:

> "I can't have you participate in class anymore."
>
> I was on my way out of class when my social welfare and policy professor casually called me over to tell me this. The friendliness of her tone did not match her words, and I attempted a shocked, confused apology. It was my first semester at the Hunter College School of Social Work, and I was as yet unfamiliar with the consistent, underlying threat that characterized much of the school's policy and atmosphere. This professor was simply more open and direct than most.
>
> I asked if I had said or done anything inappropriate or disrespectful, and she was quick to assure me that it was not my behavior that was the problem. No: It was my opinions. Or, as she put it, "I have to give over this information as is."
>
> I spent the rest of that semester mostly quiet, frustrated, and missing my undergraduate days, when my professors encouraged intellectual diversity and give-and-take. I attempted to take my case to a higher-up at school, an extremely nice, fair professor who insisted that it was in my own best interest not to rock the boat. I was doing well in his class, and I believed him when he told me he wanted me to continue doing well. He explained to me that people who were viewed as too conservative had had problems graduating in the past, and he didn't want that to happen to me. I thought he was joking . . . until I realized he wasn't.
>
> […]Two hundred thirty-five master's programs in the United States are accredited by the Council on Social Work Education (CSWE), which requires schools to "advocate for human rights and social and economic justice" and to "engage in practices that advance social and economic justice" as part of their curricula. As Greg Lukianoff, president of the Foundation for Individual Rights in Education (FIRE), points out, the CSWE standards act as "an invitation for schools to discriminate against students with dissenting views."
>
> Lukianoff discovered the abusive culture fostered by CSWE after several students complained about their treatment in social work programs. Emily Brooker, a Christian student at Missouri State University's School of Social Work in 2006, was asked by her professor to sign a letter to the Missouri legislature in favor of homosexual adoption. When she explained that doing so would violate her religious beliefs and requested a different assignment, she was subjected to a two-and-a-half-hour interrogation by an ethics committee and charged with a "Level Three Grievance" (the most severe kind). Brooker was not permitted to have an advocate or a tape recorder with her at the ethics meeting, during which she was told to sign a contract promising that she would "close the gap" between her religious beliefs and the values of the social work profession. At the risk of having her degree withheld, Brooker acquiesced.
>
> Bill Felkner, a student at Rhode Island College's School of Social Work, was instructed to lobby the Rhode Island legislature for several policies he did not support. In addition, RIC's policy internship requirements for graduate students included forcing students to advance policies that would further "progressive social change." When Felkner accepted an internship in the policy department of Republican Rhode Island governor Don Carcieri's office, he received a letter from Lenore Olsen, chair of the Social Work Department, informing him that he had violated their requirements and could no longer pursue a master's degree in social work policy.
>
> […]And so I sat, zombie-like, through the strange and sad reality that is groupthink for two long years. In a publicly funded school in America's greatest city, I was censored, threatened, and despised by my teachers. I left school after graduation feeling that something had been stolen from me. I wanted to go back and argue

> with my teachers some more, ask them, for example, whether a description of Reagan's economic policies as "nightmarish" in a textbook could be considered unbiased in any context. I wished I had stood up more often for my white male friends in class, asked people if they really believed that Band-Aids that were not exactly fair and not exactly dark in color were racist. Realizing that I had been awarded a diploma in part because I kept my opinions to myself was deeply unsatisfying.

Conservative students need to be aware that they are likely to face discrimination in social work programs on campus, and probably in many other programs as well. They will either have to silence themselves or change their views to be in compliance with secular leftist ideology. What's even scarier, though, is when students who are raised in traditional evangelical homes go off to college and swallow secular leftist values uncritically. It always shocks me a little when I meet students who were raised in a married home with two evangelical parents and they tell me that they vote for Democrats. I just had a conversation this week with a young woman who claimed to be pro-life and pro-marriage who voted for Obama in 2008 and 2012. She is studying *journalism*, and I would bet that there are no conservative professors in her program. She told me that she voted for Obama because of environmentalism and Obamacare. She also expressed preference for big government over small government.

It's definitely something to be aware of – the lack of critical thinking and respectful dialog in some of these programs. I'm going to be giving her a list of conservative news sites to read, like The Stream, The Weekly Standard, The Daily Signal, and so on. I wonder if she has ever read a conservative economist or journalist before… I'll find out.

If you insist on going to programs that are more ideology than marketable skills, then expect to have to keep your mouth shut all the way through in order to graduate. And then after you graduate, whenever you get the chance, vote for smaller government, lower taxes, and more academic freedom laws that protect a diversity of views in the classroom. I also recommend donating to legal groups who defend basic liberties, such as Alliance Defending Freedom.

# What is the best introductory book about pro-life apologetics?

**Wintery Knight** · 30 March 2015 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve this message

Do you like to argue about controversial things? Of course you do. And so does Scheming Unborn Baby.

Here's an excellent book review of the best pro-life book for ordinary people. It's by Scott Klusendorf of the Life Training Institute.

Excerpt:

*The Case for Life* by Scott Klusendorf is an absolutely outstanding defense of the pro-life position with regard to the abortion debate. Being familiar with Scott's work through Stand to Reason I was looking forward to this book with much anticipation. Scott is one of the most able, articulate, persuasive, and winsome pro-life speakers in the country and his book does not fail to deliver.

He's got chapter-by-chapter breakdowns, so let's look at some of them:

In **chapter five** Scott addresses the nature of truth and the topic of *moral relativism*, a view of morality our culture is saturated with to the core. Addressing this topic becomes absolutely necessary given its prevalence and the fact that often the claims of pro-lifers are misunderstood. This is seen in such cliches as "Don't like abortion? Don't have one!" or "I'm personally opposed to abortion but I think it should remain legal." In short, pro-lifers are not making subjective preference claims when they say abortion is morally wrong but rather objective truth claims. Scott lays out some fundamental problems with moral relativism as well as a brief history outlining the move from moral realism to moral non-realism.

In **chapter six** Scott exposes the myth of moral neutrality. Both sides of the abortion debate have views they want to legislate and it is impossible for the state to remain neutral. However, it is often pro-lifers who are accused of trying to "legislate morality" while pro-abortion choice advocates get a free pass. In short, pro-lifers are dismissed as "religious" because of an unwillingness by pro-abortion choice advocates to address the issues. This is intellectually dishonest. How bout we stick with science?

And more:

In chapters **ten through fifteen** Scott addresses some of the most common arguments put forth by pro-abortion choice advocates. These include “Women will die from illegal abortions,” “You shouldn’t force your view on others,” “Pro-lifers should broaden their focus,” “Rape justifies abortion,” “Men can’t get pregnant,” and “It’s my body, I’ll decide.” The fundamental problem with most of these objections is that they beg the question. They assume the unborn is not a human person.

One more chapter – I’ve never seen chapters like this before:

In **chapter sixteen** Scott outlines four essential tasks that pastors concerned with biblical truth need to accomplish:

First, Christian pastors need to emphasize a biblical view of human value and ensure their congregation understands that abortion unjustly takes the life of an innocent human being. Second, they need to equip their congregation with pro-life apologetics so they can compete in the marketplace of ideas. Third, they need to emphasize the healing power of the gospel of Jesus Christ and preach repentance and forgiveness for post-abortion men and women. Finally, Christian pastors need to overcome their fear that abortion is a distraction, their fear of driving people away who might otherwise hear the gospel, and their fear of offending people with abortion-related content.

If you want to see Scott speak, here’s a new-ish 42-minute lecture:

If you like that, consider getting the book. Scheming Unborn Baby recommends it, and so do I.

# Hillary Clinton attacks Indiana's religious liberty law

**Wintery Knight** · 31 March 2015 · Archived copy · Original

First, let's take a look at what Jesus says about same-sex marriage.

Matthew 19:1-6:

1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.

2 And large crowds followed him, and he healed them there.

3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"

4 He answered, "Have you not read that he who created them from the beginning made them male and female,

**5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?**

**6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."**

Now, let's see some reactions to the Indiana law, which I explained in a previous blog post, from people on the secular left.

Hillary Clinton thinks that any arrangement of people who love each other is as good as any other:

Hillary Clinton opposes religious liberty

Her tweet implies support for incestuous relationships being "marriage" as well as polygamy. That is a direct logical implication of calling an arrangement of people who love each other "marriage".

But she's not the only one.

Marriage defender Ryan T. Anderson responds to Apple CEO Tim Cook in the Daily Signal.

He writes:

> Apple CEO Tim Cook has taken to The Washington Post to tell the nation that, in the words of the headline, "Pro-discrimination 'religious freedom' laws are dangerous."
>
> Notice the scare quotes around "religious freedom." But the reality is that the only person in favor of discrimination in this debate is Tim Cook.
>
> It is Tim Cook who favors laws that discriminate against people of faith who simply ask to be left alone by government to run their businesses and their schools and their charities in accordance with their reasonable belief that marriage is the union of a man and a woman. It is Tim Cook who would have the government discriminate against these citizens, have the government coerce them into helping to celebrate a same-sex wedding and penalize them if they try to lead their lives in accordance with their faith.
>
> […]As Sarah Torre and I explained last week, Indiana's religious freedom law protects citizens from government coercion—it places the burden of proof on the government if it is going to violate liberty. For over 20 years, the federal government has lived by this standard—the Religious Freedom Restoration Act passed unanimously in the House, with 97 votes in the Senate, and was signed into law by Bill Clinton. Twenty states have passed this law. And 11 additional states have religious liberty protections that state courts have interpreted to provide a similar level of protection.
>
> So, in total, the federal court system and 31 state court systems enforce this level of protection. Why is Tim Cook suddenly opposed to it?
>
> The answer is simple: This isn't a debate about Religious Freedom Restoration Acts. This is a debate about whether Americans should remain free to live in accordance with the truth about marriage in their public lives. This is a debate about whether or not the government should be able to coerce people into violating their belief that marriage is the union of a man and a woman.

This is what the Indiana law is suppose to defend against:

Again, it's not a slam dunk – all it says is that when a secular big government sues a person of any religion to force them to deny their faith, then religious liberty can be brought in as part of their defense during their day in court. By the way, always vote for smaller government, then these things don't even happen because marriage, family and private businesses are less regulated.

**How is the law applied?**

This article from The Federalist lists 10 examples of how religious freedom laws have been applied.

Here's one:

> **7) Muslim prisoner fights to wear short beard: Abdul Muhammad**
> Abdul Muhammad is a Muslim incarcerated in Arkansas. He was not allowed to grow the 1/2 inch beard his religion commands even though Arkansas permits beards for other reasons. And the same beard would have been allowed in 44 state and federal prison systems in the country. In 2011, he filed suit. He won the suit using the "RFRA for prisoners" — the Religious Land Use and Institutionalized Persons Act. That bill was also signed by Bill Clinton.Earlier this year, Muhammad won his case unanimously at the United States Supreme Court. They held that he'd shown the restriction was a substantial burden on his religious exercise.

And:

> **9) Florida denies prisoners kosher meals: Bruce Rich**
>
> Bruce Rich is an Orthodox Jewish prisoner in Florida, one of the last remaining states in the country that doesn't provide kosher food for Jewish prisoners. He argued this violates the Religious Land Use and Institutionalized Persons Act of 2000, RFRA for prisoners.

> Florida claimed it limited food options to control costs and maintain security. The Becket Fund for Religious Liberty, which took Rich's case, noted that 35 states and the federal government provided kosher meals without it posing a problem.
>
> […]Rich withdrew his case once Florida began providing the necessary meals.

Does this law sound like a free pass to discriminate against gays to you? It goes to trial, and religious liberty is part of the defense that the judge considers.

Look at this opinion from another Indiana law professor:

> I should stress–and this point was totally lost in the Indiana debate–that RFRA does not provide immunity. It only allows a defendant to raise a defense, which a finder of fact must consider, like any other defense that can be raised under Title VII or the ADA. RFRA is *not* a blank check to discriminate.

Here's another defense of the Indiana law by an Indiana University law professor who supports same-sex marriage.

You can read another analysis of the religious liberty law from Gabriel Malor, a gay conservative. Actually, I re-tweeted THREE gay conservatives who were in favor of the law yesterday (Gabriel Malor, Milo Yiannopoulos, and Gay Patriot). This is *not* what you are hearing in the mainstream media, but is being used as a club to beat Christians into silence. And sadly, many younger evangelicals will respond to this and vote Democrat out of a lack of understanding of the issues.

# The first redefinition of marriage was much worse for children than same-sex marriage

**Wintery Knight** · 31 March 2015 · Archived copy · Original

% of Marriages Remaining Intact

I am speaking about no-fault divorce, of course. Let's take a look at it with a few articles.

First, let's take a look at what Jesus says about divorce.

Matthew 19:1-9:

1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.

2 And large crowds followed him, and he healed them there.

3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"

4 He answered, "Have you not read that he who created them from the beginning made them male and female,

5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?

6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."

7 They said to him, "Why then did Moses command one to give a certificate of divorce and to send her away?"

8 He said to them, "Because of your hardness of heart Moses allowed you to divorce your wives, but from the beginning it was not so.

9 And I say to you: whoever divorces his wife, except for sexual immorality, and marries another, commits adultery."

I'll just link to one study to prove divorce is bad, but everyone knows that.

Now, let Theologian and cultural analyst Al Mohler explain how we got no-fault (unilateral) divorce:

> The story behind America's love affair with no-fault divorce is a sad and instructive tale. As Baskerville documents, no-fault divorce laws emerged in the United States during the 1970s and quickly spread across the nation. Even though only nine states had no-fault divorce laws in 1977, by 1995, every state had legalized no-

> fault divorce.
>
> Behind all this is an ideological revolution driven by feminism and facilitated by this society's embrace of autonomous individualism. Baskerville argues that divorce "became the most devastating weapon in the arsenal of feminism, because it creates millions of gender battles on the most personal level." As far back as 1947, the National Association of Women Lawyers [NAWL] was pushing for what we now know as no-fault divorce. More recently, NAWL claims credit for the divorce revolution, describing it as "the greatest project NAWL has ever undertaken."
>
> The feminists and NAWL were not working alone, of course. Baskerville explains that the American Bar Association "persuaded the National Conference of Commissioners on Uniform State Laws [NCCUSL] to produce the Uniform Marriage and Divorce Act." Eventually, this led to a revolution in law and convulsions in society at large. This legal revolution effectively drove a stake into the heart of marriage itself, with inevitable consequences. In effect, no-fault divorce has become the catalyst for one of the most destructive cultural shifts in human history. Now, no-fault divorce is championed by many governments in the name of human rights, and America's divorce revolution is spreading around the world under the banner of "liberation."
>
> Baskerville gets right to the heart of the matter, labeling no-fault divorce as a "misnomer." In reality, the "no-fault" language was taken from the world of automobile insurance. These new divorce laws did not really remove fault from the context of divorce, but they "did create unilateral and involuntary divorce, so that one spouse may end a marriage without any agreement or fault by the other." As Baskerville explains, "Moreover, the spouse who divorces or otherwise abrogates the marriage contract incurs no liability for the cost or consequences, creating a unique and unprecedented legal anomaly."
>
> In many cases, the reality is even worse. In effect, no-fault divorce means that the courts now assist the violator of marriage vows. Any spouse can now demand a divorce for any reason and be assured that the courts will award the divorce–and will often grant disproportionate favor to the party seeking the divorce.
>
> As Judy Parejko, author of Stolen Vows, argues, no-fault divorce means that legislators created an "automatic outcome" in issues of divorce. "A defendant is automatically found 'guilty' of irreconcilable differences and is not allowed a defense," Parejko notes.
>
> Researcher Barbara Dafoe Whitehead, author of the influential book, The Divorce Culture, points to the therapeutic seduction of the culture as a contributing factor. "According to therapeutic precepts," she explains, "the fault for marital breakup must be shared, even when one spouse unilaterally seeks a divorce."
>
> In other words, no-fault divorce laws actually assume that both parties are equally at fault, since no party could be innocent. The perverse assumption inherent in this argument is that if any individual is unhappy, someone else must necessarily be at fault. Once no-fault divorce became a reality, spouses found themselves simply informed of the fact that their marriage was effectively over. Many of these spouses were not even aware that the marriage was in trouble–and trouble is not even necessary.
>
> Why did all this happen? How could an institution as fundamental and basic as marriage become transformed in less than a decade's time? Baskerville insists that no-fault divorce laws were not demanded by the public. "No popular clamor to dispense with divorce restrictions preceded their passage; no public outrage at any perceived injustice provided the impetus; no public debate was ever held in the media." As Baskerville summarizes: "In retrospect, these laws can be seen as one of the boldest social experiments in history. The result effectively abolished marriage as a legal contract. As a result, it's no longer possible to form a binding agreement to create a family."

No-fault divorce is worse than same-sex marriage, and there is almost no support among Christians for taking it on, although my view is that both no-fault divorce and same-sex marriage need to be repealed. I don't know how we are going to fix this unless Christians start to get serious about marrying well, and for the long-term. But more is needed – we have to make it harder for people to get divorced, and harder for people to get money from the government

just for having children outside of marriage. We have to shame behaviors that harm children, and shrink government so that men become more indispensable, and staying married becomes more important to women. (over two-thirds of divorces are initiated by women)

And (in response to a comment below) we should be showing young people the benefits of getting married and staying married – not just for children, but for society as a whole. That's especially true for young Christians in church – in my experience, the men often don't see marriage as an exciting enterprise that could make a difference for Christ, and the women often think of marriage as something boring to put off for as long as possible. I think one of the great ways of evangelizing the culture is showing them a romantic marriage, a home that is warm and welcoming, and happy, healthy children who are respectful and hard-working.

You can read more in this article about no-fault divorce by Dr. Stephen Baskerville. (The Baskerville that Mohler mentioned)

He covers 5 myths about no-fault divorce:

1. No-fault divorce permitted divorce by mutual consent, thus making divorce less acrimonious
2. We cannot force people to remain married and should not try
3. No-fault divorce has led men to abandon their wives and children
4. When couples cannot agree or cooperate about matters like how the children should be raised, a judge must decide according to "the best interest of the child"
5. Divorce must be made easy because of domestic violence

I hope this clears up the false charge that people who oppose same-sex marriage do so only because of animus towards homosexuals. There are many reasons to oppose same-sex marriage – religious liberty concerns, concerns about the needs of children, public health concerns, and so on. But social conservatives like me are consistent. We oppose no-fault divorce because it harms children, and we oppose unrestricted welfare for single mothers for the same reason, because it pays people to have fatherless children. There are reasons for socially conservative views, it's not just "dislike". Only someone who has never been presented with conservative views *by conservative scholars* would think such things. But that's what happens to students in universities – it's just indoctrination.

# What do skeptical ancient historians think of the earliest Christian creed?

**Wintery Knight** · 31 March 2015 · Archived copy · Original

Sherlock Holmes and Dr. John Watson solving a mystery

Here is a post from my friend Eric Chabot. He writes about the earliest historical source for the minimal facts about the resurrection, which is the early creed recorded by Paul in 1 Corinthians: 3-7.

1 Cor 15:3-7:

3 For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

4 that he was buried, that he was raised on the third day according to the Scriptures,

5 and that he appeared to Cephas, and then to the Twelve.

6 After that, he appeared to more than five hundred of the brothers and sisters at the same time, most of whom are still living, though some have fallen asleep.

7 Then he appeared to James, then to all the apostles,

8 and last of all he appeared to me also, as to one abnormally born.

Just in case you didn't know, Cephas is Peter, one of Jesus' closest followers.

The general consensus among scholars is the that creed goes back to within 1-3 years after the death if Jesus, when almost all the eyewitnesses were still around.

**The creed**

In Eric's post, he quotes very well-known skeptical historians who affirm each part of the creed.

First, the creed as a whole is respected, even by atheist scholars like John Dominic Crossan:

> Paul wrote to the Corinthians from Ephesus in the early 50s C.E. But he says in 1 Corinthians 15:3 that "I handed on to you as of first importance which I in turn received." The most likely source and time for his reception of that tradition would have been Jerusalem in the early 30s when, according to Galatians 1:18, he "went up to Jerusalem to visit Cephas [Peter] and stayed with him fifteen days" (3).

And atheist scholar Robert Funk:

> The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about

> 33 C.E. On the assumption that Jesus died about 30 C.E., the time for development was thus two or three years at most." — Robert Funk co-founder of the Jesus Seminar.(5)

Let's take a look at one of the parts of the creed that is respected by skeptical historians… namely, the early belief that Jesus was resurrected shortly after his death.

**The early belief in the resurrection**

Skeptical scholar E.P. Sanders:

> That Jesus' followers (and later Paul) had resurrection experiences is, in my judgment, a fact. What the reality was that gave rise to the experiences I do not know. "I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: 'I saw him first!' 'No! I did.' Paul's tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus' followers suffered mass hysteria. But mass hysteria does not explain the other traditions." "Finally we know that after his death his followers experienced what they described as the 'resurrection': the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it. (14)

Skeptical scholar Bart Ehrman:

Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus' resurrection, since this is a matter of public record. (17)

> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don't doubt at all that some disciples claimed this. We don't have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don't think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19). (18)

You know, if all you did was give someone his post, I think that would be enough to show people that a more complete investigation of the historical Jesus was certainly a reasonable thing to do. It's amazing to me that people who grow up at this time when access to the data is so easy do not take the opportunity to look into Christianity.

**List of virtually undeniable facts**

Finally, below is a list of facts about the historical Jesus that are accepted by ancient historians – Christian, non-Christian, atheist.

These are compiled by non-Christian scholar E.P. Sanders:

From his book "Jesus and Judaism" (1985):

- Jesus was baptized by John the Baptist.
- Jesus called disciples and spoke of there being twelve.
- Jesus confined his activity to Israel.
- Jesus was a Galilean who preached and healed.
- Jesus engaged in a controversy about the temple.
- Jesus was crucified outside Jerusalem by the Roman authorities.
- After his death, his followers continued as an identifiable movement.
- At least some Jews persecuted at least parts of the new movement.

From his book “The Historical Figure of Jesus” (1993):

- Jesus was born c.4 BCE, near the time of the death of Herod the Great;
- He spent his childhood and early adult years in Nazareth, a Galilean village;
- He was baptized by John the Baptist;
- He called disciples;
- He taught in the towns, villages, and countryside of Galilee (apparently not the cities);
- He preached “the kingdom of God”;
- Around the year 30 he went to Jerusalem for Passover;
- He created a disturbance in the temple area;
- He had a final meal with the disciples;
- He was arrested and interrogated by Jewish authorities, specifically the high priest;
- He was executed on the orders of the Roman prefect, Pontius Pilate;
- His disciples at first fled;
- They saw him (in what sense is uncertain) after his death;
- As a consequence they believed he would return to found the kingdom;
- They formed a community to await his return and sought to win others to faith in him as God’s Messiah.

The way the resurrection of Jesus is presented on TV, you would think that mythical stories about Jesus emerged decades and even centuries after the fact in other parts of the world from where the events happened. But the trouble is that no ancient historian thinks that. Only Hollywood TV producers and movie makers think that. Now, if you are getting your view of the historical accuracy of basic Christian beliefs from television and movies, then don’t be surprised if you are wrong. No one is saying that you have to go to Christian pastors and preachers for the facts, but you should go to the historians. They at least know the minimal facts.

The best way for a skeptic to tackle these issues is, I think, to watch a decent debate on the resurrection of Jesus between two respected scholars. My favorite debate on the resurrection is William Lane Craig versus atheist historian James Crossley. I have a video and a summary already ready made just waiting for you to check it out. Don’t worry, no one will be looking over your shoulder making you change everything your life should you be convinced. Just watch the debate and decide what you are going to do with it on your own. You don’t have to change your whole life overnight. Becoming a Christian is instantaneous and easy to do. Living like a Christian is a process, and it’s between you and God how fast you go. So just see what the facts are to start with and then take it from there.

# Police officers buy poor family a car seat instead of ticketing them

**Wintery Knight** · 1 April 2015 · Archived copy · Original

Story from ABC News.

Excerpt:

> Two Michigan police officers are being hailed for making the decision to buy a car seat for a family in need instead of citing the child's parents.
>
> Officers Jason Pavlige and James Hodges of Fruitport Township, Michigan, responded to a dispatch call reporting a woman at a local McDonalds holding a baby in her arms in a car's passenger seat.
>
> The officers observed a minor traffic violation and pulled over the driver, also the father of the 10-month-old girl, on the violation, Hodges, 26, a nearly two-year veteran of the force, told ABC News.
>
> When the officers spoke with the parents, who were not identified, they quickly realized they did not have the resources to purchase a car seat for their daughter.
>
> "They had just recently moved to the area," Hodges said. "We tried to have them contact family but they don't have anyone close.
>
> "There were no co-workers, no one who could help them out," he said.
>
> Instead of issuing the parents a citation, Pavlige and Hodges decided to take action in another way.
>
> "We spoke with each other and made the decision to go get them a car seat so we'd know the kid was safe and that this issue wouldn't come up again," Hodges said.
>
> While Pavlige stayed with the family, Hodges went to a local Walmart and purchased a new car seat with money from his and Pavlige's own pockets. They then installed the car seat and gave the family instructions on how to properly use it.
>
> "The father was, I think, almost in shock," said Hodges, who declined to say how much the car seat cost. "They didn't say much but were just very appreciative."
>
> Hodges and Pavlige's good deed occurred in February but was publicized just last week after a Walmart employee called the police station to report what the officers had done.
>
> "It was only brought to our attention by a clerk at Walmart who saw it and thought they should be recognized," Fruitport Township Police Lt. Bruce Morningstar told ABC News. "They were doing it on their own without any recognition."
>
> Hodges says the incident was just another day on the job in the life of a police officer.
>
> "We made the decision that was what we needed to do to solve the issue," Hodges said. "When we left we went onto the next call."
>
> "It's just part of what police officers do on a daily basis," he said.

Here is another case that happened last year:

That story is also from Michigan.

Well, I hate to politicize these stories, but I do find it funny that the news media normally makes too much of stories that feed their anti-police agenda, and then when something like this happens, almost nobody reports it. And yet, I think this case represents what the ordinary day-to-day work of a police officer is like. Wouldn't it be nice if, instead of trying to inflame different groups against each other, the news media tried to bring people together by tell the truth more? There never was any "hands up, don't shoot", but this child-seat story really happened. Why don't they make a big deal out of that?

# Study: children are safest when they live with their two married biological parents

**Wintery Knight** · 1 April 2015 · Archived copy · Original

Marriage is the safest environment for children

Story from Family Studies.

It says:

> Young people are less likely to be victims of crime if they live in two-parent than in single-parent households. That has been a consistent finding of the National Crime Victimization Survey conducted by the U.S. Department of Justice. But it has been unclear whether the safety advantage stems from married couples living in less dangerous neighborhoods, on average, than unmarried parents, or from other differences in vulnerability between family types. My analysis of recent data from another national survey shows that even when their families live in unsafe neighborhoods, children in married two-parent families are less likely to be exposed to violent crime than children of never-married and divorced parents.
>
> In the 2011-2012 National Survey of Children's Health, conducted by the U.S. National Center for Health Statistics, parents of 95,677 children aged 17 and under were asked whether their child was "ever the victim of violence or witnessed any violence in his or her neighborhood." Among children living with their married biological parents, the overall rate of exposure to neighborhood violence was comparatively low: for every 1,000 children in intact families, 36 had witnessed or experienced neighborhood violence. By contrast, among children living with a never-married mother, the rate of violent crime exposure was nearly three times higher: 102 children per 1,000 had one or more such experiences. Among children living with a separated or divorced mother, the rate of exposure was more than twice as high as for children of married parents: 89 children per 1,000. (See Figure 1.) These comparisons are adjusted for differences across family types in the average age, sex, and race/ethnicity of the child; family income and poverty status; the parent's education level; neighborhood quality; and frequency of residential moves.
>
> Some might assume that the absence of an adult male to protect the household is key to the higher victimization rates of single-parent families. Yet children living with a biological parent and a stepparent also had an elevated rate of exposure to neighborhood violence: 84 children per 1,000. Even children living with both biological parents who were cohabiting rather than married had a significantly higher victimization rate—60 children per 1,000—though not as high as those in never-married or divorced families.
>
> […]**Why are children living with never-married or separated and divorced mothers more susceptible to neighborhood violence? Beyond the greater likelihood of having to live in unsafe neighborhoods and**

> **the more frequent moves that often come with family disruption, there are several other factors that increase vulnerability. First is the stress of conflict between parents and the strain of raising children as a lone parent in reduced financial circumstances. These can lead to a lack of vigilance and the overlooking of simple precautions, such as making sure that doors and windows are locked in houses and vehicles. Second, if they have broken up with their child's other parent, a single parent will usually begin dating and trying to find a new partner. This process often involves being out of the house at night, sometimes leaving children with no or inadequate supervision. Third, as children become adolescents, the peers they become involved with in their less-than-ideal neighborhoods and schools are often troubled ones, who can lead them into hazardous situations and activities.**

Marriage matters! We can allow alternatives to natural marriage, but natural marriage is best for kids.

You can read more about the safety advantages of marriage for women and children in this Heritage Foundation paper. Marriage matters, and we should doing everything we can to shrink secular big government programs that discourage marriage (e.g. – single mother welfare),  and promote programs that encourage people to marry and have children, (e.g. – getting rid of the marriage penalty). It's a policy problem – we aren't doing enough to help children when the secular big government is more interested in making it easier for people to not marry (single mother welfare), and breaking up existing marriages (no-fault divorce laws).

# Richard Carrier debates Mark Goodacre: Did Jesus exist?

**Wintery Knight** · 1 April 2015 · Archived copy · Original

It's April Fools today, and I have an April Fool for you – his name is Richard Carrier.

Debate topic:

> Richard Carrier is the world's foremost proponent of the "mythicist" view of Jesus – that he never actually existed as a historical person. He explains his theory that St. Paul only ever spoke of Jesus in the spiritual realm and that the Gospels are "extended parables". Mark Goodacre is NT professor at Duke University. He contends that Carrier's mythicist view is extremely far fetched and the evidence for the historical Jesus is beyond reasonable doubt.

Here are the participants:

> **Mark Goodacre** is an Associate Professor in New Testament at the Department of Religion, Duke University, North Carolina, USA. He earned his MA, M.Phil and DPhil at the University of Oxford and was Senior Lecturer at the University of Birmingham until 2005. His research interests include the Synoptic Gospels, the Historical Jesus and the Gospel of Thomas.
>
> **Richard Carrier** holds a Ph.D. from Columbia University in ancient history, specializing in the intellectual history of Greece and Rome, particularly ancient philosophy, religion, and science, with emphasis on the origins of Christianity and the use and progress of science under the Roman empire.

The debate can be listened to here:

This debate took place on Justin Brierley's "Unbelievable?" show based in the UK.

Carrier uses the letters of Paul as his sources, because they are the earliest. He doesn't think that there is enough there to ground Jesus as a real person in history. Goodacre responds by looking at the letters of Paul to see what facts about a real, historical Jesus are there, and also which other eyewitnesses Paul talked to. In particular, Carrier has to respond to the early creed in 1 Corinthians 15 as well as his meeting with Peter and James, two other eyewitnesses, twice in Galatians. 1 Corinthians and Galatians are two early Pauline letters that are unanimously regarded as authentic. Carrier's strategy is to try to introduce parallels between myths and the historical Jesus.

Goodacre also raises the crucifixion a historical fact about Jesus, which is a virtually undeniable fact about Jesus that is not even denied by people like the radical atheist John Dominic Crossan. Goodacre says that the crucifixion story would be embarrassing to the early Christians. They would not have invented a story of their Messiah-candidate being crucified – it was considered to shameful of a way to die. Carrier responded that other groups make up history that is embarrassing to them all the time. Goodacre says this practice was not common among the groups of Jews that we know about. Carrier says that there are other unknown groups of Jews that we have no evidence for who did do that. Then he calls arguing based on the practices of the Jews that we do not know about an "argument from ignorance".

Carrier talks about how Philippians has that embarrassing passage about Jesus abandoning his divine capabilities to humble himself by becoming an actual human being, and says that this is evidence that he was not an actual human being. (Unforced error!) Philippians is another one of the Pauline epistles that is not in doubt. Carrier then says that John invents historical reports in order to emphasize certain things about Jesus, and therefore that means that other non-John sources are therefore all falsified by John's exaggerating on some details. He then cites the radical atheist John Dominic Crossan to say that historical narratives are actually extended parables.

# What the reaction to the Indiana religious liberty law tells us about the secular left

**Wintery Knight** · 2 April 2015 · Archived copy · Original

Hillary Clinton and the Human Rights Campaign

I surveyed three articles for this post, and we'll see a little from each.

Jewish conservative Ben Shapiro has more in Townhall. (H/T Pastor Matt)

Shapiro writes:

> **Same-sex marriage, it turns out, was never designed to grant legal benefits to same-sex couples. That could have been done under a regime of civil unions. Same-sex marriage was always designed to allow the government to have the power to cram down punishment on anyone who disobeys the government's vision of the public good. One need not be an advocate of discrimination against gays to believe that government does not have the ability to enforce the prevailing social standards of the time in violation of individual rights. There are many situations in which advocates of freedom dislike particular exercises of that freedom but understand that government attacks on individual rights are far more threatening to the public good.**
>
> You do not have a right to my services; I have a right to provide my services to whomever I choose. If you believe that your interpretation of public good enables you to bring a gun to the party, you are a bully and a tyrant. So it is with the modern American left, to whom freedom now means only the freedom to do what it is the left wants you to do at point of gun.

And Ben Shapiro again for Breitbart on what's next for the secular left:

> […][T]he obvious next step is for the left to target churches for revocation of their non-profit status.
>
> […]Once non-profit status is revoked for churches on the basis of supposed discrimination against homosexuals, those churches become private institutions engaged in commerce. Which means that they are regulated as common businesses under anti-discrimination law. Which means they can be shut down or fined for failure to perform same-sex weddings. The left says this will never happen. Which means we are a few years away from it happening.
>
> Religious universities will certainly be targeted, both as to their non-profit status and then for fines if they

> refuse to provide benefits for same-sex spouses, for example. Under the *Bob Jones University* case, which has already been touted by the left as the model for a federal case against same-sex marriage, universities will be considered discriminatory if they stand against same-sex marriage the same way Bob Jones University was with regard to its interracial dating standard. The difference, of course, is that dating between races is not the same as dating within the same sex. But the left has always equated race with homosexual behavior and will extend that equation to the law as it applies to institutions of higher education.
>
> Just because religious schools are run by religious institutions does not exempt them from the wrath of the left. Leftists have already declared in states in which same-sex marriage has been approved that children must be taught about same-sex marriage in public schools; in California, for example, the law also requires that parents allow children to attend such classes.
>
> This logic will be extended to private schools. Why should private schools be allowed to "discriminate" against same-sex couples by exempting children from learning about them? Why should homeschooled children be given state-credentialed status without being indoctrinated in the decency of homosexual behavior, all in the name of non-discrimination?

Here is an article from The Stream:

> **History teaches that mass vilification rarely stops short of spilling blood. The French Jacobins who spent the 1780s slandering the clergy in pornographic pamphlets went on in the 1790s to slaughter Christians by the hundreds of thousands. The Turks paved the way for killing a million Armenian Christians with a wave of propaganda. The Bolsheviks followed their "anti-God" crusade of the 1920s with starvation camps and firing squads. The Communist governments of Eastern Europe obeyed the same script, as scholar Anne Applebaum documents in her sobering study *The Iron Curtain*. The Hutu government of Rwanda prepared for its assault on the once-powerful Tutsis by incessantly describing them as "cockroaches" on radio broadcasts, which triggered a genocide.**

The point here is that before the mob resorts to violence, they first have to *dehumanize* their opponents. That's what we saw from the secular left in response to laws defending individual religious liberty against the secular state.

I think that it's important for us to engage the source of secular leftist radicalism – the university. This is where the next generation of radical leftists are indoctrinated. I think that Christians need to be studying apologetics, as well as economics and politics. We need to have Christians study harder things in better schools and take more influential jobs. This is a *major failure* of the Christian church – we have been too focused on spirituality and piety at the expense of effectiveness and influence. Churches are simply not set up to connect the prosperity, liberty and security that Christians need to act as authentic Christians in the public square, to specific battles over laws and policies. We are not persuasive or effective in those battles.

We really need to be more engaged and well-rounded, but all I see the church doing is the gospel, the gospel, the gospel – every week. I don't even know whether my pastor is pro-life or pro-marriage, and he certainly has never shared any reasons for his flock to be. And as far as apologetics, politics and economics? Forget it. I wonder how many young evangelicals in his church voted to set in motion the forces that would see him presiding over gay weddings , or having his children taken away from him lest they learn that there is anything wrong with abortion. But I'm sure he is very good at reading devotions, singing praise hymns, and doing Bible study. We need to be training influential young Christians and raising effective children.

# Should we fear fascism more from Christians or from secular leftists?

**Wintery Knight** · 2 April 2015 · Archived copy · Original

Two posts by Jewish author Jonah Goldberg from National Review supply us with the facts to set the record straight.

Let's start with the first post, where Goldberg looks at the actions of the fascist Adolf Hitler.

**1) Hitler wanted Christianity removed from the public square**

> Like the engineers of that proverbial railway bridge, the Nazis worked relentlessly to replace the nuts and bolts of traditional Christianity with a new political religion. The shrewdest way to accomplish this was to co-opt Christianity via the Gleichschaltung while at the same time shrinking traditional religion's role in civil society.

**2) Hitler banned the giving of donations to churches**

> Hitler banned religious charity, crippling the churches' role as a counterweight to the state. Clergy were put on government salary, hence subjected to state authority. "The parsons will be made to dig their own graves," Hitler cackled. "They will betray their God to us. They will betray anything for the sake of their miserable little jobs and incomes."

**3) Hitler replaced Christian celebrations with celebrations of the state**

> Following the Jacobin example, the Nazis replaced the traditional Christian calendar. The new year began on January 30 with the Day of the Seizure of Power. Each November the streets of central Munich were dedicated to a Nazi Passion play depicting Hitler's Beer Hall Putsch. The martyrdom of Horst Wessel and his "old fighters" replaced Jesus and the apostles. Plays and official histories were rewritten to glorify pagan Aryans bravely fighting against Christianizing foreign armies. Anticipating some feminist pseudo history, witches became martyrs to the bloodthirsty oppression of Christianity.

**4) Hitler favored the complete elimination of Christianity**

> When some Protestant bishops visited the Fuhrer to register complaints, Hitler's rage got the better of him. "Christianity will disappear from Germany just as it has done in Russia . . . The German race has existed without Christianity for thousands of years . . . and will continue after Christianity has disappeared . . . We must get used to the teachings of blood and race."

**5) Hitler favored the removal of mandatory prayers in schools**

> In 1935 mandatory prayer in school was abolished…

**6) Hitler favored the banning of Christmas carols and nativity plays**

> …and in 1938 carols and Nativity plays were banned entirely.

**7) Hitler abolished religious instruction for children**

> By 1941 religious instruction for children fourteen years and up had been abolished altogether….

And now the second post.

**8) Hitler opposed the ideas of universal truth and objective moral absolutes**

> …Just as the Nazi attack on Christianity was part of a larger war on the idea of universal truth, whole postmodern cosmologies have been created to prove that traditional religious morality is a scam, that there are no fixed truths or "natural" categories, and that all knowledge is socially constructed.

Practically everything this man believed was 100% anti-Christian. But he fits in fine on the secular left. In fact, if you read out this list of actions to the groups who represent the secular left, I have no doubt that they would get to their feet and applaud the squashing of religious liberty and religious expression in the public square.

**Conclusion**

Adolf Hitler was a man influenced by two big ideas: evolution and socialism. His party was the national SOCIALIST party. Like the secular leftists in our own time, he was not a proponent of small government and individual rights, like religious liberty. He wanted to force his own values onto businesses and individuals that had a different allegiance, such as Christianity. He favored a strong role for the state in interfering with the free market and telling private business owners what to do. He was in favor of regulating the family so that the state could have a bigger influence on children. He did not like the idea that Christian parents would teach their children Christianity, instead of the doctrines that he favored. His ideas are 100% incompatible with Christianity and with capitalism, as well. Christians value individual rights and freedoms, small government and the autonomy of the family against the state. The differences are clear and significant.

# Should we fear mass murder more from Christians or from secular leftists?

**Wintery Knight** · 2 April 2015 · Archived copy · Original

Let's take a look at what Josef Stalin did during his rule of Russia in the 1920s and 1930s.

The Library of Congress offers this in their "Soviet Archives exhibit":

> The Soviet Union was the first state to have as an ideological objective the elimination of religion. Toward that end, the Communist regime confiscated church property, ridiculed religion, harassed believers, and propagated atheism in the schools. Actions toward particular religions, however, were determined by State interests, and most organized religions were never outlawed.
>
> The main target of the anti-religious campaign in the 1920s and 1930s was the Russian Orthodox Church, which had the largest number of faithful. Nearly all of its clergy, and many of its believers, were shot or sent to labor camps. Theological schools were closed, and church publications were prohibited. By 1939 only about 500 of over 50,000 churches remained open.

Let's see more from a peer-reviewed journal article authored by Crispin Paine of the University College, London:

> Atheist propaganda and the struggle against religion began immediately after the Bolsheviks seized power in 1917. While social change would, under Marxist theory, bring religion to disappear, Leninists argued that the Party should actively help to eradicate religion as a vital step in creating 'New Soviet Man'. The energy with which the Party struggled against religion, though, varied considerably from time to time and from place to place, as did its hostility to particular faith groups. The 1920s saw the closure of innumerable churches and synagogues (and to a lesser extent mosques) and the active persecution of clergy and harassment of believers. From 1930, though, Stalin introduced a less aggressive approach, and wartime support for the government earned for the Russian Orthodox Church, at least, a level of toleration which lasted until Stalin's death. Under Khrushchev antireligious efforts resumed, if spasmodically, and they lasted until the end of the Soviet Union.

An article from the pro-communism Marxist.com web site says this about Stalin:

> During the ultra-left period of forcible collectivisation and the Five Year Plan in Four an attempt was made to liquidate the Church and its influence by government decree. Starting in 1929 churches were forcibly closed and priests arrested and exiled all over the Soviet Union. The celebrated Shrine of the Iberian Virgin in Moscow – esteemed by believers to be the "holiest" in all Russia was demolished – Stalin and his Government were not afraid of strengthening religious fanaticism by wounding the feelings of believers as Lenin and Trotsky had been! Religion, they believed, could be liquidated, like the kulak, by a stroke of the pen. The Society of Militant Atheists, under Stalin's orders, issued on May 15th 1932, the "Five Year Plan of Atheism" – by May 1st 1937, such as the "Plan", "not a single house of prayer shall remain in the territory of the USSR, and the very concept of God must be banished from the Soviet Union as a survival of the Middle Ages and an instrument for the oppression of the working masses."!

Now, if you were going to pick a hero of the Christian faith, you'd probably pick a real fundamentalist like William Wilberforce, who freed the slaves – because of his evangelical Christian convictions. Wilberforce took Christianity seriously – he believed every verse of the Bible, he tried to convert people to his faith, and he pushed his faith on others by passing laws. He was the worst nightmare of the secular left – a politically active Evangelical Christian.

But who is a great atheist who was politically active? When I think of a great atheist, someone who really did the most to oppose the "lie" of God's existence, I think of Josef Stalin. So what kind of morality can we expect from

someone who takes the message of Richard Dawkins and Dan Barker seriously and has the political power to really do something about it?

**The Ukraine Famine**

Take a look at this UK Daily Mail article about a great achievement of the atheist Josef Stalin, which occurred in 1932-1933.

Excerpt:

> Now, 75 years after one of the great forgotten crimes of modern times, Stalin's man-made famine of 1932/3, the former Soviet republic of Ukraine is asking the world to classify it as a genocide.
>
> The Ukrainians call it the Holodomor – the Hunger.
>
> Millions starved as Soviet troops and secret policemen raided their villages, stole the harvest and all the food in villagers' homes.
>
> They dropped dead in the streets, lay dying and rotting in their houses, and some women became so desperate for food that they ate their own children.
>
> If they managed to fend off starvation, they were deported and shot in their hundreds of thousands.
>
> So terrible was the famine that Igor Yukhnovsky, director of the Institute of National Memory, the Ukrainian institution researching the Holodomor, believes **as many as nine million may have died.**
>
> […]Between four and five million died in Ukraine, a million died in Kazakhstan and another million in the north Caucasus and the Volga.
>
> By 1933, 5.7 million households – somewhere between ten million and 15 million people – had vanished. They had been deported, shot or died of starvation.

This is what follows when you believe that the universe is an accident, that there is no objective good and evil, that human beings are just animals, that no God will hold us accountable, and that human beings are not made in the image of God for the purpose of freely choosing to come into a relationship with him. The Ukrainian famine is an action that came from a man whose worldview was *passionate atheism.*

**Atheism today**

You might think that today's atheists are much different than Josef Stalin, but understand that according to a recent survey of atheists conducted by atheists, 97% of atheists vote pro-abortion. How many people have been killed by abortion? 56 million in the United States alone. Atheists in a society like ours, founded on Judeo-Christian values, are obviously going to live a lot better than Stalin. For one thing, they don't have the power that Stalin had to eradicate theism, although you can see Stalinism in the anti-Christian activities of groups like the Freedom From Religion Foundation. But take away the Judeo-Christian foundations of this society, and what would you see atheists doing?

Remember the words of Richard Dawkins:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should**

> **expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> (“God’s Utility Function,” *Scientific American*, November, 1995, p. 85)

Now, having said that, I readily admit that many atheists adopt Judeo-Christian values if their society is saturated with them, but they are acting better than their worldview requires. They are acting *inconsistently* with what atheism really teaches. It’s good for us that they do, but for how long?

# Christian-owned pizza business shuts down after death threats from gay activists

**Wintery Knight** · 3 April 2015 · Archived copy · Original

Crystal O'Connor, victim of bullying by gay activists

I read a lot of articles on this, and Todd Starnes' on Fox News was the most detailed.

He writes:

> A small town, family-owned pizzeria has become the latest target of an angry mob of modern-day fascists — hell-bent on silencing anyone who opposes gay marriage.
>
> Kevin O'Connor and his daughter Crystal own Memories Pizza in Walkerton, Ind. — just a hop, skip and a jump southwest of South Bend.
>
> Mr. O'Connor and his family have been forced into hiding and had to temporarily shut down their store after they told a local television reporter that they would not cater a gay wedding.
>
> "If a gay couple came in and wanted us to provide pizzas for their wedding, we would have to say no," Crystal told ABC 57 on Tuesday.
>
> Neither Crystal nor her father realized they were about to become the LGBT community's Public Enemy No. 1.
> "I'm a born-again Christian," Kevin O'Connor told me in an exclusive telephone interview Thursday. "My faith is the base of my business."
>
> And the O'Connor family's faith teaches them that marriage is reserved for a man and a woman.
>
> "I would not participate in a gay marriage," Kevin O'Connor said. "To condone a gay wedding to me is just wrong. I could not put my stamp of approval on a gay wedding."
>
> The television station labeled Memories Pizza as the "first business to publicly deny same-sex service," in the aftermath of the state's new Religious Freedom Restoration Act, the Washington Post reported.
>
> But the O'Connors said they have never denied a same-sex couple a pepperoni pie.
>
> "I have never turned anybody away from my store," Kevin O'Connor said. "If they come in there with clothes barely hanging on their back – I don't turn anybody away. I don't care what their beliefs are."
>
> The hell storm this 61-year-old grandfather faced as a result of his Christian faith is simply beyond belief.
>
> The family business came under fierce assault by LGBT activists and their cronies — accusing them of being anti-gay bigots. Their Facebook pages were smeared with gay pornography. Their phones were overwhelmed by vulgar and profane threats.
>
> A high school softball coach in Concord, Ind., was suspended after posting an arson threat on Twitter.

> “Who’s going to Walkerton, IN to burn down #memoriespizza w me?” Coach Jess Dooley tweeted.
>
> […]The events of the past few days have been incredibly troubling for the O’Connor family. During my interview with Kevin — he became quite emotional.
>
> “It’s been pretty tough, yeah,” he said. “It’s been hard.”
>
> It was his lifelong dream to own a business. That dream came true when he opened the pizzeria in 2006, when he started the business from scratch.
>
> And his Christian faith is evident in the restaurant.
>
> “We get together and pray every day when the store opens,” he said. “We have a box for customers to put prayer requests in. We don’t push it. We don’t try to preach.”
>
> He doesn’t force his religion on anyone.
>
> “We treat them like we want to be treated,” he said.
>
> Kevin told me he was especially thankful for the support he’s received from fellow Christians around the nation — including a group that launched a fundraising drive.
>
> He also wants other Christian business owners to be encouraged.
>
> “Trust the Lord,” he said. “Pray. Even though we don’t see where He’s taking us, He’s got control. And He will make it work for His good and our good.”
>
> Kevin said he hopes to reopen the pizzeria sooner rather than later – but an exact date is unclear.
>
> Right now, he’s trying to console his 21-year-old daughter – who has shouldered a mountain of hateful threats.
>
> “Crystal needs some time,” Kevin said. “This scared her pretty good.”

There is some good news, from the Washington Times:

> Supporters of the Indiana family under attack for refusing to cater a hypothetical gay wedding stepped up Thursday, raising hundreds of thousands of dollars and dropping by Memories Pizza even though it remained closed after a rash of threats.
>
> A crowdfunding campaign launched by conservative talk-show host Dana Loesch and her staff had collected more than $410,000 in 24 hours for the O’Connor family to help with “the financial loss endured by the proprietors’ stand for faith,” said a statement on the GoFundMe.com page.
>
> The O’Connors shut down the restaurant after being bombarded Wednesday with angry phone calls and social media posts, a reaction to co-owner Crystal O’Connor telling ABC57 that the family would not cater a same-sex wedding ceremony for religious reasons — not that they had been asked to do so.
>
> At one point, the family had even considered leaving town over the uproar, but Ms. O’Connor, 21, said on Ms. Loesch’s Twitter on Thursday, “It’s totally different today than it was yesterday. We’re not leaving.”

Try to remember which side the gay activists are on in the next election, by the way:

Hillary Clinton and the Human Rights Campaign

The thing about this is that we are on defense here. We are using up our funding to play defense. We should be filing lawsuits and taking the fascists to court. Not waiting for them to bully us in the courts. See the related posts for some of the gay activism that Democrats never speak out against.

# What should you say when a co-worker asks you if you believe in evolution?

**Wintery Knight** · 3 April 2015 · Archived copy · Original

How did life begin?

You only have a few minutes to respond, and your answer is going to go all around the office. So what should you say?

Stephen C. Meyer has the answer at Evolution News.

He writes:

> I spoke recently to the Faith and Law group on Capitol Hill in D.C., a regular meeting of congressional staffers. At their request, I addressed the topic: "What Should Politicians Say When Asked About Evolution?"
>
> […]In my talk, I not only gave an answer to the question "What Should Politicians Say When Asked About Evolution?" but I first explained why it is a difficult question for many politicians, especially conservative ones, to answer. There are three main reasons.

I'm only going to give the first reason:

> First, the term "evolution" can mean several different things, ranging from (1) the scientifically uncontroversial idea of "change over time" (think of small-scale variations in the shape and size of Galapagos finch beaks) to (2) the more controversial notion of universal common ancestry (think of Darwin's tree of life) to (3) the increasingly controversial idea that the mechanism of natural selection and random mutation have produced all the forms of life we see today without any guidance or design. The last meaning of "evolution" is what Richard Dawkins calls the "Blind Watchmaker" thesis.
>
> Equivocation in the definition of evolution can make it difficult for a politician to express legitimate skepticism about the controversial meanings of evolution without being presented to the public as being ignorant of established fact, or "anti-science." In Walker's recent case, media coverage traded on precisely this ambiguity to present him as being at odds with the majority of the American public, not to mention the scientific establishment. Media outlets repeatedly cited a poll showing that 65 percent of the American people believe that "human beings have changed over time" — i.e., the first and non-controversial meaning of evolution — without mentioning that a huge majority of Americans (and many scientists) reject the third and distinctly controversial meaning of evolution — the idea that the cause of the change over time is an unguided and

> undirected mechanism.

You can click through and read the other two, but for now, let's jump to the right way to answer the question:

> Most politicians, of course, don't know about this tumult in the field or of any of the *scientific* problems with modern Darwinism. They are thus often unnecessarily intimidated by the consensus that supposedly exists in its favor.
>
> In light of all this, any candidate asked about "the theory of evolution" would be well advised to give an answer that affirms the need to teach *about* contemporary evolutionary theory, but one that also makes clear distinctions between the different meanings of evolution and indicates an awareness of the scientific problems with the standard theory as demonstrated in the scientific literature. And frankly this is not party-specific advice. The scientific literature says what it says, whether consulted by Democrats or Republicans.
>
> Politicians can also say that they think students should learn about those problems since they regard knowledge of the *actual* status of the theory as a matter of basic scientific literacy. They should not frame the issue as one of "Science versus the Bible," or answer as if they were being asked about their personal religious beliefs, or as if they think the only alternative to current dogmatic teaching of Darwinian evolution (with its strict insistence on *undirected* evolution) is to teach Bible-based creationism. They can challenge the dogmatic (and often ideological) way the topic is currently taught and at the same time affirm their commitment to scientific literacy, academic freedom, and critical thinking.

And here's a sample question and answer:

> **Reporter**: "Do you believe in evolution?"
>
> **Candidate**: "Of course, I believe that organisms have changed over time. I certainly believe in evolution in that sense. But I am skeptical about *unguided* evolution — the idea that natural selection and random mutations have produced the major changes in the history of life we observe without any guidance or design. In fact, in peer-reviewed scientific publications, many scientists have expressed doubts about the creative power of natural selection and random mutation. I think that students in learning about the modern version of Darwin's theory should learn why scientists have these doubts. Understanding the strengths *and weaknesses* of scientific theories is a matter of basic scientific literacy. And there are scientific weaknesses in modern Darwinian theory."

This is the right answer because you pull in the majority of people – the young Earth creationists, the intelligent designists and the guided evolutionists. The only people you leave out are the flat-out materialist naturalists, and they are in the minority. So that's how you answer the question. It would probably help a great deal if you had read both of Meyer's books on biological evolution, since he writes at the highest level – far higher than left-wing journalists who probably dropped biology because it was too much work.

# When speaking to non-Christians, do you use any of these Christianese terms?

**Wintery Knight** · 3 April 2015 · Archived copy · Original

I found this article by J. Warner Wallace and thought it was appropriate because it's Easter, and there are always questions.

First, the list of Christianese: (not his term)

- **#1. "God has put you (or something) on my heart. / God told me."**
- **#2. "Be 'born again.' / Have a spiritual rebirth."**
- **#3. "You need to come to repentance. / Experience a conversion."**
- **#4. "Deal with your sin."**
- **#5. "Invite Jesus into your heart."**
- **#6. "Make Jesus the Lord of your life."**
- **#7. "Have faith."**
- **#8. "Be saved."**
- **#9. "Be washed by the blood of the Lamb."**
- **#10. "Be Sanctified."**
- **Bonus Expression #11. "Enjoy fellowship."**

This article is pretty funny, but it ought to be because I think we really need to shame church Christians when they talk like this.

Here's the one I liked best:

> **#5. "Invite Jesus into your heart."**
> You mean like a boyfriend? What exactly does that mean to have "Jesus in my heart?" I'm not an emotional kind of guy, so please don't ask me to sing songs or hold hands with Jesus, especially in public. Do I have to emasculate myself to become a Christian? If so, thanks for reminding me why I'm not a Christian.
>
> **Try this instead**: "When we admit our imperfections, believe Jesus died on the cross to pay the price for our mistakes, and accept His sacrifice, we can start a new relationship with God."

Indeed. It's a wonder that any rough and tough men become Christians after what they find in church.

I think that a lot of Christians struggle with explaining "sin" to non-Christians, but I have an approach that works for me. I just ask them how much effort they have put into looking for the evidence for and against God. How much effort into cosmology, especially. How much into the origin of life. How much into the fine-tuning. Usually, the answer is "I watched every episode of Star Trek" or "I watched a documentary on the Pyramids on the Discovery Channel". I try to show them that God has left fingerprints in the natural world, and by avoiding that evidence they are, in fact, *avoiding God*. Keeping him at arm's length by dancing away from the evidence and focusing instead on having good feelings. Collecting stuff. Having thrills and adventures. Making people like them. Etc. I call this refusal to try to seek God and adjust to him "sin". It's rebellion against the obligation to know God. And to know God is to love God. And to love God is to make decisions that reflect his character, even when it's difficult.

Wallace concludes:

> I understand the importance of our theologically rich Christian language, and as a Christian I often use similar

> words when talking with Christians. But when I'm talking with unbelievers, I try to think about how I used to hear and interpret these words before I became a Christian. How do I share what I believe? I take the time to translate important Christian concepts for those who might be willing to entertain the ideas if only I was willing to speak their language.

I think that there is a real need for churches to train Christians in how to bring up topics that are of interest to Christians in public. The approach I've always taken is to have a broad worldview, including areas like economics and policy, so that I wouldn't just sit there silent while other people are talking. I can ease into discussing spiritual things much more easily because I can start the conversation from politics, economics and current events. You have to show that you have knowledge in real-world areas before anyone will listen to you about other things. That's my approach anyway. You really have to establish your credentials before you start to speak about spiritual things.

# Islamic terrorists murder nearly 150 mostly Christian students in Kenya

**Wintery Knight** · 4 April 2015 · Archived copy · Original

Map of Africa

While the mainstream media was protesting religious freedom laws, they neglected to make a big deal out of a terrorist attack by Islamic terrorists against Christian students in Kenya.

Let's read about it in the radically leftist New York Times, of all places.

It says:

> Elosy Karimi curled up in a crawl space, immobilized by fear.
>
> Her classmates were flooding out of the dorms, in boxer shorts and thin nightgowns. Gunfire was ringing all around her. People were screaming. It was predawn and pitch black.
>
> "If you want to survive, come out!" the militants yelled. "If you want to die, stay inside!"
>
> In the terrifying confusion, Ms. Karimi, 23, decided to risk it inside, she said, and stayed hidden in the ceiling above her bunk bed for the next 28 and a half hours.
>
> "I knew those guys were lying," she said at the hospital, having just arrived to be checked after the ordeal.
>
> New details emerged on Friday about how a handful of fighters from the Shabab militant group, with just a few light weapons, managed to kill nearly 150 students in Kenya's worst terrorist attack since the 1998 bombing of the United States Embassy in Nairobi.
>
> Survivors said many students had fallen for the militants' trick, voluntarily leaving their dorm rooms and obeying commands to lie down in neat rows, only to be shot in the back of the head.
>
> One of the militants appeared to be a trained sniper, some witnesses said, picking off several Kenyan soldiers and critically hampering the rescue effort, giving the gunmen hours more to keep killing.
>
> The militants seemed especially cruel and gleeful, ordering some students to call their parents on their cellphones and tell them that the attack was payback for Kenya's military intervention in Somalia.

> Students who hid during the attack said they had heard their classmates whimpering as the militants taunted them. Then a single gunshot. Then silence.
>
> “They were shooting people as they came out; they were making others lie down,” said a doctor who was not authorized to speak publicly. “They had so many people lying in one place, it was easy killing.”

I am contrasting this story with the photos of the people marching around in Indiana for their right not to be refused gay marriage services from Christians. They were not marching for the Christian students who were murdered by terrorists in Kenya. Oh no – they have much higher priorities. The journalists who spent hours and hours lying about the religious liberty law also had different priorities. What a strange world where people think that it is more important to compel others to celebrate their behavior instead of condemning something that is truly evil. I guess it’s too much to ask that entitle secular leftist bullies would care about the basic human rights of others. They want a happy life for themselves, but there is no morality underlying any of their rhetoric.

As an aside, I think this story shows the important of America having a strong military and having the will to use it. It’s one thing to read about stories like this, but if you go to the polls and vote for Democrats to cut our defense budget and neuter the army with politically correct policies, then there is nothing we can do when things like this happen. The bad guys in this story only understand one thing, and that’s men with guns standing between them and their intended victims. No shrieking anti-war activist in pink could have helped the victims, but our military could have.

# Indiana RFRA “fix” is a full repeal, religious liberty will be no defense

**Wintery Knight** · 4 April 2015 · Archived copy · Original

CNS News analyzes the “fix” proposed by Indiana *Republicans*.

Excerpt:

> Indiana House Speaker Brian Bosma and Senate President Pro Tem David Long announced Thursday that they would submit a new versionof the state’s Religious Freedom Restoration Act (RFRA) to Gov. Mike Pence to counter criticism that it discriminates against gays and lesbians.
>
> “It was never intended to discriminate against anyone,” Long told reporters. “That perception led to the national protests we’ve seen.”
>
> **But a lawyer for The Becket Fund for Religious Liberty says the proposed legislative “fix” is not only unnecessary, it would undermine the religious rights of Hoosiers and leave them vulnerable to criminal prosecution for following their religious beliefs, the opposite of what RFRA was intended to do.**
>
> “We think the Indiana law is a very good law which is modeled on what has worked at the federal and state level for 20 years, and which is similar to constitutional provisions that are backed up by 50 years of jurisprudence,” Becket legal counsel Daniel Blomberg told CNSNews.com. “These laws work very well to protect the religious rights of minorities.
>
> **“All the Indiana law does is the same thing that’s been working very well for a long time,” he pointed out. “Today the Indiana legislature proposed a ‘fix’ that we think is 1) unnecessary; and 2) itself is broken and would create a very dangerous change in Indiana law.**
>
> **“Individuals asked to be part of a same-sex wedding who decline because they feel it violates their religious beliefs would not be able to raise the RFRA under the ‘fix’,” Blomberg told CNSNews.com. “It would leave them defenseless. It also makes specific allowances for criminal prosecution. So not only is the ‘fix’ not helpful, it should not be accepted.**
>
> **“We have a choice on how to handle these situations. We can allow government to drive religious people out of business, fine them and possibly imprison them, or we can allow religious people to have their day in court, and let the courts balance their religious claims against other competing values.”**

Gary Bauer explains what’s at stake:

> “Gov. [Mike] Pence is going through a rhetorical lynching,” Gary Bauer, former Republican presidential candidate and president of American Values, told CNSNews.com. “This is what we were warning about in the [Manhattan] Declaration, and why the Declaration was written.”
>
> Besides upholding the “sanctity of life” and the “dignity of marriage,” the Manhattan Declaration, which was signed by Bauer and a number of other religious and political leaders in 2009, championed “religious freedom”. “No one should be compelled to embrace any religion against his will, nor should persons of faith be forbidden to worship God according to the dictates of conscience or to express freely and publicly their deeply held religious convictions,” the Declaration stated.
>
> It warned that “freedom of religion and the rights of conscience are gravely jeopardized by those who would use the instruments of coercion to compel persons of faith to compromise their deepest convictions.”
>
> Such restrictions “undermine the viability of the intermediate structures of society, the essential buffer against the overweening authority of the state, resulting in the soft despotism [Alexis de] Tocqueville so prophetically warned of,” the Declaration continued. “Disintegration of civil society is a prelude to tyranny.”

> "It's becoming clearer and clearer that the tolerance movement used by the cultural Left in recent decades was just a poll-driven strategy and not an actual commitment to tolerance," Bauer continued, adding that the Indiana law is being used to cut off debate and redefine anyone with traditional moral values as a bigot. "Every pastor and every parent should be deeply worried about what is happening in Indianapolis," he said.

I guess I blame the church for this. I go to church. I know what goes on in there. It's a sermon on the gospel every week. There is about 20 minutes of singing. Current events are never mentioned. The existence of God and the resurrection are never explained or defended. The Bible is just assumed to be true, and no issues outside it are ever discussed. Objections to Christian theism are never named, much less defended against. Reasons and evidence are never provided for the Biblical view on topics like abortion or same-sex marriage, much less economics, the environment, etc. The emphasis is on comforting people. The emphasis is on not judging. The emphasis is on making people feel good and leaving them free to do whatever makes them feel good.

I just don't see young people having any interest in defending Christianity any more against the culture. I mean, I am seeing "pro-life", "pro-marriage" evangelicals voting for Democrats because they want a bigger secular government. They want more money to be transferred from Christian families to Solyndra so we can fight the global warming monster. They believed Obama about keeping your doctor, keeping your health plan, and not funding abortions – but Obama lied on all three of these. They want to vote for Obama's promise that health insurance premiums will drop $3000 in 2008, and then vote for the same guy again in 2012 when the premiums have actually gone up $2500. They voted for Obama saying that he supported traditional marriage, but then his Justice Department declined to defend the Defense of Marriage Act.

Young Christians just don't care about marriage as Jesus defined it – one man, one woman, for life. They say they do, but then they vote for the party that opposes religious liberty when they get the chance. Global warming and raising the minimum wage are more important. Why? Because the secular culture told them so. And that's their authority when it comes to voting.

Young Christians just seem to be completely disloyal to God as he really is. I don't think that Christians really want to have to think about what would work to defend God's reputation and character from these attacks. They just want to do their own thing, and get the praise from men, rather than the praise from God. In my own case, I am now in my upper 30s and still very much respecting the Biblical standards around sex: no pre-marital sex, no adultery, no frivolous divorce. Why is it such a difficult standard for younger evangelicals to accept and to defend? They seem to believe that chastity, natural marriage, and natural child-bearing are all unimportant things. The only rule now is to have fun with sex, and to never judge anyone for breaking the rules. That's not what the Bible teaches, but that's what young Christians believe. Who is going to talk to them about it? Not the pastors. Not their parents. And not their friends.

# William Lane Craig presents the evidence for the resurrection of Jesus

**Wintery Knight** · 5 April 2015 · Archived copy · Original

It's Resurrection Day, so that means it's time for a William Lane Craig lecture:

And if you like the lecture, you can see these ideas defended in a formal academic debate right here.

And, if you would rather read an essay by Dr. Craig on the resurrection, you can read one right here.

# Is love more about accepting a woman as she is, or growing her into something better?

**Wintery Knight** · 5 April 2015 · Archived copy · Original

A man leading a woman upward

On Saturday, my friend Dina asked me to do a Bible study with her, and she chose Ephesians. I decided that if I read it right away, it would give me more time to think about it. So I was on the treadmill today listening to all six chapters of it, and listening to some parts over. I have an NIV dramatized Bible on my smartphone, so it's super easy to listen to. Something stood out to me when I was listening to Ephesians 5 though, so I wanted to write about it.

Look at this from Ephesians 5:25-31:

[25] Husbands, love your wives, as Christ loved the church and gave himself up for her,

[26] that he might sanctify her, having cleansed her by the washing of water with the word,

[27] so that he might present the church to himself in splendor, without spot or wrinkle or any such thing, that she might be holy and without blemish.

[28] In the same way husbands should love their wives as their own bodies. He who loves his wife loves himself.

[29] For no one ever hated his own flesh, but nourishes and cherishes it, just as Christ does the church,

[30] because we are members of his body.

[31] "Therefore a man shall leave his father and mother and hold fast to his wife, and the two shall become one flesh."

I have always tried to apply this verse when dealing with women, and even when mentoring men. In my relationships, I try to listen to the woman's story and then try to think of where she is trying to get to in her life as a Christian. To help her along, I try to engineer activities that will allow her to grow in strength and confidence by achieving better and better things. There is no shortcut to confidence based on mere words, you have to help her do hard things so she has the experiences of feeling scared, failing, practicing more, then finally succeeding. Although a woman might think that it's fine to study English for a year, then drop out and sit around the house drinking beer and watching TV, a good man will not think that's acceptable. If a man loves a woman, then he wants to build her up into something nice for God. And in truth, that will be more fulfilling for her in the long run, although it might conflict with her feelings in the short run.

C.S. Lewis makes the same point in "The Problem of Pain":

> Finally we come to an analogy full of danger, and of much more limited application, which happens, nevertheless, to be the most useful for our special purpose at the moment—I mean, the analogy between God's love for man and a man's love for a woman. It is freely used in Scripture. Israel is a false wife, but her heavenly Husband cannot forget the happier days; 'I remember thee, the kindness of thy youth, the love of thy espousals, when thou wentest after Me in the wilderness.' 6 Israel is the pauper bride, the waif whom her Lover found abandoned by the wayside, and clothed and adorned and made lovely and yet she betrayed Him .7 'Adulteresses' St James calls us, because we turn aside to the 'friendship of the world', while God 'jealously longs for the spirit He has implanted in us'.8 The Church is the Lord's bride whom He so loves that in her no spot or wrinkle is endurable? For the truth which this analogy serves to emphasize is that Love, in its own nature, demands the perfecting of the beloved; that the mere 'kindness' which tolerates anything except suffering in its object is, in that respect, at the opposite pole from Love. **When we fall in love with a woman, do we cease to care whether she is clean or dirty, fair or foul? Do we not rather then first begin to care? Does any woman regard it as a sign of love in a man that he neither knows nor cares how she is looking? Love may, indeed, love the beloved when her beauty is lost: but not because it is lost. Love may forgive all infirmities and love still in spite of them: but Love cannot cease to will their removal. Love is more sensitive than hatred itself to every blemish in the beloved; his 'feeling is more soft and sensible than are the tender horns of cockled snails'. Of all powers he forgives most, but he condones least: he is pleased with little, but demands all.**
>
> […]We are, not metaphorically but in very truth, a Divine work of art, something that God is making, and therefore something with which He will not be satisfied until it has a certain character. Here again we come up against what I have called the "intolerable compliment." Over a sketch made idly to amuse a child, an artist may not take much trouble: he may be content to let it go even though it is not exactly as he meant it to be. But over the great picture of his life—the work which he loves, though in a different fashion, as intensely as a man loves a woman or a mother a child—he will take endless trouble—and would doubtless, thereby give endless trouble to the picture if it were sentient. **One can imagine a sentient picture, after being rubbed and scraped and re-commenced for the tenth time, wishing that it were only a thumb-nail sketch whose making was over in a minute. In the same way, it is natural for us to wish that God had designed for us a less glorious and less arduous destiny; but then we are wishing not for more love but for less."**

Imagine that you have signed up for swimming lessons and then your instructor takes you aside and says "listen, you really have talent at swimming. I think that you could compete in the Olympics if you apply yourself. I want you to work harder than everyone else here, and practice more on your own." How would you feel? The extra practice is going to cut into your TV and popcorn eating time. You are not even sure that you want to be an Olympic swimmer. What good is it to you if you are one? Why can't your instructor just accept you as you are and leave you alone to do whatever you want? If he loved you,wouldn't he just let you do what you wanted? Well… that's the challenge of letting yourself be led; recognizing leadership as love, and submitting to it.

**Choosing a good leader**

I have some advice for women who encounter men who believe that they have talent and who try to get them to grow into something better. A good man who wants to marry you is going to audition for the role of husband by trying to lead you upward. That's what love is, self-sacrifice designed to help the other person grow. It can be scary to let a man lead you. Letting a man lead you is especially hard if you have been indoctrinated by feminism to not trust men, or if you have had experiences with bad men who abused your trust and vulnerability. What if what he wants you to do is hard, and exposes you to failure? That won't feel good. Would he reject you if you failed? That wouldn't feel good. How can you tell if *this* man can be trusted when so many others have failed to be trustworthy? Aren't men all the same?

So here is some advice for picking a good leader. You can look around at some of the other people that this man has tried to lead, and see how it has worked out. Are the other people that he's mentored happy with the results?

Did they achieve more with his mentoring than without it? Has anyone he mentored been left in a worse state than they were in when he started investing in them? Were any of the people he mentored rejected for not being good enough? If they tried but failed to be perfect, did the man give up on them or was he delighted that they tried and achieved something less than perfect? Does he try to surround you with other people who are older and wiser so that they can mentor you and support you as well? I think that answering those kinds of questions can show whether the leading is meant to help you or harm you. The answers to those questions counterbalance the feelings that we all have when someone tries to love us upward.

And if a man isn't trying to audition for the husband role by leading you, then you should ask yourself why.

**Clarifications:**

- this doesn't apply to dating, only courting. Also, I don't believe that men should not be allowed to ask women out until they have a degree / trade and a job and some job experience
- this advice only works with men who are capable of leading, it's not some sort of given that all men get to lead without qualification
- when I am talking about leadership, I mean leadership before marriage in order to improve a woman's skills so she can serve God better, e.g. – improving apologetics or public speaking or teaching
- the goal of this is for the man and woman to experience how a man leads before the marriage, so that there are no surprises after the wedding
- leadership to me is the same as leadership in the corporate world, it means providing a vision, building consensus, enabling others to do their best, and motivating them with rewards and/or recognition
- examples of me leading a woman are: leading her to complete her undergraduate degree, leading her to start a masters, leading her to pay off her debts, leading her to teach in church, leading her to give lectures on apologetics issues, etc.

# UK's largest teacher union tells teachers they MUST promote the gay lifestyle to students

**Wintery Knight** · 6 April 2015 · Archived copy · Original

Dina tweeted this article from the UK Daily Mail.

It says:

> Schools should be forced to promote gay relationships in sex education lessons, union leaders say.
>
> The National Union of Teachers has called for a 'positive portrayal of same sex relationships' in lessons to be made 'compulsory' under the next government.
>
> It said MPs had a duty to tackle 'homophobia, biphobia and transphobia' in schools and create a 'positive climate of understanding about sexuality'.
>
> […]Simon Calvert of the Christian Institute said: 'This motion is itself an act of intolerance towards mainstream Christians and their beliefs. It would force Christian teachers to have to choose between their faith and their job.
>
> 'I wonder whether Christian members of the NUT who have paid their dues can expect any help from the NUT when their jobs are on the line.'
>
> He added that Church schools already teach 'love and tolerance' of others without having to explicitly approve of same sex relationships.
>
> The proposal was contained in a motion on lesbian, gay, bisexual and transgender (LGBT) rights passed by the NUT at its annual conference in Harrogate yesterday.
>
> It stated: 'Conference instructs the executive to call upon the present and future government to … make it compulsory that all schools' sex education policies include a positive portrayal of same sex relationships.'

That reminded me of this story from a few weeks ago about the Catholic teacher who was forced to take down pro-traditional marriage postings from her Facebook page.

The article says:

> A Catholic high school teacher was forced to remove her Facebook page Wednesday after a petition surfaced online calling attention to her "homophobic" posts.
>
> The petition was posted on change.org Tuesday and has 441 signatures as of Wednesday evening. It points directly to posts allegedly made by Patricia Jannuzzi, a theology teacher at Immaculata High School in Somerville, and has caught the eye of actress Susan Sarandon and former "Real Housewives of New Jersey" cast member Greg Bennett.
>
> "Mrs Jannuzzi's facebook is a religious curtain covering hateful message," the petition reads. "The homophobic and short-sighted posts are disturbing and degrading."
>
> **In a statement provided to NJ Advance Media, the school said it took "immediate action" and "mandated that the teacher involved permanently de-active her Facebook page."**
>
> **"The opinions reflected in these posts do not in any way represent the philosophy, mission or student experience of this high school," the statement said. "… Through our investigation, we have determined that the information posted on this social media page has not been reflected in the curriculum content of the classes she teaches."**
>
> […]Another alumnus, Scott Lyons, who is gay and had Januzzi as a teacher, shared a letter on Facebook he sent to her after reading one of her posts. He said in the letter that he remembers Januzzi's classes to be

> “focused on love and acceptance” but that he is “offended and disappointed” by her recent posts.
>
> “While I respect the fact that people have different opinions on the matter what I can tell you from my heart is that I urge you to be careful with your words and the messaging you are putting out there,” he wrote.
>
> Lyons is the nephew of Sarandon, who shared the post to her 3,000 followers.
>
> “So proud of my nephew Scott and the dialogue he started,” Sarandon writes. “…High school is a tough time anyway… students don’t need teachers making it even more difficult.”
>
> **Immaculata said in its statement that the school is reviewing its social media policy with faculty and staff members.**
>
> **“It is the policy of the school that all faculty and staff demonstrate respect and sensitivity to all people at all times and to avoid offending any individuals or groups,” the statement said.**

The Catholic teacher linked to an article from Young Conservatives. A mainstream conservative site. And that’s what her employer did to her. Apparently, the employer is a Catholic school.

# Images of unborn babies developing in the womb

**Wintery Knight** · 6 April 2015 · Archived copy · Original

This post from Life News has ten excellent pictures of life inside the womb.

Here's my favorite from 10 weeks:

Unborn Baby – 10 weeks old
This is a first trimester baby!

I decided to go hunting to see what is developed at this time, and found this list:

> - From this week until birth, the developing organism is called a fetus.
> - The fetus is now the size of a small strawberry.
> - The feet are 2mm long (one tenth of an inch).
> - The neck is beginning to take shape.
> - The body muscles are almost developed. Baby has begun movement.
> - While still too small for you to feel, your little one is wriggling and shifting.
> - The jaws are in place. The mouth cavity and the nose are joined.
> - The ears and nose can now be seen clearly.
> - Fingerprints are already evident in the skin.
> - Nipples and hair follicles begin to form.
>
> The unborn baby is now called a fetus. Though the fetus is constantly moving, you will not be able to actually feel fetal movement for several more weeks. All of the organs, muscles, and nerves are in place and beginning to function. As the hands and feet develop fingers and toes, they have lost their paddle like look. The touch pads on the fingers form and already have fingerprints.
>
> During this week of pregnancy the crown to rump length of the fetus is 0.9 inch to 1.2 inches (22 to 30mm),

> weight 0.07 ounce (2gm). They are now on the way to forming their testicles or ovaries, getting ready for the next generation. Until the ninth week of fetus development, the fetal reproductive apparatus is the same one for the both sexes. The head is still large and curves into chest.
>
> Each week your uterus grows larger with the baby growing inside it. You may begin to see your waistline growing thicker by this time. A pelvic exam will detect that your uterus has grown from it's normal, size of your fist, to a little bigger than a grapefruit.

Here are some new photos from another Life News, which actually show sperm and egg, as well as the earliest stages after conception.

# Did your science textbook teach that embryo drawings prove evolution?

**Wintery Knight** · 6 April 2015 · Archived copy · Original

Haeckel's embryos and scientific fraud

Jonathan Wells, a biologist with Ph.Ds from Yale and UC Berkeley, writes about one example of fake evidence here:

> Charles Darwin thought that "by far the strongest" evidence that humans and fish are descended from a common ancestor was the striking similarity of their early embryos. According to Darwin, the fact that "the embryos of the most distinct species belonging to the same class are closely similar, but become, when fully developed, widely dissimilar… reveals community of descent." [2] To illustrate this, German Darwinist Ernst Haeckel made some drawings in the 1860s to show that the embryos of vertebrates (fish, amphibians, reptiles, birds and mammals) look almost identical in their earliest stages.
>
> But Haeckel faked his drawings. Not only do they distort vertebrate embryos by making them appear more similar than they really are (in a way that Stephen Jay Gould wrote "can only be called fraudulent" [3]), but they also omit classes and stages that do not fit Darwin's theory. *Most significantly, Haeckel omitted the earliest stages, in which vertebrate embryos are strikingly different from each other.* The stage he portrayed as the first is actually midway through development. Yet according to Darwin's logic, early *dis*-similarities do *not* provide evidence for common ancestry.
>
> Haeckel used his faked drawings to support not only Darwinian evolution, but also his own "Biogenetic Law," which stated that embryos pass through the adult stages of their ancestors in the process of development.
>
> …Haeckel's drawings were exposed as fakes by his own contemporaries, and his Biogenetic Law was thoroughly discredited by 20th century biologists. It is now generally acknowledged that early embryos never resemble the adults of their supposed ancestors. A modern version of recapitulation claims that early embryos resemble the *embryos* of their ancestors, but since fossil embryos are extremely rare, this claim is little more than speculation based on the assumption that Darwin's theory is true.

Now the standard response from Darwinists: *no textbooks are still using the fraudulent embryo images.*

You can see the actual faked pictures from the modern textbooks here. These textbooks were being produced as late as 2004, even though the fraud was detected in the 1800s! Is this the vaunted self-correction of science, or science being twisted to support social and political goals?

And this excerpt from that article is interesting:

> Some Darwinists continue to deny that there has been any misuse of Haeckel in recent times. If that is the case, why did Stephen Jay Gould attack how textbooks use Haeckel in 2000? Gould wrote: "We should… not be surprised that Haeckel's drawings entered nineteenth-century textbooks. But we do, I think, have the right to be **both astonished and ashamed by the century of mindless recycling that has led to the persistence of these drawings in a large number, if not a majority, of modern textbooks!**" (emphasis added) Similarly, in 1997, the leading embryologist Michael K. Richardson lamented in the journal *Anatomy and Embyology* that "Another point to emerge from this study is the **considerable inaccuracy of Haeckel's famous figures**. These drawings are **still widely reproduced in textbooks** and review articles, and continue to exert a significant influence on the development of ideas in this field." (emphases added)

Here is a link to the peer-reviewed journal Science, where there is an article talking about the fraudulent embryo drawings. Yes – the drawings really are fraudulent.

And finally, Casey Luskin has a new post up at Evolution News that lists all the textbooks that contain the fraudulent drawings. One is dated 2013! The drawings just keep getting recycled over and over as a "proof" of evolution.

# UVA retracts rape story after Columbia University calls it "journalistic failure"

**Wintery Knight** · 7 April 2015 · Archived copy · Original

UVA students blindly following their leftist masters

The Wall Street Journal reports on the conclusion to this radical-feminist scandal. I'll explain later why I am writing about this, too.

Excerpt:

> Rolling Stone retracted an explosive article detailing an alleged gang rape at a University of Virginia fraternity after Columbia University's Graduate School of Journalism concluded that the story was a "journalistic failure that was avoidable."
>
> The Rolling Stone story was written by Sabrina Rubin Erdely and published last November under the headline "A Rape on Campus." It sparked a national uproar over sexual misconduct at college campuses. At UVA, President Teresa Sullivan suspended all Greek activities for six weeks and students marched in protest.
>
> But before long, other media reports raised serious doubts about the veracity of the article and the reporting and editing process behind it.
>
> […]The "most consequential" decision, the report found, was Rolling Stone's acquiescence to the fact that Ms. Erdely "had not contacted the three friends who spoke with Jackie on the night she said she was raped." If Rolling Stone had done so, it said, it "would have almost certainly led the magazine's editors to change plans."
>
> […]The Charlottesville, Va., police concluded in March after a four-month investigation that "there is no substantive basis to support the account alleged in the Rolling Stone article," the Columbia report notes. Police said at the time they were unable to interview the woman featured in the story and their investigation remains suspended until she decides she "wishes to cooperate."

Jackie was later discovered to be a radical feminist. The author of the retracted rape story is also a radical feminist. And she is presenting herself as a victim:

> Ms. Erdely, in a statement, said the past few months have been among the most painful in her life, and reading the Columbia report detailing her mistakes was "a brutal and humbling experience."
>
> […]The report said that Rolling Stone's editors, as well as Ms. Erdely, "concluded that their main fault was to be too accommodating of Jackie because she described herself as the survivor of a terrible sexual assault."
>
> **Columbia, however, disagreed with that conclusion, noting that editors made decisions about "attribution, fact-checking and verification that greatly increased their risks of error but had little or nothing to do with protecting Jackie's position."**

Newsbusters quotes the report, which shows that Erdely's story was agenda-driven from the start:

> Last July 8, Sabrina Rubin Erdely, a writer for Rolling Stone, telephoned Emily Renda, a rape survivor working on sexual assault issues as a staff member at the University of Virginia. Erdely said she was searching for a single, emblematic college rape case that would show "what it's like to be on campus now … where not only is rape so prevalent but also that there's this pervasive culture of sexual harassment/rape culture," according to Erdely's notes of the conversation.

Reason.com quotes this part of the report to show her editors were complicit:

> Jackie proved to be a challenging source. At times, she did not respond to Erdely's calls, texts and emails. At two points, the reporter feared Jackie might withdraw her cooperation. Also, Jackie refused to provide Erdely the name of the lifeguard who had organized the attack on her. She said she was still afraid of him. That led to tense exchanges between Erdely and Jackie, but the confrontation ended when Rolling Stone's editors decided to go ahead without knowing the lifeguard's name or verifying his existence. After that concession, Jackie cooperated fully until publication.

Reason also comments:

> It's actually even worse than that. When Erdely told Jackie that she really did need to know the name of Jackie's date (the lifeguard who supposedly masterminded the attack), Jackie stopped answering her phone calls and texts for about two weeks. Eventually, Erdely left Jackie another voicemail in which the writer agreed to stop trying to contact the lifeguard and instead use a pseudonym, *Drew*. After that, Jackie magically reappeared, calling Erdely back "quickly," according to the report.
>
> Jackie, in fact, displayed impressive levels of self-preservation and rational behavior—at least, from the perspective of a highly disturbed person whose goal was to spread an incredible lie without exposing it as such. She was highly detailed in her account of the crime, gave descriptions, and recalled (wholly invented) conversations with great accuracy. And she studiously avoided any line of questioning that would have exposed the lie. If a particular question posed a threat, she either invented a reason why it couldn't be answered, or simply stopped responding.

No one at Rolling Stone has been fired, much less charged with crimes. The woman who made the false rape charge has also not been charged with anything. So there is no deterrent there to prevent this from happening again – either to the women who make the charges, or to the radical feminists who "report" on them. Let's hope that when the lawsuits shake out that both Erdely and her Rolling Stone cheerleaders find themselves bankrupted.

**How often are rape claims false?**

National Review explains:

> Specifically, in their analysis of sexual-assault cases at a large university, the authors found that 5.9 percent of cases were provably false. **However, 44.9 percent cases "did not proceed" – meaning there was insufficient evidence, the accuser was uncooperative, or the incident did not meet the legal standard of assault. An additional 13.9 percent of cases could not be categorized due to lack of information. That leaves 35.3 percent of cases that led to formal charges or discipline against the accused.**

"35.3 percent of cases that led to formal charges or discipline against the accused". That's a lot of Jackie-scenarios.

The trouble is when people don't do the homework and just come to have a general mistrust of men based on their intuitions and emotions from stories they hear about from the news media – stories like this one. And yet they become so sure that they have an educated and informed opinion, just from hearing news reports. They never hear

about the retractions.

**My take**

So why did I cover this story in past blog posts, and why am I bringing up the retraction now? Well, it's because of the feminist agenda. I want to point out how the feminist left uses stories like this in order to push a wedge between men and women. Women who are indoctrinated for four years in misandry are less likely to look to men as protectors, providers and moral/spiritual leaders. Marriage, with its traditional gender roles of men working and woman raising the kids, will be out.

If men are all rapists, then how could a woman give up her own dreams and career to stay home and raise kids? If men are all rapists, how could a woman trust a man to be faithful to her? If men are all rapists, then how could a man be trusted to provide for a family. If men are all rapists, then how could a woman trust a man to stick around when she is old and wrinkly? And of course, this lousy impression of men is all reinforced by the binge-drinking, hooking-up, and serial cohabitation that is so popular in university campuses.

There is a reason why Rolling Stone ran with this story, despite all the warning signs – it made the point that they wanted to make. Women who think that they can't depend on men will naturally turn to bigger government to provide for them, and that's what people on the left want women to do. Marriage is subversive to their plan. Having a lot of children is subversive to their plan. Homeschooling is subversive to their plan.

# Are you ready for marriage? 10 questions to find out how prepared you are

**Wintery Knight** · 7 April 2015 · Archived copy · Original

Marriage and family

Would you like your marriage to be long-lasting and fulfilling? Well, check out the questions below and see if you are ready for life-long wedded bliss.

**1. Are you opposed to no-fault divorce laws?**

No-fault divorce laws allow one spouse to leave the marriage at any time, for any reason, or for no reason at all. If you support no-fault divorce, then your view of marriage is that it's something to be entered into lightly, because it can be exited easily. You'll be walking down the aisle thinking "oh well, if it doesn't work out, I can always get a divorce". If you oppose no-fault divorce laws, then your view of marriage is that there is no escape hatch. You'll probably be a lot more careful about getting married. Since you are convinced that marriage is built to last forever, you'll have a courtship of at least 6 months, and involve both sets of parents in the process. If you put commitment above happiness, you're ready for marriage.

**2. Are you opposed to abortion laws?**

Abortion laws basically make it easy for two people to have recreational sex, and then get rid of any complications that result quickly and easily. This way, both the people that created the effect can escape the responsibility for what they did, and keep right on pursuing their goals and dreams. If you support abortion laws, you're really saying that you can engage in recreational sex with people who are unwilling to accept responsibility for any children that result. If you are pro-life, then you're saying that people should be careful about having sex, and be ready to take responsibility for a child, should one appear. Being responsible is good preparation for marriage.

**3. Are you supportive of daycare for young kids?**

Daycare services are essential for couples who need both the father and the mother to be working. The advantage of both parents working is that you can afford lots of shiny new stuff – like vacations, boats, shoes and handbags. Studies show that children don't die during daycare, although if you put a child in daycare, there will be effects on the child's behavior, such as higher anxiety and aggression. If you oppose daycare, you're putting the needs of your children above your need for shiny stuff. Putting the needs of children first is a sign that you are ready for the self-sacrifice that marriage requires.

**4. Are you in favor of smaller government?**

If you're in favor of smaller government, then you would rather keep taxes low so that more money stays in the family. If you support bigger government, then you think that government knows how to spend your money better

than you and your spouse do. Additionally, government usually likes to spend more money than they take in. For example, in the last 8 years, we've added $10 trillion dollars to the debt, which is now $18.5 trillion. If you oppose higher taxes and bigger government, then you want government to pass on less debt to your children. Putting your kids' financial well-being over your own is pro-marriage.

**5. Are you in favor of school choice?**

If you're opposed to school choice, then you think that government should decide which schools your children will attend. School choice laws allow parents to give money to the schools they think are best for the children. If a school has excellent teachers and teaches students skills that they can use in their professional lives, then parents can choose that school. Schools have to compete to provide higher quality to parents, for lower cost. If you support giving parents more choice, then you put the needs of children – especially poor, minority children – above the needs of education administrators and teacher unions. Putting kids fist is pro-marriage.

**6. Are you in favor of premarital sex?**

Premarital sex is really fun (so I'm told). You can have sex with people who are just really attractive, even if these people have lousy character. Your friends will be impressed, and you'll feel more attractive – like you were climbing a ladder of attractiveness with each new partner. If you combine sex with being drunk, then you can't remember anything after. And you can't feel guilty if the booze made you do it, right? On the other hand, if you present yourself to your spouse as a virgin, you are telling them that you have self-control, that you take sex as communication rather than recreation, and that they can trust you to be faithful by keeping sex inside the marriage. Trust is important for a good marriage.

**7. Are you in favor of welfare for single mothers?**

Sometimes, women find themselves pregnant before they are married. If you think that giving taxpayer money to women who have babies before they have husbands is a good idea, then you are rewarding behavior that creates fatherless children. Raising a child without a father causes serious behavioral problems. Boys tend to become more violent, and are more likely to commit crimes. Girls tend to engage in sex at earlier ages. If you oppose encouraging fatherlessness with welfare, you want women to get married before they have kids. Taking the needs of children seriously is pro-marriage.

**8. Are you in favor of same-sex marriage?**

When a man and a man get married and acquire children, those children will not be raised with their birth mother. Similarly with lesbians, the children will not grow up with their birth father. Studies show that children suffer from not being raised by their biological parents. For example, children of same-sex parents have lower graduation rates than children raised by heterosexual couples. If you think that children have a right to a stable relationship with their biological mother and father, then you place a higher value on the needs of children as opposed to the needs of adults. That's a good sign you're ready for marriage.

**9. Are you in favor of radical feminism?**

Feminism shows that you think the purpose of marriage is to make women happy, and not to work as a team to serve God and raise good children. Indeed. Marriage doesn't work if the woman approaches it as an accessory. Marriage is about a man and a woman sacrificing their own interests and compromising in order to work together as a team. Husbands and children have needs that women should care about. Feminism teaches women that husbands and children are less important than their careers, hobbies and interests. Feminism is anti-marriage.

**10. Are you responsible with earning, budgeting and saving money?**

This one comes to us from Bob P. He says that marriages work better when both spouses are "committed to financial planning, budgeting and a renunciation of debt to support a lifestyle. Disagreement about financial issues is one of the greatest causes of marital stress." If you're able to choose a college major or a trade that you don't like, but that pays well, that's a positive. If you're able to string together jobs so that your resume is gap-less, that's a

positive. If you’re able to save money even though it means you’re having less fun, that’s a positive. If you’re able to give away money to others to support them, that means you’re able to sacrifice your interests for the benefit of others. That’s pro-marriage.

Well, how did you do? Leave your ideas for more policies and points of view that are marriage-friendly in the comments.

# Wayne Grudem debates Richard Glover on economics and the Bible

**Wintery Knight** · 7 April 2015 · Archived copy · Original

A great episode of the Unbelievable podcast. This is a great debate. I really enjoyed it. All three speakers were excellent putting forward their points. It's nice to hear an American voice, a British voice and an Australian voice debating an important issue. HIGHLY RECOMMENDED.

Details:

> Wayne Grudem is a theologian known for his conservative approach to both doctrine and economics. His new book "The Poverty of Nations: A Sustainable Solution" (co-authored with economist Barry Asmus) makes the case that pouring aid into developing countries is a failed strategy. Grudem debates whether the Bible supports free market, capitalist economics with Australian economist and theologian Richard Glover who wrote a critique of the book for the Australian Bible Society.

The MP3 file is here.

**Summary:**

Grudem:

- The Bible speaks to all of life, including economics, stewardship, government
- The study of economics helps us to understand how to take care of the poor
- My job is to apply the teachings of the Bible to all of life

Brierley:

- What's your thesis in the book?

Grudem:

- A good system is one where the poor have the opportunity to earn and save from their labor
- Book is a response to a Kenyan couple Grudem met at a London conference on business and Christianity
- Book is not concerned with how individuals and groups can do charity to help the poor
- Our church already does that and we support individuals and groups doing charity
- The book is concerned with how should nations be transformed in order to grow economically
- What should the laws, policies and cultural beliefs of a nation be in order for it to not be poor?
- The book lists factors that have moved nations from poverty to prosperity in different times and places
- The thesis of the book is this: government should set their people free to be able to produce more
- We advocate freedom in economics: freedom to work, freedom to save, freedom to start businesses
- We believe that this free enterprise view is consistent with the Bible in a number of places
- E.g. – private property is good for prosperity (thou shall not steal) but forbidden by communism

Brierley:

- What about the church sharing in communities in Acts 2 and Acts 4?

Grudem:

- That is not redistribution of wealth among individuals and businesses by a secular government
- Those passages showed that there was voluntary sharing among Christians, which is not communism

Brierley:

- What's wrong with Grudem's book?

Glover:

- The book emphasizes the Bible and the goal is to help the poor in poor countries
- Criticism 1: the book doesn't engage with non-free-market perspectives on economics
- Criticism 2: the book doesn't survey all that the Bible says about economics

Brierly:

- For 1) what is one of the views that is not considered?

Glover:

- Jeffrey Sachs says that nations need a leg up before they can grow economically
- Ha-Joon Chang says that free enterprise was not how the wealthy nations became wealthy

Grudem:

- We do engage with other points of view, especially Jeffrey Sachs in the book
- The trouble with leftist views on economic development is that it does not work in practice
- NO COUNTRY has even been lifted out of poverty by foreign aid
- He says we don't cite enough from the wisdom literature: we have 64 citations in the index
- He says we don't cite enough from the gospels: we have 42 citations in the index
- He says we don't cite enough from the epistles: we cite 22 of 27 epistles in the index
- Some economists won't criticize cultural and moral values that hurt prosperity
- As Christians, we think that moral and cultural values are part of the problem that needs solving

Brierley:

- What about foreign aid?

Grudem:

- Foreign aid doesn't help: a lot of the money goes into government and rulers can be corrupt
- Instead of encouraging people to start businesses, it tells people to go into government to get aid money
- Economists (lists 3) are saying that foreign aid entrenches corrupt government in power, does no good

Brierley:

- If it's not working, should we keep doing it?

Glover:

- When there is an immediate need, we should do it, even if it is not a long-term solution: we need both

Brierley:

- Should we stop foreign aid completely?

Grudem:

- Voluntary charitable giving from individuals and churches to help poor countries is good
- Me and my co-author are both active on our church board that helps poor countries with urgent needs

- Food and doctors are urgent needs, and we should help, but it doesn't lift countries out of poverty
- We need a long-term solution that helps poor countries produce their own food and doctors
- We are criticizing 1) government to government aid and 2) IMF/World bank to government aid
- We have had pushback because 500,000 people make a living from this foreign aid industry
- No country has ever been lifted out of poverty into sustainable prosperity
- That's the definition of insanity: continuing to do the same thing that has never worked

Brierley:

- Does the Bible support free enterprise as a way of creating sustainable prosperity?

Glover:

- When I said the Bible was absent from his book, absent was a bad choice of words
- But the hundreds of references he listed were not dealth with *in depth*
- In the Scriptures, God is the one who provides (e.g. – in Ephesians, Sermon on the Mount)
- The Bible is less focused on his people making money, and more focus on sharing basics, like food
- Secular governments should just take it from people who have food and give it to hungry people
- In 2 Cor 8-9, Paul talks about voluntary sharing so everyone will be equal

Brierley:

- Does 2 Cor 8-9 undermine the free enterprise system you champion in the book?

Grudem:

- The sharing in the Bible solves cases of urgent need, it does not lift countries from poverty to sustainable prosperity
- Some older translations say "equality" in 2 Cor 8:13-14, but newer translations (e.g. – ESV) say "fairness"
- The Greek word is translated as "fairly" the only other place it appears in the NT (Col 4:1), in every translation
- God uses the means of human work and productivity to provide (daily bread is baked, doesn't just fall from Heaven)
- In general, there's no provision in Scripture for a person to be dependent on donations for their entire lives
- God promises Israel fields and mountains to tend and mine, but prosperity is from work, not depending on others

Brierley:

- Does the Bible support this focus on work?

Grudem:

- Working is highly praised in Scripture, (lists Bible passages that favor work over dependency)
- Countries that were exposed to this notion of work and productivity have been more prosperous

Glover:

- Jeffrey Sachs and other development economists don't say you can be prosperous through dependence
- They say that it is a necessary part of leading to nations out of poverty into poverty

Grudem:

- It's never worked. What nation has become prosperous through foreign aid?

Glover:

- There are lots of nations, especially in Africa, where foreign aid has helped lift them out of poverty

Grudem:

- Name one country in Africa where foreign aud has lifted them out of poverty into sustainable prosperity

Glover:

- I can't think of one right now.

Grudem:

- Our book contains a map of Africa and we looked at every nation's per capita income
- No nation has been able to rise out of poverty through dependence on foreign aid
- The only close one is Botswana, but they have abundant freedoms, Christian morals, less corrupt government
- So Botswana is the best case and they became prosperous through becoming productive, not foreign aid

Brierley:

- Is he right to say that charity is a short-term solution, but that it's not good long-term for prosperity?

Glover:

- Yes, and work is a very important focus in the Scriptures as he says.
- But since the Fall work has been much harder, and may not have the outcomes that we would like

Grudem:

- I also believe in emergency aid for when catastrophies happen, like floods and famines
- But dependence on foreign aid enriches corrupt rulers and does not create the productivity that leads to sustained prosperity

Brierley:

- Can foreign aid be used to give poor nations a leg up on becoming prosperous?

Grudem:

- Dambisa Moyo, Oxford-educated economist from Zambia, says stop the aid, it's doing more harm than good
- Jeffrey Sachs' view is that foreign aid hasn't worked yet, but just keep trying a bit more
- What works: limited government, rule of law, fair courts, documented property rights, low taxes, stable currency
- People are creative and want to work, we just have to get government out of the way and let people work, earn and save

Brierley:

- Is this free enterprise system supported by the Bible?

Glover:

- The wealthy nations of the world did not become wealthy through productive work and free enterprise policies
- Ha-Joon Chang: free enterprise policies have never brought a country from poverty to wealth
- E.g. – wealth is created through tariffs (not by innovating and by economic freedom?)

Grudem:

- I've read Ha-Joon Chang's book, and his examples are very selective and limited
- Index of Economic Freedom: the freest countries are the most prosperous, the least free countries are the most poor
- When you look at macro data, instead of very selective examples, the free enterprise system is best for prosperity

Glover:

- The book doesn't do enough to engage with leftist economists (he doesn't say which ones)
- Just because nations who are free are rich, doesn't mean freedom causes productivity
- There are parts of the Bible that doesn't support the free enterprise system (he names none)

Grudem:

- The Bible is focused on work not dependency, and charity not government redistribution
- The best way to help the poor in other countries is by encouraging work and productivity

# Should Christian apologists avoid political, moral and cultural issues?

**Wintery Knight** · 8 April 2015 · Archived copy · Original

The Sexual Revolution and the decline in religious affiliation
Here's an article from The American Conservative, by moderate conservative Rod Dreher, dated April 2013.

He writes:

> Twenty years ago, new president Bill Clinton stepped on a political landmine when he tried to fulfill a campaign promise to permit gay soldiers to serve openly. Same-sex marriage barely registered as a political cause; the country was then three years away from the Defense of Marriage Act and four years from comedian Ellen DeGeneres's prime-time coming out.
>
> Then came what historians will one day recall as a cultural revolution. Now we're entering the endgame of the struggle over gay rights and the meaning of homosexuality. Conservatives have been routed, both in court and increasingly in the court of public opinion. It is commonly believed that the only reason to oppose same-sex marriage is rank bigotry or for religious reasons, neither of which—the argument goes—has any place in determining laws or public standards.
>
> The magnitude of the defeat suffered by moral traditionalists will become ever clearer as older Americans pass from the scene. Poll after poll shows that for the young, homosexuality is normal and gay marriage is no big deal—except, of course, if one opposes it, in which case one has the approximate moral status of a segregationist in the late 1960s.
>
> […]When they were writing the widely acclaimed 2010 book *American Grace*, a comprehensive study of contemporary religious belief and practice, political scientists Robert D. Putnam and David E. Campbell noticed two inverse trend lines in social-science measures, both starting around 1990.
>
> They found that young Americans coming into adulthood at that time began to accept homosexuality as morally licit in larger numbers. They also observed that younger Americans began more and more to fall away

> from organized religion. The evangelical boom of the 1970s and 1980s stopped, and if not for a tsunami of Hispanic immigration the U.S. Catholic church would be losing adherents at the same rate as the long-dwindling Protestant mainline.
>
> **Over time, the data showed, attitudes on moral issues proved to be strong predictors of religious engagement. In particular, the more liberal one was on homosexuality, the less likely one was to claim religious affiliation. It's not that younger Americans were becoming atheists. Rather, most of them identify as "spiritual, but not religious." Combined with atheists and agnostics, these "Nones"—the term is Putnam's and Campbell's—comprise the nation's fastest-growing faith demographic.**
>
> Indeed, according to a 2012 Pew Research Center study, the Nones comprise one out of three Americans under 30. This is not simply a matter of young people doing what young people tend to do: keep church at arm's length until they settle down. Pew's Greg Smith told NPR that this generation is more religiously unaffiliated than any on record. Putnam—the Harvard scholar best known for his best-selling civic culture study *Bowling Alone*—has said that there's no reason to think they will return to church in significant numbers as they age.
>
> Putnam and Campbell were careful to say in *American Grace* that correlation is not causation, but they did point out that as gay activism moved toward center stage in American political life… the vivid public role many Christian leaders took in opposing gay rights alienated young Americans from organized religion.
>
> In a dinner conversation not long after the publication of *American Grace*, Putnam told me that Christian churches would have to liberalize on sexual teaching if they hoped to retain the loyalty of younger generations. This seems at first like a reasonable conclusion, but the experience of America's liberal denominations belies that prescription. Mainline Protestant churches, which have been far more accepting of homosexuality and sexual liberation in general, have continued their stark membership decline.
>
> **It seems that when people decide that historically normative Christianity is wrong about sex, they typically don't find a church that endorses their liberal views. They quit going to church altogether.**

That's why I am somewhat underwhelmed with the pure apologetics approach of most apologists.The real reason that drives atheist "apologetics" is, to be frank, the desire to dispense with rules around sexuality. The sexual freedom comes first, and then the speculative smokescreens follow. Close behind the sexual freedom is leftist economic policies (which are seen as more "fair") and anti-business environmentalist policies. So there's more turf to defend here than just the existence of God, the resurrection and the reliability of the Bible. That's not what's behind the drift of young people away from Christianity.

That's why on this blog, you get a ton of politics and tons of studies and arguments against premarital sex, no-fault divorce, single motherhood by choice, same-sex marriage, and everything else that comes before traditional apologetics. (And you also get lots of apologetics, too!) We need to get better at defending Christian sexual ethics using purely secular arguments and evidence, e.g. – showing people how premarital sex undermines marital stability or how gay parenting harms the well-being of children. There are reasons for these rules we have, and we have to go beyond "The Bible Says…" if we expect to be convincing to young people.

And when we go against the Sexual Revolution, we have to bring secular arguments and secular evidence and bring it to bear squarely against radical feminism, and the Sexual Revolution. In particular, we have to put the burden of responsibility for poor sexual decisions back on the shoulders of young people. Young men must reject a cultural standard of what a "good" woman is. Young women must reject a cultural standard of what a "good" man is. Men and women who reject traditional Christianity, traditional morality, and traditional notions of male leadership and male roles are *bad people to have relationships with*. We have to persuade both men and women about the harm that poor choices cause – abortion, divorce, fatherlessness, expensive welfare programs. There is no point in blaming bad men and women – they are already bad. We have to teach young people to choose good men and good women. We have to teach them that choosing mates poorly, and making poor sexual choices, is *their responsibility.* They are

not victims! And we shouldn't be blaming one sex for the others *poor choices,* i.e. – we should not be blaming bad men when women chose them and make bad choices with the bad men. Those men were bad before the women chose them, and those women are only victims of *their own poor choices.*

When it comes to same-sex marriage, we have to defend traditional marriage using secular arguments and secular evidence. We have to show how same-sex marriage undermines religious liberty. We have to show how same-sex marriage undermines marital norms like exclusivity and permanence. We have to show how same-sex marriage harms children by depriving them of a mother or a father or both. And so on. We have to defend the goodness of traditional marriage.

# New study: tiny songbirds fly over the Atlantic ocean and back each year

**Wintery Knight** · 8 April 2015 · Archived copy · Original

Blackpoll Warbler- so cute!
I love birds! I really, really do! A lot!

So here is the latest study, reported in Science Daily about our amazing feathered friends.

They write:

> For more than 50 years, scientists had tantalizing clues suggesting that a tiny, boreal forest songbird known as the blackpoll warbler departs each fall from New England and eastern Canada to migrate nonstop in a direct line over the Atlantic Ocean toward South America, but proof was hard to come by.
>
> Now, for the first time an international team of biologists report "irrefutable evidence" that the birds complete a nonstop flight ranging from about 1,410 to 1,721 miles (2,270 to 2,770 km) in just two to three days, making landfall somewhere in Puerto Rico, Cuba and the islands known as the Greater Antilles, from there going on to northern Venezuela and Columbia. Details of their study, which used light-level, or solar, geolocators, appear in the current issue of *Biology Letters.*
>
> First author Bill DeLuca, an environmental conservation research fellow at the University of Massachusetts Amherst, with colleagues at the University of Guelph, Ontario, the Vermont Center for Ecostudies and other institutions, says, "For small songbirds, we are only just now beginning to understand the migratory routes that connect temperate breeding grounds to tropical wintering areas. We're really excited to report that this is one of the longest nonstop overwater flights ever recorded for a songbird, and finally confirms what has long been believed to be one of the most extraordinary migratory feats on the planet."
>
> While other birds, such as albatrosses, sandpipers and gulls are known for trans-oceanic flights, the blackpoll warbler is a forest dweller that migrates boldly where few of its relatives dare to travel. Most migratory songbirds that winter in South America take a less risky, continental route south through Mexico and Central America, the authors note. A water landing would be fatal to a warbler.
>
> […]For this work the scientists fitted geolocator packs on 20 birds in Vermont and 20 more in Nova Scotia. They were able to recapture three birds from the Vermont group and two from the Nova Scotia group for analyses.
>
> So-called light-level geolocators use solar geolocation, a method used for centuries by mariners and explorers. It is based on the fact that day length varies with latitude while time of solar noon varies with longitude. So all the instrument needs to do is record the date and length of daylight, from which daily locations can then be inferred once the geolocator is recaptured. "When we accessed the locators, we saw the blackpolls' journey

> was indeed directly over the Atlantic. The distances travelled ranged from 2,270 to 2,770 kilometers," DeLuca says.

Evolution News has more on the discovery.

They write:

> More record-breaking discoveries may be in store. Oskin says that some of the blackpoll warblers spend their summers in Alaska and Canada instead of New England. If they fly east before joining the southern route to Colombia and Venezuela, it would add three thousand more miles to their annual migration.
>
> […]But that's not all. Lest we forget, there are the Monarch butterflies, much smaller and lighter than birds, that travel three thousand miles from Canada to Mexico each year, as detailed in Illustra's film *Metamorphosis*. Even though butterflies don't fly non-stop, that's — well, we need an adjective beyond "extraordinary." And more recently, British scientists found that another butterfly, the painted lady, flies triple that distance — nine thousand miles — in its annual migration from the UK to Africa.
>
> Think of all the integrated systems that have to be in place to make these migrations possible. The birds or butterflies need elegant flight systems, with all the attendant muscles, nerves, and structural supports required. They require digestive systems to sustain them, circulatory systems, thermal systems, sensory systems, and protection from the elements. Most astonishing are the navigational systems, including sensing the stars or the earth's magnetic field, to take them unerringly to their destination and back over routes of thousands of miles. To pack all that in a tiny animal is a masterpiece of miniaturization. Oh — and then there's a reproductive system, and a battery of instincts to operate all the systems.
>
> It seems fair to say these engineering marvels are beyond the reach of unguided Darwinian evolution. The birds don't have to fly that far. Warblers could stay inland along the coast, and feed on the way, or learn to get by through the winter like other birds do. Butterflies, too, could stay with other species that don't migrate. Natural selection would take the easy road, get rid of the wings, and let them grovel in the dirt to eke out a living. These migratory abilities are gratuitous and superfluous to the requirements of mere survival. Such over-design, right on the "brink of impossibility," speaks of design so beyond our comprehension, we can only stand in awe.

Butterflies are OK, but birds are much better – you can actually make friends with birds. Anyway, if you like birds as much as I do… well, no one likes them as much as I do… but if you like birds a lot, then you should get Illustra's documentary *Flight: The Genius of Birds* and watch it. And share it with your friends.

# How brief was the period in which the Cambrian phyla suddenly appeared?

**Wintery Knight** · 8 April 2015 · Archived copy · Original

The Cambrian explosion refers to the sudden appearance of new body plans in the fossil record. ID proponents think that the period is between 5-10 million years at the most. Naturalists want to stretch out the period in which the body plans appear to tens of millions of years. The two sides can't both be right. What's the truth?

Evolution News has the answer.

Excerpt:

> To establish the length of the most explosive period of innovation within the Cambrian explosion itself, Meyer cites the work of MIT geochronologist Samuel Bowring and his colleagues as well the work of another group led by Smithsonian paleontologist Douglas Erwin. The Bowring-led study showed that (in their words) "the main period of **exponential diversification**" within the Cambrian lasted "only 5-6 million years" (emphasis added). Meyer explains:

> An analysis by MIT geochronologist Samuel Bowring has shown that the main pulse of Cambrian morphological innovation occurred in a sedimentary sequence spanning no more than 6 million years. Yet during this time representatives of at least sixteen completely novel phyla and about thirty classes first appeared in the rock record. In a more recent paper using a slightly different dating scheme, Douglas Erwin and colleagues similarly show that thirteen new phyla appear in a roughly 6-million-year window. (p. 73)

> […][T]ake a look first at the following figure that Bowring and his colleagues included in their definitive 1993 article, published in the journal Science. They use radiometric methods to date the different stages of the Cambrian period, including the crucial Tommotian and Atdabanian stages in which the greatest number of new animal phyla and classes arise. Note that the so-called Manykaian stage of the Cambrian period lasts about 10-14 million years. Note also that the main pulse of morphological innovation didn't begin during this stage but rather during the Tommotian and Atdabanian — a period that they describe as taking between "5 to 10 million years," and in a more detailed passage as taking about 5-6 million years.

> […]In the figure above, the Tommotian and Atdabanian stages of the Cambrian period together span only about 5 million years, starting at about 530 and ending about 525 million years ago. Bowring's figure also depicts the total number of classes and orders present at any given time during the Cambrian period. The biggest increases in morphological innovation occur during the Tommotian and Atdabanian stages. Indeed, during this period the number of known orders nearly quadruples. Moreover, Bowring and his colleagues also make clear that this period corresponds to the main pulse of Cambrian morphological innovation as measured by the number of new phyla and classes that first appear. They note that, while a few groups of animals do arise in the earliest Manykaian stage of the Cambrian, the most rapid period of "exponential increase of diversification," corresponding to the Tommotian and Atdabanian stages, "lasted only 5 to 6 m.y."

You can see the figure they are reference in the Evolution News article.

Also, check out these clips that explain the Cambrian explosion:

Part 1:

Part 2:

The first clip features James Valentine, a professor of biology at the University of California who just co-authored a new book on the Cambrian explosion and *is not* a proponent of intelligent design.

The consensus among scientists regarding the period of time *in which the new body plans appear* is 5-6 million years. Biologically speaking, that's a blink of an eye. You aren't going that kind of complexity and innovation in such a short period of time any more than you can expect to win the lottery by buying 5-6 million tickets when the odds of winning are 1 in a googol (10 to the 100th power – 1, followed by 100 zeroes). You don't have enough lottery tickets to make winning the lottery likely. Similarly, 5-6 million years is not enough time for naturalistic mechanisms to code brand new body plans from scratch. It would be like trying to research and write a Ph.D thesis during a single lunch hour. It's just not enough time to produce the amount of information that's required.

# Is Obama's nuclear deal with Iran good for our national security?

**Wintery Knight** · 9 April 2015 · Archived copy · Original

Iran's chief negotiator: all the sanctions cease immediately

This is the top article on the Wall Street Journal right now. It's written by two former Secretaries of State, Henry Kissinger and George P. Shultz.

They are assessing the Iran deal:

> While Iran treated the mere fact of its willingness to negotiate as a concession, the West has felt compelled to break every deadlock with a new proposal. In the process, the Iranian program has reached a point officially described as being within two to three months of building a nuclear weapon. Under the proposed agreement, for 10 years Iran will never be further than one year from a nuclear weapon and, after a decade, will be significantly closer.
>
> […]Progress has been made on shrinking the size of Iran's enriched stockpile, confining the enrichment of uranium to one facility, and limiting aspects of the enrichment process. Still, the ultimate significance of the framework will depend on its verifiability and enforceability.
>
> […]Under the new approach, Iran permanently gives up none of its equipment, facilities or fissile product to achieve the proposed constraints. It only places them under temporary restriction and safeguard—amounting in many cases to a seal at the door of a depot or periodic visits by inspectors to declared sites. The physical magnitude of the effort is daunting. Is the International Atomic Energy Agency technically, and in terms of human resources, up to so complex and vast an assignment?
>
> In a large country with multiple facilities and ample experience in nuclear concealment, violations will be inherently difficult to detect. Devising theoretical models of inspection is one thing. Enforcing compliance, week after week, despite competing international crises and domestic distractions, is another. Any report of a violation is likely to prompt debate over its significance—or even calls for new talks with Tehran to explore the issue. The experience of Iran's work on a heavy-water reactor during the "interim agreement" period—when suspect activity was identified but played down in the interest of a positive negotiating atmosphere—is not encouraging.
>
> Compounding the difficulty is the unlikelihood that breakout will be a clear-cut event. More likely it will occur, if it does, via the gradual accumulation of ambiguous evasions.
>
> When inevitable disagreements arise over the scope and intrusiveness of inspections, on what criteria are we prepared to insist and up to what point? If evidence is imperfect, who bears the burden of proof? What process will be followed to resolve the matter swiftly?

> **The agreement's primary enforcement mechanism, the threat of renewed sanctions, emphasizes a broad-based asymmetry, which provides Iran permanent relief from sanctions in exchange for temporary restraints on Iranian conduct. Undertaking the "snap-back" of sanctions is unlikely to be as clear or as automatic as the phrase implies. Iran is in a position to violate the agreement by executive decision. Restoring the most effective sanctions will require coordinated international action. In countries that had reluctantly joined in previous rounds, the demands of public and commercial opinion will militate against automatic or even prompt "snap-back." If the follow-on process does not unambiguously define the term, an attempt to reimpose sanctions risks primarily isolating America, not Iran.**
>
> The gradual expiration of the framework agreement, beginning in a decade, will enable Iran to become a significant nuclear, industrial and military power after that time—in the scope and sophistication of its nuclear program and its latent capacity to weaponize at a time of its choosing. Limits on Iran's research and development have not been publicly disclosed (or perhaps agreed). **Therefore Iran will be in a position to bolster its advanced nuclear technology during the period of the agreement and rapidly deploy more advanced centrifuges—of at least five times the capacity of the current model—after the agreement expires or is broken.**

That doesn't sound like a good deal to me.

It sounds like we are trading permanent relief from sanctions. Those sanctions were built up over years of negotiations with the UN countries. Sanctions that are not easy to "snap back" if Iran breaks the deal, because they require negotiations with many different UN countries again – it won't be automatic. That's the "asymmetry" they are talking about in the article. Iran can break the agreement unilaterally, or just block the inspections, and the sanctions will stay off until we get agreement with the UN countries.

Here's the former Democrat campaign worker, and now State Department spokeswoman Marie Harf:

She is confused by all the "big words" that these two Secretaries of State used in the article above.

But it gets worse!

Here's the latest from the Times of Israel. (H/T Director Blue via ECM)

It says:

> **Iran will begin using its latest generation IR-8 centrifuges as soon as its nuclear deal with the world powers goes into effect, Iran's foreign minister and nuclear chief told members of parliament on Tuesday, according to Iran's semi-official FARS news agency.**
>
> If accurate, the report appears to make a mockery of the world powers' much-hailed framework agreement with Iran, since such a move clearly breaches the US-published terms of the deal, and would dramatically accelerate Iran's potential progress to the bomb.
>
> Iran has said that its IR-8 centrifuges enrich uranium 20 times faster than the IR-1 centrifuges it currently uses.
>
> According to the FARS report, "Iran's foreign minister and nuclear chief both told a closed-door session of the parliament on Tuesday that the country would inject UF6 gas into the latest generation of its centrifuge machines as soon as a final nuclear deal goes into effect by Tehran and the six world powers."
>
> It said that Foreign Minister Mohammad Javad Zarif and Atomic Energy Organization of Iran (AEOI) head Ali Akbar Salehi made the promise when they briefed legislators on the framework agreement, and claimed the move was permitted under the terms of the deal.

Oh, I guess was wrong. This is a good deal! For Iran.

Sigh. I guess if you want to be even more horrified by the Iran deal, you can listen to an interview that Hugh Hewitt did with Wall Street Journal columnist Bret Stephens, and there's a transcript as well for those who would rather read about the incompetence of the Obama administration rather than hear about the incompetence of the Obama administration.

# After destroying religion and marriage, Europe tries to convince people to make babies

**Wintery Knight** · 9 April 2015 · Archived copy · Original

Fertility rates in European countries (click for larger image)

This is from the radically leftist New York Times, of all places.

They write:

> Recently, Sex and Society, a nonprofit group that provides much of Denmark's sex education, adjusted its curriculum. The group no longer has a sole emphasis on how to prevent getting pregnant but now also talks about pregnancy in a more positive light.
>
> It is all part of a not-so-subtle push in Europe to encourage people to have more babies. Denmark, like a number of European countries, is growing increasingly anxious about low birthrates. Those concerns have only been intensified by the region's financial and economic crisis, with high unemployment rates among the young viewed as discouraging potential parents.
>
> The Italian health minister described Italy as a "dying country" in February. Germany has spent heavily on family subsidies but has little to show for it. Greece's depression hasfurther stalled its birthrate. And in Denmark, the birthrate has been below the so-called replacement rate needed to keep a population from declining — just over two children per woman — since the early 1970s.
>
> "For many, many years, we only talked about safe sex, how to prevent getting pregnant," said Marianne Lomholt, the national director of Sex and Society. "Suddenly we just thought, maybe we should actually also tell them about how to get pregnant."
>
> The demographic shift is more pressing in Europe than almost any other major region, save Japan. There are an estimated 28 Europeans 65 or older for every 100 residents ages 20 to 64, almost twice the world average, according to the United Nations, and compared with 24.7 for the United States. By the end of the century, the United Nations expects the European figure to double.
>
> Such trends will transform societies, potentially reducing economic growth and increasing stress on public pension systems and requiring more elder care. Japan already faces existential questions in a country whereadult diaper sales are beginning to eclipse those of baby diapers.
>
> But there is not a consensus about the impact of demographics. Some see a natural maturing of developed societies. Others see disaster ahead, because with fewer workers and more retirees, the active work force faces an increased burden to sustain social programs.

> Productivity gains over time, though, can make up for such population stresses. Declining birthrates can also lead to labor shortages, and Germany has faced a gap in skilled labor. But that is hardly an issue now for much of Europe, which is mired in high unemployment.

OK, so it's a crisis. But how did it happen?

Nicholas Eberstadt explains what's happening to marriage and parenting, in this Wall Street Journal article.

Why is it happening?

> All around the world today, pre-existing family patterns are being upended by a revolutionary new force: the seemingly unstoppable quest for convenience by adults demanding ever-greater autonomy. We can think of this as another triumph of consumer sovereignty, which has at last brought rational choice and elective affinities into a bastion heretofore governed by traditions and duties—many of them onerous. Thanks to this revolution, **it is perhaps easier than ever before to free oneself from the burdens that would otherwise be imposed by spouses, children, relatives or significant others with whom one shares a hearth.**

People are rejecting responsibilities, expectations, and obligations because they are selfish.

When he talks about Europe, he offers an explanation for this:

> Now consider Europe, where the revolution in the family has gained still more ground. European demographers even have an elegant name for the phenomenon: They call it the Second Demographic Transition (the First being the shift from high birth rates and death rates to low ones that began in Europe in the early industrial era and by now encompasses almost every society). In the schema of the Second Demographic Transition, long, stable marriages are out, and divorce or separation are in, along with serial cohabitation and increasingly contingent liaisons. **Not surprisingly, this new environment of perennially conditional, no-fault unions was also seen as ushering in an era of more or less permanent sub-replacement fertility.**
>
> According to Eurostat, the European Union's statistical agency, the probability of marriage before age 50 has been plummeting for European women and men, while the chance of divorce for those who do marry has been soaring. In Belgium—the birth-land of the scholars who initially detected this Second Transition—the likelihood of a first marriage for a woman of reproductive age is now down to 40%, and the likelihood of divorce is over 50%. This means that in Belgium the odds of getting married and staying married are under one in five. A number of other European countries have similar or even lower odds.
>
> Europe has also seen a surge in "child-free" adults—voluntary childlessness. The proportion of childless 40-something women is one in five for Sweden and Switzerland, and one in four for Italy. In Berlin and in the German city-state of Hamburg, it's nearly one in three, and rising swiftly. Europe's most rapidly growing family type is the one-person household: the home not only child-free, but partner- and relative-free as well. In Western Europe, nearly one home in three (32%) is already a one-person unit, while in autonomy-prizing Denmark the number exceeds 45%. The rise of the one-person home coincides with population aging. But it is not primarily driven by the graying of European society, at least thus far: Over twice as many Danes under 65 are living alone as those over 65.

"Perenially conditional, no-fault unions". That means that either party can leave at any time, for any reason.

Basically, people became skeptical of objective morality and the afterlife, and they have decided to follow their hearts and go more the most happiness they can have in this life. And they've noticed that relationships with other people – with all the nasty expectations, obligations and responsibilities – get in the way of this self-centeredness. To get married and have children is to embrace responsibility. It means that you are accepting the obligation to learn the needs of other people and care for those needs. Something has gone wrong in European society where

these social obligations declined, just as religion declined. And the same thing is being taught to the next generation in our most prestigious universities.

This is a bird's-eye view. I'll have a closer look at the problem in my next post.

# Colorado Civil Rights Commission: anti-conscience laws can only target Christians

**Wintery Knight** · 10 April 2015 · Archived copy · Original

This is from Todd Starnes, writing at The Stream.

He writes:

> Bill Jack wants to make one thing perfectly clear: Bakers should not be forced to make a cake that would violate their conscience or freedom of expression.
>
> Jack, of Castle Rock, Colo., is making national headlines over an experiment he conducted in the wake of attacks on Christian business owners who refuse to provide services for same-sex marriages.
>
> Last year, the Colorado Civil Rights Commission ruled that the Masterpiece Cakeshop in Lakewood unlawfully discriminated against a gay couple who wanted a wedding cake. Jack Phillips, the owner of the cake shop, is a devout Christian, and his attorneys argued that to force him to participate in the gay wedding would violate his religious beliefs.
>
> The Civil Rights Commission saw it differently.
>
> So if Christian bakers who oppose gay marriage are compelled under law to violate their beliefs — what about bakers who support gay marriage? Would they be compelled to make an anti-gay marriage cake?
>
> […]As you probably guessed, the bakeries rejected Jack's request for what some would call "anti-gay" cakes.
>
> "If he wants to hate people, he can hate them not here in my bakery," Azucar Bakery owner Marjorie Silva told 7NEWS. She called the writing and imagery "hateful and offensive."

But hating Christians enough to force your morality on them with fines and emprisonment – that's not hatred at all.

More:

> So Jack filed a discrimination complaint with the Colorado Civil Rights Commission — just as the gay couple did in the Masterpiece Cakeshop case.
>
> Using the commission's logic — if a Christian baker is forced to violate his beliefs, shouldn't all bakers be forced to violate theirs, too?
>
> Absolutely not, says the Colorado Civil Rights Commission.
>
> It ruled that Azucar did not discriminate against Jack based on his creed. It argued that the bakery refused to make the cakes because of the "derogatory language and imagery," The Denver Channel reported.
>
> Jack told me it's a double standard — pure and simple.
>
> "I think it is hypocritical," he said. "It's unequal treatment before the law. The Colorado Anti-Discrimination Act is being used to coerce businesses to participate in events that violate their consciences."
>
> Jack said he decided to conduct his experiment to prove the Colorado law was "only being applied to Christian business people."
>
> "Christians need to understand that this is the state of Christianity in the United States," he said. "We are now second-class citizens. Our free speech is being censored."
>
> To be clear, Jack believes the bakeries had the right to deny him service. His point was to draw attention to the hypocrisy.
>
> "I stand for liberty for all, not liberty for some," he said. "If we don't have liberty for all, then we have liberty for none."

So. Although Christians may have voted for these laws thinking that they were “nice”, the truth is that every scrap of Christianity that anyone finds of offensive is going to become illegal. At some point, we are all going to have to choose between the Bible and being punished by the state.

# Psychological Society of Ireland: disagreement with same-sex marriage is harmful

**Wintery Knight** · 10 April 2015 · Archived copy · Original

This is from Spiked Online.

It says:

> To see how straitjacketed the debate about gay marriage has become, look no further than Ireland.
>
> There, on 22 May, there will be a referendum, with voters asked to say Yes or No to amending the Irish Constitution so that marriage will be redefined as a union between 'two persons without distinction as to their sex'. Sounds good, right? An opportunity for an actual electorate to have a debate and have its say on the future of marriage? Not so fast.
>
> The run-up to the referendum has been about as far from a fair or open debate as it's possible to get. One side in the debate – the side that is critical of gay marriage – is demonised daily, treated virtually as heretics, almost as criminals. It's accused of causing psychological harm, branded as 'hate speakers', and frequently forced to make public apologies simply for expressing its belief that marriage should be between a man and a woman. And as a writer for the *Irish Independent* says, 'It's not a debate if one side can't speak'. The public discussion before the Irish referendum has not been a debate, she says – it's been 'a Two Minutes Hate' against anyone who doesn't think gay marriage is the greatest idea ever.
>
> Pretty much the entire establishment in Ireland, aside from the increasingly uninfluential bishops and priests, backs gay marriage (giving the lie to the gay-marriage movement's depiction of itself as a beleaguered minority bravely battling The Man for its civil rights). From the prime minister, Enda Kenny, to the vast majority of Dail Eireann, to pretty much the whole media – most notably the *Irish Times*, voice of the minuscule cultural elite in Dublin that sets the moral and political agenda in Ireland – every person with power is rallying for gay marriage. And barely a week passes when they don't demonise the other side, the smaller, less powerful side, the side which, in opposing gay marriage, is apparently harming citizens, causing violence and, worst of all, jeopardising Ireland's political future.
>
> As with all heretics in history, Ireland's opponents of gay marriage stand accused of directly harming the public. So last month, the Psychological Society of Ireland issued a dire warning that the propaganda of the anti-gay marriage camp could 'impact detrimentally on people'. PSI said it is 'seriously concerned' that this lobby's claim that traditional marriage is better than gay marriage, on the grounds that a mother and father make better parents than two people of the same sex, could have 'far-reaching implications'. It chastised opponents of gay marriage for promoting ideas that 'run contrary to the positions of professional bodies' – that is, for daring to defy the new priests: the expert class – and said their words could wreak mental and moral havoc.
>
> As one news report summed it up, PSI thinks that '*the debate itself* [my italics] carrie[s] the potential to have detrimental effects, both psychological and emotional, on adults and children'. So discussion is dangerous; positing a view that runs counter to the elite's outlook could cause emotional damage. It's remarkable how much the authoritarian boot has shifted: once it was those who denied Biblical truths who were accused of doing moral harm to citizens; now it is those who cleave to Christian views and doubt gay marriage whose words, whose desire to have a debate, are depicted as dangerous, warping things.

Rod Dreher is following the religious liberty issue pretty closely, and he wrote this recently:

> I had a 30-minute phone conversation today with a prominent Christian physician who works at one of the great medical institutions in the world, here in the US. He reached out to me through a mutual friend to say to

> me how important it is to raise the alarm about what's happening on this front, and to start networking and building institutions to help us get through what is to come.
>
> "This is what I think you mean with the Benedict Option," he said, correctly. "You need to write that book so somebody can give the public a clear understanding of where we are, how we got here, and what we're going to have to do to get through what's coming."
>
> We were talking on background, so I don't feel comfortable relating specific details of our discussion here. He gave me a lot of deeply concerning information about what's happening in the medical world around this and related culture-war issues. He said he's been watching it unfold for some time now, and he's been trying to make people understand that Christians in this country are facing something unprecedented in US history.
>
> One of the things he sees coming, and coming fast: the inability of many professionals, and not only in the medical field, to work unless they sign off on things they cannot in good conscience accept. "We're going to see jobs lost and retirements lost," he said.
>
> In his institution, said the doctor, every single one of his colleagues believes that on LGBT issues, Christians who hold to the orthodox view are no better than segregationists. This cultural attitude is sooner or later going to be absorbed into the law.

To just to let you know how this has affected me personally – on Thursday afternoon, my entire Facebook account with 1103 friends and 933 people who liked this blog's page were shut down for "abusive" speech. We will never know who exactly was responsible for the charges, but I wouldn't be surprised if it was more of what's going on in Ireland right now. What does the secular left know about free speech? Nothing. I would sooner hope for mercy from a lion than hope for tolerance from the secular left. They are fascists.

# What is it like to be a conservative in Silicon Valley?

**Wintery Knight** · 10 April 2015 · Archived copy · Original

This article comes to us from my favorite far-left new source, The Nation.

They write:

> Deep in Silicon Valley, where the free market reigns and the exchange of ideas is celebrated, a subset of tech workers are hiding their true selves. Working as programmers and software engineers, they don't want the stigma that comes with revealing who they really are.
>
> They're the tech company employees, startup founders, and CEOs who vote for and donate to Republican candidates, bucking the Bay Area's liberal supremacy. Fearing the repercussions of associating with a much-maligned minority, they keep their political views fiercely hidden.
>
> "It's a liberal echo chamber," Garrett Johnson, a co-founder of Lincoln Labs, which was started in 2013 to connect the right-of-center outsiders in Silicon Valley, told *National Journal*. "People have been convinced that Silicon Valley is reflexively liberal or progressive. And so their response is to conform."
>
> […]**Rather than ruffle feathers—or worse—Republicans who work there often just keep quiet.**
>
> […]One startup CEO who has worked in Silicon Valley for more than a decade says that while it's popular to talk politics in the workplace, the underlying assumption is that everyone has similar views.
>
> The CEO, who generally votes Republican and donates to GOP candidates—he spoke on background to conceal his right-leaning views—said that in 2012, "you wouldn't want to say you're voting for Romney in the election." At the same time, openly expressing one's support for Obama was "incredibly common."
>
> His opposition to raising the minimum wage is just one area where he diverges with most of his colleagues. "If you say something like, 'We need a higher minimum wage,' you don't get critiqued," he said. But he would never reveal his more conservative outlook on the matter.
>
> **"They can't fathom that somebody disagrees with them," he said. "And I disagree with them. So I'm not going to open up that box."**

I was chatting by e-mail with a well known atheist who sometimes links to me. He still thinks that atheism is a good thing, and he has no idea who he has thrown in with. For example, he had never heard of Brendan Eich, who is mentioned in the article.

It says:

> The consequences for being outed for conservative views can be dire. In a highly public controversy last year, newly-hired Mozilla CEO Brendan Eich, who is registered as an independent in California, stepped down after critics attacked his 2008 donation to support Proposition 8, the anti-same-sex marriage law in California. Eich, who declined to comment for this story, faced an internal uprising from within the Mozilla community, as well as boycotts from other tech companies, and quit after just two weeks on the job.

Previously, he had written about his support for same-sex marriage. The same same-sex marriage that got Brendan Eich forced out as CEO.

The atheist blogger assured me not to worry – even though people are being fired, fined, and thrown into prison for taking conservative positions. He is a very smart fellow, but I just think he doesn't know what's really going on. I've been following these issues in other countries *for years*, and I know how far his side will go to squash ours. He ought to know too, if he looked back far enough.

# What got me started on apologetics? William Lane Craig debate transcripts

**Wintery Knight** · 11 April 2015 · Archived copy · Original

To have informed views, you should listen to both sides

Yes, William Lane Craig debate transcripts. In fact, I still read them from time to time to keep up my skills.

Here's one of my favorites, the Craig-Nielsen debate on grounding morality without God

Summary:

> THE CRAIG-NIELSEN DEBATE: GOD, MORALITY, AND EVIL
> William Lane Craig and Kai Nielsen
> with annotations by William Lane Craig
> February 1991, University of Western Ontario

Best part:

Finally, he raises the issue of immortality and says, "Death doesn't undermine moral values. In fact, things that we value become all the more precious." Well, in one sense he's right. It's the *absence of God* that undermines the objectivity of moral values, not *death*. But let's suppose that there are objective moral values. What would be undermined by the lack of immortality? I think two things.

First, I think there would be no reason to adopt the moral point of view. Since you're going to die, everyone ends up the same. It doesn't make any difference whether you live as a Hitler or a Mother Teresa. There is no relationship between your moral living and your ultimate fate. And so in that sense, death undermines the reason for adopting the moral point of view rather that just being an egoist and living for self.

Second, there's no basis for self-sacrifice on this point of view. Why should an atheist, who knows everything is going to end in death, do things that are morally right that go against self-interest? For example, a few years ago there was a terrible mid-winter air disaster in Washington, DC, as a plane crashed into a bridge spanning the Potomac River, spilling its passengers into the icy waters. And as the helicopters came to rescue these people, attention focused on one man who again and again passed by the rope ladder rather than be pulled to safety himself. Seven times he did this, and when they came again, he was gone. The whole nation turned its eyes to this man in respect and admiration for the noble act of self-sacrifice that he did. And yet on the atheistic view, that man wasn't noble. He did the *stupidest* thing possible. He should have gone for the rope ladder first, pushed others away, if necessary, in order to survive! But to give up all the brief existence he will ever have for others he didn't even

know? Why? It seems to me, then, that it's not simply the absence of God that undermines objective moral values, but ethical living is also undermined by the atheistic point of view because you then have no reason to adopt the moral point of view and you have no basis for acts of self-sacrifice.

By contrast, on the Christian view, where you have both God and immortality, you have the necessary presuppositions for the affirmation of objective moral values and for consistent living of the ethical life.

And another of my favorites, the Craig-Taylor debate on the ontological grounding of morality.

Summary:

> Is The Basis Of Morality Natural Or Supernatural?
> Richard Taylor and William Lane Craig
> October 1993, Union College, Schenectady, New York

Sample Craig:

(2) I argued that moral accountability also exists under the supernaturalist view, and Professor Taylor didn't deny the point.

(II) What about my critique, then, of naturalism? I said that naturalism doesn't provide a sound foundation for morality, and here I made two points:

(1) On the naturalist view, objective right and wrong do not exist. Again, Professor Taylor doesn't deny this point; he just says, "Well, to say that they're conventional doesn't mean they're contemptible." Well, granted; but it *does* mean they're arbitrary, they're non–objective. There's no more difference between moral right and wrong than driving on the right–hand side of the road versus the left–hand side of the road. It's simply a societal convention. And the modern evolutionist thinks these conventions are just based in socio–biological evolution. According to Michael Ruse, a professor of the philosophy of science,

> The position of the modern evolutionist…is that humans have an awareness of morality…because such an awareness is of biological worth. Morality is a biological adaptation, no less than are hands and feet and teeth…. Considered as a rationally justifiable set of claims about an objective something, [ethics] is illusory. I appreciate that when somebody says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves…. Nevertheless…such reference is truly without foundation. Morality is just an aid to survival and reproduction and…any deeper meaning is illusory….{26}

This is essentially the same view as Professor Taylor's. Moral values are simply rooted in socio–biological evolution, that have passed down as certain taboos and certain commands, but they have no objective validity in terms of their moral rightness or wrongness. Professor Taylor says, "But I have a high regard for people who are truly moral and decent." I don't deny that. Of course he does! But the point is that in his ethics, in his philosophy, he has no *basis* for that affirmation. What I bring is not a new set of values—I think we pretty much hold those in common—but I'm offering a secure *foundation* for those values that we all want to hold dear.

You see, on Professor Taylor's view, there really isn't any objective morality. I think every one of us here tonight would agree that it's wrong to kill babies and that the holocaust was morally wrong. But in his book Professor Taylor says, "The infanticide practiced by the Greeks of antiquity did not violate their customs. If we say it was nevertheless wrong, we are only saying that it is forbidden by *our* ethical and legal rules. And the abominations practiced by the Nazis…are forbidden by our rules, and not, obviously, by theirs."{27} I submit that that is simply a patently false view of moral values and that naturalism, therefore, can't provide any objective basis for right and wrong.

And another of my favorites, the Craig-Tooley debate on the problem of evil.

Summary:

> A Classic Debate on the Existence of God
> Dr. William Lane Craig & Dr. Michael Tooley
> November 1994, University of Colorado at Boulder

Sample Craig:

(2) Christian doctrines increase the probability of the coexistence of God and the evils in the world. Let me just mention a couple of these.

(i) On the Christian view, the purpose of life is not happiness as such in this life. Rather it is the knowledge of God—which will ultimately produce true and everlasting happiness. What that means is that many evils occur in this life which might be utterly pointless with respect to producing human happiness. But they might not be pointless with respect to producing the knowledge of God. Dr. Tooley assumes when he talks about changes that would make this world a better place, that the purpose of life is basically to be happy in this life. And I certainly admit that you could make changes that might appear to make this life a better place, make it happier. But that's not God's purpose. So if you understand that the purpose of life is not happiness as such, I think that you can see that the existence of evil doesn't necessarily cast any improbability upon God's existence.

(ii) It's also the Christian view that God's purpose spills over into eternal life. In the afterlife God will bestow a glory and happiness upon us that is incomparable to what we've suffered here on earth. And the longer we spend in eternity with Him, the more the sufferings in this life shrink by comparison to an infinitesimal instant. Dr. Tooley admits in his article that it is possible that immortality could justify such evils. But, he says, it's "very unlikely" that there is life after death. Well, I have two comments. First, I'd like him to prove that it's unlikely that there is life after death.{26} Second, I suggest that the resurrection of Jesus gives us grounds for hoping in life after death, and I've attempted to justify that historically. So given these Christian doctrines, I think you can see that the existence of God and evil is not so improbable after all.

[…](4) Finally, I think that there is actually an argument for God from evil. It would go like this:

(i) If God does not exist, objective moral values do not exist. If there is no God, moral values are either socio-biological by-products or just expressions of personal preference.

(ii) Evil exists. That's the premise of the atheist. There is real evil in the world.

(iii) Therefore, objective values do exist. Some things are really wrong.

(iv) Therefore, God exists.

Thus the presence of evil in the world actually demonstrates God's existence because in the absence of God, there wouldn't be any distinction objectively between good and evil, between right and wrong. So although evil in one sense calls into question God's existence, in a much deeper sense, I think, it actually requires God's existence.

So in the light of these four responses, I think that the argument from evil, as difficult and emotionally pressing as it might be, in the end doesn't constitute a good argument against the existence of God. So I think the four arguments given against the existence of God by Dr. Tooley are inconclusive. You've still got my six arguments for God's existence, and therefore I still think that on balance the evidence favors theism as the more rational worldview.

You can find more debates here.

# Why is college so expensive? Why does university tuition cost so much?

**Wintery Knight** · 11 April 2015 · Archived copy · Original

The *correct answer* appeared in the radically leftist New York Times, of all places.

This is by Paul F. Campos, law professor at the radically leftist UC Boulder.

He writes:

> [P]ublic investment in higher education in America is vastly larger today, in inflation-adjusted dollars, than it was during the supposed golden age of public funding in the 1960s. Such spending has increased at a much faster rate than government spending in general. For example, the military's budget is about 1.8 times higher today than it was in 1960, while legislative appropriations to higher education are more than 10 times higher.
>
> **In other words, far from being caused by funding cuts, the astonishing rise in college tuition correlates closely with a huge increase in public subsidies for higher education. If over the past three decades car prices had gone up as fast as tuition, the average new car would cost more than $80,000.**
>
> Some of this increased spending in education has been driven by a sharp rise in the percentage of Americans who go to college. While the college-age population has not increased since the tail end of the baby boom, the percentage of the population enrolled in college has risen significantly, especially in the last 20 years. Enrollment in undergraduate, graduate and professional programs has increased by almost 50 percent since 1995. As a consequence, while state legislative appropriations for higher education have risen much faster than inflation, total state appropriations per student are somewhat lower than they were at their peak in 1990. (Appropriations per student are much higher now than they were in the 1960s and 1970s, when tuition was a small fraction of what it is today.)
>
> **As the baby boomers reached college age, state appropriations to higher education skyrocketed, increasing more than fourfold in today's dollars, from $11.1 billion in 1960 to $48.2 billion in 1975. By 1980, state funding for higher education had increased a mind-boggling 390 percent in real terms over the previous 20 years. This tsunami of public money did not reduce tuition: quite the contrary.**
>
> […]State appropriations reached a record inflation-adjusted high of $86.6 billion in 2009. They declined as a consequence of the Great Recession, but have since risen to $81 billion. And these totals do not include the enormous expansion of the federal Pell Grant program, which has grown, in today's dollars, to $34.3 billion per year from $10.3 billion in 2000.

The more money that is attached to students, the more money universities charge – simple.

But where is the money going? Is it mostly going to research? To the classroom? To hire more and better professors?

No:

> **Interestingly, increased spending has not been going into the pockets of the typical professor. Salaries of full-time faculty members are, on average, barely higher than they were in 1970. Moreover, while 45 years ago 78 percent of college and university professors were full time, today half of postsecondary faculty members are lower-paid part-time employees, meaning that the average salaries of the people who do the teaching in American higher education are actually quite a bit lower than they were in 1970.**
>
> **By contrast, a major factor driving increasing costs is the constant expansion of university administration. According to the Department of Education data, administrative positions at colleges and universities grew by 60 percent between 1993 and 2009, which Bloomberg reported was 10 times**

> **the rate of growth of tenured faculty positions.**
>
> **Even more strikingly, an analysis by a professor at California Polytechnic University, Pomona, found that, while the total number of full-time faculty members in the C.S.U. system grew from 11,614 to 12,019 between 1975 and 2008, the total number of administrators grew from 3,800 to 12,183 — a 221 percent increase.**

If you're going to college or trade school, go to a low-cost school. Do a STEM degree or do a trade that pays well. Try to get tuition assistance even if it means going to a less prestigious school. And work at every opportunity you get in the most serious job you can find. Don't spend your money – save it. Especially don't spend your money on fun, vacations and alcohol. As soon as you grow up, you're going to wish you could have it all back.

# Why is it so hard for young people to find a job?

**Wintery Knight** · 12 April 2015 · Archived copy · Original

Young people have a sense of entitlement

Bloomberg News discusses the "Professionalism in the Workplace" survey of human resources specialists from York College of Pennsylvania.

> **Forty-nine percent of [those surveyed] stated that less than half of new employees "exhibit professionalism in their first year." More than half (53 percent) have noticed "a sense of entitlement" rising among younger workers; almost 45 percent have seen a "worsening of the work ethic," including "too casual of an attitude toward work" and "not understanding what hard work is."**
>
> Younger workers believe they can multitask and remain productive, the human-resources people told the York researchers. Thirty-eight percent of respondents blamed multitasking for the lack of "focus" among younger workers. The authors of the study explained that the younger generation "believes that it is possible to multi-task effectively" and that using social media, for example, is an efficient way to communicate. In interviews, the applicants check their phones for texts and calls, dress inappropriately and overrate their talents.
>
> "The sad fact is some of these persons probably do not understand what is wrong with this," the authors note.
>
> Older workers have always complained about younger workers, of course, but there's a difference: This time they attribute the youthful flaws not to ignorance or waywardness, but to a "sense of entitlement."
>
> We might forgive 18-year-olds fresh out of high school for lacking employability skills (the manufacturing sector hires many workers lacking undergraduate degrees). But when he or she reaches 23 and has four years of college, employers expect a white-collar worker to recognize basic norms of dress and deportment.
>
> **What happened in college, then? The survey by York College's Center for Professional Excellence assigns colleges part of the blame, observing that letting students miss deadlines without penalty and assigning good grades for middling work only make them form the wrong expectations.**

Meanwhile, the UK Daily Mail had the results from a 2013 survey:

> Young people's unprecedented level of self-infatuation was revealed in a new analysis of the American Freshman Survey, which has been asking students to rate themselves compared to their peers since 1966.
>
> Roughly 9 million young people have taken the survey over the last 47 years.

> Psychologist Jean Twenge and her colleagues compiled the data and found that over the last four decades there's been a dramatic rise in the number of students who describe themselves as being 'above average' in the areas of academic ability, drive to achieve, mathematical ability, and self-confidence.
>
> But in appraising the traits that are considered less invidualistic – co-operativeness, understanding others, and spirituality – the numbers either stayed at slightly decreased over the same period.
>
> Researchers also found a disconnect between the student's opinions of themselves and actual ability.
>
> **While students are much more likely to call themselves gifted in writing abilities, objective test scores actually show that their writing abilities are far less than those of their 1960s counterparts.**
>
> **Also on the decline is the amount of time spent studying, with little more than a third of students saying they study for six or more hours a week compared to almost half of all students claiming the same in the late 1980s.**
>
> **Though they may work less, the number that said they had a drive to succeed rose sharply.**
>
> […]Twenge is the author of a separate study showing a 30 per cent increase towards narcissism in students since 1979.
>
> 'Our culture used to encourage modesty and humility and not bragging about yourself,' Twenge told BBC News. 'It was considered a bad thing to be seen as conceited or full of yourself.'
>
> Just because someone has high self-esteem doesn't mean they're a narcissist. Positive self-assessments can not only be harmless but completely true.
>
> However, one in four recent students responded to a questionnaire called the Narcissistic Personality Inventory with results pointing towards narcissistic self-assessments.
>
> Narcissism is defined as excessive self-love or vanity; self-admiration, or being self-centered.
>
> Twenge said that's a trait that is often negative and destructive, and blames its boom on several trends – including parenting styles, celebrity culture, social media, and easy credit – for allowing people to seem more successful than they really are.

I think what I am seeing is that not only do they work less, but they work at things they "like", rather than at things that will allow them to provide value to others. So, you're not going to find a lot of computer programmers or petroleum engineers among young Americans, but you will find a lot of people gravitating to jobs that are easy that make them feel good about themselves, and look good to other people, too.

Obviously, there are policy reasons for youth unemployment being so high, but I think this attitude that young people have is definitely part of it.

# Can prayer, Bible reading, church-singing and charismatic preaching stop Katy Perry's apostasy?

**Wintery Knight** · 12 April 2015 · Archived copy · Original

I received an e-mail from a woman who was telling me to drop my list of 10 worldview questions and just look for a wife who reads the Bible and has feelings about Jesus.

She wrote:

> My suggestion to you is to consider a top-down approach. Just pray for God to send you your wife and pray that you recognize her immediately. You don't seem like you really want to remain single…and your children are missing out on having you as their dad. Marriage is for children, remember? I know several young ladies who know their Scripture and who love Jesus but who, I don't think, would pass your test because, in my perception, they aren't cerebral enough.

I get this e-mail a lot, especially from women who have married non-Christians or who are divorced. Now the whole point of the list of 10 questions is to detect women who are not going to help me to produce effective, influential Christian children. If I am going to spend north of $100,000 per child + tuition, then I expect to get some sort of return on that investment for God. That money doesn't earn itself, and it needs to be well-spent serving God.

It's my wife's job to help me to do that. My goal in choosing a wife is to find a helper to make the relationship serve God. Otherwise, it's better for God if I give that money that I worked very hard to earn directly to effective Christian scholars. I don't have money to burn "playing house" with someone who is guided by her feelings. I can just give the money to Reasonable Faith or Discovery Institute instead.

Let's take a look at two parents who aimed at nothing and hit it with their daughter. The two parents run a ministry that is based around passionate preaching, prayer and Bible verses.

Excerpt:

> The Lord spoke to Arise International Conference host Mary Hudson to encourage women to reach their full destiny in Jesus Christ. He wants women to rise up as trailblazers, to think outside the box and be bold in Him, of course putting God first, your husband second and then your family!
>
> Mary's ministry of Arise! International holds annual women's empowerment and leadership conferences in Hawaii, Belgium, Colombia, France, Switzerland, Denmark and the USA. The river of glory is rising and we must flow with it.
>
> 2012 promises to be a break-through year to Arise! in who you are in Christ. Lean on Him for direction, don't look to man. Knowing the signs of the times and hearing the voice of the Holy Spirit will be vital to being at the right place at the right time to reap the harvest of souls coming into the Kingdom.
>
> Pray about being a part of Arise! this coming year. It just may be the meeting that propels you into the next level for your life. Remember, you are equipped with everything you need to fulfill your purpose. God's assignments reveal your abilities and your capabilities, and He will provide both the potential and the provision to meet every assignment.
>
> We call you blessed and highly favored!

I noticed that their "book store" offers nonsense books like this:

Keith Hudson "Looking and Seeing":

> Like this disciplined athlete, you need to learn how to look beyond your present situation and keep your eye on

> His Presence. God is ready to display His glory in your life as well in these last days, but it is going to take boldness for you to take the mask off and look at people and situations the way God sees them, not how man looks at them. What may stand in front of you may look too big for you to grasp; that what you see now is the way it's always going to be. Or you look at the dream God has given you and think, "there is no way I can ever accomplish this with my resources at my age…" That is the moment you have to flip the switch from looking to seeing.

Mary Hudson "Smart Bombs":

> Smart Bombs is a book which will show you practically and with true life examples how to take God's Word and let it explode strongholds in your life. When you read the Bible, He quickens particular passages or verses to your heart. You know it is God talking to you about your situation. Or when you receive a prophetic word, you sense in your heart this is speaking to you. But what do you do with these words when they bear witness with you? Let them fade away and disappear off of your memory? No, Smart Bombs shows you how to go on the offense with the anointed word of God, how to demolish strongholds and take back everything the enemy has stolen from you.
>
> This easy read is a must for anyone who is looking for clarity on their destiny.

Keith Hudson "The Cry":

> The Cry will reignite you with new fire. Christians lose their passion when they let go of their zeal for God. We come into prayer meetings and we are so polished and perfected. But the Lord wants to hear the cry of your heart. The church has lost its cry: God is about to restore it. Why did the thirty people gathered for the Azusa Street revival have such a move of the spirit of God in their day? Because they had a cry in their hearts and in their prayers. The Cry will release a desperate longing in you for Gods intervention in your life. It goes way beyond your natural thinking into a spiritual hunger from your innermost being. When everything else has failed, a desperate cry touches the heart of God.

Now do you think that someone who reads books like that will produce the same kind of children as parents who read William Lane Craig, Stephen C. Meyer, Jay Richards, and Michael Licona? Of course not. Because the Hudson books are fluff and the books by real Christian scholars are not fluff.

Now let's read an article from Christian Post about what sort of child the fluff approach produces. (H/T Mysterious Chris S.)

Excerpt:

> Katy Perry, the 29-year-old singer and songwriter, is revealing that while she prays she no longer identifies with Christianity.
>
> "I don't believe in a heaven or a hell, or an old man sitting on a throne. I believe in a higher power bigger than me because that keeps me accountable," she told Marie Claire magazine recently. "Accountability is rare to find, especially with people like myself, because nobody wants to tell you something you don't want to hear."
>
> Perry, who took the Billboard charts by storm with her hit song "I Kissed a Girl" in 2008, told Marie Claire that she no longer considers herself a Christian despite being raised by Christian ministers.
>
> "I'm not Buddhist, I'm not Hindu, I'm not Christian, but I still feel like I have a deep connection with God. I pray all the time – for self-control, for humility," she told Marie Claire. "There's a lot of gratitude in it. Just saying 'thank you' sometimes is better than asking for things."
>
> Despite her decision to perform music that may seem controversial to the Christian community, the chart-topping singer has never shied away from crediting the Christian church for giving her a start as a performer.

> "The atmosphere I grew up in was 100 percent Christian," Perry said her "Part of Me: 3D" movie which was released last year. "I started singing in the church, I never really had another plan."

Their daughter is writing songs to promote homosexuality to young people. That's their legacy. The legacy of spiritual gifts, God opening doors of mysticism and charismatic anti-intellectualism. That's what they are going to present to God as their spiritual legacy. I noticed that Mary Hudson is now calling her daughter's celebrity divorce after one year of marriage a "gift from God". Her daughter married a heroin-addicted leftist non-Christian – but he was *hawt*. Tall, dark, handsome and a famous comedian, too.

The list of questions I use when courting helps me to avoid marrying a woman like Katy Perry's mother. She could not answer any of my questions. None of them. And what's more, she doesn't want to answer them. She wants to live her whole life without learning how to answer them. She wants to stick with her Bible, her singing, her feelings, her passionate oratory and her crowds of gullible people. I will not marry a woman like that. It produces disaster and failure. It produces anti-Christian children.

In fact, you can't succeed at anything worthwhile in life using the Keith and Mary Hudson approach to parenting. You can't do a thing with that approach. Not writing software, not fixing cars, not making investments, not sending a rocket to the moon, not even evangelizing an apostate daughter. You do not want to be a Christian man who pumps 30 years of hard labor into a family that produces apostate children. If you are going to spend the money, then make sure you get the results.

# Slowly but surely, I am becoming less upset when bad things happen

**Wintery Knight** · 13 April 2015 · Archived copy · Original

"The wounded soldier" – Étienne Prosper Berne-Bellecour

I had some drama at the end of last week. My plan to share my thoughts online using an alias ran into a snag, and I've had to make adjustments.

Anyway, things are fixed now as well as they can be, so we continue. But what was interesting to me was that all my closest friends thought that I must be ready to jump off a cliff because of the setback. Well, no. I just took a couple of days to think about it and then did the best I could to fix it, and that's it.

So I thought about why they might be so concerned and I came up with three ideas. First, they thought that because I always talk about plans, responsibilities, expectations and obligations so much that I would flip out if anything went wrong. Second, they thought that because I have anxiety left over from being stuck in daycare so much that I would be shattered by the setback. Third, some of my male friends thought that I should be really angry and fight against the injustice.

Well, here's why I didn't get depressed or angry.

1. First, and most importantly, it's important to understand that in Christianity, salvation is a free gift of God. God's love for me is not conditional on me achieving specific results, even though I am very serious about achieving specific results. Although I'm not a guy who has a past full of wild sins, I have something else – I have a lot of missed opportunities. I could have succeeded better and been more effective and influential. In my first job, I got a ton of stock options, but we were acquired 1 month before they vested. The gain in our stock price would have been worth $100,000 to me. I also missed a chance to intern with a small company that was later acquired by Oracle. I chose instead to intern with a much larger company that eventually went bankrupt. I failed an on-site interview with a great small company because I mentioned my conservative politics (my manager-to-be had run at the state level as a Democrat). They also got acquired by Oracle.

And there have been many more near misses. And even now, some of the plans I made (marriage, PhD) are 12 years and 8 years behind schedule, respectively. I've been forced to scramble to find other options in order to make a difference. But that's OK, because I'm not under pressure to earn my way to Heaven here. God is in control. Being faithful doesn't mean you get everything you plan to achieve, it just means being serious and self-sacrificial when you make decisions, and then leave the rest to God. It means reacting to targets of opportunity when your primary and secondary targets are not available.

2. Second, God has done an excellent job of strengthening me to recover from the daycare anxiety. He's done it in three ways.

First, my education and career went well enough that I have kept up with my financial goals. Having enough money to survive all the terrible things I can imagine happening to me is a *big calming influence* on me. And this was a gift from God. I believe that my finances and my career are not things that I achieved, but things that God gave me in order for me to be able to mentor and assist others with the experience gained from being given these gifts. God gave these things to me so that I could fill a role with others – advising them on their decisions about education and career.

God also gave me a string of unexpected disasters to experience to build up my toughness, e.g. – running over a large possum at night while on the way back from a J. Warner Wallace event, or being rear-ended by a college student driving her Dad's SUV. When these things happened to me early in my life, I would cry like Niagara Falls. I was raised to think that everything had to be "perfect" growing up – my working mom was always stressed out and aggressive. But now, when bad things happen, I'm much less phased. Sometimes, people run away from challenges if they don't learn that it's OK to fail, but thanks to God leading me, I didn't end up like that. I kept trying.

Finally, the influence of supportive Christian women in my life has helped me a lot. It's amazing how one action – the first time a Christian woman put her hand on my face – has stayed with me, and it makes everything terrible seem so easy to bear with. Whenever things go wrong, I just think of that day. It was a *big deal*. When you wait a long time for it, and when the woman understands you and approves of you, it makes a difference – *for the rest of your life*.

3. Third, I believe that God is sovereign so that I don't have to defend myself all the time when things go wrong. Sometimes, when things go wrong, the most important thing to do is to not fix it, and just concentrate on being calm and polite to everyone around you. Sometimes, God has reasons for allowing me to fail or get hurt. And since I can't see everything he can see, what's the point in thinking that I have to get upset every time someone disrespects me or sets me back? I don't. If God wanted me to make a huge difference right away, he could make me do that. But he's not going to do anything that will threaten his most important goal for me, and that's making sure I get where I need to be after my life is finished. With all the focus on plans and goals, it can be easy to forget that this is what really matters.

So all of that is just to say that I am not earning my way to Heaven here – the most important thing to know about me is that God the Father has saved me through his Son, Jesus. The rest of my life is just me reacting to that as respectfully and effectively as I can, and not really caring much what people think of me. That doesn't mean I'm going to do whatever I want, but it does mean that if things don't go perfectly, then the most important thing about me isn't going to be affected. At all. There is a great contentment in understanding these things when you are trying to interpret unexpected setbacks.

By the way, please like the new Facebook page for the blog if you haven't already. It has fewer likes than the old page did right now, but we'll get back up there.

# Does the New Testament book of James undermine salvation by faith alone?

**Wintery Knight** · 13 April 2015 · Archived copy · Original

Theology that hits the spot

Are people brought in a right relationship with God because God provides for their salvation, or must we do works in order to earn our place with God in the afterlife?

The Bible is pretty clear that God provides our salvation from our rebellion by himself, all we have to do is accept it.

Look at Romans 3:21-30:

> [21] But now apart from the Law *the* righteousness of God has been manifested, being witnessed by the Law and the Prophets,
>
> [22] even *the* righteousness of God through faith in Jesus Christ for all those who believe; for there is no distinction;
>
> [23] for all have sinned and fall short of the glory of God,
>
> [24] being justified as a gift by His grace through the redemption which is in Christ Jesus;
>
> [25] whom God displayed publicly as a propitiation in His blood through faith. *This was* to demonstrate His righteousness, because in the forbearance of God He passed over the sins previously committed;
>
> [26] for the demonstration, *I say*, of His righteousness at the present time, so that He would be just and the justifier of the one who has faith in Jesus.
>
> [27] Where then is boasting? It is excluded. By what kind of law? Of works? No, but by a law of faith.
>
> [28] For we maintain that a man is justified by faith apart from works of the Law.
>
> [29] Or is God *the God* of Jews only? Is He not *the God*of Gentiles also? Yes, of Gentiles also,
>
> [30] since indeed God who will justify the circumcised by faith and the uncircumcised through faith is one.

Here's theologian R.C. Sproul, to explain a passage from the Bible that seems to contradict the passages that teach that faith alone is sufficient for salvation.

Here's James 2:18-24:

> [18] But someone may *well* say, “You have faith and I have works; show me your faith without the works, and I will show you my faith by my works.”
>
> [19] You believe that God is one. You do well; the demons also believe, and shudder.
>
> [20] But are you willing to recognize, you foolish fellow, that faith without works is useless?
>
> [21] Was not Abraham our father justified by works when he offered up Isaac his son on the altar?
>
> [22] You see that faith was working with his works, and as a result of the works, faith was perfected;
>
> [23] and the Scripture was fulfilled which says, “And Abraham believed God, and it was reckoned to him as righteousness,” and he was called the friend of God.
>
> [24] You see that a man is justified by works and not by faith alone.

Sproul explains the apparent conflict:

> What James is saying is this: If a person says he has faith, but he gives no outward evidence of that faith through righteous works, his faith will not justify him. Martin Luther, John Calvin, or John Knox would absolutely agree with James. We are not saved by a profession of faith or by a claim to faith. That faith has to be genuine before the merit of Christ will be imputed to anybody. You can’t just say you have faith. True faith will absolutely and necessarily yield the fruits of obedience and the works of righteousness. Luther was saying that those works don’t add to that person’s justification at the judgment seat of God. But they do justify his claim to faith before the eyes of man. James is saying, not that a man is justified before God by his works, but that his claim to faith is shown to be genuine as he demonstrates the evidence of that claim of faith through his works.

So yes, works are important as a sign to others that you believe what you say you believe, but not important for balancing your sins. Your sins are already paid for by Jesus, what you do in your life doesn’t add or take away anything from that. But I will say that if you can see that a person is spending a great deal of their time performing actions that are consistent with a concern for God’s purposes and reputation, then that’s a good sign that his faith is in good shape. Yes, even if he doesn’t do as much Bible study, devotions, singing and praying as he should. The important thing about actions (works) is that you can look at a person’s life and see evidence that he is taking God seriously – that Jesus is his leader, and that Jesus’ character is informing their decision-making and prioritizing.

# Robin Collins lectures on the fine-tuning argument at Pepperdine University

**Wintery Knight** · 13 April 2015 · Archived copy · Original

A lecture on the fine-tuning argument by an expert.

Details:

> Dr. Robin Collins is a Professor of Philosophy and Chair of the Department of Philosophy at Messiah College. Collins is the foremost defender of what is known as the teleological argument for the existence of God. He has a background in both physics and philosophy and will be discussing how the specific physical constants and conditions in the universe are finely-tuned for intelligent life and how this "fine-tuning" gives us reason to believe in a Creator.

Here is the video:

Topics:

- the constants and quantities set at the origin of the universe is fine-tuned for conscious, embodied intelligences like us
- three kinds of fine-tuning: 1) laws of nature, 2) constants, 3) quantities
- examples of 1): gravity, electromagnetism, strong force, quantization, Pauli exclusion principle
- examples of 2): **gravitational constant**, **cosmological constant**,
- examples of 3): initial distribution of mass-energy
- in addition to fine-tuning for life, there is also fine-tuning for discoverability
- Naturalistic response to the evidence: the multiverse hypothesis
- problems with the multiverse hypothesis
- additional topics

I put the ones I am ready to speak on in bold. I recommend you learn those as well in order to illustrate the fine-tuning with evidence when you present it. The evidence is important because I've never found a single atheist who I discussed this with who could properly state the argument or understand the evidence. They talk about it without really understanding it, which is why we need to be ready to explain it to them.

# Is Obama's economy as good as the mainstream media are telling us?

**Wintery Knight** · 14 April 2015 · Archived copy · Original

This article from CNS News was tweeted by GOP presidential candidate Carly Fiorina.

This economy is not good (click for larger image)
It says:

> The federal government taxed away more money, spent more money and ran a bigger deficit in the first half of fiscal 2015 than it did in the first half of fiscal 2014, according to the Congressional Budget Office.
>
> "The federal government ran a budget deficit of $430 billion for the first half of fiscal year 2015, CBO estimates–$17 billion more than the shortfall recorded in the same span last year," the CBO said in its Monthly Budget Review for March 2015, which was published April 8. "Both revenues and outlays were about 7 percent higher than the amounts recorded in the first six months of fiscal year 2014."

Keep in mind that these deficit numbers are for *half a year*. In 2007, George W. Bush was running a deficit of $160 billion *for an entire year*.

And we're being taxed more, too:

> The biggest source of additional tax revenue for the federal government was the individual income tax. In the first six months of fiscal 2014, Americans paid the federal government approximately $585,000,000,000 in individual income taxes. In the first six months of fiscal 2015, Americans paid $642,000,000,000 in individual income taxes—an increase of $57 billion (or 9.7 percent) from fiscal 2014.

What's the long-term forecast?

The Wall Street Journal has it:

> **Question: "How close are we from seeing entitlement programs like Medicare, Medicaid, and Social Security come into direct conflict with defense spending priorities? Defense spending is almost 20% of the Fed budget and nearly 60% of discretionary spending. Current cost of health care and an aging population are strong indicators this could happen sooner than later."**
>
> **Zumbrun:** "I'd say we're already seeing it now. As Nick noted above, the CBO projects that mandatory

> spending and spending on interest will climb, but that defense and nondefense discretionary spending will be squeezed. Anyone who doesn't want to see that happen in the next decade needs some combination of higher revenue, much faster economic growth, or cuts to entitlement programs.
>
> "The budget deal known as sequestration squeezed down both defense and non-defense discretionary spending. If, instead, everyone agreed it was okay to cut entitlements (which they obviously don't), you wouldn't have needed to squeeze that down. So I think it's fair to say these things are already in conflict."
>
> **Question: "Debt as long as partnered with productivity is no problem. From the looks of it, the U.S. might fall as an economy, but is now the time?"**
>
> **Timiraos:** "That's a good point. One thing that's a little bit troubling, however, is that estimates of the potential output of the U.S. economy have been revised down. What does that mean exactly? Instead of growing at a 2.7% rate from 2014-18, it now says the economy will grow at a 2.5% rate. That doesn't sound too bad, but over time, it adds up."
>
> **Question: "The U.S. has so far been capable of keeping its cost of borrowing at a remarkably low level. What about in the long term where it seems likely that servicing the debt will eat up a larger and larger percentage of government expenditures in an age of slowing growth?"**
>
> **Zumbrun:** "There's actually decent reason to believe that if the economy slows down a lot then interest rates will stay very low. That's basically the situation in Japan, right? They're mired in decades of low growth, driven by aging demographics and a central bank that was really timid for a long time, but as a result of their permanently stagnant economy, interest rates are incredibly low. In the U.S., one scenario like this is known as secular stagnation.

Wow, if our economy starts to look like Japan, that will not be good. They have massive deficits, zero economic growth and a looming demographic crisis (few young workers, many older retirees). It's a very bad situation that's being masked by low interest rates and massive, massive borrowing.

**The Brookings Institute agrees**

Lest you think that this is just the conservative take on this, here's the leftist Brookings Institute, writing about it just last week.

They say:

> Debt figures tell part of the story. When the Great Recession hit, the federal debt was equal to about 40 percent of GDP. But to fight the recession, Congress enacted an $800 billion dollar stimulus bill. Stimulus spending, combined with already enacted spending and tax policy, **resulted in four years of trillion dollar deficits**. As a result, the debt ballooned to 78 percent of GDP in 2013, almost twice the pre-recession level. The annual deficit is now declining at a stately pace, but by 2016 it will begin increasing again, and by 2020 under CBO's alternative fiscal scenario, **we will once again return to annual deficits above a trillion dollars**, thereby once again greatly increasing the national debt.

Oh come on – Obama says that he saved the economy, and everyone in the mainstream media agrees.

Did he?

> What's the word for our fiscal situation? Stunning? Shocking? Desperate? In recent testimony before the Senate Budget Committee, Boston University Economics Professor Laurence Kotlikoff, in effect, told the Committee that all of these terms are pathetically inadequate to describe our true fiscal situation. **In compelling testimony, Kotlikoff argues that the federal fiscal situation is much worse than the CBO estimates let on. The reason is that CBO's debt estimates do not take into account the full financial obligations the government is committed to honor, especially for future payments of Social Security,**

> **Medicare, and interest on the debt.** He asserts that the federal government should help the public understand the nation's true fiscal situation by using what economists call "the infinite-horizon fiscal gap," defined as the value of all projected future expenditures minus the value of all projected future receipts using a reasonable discount rate.

If you're going to be retirement age around 2030, you'd better do two things right now – first, don't expect any help from the Federal government. I don't care if you paid into their Ponzi scheme redistribution programs – there is *no money for you there.* Second, if you're working till you're retired, then expect the government to *raise taxes even more* on you.

Would you expect secularists to care about the next generation when this is the only life they have? I would not. Ideas have consequences.

# Gay activists target student leader Lindsey Kolb for defending religious liberty

**Wintery Knight** · 14 April 2015 · Archived copy · Original

A banner with Lindsey Kolb

Here's the story from The College Fix.

Excerpt:

> Members of the LGBT community at Missouri State University are demanding the school retaliate against a student leader for her off-campus activism against a local ordinance that could harm religious freedom.
>
> […]A petition posted Wednesday on Change.org, originally titled "#TakeLindseyOffCarrington" but since changed to "#AccurateRepresentationMSU," asks the school to remove a banner from its signature building, Carrington Hall, depicting "university ambassador" Lindsey Kolb.
>
> As of Sunday night, the petition had 873 signatures.
>
> Providing little context for its subject or a clear articulation of its demand, the petition was posted the day after Springfield residents voted to repeal a city council ordinance that banned discrimination based on sexual orientation and gender.
>
> Proponents of repeal have argued the ordinance did not provide substantial religious exemptions for businesses and individuals.
>
> Removing the banner of Kolb would "send a message of cultural competence and not advertise someone who has no respect for a culture different from their own," petition author and MSU student Connor Hayes wrote at Change.org.
>
> Kolb told *The College Fix* her opponents have mischaracterized her beliefs and her faith.
>
> **"I advocated for repeal because I believe in religious freedom," said Kolb in a statement. "A Church should not be forced to host a LGBTQ wedding. A cake shop should not be forced to make a cake for a LGBTQ couple's wedding."**
>
> Kolb wears many hats, according to her LinkedIn page: state chairman of the Missouri Federation of College Republicans and president of MSU's chapter, receptionist for the dean of students and office of admissions, member of the student government cabinet, and even "campus ambassador" for a clothing brand.

What's scary about this is the response of the gay activists:

> She initially came under fire after taking issue with a satirical op-ed in *The Standard* by Caleb Hearon, which mocked Christians who favored of repeal of the Springfield ordinance.
>
> "Repealing this protects religious freedom. It is my God-given right to hate whomever I want. Can I get a yee-yee?" Hearon wrote.

Caleb? What kind of name is Caleb for a secular leftist? That's just weird.

More:

> Though Hayes' petition says its goal "is not to make Lindsey a scapegoat for the way the [Springfield ordinance repeal] vote turned out," it continually returns to Kolb, calling her unfit to represent the university.
>
> "Her remarks in the past do not exemplify an ethical leader by ostracizing and discriminating against current and prospective students who identify as member or ally of the LGBT+ community," it states. "For Missouri State to continue to endorse her discriminatory views is effectively showing that they do not in fact value ethical leadership."
>
> Kolb told *The Fix* she feels "bullied" by the petition.
>
> "The people who started this petition did not personally know me, my convictions, and completely took my views out of context," she said.
>
> Her opponents have taken to Twitter, using the hashtag #TakeLindseyOffCarrington and labeling her an "awful individual" and a "bigot"among other slurs.

I feel badly for her – trying to stand up for religious liberty using your real name is a disaster these days. It's not safe. I do think that it's extra good when a woman stands up for religious liberty, though. In my experience, women are more likely to want to hide their conservative beliefs from their peers – or even get rid of them completely in order to fit in. I feel really bad when that happens – I want to get in there and reinforce her so that she doesn't feel pressured to change her values in order to fit in.

Look how tough Lindsey is:

> And while Smart's intervention on her behalf suggests Kolb's banner will remain on Carrington Hall, "If it ever comes down to me having the freedom of speech and religion or having a banner on campus, I choose my faith and freedom every time," Kolb told *The Fix*.

Fortunately, this story has a happy ending so far:

> University President Clif Smart decried those attacking Kolb in a Wednesday night blog post.
>
> "In the same way that discrimination will not be permitted at Missouri State, we will also not permit retaliation based on someone's political or religious beliefs or advocacy efforts on this or any other political issue," Smart wrote.
>
> He said the university's "public affairs" mission – the petition's stated rationale for removing Kolb's banner – "is not a weapon to be wielded when we work or study with those who have different ideas, beliefs or values than our own."
>
> Discouraging people from speaking openly is not what Missouri State is about, Smart continued: "We do not behave as ethical leaders when we seek to stifle free expression or punish those who advocate for particular viewpoints."

And there is a counter-petition for you to sign to support Lindsey, as well. I posted this because my heart just went out to her trying to do the right thing and taking flak from the secular leftist mob. She is a very, very brave girl – I'm sure this experience has hurt her some. It's scary – so many of our young people are like Crazy Caleb – even the ones raised in Christian homes. And there are so few Lindseys. The university is a very dark place right now. And yet it has so much influence in our society that we can't abandon it, we have to keep trying to get a foothold.

# Florida senator Marco Rubio will compete in the GOP presidential primary

**Wintery Knight** · 15 April 2015 · Archived copy · Original

Florida Senator Marco Rubio

Here's a profile of Marco Rubio posted by Rachel Alexander at The Stream.

She writes:

> On Monday night, Florida Senator Marco Rubio became the third major Republican candidate to announce he was officially running for president, after Senators Ted Cruz and Rand Paul. He made the announcement from the Freedom Tower in downtown Miami, considered the Ellis Island of Florida, where Cuban refugees seeking political asylum from Castro's communist regime were processed by the federal government in the '60s and early '70s. It made a powerful statement, that the son of refugees is now running for president.
>
> Rubio's parents came to America before the Castro regime, and took menial jobs. He told the cheering crowd, "My father stood behind a small portable bar in the back of a room so that tonight I could stand behind this podium in front of this room."
>
> Rubio has been an outspoken critic of Obama's efforts to relax relations with Cuba, and takes a hawkish approach to foreign policy. Earlier this year, he published the book *American Dreams*, which lays out how to rise to success economically in the U.S.
>
> The youngest candidate in the race, Rubio reached out to younger voters in his speech, saying, "This election is not just about what laws we will pass, it is a generational choice about what kind of country we will be."

He has lots of experience and a track record we can analyze:

> A lawyer, Rubio worked his way up through the political system, serving in the Florida House from 2000 to 2008 and eventually becoming Speaker. While there he developed a reputation for pursuing innovative policy ideas and while Speaker of the Florida House, he wrote a book, *100 Innovative Ideas for Florida's Future,* which contained many ideas he implemented while Speaker.
>
> He went on to defeat liberal Republican turned Democrat Charlie Crist in a surprising underdog campaign to become U.S. Senator in 2010, making him an instant Tea Party favorite. *The New York Times* magazine declared him the "first Senator from the Tea Party."

His most exciting policy is his tax policy:

> On the fiscal side of the conservative equation, Rubio's new tax reform proposal is raising some eyebrows. Introduced with conservative stalwart Sen. Mike Lee (R-Utah), the plan would consolidate income tax rates into just two, 15 percent and 35 percent, eliminate capital gains taxes on investment income for individuals, combine all corporate tax rates to 25 percent, and resuscitate the child tax credit, which had shrunk under the Obama administration. However, individuals making as little as $75,000 would be subject to the 35 percent rate. Many conservatives prefer the more radical flat tax option advocated by Ted Cruz and Rand Paul.

Mike Lee is my favorite conservative in the Senate.

Rubio is a solid conservative in terms of voting:

> He has a 98.67 percent lifetime rating from the American Conservative Union, higher than most other Republican Senators.The Pulse 2016, a new site tracking the presidential election, gave Rubio an A grade on handling the Indiana religious freedom law controversy. The site noted that during an appearance on *The Five*, Rubio spoke "intelligently, knowledgeably, and at length about the need to protect the rights of Christians to follow their religious convictions."

But he doesn't have the executive accomplishments of a Scott Walker or a Bobby Jindal, since he isn't a governor.

This is his biggest flaw:

> Since taking office, Rubio has disappointed the Tea Party once, in 2013, when he joined a bipartisan group of Democrats and moderate Republicans to propose a path to citizenship for illegal immigrants, which went further than even Jeb Bush's plan. Bush supports a path for legal status only. Rubio's legislation failed, and at CPAC earlier this year, he said he now would only support a path to citizenship after securing the border.

Rubio is a strong candidate, but I can't forgive him for endorsing a path to citizenship for those who break the law coming into the United States without a work permit. I don't even favor work permits for people who break the law, much less permanent residencies, much less citizenship. Rubio is *far* to the left of me on immigration. But if you take away that negative, he is a formidable candidate in the general election. He would make an extremely difficult opponent for Hillary Clinton, or whoever the Democrats choose.

I am OK with him being our candidate in the general, and I think he would be as electable as Scott Walker, my top choice. If we were just choosing positions, I agree most with Cruz, but Cruz lacks accomplishments and I don't see intelligent policies coming out of his mouth – the kinds of policies that can move us in a conservative direction, while still appealing to independents.

But I rank Rubio fifth in my list:

1. Gov. Scott Walker
2. Gov. Bobby Jindal
3. Gov. Rick Perry
4. Sen. Ted Cruz
5. Sen. Marco Rubio

I like Rick Santorum more than Marco Rubio, but I'm not sure if he's running. Carly Fiorina and Ben Carson are not on my list because of lack of experience, but I would love to see them run and be present to speak at the debates – I like listening to them both. They are both stars, but maybe not ready for the Presidency.

Rand Paul is a good candidate on fiscal policy. His statements on social policy are good, but he lacks accomplishments.His foreign policy is too much like Obama's for me. He has said some good things, but he lacks accomplishments. I don't want any more weakness and appeasement. Paul is to the left of Cruz and Rubio on foreign policy – I don't want him on my list. But I'd put him in charge of the Federal Reserve in an instant.

We have SO MANY good candidates, and the Democrats have picked themselves a stinker. It's so good! I feel bad that young people are so lousy on the marriage issue, but maybe with a good leader, we can change some of their minds during the debates? Do young people even watch debates?

# New study: cohabitation produces far inferior outcomes to marriage

**Wintery Knight** · 15 April 2015 · Archived copy · Original

This study is from the American College of Pediatricians.

The Stream writes about the study:

> The American College of Pediatricians recently published a paper, *Cohabitation*, which cautions adolescents and young adults about the negative consequences of cohabitation for both themselves and their children, and urges parents to teach their children about the advantages of waiting until marriage.
>
> More young people are now first cohabiting than are marrying without prior cohabitation, yet research shows that, rather than being a stepping-stone to a healthy marriage, living together before marriage (cohabitation) makes couples more likely to break-up and more likely to divorce if they do marry. It results in lower marital satisfaction and increased negative communication. Cohabiting couples spend less time together; men are more likely to spend their time on personal pleasure than do married men.

Commitment failure:

> Cohabiting couples are now less likely to later marry than 40 years ago. Controlling for other factors that increase risk of divorce, marriages preceded by cohabitation are still **50 percent more likely to end in divorce**. (Some recent studies challenge this, but are scientifically flawed and omit the raw data.) **Also 27 percent of cohabitations dissolve without marriage in the first three years.**

Domestic violence:

> Cohabiters commit increased violence against their partner. Women are nine times more likely to be killed by a cohabiting partner than by their husband. Severe violence is four times as common among cohabiting couples; any violence is nearly 50 percent more common among couples cohabiting before marrying and doubled among couples continuing to cohabit after five years.

Alcohol abuse:

> Men who cohabit without marrying in 5 to 10 years have more than double the rate of alcohol abuse as married men; women who cohabit without marrying have 4 to 7 times the rate of alcohol abuse as married women.

Infidelity:

> Cohabiters, both men and women, have rates of infidelity in the preceding year more than triple that of married spouses. Among the married, those cohabiting prior to marriage were 50 percent more likely to be unfaithful as those marrying without cohabiting.

Poverty:

> Poverty is more common among cohabitating women and their children. Their male partners have both a higher unemployment rate (15 percent vs 8 percent), and work less hours if employed.

Abortion:

> Cohabitating women are ten times more likely to have an abortion than married women, and suffer from its associated mortality and morbidity. In fact, 89 percent of women who have had abortions have at one time cohabited; 40 percent have lived with three or more men. Abortion also puts future children at risk, especially from extremely premature birth.

Harm to children:

> Children who survive also suffer due to parental cohabitation. They have increased risk of losing a parent to divorce or separation, possibly multiple times. Children born of cohabiting parents are over four times more likely to suffer separation of their parents by their third birthdays (49 percent) than those born to married parents (11 percent).
>
> […]Nearly one-third of couples enter into cohabitation with a child from a previous relationship, as do half of those cohabitating for six years or longer. Children living with a parent and unmarried partner (live-in boyfriend) have 20 times the risk of sexual abuse and eight times the risk of all maltreatment compared to children living with married biological parents. Even if the couple marries, stepchildren have over eight times the risk of sexual abuse and triple the overall risk of abuse of neglect. Girls living with a stepparent had 60 percent higher risk of being raped than girls living with their biological parents.

Depression:

> Women in cohabiting relationships have more depression than married women, and poorer responsiveness to their children's emotional needs. Children whose mothers are depressed have increased cortisol responses to stress (which may explain their increased hypertension in adulthood). Children with unmarried mothers are half as likely to be breastfed, leading to higher rates of asthma, pneumonia, ear and intestinal infections, diabetes, obesity, and lower intelligence.

Please believe me when I say that you should click through to the Stream and read the entire article.

So what do I want to say about this in my 500 words? Well, I want to say that the cohabitation issue is a good opportunity for us to reason about whether there should be any rules around sexuality and relationships.

Our culture is absolutely poisoned right now with a kind of feelings-oriented non-judgmentalism that prevents debate. Everything has been reduced to people feeling "offended" and using the power of government to stifle debate. Nowhere is this more evident than on the university campus, which is the source of the problem. This hyper-tolerance and emotional non-judgmentalism leaves people open to making poor decisions that cause self-destruction and harm to others. As a result, young people are blindly accepting a script for sexuality and relationships from the culture, e.g. – Hollywood, celebrities, and ideologically-driven academics. A script made by professional story-tellers insulated from the consequences of their ideas.

As Christians, we seem to have so much trouble talking to young people about rules around sexuality and relationships. So many young people think that premarital sex is benign. That cohabitation is no big deal. And that redefining marriage cannot be opposed. Christian parents and pastors are not preparing themselves to discuss these things with young people. If there is a battle of ideas, and one side shows up with a bunch of feelings and lies, that side still wins – if the other side doesn't show up at all. Don't be so focused on your career and your own self that you fail your children by failing to discuss and debate with them about the issues. Don't assume that just because your children look OK on the surface that there are not serious questions underneath.

There is so much I could say about this problem of talking to young people. As I argued in a previous post, I truly believe that apologists should not neglect these social / cultural / fiscal issues. We have to study them and know how to argue for our values using secular arguments and evidence, such as you see in the study above. Once young people have decided that Christian teachings on sexuality (e.g. – chastity, courting) are primitive and irrational, or

worse, then getting them to accept Christianity becomes that much harder. And that goes double for marriage. If they think that cohabitation, no-fault divorce, same-sex marriage and gay adoption are opposed for no other reason than blind prejudice or even hatred, then we've lost before we even begin to make our first philosophical argument. We have to use a combined arms approach.

Let's attack! Now is the time!

# Professor explains how his study of the historical Jesus made him leave atheism

**Wintery Knight** · 15 April 2015 · Archived copy · Original

Sherlock Holmes and John Watson: let's investigate Jesus!

Dr. Michael F. Bird has a great article in Christianity Today. I've featured his debates with atheist historican James Crossley on this blog before, and I have the book they co-wrote.

In the article, Dr. Bird writes:

> I grew up in a secular home in suburban Australia, where religion was categorically rejected—it was seen as a crutch, and people of faith were derided as morally deviant hypocrites. Rates for church attendance in Australia are some of the lowest in the Western world, and the country's political leaders feel no need to feign religious devotion. In fact, they think it's better to avoid religion altogether.
>
> As a teenager, I wrote poetry mocking belief in God. My mother threw enough profanity at religious door knockers to make even a sailor blush.
>
> Many years later, however, I read the New Testament for myself. The Jesus I encountered was far different from the deluded radical, even mythical character described to me. This Jesus—the Jesus of history—was real. He touched upon things that cut close to my heart, especially as I pondered the meaning of human existence. I was struck by the early church's testimony to Jesus: In Christ's death God has vanquished evil, and by his resurrection he has brought life and hope to all.
>
> When I crossed from unbelief to belief, all the pieces suddenly began to fit together. I had always felt a strange unease about my disbelief. I had an acute suspicion that there might be something more, something transcendent, but I also knew that I was told not to think that. I "knew" that ethics were nothing more than aesthetics, a mere word game for things I liked and disliked. I felt conflicted when my heart ached over the injustice and cruelty in the world.
>
> Faith grew from seeds of doubt, and I came upon a whole new world that, for the first time, actually made sense to me. To this day, I do not find faith stifling or constricting. Rather, faith has been liberating and transformative for me. It has opened a constellation of meaning, beauty, hope, and life that I had been indoctrinated to deny. And so began a lifelong quest to know, study, and teach about the one whom Christians called Lord.

And now specifics:

> For many secularists, Ehrman is a godsend who propagates common misconceptions about Jesus and the early church. He believes there was a spectrum of divinity between gods and humans in the ancient world. Therefore, he asserts that the early church's beliefs about Jesus evolved: from a man exalted to heaven to an

> angel who became human to a pre-existent "divine" person who became incarnate to a subordinated or lesser god to being declared one with God.
>
> **My faith and studies have led me to believe otherwise. First-century Jews and early Christians clearly demarcated God from all other reality, thus leading them to hold to a very strict monotheism. That said, Jesus was not seen as a Greek god like Zeus who trotted about earth or a human being who morphed into an angel at death. Rather, the first Christians redefined the concept of "one God" around the person and work of Jesus Christ. Not to mention the New Testament writers, especially Luke and Paul, consistently identify Jesus with the God of Israel.**
>
> **Many people get the idea that Jesus was just a prophet and never claimed to be divine. But a careful look at the Gospels shows that the historical Jesus explicitly claimed to exercise divine prerogatives. He identified himself with God's activity in the world. He believed that in his own person, Israel's God was returning to Zion, just as the prophets had promised. And he claimed he would sit on God's throne. These claims, when studied up close, are de facto claims to divine personhood, the reasons religious leaders of the day were so outraged.**
>
> Evidence shows that Jesus claimed to be God incarnate, and within 20-some years after his death and resurrection, Christians were identifying him with the God of Israel, using the language and grammar of the Old Testament to do so.
>
> Sure, some sects in the first few centuries held heretical beliefs about Jesus. But the mainstream, orthodox view of Christ's identity was always consistent with and rooted in the New Testament, though orthodox Christology became more refined in the following centuries.

It's definitely true that you can recover a high Christology (a view of Jesus as divine) from the earliest gospel, Mark. I wrote about it in a previous post. But the earliest evidence for Jesus is that creed in 1 Corinthians 15, that I blogged about recently.

Here is his conclusion:

> Some have great confidence in skeptical scholarship, and I once did, perhaps more than anyone else. If anyone thinks they are assured in their unbelief, I was more committed: born of unbelieving parents, never baptized or dedicated; on scholarly credentials, a PhD from a secular university; as to zeal, mocking the church; as to ideological righteousness, totally radicalized. But whatever intellectual superiority I thought I had over Christians, I now count it as sheer ignorance. Indeed, I count everything in my former life as loss because of the surpassing worth of knowing the historical Jesus who is also the risen Lord. For his sake, I have given up trying to be a hipster atheist. I consider that old chestnut pure filth, in order that I may gain Christ and be found in him, not having a CV that will gain me tenure at an Ivy League school, but knowing that I've bound myself to Jesus—and where he is, there I shall also be.

I recently led a Bible study on the passage he is paralleling there – it comes from my *favorite* book of the Bible, Philippians.

What I like about Bird's story is that he was a skeptic, and his study of history is what changed his mind. This contradicts a narrative that young people are sold at the university, which is that the more education you have, the more you turn away from theism in general, and Christianity in particular. I wouldn't even classify him as a super conservative scholar, by any means – he's just a good scholar who believes whatever he thinks is historically sound. It just turns out that you can recover enough historically to ground a commitment to Jesus Christ. You can't get *everything* as a historian, but you get enough to cause a change of mind about who Jesus was.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory

# California Democrats introduce bill to force pregnancy centers to refer abortions

**Wintery Knight** · 16 April 2015 · Archived copy · Original

The bill was introduced by two Democrats:

> Assemblymembers David Chiu (D-San Francisco) and Autumn Burke (D-Los Angeles) introduced AB 775, a bill that helps ensure women receive prompt access to affordable, comprehensive reproductive-health care and are empowered to make fully informed decisions. AB 775 will be heard in the Assembly Committee on Health tomorrow, on April 14th.
>
> AB 775, the Reproductive Freedom, Accountability, Comprehensive Care and Transparency (FACT) Act, requires licensed facilities that provide family planning and pregnancy-related services to inform patients about available assistance for affordable contraception, abortion, and prenatal care, including how to obtain that assistance. Facilities that offer similar services but do not have a medical license must disclose that they are not licensed facilities and do not have a licensed provider on staff. The bill is sponsored by NARAL Pro-Choice California and Black Women for Wellness.

Life News explains what the bill actually does to pro-life crisis pregnancy centers:

> A California committee has approved a bill that would force pregnancy centers providing women with abortion alternatives to refer women for abortions.
>
> Thousands of pregnancy centers across the nation are the counterbalance to the abortion industry by providing women with tangible help and real alternatives to abortion. But pregnancy centers in California may soon find themselves forced to promote abortions under legislation pending in the California legislature.
>
> AB 775, the Pregnancy Counseling Discrimination Rule, would require all pregnancy centers to promote abortions to their clients. There is no conscience clause or opt out for centers that provide pregnant women assistance without abortions or abortion referrals. Failure to comply carries a $500 fine for first offense and $1,000 for each subsequent offense. The bill authorizes the Attorney General, city attorney, or county counsel to impose the civil fines.

I've been posting a lot of stories lately about how the secular left forces people who support natural marriage to be in favor of redefining marriage. But secular leftists are willing to use the power of big government to bully people of morality elsewhere – this time on the abortion issue. Yes, when they're not busy denying children their mothers or fathers, they're trying to kill them with abortion. And if you disagree with being forced to do evil things to born and unborn children, well, that's what courts and prisons are for. I guess they think that if everyone is forced to be complicit, either by funding it or participating in it, then no one is innocent. Then what they are doing is not really wrong at all. That's what they tell themselves.

# Clinton Foundation continues to take donations from regimes that oppress women

**Wintery Knight** · 16 April 2015 · Archived copy · Original

Hillary Clinton: secretive, entitled, hypocritical, deceptive
From the Washington Times.

Excerpt:

> The board of the Clinton Foundation said Wednesday night that it will continue accepting donations from foreign governments, but only from six nations, a move that appears aimed at insulating Hillary Rodham Clinton from controversies over the charity's reliance on millions of dollars from abroad as she ramps up her presidential campaign.
>
> Clinton, who resigned from the foundation's board last week, has faced mounting criticism over the charity's ties to foreign governments.
>
> The board of the Bill, Hillary and Chelsea Clinton Foundation said that future donations will only be allowed from the governments of Australia, Canada, Germany, the Netherlands, Norway and the United Kingdom – all nations that previously supported the charity's health, poverty and climate change programs.
>
> While direct contributions from other governments would be halted, those nations could continue participating in the Clinton Global Initiative, a subsidiary program that encourages donors to match contributions from others to tackle international problems without direct donations to the charity.
>
> The foundation also will begin disclosing its donors every quarter instead of annually – an answer to long-standing criticism that the foundation's once-a-year lists made it difficult to view shifts and trends in the charity's funding. Former President Bill Clinton and other foundation officials have long defended the charity's transparency, but the new move signaled sensitivity to those concerns, particularly as his wife begins her race for the White House.
>
> […]An Associated Press analysis of Clinton Foundation donations between 2001 and 2015 showed governments and agencies from 16 nations previously gave direct grants of between $55 million and $130 million. Those governments include the six nations that will be allowed to continue donating. The remaining 10 are Saudi Arabia, Qatar, Oman, the United Arab Emirates, Algeria, Kuwait, Italy, Brunei, Taiwan and the Dominican Republic.
>
> […]Hillary Clinton had previously agreed with the Obama administration to limit new foreign donations to the foundation while she served as secretary of state, but at least six nations that previously contributed still donated to the charity during her four-year stint. In one case, thefoundation failed to notify the State Department about a donation from the government of Algeria.

One feminist activist has come out and asked Clinton to stop taking donations from countries that oppress women.

The Weekly Standard explains:

> A prominent Pakistani-born women's rights activist is asking presidential candidates, including Hillary Clinton, to pledge not to accept donations from foreign nations that oppress women. Raheel Raza, the Canadian journalist behind the documentary film *Honor Diaries*, is requesting all the presidential candidates, from both parties and both "men and women," to sign her pledge.
>
> This week, Hillary Clinton announced her candidacy for President," said Raza in a statement. "As a woman, I congratulate her, but as a women's rights advocate, I'm concerned about the $13,000,000-$40,000,000 the Clinton Foundation reportedly took from regimes that persecute women, namely Saudi Arabia, Qatar, Oman and the UAE."
>
> Raza's pledge is not limited to presidential campaigns, asking candidates to promise to "never take money from regimes that oppress women, even after I leave public office, including any libraries or foundations in my name."
>
> "If you're running for President—and if you want women's votes—you should sign 'The Pledge to Women' and say 'no' to money from regimes that forbid women to vote or run for office," said Raza.
>
> The Clintons' foundation has said that it will continue to accept donations from a specific set of Western nations, though not from the Middle Eastern regimes that persecute women. The related Clinton Global Initative may, however, still allow participation from those regimes, the *Wall Street Journal* reports.
>
> Raza is a liberal Muslim who has spoken out against Islamic terrorism as well as so-called honor killings within Muslim communities. She has received death threats for her views.

I don't think this is going to reach most of her low-information supporters, who will just vote for her because she is a woman regardless, but the independents might care about what they are getting.

We've already seen how liberals think with the election and re-election of Barack Obama. Here is how it works, and there really is no more to their thinking than this – at any level. They think "Obama is black, so that means we should vote for him because he will help blacks". Except that the facts show that black unemployment has recovered the least of any race during his time as President. That's from the radically leftist Washington Post, by the way. With Hillary, a lot of women will be voting for her thinking, "she's a woman, she'll help women". But the facts clearly show that not only does Hillary pay her women staffers less than men, but that her foundation also pays women less than men. And she takes donations from nations that oppress women. And I don't mean "no free condoms" when I say oppress women, I mean stuff like "have them killed for not wearing a burkha".

# Serial sexual relationships, multi-partner fertility, single motherhood and fatherlessness

**Wintery Knight** · 16 April 2015 · Archived copy · Original

A man leading a woman upward

Here's an article from the policy journal National Affairs (editor is Yuval Levin) that has some statistics about single motherhood by choice. When you are reading the article, keep in mind that most people who lean left are so influenced by feminism that they seem to think that women trip and fall accidentally, and end up pregnant from random men. I don't think that we should minimize the fact that most women *freely choose* the men who treat them badly.

Excerpt:

> Pew Foundation and Centers for Disease Control and Prevention surveys indicate that, on a range of measures, a very large share of fathers who do not live with their children have virtually no meaningful relationship with their non-custodial children. More than one-half report that they had not shared a meal with their non-custodial children in the last four weeks, while nearly two-thirds had not read to their children and a full three-quarters had not done homework with them. Moreover, these are self-reported figures, so the share of fathers with no relationship to their non-custodial children is most likely even higher.
>
> When fathers form new romantic partnerships, their involvement with children from previous relationships declines. Jo Jones and William Mosher report that, while 39% of fathers in new romantic relationships had shared a meal with their non-custodial 5- to 18-year-old children at least once in the past month, 62% of those not in a new romantic relationship had. While 55% of fathers in a new romantic relationship had spoken with their 5- to 18-year-old non-custodial children, 77% of those not in a new romantic relationship had.
>
> In addition, men with less education are more likely to exhibit absent-father behavior. Whereas 70% of fathers with at least some college had talked to their non-custodial 5- to 18-year-old children at least once in the past month, 59% of those with no more than a high-school degree had done so. While 74% of fathers with at least some college had played with their non-custodial child under 5 years old at least once in the past month, only 53% of those fathers with no more than a high-school degree had.
>
> Multi-partner fertility is not only associated with father abandonment, it also adversely impacts child-maltreatment rates. Women attempting to balance work, the demands of new relationships, and the challenges of raising children are faced with a set of chronic stressors that often lead to child abuse and neglect. The shift from welfare to work increased these stresses. Partially as a result, between 1993 and 2005, the rate of overall abuse, physical abuse, sexual abuse, and serious abuse, respectively, rose by 22%, 14%, 49%, and 34% for

children living with single mothers. By contrast, for children living in two-parent households, child-abuse rates fell on each of the four measures (by 42%, 24%, 62%, and 37%, respectively). By 2005, the child-abuse rate was 2.9 per 1,000 for children living with married biological parents but 10.2 for those living with a single parent and no partner, according to the U.S. Department of Health and Human Services. This disparity cannot be explained solely by socioeconomic status since the abuse rate for children in families *of all kinds* in the lowest socioeconomic group was still lower than that for children living in single-parent households.

Multi-partner fertility also increases child-abuse rates in a second way: the presence of non-biological fathers in the house. Child abuse in households with single mothers triples when they live with a man other than the child's father. Child-maltreatment rates are actually lower in black than white households when the mother lives alone. But unfortunately, many men bring their job and other frustrations into the home, creating abusive situations. As a result, when a partner is present, the black rates on all three measures of child maltreatment — emotional, physical, and endangerment — are almost double the white rates. In addition, rates of intimate violence are over 12 times higher for single mothers than for married mothers.

Edin and Nelson ignore the subject of abusive behavior in men. Instead, despite the fathers' caring attitudes, we are told, the mothers kick them out because they don't earn sufficient income. And on the impact of multi-partner fertility on children, *Doing the Best I Can* offers *one* benign sentence: "Kids are amazingly resilient, but the rate of family change among children of unwed fathers has become so rapid, and now leads to such complicated family structures, that kids might have a hard time adjusting."

Academic studies paint a much grimmer picture. After surveying the evidence, Sara McLanahan and Christopher Jencks concluded earlier this year,

> [A] father's absence increases antisocial behavior [among children], such as aggression, rule breaking, delinquency, and illegal drug use. These antisocial behaviors affect high school completion independent of a child's verbal and math scores. Thus it appears that a father's absence lowers children's educational attainment…by disrupting their social and emotional adjustment and reducing their ability or willingness to exercise self-control.

The effects of growing up without both parents when it comes to aggression, rule breaking, and delinquency are also larger for boys than for girls. Marianne Bertrand and Jessica Pan found in 2011 that the behavior of boys is far more dependent upon good parenting practices — spending time with a child, emotional closeness, and avoiding harsh discipline — than that of girls. Such parenting habits are far more common in two-parent families, which helps to explain why boys with absent fathers are more likely to be suspended and have other behavioral problems than boys who have both parents at home.

The evidence also indicates that the outcomes are most negative when a man other than the biological father is present. Cassandra Dorius and Karen Guzzo found that "adolescents with a half-sibling with a different father are about 65 percent more likely to have used marijuana, uppers, inhalants, cocaine, crack, hallucinogens, sedatives, or other drugs by the time of their 15th birthday than those who have only full siblings." Cynthia Harper and Sara McLanahan reported in 2004 that, among fatherless boys, those who lived with stepfathers were at an even greater risk of incarceration than those who lived with a single mother.

I think in today's society, there seems to be a lot of fear and trembling to speak about moral standards. And it seems to be especially true that men are not allowed to tell women about their moral obligations. I know that at least when I speak to young women, they are often very rebellious. The attitude I encounter most often is that they feel that they should be able to trust their feelings and act in the way that their feelings dictate. Any destructiveness that results – which I warned them about – is dismissed as "unexpected".

I can clearly remember the first time this happened to me, when I was in high school. I was friends with a girl named Tara who would come over and speak to me before morning announcements. She would tell me about her

stock car driving boyfriend. One day, she told me that she was moving in with him. I warned her against it, and listed off a bunch of statistics about how this would cause problems. She stopped coming to talk to me, and so did her best female friend. Well, a few years later I ran into her again at one of our local universities where I was an undergraduate. She filled me in on what had happened. He had cheated on her with her best friend in their house. He got her pregnant. She had an abortion. She knew better now, but back in high school I was easily dismissed, and all of her friends sided with her.

Whenever I try to produce evidence to say that something is likely to cause harm, the response is usually “well I know a person who broke the rules and nothing happened”. I produce statistics about some likely consequence of following your heart, and it’s dismissed because some Hollywood celebrity managed to escape the probabilities. “Don’t judge me!” they say. Happiness comes first, and the best way to decide how to be happy in the long-term is apparently to do what makes a person feel happy right now. But statistics are there to tell a story of how the world *normally* works – dismissing it all with individual cases is bad logic. There are consequences to following your feelings and dismissing moral obligations.

# What are Hillary Clinton's views on amnesty and illegal immigration?

**Wintery Knight** · 17 April 2015 · Archived copy · Original

Here's a story from the Weekly Standard.

It says:

> Hillary Clinton's campaign is now saying she supports driver's licenses for illegal immigrants. "Hillary supports state policies to provide driver's licenses to undocumented immigrants," a spokesperson told the *Huffington Post*.
>
> The issue gave Clinton fits last time she ran for president. She was for it before being against it.
>
> […]But now Clinton has completely flipped again, taking up the position now most in line with the Democratic base. It would appear the front-running Democratic candidate is doing her best to adopt the positions of her chief rival, Martin O'Malley, whose long supported this liberal policy.

So she supports Obama's executive order amnesty. How many driver's licenses are we talking about?

The Washington Times has the number.

Excerpt:

> The administration has granted about 541,000 Social Security numbers to illegal immigrants under President Obama's original 2012 deportation amnesty for Dreamers, officials told Congress in a letter made public Wednesday.
>
> That means almost all of the illegal immigrants approved for the amnesty are being granted work permits and Social Security numbers, opening the door to government benefits ranging from tax credits to driver's licenses.
>
> […]**Social Security numbers are considered one of the gatekeepers for being able to live and work in the U.S., and some experts have said granting them to illegal immigrants makes it easier for them to access rights reserved only for citizens, such as voting.**
>
> **But the Obama administration has ruled that the illegal immigrants it has approved for its temporary deportation amnesty, known as "deferred action," are here legally for as long as the program exists, and so they are entitled to work permits and Social Security numbers.**
>
> **The IRS has acknowledged that getting a Social Security number entitles illegal immigrants to go back and claim refunds under the Earned Income Tax Credit for time they worked illegally — even if they didn't file returns or pay taxes for those years.**
>
> **Republican critics of the president's immigration policy say he's helping illegal immigrants at the expense of American workers, whose taxes pay for Social Security and other government benefits.**
>
> "This grant transfers jobs, wealth and benefits from marginalized U.S. workers directly to illegal workers," said Stephen Miller, a spokesman for Mr. Sessions. "One of the most dramatic costs of amnesty — whether legislative or imposed through executive diktat — is the opening of our federal Trust Funds to large numbers of lower-income illegal immigrants."
>
> Mr. Obama's latest amnesty, announced in November 2014, has been halted by a federal court, so no Social Security numbers have been granted under that policy.
>
> But the first amnesty, announced in June 2012 and covering young adult illegal immigrants known as Dreamers, remains in effect, and had approved nearly 639,000 persons as of the end of 2014.

I think this quotation hits on the problem that conservatives have with illegal immigration – whether the illegal immigrants will pay more in taxes than they use in social services. It is good to be generous to others, but I would rather use my own money to help people who will respect my values and let me into their decision-making, instead of having the government swoop in and hand out money in exchange for votes – my money. My plans require the money I earn. When that money is taken by government for someone else who doesn't know me at all, that makes it harder for me to carry out my plan and help the people who know me.

To give someone financial aid is to present your values to them in a positive light. Who is respected when government takes my money and hands it out? I don't get to pass my values to the people I am helping. Government gets to pass their values to the people they are using my money to help. I have the ability to speak into the decision-making of people who ask me for my help – I get to advise them. But government has nothing to say to people when they hand out money, except maybe to encourage them to make more bad decisions so they can get more of other people's money. That's not a hand up, that's a hand-out.

# Michael Ruse debates Stephen C. Meyer on intelligent design and evolution on NPR

**Wintery Knight** · 17 April 2015 · Archived copy · Original

Here's a debate between:

- Stephen C. Meyer, author of Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design
- Michael Ruse, Director of the History and Philosophy of Science Program at Florida State University

The MP3 file is here. (28 minutes)

The following summary is rated S for Slightly Snarky. Reader discretion is advised.

Topics:

- Moderator: (to Meyer) define creationism, evolution, and intelligent design
- Meyer: creationism is based on an interpretation of the Bible
- Meyer: evolution is an unguided process of mutation and selection that produces organisms
- Meyer: intelligent design is the idea that the best explanation for certain features of life
- Moderator: (to Ruse) Where do you disagree?
- Ruse: Intelligent design is similar to creationism, but I won't say how exactly
- Meyer: ID is a good explanation for the sudden origin of animal body plans in the Cambrian era
- Moderator: (to Meyer) Is the designer God? Is the designer the Christian God?
- Meyer: No, ID theory is an inference that is rooted in scientific evidence, not in a religious text
- Meyer: ID can be inferred from the origin of biological information and from molecular machines
- Moderator: (to Ruse) Where do you disagree?
- Ruse: Meyer is disingenuous because ID requires the designer to be God
- Meyer: The biological evidence for intelligent design by itself does not implicate God
- Meyer: The fine-tuning of the cosmos is intelligent design in physics, and that *would* require God
- Moderator: (to Meyer) Explain what the Cambrian explosion is
- Meyer: sudden origin of 36 body plans in 10 million years 530 million years ago
- Moderator: So you think that 36 body plans in 10 million years is too sudden for Darwinian mechanisms to produce?
- Meyer: Yes, for two reasons. One, there are no precursors prior to the start of the explosion in complexity
- Meyer: And two, the complexity of animal life includes code, circuitry, hierarchies – best explained by a designer
- Moderator: (to Ruse) Is it a problem for you?
- Ruse: There is no peer-reviewed paper that denies that the Ediacaran fauna are precursors to the Cambrian animals
- Ruse: There is no peer-reviewed paper that denies that microfossils are precursors to the Cambrian animals
- Ruse: There is no peer-reviewed paper that denies that animal complexity goes from simple to complex in the fossil record
- Ruse: There is no peer-reviewed paper that shows that the Cambrian explosion took place over a few million years
- Ruse: There is no peer-reviewed paper that shows that there were complex organ types at the start of the

Cambrian explosion

- Ruse: There is no peer-reviewed paper that denies that we already have a materialist explanation for the Cambrian explosion
- Ruse: everything is solved! nothing to see here! (folds arms and beams) I trust that my unsupported assertions have relieved your doubts, yes?
- Moderator: Is intelligent design undermined by more recent science?
- Meyer: no, there is an absence of precursor fossils in the period before the Cambrian explosion
- Meyer: there are other things that make the problem even worse for naturalism, like information from epigenetics
- Moderator: (to Ruse) Answer that
- Ruse: He is just pulling out passages out of context because he is a creationist!
- Moderator: The leftist New Yorker reviewer Gareth Cook says that the Cambrian explosion took tens of millions of years
- Meyer: Actually, the peer-reviewed science is clear that the standard date is at most 10 million nears
- Moderator: (to Ruse) Deny the mainstream date
- Ruse: Well, Prothero says no! Ho ho ho! (folds arms) He just says it. No it's not published in peer-reviewed research
- Ruse: We know so much more than Darwin did, how could the progress of science disprove my materialist pre-supposition? It's unpossible!
- Moderator: (to Meyer) Isn't ID pseudo-science?
- Meyer: If we limit ourselves to materialist explanations only, then we cannot infer intelligence when we see artifacts like the Rosetta Stone
- Meyer: wind and erosion is not an adequate explanation for certain systems – systems that are rich in information
- Meyer: the best explanation is the explanation that relies on known causes – we know that intelligence produces information
- Moderator: (to Meyer) so the intelligence is the best explanation of systems that have information?
- Meyer: yes, think about software code – the best explanation of new computer instructions is an intelligence
- Meyer: we have uniform and repeated experience of intelligence bringing new information into being, and new animals need new information
- Moderator: (to Ruse) must science only work with natural explanations?
- Ruse: intelligent design is religion! Ho ho ho ho! (folds arms)
- Ruse: there is no a priori way of ruling out supernatural causes in order to explain nature
- Ruse: We don't need to introduce supernatural causes to explain information in living systems or in software code
- Ruse: Steve is asking me to explain the Cambrian explosion, but why does he want me to explain that?
- Ruse: How did anything start to fly? How did whales come? There, those questions explain the Cambrian explosion naturalistically
- Ruse: Steve's answer to explain new information is to bring in miracles, like when he said that new computer code requires God
- Ruse: inferring intelligence as an explanation for information like the computer code is religion! God! Creationism! Prayer in schools!
- Ruse: we have to keep looking for naturalistic explanations for the Big Bang, the DNA, the fine-tuning, the Cambrian fossils, etc.

- Ruse: we are never justified in inferring an intelligence to explain information, because that would deny my religion of materialism
- Moderator: (to Ruse) what are the requirements for a theory to be scientific?
- Ruse: any explanation has to be naturalistic, because I am an atheist and that's my religion, and we can't go against my religion
- Ruse: it's "really stupid" to infer God as the explanation of the creation of the entire physical universe or the cosmic fine-tuning
- Moderator: (to Meyer) why is intelligent design so popular when we have court cases saying it is not science?
- Meyer: the Discovery Institute does not have an agenda to teach intelligent design in public schools
- Meyer: intelligent design is about inferring intelligence as a causal explanation for information in living systems, and elsewhere
- Moderator: (to Ruse) are evolutionists unwilling to entertain the possibility of intelligence being the best explanation?
- Ruse: scientists have to make sure that that all their explanations don't go outside of the materialist reservation
- Ruse: intelligent design is evangelical Christianity dressed up to look like science, the Dover judge said so
- Ruse: Meyer is disingenuous! Ho ho ho ho ho! (folds arms contentedly)
- Meyer: first, judges don't decide science, evidence decides science
- Meyer: the Dover people made a mistake by trying to go to the courts to get things into the schools
- Meyer: intelligent design is about research, writing books and papers based on what we learn from science
- Moderator: (to Ruse) is intelligent design dangerous?
- Ruse: yes, intelligent design is about politics, it's not about cosmic fine-tuning, origin of life, molecular machines or Cambrian explosion
- Ruse: intelligent design is about abstinence, prayer in schools, burdening women with unwanted babies and male-female marriage
- Ruse: my reason for opposing ID is the socially conservative agenda which emerges from protein folding probability calculations
- Ruse: I don't want to be drafted to fight in Vietnam, I don't want them to take away my drugs, etc. so that's why I believe Darwinism
- Moderator: (to Meyer) why do you want to take abortion away, you meany?
- Meyer: actually, intelligent design is about science, and in any case National Review gave my book a bad review
- Moderator: (to Ruse) are science and religion in conflict?
- Ruse: well religion can just abstain from making any claims about the physical world, and just stick to subjective nonsense – that's fair
- Moderator: (to Meyer) isn't all opposition to evolution rooted in fundamentalist religion?
- Meyer: you can believe in Darwinism and be a theist, but the real reason for doubting Darwinism is the scientific evidence, not religion

Tell me how you think Dr. Meyer did in the comments.

# Video, audio and summary of William Lane Craig vs Peter Millican debate

**Wintery Knight** · 17 April 2015 · Archived copy · Original

Here's a debate with a well-qualified atheist and Dr. Craig.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

**Dr. Craig's opening speech:**

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

**Dr. Millican's opening speech:**

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

**Dr. Craig's first rebuttal:**

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He  says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

**Dr. Millican's first rebuttal:**

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

**Dr. Craig's second rebuttal:**

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

**Dr. Millican's second rebuttal:**

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

**Dr. Craig's final rebuttal:**

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

**Dr. Millican's final rebuttal:**

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3  minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

# Obama's irresponsible student loan policies leave taxpayers with trillion-dollar bubble

**Wintery Knight** · 18 April 2015 · Archived copy · Original

President Obama's student loan bubble

This is from Investors Business Daily.

It says:

> In 2010, Obama eliminated the federal guaranteed loan program, which let private lenders offer student loans at low interest rates. Now, the Department of Education is the only place to go for such loans.
>
> Obama sold this government takeover as a way to save money — why bear the costs of guaranteeing private loans, he said, when the government could cut out the middleman and lend the money itself?
>
> The cost savings didn't happen. In fact, the Congressional Budget Office just increased its 10-year forecast for the loan program's costs by $27 billion, or 30%.
>
> What did happen was an explosive growth in the amount of federal student loan debt. President Clinton phased in direct federal lending in 1993 as an option, but over the next 15 years the amount of loans was fairly stable. The result of Obama's action is striking. In each of the past six years, federal direct student loan debt has climbed by more than $100 billion. (See chart.)
>
> And since Obama keeps making it easier and easier to avoid repaying those loans, it's a problem that taxpayers will eventually have to shoulder.
>
> Through words and actions, Obama has encouraged irresponsibility on the part of student borrowers. He constantly talks as if student debt were an unfair burden they unknowingly had foisted upon them.
>
> At the same time, he's made it easier and easier to avoid paying back student loans in full. Earlier this year, for example, Obama expanded eligibility for his "pay as you earn" program, which limits loan payments to 10% of income, with any debt left after 20 years forgiven.
>
> Students got the message. The St. Louis Fed reports that 27.3% of student loans in repayment are at least a month behind in payments. That's a far higher delinquency rate than any other kind of debt, and it's significantly higher than the delinquency rate 10 years ago.
>
> "This overall level of delinquency is very concerning," concluded authors Juan Sanchez and Lijin Zhu.
>
> A 2013 Consumer Financial Protection Board report found that less than half of this federal loan money was actually being paid. About 30% was held by borrowers still in school or in a grace period, another chunk in deferment or forbearance, and almost 14% was in default.

The problem here is that whenever the government nationalizes something that the private sector is doing, it always creates a problem. Let me explain. If student loans (or mortgage loans) are run solely by the private sector, then the motivation for lending money out at interest is to make money for the bank's depositors and investors. In other words, because the bankers are in a free market and have to compete for depositors and investors, they have an interest in making sure that the loans they make get paid back.

But when the government takes over loans, they are not interested in being wise with the money they lend out – it's not their money. They want to lend out as much as possible today in order to buy votes, and then kick the can down the road on the repayment. So instead of being careful about asking "will this get paid back?" they ask "how can I borrow from the future in order to buy as many votes as I can right now?" And that's how we got the housing crisis of 2008, as well as this trillion-dollar student loan crisis.

When you take the profit motive out of the lending decision, then money gets lend to people who will never be able to pay it back. No private bank that has to answer to shareholders hands out money to students who want to study underwater basket-weaving. But the government does. They want to buy as many votes as possible. And besides, this is not their money. They are borrowing it from the future earnings of the very students they are giving it to! That's what happens when you let big government decide everything.

Whenever big government politicians want to buy votes with taxpayer money, they always sell it to the people with sob stories about some poor, helpless group of people will suffer through no fault of their own. There are a lot of voters who will vote for politicians who cry crocodile tears for them, especially ones who don't understand economics. There is no free lunch – somebody has to pay. Democrats are basically throwing a party for students, and then mailing them the (unexpected) bill for it, with interest.

# Does peer-reviewed science support Bill Nye's attempt to prove materialism?

**Wintery Knight** · 18 April 2015 · Archived copy · Original

Do the Miller-Urey experiments simulate the early Earth?

Casey Luskin looks at Nye's new book "Undeniable", which turns out to be very deniable, since it uses discredited science to support materialist philosophy.

Luskin writes:

> If you think Nye's ideology is bad, wait until you see the "science" he uses to justify these claims.
>
> On the origin of life, Nye maintains that the famous Miller-Urey experiments "simulate[d] the conditions on earth in primordial times," and "produced the natural amino acids." Yet the Miller-Urey experiments did *not* accurately simulate the earth's early atmosphere. An article in *Science* explains why the experiments are irrelevant: "the early atmosphere looked nothing like the Miller-Urey situation."
>
> Nye also invokes the unsophisticated argument that humans and apes must share a common ancestor because our gene-coding DNA is only about 1% different. "This is striking evidence for chimps and chumps to have a common ancestor," he writes.
>
> This argument is not just simplistic, it's also false.
>
> An article in the journal *Science* challenged "the myth of 1%," suggesting the statistic is a "truism [that] should be retired," since "studies are showing that [humans and chimps] are not as similar as many tend to believe." Geneticist Richard Buggs maintains that "the total similarity of the genomes could be below 70%."
>
> Even if we do share DNA with chimps, why should that demonstrate common ancestry? Intelligent agents regularly re-use parts that work in different systems (e.g., wheels for cars and wheels for airplanes). Nye's crude argument ignores the possibility of common design.
>
> *Undeniable* also botches arguments that the fossil record shows "transitional forms."
>
> Nye cites *Tiktaalik* as a "'fishapod' (transition between fish and tetrapod, or land animal with four legs)" that is a fulfilled "prediction" of evolution because of when it was found in the fossil record. Nye is apparently unaware that this so-called evolutionary "prediction" went belly-up after scientists found tracks of true tetrapods with digits some 18 million years before *Tiktaalik* in the fossil record. As *Nature* put it, *Tiktaalik* cannot be a "direct transitional form."

> In another instance, Nye claims we've "found a whole range of human ancestors, including *Sahelanthropus tchadensis*," apparently not realizing that an article in *Nature* reported there are "many … features that link the specimen with chimpanzees, gorillas or both," since "*Sahelanthropus* was an ape."
>
> There are other scientific errors in Nye's book, but one more will suffice. Throughout *Undeniable*, Nye demeans humanity by claiming our bodies are poorly designed, promoting the old canard that the human eye is wired backwards, and "not an optimal optical arrangement." Nye apparently never saw a 2010 paper in *Physical Review Letters* which found that our eyes have special glial cells which sit over the retina, acting like fiber-optic cables to channel light through tissue directly onto our photoreceptor cells, showing the human retina is "an optimal structure designed for improving the sharpness of images."
>
> *Undeniable* is one long attempt at wedding materialist philosophy with science. "The natural world is a package deal," Nye insists at one point, "you don't get to select which facts you like and which you don't." Yet he consistently ignores facts that contradict his arguments for Darwinian orthodoxy.

Interesting that he stands by the Miller-Urey experiments, when we now know that the experiment used gases that were not found on the early earth, not to mention that the experiments required experimenter intervention. And this is just to get the letters for proteins and DNA code – it doesn't even count the sequencing problem, which is where you run into improbabilities that make materialist explanations for the origin of life as unlikely as flat-Earthism. You can believe if you really need to, but I wouldn't call wanting to believe something really badly "scientific".

# Largest individual donor to Clinton Foundation has trade ties to Iran

**Wintery Knight** · 19 April 2015 · Archived copy · Original

Hillary Clinton and Planned Parenthood

This is from the leftist Newsweek, of all places.

Excerpt:

> The fourth richest man in Ukraine, Pinchuk owns Interpipe Group, a Cyprus-incorporated manufacturer of seamless pipes used in oil and gas sectors.
>
> Newsweek has seen declarations and documents from Ukraine that show a series of shipments from Interpipe to Iran in 2011 and 2012, including railway parts and products commonly used in the oil and gas sectors.
>
> Among a number of high-value invoices for products related to rail or oil and gas, one shipment for $1.8m (1.7m) in May 2012 was for "seamless hot-worked steel pipes for pipelines" and destined for a city near the Caspian Sea.
>
> Both the rail and oil and gas sectors are sanctioned by the US, which specifically prohibits any single invoice to the Iranian petrochemical industry worth more than $1m.

Hot Air says that the group should not have been doing business with Iran:

> In other words, Interpipe should have been slapped with penalties and sanctions for its operations with Iran. Pinchuk's company has a US subsidiary, which means that US sanctions apply across the entire organization. The agency for imposing penalties for sanctions violations in these cases, Ross notes, is the State Department. Who was in charge at the State Department during this period? None other than Hillary Clinton.
>
> […]Despite all of Pinchuk's activity with Iran, the State Department apparently took no action against his company or Pinchuk himself. That lack of response finally got the attention of Rep. Steve Stockman last November, before his retirement, who requested that the Department of the Treasury investigate Interpipe. So far, there have been no developments on that front.

Hot Air also linked to this Wall Street Journal article that specifies the amounts of the donations.

Hold on to your hats:

> **Between 2009 and 2013, including when Mrs. Clinton was secretary of state, the Clinton Foundation received at least $8.6 million from the Victor Pinchuk Foundation, according to that foundation, which is based in Kiev, Ukraine.** It was created by Mr. Pinchuk, whose fortune stems from a pipe-making company. He served two terms as an elected member of the Ukrainian Parliament and is a proponent of closer ties between Ukraine and the European Union.
>
> Mr. Pinchuk and his wife—the daughter of former Ukraine PresidentLeonid Kuchma—began donating to Clinton charities in 2006 after being introduced to Mr. Clinton by Doug Schoen, a pollster who has worked for both Clintons.
>
> In 2008, Mr. Pinchuk made a five-year, $29 million commitment to the Clinton Global Initiative, a wing of the foundation that coordinates charitable projects and funding for them but doesn't handle the money. The pledge was to fund a program to train future Ukrainian leaders and professionals "to modernize Ukraine," according to the Clinton Foundation. Several alumni are current members of the Ukrainian Parliament. Actual donations so far amount to only $1.8 million, a Pinchuk foundation spokesman said, citing the impact of the 2008 financial crisis.

Now you might think that millions of dollars is a lot of money to Hillary Clinton, but actually, her campaign is expected to blow through $2.5 BILLION, according to the radically leftist New York Times.

The ultra-leftist New Yorker listed some more of the Clinton Foundation donors, and one of them is a monster:

> The *Guardian* story, by highlighting the fact that some of the Clinton Foundation's donors have been maintaining bank accounts in Switzerland, has focussed attention on its sources of financing rather than its makeover or its philanthropic activities. Among the donors named by the *Guardian* were the British retail mogul Richard Caring; Frank Giustra, a Canadian mining magnate who appeared earlier this week at C.G.I.'s annual winter meeting, in New York; **and Jeffrey Epstein, a New York financier who was jailed in 2008 for soliciting prostitution from underage girls.** According to the Clinton Foundation's donor database, Giustra and charities linked to him have donated at least fifty million dollars. In 2006, Epstein gave twenty-five thousand dollars, the *Guardian* said. Other donors to the foundation who were identified as clients of H.S.B.C.'s Geneva office included Eli Broad, the Californian entrepreneur and philanthropist, and Denise Rich, whose former husband, the fugitive commodities trader Marc Rich, was pardoned by Bill Clinton just before he left office, in 2001.

Maybe Epstein is hoping for a pardon, the way that Marc Rich got a pardon from Bill Clinton, just before he left office? This whole situation is incestuous. It sickens me that this is what Democrats do in order to get elected. TWO AND A HALF BILLION DOLLARS? That's how you get elected President?

Or maybe it's just being a woman:

Do you think those college students know about where the Clinton Foundation gets its millions of dollars of donations?

# Will gay activists threaten this little girl for covering her eyes at a gay pride parade?

**Wintery Knight** · 19 April 2015 · Archived copy · Original

It seems to me that we need to have another massive protest like we saw in Indiana! Some impertinent little girl at a gay rights parade in Toronto has dared to refuse to celebrate at a gay pride parade.

Look at her committing a hate crime against this innocent gay man. (I am not posting this picture on my blog, and viewer discretion is advised)

The story says:

> Earlier this week, our managing editor Steve Jalsevac published a slideshow with his photos from the 2011 Toronto Gay Pride Parade. Many of the photos were shocking. But one commenter pointed out a detail in one photo that many people probably missed.
>
> The photo says it all: Naked men marching in Toronto's Pride parade, showcasing what supporters cheer on as the advancement of "gay rights" and "sexual liberation." The naked men march past men, women, and yes even children. Everyone is encouraged to celebrate "diversity."
>
> Oh, but what's this? A young girl with blond hair in a turquoise teeshirt knows that something is wrong.
>
> The girl, maybe 8 or 9, doesn't want to see naked men displaying their genitals. She feels assaulted by what she sees. She implicitly understands that her innocence is threatened by what she sees. She knows something wrong is happening.

Death threats and getting people fired is getting to be a common response of gay activists to anything less than enthusiastic celebration of the gay agenda. That's what happened to the religious liberty law in Indiana, to the pizza store that refused to cater a gay wedding. Maybe this little girl needs to be taught a lesson, too, right gay activists?

**Where does it end?**

Interesting to note that Ontario, the province where this occurred, has elected a gay premier (governor), and that their sex education curriculum was written in consultation with a convicted sex offender.

Read it:

> A man who was once Ontario's deputy minister of education has pleaded guilty to three child pornography-related charges in a Toronto court.
>
> Benjamin Levin, who was also a university professor, entered a guilty plea for making written child pornography, counselling a person to commit a sexual assault, and possession of child pornography.
>
> He was originally charged with seven child-pornography-related offences.
>
> The investigation that led to Levin's July 2013 arrest began in mid-2012 after officials in Toronto were contacted by authorities in New Zealand and later police in London, Ont.
>
> From late 2004 to early 2007, Levin held the post of deputy education minister in Ontario, and was on Ontario Premier Kathleen Wynne's transition team as she took office.
>
> He also served as Manitoba's deputy minister of advanced education and deputy minister of education, training and youth between 1999 and 2002.
>
> Levin has been back in the spotlight in recent days as Ontario released an updated sex-education curriculum.

Kathleen Wynne is the lesbian premier. She divorced her husband and left her three kids when she "came out".

Something to celebrate! You'd better celebrate it, or else. And the sex education curriculum will make sure that going forward, fewer and fewer people will see anything wrong with what she did.

You can read about the sex education curriculum here.

Look:

> CLC has studied the 2015 proposed curriculum and we have found that the controversial elements of the program that angered parents in 2010 have remained unchanged, word for word, at the same age-inappropriate grade levels as before, when it was written under the direction of confessed child pornographer Benjamin Levin, then Deputy Education Minister. The only difference now is that Kathleen Wynne has made the curriculum even more explicit and more age-inappropriate than before, dramatically increasing the mentions of "Gender Identity" theory, sexual "identities" and "orientations".
>
> Anal intercourse is still being presented in a way that students will interpret as carrying no higher risk for STIs than vaginal intercourse, an irresponsible and misleading presentation of the former which carries a 3000% higher risk for contracting HIV. The curriculum also downplays the seriousness of contracting HIV, potentially leaving the impression with students that it's not really that big a deal. A section on HIV and AIDS seems to have an undertone of making it acceptable and normal for individuals who are HIV positive to continue having sex with others. Of course this is not science-based teaching. It's political and social engineering. It is irresponsible and may also put lives at risk.
>
> The 2015 version has added a new, controversial and very flawed theory that will be taught to elementary school children, called "gender expression". The new curriculum document also has a much stronger undertone of sex as a purely **recreational activity whose purpose is pleasure, apart from love or marriage**. In fact, the words "love" and "marriage" never appear once in the sex-education strand of the curriculum. Not a single mention. Does that reveal the mindset of its writers, if not the philosophical underpinnings of the curriculum itself?

That's what politicians on the left stand for. That's what they want for your children. Canada is about 10-20 years ahead of us, but we are catching up to them with each new Democrat we elect.

Hillary Clinton and the Human Rights Campaign

Make no mistake that Hillary Clinton is on board with this agenda, and she gives speeches extolling the virtues of

the gay agenda to the Human Rights Campaign, just as Obama did.

# New book by Peter Schweizer: Clinton State Department favored foreign donors

**Wintery Knight** · 20 April 2015 · Archived copy · Original

Hillary Clinton: secretive, entitled, hypoctritical

This is from the radically leftist New York Times, of all places.

They write:

> The book does not hit shelves until May 5, but already the Republican Rand Paul has called its findings "big news" that will "shock people" and make voters "question" the candidacy of Hillary Rodham Clinton.
>
> "Clinton Cash: The Untold Story of How and Why Foreign Governments and Businesses Helped Make Bill and Hillary Rich," by Peter Schweizer — a 186-page investigation of donations made to the Clinton Foundation by foreign entities — is proving the most anticipated and feared book of a presidential cycle still in its infancy.
>
> **The book, a copy of which was obtained by The New York Times, asserts that foreign entities who made payments to the Clinton Foundation and to Mr. Clinton through high speaking fees received favors from Mrs. Clinton's State Department in return.**
>
> **"We will see a pattern of financial transactions involving the Clintons that occurred contemporaneous with favorable U.S. policy decisions benefiting those providing the funds," Mr. Schweizer writes.**
>
> **His examples include a free-trade agreement in Colombia that benefited a major foundation donor's natural resource investments in the South American nation, development projects in the aftermath of the Haitian earthquake in 2010, and more than $1 million in payments to Mr. Clinton by a Canadian bank and major shareholder in the Keystone XL oil pipeline around the time the project was being debated in the State Department.**

This is the piece that is missing in this Clinton Foundation story – the piece that could sink her, even if she has a $2.5 billion campaign war chest.

The book description from Amazon.com:

> In 2000 Bill and Hillary Clinton owed millions of dollars in legal debt. Since then they've earned over $130 million. Where did the money come from? Most people assume the Clintons amassed their wealth through lucrative book deals and high-six-figure fees for speaking gigs. Now Peter Schweizer shows who is really behind those enormous payments.

> In his *New York Times* best-selling books *Extortion* and *Throw Them All Out*, Schweizer detailed patterns of official corruption in Washington that led to congressional resignations and new ethics laws. In *Clinton Cash* he follows the Clinton money trail, revealing the connection between their personal fortune, their close personal friends, the Clinton Foundation, foreign nations, and some of the highest ranks of government.
>
> Schweizer reveals the Clintons' troubling dealings in Kazakhstan, Colombia, Haiti, and other places at the Wild West fringe of the global economy, where business is often conducted on the basis of bribes and personal connections. In this blockbuster exposé, Schweizer does not allege illegal or unethical behavior; he merely presents the troubling facts he's uncovered. Meticulously researched and scrupulously sourced, filled with headline-making revelations, *Clinton Cash* raises serious questions of judgment, of possible indebtedness to an array of foreign interests, and ultimately of fitness for high public office.

Peter Schweizer is one of my favorite authors, and his research in his previous books was first class scholarship. I'm excited to see that he is hitting this story with a thorough review right when the story is heating up. He has to do the work that the mainstream media won't do, or we will end up with another Obama.

# “Dead broke” Hillary Clinton makes more money in an hour than top-paid CEO

**Wintery Knight** · 20 April 2015 · Archived copy · Original

$300,000 an hour for a speech

Astonishing article from the Washington Examiner.

Excerpt:

> Democratic presidential candidate Hillary Clinton is drawing a populist bead on lavish Wall Street pay packages as she revs up her march to the 2016 Democratic presidential nomination, but in some respects the fat-per-speech fee she can charge puts her far ahead of the top 10 highest-paid American CEOs.
>
> “I think it’s fair to say that if you look across the country, the deck is stacked in favor of those already at the top. There’s something wrong when CEOs make 300 times more than the American worker…,” Clinton said during her first campaign swing last week at an Iowa community college.
>
> Bashing Wall Streeters is part of Clinton’s strategy of remaking her image to appear more sympathetic to middle class voters, while also appealing to left-wing Democrats who are attracted to Sen. Elizabeth Warren, D-Mass., and the even more radical supporters of Sen. Bernie Sanders, the Vermont socialist who talks of seeking the 2016 nomination.

Let’s compare the per-hour rate of pay for Hillary compared to the top American CEOs:

> On that basis, the CEOs are pikers compared to an hour of Clinton speaking for $300,000. Hammergren, for example, makes only $63,076 for the same hour of labor. Clothing magnate Ralph Lauren, the second best-paid CEO on the Forbes list receives $32,067. Vornado Realty’s Michael Fasitelli, the third-place CEO, gets $30,961 per hour.

Now at least those CEOs are being paid to produce a return – invent new products and services that people are willing to pay for. What does a speech do? Do the people who pay for it get anything in return? What does she talk about?

Here’s a sample from one of her speeches:

I think she is making a pitch there for Soviet-style re-education camps – not sure why this is worth $300,000, comrades.

But she's not the only hypocrite on the left.

Here's a crazy racist, pro-abortion MSNBC commentator named Melissa Harris-Perry:

> According to the IRS, although she likely makes a substantial living anchoring a weekend MSNBC show and as a professor at Wake Forest University, the left-wing Melissa Harris-Perry does not pay her taxes. The Internal Revenue Service just placed a $70,000 tax lien against Harris-Perry.
>
> She is the second left-wing MSNBC anchor caught not paying her fair share. Al Sharpton reportedly owes Uncle Sam upwards of $3 million.
>
> According to Harris-Perry, a left-wing activist who frequently rails against the wealthy for not paying enough taxes, the tax bill is from 2013, and she and her husband plan to pay the lien off as quickly as possible.
>
> Harris-Perry is most famous for her the terrible things she has said about Mitt Romney's black grandchild, wearing tampon earrings, and telling parents that their children belong to the community.

Meanwhile, here she is advocating for higher taxes:

Indeed! People on the left often advocate in favor of higher taxes, but you shouldn't infer from that that they want to pay higher taxes *themselves*. Studies show that people on the left give far less money to charity as well. They talk about the poor, but when they get the chance to do something about it, they don't. It's just a pose, but it works on a lot of stupid people to get them to vote Democrat.

# Do tax hikes, welfare spending and minimum wage hikes lower income inequality?

**Wintery Knight** · 20 April 2015 · Archived copy · Original

Here's Heritage Foundation economist Stephen Moore to explain.

He writes:

> Massachusetts Sen. Elizabeth Warren recently appeared on one of the late night talk shows, beating the class warfare drum and arguing for billions of dollars in new social programs paid for with higher taxes on millionaires and billionaires. In recent years, though, blue states such as California, Illinois, Delaware, Connecticut, Hawaii, Maryland and Minnesota adopted this very strategy, and they raised taxes on their wealthy residents. How did it work out? Almost all of these states lag behind the national average in growth of jobs and incomes.
>
> So, if income redistribution policies are the solution to shrinking the gap between rich and poor, why do they fail so miserably in the states?
>
> The blue states that try to lift up the poor with high taxes, high welfare benefits, high minimum wages and other Robin Hood policies tend to be the places where the rich end up the richest and the poor the poorest.
>
> California is the prototypical example. It has the highest tax rates of any state. It has very generous welfare benefits. Many of its cities have a high minimum wage. But day after day, the middle class keeps leaving. The wealthy areas such as San Francisco and the Silicon Valley boom. Yet the state has nearly the highest poverty rate in the nation. The Golden State, alas, has become the inequality state.
>
> In a new report called "Rich States, Poor States" that I write each year for the American Legislative Exchange Council with Arthur Laffer and Jonathan Williams, we find that five of the highest-tax blue states in the nation—California, New York, New Jersey, Connecticut and Illinois—lost some 4 million more U.S. residents than entered these states over the last decade. Meanwhile, the big low-tax red states—Texas, Florida, North Carolina, Arizona and Georgia—gained about this many new residents.

What's wrong? Isn't raising taxes, growing government and spending more on welfare supposed to make reduce income inequality? Well, the trouble is that you need to think about things from the point of view of the people who create the jobs. People who want to start a business prefer to move to states where they can *keep more of the money they earned*. So, that's why there is a mass exodus from states that don't allow job creators to keep the money they earn. And naturally, they hire workers in their new state once they get there. Eventually people in the high-tax states move to where the jobs are, too.

Stephen Moore has actually measured it:

> **The least "regressive" tax states [high tax states] had average population growth from 2003 to 2013 that lagged below the national trend. The 10 most highly "regressive" tax states [low tax states], including nine with no state income tax, had population growth on average 4 percent above the U.S. average. Why was that? Because states without income taxes have twice the job growth of states with high tax rates.**
>
> […]Ohio University economist Richard Vedder and I compared the income gap in states with higher tax rates, higher minimum wages and more welfare benefits with states on the other side of the policy spectrum. There was no evidence that states with these liberal policies had helped the poor much and, in many cases, these states recorded more income inequality than other states as measured by the left's favorite statistic called the Gini Coefficient.

> […]The 19 states with minimum wages above the $7.25 per hour federal minimum do not have lower income inequality. States with a super minimum wage—such as Connecticut ($9.15), California ($9.00), New York ($8.75), and Vermont ($9.15)—have significantly wider gaps between rich and poor than states without a super minimum wage.

No, I am not an economist, but I think that this is because the real minimum wage is ZERO, and that's what more people in high minimum wage states make compared to people in low minimum wage states. If Seattle raises the minimum wage to $15 and the workers end up making the real minimum wage (ZERO) because job creators can't pay them, then naturally the gap between rich and poor increases.

I think it's always a good idea for people to think about things from the point of view of the small business job creator, and it all makes sense. If you want to get trained in how to do this, I recommend picking up introductory books by economists like Thomas Sowell, Milton Friedman or even F.A. Hayek. The goal here is to achieve good results, not to have good intentions.

# Scott Walker's immigration plan is more conservative than Bush or Rubio

**Wintery Knight** · 21 April 2015 · Archived copy · Original

Wisconsin Governor Scott Walker

According to Breitbart News, which took a good look at it.

Excerpt:

> Wisconsin Gov. Scott Walker, a likely 2016 GOP presidential candidate, pledged to protect American workers from the economic effects, not only of illegal immigration but also of a massive increase in legal immigration.
>
> During an interview with Glenn Beck, Walker became the first declared or potential 2016 GOP presidential candidate to stake out a position on immigration fully in line with that of Senate Judiciary Committee subcommittee on Immigration and the National Interest chairman Sen. Jeff Sessions (R-AL). He also noted that he has been working with Chairman Sessions on the issue to learn more about it.

His view is now secure the border and implement E-Verify for foreign workers:

> Walker says he discussed immigration policy in depth with Texas Gov. Greg Abbott when he visited the border a few weeks ago. He said that he doesn't think he was "directly wrong" before but didn't have a "full appreciation for what is the risk along our border."
>
> He continued:
>
> I knew there were people traveling, coming across the border, but really what you have is much greater than that. What you have is international criminal organizations, the drug cartels aren't just smuggling drugs—they're smuggling firearms and smuggling not only humans but trafficking and horrific situations. It's an issue that's not just about safety or about national security, it's about sovereignty. If we had this kind of assault along our water based ports, the federal government would be sending in the navy. And yet there is a very minimal force along our land-based borders, be it New Mexico, Texas, Arizona, or California, and so to me it was clearly far bigger than immigration.
>
> We need to have a much bigger investment from the federal government to secure the border, through not only infrastructure but personnel and certainly technology to do that and to make a major shift. If you don't do that, there's much greater issues than just immigration. Folks coming in from potentially ISIS-related elements and others around the world, there's safety issues from the drugs and drug trafficking and gun trafficking and gun things with regard—but to get to immigration you have got to secure the border, because nothing you do on

> immigration fundamentally works if you don't secure that border.
>
> Walker also discussed the need for interior enforcement:
>
> Then I think you need to enforce the law and the way you effectively do that is to require every employer in America to use an effective E-Verify system and by effective I mean you need to require particularly small businesses and farmers and ranchers. We got to have a system that works, but then the onus is on the employers and the penalties have to be steep that they're only hiring people who are here, who are legal to be here. No amnesty, if someone wants to be a citizen, they have to go back to their country of origin and get in line behind everybody else who's waiting.
>
> This development, perhaps one of if not the biggest of the 2016 presidential campaign so far, comes as Walker has taken a commanding lead in polls in all three of the first GOP primary states: Iowa, New Hampshire, and South Carolina.

Walker also said in the interview that he would "absolutely" repeal Common Core in Wisconsin. Jeb Bush is, of course, a huge proponent of Common Core.

So, whatever our worries were about Walker on immigration, I think now we can relax. The only trouble now is getting the electorate to care more about accomplishments than charisma. But if the fight is between Walker and Clinton, I have no doubt that Clinton's "entitled" attitude is going to lose her the election. No matter how much money she has. And remember that Walker is able to speak to any issue in a way that is persuasive to independents – he proved that in Wisconsin. While Hillary is taking about "equal pay" and smashing the glass ceiling, Walker's going to be cleaning up on the issues middle-class Americans care about.

Chins up, buttercups! Things are looking good for our side.

# What should we do to encourage men to marry?

**Wintery Knight** · 21 April 2015 · Archived copy · Original

Marriage and family

Dina tweeted two articles in a row about a new book that describes some of the reasons that men aren't marrying. I thought that since she tweeted two of them, that I had better blog on them. I think there are some good ideas in here about why men are not marrying as much as they used to.

The first article is from the UK Daily Mail, and it talks about how men are mocked in the popular culture.

It says:

> Our universities and further education institutions are dominated by women at a proportion of ten to every seven men, with the Royal Veterinary College formally identifying boys as an under-represented group.
>
> Across the Russell Group of Britain's leading 20 universities, just three have a majority of male students.
>
> This means your son will be more likely to join the ranks of the unemployed, the majority of whom are now — yes, you've guessed it — men.
>
> The Office of National Statistics noted that in the summer of 2014 a total of 1,147,511 British men were out of work, compared with 887,892 women.
>
> Psychologically, your son will be more likely to suffer from depression and attempt suicide than his sibling, but there'll be less support in place to save him.
>
> He's also more likely to endure everyday violence than women, with the latest crime statistics for England and Wales noting that two-thirds of homicide victims were men.
>
> […]By the time your son is 18, he will probably have absorbed the social message that his dad is much less valuable as a parent than his mother — that fathers in families are an added bonus, not a crucial cog.
>
> Then, if he starts his own family and his relationship doesn't last, he may become one of the four million UK men who have no access to their children, yet are forced to fund them.

This part below about health care for men was interesting – how well do men do in a big-government health care system?

Not well:

> To cap it all, he'll be progressively neglected by British healthcare despite being more likely to get — and die from — nine out of the top ten killer diseases. You know, the biggies: these include cancer, heart conditions, strokes, pneumonia, diabetes and cirrhosis of the liver.

> **Fifteen years ago the UK Men's Health Forum showed that, for every £1 spent on men's health, £8 was spent on women's. Since then little has changed, for no good reason. Or rather, one very bad reason: we live in a medical matriarchy. In other words, male life is cheap. Bargain basement, last-day-of-the-sale cheap.**
>
> **The ultimate insult? It's all done at our expense. The National Health Service is funded by the public purse, but it's men — yes, men — who pay a whopping 70 per cent of UK income tax. Yet we are thrown nothing but crumbs in return.**
>
> **Currently, women are screened for breast cancer, ovarian and cervical cancer. This is great, but excuse me if I don't jump for joy. There's still no screening programme for prostate cancer, even though it kills four times more men than cervical cancer does women.**
>
> And while we're on the subject of statistics, we men will die five years earlier than our wives, sisters, daughters and girlfriends in a life expectancy gap that's increased 400 per cent since 1920.

Regarding government-run health care in the UK, this is the same as in other government-run systems. In America, men do much better because the health care system is slightly less controlled by government.

Look:

> **Americans have better survival rates than Europeans for common cancers.**[1] Breast cancer mortality is 52 percent higher in Germany than in the United States, and 88 percent higher in the United Kingdom. Prostate cancer mortality is 604 percent higher in the U.K. and 457 percent higher in Norway. The mortality rate for colorectal cancer among British men and women is about 40 percent higher.
>
> **Americans have lower cancer mortality rates than Canadians.**[2] Breast cancer mortality is 9 percent higher, prostate cancer is 184 percent higher and colon cancer mortality among men is about 10 percent higher than in the United States.

I was wondering if he was going to say something about divorce and child custody in his article, but he left that for his second article, also tweeted by Dina.

He writes:

> **'Ultimately, men know there's a good chance they'll lose their friends, their respect, their space, their sex life, their money and — if it all goes wrong — their family,' says Dr Helen Smith, author of Why Men Are Boycotting Marriage, Fatherhood And The American Dream.**
>
> **'They don't want to enter into a legal contract with someone who could effectively take half their savings, pension and property when the honeymoon period is over.**
>
> **'Men aren't wimping out by staying unmarried or being commitment phobes. They're being smart.'**
>
> […]It wasn't always this way. In the 1800s, men typically got custody of the children in the event of a split — not as a result of privilege, but because they were solely financially responsible for them.
>
> They got the children, but they also got the bill. **Benefits Britain didn't exist, encouraging single mums to go it alone.**
>
> Now, 200 years on, women get the children, but men still get the bill. Sometimes, men even pay for children who aren't theirs.
>
> The Child Support Agency has 500 cases of paternity fraud a year, where a mother names a man as the biological father of her child, even when she has a good idea he isn't. And that's just the cases we know about. According to a YouGov study, 1.2 million men doubt they are the fathers of their partners' children.
>
> […][N]o British woman has been convicted of paternity fraud.

And finally, the well-known sex-withholding problem:

> Think your wedding day will be the happiest day of your life, chaps? You may need to think again. The quantity — and quality — of sex dwindles after marriage, say researchers.
>
> A recent survey of 3,000 couples found those who had sex four times a week before their wedding did the deed just once a week afterwards.

The value proposition of marriage to men has certainly changed over time, and men are responding to the changing incentives.

One of my co-workers who has no trouble attracting talented, attractive women to live with him asked me to name one reason why he – as an atheist – ought to get married. I could not think of one. The risks are just too high, and in my experience, women (not Dina, obviously), generally don't understand the problem, nor are they sympathetic with the needs of men.

# Are atheists more moral than religious people?

**Wintery Knight** · 21 April 2015 · Archived copy · Original

Well, let's take a look at the numbers with this article by Arthur Brooks, published by the Hoover Institute at Stanford University.

Excerpt:

> How do religious and secular people vary in their charitable behavior? To answer this, I turn to data collected expressly to explore patterns in American civic life. The *Social Capital Community Benchmark Survey* (SCCBS) was undertaken in 2000 by researchers at universities throughout the United States and the Roper Center for Public Opinion Research. The data consist of nearly 30,000 observations drawn from 50 communities across the United States and ask individuals about their "civic behavior," including their giving and volunteering during the year preceding the survey.
>
> From these data, I have constructed two measures of religious participation. First, the group I refer to as "religious" are the respondents that report attending religious services every week or more often. This is 33 percent of the sample. Second, the group I call "secular" report attending religious services less than a few times per year or explicitly say they have no religion. These people are 26 percent of the sample (implying that those who practice their religion occasionally make up 41 percent of the sample). The SCCBS asked respondents whether and how much they gave and volunteered to "religious causes" or "non-religious charities" over the previous 12 months. Across the whole population, 81 percent gave, while 57 percent volunteered.
>
> **The differences in charity between secular and religious people are dramatic. Religious people are 25 percentage points more likely than secularists to donate money (91 percent to 66 percent) and 23 points more likely to volunteer time (67 percent to 44 percent). And, consistent with the findings of other writers, these data show that practicing a religion is more important than the actual religion itself in predicting charitable behavior. For example, among those who attend worship services regularly, 92 percent of Protestants give charitably, compared with 91 percent of Catholics, 91 percent of Jews, and 89 percent from other religions.**
>
> Socioeconomically, the religious and secular groups are similar in some ways and different in others. For example, there is little difference between the groups in income (both have average household incomes around $49,000) or education level (20 percent of each group holds a college degree). On the other hand, the secular group is disproportionately male (49 percent to 32 percent), unmarried (58 percent to 40 percent), and young (42 to 49 years old, on average). In addition, the SCCBS data show that religion and secularism break down on ideological lines: Religious people are 38 percentage points more likely to say they are conservative than to say they are liberal (57 percent to 19 percent). In contrast, secular people are 13 points more likely to say they are liberal than to say they are conservative (42 percent to 29 percent).
>
> It is possible, of course, that the charity differences between secular and religious people are due to these nonreligious socioeconomic differences. To investigate this possibility, I used a statistical procedure called probit regression to examine the role of religious practice in isolation from all other relevant demographic characteristics: political beliefs, income (and hence, indirectly, the tax incentives for giving), education level, gender, age, race, marital status, and area of residence. **The data show that if two people — one religious and the other secular — are identical in every other way, the secular person is 23 percentage points less likely to give than the religious person and 26 points less likely to volunteer.**

Honestly, I've always struggled to understand how giving to charity could be rational, on atheism. If you are only alive for 80 years, and the purpose of your life is to be happy, then the only reason I can think of to give anything away to anyone is because it makes you feel happier or more respected or something. Maybe because you like thinking of yourself as moral, or maybe because you want to be seen as moral, or maybe because you want a tax

deduction, or maybe something else. But if this is the only life you are ever going to have, and people are just collections of atoms, then why care about what anyone is doing? We're all just accidents anyway, on atheism, and we're going to die out eventually. There are no objective moral duties – we are *accidents* on the atheist view. One set of atoms giving some atoms to another set of atoms, and then in the end all the atoms get scattered: who cares?

Look:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

They may live better than that for whatever whim, but goodness is not rational within their worldview. And we want to be rational about morality, because as the numbers show, having a reason to be good *makes a big difference* in whether actually *do good*. As opposed to just claiming to be good. Anyone can say anything, but their rational beliefs are the rails on which they run their lives.

Here's something interesting I found about the leaders of the two political parties in this country.

Excerpt:

> In 2009, the Obamas gave 5.9 percent of their income to charity, about the same as they gave in 2006 and 2007. In the eight years before he became president, Obama gave an average of 3.5 percent of his income to charity, upping that to 6.5 percent in 2008.
>
> The Obamas' charitable giving is equally divided between "hope" and "change."
>
> George W. Bush gave away more than 10 percent of his income each year he was president, as he did before becoming president.
>
> Thus, in 2005, Obama gave about the same dollar amount to charity as President George Bush did, on an income of $1.7 million — more than twice as much as President Bush's $735,180. Again in 2006, Bush gave more to charity than Obama on an income one-third smaller than Obama's.
>
> In the decade before Joe Biden became vice president, the Bidens gave a total — all 10 years combined — of $3,690 to charity, or 0.2 percent of their income. They gave in a decade what most Americans in their tax bracket give in an average year, or about one row of hair plugs.
>
> Of course, even in Biden's stingiest years, he gave more to charity than Sen. John Kerry did in 1995, which was a big fat goose egg. Kerry did, however, spend half a million dollars on a 17th-century Dutch seascape painting that year, as Peter Schweizer reports in his 2008 book, "Makers and Takers."
>
> To be fair, 1995 was an off-year for Kerry's charitable giving. The year before, he gave $2,039 to charity, and the year before that a staggering $175.
>
> He also dropped a $5 bill in the Salvation Army pail and almost didn't ask for change.
>
> In 1998, Al Gore gave $353 to charity — about a day's take for a lemonade stand in his neighborhood. That was 10 percent of the national average for charitable giving by people in the $100,000-$200,000 income bracket. Gore was at the very top of that bracket, with an income of $197,729.
>
> When Sen. Ted Kennedy released his tax returns to run for president in the '70s, they showed that Kennedy gave a bare 1 percent of his income to charity — or, as Schweizer says, "about as much as Kennedy claimed as a write-off on his 50-foot sailing sloop Curragh." (Cash tips to bartenders and cocktail waitresses are not considered charitable donations.)
>
> The Democratic base gives to charity as their betters do. At the same income, a single mother on welfare is

> seven times less likely to give to charity than a working poor family that attends religious services.
>
> In 2006 and 2007, John McCain, who files separately from his rich wife, gave 27.3 percent and 28.6 percent of his income to charity.
>
> In 2005, Vice President Cheney gave 77 percent of his income to charity. He also shot a lawyer in the face, which I think should count for something.
>
> In a single year, Schweizer reports, Rush Limbaugh "gave $109,716 to 'various individuals in need of assistance mainly due to family illnesses,' $52,898 to 'children's case management organizations,' including 'various programs to benefit families in need,' $35,100 for 'Alzheimer's community care — day care for families in need,' and $40,951 for air conditioning units and heaters delivered to troops in Iraq."

The Democrats are the non-religious party, the Republicans are the religious party. The Democrats are also the talking party, as you can see, and the Republicans are the doing party.

By the way, Arthur Brooks eventually turned this research into a book called "Who Really Cares?", and it's a good response to atheists when they tell you that they can be moral without God. If it doesn't make sense to be moral, then atheists aren't going to do it. You can read more about that book here.

# New study: how the mainstream media deleted Hillary Clinton's e-mail scandal

**Wintery Knight** · 22 April 2015 · Archived copy · Original

Newsbusters has done some work to quantify it.

Excerpt:

> Hillary Clinton's official presidential announcement was a golden opportunity for networks to demand the former Secretary of State respond to unanswered questions about her e-mail scandal. Yet in the flurry of coverage since her official rollout (April 12 – April 20) the e-mail scandal garnered a total of just 7 minutes, 12 seconds on the Big Three (ABC, CBS, NBC) evening and morning shows.
>
> Even a new angle on the e-mail scandal – the *New York Times* reported April 14 that Clinton never responded to a congressional inquiry [in December of 2012] that "directly asked" if she had used a private e-mail account – failed to re-ignite the interest networks initially showed when the scandal first broke in March.
>
> Over the past five weeks, all three broadcast networks have essentially walked away from covering the ex-Secretary of State's secret extra-governmental e-mail server and the possible loss of crucial documents needed by the House Select Committee investigating the 2012 Benghazi attacks, with coverage on ABC, CBS and NBC's morning and evening news shows falling by more than 93 percent from the levels seen in early March.
>
> When news first broke that Clinton improperly used her own private e-mail account, the Big Three networks actually jumped to cover the story, filling their evening and morning shows with a total of 124 minutes and 55 seconds of airtime (NBC: 53 minutes, 51 seconds; CBS: 36 minutes, 39 seconds; ABC: 34 minutes, 25 seconds) within the first two weeks (March 3-16) of coverage that encompassed Hillary Clinton's March 10 press conference.
>
> But despite pundits and journalists like NBC's Chuck Todd insisting that Clinton's press conference "didn't satisfy her media critics" a look at the coverage in the ensuing weeks shows they lost a lot of their interest in the story.
>
> In the third week, (March 17-23), the networks reduced their coverage of the latest Clinton controversy to just 1 minute and 59 seconds (NBC: 23 seconds; CBS 29 secondsl; ABC: 1 minute, 7 seconds).
>
> In the fourth week (March 24-30), the stunning news that Clinton's own attorney admitted her server had been wiped clean caused a brief spike in coverage — but even that development generated just 11 minutes and 14 seconds of airtime (ABC: 1 minute, 32 seconds; CBS: 4 minutes, 48 seconds; NBC: 4 minutes, 54 seconds).
>
> By week 5 (March 31-April 6) the story was virtually non-existent drawing just 1 minute and 16 seconds total coverage. (ABC: 0; CBS: 29 seconds; NBC: 47 seconds).
>
> […]Even though unanswered questions still persist (Why was her private server wiped clean? Was there incriminating evidence in those e-mails regarding the Benghazi investigation or Clinton Foundation donations? Could a foreign nation, like Russia, have hacked her server?) the networks have essentially discarded the story, reducing their coverage to just a total of 2 minutes and 11 seconds (CBS: 14 seconds, ABC: 42 seconds, NBC: 1 minute, 15 seconds) by the seventh week.

Compare a few minutes here and there with the coverage of the VA scandal:

> In nearly four and a half weeks, the ABC, CBS and NBC morning and evening news shows have offered 110 minutes to an evolving Obama administration scandal involving secret lists designed to keep veterans from receiving proper medical treatment. Back in January, it took those same network shows just four and a half days to churn that much coverage for Chris Christie's Bridgegate.

> Since the VA story broke on April 23 with the news that as many as 40 veterans seeking treatment at one Phoenix facility died while on secret waiting lists, CBS has provided the most coverage, 48 minutes and 46 seconds. NBC allowed 44 minutes and 53 seconds and ABC came in last with a scant 16 minutes and 44 seconds. None of the networks bothered covering the story until May 6, almost two weeks after it broke. (This is despite heavy investigative reporting by Fox News and CNN.)
>
> An analysis last week by the Media Research Center found that through the morning of May 16, a mere five seconds of the coverage included criticism of Barack Obama's handling of the VA hospital scandal. Only this week, as the pressure mounted and new details emerged, the storyline finally shifted to including criticisms of the President.

Oh, but if it's a Republican scandal then clear the decks:

> A 2014 Media Research Center study found that the broadcast networks of ABC, CBS, and NBC devoted a stunning 88 minutes of air time to the Bridgegate story in less that 48 hours after it broke on January 8 of that year.

And it didn't fade, either:

> In stark contrast, when a scandal involving the administration of New Jersey Governor Chris Christie (R) erupted in January, CNN provided wall-to-wall coverage. In the first full day of coverage on January 9, CNN spent a whopping eight hours and 35 minutes covering the Christie story.

I'm really not sure why so many Americans willingly indoctrinate themselves by watching the mainstream media and pretending that it's unbiased news. If you're looking for balance, then you're better off reading something from a quality left-leaning source like National Journal or the Atlantic.

# In Wisconsin, Democrat district attorney has armed police raid the homes of conservatives

**Wintery Knight** · 22 April 2015 · Archived copy · Original

This story, which was written up in National Review by religious liberty defender David French, has two parts.

The first part talks about the police raids. I can only snip a little to capture the horror of the raid.

It says:

> ‘THEY CAME WITH A BATTERING RAM.”
>
> Cindy Archer, one of the lead architects of Wisconsin’s Act 10 — also called the “Wisconsin Budget Repair Bill,” it limited public-employee benefits and altered collective-bargaining rules for public-employee unions — was jolted awake by yelling, loud pounding at the door, and her dogs’ frantic barking. The entire house — the windows and walls — was shaking.
>
> She looked outside to see up to a dozen police officers, yelling to open the door. They were carrying a battering ram.
>
> She wasn’t dressed, but she started to run toward the door, her body in full view of the police. Some yelled at her to grab some clothes, others yelled for her to open the door.
>
> “I was so afraid,” she says. “I did not know what to do.” She grabbed some clothes, opened the door, and dressed right in front of the police. The dogs were still frantic.
>
> “I begged and begged, ‘Please don’t shoot my dogs, please don’t shoot my dogs, just don’t shoot my dogs.’ I couldn’t get them to stop barking, and I couldn’t get them outside quick enough. I saw a gun and barking dogs. I was scared and knew this was a bad mix.”
>
> She got the dogs safely out of the house, just as multiple armed agents rushed inside. Some even barged into the bathroom, where her partner was in the shower. The officer or agent in charge demanded that Cindy sit on the couch, but she wanted to get up and get a cup of coffee.
>
> “I told him this was my house and I could do what I wanted.” Wrong thing to say. “This made the agent in charge furious. He towered over me with his finger in my face and yelled like a drill sergeant that I either do it his way or he would handcuff me.”
>
> They wouldn’t let her speak to a lawyer.

The article talks about a few more of the home invasions, and the warnings not to tell anyone were the same.

Here’s another:

> Don’t call your lawyer. Don’t talk to anyone about this. Don’t tell your friends. The kids watched — alarmed — as the school bus drove by, with the students inside watching the spectacle of uniformed police surrounding the house, carrying out the family’s belongings. Yet they were told they couldn’t tell anyone at school.
>
> They, too, had to remain silent.
>
> The mom watched as her entire life was laid open before the police. Her professional files, her personal files, everything.

Now the second part. Who was ordering these pre-dawn police raids on law-abiding families, and why?

District attorney John Chisolm (left)

Here's who and why:

> District Attorney Chisholm was a Democrat, a very partisan Democrat.
>
> Almost immediately after opening the John Doe investigation, Chisholm used his expansive powers to embarrass Walker, raiding his county-executive offices within a week. As Mr. O'Keefe and the Wisconsin Club for Growth explained in court filings, the investigation then dramatically expanded:

> Over the next few months, [Chisholm's] investigation of all-things-Walker expanded to include everything from alleged campaign-finance violations to sexual misconduct to alleged public contracting bid-rigging to alleged misuse of county time and property. Between May 5, 2010, and May 3, 2012, the Milwaukee Defendants filed at least eighteen petitions to formally "[e]nlarge" the scope of the John Doe investigation, and each was granted. . . . That amounts to a new formal inquiry every five and a half weeks, on average, for two years.

> This expansion coincided with one of the more remarkable state-level political controversies in modern American history – the protest (and passage) of Act 10, followed by the attempted recall of a number of Wisconsin legislators and, ultimately, Governor Walker.
>
> Political observers will no doubt remember the events in Madison — the state capitol overrun by chanting protesters, Democratic lawmakers fleeing the state to prevent votes on the legislation, and tens of millions of dollars of outside money flowing into the state as Wisconsin became, fundamentally, a proxy fight pitting the union-led Left against the Tea Party–led economic Right.
>
> At the same time that the public protests were raging, so were private — but important — protests in the Chisholm home and workplace. **As a former prosecutor told journalist Stuart Taylor, Chisholm's wife was a teachers'-union shop steward who was distraught over Act 10's union reforms. He said Chisholm "felt it was his personal duty" to stop them.**
>
> **Meanwhile, according to this whistleblower, the district attorney's offices were festooned with the "blue**

> **fist" poster of the labor-union movement, indicating that Chisholm's employees were very much invested in the political fight.**
>
> [Chisholm] launched yet another John Doe investigation, "supervised" by Judge Barbara Kluka. Kluka proved to be capable of superhuman efficiency — approving "every petition, subpoena, and search warrant in the case" in a total of one day's work.
>
> If the first series of John Doe investigations was "everything Walker," the second series was "everything conservative," as Chisholm had launched an investigation of not only Walker (again) but the Wisconsin Club for Growth and dozens of other conservative organizations, this time fishing for evidence of allegedly illegal "coordination" between conservative groups and the Walker campaign.
>
> In the second John Doe, Chisholm had no real evidence of wrongdoing. Yes, conservative groups were active in issue advocacy, but issue advocacy was protected by the First Amendment and did not violate relevant campaign laws. Nonetheless, Chisholm persuaded prosecutors in four other counties to launch their own John Does, with Judge Kluka overseeing all of them.
>
> Empowered by a rubber-stamp judge, partisan investigators ran amok. They subpoenaed and obtained (without the conservative targets' knowledge) massive amounts of electronic data, including virtually all the targets' personal e-mails and other electronic messages from outside e-mail vendors and communications companies.
>
> The investigations exploded into the open with a coordinated series of raids on October 3, 2013. These were home invasions, including those described above. Chisholm's office refused to comment on the raid tactics (or any other aspect of the John Doe investigations), but witness accounts regarding the two John Doe investigations are remarkably similar: early-morning intrusions, police rushing through the house, and stern commands to remain silent and tell no one about what had occurred.

This is how Democrats operate… and it shows what we can expect from them the more they gain political power.

Judge Barbara Kluka

Here's how the families were affected:

> O'Keefe, who has been in contact with multiple targeted families, says, "Every family I know of that endured a home raid has been shaken to its core, and the fate of marriages and families still hangs in the balance in some cases."
>
> Anne also describes a new fear of the police: "I used to support the police, to believe they were here to protect us. Now, when I see an officer, I'll cross the street. I'm afraid of them. I know what they're capable of."
>
> Cindy says, "I lock my doors and I close my shades. I don't answer the door unless I am expecting someone. My heart races when I see a police car sitting in front of my house or following me in the car. The raid was so

> public. I've been harassed. My house has been vandalized. [She did not identify suspects.] I no longer feel safe, and I don't think I ever will."
>
> Rachel talks about the effect on her children. "I tried to create a home where the kids always feel safe. Now they know they're not. They know men with guns can come in their house, and there's nothing we can do." Every knock on the door brings anxiety. Every call to the house is screened. In the back of her mind is a single, unsettling thought: These people will never stop.
>
> Victims of trauma — and every person I spoke with described the armed raids as traumatic — often need to talk, to share their experiences and seek solace in the company of a loving family and supportive friends. The investigators denied them that privilege, and it compounded their pain and fear.
>
> The investigation not only damaged families, it also shut down their free speech. In many cases, the investigations halted conservative groups in their tracks. O'Keefe and the Wisconsin Club for Growth described the effect in court filings:
>
> O'Keefe's associates began cancelling meetings with him and declining to take his calls, reasonably fearful that merely associating with him could make them targets of the investigation. O'Keefe was forced to abandon fundraising for the Club because he could no longer guarantee to donors that their identities would remain confidential, could not (due to the Secrecy Order) explain to potential donors the nature of the investigation, could not assuage donors' fears that they might become targets themselves, and could not assure donors that their money would go to fund advocacy rather than legal expenses. The Club was also paralyzed. Its officials could not associate with its key supporters, and its funds were depleted. It could not engage in issue advocacy for fear of criminal sanction.

> These raids and subpoenas were often based not on traditional notions of probable cause but on mere suspicion, untethered to the law or evidence, and potentially violating the Fourth Amendment's prohibition against "unreasonable searches and seizures." The very existence of First Amendment–protected expression was deemed to be evidence of illegality. The prosecution simply assumed that the conservatives were incapable of operating within the bounds of the law.
>
> Even worse, many of the investigators' legal theories, even if proven by the evidence, would not have supported criminal prosecutions. In other words, they were investigating "crimes" that weren't crimes at all.

I really recommend that you read this entire article to get the details of the raids, and the trauma that was inflicted on families who thought that the police were their friends. It is literally the most astonishing and fearful thing that I have read all year, and I have read a lot of scary things. This is like my worst nightmare. It reminds me of one of my favorite movies "The Lives of Others", which is a foreign film about the East German "Stasi" secret police. I didn't think it could happen here. But I guess leftists are leftists.

# Paul Gould at the University of Toronto: Does Jesus answer life's biggest questions?

**Wintery Knight** · 22 April 2015 · Archived copy · Original

(72 minutes)

A friend of mine sent me a link to this lecture, and he says the Q&A is dynamite.

Here's the description:

> What is the meaning of my life? What is my purpose? What happens after I die? How do I know what is true? How should I live? Why? What does Jesus have to do with my everyday life? Does he answer life's biggest questions? If he does is there evidence for this?
>
> On Feb 12, 2015 at the University of Toronto, Dr. Paul Gould gave a compelling case for why Jesus answers life's biggest questions and he also answered a number of tough and interesting questions in the Question and Answer Period.
>
> This lecture is part of a series called "God + Reason: A Christian Perspective" (http://www.bitly.com/godandreasonpt1).
>
> In this series professors, thinkers, academics, or graduate students give reasons why they trust in God and address objections to trusting in God.
>
> **SPEAKER'S BIO:**
>
> Dr. Paul Gould is a philosopher, a scholar, a teacher, a husband, a father, and a follower of Jesus Christ. He believes that Jesus is humanity's greatest need and our highest good. As C.S. Lewis, puts it:
>
> "God wills our good, and our good is to love Him (with that responsive love proper to creatures) and to love Him we must know Him: and if we know Him, we shall in fact fall on our faces."
>
> So, God wills our good–and our good is to love Him–and to love Him is to know Him. His passion in life is to present to the world Jesus–in all his brilliance and beauty.
>
> He received his MA in Philosophy of Religion and Ethics from Biola University and a PhD in Philosophy from Purdue University.
>
> Dr. Paul Gould is an Assistant Professor of Philosophy and Christian Apologetics at Southwestern Theological Seminary.
>
> He is married to Ethel and has four wonderful children.
>
> **EMCEE'S BIO:**
>
> Mark Sutherland received his BEng in Engineering Science from the University of Toronto and is currently a masters student in Applied Science (Computer Engineering) at the University of Toronto.

My friend also noted that Dr. Gould has an article up on his web site on the same topic as the lecture that lays out all the questions he covered in the lecture.

It says:

*Is there a God?* Yes, and he loves and pursues you.

*What is the nature of Reality?* It is enchanted, a world of rich physical, aesthetic and moral beauty.

*What is the purpose of the universe?* For God to spread his joy and delight and love and you to find happiness in creaturely response.

*What is the meaning of life?* Ditto.

*Why am I here?* Because God created me.

*Does prayer work?* Yes, God is ever present and involved in your life, even when you don't know it.

*Is there a soul? Is it immortal?* Yes, you are essentially a soul that has a body, you will live forever.

*Is there free will?* Yes, we are self-determiners of our action and our character.

*What happens when we die?* We enter into eternal life, either with God in heaven or without God in hell.

*What is the difference between right and wrong, good and bad?* There is objective morality, the right is what God commands and the wrong is what God prohibits; the good is that which God has created, the bad that which sin has corrupted.

*Why should I be moral?* Because it is good in itself and for what it brings (as Plato puts it in the Republic).

*Is abortion, euthanasia, suicide, paying taxes, foreign aid, or anything else you don't like forbidden, permissible, or sometimes obligatory?* There is a moral law, not everything is permissible, nor is everything forbidden.

*What is love, and how can I find it?* Love is the one thing that can never hurt anyone, although it may cost dearly.

*Does history have any meaning or purpose?* Yes, there is meaning and purpose to everything.

*Does the human past have any lessons for our future?* Yes, and we'd be wise to listen to them.

Paul Gould is one of my favorite Christian scholars – he comes from a business background and has a real heart for evangelism. We also agree that the "top-down" approach to having an influence is the correct approach, and therefore we both see impacting young people when they are at the university as absolutely vital. There are a lot of things that are worthwhile for Christians to do, but the university is the place that creates the next generation of influential people. We have to make our stand there, whether we like it or not. Whether it feels good or not.

# Left uses stories and peer-pressure to indoctrinate children to support same-sex marriage

**Wintery Knight** · 23 April 2015 · Archived copy · Original

National Education Association

This is a striking story from Life Site News. It talks about how the school system gets pro-same-sex-marriage speakers to teach the children to support same-sex-marriage.

It says:

> A primary grade lesbian teacher from an Ontario public school revealed in a workshop at a homosexual activist conference for teachers earlier this month how she uses her classroom to convince children as young as four to accept homosexual relationships.
>
> "And I started in Kindergarten. What a great place to start. It was where I was teaching. So, I was the most comfortable there," Pam Strong said at the conference, attended by LifeSiteNews.
>
> The conference, hosted by the homosexual activist organization Jer's Vision, now called the Canadian Centre for Gender and Sexual Diversity, focused on the implementation of Bill 13 in Ontario classrooms. Bill 13, called by critics the 'homosexual bill of rights,' passed in June 2012 and gave students the right to form pro-gay clubs in their school, including Catholic ones, using the name Gay-Straight Alliance (GSA).
>
> Strong, who is in an open relationship with another woman and who has been a teacher for about five years, focused her workshop on what she called the "power of conversation" for promoting LGBTQ issues in an elementary classroom. She began her talk by relating how she reacted the first time one of her students called another student 'gay' as a putdown.
>
> "With [the principal's] encouragement, we decided that I would go from class to class and talk about what 'gay' means, what does 'LGBTQ' mean, what do 'I' mean," she told about 40 attendees, all educators, at her workshop.

There are some examples of how she manipulates the children, but I want to focus on one in particular:

> Strong related an incident that happened last fall involving a new boy who had recently entered her grade 5

> classroom. The new boy had not yet been made aware of Strong's sexual preference for other women.
>
> "All my class is very used to who I am. My family picture is very proudly in my room now. On Mondays they quite often will say, 'What did you do with your wife?' It's normal in my classroom."
>
> Strong said that a conversation between herself and the students came up one day where it was mentioned that she was a lesbian. The new boy put his hands over his mouth and said, according to Strong: "Oh, my God, I think I'm going to puke."
>
> "As I took the abuse — personally, as an individual – of those words, I also saw half of my class look at me with incredible concern. One student who was right in front of me already had tears in her eyes. And I noticed several other students who were looking at him. They were just very, very upset with this kid," she related.
>
> **Strong said the boy instantly became aware that "something he had said had just created this unbelievable tension in the room." She related how she addressed the boy, telling him: "I think that what you might not be aware of is that I am gay, and I am married to a woman, and my family has two moms."'**
>
> **"His eyes just started darting around, and he was incredibly uncomfortable," she related.**
>
> "I looked at the other kids and I said: 'Ok guys, what I want to ask you is: Am I upset with him?' And the one little girl in my class put up her hand — that doesn't usually get into these conversations very much in my classroom — and she said, 'Mrs Strong, I know you're not upset with him, because he hasn't had the benefit of our conversations."
>
> "And I looked at my little friend, my 'new' friend, and I said: 'But, we're going to have one now,'" she related.
>
> Strong said that she then directed her class to the board and asked them to write everything she had told them related to LGBTQ.
>
> "And my class all of a sudden popped up. 'LGBTQ' was on the board, 'lesbian,' and all the different words coming out there. And I sat back and said, 'Let's review.' So, the last year and a half of 'inclusive' education came alive in my classroom."
>
> **Strong told her workshop attendees that her "new little friend" is now a devoted champion of diversity. She boasted how he was the one in her class to count down the days to the pro-homosexual Day of Pink that took place earlier this month. When Strong took a photo of all the children wearing pink shirts in her classroom, she said the boy requested to be in the front.**

She isn't interested in presenting both sides of the argument, or persuading grown adults like Dr. Ryan T. Anderson. She wants to go after children with stories that make her side look a certain way, stories that cannot be challenged or refuted by children. And with no opt-out or notification for parents, because parents have to be kept in the dark. Parents just get to pay to feed and clothe and shelter the children – but what they think is decided by teachers with an agenda. This indoctrination against the values of parents is taxpayer-funded. With no opt-out. This is the "big government" that so many young evangelicals support.

This is why I am concerned about finding a wife who understands these things and takes them seriously enough to make a plan to deal with it. I have had Christian women who responded to this challenge from the schools by telling me that they intended to entrust the children to daycare and secular schools so they could focus on careers, travel, buying bling, etc. I try to show them studies showing how children are affected by daycare, homeschooling, etc. Usually, it's like banging your head against a brick wall. It's almost as if they *have to* get their way on these things even though they have not studied these things themselves. They have to find a way to escape from any responsibilities to others so they can be free to do what feels good to them. But I need a partner who will take these concerns seriously and think of our children, not of her own happiness.

Keep in mind that even if you homeschool or private-school your kids, that they have live next door to the brainwashed kids. The brainwashed kids are taught to hold to their views at a brittle, non-rational, emotional level.

This is why children who are indoctrinated by the secular left are so offended by “triggering” behaviors that they have to take refuge in “safe spaces” free of opposing views. Our kids (raised by us) might agree with us, but they are not free of the influence from a much larger group of brainwashed kids. Our kids have to work for them. Our kids have to go to school with them. Our kids have to live under the laws that these other kids will pass, as they are shuffled through the best schools because they have the “right” views. The brainwashed kids vote and we will have to live under the laws they pass. Do you have a plan to deal with this? It seems to me that if women want to get married and have kids “some day”, then they should have thought about this some and be willing to talk about what to do about it, and be open to the fact that they may have to make some adjustments to prepare for it.

UPDATE: Life Site News is now threatened with a lawsuit after breaking this story.

# New study: lack of secure attachment during early childhood harms children

**Wintery Knight** · 23 April 2015 · Archived copy · Original

This is from the leftist Brookings Institute, a respected think tank I usually disagree with.

They write about a new study:

> Attachment theory is founded on the idea that an infant's early relationship with their caregiver is crucial for social and emotional development. It is an old theory, born during the 1950s. But it can bring fresh light on issues of opportunity and equality today, as a three-decade longitudinal study of low-income children from Alan Sroufe, Byron Egeland, Elizabeth Carlson, and W. A. Collins, all University of Minnesota psychologists, demonstrates.
>
> […]Small infants are heavily dependent on caregivers, who must respond to their needs. But counter-intuitively, the infants who have a reliable caregiver are also most likely to become self-efficacious later.
>
> Infants (aged 9 to 18 months) with responsive parents learn how their own behavior can impact their environment. This "call and response" process builds the infant's sense of self-efficacy— one reason parents *should* pick up the sippy cup, especially for the hundredth time! But this virtuous learning cycle breaks down if the caregiver fails to respond adequately.

Here are the definitions:

- **Secure attachment**: When the caregiver (mom, in this study) is present, the infant explores the room and interacts with the experimenter, occasionally returning to the caregiver for support. When the caregiver leaves, the child becomes sad and hesitates to interact with the experimenter, but upon their return, is visibly excited.
- **Anxious/resistant attachment:** Regardless of the caregiver's presence, the infant shows fear of the experimenter and novel situations—these infants cry more and explore the room less. They become upset when the caregiver leaves, and while they approach upon return often resist physical contact, as a form of "punishment".
- **Anxious/avoidant attachment:** No preference is shown between a caregiver and a stranger— infants play normally in the presence of the experimenter and show no sign of distress or interest when their caregiver leaves and returns. The experimenter and the caregiver can comfort the infant equally well.

And here the results:

> The Minnesota study found that attachment makes a difference later in life. Without knowing students' attachment history, preschool teachers judged those who had secure attachments to have higher self-esteem, to be more self-reliant, to be better at managing impulses, and to recover more easily from upsetting events. When teachers were asked which students, among those with serious struggles in class, nonetheless had "a core of inner self-worth, an indication that… maybe they could get better," they picked students that had secure attachments as infants.
>
> In contrast, children with anxious/resistant attachments:
>
> - tended to hover near teachers
> - became easily frustrated
> - were more likely to be seen as "dependent" by blinded observers
> - were less competent and patient with puzzles and other cognitive challenges
>
> Children with anxious/avoidant attachments:

> - tended to be apathetic towards other children
> - failed to ask for adult help when stressed
> - were “often self-isolating”
>
> Both groups had higher rates of anxiety and depression as teenagers.

So again, we are seeing that when it comes to parenting, you have to think about what you are doing. That doesn’t mean that you have to be slaves to your kids, or spoil them or hover over them. It means that what you are doing with your kids matters. It means that you need to make a plan to have enough time and money to be able to care for them. I think that the right time to talk about such things is during the courtship.

Also, one more point. If you meet people with some of these short comings, (I had most of the anxious/avoidant ones growing up), then try not to draw lines in the sand where you reject them over these shortcomings. Instead, do what I do. Recognize that these people have value and that if you take responsibility to care for them and supply for their needs, you might be able to guide them to do some pretty amazing things. Don’t be so self-centered that you expect people to be perfect so they don’t need anything from you. Nobody is perfect. Everybody has a story. If you want to be like Jesus, why not start by recognizing the effects of a disrupted childhood through study, and then make a plan to grow people – even difficult ones like me.

# The seven fatal flaws of moral relativism

**Wintery Knight** · 23 April 2015 · Archived copy · Original

Moral relativism is the view that moral values and moral duties do not exist in reality, but only exist as opinions in people's minds. When you ask a moral relativist where the belief that stealing is wrong comes wrong, he may tell you that it is his opinion, or that it is the opinion of most people in his society. But he cannot tell you that stealing is wrong independent of what people think, because morality (on moral relativism) is just personal preference.

So what's wrong with it?

I found this list of the seven flaws of moral relativism at the Australian site Faith Interface.

Here's the summary:

1. *Moral relativists can't accuse others of wrongdoing.*
2. *Relativists can't complain about the problem of evil.*
3. *Relativists can't place blame or accept praise.*
4. *Relativists can't make charges of unfairness or injustice.*
5. *Relativists can't improve their morality.*
6. *Relativists can't hold meaningful moral discussions.*
7. *Relativists can't promote the obligation of tolerance.*

Here's my favorite flaw of relativism (#6):

> *Relativists can't hold meaningful moral discussions.* What's there to talk about? If morals are entirely relative and all views are equal, then no way of thinking is better than another. No moral position can be judged as adequate or deficient, unreasonable, acceptable, or even barbaric. If ethical disputes make sense only when morals are objective, then relativism can only be consistently lived out in silence. For this reason, it is rare to meet a rational and consistent relativist, as most are quick to impose their own moral rules like "It's wrong to push your own morality on others". This puts relativists in an untenable position – if they speak up about moral issues, they surrender their relativism; if they do not speak up, they surrender their humanity. If the notion of moral discourse makes sense intuitively, then moral relativism is false.

I sometimes get a lot of flack from atheists who complain that I don't let them make any moral statements without asking them first to ground morality on their worldview. And that's because on atheism morality IS NOT rationally grounded, so they can't answer. In an accidental universe, you can only describe people's personal preferences or social customs, that vary by time and place. It's all arbitrary – like having discussions about what food is best or what clothing is best. The answer is always going to be "it depends". It depends on the person who is speaking because it's a subjective claim, not an objective claim. There is no objective way we ought to behave.

The whole point of atheism is to pursue pleasure without the bonds of morality – there is no other reason to do anything on atheism except for the pleasure it gives you. You do fashionable things to feel good getting praise from your neighbors, and you do unfashionable things in private to make yourself feel good and you hope that no one who is powerful enough to hold you accountable ever finds out. There's no way you were made to be.

# Mitt Romney: Hillary's Clinton Foundation Uranium One scandal "looks like bribery"

**Wintery Knight** · 24 April 2015 · Archived copy · Original

What looks like bribery? Well, read this story from the radically leftist New York Times, of all places. It should be the end of Hillary's campaign.

Excerpt:

> The headline in the website Pravda trumpeted President Vladimir V. Putin's latest coup, its nationalistic fervor recalling an era when its precursor served as the official mouthpiece of the Kremlin: "Russian Nuclear Energy Conquers the World."
>
> The article, in January 2013, detailed how the Russian atomic energy agency, Rosatom, had taken over a Canadian company with uranium-mining stakes stretching from Central Asia to the American West. The deal made Rosatom one of the world's largest uranium producers and brought Mr. Putin closer to his goal of controlling much of the global uranium supply chain.
>
> But the untold story behind that story is one that involves not just the Russian president, but also a former American president and a woman who would like to be the next one.
>
> At the heart of the tale are several men, leaders of the Canadian mining industry, who have been major donors to the charitable endeavors of former President Bill Clinton and his family. Members of that group built, financed and eventually sold off to the Russians a company that would become known as Uranium One.
>
> Beyond mines in Kazakhstan that are among the most lucrative in the world, the sale gave the Russians control of one-fifth of all uranium production capacity in the United States. Since uranium is considered a strategic asset, with implications for national security, the deal had to be approved by a committee composed of representatives from a number of United States government agencies. Among the agencies that eventually signed off was the State Department, then headed by Mr. Clinton's wife, Hillary Rodham Clinton.
>
> **As the Russians gradually assumed control of Uranium One in three separate transactions from 2009 to 2013, Canadian records show, a flow of cash made its way to the Clinton Foundation. Uranium One's chairman used his family foundation to make four donations totaling $2.35 million. Those contributions were not publicly disclosed by the Clintons, despite an agreement Mrs. Clinton had struck with the Obama White House to publicly identify all donors. Other people with ties to the company made donations as well.**
>
> **And shortly after the Russians announced their intention to acquire a majority stake in Uranium One, Mr. Clinton received $500,000 for a Moscow speech from a Russian investment bank with links to the Kremlin that was promoting Uranium One stock.**
>
> **At the time, both Rosatom and the United States government made promises intended to ease concerns about ceding control of the company's assets to the Russians. Those promises have been repeatedly broken, records show.**
>
> […]The path to a Russian acquisition of American uranium deposits began in 2005 in Kazakhstan, where the Canadian mining financier Frank Giustra orchestrated his first big uranium deal, with Mr. Clinton at his side.
>
> The two men had flown aboard Mr. Giustra's private jet to Almaty, Kazakhstan, where they dined with the authoritarian president, Nursultan A. Nazarbayev. Mr. Clinton handed the Kazakh president a propaganda coup when he expressed support for Mr. Nazarbayev's bid to head an international elections monitoring group, undercutting American foreign policy and criticism of Kazakhstan's poor human rights record by, among others, his wife, then a senator.
>
> Within days of the visit, Mr. Giustra's fledgling company, UrAsia Energy Ltd., signed a preliminary deal giving

> it stakes in three uranium mines controlled by the state-run uranium agency Kazatomprom.
>
> […][T]he company's story was hardly front-page news in the United States — until early 2008, in the midst of Mrs. Clinton's failed presidential campaign, when The Times published an article revealing the 2005 trip's link to Mr. Giustra's Kazakhstan mining deal. It also reported that several months later, Mr. Giustra had donated $31.3 million to Mr. Clinton's foundation.
>
> […]**[T]he ultimate authority to approve or reject the Russian acquisition rested with the cabinet officials on the foreign investment committee, including Mrs. Clinton — whose husband was collecting millions of dollars in donations from people associated with Uranium One.**

Romney, in his interview with Hugh Hewitt, explained that because Bill and Hillary are married, their assets are co-mingled.

So what's the problem with this deal?

> The national security issue at stake in the Uranium One deal was not primarily about nuclear weapons proliferation; the United States and Russia had for years cooperated on that front, with Russia sending enriched fuel from decommissioned warheads to be used in American nuclear power plants in return for raw uranium. Instead, it concerned American dependence on foreign uranium sources. While the United States gets one-fifth of its electrical power from nuclear plants, it produces only around 20 percent of the uranium it needs, and most plants have only 18 to 36 months of reserves, according to Marin Katusa, author of "The Colder War: How the Global Energy Trade Slipped From America's Grasp."
>
> "The Russians are easily winning the uranium war, and nobody's talking about it," said Mr. Katusa, who explores the implications of the Uranium One deal in his book. "It's not just a domestic issue but a foreign policy issue, too."

It's a national security issue. We shouldn't be selling uranium companies to countries like Russia who not only invade their neighbors, but also sell long-range missiles to Iran – and a host of other nasty things, too. This country is not friendly to us.

Hillary Clinton: secretive, entitled, hypoctritical

What was Hillary's response? It's a distraction invented by the vast right-wing conspiracy:

That's some vast right-wing conspiracy that makes its way onto the nation's most respected leftist national newspaper.

So, does this explain why Hillary Clinton deleted tens of thousands of e-mails and then wiped her private e-mail

server clean? We'll never know, because she destroyed all the evidence. But one thing is for sure – there is no reason to vote for this candidate for President, although some people will:

That's the only "reason" that people will vote for her, because on the merits, she's a stinker.

# A third of Americans who have a savings plan have less than $1000 in it

**Wintery Knight** · 24 April 2015 · Archived copy · Original

National Debt and Deficit 2007-2013

Let me start with the facts from Breitbart News, and then I'll comment on the part in bold.

Excerpt:

> Study after study shows that Americans are not saving for retirement like they should, and a new survey finds that nearly one third of people who have some sort of savings plan have amassed less than $1,000 for retirement.
>
> The survey titled "Preparing for Retirement in America," by Employee Benefit Research Institute (EBRI) and Greenwald and Associates, finds that only 65 percent of workers have any savings for retirement, a number that fell below the 75 percent figure from 2009.
>
> But 28 percent of workers report that they have saved less than $1,000 for retirement, and almost 6 in 10 Americans say that their financial planning needs improvement.
>
> Additionally, 34 percent say they have made no effort at all to saving anything or make a retirement plan. Still, most say that they intend to start saving at some point.
>
> **But intentions may not be enough. "Intending one thing and doing another is human, but it's an impulse we should all fight hard to resist," Rebekah Barsch, vice president of planning and sales at Northwestern Mutual, said in a press statement. "Intentions only get us so far. And when the stakes are high, it's taking action that's critical."**
>
> Many say that the average person needs to save one million dollars for retirement, but a recent piece by David Marotta, president of Marotta Wealth Management in Charlottesville, VA, noted that a 20-year-old in 2015 may have to amass up to $7 million to retire comfortably.
>
> "Someone retiring now in 2014 with $1 million at age 65 can safely withdraw $43,600 a year," Marotta wrote last May. "However, [because of inflation], today's 20-year-olds will need over $7 million to have that same lifestyle when they retire. In 1970, they would only have needed $166,000 in retirement to have a similar

> purchasing power for the rest of their life."
>
> Many Americans save for retirement using the 401K plans provided through their employer, but according to the federal government, around 50 million Americans don't have the ability to enroll in such a savings plan.

Here's a helpful article from CNBC that answers the question "how much do I need to retire?".

It says:

> You can't feel secure in retirement if you don't have a good idea of how much money you'll need.
>
> But if you believe a new Legg Mason survey, you may have to save far more than you think. Investors surveyed by the global investment management firm said they will require an average of $2.5 million in retirement to enjoy the quality of life they have today.
>
> That's about $2.2 million *more* than the average balance of $385,000 those investors actually had in 401(k)s and similar retirement plans, which might help explain why only 40 percent of the 458 investors surveyed said they are "very confident" in their ability to "retire at the age I want to." (And the investors surveyed have set more aside than the average retirement saver. At Fidelity, the nation's largest retirement plan provider, the average 401(k) balance was $91,300 at the end of 2014.)
>
> […]**Fidelity estimates most investors require about eight times their ending salary to increase the chances that their savings will last during a 25-year retirement.** But every retirement is different. People also tend to spend lavishly in their first years of retirement before their spending declines in later years.
>
> Health care is the wild card in retirement planning, especially as Americans live longer. Fidelity projects a 65-year-old couple retiring will need an average of $220,000 to cover medical expenses in retirement.

So, according to Fidelity's rule, if you are single and making $50K after taxes, then you need $400,000 to retire at age 65. You'll need more the earlier you retire. That seems about right to me. The important thing to do when planning for the future is not to imagine a higher income than you have right now, though. Imagining that things will be better than they are right now is a terrible mistake. You can't make the world change just by imagining things that make you feel good, or by looking at cherry-picked examples from people you know who got lucky.

The trouble with young people today is that they think that things tomorrow will be the same as they were yesterday. They don't see the future implications of running our national debt up to $18.5 trillion dollars. They think entitlement programs will be solvent when they are ready to retire. They aren't aware of what's going on in the economies of other countries that we trade with. They aren't aware of what's going on in Greece, and how that will affect the European Union. They aren't aware of the demographic crisis in Europe, and especially in Japan. They aren't thinking about the implications for future wars as America withdraws from the world stage. And so on. And since they are not aware, they are delaying making a plan to save, so they can have more fun now. Their retirement plan is all future sunshine and rainbows, but no actions are being taken *right now*.

If I could give young people one piece of advice, it's this. It's much easier to shift your life out of a position of financial security to something lighter but more meaningful in the second half of your life. It's harder to work back to earning and saving if you have squandered your early life on fun, thrills, travel, non-STEM degrees, etc. If you're 30 years old and don't have any savings, you are in serious, serious trouble. You need to get focused on a regular career as soon as possible, and start saving. Get those debts paid off *now*. Still think that your rosy picture of the future will obtain? Usually, you can tell how good you are at strategic forecasting by looking at your past decisions. Have you been wise before, or have you chosen poorly? If you've chosen poorly, then it's a good idea to defer to people who haven't made the same mistakes. If you're an optimistic person who is always being surprised and disappointed, that's a good sign you need to start saving now.

# Ryan T. Anderson: background on the same-sex marriage case before the Supreme Court

**Wintery Knight** · 24 April 2015 · Archived copy · Original

This Daily Signal article is a great summary of everything that a lay-person like me or you ought to know about the case that is going to be decided by the Supreme Court.

Here are a few of the points I thought were most interesting:

> 2. The overarching question before the Supreme Court is not whether a male–female marriage policy is the best, but only whether it is allowed by the Constitution. The question is not whether government-recognized same-sex marriage is good or bad policy, but only whether it is required by the Constitution.
>
> Those suing to overturn male-female marriage laws thus have to prove that the man–woman marriage policy that has existed in the United States throughout our entire history is prohibited by the Constitution. They cannot successfully so argue.
>
> 3. As Supreme Court Justice Samuel Alito pointed out two years ago, there are two different visions of what marriage is on offer. One view of marriage sees it as primarily about consenting adult romance and care-giving. Another view of marriage sees it as a union of man and woman—husband and wife—so that children would have moms and dads.
>
> Our Constitution is silent on which of these visions is correct, so We the People have constitutional authority to make marriage policy.
>
> The debate over whether to redefine marriage to include same-sex relationships is unlike the debate over interracial marriage. Race has absolutely nothing to do with marriage, and there were no reasonable arguments ever suggesting it did.
>
> Laws that banned interracial marriage were unconstitutional and the Court was right to strike them down. But laws that define marriage as the union of a man and woman are constitutional, and the Court shouldn't strike them down.
>
> 4. The only way the Court could strike down state laws that define marriage as the union of husband and wife is to adopt a view of marriage that sees it as an essentially genderless institution based primarily on the emotional needs of adults and then declare that the Constitution requires that the states (re)define marriage in such a way.
>
> Equal protection alone is not enough. To strike down marriage laws, the Court would need to say that the vision of marriage that our law has long applied equally is just wrong: that the Constitution requires a different vision entirely.
>
> But the Constitution does not require a new vision of marriage.
>
> Advocates for the judicial redefinition of marriage cannot reasonably appeal to the authority of Windsor, to the text or original meaning of the Fourteenth Amendment, to the fundamental rights protected by the Due Process Clause, or to Loving v. Virginia. So, too, one cannot properly appeal to the Equal Protection Clause or to animus or Lawrence v. Texas.
>
> Nor can one say that gays and lesbians are politically powerless, so one cannot claim they are a suspect class. Nor can one say that male–female marriage laws lack a rational basis or that they do not serve a compelling state interest in a narrowly tailored way, as explained in Heritage Foundation legal memorandum "Memo to Supreme Court: State Marriage Laws Are Constitutional."
>
> 7. Redefining marriage to make it a genderless institution fundamentally changes marriage: It makes the relationship more about the desires of adults than the needs—or rights—of children. It teaches that mothers and fathers are interchangeable.

I think that's the fundamental question in the marriage debate. The question is, is marriage a relationship that is geared towards producing children, and locking in husbands and wives together in an exclusive, permanent relationship so that those children have two people who are biologically-related to them who are nearby to watch over them and care for them. When I think about what it is like to be a little child, or even a little animal, it is obvious to me that we should be aggressive about encouraging and celebrating couples who have children and then stick together to raise them. It's a hard, self-sacrificial job. It's not about self-centered hedonism. It's about doing the right thing to provide for the needs of children as they grow up. Marriage isn't about grown-ups being happy, it's about regulating sex for the benefit of children, and society as a whole. We do better together as a society with natural marriage.

# Should we be trying to change the world from the bottom up or the top down?

**Wintery Knight** · 25 April 2015 · Archived copy · Original

Dr. Paul Gould is a professor of philosophy (PhD from Purdue) at Southwestern Baptist Theological Seminary.

Here is his bio, which says, in part:

> I have a Masters in Philosophy of Religion and Ethics from Talbot School of Theology and a Ph.D. in Philosophy from Purdue University.
>
> I am an Assistant Professor of Philosophy and Christian Apologetics at Southwestern Baptist Theological Seminary in Fort Worth, Texas.

What his bio page doesn't say is that he left a career in business to go onto this apologetics/philosophy track. I find that very interesting, because like most professionals with an interest in apologetics, I had the same dream – to go and do a PhD and get into a college and be a positive influence on Christian kids. But the main thing is that he has had some experience in the real world.

Anyway, Dr. Gould has written two posts on how to change the world, and I want you to look at an excerpt from the first one.

First post:

> Christians like to talk—and aspire—to changing the world. This language stems very naturally from our God-given desire to *make a difference*, to *live a life that matters*. In a very real sense, making a difference *is* to change the world. But, usually, when Christians talk about "changing the world" they mean something like "winning the world for Christ" or "helping the gospel to gain a hearing in culture" or "contributing toward shalom."Recently, there have been a number of very helpful books written by folks who challenge the common view of *how* to go about the task of world-changing, and call into question the relationship between Christ and culture. One of the most important books to enter this discussion is James Davison Hunter's *To Change the World*. I highly recommend it to anyone interested in the topic of world-change. In this post I will share his critique of the "common view" of world change. I think his critique is dead on.
>
> Hunter argued that by and large, Christians have gone about the task of world changing in completely the wrong way and the result is that Christianity in our country at least and in the western world in general, represents a weak culture.
>
> He focuses on world-view ministries (primarily from the US such as Chuck Colson's Wilberforce Forum and Focus on the Families' Truth Project) and those like them that offer the following view of how to change the world:
>
> Common view of world change: as we change the individual beliefs and values of persons, and change enough persons, then we will ultimately change society. This is a **bottom up approach**.
>
> On the common view, the implicit view of culture is that "the essence of culture is found in the hearts and minds of individuals" and that culture change will come as enough individual lives are transformed.
>
> Hunter argues that this approach fails to take into account cultural elites and the institutions that yield power within culture.
>
> Instead, cultural change has always been **top-down:** it is always elites—those who have cultural capital to exert influence and power—who have changed the culture. This is why the university, and the media, and the arts are so important in shaping the culture.
>
> All of this leads to a fascinating conclusion: ***some** ideas have consequences*—namely ideas propagated by those

> within society who possess cultural capital and a supporting network of other individuals and institutions also within the center of cultural influence and production.

Second post is here. The second post has a link to his review of Hunter's book (PDF), which is published by Oxford University Press.

I agree completely with the top-down thesis of James Davison Hunter, and I think that it is a *tragedy* that the Christian parents and Christian churches don't do a good job of challenging and guiding young Christians to study the things that will allow them to have an influence. Most Christians I talk to have a negative view of steering young Christians towards advanced degrees, or towards making a lot of money, or towards positions of cultural influence, etc. Instead of focusing on being effective, they tell me "I will do what I want to do, because God has a mysterious will for me to be happy". I don't buy it. I am happy to consider alternative plans that serve God better, but I don't think that the "I'll do what feels good" view is interested in producing a return for God in terms of money and/or influence. Crazy plans do not work out just because we want them to. There are costs to every plan, and not every plan is as likely to lead to influencing the culture as any other plan. This is reality.

I also think it is important to steer children into positions where they can be prosperous and/or influential. Again, many Christians disagree with guiding children that way. In my experience, it is assumed that children need to be happy, and that they are the best people to decide what they should be doing in life. Well, I'm not a heavy-handed bully, but I am not letting my children do whatever they like, because they don't have enough wisdom and experience to know what to do. For example, I am not letting my children study ballet in university. It doesn't pay the bills, and it isn't likely that they will have an influence compared to other choices. Money is important because money can be used to fund Christian scholars, apologetics ministries and apologetics events. Marriage is a great way to have an influence, but marriage costs money, and that means that marriage-minded people should have a plan to *pay the bills* before they consider marriage. We do not have the right to *do whatever we feel like*, because we have a boss who *expects a return on his investment*. If a person is capable of doing hard things that produce a better return (money or influence or children, etc.) then he should do that.

We have a problem in this country as it is with young people borrowing tens of thousands of dollars to study things that either don't pay off, or that don't allow them to have an influence. It's not unloving to tell children the truth about the choices they make. Especially when the cost of having a child is over six figures *per child*. You can have a huge Christian influence with that kind of money if you spent it on other things, like apologetics scholars, their ministries and their events. So, if you are going to have children and spend it on them, you'd better have some sort of plan, and look for a spouse who is on board with that idea of providing God with a good return on his investment. Everything we do – including the choices to marry and have children – should be focused on serving God. If people shy away from the idea of steering children to have an influence, I don't think it's a good idea to get married at all. Save the money and use it for the kingdom somewhere else. Marriage is about making the best decisions you can in order to serve God, and you can't marry someone who puts their own happiness over the need to produce that return for the boss.

Having said that, if you are already married, stick with it. I am advocating for making smarter decisions *before* you commit. And before you go off to college, ask yourself: is what you are thinking of studying worth it? Trade school is an excellent option that will give you an income that can support a family AND give to apologetics ministries, with less exposure to debt. If you must go to university, then it's generally wiser to stick with STEM degrees, so that you can get a job and actually pay off those loans. Marriages and children are NOT free. Retirement is not free. Health care is not free. Christian apologetics ministries do not run on wishes and hopes. Christian scholars do not get their degrees for free – they need support. I think another good plan is to have one person do philosophy or history and then be supported by other people with jobs in STEM fields. That's what I do – I help out Christian scholars on my team to finish their graduate degrees in fields related to apologetics. Those non-STEM degrees are the best way to have an influence, but it's easier to get them as a multi-disciplinary team effort. Everyone has to pull their weight!

And one last point. The most amazing thing in the world is when I meet people who are very very skeptical about mentoring young people and steering children towards prosperous and influential areas, even though they themselves may be facing the results of their own poor decisions. You would think that someone who has burned $60,000 on a degree in Women's Studies and can't find a job would be on your side about helping other young people to make better decisions, but they are often not on your side. Why is that? Somewhere along the way, this culture stopped liking the Mr. Knightleys who were praised for loving people by telling them the truth about their bad decisions. Now we think that the Emmas can do whatever they want, and no one should be giving them any guidance. How sad.

# William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

**Wintery Knight** · 25 April 2015 · Archived copy · Original

Below, please find my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

Brian Auten has posted the MP3 audio of the debate at Apologetics 315.

**The debaters**

- William Lane Craig
- Alex Rosenberg

Below is the summary.

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the

minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is

too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of

scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# What is the “unforgiveable sin” in Mark 3 and Matthew 12?

**Wintery Knight** · 26 April 2015 · Archived copy · Original

Take a look at these two puzzling passages from the New Testament.

Mark 3:28-29:

[28] Truly I tell you, people can be forgiven all their sins and every slander they utter,

[29] but whoever blasphemes against the Holy Spirit will never be forgiven; they are guilty of an eternal sin.”

Matthew 12:30-32:

[30] “Whoever is not with me is against me, and whoever does not gather with me scatters.

[31] And so I tell you, every kind of sin and slander can be forgiven, but blasphemy against the Spirit will not be forgiven.

[32] Anyone who speaks a word against the Son of Man will be forgiven, but anyone who speaks against the Holy Spirit will not be forgiven, either in this age or in the age to come.

What can it mean?

Well, here’s a post by Dr. Paul Gould to shed some light on it.

Excerpt:

> Taken in isolation, it is hard to make sense of this passage—how is it that all kinds of sins can be forgiven but one sin will not be forgiven? What is going on here? Well, here is a principle of sound biblical interpretation:
>
> Principle #1: I*n order to correctly understand a passage, we must always look at it within its context.*
>
> And what is the passages context? The broader context can be found in Matthew 12:22-32. In this broader context we read of Jesus performing a miracle (he performs an exorcism and heals a blind and mute man), we read of the crowd’s amazement and wonderment over the identity of Jesus (“Could this be the Son of David?”), we find the slanderous (and murderous) charge of the Pharisees, and we find Jesus’ response to the Pharisees charge (both his reasoned response to their explicit charge that he drives out demons by Satan’s power as well as his warning to the Pharisees if they continue to attribute to Satan what is in fact the work of God’s Spirit).
>
> After looking at this passage in context, we find that the “unforgivable sin” is (basically) attributing what is in fact the work of God’s Spirit to His ultimate enemy, Satan.
>
> Fair enough, you say, but there are other problems passages that talk about the unforgivable sin—Hebrews 6, 1 John 5, and Hebrews 10 come to mind. What about those passages? Well, here is our second principle of biblical interpretation:
>
> Principle #2: *Always interpret unclear passages in light of the clear teachings of Scripture (as a whole).*
>
> And what is the clear teaching of Scripture related to sin and forgiveness? It is this:
>
> **Forgiveness of sins is a consequence of man’s repentance, and repentance is a consequence of the activity of the Holy Spirit in our hearts. So in the end, it seems that blasphemy against the Holy Spirit is nothing more or less than the unrelenting rejection of His advances.**

So, the only unforgiveable sin is the sin of deliberately rejecting God’s efforts to draw you into a saving relationship with him. What does this mean for you? It means that if you are a Christian and you believe the essentials of the faith, then you aren’t going to be able to lose your salvation by performing sinful actions. You can’t sin your way out of God’s forgiveness, because if you accept Jesus’ death as payment for your sins, then it covers all your sins. I do think that the Bible is very clear that you can lose your salvation by “the unrelenting rejection” of God’s

advances. But that's not a description of any Christians, it's a description of someone who does not believe in Jesus.

# Physicist Victor Stenger debates William Lane Craig: Does God Exist?

**Wintery Knight** · 26 April 2015 · Archived copy · Original

This debate took place on March 1, 2010 at Oregon State University.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here is the MP3 file for the audio.

Here's the video of the debate:

**Dr. Craig's opening speech:**

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

**Dr. Stenger's opening speech:**

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic
- It's theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are "our inventions"
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn't really nothing, it is "the total chaos that we project existed just before the big bang"
- If something has no structure, then "it is as much nothing as nothing can be"
- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

**Dr. Craig's first rebuttal:**

Stenger's argument that there is no objective evidence for God's existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)
- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger's argument that the balance of energy is zero so "nothing" exists:

- if you have the same amount of assets and liabilities, it doesn't mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger's argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

**Dr. Stenger's first rebuttal:**
Craig's cosmological argument:

- Craig's premise is "everything has a cause", but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- "I don't know of a single working cosmologist today who believes there was a singularity prior to the Big Bang"
- "If there wasn't a singularity then there's no basis for arguing that time began at that point"
- "There's no reason from cosmology that we know of that the universe can't be eternal"
- "When I talk about an eternal universe, I mean a universe that has no beginning or end"
- The Hartle-Hawking model doesn't have a beginning
- "There was no violation of energy conservation by having a universe coming from nothing"
- "The universe *could have* come from a previous universe for example or even just from a region of chaos"
- The paper by Vilenkin is counteracted by other papers (he doesn't specify which ones)

Craig's moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that's objective
- Dr. Craig has too little respect for the human intellect
- I don't need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists

- Morality just evolved naturally as an aid to survival

Craig's resurrection argument:

- No Roman historians wrote about the execution of Jesus but none of them did
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

**Dr. Craig's second rebuttal:**

Craig's cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible
- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal
- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

**Dr. Stenger's second rebuttal:**

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"
- There are a lot of books written about how morality evolved naturally
- "I don't have to prove that the events surrounding the supposed resurrection of Jesus did not take place"
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig's minimal facts)

- Just because people are willing to die for a cause, does not make their leader God, e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don't like dark matter and I wouldn't have made the universe with dark matter
- I don't like the doctrine of penal substitution
- I don't like the doctrine of original sin
- I don't like the heat death of the universe

**Dr. Craig's conclusion:**

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman's objection to the resurrection is not historical: he's an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

**Dr. Stenger's conclusion**

The cosmological argument:

- "I argued that we have very good physical reasons to understand how something can come from nothing"
- "There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing"
- The transition from a vapor to a liquid to ice shows how something could come from nothing
- "It cannot be proven that the universe had a beginning"

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think
- "Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women" (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don’t see any evidence that there is anything more to religious experience than just stuff in their heads

God’s purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it’s too big
- God could have made it possible for humans to live anywhere “even in space”

# New study: children's brains function better when they can see their mothers

**Wintery Knight** · 27 April 2015 · Archived copy · Original

The new study published in Psychological Science was reported in Pacific Standard.

Excerpt:

> For little kids, seeing mom or dad nearby is a calming influence, maybe the difference between between perfect calm and a full-bore freakout. It's as if having a trusted caregiver nearby transforms children from scared toddlers into confident adolescents. And in a way, a new report suggests, that's what having mom around does to a kid's brain.
>
> When they're first born and for years after, infants and young children can't do a whole lot by themselves. They can't eat on their own, they aren't very good at managing their emotions, and it takes a while for them to learn how to dress themselves. Most children figure it out eventually, but in the meantime they need their parents to do a lot of that stuff for them. All the while, their brains are changing, too. Well into adolescence, kids' brains undergoanatomical and physiological changes that affect the way we think and act.
>
> […]Young children's brains responded differently based on whether they were looking at their mothers or strangers. In particular, their brains showed signs of positive amygdala-PFC connections when viewing pictures of strangers, but negative connections when viewing pictures of their mothers, suggesting more mature and stable brain function—and likely more mature and stable behavior, at least when moms were around. In contrast, tweens and teens had negative connections whether they were looking at their mothers or strangers. In other words, looking at pictures of their mothers made young children's brains look a little more like those of adolescents.
>
> The companion behavioral experiment backed up that thinking—young children made around 20 percent fewer errors when their mothers were present than when they weren't, while there was no difference for adolescents. That combined with the fMRI results to suggest that mothers—and likely other caregivers—can provide an external source of mental regulation that young children won't develop until later in life, the authors write in *Psychological Science.*

In view of the recent triumphs for gay marriage advocates, I think it's worth remembering that gay marriage, like single motherhood, is not the best we can do for children. I think it's a bad enough situation when the husband dies and leaves his children to be raised by the mother. That's hard, but it's not immoral. On the other hand, I think that deliberately choosing to deprive a child of his or her mother or father IS immoral. It's child abuse, in my opinion. And that goes for gay marriage as well as "single motherhood by choice". I also oppose frivolous divorce ("frivorce"), which is very popular in a nation that views structured courtship as "boring" and no-fault divorce as a woman's right.

Previously, I blogged about another study that showed the importance of moms for young children.

Excerpt:

> Both of these images are brain scans of a two three-year-old children, but the brain on the left is considerably larger, has fewer spots and less dark areas, compared to the one on the right.
>
> According to neurologists this sizeable difference has one primary cause – the way each child was treated by their mothers.
>
> The child with the larger and more fully developed brain was looked after by its mother – she was constantly responsive to her baby, reported The Sunday Telegraph.

> But the child with the shrunken brain was the victim of severe neglect and abuse.
>
> According to research reported by the newspaper, the brain on the right worryingly lacks some of the most fundamental areas present in the image on the left.
>
> The consequences of these deficits are pronounced – the child on the left with the larger brain will be more intelligent and more likely to develop the social ability to empathise with others.
>
> But in contrast, the child with the shrunken brain will be more likely to become addicted to drugs and involved in violent crimes, much more likely to be unemployed and to be dependent on state benefits.
>
> The child is also more likely to develop mental and other serious health problems.
>
> Professor Allan Schore, of UCLA, told The Sunday Telegraph that if a baby is not treated properly in the first two years of life, it can have a fundamental impact on development.
>
> He pointed out that the genes for several aspects of brain function, including intelligence, cannot function.
>
> […]The study correlates with research released earlier this year that found that children who are given love and affection from their mothers early in life are smarter with a better ability to learn.
>
> The study by child psychiatrists and neuroscientists at Washington University School of Medicine in St. Louis, found school-aged children whose mothers nurtured them early in life have brains with a larger hippocampus, a key structure important to learning, memory and response to stress.
>
> The research was the first to show that changes in this critical region of children's brain anatomy are linked to a mother's nurturing, Neurosciencenews.com reports.
>
> The research is published online in the Proceedings of the National Academy of Sciences Early Edition.
>
> Lead author Joan L. Luby, MD, professor of child psychiatry, said the study reinforces how important nurturing parents are to a child's development.

I have a very good feminist non-Christian friend who sometimes comments here. I once asked her about marriage and she said that her skills would be wasting on raising children. I explained to her my view that a mother needs to stay at home with the children, and that is more important work. I expect my future wife to read all kinds of books on child care and to give the child attention, nutrition, exercise and play so that the child will grow up to be an effective Christian. Maybe I need to be clear. I am not going to spend hundreds of thousands per child with just any woman. I need a woman who can produce influential and effective Christians who will engage in the public square. And we do not entrust that job to just anyone. We want educated, professional women who are willing to be stay-at-home moms when it's necessary to do that – for the sake of the children.

I expect the woman I marry (if I marry) to have a college degree, and preferably a graduate degree, and at least a couple of years of employment. Then she has to stay home and invest in those children through the first five years, at least. After that she can stay home or work as much as she thinks is beneficial to the family goals of impacting the university, the church and the public square – as well as continuing to raise those children. It's not a waste of her talent to make the next William Lane Craig, or the next Marsha Blackburn, or the next Doug Axe, or the next Edith Hollan Jones.

# Study: fathers are important for the development of children's brains

**Wintery Knight** · 27 April 2015 · Archived copy · Original

Fathers and children

The study was reported in the Wall Street Journal.

Excerpt:

> Dr. Braun's group found that at 21 days, the fatherless animals had less dense dendritic spines compared to animals raised by both parents, though they "caught up" by day 90. However, the length of some types of dendrites was significantly shorter in some parts of the brain, even in adulthood, in fatherless animals.
>
> "It just shows that parents are leaving footprints on the brain of their kids," says Dr. Braun, 54 years old.
>
> The neuronal differences were observed in a part of the brain called the amygdala, which is related to emotional responses and fear, and the orbitofrontal cortex, or OFC, the brain's decision-making center.
>
> […]The balance between these two brain parts is critical to normal emotional and cognitive functioning, according to Dr. Braun. If the OFC isn't active, the amygdala "goes crazy, like a horse without a rider," she says. In the case of the fatherless pups, there were fewer dendritic spines in the OFC, while the dendrite trees in the amygdala grew more and longer branches.
>
> A preliminary analysis of the degus' behavior showed that fatherless animals seemed to have a lack of impulse control, Dr. Braun says. And, when they played with siblings, they engaged in more play-fighting or aggressive behavior.
>
> In a separate study in Dr. Braun's lab conducted by post-doctoral researcher Joerg Bock, degu pups were removed from their caregivers for one hour a day. Just this small amount of stress leads the pups to exhibit more hyperactive behaviors and less focused attention, compared to those who aren't separated, Dr. Braun says. They also exhibit changes in their brain.
>
> The basic wiring between the brain regions in the degus is the same as in humans, and the nerve cells are identical in their function. "So on that level we can assume that what happens in the animal's brain when it's raised in an impoverished environment … should be very similar to what happens in our children's brain," Dr. Braun says.

Read the whole thing.

I think this is important because we hear so much today that marriage can be redefined, that having one of each parent doesn't matter, that live-in boyfriends and stepfathers have the same motivation to care for a woman's children as the biological father does. We don't want to make judgments, even if setting boundaries is better for

children. A child's well-being is enormously affected by the woman's choice of biological father. You can't have it both ways – either we are going to judge women who choose men who don't have the desire to commit to marriage, and do the father role, OR we are going to take things away from children by encouraging women to choose men based on "feelings" instead of abilities. Lowering moral standards and removing moral obligations *hurts children.* It sounds so nice when we tell women, "you can do whatever you feel like, and just forget about responsibilities, expectations and obligations", but letting women be guided by their feelings *harms children*. My stock broker makes me feel uncomfortable because he knows more than I do, and does not respect my opinion. But I *pay him* to make investment decisions for me. I mustn't let my pride get in the way of letting him do his job – a job he is more qualified than I am to do. Let him do his job.

Here's a related question: Are biological fathers or unrelated men more dangerous for children?

This article from the Weekly Standard answers the question.

Excerpt:

> A March 1996 study by the Bureau of Justice Statistics contains some interesting findings that indicate just how widespread the problem may be. In a nationally representative survey of state prisoners jailed for assaults against or murders of children, fully one-half of respondents reported the victim was a friend, acquaintance, or relative other than offspring. (All but 3 percent of those who committed violent crimes against children were men.) A close relationship between victim and victimizer is also suggested by the fact that three-quarters of all the crimes occurred in either the perpetrator's home or the victim's.
>
> A 1994 paper published in the Journal of Comparative Family Studies looked at 32,000 documented cases of child abuse. Of the victims, only 28 percent lived with both biological parents (far fewer than the 68 percent of all children who live with both parents); 44 percent lived with their mother only (as do 25 percent of all children); and 18 percent lived with their mother and an unrelated adult (double the 9 percent of all children who live with their mother and an unrelated adult).
>
> These findings mirror a 1993 British study by the Family Education Trust, which meticulously explored the relationship between family structure and child abuse. Using data on documented cases of abuse in Britain between 1982 and 1988, the report found a high correlation between child abuse and the marital status of the parents.
>
> Specifically, the British study found that the incidence of abuse was an astounding 33 times higher in homes where the mother was cohabiting with an unrelated boyfriend than in stable nuclear families. Even when the boyfriend was the children's biological father, the chances of abuse were twice as high.
>
> These findings are consonant with those published a year earlier by Leslie Margolin of the University of Iowa in the journal Child Abuse and Neglect. Prof. Margolin found that boyfriends were 27 times more likely than natural parents to abuse a child. The next-riskiest group, siblings, were only twice as likely as parents to abuse a child.
>
> More recently, a report by Dr. Michael Stiffman presented at the latest meeting of the American Academy of Pediatrics, in October, studied the 175 Missouri children under the age of 5 who were murdered between 1992 and 1994. It found that the risk of a child's dying at the hands of an adult living in the child's own household was eight times higher if the adult was biologically unrelated.
>
> The Heritage Foundation's Patrick Fagan discovered that the number of child-abuse cases appeared to rise in the 1980s along with the general societal acceptance of cohabitation before, or instead of, marriage. That runs counter to the radical-feminist view, which holds that marriage is an oppressive male institution of which violence is an integral feature. If that were true, then child abuse and domestic violence should have decreased along with the rise in cohabitation.
>
> Heritage also found that in the case of very poor children (those in households earning less than $ 15,000 per year), 75 percent lived in a household where the biological father was absent. And 50 percent of adults with

> less than a high-school education lived in cohabitation arrangements. “This mix — poverty, lack of education, children, and cohabitation — is an incubator for violence,” Fagan says.
>
> Why, then, do we ignore the problem? Fagan has a theory: “It is extremely politically incorrect to suggest that living together might not be the best living arrangement.”

The moral of the story is that it is a lot safer for children if we promote marriage as a way of attaching mothers and fathers to their children. Fathers who have a biological connection to children are a lot less likely to harm them. We should probably be teaching women to choose men who have a certain tenderness towards people they mentor or nurture, as well. These things are not free, you have to persuade women to value the male tendency to want to lead / guide / mentor. A lot of social problems like child poverty, promiscuity and violence cannot be solved by replacing a father with a check from the government. We need to support fathers by empowering them in their traditional roles. Let the men lead. Swallow your feminist instincts, and prefer men who take seriously their role of leading others upward.

# Hillary Clinton: let's use government to force Christians to stop being pro-life

**Wintery Knight** · 28 April 2015 · Archived copy · Original

My friend Mary from Marin tweeted this story from Life News.

It says:

> In a speech last week, Hillary Clinton lamented that too many women are supposedly denied abortions. The Democratic presidential candidate came under fire for that pro-abortion comment, but she also is drawing widespread condemnation for another remark in the speech.
>
> The comment has Hillary Clinton essentially saying that Christians must be forced to change their religious views to accommodate abortions.
>
> "Far too many women are still denied critical access to reproductive health care and safe childbirth. All the laws we've passed don't count for much if they're not enforced," Clinton said, using the euphemism for abortion.
>
> "Rights have to exist in practice — not just on paper," Clinton argued. "Laws have to be backed up with resources and political will. And deep-seated cultural codes, religious beliefs and structural biases have to be changed,:
>
> That is not going over well with pro-life advocates.
>
> Bill Donohue of the Catholic League let Hillary have it in his remarks to LifeNews.
>
> "It was not surprising that Hillary Clinton, who strongly opposes a ban on partial-birth abortion, would tell her feminist audience that she supports Planned Parenthood. What was surprising was her comment on the need to change religious beliefs on abortion," he said. "In others words, Hillary has a problem with the Catholic Church's teachings on abortionthey must be changed."
>
> "Never before have we seen a presidential candidate be this bold about directly confronting the Catholic Church's teachings on abortion. It's time for Hillary to take the next step and tell us exactly what she plans to do about delivering on her pledge. Not only would practicing Catholics like to know, so would Evangelicals, Orthodox Jews, Muslims, and all those who value life from conception to natural death," Donohue added.
>
> David Ripley of Idaho Chooses Life also condemned her remarks.
>
> "We have known for some time that abortion would be Hillary's primary campaign message," he said. "What made this particular speech unique was Hillary's bold declaration that God needed to get His act together on this whole abortion thing. It was past time to update the Ten Commandments."
>
> "Now, of course, most of those "religious beliefs" are based upon clear teachings within Scripture that teach us to hold children precious, to sacrifice ourselves for others – and, above all, not to kill the innocent. What Clinton and her comrades on the Left do not seem to understand is that our religious beliefs are not a matter of personal opinion, but, rather, one of submission to our Creator," Ripley continued. "Clinton is not the first self-proclaimed leader to shake a fist at the Almighty. One can presume that He is not particularly impressed; though His heart is undoubtedly grieved."
>
> "And we can all be grieved that a person of such arrogance stands a chance of becoming president over this great nation," he concluded.

Here she is speaking to Planned Parenthood, the nation's largest abortion provider:

Hillary Clinton and Planned Parenthood
And Planned Parenthood gets taxpayer funding.

A lot of evangelical Christian women will be voting for Hillary just because she is a woman. Do you know any? Why don't you ask them?

# Louisiana governor Bobby Jindal to anti-marriage corporate bullies: “Save your breath”

**Wintery Knight** · 28 April 2015 · Archived copy · Original

Louisiana Governor Bobby Jindal

Bobby Jindal is my #2 pick for President, just behind Scott Walker. Previously, I blogged about how Jindal had the best pro-life record of any of the GOP primary candidates. And now were going to see that he is tough on defending marriage, as well.

Jindal defends marriage in the radically leftist New York Times, of all places.

Jindal writes:

> THE debate over religious liberty in America presents conservatives and business leaders with a crucial choice.
>
> In Indiana and Arkansas, large corporations recently joined left-wing activists to bully elected officials into backing away from strong protections for religious liberty. It was disappointing to see conservative leaders so hastily retreat on legislation that would simply allow for an individual or business to claim a right to free exercise of religion in a court of law.
>
> Our country was founded on the principle of religious liberty, enshrined in the Bill of Rights. Why shouldn’t an individual or business have the right to cite, in a court proceeding, religious liberty as a reason for not participating in a same-sex marriage ceremony that violates a sincerely held religious belief?
>
> That is what Indiana and Arkansas sought to do. That political leaders in both states quickly cowered amid the shrieks of big business and the radical left should alarm us all.

It might be a surprise for my readers, but big greedy corporations are as liberal as big greedy unions – conservatives don’t like unions or big corporations. We like small businesses. And so does Bobby Jindal.

While Indiana and Arkansas retreat, Jindal wants to double down:

> **As the fight for religious liberty moves to Louisiana, I have a clear message for any corporation that contemplates bullying our state: Save your breath.**
>
> In 2010, Louisiana adopted a Religious Freedom Restoration Act, which prohibits government from unduly burdening a person’s exercise of religion. However, given the changing positions of politicians, judges and the

> public in favor of same-sex marriage, along with the potential for discrimination against Christian individuals and businesses that comes with these shifts, **I plan in this legislative session to fight for passage of the Marriage and Conscience Act.**
>
> **The legislation would prohibit the state from denying a person, company or nonprofit group a license, accreditation, employment or contract — or taking other "adverse action" — based on the person or entity's religious views on the institution of marriage.**
>
> **Some corporations have already contacted me and asked me to oppose this law. I am certain that other companies, under pressure from radical liberals, will do the same. They are free to voice their opinions, but they will not deter me. As a nation we would not compel a priest, minister or rabbi to violate his conscience and perform a same-sex wedding ceremony. But a great many Americans who are not members of the clergy feel just as called to live their faith through their businesses. That's why we should ensure that musicians, caterers, photographers and others should be immune from government coercion on deeply held religious convictions.**

I know that many of you have not heard of Bobby Jindal, but he is one of our best and most conservative candidates. I think that for people who vote primarily for social conservatism, he is the most effective on those issues – much more than all the other candidates. Honestly, I don't think he cares about being popular, he just does what he thinks is right.

# GoFundMe shuts down fundraising accounts of pro-marriage baker and florist

**Wintery Knight** · 28 April 2015 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

Here's the latest, from The Daily Signal.

Excerpt:

> Less than 48 hours after the crowdfunding website GoFundMe shut down a campaign setup for Sweet Cakes by Melissa, GoFundMe yanked a similar fundraiser for a 70-year-old Washington florist facing seven-figure financial penalties for violating her state's anti-discrimination law.
>
> The campaign, created for Barronelle Stutzman, a Christian florist who refused to make flower arrangements for a gay couple's wedding, had been operating on GoFundMe for over two months.
>
> It wasn't until GoFundMe removed the Sweet Cakes by Melissa campaign—meant for Aaron and Melissa Klein, the Oregon-based bakers who were fined $135,000 for refusing to make a cake for a same-sex wedding—that it closed the account for Stutzman, owner of Arlene's Flowers.
>
> Before it was shut down, Stutzman's GoFundMe page had raised more than $174,000 in donations.
>
> […]Meanwhile, the Sweet Cakes by Melissa campaign had raised more than $109,000 in nine hours before being removed.
>
> What happened?
>
> A Facebook group, called "Boycott Sweet Cakes by Melissa, Gresham, OR," sought to shut the account down.
>
> In multiple posts, the group linked to the Klein's GoFundMe page, writing, "How fast can we shut this down."
>
> Kristen Waggoner, the attorney representing Stutzman on behalf of Alliance Defending Freedom, told The Daily Signal that opponents are trying to bully people like Stutzman and the Kleins who are trying to live in accordance to their faith.
>
> "It's not enough to have the government redefine marriage or to punish those who disagree," she said.
>
> **The opponents of freedom have to ruin every aspect of the lives of those who disagree—denying them a living, the ability to feed their families, and the opportunity to raise money to pay the so-called**

> **‘victims.’** This type of vindictive, hateful behavior is terrifying. Corporations like Apple, Salesforce, and GoFundMe want to make sure they can live and work consistent with their beliefs about marriage, but then deny that same right to people like Barronelle Stutzman who lovingly served her customer for nearly a decade but simply couldn’t participate in the celebration of his same-sex wedding.

I’m not expert, but it seems to me that the businesses who receive death threats and are put on trial and fined tens of thousands of dollars are bigger victims. But I guess now the “right to not be offended” is more important than freedom of religion. All I want to be able to say in public is that marriage is better for children than divorce, cohabitation, single motherhood by choice, and same-sex marriage – because children need their mother and father. Apparently, it’s now illegal to say that, and not just in the way that a parking ticket is illegal. This is serious. I think a lot of Christians on the margin are going to be even more intimidated about speaking out and donating to pro-marriage causes the more these persecutions intensify.

# Only 10% of money given to Clinton Foundation goes to charity

**Wintery Knight** · 29 April 2015 · Archived copy · Original

Astonishing article from The Federalist.

It says:

> After a week of being attacked for shady bookkeeping and questionable expenditures, the Clinton Foundation is fighting back. In a tweet posted last week, the Clinton Foundation claimed that 88 percent of its expenditures went "directly to [the foundation's] life-changing work."
>
> There's only one problem: that claim is demonstrably false. And it is false not according to some partisan spin on the numbers, but because the organization's own tax filings contradict the claim.

Look:

Only 10% of their income goes to charity

And:

> In order for the 88 percent claim to be even remotely close to the truth, the words "directly" and "life-changing" have to mean something other than "directly" and "life-changing." For example, the Clinton Foundation spent nearly $8.5 million–10 percent of all 2013 expenditures–on travel. Do plane tickets and hotel accommodations directly change lives? Nearly $4.8 million–5.6 percent of all expenditures–was spent on office supplies. Are ink cartridges and staplers "life-changing" commodities?
>
> Those two categories alone comprise over 15 percent of all Clinton Foundation expenses in 2013, and we haven't even examined other spending categories like employee fringe benefits ($3.7 million), IT costs ($2.1 million), rent ($4 million) or conferences and conventions ($9.2 million). Yet, the tax-exempt organization claimed in its tweet that no more than 12 percent of its expenditures went to these overhead expenses.
>
> How can both claims be true? Easy: they're not. The claim from the Clinton Foundation that 88 percent of all expenditures go directly to life-changing work is demonstrably false. Office chairs do not directly save lives. The internet connection for the group's headquarters does not directly change lives.
>
> […][T]he IRS 990 forms submitted by the Clinton Foundation include a specific and detailed accounting of these programmatic expenses. And even using extremely broad definitions–definitions that allow office supply, rent, travel, and IT costs to be counted as programmatic costs–the Clinton Foundation fails its own test.
>
> According to 2013 tax forms filed by the Clinton Foundation, a mere 80 percent of the organization's

> expenditures were characterized as functional programmatic expenses. That's a far cry from the 88 percent claimed by the organization just last week.
>
> […]In 2013, for example, only 10 percent of the Clinton Foundation's expenditures were for direct charitable grants. The amount it spent on charitable grants–$8.8 million–was dwarfed by the $17.2 million it cumulatively spent on travel, rent, and office supplies. Between 2011 and 2013, the organization spent only 9.9 percent of the $252 million it collected on direct charitable grants.
>
> While some may claim that the Clinton Foundation does its charity by itself, rather than outsourcing to other organizations in the form of grants, there appears to be little evidence of that activity in 2013. In 2008, for example, the Clinton Foundation spent nearly $100 million purchasing and distributing medicine and working with its care partners. In 2009, the organization spent $126 million on pharmaceutical and care partner expenses. By 2011, those activities were virtually non-existent. The group spent nothing on pharmaceutical expenses and only $1.2 million on care partner expenses. In 2012 and 2013, the Clinton Foundation spent $0. In just a few short years, the Clinton's primary philanthropic project transitioned from a massive player in global pharmaceutical distribution to a bloated travel agency and conference organizing business that just happened to be tax-exempt.

As if that were not bad enough, now Bloomberg News is reporting that there were 1100 UNREPORTED DONORS to the Clinton Foundation, most of them non-US residents.

Look:

> There are in fact 1,100 undisclosed donors to the Clinton Foundation, Giustra says, most of them non-U.S. residents who donated to CGEP.
>
> […]The reason this is a politically explosive revelation is because the Clinton Foundation promised to disclose its donors as a condition of Hillary Clinton becoming secretary of state. Shortly after Barack Obama was elected president in 2008, the Clinton Foundation signed a "memorandum of understanding" with the Obama White House agreeing to reveal its contributors every year. The agreement stipulates that the "Clinton Giustra Sustainable Growth Initiative" (as the charity was then known) is part of the Clinton Foundation and must follow "the same protocols."
>
> It hasn't.

So, if none of the money from all these foreign donors was being used for charitable activities, then what was it being used for? Hmmmn, what could a Secretary of State who wants to run for President do with all that money?

# What happened in other countries, e.g. Canada, after gay marriage was legalized?

**Wintery Knight** · 29 April 2015 · Archived copy · Original

If you want real confidence, try studying instead of yelling

This article from CNS News is a must-read for sleepy American Christians.

It says:

> Rather than settle animosity and ease cultural tensions, the advent of same-sex "marriage" will lead to the repression of religious freedom and determination to root out dissent to the gay rights doctrine. At LifeSiteNews, we have watched this play out for nearly two decades in 17 countries around the world – and America is next.
>
> A prime example is Canada. Same-sex "marriage" passed in 2005. Similar to European countries which have done so, there has been a relentless pursuit of the minds of children against the wishes of their parents. Schools, both public and private, were first mandated by law to have gay-straight alliance clubs under the auspices of anti-bullying. Then, sex-education, teaching the normalcy of homosexual sex, was given to children without parents being permitted to opt their children out of the classes.
>
> We have arrived at this state of affairs because of the silence of Christian pulpits on sexual matters, and the concomitant shouting from every secular pulpit, screen and book. Even the current discussion around same-sex "marriage" in the United States reveals a grave reluctance to speak about the heart of the issue – homosexual sex. Rather, arguments are made about the goodness of natural marriage, about its benefit to children, and its unchangeable character.
>
> From reporting on the subject every day for so many years, we knew that the struggle for same-sex "marriage" has very little to do with marriage. In fact, until just recently, gay activists didn't even *want* to be "married" to each other. Most had no interest in the constraints that such a formalized union would entail in terms of exclusive partnership.
>
> However, the leaders among the activists convinced the movement that they must attain marriage as a societal stamp of approval to homosexual behavior. And, frankly, they have largely succeeded.
>
> Today, in many of the nations where same-sex "marriage" is law, opposition to it is seen as akin to racism. It is seen falsely as an animosity against someone for who they are—an unwillingness to recognize the human

> dignity of a class of persons due to an immutable characteristic.
>
> However, that false perception is due to a purposeful agenda to conflate animosity against homosexual sex acts with animosity against persons who experience same-sex attraction. The ancient Christian teaching to "love the sinner and hate the sin" is an impermissible distinction in the minds of some. It is, however, the key to understanding the majority of the opposition to same-sex "marriage."
>
> The plain truth of the matter is that opposition to same-sex "marriage" is rooted not in hatred and bigotry, but just the opposite – in love. Like parents who do not allow children to behave dangerously without lovingly correcting them, opponents of same-sex relationships are hoping to save people with same-sex attractions from severe physical, psychological, and spiritual harm.
>
> Just as, out of love and concern for their children's welfare, parents must correct and discipline, despite the protests they may get in return, any true believer in marriage, natural law and science must lovingly correct their fellow man.
>
> **In other nations, the perception that opposition to same-sex "marriage" is based upon bigotry has led to laws that violate religious liberty, parental rights and freedom of speech. This is why those who oppose same-sex "marriage" must present their reasoning as based on love and concern for the welfare of those in homosexual relationships, in addition to concerns for children and society itself. And there is ample evidence on which to base that concern in the numerous studies showing the grave harm of homosexual sex to both body and psyche.**

The danger is something that some gay activists (who are honest) speak about:

> When I've spoken of these findings at conferences around the world, some have questioned if the researchers who showed these harms weren't themselves biased by anti-gay sentiment. And so I've taken to carrying with me on my phone the quotes of the late Canadian gay activist Gens Hellquist, whose testimony proves the harms of gay sex better than any study ever could.
>
> Speaking a year after the passage of same-sex "marriage" into law, Hellquist was seeking more healthcare dollars for the LGBT community. "We have one of the poorest health statuses in this country," he said. "Health issues affecting queer Canadians include lower life expectancy than the average Canadian, suicide, higher rates of substance abuse, depression, inadequate access to care and HIV/AIDS."
>
> "There are all kinds of health issues that are endemic to our community," he added. "We have higher rates of anal cancer in the gay male community, lesbians have higher rates of breast cancer."
>
> He concluded: "Now that we can get married everyone assumes that we don't have any issues any more. A lot of the deaths that occur in our community are hidden, we don't see them. Those of us who are working on the front lines see them and I'm tired of watching my community die."

Here is a good summary of what happened in Canada in the years after they legalized same-sex

Why is this happening? The answer is that American Christians have become more concerned about soft-aspects of Christianity than about truth. The church is more concerned about feeling good and being liked by non-Christians. Cultivating intellectual ability to defend marriage through a study of the relevant literature is definitely out. The very pious Bible-focused fundamentalists are confident that the best way to argue with non-Christians is to quote Bible verses to them.

I have a different idea of what we should be doing. I think we should be reading books on the philosophical arguments for marraige, (e.g. – "What Is Marriage?") ,and reading books on what happens to children who are raised by same-sex adults instead of by their own mom and dad, (e.g. – "Gender and Parenthood"). It's this study of philosophical arguments and social science evidence which allows us to be bold in defending marriage. Studying the issues instead of trying to do pious, subjective devotional activities will also help our children to be able to reach

positions of influence in the culture, from which they can push the pro-marriage view.

# Robert Gagnon debates gay activist Jayne Ozanne on Bible vs homosexuality

**Wintery Knight** · 29 April 2015 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

I am tempted to say that this is the best podcast I have ever heard on the Unbelievable show. Do anything you have to do in order to listen to this podcast.

Details:

> Prof Robert Gagnon has become a well-known voice advocating the traditional biblical view on sexuality. In a highly charged show he debates the scriptural issues on sexuality with Jayne Ozanne, the director of Accepting Evangelicals who came out as gay earlier this year.

The MP3 file is here.

If you can only listen for 15 minutes, then start at 49 minutes in and listen from there.

The following summary is rated MUP for made-up paraphrase. Reader discretion is advised.

**Summary:**

Intro:

- Speaker introductions
- Gagnon: scholars who support gay marriage agree that the Bible doesn't support it
- Gagnon: scholars who support gay marriage agree Jesus taught male-female marriage
- Ozanne: I went to the hospital because I was sick from trying to suppress my gay desires
- Ozanne: Doctors told me that I would die if I didn't act on my gay desires
- Ozanne: I decided to reinterpret the Bible to fit with my gay desires
- Ozanne: According to my new interpretation, Jesus actually supports my gay desires

Segment 1: Genesis

- Ozanne: In Genesis the Bible says that Adam needs a woman to complete him
- Ozanne: I reinterpret this to mean that Adam needed a "complementarian human being"

- Ozanne: Genesis doesn't say whether Eve was complemented by Adam in that chapter
- Ozanne: It's not critical that men are complemented by women, a man could complement a man
- Ozanne: Genesis 2 doesn't talk about children, it's all about adult needs from a relationship
- Gagnon: Genesis 2 has never been interpreted that way in all of history
- Gagnon: Genesis 2 language specifically implies a human being who is opposite/different
- Gagnon: Genesis 2 language translates to complement or counterpart
- Gagnon: Genesis as a whole teaches that the sexuality is for male and female natures
- Gagnon: The extraction of something from the man that is given to the woman is complementarian
- Ozanne: I think that people can be complementary outside of male-female Genesis language
- Ozanne: I don't want to discuss specific words and texts and Greek meanings
- Gagnon: the text has always been read and interpreted to support male/female complementarity
- Gagnon: the male-female nature argument is made because the two natures are complementary
- Ozanne: the text was interpreted by patriarchal males who treated women like property, it's biased
- Ozanne: what is important to me is how Christ interprets Genesis (?? how does she know that?)
- Ozanne: I am passionate about my interpretation of Scripture which supports my gay desires
- Gagnon: just because a person is passionate about their interpretation it doesn't make it right
- Gagnon: I am not arguing for the male-female view based on passion, but on scholarship, evidence and history
- Ozanne: both sides are equally passionate about their interpretations (?? so both are equally warranted?)
- Ozanne: the real question is why God "allowed" two different interpretations of Scripture

Segment 2: Is homosexuality a sin?

- Gagnon: Jesus affirmed traditional sexual morality, which forbids homosexuality
- Gagnon: Jesus teaches that marriage is male-female, and limited to two people
- Gagnon: No one in history has interpreted the Bible to say that homosexuality was not immoral
- Ozanne: Jesus came to bring life, and that means he supports homosexuality
- Ozanne: I was dying, and embracing my gay desires allowed me to live, so Jesus approves of me
- Ozanne: God says "I am who I am" and that means he approves of me doing whatever I want
- Ozanne: There is an imperative to be who I am, and that means embracing my gay desires
- Gagnon: Jesus argued that the twoness of the sexual bond is based on the twoness of the sexes
- Gagnon: Jesus did not come to gratify people's innate desires, he called people to repent of sin
- Gagnon: Jesus did reach out to sinners but he never condoned the sins they committed
- Gagnon: Jesus' outreach to tax collectors collecting too much and sexual sinners is the same: STOP SINNING
- Ozanne: I don't think that Romans 1 is talking about homosexuality
- Ozanne: I think it's talking about sexual addiction, not loving, committed gay relationships
- Ozanne: Paul was condemning pederasty in Romans 1, not loving, long-term, consensual sexual relationships between gay adults
- Gagnon: nothing in the passage limits the condemnation to pederasty
- Gagnon: the passage was never interpreted to be limited to pederasty in history
- Gagnon: rabbis and church fathers knew about committed two-adult same-sex relationships, and said they were wrong
- Gagnon: the argument for marriage is based on the broad two-nature argument, with no exceptions
- Gagnon: the condemnation is not limited to exploitative / coercive / lustful / uncommitted relationships

- Gagnon: even pro-gay scholars agree the passage cannot be interpreted Ozanne's way (he names two)

Segment 3: The showdown (49:00)

- Ozanne: I don't care how many pages people have written on this
- Ozanne: God says that "the wisdom of the wise I will frustrate" so you can't use scholars, even pro-gay scholars, to argue against my passionate interpretation
- Ozanne: I am not interested in the text or history or scholarship or even pro-gay scholars who agree with you
- Ozanne: what decides the issue for me is my mystical feelings about God's love which makes my sexual desires moral
- Ozanne: you are certain that this is wrong, but your view does not "give life" to people
- Ozanne: your scholarship and historical analysis is "a message of death" that causes teenagers to commit suicide (= you are evil and a meany, Robert)
- Ozanne: "I pray for you and your soul" (= opposing me will land you in Hell) and "I hope that listeners will listen with their hearts" (?? instead of their minds?)
- Ozanne: you can prove anything you want with research, even two mutually exclusive conclusions, so you shouldn't rely on scholarship and research since it could be used to prove my view as well
- Ozanne: instead of relying on research, you should rely on your heart and your feelings about God's love to decide what the Bible teaches about sexual morality
- Gagnon: you are distorting the gospel in order to make your case
- Gagnon: attacking my "certainty" is an ad hominem attack to cover your dismissmal of the scholarship and history
- Gagnon: you distort the gospel to make it seem like Christ just wants us to get what we want, when we want it, with who we want it with
- Gagnon: Christ calls us to take up our cross, to lose our lives and to deny ourselves
- Gagnon: you have a notion of what "fullness of life" is, but it's not reflective of the gospel
- Gagnon: Paul's life was much more troubling than yours, mine or anyone else around here
- Gagnon: Paul was beaten, whipped, stoned, poorly sheltered, poorly clothed, poorly fed, shipwrecked, and anxious for his churches
- Gagnon: on your view, he should have been miserable and angry with God all the time
- Gagnon: but instead Paul was constantly thankful and rejoicing to be able to suffer with Jesus and look forward to the resurrection
- Gagnon: I have suffered too, but the suffering we go through never provides us with a license to violate the commandments of God
- Ozanne: "the ultimate thing is what people feel God has called them to"
- Ozanne: My goal right now is to tell young people that homosexuality is fine so they don't commit suicide
- Ozanne: the view that homosexuality is wrong is "evil and misguided"
- Gagnon: the greater rates of harm in the gay community are intrinsic to homosexual unions, not caused by external disapproval of homosexuality

Segment 4: Concluding statements

- Gagnon: gay male relationships on average have more sex partners and more STDs
- Gagnon: female relationships on average have shorter-length relationships and more mental issues
- Gagnon: the greater rates of harm are because there is no complementarity / balance in the relationships
- Gagnon: everyone has some disappointment or suffering in their lives that hurts them, and that they are tempted

to break the rules to fix, but we should not break the rules in order to be happy

- Ozanne: both sides are passionate, so no one can be right, and evidence proves nothing
- Ozanne: only feelings about “what God is doing” can allow us to decide what counts as sin or not
- Ozanne: the main thing that is at stake here is to make people like us, not to decide what the Bible says about sin
- Ozanne: my message to people is to do whatever you want, and ignore mean people who don’t affirm you
- Ozanne: we should be more opposed to mean people who make non-Christians feel unloved than about doing what the Bible says

# Atheist Richard Carrier, who divorced his wife to go polyamorous, seeks new sex partner

**Wintery Knight** · 30 April 2015 · Archived copy · Original

Goodness Without God: is it possible?
Is atheism a rational worldview, or is it just rationalizing sexual misbehavior?

A while back, prominent atheist Dr. Richard Carrier explained how he was divorcing his wife – who supported him financially – in order to go polyamorous full-time.

The Yeti's Roar, a libertarian atheist blog reacted to the news: (link removed)

> In a recent blog post, entitled "Coming Out Poly + A Change of Life Venue", the esteemed Dr. Richard Carrier PhD, discusses his "coming out" as polyamorous, an "orientation" that he just discovered at the young age of 47.
>
> […]Carrier claims that after 17 years of marriage, he cheated on his wife multiple times, for reasons that he won't disclose. In the midst of his infidelity, he suddenly "discovered" (as a middle aged man) that he was polyamorous. Even though his wife attempted to make the marriage work by allowing him to see other women under the guise of an "open marriage", Carrier still decided to kick her to the curb. So in Carrier's view, his affairs were not a mistake, but rather a fun new "lifestyle choice" that he will pursue, regardless of the past commitment to his wife.
>
> What is even more despicable about Carrier's behavior toward his wife is the fact that she supported him financially.
>
> […] The only reason he has been able to live a comfortable lifestyle while blogging and writing obscure books is due to his wife's financial support. The reason that he could afford to invest his time in getting graduate degrees from Columbia in subjects that will never land him a decent paying job is due to the support of his wife. The reason he was able to travel around the country for low paying speaking engagements instead of having to get a real job is due to his wife's financial support. And how does he repay his wife for the support

> she has given him? He cheats on her, waits until he is making enough money where he no longer needs her income, and kicks her to the curb.

So, whenever Richard Carrier was talking about morality without God, now we know what he meant. He even dedicated his book on morality without God to his now ex-wife. How ironic.

But the new polyamoratheism news is that Carrier is actually searching for a new "date".

I am not linking to his blog post, but it says: (H/T The Yeti's Roar)

> I'll start by making sure anyone considering this is up to speed. I am polyamorous. I currently have many girlfriends. All I consider my friends. Some are just occasional lovers. Some I am more involved with. They are also polyamorous, or near enough (not all of them identify that way, but all of them enjoy open relationships). And I will always have relationships with them, as long as they'll have me in their life.
>
> Many different things can be meant by the following terms, but just for the present purpose, if by a primary relationship is meant someone you live with or just about as good as live with, a secondary as someone you date regularly, and a tertiary as someone you date occasionally, all my relationships are tertiary, but only because of geography. I live just below Sacramento, California, where the rents are cheap, which means, where no one wants to live. And I'm unlikely to move anytime soon. So relationships with me, at best, are likely to be tertiary—long distance chatting with occasional being together throughout the year. Even so, I always take such friendships seriously.
>
> […]**I'm 0.5 on the Kinsey scale. Not heavy into kink (but get along well with people who are). I have an unusual fetish or two but don't expect any of my partners to share them. I'm pro sex worker, and though I personally find strip clubs and brothels uninteresting at best (uncomfortable at worst), I like partners who are or who have been sex workers. I also like women who have or pursue a lot of partners or who love to boast of their sexual exploits, especially over wine or whiskey or equivalent. I'm not going to get all butt-hurt or angsty over how high Your Number is. It very much has the opposite effect on me.**
>
> […]I am also planning to have a hotel room, and am comfortable sharing it platonically. Certainly I would enjoy sharing it non-platonically, but I don't expect it. I can't believe (even though I know) there are still guys who assume the other sh*t buys them sex, thus necessitating I say this: if you are going to have sex with me, it has to be because it's fun and you want to, not because it's something you owe me. On the same understanding, if you have a place for me to crash in town (platonically or not), and are happy to have me over to spare me the cost of hiring a room, that would be lovely. And yes, if you are poly or open and live with a partner or two, I'm comfortable with that as well.
>
> This also means you don't have to live in the LA area to join me for this. If you can get to LA, and don't mind sharing a room (at my expense), the opportunity remains.

This is Richard Carrier's book on morality without God:

Goodness without God: Now we know what he was talking about
And the book is dedicated to his wife, now ex-wife:

> For Jen…
>
> My buxom brunette
> My wellspring of joy
> My north star of sanity

Indeed.

You can read a multi-part review of the book here on Deeper Waters (Nick Peters' site)

I trust that everyone now understands what I was saying about the reasons why atheists jettison God and objective morality. Sexual freedom is definitely a big one, and probably the biggest. This is not a worldview, people, it's not something that is derived from logic and evidence. It starts and ends with getting rid of moral accountability to the Creator. Period. End of issue.

Not that all atheists are as immoral as Carrier, and not all atheists are motivated by sexual perversion. But the primary motivation is always to be able to get God out of the morality business. There's no denying that atheists look pretty normal in a society that is still running on the fumes of a declining Judeo -Christian value system. But if you look at how they vote, e.g. – for abortion, for gay marriage, against religious liberty, etc., it's very clear that they want the society to move away from Judeo-Christian values. And it is this desire that more and more human beings not respect the moral oughts that God prescribes that is the real rebellion.

Romans 1:18-21 nails this:

> [18]The wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness,
>
> [19]since what may be known about God is plain to them, because God has made it plain to them.
>
> [20]For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse.
>
> [21]For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened.

What is expected in the Christian worldview is not to pick and choose a few moral behaviors here and there.

Individual moral values are not the issue. When Christ calls a man, he call him to die to himself and his own self-interest, and to take up his moral positions and champion them. Have you ever tried to champion the pro-life cause in an increasingly secular society? How about championing the pro-marriage cause? In order to be a Christian, you don't just accept the sacrifice of Jesus as atonement for sin, but you also let him lead. And one of those areas of letting him lead is in defining what is and is not moral. It's very easy for a man to not murder unborn children himself, and to marry someone of the opposite sex, and congratulate himself on how moral he is. Personal morality is not the issue. Inventing your own arbitrary  moral code and then following it might make you feel good, but that is not what God requires. The real challenge of Christianity has to do with standing up for the truth claims, including the moral values, in the face of a society that will not approve of you.

What is required of a man on the Christian worldview is total abandonment to God's calling and a 100% re-prioritization of his life. It's not about doing X and Y, but not A and B, and getting a passing grade. It's about putting Jesus Christ in as your commanding officer in every area of your life.

# The top 7 things a wife needs to be happy in her marriage

**Wintery Knight** · 30 April 2015 · Archived copy · Original

Do women influenced by feminism understand marriage?
From MercatorNet.

Here's the list, in order of importance:

1. A husband's emotional engagement
2. Fairness
3. A breadwinning husband
4. A commitment to marriage
5. Staying at home
6. Shared religious attendance
7. Traditional gender attitudes

I want to highlight #3, because it's the one I most frequently find missing in younger, unmarried Christian women.

Here's number three:

> American wives, even wives who hold more feminist views about working women and the division of household tasks, are typically happier when their husband earns 68% or more of the household income. Husbands who are successful breadwinners probably give their wives the opportunity to make choices about work and family—e.g., working part-time, staying home, or pursuing a meaningful but not particularly remunerative job—that allow them to best respond to their own needs, and the needs of their children.

The reason I have found that the young, unmarried Christian women oppose this is because it negates the "follow your heart" Disney princess mentality that they are often raised on. They don't want to be practical, and some of them even go so far as to shun the good advice of other married women. Women should be able to count the costs of a marriage and understand that handsomeness and confidence does not pay the considerable bills that married couples incur, especially when they have children. I think a good basic education in business, finance and/or economics for this "follow your heart", "have no fear" women would be beneficial. It's very important that women learn to value a man's ability to make decisions that allow him to find work that pays well.

It's getting common now for men to be in their late 20s and yet never have had a job that earns money. Women

should not be relying on penniless students younger than they are – men who have not proved (from their past) that they can fulfill the demands of the provider role. Women should not be resting their hopes on men who have no proven record of work experience. They should not hope that things will get better in the future. Future wishes are not evidence of the ability to provide, only past performance at providing is evidence of the ability to provide. What is needed is a record of earning money, of showing up to work on time, of getting promotions, of steady long-term employment (not jumping around to different jobs), and being good at saving money that is earned.

I also liked #4:

> Wives who share a strong commitment to the norm of lifelong marriage with their husband—e.g., who both believe that even unhappily married couples should stay together for the sake of their children—are more likely to have a happy marriage than couples who do not share this commitment to marriage. Shared commitment seems to generate a sense of trust, emotional security, and a willingness to sacrifice for one's spouse—all of which lead to happier marriages for women. This shared commitment also provides women with a long-term view of their marriage that helps them negotiate the inevitable difficulties that confront any marriage.

I think the commitment ideal is something that is now very much against the grain in our culture. We want to have relationships that make us happy all the time. We don't want to make commitments that will force us to confront the needs of that other person. We don't want to have to deal with expectations, responsibilities and obligations, especially when they conflict with our pursuit of self-fulfillment and fun. But commitment is the opposite of pursuing fun. Commitment is about making a promise to another person to care for their needs. If caring for someone else's needs scares you, then naturally, you'll want to avoid commitment as much as you can.

Unfortunately, marriage isn't compatible with obligation avoidance. Commitment is the very center of it, and if you want a good marriage, then you'd better get used to making and keeping commitments. If you are good at sensing and caring for the needs of others, and putting others above yourself, and enduring hardships and difficulties to keep your commitments, then you're ready for marriage.

# Atheist Michael Shermer tries to rationally ground morality in debate with Frank Turek

**Wintery Knight** · 30 April 2015 · Archived copy · Original

Michael Shermer debates Frank Turek: atheism and morality

The topic of the debate was on the grounding of morality – which worldview (theism or atheism) is better at grounding morality?

And here is the MP3 for the cross-examination only, which is what I will be summarizing. (12.5 Mb)

The full debate can be seen here and can be heard here.

Turek's cross-examination period starts at 74m22s and ends at 89m20s.

Shermer's cross-examination period starts at 89m50s and ends at 105m0s.

**Topics of Turek's cross-examination:**

- evolution produces Shermer's moral sense and Hitler's moral sense
- why does Shermer think his is better than Hitler's, since both were produced by the same evolution?
- what makes right or wrong if evolution is the source of morality?
- why is Stalin's opinion of right and wrong less valuable than the herd's opinion of right and wrong?
- do the Founding Fathers ground inalienable rights in a Creator, or in evolution?
- can atheism ground the existence of inalienable rights?
- can you ground objective moral values and objective moral duties by asking people how they feel?
- can you ground objective human rights on atheism by shouting like a madman and interrupting?
- how can you trust your thinking if they are the result of an unguided, random process of evolution?
- how can you have rational thoughts if materialism is true, and you are a machine made out of meat?
- can you ground objective moral values and objective moral duties on personal preferences?
- how do the personal preferences of some individuals create an objective moral duty for other individuals?
- does naturalistic evolution orient human beings toward survival or truth?
- on materialism, what is the chemical composition of justice?

**Topics of Shermer's cross-examination:**

- Radical muslims are exactly the same as evangelical Christians, and have the same God (Allah is the same as the

Triune Christian God)

- Radical muslims would assert that their God is the same as the Triune Christian God, with Jesus and the Holy Spirit also being God
- Therefore, we can lay the blame for what radical muslims do on the backs of evangelical Christians
- Radical muslims and evangelical Christians are the same, because “you’re enthusiastic, they’re enthusiastic”
- The Bible’s notion of indentured servitude to pay off debt is the identical to the idea of slavery based on race
- The Bible’s notion that masters and slaves are equal in the sight of God forms a basis for thinking they are unequal
- The Bible teaches things that I disagree with, like the idea that marriage should provide children with a mother and a father
- Gay marriage is solidly grounded in evolution, even though the morality that evolution produces varies by time and place
- Atheists can ground objective moral values and objective moral duties by asking people how they feel
- Can atheists who want to legalize gay marriage because “they’re in love” prohibit polygamy or incest as marriage?
- Is shouting “you’re on the wrong side of history” a way to rationally ground morality in an accidental atheistic universe?
- Is it loving for atheists to celebrate a lifestyle that exposes gay men to sickness and premature death?
- Is it “bigotry” for the Center for Disease Control to warn men who have sex with men about higher health risks?
- How do Christians decide what is right and wrong when they are confronted with a moral dilemma?
- How do humans sense the objective moral standard that is required for them to make moral judgments
- Can enlightenment philosophers who merely *imagine* human rights actually *create* those human rights?
- If revelations change over time for Mormons, does that undermine the need for God to ground objective morality?

I apologize for the poor quality of the video and audio. The moderator was extremely ineffective, letting Shermer go on and on making speeches instead of asking questions during his questioning time. Also, Shermer apparently thought that shouting at Turek and waving his finger at Turek was a good strategy to defend against Turek’s use of logic and evidence.

**My thoughts on Michael Shermer**

I do want to make some general comments about what Shermer said. Shermer’s view of morality is “what is best for the greatest number of people”. There are no inalienable rights that act as a break on the will of the majority. Shermer has no objection to anything that the majority has decided in any time or in any place. If he were there, he would agree that whatever they decided was morally right.

Two hundred years ago, Shermer would have endorsed slavery. And if he were in Germany 50 years ago, he would have endorsed the Holocaust. If he lived in a Pakistan today, he would endorse stoning women for wearing the wrong clothes. Atheists always think that whatever the majority is doing in a particular time and place is right for them. There are no inalienable human rights that exist apart from human opinions, on atheism.

Another problem is that Shermer is constantly making moral judgments when his own view is that morality is constantly changing in different times and places. He condemns the moral values of other times and places without having any standard in his worldview that can decide between different moral values and duties. It is like saying that lunch is better than breakfast because lunch is here and now, and breakfast was then and there. That is literally what atheists do when they make moral judgments. They have no standard that applies to different times and places, just the ever evolving opinions of the majority of people in different times and places.

**Is Michael Shermer concerned about morality?**

Finally, I want people to understand what kind of person Michael Shermer is. You can read a post by PZ Myers on his blog Pharyngula to get the picture. I think it's useful to know about Shermer's own morality since he seems to like to make moral judgments so much during debates. In my own experience in dealing with atheists, although they will talk about slavery and the Crusades, there is nothing in an atheist's moral system that makes things wrong for all times and all places. They bring it up to stop you from judging them about the things that they care about. When an atheist says "the Crusades! Slavery!" what they really mean is "I need to shame you for having a basis for moral judgments against me, so that you won't say anything about me getting married women drunk then raping them". That's what atheistic use of moral language is really about.

**What atheists really think about morality**

Atheist Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

So, when Shermer tries to shame Christians for behaviors in other times and places which our society here and now disagrees with, what he really means is "morality, objectively speaking, is nonsense, but I will use your moral sense that comes from your non-atheistic worldview to shame you, so that you won't have the confidence to judge me for my immoral behavior". And we need to get used to understanding this about atheists. Morality is nonsense to them, and their real goal is to get you off their back for their hedonism. For atheists, morality is just complying with arbitrary social customs which vary by time and place. There is nothing more to it than aping their neighbors (at least when their neighbors are watching). And they would have aped slave-owners, widow-burners and Nazi prison guards too, if they lived in that time and place. And shouted at Christians for disagreeing with them, just like Shermer did about gay marriage.

If you like the way that Frank Turek debates, then be sure and check out his new book "Stealing From God". I highly recommend it.

# Warning: if the Supreme Court legalizes same-sex marriage, you could lose your church

**Wintery Knight** · 1 May 2015 · Archived copy · Original

Hillary Clinton and the Human Rights Campaign

This is by John Zmirak, who is writing at The Stream. You should read the whole thing.

He writes:

> If you aren't following the arguments over same-sex marriage before the Supreme Court, you should be. Even if you don't cater weddings or sell pizza in Indiana, your religious freedom is in danger. For detailed accounts of the debate and the questions asked by justices that might be readable tea leaves, see Ryan Anderson's analysis and the capsule summary provided by Russell Moore and Andrew T. Walker.
>
> The outcome of this week's debate will determine whether orthodox American Christians will fall to the status of *dhimmis*, the third-class Christian citizens of sharia Muslim states. (Dhimmis have bare freedom of worship, but pay special, heavy taxes and are excluded from any positions of influence.) If the court imposes same-sex "marriage," it will be exposing the churches attended by the majority of Americans to sustained legal attack. Does that sound like crazy alarmism? The Solicitor General of the United States agrees with me. Except that he is in favor of it.
>
> Justice Samuel Alito asked Solicitor General Donald Verrilli whether acceptance of same-sex marriage would subject orthodox Christian churches to the treatment once accorded Bob Jones University, which lost its tax-exempt status because its ban on interracial dating contradicted federal policy. Verrilli seemed a little taken aback, then answered yes, "it's certainly going to be an issue."
>
> In other words, if the Supreme Court votes against natural marriage, it will free up the feds to target organizations you might have heard of, such as the Catholic Church and the Southern Baptist Convention. (In theory, the feds might also take aim at every mosque in America, but something tells me that the mosques are likely to get a pass.) Remember that the Obama administration has *already* tried to force these same churches to provide abortifacients to their employees. Attacking their tax-exempt status over biblical sexual ethics is peanuts next to that.

> In case you don't follow tax policy as a hobby, see Joe Carter's detailed account of the grave consequences this would have for churches. Put briefly, *most would close.* Unless, of course, they caved.
>
> Imagine if your house of worship needed to turn a hefty profit, so it could pay the same taxes on its property and income as a casino or a strip joint — unlike Planned Parenthood, since that abortion business is a tax-exempt (and federally funded) "charity." Imagine if none of the money you gave your church were deductible from your taxes, unlike the money you sent to Greenpeace. Many if not most religious schools and colleges would also shut their doors, unable to pay the same business taxes as for-profit diploma mills.
>
> The First Amendment won't prevent any of this. When the dictates of a religion conflict with what courts have ruled is a constitutional right, the church's claims give way every time.

Practical point:

> When presidential candidates come to our states to court us during the primaries — the only time faithful Christians exercise any real leverage in this country — the issue of same-sex marriage must now rival abortion in its importance. Any hopeful should be pressed repeatedly to give a straight, unambiguous answer to this question: **"Do you support a constitutional amendment restoring natural marriage? If not, then what exactly will you do to protect my religious freedom? If nothing, why should I support you?"** We should print that question on cards and distribute it in Iowa and New Hampshire, and candidates should hear nothing else from us till they answer. We need to know whether a year from now we will be living like Americans, or increasingly like Christians in China.

You don't have to speculate about these things, you just have to look north to Canada, or east to Europe, where the secular leftists are much stronger. Same-sex marriage is a club that the secularist leftists can use to get publicly expressed religious convictions out of the public square, once and for all. All they have to do is leverage sentiments of tolerance that come from religion to pass the gay marriage law, and then use the gay marriage law to get rid of the moral convictions that make it harder for them to do what they want without feeling ashamed. And it's working, because we have reduced Christianity to emotions, instead of grounding it on reason and evidence. It's all about feeling good now, and feeling good is more important to most Christians than respecting God's actual character.

# Why do atheists like Dan Barker abandon their faith?

**Wintery Knight** · 1 May 2015 · Archived copy · Original

Unbelievable's latest radio show featured a discussion with former Christian Dan Barker, the founder and co-President of the Freedom From Religion Foundation.

The MP3 file is here. (60 minutes)

I thought that I would make some general comments about why I think that many people leave the Christian faith, and what you should be careful of in order to avoid following in Dan Barker's footsteps, specifically.

Basically, there are four major reasons why people leave Christianity.

1. They want to do something immoral with impunity. This type of person wants to do something immoral that is forbidden by Christianity, like pre-marital sex. They dump Christianity in order to feel better about seeking happiness in this life, apart from God and his moral duties.
2. They want to pursue happiness in irresponsible ways. This type of person thinks that God's job is to save them when they act irresponsibly while pursuing happiness. When God disappoints them by not giving them what they want in order to be happy, they leave the faith.
3. They want to be loved by people, not by God. This type of person thinks that Christianity is a tool that they can use to become popular. When they first try to articulate the gospel in public, they find that people don't like them as much, and they feel bad about offending people with exclusive truth claims that they cannot back up using logic and evidence. So, they water down Christianity to get along with atheists, liberal Christians and other religions. Finally, they jettison Christianity completely and focus on making everyone feel good about whatever they believe.
4. They don't want to learn to defend their faith. This type of person is asked questions by skeptics that they cannot answer. Usually this happens when people go to university after growing up in the shelter of the Church. The questions and peer pressure make them feel stupid. Rather than investigate Christianity to see if it's true and to prepare to defend it in public, they dump it so they can be thought of as part of the "smart" crowd.

Now listen to the discussion and see if you can identify some of these factors from Barker's own carefully-prepared words. He is trying very hard to make himself look honest and moderate, because he wants Christians to be sympathetic with his story and his motives for leaving Christianity. But I think that there is enough in his statements to construct a different hypothesis of why he left Christianity.

I've grouped the data by risk factor. (These are not his *exact* views)

**Non-rational, emotional approach to Christianity**

- he was raised in a devout Christian family where he probably wouldn't have faced skeptical questions
- he converted to Christianity at age 15 as a result of a religious experience, not a serious investigation
- his idea of God was probably idealized and uninformed, e.g. – a loving God who wants us to be happy
- he wandered around from church to church preaching, with no fixed address or source of income
- he earned money by collecting "love offerings" from churches where he performed his music
- he wrote Christian songs and Christian musicals, but nothing substantive on apologetics and theology
- he worked in three churches known for being anti-intellectual and fundamentalist
- there's no evidence that of any deep study of philosophy, science and history during this time

**Desire to gain acceptance from non-Christians**

- he began to notice that some people were uncomfortable with sin and Hell

- he began to avoid preaching about sin and Hell in order to make these people comfortable
- he watered-down the gospel to focus on helping people to be happy in this life
- his manic approach to Christian ministry was challenged by the “real life” needs of his growing family
- he met liberal pastors while performing his music in their churches
- he found it difficult to disagree with them because they seemed to be “good” people
- he watered down his message further in order to appeal to people across the theological spectrum

**Ignorance of Christian apologetics**

- he began to think that if there are many different views of religion, then no view can be correct
- he was not intellectually capable of using logic and evidence to test these competing claims to see which was true
- he decided to instead re-interpret Christian truth claims as non-rational opinions, so they could all be “valid”
- he became a theological liberal, abandoning theism for an impersonal “ground of being”
- he embraced religious pluralism, the view that all religions are non-rational and make no testable truth claims
- he began to see God as a “metaphor” whose purpose is to make people have a sense of meaning and purpose
- he jettisoned God completely and focused more on helping people find meaning and morality apart from God
- seems to think that religion is about having a “great life”, and felt that you can have a “great life” without religion
- seems to think that religion is about being “good”, and felt that you can be “good” without religion
- religion makes people feel bad by telling them what to do instead of letting them do anything they want
- religion makes people feel bad by telling them what is true, instead of letting them believe whatever they want
- religion makes people feel bad by telling them that God will hold them accountable for their beliefs and actions

**So what do I think happened?**

I think he abandoned his faith because he wanted people to like him and because he needed to be invited to liberal churches in order to make money to pay for the “real life” needs of his family.

He seems to have thought that Christianity is about having his needs met and being liked by others. I think he wanted to feel good and to make people feel good with his preaching and singing. He seems to have become aware that the exclusive claims of Christianity made other people feel offended, so he cut them out. He hadn’t studied philosophy, science or history so that he would have been able to demonstrate to other people whether what he was saying was true. It’s hard to offend people when you don’t really know whether your claims are true or not, and when you don’t know how to demonstrate whether they are true or not.

I also think money was a factor. It seems to me that it would have hurt his career and reduced his invitations from liberal churches if he had kept up teaching biblical Christianity. In order to appeal to a wider audience, (like many Christian singers do – e.g. – Amy Grant, Jars of Clay, etc.), he would have felt pressured to water down the unpleasant parts of his preaching and singing. Lacking apologetics skill, he instead abandoned his message. He needed to account for his family’s needs and “real life”, and exclusive truth claims and Hell-talk would probably have reduced his ability to do that. It seems to me that he should have scaled back his extreme schedule of preaching and singing, and instead gotten a steady job so that he could afford “real life” and a family without being pressured into altering his message.

Life isn’t a fairy tale. God isn’t there to reward risky behavior. We need to be more shrewd about financial matters so that we have the ability to *not care* about what people think of us. Look at this blog. I work all day as a senior software engineer with two degrees in computer science so that I can refuse donations. I save most of what I make in case a tragedy strikes. Since I am financially secure, I can say what I think, and disregard anyone who wants me to change my message because they are offended. Becoming a Christian isn’t a license to behave irrationally and

immaturely with money. For some people, (like William Lane Craig), stepping out in faith works. But if it doesn't work, it's better to retreat and re-trench, rather than to compromise your message for money.

Barker didn't seem to make any effort to deal intellectually with typical challenges like the existence of Hell and religious pluralism. He just wanted to be liked by people instead of being liked by God. He seemed to have thought that being a Christian would make him happy and that other people would all respond to him and like him without having to do any work to explain why Christianity is true. But that's not Biblical. When the singing and preaching is over, you still have to know how to give an answer to non-Christians. But Barker couldn't give an answer – not one that allowed him to retain his beliefs. He had not prepared a defense.

**What does Dan Barker think about Christianity today?**

Many atheists today are interested in eradicating public expressions of Christian beliefs in the public square, because they hate Christianity and believe that Christians should not be allowed to make them feel bad by exercising their rights of free speech. Is Dan Barker one of these militant atheists?

Well, take a look at this video, in which he objects to a nativity scene and demands that an atheistic denunciation of theism be posted alongside it. In the video, Barker explains that the nativity scene is *hate speech*, and that the baby Jesus is a *dictator*. He seems to be totally oblivious to the the idea that if Christianity is *true,* then it doesn't matter whether it's mean and exclusive. And this seems to me to have been his problem all along, from the day of his "conversion".

So the real question is this: is it true? Barker seems to be much more interested in asking "is it nice?" and "will it make me happy?".

# What can we do to have the perfect marriage?

**Wintery Knight** · 1 May 2015 · Archived copy · Original

Painting: "Courtship", by Edmund Blair Leighton (1888)

I'm finding it hard to convince young feminists that marriage is worthwhile, but here is something that might work.

This is from chapter 1 of the book "The Proper Care and Feeding of Marriage" by Dr. Laura Schlessinger.

Is there really ever such a thing as a perfect marriage? The answer to that question is, "YES." I know you're stunned. Stay with me here: "perfect" doesn't mean that everything goes right, or your way for that matter, or that you're feeling romantically perky all the time. There are just too many unpredictable events, challenges, and tragedies in life for any of us to feel content and satisfied for any prolonged period of time. Yet, even in the midst of misery, you can still feel and believe that your marriage is perfect if you have the right attitude; and I don't mean that you think positively – I do mean that you think outwardly. When you do so, married life becomes perfect no matter what difficulties you're going through.

I took a call from Michelle, a seventeen-year-old high-school student, which will clarify:

Michelle: Hi, Dr. Laura! It's a pleasure to speak with you. My question is this: this Saturday is my boyfriend's and mine senior prom. As it turns out, we have a conflict because it is also his championship lacrosse game, at the same time as the dance. He has told me that I could decide which one we should do.

Dr L: Really? So, what's your decision?

Michelle: Well, personally, I want to go to the prom because it's our senior prom and it's our last dance together, it's meaningful, you know? But it's also his major opportunity because scouts will be at this game for college recruitment. So, for him the best choice would be for the game but I want to go to prom… selfishly.

Dr L: Do you love him?

Michelle: Of course. Yes.

Dr L: Do you imagine you're going to marry him? I'm asking you that because I just want to know the depth of your

compassion and caring for him.

Michelle: I can see it. I can definitely see it working, but I'm only seventeen… Yes, I care for him a lot.

Dr L: Well then, I guess he's going to his lacrosse tournament.

Michelle: (sounding deflated) Okay.

Dr L: **Because that's what we do when we're in love – we give them gifts… that doesn't mean you go to the store and buy something. It means you give up something that's very important to you to give them something that's very important to them.** O'Henry wrote a short story called, The Gift of the Magi. There was a young couple, very poor, married, and very much in love with each other. Christmas is coming and there is no money to buy gifts for one another. Her prized possession was her long, lovely hair which she had grown since childhood. His prized possession was his solid gold pocket watch – an heirloom, passed down from generation to generation.

Come Christmas morning, she hands her beloved a package. It is a solid gold chain for his pocket watch. He hands his beloved a package. It is a bejeweled comb to hold her beautiful hair in a bun on top of her head. They both cried with joy… even though… he no longer had the pocket watch, as he had sold it to buy her the jeweled comb… and she no longer had long hair, as she had sold it to buy him the gold chain.

Neither could use the gift the other had given them from a store – but look at the gift they truly got from the other.

Michelle: WOW!

Dr L: So, when you love somebody you give them what they really need – and your boyfriend needs you to be supportive of the fact that this game is important to his college career – for scholarships. If you do get married, you'll be dancing together for the rest of your lives.

Michelle: That's true. Well, I guess he'll be playing this game and I'll be sitting on the sidelines cheering.

Dr L: Good for you! That's the kind of woman a man should marry.

Michelle: Thank you so much, Dr. Laura.

Oh, wait a minute, friends! The story does not end there. A few days later I received this email from Michelle:

"A few days ago I called in with a dilemma I had with prom because my boyfriend's championship lacrosse game (with college scouts) was the same night. You told me the story of the Gift of the Magi, and that if you really loved someone you would be willing to give up whatever was most important to you – which for me was the prom. I took your advice and called up my boyfriend telling him that we would be going to his lacrosse game instead of senior prom. He explained to me that he knew I would decide to go to his game, so he went ahead and bought our prom tickets so we would go to the prom.

So, basically, I was willing to give up senior prom for him, and he was willing to give up what was most important to him, his championship game – proving the story of the Gift of the Magi…

But hold on! The story gets better! Yesterday we found out that because of some unknown factor, his championship game was changed from 7 o'clock to 3 o'clock in the afternoon. Is this a God thing? I think so! Now we not only get to go to prom and his lacrosse game, but we have the knowledge that we are both willing to sacrifice what is most important to us because our love is stronger.

I know that I am only 17, but I think I found a keeper!! Thank you so much for your wonderful advice to let my MAN know how important he is to me. This experience not only made me grow as a person, but is strengthening our relationship as well."

**Now, dear friends, even some seventeen year olds can understand the beauty and meaning of having somebody care enough about you to put themselves aside for you – that beats every prom and game**

**imaginable. And when you are living this scenario, no matter what grunge is going on in your life, your marriage is PERFECT!**

Emphasis mine. The point of getting married is to give self-sacrificially to someone else. Just like Jesus. Instead of being annoyed by other people's needs, we should be happy that there is something there for us to do. And of course, the right person for you will be looking at you and thinking the same thing – how can I help you by giving self-sacrificially to you? I'm not sure what is scaring women away from marriage, but if I had to guess, it's this fear of losing their autonomy and having the moral obligation to care for the needs of other people – even if those other people are strong in other areas and able to care for them.

# Is the story of the woman being stoned for adultery in John 7-8 authentic?

**Wintery Knight** · 2 May 2015 · Archived copy · Original

Here's the leading conservative New Testament scholar Daniel Wallace to explain.

Excerpt:

> One hundred and forty years ago, conservative biblical scholar and Dean of Canterbury, Henry Alford, advocated a new translation to replace the King James Bible. One of his reasons was the inferior textual basis of the KJV. Alford argued that "a translator of Holy Scripture must be…ready to sacrifice the choicest text, and the plainest proof of doctrine, if the words are not those of what he is constrained in his conscience to receive as God's testimony." He was speaking about the Trinitarian formula found in the KJV rendering of 1 John 5:7–8. Twenty years later, two Cambridge scholars came to the firm conclusion that John 7:53–8:11 also was not part of the original text of scripture. But Westcott and Hort's view has not had nearly the impact that Alford's did.
>
> For a long time, biblical scholars have recognized the poor textual credentials of the story of the woman caught in adultery (John 7:53–8:11). The evidence against its authenticity is overwhelming: The earliest manuscripts with substantial portions of John's Gospel (P66 and P75) lack these verses. They skip from John 7:52to 8:12. The oldest large codices of the Bible also lack these verses: codex Sinaiticus and Vaticanus, both from the fourth century, are normally considered to be the most important biblical manuscripts of the NT extant today. Neither of them has these verses. Codex Alexandrinus, from the fifth century, lacks several leaves in the middle of John. But because of the consistency of the letter size, width of lines, and lines per page, the evidence is conclusive that this manuscript also lacked the *pericope adulterae*. Codex Ephraemi Rescriptus, also from the fifth century, apparently lacked these verses as well (it is similar to Alexandrinus in that some leaves are missing). **The earliest extant manuscript to have these verses is codex Bezae, an eccentric text once in the possession of Theodore Beza. He gave this manuscript to the University of Cambridge in 1581 as a gift, telling the school that he was confident that the scholars there would be able to figure out its significance.** He washed his hands of the document. Bezae is indeed the most eccentric NT manuscript extant today, yet it is the chief representative of the Western text-type (the text-form that became dominant in Rome and the Latin West).
>
> **When P66, P75, Sinaiticus, and Vaticanus agree, their combined testimony is overwhelmingly strong that a particular reading is not authentic. But it is not only the early Greek manuscripts that lack this text. The great majority of Greek manuscripts through the first eight centuries lack this pericope. And except for Bezae (or codex D), virtually all of the most important Greek witnesses through the first eight centuries do not have the verses. Of the three most important early versions of the New Testament (Coptic, Latin, Syriac), two of them lack the story in their earliest and best witnesses. The Latin alone has the story in its best early witnesses.**
>
> Even patristic writers seemed to overlook this text. Bruce Metzger, arguably the greatest textual critic of the twentieth century, argued that "No Greek Church Father prior to Euthymius Zigabenus (twelfth century) comments on the passage, and Euthymius declares that the accurate copies of the Gospel do not contain it" (*Textual Commentary*, 2nd ed., *loc. cit.*).
>
> It is an important point to note that although the story of the woman caught in adultery is found in most of our printed Bibles today, the evidence suggests that the majority of Bibles during the first eight centuries of the Christian faith did not contain the story. Externally, most scholars would say that the evidence for it not being an authentic part of John's Gospel is rock solid.
>
> But textual criticism is not based on external evidence alone; there is also the internal evidence to consider.

> This is comprised of two parts: *intrinsic evidence* has to do with what an author is likely to have written;*transcriptional evidence* has to do with how and why a scribe would have changed the text.
>
> Intrinsically, the vocabulary, syntax, and style look far more like Luke than they do John. There is almost nothing in these twelve verses that has a Johannine flavor. And transcriptionally, scribes were almost always prone to add material rather than omit it—especially a big block of text such as this, rich in its description of Jesus' mercy. One of the remarkable things about this passage, in fact, is that it is found in multiple locations. Most manuscripts that have it place it in its now traditional location: between John 7:52 and 8:12. But an entire family of manuscripts has the passage at the end of Luke 21, while another family places it at the end of John's Gospel. Other manuscripts place it at the end of Luke or in various places in John 7.
>
> The *pericope adulterae* has all the earmarks of a pericope that was looking for a home. It took up permanent residence, in the ninth century, in the middle of the fourth gospel.

Wallace teaches at the ultra-conservative fundamentalist Dallas Theological Seminary, and is the foremost evangelical manuscript expert in the world.

Why is this important? I think it is important because this story is very prominent for a great many Christians, especially Christian women, who use this to justify a variety of positions that are inconsistent with the rest of the Bible. These Christians *do not like the idea of anyone being judged* and so they are naturally inclined to blow this disputed passage into an entire theology that repudiates making moral judgments on such things as capital punishment. In fact, in another post, I was accused of being the equivalent of one of the people who wanted to stone the woman taken for adultery because I oppose fornication and single motherhood. That's how far this has gone, where some Christians, especially Christian feminists, have leveraged this passage to redefine the Bible so that women are no longer responsible to the Bible's moral rules and can never be blamed for acting irresponsibly.

# A popular reason why people leave Christianity: disappointment with God

**Wintery Knight** · 2 May 2015 · Archived copy · Original

Part 2 of a brilliant series by Bradley Wright. This time he explains how people leave Christianity because they expect God to meet their needs and he doesn't.

Excerpt:

> In a study of religious deconversion, we analyzed 50 on-line testimonies posted by former Christians, and in these testimonies we found four general explanations for deconversion. The first explanation, which I wrote about last week, regarded intellectual and theological concerns about the Christian faith. The second, which I elaborate here, regards a failed relationship with God. Almost half (22 of 50) of the writers expressed sentiments that in some way God had failed them by His not doing what they thought He should.
>
> God's perceived failure took various forms, most of which fall under the general heading of "unanswered prayers."
>
> One way that people felt that God had failed them happened when He did not respond to requests for help during difficult times. A young man raised in a Baptist church epitomized this feeling of failure when he wrote about God not answering his prayers about family difficulties. He wrote: "The first time I questioned the faith was when my grandmother shriveled up in front of me for 6 month's due to cancer. I was 13 & my mother & father [were] getting a divorce. My father told me I should have been aborted. I prayed to God but nothing fails like prayers."

So you can see here where people have this expectation that it is God's job to give them good health. But is that anywhere in the Bible? Is it God's job to make us healthy so that we can have a happy life, even if we are busy spending that happy life ignoring him and not knowing his character. When you ask a serious Christian what it is like to be a Christian, we will tell you that what God is about is NOT making us healthy or happy, but instead giving us time and peace to study him, to make plans to serve him, to execute those plans, and to have (sometimes unhappy) experiences that cause our sympathies to change as we feel what God feels. In short, life is about getting closer to him, and suffering and sickness is one of the tools God uses in order to get us to know him as he is and to participate in the relationship.

> Likewise, a woman raised in a Methodist household described her step-father as "cruel and abusive" to her, and she could not understand why "if God loves me, why won't he protect me instead of letting this happen to me?"

I think the reason why God allows suffering like this is to create people who take his rules about sexual morality seriously. When I was growing up I had front-row seats to the divorces of many of my friends. I remember vividly talking to children who cried to me about how they felt when their mothers invited new men into the house after the divorce. Pain and suffering like this is a reminder to us that the moral law is real, that God expects us to follow it in order to prevent harm. One of the reasons why I am chaste is because I listen to the stories of men whose girlfriends aborted their babies, the stories of women who cohabitated and then were betrayed, the stories of the children of divorces. And from this I learn that morality is real and it matters.

> In a variation of this theme, some deconverts lamented God's inactivity amidst spiritual difficulties. A man in his forties, a former elder at a charismatic church, wrote: "In my own life, no matter how much I submitted to 'God' and prayed in faith, 'sin' never seemed to leave me. Well, what's the point of being 'saved' if you aren't delivered from 'sin'?"

This is why accurate theology matters. No serious Christian thinks that you stop sinning after you become a Christian, and no serious Christian thinks that prayer alone is a solution to sin. To stop sinning, you need to engage more than the spirit, you need to engage the mind. Most people want to spiritualize things because prayer is easier than study. But if you want to stop sinning, the best way is a combination of prayer and study. If you want to stop premarital sex, study how premarital sex affects STD infection, risk of divorce, future marital stability, oxytocin, quality of marriage, and so on. Study the risks of divorce. That's how you stop sinning. Some people want to dumb Christianity down to the level of superstition then they complain that it doesn't work. But Christianity is better when you learn more and work harder.

> A former Southern Baptist described the various good things that God failed to give him: "God promises me a lot in the bible and he's not come through. Ask and it shall be given. Follow me and I will bless you. I promise you life and promise abundance. Man should not be alone. I have a plan for you. Give tithe and I will reward you. All broken promises. This god lacks clarification. This god lacks faith in me. He wants my faith. I want his too."

Do you know what I expect from God after reading the Bible? I expect what Jesus got: pain and suffering during obedience. What kind of simpleton reads the Bible and thinks that it is about getting goodies from God? That is NOWHERE in the Bible. It's projecting Santa Claus onto God and that isn't going to work – God has other plans for us, and those plans involve work and pain. People become Christians because they want to be like Jesus, and they understand that Jesus was not having fun. He was doing a job, and he wasn't happy or appreciated.

> Other writers took a different approach to God's failures. They too sought God's help, but when they did not receive it, they simply concluded that God did not exist. A former member of an Assemblies of God church explicitly linked unanswered prayers and the existence of God: "How many humble and totally selfless prayers offered up to and ignored by the imaginary skydaddy does it take for the average person to finally throw in the towel and say [God doesn't exist]!!!!" His answer: "Too damn many."

It's so strange to me that people think that the best way to see God interfere is to pray. The way I see God working in my life is when I go home and listen to some debate about the problem of evil, and then the next day some atheist asks me out to lunch to talk about why God allows evil. Maybe instead of doing easy things, we should actually invest in our relationship with God and then see if he responds by giving us work to do. Maybe a relationship with God is about serving him, and the joy is about seeing him reward those efforts by working with us and through us. Maybe God has more for us than just entertainment.

> Still others sought a tangible sign of God's presence. A former Pentecostal exclaimed: "There were many nights while in bed I would ask God to show me the truth, or give me some type of sign to show that he or she existed. These prayers would never be answered. So I would just go on with my life having doubts." Likewise, a former Baptist missionary wrote: "I've begged God to show himself to me and put an end to my inner torture. So far it hasn't happened and the only thing I know for sure is that I have unanswered questions."

I think this paragraph is interesting, since I consider things like church, praying and singing hymns to be less practical when compared with practical and difficult things like chastity, apologetics, charity, studying hard things, getting a good job, committing to caring for others who have special needs, etc. If you want to feel the presence of God, then do the right thing and take the punishment for doing it. That's what Christianity is really about.

**The example of Dan Barker**

I've actually written about this before in the context of Dan Barker, a charismatic fundamentalist praise hymn singer and writer who expected God to validate all of his irresponsible ministry decisions. Eventually, he fell away from the church because he had this ludicrous Santa Claus caricature of God that didn't match reality. Dan Barker

is the complete opposite of everything I consider a manly Christian to be. He is the polar opposite of what I recommend to men when I recommend that they study math, science, engineering and technology, avoid music, singing and dancing, and prefer apologetics and conservative politics over speaking in tongues and apocalyptic fiction. This man, when he was a “Christian”, was the complete opposite of the WK Christian man model. Men should be practical.

I think that Christians should protect themselves from the Dan Barker outcome by being aware of how emotional experiences and praise hymns warp your view of God. God is a person, and he has a goal for you – to know him. To achieve that goal, it may not be effective to just give you everything you want. It may be the case that God has to allow you to experience some suffering, to form your character and to bring your goals in line with his character. Children have to grow up, and shielding them from pain and responsibility doesn’t allow them to grow up.

# Should Christians expect to know God's will by means of feelings and intuitions?

**Wintery Knight** · 3 May 2015 · Archived copy · Original

There are two views on the topic of decision making and the will of God. The view you learn in the church is called "the traditional view". I call this view the feelings/intuition view. This view that elevates feelings / intuitions to the level of divine communications from God. The more practical view is called "the wisdom view". I call this view the battlefield commander view. I am a proponent of the wisdom / commander view.

Let's learn about the two different views:

> [The traditional view is] that God has a plan for our lives and that we receive guidance through methods such as "open and closed doors", "feeling led" and "the still, small, voice".
>
> [The wisdom view] holds that God does not have an "individual will" for our lives, but rather that all of God's will can be summed up within two categories, God's sovereign will and God's moral will. Basically God's sovereign will is all the things that god decrees will happen. It is hidden (mostly) from us, and does not play an active part in our decision, although some of it is revealed in the bible. God's moral will is the part that we must concern ourselves with in making decisions. It is fully revealed in the bible and our decisions must be made within it. We may use wisdom in applying god's moral will to our lives, or we may be in an area not covered by god's moral will. We must finally submit in advance to God's sovereign will, being prepared for him to sovereignty intervene and redirect us through whatever means he wills (see James).

Here's a bit more from someone else:

> Regarding the view that God has a personal will for us individually that we have to discern and find, J.I. Packer says, "The first thing to say is that the idea of guidance is actually a novelty among orthodox evangelicals. It does not go back farther than the last century. Second, it has led people to so much foolish action on the one hand, and so much foolish inaction on the other, as well as puzzlement and heartbreak when the 'hotline' to God seems to go silent, that it has to be discredited. Third, it must be said that Scripture gives us no more warrant constantly to expect personal 'hotline,' 'voice-from-the-control-tower' guidance than to expect new authoritative revelations to come our way for the guidance of the whole church." (Hot Tub Religion, page 118).
>
> As to the point of the question, how do I make decisions, I attempt to make decisions in light of three factors: God's moral will, wisdom, and my personal desires. If something is opposed to God's moral will, then I should obviously flee from it. If it's not opposed, then I consider the wisdom of the choices. For example, would it be wise for me to marry a woman who loves Jesus, though we have nothing else in common? Probably not. If the options pass the criteria of wisdom, then I'm free to choose how I wish. If I'm offered two jobs, and both are honoring to God, and both would be wise to take, then I'm free to choose the job I would like more. I don't need to put out a fleece or await some other confirmation from God. If it's moral and wise, then the only question as to whether or not it will honor Him is my attitude.
>
> Some examples of this model used in the Bible (in theological circles referred to as the Wisdom Model) are in Paul's planning of a mission to Rome in Romans 1:9-15, 15:22-24, the Jerusalem Council (Acts 15:1-29), and Paul's instructions for legal disputes (1 Cor 6:3-6).

The best book on this topic is Garry Friesen's "Decision Making and the Will of God". In it, you'll find a full assessment about what the Bible teaches on this topic.

When I am trying to decide what will be effective, I look at Christian scholars, at their papers, books, and public

debates. That's effectiveness because it is addressed to a non-Christian audience in public with the force of reason and evidence. It is persuasion and it is addressed to rational minds. I want to change the minds of people who have a large influence on society on the whole. I don't think that offering Christianity as life-enhancement or self-help is really "having an influence". I think that offering Christianity as truth, with support, is "having an influence".

So let me be clear about what I believe:

- I don't think that God normally talks to people directly
- I don't believe that life is an Easter egg hunt, filled with clues accessible only to emotion and intuition
- I don't believe that God expects people to discover a specific will for their lives using non-rational means
- I think that people make up their own life plan that is consistent with the Bible
- The goal of the life plan is to be effective, and there are no other considerations
- I think that there are many good things a person can do, but that some are more effective than others
- I think that with respect to the goal of serving God effectively, *my happiness is expendable*
- I don't think that the purpose of doing something for the Lord is to feel good about ourselves
- I don't think that people should choose ineffective things to do just because they like them
- I don't think that people should choose ineffective things to do just because they are good at them
- I think people should do hard things that they don't like – as long as it's more effective
- I don't think that any course of action is as effective as any other – some plans accomplish more
- I don't think that life is totally unpredictable and irrational and subjective
- I think that we can know what is or is not effective by studying and learning about the world
- I think life is like a battlefield that must be surveyed, understood and acted upon deliberately

I think that every person is the commanding officer of his or her own life, and each person must study everything they can, make a plan that is consistent with the Bible's moral prescriptions, execute the plan and achieve whatever they can achieve for the Lord. And the goal is not comfort or happy feelings, but real achievements. Not for the purpose of being saved, of course, because salvation is a free gift of God because of what Jesus did on the cross. Life is more like a battle than a vacation resort or a buffet or a shopping center. God's will for us is not have happy feelings, but that we freely choose to sacrifice ourselves out of obedience and service to him. In my case, that means studying hard things, making money, saving money, and giving money away to good scholars, sponsoring good events and being persuasive to non-Christians. None of this necessarily makes me happy, but it does work to bring glory to God. I cried when I had to learn calculus, because it was so hard. But who cares? The main thing is that I have money now to sponsor Christian speakers or to give books to Christians to read, and God is happy with that.

I think that it is very important to realize that God is not impressed by our not being smart and not being effective. If we have the ability to be smart, then we should be smart, whether it makes us happy or not. If we have the ability to make money, then we should make money, whether it makes us happy or not. If we have the ability have a great influence, then we should have a great influence, whether it makes us happy or not. There will be plenty of time for happiness after we're dead. But this life is a time of serving, and we should try to serve effectively, whether it makes us happy or not. With respect to God's purposes in the world, my happiness is expendable.

Whenever someone questions my goals and plans by saying that I am asserting my will over God's will, the first question I want to ask that person is this: "how do you know what God's will is?" and "what is your basis for thinking that my plan to serve will not be effective?". I want to know if I have misunderstood something about the way the world is, or miscalculated in some way. I want someone to look at my calculations and show where they are going to produce a less optimal result for the Lord. That's the only concern I have – effectiveness for the Lord. Usually what I have found is that the other person wants to make the purpose of life *their own happiness*, and it makes them happier to choose what to do moment by moment, without having to study anything or make plans. It's

not that they have better goals (for God) or better plans (for God). It's that they want their goals to be above God, and they don't want to make plans other than to do whatever makes them happy.

This article by Greg Koukl may be helpful.

And I also found this summary of the Friesen book useful:

- Part 1
- Part 2
- Part 3
- Part 4
- Part 5
- Part 6
- Part 7
- Part 8
- Part 9

In nine parts.

# Why do famous atheists believe that God does not exist?

**Wintery Knight** · 3 May 2015 · Archived copy · Original

Here's a lecture by New York University professor Paul Vitz to explain a connection between atheism and fatherlessness:

Here's an article by Paul Copan (related to the lecture) which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.*It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own*rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of Francois-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]

> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]
>
> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Here are some corrections to the list:

1) Voltaire was not an atheist but a deist who rejected claims of the Bible's inspiration, like Paine. Voltaire's aphorism, "If God did not exist, it would be necessary to invent him," far from being the cynical remark it is often taken for, it was meant as a retort to the atheistic clique of d'Holbach, Grimm, and others.

2) David Hume's religious views remain uncertain. He never said he was an atheist. A gentle skeptic suits him more.

3) Bertrand Russell was an agnostic.

Not only is there that anecdotal evidence of a psychological explanation for atheism, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an enormously difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary.

By the way, isn't it interesting to note that Barack Obama also grew up fatherless and has issues with God and morality.

# What's the best book a woman can read to prepare herself for marriage?

**Wintery Knight** · 4 May 2015 · Archived copy · Original

A good marriage is more than fun and feelings – it takes planning and work

I found a great lecture by Sue Bohlin, who works at Probe Ministries. The lecture is about the book "The Proper Care and Feeding of Husbands" by Dr. Laura Schlessinger. I recommend this book more highly than any other book to Christian women. It really does a lot to give young women a different perspective on men and marriage. Don't be thrown off by the funny title, it's really good.

The MP3 file is here. (48 minutes)

Here is a blog post that Sue wrote that captures most of the material in the lecture.

Here's the introduction:

> Talk show host Dr. Laura Schlessinger has written a book that is improving thousands of marriages: *The Proper Care and Feeding of Husbands.* We need this book because millions of wives either don't know how to love their husbands wisely and well, or they're too self-centered to see it as important. Dr. Laura credits this dismal condition to forty years of feminist philosophy, "with its condemnation of just about everything male as evil, stupid, and oppressive, and the denigration of female and male roles in families." While the women's movement certainly had a hand to play in the disintegration of relationships and the family, I believe the core cause is our sinful self-centeredness, just as the Bible says.
>
> Which is why we need help, and God instructs older women to train younger women to love their husband and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God. *The Proper Care and Feeding of Husbands* is a great resource for learning these important values and skills.

And here's the first part I thought was most important:

> A listener to Dr. Laura's radio show named Edgar wrote, "There are a few things that men want so bad they would do anything for it. I think a good number of men want respect more than love. They like to feel they

> have some power. I nearly cry when you tell a woman caller to respect her husband. There is so much selfishness in the world—in marriages. Prosperity has allowed women to be so independent, and thus so selfish. I always feel as though I come last—my feelings come last, my needs come last."
>
> *"A good number of men want respect more than love."* God knew this when He made us. His commands to husbands and wives in Ephesians 5:33 reflects each one's deepest needs: "Each one of you also must love his wife as he loves himself, and the wife must respect her husband." Dr. Emerson Eggerichs of LoveandRespect.com points out that this verse commands a husband to love his wife. Why? She needs love like she needs air to breathe. This same verse commands a wife to respect her husband. Why? He needs respect like he needs air to breathe.
>
> - Respect means treating someone in a way that builds him up and doesn't tear him down, never denigrating or attacking.
> - Respect means always treating the other person with the dignity they deserve as a person made in the image of God.
> - Respect means grasping that a man's needs and wants are every bit as valid and important as a woman's needs and wants.
> - Respect means not venting to others, *especially* the children. One woman wrote to Dr. Laura, "No emotional outlet is worth damaging my husband's reputation."
>
> There are three A's that men long for from their wives: attention, affection, and affirmation. Respect involves paying attention to what they do simply because they're the ones doing it.

Yes, respect is very important to men, but the thing is, a woman can't respect every man equally. She should choose a man who does things that are respectable. Then respecting him will be easy. Sometimes, women overestimate how easy men are to change after marriage. It's better to just pick one who does all the important things instead of thinking that you can pick a good-looking one and make him do the important stuff like be faithful to you, hold a steady job, save money, argue without getting angry, etc. later. Men don't change much, so pick one who does things that you respect and then give him respect.

And this part also seemed important to me:

> A man named Roy wrote to Dr. Laura with some good advice for wives: "If you can't accentuate the positive, at least acknowledge it. The world is full of messages to men that there are standards we don't meet. There is always another man who is more handsome, more virile, or more athletic than we are. None of that matters if the most important person in our life looks up to us, accepts us as we are, and loves us even though we aren't perfect. . . . All I know is that the husband who has a wife who supports him and praises him for the positive things he does is the envy of all the other men who have to live with criticism, sarcasm, and constant reminders of their failures."
>
> Men desperately want and need the support of their wives. This is reflected in what God reveals in His Word when He says, "It is not good for man to be alone. I will make a helper suitable for him." And through the apostle Paul, God instructs wives to relate to their husbands in a way that meets this need when He says, "Wives, submit to your husbands as to the Lord."
>
> Submission is basically giving support with a willing, cooperative heart.
>
> A wife's submission includes knowing her gifts and strengths, and using them to serve her husband and family.
>
> Service has a bad name, but both husbands and wives are called to serve God first and then each other; husbands are called to sacrificially love and serve their wives with Jesus as their pattern.
>
> So what does support look like?
>
> - Believing in him. Telling him, "You have what it takes." Being his #1 fan.

> - Cultivating a cooperative heart.
> - Being generous and openhearted—willing to use your gifts and strengths to help him succeed.
> - Understanding the importance of making him look good: never saying anything negative in public.
> - Creating a home that's a safe haven from the world.
> - Having a warm heart with a positive, cheerful demeanor. Women set the temperature of the home; we are thermostats, not thermometers, of the family. (On the other hand, Proverbs says "A quarrelsome wife is like a constant dripping on a rainy day; restraining her is like restraining the wind or grasping oil with the hand.")
> - Being interested in him and his life.
> - Showing thoughtfulness. What does he like? Do it.
> - And though by no means exhaustive, it also means being a person of faithfulness and integrity. That means keeping your promises and being dependable. As Proverbs 31 puts it, "Her husband has full confidence in her and lacks nothing of value."

Support and encouragement is SO important to a man. A man can continue to function fine if the whole world opposes him, but not if the woman he loves doesn't support him. When a man falls in love, a woman has to realize the enormous power she has over him, and be careful not to hurt him. Men are vulnerable to the woman they choose. Although they look pretty tough on the outside, they can easily be hurt by insults or discouragement.

**Parting thoughts**

So, this lecture and the book are good, but young women should also seek out the advice of older Christian women who have been married successfully for some time. Read Titus 2:3-4 – the Bible encourages older women to mentor younger women! This is really important because we are in a time where young women are often pulled by the culture in many wrong directions, and they need help from people who know what they are doing.

One last point – I actually bought the audio version of the Dr. Laura book and noticed that it was just over two hours long. It turns out that the audio version is *abridged* – it is not as complete as the actual book. I noticed that Sue was quoting from the book passages that I had not heard in the audio recording. So, if you want the full content, get the book, not the audio recording.

# Frequent denial of sex breaks the marriage covenant as much as adultery

**Wintery Knight** · 4 May 2015 · Archived copy · Original

Let's start this post by quoting a passage from the Bible.

1 Corinthians 7:1-5:

1 Now concerning the things about which you wrote, it is good for a man not to touch a woman.

[2] But because of immoralities, each man is to have his own wife, and each woman is to have her own husband.

[3] The husband must fulfill his duty to his wife, and likewise also the wife to her husband.

[4] The wife does not have authority over her own body, but the husband *does*; and likewise also the husband does not have authority over his own body, but the wife *does*.

[5] Stop depriving one another, except by agreement for a time, so that you may devote yourselves to prayer, and come together again so that Satan will not tempt you because of your lack of self-control.

So with that in mind, I want to turn to a well-known Jewish talk show host named Dennis Prager, who is much loved and listened to by Christians. Dennis Prager features a lot of discussions about male-female relationships on his show, particularly during the male-female hour. In this two part series on male sexuality, he explains why women should not deprive their husbands of sex without a good reason.

Part 1 is here.

Excerpt:

> It is an axiom of contemporary marital life that if a wife is not in the mood, she need not have sex with her husband. Here are some arguments why a woman who loves her husband might want to rethink this axiom.
>
> First, women need to recognize how a man understands a wife's refusal to have sex with him: A husband knows that his wife loves him first and foremost by her willingness to give her body to him. This is rarely the case for women. Few women know their husband loves them because he gives her his body (the idea sounds almost funny). This is, therefore, usually a revelation to a woman. Many women think men's natures are similar to theirs, and this is so different from a woman's nature, that few women know this about men unless told about it.
>
> This is a major reason many husbands clam up. A man whose wife frequently denies him sex will first be hurt, then sad, then angry, then quiet. And most men will never tell their wives why they have become quiet and distant. They are afraid to tell their wives. They are often made to feel ashamed of their male sexual nature, and they are humiliated (indeed emasculated) by feeling that they are reduced to having to beg for sex.
>
> When first told this about men, women generally react in one or more of five ways…

He then explains the 5 ways that women respond to this.

Here's one:

> 1. You have to be kidding. That certainly isn't my way of knowing if he loves me. There have to be deeper ways than sex for me to show my husband that I love him.

I think that this is a common mistake that liberal women make because they think that men are just hairy women. But men are not women, we are different and sex means something different to men than it does to women. In the past, *most* women understood how men are different than women, but younger women have been taught that there

are no differences between the sexes. To think any different is “sexism”.

Here’s another from the list:

> 4. You have it backwards. If he truly loved me, he wouldn’t expect sex when I’m not in the mood.

Again, this is the common mistake that many younger women today make in thinking that love is a one-way street – flowing from men and children to the woman. If men and children DON’T do what the woman wants, or if they make demands on her, then they don’t “love” her and she is justified in ignoring them.

Liberal women have been taught to believe that they are always victims or some group of oppressors, such as men and children or corporations. It makes them rebel against having to do anything for anyone else, because they don’t want to be “oppressed”. That makes them unable to accept that relationships are give-and-take, Once a commitment to love another person permanently has been made, then each person has responsibilities to provide for the needs of the other.

I actually had a conversation with a Christian woman once who said that women should not be obligated to do things that they didn’t feel like doing. I asked her if men were obligated to go to work when they didn’t feel like going. She said yes, and acted as though I were crazy for asking. I just laughed, because she didn’t even see the inconsistency. The truth is that men often don’t feel like working, but they get up and go to work anyway, whether they like it or not (in most cases). Similarly, a women should feel obligated to have sex with her husband, even if she is not in a perfect mood for it (in most cases). Sometimes, a man stays home from work, and it’s OK. And sometimes a woman says no to sex, and it’s OK. But it’s not OK to stop doing it for months and months with no good reason.

Part 2 is here.

Excerpt:

> Here are eight reasons for a woman not to allow not being in the mood for sex to determine whether she denies her husband sex.

He then explains the eight reasons.

Here’s one of them:

> 7. Many contemporary women have an almost exclusively romantic notion of sex: It should always be mutually desired and equally satisfying or one should not engage in it. Therefore, if a couple engages in sexual relations when he wants it and she does not, the act is “dehumanizing” and “mechanical.” Now, ideally, every time a husband and wife have sex, they would equally desire it and equally enjoy it. But, given the different sexual natures of men and women, this cannot always be the case. If it is romance a woman seeks — and she has every reason to seek it — it would help her to realize how much more romantic her husband and her marriage are likely to be if he is not regularly denied sex, even of the non-romantic variety.

Women have to engage their husbands if they expect their husbands to engage in the marriage as a husband and father. Men can’t do their protector, provider and spiritual leader roles forever unless their needs are met at some point. Performance of these male duties is not free. Wives have to love their husbands in the way that men expect to be loved. That’s what they vowed to do in the wedding, isn’t it?

At the end of the article, Prager makes a general point about women that I think needs to be emphasized over and over and over:

> That solution is for a wife who loves her husband — if she doesn’t love him, mood is not the problem — to be

> guided by her mind, not her mood, in deciding whether to deny her husband sex.

This problem of sex-withholding is so widespread, that it really makes me (although I am a virgin) wonder what women think that marriage is about anyway. When a woman vows to love her husband, what do they think that word really means? Why do women think that men marry? What do men want that marriage provides for them? Which of those needs are the women's responsibility to provide for? I think these are questions that men should ask women. I think women should be prepared to answer them. Men should expect that women be reading books on men and marriage, and that she has relationships with men where she is giving support, respect, affirmation, affection and approval. You can learn a lot about a woman by how she treats her father, for example.

Unfortunately, many men today haven't thought through what they need from wives in a marriage. They spend their young years chasing women who are fun and sexually permissive. Every husband I asked about what they need has told me that respect, affirmation, affection and regular sex are more important than appearance and fun. Pre-marital sex, having fun, getting drunk, and going out, etc. are not the right foundation for marriage – which requires mutual self-sacrifice in order to work.

Another point: I have a friend who is very concerned that men are breaking sexual rules, but he seems oblivious to 1 Corinthians 7:1-5. I asked him privately what he thought about sex-withholding, and whether this might cause husbands to turn to pornography and even affairs, and I mentioned 1 Corinthians 7:1-5. He said: "no, it's not something I take much interest in". I was tempted to ask him if the Bible was something that he does not take much interest in.

I think he misreads 1 Corinthians 7:1-5 so that it could only be used to condemn *men*. If that were his view, then it actually worries me if well-meaning men are actually undermining marriage, by teaching women that they have no responsibilities to keep the marriage going, and helping them to feel like victims when their marriages fall apart. Sometimes even people who claim to be pro-marriage can undermine marriage practically-speaking, because of their unBiblical belief that women are "naturally good" and should not have any responsibilities in a marriage.

I thought this attitude was so interesting in view of what I read in the Proper Care and Feeding of Husbands. In that book, Dr. Laura urges women to be sensitive to their husbands' different male natures in order to avoid them looking at pornography and having affairs. Withholding sex from a man is the equivalent of a man withholding *conversation* to a woman. Sex is how a man feels loved! What's remarkable is how female callers on her show are shocked that men react badly to being deprived of sex.

I do think that some men will look at porn and cheat regardless of what their wife does sexually, but then it again falls to the woman to choose a man who has demonstrated that he has self-control – i.e., a virgin who has remained chaste with her throughout the courtship and protected her from doing sexual things outside of the covenant context. Chastity is hard, but it is how a man loves his wife self-sacrificially, before he even meets her. It should be a trait much sought after *and respected* by women. Basically, women need to be led by their minds, not by their feelings, when choosing a husband.

A man has to get up and go to work every day for his family, regardless of whether he feels like it or not. In fact, the many decisions he has made before getting married are also made not because they make him happy, but because he needs to be responsible to his future wife and children. The decision to study science? Loving obligation. The decision to go to grad school in science? Loving obligation. The decision to work in a demanding, risky career? Loving obligation. The decision to save money and eat instant oatmeal for dinner? Loving obligation. Men don't do these things because we enjoy them. We do it because we love our wives and children self-sacrificially, *before we ever even meet them*. I think that women need to do the same.

# Don Johnson: six reasons why people reject Christianity

**Wintery Knight** · 4 May 2015 · Archived copy · Original

Here's a post on practical evangelism by Christian scholar Don Johnson.

His list of reasons why people often reject Christianity:

1. Christians behaving badly
2. Disappointment with God
3. Weak or absent father
4. Social pressure
5. Cost of discipleship
6. Immorality (especially sexual immorality)

And here's the detail on #6:

> Of all the motivations and reasons for skepticism that I encounter, immorality is easily the most common. In particular, sexual sin seems to be the largest single factor driving disbelief in our culture. Brant Hanson calls sex "The Big But" because he so often hears this from unbelievers: "'I like Jesus, BUT…' and the 'but' is usually followed, one way or the other, with an objection about the Bible and… sex. People think something's deeply messed-up with a belief system that says two consenting, unmarried adults should refrain from sex." In other words, people simply do not want to follow the Christian teaching that sexual intercourse should take place only between and man and woman who are married, so they throw the whole religion out.
>
> The easiest way to justify sin is to deny that there is a creator to provide reality with a nature, thereby denying that there is any inherent order and purpose in the universe.
>
> Aldous Huxley admitted that this is a common reason for skepticism:
>
> I had motives for not wanting the world to have a meaning; consequently I assumed that it had none and was able without any difficulty to find satisfying reasons for this assumption…. Those who detect no meaning in the world generally do so because, for one reason or another, it suits their books that the world should be meaningless. …
>
> For myself as, no doubt, for most of my contemporaries, the philosophy of meaninglessness was essentially an instrument of liberation. The liberation we desired was …liberation from … a certain system of morality. We objected to the morality because it interfered with our sexual freedom…. There was one admirably simple method in our political and erotic revolt: We could deny that the world had any meaning whatsoever. Similar tactics had been adopted during the eighteenth century and for the same reasons. (Ends and Means, 270-273)
>
> Indeed, similar tactics have been used extensively up to the present day. If you are looking for two great resources that document the extent to which the work of the world's "great" atheistic thinkers has been "calculated to justify or minimize the shame of their own debauchery," (Spiegel, 72) I recommend *Intellectuals* by Paul Johnson and *Degenerate Moderns: Modernity as Rationalized Sexual Misbehavior* by E. Michael Jones. The bottom line is that these skeptical scholars didn't reach their conclusions by following the evidence where it led. They didn't "discover" that the world was meaningless and then proceed to live accordingly. They lived sinful lives (usually involving some type of sexual deviancy) and then produced theories that justified their actions.

It's important to understand that an atheist is not identical to a Christian, except not religious. There is something else going on in their minds when they reject very obvious evidences like the origin of the universe, the cosmic fine-tuning, the origin of life, the Cambrian explosion, the habitability arguments, etc. The something else that is

going on is hinted at when you look at atheist attitudes to abortion. According to a recent survey of atheists, 97% of them were pro-abortion!

What kind of person likes abortion? The kind of person who wants to be sexually active with no consequences, even if it means taking someone else's life. The desire to do as they please and retreat from obligations to others is the key. Now dispensing with God and his obligations is not an unreasonable view if there is no evidence for God, but it does provide a motive for people to not look for that evidence if happiness is their main goal. When I discuss these issues with atheists, I find that no work has been done to read anything. Not even debates, where there are two sides. They don't want to hear the case for Christian theism, and they work hard to avoid stumbling across it by accident, too.

**God and the cosmic authority problem**

Tough Questions Answered has a quote from Christian philosopher Paul Moser that I think is relevant:

> It would be a strange, defective God who didn't pose a serious cosmic authority problem for humans. Part of the status of being God, after all, is that God has a unique authority, or lordship, over humans. Since we humans aren't God, the true God would have authority over us and would seek to correct our profoundly selfish ways.

So we're not dealing with unbiased truth-seekers here. The goal might not always be sex, but let's be honest. Who wants to have to spend time reading the Bible, praying, going to church and reading thick books by Stephen C. Meyer, Michael Licona and Hugh Ross so that we can answer questions? No one. Who wants to give up premarital sex so that we can create a stable marriage for children so they can grow up in a safe place where knowing God is natural and easy? No one. We just don't want to have to do stuff for God, even if it's good stuff. We don't want to have build a life that is a testament to God's existence and character, especially if it means that other people will think that we are weird and maybe even a bit mean. We want to do what we want to do instead, and be liked by other people.

That's the real challenge of Christianity: setting aside what you wanted to do, and letting God be your customer, instead. You'd be surprised how many Christians aren't comfortable with the idea of serving God and being viewed in a bad way by non-Christians. They aren't OK with the self-sacrifice, and they are really not OK with the social disapproval. It's hard to be chaste, and to be known to be chaste by your peers, for example. Much easier to just give in and do what everyone else is doing.

**Let's illustrate with C.S. Lewis**

And here's a relevant quote from C.S. Lewis' "The Screwtape Letters" to illustrate:

> You must have often wondered why the enemy [God] does not make more use of his power to be sensibly present to human souls in any degree he chooses and at any moment. But you now see that the irresistible and the indisputable are the two weapons which the very nature of his scheme forbids him to use. Merely to over-ride a human will (as his felt presence in any but the faintest and most mitigated degree would certainly do) would be for him useless. He cannot ravish. He can only woo. For his ignoble idea is to eat the cake and have it; the creatures are to be one with him, but yet themselves; merely to cancel them, or assimilate them, will not serve…. Sooner or later he withdraws, if not in fact, at least from their conscious experience, all supports and incentives. He leaves the creature to stand up on its own legs—to carry out from the will alone duties which have lost all relish…. He cannot "tempt" to virtue as we do to vice. He wants them to learn to walk and must therefore take away his hand…. Our cause is never more in danger than when a human, no longer desiring, but still intending, to do our enemy's will, looks round upon a universe from which every trace of him seems to have vanished, and asks why he has been forsaken, and still obeys.
>
> — Uncle Screwtape, in The Screwtape Letters

I'm not a big fan of Lewis, but I think he is onto something there. That's really what the Christian life is like, and no wonder more people don't choose it. Who wants to do your duty for God, as part of a relationship with him, in a universe that seems so unfair? It's a tall order, and most people prefer to do their own thing instead of building something nice for God with their lives.

# Colorado Democrats vote down bill to protect unborn victims of violence

**Wintery Knight** · 5 May 2015 · Archived copy · Original

This article is from Life News.

Excerpt:

> After Republicans in the Colorado state Senate approved an unborn victims bill to hold criminals accountable when they kill or injure unborn children in violent crimes against them and their mothers, Democrats in the state House killed the bill.
>
> That means victims like Baby Aurora, who was cut out of her mother Michelle Wilkins' (pictured above) womb in a horrific assault that claimed her life earlier this year, will not receive any justice. Criminals in Colorado, unlike most other states, can't be charged with a second crime for killing or injuring unborn babies.
>
> Today the Offenses Against Unborn Children Act, (SB 268) was defeated in the House State Veterans and Military Affairs Committee in a party-line vote of 6-5 with Democrats opposing the bill and Republicans supporting it.
>
> Colorado Citizens for Life, the statewide pro-life group, is very disappointed by the vote.
>
> "In March, a woman in Longmont was arrested after she attacked Michelle Wilkins and cut her 7-month-old unborn baby from her womb. Michelle's daughter Aurora died, but she survived. Unbelievably, after the grisly incident, prosecutors in Boulder County announced that the woman responsible for baby Aurora's death would not face murder charges because Colorado law refuses to provide justice for unborn babies," said Colorado Citizens for Life director Sarah Zagorski.
>
> […]The bill creates a number of crimes against unborn children who are killed or injured in the process of an assault or homicide against the baby's mother. The measure is similar to bills that have been used in the past to prosecute criminals for two crimes against both mother and child. Unborn victims laws have repeatedly been upheld as constitutional in court.
>
> […]Colorado state law does not regard unborn children as human beings who deserve justice when they are killed. In 2013, Colorado Democrats killed a bill that would add the state to the list of more than 25 states that provide justice and protection for pregnant women and unborn children.

These laws are important because it is an incremental step to getting the courts to recognize the value of unborn children. I think that the Democrat lawmakers are unwilling to protect unborn victims of violence for that reason. But what a position to take. Who is going to give the pregnant woman her baby back? And the child's entire future was snuffed out in an instant, and Democrats just don't care.

# Thomas Sowell: if we care about poverty and crime, then we should encourage marriage

**Wintery Knight** · 5 May 2015 · Archived copy · Original

Economist Thomas Sowell

My favorite economist Thomas Sowell writes about poverty and crime in National Review.

Excerpt:

> The "legacy of slavery" argument is not just an excuse for inexcusable behavior in the ghettos. In a larger sense, it is an evasion of responsibility for the disastrous consequences of the prevailing social vision of our times, and the political policies based on that vision, over the past half century.
>
> Anyone who is serious about evidence need only compare black communities as they evolved in the first 100 years after slavery with black communities as they evolved in the first 50 years after the explosive growth of the welfare state, beginning in the 1960s.
>
> You would be hard-pressed to find as many ghetto riots prior to the 1960s as we have seen just in the past year, much less in the 50 years since a wave of such riots swept across the country in 1965.
>
> We are told that such riots are a result of black poverty and white racism. But in fact — for those who still have some respect for facts — black poverty was far worse, and white racism was far worse, prior to 1960. But violent crime within black ghettos was far less.
>
> Murder rates among black males were going down — repeat, *down* — during the much-lamented 1950s, while it went up after the much celebrated 1960s, reaching levels more than double what they had been before. Most black children were raised in two-parent families prior to the 1960s. But today the great majority of black children are raised in one-parent families.
>
> Such trends are not unique to blacks, nor even to the United States. The welfare state has led to remarkably similar trends among the white underclass in England over the same period. Just read *Life at the Bottom*, by Theodore Dalrymple, a British physician who worked in a hospital in a white slum neighborhood.
>
> **You cannot take any people, of any color, and exempt them from the requirements of civilization — including work, behavioral standards, personal responsibility, and all the other basic things that the**

> **clever intelligentsia disdain — without ruinous consequences to them and to society at large.**
>
> **Non-judgmental subsidies of counterproductive lifestyles are treating people as if they were livestock, to be fed and tended by others in a welfare state — and yet expecting them to develop as human beings have developed when facing the challenges of life themselves.**
>
> **One key fact that keeps getting ignored is that the poverty rate among black married couples has been in single digits every year since 1994. Behavior matters and facts matter, more than the prevailing social visions or political empires built on those visions.**

So skin color has nothing to do with it, the real problem is that social programs encourage people to make poor choices – including more poverty and crime. We reward failure, and we are surprised when we get more failure.

The book he mentioned – Life at the Bottom – is one of my favorite books. It really shows how social programs that redistribute wealth actually teach poor people to make poor choices, and then refuse to take responsibility for their own poor choices. I posted links to the full text of the book here.

# Why does God allow so much natural evil from earthquakes?

**Wintery Knight** · 5 May 2015 · Archived copy · Original

My friend Eric Chabot of Ratio Christi shared this video with me, which features chemist Fazale Rana.

The video runs under 4 minutes:

Basically, there was an atheist who challenged the idea that nature is designed because there are things in nature which cause suffering, like earthquakes and volcanoes.

Now the first thing to note is that atheists commonly think that God's job is to make humans happy. If he doesn't make humans feel happy – regardless of their knowledge of him and relationship with him – then he is a big failure. Many atheists think that, it is one of the most common reasons why people become atheists. But of course anyone who reads the Bible and reads the story of Jesus knows that the purpose of life on God's view is for humans to know him and to be disciples of a *suffering* Messiah who sacrifices himself in order to obey God the Father. So that's the first thing to say – purpose of life *not* happiness, but knowledge of God and being a disciple of Jesus. This may involve all kinds of suffering, and that's to be expected.

Second, there is a response to the problem of evil based on the necessity of natural laws. The argument goes that you can't have genuine morality without a predictable, knowable system of natural laws.

But I want to talk about something different in this post. In the video, Dr. Rana thinks that many of the things that cause suffering in the natural world are actually necessary for life to exist at all. He provides the example of plate tectonics in his video above, and I want to take that one and add to it the example of heavy element production and the stellar lifecycle. These are both from a book called "Rare Earth", which is written by two non-Christians – Peter Ward and Donald Brownlee, but I'll link to web sites to make the case.

**Plate tectonics.**

Here's an article from Reasons to Believe by Dr. David Rogstad, who has a PhD in physics from Caltech – the top school for experimental science. The article not only goes over the basic plate tectonics to carbonate-silicate cycle connection, but it adds a newer discovery to boot.

Excerpt:

> Earthquakes are a byproduct of plate tectonics, a theory in geology developed in recent years for explaining motions near the surface of the Earth. One of the benefits from plate tectonics is that Earth maintains the right levels of carbon dioxide ($CO_2$) in the atmosphere to compensate for the Sun's increasing luminosity. This is accomplished by what is called the carbonate-silicate cycle. $CO_2$ is removed from the atmosphere through weathering. The weathered products are eventually drawn into the Earth's interior via plate tectonics. Processes inside the Earth's interior release the $CO_2$ back into the atmosphere via volcanoes. While all aspects of this mechanism are not yet fully understood, it has been instrumental in providing a stable environment for life on the Earth for billions of years.
>
> New research provides yet another component that appears fine-tuned for life. In a letter in the September 27, 2007 issue of Nature together with a corresponding news release from the University of Bonn, Arno Rohrbach and his colleagues have discussed another mechanism similar to the carbonate-silicate cycle. It also depends on plate tectonics but, in this case, the mechanism controls the amount of oxygen on the surface of the Earth.
>
> Oxygen becomes bound up in various oxides which are then drawn into the Earth's interior, where various processes result in its being incorporated into an exotic mineral called majorite. The results reported in this letter established that majorite functions as a kind of "reservoir" for oxygen, and when the majorite ascends nearer to the surface of the Earth it breaks down and releases its oxygen. Some of this oxygen also binds with hydrogen released from the interior of the Earth to form water. The authors have referred to the whole process

> as an “oxygen elevator.”
>
> They go on to say that “without the ‘oxygen elevator’ in its mantle the Earth would probably be a barren planet hostile to life. According to our findings, planets below a certain size hardly have any chance of forming a stable atmosphere with a high water content.”
>
> This research confirms the existence of one more finely tuned mechanism that depends on plate tectonics and contributes to an environment that can support life. It also gives humans one more reason to be appreciative rather than dismayed when we experience an earthquake that breaks some precious possessions beyond repair.

Astronomer Dr. Hugh Ross who has a PhD in Astronomy from the University of Toronto and did a 5-year post-doctoral work at Caltech, adds to this with another discovery.

Excerpt:

> In the December 2007 issue of *Astrobiology* Stanford University geophysicists Norman H. Sleep and Mark D. Zoback note that the higher tectonic activity during Earth’s early history could have played a key role in cycling critically important nutrients and energy sources for life. The production of numerous small faults in the brittle primordial crust released trapped nutrients. Such faults could also release pockets of methane gas and molecular hydrogen. The methane and hydrogen could then provide crucial energy sources for nonphotosynthetic life. Finally, the production of faults could bring water to otherwise arid habitats, such as rocks far below Earth’s surface.
>
> Faulting, generated by active and widespread tectonics, allowed a youthful Earth to support diverse and abundant life. This enhanced diversity and abundance of life quickly transformed Earth’s surface into an environment safe for advanced life. Also, the buildup of biodeposits for the support of human civilization occurred more rapidly due to active tectonics.
>
> The more rapid preparation of Earth for humanity is critical. Without such rapid preparation, humans could not come upon the terrestrial scene before the Sun’s increasing luminosity would make their presence impossible (due to excessive heat).

So that’s the science behind earthquakes. So that’s a brief look at why we need plate tectonics for life, and we just have to buck up and take the earthquakes with it. It’s not God’s job to give us happiness and health. That’s not his plan. People who complain about earthquakes have to show how God could get the life-permitting effects of earthquakes without wrecking his ability to succeed in his plan to make people know him and follow him. But how can an atheist do that? They can’t. I think that people just need to realize that humans are not in charge here and we have to live with that. We have to accept that we didn’t make the universe, and we don’t get to decide what purpose it has. God decides.

On to star formation.

**Star formation**

Atheists often complain that the universe is too big or too old (which is actually the same thing, since the more time passes, the more it expands). The fact of the matter is that life appeared the earliest it could appear – we needed the universe to be a certain age before it could support life.

Dr. Hugh Ross explains in this article.

Excerpt:

> The second parameter of the universe to be measured was its age. For many decades astronomers and others have wondered why, given God exists, He would wait so many billions of years to make life. Why did He not do it right away? The answer is that, given the laws and constants of physics God chose to create, it takes about

> ten to twelve billion years just to fuse enough heavy elements in the nuclear furnaces of several generations of giant stars to make life chemistry possible.
>
> Life could not happen any earlier in the universe than it did on Earth. Nor could it happen much later. As the universe ages, stars like the sun located in the right part of the galaxy for life (see chapter 15) and in a stable nuclear burning phase become increasingly rare. If the universe were just a few billion years older, such stars would no longer exist.

The Rare Earth book explains the details on p. 40-4:

> The trick for getting from helium to the generation of planets, and ultimately to life, was the formation of carbon, the key element for the success of life and for the production of heavy elements in stars. Carbon could not form in the early moments following the Big Bang, because the density of the expanding mass was too low for the necessary collisions to occur. Carbon formation had to await the creation of giant red stars, whose dense interiors are massive enough to allow such collisions. Because stars become red giants only in the last 10% of their lifetimes (when they have used up much of the hydrogen in their cores), there was no carbon in the Universe for hundreds of millions to several billion years after the Big Bang—and hence no life as we know it for that interval of time.
>
> […]The sequence of element production in the Big Bang and in stars provided not only the elements necessary for the formation of Earth and the other terrestrial planets but also all of the elements critical for life—those actually needed to form living organisms and their habitats.

> […]The processes that occurred during the billions of years of Earth's "prehistory" when its elements were produced are generally well understood. Elements are produced within stars; some are released back into space and are recycled into and out of generations of new stars. When the sun and its planets formed, they were just a random sampling of this generated and reprocessed material. Nevertheless, it is believed that the "cosmic abundance" mix of the chemical elements—the elemental composition of the sun—is representative of the building material of most stars and planets, with the major variation being the ratio of hydrogen to heavy elements.
>
> […]Many stars are similar in composition, but there is variation, mainly in the abundance of the heavier Earth-forming elements relative to hydrogen and helium. The sun is in fact somewhat peculiar in that it contains about 25% more heavy elements than typical nearby stars of similar mass. In extremely old stars, the abundance of heavy elements, may be as low as a thousandth of that in the sun. Abundance of heavy elements is roughly correlated with age. As time passed, the heavy-element content of the Universe as a whole increased, so newly formed stars are on the average more "enriched" in heavy elements than older ones.
>
> […]The matter produced in the Big Bang was enriched in heavier elements by cycling in and out of stars. Like biological entities, stars form, evolve, and die. In the process of their death, stars ultimately become compact objects such as white dwarfs, neutron stars, or even black holes. On their evolutionary paths to these ends, they eject matter back into space, where it is recycled and further enriched in heavy elements. New stars rise from the ashes of the old. This is why we say that each of the individual atoms in Earth and in all of its creatures—including us—has occupied the interior of at least a few different stars.

What he's saying is that heavy elements are created gradually because of the star formation lifecycle. The first generation of stars are metal-poor. The next generation of stars is better. And so on until we get to stars that can support life by providing a steady, stable amount of energy – as well as other benefits like planets with an atmosphere.  Our planet is 4.5 billion years old, and the universe is about 14 billion years old. Simple life appears about 4 billion years ago on Earth. That means we got life practically immediately, given that we had to develop the heavy elements needed to make a life-supporting star, a life-supporting planet and our physical bodies.

# Paul Helm debates William Lane Craig on Calvinism and Molinism on Unbelievable

**Wintery Knight** · 5 May 2015 · Archived copy · Original

I listened to this excellent discussion between Dr. William Lane Craig and Oxford University Calvinist philosopher Dr. Paul Helm. I think this is a useful discussion in general because atheists often bring up problems with Calvinism as objections to Christianity in general, such as:

- If God exists, then he controls everything and I don't have free will
- If God knows the future, then I don't have free will
- If God controls everything, then I am not responsible for my sinning
- If God has to choose me to be saved, then I am not responsible for my damnation

Details:

> If God ordains the future, can humans have free will? Are people predestined for salvation? And what does the Bible say on the matter? William Lane Craig is a Christian philosopher and leading proponent of Molinism, a view of divine sovereignty that seeks to reconcile God's fore-ordination with human free will. Paul Helm is a leading Calvin Scholar. He defends the view that God predestines the future, limiting human freedom.
>
> MP3 of this show: http://cdnapi.kaltura.com/p/618072/sp/61807200/playManifest/entryId/1_jn0bdo52/flavorId/0_002f1k0d/protocol/http/format/url/a.mp3?clientTag=feed:1_jlj47tkv
>
> For William Lane Craig: http://www.reasonablefaith.org
>
> For Paul Helm: http://paulhelmsdeep.blogspot.co.uk/

I was surprised because my Calvinist friend Dina thought that Dr. Helm won this debate, but I thought that Dr. Craig won. So without further ado, here is the snark-free summary of the discussion. I also sent the summary to Dina to make sure that it was reasonably fair and accurate. She said it was biased, but she was predestined to say that. Anyway, there's a commentary on the debate over at Michael's Theology blog. And Calvinist Remington has a podcast review in parts. Part 1 is here.

**Summary:**

JB: Has Lewis had any impact on your apologetics?

Craig: Not as a scholar, but more as a model of a scholar who leaves a legacy through his published work

JB: How did you become interested in Calvinism?

Helm: Starting from childhood, and lately writing more on Calvinism from a philosophical point of view

JB: How do you view God's sovereignty?

Helm: Strong view of divine sovereignty, God is sovereign over all events, but that doesn't mean that they are determined by him

JB: What is Calvin's legacy?

Helm: He amplified an existing concept of predestination, and wrote on many other topics

JB: What is Molinism?

Craig: Molina affirms divine sovereignty as Paul Helm does, but he also affirms libertarian free will

Craig: Every event that occurs happens by God's will or by God's permission

JB: What about open theism?

Craig: Paul and I both oppose open theism

JB: How does Molinism reconcile human free will and divine sovereignty

Craig: God has knowledge of what would happen under any set of circumstances

Craig: God has knowledge of everything that COULD happen, and he has knowledge of everything that WILL happen

Craig: God knows what each person freely choose to do in any set of circumstances and he can place people in times and places where he is able to achieve his ends without violating creaturely freedom and creaturely responsibility

JB: How does this apply to the issue of salvation?

Craig: The circumstances in which God puts a person includes God leading people to him and he foreknows who will respond to his leading

Craig: God has ordered the world in such a way that he foreknows the exact people who will free respond to his leading if he puts them in certain circumstances

JB: Does God want to save the maximum of people?

Craig: My own view is that God does order the world in such a way that the maximum number of people will respond to God's drawing them to himself

JB: Is the Molinist view gaining ground?

Craig: Yes, Calvinists and open theists are both moving towards it, and Molinism is the dominant view among philosophical theologians

JB: Why has Molinism not convinced you?

Helm: It's an unnecessary theory, God's natural knowledge and free knowledge covers what middle knowledge covers

Helm: Calvinism has a stronger view of sin, such that God has to act unilaterally and irrestibly to save them

JB: Are creatures free on your view?

Helm: My view of free will is weaker than Craig's view of free will

Craig: For the Calvinist, grace is irresistible, but for the Molinist, grace is effective when it is met with a response from the creature

Craig: The Bible affirms the strong view of free will, when it says that in certain circumstances people can freely choose to do other than they do

Helm: But if a person is in circumstances X and they are free, then why don't they choose something that isn't what God can foresee

Craig: In identical circumstances, a person has the freedom to choose, and God doesn't determine what they choose, he just foreknows what they choose

Helm: How can God foreknow what people will freely do if people have this strong view of freedom that allows them to do anything? God would not know what people can freely do if they really are free

Craig: God has knowledge of what his creatures would freely do in any set of circumstances, he has knowledge of

subjunctive statements

Craig: The Scripture is filled with statements that show that God has this knowledge of what people would do in other circumstances (e.g. – 2 Cor 2:8)

Helm: I am not denying that the Bible is full of subjunctive statements, but if humans have real libertarian free will, then God cannot know what they will do

Craig: I think God does preordain everything, Molinism has a strong sense of divine sovereignty BUT the foreordaining is done with the knowledge of what humans would do in any circumstances, so that what God ordains achieves his ends, but without violating creaturely free will

Craig: I take at face value the passages of the Bible where it says that God wants all persons to be saved

Craig: When the Bible says that God wants ALL persons to be saved (2 Pet 3:9), the Bible means that God wants ALL persons to be saved

Craig: So either universalism is true OR there is something that stops all from being saved outside of God

Craig: the something that prevents all from being saved is creaturely free will

Helm: Most people don't have the opportunity to hear the gospel, so God doesn't want all to be saved

Helm: People can still be responsible for what God "fore-ordains"

JB: Can a person really be responsible for wickedness if they didn't freely choose it?

Helm: Even though God is the only one who can act unilaterally to make save people, the people who act wickedly are still responsible

Craig: Molinism provides an answer to the problem of why not all people have heard the gospel, because by using middle knowledge he is able to know who would respond to the gospel if they heard it and he places those people in the times and places where they will hear it

Craig: That solution means that NO ONE is lost because they have not heard the gospel

Craig: There is Biblical support for (Acts 17:27) God choosing the times and places where people will live SO THAT they will be led by him and be able to respond to his leading

JB: Is God the author of sin, on Calvinism?

Craig: If Calvinists define providence to mean causal determinism, then he is the cause of every effect including human actions, and he is the one who causes people to sin

Craig: This view (determinism) impugns the character of God

Helm: I don't think that sovereignty requires determinism

Helm: God has mysterious resources – which I cannot specify – that reconcile his sovereignty with human responsibility for wickedness

JB: But if God is the cause of people doing wrong things, then how can they be responsible for it?

Helm: Well, humans do cause their own actions

Craig: Helm is right to say that God has resources to reconcile God's sovereignty with free will and human responsibility, and that resource is not an unknown mystery, it's middle knowledge

Craig: I can affirm everything in the Westminster Confession except for the one clause where they expressly repudiate middle knowledge as the mechanism for reconciling divine sovereignty and free will

Helm: Well, Calvinists have a strong view of sin so that humans cannot respond to God's leading

Craig: Yes, and that's why humans need prevenient grace in order to respond to him

Craig: God has to take the initiative and draw people to himself or they cannot be saved, but that grace is resistible, and that's what the Bible teaches (Acts 7:51), so humans are still responsible if they resist God

Helm: My view of grace is that it is monergistic and irrestible, it is a unilateral action on the part of God, like pulling someone out of an icy pond which they can't get out of

JB: If humans freely choose to respond to God's drawing and leading, does that diminish grace?

Helm: Many are called but few are chosen

Craig: Molinism does not require synergism – which is the idea that humans are partly responsible for their salvation

Craig: In Eph 2:8, Scripture is clear that faith opposite to works, and responding to God's drawing is not meritorious

JB: So receiving a gift is not meritorious?

Craig: It's the passive acceptance of what someone else has done for you

Helm: But doesn't this mean that you can lose your salvation, because you can accept and resist the gift of salvation?

Craig: That's a separate question that Christians can differ on, but if the Holy Spirit indwells a person and seals them, then that would argue for the view that salvation cannot be revoked

JB: Doesn't Romans 8 teach Calvinism pretty clearly?

Helm: This is called the "golden chain", and it does support Calvinism

Craig: Actually, this text is no problem for Molinists because the first link in the chain is foreknowledge, which, if it incorporates middle knowledge, is no problem for Molinists

Craig: What God is electing in Romans 8 is a specific group of people that he knows in advance of creating the universe will freely respond to his drawing them to him

Craig: In Acts 4:27-28, it is talking about God's foreknowledge, which involves and incorporates knowledge of what any individual would freely choose if placed in those circumstances

JB: If God actualizes a set plan with set circumstances for everyone, isn't that very similar to Calvinism?

Craig: Yes! It's a strong statement of divine sovereignty

Helm: Foreknowledge doesn't mean that God knows what people would do, it's just refering to God "knowing his own mind" about what he wants to do

JB: How do you respond to the fairness of God unilaterally and specifically choosing some people for salvation and choosing other people for damnation (because he refuses to act unilaterally for them)?

Helm: God ordinarily bypasses other people in the Bible, like when he chooses the Jews as his chosen people

Craig: The problem with that is that the Bible clearly teaches that God has a genuine will that all will be saved and he makes a genuine offer of salvation to all people

Craig: Also, just being a Jew and a member of the chosen people doesn't mean you were saved, because some Jews rebelled against God

Craig: And there were also people outside of the Jewish people who were righteous and in a relationship with God, like Job

Helm: “the fabric of our faith” depends on God’s choice and his not-choice, it is fundamental to the Bible and to God’s character, and choosing them “effectively” (irrestibly and unilaterally)

Helm: The idea of God considering “possible worlds”, some of which are feasible and not feasible, with conflicts between the wills of free creatures in different circumstances, and then actualizing one world that achieve these ends is very messy

Craig: Some worlds may not feasible for God to create, for example a world in which everyone is saved – it is logically possible, but may not be feasible

Craig: God will not exercise any divine coercion to force people to go to Heaven against their own will

Helm: If God chooses a world because it is feasible, then he doesn’t love me directly, he is choosing a world, not individuals

Craig: Well, when God actualizes a world, he specifically knows which individuals will be saved within that world, but without disrespecting free will

Craig: The world isn’t primary, the individuals are primary

Helm: I think that middle knowledge can he included in God’s natural knowledge and free knowledge

Craig: The knowledge of what people would do in different circumstances is based on the freedom of the individuals

JB: Make your conclusions!

Craig: Molinism is a Biblical model for reconciling divine sovereignty with human freedom

Helm: It is intellectually mystifying to introduce this strong view of human freedom and it is not Biblical

# Socialist party wins majority in Canada's most conservative province

**Wintery Knight** · 6 May 2015 · Archived copy · Original

Orange = NDP, Green = Wildrose, Blue = Conservative

This article from Reuters explains what happened.

It says:

> The left-wing New Democrats won election in the Canadian province of Alberta on Tuesday, ending the 44-year run by the Progressive Conservatives amid promises to review oversight of the oil and gas sector in the home of Canada's oil sands.
>
> At the end of a month-long campaign, the New Democratic Party (NDP), which has never held more than 16 seats in the 87-seat provincial legislature, will lead a majority government. It held a commanding lead in early results, leading or elected in 54 seats at 9 p.m. local time while the Conservatives were ahead in just 13, according to CBC TV.
>
> The NDP is expected to be far less accommodative to the Western Canadian province's powerful energy industry.
>
> NDP Premier-elect Rachel Notley has proposed reduced support for pipeline export projects and a review of oil and gas royalties in the resource-rich province, and energy shares on Canadian stock markets are expected to react negatively to her party's victory.
>
> The NDP had promised to hike corporate tax rates by two percentage points to 12 percent if elected, but its promise to review the amount of royalty payments due the province from oil and gas production made some investors nervous.
>
> Alberta's oil sands are the largest source of U.S. oil imports.
>
> The Conservatives had won 12 straight elections, but support for rookie Premier Jim Prentice plunged during the campaign and right-wing voters split support between the Conservatives and the younger, more conservative Wildrose Party, which appeared on track to be the official opposition.

The Alberta "Progressive Conservatives" are almost as leftist as the NDP. The only real conservatives in Alberta are the Wildrose.

This Canadian Press looks at specific NDP policies:

> The NDP have won a majority in Alberta. What could Alberta look like moving forward? Leader Rachel Notley campaigned on having the wealthy pay more to fund better health care and education. Here's a look at some of the party's key platform planks:
>
> — A Resource Owners' Rights Commission to review the royalties oil companies pay to the province with any amount earned above the current rates going into savings.
>
> — A boost in the corporate tax rate to 12 per cent from 10 per cent and an increase in the minimum wage to $15 and hour by 2018.
>
> — More tax brackets on high earners than the Tories are proposing: A 12 per cent tax rate on income between $125,000 to $150,000; 13 per cent on income between $150,000 to $200,000; 14 per cent between $200,000 and $300,000 and 15 per cent over $300,000. The NDP also plans to roll back the Tory health levy.
>
> — The creation of 2,000 long-term care spaces over four years.
>
> **— A ban both corporate and union donations to political parties.**

That last one looks like a conservative policy, since big corporations and unions are both leftist. So there's a silver lining to this cloud. I'm sorry for my Canadian friends who will have to live with this, but the mistake was made last election, when they chose the Progressive Conservatives over Wildrose. One thing is for sure, Alberta supplies a lot of our oil here, so this NDP win will raise oil prices, and it's going to put pressure on American families. Maybe we should be drilling for our own oil?

# How accurate are past global warming predictions ?

**Wintery Knight** · 6 May 2015 · Archived copy · Original

I like this article from The Stream, which lists a bunch of failed predictions by global warming socialists.

Here's the list:

1. 2015 is the 'last effective opportunity' to stop catastrophic warming
2. France's foreign minister said we only have "500 days" to stop "climate chaos"
3. President Barack Obama is the last chance to stop global warming
4. Remember when we had "hours" to stop global warming?
5. United Kingdom Prime Minister Gordon Brown said there was only 50 days left to save Earth
6. Let's not forget Prince Charles's warning we only had 96 months to save the planet
7. The U.N.'s top climate scientist said in 2007 we only had four years to save the world
8. Environmentalists warned in 2002 the world had a decade to go green
9. The "tipping point" warning first started in 1989

Here are the 3 I thought were the worst:

> **7. The U.N.'s top climate scientist said in 2007 we only had four years to save the world**
>
> Rajendra Pachauri, the former head of the Intergovernmental Panel on Climate Change said in 2007 that if "there's no action before 2012, that's too late."
>
> "What we do in the next two to three years will determine our future. This is the defining moment," he said.
>
> Well, it's 2015 and no new U.N. climate treaty has been presented. The only thing that's changed since then is that Pachauri was forced to resign earlier this year amid accusations he sexually harassed multiple female coworkers
>
> **8. Environmentalists warned in 2002 the world had a decade to go green**
>
> Environmentalist write George Monbiot wrote in the UK Guardian that within "as little as 10 years, the world will be faced with a choice: arable farming either continues to feed the world's animals or it continues to feed the world's people. It cannot do both."
>
> In 2002, about 930 million people around the world were undernourished, according to U.N. data. by 2014, that number shrank to 805 million. Sorry, Monbiot.
>
> **9. The "tipping point" warning first started in 1989**
>
> In the late 1980s the U.N. was already claiming the world had only a decade to solve global warming or face the consequences.
>
> The San Jose Mercury News reported on June 30, 1989 that a "senior environmental official at the United Nations, Noel Brown, says entire nations could be wiped off the face of the earth by rising sea levels if global warming is not reversed by the year 2000."
>
> That prediction didn't come true 15 years ago, and the U.N. is sounding the same alarm today.

Should we believe the global warming socialists? Based on past predictions, we should not. And we especially should not because current levels of solar activity – which is the actual cause of climate change – are extremely low. It's getting colder, not warmer.

# Polk State College professor fails student for refusing to bash Christianity

**Wintery Knight** · 6 May 2015 · Archived copy · Original

This is from Campus Reform.

Excerpt:

> A professor at Polk State College has allegedly failed a humanities student after she refused to concede that Jesus is a "myth" or that Christianity oppresses women during a series of mandatory assignments at the Florida college.
>
> According to a press release from the Liberty Counsel, a non-profit public interest law firm, Humanities Professor Lance "Lj" Russum gave a student a "zero" on four separate papers because the 16-year-old did not "conform to his personal worldviews of Marxism, Atheism, Feminism, and homosexuality." The law firm has called for a full, private investigation of the professor and the course curriculum.

His view is that all religions are false:

> "The point of this is not to 'bash' any religion, we should NEVER favor one over another, they all come from the same source, HUMAN IMAGINATION and [sic] they demonstrate that humanity is one," a copy of Russum's class outline, riddled with grammatical errors, says.

But he targets Christians especially, of course:

> "The point of this is not to 'bash' any religion, we should NEVER favor one over another, they all come from the same source, HUMAN IMAGINATION and [sic] they demonstrate that humanity is one," a copy of Russum's class outline, riddled with grammatical errors, says.
>
> "We have much to thank of [sic] humans like Michelangelo who took a sacred space, a temple to god, and made it a HUMAN space, a space where humanism can meet with god and discourse," one course assignment read. "Finally humanity and the gods are on equal footing and that is what the myths of Hercules, Apollo and Jesus are all about—the divine becoming human and human being divine."
>
> In her essay, the student, who Liberty Counsel identifies as "G.L.," argued that "it is a logical fallacy to make the assumption that Christian humanism's goal was to 'blend mythologies and make man the center' simply on account of Michelangelo's artwork or because Renaissance artists incorporate classicism."
>
> The student apparently received a zero on that assignment.
>
> Another assignment allegedly required students to discuss how "fortunate" Martin Luther was to be born in a historical moment that allowed him to "challenge the mythos of the power structure of the church." The assignment required students to write only about the humanism of Luther and his reformation—and students were instructed in bolded text to keep theology out of the paper:
>
> "WHAT YOU MUST NOT WRITE ABOUT: 1. This is NOT about Luther's theology
>
> "2. Any quotes from his sermons or writings MUST be about humanism and how the reformation is in the right place and right time in history NOT some divine providence of the gods
>
> "3. You must stay focused on the history of the humanism of Luther and his reformation IF You turn this into a theological debate or divine providence I will NOT read it and you will be given a zero."
>
> She failed that assignment as well.
>
> Another description on the course outline criticized Christianity as one of the "most violent forms of religion

> the world has ever seen," and bashed the religion for its "dominance by powerful men." The description, supposedly for a class centered on the role of religion in the Middle Ages, claims that today's major religions "STILL attempt to regulate the bodies of women."

That sounds like indoctrination to me, not education.

How did the college respond to complaints?

> In an email to G.L.'s parents, obtained by Liberty Counsel, Dean of Academic Affairs Donald Paintersaid that he had reviewed the materials presented in Russum's Humanities 2020 course and "believe[d] them to be appropriate." Painter apologized that the student and her family found the course materials to be "distasteful," but said the materials would not be modified.
>
> Painter, who did not respond to an emailed request for comment from *Campus Reform*, reminded the student's parents in the email that they had signed an agreement with her dual-enrollment that acknowledged they were aware that some course material may be developed for "the adult student, age 18 or older."

Yet another reason to never go into non-STEM degree programs. There are certainly good humanities professors, but there are also secular leftist clowns. It's just far too easy for knuckleheads like this professor, who are divorced from reality, to get teaching positions in most secular leftist universities. They get paid for spouting opinions, and if you disagree with them, then they fail you. Don't give them any of your money. It just prolongs their retreat from the adult responsibilities.

# Most Americans believe that religious businesses can refuse gay wedding-related services

**Wintery Knight** · 7 May 2015 · Archived copy · Original

This poll is from CBS News.

It says:

> A majority of Americans (57 percent) continue to say it should be legal for same-sex couples to marry, although that's down three points from a high reached in February. Most Democrats (66 percent ) and independents (61 percent ) think same-sex marriage should be legal, while most Republicans (61 percent ) do not.
>
> **Still, just over half of Americans (51 percent) think small business owners should be allowed to refuse wedding services to same-sex couples if it violates their religious beliefs; 42 percent think those businesses should be required to provide those services. There are sharp partisan differences on this issue.**

I found the numbers in this poll troubling – it seems to me that the support for same-sex marriage over religious liberty is worse than I thought.

According to this Washington Examiner article, Bobby Jindal and Ted Cruz appear to be the toughest defenders of religious liberty, with Walker and Rubio in the second tier.

It says:

> Evangelical Christian voters are facing an unusual problem: they may have too many choices when it comes to the 2016 presidential election. Several Republican candidates are vying for their support, viewing the voting bloc as a key stepping stone to the nomination.
>
> More than ever before, evangelical sources say, candidates will need to focus on the issue of religious liberty to win this crucial vote, especially in states like Iowa. Many evangelicals felt Indiana Gov. Mike Pence failed to stand up for his state's Religious Freedom and Restoration Act, which animated conservative Christians across the country.
>
> Steve Deace, a leading talk radio personality in Iowa, believes the impact of Pence's decision on voters in his state cannot be understated. "There's a better chance Hillary Clinton will be the [GOP] nominee next year than Mike Pence," Deace told the *Washington Examiner*. "Religious freedom is going to be the biggest issue. It has become a transcendent issue. It's bigger than life, it's bigger than marriage."
>
> […]Bob Vander Plaats, the CEO of the social conservative group the Family Leader, is a kingmaker of sorts in Iowa who has gained influence in the state by leading the effort to remove three Iowa Supreme Court judges from office because of a decision in favor of gay marriage. In 2008, he endorsed former Arkansas Gov. Mike Huckabee. In 2012, he picked former Sen. Rick Santorum, R-Pa.
>
> This time, Vander Plaats expects to endorse someone around the Thanksgiving holiday, and said Huckabee, Louisiana Gov. Bobby Jindal, and Texas Sen. Ted Cruz are the Republicans that have already impressed him.
>
> […]Deace said that after the candidate forum he moderated in Des Moines, Iowa, last month, he believes Cruz and Jindal to be the early favorites among evangelical voters. But many evangelical voters, he says, have interest in Florida Sen. Marco Rubio and Wisconsin Gov. Scott Walker, and have not yet made a decision. Unlike recent elections past, Deace says evangelical listeners who are loyal members of his audience want someone who has the organization and financing capable of winning the Republican nomination.
>
> "They're tired of the false choice of choosing between the guy who believes in something and the guy who

> raises a bunch of money," Deace said. "They want the guy who believes in something to raise a bunch of money. … They're not necessarily looking for the nice guy, or the guy who says 'Jesus' the most."

Evangelicals have several good candidates this time in the primary. I am still favoring Jindal and Walker above all the others, and I'm happy to see that they are seen as solid on religious liberty.

# Do Supreme Court justices understand the reasons for traditional marriage?

**Wintery Knight** · 7 May 2015 · Archived copy · Original

This article from the Public Discourse takes a look at the oral arguments from the same-sex marriage case in progress at the Supreme Court.

Here's the list:

- **Error Number One: Massachusetts Marriage Rates Have Stayed the Same**
- **Error Number Two: Because Some Men Leave Their Wives and Children, Marriage Does Not Help Keep Fathers Around**
- **Error Number Three: The Purpose of States' Recognizing and Regulating Marriage is to Bestow Dignity on Couples**
- **Error Number Four: The Only Harm to Legalizing Same-Sex Marriage Is Making Marriage More Adult-Centered**
- **Error Number Five: There Is a Parallel between *Brown/Loving* and *Lawrence/Obergefell***
- **Error Number Six: Age Restrictions on Marriage Are Equivalent to the Definitional Element of One Man and One Woman**

One of Obama's Supreme Court picks is showing herself a poor thinker:

> **Error Number Two: Because Some Men Leave Their Wives and Children, Marriage Does Not Help Keep Fathers Around**
>
> Justice Sotomayor also committed what is commonly referred to as an exception fallacy. This is where someone reaches an overall conclusion about a group on the basis of a few exceptional cases. Thus, when Mr. Bursch was making the argument that redefining marriage to include same-sex couples will disconnect marriage from the long-held norm that the institution binds children to their biological mother and father, Justice Sotomayor responded:
>
> Marriage doesn't do that on any level. How many married couples do fathers with the benefits or the requirements of marriage walk away from their children? So it's not that the institution alone does it and that without it that father is going to stay in marriage. He made a choice . . . Some mothers do the same thing.
>
> This is a classic example of the exception fallacy. Of course some men and women walk away from their marriage and their children. But that is the exception, not the rule, and it is certainly counter to the social norm of marriage that gently pushes parents to stay together and raise their children.
>
> It is rather shocking that a justice of the United States Supreme Court would claim that "on any level" marriage does not have that effect and longstanding purpose. It is also disappointing that she would commit such a basic error of logic.

I often encounter the problem among people with no math background. You cite statistics about what outcomes are expected, and they reply with an exceptional outlier to refute the argument. I'm troubled that Supreme Court justices lack the ability to reason in this way, though.

Here's another pretty obvious mistake:

> **Error Number Four: The Only Harm to Legalizing Same-Sex Marriage Is Making Marriage More Adult-Centered**
>
> Several justices struggled to see how redefining marriage in genderless terms would cause any harm or have

> any impact on the institution of marriage. As Mr. Bursch correctly but incompletely argued, legalizing same-sex marriage will alter the institution to be primarily concerned with fulfilling the desires of adults rather than the needs of children.
>
> But that's not all. As the 100 Scholars of Marriage made clear in their amicus brief, several other important and beneficial social norms will be eroded, if not erased, by same-sex marriage, including:
>
> **– Gender-diverse parenting**: the norm that children both need and deserve to be raised by a man and a woman, not only because of what they learn from interacting with a parent of each sex, but because men and women parent and interact with their children differently, providing distinct but complementary benefits. By its very structure, same-sex marriage eliminates this norm and its attendant benefits to children.
>
> **– Biological bonding**: the norm that marriage binds children to their biological mother and father in a family unit. Same-sex marriage and parenting, by definition, means that at best only one of a child's biological parents will be in the home. While death, divorce, or parental delinquency create exceptions, elevating the exception to the norm undermines that norm and the benefits it produces.
>
> **– Postponing or channeling procreation**: the norm that procreation should only responsibly occur within the stable bonds of marriage. Same-sex marriage is not, and biologically cannot be, about procreation. By redefining marriage in this way, the institution becomes less about being the socially recommended "place" and "time" where procreation is recommended.
>
> **– Placing social value on raising children**: the norm that society values and needs children to be born and raised by their parents. Again, same-sex marriage is not primarily about procreation, and its acceptance attenuates this norm for the institution as a whole. Of course, same-sex couples can adopt or one member of the couple can reproduce with someone of the opposite sex, but these are secondary purposes and behaviors.
>
> What impact will the weakening or elimination of these norms have on the institution of marriage, and thus the behavior of society? Put another way, as Justice Breyer asked, "what's the empirical connection?"
>
> Well, the last major alteration to the institution of marriage—no-fault divorce—did have unintended negative consequences, reducing marriage rates and increasing divorce rates more than expected, with children and women suffering the consequences. Additionally, the Netherlands, the country that has had same-sex marriage the longest, after controlling for other factors, has experienced a drop in opposite-sex marriage rates among young women after adopting same-sex marriage.
>
> The truth is, no one knows for sure what the effect will be—but it clashes with history, common sense, and theory to assume it will be innocuous.

The norm of gender-diverse parenting is important, because fathers and mothers are both needed.

Look at this abstract from a very new study to see why:

> The association between family structure instability and children's life chances is well documented, with children reared in stable, two-parent families experiencing more favorable outcomes than children in other family arrangements. This study examines father household entrances and exits, distinguishing between the entrance of a biological father and a social father and testing for interactions between family structure instability and children's age, gender, and genetic characteristics. **Using data from the Fragile Families and Child Wellbeing Study and focusing on changes in family structure by age (years 0–9), the authors show that father exits are associated with increases in children's antisocial behavior, a strong predictor of health and well-being in adulthood. The pattern for father entrances is more complicated, with entrances for the biological father being associated with lower antisocial behavior among boys and social father entrances being associated with higher antisocial behavior.** Child's age does not moderate the association; however, genetic information in the models sharpens the findings substantially.

Biological fathers need to present in the home.

It doesn't look like we will get a good legal decision on this case. The leftist judges are just not thinking clearly.

# William Lane Craig answers: should Christians accept intelligent design?

**Wintery Knight** · 7 May 2015 · Archived copy · Original

Here is the question he is answer on his Reasonable Faith web site:

> Dr. Craig,
>
> First of all, I appreciate all you have done for the Kingdom of God. I pray you keep up the good work. You are someone I look up to.
>
> I'm taking a philosophy of religion course right now, and it is very fascinating to me. I'm taking the course because I am interested in Christian Apologetics. One aspect of Christian Apologetics is to argue for intelligent design. To my surprise, my professor, who is a Christian, does not believe in intelligent design (ID). I also wanted to point out the fact that in an astronomy class my girlfriend is taking, the professor lectured on how most Christians do not believe in ID.
>
> As I'm pondering on why my Christian professor doesn't believe in ID and how an astronomy professor lectures on how most Christians don't believe in ID, I start to question if I even know what ID really is.
>
> I thought that God was the intelligent designer that we are arguing for in Christian Apologetics.
>
> So my questions for you are:
>
> 1) What is your definition of intelligent design?
>
> 2) Is intelligent design something that Christians should believe in?
>
> 3) If Christians should believe in intelligent design, then why do some people not believe in it? Are they just confused on the meaning of intelligent design?
>
> I appreciate your time.
>
> Drew

Here is part of Dr. Craig's answer:

> I think it advisable to capitalize "Intelligent Design" (ID) in order to signal that we are using the words in a technical sense, rather than in the sense accepted by every Christian. Broadly speaking, we may say that ID is a theory of justifiable design inferences. That is to say, it's a theory which seeks to answer the question: what justifies us in inferring that design is the best explanation of some phenomenon? It is obvious that we make such design inferences all the time. A teacher who finds that a student's term paper reproduces sections from Wikipedia realizes that this is not the result of chance but of deliberate plagiarism. Archaeologists excavating a site readily discern the difference between the products of sedimentation and metamorphosis and human artifacts. A beachcomber who comes upon a sandcastle recognizes that it's not the result of the action of the waves and the wind but of intelligent design.
>
> Some of these inferences are so obvious that it never even occurs to us to ask why we are justified in making such inferences to design. But philosophically, it's no trivial matter to provide a theory of what makes a design inference justified. The theory of Intelligent Design seeks to provide just such an account. As an account of justified design inferences, Intelligent Design theory is of interest to a wide variety of fields: for example, to cryptographers who are trying to discern whether a sequence of letters is just meaningless jibberish or an encoded message; to crime scene investigators who want to determine whether the fire was a result of natural causes or of arson; to searchers for extra-terrestrial intelligence who are trying to make out whether the signal they're receiving is just random noise or a message from an extra-terrestrial intelligence, and so on and so forth.

> ID theorists have offered a number of accounts of what justifies a design inference. Undoubtedly one of the most sophisticated which has been offered comes from the mathematician William Dembski in his book *The Design Inference*, which appeared in Cambridge University Press's monograph series on Probability, Induction, and Decision Theory. Dembski argues that a design inference is justified when two conditions are met: first, the event to be explained is extraordinarily improbable and, second, the event corresponds to an independently given pattern.
>
> **In its most fundamental sense, then, Intelligent Design is a theory of design inferences which is applicable to a number of diverse fields. While disagreement may exist over which theory of design inference is correct, this is hardly the point at which Intelligent Design encounters heated opposition. Rather controversy arises when the theory of Intelligent Design is applied to the field of biology. For Dembski and other ID theorists have made the controversial claim that biological organisms exhibit just that combination of high improbability and conformity to an independently given pattern that justifies an inference to intelligent design. Accordingly, they maintain that we are justified scientifically in inferring that biological complexity is best explained by Intelligent Design.**

We infer design in biology (e.g. – protein sequencing) the same way we infer design in blog posts, computer programs, etc.

This video featuring Stephen Meyer explains ID in 5 minutes: (H/T Evolution News)

If you want to understand intelligent design better, I recommend this lecture by Stephen C. Meyer on the origin of life.

# Schools ask 12-year-old children whether they have had gay, oral and anal sex

**Wintery Knight** · 8 May 2015 · Archived copy · Original

This is from Breitbart News. (H/T Ari)

Full text:

> A public hearing is taking place Wednesday morning in the Massachusetts State House to look into a controversial sex survey given to middle school and high school students.
> Developed by the Centers for Disease Control and called the "Youth Risk Behavior Survey," the survey asks students as young as 12 a series of very personal and highly ideological questions.
>
> The survey asks students if they are homosexual and if they are transgender. It also asks if they have had oral or anal sex and if they have performed such acts with up to six people.
>
> Whether or not they have carried a gun, smoked cigarettes, consumed alcohol and how much also appear on the questionnaire, as well as whether they have taken drugs, such as OxyContin, Percocet, and Vicodin. It asks how often their guardian uses a seat belt, if the youngster has a sexually transmitted disease, and where they sleep.
>
> The group MassResistance says the survey is "psychologically distorting" and will lead the child to think he is "abnormal if he is not doing it all." The group stated that "having children reveal personal issues about themselves and their family can have emotional consequences." They also complain that "the survey results are used by radical groups from Planned Parenthood to LGBT groups to persuade politicians to give more taxpayer money [to] these groups."
>
> Though students fill out the survey anonymously, MassResistance warns that "they are administered by the teacher in the classroom and there is often pressure for all kids to participate."
>
> The test is given nationally and not without controversy. The Chicago Tribune reported two years ago that a Chicago teacher was reprimanded for telling students they had a "constitutional right" not to fill out the survey.

This post is a lead-in for my 2 PM post, which tries to explain what people on the secular left are hoping to achieve by trying to break down the natural resistance that children have to sexual exploitation.

# What difference does the doctrine of humans being in “the image of God” make?

**Wintery Knight** · 8 May 2015 · Archived copy · Original

Here’s an article from the leftist The Week about how Christianity transformed our view of the value of children. (H/T Trina)

It says:

> We have forgotten just how deep a cultural revolution Christianity wrought. In fact, we forget about it precisely because of how deep it was: There are many ideas that we simply take for granted as natural and obvious, when in fact they didn’t exist until the arrival of Christianity changed things completely. Take, for instance, the idea of children.
>
> Today, it is simply taken for granted that the innocence and vulnerability of children makes them beings of particular value, and entitled to particular care. We also romanticize children — their beauty, their joy, their liveliness. Our culture encourages us to let ourselves fall prey to our gooey feelings whenever we look at baby pictures. What could be more natural?
>
> In fact, this view of children is a historical oddity. If you disagree, just go back to the view of children that prevailed in Europe’s ancient pagan world.
>
> As the historian O.M. Bakke points out in his invaluable book *When Children Became People*, in ancient Greece and Rome, children were considered nonpersons.

Here’s how children were viewed before Christianity:

> One of the most notorious ancient practices that Christianity rebelled against was the frequent practice of *expositio*, basically the abandonment of unwanted infants.
>
> […]Another notorious practice in the ancient world was the sexual exploitation of children. It is sometimes pointed to paganism’s greater tolerance (though by no means full acceptance) of homosexuality than Christianity as evidence for its higher moral virtue. But this is to look at a very different world through distorting lenses. The key thing to understand about sexuality in the pagan world is the ever-present notion of concentric circles of worth. The ancient world did not have fewer taboos, it had different ones. Namely, most sexual acts were permissible, as long as they involved a person of higher status being active against or dominating a person of lower status. This meant that, according to all the evidence we have, the sexual abuse of children (particularly boys) was rife.
>
> […]According to our sources, most abandoned children died — but some were “rescued,” almost inevitably into slavery. And the most profitable way for a small child slave to earn money was as a sex slave. Brothels specializing in child sex slaves, particularly boys, were established, legal, and thriving businesses in ancient Rome. One source reports that sex with castrated boys was regarded as a particular delicacy, and that foundlings were castrated as infants for that purpose.
>
> Of course, the rich didn’t have to bother with brothels — they had all the rights to abuse their slaves (and even their children) as they pleased. And, again, this was perfectly licit. When Suetonius condemns Tiberius because he “taught children of the most tender years, whom he called his little fishes, to play between his legs while he was in his bath” and “those who had not yet been weaned, but were strong and hearty, he set at fellatio,” he is not writing with shock and horror; instead, he is essentially mocking the emperor for his lack of self-restraint and enjoying too much of a good thing.
>
> This is the world into which Christianity came, condemning abortion and infanticide as loudly and as early as it could.

Here are a couple of stories that contrast the Christian view of children as made in the image of God with the secular leftist view that children, unborn and born, are basically just machines made out of meat.

First one from the Washington Times is on a wealthy Democrat donor named Jeffrey Epstein:

> **Former Secretary of State Hillary Rodham Clinton is incensed that her husband, former President Bill Clinton, has been tied to sex offender Jeffrey Epstein, who's also at the heart of an investigation into Prince Andrew's alleged sexual dalliances with a minor, the New York Post reported.**
>
> **[…]Court documents related to a suit filed by Virginia Roberts, who allegesMr. Epstein paid her $15,000 to have sex with the prince, also included several references to Mr. Clinton. The documents from 2011 show thatMr. Epstein had 21 different email and telephone numbers for Mr. Clinton and an aide in his directory.**
>
> The court documents also show Mr. Clinton "frequently flew" with Mr. Epstein on his private plane between 2002 and 2005. The court documents say that Mr. Clinton "suddenly stopped, raising the suspicion that the friendship abruptly ended, perhaps because of events related to Epstein's sexual abuse of children," the Post reported.
>
> Mrs. Clinton, widely considered the front-runner for the 2016 Democratic presidential bid, is reportedly outraged that her husband's name has again popped up in a sex scandal.

When I read the story about what allegedly happened to Virginia Roberts, I literally cried my eyes out. But then again, I'm coming at this from a Christian perspective where selfish adults ought to give way to the needs of vulnerable children. Secular leftists don't have that view, so anything goes.

The second story is from Oregon Live and is about another wealthy Democrat donor:

> The former boyfriend of Terrence P. Bean was arrested early Thursday on sex abuse charges stemming from the same alleged 2013 encounter with a 15-year-old boy at a hotel in Eugene.
>
> Kiah Loy Lawson, 25, was arrested at 1:15 a.m. at the Portland Police Bureau's Central Precinct and booked into the Multnomah County Detention Center shortly after 2 a.m.
>
> […]Detective Jeff Myers from the Portland's Sex Crimes Unit made the arrest, hours after police took Lawson's ex-boyfriend, Portland developer Terrence Patrick Bean, into custody Wednesday morning.
>
> **Bean, 66, a prominent gay rights activist and major Democratic Party fundraiser, was arrested at his home in Southwest Portland and booked into the Multnomah County Detention Center at 10:12 a.m. Wednesday.**
>
> The indictment charges Bean with two counts of third-degree sodomy, a felony, and one count of third-degree sex abuse, a misdemeanor, police said.
>
> […]Both Bean and Lawson are accused of having a sexual encounter with the same 15-year-old boy in a hotel in Eugene last year. They had arranged the encounter with the teen after meeting him via a website, investigators allege.
>
> […]**Bean has been one of the state's biggest Democratic donors and an influential figure in gay rights circles in the state. He helped found two major national political groups, the Human Rights Campaign and the Gay and Lesbian Victory Fund, and has been a major contributor for several Democratic presidential candidates, including Barack Obama. He's also a close friend of former Gov. Barbara Roberts.**

Children are weak and adults are strong. Secular leftists believe that selfish adults should be able to do whatever they want with children in order to gratify their own desires. This is the default "no God" view. I can guarantee you that no one who abuses children, unborn or born, expects to face God and be held accountable for what they did.

The secular left, which does not recognize that children are made in the image of God in order to know God, has discovered that it's easier to sexually abuse children if you separate them from their biological parents, especially their fathers. That's one of the reasons why they support no-fault divorce, single mother welfare, and now even same-sex marriage. Children who don't have biological parents are much easier to exploit sexually. And if the children find anything wrong with being sexualized at an early age and groomed for sexual exploitation, well, we have public schools to teach them that this is all perfectly normal. Public schools that are championed by Democrats, of course.

# Economist Walter Williams explains how to not be poor

**Wintery Knight** · 8 May 2015 · Archived copy · Original

Economist Walter Williams

Here is his article on wealth and poverty on Creators.

First, there is no real poverty in the United States:

> There is no material poverty in the U.S. Here are a few facts about people whom the Census Bureau labels as poor. Dr. Robert Rector and Rachel Sheffield, in their study "Understanding Poverty in the United States: Surprising Facts About America's Poor", report that 80 percent of poor households have air conditioning; nearly three-quarters have a car or truck, and 31 percent have two or more. Two-thirds have cable or satellite TV. Half have one or more computers. Forty-two percent own their homes. Poor Americans have more living space than the typical non-poor person in Sweden, France or the U.K. What we have in our nation are dependency and poverty of the spirit, with people making unwise choices and leading pathological lives aided and abetted by the welfare state.

Second, the "poverty" is not caused by racism, but by poor choices:

> The Census Bureau pegs the poverty rate among blacks at 35 percent and among whites at 13 percent. The illegitimacy rate among blacks is 72 percent, and among whites it's 30 percent. A statistic that one doesn't hear much about is that the poverty rate among black married families has been in the single digits for more than two decades, currently at 8 percent. For married white families, it's 5 percent. Now the politically incorrect questions: Whose fault is it to have children without the benefit of marriage and risk a life of dependency? Do people have free will, or are they governed by instincts?
>
> There may be some pinhead sociologists who blame the weak black family structure on racial discrimination. But why was the black illegitimacy rate only 14 percent in 1940, and why, as Dr. Thomas Sowell reports, do we find that census data "going back a hundred years, when blacks were just one generation out of slavery … showed that a slightly higher percentage of black adults had married than white adults. This fact remained true in every census from 1890 to 1940"? Is anyone willing to advance the argument that the reason the illegitimacy rate among blacks was lower and marriage rates higher in earlier periods was there was less racial discrimination and greater opportunity?

Third, avoiding poverty is the result of good choices:

> No one can blame a person if he starts out in life poor, because how one starts out is not his fault.
>
> If he stays poor, he is to blame because it is his fault. Avoiding long-term poverty is not rocket science. First, graduate from high school. Second, get married before you have children, and stay married. Third, work at any kind of job, even one that starts out paying the minimum wage. And finally, avoid engaging in criminal behavior. It turns out that a married couple, each earning the minimum wage, would earn an annual combined income of $30,000. The Census Bureau poverty line for a family of two is $15,500, and for a family of four, it's $23,000. By the way, no adult who starts out earning the minimum wage does so for very long.

Fourth, what stops people from making good choices is big government:

> Since President Lyndon Johnson declared war on poverty, the nation has spent about $18 trillion at the federal, state and local levels of government on programs justified by the "need" to deal with some aspect of poverty. In a column of mine in 1995, I pointed out that at that time, the nation had spent $5.4 trillion on the War on Poverty, and with that princely sum, "you could purchase every U.S. factory, all manufacturing equipment, and every office building. With what's left over, one could buy every airline, trucking company and our commercial maritime fleet. If you're still in the shopping mood, you could also buy every television, radio and power company, plus every retail and wholesale store in the entire nation". Today's total of $18 trillion spent on poverty means you could purchase everything produced in our country each year and then some.

Walter Williams is one of my two favorite economists, the other being Thomas Sowell. By sheer coincidence, they both happen to have grown up poor, and they both happen to be black. They understand what causes poverty very well. I recommend their books to you if you want to understand poverty, too.

# Must you agree with a person who threatens to kill himself if you don't?

**Wintery Knight** · 9 May 2015 · Archived copy · Original

The latest from Life Site News about Stanford's University's attempt to suppress a pro-natural-marriage group's campus event.

Excerpt:

> At a recent GSC meeting, SAS co-president Judy Romea reminded student leaders that not only is the SAS not "anti-gay," it stood "in solidarity" with homosexual groups against the controversial Westboro Baptist Church when it held a protest on campus.
>
> But that wasn't enough for campus gay activist groups, who turned out en masse for the same GSC meeting to demand that funding for the event be pulled.
>
> "Their viewpoint kills people," Jeffrey Cohen, vice president of GradQ, a homosexual advocacy group for graduate students, told the GSC. "There's a lot of research published in top psychology journals that have looked at university environments, both positive and negative. An event such as this would be a negative event, [and] in schools that have negative events there is a statistically significant increase in suicide." He said the last time a pro-marriage speaker visited the campus, someone told him "they wanted to kill themselves."
>
> Cohen said he was especially "bothered by the idea that their conference is trying to create better ways to deliver [the pro-marriage] message. … The idea that they are learning how to deliver their message scares [me]." Cohen suggested SAS cancel its conference and instead hold a joint event with GradQ in which gay activists would have a chance to promote their message too.
>
> Ben Holston, chair of the undergraduate senate, also threw his weight behind the gay groups. "This is an event that hurts the Stanford community," Holston said. "To express a belief that, for some reason this event is not discriminatory, is completely off-base. This event as it stands, given the speakers, and given that they have said the event is supposed to 'promote one-man one-woman [marriage],' which promotes stripping away rights of people in this room, is unacceptable on Stanford's campus." He urged the GSC to withdraw its funding for the conference.

Now I'm chaste, and a virgin, so I was just imagining what it would be like for me at Yale during Sex Week, when my student fees (hypothetically) would be used to bring in sex addicts to instruct college students that my view is sick and twisted and that binge drinking and premarital promiscuity is morally praiseworthy. Does anyone here seriously think that I would threaten to commit suicide unless people who disagreed with my chastity and virginity stopped disagreeing with me? No. A sex addict's disapproval of my chastity and virginity doesn't make me want to commit suicide, *because I am not insane.* I'm also *not engaged in immoral behavior* by being chaste and remaining a virgin. Criticism of me for being moral doesn't bother me – that's *your* problem if you disagree with morality.

If you tell me that what I'm doing is wrong, I've got piles of papers in peer-reviewed journals showing me that for my plans – life-long married love and influential Christian children raised by a stay-at-home mom – chastity is the best plan. But it doesn't bother me if you disagree with me, and I'm not going to attack your place of work with guns, vandalize your church, or force you to lose your job – because I'm not a gay activist. I don't care that you disagree with me, because I believe that there is a right to free speech and no right to force you to celebrate and fund my sexual orientation.

That gay activist sounded insane, but I don't think that most gay people agree with him.

Look:

> Ben, a graduate student in neuroscience, told the GSC that even though he is homosexual, he believes the SAS should be able to access the same student funding as any other group.
>
> “What bothers [me] the most is that in the name of tolerance, we are silencing and taking away support from a view that we don’t agree with,” Ben said. “These views are out there, we should listen to them. I totally disagree with these people, but we need to hear what they have to say.  We need to hear SAS.”

Now there is a gay person I can tolerate – because he tolerates me.

# What UK Prime Minister David Cameron will do, and an extra thing that he should do

**Wintery Knight** · 9 May 2015 · Archived copy · Original

CON = 331 (+24), LAB = 232 (-26), SNP = 56 (+50), LIB = 8 (-47), UKP = 1 (+1), OTH = 22

Here's an article from the radically leftist UK Independent, which is furious with the Conservative Party victory in Thursday's national elections.

In it, they explain what Cameron intends to do:

> David Cameron will use the Conservative Party's first majority in the House of Commons for nearly 20 years to "deliver" on a radical agenda to cut welfare, shrink the size of the state and re-define Britain's relationship with Europe.

> Conservative insiders said Mr Cameron would move to the right to consolidate support among his backbench MPs after five years of compromise with the Liberal Democrats.
>
> Among Mr Cameron's first legislative priorities will be to enshrine an EU referendum into law, bring in the so-called 'snoopers charter' to give police greater powers to monitor internet communications and give English MPs a veto over legislation only affecting England. The Tories also intend to publish plans to scrap the Human Rights Act within their first 100 days. All proposals had been previously blocked by the Lib Dems.

I always think of the UK as the biggest dupes when it comes to global warming, especially after the Climategate e-mails came out showing that that there was a concerted effort to falsify data and persecute global warming skeptics. But, like Canada's Conservative Party, the UK Conservative Party is taking a stand against the pseudo-science.

Look:

> As well as deep welfare cuts *The Independent* understands that the Department of Business and the Department of Energy and Climate Change, previously run by the Lib Dems, will be among the biggest casualties in terms of spending reductions.
>
> Oliver Letwin, the Tories' policy chief, has spent the campaign in Whitehall drawing up proposals to merge quangos and slash Government regulation. These are likely to form a key part of the spending review. The review has been made more difficult by Mr Cameron's late and unexpected election pledge to find an extra £8bn for the NHS. This has yet to be funded and if the Tories stick to their other tax and spending commitments could require further cuts. Most senior Tories had expected to be negotiating another coalition agreement with the Liberal Democrats, giving them the flexibility to raise taxes to fund their additional spending commitments. As it is they are now bound to implement legislation binding the Government not to increase income tax, national insurance or VAT rates for the next five years.

Quangos are "quasi-autonomous non-governmental organisations". Abolishing or merging these will put a serious dent in government over-spending – and overreach.

**The Democratic Unionist Party factor**

Cameron would do well to add the Democratic Unionist Party (DUP) members to his coalition. Conservative MEP Daniel Hannan says that "On immigration, on constitutional reform, on defence, on Europe, on rural issues, on education, on law and order, the DUP is, well, conservative."The Conservatives need 323 seats to govern. They have 331 by themselves, and 8 more would help them in case there are any rebellions from within their own ranks. If he can get the lone UKIP member on board, that would help too, giving him a majority of 340.

More about the DUP:

> The DUP bills itself as "right-wing in the sense of being strong on the constitution", but "to the left on social policy". The party's members show a strong leaning towards the Conservatives, Professor Jonathan Tonge notes, backing them by a ratio of seven to one over Labour. The DUP also back the Conservatives on areas like Europe, with Nigel Dodds insisting that any coalition they are involved in would need to offer an EU referendum.
>
> […]The DUP, which has close links to the Dr Paisley's Free Presbyterian Church, has frequently sparked controversy for how it discusses homosexuality. This has led to David Cameron facing tough questions earlier this month during a Q&A when one audience member wanted him to vow not to go into coalition with the DUP because of its views on LGBT rights, something he refused to rule out.
>
> […]The DUP also oppose the right of women to an abortion, with Jim Wells saying it should be ruled out for rape victims. The party has also called for a parliamentary debate on resinstating the death penalty.

It sounds like they are even further right than Cameron, which is good, because Cameron is what Americans would call a RINO.

**Give Scotland enough rope to hang itself**

But the most important thing for Cameron to do is to give Scotland full fiscal autonomy.

This is even something that the SNP leader wants:

> Nicola Sturgeon was forced to admit in the second Scottish leaders' debate that her MPs would be prepared to vote next year for full fiscal autonomy, which according to experts would make Scotland £7.6 billion worse off.
>
> […]In March, she suggested it might not happen straightaway as she faced claims it would cost almost 140,000 jobs and leave Scotland with a higher deficit than Spain.
>
> […]It would mean Scotland opting out of the Barnett Formula which currently sets Scotland's public spending

> block grant, and gives Scots around £1,200 extra per head.
>
> […]In March, Ms Sturgeon dismissed warnings from the impartial Institute for Fiscal Studies (IFS) that her general election demand for full fiscal autonomy would create a multi-billion pound financial black hole in Scotland's finances.

Daniel Hannan thinks this would be a great idea:

> Commentators struggle to explain the rise of the SNP: why, seven months after rejecting separation, should Scots turn to the separatist party? Those commentators miss the point. The SNP knows fine well (as Scots say) that opinion has not moved on the independence issue. Nicola Sturgeon had to keep promising that there'd be no re-run of the vote.
>
> **No, the SNP is better understood as Scotland's version of Greece's Syriza or Spain's Podemos – a far-Left, populist insurgency. Like those parties, it has a touching belief in its ability to conjure wealth through alchemy.**
>
> […]There is a very weak link in Scotland between taxation, representation and expenditure. Because of the Barnett Formula, Scottish politicians get to spend money that has been raised through taxation elsewhere. This incentivises their constituents to vote for high-spending parties. Over time, that tendency has become self-reinforcing to the extent that the very act of calling for fiscal restraint is seen as alien, un-Scottish.
>
> Not all Scots are on the Left, obviously. There are some free-marketeers in the land of Adam Smith. But the prevailing assumption among Holyrood politicians and pundits is that higher spending is a defining national characteristic. They don't use those words, of course. They say, "We're a compassionate, fair-minded people". But it's what they mean.
>
> What can be done about it? Well, the SNP demands full fiscal autonomy, and David Cameron should hurry to meet that demand. Partly because linking taxation to expenditure north of the border might allow a revival, over time, of Right-of-Centre politics in Scotland. Partly because the measure will also be popular with English taxpayers. Partly, too, because, without such a reform, separatism will revive. And partly because greater autonomy for Scotland could bring about a new, devolved settlement for the entire United Kingdom, something that is long overdue. Mainly, though, because most Scots say they want it, and the SNP has won an unarguable mandate. What are we waiting for?

The Scottish electorate – by and large – make Greek socialists like Tsipras / Syriza appear fiscally prudent. They need to find out how economics works the hard way. Let them make their own decisions, and maybe when they are picking leaves off of trees to feed themselves in a few years, they will come to their senses and be ready to deal. It's very important for people who are led by their feelings and who pursue dreams against reality to crash and burn, so that they understand the value of practical people who have worked hard, saved and played by the rules.

The Scots are voting for slogans like "stop austerity" without any idea of how difficult working and saving really is for taxpayers, of which there are precious few in Scotland. Let them face the consequences of their own folly, and then come back to the negotiating table with a weaker hand, just as Greece is doing now. Maybe if Cameron does this in the UK, it will inspire Harper to do the same with Quebec in Canada. Just give Quebec full fiscal autonomy and then cut off the equalization payments that allow them to live far beyond their means. Make them grow up.

One thing is for sure. The UK electorate (aside from Scotland and Wales) has impressed me. This is the beginning of a period of liberty, prosperity and security for the UK, and I for one am envious that they are getting a head start on it, while we have to wait another year and a half before we join them by electing a Republican president, and holding the House and Senate.

# New study: unborn babies are viable at 22 weeks

**Wintery Knight** · 10 May 2015 · Archived copy · Original

Unborn baby – 10 weeks old

This story appeared in the radically leftist New York Times, of all places.

It says:

> A small number of very premature babies are surviving earlier outside the womb than doctors once thought possible, a new study has documented, raising questions about how aggressively they should be treated and posing implications for the debate about abortion.
>
> […]The study, one of the largest and most systematic examinations of care for very premature infants, found that hospitals with sophisticated neonatal units varied widely in their approach to 22-week-olds, ranging from a few that offer no active medical treatment to a handful that assertively treat most cases with measures like ventilation, intubation and surfactant to improve the functioning of babies' lungs.
>
> […]The study, involving nearly 5,000 babies born between 22 and 27 weeks gestation, found that 22-week-old babies did not survive without medical intervention. In the 78 cases where active treatment was given, 18 survived, and by the time they were young toddlers, seven of those did not have moderate or severe impairments. Six had serious problems such as blindness, deafness or severe cerebral palsy.
>
> Of the 755 born at 23 weeks, treatment was given to 542. About a third of those survived, and about half of the survivors had no significant problems.

You can double-check the details of the study.

Meanwhile, in Congress, the Republicans are getting ready to reintroduce a bill that bans abortions after 20 weeks.

Excerpt:

> Republicans in the House of Representatives will hold a vote on or around the anniversary of the murder

> conviction of late-term abortionist Kermit Gosnell on a marquee bill to ban abortions after 20 weeks of pregnancy because unborn children feel intense pain in abortions. This is the second time Republicans have planned a vote on the major pro-life bill — and this vote is expected to take place next week, possibly Wednesday, the anniversary of Gosnell's conviction.
>
> […]As pro-life sources have informed LifeNews, other new provisions of the bill that strengthen in include a born-alive infant protection requirement that requires a second doctor be present and prepared to provide care to the child if he or she is born alive and that the child must receive the same level of care as would any other premature infant. The baby must then be transported and admitted to a hospital. The woman is also empowered with a right to sue if the law is not followed, and is provided with an informed consent form that notifies her of the age of her baby and the requirements under the law.
>
> Abortionists are explicitly required to follow state mandatory reporting laws and state parental involvement laws. Finally, abortionists are required to report any late abortions done under the exceptions to the Center for Disease Control and such data will be compiled into an annual public report to ensure accountability.

This bill doesn't go all the way to banning all abortions – far from it. But pro-life groups are pleased, because they want to save some lives even if they can't save all:

> Top pro-life advocates are strongly supporting the final version of the bill up for a vote next week, according to the Weekly Standard. Two major pro-life groups have already signed off on the revised bill.
>
> > "We will have even stronger support than we did in the last Congress," said Rep. Chris Smith of New Jersey, a leading pro-life advocate in the House. "It will be good to have a truly unified pro-life conference."
> >
> > National Right to Life Committee president Carol Tobias worked closely with Republican leadership staff members and met Thursday with McCarthy. "I felt very comfortable working with leadership staff," said Tobias. "We were working as allies."
> >
> > "We are thankful to our pro-life allies on the Hill, including House GOP leadership and the Congressional Pro-Life Women's Caucus, who have tirelessly worked to bring this bill to a vote," said Marjorie Dannenfelser, president of the Susan B. Anthony List. "This process has yielded a strong bill which we expect to pass next week with enthusiastic bipartisan support."
>
> Sponsoring Congressman Trent Franks of Arizona says the bill has the potential to save thousands of babies from abortion.

That bill is, of course, opposed by Democrats.

UPDATE: Here's a news story about a woman who killed a 20-week-old baby who was born alive and left to die.

# What does it take to be a good spiritual leader? What does following Jesus mean?

**Wintery Knight** · 10 May 2015 · Archived copy · Original

Theology that hits the spot

I think it's pretty clear from the gospels that if Jesus did anything, he certainly died for our sins in obedience to God his Father. He did this not because it was fun and thrilling, but because he though it would be effective on our behalf. I'm sure that Jesus would have preferred to go do fun things, have nice vacations, etc. But instead, he chose the suffering and the death. And for those of us who claim to be Christian, we should be careful that we are not living our lives in the constant pursuit of pleasure as well. There is no place for that in Christianity – we need to be about the work of identifying with Jesus' example of suffering, self-denial, self-sacrifice.

Matthew 16:24-27:

> [24] Then Jesus said to His disciples, "If anyone wishes to come after Me, he must deny himself, and take up his cross and follow Me.
>
> [25] For whoever wishes to save his life will lose it; but whoever loses his life for My sake will find it.
>
> [26] For what will it profit a man if he gains the whole world and forfeits his soul? Or what will a man give in exchange for his soul?
>
> [27] For the Son of Man is going to come in the glory of His Father with His angels, and will then repay every man according to his deeds.

Matthew 23:12-12:

> [12] Whoever exalts himself shall be humbled; and whoever humbles himself shall be exalted.

John 12:25-26:

> [25] He who loves his life loses it, and he who hates his life in this world will keep it to life eternal.
>
> [26] If anyone serves Me, he must follow Me; and where I am, there My servant will be also; if anyone serves Me, the Father will honor him.

Our lives are supposed to be about taking up our crosses and following Jesus. Not having fun or pursuing thrills.

Sometimes I say that to people I mentor who have been raised in the church, who love to read devotionals and Bible study, who love to go to church. And what I find is that they disagree and think that the purpose of life is to do easy things that make them feel good and that make other people think that they are something special. It is an article of faith for them that you can make a difference for God by choosing the easiest, funnest and most thrilling option throughout your life and that God will work this into an effective life. But Jesus didn't think like that. In fact, I cannot think of a single case in the Bible where Jesus chose fun and thrills. Jesus chose the cross. He was not trying to have good feelings or to be liked by lots of people. And we are supposed to be following in his steps.

Christian self-sacrifice is all about denying desires and interests which interfere with our ability to follow Jesus. For example, one of my goals is to follow Jesus through charity. So I went into a field that was not easy for me, took jobs that I did not like, and put away investments instead of spending – all so that I would be able to invest in others as a way of imitating the self-denial and self-sacrifice of Jesus, with the goal of making a difference. I am trying to stop looking out for number one, and starting looking out for Jesus. And if I have to do things that I don't feel like doing, well so much the worse for me. And let me tell you, investing in people who then betray you at the deepest level is no fun. And yet I must keep giving away money to people joyfully, even after this happens. I have to continue to care for others and to deny myself. It is not good for my self-love and self-esteem to be hurt when I invest in others, but it is following Jesus.

So I want to say three things about this based on my own personal experiences.

The first thing to say is that a good spiritual leader is one who leads us to be more like Jesus. And that means helping us be better less interested in fun, less interested in thrills, less interested in travel, less interested in vanity. And so on. For example, if what you are trying to do with your life now is the exact same thing that you were trying to do with your life before you became a Christian, it's a good sign that you are deceiving yourself that your plan is from God. A good spiritual leader is able to spot when you are wrapping your pre-conversion desire in a cloak of religious language. In my own case, if you ask me to lead you, you'll find that I'll push you away from things that do not work to serve God. But there's more to self-denial than just avoiding fun, there's self-control. Don't do stuff just so that you can tell everyone about it on Facebook. An outspoken supporter of intelligent design I know proudly posted that she had been admitted to a prestigious graduate school on her Facebook page, and she lost her academic adviser. We need to have humility, wisdom and self-control if we expect to have an impact for Christ. A good spiritual leader can sense when you are just doing stuff in order to impress other people, and he will tell you not to do that.

The second thing to say is that a bad spiritual leader does not make us more like Jesus. A bad spiritual leader is someone who says yes to other people in order to be liked by them. He is not able to understand what will and will not work – especially in areas where he has no experience. A bad spiritual leader is someone who is more concerned about making a name for himself by using Christianity to become popular and admired. A bad spiritual leader is someone who lacks self-control. Instead of looking around to others to see how he can help them, he looks out for himself and undermines others for his own benefit. Instead of seeking the good of others, he helps himself to good things for his own appetites, and takes away the good things that others need. I also think that in general, a bad spiritual leader is someone who lacks life experience. For example, do not take advice on professional and financial matters from someone who is still a student in her late 20s and who has never worked a paid job. She will not know what you should do financially or professionally.

The final thing I have to say is about the kind of person who rejects a good spiritual mentor and chooses a bad one. I want to advise you to be careful about rejecting people with real experience of following Jesus. That is, people who have actually engaged in acts of self-denial, self-sacrifice, etc. in order to be more like Christ. People who have studied things they did not like. Worked at jobs they did not want to. Given away money to people who did not appreciate it. Mentored people to serve God who were rebellious and emotional. Do not choose people who are easy to control, e.g. – people who are younger or less mature than you are, to be your mentor. Do not choose people who say yes to your desire to feel good or to have fun because they only want to be liked by you. Be careful of choosing advisers who lack maturity and who are easy to manipulate because of their need for attention. It's better

to prefer the people who labor in service to others without wanting attention drawn to themselves. It's better to prefer the people who tell you no and point you towards self-denial, self-control and self-sacrifice. This is real spiritual leadership – pointing you towards the example of Jesus.

If you look back in your past and see yourself making bad decision after bad decision because you hid things from good spiritual leaders so you could have fun, you know you are vulnerable to doing this. If you know you have sought out the approval of poor inexperienced leaders deliberately, then you ought to know better. You cannot make a bad plan work by pushing away mature spiritual leaders and surrounding yourself with young, immature, emotion-driven advisers. You need to prefer people who tell you the truth about what you are doing, even if it is uncomfortable for you – that is the wise thing to do. Do not seek out advisers who tell you that your feelings are the voice of God speaking to you – that is just telling you what you want to hear. The first part of exercising self-control is not letting your emotions affect strategic decisions.

If you want to read more about self-denial, here's a lecture to read by Charles Finney.

# What policies can we enact to help poor children out of poverty?

**Wintery Knight** · 11 May 2015 · Archived copy · Original

Teacher union says no to vouchers

Well, obviously pro-marriage policies will help – encouraging people to get married before they have children, then sticking together to raise the children. That will help.

Economist Stephen Moore has another idea, which I support.

He writes about it at the Daily Signal.

Excerpt:

> The scenes of Baltimore set ablaze have many Americans thinking: What can be done to rescue families trapped in an inner-city culture of violence, despair and joblessness?
>
> There are no easy answers, but down the road from Baltimore in Washington, D.C., an education program is giving children in poor neighborhoods a big lift up.
>
> The D.C. Opportunity Scholarship Program, which George W. Bush signed into law in 2004, has so far funded private school tuition for nearly 5,000 students, 95 percent of whom are African-American. They attend religious schools, music and arts schools, even elite college-prep schools. Last month at The Heritage Foundation in Washington, I met with about 20 parents and children who participate in the program. I also visited several of these families in their homes—which are located in some of the most beaten-down neighborhoods in the city, places that in many ways resemble the trouble spots in Baltimore.
>
> These families have now pulled together to brace for a David vs. Goliath fight to save the program. For the seventh straight year, President Obama has proposed eliminating this relatively tiny scholarship fund, which at $20 million accounts for a microscopic 0.0005 percent of the $4 trillion federal budget.

Why would Obama want to end the program? Because if children can choose schools that don't fail them, the teachers are the failing schools might lose their jobs. Since Obama needs the votes and the political support of the teacher unions, he cannot put the interests of the children above the interests of the unionized teachers.

More from the article:

> An Education Department-funded study at the University of Arkansas recently found that graduation rates rose 21 percentage points—to 91 percent, from 70 percent—for students awarded the scholarship vouchers through a lottery, compared with a control group of those who applied for but didn't get the scholarships. For all D.C. public schools, the high school graduation rate is closer to an abysmal 56 percent.
>
> "If you've got a program that's clearly working and helping these kids, why end it?" asks Pamela Battle, whose

> son Carlos received a voucher and was able to attend the elite Georgetown Day School. He's now at Northeastern University in Boston. She says Carlos "almost surely wouldn't have gone to college" without the voucher. "We send all this money overseas for foreign aid," she adds, "why not save the kids here at home first?"

Well, as I said, the Democrats don't like the law:

> Amazingly, these energized parents are opposed by almost every liberal group, even the NAACP, and nearly every Democrat in Congress—including Eleanor Holmes Norton, who represents the District of Columbia in Congress but opposes a program that benefits her own constituents.
>
> There is little question what stirs this opposition. The teachers union sees the program as taking away union jobs, and it is so powerful that the Democratic establishment falls in line. "It is so sad that our public schools aren't doing what's best for the kids," laments Ford, but instead are looking out for "the adults."
>
> […]Obama won't even meet with these parents. A few years ago the voucher supporters held a rally with 3,000 minority and disadvantaged families in front of the Capitol to protest President Obama's proposed elimination of the program for all new students. Republicans in Congress, including House Speaker John Boehner, one of the program's strongest supporters, stood in solidarity with the families, while Nancy Pelosi and her Democratic colleagues were nowhere to be seen.

So, the next time someone accuses conservatives of not caring about children, be sure and tell them the story of the D.C. voucher program. We conservatives are very much in favor of helping poor children. It's the people on the left who are not. Don't let your conversations with leftists be about vague things like racism and "the rich". Bring it down to the level of details – "I support voucher programs for poor children to get out of failing schools. Do you? Why don't your Democrat leaders support them?" Go on the attack with the facts.

By the way, read the whole post by Moore – it's chock full of parents giving their opinion about the program, and telling stories of how vouchers worked for them. Children first, adults second. That has to be our rule.

# Is it wrong to pass incremental pro-life laws?

**Wintery Knight** · 11 May 2015 · Archived copy · Original

I'm Scheming Unborn Baby, and saving a life is a good thing

Pro-life debater Scott Klusendorf summarizes a recent debate between a pro-life incrementalist and a pro-life abolitionist. An incrementalist is a pro-lifer who wants to pass laws that save lives right now, while still working for a full ban on abortion. An abolitionist is a pro-lifer who does not want to pass laws that solve part of the problem, preferring to hold off on laws that save lives until they can get all abortions banned.

So there was a debate, and Scott watched it, and here is his review.

First, the intro:

> T. Russell Hunter issued a very public challenge calling for any pro-life leader to debate him on incrementalism. Gregg Cunningham, a former member of the Pennsylvania House of Representatives and Executive Director of the Center for Bioethical Reform, accepted. The formal debate structure was as follows: 20-minute opening statements, 15-minute rebuttals, 15-minute cross-examination, 5-minute closing statements. An informal audience Q&A followed the formal debate.
>
> […]Gregg Cunningham won the formal exchange handily and he did so early by pointing out a fundamental flaw in Hunter's argument—namely, the mistaken claim that pro-lifers have the power to end abortion immediately but won't. Again and again, he exposed Hunter's fallacious either/or reasoning by demonstrating that pro-lifers don't have to choose between incremental legislation that saves some children right now or total abolition that saves all at a later time. Rather, they can advance both strategies simultaneously and save many lives in the process. Cunningham also demonstrated a superior grasp of social reform history, noting that while Wilberforce, Lincoln, and Martin-Luther King were in *principle* moral absolutists, in practice they *functioned* as strategic and tactical incrementalists—as do pro-lifers today. During cross-examination, Hunter stumbled badly when asked if those babies saved through incremental legislation should have been left to die. When he refused to give a clear answer—despite being repeatedly pressed to do so—the debate was effectively over. In short, Hunter could not preach his way to victory, even when invoking his understanding of Scripture. His

> claim that incrementalism is not found in the Bible was decisively refuted when Gregg cited three examples from Scripture where God dealt incrementally with His people.

I watched this video clip to get a feel for how it went down:

In the clip, Cunningham asks if the babies who are saved by incremental legislation should be allowed to die instead. He has some evidence from a law professor saying that incremental laws do save some lives, and he is asking the AHA person should we not enact these incremental laws that save the lives of unborn children.

Scott has the transcript:

> GC: I'd like to return to the question with which I began, which Russ hasn't answered. Should we allow these babies to die rather than enact incremental legislation?
>
> TRH: No.
>
> GC: I'm sorry?
>
> TRH: Like, should we allow – should we allow babies to die?
>
> GC: Should we allow these – because…
>
> TRH: The charade is – the charade is not even what we're talking about – the incrementalism/immediatism debate. Focusing the ax at the tree, getting all the people who follow incrementalism to become immediatists and help put that ax to the branch – to the root…
>
> GC: Would you answer this question?
>
> TRH & GC: [unintelligible]
>
> Moderator: That was the last question. Russ, go ahead and answer that, and then we're gonna end this.
>
> GC: Just for the record, Russ didn't answer the question: Should we have allowed these babies to die, which this university professor says would have died had that legislation not been enacted. Should we have allowed them to die rather than enact the incremental legislation?
>
> Moderator: Okay, Russ, answer that question, then we'll change.
>
> TRH: Um, well, I firmly believe that abortion is evil, and it is one of these things that the powers and principalities of darkness and high places are very in to. It's the crown jewel of darkness, and I actually believe that if they can keep abortion going by deceiving people into becoming gradualists, they will do it. And if to deceive them they have to give them empty, illusory victories, and law professors may claim that babies were saved, they'll do it. But I – if someone goes to an abortion mill and shoots a doctor, a baby might be saved that day, but that's not going towards abolishing abortion. It's not establishing justice that day [unintelligible] a baby that day.
>
> GC: May I ask for clarification for your answer? You're saying this guy's making this up?
>
> TRH: Uh, no, I have to read it. But I'm just saying that convincing people to be gradualists by saying, "Hey look, we saved some," while they're still being – I'm pretty sure that you can convince people to be gradualists for the next 40 years…
>
> GC: Hey Russell, let's do both. Let's do both. Let's do both.

Honestly, I am not sure why anyone pays these AHA people any mind. Just judging from that one clip, I don't think that Hunter has anything of value to say in this debate. His group seems to be more concerned with attacking other pro-lifers who actually are getting the job done than doing anything. In the real world, incremental pro-life laws save lives. To be persuasive on those incremental laws, you have to talk about the logic and science that supports the pro-life view. That will be persuasive to Christians as well as non-Christians. Building consensus for incremental pro-life laws by appealing to a bigger audience that includes non-Christians makes sense – it solves the

actual problem.

# Physicist Frank Tipler on the usefulness of refereed journals, then and now

**Wintery Knight** · 11 May 2015 · Archived copy · Original

I really enjoyed this episode of the ID the Future podcast.

Description:

> Is the only good science peer-reviewed science? Are there other avenues to present important scientific work? On this episode of **ID The Future**, Professor of Mathematics Dr. Frank Tipler discusses the pros and cons of peer review and refereed journals. More than fifty peer-reviewed papers discussing intelligent design have been published, but critics of the theory still proclaim a lack of peer-reviewed work as an argument. Listen in as Tipler shows how things have changed with the peer review process and what we can do about it.

About the speaker:

> Frank Tipler was born and raised in Andalusia, Alabama. His first science project was a letter written in kindergarten to Werner von Braun, whose plans to launch the first earth satellite were then being publicized. Von Braun's secretary replied, regretting he had no rocket fuel for Tipler as requested. By age five, he knew he wanted to be an astrophysicist. But he's always been a polymath, reading widely across disciplines and into the history of science and theology. After graduating from MIT and the University of Maryland, he did postdoctoral work at Oxford and Berkeley, before arriving at Tulane in 1981.

William Lane Craig often cites a book by two physicists named "Barrow and Tipler" called "The Anthropic Cosmological Principle" (Oxford University Press, 1988) in his debates to support the fine-tuning argument. This Tipler is that Tipler! Dr. Tipler is a master of the physics of cosmology and fine-tuning. However, I definitely disagree with him on some of his ideas.

The MP3 file is here. (17 minutes)

Topics:

- the changing nature of refereed journals and peer-review
- previously, the refereed journals were more about communication
- now, ideas are not taken seriously unless they are published in these journals
- the problem is that referees can be motivated by ideological concerns
- before, an obscure patent official named Einstein submitted a physics paper and it was published
- now, an uncredited person would not be able to have a brilliant paper published like that
- today, there are so many scientists that many more papers are submitted
- although it restricts BAD ideas, it can also end up censoring NEW ideas
- the problem is that any really brilliant idea has to go against the prevailing consensus
- peer-review may actually be holding back the progress of science by censoring NEW ideas
- some referees are motivated to censor ideas that undercut their reputation and prestige
- Dr. Tipler was told to remove references to intelligent design before one of his papers would be published
- how scientists with NEW ideas can bypass the system of refereed journals when they are censored
- peer-review has value when it finds errors, but not when it suppresses new ideas

I think this one is a must listen. I like to refer to peer-reviewed evidence when arguing, but it's not perfect, for sure.

# Woman fakes cancer for late-term abortion money, baby died after being born alive

**Wintery Knight** · 12 May 2015 · Archived copy · Original

Chalice Renee Zeitner

Here's the story from ABC Local News.

It says:

> A convicted con artist duped the state into paying for her late-term abortion, a procedure which otherwise would not have been funded with public money, according to court records.
>
> Chalice Renee Zeitner made up a story about having cancer in order to qualify for an abortion while on Arizona's Medicaid insurance, and forged a doctor's note to support her claim, according to charging documents.
>
> A doctor performed the abortion when Zeitner was 22-weeks pregnant.
>
> Arizona's Medicaid, known as AHCCCS, will only pay for an abortion in cases of rape or incest or "medical necessity," which include cases where the pregnancy causes or worsens a serious health risk to the mother.
>
> Zeitner, 29, received "what was thought to be a medically necessary late-term abortion," court documents state.
>
> "Zeitner claimed she had stage IV sarcoma in her abdomen and lower spine, had received chemotherapy and radiation treatments and was scheduled to receive a life-saving surgery in Boston," documents state.
>
> That was later determined to be a fraud, according to documents.
>
> Zeitner had produced a one-page letter, purportedly from a Massachusetts doctor, that supported her claims, documents state.
>
> The abortion was performed in 2010.
>
> But one year later, it was another pregnancy that led to the discovery of Zeitner's alleged scam.
>
> She returned to the same doctor who performed the abortion to deliver a full-term child by cesarean section. During that birth, the doctor found no signs of cancer, documents state.
>
> That led to a check with the Boston doctor, which revealed that "he did not know Zeitner and had never treated her," so the cancer letter from him was a fraud, documents state.
>
> Attorney General Mark Brnovich's office on Tuesday charged Zeitner with felonies including fraud, theft, and forgery. She has a history of skipping town when she gets into trouble with the law, according to court documents. While a warrant was issued Wednesday, records do not yet indicate that she has been arrested.
>
> **Zeitner's aborted child was born alive, weighing just more than one pound, documents state.**

> **"The baby lived for approximately 20 minutes and received no life-saving measure by hospital staff," according to documents.**
>
> […]Zeitner has a previous forgery-related conviction in Maricopa County, documents state.
>
> She could not be reached for comment.

Now, if you ask a typical Democrat, they will say that this woman did nothing wrong from start to finish, and that the real solution is for pro-life taxpayers to pony up the money for her late-term abortion. The Democrat position on abortion is that it should be allowed through all nine months of pregnancy, that it should be taxpayer-funded, that doctors and nurses should have to assist without objection, and that babies who are born-alive should be left to die. Our current President, Barack Obama, voted for that last one multiple times when he was a state senator in Illinois.

I sent this story to a Christian woman friend who is strongly feminist and very anti-male. She told me that although she personally opposes abortion, that the law should allow this woman to choose to kill her baby. I was not surprised by this, because whenever I tell her stories about women making horrible decisions, she always either blames men, or gives a counter-example of where someone else made the same stupid decision and it worked out for them. I think that's what scares me the most about the abortion issue. How many apparently nice people are so convinced that whatever a woman wants to do must be OK.

I can imagine Zeitner posting news of her late-term, born alive abortion and having all her friends click like on it. Yay, Chalice! You didn't do anything wrong. After all, the baby is dead and gone now, and the mother still alive, and we want her to like us. Why rock the boat by telling her that she did anything wrong? A dental hygienist our family knows has had 3 children out of wedlock, and each time she changes boyfriends, she posts a picture of herself with the new boyfriend on Facebook, and all her friends click like on the picture. What could be wrong with changing boyfriends every year when you have 3 young children to take care of? I think the same cheering on of bad decisions must have happened many times with Zeitner – people around her refusing to set boundaries on her long before she started killing her own babies. It's easy for a woman to surround herself with people who just approve of everything she is doing – especially when she is young and attractive. Anyone who cautions her can just be blocked out. And the guaranteed failures that result from following her heart can just be declared "unexpected" by her carefully picked entourage of supporters. Life is so unpredictable, so she is not responsible.

Before Zeitner's abortion decisions ever materialized, there were a million bad decisions that Zeitner made in order to find herself facing the choice to abort. She was acting on selfish motives – she wanted to have fun. So she broke moral rules more and more, and pushed away anyone who would judge her. All her friends and family standing around said nothing or even approved of her, because they were afraid to tell her "this will not work" or "this is wrong". She had to have an exciting life, and hang out with exciting men. It's the failure to draw the line with women beforehand that causes them to get to a place where a baby has to die. But we want so much to be her friend. And to be liked. Maybe to get attention from her, or affection from her, or even sex with her. Judging her seems so… intolerant and mean. We don't want to be mean, do we? The Christian version of this is even more insidious, where the woman's feelings are "God's mysterious will for her life" and cannot be questioned or assessed rationally. It all ends the same, though.

# How well is the Tspiras-Syriza “austerity is over” plan working out for Greece?

**Wintery Knight** · 12 May 2015 · Archived copy · Original

Greece debt repayment schedule

First, let’s recall what the socialist leader Tsipras said after he was elected to save nearly bankrupt Greece.

Look how the radically leftist UK Guardian gushed when Tsipras took office:

> In a dramatic start to his tenure in office, Greece’s new prime minister, Alexis Tsipras, has begun unpicking the deeply unpopular austerity policies underpinning the debt-stricken country’s bailout programme.
>
> […]“We won’t get into a mutually destructive clash, but we will not continue a policy of subjection,” said Tsipras, who at 40 is Greece’s youngest postwar leader.
>
> […]**Earlier, the energy minister, Panagiotis Lafazanis, called a halt to the privatisation programme that the EU and IMF have demanded in exchange for the €240bn in aid keeping Greece afloat. Plans to sell off the country’s dominant power corporation, PPC, were to be frozen with immediate effect. “We will immediately stop any privatisation of PPC,” said the politician, who heads Syriza’s militant Left Platform. A proposed scheme to privatise the port of Pireaus, the country’s largest docks, were also put on hold.**

Yes, only nasty conservatives like me think that private industry is cheaper, more efficient and less corrupt than big government for handling big projects.

More:

> **After that, ministers announced more measures: the scrapping of fees for prescriptions and hospital visits, the restoration of collective work agreements, the rehiring of workers laid off in the public sector, the granting of citizenship to migrant children born and raised in Greece.** On his first day in

> office – barely 48 hours after storming to power – Tsipras got to work. The biting austerity his Syriza party had fought so long to annul now belonged to the past, and this was the beginning not of a new chapter but a book for the country long on the frontline of the euro crisis.
>
> "A new era has begun, a government of national salvation has arrived," he declared as cameras rolled and the cabinet session began. "We will continue with our plan. We don't have the right to disappoint our voters."
>
> If Athens's troika of creditors at the EU, ECB and IMF were in any doubt that Syriza meant business it was crushingly dispelled on Wednesday . With lightning speed, Europe's first hard-left government moved to dismantle the punishing policies Athens has been forced to enact in return for emergency aid.
>
> Measures that had pushed Greeks on to the streets – and pushed the country into its worst slump on record – were consigned to the dustbin of history, just as the leftists had promised.

Yes, everything is going to be sunshine and roses, because a 40-year-old know-nothing with no experience says it will be. Economics? That dismal science belongs in the dustbin of history. We can unilaterally reverse the policies our creditors demanded, and then they will of course keep lending us money anyway.

Another leftist UK Guardian article has more happy rhetoric and socialist policies:

> Dismantling the EU-IMF mandated measures that had plunged Greece into poverty and despair would, declared Panos Skourletis, the labour minister, be his single greatest priority.
>
> "The reinstatement of the minimum wage to €751 (£560) [a month] will be among the government's first bills," Skourletis announced on Antenna TV.
>
> **Under international stewardship, Athens had been forced to pare back the minimum wage to under €500, ostensibly to increase competitiveness and make the labour market more attractive. Skourletis, formerly Syriza's hard-nosed spokesman, said plans were similarly under way to bring back collective work agreements – a major demand of unions – and to annul the enforced mobilisation of workers protesting against cuts.**

Everything is awesome! Well, those two articles were from January 2015. Let's see what's happening now.

Everything is awesome! Lets have fun!
This is from UK Telegraph:

> Greece's "war cabinet" has resolved to defy the European creditor powers after a nine-hour meeting on

> Sunday, ensuring a crescendo of brinkmanship as the increasingly bitter fight comes to a head this month.
>
> Premier Alexis Tsipras and the leading figures of his Syriza movement agreed to defend their “red lines” on pensions and collective bargaining and prepare for battle whatever the consequences, deeming the olive-branch policy of recent weeks to have reached a dead end.
>
> “We have agreed on a tougher strategy to stop making compromises. We were unified and we have a spring our step once again,” said one participant.
>
> The Syriza government knows that this an extremely high-risk strategy. The Greek treasury is already empty and emergency funds seized from local authorities and state entities will soon run out.
>
> Greece’s mayors warned over the weekend that they would not release any more funds to the central government. The Greek finance ministry must pay the International Monetary Fund €750m (£544m) on Tuesday, the first of an escalating set of deadlines running into August.
>
> **“We have enough money to pay the IMF this week but not enough to get through to the end of the month. We all know that,” said one minister, speaking to The Telegraph immediately after the emotional conclave.**

If there’s one thing that makes me feel better about all the crap that is happening in this world, it’s the wonderful truth that eventually, bad economics meets with reality. You can imagine anything you want today that makes you feel good, and imagine that it will all be paid for somehow in the future. I really like it when people who don’t have any money make these elaborate future plans and then bet their futures on it. Because when reality comes, we all find out that there is justice in the world after all. There is no path to prosperity that involves doing whatever you want and being happy all the time – that is a myth that children have about life. Anyway, pass me the popcorn and let’s see how the Peter Pan plans of these inexperienced children work out. We won’t have to wait long. Mmm, this popcorn tastes schadenfreudelicious.

# A positive thing, should the SCOTUS same-sex marriage decision go against us

**Wintery Knight** · 12 May 2015 · Archived copy · Original

Marriage and family

I am looking forward to something if the Supreme Court decides to redefine marriage to remove the complementary genders.

This USA Today article from Michael Farris, head of the HSLDA, hints at it.

He writes:

> Justice Alito posed a predictable, but revealing question to Solicitor General Donald Verrilli, Jr., in the recent Supreme Court same-sex marriage oral argument: "In the Bob Jones case, the court held that a college was not entitled to tax exempt status if it opposed interracial marriage or interracial dating. So would the same apply to a university or a college if it opposed same-sex marriage?"
>
> Verrilli replied that he would need to know more specifics, but allowed that "it's certainly going to be an issue. I don't deny that."
>
> The solicitor general's answer should have been and probably was practiced. The question was unlikely to have surprised Verrilli, especially with the kind of preparation undertaken by the highest appellate lawyer for the United States in such high stakes situations. Such preparations would include multiple moot courts, simulated arguments with various lawyers playing the roles of each of the members of the Supreme Court trying to ask as many questions as possible.
>
> As an appellate litigator and the coach of eight collegiate national moot court championship teams, I understand the goal of such preparation. You never want to hear a question from the bench that you have not thought about ahead of time.
>
> Alito's question was premised on the Bob Jones University case from 1983 in which the IRS revoked the school's tax exempt status because of its policies on interracial dating and marriage. BJU defended on the basis of the free exercise of religion. The Supreme Court rejected their defense holding that the government's goal of eradicating racial discrimination in marriage was more important than BJU's religious rights.
>
> So, the follow-up question from Alito's question is obvious: If the court rules in favor of same sex marriage, how can religious colleges that refuse to acknowledge such unions avoid BJU's fate?
>
> **No one should think that IRS implications will stop with colleges. Religious high schools, grade schools and any other religious institution will face the same outcome. And this includes churches.**
>
> **All of these entities are exempt from taxation under the same section of the IRS code. And even though**

> **churches can be exempt without application, their exemption can nonetheless be revoked.**
>
> **Even if it takes the IRS years to begin the enforcement proceedings against such institutions, we can expect other fallout from this decision to begin shortly after the release of the Supreme Court's opinion.**
>
> **Colleges and universities that receive federal funding will be coerced into immediate compliance. Accreditation agencies will ratchet up their bullying of Christian institutions, as has already been done against Gordon College in Massachusetts. Threats to accreditation are fatal. Colleges may not legally operate in several stateswithout it.**
>
> **Christian colleges and churches need to get prepared. We must decide which is more important to us — our tax exemption or our religious convictions. Keep in mind, it is not the idea that the college itself might have to pay taxes that is the threat. Schools like Patrick Henry College, which I started, never run much of a profit. But since PHC refuses all government aid, all of our donations for scholarships and buildings come from tax deductible gifts. Cutting off that stream of revenue is effectively the end of such colleges absent a team of donors who simply don't care if gifts are deductible.**
>
> A slogan of the American Revolution, "We have no King but Jesus" may well be overturned by a 5 to 4 decision of the Supreme Court near the end of June.

Now here's what I want to see.

I have spent a lot of my life in church, youth groups, campus Christian groups (not talking about Ratio Christi of course) and around happy-clappy Christians who focused on feelings and being accepted. In my current church, issues like abortion and same-sex marriage have never been discussed, much less economics and foreign policy. The leaders of the church are very pious Calvinists who struggle with the idea that they should discuss anything. It probably has something to do with losing the money they get from having a tax-exempt status, but they couch it in piety when they explain to us why we are getting a gospel sermon for the millionth time in a row.

Well, now. I think that if we lose this same-sex marriage case in the Supreme Court, one of the wonderful things that will happen is that these pious churchy ministers will at last be confronted with the mistake they made by giving away the culture to the secularists. At last, all the decades of anti-intellectualism and feminization will hit them right where it hurts – in their pocketbooks. And there will be no denying that they made a terrible mistake in trying to make church solely about praise hymns, devotions and Bible study then. There is a price to pay for focusing on good feelings and comfort, and the churchy pastors are about to find out what it is.

Maybe the Sunday after the decision, the pastors in my church might actually talk to us about the good secular arguments and sociological evidence that there is in favor of traditional marriage. Hey, we might even get a sermon on the evils of divorce, with more arguments and evidence to support the Bible's position on that issue. Maybe even a sermon on the sexual revolution and premarital sex, that pairs what the Bible teaches with secular arguments and secular evidence that can be used by the flock to make an impact with non-Christians in the culture. Money has a wonderful way of focusing the minds of the most pious of pastors.

# UVA Dean sues Rolling Stone for publishing Jackie's false rape story

**Wintery Knight** · 13 May 2015 · Archived copy · Original

135. Pinkleton said that Erdely kept asking her questions designed to get Pinkleton to embellish her own sexual assault, like repeatedly trying to get her to say that her perpetrator was feeding her drinks to get her drunk. Pinkleton felt that a run-of-the-mill date rape was not good enough for Erdely, saying "I felt that she wasn't satisfied with my perpetrator as someone who wasn't clearly monstrous.... I didn't like that it seemed like she was looking for a story that had to be at a fraternity."

136. A Yale student contacted by Erdely said that she "put [Erdely] in touch with a couple of students who had ... normal rape stories, and none of them were good enough for her."

137. Another UVA student interviewed by Erdely said she and several other students "felt really uncomfortable" after being interviewed by Erdely, because they concluded that Erdely was not objective and had an agenda.

None of the normal rape stories were good enough for her
This is from the leftist Washington Post, of all places.

Excerpt:

> A University of Virginia associate dean of students filed a multimillion dollar defamation lawsuit against Rolling Stone magazine Tuesday, alleging that it portrayed her as callous and indifferent to allegations of sexual assault on campus and made her the university's "chief villain" in a now-debunked story about a fraternity gang rape.
>
> Nicole Eramo is seeking more than $7.5 million in damages from Rolling Stone, its parent company Wenner Media and Sabrina Rubin Erdely, the investigative journalist who wrote the explosive account of sexual assault on the campus in Charlottesville, Va. The magazine retracted the story after news organizations and the Columbia University journalism school found serious flaws in it.
>
> Eramo, who is the university's chief administrator dealing with sexual assaults, argues in the lawsuit that the story destroyed her credibility, permanently damaged her reputation and caused her emotional distress. She assailed the account as containing numerous falsehoods that the magazine could have avoided if it had worked to verify the story of its main character, a student named Jackie who alleged she was gang raped in 2012 and that the university mishandled her case.
>
> "Rolling Stone and Erdely's highly defamatory and false statements about Dean Eramo were not the result of an innocent mistake," according to the lawsuit, which was filed in Charlottesville Circuit Court. "They were the result of a wanton journalist who was more concerned with writing an article that fulfilled her preconceived narrative about the victimization of women on American college campuses, and a malicious publisher who was more concerned about selling magazines to boost the economic bottom line for its faltering magazine, than they were about discovering the truth or actual facts."
>
> […]"Erdely and Rolling Stone's epic failure of journalism was the result of biased, agenda-driven reporting," the lawsuit says. The suit claims that the magazine's account represented "a purposeful avoidance of the truth, and an utter failure to investigate the accuracy of Jackie's claims."
>
> The magazine also printed a photo illustration of Eramo that she argues is inflammatory; the lawsuit says that

> the magazine turned a mundane Cavalier Daily student newspaper photo of her addressing a classroom and turned it into a wild-eyed image of her sitting in an office and giving a thumbs-up in front of a distraught sexual assault victim as protesters hold signs outside. The lawsuit claims the doctored image "demonstrates the lengths Erdely and Rolling Stone were willing to go to portray Dean Eramo as a villain."
>
> The complaint details that in the wake of the story's publication, Eramo received hundreds of spiteful e-mails from alumni and others who judged her based on her portrayal in Rolling Stone. In addition to rape and death threats, the messages described Eramo as a "wretched rape apologist" and "a disgusting, worthless piece of trash" who should "burn in hell forever."

Yes, that's what we call "radical feminism". The whole point of radical feminism is to tell lies and make fake statistics to make women look like victims, and men look like evil brutes. Then the government steps in and fixes everything, e.g. – giving women free birth control pills. And that's why feminists vote for bigger and bigger government, because they have been told, through these myths and fake statistics, that they are victims. This is the same big government, by the way, that is now going to war with freedom of speech and freedom of religion. Should Christians care about puncturing the myths that cause people to vote for the big government that comes after us? We better start making the connections and getting in the game now, before it's too late.

We as Christians really need to consider why people are voting for the bigger secular government that turns around and trashes our liberties, for example, with the Hobby Lobby case and the mandate that companies pay for drugs that cause abortions. If you *don't* want Christian-owned companies to be forced to do bad things, then understand that you have to counter the reasons why non-Christians vote for bigger government. If it's global warming, you have to defeat that. If it's higher minimum wage, you have to defeat that. And I am telling you right now, there are *a lot* of women out there who are being led by their emotions into disastrous situations of their own making, and then turning to big government for a bailout, because feminists are telling them that it's all the fault of those evil men. If you want your religious liberty, your right to work, your right to keep what you earn, then you'd better start connecting the dots and confronting the people around you. Christians, we cannot absorb doctrines like radical feminism into our worldview, we have to fight against it by telling the truth.

# Women tells ex-boyfriend their baby was aborted so she could sell it to a gay man

**Wintery Knight** · 13 May 2015 · Archived copy · Original

Is it OK to tell women when they are wrong?
This is from the UK Daily Mail.

It says:

> A pregnant mother allegedly conned her lover into thinking she had undergone an abortion so she could sell his newborn baby to a gay friend, a jury has been told.
>
> The 29-year-old woman, from Perth, Perthshire, who cannot be named for legal reasons, allegedly wanted to pocket up to £300 by selling her unborn daughter to the 35-year-old man.
>
> The court heard how the woman and the gay man allegedly orchestrated an elaborate story in order to dupe the biological father into thinking the child had never been born.
>
> But the court heard how the mother had given birth to the child in February 2011, before claiming the father was her gay friend.
>
> After putting his name on the birth certificate, the pair allegedly duped the NHS, the local registrar and council officials in an alleged scam which rumbled on for nearly three years.
>
> The court heard how, initially, the woman had pretended that she did not give birth to the child at all.
>
> Instead, the pair allegedly set up a fake Facebook profile for a fictional woman known as Clare Green, who was described as the child's surrogate mother.
>
> The bogus profile claimed that the woman had been a surrogate for the gay man and that she had gone on to give him full custody of the child.
>
> But the mother later admitted to council officials that she had been pregnant with her former lover but terminated the pregnancy. She claimed she then fell pregnant for a second time with her friend after sleeping together on his birthday.
>
> The mother and the man are now on trial accused of carrying out the elaborate hoax over the baby girl's parentage.

> She claimed she had been in a relationship with the biological father from the end of 2009 to early 2010 and had fallen pregnant with him but had lost the baby.
>
> She said that, once they had split up, she ended up sleeping up with her co-accused, an old friend, following a pub crawl to mark his birthday.
>
> […]The woman insisted that the other man could not have been the father as she had not seen him prior to falling pregnant.
>
> But the court heard how doctors said the baby could not have been conceived in April 2010 and had instead been conceived at least one month later.
>
> It was not until a second police interview that the woman finally conceded that the baby might have been her ex-partner's because she had 'slept with both of them', the court heard.

And the UK Daily Mirror says that in fact her ex-boyfriend was the father:

> The court had earlier heard that she and her co-accused duped the biological dad out of knowing he had a child by putting the other man's name on the birth certificate.
>
> A joint minute was lodged with the court which stated as fact that the duo registered their names as mother and father of the child at the registry office in Perth.
>
> The agreed statement said they had both signed the register but it was a matter of fact, discovered subsequently, that another man was the biological father of the child.

Now remember, children do better when growing up in a stable home with their biological mother and biological father.

But think about the situation this little kid is going to find herself in. What kind of environment can a single gay man offer a child?

A Family Research Council paper cites 4 different studies thus:

> In *The Sexual Organization of the City,* University of Chicago sociologist Edward Laumann argues that "typical gay city inhabitants spend most of their adult lives in 'transactional' relationships, or short-term commitments of less than six months."[5]
>
> A study of homosexual men in the Netherlands published in the journal *AIDS* found that the "duration of steady partnerships" was 1.5 years.[6]
>
> In his study of male homosexuality in *Western Sexuality: Practice and Precept in Past and Present Times*, Pollak found that "few homosexual relationships last longer than two years, with many men reporting hundreds of lifetime partners."[7]
>
> In *Male and Female Homosexuality,* Saghir and Robins found that the average male homosexual live-in relationship lasts between two and three years.[8]

Is that nice to do to a child? Do we even care any more what children need when deciding who to have sex with? Or is it all adult selfishness, all the time now… and pass the bill for the damages to the next generation of motherless, fatherless, children? Children need us to restrain our passions so that they can get what they need. They are weaker and more vulnerable than we are, and our feelings and desires have to give ground so that they get what they need. We have to get used to self-denial and self-sacrifice for their benefit, because we are the ones who are choosing to make them. They didn't ask to be born. We are the ones who choose the behaviors that create them, and that puts obligations, expectations and responsibilities on us.

# William Lane Craig answers: why choose Christianity over Judaism or Islam?

**Wintery Knight** · 13 May 2015 · Archived copy · Original

Sherlock Holmes and John Watson

This is the latest question on the Reasonable Faith Q&A section.

It says:

> Hello Dr. Craig,
>
> I have always wondered about your claim that Christianity is the only true religion (based on historical evidence as you say). But how can you be so sure when Islamic and Jewish scholars claim the same claim?
>
> As a former atheist and now an agnostic, the question of which religion to choose is essential. I'm very well acquainted with Islamic Theology and unlike your claim. Islam affirms that Christians, Jews and Muslims worship the same god ("Allah" is not a special god for Muslims rather it's the term for god in Arabic).
>
> So what is your position on Islam? (And I would really like to know from who do you get your information on Islamic theology).
>
> I also would to invest some time in Christian theology, would kindly recommend some introductory books?

I think we are going to have to work from the historical Jesus to answer this one, and we won't be able to use the New Testament as if it is the inspired Word of God. We'll have to use it like a history book, and see what we can get from it using the ordinary rules for doing history on ancient documents.

Here's the best part of Dr. Craig's answer for Islam:

> The short answer to your question of why Christianity rather than Islam or Judaism, Sultan, is Jesus of Nazareth. While Judaism, Christianity, and Islam are the world's three great monotheistic faiths, genetically related and so having much in common, what divides them is their account of Jesus. I think that neither Judaism nor Islam gives a satisfactory historical account of the person and work of Jesus of Nazareth.
>
> […]It is ironic that the Qur'an chooses to deny the best established fact about Jesus, namely, his crucifixion

> (IV.157). Not only is there not a single shred of evidence in favor of this remarkable hypothesis, but the evidence supporting Jesus' crucifixion is, as Emory University New Testament scholar L. T. Johnson puts it, "overwhelming" *(The Real Jesus* [San Francisco: Harper San Francisco, 1996], p. 125). Paula Frederickson, whose book *From Jesus to Christ* inspired the PBS special by the same name, declares, "The crucifixion is the strongest single fact we have about Jesus" (Society of Biblical Literature meeting, November 22, 1999). The crucifixion of Jesus is recognized even by the sceptical critics in the Jesus Seminar as–to quote Robert Funk–"one indisputable fact" (Jesus Seminar video).
>
> When we think that the Qur'an was written by a man living in Arabia 600 years after Jesus with no independent source of information about him, it really isn't so surprising that his view of Jesus was distorted. Whatever else one might say about Islam, its view of Jesus is erroneous, and so this religion cannot be true.

And the best part of Dr. Craig's answer for Judaism:

> As for Judaism, again I should say that the decisive consideration is Jesus' claims to be the Jewish Messiah and his subsequent resurrection from the dead. Jewish scholars are coming to recognize the historical facts undergirding Jesus' resurrection and are hard-pressed to explain those facts apart from the resurrection. Indeed, one of their number, the late Pinchas Lapide, whom I heard lecture at the University of Munich, declared himself convinced that the God of Israel raised Jesus of Nazareth from the dead. He also thought that Jesus believed himself to be the Messiah.

The striking thing about this is that I know a Jewish guy who will debate historical Jesus with me, and he LOVES The Teaching Company (now called "The Great Courses"). I tell him that even the atheist Bart Ehrman is willing to give me the burial, the empty tomb and the post-mortem appearances of Jesus in his course on the historical Jesus for The Teaching Company. So if we are going to do some history, it's going to be pretty awkward for the Jewish guy to come up with a hypothesis that can explain those 3 facts, not to mention the early proclamation of the first Christians that Jesus was the Messiah, even after he was executed in a shameful way. Even non-Christian sources report *that.* And their proclamation of the resurrection that didn't win them any friends, let me tell you.

In the post, Dr. Craig recommended a book where he debates a Jewish New Testament scholar, edited by Paul Copan and Craig Evans. I asked my friend Eric Chabot about the book, and he said he had read it and it was "great". So I bought it. I love debate books. I try to buy them all right away and then read them, since I like to read a fight. Somehow, this one had escaped my notice until now. If you're interested in these issues, I recommend getting that book as well.

# House Republicans pass ban on abortions after 20 weeks, Hillary tweets against it

**Wintery Knight** · 14 May 2015 · Archived copy · Original

Hillary Clinton and Planned Parenthood

Life News reports on some great news, and the timing was interesting.

Excerpt:

> The House of Representatives today approved a pro-life bill that bans abortions from after 20-weeks of pregnancy up to the day of birth.
>
> The vote for the Pain Capable Unborn Child Protection Act broke down on mostly partisan lines with Republicans supporting the ban on late-term abortions and Democrats opposing it. The House approved the bill on a 242-184 vote with four Democrats (Reps. Cuellar, Langevin, Lipinski, and Peterson) voting for the bill and five Republicans voting against it (Reps. Dent, Dold, Hanna, Frelinghuysen) or voting present (Hice).
>
> During the debate today on a bill to ban abortions after 20 weeks, Congressman Sean Duffy gave what may be one of the most passionate defenses of the pro-life position ever seen on the floor of Congress. Duffy took on the claim often made by Democrats who support abortion saying they stand for the defenseless and voiceless.
>
> “I’ve listened to the floor debate day after day .. about how they fight for the forgotten, they fight for the defenseless, they fight for the voiceless. And they pound their chest and stomp their feet. You don’t have anyone in our society that’s more defenseless than these little babies,” he said. “And we are not taking — I believe in conception. I know my colleagues can’t agree with me on that. Can’t we come together and say we are going to stand with little babies that feel pain, that survive outside the womb? Ones that don’t have lobbyists and money? Don’t we stand with those little babies?”
>
> “If you stand with the defenseless, with the voiceless, you have to stand with little babies. Don’t talk to me about cruelty in our bill — when you look at little babies being dismembered, feeling excruciating pain, if we can’t stand to defend these children, what do we stand for in this institution?” he added.
>
> […]This is the second time the House has voted for the legislation — having approved it in May 2013. The bill was then blocked by pro-abortion Democrats who controlled the U.S. Senate.

The bill also includes protections for babies who are born alive during the abortion. It empowers women who have abortions to sue their abortion providers if they don’t comply with the law. Right now, there are no restrictions on

abortions through all nine months of pregnancy at the federal level, and Democrats have even introduced a bill to reverse restrictions on abortion at the state level.

Hillary Clinton is not happy with the bill, because she stands for abortion through all nine months of pregnancy:

> No sooner did the House of Representatives pass a bill to protect babies from late-term abortions and ban them after 20 weeks than Democratic presidential candidate Hillary Clinton fired off a statement slamming them for doing so.
>
> The House of Representatives today approved a that bans abortions from after 20-weeks of pregnancy up to the day of birth. The vote for the Pain Capable Unborn Child Protection Act broke down on mostly partisan lines with Republicans supporting the ban on late-term abortions and Democrats opposing it.
>
> Should the Senate approve the bill, President Barack Obama has issued a veto threat and now Hillary Clinton has joined him in opposing the bill.
>
> **"Politicians should not interfere with personal medical decisions, which should be left to a woman, her family and her faith, in consultation with her doctor or health care provider," Clinton's senior policy adviser Maya Harris said in a statement on her behalf.**
>
> **"This bill is a direct challenge to Roe v. Wade, which has protected a woman's constitutional right to privacy for over forty years," the Clinton campaign said. "The bill puts women's health and rights at risk, undermines the role doctors play in health care decisions, burdens survivors of sexual assault, and is not based on sound science."**
>
> **"It also follows a dangerous trend we are witnessing across the country. In just the first three months of 2015, more than 300 bills have been introduced in state legislatures — on top of the nearly 30 measures introduced in Congress — that restrict access to abortion," the Clinton spokeswoman added.**
>
> **Meanwhile, Hillary Clinton sent out a tweet opposing the late-term abortion ban and supporting Roe v. Wade, which allowed for virtually unlimited abortions up to the day of birth in the United States.**

And Barack Obama, has vowed to veto the bill if the Senate approves it.

> [T]he White House says Obama would veto the bill.
>
> The Administration strongly opposes H.R. 36, which would unacceptably restrict women's health and reproductive rights and is an assault on a woman's right to choose. Women should be able to make their own choices about their bodies and their health care, and Government should not inject itself into decisions best made between a woman and her doctor.
>
> If the President were presented with this legislation, his senior advisors would recommend that he veto this bill.
>
> A veto of the bill, which is already state law in 11 states, would put Obama at odds with public opinion on abortion once again.

Look here, if you're in favor of dismembering a 20-week-old unborn child who can feel you tearing her apart limb from limb, then something is really wrong with you. And yet there he is, our President. How did it happen?

# Are Christians more concerned about social issues than they are about the poor?

**Wintery Knight** · 14 May 2015 · Archived copy · Original

I saw this editorial on the leftist Washington Post and thought it was useful in case you get this question.

It says:

> Broadly speaking, American churches are incredibly generous to the needs of a hurting world.
>
> As noted by The Philanthropy Roundtable:
>
> "In 2009, overseas relief and development supported by American churches exceeded $13 billion, according to path-breaking calculations by the Hudson Center for Global Prosperity. (This includes not just evangelical churches but also Catholic and mainline Protestant congregations, and covers both direct missions work and donations to private relief groups.) That compares to $5 billion sent abroad by foundations in the same year, $6 billion from private and voluntary relief organizations apart from church support, and $9 billion donated internationally by corporations. The $13 billion in religious overseas philanthropy also compares impressively to the $29 billion of official development aid handed out by the federal government in 2009."
>
> […]In 2012 alone, the evangelical relief group World Vision spent "roughly $2.8 billion annually to care for the poor," according to World Vision U.S. President Richard Stearns. "That would rank World Vision about 12th within the G-20 nations in terms of overseas development assistance."
>
> World Vision is only one such major evangelical ministry. Groups such as Samaritan's Purse, Food for the Hungry, World Relief and many others provide hundreds of millions of dollars in anti-poverty programs at home and abroad.
>
> The gold-standard accountability group for evangelical ministries, the Evangelical Council for Financial Accountability, represents groups that provide food, medical care, education, adoption services, orphan care, post-prison assistance, substance abuse help and other critical services at home and abroad. In aggregate, the more than 600 evangelical ministries represented in the ECFA provide more than $9.2 billion in relief assistance.
>
> Catholic ministries, too, here and abroad are vibrant: How many Americans, of every faith and every economic status, have received world-class health care in Catholic hospitals? In total, The Economist magazine's assessment of the Catholic Church's estimated $170 billion total U.S. income finds that about 57 percent (roughly $97 billion) goes to "health-care networks, followed by 28 percent on colleges, with parish and diocesan day-to-day operations accounting for just 6 percent, with the remaining $4.6 billion going to 'national charitable activities.'"
>
> […]What about some hard numbers? Of the major national conservative Christian groups that are involved in the political arena, here is a representative sampling of various financial reports:
>
> - Susan B. Anthony List: $7 million
> - Americans United for Life: $4.5 million
> - Family Research Council: $15.2 million
> - National Right to Life: $6.4 million
> - National Organization for Marriage: $1.7 million
> - Focus on the Family: $94.5 million
> - Alliance Defending Freedom: $38.2 million
>
> For the sake of argument, let's add in the roughly 40 state Family Policy Councils and, generously, surmise their budgets, together, total $100 million.

> […]If you want to be generous, the national/state combo is about $270 million.

I am actually not in favor of Christians focusing so much on alleviating poverty through these massive organizations. This is especially true now, when it's pretty clear that religious liberty is at stake, even to the degree that our schools, universities and churches are going to lose their tax-exempt status. I think now, we should probably thinking a lot more about apologetics in the churches, better schools and universities, raising influential kids, and political action. This is a crisis situation, survival is more important to me than helping others. We can get back to helping others if we are still here in 25 years.

# Physicist Michael Strauss discusses Christianity and science at Stanford University

**Wintery Knight** · 14 May 2015 · Archived copy · Original

This is one of my favorite lectures.

**The lecture:**

Dr. Strauss delivered this lecture at Stanford University in 1999. It is fairly easy to understand, and it even includes useful dating tips.

Here is a clip:

The full video can be watched on Vimeo:

I pulled the MP3 audio from the lecture in case anyone wants just the audio.

**Summary:**

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range in order for the universe to support the minimal requirements for life
– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

It's a good lecture explaining basic arguments for a cosmic Creator and Designer. If you add the origin of life and the Cambrian explosion (Stephen C. Meyer's arguments), then you will be solid on science apologetics. That's everything a rank-and-file Christian needs.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information

- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# ABC News anchor who defended Clinton Foundation donated $75,000 to Clinton Foundation

**Wintery Knight** · 15 May 2015 · Archived copy · Original

Text at the bottom: White House Senior Advisor George Stephanopolous with President Clinton in the Oval Office (Image source: Time Magazine)

*The text at the bottom of the April 4, 1994 Time Magazine cover says: "White House Senior Advisor George Stephanopolous with President Clinton in the Oval Office".*

Whenever the story is media bias, the web site to go to is Newsbusters.

First article:

> ABC news host George Stephanopoulos admitted Thursday he had donated $75,000 to the Clinton Foundation and did not disclose this conflict of interest to viewers before interviewing the author of a book critical of the foundation's foreign donors and influence over Hillary Clinton at the State Department.
>
> Stephanopoulos, a former Bill Clinton communications aide, interviewed *Clinton Cash* author Peter Schweizer on the April 26 edition of *This Week*, where he pushed back against his reporting and Schweizer himself, repeating Democratic attacks that he had a "partisan interest" in disparaging the Clintons.
>
> "They say you used to work for President Bush as a speech writer. You are funded by the Koch brothers," he said. "How do you respond to that?"
>
> "As you know, the Clinton campaign says you haven't produced a shred of evidence that there was any official action as secretary that supported the interest of donors," he asked later. "We've done investigative work here at ABC News, found no proof of any kind of direct action. An independent government ethics expert at the Sunlight Foundation Bill Allison wrote this: 'There's no smoking gun. No evidence that the changed policy based on donations to the foundation. No smoking gun.' Is there a smoking gun?"
>
> Stephanopoulos did not point out that the Sunlight Foundation is funded by left-wing billionaire George Soros.

> […]The story came to light when the *Free Beacon*'s Andrew Stiles discovered Stephanopoulos' donation and requested a comment from ABC News. Stephanopoulos then confirmed the donation to *Politico* and issued an apology for not disclosing it beforehand, and ABC announced it would not take any punitive action against him.

Second article:

> Talking to Bloomberg Politics correspondent Joshua Green on Wednesday, *Clinton Cash* author Peter Schweizer said he was "really quite stunned" by the revelation that ABC News anchor George Stephanopoulos gave $50,000 to the Clinton Foundation. Schweizer called it a "massive breach of ethical standards" for the Bill Clinton operative turned journalist.
>
> Referencing a contentious interview with Stephanopoulos for *This Week* on April 26, Schweizer observed: "He fairly noted my four months working as a speech writer for George W. Bush. But he didn't disclose this?" In that exchange, Stephanopoulos accused Schweizer of having a "partisan interest" in writing a book critical of the Clintons.
>
> In 2014, Stephanopoulos offered a glowing puff piece on the Clinton Foundation, hailing it as an organization that "brings together world leaders…and celebrities, re-imagining the world and taking action."
>
> Also on Thursday, Kentucky Senator and Republican presidential candidate Rand Paul told *The New York Times* that Stephanopoulos should not be permitted to moderate any 2016 debates: "It's impossible to divorce yourself from that, even if you try. I just think it's really, really hard because he's been there, so close to them, that there would be a conflict of interest if he tried to be a moderator of any sort."

And Rand Paul is getting what he asked for, the former Clinton administration communications director George Stephanopolous will not be moderator of a GOP debate. Honestly, why was he in there in the first place? You might as well pick Satan to moderate a debate on the resurrection of Jesus. I'm really not sure why ABC News would make him their chief anchor, since the man is a diehard Democrat. A top Clinton aide, and White House Communications Director when Clinton was President. Do you know what the White House Communications Director does? He just says whatever he has to to make the President look good.

A fair moderator of GOP debates? Give me a break.

The radically leftist New York Times reminds us what Stephanopolous did in the 2012 presidential debate he moderated:

> In 2012 advisers in the Romney campaign actively lobbied to exclude Mr. Stephanopoulos from the primary debates to no avail. Conservatives say their fears were borne out during the ABC News debate in New Hampshire that year. Mr. Stephanopoulos repeatedly asked Mr. Romney if he believed that states could outlaw birth control — a question that the Romney campaign saw as off-point and far afield of the issues that concerned voters. Mr. Stephanopoulos pressed repeatedly, asking six follow-up questions.

That's right. He asked 7 questions about a topic that as relevant to the campaign as Clinton's affairs with Monica Lewinsky. He did it in order to smear Republicans.

ABC News is, of course, not punishing him from reporting on a foundation that he donated to.

The original source for this story was the Washington Free Beacon. Credit where due.

# Germany is further along the green energy road, how is it working for them?

**Wintery Knight** · 15 May 2015 · Archived copy · Original

Cost of renewable wind and solar energy

This is from National Review, and I think it's important for the young people to know, because they are the ones who think that green energy is a moral imperative that has no downside.

Look:

> According to EU data, Germany's average residential electricity rate is 29.8 cents per kilowatt hour. This is approximately double the 14.2 cents and 15.9 cents per kWh paid by residents of Germany's neighbors Poland and France, respectively, and almost two and a half times the U.S. average of 12 cents per kWh. Germany's industrial electricity rate of 16 cents per kWh is also much higher than France's 9.6 cents or Poland's 8.3 cents. The average German per capita electricity consumption is 0.8 kilowatts. At a composite rate of 24 cents per kWh, this works out to a yearly bill of $1,700 per person, experienced either directly in utility bills or indirectly through increased costs of goods and services. The median *household*income in Germany is $33,000, so if we assume an average of two people per household, the electricity cost would amount to more than 10 percent of available income. And that is for the median-income household. The amount of electricity that people need does not scale in proportion to their paychecks. For the rich, $1,700 per year in electric bills might be a pittance, or at most a nuisance. But for the poor who are just scraping by, such a burden is simply brutal.

The trouble with solar and wind power is that they are not consistent:

> So, what has the German government accomplished for "the Earth" in exchange for the severe harm it has inflicted on the nation's poorer citizens? It is claimed that Germany has replaced 30 percent of its electricity with renewable energy. If all you look at is capacity, that might appear to be true. Germany has a total installed capacity of 172 gigawatts (GW), and 65 GW of that is based on renewables. **But neither wind nor solar**

> **power obtains an around-the-clock average of anything close to full capacity. Rather, these methods of electricity generation typically average at best about 20 percent of their full rated power. Thus Germany's nominal 65 GW of solar and wind generation capacity is worth about as much as 13 GW capacity in conventional power plants.** Of the 614,000 GW hours that Germany generated in 2014, 56,000 GWh came from wind and 35,000 GWh from solar, for an actual combined average power of 10.4 GW, or 14.8 percent of all electricity generated. About half of this, or 5.2 GW, has been developed since 2005.

Germany used to have safe, clean nuclear power with zero emissions, but they got rid of it:

> However, in 2011 Germany had 20 GW of capacity in nuclear power plants, producing more than twice as much electricity as wind and solar do currently, at less than half the cost, with no carbon emissions whatsoever. But, using the rather improbable threat of a Fukushima-like tsunami as a pretext, the nation's elites decided to shut them down; 8.3 GW have already been eliminated.
>
> Thus, over the past decade, the total amount of carbon-free power that Germany has produced under its oppressive green-energy policy has actually *decreased* by 3 GW.

This makes me think of what happened to the wind farms in the UK during cold weather – they had to keep spinning using power from the main grid, to keep themselves from freezing! What a disaster. Green energy is just not ready for prime time. The more the government pushes it, the more the cost of electricity rises. Not good for the poor. Does anyone care how these "feel good" policies of the rich left affect the poorest people?

# Professor concerned by students who are unable to consider alternative views

**Wintery Knight** · 15 May 2015 · Archived copy · Original

This is a post by Dr. George Yancey, and he's writing about the 5-minute video clip above.

Dr. Yancey writes:

> Here is a great example of what I term education dogma. Note that the students are chanting about not being silenced while they are obviously silencing the speaker. My understanding of this situation is that the speaker published something that challenges some of the assertions about a campus rape culture. Such a challenge is an affront to the dogma of the students. Therefore, these students do not feel that the speaker has a right to speak on a different topic. The violation of beliefs they accept without question or doubt creates their incentive to shut down the proceedings.
>
> […]For the dogmatic, ideas that violate the notions defended by education dogma are deemed "dangerous" and too much for the tender ears of our students. So in additional to shouting down speakers there have been calls for "trigger warnings" and "safe spaces" so that individuals do not have to listen to dangerous ideas. The true danger of these ideas is their threat to certain dogmatic beliefs of our students. These students are unwilling to consider the possibly that they are wrong, or perhaps not as right as they might believe. .
>
> […]**As I watch that video I did not see intellectual powerhouses but I symbolically saw individuals who were yelling nonsense with their hands over their ears so that they would not hear an idea that may confront their presuppositions about reality.**

Here, Dr. Yancey compares the secular leftist students to religious fundamentalists: (links removed)

> For all practical purposes the students saw the speaker as a heretic. The use of the term heretic can bring up images of torturing, imprisoning and killing of those who disagree. This is not occurring. However, it is reasonable to ask whether the seemingly restraint of the students from such drastic actions is due to their moral compass or to the fact that they do not have the social power to engage in such actions. Education dogma has led to attempting to kick offending businesses off campus, attempts to fire professors, and the official "shunning" of students who hold the "wrong ideas." Those with education dogma do punish those who violate their beliefs to the highest extent possible given their current level of institutional powers.

So if the holding your hands over your ears and screaming doesn't work, there is always calling the police, or using other means of coercion. Scary, especially when you consider the history of the secular left in communist countries where God is dead, and the state is all-powerful. How far would these leftist students go to silence people who disagreed with them?

More:

> […][H]igher education occurs in a specific social institution that promotes certain subcultural values and beliefs. Participants in these institutions are expected to accept these values and beliefs without question. These beliefs are not the result of gaining more facts but instead are the dogmatic adaptation of certain social values provided to them by this subculture.

The trouble here is that they don't want more facts – that's why they are holding their hands over their ears and screaming.

It makes me think of my own intellectual journey… the way I got started in apologetics in college was by reading

transcripts of William Lane Craig debates that I found on the Leadership University web site. What was exciting was reading *both sides* and seeing what each person would say to respond. Would you go to a football game where only one side showed up? What if you already knew the score in advance, would you still go? What if one team didn't play very hard, would that be worth watching? What makes intellectual inquiry fun and interesting is that two sides show up and play their best. Otherwise, it's just brainwashing, not a search for truth. When I write a summary with a good atheist like Peter Millican, I actually feel like I have learned something – I have learned how far I can push each of my arguments, and what I need to study going forward. I care to learn more about what is discussed in a real debate.

This is the striking part of his essay:

> Students are responsible for seeking out alternative perspectives and developing an attitude of inquiry allowing them to interrogate their own presuppositions. But their college and university teachers should be held to account since more than a few college professors have done a horrible job introducing critical thinking skills. These teachers come in with a certain set of assumptions and if students agree with those assumptions then they can leave college without any disturbance to their pre-college ideology. Then we have the gall to call that critical thinking. It is anything but critical thinking. It is confirmation thinking and we do our students a disservice with such an approach.

This is why I get so frustrated by non-STEM disciplines. I think those non-STEM areas are the places where what he described is most likely to happen. When you walk into a computer science classroom, you are there to learn something that you will be doing for money in a couple of years. You can go home and use what you just learned to write a sorting program, or improve the speed of your database queries, or write a mobile application and put it out for use. I just don't get that feeling of usefulness from non-STEM disciplines, aside from maybe analytical philosophy, which is just computer science anyway (symbolic logic). The critical thinking in computer science comes from trying things yourself and seeing what works and doesn't work in real life. Where is the testing against reality in non-STEM disciplines? There is none.

And then here is something hopeful for conservatives:

> Ironically a conservative Christian Republican has a better opportunity to learn critical thinking in college than a progressive humanist Democrat because of the opportunity he/she gains to consider new ideas. When we allow students with certain perspectives to go through college without challenging them we not only promote dogma, we also do those students the disservice of never helping them to engage in the critical thinking necessary to intellectually grow. They are reduced to being a sounding board that regurgitated the latest expression of political correctness.

This is where all my hope lies. I really hope that the left educates itself into imbecility by refusing to consider different points of view, and that we conservatives are the ones who start to outperform them and take the high ground in the culture. To innovate, you have to do things better, and to do things better, you have to do things differently.

Read his whole essay.

# Frank Turek and Michael Shermer defend their debate to gay activists

**Wintery Knight** · 16 May 2015 · Archived copy · Original

Michael Shermer debates Frank Turek: atheism and morality

Remember how I blogged on the debate between Frank Turek and Michael Shermer a few days ago?

Well, apparently, a group of gay activists did not like the debate, and they complained – presumably in order to punish the debate organizers and shut down future debates.

Turek and Shermer have responded to their challenge, though, in this letter to the editor. And Shermer will even be on Turek's radio show at 10 AM Eastern to discuss their joint response.

The show can be heard here on the Cross Examined web site.

> CrossExamined Radio Program and Podcast
>
> Listen to CrossExamined with Frank Turek on American Family Radio network
>
> Saturday, 10-11 am Eastern on AFR network streaming audio and FM radio
>
> Tune in to our weekly call-in radio program hosted by Frank Turek on American Family Radio network. Join Frank as he discusses challenging topics, takes calls from listeners, and interviews dynamic Christian apologists. Sponsored by CrossExamined.org, this apologetics program is both informative and entertaining!

If you miss the show, the podcast archive is here.

And here's part of the joint letter:

> It's not often that an atheist and a Christian, who have just had a debate on campus, can be brought into agreement by a group in the audience. But the Graduate Queer Alliance (GQA) at Stony Brook University has managed to do that. Their letter to the editor on April 30 was so full of false assertions and totalitarian demands that we, Dr. Michael Shermer (an atheist) and Dr. Frank Turek (a Christian), felt compelled to write this letter together in response.
>
> The central assertion of the GQA is that anyone who expresses a negative opinion of same sex marriage or homosexual behavior is guilty of "hate speech" and should be barred from speaking at Stony Brook University. The GQA says this while also claiming to believe "that a university should provide an open forum for controversial ideas to be discussed and debated." We both wonder how the GQA can hold these two contradictory opinions at the same time. After all, they say they are for the debate of controversial issues, but

> apparently only if both debaters hold the same position and that position agrees with the GQA. Some debate!
>
> How is disagreement over controversial moral and political issues "hate speech?" If it is then GQA's position is "hate speech" because it disagrees with people who believe marriage should be defined in other ways. Calling people names or characterizing their arguments as "hate speech" is not good public discourse designed to discover the truth; it is bullying—the very thing GQA should be against.

If you remember my post, the clip I played had some back and forth on gay rights in it. I guess the GQA didn't like hearing any ideas contrary to their own.

More:

> The true motives of the GQA are revealed by what is not in the letter: the arguments made by Dr. Shermer in support of same sex marriage, arguments he made with great passion that elicited equal passion—on both sides of the issue—from the audience. If those in the GQA are so interested in advancing their position through sound reason and science—which was Dr. Shermer's point—why would they not highlight the arguments offered in support of it? Instead, the GQA seems to think they have a right not to hear an opposing opinion lest they be challenged!
>
> It's a shame that those in GQA appear so uninterested in evidence.

Well, read the whole thing.

I think the letter from the gay activists and the response are particularly interesting, especially given what Dr. George Yancey said in his essay on educational dogma, which I talked about yesterday.

This:

> For the dogmatic, ideas that violate the notions defended by education dogma are deemed "dangerous" and too much for the tender ears of our students. So in additional to shouting down speakers there have been calls for "trigger warnings" and "safe spaces" so that individuals do not have to listen to dangerous ideas. The true danger of these ideas is their threat to certain dogmatic beliefs of our students. These students are unwilling to consider the possibly that they are wrong, or perhaps not as right as they might believe. .

And:

> For all practical purposes the students saw the speaker as a heretic. The use of the term heretic can bring up images of torturing, imprisoning and killing of those who disagree. This is not occurring. However, it is reasonable to ask whether the seemingly restraint of the students from such drastic actions is due to their moral compass or to the fact that they do not have the social power to engage in such actions. Education dogma has led to attempting to kick offending businesses off campus, attempts to fire professors, and the official "shunning" of students who hold the "wrong ideas." Those with education dogma do punish those who violate their beliefs to the highest extent possible given their current level of institutional powers.

Dr. Yancey was talking about a different group of college leftists, but I think that's exactly what's going on here, too. For now, it's shouting down and writing letters and getting people fired (which actually happened to Turek, before). But will they stop there?

# Former CIA deputy director: foreign countries have everything on Clinton's e-mail server

**Wintery Knight** · 16 May 2015 · Archived copy · Original

This is from The Daily Caller.

Full text:

> Former acting CIA director Michael Morell said he believes former Secretary of State Hillary Clinton's Homebrew email server was indeed compromised by foreign intelligence services.
>
> Morell, who served as both deputy director and acting director of the CIA during his four year tenure (2010-2013) made the remark to radio host Hugh Hewitt Friday afternoon as he continued promoting his new book on America's war on terror.
>
> "As a professional matter, do you believe at least one, or perhaps many, foreign intelligence services have everything that went to and from that server?" Hewitt asked.
>
> "So I think that foreign intelligence services, the good ones, have everything on any unclassified network that the government uses, whether that's a private server or a public one," Morell said. "They're that good."
>
> "So that's a yes?" Hewitt asked in affirmation.
>
> "Yep," Morell said.

Well, that's a comforting thought. But look on the bright side: at least with the e-mails all deleted, we don't have any evidence that Clinton committed treason with Benghazi, the Clinton Foundation, etc. That's a positive, right? Well, what do you care about more? Our national security, or Hillary Clinton getting elected President in 2016?

# George Stephanopolous was a member of the Clinton Global Initiative in 2010 and 2011

**Wintery Knight** · 16 May 2015 · Archived copy · Original

White House Senior Advisor George Stephanopolous with President Clinton in the Oval Office
(Image source: Time Magazine)

*The text at the bottom of the April 4, 1994 Time Magazine cover says: "White House Senior Advisor George Stephanopolous with President Clinton in the Oval Office".*

Breitbart News has more news on the ABC News defense of the Clinton Foundation by former Clinton administration top aide George Stephanopolous.

Excerpt:

> George Stephanopoulos' connections to the Clinton Foundation may be more substantial than he has so far admitted.
>
> An archived page of the Clinton Global Initiative website lists George Stephanopoulos as a "notable member" for the years 2010 and 2011. ABC News has confirmed Mr. Stephanopoulos was a member during both years.
>
> Blogger Jeryl Bier first noticed Stephanopoulos' name on a CGI list of "notable past members." The site did not specify when each individual listed had been a member. However, the Internet archive shows that Stephanopoulos was listed as a notable member in 2010 and 2011 along with a list of other well-known media members like Matt Lauer and Anderson Cooper.
>
> […]Breitbart News contacted ABC News and was told that Mr. Stephanopoulos did not pay a membership fee in either 2010 or 2011. According to a spokesperson, he was listed as a member because he moderated a panel for CGI events both of those years.
>
> The Internet archive does not have a cache of the notable CGI members prior to 2010, but according to publicly available sources, Stephanopoulos also participated in CGI events in 2005, in 2006, in 2007 and in

> 2009. Therefore, it's possible he was considered a member for every year between 2005-2011, with the possible exception of 2008, when he does not appear to have taken part in any CGI event.
>
> On Wednesday of this week, the Washington Free Beacon discovered that ABC's Stephanopoulos was listed on the Clinton Foundation website as a donor. WFB reporter Andrew Stiles contacted ABC News to confirm those donations. Rather than respond to the WFB, the spokesperson for ABC News appears to have leaked the story on the donations to Politico.

Politico is a left-wing organization, and they would have spun the story to protect the Clintons and ABC News. It amazes me that anyone looks to the mainstream media for news. Why would you trust people to tell you the truth about Clinton when they donated to the Clinton Foundation, did events for the Clinton Global Initiative, helped to get Bill Clinton elected President as a top aide, then worked in Bill Clinton's administration as White House Communications Director?

Remember what Stephanopoulos did to Romney during the last Republican primary debate?

The radically leftist New York Times summarizes the clip above:

> In 2012 advisers in the Romney campaign actively lobbied to exclude Mr. Stephanopoulos from the primary debates to no avail. Conservatives say their fears were borne out during the ABC News debate in New Hampshire that year. Mr. Stephanopoulos repeatedly asked Mr. Romney if he believed that states could outlaw birth control — a question that the Romney campaign saw as off-point and far afield of the issues that concerned voters. Mr. Stephanopoulos pressed repeatedly, asking six follow-up questions.

That's right. He asked 7 questions about a topic that as relevant to the campaign as Clinton's affairs with Monica Lewinsky. He did it in order to smear Republicans.

# Atheist gets her PhD in astronomy and astrophysics and finds evidence for God

**Wintery Knight** · 17 May 2015 · Archived copy · Original

Sherlock Holmes and John Watson

Christian apologist Terrell Clemmons tweeted this testimony by Sarah Salviander, a research scientist in astronomy and astrophysics at the prestigious University of Texas at Austin.

Dr. Salviander writes:

> I was born in the U.S., but grew up in Canada. My parents were socialists and political activists who thought British Columbia would be a better place for us to live, since it had the only socialist government in North America at the time. My parents were also atheists, though they eschewed that label in favor of "agnostic." They were kind, loving, and moral, but religion played no part in my life. Instead, my childhood revolved around education, particularly science. I remember how important it was to my parents that my brother and I did well in school.

I just want to point out that I hope that all you Christian parents are taking seriously the obligation to make your kids do well in school, because even if they start out as atheists when they are young, they can still find their way back to God through study, as Sarah did.

She had a bad start, that's for sure:

> I grew up in the 1970s and 1980s, a time when science fiction was enjoying a renaissance, thanks largely to the popularity of *Star Wars*. I remember how fascinated I was by the original *Star Wars* trilogy. It had almost nothing to do with science—it's more properly characterized as space opera—but it got me thinking about space in a big way. I also loved the original *Star Trek*, which was more science fiction. The stoic and logical character of Mr. Spock was particularly appealing to me. Popular science was also experiencing a renaissance at that time, which had a lot to do with Carl Sagan's television show, *Cosmos*, which I adored. The combination of these influences led to such an intense wonder about outer space and the universe, that by the time I was nine years old I knew I would be a space scientist someday.
>
> Canada was already post-Christian by the 1970s, so I grew up with no religion. In retrospect, it's amazing that for the first 25 years of my life, I met only three people who identified as Christian. My view of Christianity was negative from an early age, and by the time I was in my twenties, I was actively hostile toward Christianity. Looking back, I realized a lot of this was the unconscious absorption of the general hostility toward Christianity that is common in places like Canada and Europe; my hostility certainly wasn't based on actually knowing anything about Christianity. I had come to believe that Christianity made people weak and

> foolish; I thought it was philosophically trivial. I was ignorant not only of the Bible, but also of the deep philosophy of Christianity and the scientific discoveries that shed new light on the origins of the universe and life on Earth.

She documents a phase of following Ayn Rand and embracing "Objectivism", but eventually she rejects it for failing to answer the big questions of life.

More:

> I began to focus all of my energy on my studies, and became very dedicated to my physics and math courses. I joined campus clubs, started to make friends, and, for the first time in my life, I was meeting Christians. They weren't like Objectivists—they were joyous and content. And, they were smart, too. I **was astonished to find that my physics professors, whom I admired, were Christian. Their personal example began to have an influence on me, and I found myself growing less hostile to Christianity.**

This is why I think it is so important for Christian parents to raise their children to get advanced degrees… either to become professors themselves, or to finance others (e.g. – our own children) to do advanced degrees. It is so important for university students to see Christian professors on campus. And failing that, it's important that we bring Christian speakers in to debate non-Christian speakers on the important issues. This will not happen unless we recognize how important it is, and then make a plan to achieve it.

More:

> **I had joined a group in the Center for Astrophysics and Space Sciences (CASS) that was researching evidence for the big bang. The cosmic background radiation—the leftover radiation from the big bang—provides the strongest evidence for the theory, but cosmologists need other, independent lines of evidence to confirm it. My group was studying deuterium abundances in the early universe. Deuterium is an isotope of hydrogen, and its abundance in the early universe is sensitive to the amount of ordinary mass contained in the entire universe. Believe it or not, this one measurement tells us whether the big bang model is correct.**
>
> **If anyone is interested in how this works, I'll describe it, but for now I'll spare you the gruesome details. Suffice it to say that an amazing convergence of physical properties is necessary in order to study deuterium abundances in the early universe, and yet this convergence is exactly what we get. I remember being astounded by this, blown away, completely and utterly awed. It seemed incredible to me that there was a way to find the answer to this question we had about the universe. In fact, it seems that every question we have about the universe is answerable. There's no reason it has to be this way, and it made me think of Einstein's observation that the most incomprehensible thing about the world is that it's comprehensible. I started to sense an underlying order to the universe. Without knowing it, I was awakening to what Psalm 19 tells us so clearly, "The heavens declare the glory of God; the skies proclaim the work of his hands."**
>
> That summer, I'd picked up a copy of T*he Count of Monte Cristo* by Alexandre Dumas and was reading it in my off hours. Previous to this, I'd only known it as an exciting story of revenge, since that's what the countless movie and TV adaptations always focused on. But it's more than just a revenge story, it's a philosophically deep examination of forgiveness and God's role in giving justice. I was surprised by this, and was starting to realize that the concept of God and religion was not as philosophically trivial as I had thought.
>
> All of this culminated one day, as I was walking across that beautiful La Jolla campus. I stopped in my tracks when it hit me—I believed in God! I was so happy; it was like a weight had been lifted from my heart. I realized that most of the pain I'd experienced in my life was of my own making, but that God had used it to make me wiser and more compassionate. It was a great relief to discover that there was a reason for suffering,

> and that it was because God was loving and just. God could not be perfectly just unless I—just like everyone else—was made to suffer for the bad things I'd done.

The Count of Monte Cristo is one of my favorite, favorite books as well, and had the same impact on me as it did on her.

OK, that's enough for this post. Go read the rest, and please share it. This woman is an expert Christian apologist and her life will have an influence. Are you going to be like her? Will you mentor others to be like her? Will you marry someone like her? Will you raise children who are like her (which is my plan)? We really need everyone to pull their weight now, because everywhere you look, the truth of Christianity is under attack.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason

# Obama administration lifts 32-year-old ban on gay / bisexual men donating blood

**Wintery Knight** · 17 May 2015 · Archived copy · Original

Breitbart News reports.

Excerpt:

> The Obama administration, more interested in pleasing its LGBT supporters than in protecting the health of the general public, is proposing "new rules" through the FDA that would terminate the 32-year-old ban on blood donations from gay and bisexual men.
>
> Hilariously, the FDA would still ban gay men from donating if they confess to having sex with a man within a year before donating blood.
>
> The FDA did admit that "some individuals knowingly donate despite the deferral."
>
> […]The FDA decided that the MSM group (men who have sex with men) was much less of a risk than those in the commercial sex work (CSW) and injection drug use (IDU) groups, even though the agency reported, "In 2010, male-to-male sexual contact accounted for 63% of newly diagnosed HIV infections among adults, and 78% of newly diagnosed HIV infections in men, indicating that male-to-male sexual contact remains associated with high risk of HIV exposure." Further, the FDA allowed that "the available epidemiologic data in the published literature do not support the concept that MSM who report mutual monogamy with a partner or who report routine use of safe sex practices are at low risk for HIV."
>
> So why make the change? The FDA admits, "Although not making a change would maintain the current level of safety of the blood supply, as noted above… there is evidence that the deferral policy is becoming less effective over time. **In addition, the policy is perceived by some as discriminatory.**"

Previously, I blogged about the HIV infection rates among men who have sex with men (MSM).

It said:

> Recent statistics from the Centers for Disease Control and Prevention (CDC) on HIV infection in the United States reveal some disturbing trends concerning gay males or, in CDC terminology, "men who have sex with men" (MSM). In recent data the CDC estimated that 61 percent of the 48,079 HIV infections diagnosed in 2010 occurred through male to male sexual contact.(1) According to the CDC data, sexual contact and injection drug use are the predominant means by which HIV is transmitted.
>
> The CDC data on HIV diagnoses came from forty-six states and five U.S. dependent areas. Some 29,194 new HIV diagnoses in 2010 were linked to male homosexual contact where no injection drug use took place. There were approximately 4550 HIV male diagnoses linked to heterosexual contact. Injection drug use was involved in 5481 cases. Women contracting the HIV virus through heterosexual contact accounted for approximately 8,800 cases. Another 47 HIV cases came from sources other than the four listed. Included in the other 47 cases were blood transfusions and prenatal exposure.(2) When CDC statistics are analyzed using the estimate of the MSM population at 4 percent of the American male population and assuming the other 96 percent who do not have sex with men are heterosexual, the risk of HIV infection from sexual contact for MSM was approximately 150 times greater than the heterosexual male population in 2010.(3)

Did Obama make a good decision by lifting the ban?

# Christian florist Barronelle Stutzman explains what it is like to face persecution

**Wintery Knight** · 18 May 2015 · Archived copy · Original

Barronelle Stutzman vs Washington state

This article appeared in the Washington Post, and I though it might be good for us to find out what it is like when big government comes after you for taking the Bible seriously.

Barronelle writes:

> I've been a florist in Richmond, Wash., for more than 30 years. In that time, I've developed close relationships with many of my clients.
>
> One of my favorites was Rob Ingersoll. Ingersoll came in often and we'd talk. Like me, he had an artistic eye. I'd try to create really special arrangements for him. I knew he was gay, but it didn't matter — I enjoyed his company and his creativity.
>
> Then he asked me to create the floral arrangements for his wedding. I love Rob, and I'd always been happy to design for his special days. But there's something different about a wedding.
>
> Every person in the creative professions regularly has to make decisions about where they lend their artistic talents and which events they will participate in. For me, it's never about the person who walks into the shop, but about the message I'm communicating when someone asks me to "say it with flowers."
>
> I was raised Christian. In my religious tradition, marriage is a sacred religious ceremony between a man, a woman and Christ. It's a covenant with the church. To participate in a wedding that violates those principles violates the core of my faith.
>
> When Rob asked me, I thought about it carefully. I talked over the decision with my husband, and I prayed. But ultimately I know I had to stay true to my faith. I couldn't do it.
>
> When I told Rob, I felt terrible that I couldn't share this day with him, as I'd shared so many with him before. I took his hands and said, "I'm sorry I can't do your wedding because of my relationship with Jesus Christ." Rob

> said he understood, and that he hoped his mom would walk him down the aisle, but he wasn't sure. We talked about how he got engaged and why they decided to get married after all these years. He asked me for the names of other flower shops. I gave him the names of three floral artists that I knew would do a good job, because I knew he would want something very special. We hugged and he left.

> I never imagined what would happen next. Washington State Attorney General Bob Ferguson sued me after hearing in the media what had happened. That was shocking. Even more surprising, Rob and his partner Curt, with their ACLU attorneys, filed suit shortly thereafter. A judge ruled against me, but this week, with the help of the Alliance Defending Freedom, I appealed.
>
> We've always heard that same-sex marriage would never affect anyone aside from the same-sex couples who wanted to be married. But a judge recently told me that my freedom to live and work according to my beliefs about marriage expired the day same-sex marriage became the law in my state.
>
> Our government is supposed to protect our First Amendment rights — freedom of religion and expression. But the government is telling me I can only be a faithful Christian within the four walls of my church. That's impossible and it's unjust. What would Rob and Curt say if the government told them they could only be who they are in their own homes?
>
> This isn't about bigotry. I've had gay and lesbian employees and friends. And it's important to remember that Rob was a long-time customer and friend despite our different beliefs about marriage. When I had to refer him for this one event, I did everything I could to avoid hurting his feelings and I believed we would remain friends when he left the shop. He got enough offers after this situation became public to do about 20 weddings.
>
> In Washington, Rob and Curt have the right to get a marriage license. But that doesn't mean that the state should be able to force people in the creative professions like myself to create expression celebrating the ceremonies. We all have different viewpoints about how to live our lives. One thing I've loved about our country is that we protect the freedom of artistic expression and the right to disagree over these kinds of issues without one side being threatened by the government over it.
>
> But whatever the state says and however they want to try to punish me, they can't change my faith. What happens in my business or my life is in God's hands. Having a clear conscience means much more to me than any amount of money or my business. Rob and Curt have their beliefs about marriage and aren't being stopped by the state from living them out. I only ask for the same freedom.

If you want to understand just how bad things are in the culture right now, read some of the comments to her post. Lots of non-Christians telling her that true Christianity consists in abandoning morality completely and celebrating whatever non-Christians tell her to celebrate.

Anyway, I definitely *would not* live in Washington State. But not all states are like Washington.

Louisiana Governor Bobby Jindal

Here's Bobby Jindal, the Republican governor of Louisiana:

> Louisiana Governor and prospective GOP presidential candidate Bobby Jindal argued that to President Obama and Hillary Clinton religious liberty only means "you get to go to church and say what you want inside church" during a speech in South Carolina on Saturday.
>
> Jindal said, "There was a time when the left believed in the First Amendment. There was a time when the left really understood that religious liberty is the foundation of our freedom of speech, and freedom of association…without religious liberty, there are no other freedoms like freedom of speech, and freedom of association, and freedom of the press.
>
> He continued, "And make no mistake about it this isn't just about marriage, though, unlike President Obama and Secretary Clinton, my views on marriage are not evolving with the polls. I continue to believe in traditional marriage between a man and a woman. This debate is much, much bigger than that. It is bigger than marriage. This is about the power of the state to to close or fine Christian business owners, this is about the left trying to silence us and telling us we don't have a right to live our lives according to our sincerely held beliefs. When Secretary Clinton, when President Obama say, 'you've got the freedom of religious expression,' to them, that just means you get to go to church and say what you want inside church. That's not religious liberty. Religious liberty is the ability to live our lives according to our faith 24 hours a day, seven days a week."

Christianity is a whole life worldview. I want to be able to speak out in the public square for the Christian worldview, just like the gay activists can speak out for their worldview. That's what the First Amendment is all about, after all. If I wanted secularism, I'd move to North Korea. Unfortunately, we seem to be headed in that direction.

# Why don’t men talk to women about commitment and marriage any more?

**Wintery Knight** · 18 May 2015 · Archived copy · Original

Painting: “Courtship”, by Edmund Blair Leighton (1888)

I saw this essay from a young woman named Jordana Narin who is explaining how she feels about not being able to talk seriously to a man she had sex with.

The essay was published in the radically leftist New York Times.

First kiss:

> I met [a guy] at summer camp in the Poconos at 14, playing pickup basketball by day and talking in the mess hall late into the night. Back home we lived only 30 minutes apart, but I didn’t see him again until 11th grade, when we ran into each other at a Halloween party in a Lower Manhattan warehouse.
>
> […]Under the muted flashes of a strobe light, we shared our first kiss.

Why do you think that she kissed a guy she barely knew? It makes no sense to me.

This is how they talked:

> We stayed in touch for the rest of high school, mostly by text message.

Oh my goodness. What can you find out about a person in 140-character messages? It makes no sense to me.

More:

> Every time his name popped up on my phone, my heart raced.
>
> Still, we were never more than semiaffiliated, two people who spoke and loved to speak and kissed and loved to kiss and connected and were scared of connecting. I told myself it was because we went to different schools,

> because teenage boys don't want relationships, because it was all in my head.
>
> I told myself a lot of things I never told him.
> Two years after our first kiss, we were exchanging "I've missed you" messages again. It was a brisk Friday evening in our first semesters of college when I stepped off a train and into his comfortable arms.
>
> He had texted weeks earlier on Halloween (technically our anniversary) to ask if I would visit. We had not talked since summer, and I was trying to forget him. We had graduated from high school into the same inexpressive void we first entered in costume, where an "I've missed you" was as emotive as one got. I decided to leave him behind when I left for college.
>
> But he wouldn't let me. Whenever I believed he was out of my life, I'd get a text or Facebook comment that would reel me back in.
>
> And I wouldn't let me, either. His affection, however sporadic, always loomed like a promise. So I accepted his invitation, asking myself what I had to lose.

She had sex with him, losing her virginity, and then:

> Naïvely, I had expected to gain clarity, to finally admit my feelings and ask if he felt the same. But I couldn't confess, couldn't probe. Periodically I opened my mouth to ask: "What are we doing? Who am I to you?" He stopped me with a smile, a wink or a handhold, gestures that persuaded me to shut my mouth or risk jeopardizing what we already had.
>
> On the Saturday-night train back to Manhattan, I cried. Back in my dorm room, buried under the covers so my roommates wouldn't hear, I fell asleep with a wet pillow and puffy eyes.
>
> The next morning I awoke to a string of texts from him: "You get back OK?" "Let's do it again soon :)"

Yes. She had sex with him because of text messages, Facebook comments and because he "missed her". Not because he had presented his resume and balance sheet to her father, then bought her an engagement ring, then a wedding ring, then walked down the aisle with her. And *of course* that opened her up for hurt. Sex binds people together. It's supposed to be for people who first commit to each other, self-sacrificially, for life – through all trials and hardships.

They had a lot more sex, but never talked about why or to what end:

> I'm told my generation will be remembered for our callous commitments and rudimentary romances. We hook up. We sext. We swipe right.
>
> All the while, we avoid labels and try to bury our emotions. We aren't supposed to want anything serious; not now, anyway.

"Swipe right" refers to a hooking-up app called Tinder. Who would use that? It makes no sense to me.

She praises the "control" that the Sexual Revolution gave her:

> To this day, if I ever let a guy's name slip out to my father, his response is always, "Are you two going steady?"
>
> He means to ask if we're dating exclusively, if I have a boyfriend. I used to hate it.
>
> "People don't go steady nowadays," I explain. "No one says that anymore. And almost no one does it. Women today have more power. We don't crave attachment to just one man. We keep our options open. We're in control."

Anyway, there's also an interview that goes with it on the radically leftist NPR web site, but I saved a copy of the MP3 file here in case it disappears.

Moderate Christian Rod Dreher comments on the interview:

> I wouldn't have understood the full scope of what this young woman is saying in her essay without the interview, which is short. In the segment, Narin says that men and women in her generation don't have actual romantic relationships anymore. It's all casual, non-committal sex. "Nobody knows whether their own feelings are real," she says.
>
> Our generation doesn't have relationships anymore. Nobody to call their own. Just casual. Nobody knows whether their own feelings are real.
>
> She tells the interviewer that there's lots of making out and sex, but nobody wants to be emotionally vulnerable to anybody else.
>
> […]**"Everyone in college uses Tinder," she said, referring to the wildly popular dating and hook-up app. "You can literally swipe right and find someone just to hang out for the night. There's no commitments required, and I think that makes committing to someone even harder, because it's so normal, and so expected even, to not want to commit."**
>
> "**In a different time, my grandparents, my great grandparents, they might have thought they were missing out on casual sex**," she says. "But since my generation has been saddled down with that, we kind of look to the past and say well, wasn't that nice. I think both are optimal. **I'm a huge feminist, and I think women should be able to do whatever they want to do. If a woman wants to have tons of casual sex, she totally should.** But I think that there should be the option. And they shouldn't be gendered, women and men. But there should be the option of being in a relationship."

Right. Young women like her who have swallowed radical feminism hook, line and sinker don't want to miss out on casual sex right now, but they want to get married "some day".

But what do they think marriage is? I think this popular song sheds some light on it.

I heard this popular song by Meghan Trainor being deconstructed on the Ben Shapiro show last week – look at the lyrics:

> You got that 9 to 5
> But, baby, so do I
> So don't be thinking I'll be home and baking apple pies
> I never learned to cook
>
> After every fight
> Just apologize
> And maybe then I'll let you try and rock my body right
> Even if I was wrong
> You know I'm never wrong
>
> Make time for me
> Don't leave me lonely
> And know we'll never see your family more than mine
>
> Even when I'm acting crazy
> Tell me everything's alright

This is what women today understand marriage to be. They expect to be pursuing their own careers, not supporting their husbands and raising children. An independent flow of money is important to feminists, because it allows them to insulate themselves from the husband's vision of stewardship, which is important to his primary goal of making the marriage serve God above all. I have also heard that women want to work because they view the roles of

wife and mother as demeaning, and they don't trust men to provide. Well, that's why they ought to be choosing men who 1) have a resume with long-term commitments, 2) are used to sharing with others and donating to causes. But I personally know two women who chose men 5 years younger than they were, students who had never earned a dime – presumably because they were easier to manipulate and control. (One of the women has chosen younger, unemployed, penniless men three times in a row, and then she complains that men are not financially prepared for marriage!) The lyrics also say that wives don't do cooking, and probably implies not being domestic at all.

And in marriage, women expect to win every disagreement. One woman told me that her opinions about financial matters were as good as mine. I have a BS, MS and a very high net worth. She is in debt 25K in her 30s, is living at home with her parents and working an easy minimum wage job. She expects to win any disagreements about career and money, because, like the song says, she is never wrong. The lyrics also say that sex is conditional on whether the woman feels validated and happy. But men are expected to go to work regardless of whether their needs are met. When it comes to visiting family and holidays – two frequent disagreements even in complementarian couples – she lets us know that her family is more important than his. And she is allowed to act crazy, which could involve a whole host of selfish, wasteful, narcissistic behaviors, (e.g. – skydving, ziplining, surfing), and he is just supposed to accept it – and pay for it. For the rest of his life. How does any of this craziness help him in his plan to build a marriage that serves God? But even Christian women often think that relationships and marriage are about their needs, not serving God. It's very important to understand that women today are only able to sustain relationships with men by giving them sex and then shutting up about what it means and where the relationship is headed – they have nothing that a man wants with respect to the role of wife, so there will be no marriage.

So is it worth it for a man to make a lifelong commitment to provide for a woman like this?

Let me explain to you why men are not interested in committing to, or discussing commitment with, radical feminists. Men will have sex with a radical feminist, but they will never commit to them. Why not? If a man's role is just to please the "huge feminist", then there is no reason to commit to her. Because of no-fault divorce laws, a man loses all leverage in negotiations the minute he marries a radical feminist. The only leverage he has with her is *before* the marriage. Radical feminists believe that relationships are about their plans and their needs. They are not interested in responsibilities, expectations or obligations to men or to children. But men, even secular men, understand that they must not marry a woman who thinks that relationships should impose no obligations on her. Men play dumb with women to keep the sex coming, but there is no way they would commit to such women.

Let me speak about the men who are interested in commitment. A man marries a woman if she is interested in supporting his plan to change the world. For Christian men, that means making sure that the marriage and children will build up the Kingdom of God. Although you might think that every woman who claims to be a Christian would be interested in a man who has a plan to build the Kingdom of God, that is not a common view of relationships, even among Christian women. Every Christian woman needs to be evaluated to understand what they expect marriage to be like. If they don't show evidence in their own choices that they are used to self-denial, self-sacrifice, etc. (which all Christians ought to be), then it's not a good idea to marry her.

The problem with feminism is that it makes women think that marriage is about them getting their needs met, with no obligations to men or children. That's what the sexual revolution and abortion taught women. Relationships should be recreational. You get a man to pay attention to you with sex, not with support or love. If a baby arrives, don't let it impose obligations on you – just kill it. But marriage – lifelong commitment to have a home and raise kids – requires that women have a certain character. Marriage is hard work, especially with kids. Men who are interested in marriage will prefer a woman who thinks less of herself ("hugely feminist"), and more about others (husbands and children), and who accepts that the needs of others create obligations on her, which she is responsible for. That's why I recommend women who go into STEM fields in college and have solid resumes. STEM helps to break the selfishness of women. (Jordana has a degree in creative writing) But many women will not want to be led to do hard things that prepare her for marriage, and that's why commitment-minded men don't talk to them. If a woman is not interested in the obligations that a life-long commitment imposes on her, then she will be stuck with men who are only interested in sex with her.

Now there is one exception to this rule, and that's young, naive men. If a woman is a "huge feminist" then she might be able to get attention from a doormat man without having to give him sex. Typically, these men have no work experience, no savings, are much younger, and are so desperate for attention that they do what Meghan Trainor says in the song: apologize, grovel, condone craziness and selfishness, etc. Although a woman may think she wants a man like that in the short-term, in the long-term, those men prove unattractive and unsatisfactory. In order to be masculine, a man needs to be a good moral leader and a good spiritual leader. And that means that he needs to call a woman higher, away from her self-centeredness, so she can serve God and serve other people. He cannot just agree with whatever crazy, emotional thing that she thinks up that is fun, thrilling and bound to fail. A good leader has *experience* as a provider, protector and leader that he brings to bear on decision-making, and proven ability achieving and leading others to greatness. I think women with low self-esteem will be interested in men who are doormats, but that is not the solution to the commitment problem. The real solution is for them to let themselves be led by a good man into doing harder and harder things – graduate school, non-trivial work (if there are no young children at home), organizing Christian speakers on campus, teaching classes in apologetics, defending the unborn, defending marriage, getting herself out of debt, moving out of her parents' house, etc. The self-esteem she needs has to come from doing hard work – that is what builds her into the kind of person who can handle responsibilities, expectations and obligations in a marriage. There is no shortcut to an effective, influential marriage that goes through a doormat man.

# William Lane Craig debates James Crossley: Did Jesus rise from the dead?

**Wintery Knight** · 18 May 2015 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence. He's also done debates with Richard Bauckham and Michael Bird. You have to respect him for getting out there and defending his views in public.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment

  - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
  - the response was that the disciples stole the body
  - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
  - this material is extremely early, withing 1-3 years after the cross
  - James, the brother of Jesus, was not a believer when he got his appearance
  - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
  - Peter: attested by Luke and Paul
  - The twelve: attested by Luke, John and Paul
  - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s

- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death

- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments

- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# Republican Governor Mary Fallin defends religious liberty against gay marriage

**Wintery Knight** · 19 May 2015 · Archived copy · Original

Oklahama Governor Mary Fallin

Great news about one of my favorite Republican governors, Mary Fallin.

Excerpt:

> If the U.S. Supreme Court decides to overturn the millennia-long definition of marriage, Oklahoma clergy will not have to be concerned that they will be forced to perform such ceremonies.
>
> On May 1, Governor Mary Fallin signed a law that would allow ministers to exercise their religious beliefs on marriage and decline to "wed" same-sex couples.
>
> Governor Fallin's office said in a press release that H.B. 1007 is "a bill protecting religious leaders from being compelled to perform marriages that are in direct contradiction to their religious beliefs."
>
> The law says that "no regularly licensed, ordained, or authorized official of any religious organization shall be required to solemnize or recognize any marriage that violates the official's conscience or religious beliefs."
>
> Unlike other governors, the Oklahoma Republican did not back down from the potential controversy that could surround her signature of H.B. 1007.
>
> "This bill makes it clear that the government can never compel our religious leaders or houses of worship to act in violation of their faith where marriage is concerned," Fallin said. "I am proud to join our legislature in taking a strong stand in defense of religious liberty and the freedoms awarded to all American citizens by the U.S. Constitution."

Somehow, I missed this story about a similar bill passed last week – although this one has not been signed:

> The bill is similar to one passed by the Texas Senate last week, the "Pastor Protection Act." The bill, which is being considered by the House, has enraged some LGBT activists.
>
> The Texas Freedom Network, which says its mission is "to counter the Religious Right," said the bill would give religiously affiliated entities the "authority to discriminate against almost any Texas family."
>
> The bill's supporters say they are simply trying to guarantee conscience rights, which even the Obama administration's Solicitor General, Donald Verrilli, has admitted could be imperiled by a Supreme Court ruling

> redefining marriage.

I wonder if either of these states will draw protests from the big corporations and the gay activists? I am more optimistic about Oklahoma, because they don't have the same exposure to the big corporations that Texas does. Remember that in Indiana it was the big corporations like Apple, Salesforce, Wal-Mart, Angie's List, etc. that caused Governor Mike Pence to back down, and then the legislature passed a law that made it even tougher on people who want to refuse to celebrate gay marriage.

Barack Obama and Planned Parenthood

Meanwhile, Obama the atheist wants Bible-believing Christians to convert to Marxism:

> […]…President Obama told the Catholic-Evangelical Leadership Summit that churches should spend less time focusing on abortion and same-sex "marriage."
>
> During a panel discussion on poverty at Georgetown University last Tuesday, Obama criticized churches for how they engage politically, focusing on "divisive issues" such as protecting life and preserving marriage.
>
> […]While the Christian religion has rejected abortion since its founding, and always considered homosexuality a grave sin, traditionally no welfare state economic theory has been endorsed by the Christian Church.
>
> […]"I reject his premise," blogger Stan Guthrie, an editor at large at *Christianity Today*, commented. "People of faith already do far more for the poor than secular leftists."
>
> President Obama's comments, he said, exemplified "unbelievable ignorance on display."
>
> The unusual scene of a sitting president criticizing churches for emphasizing traditional doctrines opened the question of whether the president and others on the Left intend to influence, cajole, or bully Christians into altering their fundamental moral beliefs. Obama's remarks came shortly after presidential candidate Hillary Clinton declared that religious beliefs against abortion "have to be changed."
>
> She had previously likened beliefs that homosexuality is immoral to "honor killings, widow burning, or female genital mutilation."
>
> […]Those churches which have emphasized issues like economic redistribution or climate change have had the most precipitous loss of members, according to a new Pew Research Center report on the decline of Christianity in America.
>
> In his remarks at Georgetown, Obama also criticized Fox News for its reporting on welfare and government aid recipients, declaring, "We're going to have to change how the media reports on these issues."

I blogged about Hillary Clinton's comments about forcing Christians to endorse abortion in a previous post. I have no doubt that she has the same views on forcing Christians to celebrate gay marriage, too.

Hillary Clinton and Planned Parenthood

Well, the good news is that we get another shot at this in 2016. I expect a lot of people who claim to be Christians to vote for Hillary Clinton, the candidate of abortion and gay marriage. The candidate of anti-Christian fascism. Will it be different this time? Are we going to put the lives of children, born and unborn ahead of global warming and free birth control pills, this time?

# A Harvard University student explains how evidence changed her mind about God

**Wintery Knight** · 19 May 2015 · Archived copy · Original

Harvard University student discovers apologetics

Here's a must-read article about the effectiveness of apologetics on college campuses in Christianity Today.

Excerpt:

> I don't know when I first became a skeptic. It must have been around age 4, when my mother found me arguing with another child at a birthday party: "But how do you know what the Bible says is true?" By age 11, my atheism was so widely known in my middle school that a Christian boy threatened to come to my house and "shoot all the atheists." My Christian friends in high school avoided talking to me about religion because they anticipated that I would tear down their poorly constructed arguments. And I did.
>
> As I set off in 2008 to begin my freshman year studying government at Harvard (whose motto is *Veritas*, "Truth"), I could never have expected the change that awaited me.
>
> It was a brisk November when I met John Joseph Porter. Our conversations initially revolved around conservative politics, but soon gravitated toward religion. He wrote an essay for the *Ichthus*, Harvard's Christian journal, defending God's existence. I critiqued it. On campus, we'd argue into the wee hours; when apart, we'd take our arguments to e-mail. Never before had I met a Christian who could respond to my most basic philosophical questions: How does one understand the Bible's contradictions? Could an omnipotent God make a stone he could not lift? What about the Euthyphro dilemma: Is something good because God declared it so, or does God merely identify the good? To someone like me, with no Christian background, resorting to an answer like "It takes faith" could only be intellectual cowardice. Joseph didn't do that.
>
> And he did something else: He prodded me on how inconsistent I was as an atheist who nonetheless believed in right and wrong as objective, universal categories. Defenseless, I decided to take a seminar on meta-ethics. After all, atheists had been developing ethical systems for 200-some years. In what I now see as providential, my atheist professor assigned a paper by C. S. Lewis that resolved the Euthyphro dilemma, declaring, "God is not merely good, but goodness; goodness is not merely divine, but God."

> Joseph also pushed me on the origins of the universe. I had always believed in the Big Bang. But I was blissfully unaware that the man who first proposed it, Georges Lemaître, was a Catholic priest. And I'd happily ignored the rabbit trail of a problem of what *caused* the Big Bang, and what *caused* that cause, and so on.
>
> By Valentine's Day, I began to believe in God. There was no intellectual shame in being a deist, after all, as I joined the respectable ranks of Thomas Jefferson and other Founding Fathers.
>
> I wouldn't stay a deist for long. A Catholic friend gave me J. Budziszewski's book Ask Me Anything, which included the Christian teaching that "love is a commitment of the will to the true good of the other person." This theme—of love as sacrifice for true good—struck me. The Cross no longer seemed a grotesque symbol of divine sadism, but a remarkable act of love. And Christianity began to look less strangely mythical and more cosmically beautiful.

Now, I'm going to get into a lot of trouble for saying this, but I think that if you are a Christian and you are in a secular university, then you really need to have put in the effort to study the areas of science, history and philosophy that are relevant to the Christian faith. This is regardless of your personal abilities or field of study. We must all make an effort regardless of how comfortable we are with things that are hard for us to learn.

Granted, most people today are not interested in truth, because we just have this cultural preoccupation with having fun and feeling good and doing whatever we want to do whenever we want to do it. Most atheists I've met are like that, but some are more honest, open-minded, and they just have never encountered any good reasons or evidence to think that God exists and that Jesus is anything other than a man. There are a lot of atheists like that who are just waiting to hear some decent evidence. Our job is to prepare for them and then engage them, if they are willing to be engaged.

I think that definition of love she cited – self-sacrifice for the true good of another person – is important. I don't think that ordinary Christians like you or me spends time on apologetics because we "like" it. I know lots of Christians who are in tough, expensive academic programs trying to get the skills they need to defend truth in areas that matter. They do this because they know that there are people out there who are interested in truth, and who are willing to re-prioritize their lives if the truth is made clear to them. We need to be willing to serve God by doing hard things that work.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

- Arguments and scientific evidence for non-physical minds

# Christopher Hitchens debates William Lane Craig at Biola U: Does God Exist?

**Wintery Knight** · 19 May 2015 · Archived copy · Original

Here is the video of the debate:

**TOPIC: DOES GOD EXIST?**

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

**WC opening speech:**

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws
– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)
– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument

– objective moral values are values that exist regardless of what humans think
– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

**CH opening speech:**

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus
– god wouldn't have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that's a bad design
– the universe is so vast, why would god need so much space, that's a bad design
– there is too much destruction in the universe, like exploding stars – that's a bad design
– the heat death of the universe is a bad design
– too many of the other planets don't support life, that's a bad design
– the sun is going to become a red giant and incinerate us, that's a bad design

3. hitchens' burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can't prove there is no god
– but they can prove there is no good argument for god

4. craig's scientific arguments don't go far enough, they only prove deism, not theism
– the scientific arguments don't prove prayer works

– the scientific arguments don't prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn't be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig's evidence was extraordinary

7. science can change, so craig can't use the progress of science
– it's too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god's existence should trump contradicting evidence
– but then he isn't forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don't believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

**WC first rebuttal:**

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you've got is agnosticism
– because CH did not claim to know there is no God
– and he gave no arguments that there is no God

CH's evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH's argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn't need to be efficient

CH's argument that god waits too long to send Jesus
– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH's argument that Craig's scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work
– all that deism denies is miraculous intervention

CH's argument that Craig has a burden of proof
– theism doesn't need to be proven with certainty
– must only prove best explanation of the evidence

CH's citation of Craig's book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH's rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH's rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for  minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH's argument about heat death of the universe
– duration of design is irrelevant to whether something was designed
– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

**CH first rebuttal:**

it's not agnosticism
– if there are no good arguments for theism
– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old
– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do
– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

**WC cross-examination of CH:**

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and

duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

**CH cross-examination of WC:**

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH  are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

**WC second rebuttal**

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing
– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

**CH second rebuttal:**

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon
– that is why there are so many religions

**WC concluding speech**

no arguments for atheism presented

What CH has said during the debate:
– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it's just a genetic predisposition to act in a certain way – that's not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

**CH concluding speech**

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

**Further study**

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek.

# In one day, Bill and Hillary Clinton got over $1 million for FOUR speeches

**Wintery Knight** · 20 May 2015 · Archived copy · Original

Wow, “dead broke” indeed.

The Weekly Standard reports:

> Disclosure forms filed with the Federal Election Commission by Hillary Clinton provide fascinating details of the remarkable money-making machine that is the once-and-possibly-future first couple. Between January 2014 and the filing of the forms on May 15, 2015 (up to and including a speech by Bill Clinton to the American Institute of Architects the day before the filing), the Clintons made about $30 million, approximately $25 million from speeches alone.
>
> Both of the Clintons have given speeches regularly in the 16-month period covered in the filing with rarely more than a few weeks off in between engagements. Often events are crowded together during a period of several days, sometimes with more than one speech on the same day. On a single day last October, Bill and Hillary delivered a total of four speeches, taking home over $1 million. Those four speeches fell in the middle of a three-day blitz that brought in a total of $1,511,000. (Mrs. Clinton edged out her husband $786,000 to $725,000.)
>
> […]Although the audiences for the Clintons vary widely, the actual content and duration of the speeches is not always revealed. However, a YouTube video of Bill Clinton’s recent speech to the American Institute of Architects, apparently recorded by an attendee, shows that the $250,000 fee paid to Mr. Clinton purchased the group a 23 minute speech, an hourly rate of about $652,000.

On a per-hour basis, she makes more than all of the CEOs of the largest companies.

Look:

$300,000 an hour for a speech

That’s from this astounding article from the Washington Examiner.

Excerpt:

> Democratic presidential candidate Hillary Clinton is drawing a populist bead on lavish Wall Street pay packages as she revs up her march to the 2016 Democratic presidential nomination, but in some respects the

> fat-per-speech fee she can charge puts her far ahead of the top 10 highest-paid American CEOs.
>
> "I think it's fair to say that if you look across the country, the deck is stacked in favor of those already at the top. There's something wrong when CEOs make 300 times more than the American worker…," Clinton said during her first campaign swing last week at an Iowa community college.
>
> Bashing Wall Streeters is part of Clinton's strategy of remaking her image to appear more sympathetic to middle class voters, while also appealing to left-wing Democrats who are attracted to Sen. Elizabeth Warren, D-Mass., and the even more radical supporters of Sen. Bernie Sanders, the Vermont socialist who talks of seeking the 2016 nomination.

Let's compare the per-hour rate of pay for Hillary compared to the top American CEOs:

> On that basis, the CEOs are pikers compared to an hour of Clinton speaking for $300,000. Hammergren, for example, makes only $63,076 for the same hour of labor. Clothing magnate Ralph Lauren, the second best-paid CEO on the Forbes list receives $32,067. Vornado Realty's Michael Fasitelli, the third-place CEO, gets $30,961 per hour.

And this is what her speeches are like:

Is that worth millions of dollars? When you put this together with the secretive Clinton Foundation, it looks like something else might be going on here.

The radically leftist New York Times is saying that the "dead broke" Clintons made $30 million in a 16-month period.

Astonishing:

> Hillary Rodham Clinton and her husband made at least $30 million over the last 16 months, **mainly from giving paid speeches to corporations, banks and other organizations**, according to financial disclosure forms filed with federal elections officials on Friday.
>
> The sum, which makes Mrs. Clinton among the wealthiest of the 2016 presidential candidates, could create challenges for the former secretary of state as she tries to cast herself as a champion of everyday Americans in an era of income inequality.
>
> The $25 million in speaking fees since the beginning of last year continue a lucrative trend for the Clintons: They have now earned more than $125 million on the circuit since leaving the White House in 2001.
>
> In addition, the report shows, Mrs. Clinton reported income exceeding $5 million from her memoir of her time as secretary of state, "Hard Choices."

Now, she wants to save us from the "1%". She's the 1% of the 1% of the 1%.

# Letitia Wong: making a difference with apologetics inside and outside her home

**Wintery Knight** · 20 May 2015 · Archived copy · Original

Letitia Wong
Article in the Examiner.

Excerpt:

> Letitia Wong is a busy woman.
>
> She is a devoted mother of two, a responsibility that she takes very seriously. She also writes a Christian Apologetics blog, "Talitha, Koum!"
>
> At Missouri Baptist University in St. Louis; she directs a student chapter which is devoted to providing those students with resources for defending the Christian worldview against cultural and intellectual challenges. In addition to helping college students, she also helps teenagers with apologetics through a local organization called Faith Ascent Ministries.
>
> Letitia is a cohost of a weekly radio program – named TRU-Life Fridays Radio – which focuses on educating and promoting the defense of a healthy ethic of human life.
>
> […]Letitia is well-qualified in her specific focus on the defense of life, having studied Health Sciences at Purdue and Medical Technology at Arizona State. Letitia's unique capacity to uphold the Christian worldview does not stop here, though:

This quotation from Letitia was what caused me to link to her profile:

> "For as long as I can remember, critics have accused Christianity as a legalistic religion that is anti-woman among other things. This seems to demand that Christian women come to the forefront to proclaim that Woman was created as the completion to humankind. How appropriate, then, that women engage and complete the argument for the validity and veracity of the Christian faith. Plus, women who can communicate well and teach other women make the disciplines used in apologetics so much more accessible so that more women can become involved.
>
> "I have many times heard women disparage apologetics study, questioning its relevance, worried that it causes people to complicate faith or be combative. I want to shift this perspective. **Women tend to invest heavily in**

> **their children's education and spiritual and worldview formation. However, they also tend to disconnect at the most crucial point in this investment, the point at which the Christian worldview relies heavily on sound reasoning about philosophical and theological matters. The need to follow through is key to bringing the heart and the mind together to apply all the knowledge of their education (history, science, and the humanities) to be able to have and share an integrated Christian worldview. Apologetics study completes what women begin in earnest in properly educating their children, and I believe what is beneficial for children is likewise beneficial for women.** Apologetics bridges the gap between knowledge and application. Knowledge and application together are the key to communication of truth to a world that is skeptical about the claims of Christianity."

I have always felt concerned because I meet many women who are not interested in apologetics, and especially not the evidential kind that Letitia likes. I really love the way that she has thought through her responsibilities as wife and mother, and realized that apologetics is needed for her to do her jobs. I know that she has been involved with organizing apologetics conferences, her pro-life podcast, and her blog. So clearly, she has a need to be good at defending her faith. I think that's the right way to become interested in apologetics – you want to be able to talk to people about these things, and have an influence. That means having the knowledge, so that you are leading others, not just expressing your opinions.

# Define biomimetics and give two examples from peer-reviewed science journals?

**Wintery Knight** · 20 May 2015 · Archived copy · Original

I'm baby octopus, and I approve this message

Today, I have two examples of biomimetics.

But first, here's what that is:

> Biomimetic refers to human-made processes, substances, devices, or systems that imitate nature. The art and science of designing and building biomimetic apparatus is called biomimetics, and is of special interest to researchers in nanotechnology, robotics, artificial intelligence (AI), the medical industry, and the military.

Here's the first example from Science Daily.

> A robotic arm that can bend, stretch and squeeze through cluttered environments has been created by a group of researchers from Italy.

> Inspired by the eight arms of the octopus, the device has been specifically designed for surgical operations to enable surgeons to easily access remote, confined regions of the body and, once there, manipulate soft organs without damaging them.
>
> It is believed the device could reduce the number of instruments, and thus entry incisions, necessary in surgical operations, with part of the arm being used to manipulate organs whilst another part of the arm operates.
>
> The device, which has been presented 14 May, in IOP Publishing's journal ***Bioinspiration and Biomimetics***, holds a key advantage over traditional surgical tools due to its ability to quickly transform from a bending, flexible instrument into a stiff and rigid instrument.
>
> It has been inspired by the eight highly flexible arms of the octopus which have no rigid skeletal support and can thus easily adapt to the surrounding environment by twisting, changing their length or bending in any

> direction at any point along the arm.
>
> The octopus can, however, vary the stiffness of its arms, temporarily transforming the flexible limbs into stiffened segments to allow the octopus to move and interact with objects.
>
> […]The ability of the robotic arm to manipulate organs while surgical tasks are performed was successfully demonstrated in simulated scenarios where organs were represented by water-filled balloons.
>
> 'Traditional surgical tasks often require the use of multiple specialized instruments such as graspers, retractors, vision systems and dissectors, to carry out a single procedure,' Dr Ranzani continued.
>
> 'We believe our device is the first step to creating an instrument that is able to perform all of these tasks, as well as reach remote areas of the body and safely support organs around the target site.'

Fascinating, and useful. If we are reverse engineering these designs, should we assume that they were designed in the first place? Especially when there is zero evidence for macroevolution either in the lab or in the fossil record.

The shorebird's beak is more interesting than you might think

My second example of biomimetics is also from Science Daily.

Excerpt:

> A UT Arlington engineering professor and his doctoral student have designed a device based on a shorebird's beak that can accumulate water collected from fog and dew.

> The device could provide water in drought-stricken areas of the world or deserts around the globe.
>
> Xin Heng… a doctoral student in Mechanical and Aerospace Engineering, and Cheng Luo, MAE professor, have made a device that can use fog and dew to collect water.
>
> Cheng Luo, professor in the Mechanical & Aerospace Engineering Department, and Xin Heng, PhD candidate in the same College of Engineering department, published "Bioinspired Plate-Based Fog Collectors" in the Aug. 25 edition of ACS' (American Chemical Society) ***Applied Materials & Interfaces*** journal.
>
> The idea began when Heng saw an article that explained the physical mechanism shorebirds use to collect their food — driving food sources into their throats by opening and closing their beaks. Luo said that inspired the team to try to replicate the natural beak in the lab.
>
> "We wanted to see if we could do that first," Luo said. "When we made the artificial beaks, we saw that multiple water drops were transported by narrow, beak-like glass plates. That made us think of whether we could harvest the water from fog and dew."

> Their experiments were successful. They found out they could harvest about four tablespoons of water in a couple of hours from glass plates that were about 26 centimeters long by 10 centimeters wide.

Now, if we are lifting designs out of nature, then shouldn't we give honor to God for putting the designs in there in the first place? I really think it's important to give God credit where due for his clever designs, even if you're not a big fan of the shorebird. I also think it's interesting that it's engineers who made this application of something in nature, not biologists.  Also, I feel I have to mention that the birdy is also cute, which is not insignificant, if you like birds as much as I do. I blog about birds a lot on this blog. And dragonflies too! Because wings are awesome!

# Pro-gay marriage study retracted for using “completely” fake data

**Wintery Knight** · 21 May 2015 · Archived copy · Original

Marriage and family

The story was reported in the ultra-leftist Politico.

They say:

> One of the authors of a recent study that claimed that short conversations with gay people could change minds on same-sex marriage has retracted it.
>
> Columbia University political science professor Donald Green’s retraction this week of a popular article published in the December issue of the academic journal Science follows revelations that his co-author allegedly faked data for the study, “When contact changes minds: An experiment on transmission of support of gay marriage.”
>
> According to the academic watchdog blog Retraction Watch, Green published a retraction of the paper Tuesday after confronting co-author Michael LaCour, a graduate assistant at UCLA.
>
> **The study received widespread coverage from The New York Times, Vox, The Huffington Post, The Washington Post, The Wall Street Journal and others when it was released in December.**
>
> “I am deeply embarrassed by this turn of events and apologize to the editors, reviewers, and readers of Science,” Green told the blog.
>
> […]The investigation into the paper began when graduate students at the University of California, Berkeley, were initially impressed with the work and wanted to do an extension of it, according to a timeline of their probe posted Tuesday. When the students started a similar study, they found they were not getting the large response rate that Green and LaCour received in theirs.
>
> […]**Qualtrics said it was not familiar with the project and “denied having the capabilities” to do some of what the survey described, according to Green, after UCLA’s political science department chair contacted the company. The graduate students also contacted a Yale political science professor to help look into the discrepancies.**
>
> **After speaking with LaCour, Green told one of the graduate students and the Yale professor that the UCLA graduate assistant [Michael LaCour],had confessed to “falsely describing at least some of the details of the data collection.”**

The equally leftist Washington Post is even more forceful – calling the data a complete fake.

Excerpt:

> […]…**[W]hat really happened was that the data were faked by first author LaCour.** Co-author Green (my colleague at Columbia) had taken his collaborator's data on faith; once he found out, he firmly retracted the article.
>
> Ironically, **LaCour benefited (in the short term) by his strategy of completely faking it.** If he'd done the usual strategy of taking real data and stretching out the interpretation, I and others would've been all over him for overinterpreting his results, garden of forking paths, etc. But, by doing the Big Lie, he bypassed all those statistical concerns.

The Christian Post has an article on this that makes the faking of the data look deliberate.

Excerpt:

> According to Hughes, after Green was alerted to the irregularities, he contacted LaCour's dissertation advisor, Professor Lynn Vavreck. **After Vavreck confronted LaCour, he was unable to provide the study's raw data and claimed he accidentally deleted the file. A representative from Qualtrics, the company that provided the survey program LaCour used, told UCLA there was no evidence that the data had been deleted.**

Isn't it amazing that the fake study was quickly picked up by the mainstream media, but none of them thought to check the data? Well, I guess it's what they wanted to believe, and there was not even one person who thought critically about it. That's the trouble with surrounding yourself with people who agree with you. I doubt that anyone in the mainstream media can even state the case against same-sex marriage without resorting to insults or caricatures. And that's how these mistakes get made.

Here's an older post that summarizes what we know from research on same-sex parenting. This post is more recent, and links to two studies – one from the UK, and one from Canada – that show that same-sex parenting does have a negative effect on children. Surprise! Moms matter. Dads matter. You can't switch either one out without hurting the child. That's one reason why people oppose same-sex marriage. And another is because it is not compatible with religious liberty and freedom of conscience. We're getting more proof of that almost every day.

# Jay Richards: why should Christians learn about economics?

**Wintery Knight** · 21 May 2015 · Archived copy · Original

Here's a good basic introduction to the free enterprise system by Dr. Jay Richards:

In this lecture, Dr. Richards covers the following topics:

- the piety myth – thinking that good intentions matter more than good results
- the greed myth – thinking that capitalism is about greed instead of about innovation and serving others
- the zero sum game myth – thinking that voluntary exchanges between buyers and sellers result in win-lose outcomes
- the materialist myth – thinking that there is only a set amount of wealth to be divided by competition

It turns out that the best system for lifting the poor out of poverty – by work or charity – is the economic system that creates wealth through human ingenuity and hard work. That system is the free enterprise system.

**Something to read?**

If you can't listen to the lecture and don't want to buy the whole book "Money, Greed and God?" Then I have a series of posts on each chapter for you.

The index post is here.

Here are the posts in the series:

- Part 1: The Eight Most Common Myths about Wealth, Poverty, and Free Enterprise
- Part 2: Can't We Build A Just Society?
- Part 3: The Piety Myth
- Part 4: The Myth of the Zero Sum Game
- Part 5: Is Wealth Created or Transferred?
- Part 6: Is Free Enterprise Based on Greed?
- Part 7: Hasn't Christianity Always Opposed Free Enterprise?
- Part 8: Does Free Enterprise Lead to An Ugly Consumerist Culture?
- Part 9: Will We Use Up All Our Resources?
- Part 10: Are Markets An Example of Providence?

Parts 4 and 5 are my favorites. It's so hard to choose one to excerpt, but I must. I will choose… Part 4.

Here's the problem:

> **Myth #3: The Zero Sum Game Myth – believing that trade requires a winner and a loser.**
>
> One reason people believe this myth is because they misunderstand how economic value is determined. Economic thinkers with views as diverse as Adam Smith and Karl Marx believed economic value was determined by the labor theory of value. This theory stipulates that the cost to produce an object determines its economic value.
>
> According to this theory, if you build a house that costs you $500,000 to build, that house is worth $500,000. But what if no one can or wants to buy the house? Then what is it worth?
>
> Medieval church scholars put forth a very different theory, one derived from human nature: economic value is in the eye of the beholder. The economic value of an object is determined by how much someone is willing to give up to get that object. This is the subjective theory of value.

And here's an example of how to avoid the problem:

> How you determine economic value affects whether you view free enterprise as a zero-sum game, or a win-win game in which both participants benefit.
>
> Let's return to the example of the $500,000 house. As the developer of the house, you hire workers to build the house. You then sell it for more than $500,000. According to the labor theory of value, you have taken more than the good is actually worth. You've exploited the buyer and your workers by taking this surplus value. You win, they lose.
>
> Yet this situation looks different according to the subjective theory of value. Here, everybody wins. You market and sell the house for more than it cost to produce, but not more than customers will freely pay. The buyer is not forced to pay a cost he doesn't agree to. You are rewarded for your entrepreneurial effort. Your workers benefit, because you paid them the wages they agreed to when you hired them.
>
> This illustration brings up a couple important points about free enterprise that are often overlooked:
>
> **1. Free exchange is a win-win game**.
>
> In win-win games, some players may end up better off than others, but everyone ends up better off than they were at the beginning. As the developer, you might make more than your workers. Yet the workers determined they would be better off by freely exchanging their labor for wages, than if they didn't have the job at all.
>
> A free market doesn't guarantee that everyone wins in every competition. Rather, it allows many more win-win encounters than any other alternative.
>
> **2. The game is win-win because of rules set-up beforehand.**
>
> A free market is *not* a free-for-all in which everybody can do what they want. Any exchange must be free on both sides. Rule of law, contracts, and property rights are needed to ensure exchanges are conducted rightly. As the developer of the house, you'd be held accountable if you broke your contract and failed to pay workers what you promised.
>
> An exchange that is free on both sides, in which no one is forced or tricked into participating, is a win-win game.

If you do get the book, be sure and skip the chapter on usury. It's just not as engaging as the others, in my opinion.

# Ted Cruz shows how to answer questions on social issues from leftist reporter

**Wintery Knight** · 22 May 2015 · Archived copy · Original

This is from Real Clear Politics.

Transcript:

> SEN. TED CRUZ: Let me ask a question: Is there something about the left, and I am going to put the media in this category, that is obsessed with sex? Why is it the only question you want to ask concerns homosexuals? Okay, you can ask those questions over and over and over again. I recognize that you're reading questions from MSNBC…
>
> […]You're wincing. You don't want to talk about foreign policy. I recognize you want to ask another question about gay rights. Well, you know. ISIS is executing homosexuals. You want to talk about gay rights? This week was a very bad week for gay rights because the expansion of ISIS, the expansion of radical, theocratic, Islamic zealots that crucify Christians, that behead children and that murder homosexuals. That ought to be concerning you far more than asking six questions all on the same topic.
>
> REPORTER: Do you have a personal animosity against gay Americans?
>
> CRUZ: Do you have a personal animosity against Christians sir? Your line of questioning is highly curious. You seem fixated on a particular subject. Look, I'm a Christian. Scripture commands us to love everybody and what I have been talking about, with respect to same-sex marriage, is the Constitution which is what we should all be focused on. The Constitution gives marriage to elected state legislators. It doesn't give the power of marriage to a president, or to unelected judges to tear down the decisions enacted by democratically elected state legislatures.

His delivery is smooth, fluid, natural. He speaks like this because he has thought about it a lot, and he knows how to present his views to hostile audiences in the best possible light. His positions are not check boxes that he ticks in order to appeal to Christian voters. He actually believes the things we believe, and he will debate with those who disagree.

My concern with Cruz is that he hasn't got the experience of building consensus to move legislation and enact policies, the way others like Bobby Jindal and Scott Walker have done.

Here's Louisiana Governor Bobby Jindal, for example, backing up his words with actions.

Louisiana Governor Bobby Jindal

Excerpt:

> Defying state legislators who rejected a measure that sought to protect “the right of conscience as it relates to marriage,” Louisiana Gov. Bobby Jindal acted on his own Tuesday.
>
> “I’m going to do anything I can to protect religious liberty,” the Republican governor told The Daily Signal in a phone interview on Wednesday.
>
> His executive order, issued after state legislators voted down the Louisiana Marriage and Conscience Act, prohibits “all departments, commissions, boards, agencies, and political subdivision of the state” from discriminating against people or businesses with deeply held religious beliefs about marriage.
>
> “My executive order accomplishes the intent of the [Louisiana Marriage and Conscience Act]. It prevents the state from discriminating against people or their business with deeply held religious beliefs,” Jindal said.
>
> The measure builds on a Religious Freedom Restoration Act that was enacted during Jindal’s first term as governor. The state of Louisiana, under a Constitutional amendment, also defines marriage strictly as the union between a man and a woman.
>
> […]**“Even if you don’t agree with me on the definition of marriage … you still should want those folks to have their rights—our rights to live the way we want,” he said.**
>
> **Jindal, who is exploring a 2016 presidential bid, doesn’t shy away from his support for traditional marriage.**
>
> **“I believe in the traditional definition of marriage,” he said. “Unlike President Obama and Hillary Clinton, my opinions are not evolving on this issue. But at the end of the day, this is even bigger than marriage.”**
>
> **[…]“Don’t waste your breath trying to bully me in Louisiana,” he said. “It is absolutely constitutional to have religious liberty and economic freedoms.”**

I have actually been saying “Don’t Waste Your Breath” to a lot of people lately, it’s become my motto whenever I am defiant.

# Study explores whether atheism is rooted in reason or emotion

**Wintery Knight** · 22 May 2015 · Archived copy · Original

Image of Navy SEAL Matthew "Axe" Axelson from the movie "Lone Survivor"
From First Things, based on research reported by CNN.

> A new set of studies in the *Journal of Personality and Social Psychology* finds that atheists and agnostics report anger toward God either in the past or anger focused on a hypothetical image of what they imagine God must be like. Julie Exline, a psychologist at Case Western Reserve University and the lead author of this recent study, has examined other data on this subject with identical results. Exline explains that her interest was first piqued when an early study of anger toward God revealed a counterintuitive finding: Those who reported no belief in God reported more grudges toward him than believers.
>
> At first glance, this finding seemed to reflect an error. How could people be angry with God if they did not believe in God? Reanalyses of a second dataset revealed similar patterns: Those who endorsed their religious beliefs as "atheist/agnostic" or "none/unsure" reported more anger toward God than those who reported a religious affiliation.
>
> Exline notes that the findings raised questions of whether anger might actually affect belief in God's existence, an idea consistent with social science's previous clinical findings on "emotional atheism."
>
> Studies in traumatic events suggest a possible link between suffering, anger toward God, and doubts about God's existence. According to Cook and Wimberly (1983), 33% of parents who suffered the death of a child reported doubts about God in the first year of bereavement. In another study, 90% of mothers who had given birth to a profoundly retarded child voiced doubts about the existence of God (Childs, 1985). Our survey research with undergraduates has focused directly on the association between anger at God and self-reported drops in belief (Exline et al., 2004). In the wake of a negative life event, anger toward God predicted decreased belief in God's existence.
>
> The most striking finding was that when Exline looked only at subjects who reported a drop in religious belief, their faith was least likely to recover if anger toward God was the cause of their loss of belief. In other words, anger toward God may not only lead people to atheism but give them a reason to cling to their disbelief.

I think the best defense to this phenomena is for the church to not tell people that God's job is to make them happy in this life on Earth. I think if we spent less time selling Christianity to young people as life enhancement, we would have much fewer apostates. If young people get into their minds that God is their boss, not their waiter, then that

is a good preparation for the real world. And all of the challenges that Christians face – from poverty, to peer pressure, to health problems to persecution. Stop expecting happiness, that is not God's goal for you.

I was blessed to have discovered apologetics at a very early age. This passage from C. S. Lewis' "The Screwtape Letters" always stood out to me back then:

> Do not be deceived, Wormwood. Our cause is never more in danger than when a human, no longer desiring, but still intending, to do our Enemy's will, looks round upon a universe from which every trace of Him seems to have vanished, and asks why he has been forsaken, and still obeys.

When I was young, I shortened this quote into my motto, which lasted until just a few years back when I finally started to feel some security because of my contingency fund's size. And that motto was "nothing works". Nothing works. That's right, so get used to it. Everything sucks, nothing works. *Nothing works.*

Stop expecting God to make you happy. You are a soldier, and your job is to fight to the last breath in your body for the General. Hold until relieved. You're damn right it's unfair. Your whole life is unfair and then you die. Get used to it. When I was in college, my Christian friends and I used to joke that even if we fought our entire lives for God and he tossed us into Hell like firewood, we would still do the same things. We were happy to serve and we didn't think about whether we were getting what we wanted.

Certainly, we did not take stupid chances to get ourselves into trouble deliberately. But we just didn't care about being happy, that was not our goal. We felt that God was in the right, and sinful humans were in the wrong, and that it was enough for us to serve on the right side. We didn't expect anyone to care how we felt, we just expected to serve. And if our first plan failed, we went on to the next plan, and the next, until we found a way to serve in spite of the unfairness of it all.

There is no way that you could read the New Testament and come out with the idea that Jesus wanted fun and thrills and good feelings. He never laughed. He was killed for his obedience to God. He desperately wanted to avoid punishment, but he did things that he did not feel like doing because it was for the benefit of others, in obedience to God his Father. And it's that kind of realistic pessimism – downbeat practical resignation – that we ought to be striving for. This life is not a trip to the mall where everything is on sale and we grab what we like. At all.

# Two Jennifer Roback Morse lectures on love, sex, economics and marriage

**Wintery Knight** · 23 May 2015 · Archived copy · Original

Dr. Jennifer Roback Morse

Here's a quick bio of the person who is in the image above:

> Dr. Jennifer Roback Morse, Senior Fellow in Economics at the Acton Institute and regular contributor to*National Review Online* and *The National Catholic Register*, received her Ph.D. in economics from the University of Rochester. Until recently, she was a Research Fellow at the Hoover Institution. She has been on the faculty of Yale University and George Mason University, and is the author of *Love and Economics: Why the Laissez-Faire Family doesn't work*.

And here are two lectures from the great Dr. Jennifer Roback Morse. One of my favorite scholars to listen to, and a great debater, as well.

**Lecture one: Love and Economics**

(June 13, 2014) Dr J traveled to Phoenix to participate in Alliance Defending Freedom's Blackstone Legal Fellowship, where she gave two talks. This is the first one, "Love and Economics," on what marriage is and why we need it–stay tuned for the next one!

The MP3 file is here.

**Lecture two: Defending Marriage**

(June 13, 2014) Dr J traveled to Phoenix to participate in Alliance Defending Freedom's Blackstone Legal Fellowship, where she gave two talks. This is the second one, "Defending Marriage," on why marriage matters and what has happened and will happen as it gets more and more redefined by the progress of the sexual revolution.

The MP3 file is here.

I was listening to these late at night, and when she said "you know Catholics aren't good with Bible verses" at the beginning of lecture two, I howled with laughter. I'm sure the property manager is going to let me know not to howl with laughter after midnight. Oh well – it was hilarious. She is Catholic. I howled again when made a comment about chaste people over the age of 30, like me. It's just FUN to listen to, but these are serious subjects.

By the way, she debates on these issues as well. And she's *really good at it.*

**Or something to read?**

For those who prefer to read something, here is an article by marriage-defender Dr. Jennifer Roback Morse about how divorce courts challenge marriage.

Excerpt:

> Easy divorce opens the door for an unprecedented amount of government intrusion into ordinary people's lives. This unacknowledged reality is the subject of *Taken Into Custody,* by Stephen Baskerville**.** With penetrating insight, the political scientist exposes the truly breathtaking consequences of no-fault divorce for the expansion of state power and the decline of personal autonomy.
>
> First, no-fault divorce frequently means unilateral divorce: one party wants a divorce against the wishes of the other, who wants to stay married. Kim Basinger dumped Baldwin for no particular reason, unleashed the power of the Los Angeles Family Court system to inflict pain on him and, in the process, inflicted untold damage on their child. Second, the fact that one party wants to remain married means that the divorce has to be enforced. Baldwin wanted to stay married and to continue to be a husband and father. Yet, the coercive and intrusive machinery of the state must be wheeled into action to separate the reluctantly divorced party from the joint assets of the marriage, typically the home and the children.
>
> Third, enforcing the divorce means an unprecedented blurring of the boundaries between public and private life. People under the jurisdiction of family courts can have virtually all of their private lives subject to its scrutiny. If the courts are influenced by feminist ideology, that ideology can extend its reach into every bedroom and kitchen in America. Baldwin ran the gauntlet of divorce industry professionals who have been deeply influenced by the feminist presumptions that the man is always at fault and the woman is always a victim. Thus, the social experiment of no-fault divorce, which most Americans thought was supposed to increase personal liberty, has had the consequence of empowering the state.
>
> Some might think the legacy of no-fault divorce is an example of the law of unintended consequences in operation. That assumes its architects did not intend for unilateral divorce to result in the expansion of the state. But Baskerville makes the case in this book—as well as his 2008 monograph, "The Dangerous Rise of Sexual Politics," in The Family in America—that at least some of the advocates of changes in family law certainly have intended to expand the power of the state over the private lives of law-abiding citizens.

It's important for people to understand the real reasons why people are not getting married, so that we can do something to encourage them to marry that really fixes the problem. If you don't understand the threats that men are seeing with respect to marriage, it might be a good idea to take a look at this essay by Stephen Baskerville, hosted by the Christian Touchstone magazine. It's a summary of the book that Dr. Morse reviewed. I consider that book "Taken Into Custody" to be a must-read for anyone contemplating marriage.

# Islamic State burns a woman alive for refusing to engage in extreme sex act

**Wintery Knight** · 23 May 2015 · Archived copy · Original

Jay Richards tweeted this appalling story from the leftist Washington Post.

It says:

> Zainab Bangura, the U.N.'s special representative on sexual violence in conflict, recently conducted a tour of refugee camps in the shadow of the conflicts in Syria and Iraq, war-ravaged countries where the Islamic State commands swaths of territory. She heard a host of horror stories from victims and their families and recounted them in an interview earlier this week withthe Middle East Eye, an independent regional news site.
>
> "They are institutionalizing sexual violence," Bangura said of the Islamic State. "The brutalization of women and girls is central to their ideology."
>
> Bangura detailed the processes by which "pretty virgins" captured by the jihadists were bought and sold at auctions. Here's a chilling excerpt:

> After attacking a village, [the Islamic State] splits women from men and executes boys and men aged 14 and over. The women and mothers are separated; girls are stripped naked, tested for virginity and examined for breast size and prettiness. The youngest, and those considered the prettiest virgins fetch higher prices and are sent to Raqqa, the IS stronghold.
>
> There is a hierarchy: sheikhs get first choice, then emirs, then fighters. They often take three or four girls each and keep them for a month or so, until they grow tired of a girl, when she goes back to market. At slave auctions, buyers haggle fiercely, driving down prices by disparaging girls as flat-chested or unattractive.
>
> We heard about one girl who was traded 22 times, and another, who had escaped, told us that the sheikh who had captured her wrote his name on the back of her hand to show that she was his "property."

> Estimates vary, but there are believed to be somewhere between 3,000 and 5,000 women enslaved by the Islamic State. Many are Yazidis, a persecuted minority sect that the extremist Islamic State considers to be apostate "devil-worshippers," in part because of the Yazidis' ancient connection to the region's pre-Islamic past. The jihadists' treatment of Yazidi women, in particular, has been marked out by its contempt and savagery.
>
> Here's Bangura again:

> They commit rape, sexual slavery, forced prostitution and other acts of extreme brutality. We heard one case of a 20-year-old girl who was burned alive because she refused to perform an extreme sex act. We learned of many other sadistic sexual acts. We struggled to understand the mentality of people who commit such crimes.

> Hundreds of Yazidi women and girls have escaped their captors, either by running away, or being ransomed and rescued by their families. Bangura has urged international assistance in providing proper medical and "psychosocial" support to the escaped women, who have experienced terrible trauma.
>
> "It was painful for me. The countries I have worked on include Bosnia, Congo, South Sudan, Somalia and Central African Republic," says Bangura, a former former minister of Sierra Leone who is no stranger to conflicts. "I never saw anything like this. I cannot understand such inhumanity. I was sick, I couldn't understand."

Two points about this.

First, we have a Democrat administration now that apologizes for everything that Muslim terrorists do, and tries to remind Christians that they should not judge such crimes as we just heard about because of the Crusades. That literally came out of our pro-Muslim atheist President's own mouth. He simply isn't capable of moral reasoning – he wants to deny the reality of evil.

Second, the preceding administration was Republican, and it won the war in Iraq using a surge of forces. Then the Democrats came along and turned a war that had already been won into a lost war where crimes like this are happening. When Bush turned over Iraq to the Democrats, Al Qaeda in Iraq was annihilated, and there was no Islamic State terrorist group. Now, we hear stories like this all the time.

Here's former deputy director of the CIA to explain how Islamic State came to be:

> Sunday on CBS's "Face the Nation," former deputy director of the Central Intelligence Agency under President Barack Obama, Michael Morell said the rise of ISIS in Iraq was not an intelligence failure.
>
> Morell argued in 2011 when U.S. forces completely pulled out "al Qaeda in Iraq was essentially defeated" and Morell continuing to defend the intelligence added "the intelligence community monitored the growth of al Qaeda post 2001 in great detail with intelligence reporting, with analysis, we made it very clear that this group was becoming more and more dangerous."

The United States cannot pull out of wars leaving a vacuum for bad actors to step into. We won World War 2, and we stayed in Germany from the end of that war to the present day, in order to deter aggression into Germany by the Soviets. Similarly with North and South Korea. If you want to stop a war from happening, you remain in theater, in force, for decades after the war, until the country has recovered.

# Man uses his own legally-owned handgun to foil carjacking attempt

**Wintery Knight** · 24 May 2015 · Archived copy · Original

Here's the story from WSB local news.

Excerpt:

> An East Point man held a would-be carjacker at gunpoint until police arrived and arrested the suspect, according to Atlanta police.
>
> Hashim Fannin, the car owner, says the attempted carjacking occurred just after he had pulled into a parking spot at the Family Dollar on Marietta Boulevard in northwest Atlanta earlier this month.
>
> Fannin says the man slipped into the passenger's seat when his doors automatically unlocked.
>
> "He told me, 'You know what this is,'" Fannin said. That is when Fannin says he pulled his gun out.
>
> "I asked him to get out the car, probably not in those exact words," Fannin said.
>
> "I told him no, there's no leaving, leaving was before you hopped into my car … at this point there is not leaving," Fannin said.
>
> The car owner kept the suspect, Edgar Horn, 61, at gunpoint face down in the parking lot for several minutes until police arrived.
>
> "You were not trying to rob me," Fannin said to the man on cellphone video of the incident. "Do you just get into random people's cars … you thought I was your friend … you thought I was your friend … so you woke up stupid this morning?"
>
> When police arrived, you can see Fannin wave them over, and put his gun down. The police officer shakes his hand, before putting the suspect in handcuffs.
>
> "Honestly, I look at it like this. That is one less guy I got to worry about bothering my mom when she's out grocery shopping," Fannin said.
>
> According to a police report, the suspect was arrested for attempted robbery and entering an automobile.

I keep running into people (mostly women) who don't understand why it is that law-abiding taxpayers need to be able to carry their own weapons in order to protect themselves and their families. The reason is that there is no time for the police to arrive when you are the victim of a crime. You are on your own. Or, as in the case of Baltimore, the mayor will just instruct the police to give the criminals space to destroy, i.e. – to commit crimes. That actually happens more often than you think in different times and places.

Black guy with gun holds white criminal for cops

I like that the cop shook his hand, too. That would only happen in America.

Meanwhile, in the socialist, feminist United Kingdom, there is not only a ban on handguns, (with a consequent doubling of violent crime in the years following the ban), there is also a ban on righteous masculinity of any kind.

Look at this story from the UK Telegraph:

> Police reprimanded a nine-year-old boy for using a broken ruler as a sword in a playground games of “knights and dragons”.

> Kyron Bradley was spoken to by officers at George’s Bickley CE Primary School, Bromley, Kent.

> His mother Natasha, 27, is reported to have burst into tears when she learned the news.
>
> Two days earlier, she’d gone into school to meet with the head teacher following complaints Kyron had used a broken ruler in the playground as a weapon.

> During the meeting, Ms Bradley, a carer, said her son, a Year 4 pupil, explained he had been playing a chasing game with two other boys involving pretend swords.
>
> […]Ms Bradley said she thought the matter was closed following the initial meeting with the headteacher until she was told the police had been asked to speak with Kyron on April 29.

That story is hat-tip Dina, who does encourage boys and men of all ages to fight against evil with force. And good for her, that’s getting increasingly rare among women these days.

# Boy Scouts to end ban on openly gay men being troop leaders

**Wintery Knight** · 24 May 2015 · Archived copy · Original

This is from Matt Barber writing for The Stream.

Excerpt:

> On Thursday BSA President Robert Gates announced that the BSA will soon invite men who have sex with males (MSM) to become troop leaders. “The status quo in our movement’s membership standards cannot be sustained,” Gates disingenuously claimed, indicating that to maintain the BSA’s century-old proscription on “out” homosexual men would spell “the end of us as a national movement.”
>
> This, of course, is hyperbolic nonsense and simply reflects a continuation of Gates’ long-standing pro-homosexual activism. While serving as secretary of defense he both advocated for and oversaw the implementation of the full repeal of the military’s “Don’t Ask Don’t Tell” policy. This has resulted in rampant anti-Christian discrimination and an explosion (a 33 percent spike) in male-on-male homosexual assaults. Does any honest, sane, thinking person imagine that a comparable increase in homosexual assault will not befall the Boy Scouts?
>
> […]Parents, the BSA is about to place political correctness above your child’s safety. This is not an opinion. It’s an empirical, quantifiable certainty.
>
> Consider, for instance, a study published in the left-leaning Archives of Sexual Behavior, of over 200 convicted pedophiles. It found that “86 percent of offenders against males described themselves as homosexual or bisexual.” This demonstrates, observes Peter Sprigg of the Family Research Council: “Since almost 30 percent of child sexual abuse is committed by homosexual or bisexual men (one-third male-on-male abuse times 86 percent identifying as homosexual or bisexual), but less than 3 percent of American men identify themselves as homosexual or bisexual, we can infer that homosexual or bisexual men are approximately 10 times more likely to molest children than heterosexual men.”
>
> This makes perfect sense when coupled with another 2001 study in the same peer-reviewed publication. It found that nearly half of all “gay”-identified men who participated in research were molested by a homosexual pedophile as boys: “46 percent of homosexual men and 22 percent of homosexual women reported having been molested by a person of the same gender. This contrasts to only 7 percent of heterosexual men and 1 percent of heterosexual women reporting having been molested by a person of the same gender.”
>
> The connection between homosexual abuse and “gay identity” is undeniable. Although clearly not all “gay”-identified men and women abuse children, or were abused as children, the reality is that an alarmingly high percentage of them do and were. As with most forms of abuse, the cycle is both circular and vicious.

If I ever have boys, I certainly will not enroll them in the Boy Scouts. And I am sorry for the children who will suffer as a result of this decision that puts little children at risk.

# Let’s celebrate our heroes for Memorial Day

**Wintery Knight** · 25 May 2015 · Archived copy · Original

Leslie Sabo

Here’s a story of heroism from Investors Business Daily.

It says:

> Leslie Sabo was killed during the Vietnam War’s 1970 Cambodian Campaign. He was nominated for the Medal of Honor, but the records were lost until a veteran rediscovered them in 1999. In 2012, Sabo’s widow received the nation’s highest military award on his behalf, the 249th for Vietnam.
>
> Sabo’s platoon and another had been ambushed from all sides by a large and well-entrenched force of communist soldiers.
>
> He repeatedly attacked and killed enemy soldiers, was wounded by a grenade as he shielded a comrade, and then was fatally shot as he provided covering fire for a medevac helicopter.
>
> “His indomitable courage and complete disregard for his own safety saved the lives of many of his platoon members,” said the Medal of Honor citation. “Spc. 4 Sabo’s extraordinary heroism and selflessness, above and beyond the call of duty, at the cost of his life, are in keeping with the highest traditions of military service and reflect great credit upon himself, Company B, 3rd Battalion, 506th Infantry, 101st Airborne Division, and the United States Army.”
>
> Leslie Jr. was born in 1948 in Kufstein, Austria, where his well-to-do family had moved after the Soviet occupation of Hungary at the end of World War II, leaving almost everything behind.
>
> They moved to America when he was 2. They lived in Youngstown, Ohio, and then Ellwood City, Pa.
>
> Leslie Sr., a lawyer in Hungary, retrained as an engineer, and both parents taught their two remaining sons (another was killed by a bomb during the war) patriotism for their adopted country.

Here are some more details from the Army web site:

> 4 Leslie H. Sabo Jr. distinguished himself, May 10, 1970, in Se San, Cambodia, while serving as a rifleman in Company B, 3d Battalion, 506th Infantry, 101st Airborne Division.

> Members of B. Co. were ambushed by a large enemy force. While conducting a reconnaissance patrol, 22-year-old Sabo, charged an enemy position, killing several enemy soldiers. Immediately thereafter, he assaulted an enemy flanking force, successfully drawing their fire away from friendly soldiers and ultimately forcing the enemy to retreat.
>
> When a grenade landed nearby a wounded comrade, Sabo picked up the grenade threw it away while shielding his buddy with his own body, thus absorbing the brunt of the blast and saving the man's life.

> Seriously wounded by the blast, Sabo, nonetheless, retained the initiative and single- handedly charged an enemy bunker that had inflicted severe damage on the platoon. He received several serious wounds from withering automatic weapons fire in the process. Despite being mortally injured, he crawled towards the enemy emplacement and, when in position, threw a grenade into the bunker. The resulting explosion silenced the enemy fire, but also ended Spc. 4 Sabo's life.

He gave his life to save his friends.

God bless our soldiers, airmen and sailors!

# A friend from Ireland reports on their referendum on same-sex marriage

**Wintery Knight** · 25 May 2015 · Archived copy · Original

Ireland 2015 Same-Sex Marriage Referendum

I got an e-mail from a friend in Ireland about the referendum they just had where the pro-marriage side lost by a margin of 62-38.

He writes:

> Hope you don't mind the link suggestions but I've listed some interesting articles from the marriage referendum in Ireland. I'm from the North part of Ireland so I couldn't vote but some of the vitriol and hatred from the so-called "tolerant" left was absolutely vile. From "all the no voters should be murdered" to "why don't all you no voters jump into a well", it was fairly clear to see just what the true colours were.
>
> The slogans all around the country were "marriage equality for all". By hijacking the term "equality", this effectively suggested that any naysayers are just vile, intolerant bigots. It wouldn't be like the secular left to shut down discussion now would it?
>
> […]What I think you may be interested in is the sheer scale of the bullying that went on here. "Vote No" posters were ripped down, eggs were thrown at no campaigners and a young child was even hurt at a demonstration. Virtually all discussion was closed and no debate was allowed with respect to the politicians. All parties were enforcing the whip and any dissenters would no doubt be expelled from the party. Then you have to throw in the huge corporations that have offices in Ireland like Google, Microsoft and Twitter. They all have policies which promote diversity and inclusion so how would any no-voters who happen to be employees of these companies feel when their employer takes a political stance?

He understands the problem with the redefinition of marriage so that it is based on "love" rather than a lifelong commitment centered around producing and raising children:

> What frustrates me about this slogan is that they absolutely were not about "marriage equality for all". They still place limits on marriage such as close relatives, young children or indeed other topologies of relationship such as polyamory.
>
> It seems to be that marriage in Ireland from this point forward is just some genderless institution for the purposes of validating love. Perhaps the government will introduce some means-testing to ensure that the love

> of those involved really is valid!

Yes, that's the problem with love, it comes and goes. And that's why male-male and female-female relationships are so short lived. If marriage is about feelings of love and self-fulfillment, rather than the needs of the children you make to have a mom and a dad who love them and care about them, then it does not last. Period. (Aside: and that's why you never marry a woman who rejects responsibilities, expectations, and obligations for fun and thrills!)

Here are his three links:

1. Ireland's 'tolerant' elite now demonise anyone who opposes gay marriage
2. Ireland's gay marriage vote was never an equal contest
3. Asking questions about funding for referendum campaign

I had already read the first two, but not the third. I really recommend reading the first one, so you can reflect on where your money is going when you choose to patronize big corporations, and when you vote for parties on the secular left, as many Christians do.

Just briefly from the first:

> The president, Michael D Higgins, and the prime minister, Enda Kenny, back gay marriage. So does virtually every politician. Indeed, the main parties are enforcing the party whip on gay marriage, meaning any Senator or TD who votes against it is likely to be expelled from his or her party. According to the Irish Independent, even politicians who harbour 'reservations about this major legislative change' are not speaking out, 'for fear of disobeying the party whip'.
>
> […]The public sector also backs gay marriage. It's apparently being strongarmed to do so. According to one dissenting politician — the only one — 'agencies who receive state funding are being pressured [by officials] into supporting a Yes vote'.
>
> Silicon Valley is fully behind Yes: Twitter, Google and eBay have all come out for gay marriage. Twitter's Irish boss says a Yes victory will enhance 'Ireland's international reputation' — another way of saying that if you vote No, you are damaging your own country. Even the police are saying Yes: the Garda Representative Association caused a stir by calling on its members to support gay marriage, leading some to wonder if it's right for coppers to stick their truncheons into politics.
>
> So, the armed wing, political wing and chattering wing of the Irish elite is behind Yes.

The second article mentions that U.S.-based gay activist groups bankrolled the Yes side effort:

> I suppose it is possible that the vote would have been quite as conclusive – roughly 60:40 – if the debate had not been both staggeringly one-sided and the Yes campaign had not been bankrolled so overwhelmingly by US pressure groups. Certainly the youth vote would have gone that way anyway.
>
> […]But one of its in-house dissidents – the impression of balance is desirable – is Breda O'Brien, a Catholic commentator, who rather put the cat among the pigeons with a piece on 9 May on the funding for the Gay and Lesbian Equality Network (Glen) and other lobby groups by a US organisation called Atlantic Philanthropies. The striking thing about the donations was not just their size – $4.7 million to Glen in 2005-11, nearly $475,000 to Marriage Equality; some $11.5 million to the Irish Council for Civil Liberties, 2001-213 – but that they refer to years before the referendum debate got under way. I can't wait to see the actual figures for the campaign itself. By comparison the No campaign got by, I gather, on a shoestring budget of about 200,000 euros.
>
> So when friends of mine found that when they entered a shopping centre in Limerick by one entrance on Thursday and left from the other, they were bombarded with leaflets from the Yes campaign, there was a

> reason for it besides spontaneous enthusiasm. One side could afford a PR campaign; the other couldn't, though the papers heroically made the most of the tiny-by-comparison sums that US Christians put the way of the No campaign. The motives of Google for entering the fray are probably similar to those that made it take sides on the issue in the US; the referendum was on Friday, and you couldn't open their bloody homepage without being told it was in favour of marriage equality.

The third article he mentioned talks about how well gay activist organizations were funded. While Christians are giving away billions to feed the hungry and help the poor, our freedom to speak and practice our religion was being removed by groups with very different priorities.

My friend writes, in a second e-mail:

> If I was a blogger here I'd be asking three things this morning…
>
> 1. If marriage is now a genderless institution focused only on adult love, is the government going to propose a new institution that is solely focused on children?
> 2. If marriage is now purely about a validation of love then wouldn't it be wise of the government to consider investigating the depth and sincerity of this love before before handing out marriage licences? They surely wouldn't want to validate a relationship where the two parties weren't really in love. Some sort of means-test perhaps? /irony
> 3. Given the slogans aiming for marriage equality for all, at which point does the government plan to remove the current limits that restrict marriage to two persons?

My question would be this: when will Christians realize that they are under attack and start redirecting funds to pro-marriage groups rather than anti-poverty groups and big government? That money could have been used to fight back in Ireland, but instead Christians just seem to have their heads in the sand on how the world really works.

And finally, I want to add one more article to his list, about a baker in Northern Ireland who was fined for refusing to bake a cake that celebrated same-sex marriage.

# After a tough fight to take Ramadi, Obama hands it back to Islamic State

**Wintery Knight** · 25 May 2015 · Archived copy · Original

Control of Iraq (click for larger image)
(Source: Political Geography Now)

First, let's start with and article from Breitbart News about Obama's retreat from Iraq:

> There is no commitment to America's fighting men and women that President Barack Obama has not broken. When he ran for office in 2008, he promised to leave a residual force in Iraq to secure that country against external meddling and internal collapse. When he took office, President George W. Bush handed over a relatively stable and secure Iraq, thanks to the "surge" Obama opposed, and thanks to the sacrifices made by thousands of Americans, killed and wounded in battle.
>
> Yet in 2011, Obama withdrew all combat troops–which is likely what he intended to do all along–and left Iraq before the job was done, allowing terrorists to regroup and sectarian rivalries to re-emerge. By pulling out troops, he also removed the only remaining strategic threat to the Iranian regime. Today, ISIS is running rampant across the region, and he and his sycophants assure the American people that they are winning the war against the "junior varsity" terrorist caliphate.
>
> […]"I don't think we're losing," Obama says. That is because he has won, politically. But our troops paid the price.

Now an article from famous war journalist Michael Fumento, in Investors Business Daily.

He writes:

> Ramadi is a city of vast importance, both strategic and symbolic. It's the city that al-Qaida in Iraq chose as its headquarters, and it became the most fiercely contested area in the country. It's why SEAL Team 3 of

> “American Sniper” fame was stationed there and became the most decorated SEAL unit since Vietnam.
>
> Many experts consider the Battle of Ramadi and the “Anbar Awakening,” engineered by Capt. Travis Patriquin, the actual turning point of the war. Patriquin — who a few months after briefing me on his brilliant plan was killed in Ramadi — got the Sunni chieftains to join the Americans and Iraqi security forces to defeat al-Qaida.
>
> Yet, bizarrely, the Obama administration wrote off Ramadi last month, declaring that defense of an oil refinery took precedence — as if we couldn’t do both. (Chairman of the Joint Chiefs of Staff Gen. Martin Dempsey claimed, “It has no symbolic meaning.” Now Dempsey says Islamic State “gains in Ramadi are a serious setback for its long-suffering inhabitants.”)
>
> In any event, within days the refinery was out of danger. Yet, the administration still refused to defend Ramadi.
>
> […]…[O]n no day previously did the U.S. launch more than a handful of sorties in defense of Ramadi, and on many days it flew none.
>
> Yet, area assets include hundreds of strike aircraft, most of which can fly several sorties a day. These comprise F-16s, F-15s, F-22s, A-10s, B-1 heavy bombers, helicopters, and Reaper and Predator drones among U.S. forces, plus aircraft of 11 other coalition nations.
>
> A single Reaper can carry a mix of 14 bombs and missiles, meaning it’s capable of that many airstrikes. Cruise missiles are also in theater, and the U.S. can hit with heavy B-52 and B-2 bombers from anywhere in the world.
>
> Yet with this massive armada and with assets on the ground to help identify targets, the administration seems unable to find and strike more than a handful of targets daily. A machine gun here, a truck there. By comparison, during the 1968 siege of Khe Sanh, American aircraft dropped roughly 1,300 tons of bombs daily — five tons each day for every North Vietnamese soldier besieging the base.
>
> But it’s not just Ramadi that Obama has neglected. Fact is, the so-called air war against IS is a fraud. Rarely are more than a couple of dozen targets struck in a day throughout both Iraq and Syria.
>
> Obama is simply keeping U.S. air power grounded.
>
> […]…[G]enerally, Obama seems simply clueless when it comes to prosecuting war, stuck at pre-school level. (Even grade-schoolers know that bombs are worthless unless you actually drop them.)
>
> This is as bewildering as Obama’s trading the top five Taliban in captivity for one American deserter, as I wrote in these pages last June.
>
> It’s time for Congress and the presidential candidates to make this an issue. Alas, for Ramadi it’s too late. IS has scored a huge coup and the slaughter of our allies already has begun.

This is why it’s important when you elect a President that you elect one who understands the value of projecting military force and the threat of military force abroad. The next time we get attacked by terrorists trained in Iraq, maybe then we will realize the cost of abandoning the crossroads of the Middle East to the enemy. You can’t just end a war by unilaterally backing out of it, because it sounds nice. That’s how you lose a war. To win a war, you have to be decisive, use overwhelming force, and stay on until the region is stabilized.

# Clinton-appointed judge rules that pro-life license plates are “patently offensive”

**Wintery Knight** · 26 May 2015 · Archived copy · Original

New York pro-life license plate

Here’s an interesting story from The Daily Caller. (H/T Mary from Marin)

It says:

> A new decision by the Second Circuit Court of Appeals holds that New York’s state government has the right to ban “Choose Life” license plates on the grounds that such a statement is “patently offensive.”
>
> The dispute stems from a now-suspended program offered by New York’s Department of Motor Vehicles (DMV) which allowed private organizations to create custom license plates. If drivers purchased the plates, the purchasing price was split between the DMV and the non-profit.
>
> The Children First Foundation (CFF), an organization promoting adoption as an alternative to abortion, submitted a design for a “Choose Life” license plate, which featured a drawing of two children’s faces in front of a yellow sun.
>
> The proposed plate was rejected, with the DMV citing a policy that allows it to ban “patently offensive” plates in order to prevent incidents of road rage. The “patently offensive” category in U.S. speech is typically related to public obscenity laws, and allows for limitations on things like the public display of pornography or other materials that blatantly violate community standards.
>
> **Judge Rosemary Pooler, a Clinton appointee, agreed with New York’s position in her majority opinion. She took this view even though she also ruled that license plates are private speech subject to First Amendment protections. Despite these protections, however, she said that so many New Yorkers could find a plate advocating an anti-abortion position “patently offensive” that the DMV was justified in suppressing the speech.**

I want to focus in on the life of the judge who made the decision.

I found her biography on Wikipedia. Look at how successful she was:

> Rosemary Pooler was born in New York City. She earned a B.A. from Brooklyn College in 1959, an M.A. from the University of Connecticut, and a J.D. from the University of Michigan Law School.
>
> Following graduation from law school, Pooler entered private law practice in Syracuse, New York. In 1972, she was appointed as Director of the Consumer Affairs Unit in the Syracuse Corporation Counsel’s Office, serving in that post for a year. From 1974 to 1975, she served on the Syracuse City Council. In 1975, she was appointed as Chairman of the New York State Consumer Protection Board, serving until 1980. The following year, she was appointed to the state Public Service Commission. In 1987, she served as a committee staff

> member for the New York State Assembly. Following a stint on the law faculty at Syracuse University College of Law, she served for a year as Vice President of Legal Affairs at the Atlantic States Legal Foundation.
>
> In 1986, Rosemary Pooler decided to run for the United States House of Representatives. She challenged conservative Republican incumbent George C. Wortley, who was seeking a fourth term. She campaigned aggressively and came within less than 1,000 votes of winning.
>
> In 1990, she was elected as a Justice for the Fifth Judicial District of the Supreme Court of New York. Four years later, she was appointed to the federal bench by President Bill Clinton, serving from 1994 to 1998, as federal district judge in the Northern District of New York. She received her current appointment as a Judge on the United States Court of Appeals for the Second Circuit in 1998.

So, this license plate case, along with many of the other issues that I blog about, is the problem. What is the solution to all these problems? The solution is for us as Christians to get serious about our education, our work experience, our earning and saving, and our marriages and parenting in order to have an influence. We need to be the judges who make these decisions about whether pro-life license plates are legal or illegal. Failing that, our children need to be the judges. And that means that when it comes to education and career, instead of doing what makes us feel happy we have to work hard at having an influence. And when it comes to marriage, we should look at it less as something that is feelings-directed and happiness-focused, and more about making it serve God by raising influential, effective children.

# Advice for Christian parents from a woman who left Christianity at university

**Wintery Knight** · 26 May 2015 · Archived copy · Original

If you want your children to accept Christianity, then apologetics is needed

This is from the Beyond Teachable Moments blog – a great blog for Christian parents who want to raise effective, influential children.

Intro:

> I recently had the opportunity to meet an intelligent young Christian woman who is proactively learning how to discuss her faith in a secular society.
>
> Why is she so dedicated to doing this? **Because her Christian upbringing had completely failed to prepare her for the challenges of secularism, religious pluralism and atheism at university.**
>
> This young woman grew up in close-knit, loving Christian home. She faithfully attended church. She was enrolled in a Christian school that taught subjects such as apologetics, hermeneutics, inductive Bible study and managing relationships. Her parents cared about her spiritual formation.
>
> And yet, this is how she describes her university experience:
>
> "Although I was still living at home during the beginning of my freshman year, university was traumatic at best. I went from a class of 15 in a small Christian school, to 30,000 people at a public university.
>
> The most troubling thing was the amount of differing beliefs and worldviews I encountered, from professors and other students. At the time I thought they had much better arguments than I did for the validity of their views."
>
> Added to her challenge was the fact that her faith was borrowed, not her own.
>
> "I can honestly and sadly say that as I started my freshman year at age 19, my faith was very much borrowed. It was a set of rules to adhere too. Although I was well aware of the concept of a relationship with Jesus Christ, I did not have it. I was entrenched in the notion of conforming to what people wanted me to do in order to escape condemnation and judgment."
>
> "My faith at the university was non-existent. If you asked me what I believed I would say Christian, but I did not back that up with any action whatsoever."
>
> As a mom of two young boys, the top-of-mind question I had for her was: what did she wish she'd known before she went to university?

The rest of the post is her response, but I wanted to quote this part, because it reminds me of what Pastor Matt Rawlings posted about his own loss of faith a while back.

The mysterious Christian woman says this:

> **Don't use me to make you look good in front of other people at church, I can see straight through that.** It does not feel good and drives me far away. What matters is what is going on inside, not what is projected. Looking perfect and going through the motions does nothing. The very basis for Christianity is what is going on in the heart. Only by letting Jesus work in your heart can actions follow with true authenticity.

And here's what Pastor Matt said:

> Looking back, I had a very fuzzy understanding of the Gospel. I (and I think many people who call themselves Christians) are what theologians call "semi-Pelagians." I believed anyone could come to the altar but if they wanted to continue to be welcomed in the pews, they had to clean up their act and do so almost overnight. The culture of Christianity at large appeared to me to be that if you came to faith and continued to struggle with lust, a foul mouth or whatnot then there was just something wrong with you. I felt the church was more about behavior modification than grace.
>
> I needed someone who I knew loved me to sit down with me long before all of these problems arose, look me in the eye and tell me how easy and how difficult it is to be a Christian. I needed someone cared for me to unpack 2 Corinthians 5:21 and point out that by being "in Christ" I would be judged by Christ's perfect life instead of my own. I needed to know that the faith is not about "keeping the rules" but about doing things and not doing certain things to show my love and gratitude to God for what He did for me. I needed to be able to read the Bible, especially the Old Testament, in a way that always pointed to Jesus Christ. I needed to understand that God has graciously given us the spiritual disciplines of fasting, prayer, serving the poor, worship, etc. to help me grow. I needed to hear that all Christians struggle with sin and will, to a certain degree, until they go to be with the Lord or He returns to be with us.
>
> I needed good theology, good spiritual practices, good apologetics and good relationships. I needed knowledge and it needed to come from someone who I knew loved me even though I was thoroughly unlovable. You can't just leave this to the church staff because they do not have to time to meet with everyone and people with a chip on their shoulder about the church (like I had) feel like they are just doing it as part of their job. All young people in the church, especially the "troubled kids" need this. It is a lot of work but anyone's eternity is worth it, isn't it?

As J.P. Moreland has pointed out, your beliefs are not something that you form by sheer acts of will. You cannot will to believe things. Your beliefs form naturally through study, and then outward actions come from those beliefs. You cannot focus on the outward actions of your children – you have to focus on the beliefs inside. And know that those beliefs are not formed by habit, singing, church attendance or any other non-cognitive approaches. Beliefs form *through a careful study of the evidence on BOTH SIDES.* The first thing that Christian parents should be showing their kids is debates with both sides represented. That shows them that there is more to a worldview than just being bullied into it by raising your voice at them.

Christian parents, take note. Don't be focused on making your child behave nicely on the outside and making it impossible for them to talk about temptations and doubts. Christianity comes from the inside – from the mind. You need to be helping them form a worldview that has been tested and approved by them, before they ever set foot on a university campus. The Christian faith is not adopted by habit or tradition, it is adopted by transferring knowledge and discussing opposing views openly and honestly.

Don't be like this mother who is only focused on externals – what family and friends think of her:

The good news is that atheism is not generally adopted because of logic or evidence. That means that a little bit

evidence for God's existence goes a long way against *no evidence*. A little bit evidence for the reliability of the Bible goes a long way against *no evidence*. A little bit of the minimal facts case for the resurrection of Jesus goes a long way against *no evidence*. It's very important that when your children get to university that they find a conflict between *some* evidence and *no evidence*. At that point, it becomes their choice to decide what to do, and it could go either way. You don't have to make them William Lane Craig before they get to university, for example. But they should have at least read his popular-level essays and books, heard his podcasts, and seen him debate.

Peer pressure on a secular university is powerful – but if you've taught your children to value *truth* over popularity, vanity, selfishness and immorality, then you've done your job. Lots of people fall away from Christianity in university because of the hostile environment. Some fall away because they want to be approved of by their peers, some because they just want to be seen as tolerant or smart, some because they want to get good grades from liberal professors, some because they want to have a good time, etc. That's not your concern. Your concern is to demonstrate your love of truth, and communicate to them  a sober assessment of the evidence pro and con on ultimate issues. After that, it's up to them.

# New study: voucher program improved odds of poor students graduating by 21 percent

**Wintery Knight** · 27 May 2015 · Archived copy · Original

The Daily Signal reports on the study.

Excerpt:

> Private school choice initiatives have become increasingly common across the United States. Far from being rare and untested, private school choice policies are an integral part of the fabric of American education policy.
>
> In the United States today, 56 different school choice policies exist in 28 states plus the District of Columbia, and the number of choice policies has approximately doubled every four years from 2000 to 2012.
>
> The District of Columbia Opportunity Scholarship Program remains the nation's only federally sponsored private school choice initiative. It provides scholarships worth up to $8,000 in grades K-8 and $12,000 in high school to low-income children in D.C. to attend any of more than 50 participating private schools.
>
> When the Opportunity Scholarship Program was launched in 2004, the U.S. Department of Education's Institute of Education Sciences selected me to lead the initial government evaluation of this pilot program in parental school choice. Demand for scholarships exceeded supply, so most applicants faced a lottery to determine if they would receive an Opportunity Scholarship, permitting us to use a "gold standard" experimental research design to determine what impact the program had on participants.
>
> Students in our pioneering study graduated from high school at a rate 21 percentage points higher than they otherwise would have as a result of using an Opportunity Scholarship. In scientific terms, we are more than 99 percent confident that access to school choice through the Opportunity Scholarship Program was the reason students in the program graduated at these much higher rates.

But that's just one program, how about some others?

> My research team similarly found the Milwaukee Parental Choice Program significantly increased the rates of high school graduation, college enrollment and persistence in college for the low-income students participating in our nation's oldest urban private school choice program.
>
> Researchers at Harvard University and the Brookings Institution determined that a privately funded K-12 scholarship program in New York City significantly increased the rate at which black and immigrant students enrolled in college. Increasingly and consistently, researchers are finding that private school choice programs like the Opportunity Scholarship Program enable students to go farther in school.

It is so good for the poor, minority children if we let their parents get money for school tuition directly. We should let parents make the choice about which school is best for their child. But, Democrats oppose school choice, because they want their allies in the teacher unions to be insulated from competition from better-performing private schools.

Look how the Democrats have fought to kill the D.C. voucher program. They talk about helping poor kids, but they don't really mean it. And note, that article is written by ultra-leftist Democrat Juan Williams, but even he cares more about poor, minority kids getting an education than the Obama administration does.

# Terrell Clemmons: Is Matthew Vines twisting Scripture to validate his sexual behavior?

**Wintery Knight** · 27 May 2015 · Archived copy · Original

Terrell Clemmons

Here's a post from Christian apologist Terrell Clemmons about efforts by gay activists to redefine Christianity so that it is consistent with homosexual behavior. This particular post is focused on Matthew Vines. **NOTE: Matthew Vines has tweeted to say that he is not engaging in any sexual behavior, so we are criticizing his position, not his personal actions. I have updated my comments to make it about behavior, not Matthew.**

She writes:

> In March 2012, two years after having set out to confront homophobia in the church, Matthew presented the results of his "thousands of hours of research" in an hour-long talk titled "The Gay Debate." The upshot of it was this: "The Bible does not condemn loving gay relationships. It never addresses the issues of same-sex orientation or loving same-sex relationships, and the few verses that some cite to support homophobia have nothing to do with LGBT people." The video went viral (more than three quarter million views to date) and Matthew has been disseminating the content of it ever since.
>
> In 2013, he launched "The Reformation Project," "a Bible-based, non-profit organization … to train, connect, and empower gay Christians and their allies to reform church teaching on homosexuality from the ground up." At the inaugural conference, paid for by a $104,000 crowd-funding campaign, fifty LGBT advocates, all professing Christians, gathered for four days in suburban Kansas City for teaching and training, At twenty-three years of age, Matthew Vines was already becoming a formidable cause célèbre.

Terrell summarizes the case he makes, and here is the part I am interested in:

Reason #1: *Non-affirming views inflict pain on LGBT people*. This argument is undoubtedly the most persuasive *emotionally*, but Matthew has produced a Scriptural case for it. Jesus, in his well-known Sermon on the Mount, warned his listeners against false prophets, likening them to wolves in sheep's clothing. Then switching metaphors he asked, "Do people pick grapes from thornbushes or figs from thistles?" The obvious answer is no, and Jesus's point was, you can recognize a good or bad tree – and a true or false prophet – by its good or bad fruit. From this, Matthew concludes that, since non-affirming beliefs on the part of *some* Christians cause the bad fruit of emotional pain for*other* Christians, the non-affirming stance must not be good.

Terrell's response to this is spot on, and I recommend you read her post to get the full response.

She writes:

> Matthew Vines in particular, and LGBTs in general, appear to be drivingly fixated on changing other people's moral outlook. But *why*? Why are they distressed over the shrinking subset of Christianity that holds to the traditional ethic of sex? Note that Matthew found an affirming church in his hometown, as can most any LGBT-identifying Christian. Affirming churches abound. Gaychurch.org lists forty-four affirming denominations – *denominations*, not just individual churches – in North America and will help you find a congregation in your area. Why, then, given all these choices for church accommodation, are Matthew and the Reformers specifically targeting churches whose teachings differ from their own?
>
> One gets the sense that LGBTs *really*, *really need* other people to affirm their sexual behavior. Certainly it's human to *want* the approval of others, but this goes beyond an emotionally healthy desire for relational comity. Recall Matthew's plea that non-affirming views on the part of *some* Christians cause emotional pain for *others*. He, and all like-minded LGBTs, are holding *other people* responsible for their emotional pain. This is the very essence of *codependency*.
>
> The term came out of Alcoholics Anonymous. It originally referred to spouses of alcoholics who enabled the alcoholism to continue unchallenged, but it has since been broadened to encompass several forms of dysfunctional relationships involving pathological behaviors, low self-esteem, and poor emotional boundaries. Codependents "believe their happiness depends upon another person," says Darlene Lancer, an attorney, family therapist, and author of *Codependency for Dummies*. "In a codependent relationship, *both* individuals are codependent," says clinical psychologist Seth Meyers. "They try to control their partner and they aren't comfortable on their own."
>
> Which leads to an even more troubling aspect of this Vinesian "Reformation." Not only are LGBT Reformers *not* content to find an affirming church for themselves and peacefully coexist with everyone else, *everyone else must change* in order to be correct in their Christian expression.
>
> This is the classic progression of codependency, and efforts to change everyone else become increasingly coercive. We *must* affirm same-sex orientation, Matthew says. If we don't, we are "tarnishing the image of God [in gay Christians]. Instead of making gay Christians more like God … embracing a non-affirming position makes them less like God." "[W]hen we reject the desires of gay Christians to express their sexuality within a lifelong covenant, we separate them from our covenantal God."
>
> Do you hear what he's saying? LGBTs' relationships with God are dependent on Christians approving their sexual proclivities. But he's *still* not finished. "In the final analysis, then, it is not gay Christians who are sinning against God by entering into monogamous, loving relationships. It is *we* who are sinning against them by rejecting their intimate relationships." In other words, non-affirming beliefs stand between LGBTs and God. Thus sayeth Matthew Vines.

The rest of her article deals with Vines' attempt to twist Scripture to validate sexual behavior that is not permissible in Christianity.

One of the things I love about Terrell is that I am so used to Christian women, especially single Christian women, being incredibly wishy washy and lame on every issue you can imagine to Christians, from foreign policy, to economics, to business, to abortion, to same-sex marriage. Just absolutely dominated by the secular culture, straight down the line. That's why Terrell's article was like water in the desert for me.

I think the trouble with Vines needing affirmation stems directly from his advocacy of sexual behaviors not permitted by Christian teaching, which naturally result in a desire to get people to approve of it, so that the sinner can delude himself into thinking that what he is doing is not wrong. I.e. – if I can get lots of people to agree with me and silence those who disagree then what I am doing will be right. I am a chaste man now in my late 30s. I have not so much as kissed a woman on the lips. There is no celebration for what I am doing, not even in the church. Most of the Christian women I meet think that the purpose of relationships of is for the man to make the woman happy, or else she can divorce him and take all his wealth and future earnings. But you don't see me complaining

that people need to validate my choice to be chaste. And the reason is, that even if the entire world were against me, the morality of chastity is self-authenticating. It doesn't matter how many people make me feel bad about what I am doing, I have the direct experience of doing the right thing – and it comes out in the way that I love women upward, giving them my whole heart.

Matthew Vines is annoyed that we expect homosexuals to work through their same-sex attractions, abstain from premarital sex, and then either remain chaste like me, or marry one person of the opposite sex and then confine his/her sexual behavior to his/her marriage. But how is that different than what is asked of me? I have opposite sex-attractions (boy, do I!), but I am also expected to abstain from premarital sex, and either remain chaste, or marry one woman for life, and confine my sexual behavior to that marriage. If I have to exercise a little self-control to show God that what he wants from me is important to me, then I am willing to do that.

Believe me, I understand what it is like to be without a woman's love and support. I started out with a cold, distant, selfish, career-oriented mother. I dreamed about marriage since I was in high school – I remember praying about my future wife, even then. No one that I know has a stronger need for validation and encouragement from a woman than I do. Yet if I have to let that go in order to let God know that what he wants matters to me, then I will do it. I have been rejected by women because they refused to understand that what God has entrusted me with (education, career, wealth, health) is *NOT* for them to control for their own enjoyment. I am open to a woman telling me, logically and with supporting evidence, how to use my resources (or pool our resources) to serve God better. But I am not willing to marry if it means that the resources that God has entrusted to me will be redirected to fun and thrills, as her feelings dictate. I already have a Boss. I am not the boss. I don't need a different boss. My relationships, if I am going to have any, are going to reflect what God wants, not what I want, and not what she wants.

My service to God is not conditional on me getting my needs met. And my needs and desires are no less strong than the needs of people who engage in sex outside the boundaries of Christian teaching. We just make different decisions about what/who comes first. For me, Jesus is first, because I have sympathy with Jesus for loving me enough to die in my place, for my sins. I am obligated to Jesus, and that means that my responsibility to meet expectations in our relationship comes above my desire to be happy and fulfilled. For Matthew, the sexual needs come first, and Scripture has to be reinterpreted in light of a desire to be happy. I just don't see anything in the New Testament that leads me to believe that we should expect God to fulfill our desires. The message of Jesus is about self-denial, self-control and putting God the Father first – even when it results in suffering. I take that seriously. That willingness to be second and let Jesus lead me is what makes me an authentic Christian.

Matthew Vines and Michael Brown had a debate on the Bible and homosexuality, and I summarized it and commented on it in this post. Note that at the time of writing, I thought that Vines was engaged in the behaviors he was advocating for. There is also a good debate featuring Robert Gagnon and a gay activist in this post. There's another debate between Michael Brown and Eric Smaw in this post.

# Advice for Christians who discuss their faith with atheists... from an atheist

**Wintery Knight** · 27 May 2015 · Archived copy · Original

I spotted this post by Jeffery Jay Lowder on The Secular Outpost, and I think it's good advice.

> There are times where two people speak the same language, use the same words, and mean *very* different things by the same words. In conversations between Christians and atheists, "faith" is one such word. For many atheists, the word "faith" means, by default, belief *without* evidence or even belief *against* the evidence. In contrast, I doubt many Christians would accept that definition. For example, according to the NIV translation, Hebrews 11:1 states, "Now faith is confidence in what we hope for and assurance about what we do not see."
>
> Victor Reppert, at *Dangerous Idea,* writes this about the word "faith."
>
> Every time you use the word "faith" in a discussion with an atheist, they are going to declare victory. They will presume that you are believing for no reason, and that you are are admitting that the evidence is against you.
>
> I think he is probably right. If Christians want to dialogue with atheists, I think Christians would be well served to speak the 'language' of atheists. The word "faith" simply has too much baggage associated with it; inserting that word into the conversation is likely to become a distraction from whatever point the Christian was probably trying to make. So if you're a Christian talking with atheists, my advice is to temporarily delete the word "faith" from your vocabulary. Find some other way to make your point.

A better word to use is "trust", and here's Christian apologist Greg Koukl of Stand to Reason to make the same point:

Christian apologist Jonathan Morrow had a similar post on Think Christianly. (Mark well the part he put in bold)

Excerpt:

> In today's post I want to share a conversation I had with some of the sharp young men during lunch. It had to do with how we talk about Christianity with our friends, family, and coworkers. Most of the time, well meaning Christians talk about Christianity in the context of religion…not reality. Is that a problem? Yes, and here's why. Religion is understood as a personal and private feeling that is not accessible by everyone else. You can't question, challenge, or investigate it; you must simply be tolerant of it (and by tolerant, I am using the modern misunderstanding of tolerance which believes that all religious views are equally valid simply because a person sincerely believes them). That's why having a conversation about Christianity as a religion is a dead end. It's a non-starter.
>
> That's why I encouraged these students to talk about Christianity in the context of reality where terms like truth, knowledge, reason, and evidence apply. Any claim about reality is either true or false (it can't be both). *If Christianity is not the kind of thing that can be true or false…the battle has already been lost and the Gospel cannot be seriously considered*. We need to talk about Christianity in the same way we talk about having a prescription filled at the pharmacy or receiving instruction from a Doctor.
>
> In today's society, religion is a fuzzy (i.e., socially constructed or psychologically projected) category that makes little difference in everyday life. **But if Christianity is true, then it speaks to ALL of life. It makes a comprehensive claim on reality**. Jesus didn't intend to merely address two hours of our week. As Christians we need to have more conversations about reality and less about religion.

I've even written a post about the concept of faith that is presented in the Bible and the word faith has nothing to do with blind belief in the Bible – it's always based on evidence, so that people can know for certain what the truth is. I highly recommend it for anyone who disagrees with Jeffery,Greg or Jonathan. When you're talking about

Christianity, you're talking about what you know. You're talking about the way the world is, for everyone. When you talk about your belief in God, you should say "trust". You should not say "faith".

# Clinton shell corporation “WJC, LLC” allowed non-disclosure of speaking fee revenue amounts

**Wintery Knight** · 28 May 2015 · Archived copy · Original

Hillary Clinton: secretive, entitled, hypocritical

This is from James Taranto of the Wall Street Journal.

First, about the “pass-through” / “shell” corporation:

> If the Clintons had any wit, they’d have called it Everyday Americans LLC. The Associated Press reports that last week’s financial disclosures by inevitable Democratic presidential nominee Hillary Clinton “omit a company with no apparent employees or assets that the former president [the candidate’s husband] has legally used to provide consulting and other services, but which demonstrates the complexity of the family’s finances.”
>
> The company is known as WJC LLC. The first set of initials stand for William Jefferson Clinton, the second for limited liability company. As the Small Business Administration website explains, an LLC “is a hybrid type of legal structure that provides the limited liability features of a corporation and the tax efficiencies and operational flexibility of a partnership.” An LLC doesn’t pay corporate income tax but rather passes profits along to its “members” (owners) as personal income.
>
> There’s no evidence the Clintons failed to comply with the applicable laws in this matter. “Under federal ethics disclosure rules, declared candidates do not have to report assets worth less than $1,000,” the AP reports. Since WJC LLC is a “shell” or “pass-through,” which holds no assets, it falls short of that threshold by roughly a grand. **The rules require Mrs. Clinton only “to identify the source of her spouse’s income and confirm that he received more than $1,000,” which she did in at least one case that “surfaced in emails from Bill Clinton’s aides to the [State] department’s ethics officials.”**
>
> **But because there is no obligation to disclose how much money the spouse earned, “the precise amounts of Bill Clinton’s earned income from consulting have not been disclosed, and it’s not known how much was routed through WJC, LLC.” More is known about the Clintons’ extravagant speaking fees—“as much as $50 million” for him during her tenure as secretary of state—which went directly to them or the Clinton Foundation.**

But that’s not all! When Hillary was Secretary of State, her department approved arms deals (SALE OF WEAPONS) to parties who made donations to her Clinton Foundation.

Amazing:

> Graver for the Clintons is a report yesterday from David Sirota and Andrew Perez of the International Business Times. (Sirota is the left-wing author who enjoyed a dubious 15 minutes of fame in 2013 when he

> penned a piece for Salon titled "Let's Hope the Boston Marathon Bomber Is a White American.")
>
> **Sirota and Perez report that they found "dozens of arms sales," worth $165 billion, that were "approved by Hillary Clinton's State Department" and "placed weapons in the hands of governments that had also donated money to the Clinton family philanthropic empire." In some cases, the sellers of the armaments were also Clinton Foundation donors.** The report opens with this example:

> Even by the standards of arms deals between the United States and Saudi Arabia, this one was enormous. A consortium of American defense contractors led by Boeing would deliver $29 billion worth of advanced fighter jets to the United States' oil-rich ally in the Middle East.

> Israeli officials were agitated, reportedly complaining to the Obama administration that this substantial enhancement to Saudi air power risked disrupting the region's fragile balance of power. The deal appeared to collide with the State Department's documented concerns about the repressive policies of the Saudi royal family.

> But now, in late 2011, Hillary Clinton's State Department was formally clearing the sale, asserting that it was in the national interest. At a press conference in Washington to announce the department's approval, an assistant secretary of state, Andrew Shapiro, declared that the deal had been "a top priority" for [Mrs.] Clinton personally. Shapiro, a longtime aide to Clinton since her Senate days, added that the "U.S. Air Force and U.S. Army have excellent relationships in Saudi Arabia."

> These were not the only relationships bridging leaders of the two nations. In the years before Hillary Clinton became secretary of state, the Kingdom of Saudi Arabia contributed at least $10 million to the Clinton Foundation, the philanthropic enterprise she has overseen with her husband, former president Bill Clinton. Just two months before the deal was finalized, Boeing—the defense contractor that manufactures one of the fighter jets the Saudis were especially keen to acquire, the F-15—contributed $900,000 to the Clinton Foundation, according to a company press release.

> Sirota and Perez also cite fishy-looking speaking fees to Mr. Clinton, such as $175,000 from the Kuwait America Foundation "paid in the same time frame as a series of deals Hillary Clinton's State Department was approving between the Kuwaiti government and Boeing."

And now, there are connections between the Clinton Foundation and the FIFA scandal that's now in the news.

The radically leftist Daily Beast:

> Both Bill Clinton and his family's charity have been tied to soccer's governing body, as well as Qatar's disastrous World Cup bid.

> And just like that, another Clinton Foundation donor is in the news.
>
> **The Clinton global charity has received between $50,000 and $100,000 from soccer's governing body and has partnered with the Fédération Internationale de Football Association on several occasions, according to donor listings on the foundation's website.**
>
> **Several top FIFA executives were arrested Wednesday in Zurich and face corruption charges stretching back two decades, according to the U.S. Department of Justice.**
>
> Involvement with the embattled body extends beyond the foundation to Bill Clinton himself. The former

> president was an honorary chairman of the bid committee put together to promote the United States as a possible host nation for the 2018 or 2022 World Cup.
>
> When the U.S. lost the 2022 bid to Qatar, Clinton was rumored to be so upset he shattered a mirror.
>
> But apparently Qatar tried to make it up to him.
>
> The Qatar 2022 Supreme Committee, partnering with the State of Qatar, "committed to utilizing its research and development for sustainable infrastructure at the 2022 FIFA World Cup to improve food security in Qatar, the Middle East, and other arid and water-stressed regions throughout the world," according to the Clinton Foundation website.
>
> The cost of the two-year project is not listed on the Clinton Foundation website, but the Qatar 2022 committee gave the foundation between $250,000 and $500,000 in 2014 and the State of Qatar gave between $1 million and $5 million in previous, unspecified years.
>
> FIFA, which has never been a bastion of ethics, was heavily criticized for awarding the 2018 and 2022 World Cup to Russia and Qatar, respectively, in part because of their abysmal human-rights records.
>
> *The Guardian* reported in 2013 about "appalling labor abuses," including possible forced labor and worker death on Qatar's World Cup infrastructure projects. It is also considered to be too hot to play soccer in Qatar in the summer.

Seriously, is Hillary Clinton the kind of person we want to sent to the White House?

# Two reasons to avoid premarital sex: trust issues and contact with exes

**Wintery Knight** · 28 May 2015 · Archived copy · Original

This is from Family Studies blog. (H/T Brad Wilcox)

Excerpt:.

> My own research with working-class young adults leads me to believe that they have basically made peace with sexual permissiveness—at least outside of marriage—even as they retain some ambivalence about it. They tend to move in quickly with new romantic partners, even as they worry that people rush too quickly into relationships. From survey data, we know that people without a college education have more lifetime sexual partners than those with a college education, and that most of them see no problem with premarital sex.
>
> But there is one problem: easy access to sex with multiple partners can make for complicated relationships. As sexual partners accumulate, so does the potential for distrust. As one man whose ex-girlfriend had cheated on him explained, "It's gonna take a lot more time for me to ever trust somebody again like that. I let her in quick, and now it's never gonna happen again." One divorced man said simply, "Everyone has to watch their ass all the time." There is the feeling that no one is safe—even in marriage. As another young man claimed, "Nowadays, even though you got a ring on your finger, people tend to look past that."
>
> So people describe keeping vigilant watch over their partners' cell phones, policing for messages from exes. They live an all but married lifestyle, yet they say that they are hesitant to make the commitment of marriage. Why? Part of the reason is that they don't trust their partner, or themselves, to remain in the marriage. In one survey, 42.5 percent of low-income, unmarried respondents cited "worry that the marriage would end in divorce" as a reason they might not be pursuing marriage, and 23.5 percent cited "questions about whether your partner is trustworthy." As one young man that I interviewed said after learning that his fiancée was cheating on him, "I don't trust nobody."
>
> **That distrust is at least partly the legacy of the libertarian sexual ethic, which assumes that sexual activity outside of marriage is typically okay so long as people are mutually consenting to the acts. And that distrust is why I have a hard time believing—as Noah Smith does—that sexual permissiveness will somehow evolve into more stable marriages for the working class. (Indeed, having more sexual partners prior to marriage is linked to greater odds of divorce, as Nicholas Wolfinger and W. Bradford Wilcox recently documented.) There is no invisible hand that will transform James and Jessica's distrust and cynicism, which stems in part from their multiple past sexual relationships, into trust and an enduring marriage. What the working class needs—what we all need—to achieve our shared aspirations for lifelong love and a stable family is social permission to date without immediately having sex.**
>
> That's important because today young people often assume that withholding sex is a sign of distrust. As James said, if you begin a relationship and don't have sex, "they automatically assume that you're cheating." But sliding into sex often translates into sliding into a relationship—and children—without first building trust and discerning for character and compatibility. And that slide often contributes to the erosion of trust in the opposite sex and in lifelong love. We must confront that reality if we're serious about empowering working young adults to achieve trusting relationships.

"Withholding sex" makes it sound bad. You don't have sex or even do sexual things before marriage because you are trying to prove to your partner that you have self-control enough that when you are married, he/she need not be concerned that you are OK with sex outside of a lifelong commitment. You restrain yourself in order to prove to the other person that you have what it takes in order to be trusted, and the other person does the same to you. It's

not that you are trying to reduce the amount of “fun” you are having, it’s that you are auditioning for a role, and this is what the other person needs to see from you during the courtship – chastity. It’s even better if your exes can produce letters of reference. I always produce letters of references from my exes and they tell the woman “you have nothing to worry about, he may push you for many, many things as he leads you, but sex isn’t one of those things”. I am very demanding about women learning and growing – just not demanding about sex. Sex is for marriage.

Usually, when a girl I court has sexual experience, it’s because she had a period when she was not a Christian. This is fine with me (it’s something that requires adjustments and some extra work). You might think because I am so demanding and judgmental, that this is an immediate disqualifier, but it’s not. What I like to do is try to lead the woman to learn apologetics, conservative ideas, how marriage works, etc. Usually what happens is that she compares me to her ex-boyfriends who were not Christians and thinks “wow! those guys had no plan for me beyond making me fulfill their sexual needs”. Which is what you can expect from a non-Christian man – they have no interest in introducing you to the Boss, and telling you what the Boss requires. That’s one of the pluses of being courted by a Christian man – we put the woman’s service to God first. We don’t push her into sex, because we find other ways for her to show that she loves us other than sex. There are a BILLION ways for a woman to show that she loves you and is interested in you without pushing her for anything sexual.

It does have a strong effect on a woman when she sees me putting my needs second, and trying to get her to learn stuff that is helpful to the Boss. I think when a woman experiences that, it’s difficult for them to go back to non-Christian men. At least, that’s my experience. The more you teach a woman about how a marriage actually runs, and what a man actually does in a marriage, the less she tends to like guys who have not prepared for marriage. Well, at least a good woman will connect the dots and adjust what kind of man she is interested in. Men are designed to be protectors, providers and moral/spiritual leaders. Although it’s tempting for a woman to go for men who don’t make demands and don’t make judgments, in the long run, it’s not good for a marriage project. It would be like stepping on a football field and preferring to talk to the guy who doesn’t take winning too seriously. He’s fun to talk to, not very demanding, but it’s not going anywhere. I think women who choose men who don’t lead or judge on purpose may feel more comfortable, but a goal-directed, demanding relationship is actually more stable.

# Chris Sinkinson debates John Hick on religious pluralism and salvation

**Wintery Knight** · 28 May 2015 · Archived copy · Original

Two rams butting heads: may the best ram win!

Looks like Justin Brierley on the Unbelievable radio show found a pastor with a Ph.D in philosophy, and he can really whip some ass. And that's a good thing, because he is taking on one of the two leading proponents of religious pluralism, in my opinion, (the other being Paul Knitter).

The players:

> John Hick is a noted philosopher and theologian who is a proponent of a pluralist view of religion – that there is one light (God) but many lampshades (religious expressions).
>
> Chris Sinkinson is a pastor and Bible tutor who has critiqued Hick's work. He says that pluralism empties Christianity of any content and in its own way disrespects other religions more than his own exclusivist stance.

The MP3 file is here. (Note: This link works)

Justin does a great job as moderator of this debate. He said what I was thinking of saying a number of times during the debate.

Anyway, here is my snarky summary. I creatively paraphrase some of the things that Hick says to make it more clear. And funny.

—-

Hick:
– had an experience looking at the buildings of other religions
– other religions have buildings, so all religions are equal
– I spent some time in the East, and met nice Eastern people
– since Eastern people are nice that means all religions are equal

Justin:
– isn't Jesus' claim to be the exclusive path to salvation offensive?

Sinkinson:
– all religions that are exclusive and have to deal with religious pluralism
– even John Hick writes polemically in favor of his own view
– even John Hick thinks that religions that are exclusive are false

Justin:

– what about the blind man and the elephant?
– the story seems to say that other people have a partial grasp?
– but the story-teller himself has the privileged view
– so isn't the religious pluralist just as arrogant as exclusivists?

Hick:
– well, it's not arrogant to claim to have the right answer
– Jesus never made the claim to be God incarnate
– Jesus never made the claim to be the exclusive path to God
– historians don't think that John's gospel is reliable because it is late
– the proclamation of exclusivity was added by evangelists much later

Sinkinson:
– the historians who doubt the high Christology are radical skeptics
– the mainstream of historical scholarship accepts a high Christology
– the EARLIEST history about Jesus has the highest Christology

Hick:
– the moderate scholars do think Jesus was divine but that he didn't think he was divine
– the phrase "Son of God" was used to describe any remarkable person
– only later did the early church turn the generic term into "God the Son"

Sinkinson:
– there is reflection on Jesus' identity and developments, but not invention
– Jesus and his followers were in trouble precisely for linking him to deity
– why else would Jesus get into trouble and get crucified?

Hick:
– the Romans crucified him because people were saying he was the Messiah
– but the Messiah was not identified as being divine, but political
– and that's why the Romans crucified him

Justin:
– do you (Sinkinson) think that people in other religions can be saved?

Sinkinson:
– the traditional view is exclusivism
– the other world religions are logically contradictory with Christianity
– you have to respect their differences – they are not the same as Christianity
– exclusivists allow that people can be saved by responding to natural theology
– and there are also other cases where non-Christians are saved, like old testament saints and babies who die in infancy

Hick:
– but people's religions are based on where they are born
– so it's not fair for God to expect people to be saved in one religion only

Sinkinson:
– the plurality of religions grouped by location doesn't make christianity false
– that would be the genetic fallacy – rejecting an idea because of its origin
– the real question to consider is whether it is true
– and even the objection assumes that God is a God of love, who should be fair
– but how do you know that God is loving? that is an exclusive view
– how can the "blob" ultimate of religious pluralism be "loving" and "fair"

Hick:
– the ultimate reality is loving or not loving depending on each person's religion

Sinkinson:
– but some religions and theistic and some are atheistic
– how can those God exist and not exist?

Hick:
– God is beyond everyone's understanding, except mine
– God is beyond all definitions, except mine
– God is beyond all human understanding, except mine
– i'm not contradicting myself, it's a mystery! a mystery!
– as long as you don't look to closely, they're all the same!
– allow me to tell you about God, which no one can do but me

Justin:
– doesn't your religious pluralism mean that Christianity is false?

Hick:
– well, Christianity can't be true, because it disagrees with other religions
– Christianity can't falsify other religions, that would be mean to them
– other religions are just as "profound" as Christianity – and that's what matters – not whether a religion makes true claims
– some religions are older than Christianity, that means they can't be disagreed with
– we can't let Christianity be true, because then some people will feel bad
– if people feel bad, then they don't like me and then I feel bad
– if there's one thing I know about the unknowable ultimate reality, it's that it wants me to be liked by lots of people

Sinkinson:
– your view seems to be agnosticism – that nothing can be known about the "ultimate real"
– if we can't express in words what God is like, then why are you saying what God is like?

Hick:
– the indescribable ultimate is described (falsely, but interestingly) by various tradition

Sinkinson:
– does the "ultimate real" exist?

Hick:
– no

Justin:
– are all the exclusive religions wrong, and only you are right?

Hick:
– all propositions about God in all the religions are false
– the experience of being deluded and having feelings about your delusions is "valid" in all religions
– all religions are equally good ways to believe false things and to have feelings about your false beliefs
– only my propositions about God are true
– everyone who disagrees with me is wrong

Sinkinson:
– so all the propositions of all the religions are wrong
– but all the experiences and feelings are "right"

Hick:

– yes
– all propositions about God are humanly constructed, and so false
– except mine – mine are true!

Sinkinson:
– so everything distinctive about Christianity are literally false?

Hick:
– yes, Christian doctrines are all false
– because if they were true, other religions would be false, and they would feel bad
– and we can't have that, because everyone has to like me
– only things that don't offend people in other religions can be true

Sinkinson:
– so do we have to then treat all religions as non-propositional?

Hick:
– well just don't ask people about the content of their beliefs
– just treat their religion as non-cognitive rituals, feelings and experiences
– don't inquire too deeply into it, because all religions are all nonsense
– i'm very respectful and tolerant of different religions!

Sinkinson:
– but Muslims, for example, think their religion is making truth claims

Hick:
– but there can be tolerance as long as you treat religions as non-propositional nonsense

Sinkinson:
– um, I have a higher respect for religions than you do
– I actually consider that the claims of other religions could be true
– I think that other religions make truth claims and not nonsense claims

Hick:
– well they are all useful because they are all false
– I don't emphasize beliefs, I emphasize living, experiences and feelings
– as long as everyone accepts my view and rejects their religion, we'll all be tolerant

Justin:
– erm, isn't that an exclusive claim?
– you're trying to say that your view of what religion is is right, and everyone else is wrong

Hick:
– I'm not arrogant, I just think that all the religions of the worlds are false
– only my statements about religion are true – everyone else is wrong
– I'm tolerant, and Christians are arrogant

Justin:
– but you think Sinkinson's view is wrong
– why should we accept your view and deny his view?

Hick:
– His view of salvation is false, and mine is true

Sinkinson:
– you use words with set meanings, but you mean completely different things

– when I say salvation, I mean deliverance from sins through Jesus

Hick:
– I get to decide what salvation means for everyone, you intolerant bigot

Sinkinson:
– but that word has a specific meaning that has held true in all of Christian history
– but what you mean by salvation is people having subjective delusions that are not true

Hick:
– I don't like using the word salvation

Sinkinson:
– but you just used it!
– and you think that it is present in different world religions, but it isn't

Hick:
– God is unknowable and indescribable
– God isn't a wrathful God though
– and the Christian description of God is false
– Evangelical Christians are mean
– I had experiences with people of other faiths
– and these experiences taught me that religions that think that the universe is eternal are true
– as long as you reduce religion to behaviors and not truth, then religions are all good at producing behaviors
– if you just treat all religions as clothing fashion and food customs, they are all valid
– the main point of religion is for people to agree on cultural conventions and stick to them
– never mind the propositional statements of religions… who cares about truth? not me!
– but Christianity is definitely false

Sinkinson:
– the Judeo-Christian God is different – he reveals himself to humans
– he is distinct from the other religions
– he is personal, and is loving but also angry at sin

Hick:
– But God isn't a person, and he isn't a non-person
– I can't say what he is – I'll offend someone if I say anything at all!
– except Christians – I can offend them because they are arrogant bigots
– I'm also very spiritual – I meditate on my breathing

Sinkinson:
– you can't assess a religion by the experiences that people have
– people who have weird experiences do all kinds of evil things
– so the real question has to be about truth – is the New Testament reliable?, etc.

# New Gallup poll's scary numbers: social conservatism in decline

**Wintery Knight** · 29 May 2015 · Archived copy · Original

Changes in religious affiliation

A while ago, some numbers came out showing that mainline Protestant denominations were in decline, while Roman Catholicism was in steep decline. Evangelicals had a slight decline.

Here's the ultra-leftist Washington Post on the findings:

> Christianity is on the decline in America, not just among younger generations or in certain regions of the country but across race, gender, education and geographic barriers. The percentage of adults who describe themselves as Christians dropped by nearly eight percentage points in just seven years to about 71 percent, according to a survey conducted by the Pew Research Center.
>
> "It's remarkably widespread," said Alan Cooperman, director of religion research for the Pew Research Center. "The country is becoming less religious as a whole, and it's happening across the board."
>
> At the same time, the share of those who are not affiliated with a religion has jumped from 16 percent to about 23 percent in the same time period. The trend follows a pattern found earlier in the American Religious Identification Survey, which found that in 1990, 86 percent of American adults identified as Christians, compared with 76 percent in 2008.

I have an idea why this is happening and here it is: Christian leaders have nothing to say about the issues being debated in the mainstream culture. And once people get involved in the trendy sinful behaviors that are so widespread right now, it's no wonder they dump Christianity. I'm sure it will surprise no one to say that I think that Christian leaders ought to be focusing more on issues like abortion, marriage, science, economics, foreign policy, climate change, etc. from a Christian perspective – since young people are leaving Christianity precisely on those grounds.

For example, shouldn't we have something to say about premarital sex?

> Relatively extensive evidence has established that more religious adolescents tend to delay first sexual intercourse. In a paper that Sara Vasilenko and I published last year, we wanted to examine whether this association, usually assumed to be in this direction (from religiosity to sexual behavior), was actually bidirectional. We used the 100 participants from the University Life Study who transitioned to first intercourse between their first and seven semester in college. Our findings demonstrated that 12 months after transitioning to first intercourse, students attended religious services less frequently and viewed religion as less important than they had prior to first intercourse. Eventually, religiosity returned to levels that would be predicted by developmental trends prior to intercourse.

Maybe somebody ought to be explaining to them how premarital sex affects the stability and quality of their future marriage, using secular evidence from social science studies? But we're not doing that. We're stuck with assuming the Bible is true, preaching the gospel every Sunday, and studiously avoiding trying to demonstrate what the Bible teaches with real-world evidence that can be used *in the real world!*

Maybe we should have something to say about marriage and divorce?

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.

Have you ever heard a sermon on the policies that cause families to break up? I mean a sermon on anti-marriage forces like welfare programs (which make husbands unnecessary for having children), no-fault divorce (easy divorce if the woman is "unhappy"), etc? Many soft-hearted, empty-headed Christians vote for policies that actually undermine marriage because they sound nice, and we have been taught that being nice and being liked is more important than having true beliefs that are supported by evidence. In general, the church is not helping us to make the connections, either. There are *many* challenges to marriage. How many have you heard discussed from the pulpit in church? If we don't start to discuss these, then we can expect Christianity to decline – and with it, our influence.

When Christianity declines, morality declines with it. Here are the latest numbers from Gallup:

**Moral Acceptability: Changes Over Time**

% Morally acceptable

| | 2001 | 2015 | Change |
|---|---|---|---|
| | % | % | (pct. pts.) |
| Gay or lesbian relations | 40 | 63 | +23 |
| Having a baby outside of marriage* | 48 | 64 | +16 |
| Sex between an unmarried man and woman | 53 | 68 | +15 |
| Divorce | 59 | 71 | +12 |
| Medical research using human cells obtained from human embryos* | 52 | 64 | +12 |
| Polygamy (when a married person has more than one spouse at the same time)** | 7 | 16 | +9 |
| Cloning humans | 7 | 15 | +8 |
| Pornography outside marriage | 49 | 56 | +7 |
| Suicide | 15 | 14 | -1 |
| Gambling** | 65 | 67 | +2 |
| Abortion | 45 | 45 | 0 |
| Birth control | 31 | 34 | +3 |
| Betting and wagering (sitting on a racehorse race, etc.) | 60 | 61 | +1 |
| Married men and women having an affair | 7 | 8 | +1 |
| The death penalty | 66 | 60 | -6 |
| Medical testing on animals | 65 | 56 | -9 |

Note: Sorted by change in the percentage saying each is "morally acceptable"; ties sorted by current level. Issues first measured in 2001.

* First measured in 2002.

** First measured in 2003.

GALLUP

Gallup: changing opinions on moral values

Summary:

> The substantial increase in Americans' views that gay and lesbian relations are morally acceptable coincide with a record-high level of support for same-sex marriage and views that being gay or lesbian is something a person is born with, rather than due to one's upbringing or environment.
>
> The public is now more accepting of sexual relations outside of marriage in general than at any point in the history of tracking these measures, including a 16-percentage-point increase in those saying that having a baby outside of marriage is morally acceptable, and a 15-point increase in the acceptability of sex between an unmarried man and woman. Clear majorities of Americans now say both are acceptable.
>
> Acceptance of divorce and human embryo medical research are also up 12 points each since 2001 and 2002, respectively.
>
> Polygamy and cloning humans have also seen significant upshifts in moral acceptability — but even with these increases, the public largely perceives them as morally wrong, with only 16% and 15% of Americans, respectively, considering them morally acceptable.

This is becoming a concern for me. We will not be able to impact the culture until we start to win arguments on the issues that cause Christians to step away from the faith. And that is especially true for young people, who, owing to their undeveloped brains and lack of experience in real life, are more easily swayed by the cultural elites, especially at the university.

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 29 May 2015 · Archived copy · Original

Theology that hits the spot

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked

about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for example, is a necessary information base that Christians must have.
2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose

> or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

# Mike Licona debates Bart Ehrman on the reliability of the gospels

**Wintery Knight** · 29 May 2015 · Archived copy · Original

Two ninjas face off at sundown
From the Unbelievable radio show.

Details:

> Bart Ehrman is well known as a US New Testament Scholar who lost his Christian faith and now questions many core precepts of Christianity, including the Resurrection of Jesus. When Mike Licona had doubts he devoted himself to investigating the evidence and became convinced that Jesus resurrection is the only rational explanation for the facts.
>
> They debate key historical facts about the resurrection – are the letters of Paul that report the resurrection and the Gospel accounts trustworthy or theologised and changed with time? What about apparent contradictions between the Gospels? Does the consensus of scholars count as evidence, or is there a Christian bias? Can a miracle count as an explanation for historical data?

The MP3 file is here. (Note: this link works)

**Snarky summary of the radio debate:** (items with * are my made-up paraphrases/clarifications)

Ehrman:
– Bart's new book is about forgeries in the ancient world
– some books were falsely attributed to prominent Christian figures
– there are mistakes in the Bible
– there are mistakes in the resurrection narratives
– the defeat of inerrancy led to his conversion to liberal Christianity
– the problem of evil and suffering caused him to become a non-Christian

Licona:
– there are minimal facts that are agreed to by a broad spectrum of scholars
– the minimal facts are accepted because they pass standard historical criteria
– Fact 1: Jesus died by crucifixion
– Fact 2: Individuals and groups had visions of Jesus after his death
– Fact 3: Paul, a skeptic and an enemy, had an appearance of Jesus that converted him
– these facts are agreed to atheist scholars, liberal scholars, etc.
– virtually 100% of scholars agree with these three facts
– there is no naturalistic explanation of these three facts

– therefore, the best explanation of these three facts is that God raised Jesus from the dead

Ehrman:
– all historians would accept these three facts, except for maybe the group appearances
– the death of Jesus is irrelevant to the resurrection
– the second and third point can be collapsed together
– so really there is only one fact

Moderator:
– the crucifixion is relevant because Muslims don't admit that fact
– the crucifixion important because it establishes a resurrection, not a resuscitation

Ehrman:
– well, if the point is that he died, then yes, this does require a resurrection

Licona:
– the crucifixion refutes Muslims who deny that Jesus died
– the crucifixion refutes the apparent death theory (swoon theory)
– the death is required for a bodily resurrection
– it's important to know what facts most scholars, regardless of worldview, agree on
– it's important to emphasize that Licona is working from historical bedrock facts
– the resurrection is the best explanation for the historical bedrock facts

Ehrman:
– you are trying to list 3 things, but really it is just one thing – the appearances
– and not ALL scholars agree that the group visions occurred

Licona:
– name one prominent scholar who denies the group appearances

Ehrman:
– the radically leftist atheist nutcase John Dominic Crossan denies the group appearances
* Crossan is so far on the left that I look like a nutcase for even citing him
* Crossan believes in the Secret Gospel of Mark, which is a hoax – but I still cite Crossan
* Crossan believes that the synoptics are LATER than gnostic forged gospels – but I still cite Crossan
* Crossan presupposes atheism, so he cannot admit to miracle stories as a pre-supposition – but I still cite Crossan
* Crossan pre-supposes religious pluralism, so he cannot allow any exclusive claims Christians make – but I still cite Crossan
* Crossan is a good historian, it's just that he is so far to the left that no one – NO ONE – agrees with his all of crazy theories
* I think it is a good idea to cite historians who pre-suppose atheism and political correctness before they sit down to do history

Licona:
– let me explain why most scholars accept the individual and group post-mortem appearances
– the best source for the appearances is the early creed recorded by Paul in 1 Cor 15:3-8
– Paul himself had an appearance of Jesus after Jesus' death
– Paul received this material from a source very soon after the appearances – within 1-3 years
– we know that Paul met with Jesus disciples multiple times prior to writing
– Paul probably received it from Peter and James, who were themselves eyewitnesses

Moderator:
– this early dating presumably rules out legend

Licona:
– well legends CAN start quickly
– it does show that Paul was an eyewitness
– it does show that Paul was in contact with reliable eyewitnesses

Ehrman:
– 1 Corinthians is written around 55 AD, twenty-five years after Jesus died
– it is not implausible that Paul got the creed from the disciples, who were eyewitnesses
– but you don't need a long time for legends to emerge, so that is a possibility

Licona:
– only about 3% of people could read and write back them
– instead, people had enormous capacity for memorization
– the Pharisees were particularly good at memorization
– Jews were very serious about passing along traditions accurately
– Paul, a prominent Pharisee, would have been capable of passing on early creeds accurately
– Paul, in 1 Cor 7, shows that he is willing to separate his opinions from authentic tradition
– Paul had an opportunity in 1 Cor 7 to put words into Jesus' mouth, but he wouldn't do it

Ehrman:
– cultural anthropologists show that things do get changed in some oral cultures
– in these oral cultures, it is assumed that the story teller will change the story
– only in written cultures are they careful to avoid changing the story
– in the New Testament, you can compare the same story in two different gospels, there are differences

Licona:
– Ehrman is right that the gospel writers pick and choose things from the oral tradition that they want to include in their gospels
– different oral tradition transmission schemes have more or less embellishment
– african tribes embellish more, rabbinic teaching embellishes less
* Jesus' followers would have viewed him as a rabbi, and been careful about adding to his teachings
– Paul, an eyewitness, probably received the creed in 1 Cor 15 from other eyewitnesses
– Paul speaks about going twice to Jerusalem in Galatians
– he is meeting with Peter and James to check his facts

Ehrman:
– when you look at Mark and John, there are lots of differences in the narrative

Licona:
– I agree that the gospels have differences, but the oral tradition is likely fixed

Ehrman:
– but Mark and John have different sayings
– why doesn't Mark have the same explicit high Christology that John has?

Licona:
– first, John is trying to weave the oral tradition into a compelling story
– and second, when you look in Mark, the high Christology is there in the Son of Man sayings
– the apocalyptic Son of Man is in Mark, and everywhere in the New Testament

Ehrman:
– the "apocalyptic Son of Man" isn't in John

Licona:

– what about in John 9 with the man who was born blind

Ehrman:
– where is the apocalyptic part?

Licona:
– the healed man worships Jesus because he is the Son of Man
– that links to the apocalypic passages in the Old Testament

Moderator:
– what about the differences between the gospels?

Ehrman:
* well, now is the time for me to set up an inerrantist straw man and then knock it down!
* who was at the empty tomb: one angel or two angels? we don't know, so the whole Bible is false!
* I used to be an inerrantist, so one minor difference is enough for me to dump the whole Bible
* I'll kill you, you stupid straw man! I hate you, Moody Bible Institute! You lied to me!

Licona:
– many of these problems can be solved by realizing that the gospel writers compress time
– the stories don't have to list ALL the characters in every scene
– you don't have to force the Bible to meet some sort of wooden chronology
– the main thing is that the events happened, not that the descriptions match word for word across sources

Ehrman:
– you can't infer a miracle from history, David Hume says so
* extraordinary claims require extraordinary evidence, David Hume says so
* no I don't know what begging the question is, I'm not a philosopher
* no I don't remember when Bill Craig kicked my ass on this Hume objection in our debate
– the New Testament gospels contradict each other at every point, they are not reliable at all!
* they cannot even agree what Jesus' name is! There are 1 trillion variants of Jesus' name!
* "one angel vs two angels" proves that the gospels contradict each other at every point
* my expansive list of FOUR theologically insignificant variants proves that the gospels contradict each other at every point

Licona:
– um, the gospels agree on the central narrative and disagree on the peripherals
– and they agree on the minimal facts I presented, even if they disagree about the number of angels

Ehrman:
* they have to agree on everything and be inerrant! The Moody Straw Man Bible Institute says so!
* I really really really need to have the number of angels be the same, or Jesus didn't die on the cross

Licona:
– but you don't deny any of the three minimal facts I presented (crucifixion, appearances, Paul)

Ehrman:
– well, I don't know if the group appearances occurred – maybe they did
– i think Jesus died on the cross, and I think that people said they saw him alive afterward

Licona:
– if you deny the minimal facts, then you are outside the majority of scholars

Ehrman:
– the majority of scholars who agree to the minimal facts you presented are Christians
* Gerd Ludemann is an atheist Christian

* James Crossley is an atheist Christian
* Hector Avalos is an atheist Christian
* the majority of the atheist scholars are all Christians!
– VIRTUALLY EVERYBODY IN THE SOCIETY OF BIBLICAL LITERATURE IS A CHRISTIAN!!! (Yes, he said that)

Licona:
– you really think so?

Ehrman
– you name one non-Christian in the SBL

Licona:
– (incredulous) um, John Dominic Crossan is an atheist

Ehrman:
– but he CLAIMS TO BE A CHRISTIAN so that means HE IS A CHRISTIAN
* all you have to do to be a Christian is claim to be one
* you can even deny the existence of God and the divinity of Christ and still be one, you bigot!

Licona:
– would Jesus or the apostles recognize a Christian as being someone who doubts God's existence

Ehrman:
– my view is that Jesus and the apostles would not recognize evangelical Christians as Christians
* a non-theist can be a Christian just by claiming to be one, but evangelical Christians are not Christians even if they claim to be Christians
– Christians can't record accurate history about the resurrection because they are biased

Licona:
– on your view, if a person is a Christian then he can't write about the evidence for the resurrection
– so then similarly, you would not allow Jews to write about the historicity of the Holocaust
– because you think that if people have an interest in what they are recording then they can't be objective
– but you have to consider the evidence we have, taking the biases of the sources into account

Ehrman:
– but the only people who believe in the resurrection are Christians!

Licona:
– well, people can consider the evidence for the resurrection as non-Christians
– and then if they accept it they can become Christians

Moderator:
– what about your bias? you don't believe in God – doesn't that pre-supposition affect how you do history?

Ehrman:
– well, I presuppose naturalism, so I can't admit to anything in history that implicates supernatural causes
* no I have never heard of the arguments for the Big Bang, fine-tuning, origin of life, Cambrian explosion, irreducible complexity, limits on mutations creating information, habitability and so on – I never heard about that stuff from my atheist university professors and even if I had I would have been expelled for talking about it because that would make people feel bad about their sinning

Licona:
– so it's not bias you are concerned about, it's that you don't want history to contradict your untested religion of naturalism?
– why not just do the history without pre-suppositions to gather the minimal facts and then see what the best

explanation is?

Ehrman:
* well God is out of bounds as an explanation because I could not have got my PhD if I mentioned God
* I really needed my smart atheist professors to like me and give me good grades so God is RIGHT OUT
* ideas like a real God and moral laws and Hell makes my atheist professors uncomfortable and that means low grades for me
* I'm not really interested in butting heads with professors – it's easier to just agree with them and move on to selling books to the gullible
* My books are much more sensational than Dan Brown books, so please buy lots of them!

Licona:
– what if the historical evidence is good enough to show that Jesus rose from the dead?

Ehrman:
– well I would not call someone rising from the dead a miracle – I would call it weird
* I also think that the Big Bang is "weird" but that doesn't prove that God created the universe out of nothing
* if it's a miracle then I'm going to have to not sin, and maybe even go to Hell, and we can't have that

Licona:
– well, you accept the three minimal facts
– what if we try all the naturalistic explanations for those three facts and there are problems with all of them?
– what if the resurrection is the best explanation for the three minimal facts?

Ehrman:
– but I want to arbitrarily rule God put because I want to pre-suppose naturalism
– there is not historical reason I have to rule put supernatural explanations a priori

Licona:
– I think you are struggling with the theological implications of a historical conclusion

Ehrman:
– well when you do theology, you have to avoid grounding your theology on science or history
– theology has to be completely made up or it's not good theology

Licona:
– I think you are letting your dislike of the implications of the resurrection determine your historical conclusions
– you have to use historical methods to gather the minimal facts that every scholar accepts, regardless of worldview
– then you weigh ALL the hypotheses, natural and supernatural, that could account for these minimal facts
– then you choose the hypothesis that best explains the minimal facts

# The importance of having a narrative when confronting the assumption of naturalism

**Wintery Knight** · 30 May 2015 · Archived copy · Original

Apologetics and the progress of science

How do you present theism as a rational belief to a person who thinks that the progress of science has removed the need for God?

Canadian science writer Denyse O'Leary writes about the history of cosmology at Evolution News.

Excerpt:

> What help has materialism been in understanding the universe's beginnings?
>
> Many in cosmology have never made any secret of their dislike of the Big Bang, the generally accepted start to our universe first suggested by Belgian priest Georges Lemaître (1894-1966).
>
> On the face of it, that is odd. The theory accounts well enough for the evidence. Nothing ever completely accounts for all the evidence, of course, because evidence is always changing a bit. But the Big Bang has enabled accurate prediction.
>
> In which case, its hostile reception might surprise you. British astronomer Fred Hoyle (1915-2001) gave the theory its name in one of his papers — as a joke. Another noted astronomer, Arthur Eddington (1882-1944), exclaimed in 1933, "I feel almost an indignation that anyone should believe in it — except myself." Why? Because "The beginning seems to present insuperable difficulties unless we agree to look on it as frankly supernatural."
>
> One team of astrophysicists (1973) opined that it "involves a certain metaphysical aspect which may be either appealing or revolting." Robert Jastrow (1925-2008), head of NASA's Goddard Institute for Space Studies, initially remarked, "On both scientific and philosophical grounds, the concept of an eternal Universe seems more acceptable than the concept of a transient Universe that springs into being suddenly, and then fades slowly into darkness." And Templeton Prize winner (2011) Martin Rees recalls his mentor Dennis Sciama's dogged commitment to an eternal universe, no-Big Bang model:

> For him, as for its inventors, it had a deep philosophical appeal — the universe existed, from everlasting to everlasting, in a uniquely self-consistent state. When conflicting evidence emerged, Sciama therefore sought a loophole (even an unlikely seeming one) rather as a defense lawyer clutches at any argument to rebut the prosecution case.

> Evidence forced theorists to abandon their preferred eternal-universe model. From the mid 1940s, Hoyle

> attempted to disprove the theory he named. Until 1964, when his preferred theory, the Steady State, lost an evidence test.

Here is a quick summary of some of the experimental evidence that emerged in the last few decades that caused naturalists to abandon the eternal universe that they loved so much when they were younger.

**The importance of having a narrative**

Now I want to make a very, very important point about Christianity and the progress of science. And that point is that it is very important that Christians present the evidence in exactly the way that Denyse presented it in that article – in its historical context, featuring the conflict between naturalists and the experimental evidence.

All Christians should be familiar with the following basic pieces of evidence which fit the war between science and naturalism narrative:

1. The origin of the universe
2. The cosmic fine-tuning
3. The origin of life (biological information)
4. The sudden origin of the Cambrian phyla
5. The habitability/observability correlation

When you talk about these evidences as a Christian theist to non-Christians, you have to have cultivated a genuine interest in reconciling your beliefs with science. You have to accept that there are two books that reveal God's character and attributes. The book of nature, and the book of Scripture. And you need to be flexible about getting these two books to fit together. The book of nature gives us natural theology (see Romans 1). It tells us that God is Creator and Designer. The book of Scripture tells us that God stepped into history as a man to save us by taking the punishment for our headlong rush away from God, which the Bible calls sin. Science is one way that humans can recover some of basic knowledge about God. Knowledge that is only possible because God created and designed the universe (and us) in such a way that we are capable of making discoveries, and that the universe is capable of being explored and understood.

It's very important to present these five basic evidences to non-Christians in the historical context. And here is the story you must tell: "In the beginning, there was the naturalism, and the naturalism tried to argue from ignorance that God was not Creator and God was not Designer. And then came the science, and now people have to give up their naturalism in order to not be crazy and irrational". That's the narrative you use when talking to non-Christians about science.

In the beginning was the naturalism:

1. In pre-scientific times, atheists maintained that the universe was eternal
2. In pre-scientific times, atheists maintained that a life-permitting universe was as likely as a life-prohibiting universe
3. In pre-scientific times, atheists maintained that the cell was a simple blob of jello that could spontaneously emerge in some warm pond
4. In pre-scientific times, atheists maintained that the sudden origin of the Cambrian phyla would be explained by subsequent fossil discoveries
5. In pre-scientific times, atheists maintained that there was nothing special about our galaxy, solar system, planet or moon

But then science progressed by doing experiments and making observations:

1. Scientists discovered redshift and the cosmic microwave background radiation (evidence for a cosmic

beginning) and more!

2. Scientists discovered the fine-tuning of gravity and of the cosmological constant and more!
3. Scientists discovered protein sequencing and exposed the myth of "junk DNA" and more!
4. Scientists discovered an even shorter Cambrian explosion period and the absence of precursor fossils and more!
5. Scientists discovered galactic habitable zones and circumstellar habitable zones and more!

And now rational people – people who want to have true beliefs about reality – need to abandon a false religion (naturalism).

Now naturally, science is in a state of flux and things change. But you have to look at the trend of discoveries, and those trends are clearly going against naturalism, and in favor of Christian theism. No one is arguing for a deductive proof here, we are simply looking at the evidence we have *today* and proportioning our belief to the concrete evidence we have *today*. People who are guided by reason should not seek to construct a worldview by leveraging speculations about future discoveries and mere possibilities. We should instead believe what is more probable than not. That's what a *rational* seeker of truth ought to do. Proportion belief to probabilities based on current, concrete knowledge.

Atheism, as a worldview, is not rooted in an honest assessment about what science tells us about reality. Atheism is rooted in a religion: naturalism. And the troubling thing we learn from looking at the history of science is that this religion of naturalism is insulated from correction from the progress of science. Nothing that science reveals about nature seems to be able to put a dent in the religion of naturalism, at least for most atheists.

It falls to us Christian theists, then, to hold them accountable for their abuse and misrepresentation of science. And that means telling the story of the progress of science accurately, and accurately calling out the religion of naturalism for what it is – *a religion rooted in blind faith and ignorance that has been repeatedly and convincingly falsified by the progress of science in the modern era*.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

# Architect of Kathleen Wynne's Ontario Liberal Party sex ed curriculum sentenced for child porn

**Wintery Knight** · 30 May 2015 · Archived copy · Original

Liberal Party: Kathleen Wynne and Justin Trudeau

*A reader of the Wintery Knight blog insisted that I write about this story from Canada, and he helped me with all these details of Ontario politics in this post. WARNING: This post contains graphic details of sexual deviancy committed by the Liberal Party of Ontario.*

Life Site News reports.

Excerpt:

> Ben Levin, the man who "appeared to have it all," was today sentenced to three years in prison for three child pornography offences.
>
> […]The once-tenured professor at Ontario's Institute for Studies in Education had a "hidden, dark side" in a "depraved on-line world" as a "deviant mentor" who made "insidious attempts to normalize the sexual exploitation of children," McArthur noted in her 23-page reasons for sentence.
>
> […]A member of Liberal Premier Kathleen Wynne's transition team, Levin was deputy minister of education in 2009 when he and then-minister of education Wynne developed the "equity and inclusive education strategy," part of which was the 2010 radical sex-ed curriculum shelved by then-Premier Dalton McGuinty after parental backlash. The 2015 sex-ed curriculum is virtually the same as the 2010 version.
>
> Campaign Life Coalition says Levin's connection to the current radical sex-ed curriculum is further reason to reject it.
>
> "Ben Levin's prison sentence is another reminder to Ontario families of why they must continue to oppose Kathleen Wynne's sex-ed curriculum," says CLC's Ontario president Mary Ellen Douglas. The curriculum, to be rolled out this September, prematurely sexualizes children by introducing homosexuality in Grade 3, masturbation in Grade 6, and oral and anal sex in Grade 7.
>
> […]Levin himself claimed in a 2010 interview: "I was the deputy minister of education. In that role, I was the

> chief civil servant. I was responsible for the operation of the Ministry of Education and everything that they do; I was brought in to implement the new education policy."
>
> […]Levin pled guilty on March 3, 2015, to three of an original seven child pornography related charges.
>
> McArthur related how in 2010, Levin created a profile on an "alternative sexual lifestyle networking site" frequenting chat-rooms on "incest" and "teens." He subsequently "came to the attention of three undercover officers."
>
> In the course of sex-chats with these officers, Levin "wrote a story detailing the violent sexual abuse of a child" and "counseled another officer, posing as a young mother, to sadistically sexually assault her eight-year-old daughter."
>
> "Mr. Levin's offending behavior was not isolated or impulsive," she said. He "collected child pornography over two years. He saved the first image in March 2011 and the last just weeks before his arrest." Levin also had a list of about 1,750 online contacts with whom he communicated on "subversive sexual interests," primarily "sexual contact between parents and children."
>
> In his sex-chats, Levin "normalized the subject of the sexual touching of children."
>
> In his June 2013 chats with police officer Janelle Blackadar, who posed as the mother of an eight-year-old girl, Levin instructed her on how to get her daughter "used" to sex using pornography and masturbation.
>
> […]"Mr. Levin recklessly pursued his own selfish, sexual urges, all the while knowing an innocent child could be abused as a result. Mr. Levin's moral blameworthiness is extremely high."
>
> The "sadistic overtones to the counseling adds a disturbing dimension to the offence," McArthur stated, noting that psychiatrist Dr. Julian Gojer testified that Levin had a "pedophiliac interest in children" which was "intense" for three to four years. Gojer stated Levin "had sadistic impulses that seemed interwoven with his pedophilic interest" and "was on the extreme end of the sadomasochistic spectrum as it relates to the sexual abuse of children."

That's who is teaching children in Ontario schools – public, Catholic, private. There is no opt-out. Taxpayers paid for this.

Very important now to take a look at why Kathleen Wynne is the one calling the shots in Ontario:

> Wynne was born in Toronto to Dr. John B. Wynne and Patsy O'Day, a musician who grew up in the Bahamas before immigrating to Canada.
>
> She earned a Bachelor of Arts degree at Queen's University and a Master of Arts degree in linguistics from the University of Toronto. She achieved a Master of Education degree in adult education from the Ontario Institute for Studies in Education (University of Toronto).
>
> […]Prior to her coming out as a lesbian at age 37 she was married to Phil Cowperthwaite, with whom she had three children. She now lives with her second spouse, Jane Rounthwaite, whom Wynne has stated is to be referred to as her "partner" (rather than "wife"). They were married in July 2005 at Fairlawn Avenue United Church in Toronto. Wynne is a member of the United Church of Canada.
>
> […]On September 18, 2006, she was promoted to Minister of Education in a cabinet shuffle occasioned by the resignation of Joe Cordiano from the Legislature. She was the province's first openly lesbian cabinet minister, and only the second openly LGBT cabinet minister after Deputy Premier George Smitherman.

George Smitherman is the one who brought back taxpayer-funded sex changes.

When Christian leaders focus in on a version of Christianity that is about feeling good – getting your needs met, following your heart, singing praise songs, reading devotionals by A. W. Tozer, etc. – we are in fact leaving the public square wide open so that secular leftists like Kathleen Wynne can step in and take control. Either we get

serious about recognizing the value of education, career and money, or we continue to let Judeo-Christian morality slip away. The people running things in Ontario have contempt for Christians, and for traditional marriage and traditional families. But they are the ones in charge, not us. Because they put in the time to get the credentials.

If we continue to make Christianity about fun, thrills and seat-of-the-pants "plans" based solely on the "fear of missing out" and "you only live once", then secular Ontario is our future. We have to get serious about studying things that matter, getting real jobs, and doing hard work, so that we can have an influence from the top-down. Self-denial, self-sacrifice, wisdom – that's what we need if we hope to make a difference in this world.

If you want to read what is happening to Christians in Canada, this article from the leftist CBC (government-run, like our own leftist PBS) has a good rundown. This is what's coming here for us.

# What happens to crime rates if we punish police officers for stopping crime?

**Wintery Knight** · 31 May 2015 · Archived copy · Original

This story from Heather MacDonald in the Wall Street Journal is scary.

She writes:

> The nation's two-decades-long crime decline may be over. Gun violence in particular is spiraling upward in cities across America. In Baltimore, the most pressing question every morning is how many people were shot the previous night. Gun violence is up more than 60% compared with this time last year, according to Baltimore police, with 32 shootings over Memorial Day weekend. May has been the most violent month the city has seen in 15 years.
>
> In Milwaukee, homicides were up 180% by May 17 over the same period the previous year. Through April, shootings in St. Louis were up 39%, robberies 43%, and homicides 25%. "Crime is the worst I've ever seen it," said St. Louis Alderman Joe Vacarro at a May 7 City Hall hearing.
>
> Murders in Atlanta were up 32% as of mid-May. Shootings in Chicago had increased 24% and homicides 17%. Shootings and other violent felonies in Los Angeles had spiked by 25%; in New York, murder was up nearly 13%, and gun violence 7%.
>
> Those citywide statistics from law-enforcement officials mask even more startling neighborhood-level increases. Shooting incidents are up 500% in an East Harlem precinct compared with last year; in a South Central Los Angeles police division, shooting victims are up 100%.
>
> By contrast, the first six months of 2014 continued a 20-year pattern of growing public safety. Violent crime in the first half of last year dropped 4.6% nationally and property crime was down 7.5%. Though comparable national figures for the first half of 2015 won't be available for another year, the January through June 2014 crime decline is unlikely to be repeated.

What could the cause of this be? Well, it's the backlash against police officers who defend themselves from assault by criminals who attack them:

> Since last summer, the airwaves have been dominated by suggestions that the police are the biggest threat facing young black males today. A handful of highly publicized deaths of unarmed black men, often following a resisted arrest—including Eric Garner in Staten Island, N.Y., in July 2014, Michael Brown in Ferguson, Mo., in August 2014 and Freddie Gray in Baltimore last month—have led to riots, violent protests and attacks on the police. Murders of officers jumped 89% in 2014, to 51 from 27.
>
> The state's attorney general, Eric Schneiderman, wants to create a special state prosecutor dedicated solely to prosecuting cops who use lethal force. New York Gov.Andrew Cuomo would appoint an independent monitor whenever a grand jury fails to indict an officer for homicide and there are "doubts" about the fairness of the proceeding (read: in every instance of a non-indictment); the governor could then turn over the case to a special prosecutor for a second grand jury proceeding.
>
> **This incessant drumbeat against the police has resulted in what St. Louis police chiefSam Dotson last November called the "Ferguson effect." Cops are disengaging from discretionary enforcement activity and the "criminal element is feeling empowered," Mr. Dotson reported. Arrests in St. Louis city and county by that point had dropped a third since the shooting of Michael Brown in August. Not surprisingly, homicides in the city surged 47% by early November and robberies in the county were up 82%.**
>
> **Similar "Ferguson effects" are happening across the country as officers scale back on proactive policing**

> **under the onslaught of anti-cop rhetoric. Arrests in Baltimore were down 56% in May compared with 2014.**

But there's more – there's also leniency towards property and drug crime, and criminals are getting the message:

> As attorney general, Eric Holder pressed the cause of ending "mass incarceration" on racial grounds; elected officials across the political spectrum have jumped on board. A 2014 California voter initiative has retroactively downgraded a range of property and drug felonies to misdemeanors, including forcible theft of guns, purses and laptops. More than 3,000 felons have already been released from California prisons, according to the Association of Deputy District Attorneys in Los Angeles County. Burglary, larceny and car theft have surged in the county, the association reports.
>
> "There are no real consequences for committing property crimes anymore," Los Angeles Police Lt. Armando Munoz told Downtown News earlier this month, "and the criminals know this." The Milwaukee district attorney, John Chisholm, is diverting many property and drug criminals to rehabilitation programs to reduce the number of blacks in Wisconsin prisons; critics see the rise in Milwaukee crime as one result.

Yes, this is what happens with the leftist mainstream media and the Democrats who run big cities like Baltimore, Ferguson, New York, Cleveland, Seattle, etc. get together and decide that they are more opposed to police officers than they are to criminals. If we as a society choose to intimidate and persecute the police for doing their jobs, then crime goes up. What's my counter to this? Well, it might be time to start thinking about moving out of big cities, especially ones that are run by Democrats. I just don't see how this is going to get fixed in the near-term, given that Obama rolled back welfare reform, and welfare is what causes women to have children before they get married. Fatherless children are more likely to become criminals. The decline of marriage and family that everyone seems to be celebrating as "tolerance" will just make more delinquent children. So, just when we most need the police (since we insist on attack marriage with welfare, no-fault divorce and same-sex marriage) we are actively working to undermine them.

But that's not all I am seeing that troubles me. I see a lot of support for amnesty, and that means a lot more Democrat voters in the future, especially in states with a high concentration of illegal immigrants. Not only that, but there are problems of underfunded pensions at the state level, and the trillion dollar student loan bubble, and the problem of continued funding of entitlement programs like Social Security. And of course we have the $10 trillion that the Democrats added to the debt, and the problems in so many countries in the Middle East, like Iran, Iraq, Libya, Yemen and Syria. The whole Middle East is on fire, and this is bound to affect us as our defense spending declines.

How to respond to this? I think having earnings and savings is key, and maybe trying to move away from areas that are likely to have high crime, and strains on state and local budgets from illegal immigrants, pension obligations, etc. I really have no answer to the student loan bubble, the entitlements, the debt and the foreign policy threats. What I am doing is focusing on earning money (through work) and saving it by restricting spending on luxury items, e.g. – travel, fun, etc.

# Bart Ehrman debates the reliability of the gospels with Craig Evans

**Wintery Knight** · 31 May 2015 · Archived copy · Original

Sherlock Holmes and John Watson

This is the first debate ever between these two top-ranked scholars. Both Evans and Ehrman are probably 2 of the 10 most recognized historical Jesus scholars.

The MP3 audio and a link to the video is here. (From Brian Auten at Apologetics 315)

**Speakers**

Bart Ehrman

Dr. Ehrman, is a graduate of Wheaton College (Illinois), Professor Ehrman received both his Masters of Divinity and Ph.D. from Princeton Theological Seminary, where his 1985 doctoral dissertation was awarded magna cum laude. Since then he has published extensively in the fields of New Testament and Early Christianity, having written or edited twenty-one books, numerous scholarly articles, and dozens of book reviews. Among his fields of scholarly expertise are the historical Jesus, the early Christian apocrypha, the apostolic fathers, and the manuscript tradition of the New Testament.

Craig Evans

Dr. Evans received his B.A. degree in History and Philosophy from Claremont McKenna College, his M.Div. degree from Western Baptist Seminary in Portland, Oregon, and his M.A. and Ph.D. degrees in Biblical Studies from Claremont Graduate University in southern California. Author and editor of more than fifty books and hundreds of articles and reviews, Professor Evans has given lectures at Cambridge, Durham, Oxford, Yale, and other universities, colleges, seminaries, and museums, such as the Field Museum in Chicago and the Canadian Museum of Civilization in Ottawa.

Note: This is a very snarky summary, and I am just paraphrasing things to be silly and funny. Reader discretion is advised.

**Summary**

*Snarky things I made up are in italics.*

Question 1: are the gospels historically reliable?

Bart Ehrman opening speech:

- I used to be an ignorant fundamentalist like you!
- but then I went to Princeton, and now I know better
- to Craig: are there errors in the Bible
- the gospels have some reliable and some unreliable info
- only careless readers don't see contradictions in the gospels
- contradictions in the genealogies
- contradictions in timing of recognizing Jesus as the Messiah
- contradiction about when Jesus died
- contradiction about when the stone was rolled away
- contradiction about who was at the empty tomb
- contradiction about when the disciples went to Galilee
- contradictions in minor details means the gospels are unreliable

Craig Evans opening speech:

- the question is "do the gospels tell us enough about Jesus for faith?"
- the gospels don't tell us everything, but they tell enough for faith
- the extremely early creed in 1 Cor 15:3-7 has an outline of the gospel
- it contains the burial, the appearances to eyewitnesses
- and it agrees with the early sermons of Peter in Acts 2
- the gospels agree with these extremely early summaries
- the gospels are based on earlier sources
- the gospels are corroborated by the Jewish historian Josephus

Question 2: Do the gospels accurately preserve the teachings of Jesus Christ?

Bart Ehrman

- are there any discrepancies in the gospels?
- the gospels have things Jesus said, and things he didn't say
- if the Bible is inaccurate in some minor details, then it's all unreliable
- in the latest gospel, John, Jesus calls himself God and sees himself as divine
- but these high-Christology statements are not in the synoptics
- therefore, Jesus really didn't say these things
- why didn't the synoptics record these claims to divinity
- the author of John changed the words of Jesus and John the Baptist?

Craig Evans

- E.P. Sanders (a non-Christian scholar) says we can know what Jesus taught
- cites E.P.'s list of Jesus' core teachings that are agreed on by most scholars
- Jesus' focus was talking about the Kingdom of God – the rule of God
- Jesus' followers were expected to record and understand the words of Jesus
- It is permissible for the followers of Jesus to have some editorial license

Question 3: Do the gospels accurately preserve the activities of Jesus Christ?

Bart Ehrman

- E.P. Sanders agrees with me that there are discrepancies in the gospels
- E.P. Sanders agrees with me that there are mistakes in the gospels
- If Jesus' followers changed his words a little, then we can't know anything he said
- If the author changes the story a little, then the story was changed a lot
- If there not 100% accurate, then they're not accurate at all
- contradiction of the ordering of Jesus' temptations
- contradiction of the number of animals Jesus rode into Jerusalem
- contradiction of whether Jesus spoke or didn't speak in some instance
- contradiction of what Jesus said on the cross
- contradiction of the number of robbers who speak to Jesus
- Jesus can only say ONE THING when he's on the cross
- the gospel writers have to be in complete agreement

Craig Evans

- E.P. Sanders (non-Christian) lists 7 virtually indisputable facts about Jesus
- just because there are discrepancies, doesn't mean there are no minimal facts
- in additional to E.P. Sanders, there are other facts that are widely-accepted
- many assertions in the gospels are embarrassing to the author
- many liberal scholars think that Jesus was a healer and an exorcist
- all scholars agree on the crucifixion
- most scholars accept the "King of the Jews" placard placed over the cross
- this means that Jesus *was* viewed by his followers as the Messiah

Question 4: Do the gospels contain eyewitness tradition?

Bart Ehrman

- I used to be an ignorant uninformed fundie, *like you all*
- but then I started to study seriously, *not like Craig Evans*
- I changed my mind based on intense research, *not peer pressure*
- *My apostasy has nothing to do with the problem of evil and suffering!*
- I use my brain, *and Craig Evans and you fundies don't use your brains*
- the gospels don't claim to be written by eyewitnesses
- the titles of the gospels were added later
- the gospels don't claim to be written by the authors attributed to them
- the gospels were written anonymously
- the gospels only had names attached in 120-140 AD
- even if gospels were written by eyewitnesses, they are not always accurate
- written 40-60 years after Jesus died
- written in Greek, not Aramaic
- written in different countries
- based on stories that were told and retold and changed over time

Craig Evans

- Richard Bauckham says the gospels are largely based on eyewitness accounts

- the gospels were written while there were still eyewitnesses alive
- the people who met Jesus were there to correct the written accounts
- there were many disputes about things in the early church, so if the early church invented sayings, then why not invent sayings of Jesus to resolve the disputes?
- there is no evidence of things being invented wholesale by the early church
- Pappias says that he talked to Christians who knew the eyewitnesses to Jesus

Question 5: Do archaeologists and historians use the gospels as sources?

Bart Ehrman

- archaeologists do not use the gospels, they just dig things up
- historians do use gospels
- Jesus is not mentioned by any Greek or Roman non-Christian source for 80 years after Jesus' death
- The earliest Jewish source is Josephus, writing 60 years after Jesus' death
- Paul is the earliest source, but says nothing about Jesus' words and deeds
- the earliest sources for words and deeds are the discrepancy-filled gospels
- the gospels are based on telling and re-telling of the stories

Craig Evans

- James Charlesworth has a 700-book about archaeology and the Bible
- the book contains hundreds of references to the four gospels
- the four gospels and Acts are viewed as the best sources for archaeologists
- they provide accurate information about the way things were
- the gospels and Acts helps archaeologists to know where to dig for things
- the Biblical sources are early and based on eyewitnesses
- the gospels and Acts fit well in the first century culture
- the gospels and Acts talk about real events and real places and real customs
- the gospels and Acts talk about real buildings and real public figures and real groups
- the language of the gospels traces back nicely to Aramaic
- the gospels talk about geography and climate
- archaeologists discover many things discussed in the gospels

Question 6: Have the gospels been accurately preserved done through the centuries

Bart Ehrman

- if God inspired the Bible without error, he should have preserved it without error
- but the originals have NOT been preserved without error
- so I no longer accept the inerrancy of the autographs (the originals)
- we don't have the originals
- we only have copies of copies… of copies… of copies… of copies
- and the copiers all made mistakes
- the first manuscripts are decades later
- and the manuscripts we have are different from one another
- the earliest copies have the most mistakes

- even if we have many copies, they are late, so we don't know what the original said
- we don't have early manuscripts

Craig Evans

- we know where the discrepancies in the manuscripts are
- the discrepancies are marked in your Bible
- the discrepancies affect peripheral issues
- some discrepancies are supported by other verses
- Mark doesn't have the appearances, but 1 Cor 15 does, and it's earlier
- the errors are things like spelling and grammar errors, typos, etc.
- we have fragments that are earlier than the full manuscripts
- some early manuscripts have errors, but other early manuscripts are correct

Question 7: Do scribal errors and textual variants significantly impact any teaching of Jesus or any important Christian teaching?

Bart Ehrman

- the woman caught in adultery is a late addition
- the ending of Mark is a late addition
- can we handle snakes or can't we?
- did Jesus sweat blood or didn't he?
- some manuscripts have errors – that should not be allowed by God
- some scribes are careless – that should not be allowed by God
- *we have to have perfect copies of the originals, or I won't believe!*
- *if God really inspired it, it all has to be perfect! Perfect! I was lied to!!!!*
- *if the snake-handling verse isn't there, then the whole Bible is lies! Lies!*

Craig Evans

- no variants impact any teaching of Jesus or significant Christian teaching
- the vast majority of the manuscripts agree on 98-99% of the text
- often, the theology *gives rise* to a variant, which is introduced later
- variants aren't central enough to affect any theological doctrines

And then there are concluding speeches by each speaker.

I made this summary based on the video, which is here on Apologetics 315.

# Should Christians be motivated by the fear of missing out (FOMO)?

**Wintery Knight** · 1 June 2015 · Archived copy · Original

Theology that hits the spot

Dina was off from her stressful job last week, so we spent some time talking over some articles that we found on the culture. We specifically talked about what is motivating young people, so I wanted to write something about that.

**FOMO: Fear Of Missing Out**

Here's a leftist New York Times article explaining where FOMO comes from:

> It's known as FOMO, or "fear of missing out," and refers to the blend of anxiety, inadequacy and irritation that can flare up while skimming social media like Facebook, Twitter, Foursquare and Instagram. Billions of Twitter messages, status updates and photographs provide thrilling glimpses of the daily lives and activities of friends, "frenemies," co-workers and peers.
>
> […]When we scroll through pictures and status updates, the worry that tugs at the corners of our minds is set off by the fear of regret, according to Dan Ariely, author of "Predictably Irrational" and a professor of psychology and behavioral economics at Duke University. He says we become afraid that we've made the wrong decision about how to spend our time.
>
> […]A friend who works in advertising told me that she felt fine about her life — until she opened Facebook. "Then I'm thinking, 'I am 28, with three roommates, and oh, it looks like you have a precious baby and a mortgage,' " she said. "And then I wanna die."

It's like they want to run a race to do fun and exotic things with their peers, and not finish last.

Anyway, I want to begin this post with examples of FOMO behavior I have personally encountered.

**FOMO Travel**

Dina and I read and discussed this article by Alain de Botton in *The European* – notice the emphasis on travel and having fun, sophisticated experiences:

> We're continually being bombarded with suggestions about what we might do (go jet skiing, study in Colorado, visit the Maldives or see the Pyramids). We're always hearing of the amazing things friends have done or are going to do: 'there was this great bar we all went to …'; 'she's getting married in a little country church, then

> we're having a picnic…'; 'the sun was glinting on Sydney Harbour…' There are endless hints of the allure of life in other places: an article about family-friendly restaurants in Brooklyn, a crime novel set in Trieste, the departure board at the airport with its list of places only a plane trip away: Moscow, Bangkok, Addis Ababa… The modern world makes sure we know at all times just how much we're missing. It is a culture in which intense and painful doses of FOMO (Fear Of Missing Out) are almost inevitable.

What's interesting is this – how does FOMO travel affect young, unmarried Christians?

Travel through missions work seems to be the FOMO activity of choice for at least a few young, unmarried Christians. One of my best friends who is married to another of my best friends told me about her missions trip to a European country. I asked her why she did it, since it meant lost savings, lost earnings, lost work experience, etc. (She gave up a year of earnings, and she had a great job in engineering). Her answer was that she did it for the adventure. I have a hard time hearing Jesus say that he was going to do something because he was bored and wanted an adventure. Especially when it's $30,000 in costs, $60,000 of lost income, and lost work experience – per year. This was before the time of the Internet, though, when missionary work actually made sense. I just don't think it's worth spending that kind of money for the impact you make. The people I know who went on missionary trips just wanted to feel spiritual, look spiritual, and have a fun "life experience" vacation. One missionary told me that she was desperate to get away from her boring mid-Western roots.

If you really want to share Christ effectively with people in other countries, then you can start a blog and pay the tiny costs for it out of your earnings from your day job – that's what I do. I get more people from Europe reading my blog than I could contact in a year of missionary work. I Skype with the people who are interested in Christianity from these countries (Scotland, Northern Ireland, England, Canada, etc.), as well. Meanwhile, I keep working my not-exciting job, so my savings increase, and my resume remains gap-less. This is good stewardship of finances, and self-denial prepares your character for the hard work of marriage and parenting. The Bible says that those who do not work should not eat. And Paul says that he built tents so that no one could accuse him of taking on missionary work for financial gain.

You can tell whether a person is sincere in their missionary intentions by looking at how responsible they've been in their decision-making. If a person has gone into debt paying for fun, thrilling activities like skydiving, ziplining, surfing, etc., then it's FOMO travel. We must look past the spiritual smokescreen, and tell young people to grow up.

After all, if defending God's honor was the missionary's main goal, then the real battlefield would be the university.

Bill Craig puts it best:

> **William Lane Craig** (Famed Christian apologist and philosopher): "It is at the university that [our most influential people] will formulate or, more likely, simply absorb the worldview that will shape their lives. And since these are the opinion-makers and leaders who shape our culture, the worldview that they imbibe at the university will be the one that shapes our culture. If we change the university, we change our culture… If the Christian worldview can be restored to a place of prominence and respect at the university, it will have a leavening effect throughout society."[3]

If serving God is your goal, look to the university

There is already a perfectly fine university right next door – no need to fly to Europe to find one! Remember, the university that took your faith away, or maybe the faith of someone you cared about? Yeah, *it's still there in your home town!* And it's still ruining the lives of thousands of young people. It seems to me that it's better stewardship to stay here and work, then give money to groups like Reasonable Faith. And you can start a blog, teach in church and invite scholars to the local university, too. That costs almost nothing, and it produces better results.

**What about Jesus?**

Sometimes, it's a good idea to look beyond the words of the Bible and reflect on the overall message of it at a higher level. When I look in the Bible, I see that Jesus went through a lot of suffering in obedience to God in order to secure the salvation of people who did not even like him. And it's from this sacrifice on our behalf that his claim on our obedience comes. There are things that I don't like to do that I do anyway because they work to serve God. Jesus life's ambition was not to do things that were easy, or that made him happy. Experienced Christians do things that are not fun, because these things are right and *because they solve the real problem*.

# J. Warner Wallace: practical advice on becoming an effective one-dollar apologist

**Wintery Knight** · 1 June 2015 · Archived copy · Original

As promised, below is my summary of J. Warner Wallace's most recent Please Convince Me podcast, and my comments.

Details:

> J. Warner continues examining the Christian life in light of God's desire for all of us to become Christian Case Makers. Jim reads listener email highlighting some of the typical frustrations involved in starting an apologetics ministry and then provides a template to help you become the Case Maker you've always wanted to be. Jim also answers the question: Why Didn't Jesus Reveal Scientific Facts to Demonstrate His Deity?

You can grab the MP3 file here.

This episode is probably one of the best episodes of the Please Convince Me podcast I've ever heard, because it's practical. I like listening to the cold-case detective talk about practical things.

Summary:

- e-mail from someone trying to start an apologetics ministry for college students and facing difficulties
- the challenge of getting Christians to take an evidential approach to their faith
- tips for getting Christians exposed to apologetics materials
- there are a lot of Christians who are making a daily contribution to apologetics even with a full-time job
- Wallace himself started his apologetics ministry while working full-time
- Wallace, as an atheist, was initially skeptical of religion because he thought it was too focused on money
- His plan as an apologist was to take money right out of it – do it for free, and be self-funded
- 1 Cor 9: "But I have made no use of any of these rights, nor am I writing these things to secure any such provision."
- People in ministry deserve to be supported, but Paul dispensed with that right to raise support for his ministry
- Paul self-financed his ministry in order to avoid all appearance of doing his ministry for financial gain
- Similarly, Wallace's goal of being self-financed was to avoid the appearance of doing ministry for money
- If you plan your life carefully enough in the first half, you'll have the money you need to do ministry in the second half
- Wallace wanted the liberty to pursue things without any financial need, and he achieved this by working full-time
- The problem with money is that it often causes us to not cooperate well with other people
- Ministries and churches sometimes avoid working with other people, like scholars and apologists
- They do this because they are afraid of losing their own people to these scholars and apologists
- Wallace wants to get the money out of it and be able to serve anyone with a need
- Wallace: you need to work hard in the first half of life, in order to have freedom to serve in the second half
- First area: financial preparation – you need to escape financial needs so that it doesn't restrict your passion
- Wallace married well, to a woman who was a good saver, very frugal, and not materialistic – he saved 30% of his income
- Second area: need to prepare yourself educationally for being able to teach apologetics materially
- That doesn't always mean doing the MA in apologetics, but you do have master the material – continuous

learning
- Third area: try to focus on the parts of your career that might have some connection to apologetics
- You want to have experiences in your work where you learn something that can be used in your ministry
- Wallace actually made career choices to focus on evidence, case-making and teaching
- It's hard because men are naturally competitive – we focus on promotions, money and consumer goods
- It's not always the right move in your career to get promoted if it takes you away from skills related to apologetics
- Christian apologists need to not neglect to develop leadership skills and to develop influence
- He recommends a book called "Platform" by Michael Hyatt, which Doug Groothuis also recommended to me
- If you are financially independent, then if an unpaid opportunity arises, you have the freedom to take it
- You can volunteer for positions that you want to have, instead having to take what pays
- Wallace writes for Breakpoint, and he is able to dispense with the 1000-word limit that gets a fee
- Money opens up the danger of corruption, so it's another reason to just take it out of the picture
- You can be very effective in your apologetics ministry while still working full-time
- The second half is a good time to have even more freedom because your kids are grown up
- A good wife can really help you if she is picking up the slack so that you can work on your ministry
- Jane Pantig works for Ratio Christi, an organization that promotes apologetics on campus
- Jane's model: she is in full-time ministry, with a BS in biology and an MA in apologetics (Biola)
- Jane is able to get many high-quality speakers to speak for free/cheap at San Jose State University

The rest of the podcast deals a question that was asked at the San Jose State University event that Wallace did for Ratio Christi. I blogged about it this morning. I  laughed my butt off while listening to that podcast, starting at around 62:50 and on. It's pretty funny when he does the role-pay between Jesus and the people listening to him.

**My comments:**

The reason I wanted to post this is because I think that a lot of people feel obligated to quit their jobs and raise support because they think that you have to do apologetics full time. It's not true. Wallace explains that he worked as a cold-case detective until just recently when he took his pension. His pension is now underwriting his ministry. Similarly with me, I work a full-time job and run the blog out of my income. In addition, I probably donate a few thousand dollars each year to people who are organizing apologetics lectures, debates and conferences – events featuring speakers I like best.

This blog gets about 1 million page views per year, depending on the year (election years are better), so that's not an insignificant impact. In addition, I meet a lot of young Christians in university in different countries who want advice or mentoring, so I spend a few hours here and there mentoring them, and sometimes sending them rewards (books) for doing difficult degrees at good universities and getting good grades. My full-time job helps me to do all of these things. And before I could have a full-time job in information technology, I had to put in the time and effort to get the Bachelor and Masters degree in computer science.

So I think that Christian men especially need to be thinking about how much the apologetics enterprise of a one-dollar apologist relies on money. We really need to be thinking about that early on, in high school, and choosing to study hard things and to do well in those hard subjects. The higher-paying jobs that are more secure tend to be in fields like science, math, technology and engineering. We need to be thinking of doing these courses in high school – especially the men, but also the women – in order to be able to pay for our apologetics ministry. In addition, my decision to not marry (unless I meet a woman who can support me in my plan) gives me even more freedom to work on my ministry while working full time.

I fully approve of what Wallace said about self-financing your apologetics ministry – and supporting other

apologetics ministries – in order to avoid all appearance of self-interest. In fact, I have long admired Wallace for his intentional, practical way of doing his ministry. He doesn't take donations, and he gives away tons of materials for free. I like that.

# William Lane Craig: Christians are idling in intellectual neutral

**Wintery Knight** · 1 June 2015 · Archived copy · Original

The video is 40 minutes long.

The full transcript is available here on the Reasonable Faith web site. (H/T Think Apologetics)

Excerpt:

> No one has issued a more forceful challenge to Christians to become intellectually engaged than did Charles Malik, former Lebanese ambassador to the United States, in his address at the dedication of the Billy Graham Center in Wheaton, Illinois. Malik emphasized that as Christians we face two tasks in our evangelism: saving the soul and saving the mind, that is to say, not only converting people spiritually, but converting them intellectually as well. And the Church is lagging dangerously behind with regard to this second task. Our churches are filled with people who are spiritually born again, but who still think like non-Christians. Mark his words well:
>
> I must be frank with you: the greatest danger confronting American evangelical Christianity is the danger of anti-intellectualism. The mind in its greatest and deepest reaches is not cared for enough. But intellectual nurture cannot take place apart from profound immersion for a period of years in the history of thought and the spirit. People who are in a hurry to get out of the university and start earning money or serving the church or preaching the gospel have no idea of the infinite value of spending years of leisure conversing with the greatest minds and souls of the past, ripening and sharpening and enlarging their powers of thinking. The result is that the arena of creative thinking is vacated and abdicated to the enemy.
>
> Malik went on to say:
>
> It will take a different spirit altogether to overcome this great danger of anti-intellectualism. For example, I say this different spirit, so far as philosophy alone—the most important domain for thought and intellect—is concerned, must see the tremendous value of spending an entire year doing nothing but poring intensely over the *Republic* or the *Sophist* of Plato, or two years over the *Metaphysics* or the *Ethics* of Aristotle, or three years over the *City of God* of Augustine. But if a start is made now on a crash program in this and other domains, it will take at least a century to catch up with the Harvards and Tübingens and the Sorbonnes—and by then where will these universities be?
>
> What Malik clearly saw is the strategic position occupied by the university in shaping Western thought and culture. Indeed, the single most important institution shaping Western society is the university. It is at the university that our future political leaders, our journalists, our lawyers, our teachers, our scientists, our business executives, our artists, will be trained. It is at the university that they will formulate or, more likely, simply absorb the worldview that will shape their lives. And since these are the opinion-makers and leaders who shape our culture, the worldview that they imbibe at the university will be the one that shapes our culture.

And:

> The great Princeton theologian J. Gresham Machen warned on the eve of the Fundamentalist Controversy that if the Church loses the intellectual battle in one generation, then evangelism would become immeasurably more difficult in the next:
>
> False ideas are the greatest obstacles to the reception of the gospel. We may preach with all the fervor of a reformer and yet succeed only in winning a straggler here and there, if we permit the whole collective thought of the nation or of the world to be controlled by ideas which, by the resistless force of logic, prevent Christianity from being regarded as anything more than a harmless delusion. Under such circumstances, what God desires us to do is to destroy the obstacle at its root.

> The root of the obstacle is to be found in the university, and it is there that it must be attacked. Unfortunately, Machen's warning went unheeded, and biblical Christianity retreated into the intellectual closets of Fundamentalism, from which it has only recently begun to re-emerge. The war is not yet lost, and it is one which we must not lose: souls of men and women hang in the balance.

This lecture is an excellent opportunity for us all to ask ourselves: what are we doing to influence the university? Do you have a plan?

Many of the strongest people who are now opposed to Christianity raised in two-parent Christian homes, and went to church for a decade before going off to the university. I'm thinking especially of people like Tim Gill, in Colorado. At university (and even increasingly in high school) they turned away from Christianity. All their peers and the adults could not answer their questions. As adults, they were able to get money, power and influence. Many of them are using it against Christ and his kingdom – kicking away the ladder that they climbed to success on. Why is this? Unfortunately, many of us are not willing to do what works – pick up the Lee Strobel books and read them. Especially "The Case for a Creator".

# Seven ways to cut government spending and anti-business regulations

**Wintery Knight** · 2 June 2015 · Archived copy · Original

This is an article from The Federalist.

The 7 policies:

1. Repeal ObamaCare
2. Health Savings Accounts
3. Means-test Social Security
4. Restart economic growth
5. Re-reform welfare
6. Save the cities
7. Federalism

Since we just had a horrible quarter of negative GDP growth, (-0.7%), I think I'll focus on #4:

> Since the financial crisis, the United States has slipped into the Obama rate of growth, a permanent state of semi-stagnation. We've been through market crashes and recessions before, but usually after a year or two of pain, we get a strong burst of growth to make up for it. This time, we're in the long twilight of a non-recovery recovery. The economy is technically growing again, but at such a feeble rate that it hardly feels like it. It's the kind of economy in which the unemployment rate falls, not because the long-unemployed are all getting jobs again, but because so many people are dropping out of the workforce altogether.
>
> This low rate of growth makes the burden of the welfare state greater, because we can no longer grow our way out from under its expenses. At the same time, it makes the welfare state harder to get rid of. You can't just tell the unemployed to go out and get a job when the economy is still flopping around and gasping like a fish in the bottom of a bass boat. If we're going to expect people to be more self-reliant, they must also have a sense of economic hope.
>
> There are a whole range of reforms we can champion to promote renewed economic growth. These include the old-fashioned tax cuts that the reform conservatives scoff at. But they also include getting rid of a whole host of intrusive regulations. On the highest level, this would include halting and rolling back the EPA's crusade against cheap energy. We've seen in the past year, for example, that the only stimulus that really stimulates is cheap gasoline.
>
> On the lower level, it could include things like crusading against unnecessary and burdensome business licensing requirements, such as the recently overturned Texas law requiring licenses for hair-braiding, which the court found failed to "advance public health, public safety, or any other legitimate government interest." You can say that again, about a great many laws. There is no shortage of other ideas for getting the government out of the way of growth, for the simple reason that there is no shortage of intrusive government meddling.

> Or we could solve the problem from the other end, targeting taxes and regulations that make everyday goods for the poor more expensive. It is the poor, for example, who struggle to keeping their gas tanks filled so they can drive to work—which is what makes our massive gas taxes, which politicians are always scheming to increase, so scandalous. So we can make economic growth go farther by imposing fewer costs on those who are trying to provide the necessities of life.
>
> Economic growth always shrinks the welfare state by helping more people rise above poverty and above the

> need for government assistance. But it also creates the conditions for bigger reductions in the welfare state. Remember that what made the welfare reform of the 1990s such a big success was a booming economy with low unemployment, a growing work force, and rising wages. So when people were required to work, they found that the private economy was open to them.

The EPA raises the cost of electricity for everyone, and this is a hidden tax on commercial activity which slows down our entire economy. If we want to get the economy moving, we have to spur our own domestic energy industry by promoting policies that increase energy production – like the Keystone XL pipeline. Economic growth creates jobs, and creating jobs should be our number one concern – get people off of government dependency.

# When can Christians start dating?

**Wintery Knight** · 2 June 2015 · Archived copy · Original

Painting: “Courtship”, by Edmund Blair Leighton (1888)
First, read this article from a Crisis Pregnancy Center worker.

Excerpt:

> I have concerns about the number one way that our culture chooses to perpetuate the cancer of broken marriages and failed relationships– underage dating.
>
> You can follow them on Facebook – the failed attempts at love, I mean. Somebody is always changing their status from “in a relationship” to “single.” Unfortunately, a huge number of these disappointed lovers are too young to be legally married. I wonder sometimes if I am the only one who winces to hear a thirteen-year old speak with cavalier abandon of his or her “ex?” Since when is it considered healthy and acceptable for underage people to be in “relationships?” Just what do parents and educators expect to be the result of the romantic conquests of these middle-school children and young high school students? The results I’ve witnessed personally are beyond disturbing; they are downright sinister, and have caused me to question whether or not those who claim to champion marital fidelity and family values are paying any attention at all to the standards we are passing to our children.
>
> The trouble with underage dating is that it presents an entirely faulty view of what interaction with the opposite gender should be about. Rather than placing emphasis on building one strong relationship with one person at a stage of life when a marital commitment is feasible, dating encourages young people to pour their energies into consistently seducing other young people at a time when neither of them are capable of making any long-term commitments. Their “relationships” are destined to fail from the get-go because they are founded on unhealthy perceptions of love and not backed by any real necessity to stick it out.
>
> The beauty of marriage, as it was intended to be, is that it teaches two people of opposite genders to learn to work through incompatibilities and give of themselves. In the same way, the great ugliness of dating as it is practiced by our culture and portrayed by our media, is that it teaches two people of opposite genders to be

> selfish by giving them an easy “out” when things don’t go according to their initial feelings. I believe it is fair to say that this form of dating is a training manual for divorce, because it encourages young people to grow accustomed to giving their hearts away and then taking them back.
>
> Sadly, parents who should know better continue to display shocking naïveté regarding the absurd practices of driving their twelve year olds out on a “date,” or purchasing provocative clothing for their sixteen-year-olds, or sympathizing with their broken-hearted fourteen-year-olds by assuring them that they’ll “find someone better.” “They’re just having fun,” they’ll tell us, rolling their eyes at what they consider to be our tightly wound principles. I work a volunteer shift at Crisis Pregnancy Clinic where I witness every week the ruined lives and broken dreams that “fun” has left with our youth.

And now here’s my take.

Basically, relationships are not meant to be entertainment, but to lead to marriage. So, you can start dating whenever the woman and man are able to demonstrate to each other that they are prepared to fulfill their roles in a future marriage.

For example, the woman should be able to show that she has been able to maintain commitments to caring for others through some period of time, maybe with small children or pets. She should be voluntarily entering into relationships and responsibilities with other people where she is giving of herself – like volunteering at a crisis pregnancy center or caring for an ailing or elderly relative. That shows potential suitors that she has the right attitude to relationships – serving others self-sacrificially, and not looking for tingles and excitement. She should be able to show that she is good at making commitments and solving problems by studying hard subjects in school, i.e. – STEM subjects. And then she should be able to get a job in a difficult field and save money, instead of wasting it on frivolous fun activities. That shows a man that she can do hard things self-sacrificially – even if she doesn’t feel like it.

And for the man, he should be able to show that he is able to do his roles – protector, provider and moral/spiritual leader. He should be able to prove that he is able to mentor and guide other people to learn things and do things that will make them more effective Christians. That’s moral and spiritual leadership. Spiritual leadership is not just agreeing with people, it means leading them to serve God more effectively, perhaps by helping others to make better decisions about their education and careers. A man should have studied a subject that is going to allow him to find work. It’s not enough to be a hard worker, he has to be able to show from his resume and bank account that he understands how to earn, save and invest money. I don’t think that an unemployed man should start a relationship with a woman, because cannot demonstrate ability in the provider role. He needs to show that he can work self-sacrificially, even if the work does not make him feel happy. He also needs to prove that he is comfortable sharing it with others – since he will have to share with his family when the time comes.

I think there are other ways for men and women to show that they are ready for marriage, but those are some ways. The key thing is that people shouldn’t be dating until they are able to show that they know the roles that they are expected to fill in marriage as men and women. They should also be looking for the right things in others. They can’t be looking for the shallow things that give them tingles, like looks, athleticism, etc. Before men and women start dating, they have to be able to show that they are working on being able to handle their responsibilities, and they have to show that their selection criteria for the opposite sex are at least partly based on the responsibilities that the opposite sex has in a marriage.

# J. Warner Wallace: 10 reasons why you hesitate to share your faith

**Wintery Knight** · 2 June 2015 · Archived copy · Original

Want to be brave? Then talk about things you know
He has links to 10 articles in his post.

Here are the titles:

1. We mistakenly think our beliefs about Christianity are entirely subjective
2. We think we have to be a theologian or apologist to share effectively
3. We aren't sure *who* we should share with
4. We are simply afraid to take the first step
5. We think we have to know someone well before we can share the truth
6. We're not sure how to engage people (especially people we don't know well)
7. We're afraid of feeling uncomfortable at any point in the process
8. We hold pessimistically low expectations of being successful
9. We have been conditioned to speak a Christian language foreign to the secular culture
10. We think our success as evangelists is entirely dependent on our individual effort

Number 1 is the most important to me, but the one that I am seeing the most in church is number 7.

The biggest problem I am seeing is that people think that Christianity should make them feel good, and that it should make other people like them. Even if we are doing spiritual things, the overall goal is for us to feel good and be liked as we do them. Well… people are reacting very angrily to Christianity these days, so normal Christianity is not going to make you feel good or be liked by others. The animosity to Christianity is primarily for one reason – our moral rules on sexuality. A lot of people are not interested in hearing about the truth claims of Christian theism, e.g. – Jesus is God stepping into history, since they are already blocked off from Christianity because of their commitment to engaging in sexual activity.

Wallace's solution is for us to get used to the fact that Christianity is not supposed to make us happy, or make people like us:

> So my first goal in training yesterday was to simply help these young men and women *get comfortable with discomfort* by taking their eyes off themselves and placing them firmly on God. I tried to remind them that *character* is more important than *comfort*. It's easy to get caught up in thinking that our worldly image is more important than our heavenly mission. As Christians, we ought to know better:

> **1 John 2:15-17**
> Do not love the world nor the things in the world. If anyone loves the world, the love of the Father is not in him. For all that is in the world, the lust of the flesh and the lust of the eyes and the boastful pride of life, is not from the Father, but is from the world. The world is passing away, and also its lusts; but the one who does the will of God lives forever.
>
> **James 4:4**
> You adulteresses, do you not know that friendship with the world is hostility toward God? Therefore whoever wishes to be a friend of the world makes himself an enemy of God.
>
> Sometimes our fears expose what's really important to us, so they're a good place to assess and address our priorities. What are you afraid of? What's keeping you from sharing the Gospel with the people in your life, even the strangers who you meet every day? It might just be that (like me) you're often more concerned with your own comfort than you are with the cause of Christ. It's easy to worry more about the world we see than the Kingdom that matters. But we can change all that. We can conquer our fears by simply changing our focus.

Yes, Christianity is not meant to be fun. If you are asking yourself how to merge Christianity with your desire to be happy and to feel good, you're doing Christianity wrong.

My solution to the problem of feeling uncomfortable when talking about Christianity to non-Christians is to talk about science. Specifically, to talk about mainstream scientific discoveries around cosmology, biology, paleontology, embryology, and so on. No one is going to get mad at you for that – not even at work. The best way to be able to get to Christian specifics, especially the resurrection, is to first establish the existence of a supernatural Creator and Designer from mainstream scientific evidence. Then we can talk about whether history shows us that miracles have occurred, e.g. – that Jesus rose from the dead. Before you can have miracles, you need God right? Otherwise, who is there to do the miracles? So, start with the easy stuff first – science. People feel more comfortable talking about science because the findings of science are universally accessible to all religions, and even to no religion at all.

The secret to talking about God with strangers is not to talk about things that are private and subjective. Don't start with your subjective Christianese testimony – that just makes them uncomfortable. As uncomfortable as you would be if a witch doctor or voodoo priest started telling you their testimony with all their weird spiritual language. So don't do that. Talk about pure science using pure scientific language, until you defeat the presumption of naturalism. When the naturalism is dead, turn your attention to the historical claims of Christianity. When the historical claims are defended, then turn to defending Christian theism from philosophical arguments like the problem of evil, the hiddenness of God, and so on. Start from the things that even non-religious people accept, and they will discuss them with you easily. Don't annoy them with Christian theology and your religious experiences. That just makes them uncomfortable, because *they can't see how any of what you are saying is connected to reality*. It's like you are trying to get them to take your make-believe seriously – they don't know what to say back without offending you.

The only downside to this approach (which works, trust me) is that you have to study first. Which is probably why some Christians don't want to do it.

But, I have books to help you. Wallace actually has a new book out where he goes over the scientific arguments for a Creator and Designer. It's actually on sale (pre-order) on ChristianBook.com right now. If you want to read something easy and good right now, get yourself a copy of Lee Strobel's "The Case for a Creator". You should also get the 3-DVD pack on intelligent design from Amazon.com if you want to watch something instead of reading.

# Clinton Foundation fundraising branch in Sweden lobbied State Department for sanction relief

**Wintery Knight** · 3 June 2015 · Archived copy · Original

Hillary Clinton: secretive, entitled, hypoctritical

More bad news for the Clinton machine, this time reported in the Washington Times.

Excerpt:

> **Bill Clinton's foundation set up a fundraising arm in Sweden that collected $26 million in donations at the same time that country was lobbying Hillary Rodham Clinton's State Department to forgo sanctions that threatened its thriving business with Iran, according to interviews and documents obtained by The Washington Times.**
>
> The Swedish entity, called the William J. Clinton FoundationInsamlingsstiftelse, was never disclosed to or cleared by State Department ethics officials, even though one of its largest sources of donations was a Swedish government-sanctioned lottery.
>
> **As the money flowed to the foundation from Sweden, Mrs. Clinton's team in Washington declined to blacklist any Swedish firms despite warnings from career officials at the U.S. Embassy in Stockholm that Sweden was growing its economic ties with Iran and potentially undercutting Western efforts to end Tehran's rogue nuclear program, diplomatic cables show.**
>
> "Sweden does not support implementing tighter financial sanctions on Iran" and believes "more stringent financial standards could hurt Swedish exports," one such cable from 2009 alerted Mrs. Clinton's office in Washington.
>
> Separately, U.S. intelligence was reporting that Sweden's second-largest employer, telecommunications giant Ericsson AB, was pitching cellphone tracking technology to Iran that could be used by the country's security services, officials told The Times.
>
> **By the time Mrs. Clinton left office in 2013, the Clinton Foundation Insamlingsstiftelse had collected millions of dollars inside Sweden for his global charitable efforts and Mr. Clinton personally pocketed a record $750,000 speech fee from Ericsson, one of the firms at the center of the sanctions debate.**

Now the last time I blogged about these issues, I think what was said was that if a company had offices in America, as Ericsson does, then they would be subject to sanctions from America for dealing with Iran, depending on what they were doing.

What's interesting is that the responses to inquiries from the media:

> The foundation, however, declined repeated requests to identify the names of the specific donors that passed through the Swedish arm.
>
> A spokesman for Mrs. Clinton's 2016 presidential campaign offered no comment or explanation despite two weeks of requests.
>
> When Mrs. Clinton became President Obama's secretary of state in 2009, she vowed to set up a transparent review system that would ensure any of her husband's fundraising or lucrative speaking activities were reviewed for possible ties to foreign countries doing business with her agency, insisting she wanted to eliminate even the "appearance" of conflicts of interests.
>
> But there is growing evidence that the Clintons did not run certain financial activities involving foreign entities by the State Department, such as the Swedish fundraising arm and the Clinton Giustra Sustainable Growth Initiative based in Canada, or disclose on her annual ethics form the existence of a limited liability corporation that Mr. Clinton set up for his personal consulting work.

The Washington Times article is a must-read, and please do share it. We have to make sure that we do not elect another Democrat who will take our country even further away from its conservative roots. If exposing Clinton Foundation finances stops the Democrats from getting more pro-abortion, anti-marriage Supreme Court picks, then that's what we have to talk about.

By the way, this is not the first story to come out on dealings like this… we already had one from Canadian allies of the Clinton Foundation, and another from a Ukrainian donor who was dealing with Iran.

# Insurance companies are raising their premiums in response to Obamacare

**Wintery Knight** · 3 June 2015 · Archived copy · Original

This story is from Investors Business Daily.

Excerpt:

> We pointed out that several states had already tried these "guaranteed issue" and "community rating" reforms, and they'd been a disaster. Higher premiums encouraged the young and healthy to forgo insurance, knowing that they could sign up after they got sick, which drove premiums still higher.
>
> ObamaCare was supposed to avoid this fate by heavily subsidizing insurance premiums and imposing a tax penalty for going uninsured, to get the young and healthy to sign up and keep premiums down.
>
> But when IBD's Jed Graham looked at the limited number of filings two weeks ago, he noted that insurers were asking for hikes that averaged 18.6%. And as more rate filings became public, that picture hasn't changed.
>
> In Virginia, for example, just one plan came in with a proposed rate increase below 10%. Three are above 25%. In Texas, Scott & White wants a 32% boost and Humana 30%. Alliance Health Plans in Georgia says that it needs a 37.85% increase.
>
> The reasons given for these huge increases? The insurance pool is older and sicker than expected.
>
> Blue Cross Blue Shield of Illinois, which enrolled more than 329,000 people in the state, wants a 29% hike, saying, "Actual claims experience of the members … is significantly higher than expected."
>
> CareFirst in Maryland said that its per-enrollee claims shot up 49% in the first year of ObamaCare. WPS Health Plan also cited "the impact of numerous additional taxes and fees imposed upon our plan" as part of the reason why it wants a 19% boost.

It sounds so nice to feelings-oriented voters to cover all kinds of things that some people like, like birth control and sex changes. It sounds so nice to feelings-oriented voters to not turn people away with pre-existing conditions. It sounds to nice to feelings-oriented voters for every plan to cover maternity care – even for people who don't use it, e.g. – men. But the simple fact of the matter is that when you force insurers to include more coverages and extend coverage to more people, then there will be more claims, and the next rounds of premiums must rise to cover the increased number of claims. That's how insurance works. Although I doubt the average feelings-oriented Democrat understands that.

More:

> What's more, these big increases are coming before ObamaCare's temporary industry bailout programs go away. They were specifically designed to protect insurers from big losses, allowing them to keep premiums lower than they might have otherwise.

The cost of claims is going higher. The subsidies to cover the higher claims disappear. The private insurance companies cannot pay the higher claims. The private insurance companies close. The government takes over the health care industry. Taxes go up, to pay for a bloated and wasteful government-run health care system. Patients are forced to wait longer for care, even after paying into the single payer system their whole lives. Conscience protections disappear. More and more unethical behaviors that require health care get covered by the single payer system, encouraging patients to be less responsible since health care is "free". Tax rates go higher to cover skyrocketing costs of "free" health care. Government decides to cut costs by implementing coerced abortion and euthanasia.

All we have to do is look to Europe and Canada to see how it works. This is how the socialist game plan plays out.

# Are secular concerns about overpopulation science-based or science fiction?

**Wintery Knight** · 3 June 2015 · Archived copy · Original

Sherlock Holmes and John Watson

Christian apologists should care about this Weekly Standard story, and I'll explain why at the end of this post.

The story begins by profiling the king of overpopulation hysteria, a man named Paul Ehrlich. Ehrlich's hysterical predictions were at least partly responsible for rise in public support for secular causes such as abortion, euthanasia, global warming alarmism, eugenics, and so on. But, as the article notes, Ehrlich's predictions were wrong. Basically, you can think of overpopulation as a the "Left Behind" doomsday story of the left.

One quick example of Ehrlich's failure at predictions:

> Of course, it's been obvious that Ehrlich was not just misguided, but an actual charlatan, since the 1970s. The late economist Julian Simon spent most of his career exposing Ehrlich's errors. You may remember the Ehrlich-Simon wager. In 1980, Simon bet Ehrlich $1,000 that over the course of the following decade the price of a basket of commodities—any resources Ehrlich chose—would drop, as proof that Ehrlich's ravings about the relationship of population to scarcity was wrong.
>
> Simon was correct. Ten years later Ehrlich sent him a check, with no note. Never prone to either civility or introspection—he frequently called people he disagreed with "fools," "idiots," "clowns," and worse—Ehrlich later told the *Wall Street Journal,* "If Simon disappeared from the face of the Earth, that would be great for humanity." Hell of a guy.

The part of the article I want to look at it is how this disproved charlatan was supported by the secular left:

> In 1990—the same year he lost his bet with Julian Simon—Ehrlich was awarded a million dollar MacArthur "genius" grant and was simultaneously feted across the Atlantic with Sweden's Crafoord Prize, which was worth just about half a million. In 1993 the Heinz Family Foundation bestowed on him its first Heinz Award. This little trinket came with $100,000 in cash and the most delusional praise possible, claiming that Ehrlich's "perspective, uncommon among scientists, has made [him and his wife] the target of often harsh criticism—criticism they accept with grace as the price of their forthrightness." Which is a peculiar way of explaining that Ehrlich was completely wrong and that he responded to all such evidence with ad hominem attacks. Five years later, in 1998, he was awarded the Tyler Prize,which comes with $200,000. The money train kept on rolling.
>
> And it wasn't just dumb philanthropists. "Serious" organizations continued to honor him. In 2001, the American Institute of Biological Sciences gave Ehrlich its "Distinguished Scientist" award. In 2009, the World Wildlife Fund featured him as a guest lecturer in their flagship speaker series. In 2012, he was inducted into London's Royal Society, which is Britain's nearly 400-year-old national academy of science. There is more. So

> much more.
>
> Paul Ehrlich's entire career stands as a monument to the ideological imperatives of the world's elites and the extent to which they exist not just independent from, but in actual opposition to, both science, evidence, reason, and good faith.

So basically, we are dealing with a cult leader who makes false predictions and then is celebrated even as they are falsified. It reminds me of Jehovah's Witnesses. For just one recent story on the demographic crisis, check out this one about Germany, which has the lowest birth rate in the industrialized world, and is set for long-term decline because of it.

I basically have two issues where I diverge from the consensus view: global warming and fully naturalistic molecules-to-man evolution. Of course, I have scientific reasons to doubt them. But I also have observed for people who support these myths behave – defending their heroes and painting the opposition as crazy. It's an important lesson to learn. How far will people go to believe what they want to believe and try to convince others to believe it, too?

How is this relevant to Christian apologetics? Well, in Christian apologetics, you don't just talk about the resurrection. You have to establish your credibility as a truth-seeker, and it's better if you can do it in some non-religious area. For example, I have a secular Jewish guy who I talk to who is a strong supporter of abortion. He believes in global warming, Darwinism and this overpopulation nonsense, too. If you can show him the evidence that disproves any one of these, it exposes how he has deliberately chosen to believe things that he didn't have evidence for because he wanted to believe it so badly.

Demonstrating mastery at disproving the secular left's myths in one area clears the way for getting them to rethink what they believe and why in every area. It's important for Christians not to appear desperate. We cannot just fixate on the gospel and salvation and try to rush people to a conversion in 5 minutes by threatening them with Hell. We have to show them that Christianity should be adopted because it's true, because it's the end result of a process of thinking clearly. Thinking clearly in one area is evidence to our audience that we can at least in principle be thinking clearly about religious issues, too.

And this is another reason to be responsible and wise with your life decisions. Don't study junk in school. Don't work easy jobs. Don't waste all your money on fun and thrills. Don't lack self-control. People judge your ideas by how successful you have been in your education and profession. So make decisions that show them that you are competent, not crazy. If you present yourself as a an irresponsible, out-of-control thrill seeker who has not succeeded in your education, career and finances, then you'll have no credibility with a secular audience before you even open your mouth. Be a person who gathers respect because you know what you are doing. If you want to succeed at evangelism, you have to heed this warning and avoid doing the easy thing just because it feels good.

# New study: most Americans have not saved enough for their retirement

**Wintery Knight** · 4 June 2015 · Archived copy · Original

Building a castle isn't easy – it takes work

This story is from CNBC, and I hope it causes you young people to count the cost of your plans.

It says:

> A new GAO analysis finds that among households with members aged 55 or older, nearly 29 percent have neither retirement savings nor a traditional pension plan.
>
> "There hasn't been a significant increase in wages, people have student loans and other debt, and many are continuing to struggle financially," said Charles Jeszeck, the GAO's director of education, workforce and income security, which analyzed the Federal Reserve's 2013 Survey of Consumer Finances to come up with its estimates. "We aren't surprised that people have not saved a lot for retirement."
>
> Even among those who do have retirement savings, their nest eggs are small. The agency found the median amount of those savings is about $104,000 for households with members between 55 and 64 years old and $148,000 for households with members 65 to 74 years old. That's equivalent to an inflation-protected annuity of $310 and $649 per month, respectively, according to the GAO.

Americans underestimate how much money is needed in order to retire:

> Estimates about the size and scope of the retirement savings problem vary widely, the GAO found. In addition to examining the Survey of Consumer Finances, it reviewed nine studies conducted between 2006 and 2015 by a variety of organizations, including academics, benefits consultant Aon Hewitt, the Employee Benefit Research Institute (EBRI) and the Investment Company Institute. **Based on these reports, it concluded that one-third to two-thirds of workers are at risk of falling short of their retirement savings targets, in part because of the range of assumptions about how much income is required in retirement.**

Given that we have been inflating the currency and running low interest rates for the last few years, any savings you have will buy less than they buy today.

Here's another really key point:

> **The research that the GAO examined consistently showed that people aged 55 to 64 are less confident about their retirement and plan to work longer to afford retirement. However, a 2012 study by the EBRI found that about half of retirees said they retired earlier than planned because of health**

> **problems, changes at their workplace or having to care for a spouse or another family member. This suggests "that many workers may be overestimating their future retirement income and savings," wrote GAO researchers.**

Got that? When young people make plans about the future, they underestimate the risks and overestimate their own abilities.

Don't rely on Social Security, precious little snowflakes

Investors Business Daily has been posting a lot about Social Security, and they are saying that payouts are going to be dropping sooner than you think.

Look:

> Every year, the Social Security Administration releases its Trustees Report, which projects the program's solvency — how much it will take in, how much it will pay out and how long the "trust fund" can cover revenue gaps — over the next 75 years.
>
> The latest report says that Social Security can meet its financial obligations for about 18 more years. After that, the trust fund will be exhausted, and payroll taxes won't cover nearly all the benefit costs.
>
> That's bad enough. But a new study by researchers at Harvard and Dartmouth shows that this day of reckoning will almost certainly come far sooner than that.
>
> The authors compare previous Trustees Report forecasts about life expectancy, fertility rates and other variables to actual results. They found that these forecasts have grown increasingly unreliable.
>
> Worse, since 2000 "the direction of the biases are all in the same direction, making the Social Security trust funds look healthier than they turned out to be."
>
> For example, Social Security has been consistency underestimating life expectancy, which means that people are living and collecting benefits for longer than predicted. Underestimating life expectancy by just 1.3 years leads to 150,000 more people collecting benefits than predicted, the researchers note.
>
> The Trustees Report has also overestimated the nation's fertility rate. In 2010, for example, 315,000 fewer children were born than predicted. This error makes the population look younger, which in turn makes Social Security's financial outlook seem healthier.
>
> Likewise, the report has consistently overestimated the Trust Fund's assets and solvency.
>
> Many of these forecasts are so bad that the actual results are often worse than the report's "worst case" scenario, which currently has the program becoming insolvent in just 14 years.

Don't be depending on Social Security if you are under 50 – it's not going to be there for you, even though you're

going to be paying into it.

When young people imagine what the future will be like, they almost always underestimate the things that can go wrong. They are so optimistic and inexperienced, that they simply can't conceive of the possible setbacks, and calculate the probabilities of these occurring. The best way to get around this is to talk to someone who is good at doing what you are trying to do. When I was training as a software engineer, I actually had to take classes in software design to learn how to identify unexpected scenarios. This is because engineers start off the same as everyone else – optimistic. We have to train ourselves to identify dependencies and risks. This is how you design software – by thinking not just of common usage scenarios, but also unexpected disaster scenarios, like power failures and data transmission interruptions and database failures. When it comes to earning and saving money, don't talk to your inexperienced young friends. Talk to someone a little older who has already been through it, and who is doing a good job at it.

# Jennifer Roback Morse debates on marriage at Columbia University

**Wintery Knight** · 4 June 2015 · Archived copy · Original

Dr. J makes marriage interesting and fun

Dr. Jennifer Roback Morse defends marriage at Columbia University in this short hour-long exchange. This is your chance to hear how anti-child advocates of same-sex marriage really are. And Dr. J links SSM to unilateral divorce at the end of the Q&A, too. Awesome! This debate really needed to go for twice the time, and I look forward to hearing MORE debates from Dr. J.

Details:

Columbia University's Federalist Society hosts a debate between Dr J and Professor Katherine Franke based on the question "Is Marriage Equality Possible?"  About an hour of audio includes opening position (Dr J), arguments (Prof. Franke), and rebuttal (Dr J), as well as a brief question-and-answer period.

The MP3 file is here.

**Dr. J's opening speech (15 min.)**

Two basic contentions:

- 1) same-sex marriage is not the equivalent of traditional marriage
- 2) if we legislate that they are equal, then we are really redefining marriage by changing the essential purpose of marriage

A case study from Ireland:

- a known sperm donor for a lesbian couple was excluded from having a relationship with the child he conceived
- after the child was born, the sperm donor wanted regular contact with the child, but the women opposed giving him access
- same-sex marriage requires that courts are able to assign parental rights instead of having rights assigned biologically, as with traditional marriage
- That is why SSM is different from TM

What is the purpose of marriage?

- Marriage is about attaching mothers and fathers to children, and mothers and fathers to one another
- Children are born helpless from two opposite-sex parents and they need parental guidance and care during development
- In TM, there is no third party needed in order to have a child
- In TM, the biological parents have rights and responsibilities for the child

- TM is about providing the child with justice
- Every child is entitled a relationship to both biological parents, and is entitled to care, protection and nourishment from both parents, and every child is entitled to a stable family environment
- the problem is that children don't have standing to sue for these rights in court
- so the purpose of marriage is that we have a social construct to provide these rights to children naturally, without the state having to intervene

The purpose of marriage according to SSM?

- In SSM, the essential child-centered purpose marriage is replaced with new purposes like pooling resources and having same-sex couples recognized by society

SSM redefines marriage in four ways:

- it diminishes the entitlement of children to a relationship with both biological parents
- it diminishes the identification of parental roles with biology
- it requires the state to determine parental relationships, instead of recognizing biological parents
- it enshrines the idea that mothers and fathers are interchangeable, that children don't really need mothers AND fathers

**Dr. Franke's opening speech (20 min.)**

Hard cases make bad law 1: the presumption of paternity

- consider the case where a mother is married and has an affair resulting in a child
- the Supreme Court has ruled that the father of the child has no right of contact
- this is a case where marriage gets in the way of biological parents having a relationship with the child
- so it can be the case where marriage is in conflict with the relationships to biological parents

Hard cases make bad law 2: the purpose of marriage can be changed

- marriages was used to keep peace between families and communities
- marriage used to be about trading and trafficking of women
- so the concern for offspring was not always the greatest concern

TM and SSM are both equally able to create stability for children:

- same-sex unions are just as stable for children as TM marriages

Same-sex unions do provide justice for the child:

- giving the adults in same-sex couples the social recognition that opposite sex married couples have is good for children

Children can sue in court

- children can use guardians to sue their parents in court to get their rights

Opposing SSM is racism

- opposing same-sex marriage is equivalent to racism
- we could abolish marriage completely and let individuals form private contracts, then the state would really be neutral on marriage

**Dr. J's rebuttal speech (5 min.)**

The state cannot be neutral on marriage

- what the deinstutionalization of marriage means is that the private contracts are made by adults and children will have no consideration in those contracts

Regarding the adultery case

- the presumption of paternity is there to protect the marriage
- such borderline cases almost never happen with TM, whereas in SSM these third party problems occur in 100% of the cases

Children are not happy being separated from their biological parents

- adults do not have a right to exclude a child's biological parents from having a relationship with them, and children are often not happy being excluded from their biological parents

# New report: IRS used hundreds of lawyers to hide IRS persecution of conservatives

**Wintery Knight** · 5 June 2015 · Archived copy · Original

IRS Chief Fascist Lois Lerner

This is from the Washington Times. (H/T ECM)

Excerpt:

> The IRS's director of privacy, governmental liaison and disclosure division testified Wednesday that the tax agency set up a special team with hundreds of lawyers to handle the probe into whether Tea Party groups were targeted, but repeatedly said she had no idea how it operated.
>
> Mary Howard, who also works as the head Freedom of Information Act officer in the IRS, told the House Committee on Oversight and Government Reform that once the "special project team" was created and operational, she never saw requests for information.
>
> "My understanding was that it started soon after the request came from Congress and other investigators asking for documents around this whole issue," which she surmised meant around spring of 2013.
>
> **Asked who was on the team, she said: "My first hand knowledge of that is none." But she did say the Chief Council of the IRS — one of only two political appointees in the IRS; the other is the commissioner — was on the "special project team," as were "hundreds of attorneys."**
>
> **She said her office did not interact with the White House, but asked whether the "special project team" did, said: "I have no personal knowledge of how that team acted except that I know they amassed hundreds of attorneys to go through the documents and redact them."**
>
> […]Congress held Lerner in contempt after she claimed she did not know about the targeting, but then later took the Fifth Amendment to avoid answering questions. She was never prosecuted by the Justice Department, but two dozen House members want new Attorney General Loretta Lynch to pursue charges.

Just to be clear – "go through the documents and redact them" means conceal information from Congressional oversight.

This is the very definition of a cover-up. As if we did not have enough scandals in this administration already. We must be up to about a dozen Watergates already.

The ACLJ notes that this is not the first shifty behaviour from the IRS lawyers – delaying the applications of Tea Party groups for years:

> According to multiple IRS attorneys in D.C., including tax law specialist Carter Hull, who oversaw the review

> of the Tea Party cases, Lois Lerner, former Director at the Exempt Organizations Division, and her top advisor directed that certain Tea Party applications as part of a "test" group be sent to her office and IRS Chief Counsel for review in the winter of 2010-2011.
>
> Chief Counsel's office, after months more of delay, then demanded Mr. Hull make further inquiries of the Tea Party. According to the testimony, it was Chief Counsel's office that was demanding to know more information about the conservative groups' activities "right before the [2010] election period. In other words, immediately before."
>
> In addition, the testimony indicates that the Chief Counsel's office was heavily involved in preparing a template for handling these cases, something Mr. Hull testified was impractical "because these organizations, all of them are different. A template wouldn't work." Yet, as he testified, a template was prepared by someone in Chief Counsel's office in conjunction with other tax law specialists. **Even more disturbing he testified that after three years, IRS Chief Counsel's office had not made a determination about these "test" Tea Party cases, even though in 2011, Mr. Hull had all the information he needed to make a recommendation as to their request for tax-exempt status.**

The ACLJ has an ongoing lawsuit on behalf of many of the conservative / pro-life / Christian groups that were targeted by the IRS. It's times like this where I wonder what my friend the evangelical woman who voted twice for Obama would say. She is the one who is for environmentalism and big government, you remember. Well, there's your big government right there, Jessica. Surprise! They don't like Christians or conservatives.

# Draft EPA study: fracking does not cause pollution of drinking water

**Wintery Knight** · 5 June 2015 · Archived copy · Original

UAH Global Temperature up to 2014
This is reported in the radically leftist National Public Radio, of all places.

Excerpt:

> The Environmental Protection Agency says it finds no evidence that hydraulic fracturing — better known as fracking — has led to widespread pollution of drinking water. The oil industry and its backers welcome the long-awaited study while environmental groups criticize it.
>
> "We found the hydraulic fracturing activities in the United States are carried out in a way that has not led to widespread systemic impacts on drinking water resources," says Tom Burke, Science Advisor and Deputy Assistant Administrator of EPA's Office of Research and Development. "In fact, the number of documented impacts to drinking water resources is relatively low when compared to the number of fractured wells," he adds.
>
> The EPA's draft assessment was conducted at the request of Congress. "It is the most complete compilation of scientific data to date," says Burke, "including over 950 sources of information, published papers, numerous technical reports, information from stakeholders and peer-reviewed EPA scientific reports."
>
> Fracking has allowed drillers to tap oil and natural gas reserves once thought off-limits deep underground. That has led to drilling booms across the country and boosted the country's oil and natural gas production significantly. But environmental groups have long argued fracking comes with a cost to the environment, especially to water. Those groups have called for stronger regulations and even bans on fracking altogether.
>
> […]The American Petroleum Institute says the conclusions echo what the oil industry has argued all along. "Hydraulic fracturing is being done safely under the strong environmental stewardship of state regulators and industry best practices," says Erik Milito, API upstream group director.
>
> Acknowledging the potential vulnerabilities outlined in the EPA report, Milito says, "Continuous safety improvements have been an ongoing part of hydraulic fracturing for 65 years."

Indeed. This is not the first time that the radically leftist EPA has cleared the fracking industry, either. I blogged about the last one for Dimock, Pennsylvania.

Here's an excerpt from the EPA press release that exonerates fracking:

> The U.S. Environmental Protection Agency announced today that it has completed its sampling of private

> drinking water wells in Dimock, Pa. Data previously supplied to the agency by residents, the Pennsylvania Department of Environmental Protection and Cabot Oil and Gas Exploration had indicated the potential for elevated levels of water contaminants in wells, and following requests by residents EPA took steps to sample water in the area to ensure there were not elevated levels of contaminants. Based on the outcome of that sampling, EPA has determined that there are not levels of contaminants present that would require additional action by the Agency.
>
> […]Overall during the sampling in Dimock, EPA found hazardous substances, specifically arsenic, barium or manganese, all of which are also naturally occurring substances, in well water at five homes at levels that could present a health concern. In all cases the residents have now or will have their own treatment systems that can reduce concentrations of those hazardous substances to acceptable levels at the tap. EPA has provided the residents with all of their sampling results and has no further plans to conduct additional drinking water sampling in Dimock.

So, if you want to worry about fracking, it will have to be because of something other than facts.

# Are pastors and churches doing a good job of preparing women for marriage?

**Wintery Knight** · 5 June 2015 · Archived copy · Original

*Disclaimer: This post mostly targets young, unmarried women.*

Let's start with famous pastor Mark Driscoll explaining how men are to blame for single motherhood:

> Part of it is the unintended consequences of divorce. Forty percent of kids go to bed at night without a father. Not to be disparaging toward single moms, but if you're a single mom and you're working 60 hours a week, and you've got a boy, and he's home all by himself with no parents and no dad, he's just going to be hanging out with his buddies, feeding himself pizza rolls.
>
> The number one consumer of online pornography is 12- to 17-year-old boys. What that means is he's home eating junk food, drinking Monster energy drinks, downloading porn, masturbating and screwing around with his friends. That really doesn't prepare you for responsible adulthood. That's a really sad picture, especially if you're a single gal hoping to get married someday. You're like: "Seriously, that's the candidate pool? You've got to be kidding me." That's why 41 percent of births right now are to unmarried women. A lot of women have decided: "I'm never going to find a guy who is actually dependable and responsible to have a life with. So I'll just get a career and have a baby and just intentionally be a single mother because there are no guys worth spending life with."

First, notice how Driscoll is apparently clueless about the fact that many single mothers have lots of children precisely so that they don't have to work, and can just live off of welfare. But that doesn't fit his narrative.

My main point, though, is that the Bible says that premarital sex is wrong for men *and women*, but Mark Driscoll knows better – he thinks that it is only wrong *for men.* And that the consequences of it can all be blamed on men. Driscoll also says that Christian women who choose to have recreational premarital sex with non-Christian men should *expect* those men to commit to them. He also has said men should not pass over single mothers, although the sociological data shows that single mothers are more likely to divorce if they do marry, which is bad for men financially. The same is true for women who cohabitate – there's a higher risk of divorce if they do eventually marry the person they are cohabitating with.

If you look at the sociological data, single motherhood by choice is extremely harmful to the child- we should not be condoning this by telling women "it's not your fault, it's the fault of bad men, so just go on and keep choosing bad men!" As my friend and fellow woman-blamer Dina would say, "No, Baby, No!"

To respond to this problem, here is a post was written by Lindsay.

First the picture she posted:

Focus on the Family: blame the man for what the woman does

Now here is what Lindsay says about the image above:

> Focus on the Family recently posted this meme on their page.
>
> At first glance, many people might be tempted to agree with it. But the statement in the poster is actually false.
>
> The truth is that there are plenty of loving, gentle men who are worthy of respect but whose wives are not responding properly to their love and gentleness. Plenty of women have fallen for the feminist ideas that they should never submit or let a man lead them and will be difficult to live with, no matter how wonderful their man is. Even among women who are not feminists, it's difficult for many women to follow a husband's leadership because our sinful nature is in rebellion against God's plan.
>
> Submission and following our husbands is something that must be learned, not something we're born with or develop naturally. Women aren't naturally good and kind any more than men are. We're all fallen. We have to work to develop good habits and learn to do what God wants of us.
>
> It certainly is easier for women to follow a loving, gentle man, but the poster is wrong in assuming that the only barriers to a woman following her man are *his flaws*. That simply isn't true. Women also have to overcome *their own flaws* that stand in the way of the proper relationship they were meant to have.
>
> Unfortunately, this attitude that women are naturally good and that men are the flawed ones that need to change is very prevalent, even among Christians. Imagine the outrage people would have if the scenario was reversed and the poster said something like this:
>
> *"Men are usually comfortable being kind and loving to their wives if their wives are submissive, keep up their appearance, and respect them."*
>
> People would be up in arms over such a statement that assumes that men are always wonderful if women will just behave as they should. Why is it any different if the assumption is that women are always wonderful if men are behaving properly? Both are wrong. Both sexes are responsible for their own actions, regardless of what the other person in the marriage does.

Note that the Bible does not qualify the command in Ephesians 5 that women should submit to their husbands by

making it conditional on anything that a man has to do. A man has separate duties, and those are not conditional on anything a woman has to do, either. He has to get up and go to work to provide for the family, whether she does what she is supposed to do or not. It's a moral obligation. The command to not deny each other sex except temporarily and by mutual consent is not conditional on anyone's behavior. NO SEX-WITHHOLDING, if you believe the Bible. It doesn't matter if you are feel happy or unhappy, you are obligated. That's what it means to take responsibility to perform an obligation!

What I have been seeing lately is older Christian women telling younger Christian women not to take seriously the obligations of complementarianism, but to instead make sure they choose a man who will let their desires rule. As someone who is used to not getting my own way, but instead putting God first, I find the idea that my resources will be redirected to *making my wife feel good* rather than *serving God as a team* to be absolutely horrifying and unacceptable. I have been entrusted with significant resources by God, and much is expected of me and my marriage. I really wish women would understand this **– I have a Boss and my purpose in life is to serve him effectively**. We are in a battle here in this culture, and there is a lot I want to do. I want a wife who will sacrifice her own happiness and needs as much as I have, and help me to serve my Boss. She needs to have experiences that prepare her character for that role. I am not asking for any more self-denial and self-sacrifice than I am willing to do myself, and I am not asking for her to do these things for me, but for our Boss.

As someone who has made sacrifices to prepare for marriage in areas like chastity, education, career, savings, apologetics ministry, etc., I am often shocked when I meet women who have – throughout their entire lives – always done what felt good to them. And yet many of those women tell me what a great Christian wife and mother they would make. I often find a huge mismatch of education, career, financial assets and chastity between men and women in relationships, and I believe that much of it results from pastors and church leaders giving Christian women this implicit green light to let their feelings and desires override the plain meaning of the Bible. Christian women need to understand that *doing whatever feels good to you over and over* is not consistent with the example of Jesus, nor moral teachings of the New Testament as a whole. Marriage is hard work, and you need to train yourself to get used to it by repeated exposure to experiences of self-denial, self-sacrifice and self-control. If your preparation for marriage is studying what feels good, working wherever feels good, spending money in order to feel good, etc. you are not preparing for marriage. There is no "happy path" to a great marriage.

Greg Koukl has a wonderful line: "the more you sweat in training, the less you bleed in battle". That's right. Lindsay and her husband have been married for five years*, and they have never shouted at one another once. That takes wisdom. We ought to be listening to people like Lindsay and her husband about marriage. I know I listen to them. If you want to know what to do to have a good marriage, *why don't you just ask Lindsay*? Similarly, my best friend Dina has an extremely stressful job dealing with difficult customers and life-or-death situations every day. She has so much responsibility at work that she makes my job look like a boiling an egg. And yet whenever I ask her for anything, e.g. – "play a game of Memoir '44 with me", she almost always does it, even when she doesn't feel like it. I ask her why, and she says "because although you are very demanding, your needs are easy-peasy, lemon-squeezy compared to what I had to deal with today at work!" That's why I encourage women to do hard things.

**=Today is their 5-year anniversary! Congratulations, Doug and Lindsay! I admire you both so much, and you make me feel validated about my vision for marriage, and my high standards.*

# Ronald Reagan's 40th anniversary D-Day speech: the boys of Pointe du Hoc

**Wintery Knight** · 6 June 2015 · Archived copy · Original

MSNBC

June 6, 1944 D-Day Normandy Invasion Map

It's June 6th, today, and it's the anniversary of D-Day: the Allied invasion of northern France – the beginning of the end of World War 2. One of the most pivotal events of that day was the assault on German gun emplacements by members of the Army Rangers at a fortified position called "Pointe du Hoc".

President Ronald Reagan recognized the soldiers who attacked Pointe du Hoc back in 1984:

You can read the full transcript of that speech here.

Ronald Reagan also made the case for gratitude and vigilance:

Here's the hymn that starts to play at the end:

**The Boys of Pointe du Hoc**

Here's a summary of the Pointe du Hoc mission:

> [Lt. Col. James Earl] Rudder took part in the D-Day landings as Commanding Officer of the United States Army's 2nd Ranger Battalion. His U.S. Army Rangers stormed the beach at Pointe du Hoc and, under constant enemy fire, scaled 100-foot (30 meter) cliffs to reach and destroy German gun batteries. The battalion's casualty rate for this perilous mission was greater than 50 percent. Rudder himself was wounded twice during the course of the fighting. In spite of this, they dug in and fought off German counter-attacks for two days until relieved. He and his men helped to successfully establish a beachhead for the Allied forces.

You can watch a three-clip documentary on it, too: part 1, part 2, part 3.

Although initially, the Rangers did not find the guns where they had expected them, they did find them further back behind the cliffs and destroyed them there, removing a threat to the forces that would be landing later.

**What does D-Day mean to Christians in particular?**

A Christian friend asked me what she should be thinking about when I sent her one of the videos above, and so I wrote her this to explain why I sent her the video:

> To make you close your eyes and think in a more practical way about what it means for someone to sacrifice their lives to save you, of course. What it means to look up cliffs at machine guns, barbed wire and mortars raining death on you and to take a rope in your hands and to climb up a sheer cliff, under heavy fire, in order to save generations yet unborn and freedom itself.

> To think about a concrete example helps us to be able to appreciate what Christ did for us in giving his life for us so that we could be free of sin, as well.
>
> This is the insight that drives my entire interest in war and military history, in fact.
>
> What does this mean: “Greater love has no man than this, that a man lay down his life for his friends.”
>
> The more you know about D-Day, the more fearful what Jesus did appears, and the more you can be grateful.
>
> Bullets and shrapnel are scary… and so are nails and lashes. Why on Earth would anyone endure either for me? And what should my response be to it?
>
> I think it is helpful to explain Christianity to those who are not yet Christian, and for Christians to fully appreciate what Christianity is all about.
>
> We were in peril. And now we have been saved. But at a cost.

I think that it’s important for Christians to look to history, art, poetry and music to help them to reflect and comprehend the sacrifice that Christ made for us in dying on the cross to protect us from peril. What must the cross have looked like to Jesus? It must have been something like what the Omaha beach looked like to the Americans landing in Normandy. Jesus saw whips, thorns and nails, and the heroes of Normandy saw 88 mm AT guns, 81 mm mortars and MG42 machine guns. How should you feel about people who face death on your behalf? Think about it.

# On wargames, history and heroes: “this story shall the good man teach his son”

Memoir ’44: Pegasus Bridge setup

*Re-posting this old post because Dina and I spent Friday night playing games again! And this is one of my favorite posts. Last night was Portal 2 and Orcs Must Die! 2.*

Last night, I played through the Pegasus Bridge scenario from the Memoir ’44 wargame with Dina a few times. We actually played the online version of the game, using Steam. She was very gracious to play a wargame with me, which I don’t think is necessarily the first thing on most women’s lists of things to do on a Thursday night! I appreciated her agreeing to learn how to play and then playing with me several times. I think that Christians need to plan and execute more “together” activities like that – activities that involve interaction, co-operation, communication and engagement. We try to avoid doing things where we are both spectators. Playing wargames is not the only thing we do – we also do Bible study and cooking lessons (for me), for example.

Anyway, the point of this post is to express the deeper meaning behind playing wargames. I think that it is important to recognize and celebrate those who have demonstrated good character, whether it be now, or in the past. I think that it is important for us to search out the best role models ourselves, so that they will influence the way we act in our own lives. The second world war was a clear example of good versus evil. Anyone on the Allied side who demonstrated bravery and courage should be celebrated for safeguarding the security, liberty and prosperity that we enjoy today. In the case of Pegasus bridge, the hero is Major John Howard of the British paratroops.

Here is a quick re-cap of his exploits that day from the New York Times:

> Maj. John Howard, the commander of glider-borne British infantrymen who seized the strategically vital Pegasus Bridge in the first battle of the D-Day invasion of Normandy, died Wednesday in a hospital in Surrey, England. He was 86 and had lived in Burford, near Oxford.
>
> Under cover of night on June 6, 1944, six gliders carrying 181 officers and men of the Second Oxfordshire and Buckinghamshire Light Infantry landed on the eastern flank of a 60-mile invasion front on the northern coast of France. The regiment had a heritage going back to the battles of Bunker Hill and New Orleans, to Waterloo and to World War I. Now its soldiers were in the vanguard of the invasion of Hitler’s Europe.
>
> Major Howard’s D Company was ordered to seize two bridges, one over the Caen Canal and the other spanning the parallel Orne River. If the Germans held on to those bridges, panzer units could move across them in a counterattack isolating 10,000 British paratroopers jumping behind the British invasion beach known as

> Sword, where infantry forces would arrive at daybreak. And Major Howard's men sought to strike swiftly to prevent the Germans from blowing up the bridges if they were overwhelmed; the British needed those bridges to resupply their airborne units.
>
> [image]British Halifax bombers towed the gliders over the English Channel, then cut them loose.

> Major Howard's lead glider landed at 12:16 A.M., only 50 yards from the Caen Canal bridge, but the glider's nose collapsed on impact, knocking everybody aboard unconscious for a few seconds. The soldiers quickly emerged, and over the next five minutes the men directly under Major Howard killed the surprised German defenders.
>
> The nearby Orne River bridge was captured by other troops in Major Howard's unit, and soon the words "Ham and Jam," signifying mission accomplished, were radioed to the airborne.
>
> Two British soldiers were killed and 14 wounded in the operation.
>
> Over the next 12 hours, British paratroopers and commandos reinforced Major Howard's men, and British forces were able to move toward the city of Caen, their flank having been protected by the capture of the bridges.
>
> On July 16, Major Howard received the Distinguished Service Order, Britain's second-highest award for valor. On the 10th anniversary of D-Day, he received the Croix de Guerre Avec Palme from the French Government, which had renamed the Caen Canal span Pegasus Bridge, for the flying horse symbolizing the British airborne. The road crossing the bridge was later renamed Esplanade Major John Howard.

Why is this important? Well, it's important to think on the things that are excellent. There are so many things in the culture that are not excellent that we are confronted with every day. We have to make it our business to do things together where goodness is celebrated. Especially when manly virtues like courage are celebrated. We don't do that much anymore. And I think there's a connection between wargames and Christian apologetics that we need to *deliberately* encourage.

Here's an excellent passage from Shakespeare's "Henry V" that makes the point:

> This day is called the feast of Crispian:
> He that outlives this day and comes safe home,
> Will stand a tip-toe when this day is named,
> And rouse him at the name of Crispian.
> He that shall live this day, and see old age,
> Will yearly on the vigil feast his neighbours,
> And say, 'To-morrow is Saint Crispian:'
> Then will he strip his sleeve and show his scars,
> And say, 'These wounds I had on Crispin's day.'
> Old men forget: yet all shall be forgot,
> But he'll remember with advantages
> What feats he did that day. Then shall our names,
> Familiar in his mouth as household words,
> Harry the King, Bedford and Exeter,
> Warwick and Talbot, Salisbury and Gloucester,
> Be in their flowing cups freshly remembered.
> **This story shall the good man teach his son;**
> And Crispin Crispian shall ne'er go by,
> From this day to the ending of the world,

> But we in it shall be rememberèd;
> We few, we happy few, we band of brothers;
> For he to-day that sheds his blood with me
> Shall be my brother; be he ne'er so vile
> This day shall gentle his condition:
> And gentlemen in England, now a-bed
> Shall think themselves accursed they were not here,
> And hold their manhoods cheap whiles any speaks
> That fought with us upon Saint Crispin's day. (4.3.43)

This is from the famous speech in which King Henry charges his men to fight well before the famous Battle of Agincourt.

You can read more about the history of the British Airborne division and Pegasus bridge. The famous historian of the second world war Stephen E. Ambrose also wrote a history of the Pegasus bridge battle, called "Pegasus Bridge: June 6, 1944". You won't find many military historians better than Stephen E. Ambrose!

You might be surprised how many men are interested in military history and wargames, precisely because men instinctively look up to men like John Howard who embody qualities like bravery and courage. We have a dearth of moral character in this society. And we don't do much to teach young men about manly virtues, even in the church. I think that it is important for us to think of creative ways for us to present good character to our young men. Young women should also learn about good character, because they must separate out the good men from the bad when they are courting.

Thanks to Dina for helping me to edit this post!

# Remembering Lt. Richard Winters on D-Day: The Battle of Brecourt Manor

**Wintery Knight** · 6 June 2015 · Archived copy · Original

Richard D. Winters Monument

The caption says, “Wars do not make men great, but they do bring out the greatness in good men.” Now let’s see what Dick Winters did during World War II.

Mission: locate and destroy enemy artillery

**Brecourt Manor**

I want to link to this article from Investors Business Daily about Lt. Winters action at Brecourt Manor.

> Here’s the summary of what Dick Winters did on the morning of June 6th, 1944:
>
> First Lt. Dick Winters leapt into leadership on D-Day, June 6, 1944. His commander’s aircraft was shot down as the men parachuted at 600 feet. When Winters headed to earth, he was in charge of a small platoon.
>
> When he landed, he had to command Company E with 148 men, because his commander had been lost along with the plane.

> Yet in the chaos, Winters could locate only a dozen other soldiers for their first task: take out a 50-man German artillery battery.
>
> “Winters ordered his assault force to strip down to only essential weapons — guns and grenades — to use against the well-prepared defenses, then deployed his machine guns to cover his advances,” Keith Huxen, senior director of research at the National WWII Museum in New Orleans, told IBD. “Waiting for the proper moment, he led a charge across an open field, gaining the first gun placement, and then they moved down the trenches, systematically destroying each gun.
>
> “In the process, Winters discovered a map detailing all German gun positions to kill American soldiers coming up from Utah Beach, which saved many lives.”
>
> Joined by five reinforcements during the fight, Winters lost four dead and six wounded. The Yanks managed to kill 15 Nazis, capture 11 and wound many others.
>
> Winters’ maneuvers are still studied at West Point as a case of successfully attacking a fixed position, despite being outnumbered.
>
> Winters (1918-2011) was born in Ephrata, Pa., and the family moved to Lancaster when he was 8.
>
> He later attributed his character and desire to go to church regularly to his mother.
>
> Winters attended local Franklin & Marshall College and earned an economics degree with top honors in 1941. He enlisted in the Army in August to shorten his service time, rather than wait to be drafted if America was to join the war.

Here’s where everything was, and the Rangers attacked through the trenches containing the four guns, while being raked with fire from multiple MG42 heavy machine guns across the open field.

Assaulting the guns at Brecourt Manor

If this sounds familiar, it’s because he led one of the most famous actions in the Normandy invasion, and you may have seen it portrayed in the Band of Brothers DVD series. But the article notes that when Dick Winters read the script, “he asked that the profanity be cut from the dialogue of his character, since he never swore”. When the producers told him it was too late to change it, he wrote them a letter of resignation from the production, because “I

don't want these boys and girls thinking it is acceptable using profanity". In the end, the cleaned up his swearing.

If you are looking for a reason to buck the culture and stop swearing, there's a good reason for you right there – Dick Winters never used profanity.

You can watch the scene from Band of Brothers in low resolution here:

If you play Combat Mission, like I do, you can watch a 28 minute AAR from the simulation of the battle.

The article talks about a lot of the actions that Winters participated in during World War II.

**Operation Market Garden**

More from the article, this time Operation Market Garden:

> Near Nijmegen on Oct. 5, Winters' platoon was a position where any movement carried risks. Rather than retreat when fired on by a larger force behind a dike, he led a charge to the top and on the other side discovered a company of 150 Nazi SS troops. Despite having only 40 men, the Americans opened up with everything they had, then shot up a company of enemy reinforcements.
>
> The fray ended with 50 Germans dead, 11 POWs and countless wounded, with few casualties among the Americans.
>
> "This was Easy Company's crowning achievement of the war and my apogee as a company commander," Winters told Kingseed. "This demonstrated its overall superiority, of every soldier, of every phase of infantry tactics: patrol, defense, attack using a base of fire, withdrawal and, above all, superior marksmanship with rifles, machine guns and mortar fire."

Dick Winters is a brave man, someone I admire him very much. And I am grateful for men like him.

I blogged about another hero of the 101st Airborne Division, Ronald Speirs, in a previous post.

# Dr. George Yancey: advice for responding to hostility from non-Christians

**Wintery Knight** · 7 June 2015 · Archived copy · Original

Dr. George Yancey

This article contains an interview with Dr. George Yancey, who does research on bias against Christians. It appeared in the Christian Post.

Here's the introduction to the interview:

> What should Christians do about the hostile environment they increasingly face? In a Christian Post interview, professor George Yancey talks about his new book written for fellow Christians, *Hostile Environment: Understanding and Responding to Anti-Christian Bias*.
>
> Christianophobia exists among a powerful elite subculture in the United States, University of North Texas sociologists Yancey and David Williamson wrote in *So Many Christians, So Few Lions: Is There Christianophobia in the United States?* While that book was written in an academic voice, in *Hostile Environment*, Yancey writes as a Christian speaking to fellow Christians, and offers some guidance on how Christians should respond to that anti-Christian hostility.
>
> In an email interview with CP, Yancey said he appreciated the opportunity to speak from the heart to fellow believers about how he thinks Christians should respond to Christianophobia.
>
> The early chapters summarize much of his work in *So Many Christians, So Few Lions* and helps readers understand the sources of Christianophobia. The middle chapters, "Are Christians Responsible for Christianophobia" and "Trouble Within" discuss ways to deal with hypocrisy, sin and dysfunction within the Church. The latter chapters deal more specifically with ways to confront anti-Christian bigotry.
>
> Yancey is also careful throughout the book to distinguish between the discrimination against Christians in the United States and the violence against Christians in other parts of the world. He does not use the word "persecution," for instance, to describe the negative experiences of Christians domestically.
>
> "Christians are not being persecuted, but religious discrimination and bigotry in our society can affect us. We should combat that discrimination and bigotry when it rears its ugly head," he wrote.

Here's the part that I thought was the most interesting:

> **CP: What do people with Christianophobia want from Christians?**
>
> **Yancey**: In a nutshell they want Christians to shut up and stay in their homes and churches.
>
> Individuals with Christianophobia have a great deal of pre-capita social and cultural power as they are more likely to be white, male, educated and wealthy than other Americans. They indicated in my research that they believe they know what is best for our society, and perhaps that is because they possess such power.
>
> They also argue that Christians are leading us back to the "Dark Ages," want to set up a theocracy, and oppose science. They also demand that Christians do not proselytize others since they believe that Christians are not very intelligent or are trying to manipulate others for money or power.
>
> These beliefs and stereotypes provide them with justification to assert that they, and not Christians, should run our society and government. For this reason it is not surprising that they want Christians to stay out of the public square.
>
> People with Christianophobia at least superficially value the ideals of religious neutrality. They perceive themselves as non-biased. So while they want to exclude Christians from the public square, they are unlikely to support measures that overtly single out Christians for punishment. This allows them to hold on to a social identity that is linked to "tolerance."
>
> However, they have a willingness to support measures that disproportionately punish Christians, or remove Christians from the public square, as long as such punishment or removal can be justified with non-bigoted reasons. This is similar to the concept of disparate impact that has been discussed as a part of the racial problems in the United States.

Other Christian apologists who read my blog sometimes ask me why I write so much issues outside of Christian apologetics, since that's what I am most interested in. Well, I have encountered the attitude that Dr. Yancey is talking about when I was in university, and in the workplace as well. I understand that these very educated non-Christians think that Christians have no reasons for believing what we believe. They think it's all superstition and bigotry. And so, they are alarmed by the idea that we are voting for public policies based on irrationality. One reason why I talk a lot about politics to get Christians thinking about policies, and reasons why we should support and oppose specific policies. Specifically, I want Christians who believe in policies that are consistent with the Bible to be able to discuss those policies with non-Christians by appealing to public, testable evidence.

But there's another reason to talk about evidence outside of the Bible on this blog. And that reason is so that Christians understand that their faith is not private, nor is it meant to produce good feelings, nor to make them feel liked. Christianity is about truth, and we need to be studying science, history and philosophy, and making connections between what the Bible says to public, testable knowledge when we talk about our faith. We need to counter the perception that we are "dangerous" because we are irrational by being skilled at having conversations about what we believe and why. It can't just be superstition or "this is how I was raised". That's what atheists find scary. They do not find it scary when we can explain ourselves. And that's why we need to get really good at explaining how Christianity relates to these other areas. And not just explaining, but being persuasive using arguments and evidence, too.

# Did the city of Nazareth exist at the time of the birth of Jesus?

**Wintery Knight** · 7 June 2015 · Archived copy · Original

Israeli archaeologist Yardena Alexandre inspects Roman 1st-century pottery found from the city of Nazareth.

I was discussing a recent debate that a friend attended between an atheist musician named Dan Barker and a Christian with a doctorate in New Testament Studies named Justin Bass.

According to my friend's report, the atheist questioned the existence of Nazareth, and then went on from there to assert that everything we know about Jesus is legendary.

This is what the atheist's argument sounds like:

1. If the New Testament contains reliable history about Jesus, then Nazareth must exist.
2. Nazareth does not exist.
3. Therefore, the New Testaments does not contain reliable history about Jesus. (M.T. 1,2)

I was able to find a web site where an atheist was making the claim that Nazareth did not exist at the time of Jesus. So this is not completely outside the realm of mainstream atheism. I doubled checked with two more people who attended the debate that Barker indeed made an argument like the one above.

Two things to say about this 3-step argument. First off, when speaking to atheists, Christians only care about making a case for the resurrection. This is for two reasons. One, our goal is to disprove atheism, and the historical argument for the resurrection is the most evidenced miracle claim in the New Testament. Nazareth is not part of that core of minimal facts about the resurrection of Jesus. Second, it's possible to be a Christian by accepting a core of Christian dogma (e.g. – the Apostle's Creed), while remaining agnostic or even skeptical of other things in the Bible. Nazareth is not part of that core of minimal facts that must be affirmed in order to become a Christian.

The problem I have with atheists is that they pick and choose from the Bible according to their own agenda. Every Christian has read basic books on the resurrection by people like Lee Strobel, Michael Licona, William Lane Craig, J. Warner Wallace and so on. This is like table stakes for living a Christian life. We all know how to make a case based off of minimal facts for the resurrection. When Christians get into debates about Jesus, we want to make a case for the core of historical knowledge about him, minimal facts that almost no one disagrees with. But many atheists aren't like that. They want to pick and choose a few verses out of the Old Testament and the New Testament that they personally find distasteful *to them*, and then deny the minimal facts about Jesus on that basis. I don't think that it makes sense to deny evidence for widely-accepted facts by bringing up minor problems that are

irrelevant to the well-attested core facts.

But it's worse than that – we actually DO know that Nazareth existed, and we know it not from some fundamentalist preacher, but from atheist Bart Ehrman.

Ehrman writes in his book:

> One supposedly legendary feature of the Gospels commonly discussed by mythicists is that the alleged hometown of Jesus, Nazareth did not exist but is itself a myth. The logic of this argument, which is sometimes advanced with considerable vehemence and force, appears to be that if Christians made up Jesus' hometown, they probably made him up as well. I could dispose of this argument fairly easily by pointing out that it is irrelevant. If Jesus existed, as the evidence suggests, but Nazareth did not, as this assertion claims, then he merely came from somewhere else. Whether Barack Obama was born in the U.S. or not (for what it is worth, he was) is irrelevant to the question of whether he was born.
>
> Since, however, this argument is so widely favored among mythicists, I want to give it a further look and deeper exploration. The most recent critic to dispute the existence of Nazareth is René Salm, who has devoted an entire book to the question, called The Myth of Nazareth. Salm sees this issue as highly significant and relevant to the question of the historicity of Jesus: "Upon that determination [i.e., the existence of Nazareth] depends a great deal, perhaps even the entire edifice of Christendom."

So that seems like a fair representation of the argument I outlined above.

Bart's response is long, but here's part of it:

> There are numerous compelling pieces of archaeological evidence that in fact Nazareth did exist in Jesus' day, and that like other villages and towns in that part of Galilee, it was built on the hillside, near where the later rock-cut kokh tombs were built. For one thing, archaeologists have excavated a farm connected with the village, and it dates to the time of Jesus. Salm disputes the finding of the archaeologists who did the excavation (it needs to be remembered, he himself is not an archaeologist but is simply basing his views on what the real archaeologists – all of whom disagree with him — have to say). For one thing, when archaeologist Yardena Alexandre indicated that 165 coins were found in this excavation, she specified in the report that some of them were late, from the fourteenth or fifteenth centuries. This suits Salm's purposes just fine. But as it turns out, there were among the coins some that date to the Hellenistic, Hasmonean, and early Roman period, that is, the days of Jesus. Salm objected that this was not in Alexandre's report, but Alexandre has verbally confirmed (to me personally) that in fact it is the case: there were coins in the collection that date to the time prior to the Jewish uprising.
>
> Aalm also claims that the pottery found on the site that is dated to the time of Jesus is not really from this period, even though he is not an expert on pottery. Two archaeologists who reply to Salm's protestations say the following: "Salm's personal evaluation of the pottery … reveals his lack of expertise in the area as well as his lack of serious research in the sources." They go on to state: "By ignoring or dismissing solid ceramic, numismatic [that is, coins], and literary evidence for Nazareth's existence during the Late Hellenisitic and Early Roman period, it would appear that the analysis which René Salm includes in his review, and his recent book must, in itself, be relegated to the realm of 'myth.'"

Read Bart's whole excerpt from his book in his post.

I did a quick double check on the archaeologist Ehrman mentioned, and found an Associated Press story about another archaelogical discovery made by archaeologists in Nazareth. This time, it's not the coins, but pottery fragments. The date range on the pottery is 100 before Jesus' birth to 100 years after Jesus' birth.

Even though Ehrman is an atheist, I think that he understands how to do history. You can't be a credentialed

historian and throw out the early proclamation of Jesus' resurrection because of doubts about Old Testament violence. You can't be a credentialed historian and throw out the conversions of Paul and James because you don't know whether there was one angel or two angels at the empty tomb. Denying the core facts about Jesus by bringing up concerns about peripheral issues is not a responsible way to investigate the historical Jesus.

One final point. This happens when discussing scientific evidence with atheists, too. I was discussing the scientific evidence for the origin of the universe and the cosmic fine-tuning with an atheist – mentioning names, dates and places related to the discoveries – and she cut me off with "Am I going to Hell?"

# Satellite temperature measurements show no global warming for 19 years

**Wintery Knight** · 8 June 2015 · Archived copy · Original

Atmospheric temperature measurements though April 2015
(Image source: Dr. Roy Spencer, University of Alabama – Huntsville)

The best measurements of the Earth's temperature are the atmosphere measurements, not the surface measurements, because those are more easily tampered with.

Here's The Daily Caller reporting on the NOAA's latest effort to tamper with data that we've had for years, to make it prove global warming.

Excerpt:

> National Oceanic and Atmospheric Administration scientists have found a solution to the 15-year "pause" in global warming: They "adjusted" the hiatus in warming out of the temperature record.
>
> New climate data by NOAA scientists doubles the warming trend since the late 1990s by adjusting pre-hiatus temperatures downward and inflating temperatures in more recent years.
>
> "Newly corrected and updated global surface temperature data from NOAA's [National Centers for Environmental Information] do not support the notion of a global warming 'hiatus,'" wrote NOAA scientists in their study presenting newly adjusted climate data.
>
> To increase the rate in warming, NOAA scientists put more weight on certain ocean buoy arrays, adjusted ship-based temperature readings upward, and slightly raised land-based temperatures as well. Scientists said adjusted ship-based temperature data "had the largest impact on trends for the 2000-2014 time period, accounting for 0.030°C of the 0.064°C trend difference." They added that the "buoy offset correction contributed 0.014°C… to the difference, and the additional weight given to the buoys because of their greater accuracy contributed 0.012°C."

Scientific critics of global warming alarmism responded quickly:

> Climate expert Bob Tisdale and meteorologist Anthony Watts noted that to "manufacture warming during the hiatus, NOAA adjusted the pre-hiatus data downward."
>
> "If we subtract the [old] data from the [new] data… we can see that that is exactly what NOAA did," Tisdale and Watts wrote on the science blog Watts Up With That.
>
> "It's the same story all over again; the adjustments go towards cooling the past and thus increasing the slope of temperature rise," Tisdale and Watts added. "Their intent and methods are so obvious they're laughable."

> NOAA's updated data was also criticized by climate scientists with the libertarian Cato Institute. Scientists Richard Lindzen, Patrick Michaels and Chip Knappenberger argue the adjustments made by NOAA were "guaranteed to put a warming trend in recent data."
>
> Cato scientists also argued that NOAA's new data is an outlier compared to other global temperature records, which overwhelmingly show a hiatus in warming.
>
> It "would seem more logical to seriously question the [NOAA] result in light of the fact that, compared to those bulk temperatures, it is an outlier, showing a recent warming trend that is not in these other global records," the three scientists wrote.
>
> "Adjusting good data upwards to match bad data seems questionable, and the fact that the buoy network becomes increasingly dense in the last two decades means that this adjustment must put a warming trend in the data," wrote Michaels, Knappenberger and Lindzen, who is a top climatologist from the Massachusetts Institute of Technology.
>
> […]Georgia Tech climate scientist Judith Curry also chimed in, arguing that NOAA excluded extremely accurate sea buoy data in order to erase the hiatus in warming. Curry wrote that it "seems rather ironic, since this is the period where there is the greatest coverage of data with the highest quality of measurements — ARGO buoys and satellites don't show a warming trend."

It's Climategate all over again, but this time, they are doing it out in the open for everyone to see, rather than trying "hide the decline using Mike's Nature trick", as the leaked Climategate e-mails revealed. The trouble with the NOAA fraud is that the atmospheric measurements cannot be as easily monkeyed with. And – SURPRISE! – the atmospheric measurements still show 19 years with no significant warming.

The Daily Caller summarizes the atmospheric measurements, which have not been changed to fit the global warming narrative.

Excerpt:

> […][N]ew satellite-derived temperature measurements show there's been no global warming for 18 years and six months.
>
> "For 222 months, since December 1996, there has been no global warming at all," writes climate expert Lord Christopher Monckton, the third viscount Monckton of Brenchley
>
> "This month's [satellite] temperature – still unaffected by a slowly strengthening el Niño, which will eventually cause temporary warming – passes another six-month milestone, and establishes a new record length for the Pause: 18 years 6 months," Monckton adds.
>
> […]Scientists have already pushed back against NOAA's new study. The news site Mashable interviewed about a dozen climate scientists not involved in the study, and nearly all of them said "the study does not support the authors' conclusion that the so-called warming pause never happened."
>
> "Instead, they said it simply proves that changing the start and end dates used for analyzing temperature trends has a big influence on those measurements, a fact that was already widely known," Mashable reported.

I think this important, because global warming alarmism is being pushed by the secular left, especially onto young people in public schools. This affects government spending, which is ultimately paid for by us – the taxpayers. I don't know about you, but as a Christian, my priorities for my money are much different than those of secular leftist bureaucrats. Also, when young people are taken in by the siren song of environmentalism, they vote for bigger government to limit industry (fewer jobs are created) and to regulate personal consumption (higher costs of gas, heating and cooling, electricity). This again results in less money for me to run my life plan, which is focused on serving God. So, as a conservative and a Christian, I am all over this issue, and you should be as well. Show people the evidence, let them decide. Otherwise, the secular left will be making the rules that we have to live by.

# The kalam cosmological argument defended in a peer-reviewed science journal

**Wintery Knight** · 8 June 2015 · Archived copy · Original

Here's the peer-reviewed article. It appears in a scientific journal focused on astrophysics.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

Here's an excerpt in which the author, Dr. William Lane Craig, explains the Big Bang cosmology:

> The monumental significance of the Friedman-Lemaitre model lay in its historization of the universe. As one commentator has remarked, up to this time the idea of the expansion of the universe "was absolutely beyond comprehension. Throughout all of human history the universe was regarded as fixed and immutable and the idea that it might actually be changing was inconceivable."{8} But if the Friedman-Lemaitre model were correct, the universe could no longer be adequately treated as a static entity existing, in effect, timelessly. Rather the universe has a history, and time will not be matter of indifference for our investigation of the cosmos. In 1929 Edwin Hubble's measurements of the red-shift in the optical spectra of light from distant galaxies,{9} which was taken to indicate a universal recessional motion of the light sources in the line of sight, provided a dramatic verification of the Friedman-Lemaitre model. Incredibly, what Hubble had discovered was the isotropic expansion of the universe predicted by Friedman and Lemaitre. It marked a veritable turning point in the history of science. "Of all the great predictions that science has ever made over the centuries," exclaims John Wheeler, "was there ever one greater than this, to predict, and predict correctly, and predict against all expectation a phenomenon so fantastic as the expansion of the universe?"{10}
>
> As a GTR-based theory, the Friedman-Lemaitre model does not describe the expansion of the material content of the universe into a pre-existing, empty, Newtonian space, but rather the expansion of space itself. This has the astonishing implication that as one reverses the expansion and extrapolates back in time, space-time curvature becomes progressively greater until one finally arrives at a singular state at which space-time curvature becomes infinite. This state therefore constitutes an edge or boundary to space-time itself. P. C. W. Davies comments,
>
> > An initial cosmological singularity . . . forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity. . . . On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.{11}

> The popular expression "Big Bang," originally a derisive term coined by Fred Hoyle to characterize the beginning of the universe predicted by the Friedman-Lemaitre model, is thus potentially misleading, since the expansion cannot be visualized from the outside (there being no "outside," just as there is no "before" with respect to the Big Bang).{12}
>
> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"{13}
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Every theist should be able to understand and defend this argument. It is a scientific refutation of materialism, and it is supported by six lines of scientific evidence – all of which emerged as science has progressed.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

Those are the scientific discoveries that have led us to the beginning of the universe, which support's Dr. Craig's argument.

Here's a re-cap of the three main evidences for the Big Bang cosmology from Caltech. (Numbers 2, 3 and 5 from the list above)

Excerpt:

> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theory that describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> **Why Do We Think the Big Bang Happened?**
>
> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third,

> astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

The article goes into detail about each of these three evidences.

This is the kind of evidence I expect all Christian theists to be using when discussing the question of whether God exists. Scientific evidence. When talking to non-Christians, we first need to show that we understand science, because science is a reliable and respected way of getting knowledge about the universe. Non-Christians do not accept the Bible, but they do accept science, so we begin evangelism with science. Science (experimental, testable, repeatable science) should set limits on what anyone can believe – including non-Christians, who might otherwise not be inclined to listen to Bible verses and theology.

**The Big Bang is not compatible with atheism**

According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* This falsifies eternal models of the universe, which are *required* by the atheistic worldview.

You should definitely print out both articles and get familiar with the arguments and the evidence. I have tried this argument out on atheists, and the response I usually get is that scientific discoveries will soon emerge that falsifies all of these six scientific discoveries. That sounds more like faith than reason to me. And we have to make it clear to others who are still deciding that there is a conflict between science and religion. Just not the one they're expecting. Let's make our decisions about what to believe based on what science is telling us today. Let's hold accountable people who want to have a worldview that is based on speculations.

# Can atheists condemn slavery as immoral? Do atheists believe that slavery is wrong?

**Wintery Knight** · 8 June 2015 · Archived copy · Original

*Note: For a Christian response to the complaint that the Bible doesn't condemn slavery, see this article and this article for slavery in the Old Testament, and this article for slavery in the New Testament. These are all by Christian philosopher Paul Copan. You can watch a lecture with Paul Copan on the slavery challenge here, and buy a book where he answers the challenge in more detail. There is also a good debate on whether the Bible condones slavery here, featuring David Instone-Brewer and Robert Price. My post is not a formal logical essay on this issue, it is more that I am outraged that atheists, who cannot even rationally ground objective morality, insist on criticizing the morality of the Bible. I think that atheists who are serious about finding the truth about these issues should check out those links, if they are interested in getting to the truth of these matters.*

In other posts, I've argued that without an objective moral standard of what is right and wrong, any judgments about right and wrong are just individual opinions. So, when an atheist says slavery is wrong, what he really means is that he thinks slavery is wrong *for him*, in the same way that he thinks that,say, that chocolate ice cream is right *for him*. He isn't saying what is wrong *objectively*, because on atheism there are no objective moral rules or duties. He is speaking for himself: "I wouldn't own a slave, just like I wouldn't eat broccoli – because it's yucky!". But he has no rational argument against other people owning slaves in other times and places, because their justification for owning slaves is the same as his justification for not owning slaves : personal preference and cultural conventions.

So do atheists oppose slavery? Do they believe in an objective human right to liberty? Well, there are no objective human rights of any kind on atheism. Human beings are just accidents in an accidental universe, and collections of atoms do not mysteriously accrue "rights". There is no natural right to liberty on atheism. Now consider abortion, which is favored by most atheists. Like slavery, abortion declares an entire class of human beings as non-persons in order to justify preserving their own happiness and prosperity by means of violence. That's exactly what slavery does, except abortion is worse than slavery, because you actually kill the person you are declaring as a non-person instead of just imprisoning them.

So how many atheists have this pro-abortion view that it is OK to declare unborn children as non-persons so they can kill them?

Well, according to Gallup, the "non-religious" are the group most likely to support abortion. In fact, 68% favor legalized abortion, compared to only 19% who oppose it.

Take a look at the Gallup poll data from 2012:

*Americans' Abortion Views, by Education and Religion*

With respect to the abortion issue, would you consider yourself to be pro-choice or pro-life?

| | "Pro-choice" | "Pro-life" |
|---|---|---|
| | % | % |
| National adults | 41 | 50 |
| | | |
| No religion | 68 | 19 |
| Catholic | 38 | 54 |
| Protestant/Other Christian | 33 | 57 |
| | | |
| Postgraduate | 58 | 37 |
| College graduate only | 45 | 53 |
| Some college | 41 | 49 |
| High school graduate or less | 33 | 53 |

May 3-6, 2012

GALLUP

Most atheists are OK with the strong killing the weak

The Gallup numbers might actually be low, because "No religion" might include people who are spiritual, but not religious. But what about atheists alone?

As a group, atheists tend to be among the most radical supporters of legalized abortion. The Secular Census of 2012 found that 97% of atheists vote for abortion. There are almost no pro-life atheists. Why is it that atheists look at unborn children and think it's OK to kill them? Well, let's see what atheists scholars think about morality, and from that we'll find out why they think abortion is morally permissible.

**Atheist scholars think morality is nonsense**

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Source: http://www.arn.org/docs/orpages/or161/161main.htm

Atheists Michael Ruse says atheists have no objective moral standards:

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory.(Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

Atheist Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

Most atheists are like this – although some affirm objective morality, without really having a rational basis for it. In general though, when atheists use moral language to condemn God, the Bible, or Christians, it's very important to understand that it is just theater. They are trying to use words that describe realities that they do not even believe in, usually with the goal of getting you to stop judging them for their own sin. I blogged about two examples of this before – Richard Carrier and Michael Shermer.

Let's take a closer look at Richard Dawkins' statement that there is "no evil and no good".

**Richard Dawkins and morality**

Here's Richard Dawkins' view of abortion:

Richard Dawkins explains morality on atheism
But wait! He goes even further than mere abortion:

Dawkins believes in Darwinian evolution. Survival of the fittest. The strong kill the weak. Where is protection for the unborn in that narrative?

Richard Dawkins even advocates for adultery.

So, what Dawkins really believes is that morality is nonsense. But in order to get you to stop condemning abortion, adultery, infanticide and a whole host of other atheistic misbehaviors, he will try to condemn you using moral language to stop you from making moral judgments. But the goal here is to intimidate you into not judging. By his own words, he thinks that the whole notion of objective moral values and objective moral duties is just nonsense.

**Who does oppose slavery?**

How did slavery end?

Dinesh D'Souza explains:

> Slavery was mostly eradicated from Western civilization–then called Christendom–between the fourth and the tenth century. The Greco-Roman institution of slavery gave way to serfdom. Now serfdom has its problems but at least the serf is not a "human tool" and cannot be bought and sold like property. So slavery was ended twice in Western civilization, first in the medieval era and then again in the modern era.
>
> In the American South, Christianity proved to be the solace of the oppressed. As historian Eugene Genovese documents in Roll, Jordan, Roll, when black slaves sought to find dignity during the dark night of slavery, they didn't turn to Marcus Aurelius or David Hume; they turned to the Bible. When they sought hope and inspiration for liberation, they found it not in Voltaire or D'Holbach but in the Book of Exodus.
>
> The anti-slavery movements led by Wilberforce in England and abolitionists in America were dominated by Christians. These believers reasoned that since we are all created equal in the eyes of God, no one has the right to rule another without consent. This is the moral basis not only of anti-slavery but also of democracy.

And, in fact, you can see Christians pushing the culture hard against abortion today, just as we did with slavery. We

also oppose frivolous divorce, and redefining marriage in a way that normalizes removing mothers and/or fathers away from their children. Defending the weak is what we do.

# New York judge rules that it is racist to expect teachers to be functionally literate

**Wintery Knight** · 9 June 2015 · Archived copy · Original

Political spending by the NEA union in 2013

This story is from The Stream.

Excerpt:

> A federal judge in New York has struck down a test used by New York City to vet potential teachers, finding the test of knowledge illegally discriminated against racial minorities due to their lower scores.
>
> […][T]he city's second Liberal Arts and Science Test (LAST-2) …[is]… simply a test to make sure that teachers had a basic high school-level understanding of both the liberal arts and the sciences.
>
> One sample question from the test asked prospective educators to identify the mathematical principle of a linear relationship when given four examples; another asked them to read four passages from the Constitution and identify which illustrated checks and balances. Besides factual knowledge, the test also checks basic academic skills, such as reading comprehension and the ability to read basic charts and graphs.
>
> Nevertheless, this apparently neutral subject matter contained an insidious kernel of racism, because Hispanic and black applicants had a passage rate only 54 to 75 percent of the passage rate for whites.
>
> Once their higher failure rate was established, the burden shifted to New York to prove that LAST-2 measured skills that were essential for teachers and therefore was justified in having a racially unequal outcome. While it might seem obvious that possessing basic subject knowledge is a key skill for a teacher, District Judge Kimba Wood said the state hadn't met that burden.
>
> "Instead of beginning with ascertaining the job tasks of New York teachers, the two LAST examinations began with the premise that all New York teachers should be required to demonstrate an understanding of the liberal arts," Wood wrote in her opinion, according to *The New York Times*.
>
> LAST-2 hasn't been used in New York since 2012, but the ruling will still have repercussions. Minorities who failed the exam (who number in the thousands) may be owed years of back pay totaling millions of dollars, and those who were relegated to substitute teaching jobs could be promoted to having their own classrooms. In addition, while Wood's ruling only applies to New York City, the test was used statewide, and it could serve as a precedent for further lawsuits.
>
> The ruling could also pave the way for another ruling finding New York's current teacher test, the Academic Literacy Skills Test (ALST), to be discriminatory as well. That test is even harder than LAST-2, with a strong

> focus on literacy skills such as writing and reading comprehension, and like LAST-2 it has a very large gap in scores between whites and minorities. A lawsuit, once again being heard by Wood, is already pending, with the plaintiffs arguing that there is no clear evidence strong literacy skills are essential for a teacher.

See this is why you shouldn't send your children to public schools without checking them out first. Places like New York and Chicago are especially notorious for hiring poorly-performing teachers – and for refusing to fire them, no matter what they do. What does the government care whether the kids learn or not? Unionized teachers do not get paid based on their ability to get students to perform. They get paid based on the contracts that are negotiated between their union and the government. If it's a Democrat government, then a fair amount of the union dues are going to be funneled into Democrat coffers, anyway. So why would the Democrats take on the teacher unions that get them elected? They would not. And that's one major reason why so many kids in these public schools cannot read, write, or do math. It's by design. The goals of the public education system are 1) to make sure teachers get paid regardless of performance, and 2) to get Democrats elected. Parents and children are no part of the equation.

It seems to me that the real racism is when judges privilege the interests of grown-ups over the interests of poor, minority students. We should be focused on making sure that students have the best teachers, not protecting the jobs of the worst teachers for political gain.

# What happened to the economy of North Carolina when Republicans cut taxes?

**Wintery Knight** · 9 June 2015 · Archived copy · Original

This story is from The Wall Street Journal.

Excerpt:

> Four years ago, North Carolina's unemployment rate was above 10 percent and the state still bore the effects of its battering in the recession. Many rural towns faced jobless rates of more than 20 percent.
>
> But in 2013, a combination of the biggest tax rate reductions in the state's history and a gutsy but controversial unemployment insurance reform supercharged the state's economy and has even helped finance budget surpluses.
>
> As Wells Fargo's Economics Group recently put it: "North Carolina's economy has shifted into high gear. Hiring has picked up across nearly every industry."
>
> The tax cut slashed the state's top personal income tax rate to 5.75 percent, near the regional average, from 7.75 percent, which had been the highest in the South. The corporate tax rate was cut to 5 percent from 6.9 percent. The estate tax was eliminated.
>
> Next came the novel tough-love unemployment insurance reforms. The state became the first in the nation to reject "free" federal payments for extended unemployment benefits and reduce the weeks of benefits to 20 from 26. The maximum weekly dollar amount of payments, $535, which had been among the highest in the nation, was trimmed to a maximum of $350 a week. As a result, tens of thousands of Carolinians left the unemployment rolls.
>
> […]After a few months, the unemployment rate started to decline rapidly and job growth climbed. Not just a little. Nearly 200,000 jobs have been added since 2013 and the unemployment rate has fallen to 5.5 percent from 7.9 percent.
>
> […]Even with lower rates, tax revenues are up about 6 percent this year according to the state budget office. On May 6, Gov. McCrory announced that the state has a budget surplus of $400 million while many other states are scrambling to fill gaps.
>
> […]Because North Carolina built in a trigger mechanism that applies excess revenues to corporate rate cuts, the business tax has fallen to 5 percent from 6.9 percent, and next year it drops to 4 percent.

Although North Carolina is too liberal for me, it is nice to see them turning their economy around with tax cuts on job creators, and benefit cuts to those who choose not to work.

At the end of the day, the only real security that any of us has comes from the skills we have developed by working and the work experience we put on our resumes. The economy is in for some harsh conditions going forward. The more we can get Americans working, the better they will be able to weather the coming storm. A little kick in the ass might hurt, but in the long-term, it's for the best.

# Big government working with gay rights groups to punish Christians

**Wintery Knight** · 9 June 2015 · Archived copy · Original

Obama speaks to the Human Rights Campaign

Here is a story from The Daily Signal about the Christian bakers who are being sued for $135,000 for refusing to bake a gay couple a wedding cake.

Excerpt:

> The Daily Signal has exclusively learned that the government agency responsible for enforcing Oregon's anti-discrimination law appears to be working closely with a powerful gay rights advocacy group in its case against Aaron and Melissa Klein, owners of Sweet Cakes by Melissa.
>
> Communications between the agency, the Oregon Bureau of Labor and Industries, and the LGBT organization, Basic Rights Oregon, raise questions about potential bias in the state's decision to charge the Kleins with discrimination for refusing to make a cake for a same-sex wedding.
>
> In April, a judge for the agency recommended the Kleins be fined $135,000.
>
> Communications obtained through a public records request show employees of the Oregon Bureau of Labor and Industries—which pursued the case against the Kleins—participating in phone calls, texting, and attending meetings with Basic Rights Oregon, the largest LGBT advocacy group in the state.
>
> […][T]he Oregon Bureau of Labor and Industries commissioner, who is in charge of determining the Kleins' final punishment, met with Basic Rights Oregon on multiple occasions and purchased tickets costing hundreds of dollars benefiting the advocacy group.
>
> […]Communications between Bureau of Labor and Industries Commissioner Brad Avakian and Basic Rights Oregon, which has actively spoken out against the Kleins, raise questions about whether the commissioner and other agency employees were using the case to benefit a political agenda, and in the process, stripping the Kleins of their right to a fair trial.

> According to emails, Avakian met with Basic Rights Oregon on multiple occasions.
>
> One of those meetings was planned for May 1, 2014, shortly before a federal court struck down Oregon's Defense of Marriage Act.
>
> Another meeting between the commissioner and Basic Rights Oregon occurred on or around August 5, 2014. This fell between the time a judge denied the Kleins' first attempt to disqualify the commissioner for bias and shortly before a hearing for the case was scheduled to begin.

So the government, which is supposed to be fair to everyone, is actually collaborating with advocacy groups to punish those who disagree with the advocacy groups. It reminds me of the targeting of Tea Party groups by the IRS. Big government, which is funded by the taxpayers, using their power to coerce and punish taxpayers.
