> I began to focus all of my energy on my studies, and became very dedicated to my physics and math courses. I joined campus clubs, started to make friends, and, for the first time in my life, I was meeting Christians. They weren't like Objectivists—they were joyous and content. And, they were smart, too. I **was astonished to find that my physics professors, whom I admired, were Christian. Their personal example began to have an influence on me, and I found myself growing less hostile to Christianity.**

This is why I think it is so important for Christian parents to raise their children to get advanced degrees… either to become professors themselves, or to finance others (e.g. – our own children) to do advanced degrees. It is so important for university students to see Christian professors on campus. And failing that, it's important that we bring Christian speakers in to debate non-Christian speakers on the important issues. This will not happen unless we recognize how important it is, and then make a plan to achieve it.

More:

> **I had joined a group in the Center for Astrophysics and Space Sciences (CASS) that was researching evidence for the big bang. The cosmic background radiation—the leftover radiation from the big bang—provides the strongest evidence for the theory, but cosmologists need other, independent lines of evidence to confirm it. My group was studying deuterium abundances in the early universe. Deuterium is an isotope of hydrogen, and its abundance in the early universe is sensitive to the amount of ordinary mass contained in the entire universe. Believe it or not, this one measurement tells us whether the big bang model is correct.**
>
> **If anyone is interested in how this works, I'll describe it, but for now I'll spare you the gruesome details. Suffice it to say that an amazing convergence of physical properties is necessary in order to study deuterium abundances in the early universe, and yet this convergence is exactly what we get. I remember being astounded by this, blown away, completely and utterly awed. It seemed incredible to me that there was a way to find the answer to this question we had about the universe. In fact, it seems that every question we have about the universe is answerable. There's no reason it has to be this way, and it made me think of Einstein's observation that the most incomprehensible thing about the world is that it's comprehensible. I started to sense an underlying order to the universe. Without knowing it, I was awakening to what Psalm 19 tells us so clearly, "The heavens declare the glory of God; the skies proclaim the work of his hands."**
>
> That summer, I'd picked up a copy of T*he Count of Monte Cristo* by Alexandre Dumas and was reading it in my off hours. Previous to this, I'd only known it as an exciting story of revenge, since that's what the countless movie and TV adaptations always focused on. But it's more than just a revenge story, it's a philosophically deep examination of forgiveness and God's role in giving justice. I was surprised by this, and was starting to realize that the concept of God and religion was not as philosophically trivial as I had thought.

> All of this culminated one day, as I was walking across that beautiful La Jolla campus. I stopped in my tracks when it hit me—I believed in God! I was so happy; it was like a weight had been lifted from my heart. I realized that most of the pain I'd experienced in my life was of my own making, but that God had used it to make me wiser and more compassionate. It was a great relief to discover that there was a reason for suffering, and that it was because God was loving and just. God could not be perfectly just unless I—just like everyone else—was made to suffer for the bad things I'd done.

The Count of Monte Cristo is one of my favorite, favorite books as well, and had the same impact on me as it did on her.

OK, that's enough for this post. Go read the rest, and please share it. This woman is an expert Christian apologist and her life will have an influence. Are you going to be like her? Will you mentor others to be like her? Will you marry someone like her? Will you raise children who are like her (which is my plan)? We really need everyone to pull their weight now, because everywhere you look, the truth of Christianity is under attack.

# What is the criterion of embarrassment, and what are some examples of it?

**Wintery Knight** · 22 February 2016 · Archived copy · Original

Sherlock Holmes and John Watson are going to take a look at the data

The criterion of embarrassment is just one of the historical criteria used to select the parts of a piece of ancient literature that is likely to be historical. Other things in the source may have happened, but we can't know them as history. If significant parts of a text are historical, it is possible to accept it as historical until there are specific reasons to say that some part of it is NOT historical.

Here is William Lane Craig's list of criteria for a saying or event to be historical:

1. Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
2. Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
3. Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
4. Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
5. Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
6. Coherence: S is consistent with already established facts about Jesus.

The criteria is the same for liberal historians and conservative historians, although some historians weight one criteria more than others when trying to evaluate the historicity of different New Testament parts.

Here's Christian apologist Dr. Frank Turek explaining what the criterion is, and some examples:

Franks's a great speaker, you should watch that.

What's amazing is that even liberal historians will give you facts that are embarrassing to the authors as "historical".

Anyway, here are 8 examples of parts of the New Testament that exhibit the criterion of embarrassment, thanks to theologian C. Michael Patton.

1. Jesus' Baptism
2. Jesus' Family Did Not Believe
3. John the Baptist's Doubt
4. The Disciples Doubted After the Resurrection
5. Jesus Does not Know the Time of His Coming
6. Women are the First to Witness the Resurrection
7. Jesus Cursed a Fig Tree
8. Death and Resurrection of Christ

I think 6 and 8 are the ones I want you to take away with you when you finish this post.

Here they are:

> Women are the First to Witness the Resurrection
>
> This is one that is often brought up. Craig Keener puts it well enough: "The witness of women at the tomb is very likely historical, precisely because it was so offensive to the larger culture — not the sort of testimony one would invent. Not all testimony was regarded as being of equal merit; the trustworthiness of witnesses was considered essential. Yet most of Jesus' Jewish contemporaries held much less esteem for the testimony of women than for that of men; this suspicion reflects a broader Mediterranean limited trust of women's speech and testimony also enshrined in Roman law." (Keener, The Historical Jesus, 331)

And:

> Death and Resurrection of Christ
>
> This easily escapes our notice since the basic story of Christ is so well known. However, both the death and resurrection of Christ are, from the standpoint of the culture of the day, embarrassing and damaging. Concerning the death of Christ on a cross, Paul sees this problem: "But we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles" (1 Cor. 1:23). The word used for "stumbling block" is skandalon. Louw-Nida defines this as "that which causes offense and thus arouses opposition." Why? Because the Jews would never have thought their Messiah would have been hung on a tree. "Cursed is one who hangs on a tree" (Gal. 3:13; Deut 21:23). The Greeks thought of the resurrection as foolishness as they were dualist, essentially believing that the material world was evil and the spiritual world good. They would have scoffed at the idea that Christ returned to physical form. This is why later Greeks attempted to adapt the Christ story, doing away with the physical resurrection. Marcion is the most famous promoter of this view (see Docitism).

Now, when you are talking about the New Testament to your non-believing friends, you definitely want to draw attention to passages that are embarrassing to the authors. It will help you to be more convincing when you explain the New Testament like a historian.

By the way, you can read an entire post I did on *all the criteria* that historians use to evaluate ancient historical documents.

# Ted Cruz's plan to lower taxes and simplify the process for filing tax returns

**Wintery Knight** · 23 February 2016 · Archived copy · Original

How to get kissed: Heidi Cruz helping her husband

Ted Cruz is very upset with the IRS for discriminating against conservative groups and Christian groups in order to get Barack Obama re-elected in 2012. So, he's come up with a plan to drastically reduce their influence – and their cost to taxpayers.

Here he is talking about the plan with Megyn Kelly on Fox News.

And he has posted something about the plan on his web site:

> Under the Simple Flat Tax, the current seven rates of personal income tax will collapse into a single low rate of 10 percent. For a family of four, the first $36,000 will be tax-free. The Child Tax Credit will remain in place, and the Simple Flat Tax Plan expands and modernizes the Earned Income Tax Credit with greater anti-fraud and pro-marriage reforms.
>
> […]The IRS will cease to exist as we know it, there will be zero targeting of individuals based on their faith or political beliefs, and there will be no way for thousands of agents to manipulate the system.
>
> For businesses, the corporate income tax will be eliminated. It will be replaced by a simple Business Flat Tax at a single 16 percent rate. The current payroll tax system will be abolished, while maintaining full funding for Social Security and Medicare.
>
> The convoluted tax code will be replaced with new rules of the game – so simple, in fact, that individuals and families could file their taxes on a postcard or phone app. The Death Tax will be eliminated. The Alternative Minimum Tax will be eliminated. The tax on profits earned abroad will be eliminated. And of course, the Obamacare taxes will be eliminated. Also gone will be the unending loopholes in the current code, the stacks of depreciation schedules for businesses, and the multi-tiered rates on income and investments. Under the Simple Flat Tax, the Internet remains free from taxes.

Simple.

The Tax Foundation, which is the leading non-partisan think tank that deals with the issue of taxation, scored Cruz's plan.

They say:

> - Senator Cruz's plan would cut taxes by $3.6 trillion over the next decade on a static basis. However, the plan would end up reducing tax revenues by $768 billion over the next decade when accounting for economic growth from increases in the supply of labor and capital and the much broader tax base due to the new value-added tax.

> - According to the Tax Foundation's Taxes and Growth Model, the plan would significantly reduce marginal tax rates and the cost of capital, which would lead to a 13.9 percent higher GDP over the long term, provided that the tax cut could be appropriately financed.

> - The plan would also lead to a 43.9 percent larger capital stock, 12.2 percent higher wages, and 4.8 million more full-time equivalent jobs.

> - On a static basis, the plan would cut taxes by 9.2 percent, on average, for all taxpayers.

> - Accounting for economic growth, all taxpayers would see an increase in after-tax income of at least 14 percent at the end of the decade.

They conclude:

> Senator Cruz's tax plan would significantly alter the federal tax code. It would completely repeal the corporate income tax and all payroll taxes and enact a 10 percent income tax and a 16 percent "business transfer tax" or value-added tax. These changes to the tax code would increase the incentives to work and invest and would greatly increase the U.S. economy's size in the long run, leading to higher incomes for taxpayers at all income levels. The plan would also be a large tax cut, which would increase the federal government's deficit by over $3.6 trillion on a static basis. Accounting for the growth caused by the plan, federal revenues would decline by $768 billion over the next decade.

The non-partisan The Hill says that another major think thank for fiscal conservatism also likes Cruz's plan:

> Ted Cruz's tax plan would cost less and stimulate the economy more than Donald Trump's, a recent analysis found.
>
> "Of the two proposals that we have examined so far, those by Trump and Cruz, we find the Cruz proposal to be the better of the two," said David Tuerck, executive director of the Beacon Hill Institute and senior fellow at the National Center for Policy Analysis. The free-market groups released a report comparing the economic effects of the tax plans from the two Republican presidential candidates.
>
> […]Cruz's plan would also increase business investment and personal income more than Trump's plan would, the report found.

I want a higher personal income, and I want more money invested into the business that employs me – so I can keep my job, or maybe find a better one. It's very important to my life plan that I be able to earn money, and keep what I earn. I have a use for that money, whether I marry or not. And that use is not to give it to the government so they

can buy people condoms and abortions in exchange for their votes. I have a better plan for the money I earn than what a secular government wants to do with it.

Now, Ted Cruz will have to come up with $768 billion in revenue to balance his plan, but that's why he has promised to abolish or significantly reduce FIVE government departments. Don't worry, they aren't the useful ones. We have too much government, and we can get rid of some, and return the money to the people.

# New study: belief in free will linked to ability to behave morally and to help others

**Wintery Knight** · 23 February 2016 · Archived copy · Original

J. Warner Wallace: God's Crime Scene

A while back I finished reading "God's Crime Scene", the new book by J. Warner Wallace. I wanted to post something about some studies he mentioned in Chapter 6, on free will. This is one of the places where he found evidence in a surprising area.

Wallace says that free will makes more sense if theism is true, because we have non-material souls that interact with our bodies, but are not causally determined by them. On atheism, only matter exists, and you can't get free will (or consciousness) from matter. So atheists like Sam Harris and Alex Rosenberg, for example, deny free will, because they are materialists and atheists.

Anyway, here's what he writes on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others." Even determinist Michael Gazzaniga conceded: "It seems that not only do we believe we control our actions, but it is good for everyone to believe it."" The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here's the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons' belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then your worldview is telling you that what you are doing now is the result of genetic programming and sensory inputs. You're not conscious. You can't reason. You make no free choices, including moral choices. Naturally, someone who believes this is going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when things start to get a bit uncomfortable. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me. They all deny free will of course, and think that trying to resist temptation is a waste of time. What difference would it make if they did, anyway – there's no afterlife on atheism.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by

> naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

# John C. Sanford's genetic entropy hypothesis

**Wintery Knight** · 23 February 2016 · Archived copy · Original

Christianity and the progress of science

JoeCoder sent me a recent peer-reviewed paper by John C. Sanford, so I've been trying to find something written by him at a layman's level so I could understand what he is talking about.

Dr. Sanford's CV is posted at the Cornell University web page.

I found this 20-minute video of an interview with him, in which he explains his thesis:

The most important part of that video is Sanford's assertion that natural selection cannot remove deleterious mutations from a population faster than they arrive.

And I also found a review of a book that he wrote that explains his ideas at the layman level.

It says:

> Dr. John Sanford is a plant geneticist and inventor who conducted research at Cornell University for more than 25 years. He is best known for significant contributions to the field of transgenic crops, including the invention of the biolistic process ("gene gun").
>
> […]Sanford argues that, based upon modern scientific evidence and the calculations of population geneticists (who are almost exclusively evolutionists), mutations are occurring at an alarmingly high rate in our genome and that the vast majority of all mutations are either harmful or "nearly-neutral" (meaning a loss for the organism or having no discernible fitness gain). Importantly, Sanford also establishes the extreme rarity of any type of beneficial mutations in comparison with harmful or "nearly-neutral" mutations. Indeed, "beneficial" mutations are so exceedingly rare as to not contribute in any meaningful way. [NOTE: "Beneficial" mutations do not necessarily result from a gain in information, but instead, these changes predominantly involve a net loss of function to the organism, which is also not helpful to [Darwinism]; see Behe, 2010, pp. 419-445.] Sanford concludes that the frequency and generally harmful or neutral nature of mutations prevents them from being useful to any scheme of random evolution.
>
> […]In the next section of the book, Sanford examines natural selection and asks whether "nature" can "select" in favor of the exceedingly rare "beneficial" mutations and against the deleterious mutations. The concept of natural selection is generally that the organisms that are best adapted to their environment will survive and

> reproduce, while the less fit will not. Sanford points out that this may be the case with some organisms, but more commonly, selection involves chance and luck. But could this process select against harmful mutations and allow less harmful or even beneficial mutations to thrive? According to Sanford, there are significant challenges to this notion.

Stanford is a co-author of an academic book on these issues that has Dembski and Behe as co-authors.

Now, I do have to post something more complicated about this, which you can skip – it's an abstract of a paper he co-authored from that book:

> Most deleterious mutations have very slight effects on total fitness, and it has become clear that below a certain fitness effect threshold, such low-impact mutations fail to respond to natural selection. The existence of such a selection threshold suggests that many low-impact deleterious mutations should accumulate continuously, resulting in relentless erosion of genetic information. In this paper, we use numerical simulation to examine this problem of selection threshold.
>
> The objective of this research was to investigate the effect of various biological factors individually and jointly on mutation accumulation in a model human population. For this purpose, we used a recently-developed, biologically-realistic numerical simulation program, Mendel's Accountant. This program introduces new mutations into the population every generation and tracks each mutation through the processes of recombination, gamete formation, mating, and transmission to the new offspring. This method tracks which individuals survive to reproduce after selection, and records the transmission of each surviving mutation every generation. This allows a detailed mechanistic accounting of each mutation that enters and leaves the population over the course of many generations. We term this type of analysis genetic accounting.
>
> Across all reasonable parameters settings, we observed that high impact mutations were selected away with very high efficiency, while very low impact mutations accumulated just as if there was no selection operating. There was always a large transitional zone, wherein mutations with intermediate fitness effects accumulated continuously, but at a lower rate than would occur in the absence of selection. To characterize the accumulation of mutations of different fitness effect we developed a new statistic, selection threshold (STd), which is an empirically determined value for a given population. A population's selection threshold is defined as that fitness effect wherein deleterious mutations are accumulating at exactly half the rate expected in the absence of selection. This threshold is mid-way between entirely selectable, and entirely unselectable, mutation effects.
>
> Our investigations reveal that under a very wide range of parameter values, selection thresholds for deleterious mutations are surprisingly high. Our analyses of the selection threshold problem indicate that given even modest levels of noise affecting either the genotype-phenotype relationship or the genotypic fitness-survival-reproduction relationship, accumulation of low-impact mutations continually degrades fitness, and this degradation is far more serious than has been previously acknowledged. Simulations based on recently published values for mutation rate and effect-distribution in humans show a steady decline in fitness that is not even halted by extremely intense selection pressure (12 offspring per female, 10 selectively removed). Indeed, we find that under most realistic circumstances, the large majority of harmful mutations are essentially unaffected by natural selection and continue to accumulate unhindered. This finding has major theoretical implications and raises the question, "What mechanism can preserve the many low-impact nucleotide positions that constitute most of the information within a genome?"

Now I have been told by JoeCoder that there are many critical responses to his hypothesis, most of which have to do with whether natural selection can overcome the difficulty he is laying out. But since this is not my area of expertise, there is not much I can say to adjudicate here. Take it for what it is.

# Detainee released by the Democrats is now top recruiter for Islamic State (ISIS)

**Wintery Knight** · 24 February 2016 · Archived copy · Original

Neville Chamberlain Obama: peace in our time

Since the prison at Guantanamo Bay is in the news lately, it might be worth reviewing the Obama administrations actions related to radical Islamic terrorism to see whether Democrats can be serious about protecting America.

Here is a typical case of the Obama administration releasing radical Islamist terrorists from Gitmo.

Investors Business Daily explains:

> Last year, the president claimed he only freed five Taliban leaders to free "POW" Bowe Bergdahl, whom he portrayed as a hero. But now the Army says Bergdahl's a deserter. We smell a rat, and it's not just Bergdahl.
>
> The Army on Wednesday charged Sgt. Bergdahl with desertion and endangering the safety of a command, which carries a life prison term.
>
> The findings of the military's six-month investigation corroborate an internal 2009 Army report that found Bergdahl had a history of walking off his post and more than likely deserted. That's why the Pentagon never listed him as a POW.
>
> The report said he shipped his laptop back home to Idaho, and left a note expressing his disillusionment with the war, before ending up in the arms of the Taliban.
>
> Obama had access to this intelligence long before he made his Taliban deal. So why did he trade a known deserter — and likely enemy sympathizer, if not collaborator — for five enemy commanders that he acknowledged posed a national security risk? And why did he glorify Bergdahl as a war hero?
>
> To justify the release from Gitmo of five hardened terrorists who would never have been released otherwise and to help close down Gitmo.

The goal is not to improve security, it's to make it easier to close the prison.

And here's another case reported by the Weekly Standard from earlier this week:

> A former detainee hold at Gitmo has been arrested for ties to the Islamic State.
>
> "Spanish and Moroccan police on Tuesday arrested four suspected members of a jihadi cell that sought to recruit fighters for the Islamic State group, including one described as a former Guantanamo detainee who once fought with militants in Afghanistan," reports the Associated Press.
>
> "Three people were arrested in Spain's North African enclave city of Ceuta while a Moroccan was arrested in the Moroccan border town of Farkhana, next to Melilla, Spain's other North African enclave, statements from the two nations' interior ministries said.
>
> "One of those detained in Ceuta was the former Guantanamo detainee who was not named by Spanish authorities but described as 'a leader who was trained in handling weapons, explosives and in military tactics.' After being captured in 2002 and held in Guantanamo, he was returned to Spain in 2004, said Interior Minister Jorge Fernandez Diaz."

Obama says that closing Gitmo would actually strengthen our national security. He cites no experts for this, and he has no evidence that it's true – it just sounds nice to him, is all.
The truth is that releasing Islamic terrorists actually drives up recruitment of more terrorists.

Here's Andrew C. McCarthy to explain, in National Review:

> The second driver of terrorist recruitment is the perception that the jihadists are winning, the conviction that they will ultimately prevail. Osama bin Laden wooed young Muslims with the wisdom that people are always drawn to the strong horse and shun the weak one. While Islamic State "caliph" Abu Bakr al-Baghdadi follows up each jihadist atrocity by seizing more territory and enslaving more subjects, the president of the United States follows each jihadist atrocity — Benghazi, Paris, and now San Bernardino — by releasing more jihadists from Gitmo.
>
> It's not Gitmo driving recruitment. It's our president.
>
> In truth, Muslims don't care a whit about Guantanamo Bay. I prosecuted one of the world's most notorious terrorists in the mid '90s, the "Blind Sheikh," Omar Abdel Rahman, who formed the cell that carried out the 1993 World Trade Center bombing in New York. He got the gold-plated due process of a civilian trial and all the trimmings of top-shelf civilian prison — no Gitmo for him. And you know what? Islamic supremacists continue to condemn his incarceration and jihadists have killed scores of people to try to extort his release. They don't care *where* we detain jihadists; they care *that* we detain jihadists.
>
> Does Obama think we should release all the terrorists in federal penitentiaries, too? You know, to depress recruitment . . .
>
> Because it is Islamic supremacism and the perception of victory that draws young Muslims to the jihad, the brute fact is: It's not detaining terrorists at Gitmo that spurs recruitment; it's releasing them. Muslims who wage war against America and are held in our prisons become icons of the jihad. They rise from obscurity to legend, and their status imbues them with authority to command attacks, raise funds, and attract recruits.

The real concern of the left in all of this is NOT to protect America from threats such as radical Islamic terrorism. The real desire is to attack and punish those who make radical Islamists feel bad about what they are doing. Obama wants everyone to accept terrorists as just as moral as we are. Releasing them is his way of saying that they did nothing wrong – which is what he really believes. If anyone is in the wrong, Obama thinks, it's we Americans. We somehow provoked these innocent terrorists… get off your high horse, and remember the Crusades. That's his worldview. Terrrorism is your fault, and these innocent terrorists are the real victims, and that's why we need to

release them.

# Democrats changes immigration rules to admit people with multiple STDs

**Wintery Knight** · 24 February 2016 · Archived copy · Original

Is Barack Obama focused on protecting the American people?

The Daily Caller reports:

> The Obama administration will no longer ban immigrants with three sexually transmitted diseases and bacterial infections from entering the country, the Center for Immigration Studies noted.
>
> The Department of Health and Human Services announced the rule Jan. 26, and it goes into effect on March 28.
>
> The Centers for Disease Control and Prevention, within HHS, decided to remove chancroid, granuloma inguinale, and lymphogranuloma venereum from the list of inadmissible diseases for an immigrant seeking to enter the country. The Obama administration estimates that the change would not cost more than $100 million.
>
> In President Barack Obama's first year in office, the Department of Health and Human Services decided that HIV was no longer a "communicable disease of public health significance."
>
> […]The U.S. has the highest rate of HIV infection of any developed nation. More than 1.2 million people in this country are HIV positive.

Is HIV infection a serious problem?

The Washington Examiner explains:

> "Despite the declaration that HIV was no longer a communicable disease of public health significance, the CDC estimates that approximately 50,000 people in the United States are newly infected with HIV each year and that over 1.2 million persons in the country are HIV positive. The United States has the highest prevalence of HIV infection of any developed country," said CIS in a report released at midnight.
>
> […]Feere, the Center's legal policy analyst, added, "This change in policy illustrates, once again, that increased immigration is the main goal of the Obama administration, no matter the costs. **The administration itself estimates that more people will become infected and that there will be increased health care costs as a**

> **result of these changes.** But obviously these are considerations that have little relevance for those with an open-border perspective."

Democrats never want to shame people for bad behaviors like promiscuity. They think that it's better if we reward them by giving them admission to the USA, even if it puts innocent people who are already here at risk. Just ask Kate Steinle how good it is that the Obama administration does not deport illegal immigrants who commit serious crimes, once they are released from prison. Or ask the victims of the San Bernardino terrorists how good it is that the Obama administration doesn't screen out radical Islamists.

The important thing (to Democrats) is not that the American public is protected, it's that immigration of big-government supporters increases. That's why the Democrats want to let in more and more unskilled immigrants – they are future Democrat voters. They have to change the electorate so that people who behave morally, understand the Constitution, and believe in the free market system become a minority. Skilled immigrants are bad because they won't look to bigger government to save them from their own poor decisions. But unskilled immigrants – especially ones who need free health care for their sexually-transmitted diseases – are perfect Democrat voters. And they can infect other people, some of whom will also need free health care.

Big government to the rescue – to solve a crisis they created.

# Video, audio and summary of William Lane Craig vs Peter Millican debate

**Wintery Knight** · 24 February 2016 · Archived copy · Original

British Spitfire and German Messerschmitt Me 109 locked in a dogfight

Here's a debate with a well-qualified atheist and Dr. Craig.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

**Dr. Craig's opening speech:**

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a

distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

**Dr. Millican's opening speech:**

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

**Dr. Craig's first rebuttal:**

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He  says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds.  This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

**Dr. Millican's first rebuttal:**

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects

can have “algorithmic properties” as well as physical properties, it doesn’t mean that computers have minds.

**Dr. Craig’s second rebuttal:**

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that’s not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God’s goal is not just to convince people that he exists. God’s goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can’t translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can’t be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can’t be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don’t permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn’t prove that God is good, and he’s right – that’s what the moral argument is for.

He says that God isn’t efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

**Dr. Millican’s second rebuttal:**

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn’t mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

**Dr. Craig's final rebuttal:**

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

**Dr. Millican's final rebuttal:**

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3  minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

# Concealed-carry permit holder rescues woman from stabbing attack

**Wintery Knight** · 25 February 2016 · Archived copy · Original

Didarul Sarder, legal gun owner, concealed carry permit holder

Here's a story of how guns save lives by stopping crimes – a story not often told to Americans by the mainstream media.

There's a short 2-minute news report:

The Washington Times reports:

> A Michigan man lost his job after he pulled a gun to rescue a woman who was being stabbed to death, but he said he does not regret his split-second decision.
>
> "I would do it all over again," Didarul Sardertold a local Fox affiliate. "If I could save this woman's life over a job. I can get another job."
>
> Now he won't have to look for another job. Mr. Sarder's bosses reversed their unpopular decision and offered the 32-year-old his old job back as a valet service supervisor at a General Motors Technical Center in Warren, Michigan, The Washington Post reported.
>
> Warren Mayor Jim Flouts praised the decision in a Facebook post, calling Mr. Sarder a "hero" and saying he "probably saved" a "woman from being murdered." **He noted that Mr. Sarder has a valid concealed pistol license.**
>
> "Had he not legally exercised his Second Amendment rights, this woman would probably not be with us today," Mr. Flouts wrote. "He is employed by a GM-contracted valet service. **Right after it happened, someone in authority asked him off the premises because he violated company rules with a gun. That was absolutely the wrong response to this hero. However that decision was over-ruled by higher ups and he now has his job back.**
>
> "Heroes should be rewarded not terminated," he added. "Didarul is a resident of Warren and a resident that we can all be proud of!"
>
> On Wednesday morning, Mr. Sarder was heading into work as usual when he heard a woman crying for help.
>
> "The lady kept saying, 'I'm dying, someone help,' and it was just a natural reaction," Mr. Sarder told Fox. "I just see this lady getting stabbed. I only had like half a second to think, and I unholstered my firearm and pointed it at her to drop the knife."

> The woman, another employee at the GM center, was stabbed right outside the main entrance of the building. Warren police said the suspect, a 32-year-old woman, came to see the employee. The two argued in the lobby, then went outside. The suspect is accused of pulling a knife and stabbing the victim multiple times in the neck, back and abdomen. The suspect has since been identified as the daughter of the victim, Fox reported.
>
> **Mr. Sarder told the suspect to stay put until she was arrested by police.**
>
> **Officials said the victim, who has been identified as Stephanie Kerr, was in critical condition and was lucky the stabbing didn't continue any longer, Fox reported.**
>
> **But Mr. Sarder was fired on the spot and then escorted off the property.**
>
> **"He said, 'You shouldn't have had a firearm here. After this is done he needs to be escorted off the property. He's not welcome back here.' I was really bummed out. I got a little emotional," Mr. Sarder told Fox of the ordeal.**

Again, as in the vast majority of defensive handgun usages, no shots were fired. Instead, the gun was displayed to the criminal and the criminal stopped committing the crime. That is the *normal case* of defensive handgun usage by a concealed carry permit holder.

The Washington Free Beacon reports that the hero was *happy* not to have had to fire any shots:

> Sarder said he was glad he didn't have to shoot the attacker.
>
> "If I can neutralize the threat without having to fire, get to save the victim's life and the suspect's life," Sarder said.

I like this part of the Washington Times story the best:

> "I would do it all over again," Didarul Sardertold a local Fox affiliate. "If I could save this woman's life over a job. I can get another job."

This is something that I think is quintessentially masculine. I am not saying that a woman could or would not say those words. I am saying that this is something that every man is expected to say. This is the true definition of manliness – using strength to defeat evil, and then refusing to bow down to the politically correct, moral relativist, moral equivalence, gun-grabbers on the secular left. Men know right from wrong. Men use force to protect the weak. Men don't apologize for being men. Period.

I guess we live in a world now where it's considered a bad thing by the secular left to battle against evil. Somehow, this compassionate, non-judgmental, tolerant nanny instinct to make everyone be friends at the end has taken over, and we are no longer confident about condemning evil, and praising good.

**Learn about the issue**

To find the about guns and self-defense, look in the academic literature. Here are two books I really like for that.

- More Guns, Less Crime by Dr. John R. Lott (University of Chicago Press, 3rd ed.)
- Guns and Violence by Dr. Joyce Lee Malcolm (Harvard University Press)

Both of those books make the case that permitting law-abiding citizens to own firearms for self-defense reduces the rate of violent crime.

# How Google, Facebook and Twitter brainwash users against conservatism

**Wintery Knight** · 25 February 2016 · Archived copy · Original

[image]
Be careful with the liberal media
Here's a story from Rachel Alexander, writing at The Stream. I cannot cut and past the whole article, but I can excerpt a sample of what she found.

She writes about Google:

> Ever notice when you search for news or politics on Google News that the majority of search results tend to be articles from left-leaning publications? A search on Hillary Clinton today returns almost entirely articles by left-leaning publications on the first page of results. But is that just because liberals are more likely to search for stories about Hillary and are also more likely to prefer liberal sources? Maybe the Google result is just reflecting user preferences. Well, let's try it for Donald Trump. I just did and got a similar result.
>
> *Fox News* didn't show up in either search, never mind that it's a top ten news website with the most most popular television news network in America, and one that has been covering Trump's presidential campaign obsessively. Only after clicking "Explore In-Depth" and scrolling well down the page did a *Fox News* story appear, in the 12th position, just below an article by Bloomington, Indiana's *Herald Times*.

It's well-known that Facebook is biased to the left, as well.

She writes:

> Facebook's Trending News feature is also biased. John Jalsevac at *Live Action News* observed how the undercover Planned Parenthood videos were featured in Trending News, but not in a way that readers would click and go to the videos themselves. Instead, readers were routed to two articles Planned Parenthood had posted on its Facebook page.
>
> "Someone at Facebook's headquarters is responsible for coming up with a one-line description of why a particular term is 'trending,'" Jalsevac writes, "and then (it would appear), choosing which posts to give pride of place when a user clicks on that trending topic." By now it should surprise no one that the Facebook employee apparently chose to direct people to Planned Parenthood to get the organization's spin on the videos rather than to the videos themselves or to some news site that was at least attempting to offer an objective description of the controversial videos and Planned Parenthood's reaction.
>
> Facebook frequently removes conservative posts and bans conservatives, drawing a line where it thinks content is too extreme.

Here's an example of how Facebook censors viewpoints that conflict with their secular leftist values.

Rachel talks about Twitter, too:

> Twitter also frequently bans conservative users, known as "Twitter Gulag." Left-wing activists target outspoken conservatives and report them en masse to Twitter, claiming they are abusing its policies — usually claiming "harassment" — and Twitter often complies and deactivates their accounts. One conservative who was banned, Todd Kincannon, fought back in 2013 by forming the Twitter Gulag Defense Network and creating a list of tips to avoid being banned. He is still banned from Twitter three years later. Another outspoken conservative, Robert Stacy McCain, was just banned this past week, with no explanation given.
>
> Prominent conservatives Milo Yiannopoulos, tech editor at Breitbart, and John Podhoretz, editor of

> *Commentary*, recently lost their verified checks (a blue checkmark that indicates the account of a public figure is authentic), which is considered a step toward eventually banning an account. The conservative actor Adam Baldwin was temporarily banned after joking about #GamerGate, a hashtag he created for gamers fed up with political correctness.

Robert Stacy McCain and I are on each other's blogrolls. If you want to support him, you can tweet something with the hastag #FreeStacy. I did. He's a good man, and fearless about what he writes.

But I do have a response to this.

First of all, I don't recommend that you have a TV in your home, even if the only news that you get is Fox News. TV is a delivery mechanism for the thought of secular leftists. You're better off just buying or renting the programs you want, rather than uncritically taking in the opinions of uneducated clowns on CNN, MSNBC, the Comedy Channel, etc.

You should instead read a balance of left, center and right news sites. For example, on this blog, I will frequently link to the New York Times and the Washington Post, and sometimes the Los Angeles Times. Those are the sites I read on the left. On the right, I read the Washington Times, the Washington Free Beacon and Investors Business Daily.

Also, it's a good idea to get yourself set up with conservative voices, that will balance out the liberal garbage that you will undoubtedly be confronted with by co-workers, etc. I recommend listening to the Ben Shapiro podcast and the Dana Loesch podcast. Ben Shapiro has no commercials. Dana has some short commercials. I also like the Weekly Standard podcast, but they are more establishment. And I love Washington Watch with Tony Perkins – president of the Family Research Council. My favorite podcasting app for my phone and tablet is Player FM. It's free, has no ads, and works really well.

# New study: survey of 700 quintillion terrestrial exoplanets suggests Earth is special

**Wintery Knight** · 25 February 2016 · Archived copy · Original

The Circumstellar Habitable Zone, where liquid water could potentially exist
This is from Scientific American. (H/T William)

Excerpt:

> More than 400 years ago Renaissance scientist Nicolaus Copernicus reduced us to near nothingness by showing that our planet is not the center of the solar system. With every subsequent scientific revolution, most other privileged positions in the universe humans might have held dear have been further degraded, revealing the cold truth that our species is the smallest of specks on a speck of a planet, cosmologically speaking. A new calculation of exoplanets suggests that Earth is just one out of a likely 700 million trillion terrestrial planets in the entire observable universe. But the average age of these planets—well above Earth's age—and their typical locations—in galaxies vastly unlike the Milky Way—just might turn the Copernican principle on its head.
>
> Astronomer Erik Zackrisson from Uppsala University and his colleagues created a cosmic compendium of all the terrestrial exoplanets likely to exist throughout the observable universe, based on the rocky worlds astronomers have found so far. In a powerful computer simulation, they first created their own mini universe containing models of the earliest galaxies. Then they unleashed the laws of physics—as close as scientists understand them—that describe how galaxies grow, how stars evolve and how planets come to be. Finally, they fast-forwarded through 13.8 billion years of cosmic history. Their results, published to the preprint server arXiv (pdf) and submitted to *The Astrophysical Journal*, provide a tantalizing trove of probable exoplanet statistics that helps astronomers understand our place in the universe.

Discover magazine, which is all in for Darwinism and aliens everywhere, says this about the study:

> Zackrisson found that Earth appears to have been dealt a fairly lucky hand. In a galaxy like the Milky Way, for example, most of the planets Zackrisson's model generated looked very different than Earth — they were larger, older and very unlikely to support life.

> […]Zackrisson's work suggests an alternative to the commonly held assumption that planets similar to Earth must exist, based on the sheer number of planets out there.
>
> […]**One of the most fundamental requirements for a planet to sustain life is to orbit in the "habitable zone" of a star — the "Goldilocks" region where the temperature is just right and liquid water can exist. Astronomers have, to this point, discovered around 30 exoplanets in the habitable zones of stars. Simply extrapolating that figure based on the known number of stars suggests that there should be about 50 billion such planets in the Milky Way alone. Probability seems to dictate that Earth-twins are out there somewhere.**
>
> **But according to Zackrisson, most planets in the universe shouldn't look like Earth. His model indicates that Earth's existence presents a mild statistical anomaly in the multiplicity of planets. Most of the worlds predicted by his model exist in galaxies larger than the Milky Way and orbit stars with different compositions — an important factor in determining a planet's characteristics. His research indicates that, from a purely statistical standpoint, Earth perhaps shouldn't exist.**

Time for me to list out some of the things that are required for a galaxy, solar system and planet to support complex embodied life. Not just life as we know it, but life of any conceivable kind given these laws of physics.

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

It's not easy to make a planet that supports life. For those who are interested in reaching out to God, he has left us an abundance of evidence for his existence – and his attention to detail.

# New study: parents of four or more kids are happiest

**Wintery Knight** · 26 February 2016 · Archived copy · Original

Marriage and family

Here's a new study that says that four or more children makes parents the most happy.

The Daily Signal reports:

> The happiest parents are—drumroll, please—parents with four or more kids.
>
> Parents of large families were found to have the most life satisfaction, according to a study by Australia's Edith Cowan University. Dr. Bronwyn Harman, of the psychology and social science school at the university, spent five years studying what types of families are most content.
>
> "[The parents] usually say they always wanted a large family, it was planned that way, and it was a lifestyle they'd chosen," Harman told The Sydney Morning Herald.
>
> During her five-year study, Harman interviewed hundreds of parents from different family makeups. Her findings are based on resilience, social support, self-esteem, and life satisfaction.
>
> Her research points out that parental happiness relates to how much effort has been put into growing the family.
>
> "What is important for kids are things like consistency, boundaries and [to] know that they are loved, no matter what," Harman tells ABC Australia.
>
> Prior to the study, Harman thought parents with more children would be less happy.
>
> Though larger families may have more chaos and expenses than a smaller family, Harman's research shows that these issues are balanced by the amount of joy received from having more children.
>
> Her findings show that children who grow up in large families learn independence at a young age and always have someone to play with.

Now, happiness of the parents may not be the main goal of a relationship, but it definitely helps the spouses to apply themselves to the real main goal of serving God. You can't get miserable people to achieve anything for God, and you have to be serious about what people need in order to feel happy, so that they will be able to engage.

So, I've always planned for have four children in my decisions about education, career, etc. I often get a lot of flak from a few single women who wanted to delay marriage, and/or not have so many children. I am glad to see this study, because it's a confirmation of the idea that more children makes for a happier family. I'm not trying to rush into marriage and four children for no reason, but because this is what makes people happiest in the long run. It makes for a better environment for achieving other things for God.

I think people tend to worry a lot about having kids, and that's because having kids is expensive. But that can easily be planned out if you earn and save to prepare. My plan was to raise the kids in the country and have a capable homeschooling mom teach them and build their resumes up. Having lots of kids is not a problem if you take care of the money requirement, and don't let them be spoiled all the time. Sometimes, they will just have to be patient and do things on their own and not be the center of attention. That's probably good for them in any case.

# New study: scientists and the general public similar in religious practices

**Wintery Knight** · 26 February 2016 · Archived copy · Original

Christianity and the progress of science

Rice University reports on a new study conducted by sociologist Elaine Howard Ecklund.

Excerpt:

> The public's view that science and religion can't work in collaboration is a misconception that stunts progress, according to a new survey of more than 10,000 Americans, scientists and evangelical Protestants. The study by Rice University also found that scientists and the general public are surprisingly similar in their religious practices.
>
> The study, "Religious Understandings of Science (RUS)," was conducted by sociologist Elaine Howard Ecklund and presented today in Chicago during the annual American Association for the Advancement of Science (AAAS) conference. Ecklund is the Autrey Professor of Sociology and director of Rice's Religion and Public Life Program.
>
> "We found that nearly 50 percent of evangelicals believe that science and religion can work together and support one another," Ecklund said. "That's in contrast to the fact that only 38 percent of Americans feel that science and religion can work in collaboration."
>
> The study also found that 18 percent of scientists attended weekly religious services, compared with 20 percent of the general U.S. population; 15 percent consider themselves very religious (versus 19 percent of the general U.S. population); 13.5 percent read religious texts weekly (compared with 17 percent of the U.S. population); and 19 percent pray several times a day (versus 26 percent of the U.S. population).
>
> […]RUS is the largest study of American views on religion and science.

What would be interesting is to find out what specific arguments scientists who believe in God would appeal to, and which specific arguments scientists who don't believe in God would appeal to.

Personally, I think the scientific evidence is there for people who are open-minded, and who do not have a pre-commitment to behaviors that would have to change, should they become a Christian. Most of the atheists I know

are atheists because they don't want to live like Christians. And even if they don't have major adjustments to make, they don't want to live in a society where Judeo-Christian values dominate. So, for example, a successful, married atheist with children who lives mostly like a Christian still will champion abortion and gay marriage, because he simply doesn't want Judeo-Christian values to dominate in a society.

Atheism is the "anything goes" worldview. Do what pleases you, squash those who get in your way, like unborn babies or Christian business owners who don't want to celebrate your gay wedding. It is a major adjustment for atheists to start living like Christians. And it is these behavior concerns that motivate their refusal to wrestle with and accept the abundant scientific evidence for a Creator and Designer. Atheism makes life easier – you get to do what you want to feel good, and moral oughts are just fashions and customs, that vary by time and place. Nothing to be concerned about. And when you die, there's no judgment. What's not to like? It's easier. As long as you are able to ignore / deny the progress of science.

On the flip side of the issue, no Bible-believing Christian chooses Christianity because it's easier (especially the Christians in China, Africa, Muslim countries and atheist countries like North Korea). The founder of the religion gives his life for others, in obedience to God. That does not sound like fun to anyone. People become Christians because it's true. It's actually not very fun at all compared to what the atheists get to do with their lives.

# What was the Jesus Seminar? Should anyone have taken them seriously?

**Wintery Knight** · 27 February 2016 · Archived copy · Original

The Jesus Seminar and their pre-suppositions

A friend of mine was asking me about the "Jesus Seminar", which is a group of people who claim to be able to speak for broad spectrum of scholars about who Jesus really was. She was telling me that someone's child went to college, heard about the Jesus Seminar, and lost their faith because of their writings. I wanted to find a good article for her on this, and since Dr. William Lane Craig has debated most of the leading scholars in the Jesus seminar, (e.g. – John Dominic Crossan, Marcus Borg, Roy Hoover, Gerd Ludemann, Robert Price, John Shelby Spong, etc.), I chose an article by Dr. Craig. I also link to two debates that Dr. Craig did with Jesus Seminar people below.

First a short video (4 minutes):

If you can't watch anything long, then watch that.

Here is the article, on the Reasonable Faith web site.

Intro:

> In 1985 a prominent New Testament scholar named Robert Funk founded a think tank in Southern California which he called the Jesus Seminar. The ostensible purpose of the Seminar was to uncover the historical person Jesus of Nazareth using the best methods of scientific, biblical criticism. In Funk's view the historical Jesus has been overlaid by Christian legend, myth, and metaphysics and thus scarcely resembled the Christ figure presented in the gospels and worshipped by the Church today. The goal of the Seminar is to strip away these layers and to recover the authentic Jesus who really lived and taught.

Excerpt:

> The number one presupposition of the Seminar is *antisupernaturalism* or more simply, *naturalism.*Naturalism is the view that every event in the world has a natural cause. There are no events with supernatural causes. In other words, miracles cannot happen.
>
> Now this presupposition constitutes an absolute watershed for the study of the gospels. If you presuppose naturalism, then things like the incarnation, the Virgin Birth, Jesus' miracles, and his resurrection go out the

> window before you even sit down at the table to look at the evidence. As supernatural events, they *cannot* be historical. But if you are at least open to supernaturalism, then these events can't be ruled out in advance. You have to be open to looking honestly at the evidence that they occurred.
>
> […][T]he second presupposition which I wanted to discuss, namely, sceptical critics presuppose that our most primary sources for the life of Jesus are not the Gospels, but rather writings outside the New Testament, specifically the socalled apocryphal gospels. These are gospels forged under the apostles' names, like the Gospel of Thomas, the Gospel of Peter, the Gospel of Philip, and so forth. These extrabiblical writings are said to be the key to correctly reconstructing the historical Jesus.

In addition to that, there seems to be a third presupposition – radical religious pluralism.

John Dominic Crossan closed his opening speech in his debate with Dr. Craig with this:

> When I look a Buddhist friend in the face, I cannot say with integrity, "Our story about Jesus' virginal birth is true and factual. Your story that when the Buddha came out of his mother's womb, he was walking, talking, teaching and preaching (which I must admit is even better than our story)—that's a myth. We have the truth; you have a lie." I don't think that can be said any longer, for our insistence that our faith is a fact and that others' faith is a lie is, I think, a cancer that eats at the heart of Christianity.

But of course, he thinks that *all* miracle claims are lies, because of his supernaturalism. What he is really trying to do here is redefine these claims so they are not truth claims at all, but personal preference claims.

But the main point is that the co-chair of the Jesus Seminar pre-supposes that nothing that Christianity claims that offends people in other religions can be true. Before he sits down to look at the evidence. I'm not saying that these guys can't do history, I'm saying that the real debate with these guys should not be about history. The real debate should be about their presuppositions. We should work to defeat their pre-supposition naturalism with good scientific arguments like the origin of the universe, the fine-tuning, the origin of life, the Cambrian explosion, the habitability-discoverability argument, etc. And we should work to defeat their pre-supposition of pluralism by just asking them to defend it, and maybe point out that a person's being offended by some claim about reality being true does not make that claim false. Logic requires that people who make claims that are made false by reality are *wrong* and no amount of crying and sobbing can change that.

The second article in the series that Dr. Craig mentioned in the article I linked above is a generic article on the evidence for the historical Jesus. If you have not read a case for the resurrection of Jesus, then read it, too. Or you can check out this lecture by Dr. Craig on the Jesus Seminar and the historical Jesus:

If you want to see a good debate between Dr. Craig and Marcus Borg, here it is:

Dr. Borg is one of the more respected Jesus Seminar people, and a really nice guy. But also, a really wrong guy.

The key thing to know about them is that they presuppose naturalism (miracles never happen) and radical pluralism (no exclusivist religion can be correct, because that would make people in the other religions feel bad).

Now is this the right way to do history? Suppose a historian began with the presupposition that the North and South never engaged in any battles and interpreted all of the Civil War history through that lens. Would he arrive at an accurate understanding of what happened?

The presuppositions are key to understanding the "historical work" of the Jesus Seminar.

# New study: government run child-care increases negative outcomes for kids

**Wintery Knight** · 27 February 2016 · Archived copy · Original

Canada Political Map

I've complained before about Quebec, the most liberal and secular province in Canada. Well, one of the things that makes them so crappy is their policy of encouraging women to abandon their young children to strangers in government-run daycare. The government takes a whole lot of taxpayer money, often from traditional single-earner homes, and uses it to subsidize government-run child care. Well, now we have a brand new fresh study to show how wrong this policy has been.

Canada's radically leftist CTV News reports on the study.

Excerpt:

> In a paper released Monday, a group of university researchers say that children exposed to the province's child-care system were more likely to have higher crime rates, worse health and lower levels of life satisfaction as they have aged than their counterparts in other provinces who didn't have access to the same type of system.
>
> […]In their paper made public Monday through the National Bureau of Economic Research, Kevin Milligan from the University of British Columbia, Michael Baker from the University of Toronto, and Jonathan Gruber from MIT in Cambridge, Mass., update work from 2008 to see if children in the Quebec care system kicked their troubling behaviours over time.
>
> To do that, they analyzed four different data sets from Statistics Canada that touched on child outcomes, health and crime rates and scores from standardized tests that are connected to the national Council of Ministers of Education.
>
> What the trio found instead was "striking evidence" that exposure to the program was associated with higher crime rates, with the effects most acutely seen in boys. Boys were more likely to have higher levels of hyperactivity and aggression, the researchers wrote, while girls showed declines in prosocial behaviour, which captures many altruistic activities like donating and volunteering. All of those behaviours fall under the heading of "non-cognitive" abilities, such as impulsiveness and emotional stability.
>
> Exposure to the program was also associated with "worsened health and life satisfaction," the study says.
>
> There was no such lasting effects on math, science and reading abilities, the researchers write.

By the way, in case you are wondering – yes, that is the same Jonathan Gruber of MIT who was the architect of Obamacare. Surprising that he would be co-author on a study that dings big government.

Are these results unique to Canada? Let's take a look at a recent study from the UK.

From the UK Telegraph.

Excerpt:

> Academics at Oxford University discovered that exposure to some forms of early education contributed to bad behaviour and could be linked to emotional problems.

> […]In the Oxford study, researchers recruited 991 families with children aged three months. Mothers had an average age of 30.

> Researchers assessed children at the age of four through questionnaires about their behaviour and emotions completed by teachers and parents. They also observed care provided by mothers and observed non-parental care for at least 90 minutes for those children placed in formal childcare settings.
>
> **The report, published in the journal Child: Care, Health and Development, said that "children who spent more time in group care, mainly nursery care, were more likely to have behavioural problems, particularly hyperactivity".**
>
> **The study, led by Prof Alan Stein, of Oxford's Department of Child and Adolescent Psychiatry, found that "spending more time in day care centres, over the total period was a predictor of total problem scores".**
>
> **"Children who spent more time in day care centres were more likely to be hyperactive," it said. "Children receiving more care by childminders were more likely to have peer problems."**
>
> The authors added: "The findings in relation to childminding suggest that it might be out of home care rather than group care that raises the risk of behavioural difficulties."

Well, that's only Canada and the UK. Maybe things are better in Sweden?

Here's a second article from the National Post (one of Canada's national newspapers) about Sweden's government-run universal day care system.

Excerpt:

> True, parental leave in Sweden is a generous 16 months. There are no babies in daycare. But when parental leave ends, practically the reverse is true: A full 92% of all children aged 18 months to five years are in daycare. Parents pay only a symbolic amount for this; tax subsidies for daycare are $20,000 per child, annually. Swedish taxes are among the highest in the world, and the tax system was designed to make both parents seek employment in the work force.
>
> […]Then there are the questions about the social toll Sweden's childcare system is taking. Sweden has offered a comprehensive daycare system since 1975; since the early '90s, negative outcomes for children and adolescents are on the rise in areas of health and behaviour. While direct causation has been difficult to prove, many Swedish health-care professionals point to the lack of parent involvement beyond the first 16 months as a primary contributing factor. Psychosomatic disorders and mild psychological problems are escalating among Swedish youth at a faster rate than in any of 11 comparable European countries. Such disorders have tripled among girls over the last 25 years. Education outcomes in Swedish schools have fallen from the top position 30

> years ago, to merely average amongst OECD nations today. Behaviour problems in Swedish classrooms are among the worst in Europe.

Now this idea of government taking children away from families is very popular on the left, because they want children to be “equal”, and that means getting them away from their parents so that the government can raise them “equally”. You can even see Hillary Clinton pushing for it when she talks about “universal pre-K”. Well, maybe it’s time that someone showed her the studies. Not that she strikes me as someone who cares a lot about children, given her support for born-alive abortions and organ harvesting.

# Are atheists right to say that you can't prove a universal negative?

**Wintery Knight** · 28 February 2016 · Archived copy · Original

Lets take a closer look at a puzzle

I hear a lot of atheists complaining that they shouldn't have any burden of proof because it is impossible to prove a universal negative, i.e. – "there is no God".

Here's a post from William Lane Craig about it.

Excerpt:

> The first claim is, ironically, usually found on the lips of atheists, who thereby seek to excuse themselves from bearing any share of the burden of proof in the discussion. Usually, the claim is that a universal negative cannot be proved, and therefore the claim that "There is no God" is unprovable. The second claim is typically given as the reason why a universal negative cannot be proved: no matter how much knowledge you have acquired, there will always be more facts that you do not yet know, and perhaps the exception is among them. So one can never prove that there is no God. Perversely, this is somehow interpreted, not as an admission that atheism is indefensible, but as a demonstration that it is in no need of defense!
>
> Unfortunately, the argument is misconceived on a couple of counts.
>
> First, *negative, universally quantified statements can be proved*. We do this all the time. When we make statements about "all" or "none," we are speaking about what is the case with respect to a certain domain. We are saying that all or none of the members of that domain have or has a certain property. If the domain is not too large, I can confidently make universally quantified affirmative and negative statements. For example, I am quite confident that "No U.S. Senator is a Muslim." Or again, if I have a typical sample of the domain, I can make inductive inferences on the basis of the evidence from the sample to the whole, even if the whole domain is too large for me to canvass; for example, taking as my domain all the microbes on Earth, I can confidently assert, "No microbes have brains."
>
> Now someone might say that while it is admittedly true that negative, universal statements can sometimes be proven, still the point remains that in the case of God, the domain is too large and our sample too small to come to any negative conclusion. But those who propound this argument seem to think that the way one determines whether God exists is by taking a sort of universal survey to see if anything answering to the description of God exists somewhere out there. There are, however, other ways of coming to a knowledge of

> negative, universally quantified statements than doing an inductive survey.
>
> For example, we can have knowledge of negative, universally quantified statements on the basis of things' essential properties; for example, "No water molecules are composed of CO2." (Even if something looked and behaved just like water but was made of CO2 , it still would not be water but just a look-alike substance.) Or if we could show that a notion is logically impossible, we would know that it does not exist; for example, "There are no married bachelors." Significantly, many atheists have tried just this route to proving that God does not exist, arguing that the idea of a being which is all-powerful or all-knowing is logically incoherent.
>
> […]Second, *the statement that "God does not exist" is not a universally quantified statement*. When the theist asserts that "God exists," the word "God" is being used as a proper name, not as a common noun. It is not a statement like "Dogs exist" but rather like "Lassie exists." In order to prove that God does not exist, one need not prove that there are no gods whatsoever. Our interest is in one specific being, not in all the other beings which may have been imagined or worshipped throughout the world. So the claim that "God does not exist" is really a singular claim, like "Sherlock Holmes does not exist" or "Harry Potter does not exist." No one thinks that negative, singular claims cannot be proven.

So there are two ways to disprove a universal negative. Look where you expect the thing to be evident, and show that the evidence is not there. For example, show evidence that the universe is eternal. You can't have a Creator if you can show evidence that the universe is eternal. The second way is to show that the concept of God is logically contradictory, e.g. – that the concept of a "timeless person" is self-contradictory. Scholarly atheists try to do this, but this has not filtered down to the rank and file, which is why they still hold to these atheist slogans like "you can't prove a universal negative". Of course you can.

And finally, Craig concludes with some good advice:

> The bottom line is that we have no choice but to go on the basis of the knowledge and evidence that we do have—just we do in all other affairs of life.

WorldGoneCrazy found a video of William Lane Craig answering the universal negative objection:

Rank and file atheists seem to be very keen on holding out for today's scientific and historical data to be overturned by Star Trek theories of the future. But the more we study the good, scientific arguments for God's existence, the harder it is for naturalism to account for it. I am talking about the origin of the universe, the cosmic fine-tuning, the habitability argument, the origin of life, the origin of phyla, scientific evidence for consciousness and free will (e.g. – mental effort) and so on. Not to mention other arguments like the moral argument and the minimal facts case for the resurrection of Jesus.

We have to decide on the data we have *now.* And the data we have now fits better with a theistic worldview than an atheistic worldview. I can imagine all kinds of data that would argue against Christian theism. Finding the bones of Jesus. The universe being eternal. Experimental evidence for the multiverse. A probable naturalistic scenario for the origin of life. Etc. Arguing against Christian theism is not hard, it just takes work. That's why intelligent and informed atheists like Peter Millican and Austin Dacey can do it, but rank and file atheists want to talk about "I lack a belief in God" and "I can't prove a universal negative".

No one is asking atheists to *prove* anything, just as theists don't *prove* anything. We are asking them to give logical arguments with premises that are supported by the evidence. And that's what we expect theists to do, too. Once we have all the arguments and evidence on both sides, then people can decide for themselves. You don't have to "prove" anything in a debate, you just have to state your case as persuasively as possible and the other side does the same, then people decide. Simple.

**Positive arguments for Christian theism**

# Which candidate is best at working with Democrats to get things done?

**Wintery Knight** · 28 February 2016 · Archived copy · Original

Republican voters need to go beyond the surface level in assessing candidates

I have a few friends who I know are supporting either Donald Trump or Marco Rubio in the election. I have asked them specifically what policies, accomplishments and past battles they like best about their candidate.

Donald Trump supporters say this:

- he's leading in the polls (vs Republicans)
- he tells it like it is
- he's going to build a fence and make Mexico pay for it
- he's a businessman

Marco Rubio supporters say this:

- he's leading in the polls (vs Democrats)
- he's handsome
- I like the way he talks
- his wife was a Miami Dolphins cheerleader, so she is prettier and funner than nerdy workaholic Harvard MBA Heidi Cruz

My candidate is Ted Cruz, and the Trump supporters tend to have no problem with him. But the Rubio supporters don't like Cruz. So I made a list of their objections to Cruz.

The Rubio supporters say this:

- (quoting Donald Trump) not one of his colleagues in the Senate has endorsed him
- he won't be able to convince other people to get things done
- I don't like the way he talks
- he has a pickle nose
- he said he wanted to make Marco Rubio's amnesty bill "better" but his amendment actually killed the amnesty bill – that means he's a liar because his amendment didn't make the bill better

Regarding the point about Ted Cruz not being able to get along with his colleagues in the Senate, that's actually false. First, Cruz and Rubio came into the Senate at the same time, and Cruz has passed more legislation than Rubio. That might be because Rubio has the worst attendance record in the Senate.

When Rubio works together with people, he authors an amnesty bill, he supports the failed Libya invasion, he gives in-state tuition to illegal immigrants, he weakens border security, he authors a bill to remove the due process rights of men falsely accused of rape on campus, he skips votes to defund Planned Parenthood, he is liberal on the issue of gay marriage, his deputy campaign manager is a gay activist, and so on. In short, he works with liberals on liberal priorities – that's why he is likable to them.

Ted Cruz gets into trouble with his colleagues, because he tries to stop the spending, stop amnesty, stop the military interventions in Syria, Libya and Egypt, etc. That's why he is not likable to them.

What about the point that Cruz would not be persuasive to Democrats, and so would not be able to get anything done? Well, we already saw that Cruz has passed more legislation than Rubio, despite having a pickle nose. But he's also shown the ability to pull Democrats towards his point of view.

Here's an article from PJ Media to explain:

> Now that Cruz regularly polls toward the top of an ever-shrinking field, his early tenure bears closer scrutiny. Cruz has gained fame as a social conservative and an unwavering opponent of Obamacare. **In his first major leadership role, however, he developed economic policy as the director of the Federal Trade Commission's Office of Policy Planning.**
>
> At the FTC, Cruz's agenda could have been written by Milton Friedman.
>
> Cruz promoted economic liberty and fought government efforts to rig the marketplace in favor of special interests. Most notably, Cruz launched an initiative to study the government's role in conspiring with established businesses to suppress e-commerce. This initiative ultimately led the U.S. Supreme Court to open up an entire industry to small e-tailers. Based on his early support of disruptive online companies, Cruz has some grounds to call himself the "Uber of American politics."
>
> Moreover, and perhaps surprising to some, **Cruz sought and secured a broad, bipartisan consensus for his agenda. Almost all of Cruz's initiatives received unanimous support among both Republicans and Democrats.**
>
> Ted Cruz a consensus-builder? He was, at the FTC.
>
> […]Beyond the e-commerce initiative, Cruz also reoriented the FTC's use of antitrust laws.
>
> […]Cruz also sent dozens of letters to states to fight new efforts to enshrine crony capitalism.
>
> […]Perhaps surprisingly, Cruz secured a high degree of consensus in pursuing his agenda.
>
> As an independent agency, the FTC has five commissioners, and during Cruz's tenure, two of them had served in President Clinton's administration. **All five commissioners voted to support almost all of Cruz's proposals.**
>
> **Cruz achieved this consensus by listening to policy experts and political opponents. He listened to the FTC's economic experts and marshaled empirical economic analysis to support his policy objectives. He solicited input from prominent Democrats, including the late Senator Howard Metzenbaum, who spoke at the e-commerce conference. In addition, Cruz worked to develop personal relationships across the aisle. He regularly met with Democratic commissioners and incorporated their ideas into his policy proposals.**

The article explains Cruz's conservative agenda in detail; increasing competition, protecting consumers, and so on. But he wasn't likable in the way that Marco Rubio was likable – by pushing a Democrat agenda. He was likable by convincing Democrats to push a conservative agenda. He did it by gathering evidence and making his case. And

that’s what you expect from a lawyer who wins cases for conservatives at the Supreme Court.

# Report: how Donald Trump used illegal immigrants to build Trump Tower

**Wintery Knight** · 29 February 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

The Daily Beast explains how Trump used illegal immigrant labor to build his Trump Tower.

Excerpt:

> Thirty-five years ago, a small army of illegal immigrants was used to clear the site for what became the crown jewel of Donald Trump's empire.

> The 200 demolition workers—nicknamed the Polish Brigade because of their home country—worked 12-hour shifts, seven days a week with no overtime to knock down the old Bonwit Teller building and make room for Trump Tower on Fifth Avenue in Manhattan.
>
> **According to testimony in a protracted civil suit in federal court, the laborers were paid $5 an hour or less when they were paid at all. Some went unpaid after the contractor had financial troubles. A few never received even the paltry sum that was owed them for their dirty and hazardous efforts preceding the construction of Trump's monument to his own wealth.**

> **"They were undocumented and worked 'off the books,'" Manhattan federal Judge Charles Stewart said of the workers after they became the subject of a 1983 lawsuit. "No records were kept, no Social Security or other taxes were withheld."**

I am for work permits for foreign workers who can find a willing employer here, but those employers should not be allowed to work without paying taxes, and for less than the minimum wage. That's not fair to all the American workers who do pay taxes and who do play by the rules. It seems to me that you cannot really be against illegal immigration if you are benefiting from it. Is this how Donald Trump intends to bring jobs back to America?

# Is Donald Trump a successful businessman? Let's look at his record

**Wintery Knight** · 29 February 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

This post is from Daily Wire, and it lists a number of Donald Trump's business misadventures:

- **United States Football League**
- **Trump Steaks**
- **Trump Vodka**
- **Trump's board games**
- **Trump Airlines**
- **Trump Mortgage**
- **GoTrump.com**
- **Trump Magazine**
- **Trump hotels and casinos (four bankruptcies)**
- **Trump University**

But most interesting of all is the Trump University case.

Here's an article from National Review about that:

> Many people believe that higher education is a de facto scam. Trump University, Donald Trump's real-estate institution, was a de jure one.
>
> First thing first, Trump University was never a university. When the "school" was established in 2005, the New York State Education Department warned that it was in violation of state law for operating without a NYSED license. Trump ignored the warnings.
>
> […]Trump University is currently the defendant in *three* lawsuits — two class-action lawsuits filed in California, and one filed in New York by then-attorney general Eric Schneiderman, who told CNN's *New Day* in 2013: "We started looking at Trump University and discovered that it was a classic bait-and-switch scheme. It was a scam, starting with the fact that it was not a university."
>
> Trump U "students" say the same. In his affidavit, Richard Hewson reported that he and his wife "concluded

> that we had paid over $20,000 for nothing, based on our belief in Donald Trump and the promises made at the [organization's] free seminar and three-day workshop." But "the whole thing was a scam."
>
> In fact, $20,000 is only a mid-range loss. The lead plaintiff in one of the California suits, yoga instructor Tarla Makaeff, says she was "scammed" out of $60,000 over the course of her time in Trump U.
>
> How could that have happened? The New York suit offers a suggestion:
>
> > The free seminars were the first step in a bait and switch to induce prospective students to enroll in increasingly expensive seminars starting with the three-day $1495 seminar and ultimately one of respondents' advanced seminars such as the "Gold Elite" program costing $35,000.
> >
> > At the "free" 90-minute introductory seminars to which Trump University advertisements and solicitations invited prospective students, Trump University instructors engaged in a methodical, systematic series of misrepresentations designed to convince students to sign up for the Trump University three-day seminar at a cost of $1495.
>
> […]But according to the New York complaint, none of the instructors was "handpicked" by Trump, many of them came from fields having nothing to do with real estate, and Trump "'never' reviewed any of Trump University's curricula or programming materials." The materials were "in large part developed by a third-party company that creates and develops materials for an array of motivational speakers and seminar and timeshare rental companies."
>
> Furthermore, Trump's promises that the three-day seminar ($1,495) would include "access to 'private' or 'hard money' lenders and financing," that it would include a "year-long 'apprenticeship support' program," and that it would "improve the credit scores" of students were empty.

How is it that the mainstream media never told us about this? I suspect they will – once Trump is declared the Republican nominee. For now, they prefer to keep it hidden.

Donald Trump inherited a lot of money from his father. Should we assume that he knows something about business just because he did? Or should we look at his record and see how good of a businessman he really is?

# Do supporters of Donald Trump really support what Trump believes?

**Wintery Knight** · 29 February 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

My friend Doug wrote a post addressed to all the evangelical Christians and Tea Party conservatives who support Trump, to ask them if they really support the actual policies and record of the man.

Doug writes:

> Do you support Planned Parenthood, and do you approve of your tax dollars going to fund the abortion giant?
>
> If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [1] [2] [3] [4]
>
> I am not.
>
> Do you identify with the Tea Party movement?
>
> If your answer is, Yes, then you must ask yourself, Are you willing to overlook the fact that Donald Trump does not and has actively tried to defeat it? [5] [6] [7]
>
> I am not.
>
> Would you ever under any circumstance help the Democrats retake Congress from the Republicans?
>
> If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [8]
>
> I am not.
>
> Do you like the idea of socialized, single-payer, government-run healthcare?
>
> If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [9] [10]
>
> I am not.
>
> Do you support amnesty for those who are residing in our country illegally?
>
> If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [11] [12]
>
> I am not.

Do you like the ObamaCare mandate?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [13] [14]

I am not.

Do you want to see another liberal judge placed on the Supreme Court?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [15]

I am not.

Do you support Israel in the Israel-Palestinian conflict?

If your answer is, Yes, then you must ask yourself, Are you willing to overlook the fact that Donald Trump does not? [16] [17] [18] [19]

I am not.

Do you support gun control?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [20]

I am not.

Do you support the unconstitutional abuse of eminent domain?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [21] [22]

I am not.

Do you believe that Bush intentionally lied about Iraq?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [23]

I am not.

Do you approve of casinos, strip clubs, and extramarital affairs?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [24] [25]

I am not.

Would you ever under any circumstance donate money to Nancy Pelosi or Harry Reid?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [26]

I am not.

Do you like the idea of more “forward motion on gay rights”?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [27] [28] [29]

I am not.

Do you support the legality of partial birth abortion?

If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [30] [31] [32]

I am not.

> Do you consider yourself a conservative on the most important political matters?
>
> If your answer is, Yes, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [33]
>
> I am not.
>
> Do you think it's OK to ban U.S. citizens from entering this country based on religion?
>
> If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [34]
>
> I am not.
>
> Do you think that U.S. citizens should be required to register their religion with the government?
>
> If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [35]
>
> I am not.
>
> Do you want a President who flip flops on important issues?
>
> If your answer is, No, then you must ask yourself, Are you willing to overlook that shortcoming in Donald Trump? [36] [37] [38]
>
> I am not.
>
> But then, I am a Christian, an evangelical, and a consistent Constitutional conservative, and consequently, I do not support Donald Trump.
>
> The question is, Do you? Do you really support the things that Donald Trump supports?

You can find the footnotes in the original post.

I've had conversations with Trump supporters about some of these issues, and the response I get is that Trump is leading in the polls. I actually sent one Trump supporter who told me this to Real Clear Politics, which catalogs all the polls that are done nationally and at the state level. The polls clear show that Trump does not win against Clinton nationally, and he does even worse against Bernie Sanders. The response of the Trump supporter? All the polls are biased. So, the polls that show Trump in the lead in the Republican primary are not biased, but the polls showing Trump losing to Clinton and Sanders are biased.

I've tried to speak to the Trump supporters about things like eminent domain, support for bank bailouts, single payer health care, touchback amnesty, Planned Parenthood support,support for Vladimir Putin, adultery and divorce, support for the gay rights agenda, four bankruptcies, etc. Their response has been do deny the evidence. Trump never did those things, all the news articles are lies, and all the videos of Trump saying those things are fake.

Anyway, I like listening to Ben Shapiro and Ben has a new 6-minute video where he makes the case against Trump:

Doug, Ben, and myself are all supporters of Ted Cruz. I would urge Trump voters to reconsider their vote. Please share this post, and share the Ben Shapiro video, as well.

# Students who alleged racial attack disproved by video of actual event

**Wintery Knight** · 1 March 2016 · Archived copy · Original

College students puking in toilet
This is from the College Fix.

It says:

> A trio of black SUNY-Albany students, who alleged they had been attacked and subjected to racist slurs by a group of white men on a bus at the end of January, have now been charged with assault *themselves.*
>
> All three face misdemeanor assault charges, while two also are dealing with "falsely reporting an incident."
>
> "Multiple videos of the incident" showed no evidence of the students' claims, instead proving *they* were the antagonists. This included the "assault [of] a 19-year-old white woman."
>
> Fox News reports:
>
> The women [Ariel Agudio, Asha Burwell, Alexis Briggs], all 20 years old, claimed they were attacked early on the morning of Jan. 30 while riding a bus. They claimed that they were called racial slurs and were physically attacked while bystanders looked on.
>
> Police said surveillance and cellphone video, as well as eyewitness testimony, contradicted the women's account. The white men Agudio, Burwell and Briggs claimed assaulted them were actually trying to break up the fight.

The article notes that Hillary Clinton hastily tweeted her support for the 3 students. Well, of course.

Wow, it seems like a really scary thing to have to hire college students these days. They don't seem to be learning anything useful, they just seem to learn how to be divide other people up into groups and complain that they are being discriminated against. What good is that to an employer?

# Pro-lifers win: abortion clinics closing at record pace

**Wintery Knight** · 1 March 2016 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve this report

Today is likely to be a rough day for conservatives in the election, as many "evangelical Christians" and "conservatives" elect a con man who openly supports funding Planned Parenthood, and who describes himself as "very pro-choice". Depressing.

Well, there is good news on the abortion front, from Life News.

Excerpt:

> Abortion clinics are closing at a record pace across the country as they fail to meet new health and safety requirements and the demand for their business drops, according to a Bloomberg analysis.
>
> While abortion activists blame the closures on laws that require basic health and safety protections for patients, the report indicates that many factors are involved, including the lack of business and fewer doctors willing to do abortions. These numbers, coupled with plunging national abortion statistics, point to the fact that fewer women actually want abortions. As modern technology shows clear pictures of unborn babies in the womb, and as more pro-life groups offer women alternatives to abortion, more women have access to the education and resources to choose life for their unborn babies.
>
> Since 2011, at least 162 abortion clinics have shut or stopped doing abortions; 21 new abortion clinics opened in that same time period, the report states. The top four states that saw abortion clinics close were Texas with 30-plus, Iowa with 14, Michigan with 13 and California with 12, according to the report. A report from Operation Rescue also showed 53 abortion clinics closed in 2015 alone.
>
> Lack of business has been a major factor in the closing of abortion clinics, according to the Bloomberg report. The news group found that of the 162 abortion clinics that closed, 19 percent were in counties with fewer than 100,000 people. This seems to indicate that rural abortion clinics aren't doing as well financially. Last week, a Planned Parenthood abortion clinic in Blacksburg, Virginia announced that it was closing for this very reason,

> LifeNews reported. A Bridgeport, Connecticut abortion clinic also told Bloomberg it closed in 2015 because of reduced demand.

I think the pro-life movement has a lot to do with this success – everything from pro-life sidewalk counselors to the CMP sting videos helped. But Republican lawmakers helped, too – by passing laws that regulated abortion clinics:

> Abortion clinic regulations, such as those currently being challenged in Texas, also have played a major factor in the closing of abortion clinics. In March, the Supreme Court plans to hear a lawsuit bought by abortion businesses against the pro-life Texas law responsible for closing abortion clinics that could not guarantee they could protect the health of Texas women. The law has been credited with saving the lives of more than 10,000 unborn children. Abortion clinic regulations in other states also have resulted in dozens of abortion clinics closing, according to the report.

Here's an article from The Blaze that talks about how many pro-life laws have been enacted:

> According to a new report by the pro-abortion Guttmacher Institute, states have enacted 288 restrictions on abortion since 2010.
>
> The "2015 Year-End State Roundup" also shows that almost as many pro-life laws were passed in the last five years as were passed in the previous 15 years.
>
> In 2015, 17 states enacted 57 new pro-life laws.
>
> **According to the report, states implemented a variety of regulations on the abortion industry, such as requiring an ultrasound, counseling or a waiting period prior to a procedure, or limiting abortion to the first trimester of pregnancy.**
>
> Thirty-one states enacted at least one new pro-life law in the last five years. Ten states enacted more than 10 new regulations. Those 10 states are responsible for 60 percent of the new regulations.
>
> Four states — Arkansas, Indiana, Kansas and Oklahoma — each enacted more than 20. Kansas has enacted 30 pro-life laws since 2010, the most of any state.

Now we have to be vigilant, because pro-abortion judges are always anxious to strike down pro-life laws. And of course the Democrats are trying to pass a bill at the federal level that will neutralize all restrictions on abortion at the state and local levels. But for now things look pretty good.

# Why does God let people suffer? Why is there so much evil in the world?

**Wintery Knight** · 1 March 2016 · Archived copy · Original

I have a key that will unlock a puzzling mystery

I just wanted to draw your attention to this 4 page essay by Joe Manzari, which is the best darn summary of the state of the art on the problems of evil and suffering I have seen. The problem of evil is an objection to the existence of God based on the presence of evil or suffering in the world. The arguments basically infer that if God is all-good and all-powerful, then there should not *be* any evil or suffering.

There are two kinds of problem of evil.

**The Logical/Deductive Problem of Evil:**

The first kind is called "the deductive problem of evil" or "the logical problem of evil". An exampel of evil would be Saddam Hussein murdering some journalist who told the truth about him. This version of the problem of evil tries to introduce a logical contradiction between the attributes of God and the presence of evil, like this:

(1) God exists.
(2) God is omnipotent.
(3) God is omniscient.
(4) God is omni-benevolent.
(5) Evil exists.
(6) A good being always eliminates evil as far as it can.
(7) There are no limits to what an omnipotent being can do.

In order to avoid a contradiction, we need to explain how there could still be evil, since the conclusion of this argument is that there should not be any evil!So how are we going to get out of this mess? The solution is to attack premises 6 and 7.

Premise 6 is false because in order to eliminate human evil, you would have to eliminate free will. But eliminating free will is worse than allowing it, because good things like love are impossible without free will.

> It is in response to this proposition that the Free Will Theodicy of G. W. Leibniz applies. God, valuing man's freedom, decided to provide him with a will that was free to choose good over evil, rather than constraining his will, allowing him to choose only good.

Premise 7 is false because there *are* limits on what an omnipotent being can do. God *cannot* perform contradictory things, because contradictory things are impossible. God cannot make a married bachelor. Similarly, God cannot force free creatures to do his will.

> In the same manner that God cannot create a square circle, he cannot make someone freely choose to do something. Thus, if God grants people genuine freedom, then it is impossible for him to determine what they will do. All that God can do is create the circumstances in which a person can make free choices and then stand back and let them make the choices.

One last point. In order to solve the problem of natural evil for this argument, you can point out that free will requires predictable and regular natural laws in order to make free will meaningful. Natural laws mean that individuals can predict what will happen when they act, allowing for moral responsibility. More on that next time.

**Inductive/Probabilistic Problem of Evil**

There is a second version of the problem of evil, though, which is more dangerous than the first. This is the one you see being argued in debates, whereas the first version is not used because it has been defused as seen above. Here is the second one:

(1) If God exists, gratuitous evil does not exist.
(2) Gratuitous evil exists.
(3) Therefore, God does not exist.

This argument tries to argue that while God may have some reason for allowing free will, there are other evils in the world that are not the result of human action that God has *no reason* for permitting. Theists usually like to argue that God has morally-sufficient reasons for allowing some evil in the world, in order for the character of humans to develop through suffering and endurance. But what about gratuitous evil, which doesn't have any point?

Consider the case of a fawn running in the forest, who falls and breaks his leg. Ouch! Then a forest fire starts and the poor fawn suffocates to death in the smoke. Why would God allow this poor small animal suffer like that? And notice that there is no morally sufficient reason for allowing it, because no human knows about this and so no human's character or relationship with God is impacted by it.

The solution to this problem is to deny premise 2. (You can also deny 1 if you want). The problem with premise 2 is that the atheist is claiming to know that some instance of evil really is gratuitous. But since they are making the claim *to know*, they have to be able *to show* that God's permission of that evil achieves nothing. But how do they know 2 is true?

The problem with 2 is that the atheist is not in a position to know that the permission of some evil X really doesn't achieve anything. This is because the atheist cannot look forward into the future, or see into other places, in order to know for certain that there is no morally sufficient reason for allowing God's allowing evil X to occur. But since the atheist argues based on premise 2, he must be able to show that premise 2 is more probable than not.

Manzari's article also argues why apparently gratuitous evil is less problematic for Christians in particular, because of certain Christian doctrines. He lists four doctrines that make the apparently gratuitous evil that we observe more compatible with an all-good, all-powerful God.

1. The chief purpose of life is not happiness, but the knowledge of God.
   Some of the things that we experience may wreck our feelings of contentment, but we need to remember that God may be permitting those troubles in order to remind us not to get too comfortable with life on earth, and to think ahead to the after-life. And remember, even Jesus learned endurance through suffering. His suffering was not pointless and neither is ours.
2. Mankind is in a state of rebellion against God and God's purposes.
   We humans seem to be on a dead run away from God, trying to keep our autonomy by knowing as little about

him as possible. Part of knowing God is knowing what he designed us to do – to love him and to love others. And so, the less we know about God, the more we stray from his design for our lives.

3. God's purpose is not restricted to this life but spills over beyond the grave into eternity.
   Sometimes it seems as if our sufferings really are catastrophic, but when you realize that you are offered eternal life without any suffering after you die, the sufferings of this life are a lot less upsetting than they would be if this life was all we had.
4. The knowledge of God is an incommensurable good.
   This one is the biggest for me. Knowing God and knowing his actual character by studying the historical Jesus is a wonderful counterbalance for all the problems and sufferings of this life. A little bit of historical study reveals that Jesus was not spared the worst kind of suffering in his life, making it is a lot easier for us to bear with whatever God allows us to face.

In section 3, Manzari shows how you can also argue against this version of the problem by supplying evidence for God, such as from the big bang, the fine-tuning, the origin of life, the origin of free will, the origin of the first living organism, the origin of the mind, the sudden emergence of phyla in the fossil record, molecular machines, irreducible complexity, the resurrection miracle, and the objective morality argument.

The argument goes like this:

(1) If God exists, gratuitous evil does not exist.
(2) God exists.
(3) Therefore, gratuitous evil does not exist.

Just support 2 with some evidence, and you win, especially when they can't support their claim to know that gratuitous evil exists.

**The Argument for God from Evil**

In the paper, Manzari actually makes an argument for God from evil. That's right. Far from disproving God, the presence of evil (a departure from the way things out to be), actually affirms God's existence. How?

(1) If God does not exist, then objective moral values do not exist.
(2) Evil exists.
(3) Therefore, objective moral values do exist.
(4) Therefore, God exists.

That's right. If evil exists in any sense such that it is not a personal or cultural preference, then objective morality exists. If objective morality exists, then there is an objective moral lawgiver. Game over. If the atheist backtracks and says that the existence of evil is just his opinion or his cultural preference, then this standard does not apply to God, and you win again. Game over again.

So, although the problems of evil look pretty tough, they are actually easy. The toughest part of evil and suffering is the emotional problem. I could tell you stories about what I've been through… but then, that's why the arguments matter. You can hold your position under tremendous fire when you have the arguments and evidence to ground you.

# After a poor Super Tuesday showing, is it time for Marco Rubio to drop out?

**Wintery Knight** · 2 March 2016 · Archived copy · Original

GOP primary delegate count after Super Tuesday

I actually thought that grassroots conservative leader Erick Erickson was a supporter of Rubio for the longest time, but I guess he did pretty badly in the Super Tuesday primaries, because now Erickson is calling for him to drop out, and accept the Vice Presidency.

Erickson writes:

> I have tried very hard to be neutral in the race between Ted Cruz and Marco Rubio. They are both friends. But reality dawns. Rubio has won only a single state (Minnesota), and even then not all the delegates, and tells us we must wait until Florida on March 15th. Cruz is already winning states more solidly and leads in delegates.
>
> In 1980, as the nation was falling apart, Ronald Reagan as the outsider and George H. W. Bush as the insider were willing to set aside personal and policy differences to unite for the good of the country. Reagan had attacked Bush on his illegal immigration position. Bush had coined the term “voodoo economics” to describe Reagan’s economic policies. But they overcame that, they united, and they not only beat Jimmy Carter, but a third party bid by John Anderson.
>
> It is time for Rubio to accept he will not be the nominee. He keeps telling us he will pay the bill tomorrow, but tomorrow has not yet come and he is behind by double digits in his home state.
>
> It is time for Ted Cruz to accept we need a unity ticket and for Rubio to agree to be Cruz’s Vice Presidential pick, uniting the outsider and insider factions of the party and stopping Trump in the process.
>
> Cruz has won three states. Rubio won Minnesota with split delegates. The non-Trump faction has the delegates to stop Trump. But now there must be unity.
>
> It is time to divide the map, combine the campaigns, and fight Trump state by state all the way to the convention as if a single ticket.
>
> True, Rubio will say the map moving forward is more favorable to him. But that excludes voter expectations and perceptions. The reality is that Cruz is winning states, Rubio is not, and together they could dominate. Outside groups should concentrate all fire on Trump while Cruz and Rubio show the country that they can pull America from the brink.
>
> Ted Cruz has stopped Trump in three states. It is time for Team Rubio to acknowledge that.

Actually, Ted Cruz has stopped Trump in FOUR states. Alaska also went for Cruz, but those results came out after Erickson’s post was already posted. That’s 4 states to Rubio’s 1.

I used to blog a lot about Marco Rubio, before he championed the 2013 amnesty. I remember the moment I discovered that he was one of the Gang of Eight like most people remember where they were on 9/11. I remember the story, and the picture of Rubio standing in with radical leftists Republican moderates like John McCain and Lindsay Graham. People who had stabbed us in the back so many times before on important things like Supreme Court judicial nominations. I remember thinking: “what is Marco doing with them?”

That was the end of my interest in Marco Rubio. And he’s not going to win this election, given his record on amnesty and so many other liberal policies and priorities. If Donald Trump stands for anything, he stands for border security. And Marco Rubio is the opposite of that. There is just no way that Marco Rubio would be able to get the support of the Republican electorate. He’s even down 20 points in his home state of Florida. Trump’s popularity is due in large part because of the betrayal of moderate, establishment Republicans like Marco Rubio. The Washington elites need to realize that this time it is their turn to fall in line with Cruz, even if they can’t fall in love with Cruz.

When Rubio was elected to political office, he authored an amnesty bill, he supported the failed Libya invasion, he gave in-state tuition to illegal immigrants, he weakened border security, he authored a bill to remove the due process rights of men falsely accused of rape on campus, he skipped votes to defund Planned Parenthood, he has a billionaire pro-gay-marriage donor, and is very friendly with gay activists who are opposed to religious liberty and conscience protections for Christians, and so on. We can’t have the Republican nominee be a liberal moderate in the mold of Bob Dole, John McCain and Mitt Romney. The establishment has had a good long run at ignoring the base and now it’s come to an end. We need a real conservative this time: Ted Cruz.

# Trump donated to group that promotes homosexuality to 5-year-olds

**Wintery Knight** · 2 March 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

So I blogged a bit about Trump on Monday, listing out all of his positions, and I want everyone to understand what I think of people who vote for Trump.

What I infer that Trump supporters believe:

- They are in favor of adultery and frivolous divorce, they don't think it's anything that needs to be repented of.
- They think that a person can be a Christian without ever having read the Bible or attended a theologically-sound church.
- They think that constantly bragging about wealth is consistent with Christianity.
- They are in favor of abortion through all 9 months of pregnancy, including partial-birth abortion.
- They are in favor of funding Planned Parenthood, because they do "wonderful things".
- They are in favor of using taxpayer money to bailout banks.
- They are in favor of tariffs, which raise prices for consumers.
- They are in favor of using government to seize private property to benefit private businesses.
- They think that dictators who murder journalists and dissenters are "strong leaders".
- They support single-payer universal healthcare, even though this leads to rationing and waiting lists in Canada and the UK.
- They support making "forward motion" on the gay agenda.
- They think that someone who fails constantly at business, including four bankruptcies and lawsuits claiming fraud is a "successful businessman".
- They think that someone who donates huge amounts of money to Democrats like Harry Reid, Nancy Pelosi and Hillary Clinton is sincere when he speaks conservative-sounding words, while having nothing at all in the way of a conservative record.
- They think that Bush lied us into the Iraq war, and that WMDs were never found in Iraq.
- They think in the Israeli-Palestinian conflict, there is no right or wrong party.
- They don't want to condemn white supremacy or David Duke.

- They want to see radical pro-abortion judges nominated to the Supreme Court of the United States.
- They belief that taxpayer money should be distributed to certain businesses that lobby the government for handouts, e.g. – the ethanol lobby.

I assume that Trump supporters agree with most or even all of these things, and surprisingly, under questioning, they often admit to it.

And here's the latest thing that I assume most Trump voters support – promoting homosexuality to 5-year-olds in the public schools.

Life Site News explains:

> Donald Trump donated $30,000 to homosexual activists, including a $20,000 grant to an organization that promoted "fisting" to middle school students, recommended books excusing homosexual pedophilia, and proclaimed its mission is "promoting homosexuality" in the public schools to children as early as kindergarten.
>
> According to a 990 form filed with the IRS, the Donald J. Trump Foundation donated $20,000 to the Gay, Lesbian, and Straight Education Network (GLSEN) in 2012 and another $10,000 to Gay Men's Health Crisis.
>
> Kevin Jennings founded GLSEN (originally the Gay and Lesbian School Teachers Network) in 1990. He and other homosexual teachers formed Gay-Straight Alliances (GSAs) nationwide and drew up curricula that began shaping children's values in accordance with the LGBT perspective from the age of five.
>
> GLSEN has been upfront about its goals and desire for mainstream respectability. In 1997, Jennings said, "I can envision a day when straight people say, 'So what if you're promoting homosexuality?'"
>
> GLSEN recommends children face "saturation" in its viewpoint beginning in kindergarten. GLSEN activist Jaki Williams taught a workshop on "Inclusive Kindergartens" at a 1997 regional conference. "Children in the kindergarten age are 'developing their superego'…That's when the saturation process needs to begin," Williams, a New York teacher, said.

They go into all the details of what GLSEN does. They basically market homosexuality to young children in the schools, when their parents are not there to counter any of it.

I will mention one thing from the post – "fisting", since it has to do with the Planned Parenthood that Trump *and all of his supporters* support:

> But at the 2001 GLSEN conference, Planned Parenthood distributed "fisting kits."

Why else would people be supporting him for President when there are more conservative candidates like Ted Cruz, who have a proven record?

By they way, I actually asked one of my evangelical Christian friends who is a Trump supporter whether he supported the practice known as "fisting". He never denied it. I'm not sure if that means that he and all the other Trump supporters are engaging in fisting with each other, or whether they merely donate money to encourage others to do it, or whether they just support it verbally. It seems to me that it has to be something along those lines.

I'll never forget how one Trump supporter implied that there was something wrong with my chastity after I asked him whether adultery was wrong. That's why I just assume that Trump supporters are into all the same stuff he is. I think now that Trump's record is out in the open, it's safe to assume that they know about these things *and support them.*

My candidate is Ted Cruz:

How to get kissed: Heidi Cruz helping her husband

Ted Cruz married one woman – a Harvard Business graduate, who works harder than practically anyone reading this blog. That's why he chose her – for her ability and character. Does character matter to Christians and conservatives any more? Or are we all in for the hedonistic Playboy Sexual Revolution culture, now?

# William Lane Craig on the unexpected applicability of mathematics to nature

**Wintery Knight** · 2 March 2016 · Archived copy · Original

Christianity and the progress of science

You might remember that Dr. Craig used a new argument in his debate with Lawrence Krauss in Melbourne, Australia.

My notes on the debate record it thus:

> The unreasonable effectiveness of mathematics:
>
> - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
> - Mathematical objects can either be abstract objects or useful fiction
> - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
> - But a divine mind that wants humans to understand nature is a better explanation for what we see

And now Dr. Craig has expanded on it in the Q&A section of his Reasonable Faith web site.

The question:

> Dear Dr Craig
>
> Firstly can I thank you for all your work. My faith in Christ has been enormously strengthened through studying your work in apologetics in particular and I have grown in confidence in my Christian witness.
>
> My question relates to numbers and mathematics as a whole. On the Defenders podcast you state that as God is the only self-existent, necessary being, numbers and mathematical objects, whilst being useful, don't actually exist as these too would exist necessarily and independently of God. If this is the case, how can it be that mathematics is so easily applied to the natural world? Surely if mathematics only existed in our minds, we would expect to see no correlation between it and how the physical world actually is?
>
> Michael
>
> United Kingdom

Excerpt from the answer:

> As philosopher of mathematics Mary Leng points out, for the non-theistic realist, the fact that physical reality behaves in line with the dictates of acausal mathematical entities existing beyond space and time is "a happy coincidence" (*Mathematics and Reality* [Oxford: Oxford University Press, 2010], p. 239). Think about it: If, *per impossibile*, all the abstract objects in the mathematical realm were to disappear overnight, there would be no effect on the physical world. This is simply to reiterate that abstract objects are causally inert. The idea that realism somehow accounts for the applicability of mathematics "is actually very counterintuitive," muses Mark Balaguer, a philosopher of mathematics. "The idea here is that in order to believe that the physical world has the nature that empirical science assigns to it, I have to believe that there are causally inert mathematical objects, existing outside of spacetime," an idea which is inherently implausible (*Platonism and Anti-Platonism in Mathematics* [New York: Oxford University Press, 1998], p. 136).
>
> By contrast, the theistic realist can argue that God has fashioned the world on the structure of the mathematical objects. This is essentially what Plato believed. The world has mathematical structure as a result.

This argument was also made by mechanical engineering professor Walter Bradley in a lecture he gave on scientific evidence for an intelligent designer. You can read an essay that covers some of the material in that lecture at Leadership University.

Excerpt:

> The physical universe is surprising in the simple mathematical form it assumes. All the basic laws of physics and fundamental relationships can be described on one side of one sheet of paper because they are so few in number and so simple in form (see table 1.1).
>
> […]It has been widely recognized for some time that nature assumes a form that is elegantly described by a relatively small number of simple, mathematical relationships, as previously noted in table 1.1. None of the various proposals presented later in this chapter to explain the complexity of the universe address this issue. Albert Einstein in a letter to a friend expressed his amazement that the universe takes such a form (Einstein 1956), saying:
>
> You find it strange that I consider the comprehensibility of the world to the degree that we may speak of such comprehensibility as a miracle or an eternal mystery. Well, a priori one should expect a chaotic world which cannot be in any way grasped through thought. . . . The kind of order created, for example, by Newton's theory of gravity is of quite a different kind. Even if the axioms of the theory are posited by a human being, the success of such an enterprise presupposes an order in the objective world of a high degree which one has no a priori right to expect. That is the "miracle" which grows increasingly persuasive with the increasing development of knowledge.
>
> Alexander Polykov (1986), one of the top physicists in Russia, commenting on the mathematical character of the universe, said: "We know that nature is described by the best of all possible mathematics because God created it." Paul Davies, an astrophysicist from England, says, "The equations of physics have in them incredible simplicity, elegance and beauty. That in itself is sufficient to prove to me that there must be a God who is responsible for these laws and responsible for the universe" (Davies 1984). Successful development of a unified field theory in the future would only add to this remarkable situation, further reducing the number of equations required to describe nature, indicating even further unity and integration in the natural phenomena than have been observed to date.

The whole paper that started this off is called "The Unreasonable Effectiveness of Mathematics", and it is a must read for advanced Christian apologists. You can read the whole thing here.

# Texas clinic injures woman in botched abortion

**Wintery Knight** · 3 March 2016 · Archived copy · Original

Hillary Clinton and Planned Parenthood

So, there's a *very important case* before the Supreme Court to decide whether Texas is allowed to regulate abortion clinics to make sure that they are safe for women. The Texas Republicans want abortion clinics to be inspected and regulated. But this reduces the profit margiun of the abortion clinic, because they cannot operate willy nilly.

Life News reports on what's at stake.

Excerpt:

> Less than 48 hours before the U. S. Supreme Court will hear a pivotal Texas abortion case focused on women's safety, an ambulance transported a woman from Southwestern Women's Surgery Center, an abortion clinic in Dallas, Texas.
>
> The ambulance was photographed by a pro-life activist at Southwestern Surgery Center on Monday, February 29, 2016, at about 1:06 p.m.
>
> "This latest medical emergency at a Texas abortion facility only emphasizes abortion risks and how important it is for abortionists to maintain minimum safety standards and hospital privileges within 30 miles of their abortion facilities," said Operation Rescue President Troy Newman.
>
> Southwestern Women's Surgery Center is one of a handful of Texas abortion facilities that have been able to comply with ambulatory surgical center licensing requirements, which include the hospital privilege requirement that is being challenged by another Texas abortion business, Whole Women's Health.
>
> But even licensing as an ambulatory surgical center has not diminished the risk of complications to abortion that frequently send women to hospital emergency room for treatment that abortion facilities are not equipped to provide.

Life News reports on another case of this from Cleveland, OH:

> When he saw the ambulance pull up to the Pre-term abortion facility in Cleveland, Ohio, Frank Kosmerl pulled off his gloves despite the sub-freezing temperatures and hit the record button on his camcorder.
>
> It was the frigid morning of February 13, 2016, when Kosmerl, a long-time pro-life activist, captured alarming images showing EMS responders slowly wheeling out a patient covered tightly over the head with a doubled-

> over pink blanket.
>
> […]A new 911 audio recording just obtained by Operation Rescue has revealed that the woman on the gurney was a 22-year old patient who suffered a life-threatening medical emergency during late-term abortion Preterm, the same abortion center that inflicted a fatal abortion on another 22-year old woman, Lakisha Wilson, nearly two years ago.
>
> This young woman was 21.3 weeks pregnant, according to the Preterm worker that dialed 911. Such late-term abortions are inherently risky, yet Preterm is inadequately equipped to handle complications that seem to arise there on a regular basis.
>
> Curiously, while the Preterm employee who called 911 knew details of the patient's care, she did not know — or would not say — exactly what "went wrong" during the late-term abortion.
>
>> **Dispatcher:** Tell me exactly what happened.
>>
>> **Preterm:** We're an abortion facility. She was in the middle of an abortion. She's 21.3 weeks. And something went wrong during the procedure.
>
> Moments later the dispatcher again asked what happened.
>
>> **Dispatcher:** What went wrong? Does she like have — Is she awake still?
>>
>> **Preterm:** I don't know, ma'am. I'm not in the room. So I'm assuming bleeding. Maybe a perforation? I don't know.
>
> […]In the video, emergency workers are seen struggling to push the gurney from the rear of the icy, snow-packed parking lot.
>
> This young woman was 21.3 weeks pregnant, according to the Preterm worker that dialed 911. Such late-term abortions are inherently risky, yet Preterm is inadequately equipped to handle complications that seem to arise there on a regular basis.

Now, if women's health were so important to the pro-abortion crowd, then they would have no problems with inspections and regulations, right? After all, we don't want a repeat of what happened to women at the Kermit Gosnell clinic, right? But no, the left is taking the law designed to protect women to the Supreme Court to have it overturned.

**Democrats and abortion**

Although Republicans have been busy passing pro-life laws, Democrats want to get rid of them all.

National Review explains.

Excerpt:

> Readers will recall, though they will not enjoy it, the details of Dr. Gosnell's case, the transcript of which reads like the screenplay for a Rob Zombie horror flick: the illegal abortions; the newborns who survived botched abortion attempts only to have their spinal cords severed with scissors; the obscenely unhygienic conditions, with free-ranging cats using the clinic as an open-air litter box; the dead patient and subsequent manslaughter conviction; and, finally, the murder convictions. The Gosnell gore-fest was a direct consequence of the elevation of abortion to divine office: Neither the local authorities in Democrat-dominated Philadelphia nor the Democrat-dominated statewide bureaucracies in Pennsylvania were much inclined to exercise basic oversight of abortion clinics. Even after a woman died under Dr. Gosnell's knife, there was little interest in investigating his practice: It took allegations of illegal prescription-drug use and the piqued interest of the DEA to put Gosnell on the radar.

> Senator Blumenthal proposes to apply the Philadelphia model to the nation at large. Under his bill, states would have effectively no power even to ensure that abortions are performed by licensed physicians — surely the most minimal standard of medical responsibility that there is. Laws covering grisly late-term abortions would be forcibly overturned and fetal viability would be redefined according to the subjective whim of the abortionist. While the Democrats are bemoaning a fictitious war on women, their bill would provide federal protection to sex-selective abortions — the barbaric practice under which generations of girls have been decimated in such backward jurisdictions as China and Azerbaijan, a practice *The Economist* describes as "gendercide." Laws restricting taxpayer funding of abortion would be overturned. Laws protecting the consciences of physicians who choose not to perform abortions would be overturned.

That's one of the reasons that it's important for us to elect a pro-lifer as President. Because the ability to pass common sense restrictions and regulations on abortion is threatened by the judicial activism of liberal judges.

# Cruz wins primaries that are “closed” for Republican voters only

**Wintery Knight** · 3 March 2016 · Archived copy · Original

GOP primary delegate count after Super Tuesday

I have some great news. I found out why Cruz unexpectedly lost South Carolina. It turns out that in states that have “open” primaries, that anyone can vote – *including Democrats!* Cruz is losing some states because Democrats are declining to vote in their own primary, and instead voting in the Republican primary. They are voting for the Republican who is the easiest to beat in head-to-head polls: Donald Trump.

Here’s what the Boston Herald reported:

> Nearly 20,000 Bay State Democrats have fled the party this winter, with thousands doing so to join the Republican ranks, according to the state’s top elections official.
>
> Secretary of State William Galvin said more than 16,300 Democrats have shed their party affiliation and become independent voters since Jan. 1, while nearly 3,500 more shifted to the MassGOP ahead of tomorrow’s “Super Tuesday” presidential primary.

So that explains why Cruz is not winning everything. Cruz wins primaries that are closed, so that only people who register as Republicans can vote – not registered Democrats.

But some states allow Democrats to vote in Republican primaries without any change in registration.

Look at how it’s explained in the leftist Washington Post:

> Following the South Carolina primary, an interesting article by Michael Harrington went around Facebook that speculated that Donald Trump’s victory in the South Carolina primary was attributable to Democrats voting in the Republican (open) primary. One of the good things about Harrington’s article is that he put out a testable hypothesis — that turnout in the Democratic primary a few days later would be less than 390,000. In fact, it was 367,000. **Harrington concludes that had South Carolina had a closed primary, Ted Cruz would have won the primary there.** I don’t know him and the author seems to be anti-Trump based on other things he has written — but the fact that his prediction was borne out adds some independent verification to his thesis. So that got me to thinking.
>
> […]**[S]o far the primary calendar has been heavily tilted toward open primaries. But there have been four closed elections: the Iowa caucus, the Nevada caucus, and Super Tuesday’s Oklahoma primary and Alaska caucus. Ted Cruz won three of those four closed elections.**
>
> […]**[T]here are four Republican primaries/caucuses: Kansas, Kentucky, Louisiana and Maine. All are closed.**

> **Then, once the winner-takes-all states begin, a large number of those are closed primaries and caucuses as well (including Florida, for what it's worth).**
>
> […]First, the fact that South Carolina and most of the SEC primaries were open primaries may very well explain why those states did not turn out to be Ted Cruz's firewall or launch states as he had predicted. Oklahoma did perform as expected, being a fairly comfortable win for Cruz.

This is something that the Republican National Committee really needs to fix, along with requiring photo identification and proof of residency in order to vote. We can't allow a bunch of Democrats to come in and pick a raving con man as our candidate, in order to make it easier on their candidate in November. No wonder we haven't been winning elections!

Anyway, there is more good news. Shane Vander Hart has it up on his Caffeinated Thoughts blog.

He writes:

> The next few contests on March 5 are ones where Cruz could do well Kansas and Kentucky which are both caucus states that rely upon organization. Cruz could also do well in Louisiana which is a closed primary. On March 8th you have Idaho Primary which is a closed primary that doesn't favor Trump. Mississippi has an open primary, but I suspect Cruz will be competitive. Michigan on March 8th is an open primary which favors Trump.

So not only are there more upcoming closed primaries, but some of the states are caucus states, where having a good ground game makes a difference. We should be optimistic about Cruz's chances in the next week.

# Darwinian fundamentalists threaten boycott of science journal for paper mentioning “Creator”

**Wintery Knight** · 3 March 2016 · Archived copy · Original

The Church of Naturalism says turn or burn, heretic!

So, there was a peer-reviewed paper that appeared in the PLOS peer-reviewed journal that made reference to a Creator in the abstract. The scientific work of the paper had no problems.

I saved a copy of the post and the comments. Let’s look at some of the comments.

**Comments by editors of the journal**

Michael Sears:

> The article should be retracted and the handling editor should be dismissed. As an Editor for this journal, I am appalled.

Ricard Sol:

> I think that pretending to defend a creationist argument (non-science) in a science journal raises serious doubts about the whole enterprise. The paper should be retracted. As a PLOS ONE editor I believe accepting this situation would seriously damage our credibility.

Dante Chialvo:

> […]I am ashamed that the journal staff, the editor responsable for the paper, the reviewers, all ignored this more than obvious red flag resulting on a creationist argument embedded on a scientific paper. I will consider resigning unless exemplary actions are taken by Plos.

Angel Sánchez:

> As I have said in a separate post, I will resign as an editor of PLOS ONE if this paper is not retracted immediately. PLOS ONE is a scientific journal and I don’t want to have anything to do, not even my name

> related to a journal tha publishes about superstition and supernatural entities. I will stop editing and I will stop submitting, and I'll recommend everybody never to submit again to PLOS ONE. I hope we don't have to go there.

So, you can see that science – as the naturalists conduct it – is not really the search for truth, no holds barred. It's the attempt to explain nature without reference to a Creator and Designer. Whatever the experiments show must conform to a philosophical assumption (a religion), called naturalism. And the religion of naturalism determines what can and cannot be accepted as science. You can see the same principle at work in the denial of the Big Bang cosmology despite evidence such as the cosmic microwave background radiation, the light element abundances, and the redshifting of light from distant galaxies. Science has shown we live in a created universe that began about 13.7 billion years ago, but here we have atheists in denial of science sitting in positions of power deriding the Creator who has been revealed by experimental science. That's the power of the naturalistic dogma. And it turns out that the most powerful argument for Darwinian evolution is this: "believe it, or I'll have you fired, and ruin your career". This is how Darwinism propagates from old to young – through coercion, and not through real science.

**Other comments**

Zach Throckmorton:

> As others have noted, utilization of an intelligent design creationism framework for explaining human anatomy is not acceptable for a scientific journal.

Jorge Soberon:

> I find the use of religious language in a scietific paper totally unacceptable. I will be watching this paper closely, and distributing it to colleagues. If PLOS ONE does not do something about it, like asking the authors to retratct the paper, or at the very least publishing an explanation, I will stop reviewing papers for PLOS ONE. I do hope the editors of PLOS ONE realize what a huge mistake was to accept publication of a paper with this wording. It says a lot about the care with which a paper is edited.

Adam Hartstone-Rose:

> This article proves that there is something SERIOUSLY wrong with the journal. If the paper isn't retracted, my students, collaborators and I will have no choice but to refrain from submitting to this once respectable journal. I'm embarrassed for you and embarrassed that some of my proudest papers are in your journal.
>
> […]This requires a ballistic reaction, not a considered "looking into" the problem!

Enrico Petretto:

> This is outrageous. If PLOS ONE does not do something about it, i.e., ask the authors to retract the paper, and in any case, if the paper isn't retracted, my students, collaborators and I will have no choice but to refrain from considering (i..e, reading, reviewing and citing) papers published in PLOS ONE.

Luigi Maiorano:

> Quote totally!! outrageous is the minimum! I published 3 of my papers in PlosOne, but I will never do it again. I'm actually telling all my students and colleagues to boycott the journal and never consider it again!

Jean-Michel Heraud:

> I have no knowledge to judge this article…
>
> […]I would recommend to the editor of the journal to exclude definitely the two reviewers that have accepted this manuscript.

Oliver Rauhut:

> As noted by many comments below, this is not a matter of inappropriate wording! This rather seems to be a (successfull) attempt to place an intelligent design argument in a (so far) respected scientific journal. Thus, the only solution is the immediate retraction of this paper! Unless this step has been done, my workgroup and me will refrain from publishing further papers in PLoS!

Harry Noyes:

> Changing Creator to Nature will not solve the problem since it still implies a fundamental misunderstanding of evolution. That is there is no design process, no outcome is foreseen. Anything that works better tends to have a selective advantage but that is not a product of design it is a product of selection working on random events. The paper clearly needs a substantive rewrite quite apart from the concerns raised about the significance of the results raised by other comments.

Carl Schmidt:

> A more important issue is the review process that allowed such nonsense as "Creator" to appear in a journal purportedly devoted to science.

The article has now been retracted.

Evolution News comments:

> This would seem to bear out a remark by Chinese paleontologist J.Y. Chen, recounted in *Darwin's Doubt*, "In China we can criticize Darwin, but not the government; in America, you can criticize the government, but not Darwin."

So what's really behind all this fascism?

Consider this quote from famous population geneticist (and Darwinian fundamentalist) Richard Lewontin. And note that he equates science with his chosen religion of naturalism, he doesn't accept science in the traditional sense of the word, where there is no metaphysical baggage.

He says:

> Our willingness to accept scientific [i.e. – naturalistic] claims that are against common sense is the key to an understanding of the real struggle between science [i.e. – naturalism] and the supernatural. We take the side of science [i.e. – naturalism] *in spite* of the patent absurdity of some of its constructs, *in spite* of its failure to fulfill many of its extravagant promises of health and life, *in spite* of the tolerance of the scientific [i.e. – naturalistic] community for unsubstantiated just-so stories, because we have a prior commitment, a commitment to materialism. It is not that the methods and institutions of science [i.e. – naturalism] somehow compel us to accept a material explanation of the phenomenal world, but, **on the contrary, that we are forced by our *a priori* adherence to material causes to create an apparatus of investigation and a set of concepts that produce material explanations, no matter how counter-intuitive, no matter how mystifying to the uninitiated. Moreover, that materialism is absolute, for we cannot allow a Divine Foot in the door.**

> “Billions and Billions of Demons” by Richard Lewtontin. (Link)

“A priori” means before seeing the facts, before seeing the evidence.

And what is behind the choice of naturalism as the preferred religion? Consider this quote from atheist philosopher Thomas Nagel.

He says this:

> “In speaking of the fear of religion, I don’t mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers.
>
> I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn’t just that I don’t believe in God and, naturally, hope that I’m right in my belief. It’s that I hope there is no God! I don’t want there to be a God; I don’t want the universe to be like that.”
>
> (”The Last Word” by Thomas Nagel, Oxford University Press: 1997)

The days of Isaac Newton are long gone, and another Newton will not emerge while the Naturalistic Church is in power. And it’s a taxpayer-funded church, too. Think about that next time you vote for bigger or smaller government.

# Who won the debate last night? Winners and losers from the Fox News debate

**Wintery Knight** · 4 March 2016 · Archived copy · Original

Ted Cruz explains public policy to little girl who wants to be President

The Weekly Standard, which I think favors Rubio slightly over Ted Cruz, posted this:

> What Cruz did at the debate was make three parallel cases:
>
> 1. Trump is a fraud who can't be trusted to keep his word.
> 2. Trump is not either conservative or Republican in any meaningful way.
> 3. Trump actually ***is*** the corruption that he decries.
>
> He advanced these arguments not one at a time, but by interweaving them with specific attacks:
>
> * He positively crushed Trump on the use of foreign labor at Mar-a-Lago. He didn't just bring up the fact that hundreds of applicants applied for these jobs but that Trump prefers to hire foreigners instead, but included Trump's line from the last post-debate interview where he claimed that these were jobs American workers couldn't and wouldn't do.
>
> * He thoroughly prosecuted Trump on the question of Trump's off-the-record *New York Times* interview, which Trump steadfastly refuses to release.
>
> * At the end of the segment on Trump University—where Trump's best defense was telling voters that they should "wait a few years" to see whether or not he committed fraud, Cruz flashed in with a rapier: "Megyn, let me ask the voters at home, is this the debate you want playing out in the general election?" It was brutal.
>
> * When Trump went to his poll numbers—as he always does—Cruz was ready. Trump touted a terrible CNN poll showing him at 49 percent support. Cruz waited for Trump to double down and defend the integrity of the poll. And then he noted that this same poll also showed Trump losing to Clinton and Cruz beating her.
>
> * When the Second Amendment came up, Trump made a gauzy statement of general support. Cruz then dropped the hammer:
>
> It is easy for political candidates to have rhetoric and say, "I support the Second Amendment." But you cannot say that and at the same time say what Donald just said, which is that on the question of Supreme Court nominees he wants to compromise and reach a middle ground with Harry Reid and Chuck Schumer. That's what he said in the last debate. . . . And I would point out, Harry Reid and Chuck Schumer are both Democrats

> that Mr. Trump has written checks to repeatedly. Any justice that those two sign off on is going to be a left-wing judicial activist who will undermine religious liberty, and we are one vote away from the Heller decision being overturned, which would effectively erase the Second Amendment from the Bill of Rights. Amendment rights, but when you say you'd compromise with Harry Reid, you put that in jeopardy.
>
> * Cruz's most devastating line was probably this summation:
> I understand the folks who are supporting Donald right now. You're angry. You're angry at Washington, and he uses angry rhetoric. But for 40 years, Donald has been part of the corruption in Washington that you're angry about. And you're not going to stop the corruption in Washington by supporting someone who has supported liberal Democrats for four decades, from Jimmy Carter to John Kerry to Hillary Clinton. You're not going to stop the corruption and the cronyism by supporting someone who has used government power for private gain.
>
> The question is what Cruz's performance gets him. Maybe nothing. The terrain ahead could simply be too tough. But maybe not.

Watch this:

Someone has been teaching Cruz how to speak more concisely. Ted and Marco didn't attack each other much last night, just like in the last debate. And it worked!

Red State, which is a grassroots conservative web site whose contributors back all different candidates, said:

> **WINNERS**
>
> **Senator Ted Cruz:** Tonight's big winner was clearly and indisputably Ted Cruz. Cruz showed the most substance and had the strongest answers. His line about charging Snowden with treason, like his answers on ethanol before the Iowa caucus, showed he's able to give tough, definitive answers to questions that are controversial even within the party. His touting of his Supreme Court credentials was not only a great case but a timely one.
>
> And when Megyn Kelly eviscerated Trump over his disastrous Trump University failure, it seemed the smoking corpse couldn't possibly suffer more abuse. But Ted Cruz stepped in and in a few sentences buried that corpse, salted the earth, and wiped the name and location from this history books. Utterly. Destroyed.
>
> But best of all was that Cruz masterfully avoided being in the line of fire, and above the fray in Trump and Rubio's heated exchanges. Sometimes that doesn't play well. Sometimes it makes you the winner. This is one of the latter times.
>
> **Senator Marco Rubio:** Rubio was also a winner tonight. He has proved beyond the shadow of doubt how weak Donald Trump is before attacks on his tremendous, yuge vanity. He crumples. He falls apart. He talks about his ding dong. The extent to which Marco can easily send Trump into a panic by mentioning his hands or tan is just a shadow of how easily the Democrats will handle him. They won't have to mention policy. Just his hair. Or his stump fingers. He'll fall apart.
>
> Marco also crushed Trump's lack of substance on foreign policy, asking him if he would ever offer any policy details in answer to a foreign policy question. Predictably, Trump responded by taking a petty swipe at Rubio. Yet another point for Marco and against Donald.
>
> **LOSERS**
>
> **Donald Trump**: Trump is the obvious, clear loser tonight. It wasn't even close. He was clownish, he changed his mind over the course of the debate, he had his butt handed to him over and over by both Marco and Ted. He was found to be making false statements, his economic policy was proved not only to be a disaster, but it was shown that he himself couldn't even articulate it, much less a defense of it. He couldn't even muster a strong response to the Romney question. On the scale of fail he hit a solid ten: total dumpster fire.
>
> Except for one thing. Donald promised to support the nominee of the party no matter who it is. That was a

> good line for him, even if he doesn't mean it, and will play well for him.

And Erick Erickson, another grassroots conservative, says at The Resurgent that Cruz was the clear winner of the debate:

> Wow. That was one heck of a debate performance by Ted Cruz. That was just amazing. He ran circles around Trump. Trump looked like he was worn out. He was low energy. He was a loser.
>
> In the last debate, Rubio was assisted by Cruz. In this debate, Cruz was assisted by Rubio. It shows what a unity ticket between the two could do.
>
> It was a remarkable performance that had Cruz and Rubio shaking hands during commercial break.
>
> Tonight was Ted Cruz's night and it was a nearly flawless debate on his part.

PJ Media listed out 5 of Cruz's best moments in the debate.

Here's one of them:

> **5. Detroit…Has Been Utterly Decimated By Failed Left-Wing Policies** Although most of Cruz's standout moments came in opposition to Trump, one of his finest successes centered around discussing the city of Detroit. "Detroit is a great city, with a magnificent legacy, that has been utterly decimated by 60 years of failed left-wing policies," Cruz declared. He praised Detroit for "funding the arsenals of democracy" in World War II, and added that "in the 1960s, Detroit was the Silicon Valley of America — it had the highest per capita income in the country." Then the kicker: "And then for 50 years, left-wing Democrats have pursued destructive tax policies, weak crime policies, and have driven the citizens out." Cruz then detailed how he would bring manufacturing jobs back to the U.S. and Detroit specifically. This strong answer bolstered Cruz in the eyes of Luntz's focus group, scoring a 96 percent.

Trump tried to get Marco and Ted off his chest by citing GOP primary poll numbers, but Cruz had an answer for that, too. Trump cited a poll from CNN showing him in the lead. Cruz responded by pointing out that the CNN poll also shows Trump losing to Hillary Clinton by 8 POINTS. The same poll shows Cruz beating Hillary Clinton head-to-head. I have never met a Trump supporter who was aware of these head-to-head polls that show Trump losing to Clinton. But the liberal media is well aware of them, and that's why they are so supportive of Trump – they want the weakest candidate to be the Republican nominee.

One of the differences between Trump and Cruz is that Trump talks about himself and makes promises without providing details. He oversimplifies problems, and has more confidence than experience. Cruz talks about specific policies and the results of those policies in different times and places. He actually knows what works and what doesn't work, and has a record of solving actual problems.

# New study: galactic habitable zone depends on fine-tuning of cosmological constant

**Wintery Knight** · 4 March 2016 · Archived copy · Original

The galactic habitable zone (GHZ) is shown in green superimposed on a spiral galaxy

This is going to be old news to readers of this blog who are familiar with the Michael Strauss, Walter Bradley and Guillermo Gonzalez lectures on habitability and fine-tuning. But, it's nice to see these ideas show up in one of the most presitigious peer-reviewed science journals in the world (if not *the* most presitigious).

Here's the article from Science. (H/T Gunter)

It says:

> Scientists have known for several years now that stars, galaxies, and almost everything in the universe is moving away from us (and from everything else) at a faster and faster pace. Now, it turns out that the unknown forces behind the rate of this accelerating expansion—a mathematical value called the cosmological constant—may play a previously unexplored role in creating the right conditions for life.
>
> That's the conclusion of a group of physicists who studied the effects of massive cosmic explosions, called gamma ray bursts, on planets. They found that when it comes to growing life, it's better to be far away from your neighbors—and the cosmological constant helps thin out the neighborhood.
>
> "In dense environments, you have many explosions, and you're too close to them," says cosmologist and theoretical physicist Raul Jimenez of the University of Barcelona in Spain and an author on the new study. "It's best to be in the outskirts, or in regions that have not been highly populated by small galaxies—and that's exactly where the Milky Way is."
>
> Jimenez and his team had previously shown that gamma ray bursts could cause mass extinctions or make planets inhospitable to life by zapping them with radiation and destroying their ozone layer. The bursts channel the radiation into tight beams so powerful that one of them sweeping through a star system could wipe out planets in another galaxy. For their latest work, published this month in *Physical Review Letters*, they wanted to apply those findings on a broader scale and determine what type of universe would be most likely to support life.

> The research is the latest investigation to touch on the so-called anthropic principle: the idea that in some sense the universe is tuned for the emergence of intelligent life. If the forces of nature were much stronger or weaker than physicists observe, proponents note, crucial building blocks of life—such fundamental particles, atoms, or the long-chain molecules needed for the chemistry of life—might not have formed, resulting in a sterile or even completely chaotic universe.

Basically, the best place for a galaxy that permits complex, embodied life to exist is one where you can pick up enough heavy elements from dying stars nearby, but not be in an area that is so crowded by stars that you will be murdered by intense gamma radiation when they die.

The cosmological constant has to be set just right that we spread out enough to make space between spiral arms for life-permitting solar systems, but no so spread out that we cannot pick up the heavy elements we need for a metal-rich star, a moon, and the bodies of the intelligent agents themselves.

More:

> **As it turns out, our universe seems to get it just about right. The existing cosmological constant means the rate of expansion is large enough that it minimizes planets' exposure to gamma ray bursts, but small enough to form lots of hydrogen-burning stars around which life can exist. (A faster expansion rate would make it hard for gas clouds to collapse into stars.)**
>
> Jimenez says the expansion of the universe played a bigger role in creating habitable worlds than he expected. "It was surprising to me that you do need the cosmological constant to clear out the region and make it more suburbanlike," he says.

Remember, this is only one of many characteristics that must obtain in order for a have a location in the universe that can support complex, embodied life of any conceivable kind.

**Let's review the big picture**

Time for me to list out some of the things that are required for a galaxy, solar system and planet to support complex embodied life. Not just life as we know it, but life of any conceivable kind given these laws of physics.

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

It's not easy to make a planet that supports life. For those who are interested in reaching out to God, he has left us an abundance of evidence for his existence – and his attention to detail.

And remember, these requirements for a habitable planet are downstream from the cosmic fine-tuning of constants and quantities that occurs at the Big Bang. No point in talking about the need for plate tectonics if *you only have hydrogen in your universe.* The habitability requirements are a *further* problem that comes after the fine-tuning

problem.

**Resources**

The best book to read on this topic is "The Privileged Planet", by Guillermo Gonzalez and Jay W. Richards. The latter is one of my absolute favorite Christian scholars, a real renaissance man. If the book is too much, there is a DVD by the same name that covers everything you need to know at a high level. Just FYI, Gonzalez made the cover of Scientific American in 2001, for his research on habitable zones. This is real evidence you can discuss with anyone, anywhere.

You can also watch the DVD for FREE on YouTube. Not sure how long that will be there. If you like it, buy the DVD, so you can show your friends.

# What will God do with people who have never heard about Jesus?

**Wintery Knight** · 4 March 2016 · Archived copy · Original

I'm baby octopus, and I approve this message

The baby octopus is there for no particular reason, because this is a theology post. Still, he is quite cute, don't you think?

One of the most difficult questions for Christians to answer, especially when posed by adherents of other religions, is the question of what happens to those who have never heard of Jesus? In this post, I will explain how progress in the field of philosophy of religion has given us a possible (and Biblical) solution to this thorny question.

First, Christianity teaches that humans are in a natural state of rebellion against God. We don't want to know about him, and we don't want him to have any say in what we are doing. We just want to appropriate all the gifts he's given us, do whatever we want with them, and then have eternal bliss after we die. We want to do whatever we want and then be forgiven, later.

Along comes Jesus, who, through his sinless life and his death on the cross, heals that rift of rebellion between an all-good God and rebellious man. Now we have a real understanding of the fact that God is real, that he has power over death, and that he has very specific ideas on what we should be doing. If we accept Jesus' atoning sacrifice and follow his teachings, we can avoid the penalty of our rebellion.

The only problem is that in order to appropriate that free gift of reconciliation, people need to actually *know* about Jesus. And there are some people in the world who have not even *heard* of him. Is it fair that these other people will be eternally separated from God, just because they happened to be born in the wrong place at the wrong time?

Enter famous Christian apologist William Lane Craig to save the day. His solution is that God orders the world in such a way that anyone who would freely choose to acknowledge Jesus and appropriate his teachings in their decision-making *will* be given eternal life. God knows in advance who would respond, and chooses their time and place of birth, and he supplies them with the amount of evidence they need.

And this agrees with what the Bible teaches. The apostle Paul says this in his apologetic on Mars Hill in Acts 17:22-31:

> 22 So Paul stood in the midst of the Areopagus and said, “Men of Athens, I observe that you are very religious in all respects.
> 23 “For while I was passing through and examining the objects of your worship, I also found an altar with this inscription, ‘ N D ‘ Therefore what you worship in ignorance, this I proclaim to you.
> 24 “The God who made the world and all things in it, since He is Lord of heaven and earth, does not dwell in temples made with hands;
> 25 nor is He served by human hands, as though He needed anything, since He Himself gives to all people life and breath and all things;
> 26 and He made from one man every nation of mankind to live on all the face of the earth, **having determined their appointed times and the boundaries of their habitation,**
> **27 that they would seek God, if perhaps they might grope for Him and find Him, though He is not far from each one of us;**
> 28 for in Him we live and move and exist, as even some of your own poets have said, ‘For we also are His children.’
> 29 “Being then the children of God, we ought not to think that the Divine Nature is like gold or silver or stone, an image formed by the art and thought of man.
> 30 “Therefore having overlooked the times of ignorance, God is now declaring to men that all people everywhere should repent,
> 31 because He has fixed a day in which He will judge the world in righteousness through a Man whom He has appointed, having furnished proof to all men by raising Him from the dead.”

This passage is not difficult to understand, although some may find it difficult to accept. According to the Bible, God puts us in the best possible place for us to respond to him, and if we don’t, we are responsible. We decide how to respond to God’s efforts to make himself known to us. We would never find him ourselves, but he takes the initiative to reveal himself, without being coercive. It falls to us to investigate and find the clues, and re-prioritize our lives according to what we find.

In this research paper, Craig explains in detail how God foreknows how people will choose in every set of circumstances, and how God uses that knowledge to get everyone where they need to be *without violating their free will.* God wants the best for everybody, and has ordered to whole universe in order to give each of us our best opportunity for eternal life.

Here is a summary of the what is in his paper:

> The conviction of the New Testament writers was that there is no salvation apart from Jesus. This orthodox doctrine is widely rejected today because God’s condemnation of persons in other world religions seems incompatible with various attributes of God.
>
> Analysis reveals the real problem to involve certain counterfactuals of freedom, *e.g.*, why did not God create a world in which all people would freely believe in Christ and be saved? Such questions presuppose that God possesses middle knowledge. But it can be shown that no inconsistency exists between God’s having middle knowledge and certain persons’ being damned; on the contrary, it can be positively shown that these two notions are compatible.

Go read this paper and equip yourself to answer this common question!

# Oxford University Press book: is religion responsible for wars and violence in history?

**Wintery Knight** · 5 March 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

J.W. Wartick posted a review of a book called "The Myth of Religious Violence", and written by Dr. William T. Cavanaugh.

Let's take a look at some of the review.

Here, J.W. quotes from the book:

> The story goes that, after the Protestant Reformation divided Christendom along religious lines, Catholics and Protestants began killing each other for holding to different doctrines. The wars of religion… demonstrated to the West the inherent danger of public religion. The solution to the problem lay in the rise of the modern state, in which religious loyalties were marginalized and the state secured a monopoly on the means of violence…
>
> This story is more than just a prominent example of the myth of religious violence. It has a foundational importance for the secular West, because it explains the origin of its way of life and its system of governance. It is a creation myth for modernity (123).

Then writes this:

> Following the lines of thinking of Voltaire, John Locke, and others, Cavanaugh argues that the myth of religious violence is perpetuated in order to marginalize that which is considered religious and give rise to the nation-state. According to this myth, "All theological religions are to be tolerated, provided they do not interfere with the obligations of citizens to the state…" (129). The myth is that religion is divisive and that they "fight over doctrines or 'religious creeds'" so that "the state steps in to make peace" (130).
>
> Cavanaugh shows that this myth is indeed false. The "wars of religion" had any number of motivating factors. The use of this story is not so much to tell a truth as it is a means by which to legitimize the nation-state. He argues towards these conclusions by showing that many "wars of religion" were in fact wars of economy, wars of power structures, and the like. He notes four primary factors for this myth to work: that combatants were motivated by religious difference, that the primary cause of war was religion, that religious causes are analytically separable from political, economic, and social causes at the time of the wars, and that the rise of the modern state was not a cause of the wars (141-142). He then analyzes each of these in turn based upon the historical record and shows that these all fail to account for the actual history of the "wars of religion." In fact, the opposite is true in each case (142-177).

> "We must conclude that the myth of the wars of religion is finally incredible, which is to say, false" (177).

> […]Perhaps the most challenging and paradigm-shifting portion of the book is that which focuses upon the uses of the myth of religious violence. Cavanaugh argues that the myth is so perpetuated because of its usefulness.

Cavanaugh has his BA from the University of Notre Dame, his MA from Cambridge University, and his PhD from Duke University.

Regarding religion and wars, consider this post from Well Spent Journey:

> **The Claim:** *"Religion has been the primary cause of war and oppression throughout the history of mankind."*
>
> **The Truth:** In their comprehensive Encyclopedia of Wars, Phillips and Axelrod document the recorded history of warfare. Of the 1,763 wars presented, a mere 7% involved a religious cause. When Islam is subtracted from the equation, that number drops to 3.2%.
>
> In terms of casualties, religious wars account for only 2% of all people killed by warfare. This pales in comparison to the number of people who have been killed by secular dictators in the 20th century alone.

So let's take a look at those secular dictators.

According to the The Black Book of Communism, published by Harvard University Press, over 100 million innocent people were killed in atheistic, communist regimes in the last century. In the past, consistent atheists like Stalin who had power enough to ignore objective morality caused millions of innocent deaths. And you can even see atheism killing lots and lots of people in countries like North Korea today – where the official state religion is atheism. Why is that? It's because the worldview of atheism teaches that the universe, and human beings, are here by accident. We are all just molecules in motion, and there is no inherent dignity or purpose to any of our lives that would obligate others to treat us a certain way.

On the Christian view, every single person has dignity because they are made in the image of God, and made to know him. Christians can never treat another person (of any religion or no religion) in any way that would discourage them from knowing God and experiencing his love for us. We could never hurt anyone in a way that causes them to turn against God. We are careful with people, because we want to act towards them in a way that helps them to accomplish this purpose.

Of course there are lots of atheists in the Judeo-Christian West who live more peacefully, because they are living in a background of objective morality and human rights provided by Western religions. But in countries like North Korea, with a state religion that cannot ground free will or objective morality or human rights or judgment after death, there are fewer restraints.

Even here, we have already seen over 50 million unborn children killed since abortion became legal. And I can guarantee you that it's not authentic, Bible-believing Christians who are having these abortions. People who think they are going to face God when they die do not treat their fellow humans like machines made out of meat. As a group, atheists tend to be among the most radical in favor of abortion rights. The Secular Census of 2012 found that 97% of atheists vote for abortion. And of course today in the news we got the second video of Planned Parenthood top brass explaining how they sell the body parts of unborn babies to the highest bidder. I wrote about the first video here.

The idea of the strong killing the weak for their own advantage is the law of the jungle, and it's not surprising to me that those who think that humans *are just animals* would act this way with vulnerable children. If you only have 80 years to be happy in an accidental universe, then anything goes. No one is there to hold you accountable when you die. If the weak get in your way, kill them all. Just don't get caught. That's what atheist morality teaches.

Here's famous atheist Richard Dawkins explaining why infanticide is OK:

And here's what he thinks of objective moral values and duties:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music.
>
> –Richard Dawkins, (River Out of Eden: A Darwinian View of Life (1995))

You can read more about the morality of atheists likeRichard Dawkins here.

In a previous post, I looked at an article by an atheist who explained what it meant to live consistently with atheism. I really recommend reading that in order to understand what is rational within that worldview.

# Feminism triumphant: day care workers convicted of abusing children

**Wintery Knight** · 5 March 2016 · Archived copy · Original

Children need their mothers for at least two years after birth, and five years is best

Northern Virginia is one of the wealthiest areas of the country, because so many rich government workers live there and work in Washington, D.C.. Housing prices are high, and women often join their husbands in the workplace, in order to afford more and better things to show off to the neighbors.

But what happens to the young pre-school children? No problem, say Hillary Clinton and the radical feminists: we can just hand them off to strangers to raise, because children don't really need a mother in the home in order to do well. After all, we have to make men and women identical, because feminism! No gender distinctions, because that would be sexism, and sexism is bad.

NBC News reports on what happened next:

> Previously happy children became aggressive, were afraid of water and even stopped talking after they were abused at a day care center in Northern Virginia, emotional parents testified Monday in Manassas.
>
> The trial of Sarah Jordan began Monday. Jordan is one of two women accused of abusing children age 16 months to 2 years old at Minnieland Academy at The Glen in Woodbridge. Jordan faces 37 charges in the alleged abuse of 13 toddlers.
>
> Ten parents spoke Monday, some in tears, about seeing dramatic changes in their children after they joined Jordan's classroom.
>
> One after the other, parents testified about troubling behavior that emerged when their little ones were moved into Jordan's class of toddlers, nicknamed "The Monkey Room."
>
> Parents said their children became aggressive at home, stomped on their parents toes and became afraid of water. Some refused to bathe, their parents said, and most cried when they were dropped off at the center.
>
> Police say the behavior is the result of Jordan and Kierra Spriggs, who also is accused of abuse, spraying children with a hose and encouraging them to bite and fight each other.
>
> One father, Adam Smith, testified that his daughter "completely stopped talking" once she was in Jordan's care.

And there are updates on the trials of the two women  who were accused of abusing the children.

This one from the Washington Post:

> A judge on Wednesday found a former day-care worker guilty of emotionally and physically abusing seven toddlers who were in her care at the Minnieland Academy in Woodbridge.
>
> Sarah A. Jordan, 31, of Woodbridge, was convicted of seven felony counts of child cruelty and six misdemeanors in a bench trial before Prince William County Circuit Court Judge Tracy C. Hudson.
>
> She faces a maximum sentence of 41 years and is being held without bail until her sentencing, set for May 6.
>
> Jordan showed no emotion as the verdict was rendered. Parents of some of the children wept in the courtroom.
>
> **Jordan had pleaded not guilty and denied all accusations** that she sprayed children full force with a hose and pitted some children against each other to fight, among other acts.
>
> Jordan worked at the day-care center until August 2013 and was arrested three months later.

Here's the latest news from NBC News:

> A Virginia daycare teacher accused of turning her classroom of 2-year-olds into a "baby fight club" was knocked out by a jury on Thursday.
>
> Kierra Spriggs was convicted of child cruelty and other abusive behavior charges after a two-week trial in the Virginia suburbs of Washington, D.C.
>
> She was found guilty of four felony counts of child cruelty and two misdemeanor counts of assault and battery, according to NBC Washington. She could get up to five years in prison on each of the felony count convictions and a year for each misdemeanor count.
>
> […]At trial, witnesses described how Spriggs forced twin sisters to fight each other. They said Spriggs regularly mistreated the kids by stomping on bares toes, dunking them in cold water, and throwing them on cots.
>
> […]Shanna Greisen said she pulled her 21-month-old son out of Minnieland because dreaded going to daycare.
>
> "He would just cry," she told NBC Washington. "He would throw himself on the floor, you know. Just, 'No mommy, no mommy.'"

Ah, but the show must go on, mothers of young children, so no use crying about it. The important thing is that mothers of young children keep on paying taxes to big government. Big government needs their tax money to buy other people's votes.

**Christians on board with feminism**

The Gospel Coalition, which has embraced radical feminism for some time, celebrates daycare for 3-month-old children:

> After 12 weeks of glorious (and delirious) maternity leave, I returned to my job. I worked out a solution with my boss to return in a capacity my husband and I felt would be wise for our family. While my work may look different than some other moms, I believe I am serving God faithfully in it, by his grace.

Three months, then back to work. All you have to do is claim that God is leading you to do it, (through your feelings), and poof! Divine approval for radical feminism.

My friend McKenzie, who sent me that article, wondered if the Gospel Coalition was just becoming Salon.com for Christians. All you have to do is take an article from a radically leftist publication, add a few Bible verses, and you

have something to post on the Gospel Coalition. That's how far radical feminism has spread, I guess. Once upon a time, women used to value men who had good practical degrees, good resumes, and good jobs – so that they could be stay-at-home moms and meet their childrens' needs. Now, it's just follow your heart. There's no planning for the needs of children.

# Is belief in a Creator / Designer compatible with belief in Darwinian evolution?

**Wintery Knight** · 6 March 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

What should we make of theistic evolutionists telling us that you can *believe* in God, while still *knowing* that matter, law and chance fully explain the development of all of biological life?

Consider this quotation from Phillip E. Johnson.

Quote:

> The National Academy's way of dealing with the religious implications of evolution is akin to the two-platoon system in American football. When the leading figures of evolutionary science feel free to say what they really believe, writers such as Edward O. Wilson, Richard Dawkins, Daniel Dennett, Carl Sagan, Steven Pinker, Stephen Jay Gould, Richard Lewontin and others state the "God is dead" thesis aggressively, invoking the authority of science to silence any theistic protest. That is the offensive platoon, and the National Academy never raises any objection to its promoting this worldview.
>
> At other times, however, the scientific elite has to protect the teaching of the "fact of evolution" from objections by religious conservatives who know what the offensive platoon is saying and who argue that the science educators are insinuating a worldview that goes far beyond the data. When the objectors are too numerous or influential to be ignored, the defensive platoon takes the field. That is when we read those spin-doctored reassurances saying that many scientists are religious (in some sense), that science does not claim to have proved that God does not exist (but merely that he does not affect the natural world), and that science and religion are separate realms which should never be mixed (unless it is the materialists who are doing the mixing). Once the defensive platoon has done its job it leaves the field, and the offensive platoon goes right back to telling the public that science has shown that "God" is permanently out of business.
>
> (Phillip E. Johnson: "The Wedge of Truth", IVP 2000, pp. 88-89).

So what naturalistic scientists believe is that God didn't do anything to create the diversity of life – that nature does all of its own creating without God. In fact, it doesn't matter if the best naturalistic explanation is improbable or implausible – naturalists *must* bitterly cling to materialistic explanations of natural phenomena. Any doubts about the efficacy of naturalistic mechanisms get met by "theistic evolutionists" – scientists who think that science shows that God didn't do anything in the history of life.

When it comes to discussing origins, you have to be very careful with theistic evolutionists. The one question they want to avoid is whether science, done in the ordinary naturalistic way, can discover evidence of intelligent agency

in the history of the development of life. And that's why you have to ask them that question *first*. "Is there any scientific evidence that intelligent causes were active during the history of the development of life on this planet?" Their answer to that is the same as atheists, namely: "there is no scientific evidence that intelligent causes are responsible for the effects we see in the history of life on Earth". Theistic evolutionists and atheists agree on that: as far as pure scientific evidence is concerned, nature can do its own creating without any intelligence writing genetic code or engineering animal body plans.

Now, take a look at this article by Jay Richards. He cites some theistic evolutionists.

Excerpt:

> Biologist Ken Miller:
>
> For his part, [Ken] Miller, a biologist, has no qualms about telling us what *God* would do: "And in Catholicism, he said, God **wouldn't** micromanage that way. 'Surely he **can** set things up without having to violate his own laws.'"
>
> I am unaware of any tenet of Catholic theology that requires God not to micromanage. It is, however, a tenet of deism.

Got that? What really happened is that God didn't do anything. How does he know that? From the science? No. Because he assumes naturalism. Oh, it's true that he *says* that God is lurking somewhere behind the material processes that created life. But God's agency is *undetectable* by the methods of science. And he is hoping that you will accept his subjective pious God-talk as proof that a fundamentally atheistic reality is somehow reconcilable with a robust conception of theism.

More from Richards:

> Then we get Stephen Barr offering his private definition of "chance."

> It **is possible** to **believe** simultaneously in a world that is shaped by chance and one following a divine plan. "God is in charge and there's a lot of accident," said Barr, also a Catholic. "It's all part of a plan. . . . God **may have** known where every molecule was going to move."

What does Barr really believe? He believes that what science shows is that nature created life without any interference by an intelligent agent. Barr then offers believers his subjective pious God-talk to reassure them that evolution is compatible with religion. He has a *personal belief* – NOT BASED ON SCIENCE – that the material processes that created all of life are "all part of a plan". He cannot demonstrate that from science – it's his *faith commitment*. And more speculations: "God may have known…". He can't demonstrate that God did know anything *from science*. He is just offering a personal opinion about what God "could have" done. The purpose of these subjective opinions is to appease those who ask questions about what natural mechanisms can really create. Can natural causes really account for the development of functional proteins? Never mind that – look at my shiny spiritual-sounding testimony!

That's theistic evolution. What really happened is that no intelligent causes are needed to explain life. What they say is "God could" and "God might" and "I pray" and "I attend this church" and "I received a Christian award" and "I sing praise hymns in church". None of these religious opinions and speculations are relevant to the science – they are just opinions, speculations and biographical trivia. Atheists and theistic evolutionists agree on what science shows about the diversity of life – *intelligent causes didn't do anything*.

**Front-loading?**

One of the ways that theistic evolutionists try to affirm design is by insisting that the design is "front-loaded". The

design for all the information and body plans is somehow embedded in matter.

Here is Stephen C. Meyer to assess that:

It's very important to understand that there is no *scientific evidence* for design (information) being front-loaded. So although the theistic evolutionists are talking about design, it's still in the realm of faith – not detectable to scientific investigation. And as Dr. Meyer explained, it doesn't work to explain design anyway.

I attended a Wheaton College philosophy conference where Dr. Michael Murray read a paper advocating for this front-loaded view of design. I raised my hand to ask him a question, "hey, philosophy guy, did God front-load the information in that paper you're reading, or did you write it yourself?" But the philosophy moderators must have known that I was an engineer, and would talk sense into him, because they never called on me. However, I did e-mail him later and asked him if he had any evidence for this front-loading theory, and couldn't God write sequence information in time the same way he had sequenced information in his essay. He replied and said that front-loading was more emotionally satisfying for him. That's philosophy, I guess. Thank goodness an engineer wrote his e-mail program so that he could at least come clean about his silly view.

The quickest way to disarm a theistic evolutionist is to ask them for a naturalistic explanation of the origin of life. And for a naturalistic explanation of the Cambrian explosion. And so on. Focus on the science – don't let them turn the conversation to their personal beliefs, or to the Bible, or to religion. No one cares about the psychology of the theistic evolutionist. We only care what science can show.

# Where does Bernie Sanders stand on gay rights vs religious liberty?

**Wintery Knight** · 6 March 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

Here's an article from Robert Gagnon from the American Spectator. Dr. Gagnon is someone I trust on the gay marriage / homosexuality / gay rights issues. In this post he makes a list of all the things Sanders is doing and intends to do on the gay rights vs religious liberty issue.

He writes:

> I have encountered a fair number of persons holding a more or less traditional view of marriage who are warming up to Sanders because Sanders strikes them as a "nice man" who just wants to "help the poor." Pay attention, please, for Sanders has told us exactly what he would do to you as President (rest assured that Hillary Clinton would do the same):

First, Sanders will kill any sort of religious liberty legislation, such as the the "First Amendment Defense Act":

> 1. "Veto any legislation that purports to 'protect' religious liberty at the expense of others' rights" (the scare quotes are his). In other words, he is going to get you, you hateful, ignorant bigots who have a problem with supporting directly with your talents, goods, and money the full homosexual and transgender lifestyle.

Second, if anyone in your office finds out that you oppose gay marriage, Sanders is authorizing your pro-gay co-workers to have you fired on the spot:

> 2. "Sign into law the Equality Act," of which he "is currently a cosponsor," "which would expand the Civil Rights Act of 1964 and other anti-discrimination laws to include protections for sexual orientation and gender identity." This would include a so-called "employment nondiscrimination" legislation that renders you the moral equivalent of a racist should you utter in or out of the workplace the view that homosexual activity is harmful or immoral. Think of it as anti-Christian (and anti-Muslim and anti-Orthodox Jewish) employment discrimination legislation.
>
> Expect lots of firings and terminations to take place. Imagine your workplace as a sort of "secret police" state, except the policing won't be so secret. Expect there to be a full-court federal push to punish with hefty fines

> those who do not want to contribute their talents and goods directly to “gay weddings” (bakers, florists, photographers, caterers). Churches that allow non-parishioners to use any of their facilities will have to offer these to “gay weddings” and any other homosexual or transgender activities. In some cases white-collar employees who outside the workplace write in favor of a male-female foundation for marriage (even on a Facebook post) could be charged with creating a hostile work environment and terminated.

Pro-gay indoctrination of police officers into the gay agenda:

> 4. “Require police departments to adopt policies to ensure fairer interactions with transgender people, especially transgender women of color …, and institute training programs to promote compliance with fair policies.” This is a mandate to indoctrinate forcibly police departments along the lines of “progressive” sexual ideology. Either they learn to advance the transgender cause or face discipline and termination. That means converting law enforcement into the most active enforcers of a homosexual and transgender agenda against the citizenry. You have no rights, except the right to remain silent.

Pro-gay  indoctrination of young children in the schools:

> 5. Pass “anti-bullying” legislation requiring indoctrination of children in the schools into the LGBT agenda. Your children will be taught to regard you as a “bully” and a “homophobic bigot” if you don’t affirm homosexual and transsexual identities. Your children will be given exercises that will urge them to declare their affinity with the LGBT cause. “If you believe that sexual orientation is not a choice, walk across the room to us, where these treats are waiting.” If your children don’t comply, they will be ostracized.

Dr. Gagnon lists a few policies favored by Sanders, and takes a look at his record on gay rights issues in Vermont. Suffice to say that if this man is elected President, religious liberty and freedom of conscience for Christians will be finished. Some voters think that forced redistribution of wealth by a secular government is more important than the right to live by Biblical sexual ethics. For myself, I’m not for redistribution of wealth by a secular big government. I believe in Biblical sexual ethics, and I believe in natural marriage. I don’t want to elect someone who would punish me for being supportive of natural marriage and traditional morality.

# How well did Donald Trump do in the hotel and casino business?

**Wintery Knight** · 7 March 2016 · Archived copy · Original

Donald Trump should stick to Miss Universe pageants

This story from CBS Marketwatch looks at the only period of Trump's career for which we have the numbers.

It says:

> [T]he only part of his business track record for which we have the full picture shows that Trump wasn't a successful executive but an absolute catastrophe.
>
> For 10 years between 1995 and 2005, Donald Trump ran Trump Hotels & Casino Resorts — and he did it so badly and incompetently that it collapsed into Chapter 11 bankruptcy. His stockholders were almost entirely wiped out, losing a staggering 89% of their money. The company actually lost money every single year. In total it racked up more than $600 million in net losses over that period.
>
> Trump was chairman of the board throughout the entire time, and CEO as well for about half of it.
>
> Meanwhile, over the same period, all his competitors were enjoying an enormous boom. Take a look at our chart.
>
> While Trump was running Trump Hotels & Casino Resorts into the ground, the Dow Jones index of gambling stocks — the index that Trump himself cited in public filings as his best benchmark — soared 160%. Investors in Harrah's saw their stake go up by nearly 150%. MGM MGM, -2.56% quintupled. These people were making out like bandits.
>
> Donald Trump ran the worst performing casino company on the stock market. This isn't a matter of "opinion." This isn't speculation or politics. It's a matter of plain fact.
>
> However, one person associated with Trump Hotels & Casino Resorts did make money:
>
> Donald J. Trump.
>
> A review of the company's public filings show that over that period, while his ordinary investors were getting hosed, Trump himself was siphoning millions out of Trump Hotels & Casino Resorts through salary, "bonuses" — yes, really — and cozy "service agreements" or side deals with his private corporations.

Here's the chart with the info from Trump's public filings:

Trump casino and hotels performance
You can read more about his four bankruptcies on CNN Money, too.

It says:

Here's a look at Trump's bankruptcy track record.

> 1. Trump Taj Mahal, 1991
>
> To come up with the funds he needed, he sold a 282-foot yacht, as well as the Trump Shuttle, the airline he operated at the time that flew between Washington, D.C., New York and Boston, according to media reports at the time. He had to give up half of his ownership stake in the Trump Taj Mahal, but he did retain control of the property. His largest creditor was financier Carl Icahn, who held $400 million in bonds. **Now Icahn is Trump's pick for Treasury secretary should he be elected.**
>
> 2. Trump Castle Associates, 1992
>
> In less than a year he was back in bankruptcy court for his other Atlantic City casinos. This bankruptcy included the Trump Plaza Hotel in New York, the Trump Plaza Hotel and Casino in Atlantic City as well as the Trump Castle Casino Resort. He gave up half his interest in the New York Plaza to Citibank, but retained his stake in the casinos.
>
> 3. Trump Hotel & Casino Resorts, 2004
>
> Trump didn't go back to bankruptcy court again until November 2004, when he filed to shed debt at his various Atlantic City casinos and a riverboat in Indiana. It was another quick trip through bankruptcy court; the company shed $500 million in debt and emerged from bankruptcy the following May. Trump turned over majority control of the company to his bondholders but remained the largest single shareholder, and he once again kept control of the casinos.
>
> 4. Trump Entertainment Resorts, 2009
>
> His most recent bankruptcy came in 2009, after the company missed a $53.1 million bond payment. That was pretty much the end of the road for Trump in Atlantic City. While his name remained on three casinos, he resigned from the board and gave up his remaining stake in the company.

What if this guy is not a good businessman at all? His tax returns would help us decide, but he won't release them. Everyone else has released their tax returns, but not Trump. Why not? He says that he is being audited, so the IRS won't let him. But the IRS came out and said that he can go ahead and release them.

So what's stopping him? What has he got to hide?

# Conservatives in Ohio don't support John Kasich

**Wintery Knight** · 7 March 2016 · Archived copy · Original

John Kasich: dependency on big government is "compassionate"

I see that some people are voting for John Kasich, and I just thought that I should let people know that John Kasich is very far to the left on fiscal, social and foreign policy issues – the left of someone like Mitt Romney or Jeb Bush across the board.

I was going to write something about it, but then I found this article by a leader of the conservatives of Ohio.

The thing that everyone knows about Kasich is that he is a huge proponent of spending taxpayer money to "help" poor people. He's never met a big government solution to a problem that he didn't heartily embrace. He thinks that the right way to help the poor is not to use his own money to do it, it's to take money from the private sector and redistribute it to others, after the unionized government workers take their cut out first.

Here's an example, John Kasich supports expanding the role of government in providing health care:

> 1. **Governor Kasich on Obamacare:** You advanced Obamacare in Ohio, turning over 600,000 healthy, working age adults into government dependents, costing taxpayers billions of dollars and expanding the largest long term obligation in Ohio history – all against the will of the Republican controlled Ohio House and Senate.
>
> **Given that these 600,000 Ohioans would not be government dependents had you not bypassed the legislature and vetoed their wishes so you could accept Obamacare funding and conditions – how can you say you oppose Obamacare while unilaterally championing its single biggest component?**
>
> […]Ohioans, let's be brutally honest about this Kasich decision to expand Obamacare in Ohio. You and your children are being indebted by billions of dollars all to redistribute this money to healthy, working age adults. Not children, pregnant mothers or truly medically fragile people, no. The people Kasich added as government dependents were healthy adults.

Kasich likes to talk a lot about helping the poor through big government, and he does that by increasing spending:

> **2. Governor Kasich on Spending:** You talk about balancing the state budget, but every Ohio Governor balances the budget every year as it's a Constitutional requirement in your state. Democrat or Republican – every Ohio Governor does this, as it is regular and expected. This is not a unique accomplishment.
>
> Of greater interest is that Ohio's job and economic growth has lagged behind the national average during your time in office. As we all know, the national economy has improved since the crash of 2008, so tax revenues have increased in both Ohio and across the US. But, as Ohio state tax revenues increased, curiously, so did your spending at a much faster pace.
>
> **Governor Kasich, how can you justify increasing spending by greater amounts than any Ohio Democrat or Republican Governor since 1990, outpacing both inflation and population growth, but still call yourself fiscally responsible?**

If there is one thing that conservatives stand for, it's limiting the power of the liberal labor unions to influence government. But John Kasich loves unions, and opposes right-to-work legislation:

> **3. Governor Kasich on Unions and Big Labor:** Every US state with a Republican Governor and Republican controlled Legislature has ended compulsory payment of fees to unions and become a "right to work" state with the exception of Ohio.
>
> As the Ohio border states of Indiana, Michigan and West Virginia have all become "right to work" states during your time as Ohio Governor, not only have you failed to make Ohio a "right to work" state, but you actively pushed Michigan's Governor Snyder to oppose right to work legislation, you have killed Ohio right to work legislation in committees multiple times and you proactively worked to stop Ohio donors from funding a citizen's initiative to make Ohio a right to work state through a vote of the people at the ballot.
>
> ***Ohio's current ranking is a dismal 38$^{Th}$ in job creation,* so while you fought against ending forced union dues payments, right to work states dominated job growth across the country. How can you call yourself someone committed to an environment conducive to job creation when your *actions and results* in Ohio have protected unions and inhibited job growth?**

The rest of the article talks about many other minor problems with Kasich. Initially, it seemed to me that he was going to champion the same kinds of things that Governor Walker championed in Wisconsin, or that Governor Pence championed in Indiana, or that Governor Bevan championed in Kentucky, or that Governor Snyder championed in Michigan. But he's been nothing like them – he's been more like a big-spending, pro-dependency Democrat.

**Religious liberty**

Kasich considers same-sex marriage to be the law of the land, and he opposes legal protections for Christians who are sued by gay activists.

He gets an F on marriage from pro-marriage activist Maggie Gallagher for his stance on same-sex marriage:

> The Supreme Court overturns the marriage laws of your state and many others by inventing a new right? That gets a big yawn from John Kasich: "I do believe in the traditional sense of marriage—that marriage is between a man and a woman. But I also respect the Supreme Court of the United States. The Supreme Court of the United States made the decision, and as I have said repeatedly we'll honor what the Supreme Court does—it's the law of the land."

And he opposes protections for Christians who are sued by gay activists:

> What will you do, Gov. Kasich, to protect the rights of gay marriage dissenters?
>
> The other three men on the stage have all indicated support for the First Amendment Defense Act, which protects gay marriage dissenters from discrimination by the federal government, including by the IRS (Ted Cruz and Marco Rubio strongly, Donald Trump half-heartedly).
>
> Gov. Kasich has refused to say whether he would support FADA.
>
> And while we can all applaud the fact that at last night's debate Kasich no longer actively sided with those stripping Christians (and other traditional believers) of their family's livelihoods, he also refused to commit to doing anything about it.
>
> No wonder, as he said last night, he's the Democrats' favorite Republican.

I do have to say that the one issue where Kasich does perform as expected is on the pro-life issue. There, he has a moderate record of pro-life actions. Nothing as good as people like Rubio or Cruz, though. We can do better than John Kasich.

# New study: open relationships in the gay community

**Wintery Knight** · 7 March 2016 · Archived copy · Original

Young people seem to like gay marriage more than they like individual liberties
Story from the San Francisco Chronicle.

Excerpt:

> A new study released this week by the Center for Research on Gender & Sexuality at San Francisco State University put statistics around what gay men already know: Many Bay Area boyfriends negotiate open relationships that allow for sex with outsiders.
>
> […]"I think it's quite natural for men to want to continue to have an active and varied sex life," said 50-year-old technology consultant Dean Allemang from Oakland, who just ended a 13-year-open relationship and has begun another with a new boyfriend.
>
> "I don't own my lover, and I don't own his body," he said. "I think it's weird to ask someone you love to give up that part of their life. I would never do it."
>
> Hoff, who just received a $3.5 million grant from the National Institute of Mental Health to continue the study for five more years, initially started her research based on findings that HIV infection is on the rise among male couples.
>
> "So much of the HIV prevention effort is aimed at a different set – men in dance clubs or bathhouses having anonymous sex," she said. "HIV prevention might want to expand its message to address relationships; we have to look at risk in a greater context."
>
> In her study of gay couples, 47 percent reported open relationships. Forty-five percent were monogamous, and the remaining 8 percent disagreed about what they were.

Another researcher quoted in the story explains how same-sex marriage is compatible with an "open relationship", and that this interpretation of marriage *would* be a redefinition of traditional marriage.

Related to that, there is this radio interview with a gay activist.

Excerpt:

> "It's a no-brainer that (homosexual activists) should have the right to marry, but I also think equally that it's a no-brainer that the institution of marriage should not exist. …(F)ighting for gay marriage generally involves lying about what we are going to do with marriage when we get there — because we lie that the institution of marriage is not going to change, and that is a lie.
>
> The institution of marriage is going to change, and it should change. And again, I don't think it should exist. And I don't like taking part in creating fictions about my life. That's sort of not what I had in mind when I came out thirty years ago.
>
> I have three kids who have five parents, more or less, and I don't see why they shouldn't have five parents legally… I met my new partner, and she had just had a baby, and that baby's biological father is my brother, and my daughter's biological father is a man who lives in Russia, and my adopted son also considers him his father. So the five parents break down into two groups of three… And really, I would like to live in a legal system that is capable of reflecting that reality, and I don't think that's compatible with the institution of marriage."

To me, making a relationship "open" puts an emphasis on each person feeling good, rather than each person committing to love the other self-sacrificially. I wonder if young people understand that. What would be interesting, I think, would be to ask all the young people – especially young women – how they would feel if their partner's idea of marriage involved having an open relationship. How do they feel about non-exclusivity incorporated into the new definition of the word "marriage".

It seems to me that it's one thing to say that marriage is a man and a woman committing to love each other through to old age, regardless of changing feelings and unmet desires. A relationship based on the natural definition of marriage is focused on commitment, and not fulfillment of desires. And that works well for children, who need stability, even if the desires of adults are not met. If marriage is about people abandoning exclusivity and permanence in order to get what they need to be happy "in the moment", then neither person will be able to depend on the other when they are old, ugly and sickly.

Here's a video that explains the basics of why people like me support natural marriage:

The word marriage means, one man, one woman, for life. And both parents sacrifice to raise the children they create. And no frivolous divorce, either. And if you ask me, it should also mean no sex before marriage, formal courtship, approval of both sets of parents, and the wife stays home when the children under five.

# Is Donald Trump right to order U.S. troops to commit war crimes?

**Wintery Knight** · 8 March 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

David French, who served in the military with distinction, takes a look at Trump's statements for National Review.

He writes:

> Donald Trump fundamentally misunderstands the American military. He sees it as an instrument of savage brutality, restrained only by political correctness. There is no honor. There is no law. If only the military were free to torture, murder, and blaspheme, then America would win its wars. By believing that American soldiers would follow those orders — or would want to follow those orders — he slanders the character of the American military.
>
> For months, he has promised that he would order the military to commit war crimes, torturing militants and targeting their families for execution. He was just as emphatic in promising that those orders would be followed.
>
> He was wrong. There is no scenario under which the military would ever follow directives so offensive to its honor and so blatantly illegal. No man I served with in Iraq would comply with an order to intentionally kill an innocent woman or child, and no officer with a shred of decency or honor would give such an order. The Pentagon has many flaws, but truly bad soldiers are few and far between, and the military is institutionally hard-wired to resist exactly this kind of corruption. Trump would instantly sever the relationship between America's armed forces and their commander-in-chief just by asking them to do such things.
>
> As Lieutenant General James Mattis put it in a 2005 memorandum to the United States Marine Corps, "Marines fight only enemy combatants." It should go without saying that the same principle applies to soldiers, sailors, and airmen. Our men and women in uniform do not fight innocent civilians and they do not assault prisoners in their custody. Both the War Crimes Act of 1996 and the Uniform Code of Military Justice bind American soldiers to the laws of war, which prohibit such actions.
>
> Donald Trump promised that American soldiers — at the very least — violate Articles 93, 118, and 128 of the UCMJ. Article 93 prohibits "cruelty and maltreatment," while Articles 118 and 128 prohibit murder and assault.

Here he is explaining his views:

I'm not sure what Donald Trump is thinking by making these sorts of claims about what he can and cannot make the military do. I know people in the military, and they are the opposite of "hired muscle". Many of them hold to Judeo-Christian values, and they go into the military in order to serve their country *honorably*. They see their service as a matter of honor and devotion to the country that has allowed them to live free and be prosperous. Character is at the center of their service, in short. They are trained to think not about themselves, but to think of others first. Acts of self-sacrificial heroism are *celebrated* in the military. Acts of cruelty and barbarism are *shamed.*

All you have to do to see this is to read the citations for people who win the Medal of Honor… it shows you what the U.S. Military holds in the highest regard.

Look:

> The Medal of Honor is the highest military decoration that may be awarded by the United States government. It is presented by the President of the United States, in the name of Congress, and is conferred only upon members of the United States Armed Forces who distinguish themselves through **conspicuous gallantry and intrepidity at the risk of life above and beyond the call of duty**:

> - While engaged in action against an enemy of the United States;

> - While engaged in military operations involving conflict with an opposing foreign force; or

> - While serving with friendly foreign forces engaged in an armed conflict against an opposing armed force in which the United States is not a belligerent party.

That's what serving in the military is about. It's not about obeying orders, it's about moral virtues – courage, bravery, selflessness – tested under the most extreme conditions. Military people are who are trained to do the moral thing when their lives are endangered.

If our men and women in uniform were ordered to besmirch their honor in order to serve, they would almost universally disobey orders. The intentional targeting of civilians is something that we do not do. The other side (radical Islamists) targets civilians, but we do not. If Trump were elected, and ordered our fighting men and women to commit war crimes, you could expect a mass exodus of our most patriotic Americans from the armed forces.

# Suppose God had coffee with Donald Trump... how would that go?

**Wintery Knight** · 8 March 2016 · Archived copy · Original

Donald Trump and his evangelical Christian supporters

My friend William shared this post by well-known social conservative Matt Barber. Barber imagines a conversation between Trump and God.

Excerpt:

> **The following statements attributed to Mr. Trump are not fabricated. The man truly uttered them. Those attributed to God are likewise genuine.**
>
> […]The discussion begins.
>
> Trump: "I am a really smart guy. I'm intelligent. Some people would say I'm very, very, very intelligent. I know what sells, and I know what people want."
>
> God: "[I] oppose the proud, but give grace to the humble. For everyone who exalts himself will be humbled, and he who humbles himself will be exalted" (James 4:6 and Luke 14:11).
>
> Trump: "Nothing wrong with ego. Show me someone without an ego, and I'll show you a loser. Sorry losers and haters, but my I.Q. is one of the highest – and you all know it!"
>
> God: "Let not the wise man boast in his wisdom, let not the mighty man boast in his might, let not the rich man boast in his riches. When pride comes, then comes disgrace, but with the humble is wisdom. But as it is, you boast in your arrogance; all such boasting is evil" (Jeremiah 9:23, Proverbs 11:2, James 4:16).
>
> Trump: "If you don't tell people about your success, they probably won't know about it."
>
> "Part of the beauty of me is that I am very rich. I'm really rich. Cash is king, and that's one of the beauties of the casino business. And while I can't honestly say I need an 80-foot living room, I do get a kick out of having one."
>
> God: "For the love of money is a root of all kinds of evil" (1 Timothy 6:10).
>
> Trump: "Fighting for the last penny is a very good philosophy to have. I have black guys counting my money. … I hate it. The only guys I want counting my money are short guys that wear yarmulkes all day. Who the f–k knows? I mean, really, who knows how much the Japs will pay for Manhattan property these days?"
>
> God: "Again I tell you, it is easier for a camel to go through the eye of a needle than for someone who is rich to

> enter the kingdom of God" (Matthew 19:24).
>
> The conversation moves on to Mr. Trump's boasting of his many adulterous affairs.
>
> God: "Why should you be intoxicated, my son, with a forbidden woman and embrace the bosom of an adulteress?" (Proverbs 5:20)
>
> Trump: "Nice t-ts, no brains. A person who is very flat-chested is very hard to be a 10. Oftentimes when I was sleeping with one of the top women in the world, I would say to myself, thinking about me as a boy from Queens, 'Can you believe what I am getting?'"
>
> God: "Likewise, husbands, live with your wives in an understanding way, showing honor to the woman as the weaker vessel, since they are heirs with you of the grace of life, so that your prayers may not be hindered" (1 Peter 3:7).
>
> Trump: "[Women:] You have to treat 'em like s—t."
>
> "When a man leaves a woman, especially when it was perceived that he has left for a piece of a– – a good one! – there are 50 percent of the population who will love the woman who was left."
>
> "If I get my name in the paper, if people pay attention, that's what matters. You know, it really doesn't matter what they write as long as you've got a young and beautiful piece of a–."
>
> "It's all in the hunt, and once you get it, it loses some of its energy. I think competitive, successful men feel that way about women. Don't you agree? Really, don't you agree?"
>
> God: "Let marriage be held in honor among all, and let the marriage bed be undefiled, for [I] will judge the sexually immoral and adulterous" (Hebrews 13:4).

I have to skip a bit… can't quote the whole thing!

Trump holds up Bible he "received from his mother" to evangelicals

More:

> Trump: "For many years I've said that if someone screws you, screw them back. When somebody hurts you, just go after them as viciously and as violently as you can."

> God: "But I say to you, Love your enemies and pray for those who persecute you. But if you do not forgive others their trespasses, neither will your Father forgive your trespasses" (Matthew 5:44, Matthew 6:15).
>
> Trump: "I don't like to have to ask for forgiveness. Why do I have to repent or ask for forgiveness, if I am not making mistakes?"
>
> God: "If my people who are called by my name humble themselves, and pray and seek my face and turn from their wicked ways, then I will hear from heaven and will forgive their sin and heal their land" (2 Chronicles 7:14).

You know, when I think of the people I really admire in this world, I think of people like Jay Wesley Richards, Michael Licona, J. Warner Wallace, Bruce Gordon, Paul Copan, Scott Klusendorf, Tim McGrew, etc. If you asked me who takes the Bible seriously, I'd point to them. I can see how a thorough understanding of the Bible's teaching has affected their character and behavior. I cannot imagine why anyone who claims to be a Bible-believer would support a man like Trump. It's not that I insist on someone who agrees with me on every point of theology. My favorite podcast is the Ben Shapiro show, and he's an Orthodox Jew! It's that I expect that people who claim to take the Bible seriously to show it in their character and their behavior. Don't hold up the Bible and claim to respect it when there isn't anything in your life to show it.

# Evaluating the evidence for and against common descent

**Wintery Knight** · 8 March 2016 · Archived copy · Original

A conflict of worldviews

An article from Evolution News that takes a statement from an evolutionist who supports common descent, and then then refutes it point by point.

Here's the case for common descent:

> UCA is now supported by a wealth of evidence from many independent sources, including: (1) the agreement between phylogeny and biogeography; (2) the correspondence between phylogeny and the palaeontological record; (3) the existence of numerous predicted transitional fossils; (4) the hierarchical classification of morphological characteristics; (5) the marked similarities of biological structures with different functions (that is, homologies); and (6) the congruence of morphological and molecular phylogenies.
>
> (Douglas L. Theobald, "A formal test of the theory of universal common ancestry," *Nature*, Vol. 465:219-222 (May 13, 2010).)

And here's a response to each of those points from the Evolution News post:

- (1) Phylogeny and biogeography don't always agree.
- (2) Phylogeny and paleontology don't always agree.
- (3) Transitional fossils are often missing (or the "predicted" transitional fossils fall apart on closer inspection).
- (4) Hierarchical classifications often fail.
- (5) "Homologous" structures often have different developmental pathways or different structures often have "homologous" developmental pathways.
- (6) Morphological and molecular phylogenies are often incongruent.

Before I read this post, I only knew about 3, 4, 5 and 6.

**A related podcast**

Casey Luskin did a good podcast explaining a problem with two kinds of evidence commonly used to argue for common ancestry.

Details:

> On this episode of **ID the Future**, Casey Luskin takes a keen-eyed look at Darwin's tree of life and finds that common descent, far from being confirmed by the data, is actually contradicted by it, as *New Scientist* pointed out in their cover story, "Why Darwin was wrong about the tree of life."
>
> Listen in to learn how the data is challenging Darwinist assumptions, and check out "A Primer on the Tree of Life" for more information.

The MP3 file is here.

The paper linked above seems to be exactly what he read out loud in the podcast.

Here is one section from the paper that summarizes everything:

> One authoritative review paper by Darwinian leaders in this field stated, "**As morphologists with high hopes of molecular systematics, we end this survey with our hopes dampened. Congruence between molecular phylogenies is as elusive as it is in morphology and as it is between molecules and morphology.**"
>
> Another set of pro-evolution experts wrote, "That molecular evidence typically squares with morphological patterns is a view held by many biologists, but interestingly, by relatively few systematists. Most of the latter know that the two lines of evidence **may often be incongruent.**"

The two methods of determining ancestry are "often incongruent". What I am looking for in order to be convinced of common ancestry is substantial agreement between morphological phylogenies and molecular phylogenies. I don't see that, so I am still skeptical of common ancestry. Especially with all the examples of convergence that I keep finding out about.

# What happens when Christians vote to put secular government in charge of health care?

**Wintery Knight** · 9 March 2016 · Archived copy · Original

Canada Election 2015: Socialists in red, Communists in Orange, Conservatives in blue

No need to wonder, just look north to Canada. Wesley J. Smith explains in First Things.

Excerpt:

> Last year, the Canadian Supreme Court created a right to euthanasia and assisted suicide. To qualify for death, the court ruled unanimously, one must be a competent adult with a medically diagnosed condition causing "irremediable suffering"—a circumstance wholly determined *by the patient* and including "psychological suffering."
>
> The decision went well beyond mere legalization. Indeed, the court manufactured an *enforceable legal right* for qualified patients to receive what Canadian policymakers are euphemistically calling "medical aid in dying" (MAID).
>
> But what about doctors opposed to euthanasia? The court left with Parliament and the medical colleges (associations) the decision of whether and how to accommodate doctors with conscience objections, granting a one-year (now extended) period within which to enact laws to govern the practice. Since then, civil liberties groups, provincial medical colleges, and official government commissions have urged Parliament … to pass laws that would coerce doctors who are religiously or philosophically opposed to euthanasia to *cooperate actively* in mercy killings by forcing them to procure death doctors for their patients.

But isn't there a "Constitution" in Canada? Yes, but it's interpreted by unelected judges:

> All of this would seem to fly in the face of Canada's 1982 Charter of Rights and Freedoms,which states, "Everyone has the fundamental freedom of conscience and religion." Illustrating the utter lack of regard that secularized Canada now has for religious liberty, the Canadian Civil Liberties Association—that country's counterpart to the ACLU—applauded the parliamentary committee's call to stomp upon religious conscience as a "promising step forward."

> Doctors aren't the only ones threatened with religious persecution under Canada's looming euthanasia regime. Provincial and federal commissions have both recommended that nurses, physician's assistants, and other such licensed medical practitioners be allowed to do the actual euthanizing under the direction of a doctor.

Voting for a single-payer health care system, such as the one praised by Donald Trump, makes the situation much worse:

> Even Catholic and other religious nursing homes and hospices may soon be required by law to permit euthanasia on their premises, for the federal commission recommended that federal and provincial governments "ensure that all publicly funded health care institutions provide medical assistance in dying." That is a very broad category. **Canada has a single-payer, socialized healthcare financing system that permits little private-pay medical care outside of nursing homes.** Not only that, but as Alex Schadenberg, director of the Canada-based Euthanasia Prevention Coalition told me, "religiously-affiliated institutions [in Canada] have become the primary care facilities for elderly persons, those requiring psychiatric care, and dying persons. They are now being told that as a condition of providing those services they will be required to permit doctors to kill these very patients by lethal injection. If they refuse, they will find themselves in a showdown with the government."

The more people who opt to kill themselves, the less the government has to pay in health care. Naturally, the secular government looks at euthanasia as a great way to cut the costs of taxpayers who have paid into the single-payer system their whole lives, and now want to make withdrawals. If the government kills them now, they get to keep all the money, and not give any of it back.

The rights to religious liberty and conscience protections are put at risk everywhere that the secular government takes over the private sector. Christians need to be careful what they vote for at election time. Small government is best for religious liberty and conscience protections.

# New York church makes space for non-Christians to ask questions

**Wintery Knight** · 9 March 2016 · Archived copy · Original

Is church boring? How can you make it more interesting for people?
This is from the radically leftist New York Times, of all places.

It says:

> When Craig Ellis was growing up, he picked up the sort of adventure book meant for a boy looking to serve God. The book, "Shadow of the Almighty," told the story of Jim Elliot, a young American evangelist killed while doing mission work in Ecuador.
>
> The narrative of this Christian martyr did for Mr. Ellis what a superhero comic might have done for his peers: It got him pondering purpose, struggle and sacrifice. The book also provided a model for how a Christian should spread the news of salvation while working in treacherous territory, at great personal risk.
>
> Very little in "Shadow of the Almighty," however, prepared Mr. Ellis for where he stood on a recent Tuesday, in a room with industrial carpet and a dropped ceiling at Redeemer Presbyterian Church on the Upper West Side of Manhattan, where people lined up on Sunday morning are more likely awaiting a table for brunch than taking communion.
>
> Mr. Ellis, 39, welcomed the dozen men and women seated before him. "This is a space," he said, "for people who consider themselves non-Christian and are coming in from the outside."
>
> His weekly sessions, called the WS Café in a reference to the neighborhood, are at a new frontier of evangelism, one that seeks converts among a fervent and growing number of atheists in this country. The sessions started in September as a push by Redeemer Presbyterian's prominent pastor, the Rev. Tim Keller, to preach the gospel to skeptics.

How are they doing it?

By not quoting the Bible as if it were inerrant to people who don't think it is. But using evidence from outside the Bible to explain what's in the Bible.

More:

> On that recent Tuesday evening, Mr. Ellis, the pastor's assistant, was sharing a lectern with the Rev. Bijan

> Mirtolooi, the assistant pastor for the 83rd Street church. In the chairs around them sat people like Frank Ying, 33, who works for a technology start-up. Brought up in the Dallas area by immigrant parents who had been raised amid the official atheism of the People's Republic of China, Mr. Ying tried exploring Christianity with his high school classmates, even accompanying them to megachurches, only to be put off by their fundamentalism.
>
> "You have all these questions," he recalled. "And you have all these long, drawn-out conversations. 'What do you believe? How much of the Bible do you take literally?' And these people stop short and say, 'You've just got to have faith.' But I've always been more pragmatic, so that wasn't good enough."
>
> Mr. Ying heard about Redeemer Presbyterian from a few acquaintances after moving to Manhattan several years ago. He dipped his toe slowly, watching a YouTube video of Dr. Keller in conversation with a journalist and a historian, emissaries of the secular world. By now, Mr. Ying is a regular at the WS Café, not because he believes, but because his doubts get heard.
>
> Each session has a central topic, and on the recent Tuesday it was about why Jesus needed to be crucified. As part of framing a wide-open conversation, a list of quotations on the subject even included this zinger from Mr. Hitchens: "I find something repulsive about the idea of vicarious redemption."
>
> Mr. Ellis and Mr. Mirtolooi cited popular culture (movies like "The Revenant," "Inside Out") and real-life examples (the way a parent sacrifices free time to raise a child) in order to make palpable the concept of suffering leading to the remission of sin. **Very deliberately, they did not lean heavily on Scripture.**
>
> **"The difference with the Café is what you're using as your authorities," Mr. Ellis said later. "Typically, in a Christian class, the Bible is your authenticity. To this group, the Bible is just another book. You can use it, but it's just one piece of the puzzle. You rely on those your listeners would find credible — scientists, philosophers, authors — and you show how Christianity makes sense."**
>
> […]The point of their exchange was not winning a soul now as much as keeping a mind open to the possibility someday. "Now I find that I'm very comfortable going to church on a Sunday, listening to the sermons," Mr. Ying said. "I can explore more and not have religious people put down their foot and say, 'This is how it is.' "

This reminds me of the conversation I had when I went to work for a tech start-up right out of college. You had to have a graduate degree to work in this company. I remember talking to a buy who had a PhD from Northwestern, and my boss who had his undergrad from UIUC and his Masters from Purdue. I had just answered one of their questions, and then apologized for taking the conservative point of view – hoping I hadn't offended them. I said "I'm a fundamentalist". And the PhD guy said, "you're not a fundamentalist. You have your view, but you know all the other views, too".

I think that in the workplace or in the school, it's important to know all the other views, too. We don't want to play into this stereotype that the secular leftists have of us. We should be able to sit still and listen, and put their view forward better than they can themselves. You won't learn how to do that in church, though. Church teaches you to only be able to talk to people about your faith if they assume that the Bible is the inerrant Word of God (which it is, but non-Christians don't believe that!) You have to learn how to speak to non-Christians effectively on your own, by reading and watching debates. Sad, but true.

# Ryan T. Anderson presents the case for natural / traditional marriage

**Wintery Knight** · 9 March 2016 · Archived copy · Original

What effects does redefining marriage have on society?

*I spend Tuesday night working through 3 chapters of Anderson's book "Truth Overruled", so I thought I would re-post this old post on marriage.*

A must-read long paper from the Heritage Foundation. It's a great concise presentation of the reasons why the United States should not redefine marriage. (H/T A tweet from Ryan T. Anderson)

Abstract:

> *Marriage is based on the truth that men and women are complementary, the biological fact that reproduction depends on a man and a woman, and the reality that children need a mother and a father. Redefining marriage does not simply expand the existing understanding of marriage; it rejects these truths. Marriage is society's least restrictive means of ensuring the well-being of children. By encouraging the norms of marriage—monogamy, sexual exclusivity, and permanence—the state strengthens civil society and reduces its own role. The future of this country depends on the future of marriage. The future of marriage depends on citizens understanding what it is and why it matters and demanding that government policies support, not undermine, true marriage.*

Excerpt:

> Supporters of redefinition use the following analogy: Laws defining marriage as a union of a man and a woman are unjust—fail to treat people equally—exactly like laws that prevented interracial marriage. Yet such appeals beg the question of what is essential to marriage. They assume exactly what is in dispute: that gender is as irrelevant as race in state recognition of marriage. However, race has nothing to with marriage, and racist laws kept the races apart. Marriage has everything to do with men and women, husbands and wives, mothers and fathers and children, and that is why principle-based policy has defined marriage as the union of one man and one woman.
>
> Marriage must be color-blind, but it cannot be gender-blind. The color of two people's skin has nothing to do

> with what kind of marital bond they have. However, the sexual difference between a man and a woman is central to what marriage is. Men and women regardless of their race can unite in marriage, and children regardless of their race need moms and dads. To acknowledge such facts requires an understanding of what, at an essential level, makes a marriage.

And a bit later:

> If the law taught a falsehood about marriage, it would make it harder for people to live out the norms of marriage because marital norms make no sense, as matters of principle, if marriage is just intense emotional feeling. No reason of principle requires an emotional union to be permanent or limited to two persons, much less sexually exclusive. Nor should it be inherently oriented to family life and shaped by its demands. This does not mean that a couple could not decide to live out these norms where temperament or taste so motivated them, just that there is no reason of principle to demand that they do so. Legally enshrining this alternate view of marriage would undermine the norms whose link to the common good is the basis for state recognition of marriage in the first place.
>
> Insofar as society weakens the rational foundation for marriage norms, fewer people would live them out, and fewer people would reap the benefits of the marriage institution. This would affect not only spouses, but also the well-being of their children. The concern is not so much that a handful of gay or lesbian couples would be raising children, but that it would be very difficult for the law to send a message that *fathers matter* when it has redefined marriage to make *fathers optional*.

And one last one:

> In fact, much of this is already occurring. Heritage Foundation Visiting Fellow Thomas Messner has documented multiple instances in which redefining marriage has already become a nightmare for religious liberty.[48] If marriage is redefined to include same-sex relationships, then those who continue to believe the truth about marriage—that it is by nature a union of a man and a woman—would face three different types of threats to their liberty: the administrative state, nondiscrimination law, and private actors in a culture that is now hostile to traditional views.[49]
>
> After Massachusetts redefined marriage to include same-sex relationships, Catholic Charities of Boston was forced to discontinue its adoption services rather than place children with same-sex couples against its principles.[50] Massachusetts public schools began teaching grade-school students about same-sex marriage, defending their decision because they are “committed to teaching about the world they live in, and in Massachusetts same-sex marriage is legal.” A Massachusetts appellate court ruled that parents have no right to exempt their children from these classes.[51]
>
> The New Mexico Human Rights Commission prosecuted a photographer for declining to photograph a same-sex “commitment ceremony.” Doctors in California were successfully sued for declining to perform an artificial insemination on a woman in a same-sex relationship. Owners of a bed and breakfast in Illinois who declined to rent their facility for a same-sex civil union ceremony and reception were sued for violating the state nondiscrimination law. A Georgia counselor was fired after she referred someone in a same-sex relationship to another counselor.[52] In fact, the Becket Fund for Religious Liberty reports that “over 350 separate state anti-discrimination provisions would likely be triggered by recognition of same-sex marriage.”[53]

This article is long and comprehensive. It will take some time to read. It’s includes logical arguments as well as empirical evidence from research – with footnotes. I really recommend taking a look at the article. Even if it takes a long time to read, it will definitely expand your mind to think about why we had a definition of marriage in the first place, and what we would lose by changing that definition. When you debate people who want to redefine

marriage, it's very important to appeal to logical arguments and evidence from studies. Get the conversation away from emotions and instead introduce facts and arguments.

You can get an even longer treatment in the new book by Ryan T. Anderson and his co-authors Sherif Girgis and Robert P. George. This is *the* book to get on the marriage issue.

# David French: it's time for Rubio and Kasich to drop out

**Wintery Knight** · 10 March 2016 · Archived copy · Original

I've always been a bit annoyed at David French for backing that horrible RINO Mitt Romney in 2012. It made me think that he was very liberal, because Mitt Romney is moderate. But lately, I've been reading David French columns, and I'm not so sure that he is moderate.

Look at this one from National Review. You would expect him to back a moderate conservative like Rubio or a moderate liberal like Kasich, if he was moderate, right?

Well, he doesn't:

> […][B]ecause normal political rules didn't apply to Trump, other candidates falsely believed they were immune as well. But it turns out that when you don't attack the front-runner, he tends to remain the front-runner. It turns out that when you start an epic losing streak, it's virtually impossible to come back. It turns out that when you make crass personal attacks, it diminishes you more than the target. It turns out that math is still math, and building strategies around winning your *first* big state halfway through the primaries looks not just foolish, but vain.
>
> Can we wake up yet? Can we do math? Can we do politics? Here's what our actual political experience tells us: Donald Trump is not going to beat himself, he will win a four or even a three-man race, and he is entirely capable of winning the GOP nomination with roughly 35 percent of the vote — indeed, he's doing it now.
>
> Here's what the math says: John Kasich and Marco Rubio, you have no hope of becoming the GOP nominee. Even if you win your home states, the *only thing* that will do is maintain the four-person dynamic under which Trump thrives. Even if you are fortunate enough to work cooperatively to deny Trump an absolute majority of delegates, do either of you — in your right mind — believe that a convention dominated by Trump and Cruz delegates is going to unite behind you? They'd sooner riot (and I'm only partially joking).
>
> We've given the multi-candidate "blind ambition tour" exactly 23 states and one territory to work, and here's the score: Trump 15, Cruz 7, Rubio 2, and Kasich . . . zero. I think that's a sufficient sample size. **Let's try something else. Let's try uniting around the person who's beaten Trump more than anyone else — a person who happens to be a constitutional conservative, who would replace Justice Scalia with a judicial superstar, who is unquestionably pro-life, who is unyielding in his defense of religious liberty, and who actually understands the dynamics of the global economy, trade policy, and national security.**
>
> […]After 24 contests, the pattern is emerging. Cruz battles Trump for first, while Rubio and Kasich tend to battle each other for last. This is true in the South, the West, the Northeast, and the Midwest. Can conservatives finally get serious? Can we finally unify, now, before Trump starts sweeping winner-take-all states with 35 percent of the vote? If not, then a foolish GOP will richly deserve its fate.

This seems to make sense to me. And it's likely that Rubio and Kasich voters would break for Cruz more than they would for Trump.

A recent Monmouth poll said this:

> With all the discussion about hands in this election, Monmouth decided to test how Rubio and Cruz would do mano a mano against Trump. Although Rubio is struggling to make the delegate threshold in a four-way race, he would virtually tie Trump in a hypothetical two-person contest – 46% for Rubio and 45% for Trump. **Cruz, though, does better, beating Trump 48% to 41% head to head.** In the Rubio-Trump contest, both Cruz and Kasich voters would split at more than 2-to-1 for Rubio. **However, in the Cruz-Trump matchup, Rubio voters would go 3-to-1 for Cruz, while Kasich voters would split at half for Cruz and less than 1-in-5 for Trump with another 1-in-4 saying they would not vote at all.**

Seems to me that if Kasich, and especially Rubio, dropped out, then we could get a real conservative to run against Hillary. And Cruz does *much better* against Hillary than Trump does.

Two polls from Wednesday show that:

| | | |
|---|---|---|
| General Election: Trump vs. Clinton | NBC News/Wall St. Jrnl | Clinton 51, Trump 38 |
| General Election: Cruz vs. Clinton | NBC News/Wall St. Jrnl | Cruz 45, Clinton 47 |
| General Election: Rubio vs. Clinton | NBC News/Wall St. Jrnl | Rubio 46, Clinton 46 |
| General Election: Trump vs. Sanders | NBC News/Wall St. Jrnl | Sanders 55, Trump 37 |
| General Election: Trump vs. Clinton | ABC News/Wash Post | Clinton 50, Trump 41 |

Trump performs poorly against Clinton in the general election

If we were really serious about beating Hillary in November, seems to me that we should be putting pressure on Rubio and Kasich to get out. This isn't the time for big egos. We need to beat Hillary.

# Is government good at spending taxpayer money to stimulate the economy?

**Wintery Knight** · 10 March 2016 · Archived copy · Original

Canada Election 2015: Socialists in red, Communists in Orange, Conservatives in blue

I've been seeing a lot of talk up north in Canada from the substitute drama teacher they elected about how he wants to stimulate the economy by taking money out of the productive private sector and putting into the inefficient, wasteful public sector.

Here's an example of how he intends to stimulate the economy, as reported by Life Site News. (H/T Kevin the Super-Husband)

It says:

> The Liberal government is pledging $81.5 million to the United Nations' Population Fund to fund "sexual and reproductive health services and rights," International Development Minister Marie-Claude Bibeau announced Monday.
>
> And that could include access to abortion in countries where it is legal, according to a "senior government official," who told iPolitics reporter Amanda Connelly that the individual countries in the UN Population Fund (UNFPA) are free to allocate funding to provide access to abortion.
>
> "Sexual and reproductive health services and rights" is well-known UN-speak for contraception and abortion on demand, noted Campaign Life Coalition's Matt Wojciechowski, who represents CLC at the United Nations.
>
> The Liberals' decision is a reversal of the Conservatives' stated ban on abortion funding as part of international aid in the 2010 Muskoka Initiative on Maternal Health.
>
> At that time, the Conservatives pledged $2.8 billion over five years towards improving maternal health and the lives of newborn infants in developing countries, but the initiative, including the Tories apparent refusal to fund abortion, was subject to ongoing criticism.
>
> The Conservatives pledged a further $3.5 billion from 2015 to 2020 for maternal, newborn and child health care projects in developing nations in May 2014, at which time Harper was again criticized when he reiterated that his government would not fund abortion overseas as part of that initiative.

> The Liberals promised during the October 2015 election campaign that they would "cover the full range of reproductive health services as part of the [Muskoka] initiatives," which a Liberal Party official at the time confirmed included abortion where legal, reported Connelly.
>
> "Canada is committed to universal access to sexual and reproductive health services and rights," Bibeau stated in a press release Monday. "We also believe that programming decisions on these matters should be driven by evidence and outcomes, not ideology."

Trudeau has been very energetic about how he is going to stimulate the economy by taking money from job creators in the private sector and spending it to "create jobs". Well, this is what happens when Christians vote for government to "create jobs" by "infrastructure spending". And they are going to be running budget deficits much worse than what they promised. This is what the vast majority of Canadians voted for in their last election.

But we also waste money down here in the United States, too. Do you ever wonder what happens to the cut that the government takes out of your pay for your private sector activities? The Constitution sets out areas where the federal government is authorized to spend money. But the Democrat Party doesn't believe in the Constitution, they believe in buying votes and pushing the culture to the left.

Congressional Budget Office: Debt to GDP ratio

Here's a story from the Daily Caller to explain what stimulating the economy looks like in the United States. (H/T Dad)

Excerpt:

> Academics at the University of Oregon have determined that glaciers and the science that studies them are deeply sexist.
>
> "Merging feminist postcolonial science studies and feminist political ecology, the feminist glaciology framework generates robust analysis of gender, power, and epistemologies in dynamic social-ecological systems, thereby leading to more just and equitable science and human-ice interactions," reads the paper's abstract. The research was published in the peer-reviewed journal Progress in Human Geography in January.
>
> The study, by historian Dr. Mark Carey and some student researchers, was financially supported by taxpayer dollars. The National Science Foundation (NSF) gave Carey a five-year grant which he used to write his "feminist glaciology" paper. Carey has received $709,125 in grants from the NSF, according to his curriculum vitae.

> "Most existing glaciological research – and hence discourse and discussions about cryospheric change – stems from information produced by men, about men, with manly characteristics, and within masculinist discourses," Carey wrote. "These characteristics apply to scientific disciplines beyond glaciology; there is an explicit need to uncover the role of women in the history of science and technology, while also exposing processes for excluding women from science and technology."
>
> Carey concluded glacier research is intertwined with gender relations, masculine culture, geopolitics, institutional power and racism — these apparently led to to glacier-related academic and governmental jobs being predominantly filled by men. Damages from melting glaciers target women and ethnic minorities, who "are more vulnerable to glacier changes and hazards than are men," according to Carey.

That's a shovel ready project, right there. That will create jobs for sure. And no wonder that people in academia tend to support Democrats. They support Democrats for the same reason that people on welfare support Democrats – because that's where they get their money for sitting around doing nothing. Private sector research into new products and services is more useful, and doesn't cost taxpayers a dime.

**Public Works**

Henry Hazlitt's book "Economics in One Lesson" explains the problem with taxing the private sector to build public works.

Henry Hazlitt's Economics in One Lesson, chapter 4, entitled "Public Works Mean Taxes".

Excerpt:

> Therefore, for every public job created by the bridge project a private job has been destroyed somewhere else. We can see the men employed on the bridge. We can watch them at work. The employment argument of the government spenders becomes vivid, and probably for most people convincing. But there are other things that we do not see, because, alas, they have never been permitted to come into existence. They are the jobs destroyed by the $10 million taken from the taxpayers. All that has happened, at best, is that there has been a *diversion* of jobs because of the project. More bridge builders; fewer automobile workers, television technicians, clothing workers, farmers.

And consider Chapter 5 as well, entitled "Taxes Discourage Production".

> In our modern world there is never the same percentage of income tax levied on everybody. The great burden of income taxes is imposed on a minor percentage of the nation's income; and these income taxes have to be supplemented by taxes of other kinds. These taxes inevitably affect the actions and incentives of those from whom they are taken. When a corporation loses a hundred cents of every dollar it loses, and is permitted to keep only fifty-two cents of every dollar it gains, and when it cannot adequately offset its years of losses against its years of gains, its policies are affected. It does not expand its operations, or it expands only those attended with a minimum of risk. People who recognize this situation are deterred from starting new enterprises. Thus old employers do not give more employment, or not as much more as they might have; and others decide not to become employers at all. Improved machinery and better-equipped factories come into existence much more slowly than they otherwise would. The result in the long run is that consumers are prevented from getting better and cheaper products to the extent that they otherwise would, and that real wages are held down, compared with what they might have been.
>
> There is a similar effect when personal incomes are taxed 50, 60 or 70 percent. People begin to ask themselves why they should work six, eight or nine months of the entire year for the government, and only six, four or three months for themselves and their families. If they lose the whole dollar when they lose, but can keep only a fraction of it when they win, they decide that it is foolish to take risks with their capital. In addition, the capital available for risk-taking itself shrinks enormously. It is being taxed away before it can be accumulated.

> In brief, capital to provide new private jobs is first prevented from coming into existence, and the part that does come into existence is then discouraged from starting new enterprises. The government spenders create the very problem of unemployment that they profess to solve.

We need to realize that outside of Constitutional spending authority, taxes are a waste of money. We're $19 trillion in debt. We can't afford talk of "stimulating the economy" through government spending. It's a lie. Government spending kills job creation. They can hide the impact by adding the spending to the debt, but eventually, we do feel the impact of wasting money. Especially the foolish young socialists, who are going to have to pay it all back.

# Andy Bannister and Michael Ruse discuss how atheists find meaning in life

**Wintery Knight** · 10 March 2016 · Archived copy · Original

Two horses fight it out, and may the best horse win!
I'm summarizing the most recent episode of the Unbelievable show.

**Details:**

> Atheist philosopher Michael Ruse joins Justin as we spend a second week looking at Andy Bannister's new book 'The atheist who didn't exist'.
>
> Its amusingly titled chapters include 'The Peculiar Case of the Postmodern Penguin (or: Why Life without God is Meaningless). Michael and Andy debate whether it's a problem that atheists can't have meaning with a 'capital M'.

Here is a summary of the discussion between Ruse and Bannister, and my comments below the summary.

The MP3 file is here.

**Summary:**

- Ruse: ultimate questions are serious questions, and some religions are attempting to provide serious answers to those questions
- Ruse: there is a psychological element to belief in God but it's not a complete explanation, but it can apply to non-belief as well
- Bannister: there are psychological reasons why people would prefer unbelief (quotes Thomas Nagel and Aldous Huxley)
- Bannister: (to Ruse) what do you think would follow next if you got new information that caused you to believe in God?
- Ruse: I'd feel scared, I'd think of all the reasons that God would dislike me, rather than any reasons why God would save me
- Bannister: according to the Bible, God is not so much interested in mere belief, but in active trust in him
- Ruse: without being smug, I just completed 50 years as a college professor of philosophy, and I have a sense of

worth from that

- Ruse: if God turns up, and says that 50 years of being a professor is not good enough, well, I don't know God, I'm sorry, I did my best
- Brierley: Andy, explain to us this story of how a penguin explained to you how he invented a subjective meaning in life for himself?
- Brierley: (reads the story)
- Bannister: when it comes to reading a book, the real meaning is the meaning the author intended the book to have
- Bannister: readers can inject their own meaning into the book that has nothing to do with it, but the author gives the real meaning
- Bannister: meaning in life is like reading a book – you can make up your own meaning, but the author's meaning is the real meaning
- Brierley: (to Ruse) on atheism, is there any objective meaning?
- Ruse: "obviously, someone like myself cannot have meaning with a capital M in that sense"
- Ruse: the real question is and atheist can find a sense of self-worth, "I find that I'm happier within myself, I can find meaning"
- Bannister: what would you say to someone who drinks away the family inheritance and gets the same sense of happiness you have?
- Bannister: what would you say to all the people who are unable to get "a sense of self-worth" from their career, because of where they are born, sickness, etc.
- Ruse: I have nothing to offer them, some people are born into such awful situations that they are bound to be bad people
- Ruse: these unfair accidents of birth, etc., fits with atheism better
- Ruse: what we should do is change society so that more people can build a sense of self-worth through achievements
- Ruse: that way, they can say to God "I used my talents" so they can create feelings of self-worth and happiness (apart from God)
- Bannister: meaning in life cannot be answered without answering questions related to identity, value, which are rooted in the overall worldview
- Bannister: on the Christian worldview, you have an infinite worth, your value isn't determined by circumstances, earnings, friends, etc.
- Bannister: your value comes from what Jesus was willing to pay to save you, namely, giving his own life for you
- Bannister: when I travel to meet other Christians in other parts of the world, they have a happiness that should not be there if they are getting happiness from wealth, fame, achievements, etc.
- Bannister: but when you come to the West, many people who have wealth, fame, achievement, etc. are unhappy
- Ruse: well maybe who look after a flock of sheep every day may get a sense of self-worth from that, or from other jobs
- Ruse: I do take Christianity very seriously, it is a grown-up proposal to answer grown-up questions – it works if it is *true*
- Ruse: we don't have to follow Nietzche's statement that if there is no God, there is no meaning in life – we can find a middle way, we can achieve meaning in life by using our talents to achieve things
- Bannister: I disagree with Michael, I don't think that the meaning you invent for yourself is authentic meaning
- Bannister: distracting yourself with amusing things and happiness is not an answer to the problem
- Brierley: (to Ruse) are you saying that you have searched for ultimate meaning, and you are settling for

subjective meaning?

- Ruse: my subjective meaning is not second class to objective meaning, “I feel a real deep sense of achievement, of meaning, of self-worth, of having used my talents properly, and I don’t feel in any sense a sense of regret” (what matters to him is how he feels)
- Bannister: notice how Michael keeps bringing in value judgments. e.g. – “use my talents well”, that implies that there is a right way and a wrong to use your talents, which assumes an objective scale of right and wrong, which makes no sense in atheism
- Bannister: an atheist can sit in a sun room and enjoy the feelings of happiness generated by the light and heat of the Sun, without asking whether there is a Sun out there
- Bannister: ultimately, at the end of the day, my concern is not whether something makes me happy or makes me feel fulfilled
- Bannister: ultimately, at the end of the day, I think there is only one real reason to wrestle with these questions of meaning, and that is to find truth
- Ruse: sometimes we reach a point where we cannot get to true answers to some questions, sometimes we look for truth, but then give up and confess “I cannot find it” and then move on from there

Is it possible to dispense with God’s advice on your decision-making and achieve something that affects a lot of people, or makes people like you, or makes you famous, etc., and then have *that* please God? “Look, God, I did something I liked that affected a lot of people, and made them feel happy as they were on their way to Hell because they rejected you”. Will rap musicians answer God by pointing to 50 years of leading people away from chastity with godless music? A lot of people went to see the “NWA” movie that celebrated musicians who have an anti-Christian view of women and violence. Can NWA present their “artistic work” to God and claim that God should be pleased with their successful efforts to get rich and famous? Having feelings of achievement doesn’t mean anything to God.

So what is the standard? How you imitate Jesus – *self-control, self-denial and self-sacrifice to honor God* – that is the standard. If I had to choose between giving up two hours of my life to summarize this discussion for my readers, and all the fame and fortune that people who make godless TV shows, movies and music have, I would choose to make this debate summary. My goal in life is not to have fun, thrills, travel and feel happy *in this world*. I have a Boss. Doing without fun, thrills, travel and happy feelings in order to put points on the board for my Boss is objectively meaningful. It’s may not seem like much compared to what James Bond does in million-dollar movies, but at least I am wearing the right uniform, and playing for the right team.

I was telling Dina recently, isn’t it remarkable how rarely in our culture that people actually talk about the big questions? If you look out at the culture, everything seems to be about feeling good, having fun, being liked by others. Not much about ultimate questions, and certainly not a truth-based assessment of the alternatives. .

# Donald Trump's plan to introduce tariffs is just a tax on consumer goods

**Wintery Knight** · 11 March 2016 · Archived copy · Original

I have a key that will unlock a puzzling mystery

What are the consequences of adopting tariffs for all of the people who are affected? What happens next, after stage one?

Here's a lesson in basic economics from Joe Carter, writing for the Acton Institute.

He writes:

> Both Sanders and Trump propose increasing tariffs on goods imported from other countries — and increase them significantly.* This isn't that surprising for Sanders, a socialist who, on the issue of economics, is one of the most ill-informed candidates in modern history. But Trump should (and probably does) understand the detrimental impact tariffs have on the poor. And yet he has proposed an economy-crippling, poverty-increasing tariff.
>
> In 2012, Trump proposed a tariff on China of 25 percent. In 2016 he bumped it up to 45 percent. (He later tried to lie and say he never proposed the 45 percent increase, but there is audio of him making the proposal.) A tariff is simply a tax on imports or exports, so Trump is proposing to raise taxes on imported goods by 25 to 45 percent. (To keep this point in mind, I'll hereafter refer to tariffs as "taxes.")
>
> You might be thinking, " So what? That's a tax the Chinese have to pay." But that's not the way tariffs works. China doesn't pay the tax — you do. If a tariff on Chinese goods is increased by 25 to 45 percent then you pay 25 to 45 percent more for those goods.
>
> Here's a way to think about it. Imagine there are two hamburger stands in town. One is owned by the mayor's wife, Veronica, and one is owned by a woman who lives in the next town over, Betty.
>
> Of the two, Betty makes the tastier burger. She is also able to charge $1 a burger since she is able to buy her supplies in her own hometown for much cheaper. Veronica's burgers aren't quite as good and cost more to make. She has to charge $1.30 per burger.
>
> The mayor decides to implement a new tax of 45 percent on producers (like Betty) who don't live in the city limits. Since Betty's profit margin is already low, she has to pass the bulk of the 45-cent tax on to her customers. Instead of $1 she now has to charge $1.35.

> So who is better off in this scenario? The only winner is Veronica. Since her burgers are now cheaper, she is likely to sell more. And who is worse off? The customers who now have to pay 30 to 35 cents more for every burger. That is money they could have used to buy other products or services. Now they have to spend additional money on this new tax.
>
> The same principle applies to taxes on goods and services imported from other countries. Customers simply have to pay more for goods and services they used to get much cheaper.
>
> To understand how Trump's tax increase would affect consumers, take a trip to Target or Wal-Mart and add 45 percent to almost all the prices. That's money that comes directly out of your pocket into the hands of the federal government — all to punish you for buying goods that are cheaper to make in China.

Harvard University economist Greg Mankiw explains what most professional economists agree on. The economic benefit of free trade tied for first place, with 93% agreement:

> The recent debate over the stimulus bill has lead some observers to think that economists are hopelessly divided on issues of public policy. That is true regarding business cycle theory and, specifically, the virtues or defects of Keynesian economics. But it is not true more broadly.
>
> My favorite textbook covers business cycle theory toward the end of the book (the last four chapters) precisely because that theory is controversial. I believe it is better to introduce students to economics with topics about which there is more of a professional consensus. In chapter two of the book, I include a table of propositions to which most economists subscribe, based on various polls of the profession. Here is the list, together with the percentage of economists who agree:

> 1. **A ceiling on rents reduces the quantity and quality of housing available. (93%)**

> 2. **Tariffs and import quotas usually reduce general economic welfare. (93%)**

He is the author of his "favorite textbook", which is published by Harvard University Press.

This is not controversial among professional and academic economists. Economists across the ideological spectrum understand that free trade lowers the prices of consumer goods, and allows individuals, families and businesses to get more quality for their dollars. We can do better than Donald Trump and his naive, populist economic pablum.

# If Sweden and Germany became US states, they would be among the poorest states

**Wintery Knight** · 11 March 2016 · Archived copy · Original

Lets take a closer look at a puzzle

There seems to be a lot of talk among Democrats and native young people to the effect that European countries have less "income inequality" thanks to bigger government, higher taxes, and more social spending. Is there a downside to this?

The Mises Institute takes a look at it:

> The battle over the assumed success of European socialism continues. Many European countries like Sweden have gained a reputation as being very wealthy in spite of their highly regulated and taxed economies. From there, many assume that the rest of Europe is more or less similar, even if slightly poorer. But if we look more closely at the data, a very different picture emerges, and we find that the median household in the US is better off (income-wise) than the median household in all but three European countries.
>
> […]Using the BEA's regional price parity index, we can take now account for the different cost of living in different states…
> […]We now see that there's less variation in the median income levels among the US states. That makes sense because many states with low median incomes also have a very low cost of living. At the same time, many states with high median incomes have a very high cost of living.
>
> Now that we've accounted for the low cost of living in Mississippi, we find that Mississippi ($26,517) is no longer the state with the lowest median income in real terms. New York ($26,152) is now the state with the lowest median income due to its very high cost of living.
>
> This has had the effect of giving us a more realistic view of the purchasing power of the median household in US states. It is also more helpful in comparing individual states to OECD members, many of which have much higher costs of living than places like the American south and midwest. Now that we recognize how inexpensive it is to live in places like Tennessee, Florida, and Kentucky, we find that residents in those states now have higher median incomes than Sweden (a place that's 30% more expensive than the US) and most other OECD countries measured.

> Once purchasing power among the US states is taken into account, we find that Sweden's median income ($27,167) is higher than only six states: Arkansas ($26,804), Louisiana ($25,643), Mississippi ($26,517), New Mexico ($26,762), New York ($26,152) and North Carolina ($26,819).
>
> We find something similar when we look at Germany, but in Germany's case, *every single* US state shows a higher median income than Germany. Germany's median income is $25,528. Things look even worse for the United Kingdom which has a median income of $21,033, compared to $26,517 in Mississippi.
>
> Meanwhile, Colorado ($35,059) has a median income nearly identical to Switzerland ($35,083), and ten states (Connecticut, Iowa, Maryland, Minnesota, New Hampshire, North Dakota, South Dakota, Utah, Virginia, and Washington State) show higher median incomes than Switzerland. Luxembourg ($38,502), on the other hand, shows a median income higher than every state except New Hampshire ($39,034).
>
> None of this analysis should really surprise us. According to the OECD's own numbers (which take into account taxes and social benefits, the US has higher median disposable income than all but three OECD countries. Sweden ranks below the US in this regard, as does Finland and Denmark.
>
> The fact that the median level in the US is above most OECD countries thus makes it no surprise that most of these countries then rank below most US states. The US states that have income level above the median US level will, not surprisingly, outpace many OECD countries by a considerable margin.

What's going on here? Well, it turns out that when you have fewer regulations on business, lower business taxes, and an emphasis on working rather collecting welfare, that people have more money in their pockets and a better standard of living. The trouble with Europe is that too many able-bodied people can get by without working. In the United States, we put more emphasis on making your own way, earning your own pay, and spending or saving your money as you please.

In America, the system is geared towards equipping each person to serve their fellows in the private sector workplace. More people working means more wealth is produced, and more wealth produced means that people have a higher standard of living. You wouldn't have a higher standard of living in a country where most people didn't work, and just relied on the few who did work. There isn't enough to go around in society where most people don't work.

# Study: the early Earth's atmosphere contained oxygen

**Wintery Knight** · 11 March 2016 · Archived copy · Original

Apologetics and the progress of science

Here's a paper published in the prestigious peer-reviewed science journal *Nature*, entitled "The oxidation state of Hadean magmas and implications for early Earth's atmosphere". This paper is significant because it undermines naturalistic scenarios for the origin of life.

Evolution News explains what the paper is about.

Excerpt:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Miller and Urey conducted experiments to show that under certain atmospheric conditions and with the right kind of electrical charge, several amino acids could form from inorganic compounds such as methane, ammonia, and water. Several experiments have been done using various inorganic starting materials, all yielding a few amino acids; however, one key aspect of all of these experiments was the lack of oxygen.
>
> If the atmosphere has oxygen (or other oxidants) in it, then it is an oxidizing atmosphere. If the atmosphere lacks oxygen, then it is either inert or a reducing atmosphere. Think of a metal that has been left outside, maybe a piece of iron. That metal will eventually rust. Rusting is the result of the metal being oxidized. With organic reactions, such as the ones that produce amino acids, it is very important that no oxygen be present, or it will quench the reaction. Scientists, therefore, concluded that the early Earth must have been a reducing environment when life first formed (or the building blocks of life first formed) because that was the best environment for producing amino acids. The atmosphere eventually accumulated oxygen, but life did not form in an oxidative environment.
>
> The problem with this hypothesis is that it is based on the assumption that organic life must have formed from inorganic materials. That is why the early Earth must have been a reducing atmosphere. Research has been accumulating for more than thirty years, however, suggesting that the early Earth likely did have oxygen present.
>
> […]Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions

> required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

So here's where we stand. If you are a materialist, then you need a reducing environment on the early Earth in order to get organic building blocks (amino acids) from inorganic materials. However, the production of these organic building blocks (amino acids) *requires* that the early Earth atmosphere be oxygen-free. And the problem with this new research, which confirms previous research, is that the early Earth contained huge amounts of oxygen – the same amount of oxygen as we have today. This is lethal to naturalistic scenarios for creating the building blocks of life on the Earth's surface.

**Other problems**

If you would like to read a helpful overview of the problems with a naturalistic scenario for the origin of life, check out this article by Casey Luskin.

Excerpt:

> The "origin of life" (OOL) is best described as the chemical and physical processes that brought into existence the first self-replicating molecule. It differs from the "evolution of life" because Darwinian evolution employs mutation and natural selection to change organisms, which requires reproduction. Since there was no reproduction before the first life, no "mutation – selection" mechanism was operating to build complexity. Hence, OOL theories cannot rely upon natural selection to increase complexity and must create the first life using only the laws of chemistry and physics.
>
> There are so many problems with purely natural explanations for the chemical origin of life on earth that many scientists have already abandoned all hopes that life had a natural origin on earth. Skeptical scientists include Francis Crick (solved the 3-dimensional structure of DNA) and Fred Hoyle (famous British cosmologist and mathematician), who, in an attempt to retain their atheistic worldviews, then propose outrageously untestable cosmological models or easily falsifiable extra-terrestrial-origin-of-life / panspermia scenarios which still do not account for the natural origin of life. So drastic is the evidence that Scientific American editor John Horgan wrote, "[i]f I were a creationist, I would cease attacking the theory of evolution … and focus instead on the origin of life. This is by far the weakest strut of the chassis of modern biology."[3]

The article goes over the standard problems with naturalistic scenarios of the origin of life: wrong atmosphere, harmful UV radiation, interfering cross-reactions, oxygen levels, meteorite impacts, chirality, etc.

Most people who are talking about intelligent design at the origin of life talk about the information problem – how do you get the amino acids to form proteins and how do you get nucleotide bases to code for amino acids? But the starting point for solving the sequencing problem is the construction of the amino acids – there has to be a plausible naturalistic scenario to form them.

# UK district judge fired for saying that adopted children do better with a mom and a dad

**Wintery Knight** · 12 March 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

This UK Daily Mail story was sent to me by Dina, and it shows what happens in countries where gay marriage and the gay rights agenda are a little more advanced than what we have here, under the Democrats. (Note that UK expressions like "sacked" and "struck off" mean termination of employment)

Excerpt:

> A Christian judge has been struck off after claiming during a BBC interview that adopted children were better off with a man and a woman as parents than with a gay couple.
>
> Magistrate Richard Page, 68, was sacked after 15 years at Maidstone and Sevenoaks courts, in Kent, after objecting to a gay couple adopting a child live on air.
>
> The Judiciary Conduct Investigations Office confirmed that the father-of-three has been removed from the magistracy as a district judge.
>
> They said that the grounds for his dismissal result from comments made on national television which a reasonable person would conclude he is bias against single sex adopters.
>
> The interview came after Mr Page had spoken out against a child being adopted by a gay couple, and would be better placed 'with a mother and father' in 2014.
>
> He was disciplined for his remarks, which were made in private to colleagues behind closed doors during an adoption case.
>
> But during an interview, which aired in March 2015, Mr Page repeated his opinion.
>
> He was recorded saying: 'My responsibility as a magistrate, as I saw it, was to do what I considered best for the child, and my feeling was therefore that it would be better if it was a man and woman who were the adopted parents.'

Yeah, in the politically correct UK, that's grounds for dismissal. Basically, this is the continuation of a long line of changes in marriage-related policy that were meant to privilege the rights of selfish adults over the rights of children.

It all started with no-fault divorce laws, which allowed spouses who were not “happy” in their *life-long self-sacrificial commitments* to easily get out of it by filing for divorce for any reason, or for no reason at all. This law was championed by trial lawyers and feminists, who think that marriage is about the needs, feelings and desires of selfish adults. They wanted to make it easier to get out of commitments that were entered into lightly, and they didn’t care about the children.

The next change to marriage policy was making cohabitation equivalent to marriage. Again, feminists and other liberals did not want to undertake a lifelong commitment that would be hard to get out of. They wanted the same tax benefits that marriage allows for temporary arrangements like living together. But living together temporarily is nowhere near as good for children as life-long, self-sacrificial married love.

The next change to marriage policy was redefining marriage to remove the complimentary genders norm, which further disenfranchised children to benefit self-centered adults. Instead of making the central purpose of marriage based on two complimentary sexes creating and nurturing new life, marriage is now about two people having intense emotional feelings of pleasure. Feelings which, by their very nature, *cannot provide a stable, lasting environment for raising children.*

And now we have gay adoption, which continues the privileging of selfish adults over the needs of vulnerable children. ALL of the social science evidence shows that male-female relationships are more stable over the long-term than same-sex relationships. There is less domestic violence, more monogamy, more fidelity and more stability. All of which are better for children. Children benefit from growing up in a home where a man loves a woman and is faithful to her, and where a woman respects a man, and is faithful to him.

And now we see how far the marriage redefiners on the secular left are willing to go to put the selfish desires of adults above the needs of children for stability. They are willing to terminate the employment of anyone who dares to speak out on behalf of children.

We really need Christians to be diligent in learning how to defend marriage, and to get married and stay married and model successful, loving, stable marriages to the culture as a whole. We need pro-marriage apologetics, and we need marriages that are focused on self-sacrificial love. We need marriages that focus on responsibilities, obligations and expectations, not on fun and thrills.

# Woman uses legally-owned handgun to defend herself from robber

**Wintery Knight** · 12 March 2016 · Archived copy · Original

Guns are for self-defense against criminals

It's very important that everyone remember what the second amendment is used for in the United States. The second amendment allows law-abiding people to purchase firearms in order to defend themselves from criminals.

This story is from ABC News shows how law-abiding Americans use their legally-owned firearms to prevent crimes and deter criminals.

It says:

> It was a suspenseful January night as a man suspected of trying to rob a woman at knife point was instead shot by the would-be victim in Louisville, Kentucky.
>
> Police said a man was captured on surveillance camera stalking the woman. He eventually follows right behind as she heads into an elevator at a parking garage.
>
> There is no surveillance camera rolling when he eventually attacks her in the parking lot.
>
> Police said she got in her car, he pushed in right behind her and put his hand over her mouth before pulling out a knife.
>
> A violent struggle ensued, causing the car's windshield to crack. It was in that moment that the woman reached into her purse and pulled out a gun.
>
> The would-be victim shot the suspect in the neck.
>
> The attacker was later seen on a surveillance camera coming down the parking structure's stairs and bleeding from the neck.
>
> A man who saw him quickly called 911 and alerted authorities.
>
> Police arrested John Ganobick and charged him with attempted murder, kidnapping and criminal mischief.
>
> The woman he attacked suffered multiple injuries but was expected to be OK.

Although there is opposition to gun ownership in certain circles, the academic literature is quite clear and decisive. Legal ownership of firearms reduces rates of violent crime. Whenever laws that allow law-abiding citizens to carry firearms for self-defense, violent crime rates decrease. Whenever laws are passed that restrict law-abiding citizens from owning and carrying firearms for self-defense, violent crime rates increase.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England"s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, but both studies affirm the same conclusion – more legal firearm ownership means less crime.

# Pastor Matt: What happens when you die?

**Wintery Knight** · 13 March 2016 · Archived copy · Original

Lets take a closer look at a puzzle
This post is from Pastor Matt's blog.

Excerpt:

> Michael Bird breaks it all down as follows:
>
> 1. Prior to Christ's ascension, all who died descended to Sheol/Hades, which was divided into two parts, one for the wicked and one for the righteous.
>
> 2. At Christ's ascension, he went into heaven and took with him all of the saints in the paradisal part of Sheol/Hades, while the wicked remain in Sheol/Hades, waiting for judgment.
>
> 3. Upon death new covenant believers go to be with Christ in heaven ahead of the general resurrection, while the wicked descend to Sheol/Hades waiting for judgment.
>
> 4. Eventually Sheol/Hades will be thrown into hell and all believers will share in the new heavens and new earth.
>
> See Evangelical Theology p. 323.

I've featured some debates with Michael Bird before, he is a famous evangelical historian.

It's important to understand that the Christian view of humans is that we have a material part and a non-material part. When you die, the material part goes into a tomb. The non-material part goes on to be with God, until the day when you get a new resurrection body.

Earlier, I blogged about some philosophical arguments for the existence of souls and some scientific evidence for the existence of souls, and it's worth looking over in order to move beyond mere opinions. Like it or not, this is the way we are! Not just bodies, but souls.

# Does the Bible say that you should forgive someone who does not repent?

**Wintery Knight** · 13 March 2016 · Archived copy · Original

Bible study that hits the spot

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's "Jesus Through Middle Eastern Eyes" (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's some of his response copied with permission from his Facebook note:

> First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.
>
> Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, "unless you repent, you will all likewise perish." In Mark 1:15 John the Baptist commands that we must "repent and believe the Gospel." The connection between repentance and forgiveness of sins (i.e. "salvation") is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.
>
> So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other's sins. It does.

> Jesus stated in Luke 17:3, “If your brother sins, rebuke him; and if he repents, forgive him.” Here, the meaning is clear. The word “if” (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same criteria that God requires before He forgives sin.
>
> This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word “reprove” is used rather than “rebuke” and the word “listen” is employed rather than “repent,” but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. “listen”). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).
>
> […]Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.
>
> Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive when no reconciliation may be had with the sinner. We cannot “walk together” in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer’s soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).
>
> Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.
>
> Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

I agree with Kevin, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they’ve done, and they refuse to explain why what they did is wrong, then they can’t be forgiven, and you can’t trust them again.

I think this is the key passage – Luke 17:3-4:

Luke 17:3-4:

3 Be on your guard! If your brother sins, rebuke him; and if he repents, forgive him.

4 And if he sins against you seven times a day, and returns to you seven times, saying, ‘I repent,’ forgive him.”

That’s Jesus speaking, there.

Also, I was having a debate with someone who disagrees with all this, and while debating with her, I thought of

another example.

Luke 18:9-14:

9 And He also told this parable to some people who trusted in themselves that they were righteous, and viewed others with contempt:

10 “Two men went up into the temple to pray, one a Pharisee and the other a tax collector.

11 The Pharisee stood and was praying this to himself: ‘God, I thank You that I am not like other people: swindlers, unjust, adulterers, or even like this tax collector.

12 I fast twice a week; I pay tithes of all that I get.’

13 But the tax collector,standing some distance away, was even unwilling to lift up his eyes to heaven, but was beating his breast, saying, ‘God, be merciful to me, the sinner!’

14 I tell you, this man went to his house justified rather than the other; for everyone who exalts himself will be humbled, but he who humbles himself will be exalted.”

So again, no forgiveness without repentance.

Forgiveness is what happens when someone who is sinned against treats the sinner as if he had never sinned. It is not on the balance sheet. It is not brought to mind. It is not held against them in the future. The forgiver trusts the sinner again as if the previous sin had never happened.

In divine (vertical) forgiveness, there is no forgiveness without repentance. There are Bible verses above to show that.

My argument is twofold. First, there is a clear teaching of Jesus explaining the sequence of sin and forgiveness. Repentance precedes forgiveness, between humans (Luke 17:3). The verses cited by the forgive without repentance crowd don’t show the mechanics of how to forgive, they are making the point that if you want God to forgive you, you should forgive others. The parable in Luke 18:9-14 affirms this again – repentance always precedes forgiveness.

Second, we have an obligation to imitate God, and that means imitating the way he forgives those who sin against him. When I raise that with the unconditional forgiveness crowd, they want to insist that there is a difference, that the word “forgive” means different things. I’m not convinced.

Finally, I do think that forgiving someone is obligatory if they sincerely repent, and even if they screw up again and again. So long as the repentance is sincere, (like if there is restitution and a genuine effort to show an understanding how the sin affected the wronged party in writing), *then forgiveness should be automatic*.

Alan E. Kurschner argues that there is serious textual doubt about the originality of Luke 23:34a, a text used by the pro-unconditional-forgiveness crowd. He has a journal article coming out on it, but a synopsis of his argument is here.

He also wrote this in a comment on this blog:

> Second, on Matt 6:15, this is what I have to say. Notice the then-clause: “neither will your Father forgive your sins.” This would require universalism on the Father’s part according to the unconditional interpretation given the first half: “But if you do not forgive others their sins.” Since everyone has wronged the Father is the Father required to forgive everyone even if they are not seeking forgiveness?

So I think the case for the forgiveness being conditional on repentance is pretty strong, especially when serious harm has been caused.

# Ted Cruz trails Donald Trump by 4 points in deep blue Illinois

**Wintery Knight** · 14 March 2016 · Archived copy · Original

Latest CBS news / YouGov poll has Cruz just behind Trump

Wow, this is unexpected. A new CBS News poll released Sunday has Ted Cruz trailing trailing Donald Trump by 4 points in Illinois.

Excerpt:

> Donald Trump keeps his lead in winner-take-all Florida, at 44 percent over Ted Cruz's 24 percent and Marco Rubio's 21 percent. In Ohio, Governor John Kasich is tied with Trump 33 percent to 33 percent, in two of the big winner-take-all delegate prizes up on Tuesday.
>
> In Florida, home-state Sen. Marco Rubio has been trying to get traction against Trump, but still trails. Sen. Ted Cruz has overtaken Rubio in Florida. In Illinois Trump also leads, 38 percent to 34 percent over Cruz, who is in striking distance, with Kasich back at 16 percent. **The findings across the three states may suggest Cruz is emerging more generally in the minds of many non-Trump voters as the alternative to the frontrunner.**

Cruz is in second place in Florida, while Rubio is in third place. I have to think that a poll like this two days before the Florida primary would cause Rubio to drop out and endorse Cruz. Rubio is just trailing by too much to catch Trump.

Red State is reporting that Cruz plans to do FIVE rallies in Illinois on Monday, the final day of campaigning before a number of significant state-level elections on Tuesday.

> According Teddy Schleifer of CNN, Ted Cruz's team has scheduled five separate rallies in Illinois tomorrow as the Senator looks to make one last push in the state. With his surprise second place showing in Michigan, the Cruz team must have seen something in their numbers to think Cruz could do well enough in IL to grab a chunk of delegates away from Donald Trump.

> Ted Cruz will rally in:
>
> — Rockford, IL
> — Glen Ellyn, IL
> — Peoria, IL
> — Decatur, IL
> — Springfield, IL
>
> — Teddy Schleifer (@teddyschleifer) March 13, 2016

This Tuesday, we'll see elections from Florida (99), Illinois (69), Missouri (52), North Carolina (72), the Northern Mariana Islands (9) and Ohio (66).

**Ted Cruz's record of conservative achievements**

Ted Cruz is also the most qualified candidate running.

Young Conservatives explains his achievements:

- Graduated valedictorian in 1988 from Second Baptist High School
- Graduated cum laude from Princeton University in 1992
- Graduated magna cum laude from Harvard Law School in 1995
- 1992 U.S. National Debate Champion representing Princeton
- 1995 World Debating Championship semi-finalist representing Harvard
- Served a law clerk to Chief Justice William Rehnquist, making him the first Hispanic ever to clerk for a Chief Justice of the United States
- Served as Solicitor General of Texas from 2003 to 2008, making him the first Hispanic Solicitor General in Texas, the youngest Solicitor General in the entire country and the longest tenure in Texas history
- Partner at the law firm Morgan, Lewis & Bockius, where he led the firm's U.S. Supreme Court and national appellate litigation practice
- Authored over 80 SCOTUS briefs and presented over 40 oral arguments before The Court
- Adjunct Professor of Law at the University of Texas School of Law in Austin, where he taught U.S. Supreme Court litigation

Smart guy.

Here are the specifically *conservative* achievements:

- In the landmark case of District of Columbia v. Heller, Cruz assembled a coalition of 31 states in defense of the principle that the 2nd Amendment guarantees an individual right to keep and bear arms
- Presented oral arguments before the United States Court of Appeals for the District of Columbia Circuit
- Defended the Ten Commandments monument on the Texas State Capitol grounds,
- Defended the recitation of the Pledge of Allegiance in public schools
- Defended the State of Texas against an attempt by the International Court of Justice to re-open the criminal convictions of 51 murderers on death row throughout the United States

He's 5 for 9 arguing cases before the Supreme Court. Cruz knows how to convince liberal scholars to come over to his side. That's what he enjoys – persuading people who disagree with him.

Here's some of the legislation he introduced:

- ObamaCare Repeal Act
- Disarm Criminals and Protect Communities Act

- Defund Obamacare Act of 2013
- A bill to amend the National Voter Registration Act of 1993 to permit States to require proof of citizenship for registration to vote in elections for Federal office
- State Marriage Defense Act of 2014
- A bill to amend title 18, United States Code, to prohibit the intentional discrimination of a person or organization by an employee of the Internal Revenue Service
- A bill to prohibit the Department of the Treasury from assigning tax statuses to organizations based on their political beliefs and activities
- American Energy Renaissance Act of 2014
- A bill to deny admission to the United States to any representative to the United Nations who has been found to have been engaged in espionage activities or a terrorist activity against the United States and poses a threat to United States national security interests
- SuperPAC Elimination Act of 2014
- Free All Speech Act of 2014
- A bill to prevent the expansion of the Deferred Action for Childhood Arrivals program unlawfully created by Executive memorandum on August 15, 2012
- Sanction Iran, Safeguard America Act of 2014

And he has gotten more legislation passed than Marco Rubio in the Senate:

Laws enacted per year in Congress

He has done something to address so many of the things I've been writing about on this blog – voter fraud, IRS discriminating against conservatives, etc. I am a Cruz supporter because I like Cruz, not because I oppose Trump and Rubio.

# Reporter Michelle Fields files criminal charges against Trump's campaign manager

**Wintery Knight** · 14 March 2016 · Archived copy · Original

Trump holds up Bible he "received from his mother" to evangelicals

David French writes about it for National Review.

Excerpt: (links removed)

> Yesterday, I wrote a lengthy post outlining the charges and countercharges between *Breitbart's* Michelle Fields and the Donald Trump campaign. Fields claimed that Trump's campaign manager, Corey Lewandowski, yanked her away from Trump when she tried to ask him a question about affirmative action, bruising her arm and almost causing her to fall. Fields tweeted a photo of the bruises, and a *Washington Post* reporter backed her account — as did an audio recording of the event.
>
> The Trump campaign responded with scorched earth. Not only did it release a statement falsely claiming that no other reporter witnessed the incident, Lewandowski himself spewed forth a vile series of tweets that not only implied Fields was a fabulist, he also implied that she'd made up a sexual harassment charge in the recent past. The campaign demanded to see video evidence.

Here's the video – the reaching for the reporter occurs at the 8-second mark:

French continues:

> **Slowed-down video shows Lewandowski reaching more clearly, and now Fields has filed a criminal complaint.** As I said before, the Trump campaign's behavior has been reprehensible. When faced with a credible, corroborated claim of mistreatment, a responsible campaign pledges to investigate and treats the alleged victim with respect. Instead, the campaign chose to lie and — even worse — to attempt to ruin Fields's reputation.

This is no surprise, since Trump's rhetoric is borderline fascistic, and this staff and supporters have obviously picked up on it and putting it into practice. In talking with Trump supporters, what I've found is that they are angry, low-information voters. When confronted with the facts about their candidate, they resort to name calling, coercion and even violence.

One of my best friends was confronting a "Christian" supporter of Trump recently. The Trump supporter paralleled Trump with Jesus. My friend spoke up and listed out some of Trump's immoral behavior, e.g. – adultery, frivolous divorce, abortion, strip clubs, casinos. She linked to evidence for all of these things. The Trump supporter responded by literally threatening her with damnation. He literally said "You are a liar. God damn you." The person who this happened to can comment if she likes, I know she's a reader of the blog.

Now some of the people who comment here don't strike me as that crazy, but this is what I am seeing from Trump supporters in social media. He's probably the most immoral candidate to run as a Republican, and yet his supporters will do anything to protect him.

# Stephen C. Meyer debates intelligent design with two scientists on NPR

**Wintery Knight** · 14 March 2016 · Archived copy · Original

British Spitfire and German Messerschmitt Me 109 locked in a dogfight

Evolution News reported on a 27-minute debate featuring Dr. Stephen C. Meyer – probably the best proponent of intelligent design there is.

Description:

> We often say that Darwinists are reluctant to debate advocates of intelligent design, but here are two who deserve a tip of the hat. Keith Pannell is a chemist at the University of Texas at El Paso who hosts a program, *Science Studio*, on the NPR station there. He invited Stephen Meyer on to talk about the science of ID, pegged to the *Dover* anniversary.
>
> Clearly Pannell is an ID critic so he gets kudos for being willing to have a civil and informative conversation. Perhaps feeling insecure about facing the author of *Darwin's Doubt* by himself, Dr. Pannell invited a biologist colleague, Ricardo Bernal, to serve as "co-host."
>
> So it was two against one, but no worries. Meyer is, as always, superb, and the discussion sounds like it was an education for the two Texas scientists. Listen and enjoy.

I took a back-up of the MP3 file here.

Summary:

- How did Dr. Meyer get interested in science?
- What is intelligent design? (origin of life, fine-tuning)
- What is creationism? (young Earth, different epistemology)
- Who does Dr. Meyer think the intelligent designer is?
- Finding the best explanation from multiple competing hypotheses
- Critic: aren't you arguing for a designer from ignorance, then?
- The importance of naturalists acknowledging what they do and do not know about the origin of life

- We do have experience with intelligent causation, whenever we sequence symbols to have meaning and purpose, e.g. – writing
- Critic: information in DNA is not digital information, is it?
- Information in the cell follows a 4-character alphabet
- the sequences are composed of many parts / symbols
- the sequences themselves are specified to have function
- Critic: the complexity just emerges from change over time
- the origin of the first life is immune to explanation of change over time, because there is no replication – this is the first replicator
- Critic: but isn't it just ignorance about the origin of life?
- what we do is look at a number of competing hypothesis and what they are capable of, and see whether each cause is capable of generating the effects we observe in nature
- Critic: where is the experimental verification of your theory?
- well, in the appendices of Signature of the Cell, we predicted that the non-coding regions of DNA (junk DNA) would be found to have function, and that was later proven out
- the Darwinists said that non-coding regions of the DNA was junk, but that's not what has been proven experimentally
- Critic: where was this prediction written up, who wrote it?
- intelligent design theorists predicted it: Dembski, Kenyon, Mims, Sternberg
- Critic: but we used the scientific method to disprove the Darwinian predictions, you don't like the scientific method
- intelligent design proponents love science, and the scientific method, and they do work in labs to confirm their hypotheses, (WK:for example, the probability of generating a protein by chance)
- Critic: what about the Dover court case that you lost?
- the Discovery Institute objected to actions taken by the Dover school board
- Critic: what about the molecular machines, how are they related to intelligent design?
- even in the simplest living organisms, there are tiny machines that are tightly integrated, and cannot be built up in a stepwise fashion
- Critic: I've worked with the ATP-synthase and other molecular machines, but "you can kind of begin to tease how some of these molecular machines have come about" – pieces have multiple functions, and they are co-opted into larger systems
- the problem with the co-option argument breaks down when you look at the specific details of different machines
- for example – the type III secretory system cannot be an precursor to the bacterial flagellum, it is younger, not older than the bacterial flagellum
- Critic: what would it take for your view to be falsified?
- demonstrable undirected processes that are capable of creating functional information in DNA, or processes that can build up an irreducibly complex molecular machine within the time available with a decent probability

If you like this debate, check out Stephen C. Meyer's two books: "Signature in the Cell" and "Darwin's Doubt".

# How well does socialism work in countries and cities that adopt it?

**Wintery Knight** · 15 March 2016 · Archived copy · Original

Socialism in Venezuela

I noticed this article by Frank Luntz in USA Today, which talks about the political views of young people.

Excerpt:

> If you want to understand today's young Americans, consider this: 58% of them think "socialism" is the most compassionate political system, compared with just 33% who pick "capitalism." Heck, 9% even voted for "communism."
>
> That's right: Two-thirds in a poll I did last month say socialism or communism is more compassionate than capitalism.
>
> […]In our recent national survey of 1,000 first- and second-time voters ages 18 to 26, Republicans weren't just off on the wrong track. They were barely on the radar with this Snapchat generation, as it is sometimes called.

> […]The younger generation and the Republican Party simply see the world, and America, very differently. For instance, 58% in our poll say that "America isn't any better or worse than most other countries,"compared with a 42% minority that believes "America is exceptional. It's better than every other country in the world."

So how to respond to this? Well, I think it is important for us to be aware of how other countries are doing, especially the ones that are implementing socialism.

**Socialism abroad**

Take Venezuela for example. They've had socialism for a good long time under Hugo Chavez, and now his socialist successor Nicolas Maduro.

The left-leaning The Economist explained what's happening there:

> The regime has greatly compounded the damage with policies that, though designed to favour the poor, end up impoverishing them and the state. Price controls—along with the shortage of foreign exchange—have led to acute shortages of basic goods, forcing people to queue for hours to buy necessities. Inflation is officially running at 141% as of September last year (the latest available figure). Analysts believe the true figure is at

> least 200% a year; some predict hyperinflation in 2016. The massive budget deficit, which the Central Bank finances by printing money, contributes to that risk.
>
> […]Recent surveys have shown that alongside the economy and shortages, security is a major concern. The government stopped publishing comprehensive crime statistics in 2005, though it does admit there is a problem. The attorney-general has said that Venezuela's murder rate last year was 62 per 100,000 people, ten times the global average. The Venezuelan Violence Observatory, an independent research institute, says the rate is higher. The murder rate in Caracas is the highest in the region for a country's biggest city. Countrywide, 90% of murders go unpunished.

Radically leftist NPR notes:

> Last week, opposition lawmakers in Venezuela declared a "food emergency." That's because Venezuela is facing widespread shortages of milk, meat, bread and other staples. Critics blame the government's socialist economic policies. But instead of changing course, President Nicolás Maduro is calling on Venezuelans to help feed themselves — by starting urban gardens.
>
> […]In addition, falling prices for oil — Venezuela's main export — mean the government has fewer dollars to import food. There's also a severe shortage of imported farm machinery and supplies, says Vicente Perez, director of FEDEAGRO, Venezuela's main farm organization.
>
> "There is nothing — just like there's no food, there are no seeds, no herbicides … and no medicines to vaccinate farm animals," says Perez.
>
> Phil Gunson, who is based in Caracas for the International Crisis Group, warns of a pending humanitarian crisis.
>
> "At least one in 10 people is eating two meals a day or less. There isn't starvation. We are not talking about famine," Gunson says. "But we are talking about malnutrition, particularly in the case of children."

If you're looking for a country that's embraced socialism, you can't do much better than Venezuela. Maybe Argentina, but they are also in serious economic trouble. Do you know any young people who are not being told about that?

Well, what about closer to home? How are the major cities in the United States doing?

**Socialism at home**

This article from Investors Business Daily takes a look at it.

Excerpt:

> America is awash with troubled, dysfunctional cities that have been electing Democratic mayors for decades.
>
> - Detroit last elected a Republican mayor in 1957. It is now the model of urban failure — it's recognized more for its poverty, crime, rot and bankruptcy than the great cars that it turned out into the early 1970s. It is the poorest big city in the nation, with almost 40% of the population living below the poverty line. The website Law Street actually ranks Detroit ahead of Flint as the country's most dangerous city. Either way, it's clear that both cities have institutionalized crime problems.
>
> Detroit is also a pit of political corruption. Just in recent years, one mayor, Kwame Kilpatrick, was convicted of corruption and sent to federal prison for 28 years, while building inspectors have been indicted on federal felony bribery charges and a former city council member was investigated in a bribery and kickback scandal.
>
> - Chicago's last GOP mayor was elected in 1927. The nation's third-largest city is home to some of the worst inner-city violence imaginable. More than 2,300 people were shot there last year, and nearly 400 lost their

> lives to homicides.
>
> Its finances are just as grim. “Chicago is so broke,” IBD contributor Stephen Moore explained months ago, “that its bonds are junk status, and Mayor Rahm Emanuel had to go hat in hand last week to the state capital, Springfield, for bailout money to pay the bills.” Things have been rotten enough, Moore said, to send “a record number of people … fleeing Cook County, home to Chicago.” Only a little more than half of the city’s pension liabilities are funded.
>
> - St. Louis has been electing Democratic mayors since 1949. The Gateway to the West has become the gateway for crime. Law Street says that it’s the fourth most dangerous city in the country, Forbes says it’s the second. It had the sixth-highest poverty rate among big cities in 2014.
> - The last GOP mayor of Philadelphia left office in 1952. A few years ago, Moore identified it as a favorite to follow Detroit into bankruptcy.
> - Both Baltimore and Oakland had Republican mayors as late as the 1960s. In the era of Democratic rule, both are now more well known for their crime and poverty problems than for their charm and character.
> - Newark, N.J., hasn’t had a GOP mayor in more than a century. It was ranked as the fifth-worst city to live in in 2015. Detroit, of course, was first.
>
> **When Democrats are in control, cities tend to go soft on crime, reward cronies with public funds, establish hostile business environments, heavily tax the most productive citizens and set up fat pensions for their union friends. Simply put, theirs is a Blue State blueprint for disaster.**

If you want to know how well Democrats do at running things, why not look to the places where Republicans have been out of power for decades and decades?

If you don’t tell the young people you know about socialist countries and socialist cities, then how will they ever learn how socialism actually works in practice? They are learning that socialism is wonderful from their unionized public school teachers, Hollywood elites, the mainstream media, artists and musicians and Democrat politicians. Are you doing your part to educate them with real facts?

# Is dependency on welfare good for people? Or is it better for people to work?

**Wintery Knight** · 15 March 2016 · Archived copy · Original

**Major Welfare Programs, 2012**

| | |
|---|---|
| Medicaid | $296 bil |
| Unemployment Insurance | $126 |

| Head Start | $8 |
| TANF Cash Aid | $7 |

Sources: Congressional Research Service, Congressional Budget Office

Major welfare programs as of 2012

What's best for poor people – to remain dependent on government, or to be encouraged to work for their own money so they can be independent?

Consider this article from the Wall Street Journal.

Excerpt:

> Earned success means defining your future as you see fit and achieving that success on the basis of merit and hard work. It allows you to measure your life's "profit" however you want, be it in money, making beautiful music, or helping people learn English. Earned success is at the root of American exceptionalism.
>
> The link between earned success and life satisfaction is well established by researchers. The University of Chicago's General Social Survey, for example, reveals that people who say they feel "very successful" or "completely successful" in their work lives are twice as likely to say they are very happy than people who feel "somewhat successful." It doesn't matter if they earn more or less income; the differences persist.
>
> The opposite of earned success is "learned helplessness," a term coined by Martin Seligman, the eminent psychologist at the University of Pennsylvania. It refers to what happens if rewards and punishments are not tied to merit: People simply give up and stop trying to succeed.
>
> During experiments, Mr. Seligman observed that when people realized they were powerless to influence their circumstances, they would become depressed and had difficulty performing even ordinary tasks. In an interview in the New York Times, Mr. Seligman said: "We found that even when good things occurred that weren't earned, like nickels coming out of slot machines, it did not increase people's well-being. It produced helplessness. People gave up and became passive."
>
> Learned helplessness was what my wife and I observed then, and still do today, in social-democratic Spain. The recession, rigid labor markets, and excessive welfare spending have pushed unemployment to 24.4%, with youth joblessness over 50%. Nearly half of adults under 35 live with their parents. Unable to earn their success, Spaniards fight to keep unearned government benefits.
>
> Meanwhile, their collective happiness—already relatively low—has withered. According to the nonprofit

> World Values Survey, 20% of Spaniards said they were "very happy" about their lives in 1981. This fell to 14% by 2007, even before the economic downturn.
>
> That trajectory should be a cautionary tale to Americans who are watching the U.S. government careen toward a system that is every bit as socially democratic as Spain's.
>
> Government spending as a percentage of GDP in America is about 36%—roughly the same as in Spain. The Congressional Budget Office tells us it will reach 50% by 2038. The Tax Foundation reports that almost 70% of Americans take more out of the tax system than they pay into it. Meanwhile, politicians foment social division on the basis of income inequality, instead of attempting to improve mobility and opportunity through education reform, pro-growth policies, and an entrepreneur-friendly economy.
>
> These trends do not mean we are doomed to repeat Spain's unhappy fate. But our system of earned success will not defend itself.

How do we make government promote "earned success" over dependency on welfare?

Investors Business Daily reports on one state that decided to encourage people to get off of welfare, and to get back to work.

Excerpt:

> The number of childless, able-bodied adult food stamp recipients in a New England state fell by 80% over the course of a few months. This didn't require magic, just common sense.
>
> From December 2014 to March 2015, the caseload of able-bodied Maine adults with no dependents crashed from 13,332 recipients to 2,678, says the Heritage Foundation. This is a remarkable change and needs to be repeated in government programs across the country.
>
> How Maine achieved this is no mystery. Gov. Paul LePage simply established work requirements for food stamp recipients who have no dependents and are able enough to be employed. They must, write Heritage policy analysts Robert Rector and Rachel Sheffield, "take a job" — just 20 hours a week — "participate in training, or perform community service" for a mere 24 hours a week. Recipients who do none of those are stripped of their food stamp benefits after three months.
>
> This isn't a radical new idea. Rector and Sheffield cite a successful historical precedent:
>
> "When work requirements were established in the Aid to Families with Dependent Children (AFDC) program in the 1990s, nationwide caseloads dropped by almost as much, albeit over a few years rather than a few months."
>
> In the Obama era, "the food stamp caseload of adults without dependents who are able-bodied has more than doubled nationally, swelling from nearly 2 million recipients in 2008 to around 5 million today" across the country, Rector and Sheffield report. That's far too many Americans who can take care of themselves living at the expense of others. The situation cries out for reform.
>
> The Heritage report says that if the Maine policy were repeated nationally, and the caseload dropped "at the same rate it did in Maine (which is very likely), taxpayer savings would be over $8.4 billion per year."
>
> "Further reforms could bring the savings to $9.7 billion per year: around $100 per year for every individual currently paying federal income tax."
>
> […]The success in Maine is but a blip, affecting only a thin slice of the nation's welfare rolls. Yet it is a model, a prototype for reforming welfare programs in need of change or elimination, which is all of them. Policymakers at all levels should be rushing to adopt it, then adapt it.

Now, do you think that the governor of Maine is a Republican, or a Democrat? Republicans want people to be independent of government, and productive, because that makes them more free. Democrats want people to be

unproductive and dependent, because that makes them easier to control.

# Stephen C. Meyer and Keith Fox debate intelligent design and evolution

**Wintery Knight** · 15 March 2016 · Archived copy · Original

How did life begin?
From Justin Brierley's "Unbelievable" podcast.

Details:

> Stephen Meyer is a leading proponent of Intelligent Design who directs the Centre for Science and Culture at the Discovery Institute in Seattle. His [first] book "Signature in the Cell" claims to show that the DNA code is the product of intelligent mind, not naturalistic processes. Keith Fox is Professor of Biochemistry at Southampton University. He chairs the UK Christians in Science network but disagrees strongly with ID. They debate how life could have originated and whether design is allowed as an explanation in science.

Summary: (stuff in italics is my snarky paraphrase)

Meyer:

- background and how he got interested in intelligent design
- his research focus is on the origin of life – the first replicator
- summarizes the history of origin of life studies
- authored the book "Signature in the Cell"
- the DNA enigma: where did the information in DNA come from?
- naturalistic explanations of the DNA information have failed
- but intelligent agents are known to be able to produce information
- the best explanation of the information in DNA is that an intelligent agent authored it
- Meyer's book was named by atheist philosopher of science Thomas Nagel as a Times Literary Supplement Book

of the Year in 2010
- why is design so controversial? Many people think that Darwin explained why nature appears design
- the Darwinian view is that nature can create the appearance of design using mutation and selection
- however, Darwinian mechanisms cannot explain the origin of the first living cell, it assumes replication, and the origin of life is about where the first replicator comes from

Fox:

- Meyer's argument is not about the evolution of life after the first cell
- Meyer's case for design is about the origin of life
- naturalists do not know a naturalistic explanation for the origin of life
- there are a number of naturalistic hypotheses for the origin of life, like the RNA-first hypothesis
- maybe in a few years one of them will turn out to be correct
- what intelligent design is arguing from a gap in our current naturalistic knowledge to infer that God intervened in nature

Meyer:

- that's not what intelligent design is at all
- the approach ID theorists use is the inference to best explanation
- you evaluate all explanations, non-intelligent causes and intelligent causes
- you prefer the best possible explanation
- we know that minds are capable of producing information just like the information we find in DNA

Fox:

- living cells replicate, so they have the ability to introduce mutations as they replicate and then some of those mutations can be selected
- so maybe the process of replicating that living cells do created the first living cell
- maybe the first living cell created itself, X brought X into being, self-creation, what's irrational about that?

Meyer:

- the issue is the origin of life – where did the first living cell come from?
- you cannot appeal to the operations that a living cell can perform to explain the origin of the first living cell
- there was no first living cell operating before the first living cell
- there was no replication, mutation or selection before the first living cell
- in fact, in my book I show that there is no known naturalistic mechanism that is able to produce the information needed for the first living cell
- *nothing can create itself, that is self-contradictory*

Fox:

- Well, you are just saying that because something is complex that God did it

Meyer:

- Sadly, no. What I actually said needed to be explained was the information, not complexity
- And we know from software engineering that the process of adding information to code is performed by programmers
- in the absence of any adequate naturalistic explanation for information, we are justified in taking the

explanation that we are familiar with – namely, intelligent agency – based on our uniform, universal experience of what causes information

Fox:

- well, maybe we can appeal to the mutation and selection in existing living cells to explain the origin of the first living cell
- maybe there were living cells before the first living cell, and then these other living cells created the first living cell

Meyer:

- we can't keep invoking mutation and selection when those processes are not operating prior to the origin of the first living cell

Fox:

- well maybe some bare-bones self-replication molecule was a precursor to the first living cell

Meyer:

- even to generate very limited replicator would require a large amount of information
- the argument I am making is – where does the evolution come from?

Fox:

- well, maybe we will think of an explanation for information that is naturalistic in 20 years
- we've thought of explanations to things that were NOT information before
- so maybe we will be able to think of something to explain information based on our ability to explain NOT information before

Moderator: Change topics: the Dover decision

Meyer:

- the Discovery Institute opposed the policy that causes the trial
- the wording of the statute was poor
- the judge was completely wrong in his decision
- young earth creationists used the phrase "intelligent design" to cover their agenda
- intelligent design is an inference using the normal methods of science

Fox:

- intelligent design is a science stopper because it stops looking for a naturalistic explanation
- everything in nature must have a naturalistic explanation
- everything has to be explained using matter and time and chance
- it just has to be that way!!!!

Meyer:

- well, what luck would you have explaining an effect like Mt. Rushmore?
- can you explain that using matter,time and chance?
- Mt. Rushmore was the product of intelligence, not wind and erosion
- similarly, there is information in the cell, and we know that intelligence causes information

Fox:

- So you are saying that we don't understand and therefore an intelligence is necessary?

Meyer:

- no I am saying we DO understand and we are making an inference based on that understanding
- you are the one who is insisting on a material explanation because you pre-suppose materialism
- we know that minds have causal powers, and we can infer mind as an explanation from information

Fox:

- well nature is a seamless chain of material causes and effects

Meyer:

- agents can act without violating the laws of nature
- even humans can act as intelligent agents to create information in books, and they don't violate the laws of nature
- intelligent causes are real, and they explain effects in nature

Fox:

- you're trying to impose on science something to do with meaning and purpose

Meyer:

- no that's not what we're doing, we're inferring from from the fact that we ourselves are known causes of information to the fact that an intelligence cause is the best explanation for information in the cell

Fox:

- *but I am a materialist*, I need a materialist explanation

Meyer:

- mind IS an answer to the how question
- we infer to mind in many other scientific disciplines, like cryptography, archaeology, etc.
- a materialist might accuse an archaeologist of engaging in a "scribe-of-the-gaps" argument, but the best explanation of an artifact with information is a scribe
- we are inferring that mind is the cause from the nature of the effect: information

Moderator: is it appropriate to call DNA "information"
Fox:

- well DNA is just a molecular polymer, any reference to information is just by analogy

Meyer:

- DNA is a molecular polymer, but it also exhibits the property of specified complexity
- the arrangement of bases, which function as machine instructions in a software program, for performings task in the cell
- we have observed that the property of specified complexity always comes from an intelligence

Fox:

- well, maybe there are other sequences that would work, so maybe it's really not uncommon to develop functioning sequences by chance alone, without an intelligence

Meyer:

- you can measure how precise the functional specificity is in DNA and proteins

Moderator: is Shannon information the same as functional information

Meyer:

- Shannon information refers to the sequences of digits or symbols that do not necessarily have any function, i.e. – a four character string QSZX has as much Shannon information as WORD. However, only the latter is functional against the pattern of the English language. There are arrangements of DNA bases and amino acids that have the same number of symbols/characters as a functional sequence would have, but they have no biological function – they do not exhibit specified complexity

Fox:

- Well, maybe there are lots and lots of sequences of DNA and proteins so that it is fairly easy to get a functional one by chance

Meyer:

- DNA sequences that are functional are extremely rare, protein sequences are even more rare
- this is not my opinion, this is what the research shows – functional protein sequences are rare

Fox:

- well maybe there are other functional sequences that are occur before the first functional sequence that are precursors to the first functional sequence
- maybe there are billions of years of replication, mutation and selection before the first replication, mutation and selection

Meyer:

- you can't get to the first selectable functional sequence by appealing to precursor selectable functional sequences – there are no selectable functional sequences before the FIRST one
- you have to get the first selectable functional sequence by chance alone, because there is nothing to mutate or select before the first replicator
- the chance hypothesis has been rejected because the minimal amount of information for the simplest replicator is too high to get by chance alone, given the resources, including time, that are available

Moderator: *Keith are you confident that naturalism will be able to substantiate these naturalism-of-the-gap speculations that you offer in response to Meyer's actual science that we have today?*

Fox:

- well, it is hard to know for sure because it was just a fluke event
- but there's nothing irrational or unscientific or miraculous about it – the fluke would have a material explanation
- there is nothing that we can detect that would implicate God, my speculations about a fluke which I cannot observe or measure or test would all be compatible with an atheistic worldview that omits God as a causal entity

Meyer:

- where are those material processes that could account for this fluke then?
- the whole point of this argument is that the information in DNA transcends the material components in the sequence
- it's the arrangement of the material parts/letters/characters/symbols/instructions that needs to be explained

Fox:

- Well, I just have a different philosophy of science that rules out intelligent causation a priori

Meyer:

- Yes, that's the difference between us – you pre-suppose that all explanations of natural phenomena must exclude intelligent causes

There is a bit more where Meyer talks about how parts of the cell are implementations of various design patterns (Gang of Four design patterns) that are used by software architects who design software.

Find more posts on Stephen C. Meyer here.

# New report: Americans rank last in problem solving using technology

**Wintery Knight** · 16 March 2016 · Archived copy · Original

The Wall Street Journal reports on a new analysis of problem solving skills.

Excerpt:

> A new report finds U.S. workers rank dead last among 18 industrial countries when it comes to "problem solving in technology-rich environments," or using digital technology to evaluate information and perform practical tasks. The consequences of that emerging competitive disadvantage is energizing the volatile undercurrent of this year's presidential race, some observers say.
>
> If the problem-solving deficit is bad, the reasons for it may be worse, said Stephen Provasnik, the U.S. technical adviser for the International Assessment for Adult Competency: flagging literacy and numeracy skills, which are the fundamental tools needed to score well on the survey.
>
> […]The results build off a global survey conducted in 2012 by the Organization for Economic Cooperation and Development. To better compare the skills of younger and older adults and the unemployed, researchers did additional surveys in 2014. The countries that scored the highest on the problem-solving with technology criteria were Japan, Finland, Sweden and Norway. Poland scored second to last, just above the U.S.
>
> One stark revelation is that about four-fifths of unemployed Americans cannot figure out a rudimentary problem in which they have to spot an error when data is transferred from a two-column spreadsheet to a bar graph. And Americans are far less adept at dealing with numbers than the average of their global peers.

Why is that a problem? It's a problem because the best jobs all require proficiency in math.

Consider these starting salaries and mid-career salaries for various majors:

Majors by Salary Potential – Full List

| RANK | MAJOR | STARTING SALARY | MID-CAREER SALARY |
|---|---|---|---|
| 1 | Petroleum Engineering | $98,000 | $163,000 |
| 2 | Aerospace Engineering | $62,500 | $118,000 |
| 3 | Actuarial Mathematics | $56,100 | $112,000 |
| 4 | Chemical Engineering | $67,500 | $111,000 |
| 5 | Nuclear Engineering | $66,800 | $107,000 |
| 6 | Electrical Engineering (EE) | $63,400 | $106,000 |
| 7 | Computer Engineering (CE) | $62,700 | $105,000 |
| 8 | Applied Mathematics | $50,800 | $102,000 |
| 9 | Computer Science (CS) | $58,400 | $100,000 |
| 10 | Statistics | $49,300 | $99,500 |
| 11 | Physics | $51,200 | $99,100 |
| 12 | Mechanical Engineering (ME) | $60,100 | $98,400 |
| 13 | Biomedical Engineering (BME) | $54,900 | $98,200 |

Starting and Mid-Career salaries by profession (click for larger image)
(Source)

The common denominator in all these degrees is *mathematics*, which is out of favor with many Americans. But

clearly learning math would enable them to get the highest paying jobs – private sector STEM jobs. So why aren't they learning math?

**People drop math because it's too hard**

People who drop math typically do so because they want to focus on other things that are less difficult. Most of them just want to have fun… sometimes with watching TV all day, sometimes with premarital sex, sometimes with alcohol and drugs. Families break down as women choose hot, irresponsible men and have babies with them out of wedlock. And those kids learn less than their parents knew. There just isn't any interest in much of America about learning hard things like math, so you can get those private sector STEM jobs that pay well.

Consider this post by Kevin Williamson in National Review magazine:

> The white middle class may like the idea of Trump as a giant pulsing humanoid middle finger held up in the face of the Cathedral, they may sing hymns to Trump the destroyer and whisper darkly about "globalists" and — odious, stupid term — "the Establishment," but nobody did this to them. They failed themselves.
>
> **If you spend time in hardscrabble, white upstate New York, or eastern Kentucky, or my own native West Texas, and you take an honest look at the welfare dependency, the drug and alcohol addiction, the family anarchy — which is to say, the whelping of human children with all the respect and wisdom of a stray dog — you will come to an awful realization. It wasn't Beijing. It wasn't even Washington, as bad as Washington can be. It wasn't immigrants from Mexico, excessive and problematic as our current immigration levels are. It wasn't any of that.**
>
> **Nothing happened to them. There wasn't some awful disaster. There wasn't a war or a famine or a plague or a foreign occupation. Even the economic changes of the past few decades do very little to explain the dysfunction and negligence — and the incomprehensible malice — of poor white America.** So the gypsum business in Garbutt ain't what it used to be. There is more to life in the 21st century than wallboard and cheap sentimentality about how the Man closed the factories down.
>
> The truth about these dysfunctional, downscale communities is that they deserve to die. Economically, they are negative assets. Morally, they are indefensible. Forget all your cheap theatrical Bruce Springsteen crap. Forget your sanctimony about struggling Rust Belt factory towns and your conspiracy theories about the wily Orientals stealing our jobs. Forget your goddamned gypsum, and, if he has a problem with that, forget Ed Burke, too. The white American underclass is in thrall to a vicious, selfish culture whose main products are misery and used heroin needles. Donald Trump's speeches make them feel good. So does OxyContin. What they need isn't analgesics, literal or political. They need real opportunity, which means that they need real change, which means that they need U-Haul.

| Polling Data | | | | | | |
|---|---|---|---|---|---|---|
| Poll | Date | Sample | MoE | Clinton (D) | Trump (R) | Spread |
| RCP Average | 2/11 - 3/6 | -- | -- | 47.3 | 41.0 | Clinton +6.3 |
| NBC News/Wall St. Jrnl | 3/3 - 3/6 | 1200 RV | 2.8 | 51 | 38 | Clinton +13 |
| ABC News/Wash Post | 3/3 - 3/6 | 864 RV | 4.0 | 50 | 41 | Clinton +9 |

| All General Election: Trump vs. Clinton Polling Data | | | | | | |

Trump vs Hillary head-to-head: Trumpkins lack the math skills to make sense of this table

David French, who grew up in Kentucky, and then attended Harvard Law School, adds this in National Review:

> These are strong words, but they are fundamentally true and important to say. My childhood was different

> from Kevin's, but I grew up in Kentucky, live in a rural county in Tennessee, and have seen the challenges of the white working-class first-hand. **Simply put, Americans are killing themselves and destroying their families at an alarming rate. No one is making them do it. The economy isn't putting a bottle in their hand. Immigrants aren't making them cheat on their wives or snort OxyContin. Obama isn't walking them into the lawyer's office to force them to file a bogus disability claim.**
>
> For generations, conservatives have rightly railed against deterministic progressive notions that put human choices at the mercy of race, class, history, or economics. Those factors can create additional challenges, but they do not relieve any human being of the moral obligation to do their best.
>
> **Yet millions of Americans aren't doing their best. Indeed, they're barely trying. As I've related before, my church in Kentucky made a determined attempt to reach kids and families that were falling between the cracks, and it was consistently astounding how little effort most parents and their teen children made to improve their lives. If they couldn't find a job in a few days — or perhaps even as little as a few hours — they'd stop looking. If they got angry at teachers or coaches, they'd drop out of school. If they fought with their wife, they had sex with a neighbor. And always — always — there was a sense of entitlement.**
>
> And that's where disability or other government programs kicked in. They were there, beckoning, giving men and women alternatives to gainful employment. You don't have to do any work (your disability lawyer does all the heavy lifting), you make money, and you get drugs. At our local regional hospital, it's become a bitter joke the extent to which the community is hooked on "Xanatab" — the Xanax and Lortab prescriptions that lead to drug dependence.
>
> Of course we should have compassion even as we call on people to do better. I have compassion for kids who often see the worst behavior modeled at home. I have compassion for families facing economic uncertainty. But compassion can't excuse or enable self-destructive moral failures.

Chart showing Trump vs Clinton: Trumpkins can't read this chart, because it requires math skills

I have compassion for the kids, too. But not for the grown-ups, who seem to think that the world owes them a living even if they avoid learning hard things like math, and behave immorally. But there is no guarantee of success for people who don't learn math, and who don't behave morally. And it's not anyone else's fault.

# New study: a good credit score is a key performance indicator for marriage success

**Wintery Knight** · 16 March 2016 · Archived copy · Original

Financial responsibility is a key performance indicator for marriage success
Story from the leftist Washington Post.

Excerpt:

> When people are looking for a significant other, they often try to find someone whose values, education, earnings, hobbies and even height match their own. But new research suggests there's one promising measure for finding a committed partner that most daters overlook — credit scores.
>
> A credit score is a number that is supposed to reflect the risk of lending money to someone, based mostly on their past history of borrowing, repaying and defaulting on debt. Banks have long used credit scores to evaluate customers, but these days potential employers, landlords, insurance companies, cellphone companies and many other businesses do, too.
>
> A new working paper from the Federal Reserve Board that looks at what role credit scores play in committed relationships suggests that daters might want to start using the metric as well. The researchers found that credit scores — or whatever personal qualities credit scores might represent — actually play a pretty big role in whether people form and stay in committed relationships. People with higher credit scores are more likely to form committed relationships and marriages and then stay in them. In addition, how well matched the couple's credit scores are initially is a good predictor of whether they stay together in the long term.
>
> The paper analyzed a large proprietary data set of 12 million randomly selected U.S. consumers from the credit reporting agency Equifax over a period of about 15 years. Researchers used an algorithm to find a swathe of committed couples, including some who live together and are not legally married.
>
> They found that people with higher (i.e. better) credit scores are more likely to form a committed relationship, as the chart below shows. This was true even after controlling for other differences between partners, like education level, race or income.
>
> The researchers also found that having higher credit scores when they started the relationship meant that couples were less likely to separate over the next few years… In fact, for every extra 100 points in the couple's average credit score when beginning the relationship, their odds of splitting in the second year fell by around 30 percent.

So what do I want to say about this story? I want to tell you that marriage is not something that you just jump into when you feel like it, without any preparation. Relationships work well when both people have trained their character to be ready to do the most important thing in a relationship: *to commit.* And your credit score is a good measure of your ability to do that.

A high credit score is an excellent measure of a person's ability to be responsible with money, and to take their obligation to pay their money back seriously. Marriage is all about whether two people are comfortable with being responsible, and whether two people can put aside their desire for fun and thrills and meet their obligations, even when they don't feel like it. If a person is uncomfortable with marriage obligations, because it is too "transactional" and they want to be feelings-led, that's a clear sign they are not ready for a commitment through thick and thin. The credit score is a measure of one's ability to be responsible to others regardless of feelings and desires, and that's what you need to commit.

When I meet someone I am interested in for marriage, if they have problems with their education, career or finances, the first thing I do is to try to push them to study for a degree with a good employment rate, and good starting salaries. I push them to get good jobs with reputable companies, and to work in the summer if they are students. I push them to pay off their debts and start investing. I do this because I am trying to make them marriage-ready. That is, I am trying to get them to be comfortable with responsibilities, expectations and obligations.

One girl I used to mentor just got married. She started out living with her parents, doing degrees in English, and working minimum wage service jobs. Then something happened. She moved out of her parents house, got a real job, cut expenses, and married an employed non-student who works and saves money. They are both paying down debt like crazy, and she has a plan to invest soon. Most of what she did was self-directed, all I did was cheer, make suggestions and send the occasional gift. But she never viewed this advising and rewarding as "manipulative". She was happy to get the opinion of someone with qualifications in those areas. She didn't rebel against people who were leading her upward, she embraced it. Now she's committed to a man for life and they are executing a sound plan to have an influence as Christians. It has not been easy for her. She is punching well above her weight now, though.

If you want to get married, you need to develop the ability to commit. That means that you need to get comfortable with self-sacrifice and self-denial. You need to change your character through studying hard things, working boring jobs, saving instead of spending, and investing early. These are the life experiences that change your character so that you are able to commit to another person for life.

# Before you marry, have enough money saved to keep your kids out of public schools

**Wintery Knight** · 16 March 2016 · Archived copy · Original

My friend William shared this excellent article from The Federalist, which talks about how public schools, under the influence of Common Core, are exposing children to pornography in order to advance a leftist culture agenda. The article has the stories of several heroic mothers who stood up to the school system and got the pornographic materials removed. Let's look at one of them, and then I'll comment on how public school administrators and teachers should be viewed, then I'll comment on the issue of financing these public schools, then I'll talk about planning for schooling of your children.

Excerpt:

> In 2012, Lebanon, Oregon, mother of two Macey France began studying the nationwide implementation of Common Core. While looking through a document titled "Common Core Appendix B" that contained reading exemplars, Macey found the book, "The Bluest Eye" listed as an example of appropriate assigned literature for eleventh- and twelfth-grade students.*
>
> France, a contributor to the website PolitiChicks, took to her keyboard and typed up a scathing condemnation of the book as not high-school appropriate, including quotes directly from the book, such as:

I am not putting pornographic excerpts from public school books on this blog, duh.

We continue:

> As a result, her article "Common Core-Approved Child Pornography" was viewed and shared hundreds of thousands of times and Macey was nominated for a CPAC blogger award for Best Sunlight Post of 2013.
>
> "This is when I first became a 'target' for the progressives who support public education and minimize parental rights," said France, who had a hard time understanding how her well-researched, truthful article could make her the target of the kind of emotional, hateful rhetoric she experienced. It frustrated her to be personally attacked for wanting to protect her kids. It also frustrated her to find many parents who weren't concerned about their teens reading "The Bluest Eye" because they believed school officials knew more about what was best for their children than they did.
>
> "I was called names, accused of being backwards, racist [Toni Morrison is a black woman], ignorant, a flat-earther, and even received private messages on Facebook telling me how hateful I was," France said. "I was first introduced to the phrase 'white privilege.' At one point, I was called Hitler. I was misunderstood and accused of wanting to ban and burn books [even though] I went out of my way to convey that I am *not* an advocate for banning literature. I am a *huge* parental rights advocate. I got the distinct impression I was not supposed to question the manner in which they [educators] related to my kids."

My problem with public school is not that education school graduates are selecting high brow reading material that is above me. I love Shakespeare and Spenser and Dickens and Austen and other classical writers. The problem I have with public schools is that some of the teachers, and most of the administrators, have this agenda to break down traditional morality and sexualize children at earlier and earlier ages. This is part of the secular progressive agenda – they know that sexualizing children makes them less likely to become conservative, less likely to marry, less likely to have children who are raised by a mom and dad, and who are therefore more resistant to the will of the secular leftist government.

**Public schools are leftist indoctrination seminaries**

A good example of how this works can be found in the province of Ontario, Canada. There, the Liberal Party government is led by a lesbian woman who left her husband and children to move in with her lover. The Liberal Party decided to re-write the education curriculum so that it would be more in line with their supporters in the Sexual Revolution crowd, e.g. -secularists, LGBT activists, abortion providers, etc. And so, they hired a convicted child pornographer to re-write the curriculum. They didn't see the public school's priority as teaching children how to get the skills needed to find jobs that pay. They wanted the public schools to make children non-judgmental about the immoral behaviors of the selfish adults.

It's very important for parents to understand that people don't just find themselves in education programs and then in public schools by accident. Sometimes they are in there because they couldn't find real work in the private sector. Sometimes they are there because they want to indoctrinate your kids with their left-wing ideology. You can't assume that the people in public schools want to partner with you to pass on prudent and practical Judeo-Christian wisdom to your children. The public school monopoly attracts those who are looking for job security and insulation from the disapproval of their customers. It's true that some teachers are there to educate students so they have useful skills in order to find good jobs. But in my experience, many of teachers aren't, and most of the administrators aren't.

*Note: private school teachers and administrators have to compete with other schools, so they are sensitive to meeting the needs of parents. At least you have a choice about where you send your kids, so they have to care what you want for your kids, and how much you are able to pay.*

**Don't vote for bigger government if you value quality education**

So how do these public schools get their funding? Well, it's simple. They appeal to voters by saying that the more they spend on public schools, the more children will learn. This actually works on voters who don't bother to familiarize themselves with the facts:

Education spending has tripled since 1970

The truth is that parents who want children to do well should always vote for smaller government, lower taxes, and the pushing down of decision-making in education policy to the state and local level. We shouldn't be swayed by "it's for the children" rhetoric, because throwing more money at the problem only gives us more sexual revolution indoctrination and more gay rights agenda. Most of the new money goes to administrators anyway – not to the teachers in the classrooms. You might think that the public schools are there to help your children to get a job, but that's not what they public school administrators think they are there for.

**Getting married? Make a plan to provide for your kids' education**

One final point. I am finding myself surrounded by male Christian apologists who want to get married, and who are not interested in being providers. They've spend their entire 20s in school as students, they've taken money from their parents, they've never worked a day in their lives, they have outstanding student loans, they have no savings, and yet they all talk to women they like about marriage. My view is that Christian men should not be allowed to talk to women – even to ask them the time of day or for directions – until they have a STEM degree, 2 years of private sector work experience, all debts paid off, a car and some savings. And why not? Well, for reasons like this article on the public schools.

The public schools are what they are, and Christian parents cannot rely on them to educate our kids. If a man is talking about marriage without having taken steps to get a STEM degree, STEM private sector work history, and an investment account that is added to every month, then he has no business talking to a woman about marriage. He has to be able to show her that he is serious about providing the children with homeschooling or a private school education. How parents plan to educate their kids is a major issue in marriage – it affects whether the children will be effective and influential, or not. A woman should not trust the promises of any man who has not taken practical steps in the past to prepare for the needs of his children in the future. She cannot accept intentions and promises that make her feel good, she has to see evidence of his ability to put aside his ambitions in order to provide for her and the children – that is his obligation as a man (1 Tim 5:8). A man who wants marriage should prepare *well in advance* for it by having a career that will allow him to earn and save so that his wife and children will not be threatened in their worldview more than they can bear. If he has to give up some student stuff and some ministry stuff in order to prepare for husband / father responsibilities, then he should do that – before the wedding day.

# Purdue University proposes alternative to student loans: income sharing

**Wintery Knight** · 17 March 2016 · Archived copy · Original

My friend Terrell sent this article to me from the Lafayette Journal & Courier. It talks about a change to Purdue's student assistance program that will help students to think twice about what they are majoring it, and whether it will pay off.

Excerpt:

> Purdue University is close to bringing income share agreements to campus by the next academic year.
>
> Purdue Research Foundation is finalizing a contract with a partner firm that will fund student tuition in return for a percentage of income for several years after graduation, Brian Edelman, PRF's chief financial officer, said Tuesday.
>
> Purdue announced in August it was seeking a partner to launch the agreements as an alternative to student loans. The university received seven "expressions of interest" and narrowed the search down to one finalist, although Edelman said it's too early to identify the firm and how the partnership might work.
>
> But more details about how Purdue might implement the alternative have come available. PRF will complete a sample term sheet in the next few weeks and begin planning with a pilot of 100-300 students as early as this spring, Edelman said. Those students could receive funding for the entire 2016-17 year.
>
> During a University Senate meeting Monday, Edel estimated what a contract might look like for students: A $10,000 investment might cost 3 percent to 5 percent of income for five to seven years. An individual earning $48,500 a year — the median income among college graduates in 2013, according to the National Center for Education Statistics — would be on the hook for as little as $7,275 or as much as $16,975, depending on the terms.

This part made me laugh:

> Other faculty members expressed concern that such agreements might favor STEM or business students, who typically have higher incomes and better job prospects after graduation, and steer the university and faculty toward producing graduates who earn more income.

Well of course the faculty don't want students to think about getting a return on their degree – because then most of them would be out of a job! College education only makes sense if you can get a return on your investment. In theory, you could study anything and get a return on your investment. In practice, you're better off with STEM degrees – lower post-graduation unemployment, and better starting and median salaries.

Look:

**Majors by Salary Potential – Full List**

| RANK | MAJOR | STARTING SALARY | MID-CAREER SALARY |
|---|---|---|---|
| 1 | Petroleum Engineering | $98,000 | $163,000 |
| 2 | Aerospace Engineering | $62,500 | $118,000 |
| 3 | Actuarial Mathematics | $56,100 | $112,000 |
| 4 | Chemical Engineering | $67,500 | $111,000 |
| 5 | Nuclear Engineering | $66,800 | $107,000 |
| 6 | Electrical Engineering (EE) | $63,400 | $106,000 |
| 7 | Computer Engineering (CE) | $62,700 | $105,000 |
| 8 | Applied Mathematics | $50,800 | $102,000 |
| 9 | Computer Science (CS) | $58,400 | $100,000 |
| 10 | Statistics | $49,300 | $99,500 |
| 11 | Physics | $51,200 | $99,100 |
| 12 | Mechanical Engineering (ME) | $60,100 | $98,400 |
| 13 | Biomedical Engineering (BME) | $54,900 | $98,200 |

Starting and Mid-Career salaries by profession (click for larger image)

I love this idea by Purdue, it will really help students to think about what they are studying, and that is good for taxpayers, because something tells me that we are going to get the bill for the $1 trillion in outstanding student loans.

# Man uses legally-owned concealed carry handgun to prevent robbery

**Wintery Knight** · 17 March 2016 · Archived copy · Original

Guns are for self-defense against criminals

Another in my series of posts to help non-Americans understand why Americans are passionate about the Second Amendment to the Constitution and the right to bear arms.

The news story is from the Washington Free Beacon:

> A good samaritan saved a 7-11 clerk on Sunday by shooting a hatchet-wielding man who had attacked the store.
>
> A 60-year-old man with a valid concealed carry license was drinking his morning coffee when a masked man, later identified as 43-year-old Steven Blacktongue, entered the convenience store and began attacking the clerk, Kuldeep Singh. The attacker slashed Singh across the stomach several times without saying a word. At that point the concealed carrier drew his firearm and shot Blacktongue, killing him.
>
> Police said that the concealed carried did nothing wrong and ended up saving lives.
>
> "This could have been disastrous. Had this [customer] not shot, who knows what would've happened," King County Sergeant Cindi West told KIRO. "We might have a dead clerk right now and instead, we have a dead bad guy. We do not see any wrongdoing on the part of the customer."
>
> "In fact, he probably saved lives in this case."
>
> Singh said he feared for his life during the attack and is glad to be alive. A friend of his, who also works at the convenience store, told the news station that the concealed carrier was a "good guy" for intervening and stopping the attack. The concealed carrier was not expected to face any charges.

Here's the news report from KIRO 7 News:

This happened in ultra-leftist King County, Washington, of all places. I'm surprised they even let law-abiding people who pass a background check carry firearms, there. But at least this story leaves no doubt about why concealed carry permits exist.

**Merrick Garland and the Second Amendment**

This might be a useful story to send to Obama's latest Supreme Court nominee – a radically leftist who opposes the second amendment.

Washington Free Beacon again:

> Merrick Garland, President Obama's nominee to replace Supreme Court Justice Antonin Scalia, has a record of opposing gun rights as a federal judge, which includes a vote to undo a landmark gun rights ruling.
>
> Garland was one of four judges who voted to rehear the case of *Parker v. District of Columbia* with a full ten-judge panel after a smaller panel struck down the District of Columbia's total ban on handguns. Garland's vote for this en banc hearing indicates that he may believe the decision to strike down the city's gun ban was mistaken.
>
> The other six judges on the appeals court voted not to rehear the case, and the Supreme Court went on to rule in *District of Columbia v. Heller* that the Second Amendment guarantees an individual's right to bear arms in the case.

So, he's a radical on gun control, well outside the mainstream.

As usual, we end all second amendment posts with an examination of the peer-reviewed literature on gun ownership and rates of violent crime. This evidence is not generally understood by people on the left, who tend to be guided more by emotions and peer approval than evidence when forming their views on controversial issues.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for

> all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England‟s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, but both studies affirm the same conclusion – more legal firearm ownership means less crime.

# Desiring God asks: is socialism in conflict with Christianity?

**Wintery Knight** · 17 March 2016 · Archived copy · Original

Bible study that hits the spot

My friend Kevin sent me this amazing article about socialism, which appeared at Desiring God (!!!), of all places. It was authored by Phillip Holmes, who – I see from his picture -has dark skin like me, which is awesome!

In the past, I have given Desiring God and John Piper a lot of heat for not connecting Christianity to the real world. This was especially annoying to me during elections, or when legislation of interest to conservatives was being debated. But I've noted that Piper is now much better than he was before.

Anyway, here's the intro to the article:

> Socialism is trending in the minds of many Americans. Some love it, some hate it, and others are indifferent to it. Some Christians argue that it's evil, while others argue that it's morally good or neutral. Those that argue for its wickedness often fail to condemn the crony capitalism and corporate welfare that is widespread in the United States; therefore, their arguments often fall on deaf ears with socialist sympathizers. The arguments for its moral good or neutrality typically appeals to emotion, rather than evidence, which is considered insufficient for those that oppose it.

Then they quote John Piper for the definition of socialism – and it's a great definition, it really captures what is interesting for us as Christians about socialism:

> A social and economic system that through legal or governmental or military coercion — in other words, you go to jail if you don't do this — establishes social ownership at the expense of private or personal ownership and/or you could say where coercion is used to establish social control — if not ownership, at least control of the means of production in society. And thus, through control, you effectively eliminate many of the implications and motivations of private ownership.
>
> In other words, Socialism borrows the compassionate aims of Christianity in meeting people's needs while rejecting the Christian expectation that this compassion not be coerced or forced. Socialism, therefore, gets its attractiveness at certain points in history where people are drawn to the entitlements that Socialism brings, and where people are ignorant or forgetful of the coercion and the force required to implement it — and whether

> or not that coercion might, in fact, backfire and result in greater poverty or drab uniformity or, worse, the abuse of the coercion as we saw in the murderous states like USSR and Cambodia.

F. A. Hayek says that the rule of law and private property are the foundations for all other rights, even religious liberty. So, Piper's focus on property rights is right on the money. This is what we should care about when it comes to socialism, because it impacts our other liberties. The more free the free market is, the most Christians can follow their consciences. But the more the government takes hold of private industry, the harder it is for Christians to earn a living without toeing the secular government's line. Take a look at what is happening to doctors and nurses in socialist countries like Canada. They are forced to perform abortions, they are forced to assist with assisted suicide. Why? Because government is running the health care system, and there is no other company you can run to that will respect your views. There is no escape when a secular government takes over large parts of the private sector.

This part is my favorite part, the author quotes my favorite economist, Thomas Sowell:

> Despite the good they seem to do in some cases, I can't in good conscience embrace them as a necessary means to escaping poverty. In my experience, I've witnessed it hinder more families than it has helped. We give social programs too much credit and the importance of family and faith too little. As a matter of fact, some economists assert that it was during the welfare state the condition of a particular group of its recipients began to decelerate. As the black economist Thomas Sowell pointed out:
>
> The black family, which had survived centuries of slavery and discrimination, began rapidly disintegrating in the liberal welfare state that subsidized unwed pregnancy and changed welfare from an emergency rescue to a way of life.
>
> Sowell continues to attack the myth that social programs improved the conditions of blacks in America:
>
> The economic rise of blacks began decades earlier, before any of the legislation and policies that are credited with producing that rise. The continuation of the rise of blacks out of poverty did not — repeat, did not — accelerate during the 1960s.
>
> The poverty rate among black families fell from 87 percent in 1940 to 47 percent in 1960, during an era of virtually no major civil rights legislation or anti-poverty programs.
>
> Evidence seems to suggest that the families that have eliminated the poverty cycle while on social programs would have very likely done the same without the programs. While there have been numerous instances of grave injustices towards minority groups in our country that have hindered progress (slavery, Jim Crow), social programs don't seem to be the cause of any significant improvements. Therefore, I want to humbly provide three practical reasons, based on my Christian worldview, why more social programs could actually substitute the family, empower the government, and hinder the church.

This is correct. Attempts to help the poor by redistributing wealth from those who produce to those who cannot or will not actually make things worse – by drawing more people "on the margin" into dependency.

One last snip:

> Social programs are a slippery slope that could lead to unjust governments, more broken homes, and dead churches. Therefore, I simply can't embrace them. A free society under a just government gives us plenty of options. We love our neighbors by starting non-profits, building hospitals, and opening schools that address the needs of the people without using the force of the government. What I'm proposing is not easy, but it is a biblical alternative that will require sacrifice, vision, newfound conviction, and a radical shift in how we view church, family, and government.

See, he sees private, voluntary charity as an option to government-run redistribution. An option that encourages economic growth, while safeguarding liberty and conscience for Christians.

I really love this article. The problem with me is that I don’t think enough about how to make my views palatable to well-meaning people on the other side. The author of this article does know how to defuse potential objections gently and graciously.

# Ted Cruz's panel of foreign policy advisers represent diverse perspectives

**Wintery Knight** · 18 March 2016 · Archived copy · Original

Ted Cruz meets voters at a campaign event

Well, I sometimes listen to the Hugh Hewitt show, and since foreign policy is his thing, I get to hear pretty much every foreign policy point of view there is. Imagine how surprised I am to find that practically everyone that Hugh has on as a guest is on Cruz's foreign policy advisory panel.

This article from NewsMax explains:

> Republican presidential candidate Ted Cruz unveiled his national security team, which includes former Assistant Secretary of State Elliott Abrams, former Missouri Sen. Jim Talent and former U.S. Attorney Andrew McCarthy.
>
> […]Abrams, who served Presidents Ronald Reagan and George W. Bush, praised the senator's support for Israel, saying that "he has made it clear that he believes a strong Israel is America's key ally and asset in the Middle East.
>
> "He understands the power relationships in that region and he will put an end to the tensions of the Obama years that have weakened the U.S.-Israel alliance," Abrams added. "He is very clearly the most pro-Israel candidate in the race today."
>
> Other members of Cruz's team include:
>
> - Stewart Baker, former assistant secretary for policy at the Department of Health and Human Serves and general counsel of the National Security Agency.
> - Ilan Berman, vice president of the American Foreign Policy Council.
> - Retired Army Lt. General William Boykin, executive vice president of the Family Research Council.
> - Fred Fleitz, a former Central Intelligence Agency analyst.

> - Randy Fort, who has served in senior intelligence positions in the Reagan, George H.W. Bush and George W. Bush administrations.
> - Frank Gaffney Jr., president and CEO of the Center for Security Policy.
> - Nile Gardiner, a former aide to British Prime Minister Margaret Thatcher.
> - Mike Gonzalez, a senior fellow at the Heritage Foundation.
> - Katharine Gorka, president of the Council on Global Security.
> - Steven Groves, a senior research Fellow at the Heritage Foundation.
> - Mary Habeck, a visiting scholar at the American Enterprise Institute.
> - Kristofer Harrison, a co-founder of the China Beige Book who once served in the George W. Bush White House.
> - Jerry Hendrix, a retired Navy captain.
> - Michael Ledeen, an author who serves at the Foundation for the Defense of Democracies.
> - Clare Lopez, a vice president at the Center for Security Policy.
> - Robert O'Brien, a partner at the Larson O'Brien LLP law firm in Los Angeles.
> - Michael Pillsbury, who was a Reagan campaign advisor in 1980.
> - Charles Stimson, the senior legal fellow and manager of National Security Law Program at the Heritage Foundation.
> - Daniel Vajdich, a senior fellow at the Atlantic Council.
> - Christian Whiton, a former State Department senior advisor in the Bush administration.

My favorite guys on that panel are Frank Gaffney, Andrew McCarthy, Nile Gardiner, William Boykin and Michael Ledeen. Gaffney is probably the most hawkish of all of them, so I was surprised that Cruz put him in there. I always thought that Cruz was more libertarian on foreign policy than I am. And maybe he is, but he put all my favorite hawkish guys on his panel anyway. I don't know the specific people they listed from the Heritage Foundation, but it is my favorite think tank, so they have to be good. And I see someone named Mary Habeck from the American Enterprise Institute – my second favorite think tank. My favorite defense analyst from AEI is Mackenzie Eaglen, but they didn't pick her, oh well.

This article from the radically leftist Bloomberg View notes that Cruz has a whole ton of moderate conservative voices on his foreign policy advisor panel to balance out the hawks that I like so much.

It says:

> […]Cruz's team includes former officials who reject Gaffney's broad view that any Muslim who believes in Sharia law by definition believes in a totalitarian and violent ideology at war with America.
>
> "We're at war with a coalition of radical Islamists and radical secularists. It's not all one thing, nor is Islam all one thing," Michael Ledeen, a former Reagan administration official and a Cruz campaign adviser, told me.
>
> Jim Talent, a former Missouri Republican senator who was a key adviser to Romney in 2008 and 2012, is signed up for the Cruz team. So is Mary Habeck, a former staffer on George W. Bush's national security council, who is an expert on jihadi organizations and has warned against demonizing the entire religion of Islam.
>
> Another Cruz adviser, Elliott Abrams, helped craft Bush's policy to empower moderate Muslims in the Middle East against radicals. He told me he feels much the same way as Habeck. "It's now 15 years since 9/11, and I think it's obvious that Muslim citizens in the U.S. and Muslim leaders abroad have an absolutely critical role to play in fighting jihadis and other Muslim extremists," Abrams said. "This is partly a battle within Islam that they are going to have fight and win. Alienating these potential allies is the kind of foolish policy that the

> Obama administration has engaged in when it comes to Arab states that are our allies."
>
> **Victoria Coates, who has been Cruz's main adviser on national security since he came to the Senate, told me this tension on the policy team "is by design and not an accident."** She added: "Both Frank and Elliott are people I went out of my way to set up meetings with the Senator. He has met with both of them individually for years."
>
> […]His new team of national security advisers, in this respect, has something for everyone.

I think this balanced approach matches Cruz's approach in other areas. He isn't looking for mediocre people who are loyal to him above all. He has hawkish people in his panel, but he also has respected moderates. I have heard Andrew McCarthy, Michael Ledeen and Jim Talent on Hugh Hewitt's show many times. Victoria Coates is highly respected by everyone when it comes to foreign policy. The moderate people are the best at putting forward their view, just as Gaffney is the best at putting forward the hawkish view. Cruz's approach will lead to good discussions, which will lead to smart policies. We certainly can do a lot better than the Obama administration's "screw up then cover up" approach.

In contrast to Cruz, who does have good advisers on foreign policy, we are hearing this from Trump:

He says: "I'm speaking with myself, I have a very good brain". That might for for Scrabble or balancing your check book, but we are talking about foreign policy and national security, here.

# Does more relationship experience lead to better relationship success?

**Wintery Knight** · 18 March 2016 · Archived copy · Original

Published in the Journal of Marriage and Family
Marriage expert Brad Wilcox tweeted this article from the Institute for Family Studies.

It says:

> In most areas of life, having more experience is good. Want to be great in your chosen field? Sustained experience is essential. Want to be great at a sport? There's no substitute for practice. And anyone who runs a business can tell you that their best employees are those who have been in the job long enough to have learned how to handle the normal well and the unexpected with wisdom.
>
> While more experience is often beneficial in life, the story looks different when it comes to some types of experience before marriage. For example, in our *Before "I Do"* report, we surveyed a national longitudinal sample of young adults about their love lives prior to marriage to examine factors associated with future marital quality. **We found that having more sexual and cohabiting partners before marriage is associated with lower relationship quality once married. In particular, having only ever lived with or had sex with one's spouse was associated with higher marital quality. Our findings are consistent with other studies showing that cohabiting with more partners before marriage is associated with greater likelihood of divorce[1] and that a higher number of sexual partners before marriage is associated with lower marital quality and greater likelihood of divorce.[2]** As we noted, what happens in Vegas may not always stay in Vegas. But why?
>
> There are many reasons why having more romantic partners before marriage may put one at higher risk of difficulties in marriage. One of the most important explanations comes under the heading of what some call selection effects. For many people, an elevated risk of difficulties in marriage was present before they had their first relationship experience. Background characteristics such as parental divorce, low education, and economic disadvantage are associated both with having more sexual and cohabiting partners and also with lower marital

> quality and/or divorce.[3]So it may not be that having more sexual or cohabiting partners causes further risk because a lot of risk was already in motion. Selection is a big part of how relationships unfold, but is it the whole story? We believe that, in addition to selection, behavior matters and has plausible connections to marital outcomes. We are going to explain four reasons why having more relationship experience before tying the knot might make it harder to succeed in marriage.

Here are the 4 reasons:

1. **More Awareness of Alternatives**
2. **Changed Expectations: The Perfect Sexual Lover (in Your Mind)**
3. **More Experience Breaking It Off**
4. **Babies**

I have to quote the one that I've personally encountered in my mentoring – number three: more experience breaking it off. I've seen this commitmentphobia in two women who had "wild" periods in their past who had broken up with cohabitating boyfriends.

It says:

> Cohabitation has characteristics that seem paradoxical. Living with a partner makes it harder to break up than dating, all other things being equal, and often now comes at a time in relationship development where people have not really chosen each other for the future.[8] And yet, cohabiting couples frequently break up, and they are more likely than any other time in history not to end up marrying.[9]
>
> These days, cohabitation has become more a part of the dating scene than a lead-up to marriage. Let's call the phenomenon cohabi*dating*. In this context, some people are getting a lot of experience at leaving serious relationships (or surviving being left). Just as with our prior point, that does not sound bad in one way—at least insofar as people are breaking off relationships that had no future. But it's also true that people tend to get good at things they have a lot of experience doing. People can get good at moving out and moving on.
>
> How does that impact marriage? Some people probably so deeply learn that they can survive leaving a relationship when they are unhappy with it that they leave reasonably good marriages that would have given them and their children the best outcomes in life. They bail too quickly.
>
> Obviously, many others leave very poor or even dangerous marriages only after a lot of agonizing and effort. We're not suggesting divorce is ever easy or that it is not sometimes the best course. But in a day and age when people get so much experience moving out and moving on, we think many may learn to do so too rapidly, and to their detriment.

If you want to get good at relationships, experience may not be the answer. Reading good studies like this, and making decisions that line up with the research is much wiser. As always, never follow your heart. Always follow rational arguments and evidence, and keep connected to a good panel of advisors who have had long-term relationships success. That's the best way to avoid disaster.

# Dr. Tim McGrew on alleged historical errors in the gospels

**Wintery Knight** · 18 March 2016 · Archived copy · Original

I see that Brian Auten of Apologetics 315 is posting a lot of Tim McGrew material on his channel. Timothy J. McGrew (University of Scranton BA Philosophy 1988; Vanderbilt University PhD Philosophy 1992) is a Professor of Philosophy at Western Michigan University.

Here are a couple of Dr. McGrew's videos – with slides! – on alleged errors in the gospels.

**Alleged errors in Mark and Matthew:**

In this lecture, entitled Alleged Historical Errors in the Gospels, Dr. Timothy McGrew critiques seven of the strongest objections to the historical reliability of the Gospels of Mark and Matthew. This is about 55 minutes of content followed by fifteen minutes of Q&A.

More on this talk here. (including MP3)

**Alleged errors in Luke and John:**

In this lecture, entitled Alleged Historical Errors in the Gospels, Dr. Timothy McGrew critiques the strongest objections to the historical reliability of the Gospels of Luke & John. This is about 55 minutes of content followed by thirty minutes of Q&A.

More on this talk here. (including MP3)

Bio of Tim McGrew:

> Dr. Timothy McGrew is Professor of Philosophy at Western Michigan University. He specializes in theory of knowledge, logic, probability theory, and the history and philosophy of science, and he has published in numerous journals including Mind, The Monist, Analysis, British Journal for the Philosophy of Science, and Philosophia Christi. His most recent publications include the article on "Evidence" in The Routledge Companion to Epistemology (forthcoming), a co-authored anthology in The Philosophy of Science (Blackwell, 2009), and a paper (with Lydia McGrew) on the the argument from miracles in The Blackwell Companion to Natural Theology (Blackwell, 2009).

Always remember not to get bogged down in these low-level issues, though, until you have agreement from the skeptic about the higher order issues, e.g. – does God exist? etc. Scientific arguments first, historical and philosophical arguments second, Bible "errors" last of all.

# The Muratorian fragment, dated 170 A.D., affirms 22 out of 27 New Testament books

**Wintery Knight** · 19 March 2016 · Archived copy · Original

The Muratorian Fragment
Lines 32-85

The Muratorian fragment / The Muratorian canon (click for larger image)

I sometimes hear this odd objection that the books that were to be included in the Bible were not decided until the 4th century. I think it comes from some Hollywood movie, or maybe a TV show. Anyway, this post should help fix that myth.

I'm going to quote from New Testament expert Dr. Michael J. Kruger from his blog.

He writes:

> One of the key data points in any discussion of canon is something called the Muratorian fragment (also known as the Muratorian canon). This fragment, named after its discoverer Ludovico Antonio Muratori, contains our earliest list of the books in the New Testament. While the fragment itself dates from the 7th or 8th century, the list it contains was originally written in Greek and dates back to the end of the second century (c.180).
>
> […]What is noteworthy for our purposes here is that the Muratorian fragment affirms 22 of the 27 books of the New Testament. These include the four Gospels, Acts, all 13 epistles of Paul, Jude, 1 John, 2 John (and possibly 3rd John), and Revelation. This means that at a remarkably early point (end of the second century), the central core of the New Testament canon was already established and in place.

Although there is still dispute about some books, that does not negate the fact that the main books we use (the gospels, Acts, the letters of Paul) are all considered to be canon by 180 A.D., much before any famous church councils ever happened. And those books were decided on because they were in widespread use and respected by everyone.

What about the books that were in dispute? Do they throw any core doctrines into doubt?

> Second, if there was a core collection of New Testament books, then the theological trajectory of early Christianity had already been determined prior to the debates about the peripheral books being resolved. So, regardless of the outcome of discussion over books like 2 Peter or James, Christianity's core doctrines of the person of Christ, the work of Christ, the means of salvation, etc., were already in place and already established. The acceptance or rejection of books like 2 Peter would not change that fact.

By the way, I'd actually heard that the date for this fragment was 170 A.D., so it might even be earlier than Dr. Krueger says.

I did search around a bit for something to break the tie between me and Krueger, because I couldn't remember my source for the date. I found this book "Jesus, Gospel Tradition and Paul in the Context of Jewish and Greco-Roman Antiquity" by David E. Aune, and he writes on p. 22:

> The four Gospels are also referred to in the Canon Muratorianus, a seventh or eighth century manuscript originally translated from Greek into a deponent form of Latin and widely regarded as having been produced ca. 170 CE. Though the beginning of this canonical list is fragmentary (though obviously referring to Mark), the first two clear references to New Testament books are to Luke and John (lines 2, 9): tertio euangelii librum secando Lucan guard evangeliorutn lohannis ex decipolis." ("The third book of the Gospel is that according to Luke … The fourth of the Gospels is that of John, [one) of the disciples").

So, that's why the date in the title of this post is 170 A.D., and not the later 180 A.D. he mentions. And that's why there's no reason to be skeptical that the Bible we have today is any different than the Bible that everybody in the early church had.

# Ted Cruz, Rick Perry and Carly Fiorina discuss the 2016 election with Sean Hannity

**Wintery Knight** · 19 March 2016 · Archived copy · Original

Rick Perry, Carly Fiorina and Ted Cruz appear on Fox News with Sean Hannity

Ted Cruz was on Fox News yesterday for a one-hour townhall meeting in Arizona with Sean Hannity, a Trump supporter.

I noted that the Republican National Committee posted that video on Youtube. Is that a sign the establishment is coming over to support the rebel candidate?

Summary:

- Should Ohio Governor John Kasich drop out of the race?
- What will happen if no one gets 1,237 delegates before the GOP convention to choose the nominee?
- What is a brokered convention?
- What is a contested convention?
- Is Donald Trump going to get to 1,237 delegates before the GOP convention?
- Is Ted Cruz going to get to 1,237 delegates before the GOP convention?
- Why does the establishment refuse to get behind candidates who are strong on legal immigration and border security?
- What did Ted Cruz see on the border with Mexico?
- Why aren't Republicans concerned about border security?
- What would Ted Cruz do about sanctuary cities?
- What would Ted Cruz do about e-verify?
- What would Ted Cruz do about tracking entry / exit of people who are given visas?
- What would Ted Cruz do about welfare benefits given to illegal immigrants?
- If Donald Trump is tough on border security, then why did he donate so much money to open borders / pro-amnesty Democrats?
- Has Donald Trump released the New York Times tape where he explained that his real views on border security are much more moderate than he tells the public?

- What would Ted Cruz do to encourage job creators to create more jobs, and rein in government spending?
- What would Ted Cruz do to fix the regulations that are stifling small businesses?
- What would Ted Cruz do to make health care more affordable?
- Surprise guest: why does former CEO of Hewlett-Packard Carly Fiorina support Ted Cruz for President?
- Surprise guest: why does former Governor of Texas Rick Perry support Ted Cruz for President?

Leftist Politico reports that the Cruz Campaign is not wasting any time going after Marco Rubio supporters:

> In Utah, his leadership team moved to lock down the Florida senator's lengthy list of legislative endorsements before next Tuesday's caucus. Cruz is planning to meet with Gov. Gary Herbert Saturday at a campaign kickoff event for Utah Sen. Mike Lee, another Cruz ally. In Washington, several of Rubio's national security advisers signed on with Cruz — after, in part, courting from [Victoria] Coates. And nationally, Cruz's money team is making the case to Rubio's former donors that Cruz's time has come.
>
> Their message: The party is running out of time to stop Donald Trump — and Cruz is the only one who can do it.
>
> […]The broad-based, national effort comes as Cruz seeks to consolidate the anti-Trump wing of the GOP behind his campaign. He lags well behind Trump in delegates, but his team is hopeful that with a united party behind him, he'll turn that deficit into a lead by the time the he heads to the Republican National Convention in July. They insist he could do even better: assemble enough delegates to score an outright win — though that's a path that has narrowed dramatically and remains a long-shot for Cruz.
>
> A win in Utah on Tuesday, however, would be a significant first step toward catching up in the delegate count, and Cruz enjoyed a boost toward that goal Friday when former GOP presidential candidate Mitt Romney—whom Cruz has frequently criticized– said he would vote for Cruz in Utah over Trump and over Ohio Gov. John Kasich.
>
> "A vote for Governor Kasich in future contests makes it extremely likely that Trumpism would prevail," Romney wrote in a Facebook post, echoing Cruz's argument. "I will vote for Senator Cruz and I encourage others to do so as well, so that we can have an open convention and nominate a Republican."

Leftist USA Today reports that Marco Rubio effectively endorsed Ted Cruz earlier this week:

> Marco Rubio hasn't endorsed Ted Cruz, but he seemed to come awfully close during a conference call with supporters this week.
>
> Cruz is "the only conservative left in the race," Rubio told supporters in Minnesota, according to a tape obtained by the Twin Cities *Pioneer Press*.

Meanwhile, leftist CNN reports that even liberal RINO Lindsey Graham is throwing his support behind Ted Cruz:

> In a sign of just how much the Republican presidential primary has turned the party on its head, Sen. Lindsey Graham will headline a fundraiser on Monday in support of Ted Cruz.

> […]Support for Cruz is an about-face for the South Carolina senator, who compared nominating GOP front-runner Donald Trump or Cruz to being shot or poisoned. **He recently mocked Cruz's unpopularity among his colleagues, saying earlier this month: "If you killed Ted Cruz on the floor of the Senate, and the trial was in the Senate, nobody would convict you."**

> “He’s certainly not my preference, but he’s a reliable Republican, conservative, which I’ve had many differences with,” the South Carolina Republican said.
>
> When asked about his dramatic change in stance toward Cruz, Graham admitted that his Senate colleague is “not well liked,” but said, “I have doubts about Mr. Trump, I don’t think he’s a Republican, I don’t think he’s a conservative, I think his campaign’s built on xenophobia, race-baiting and religious bigotry, I think he’d be a disaster for our party and as Senator Cruz would not be my first choice, I think he is a Republican conservative who I could support.”
>
> **On specific issues, Graham said he believes Cruz would be a reliable partner for Israel, would build the Keystone XL pipeline extension, would repeal and replace Obamacare and would nominate a true conservative to be on the Supreme Court.**
>
> Still, Graham said he believes that the third remaining Republican candidate for president, Ohio Gov. John Kasich, would be “the most viable general election candidate,” but that he does not see how Kasich can win the primary.
>
> The move is also a sign that Cruz might be starting to gain traction with his colleagues in the Senate.
>
> Cruz picked up his first Senate endorsement from Utah Sen. Mike Lee last week.

I think it’s amazing that Ted Cruz has actually gotten the liberal Republican establishment to come over and support him, and all without compromising a thing. In my lifetime, I’ve witnessed the slide of the Republican party to the moderate middle. I never thought I would see the day when the moderate middle had to come over to the conservative right. And yet here we are! I pray it’s not too late.

# William Lane Craig debates atheist Lawrence Krauss: Does God Exist?

**Wintery Knight** · 20 March 2016 · Archived copy · Original

British Spitfire and German Messerschmitt Me 109 locked in a dogfight

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

**Summary**

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

**Dr. Craig's opening speech.** (4:50)

1. The kalam cosmological argument:
    - God is the best explanation of the origin of the universe
    - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
    - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning

- Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
- Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
- Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
- A mind is the best explanation for the origin of the universe

2. The unreasonable effectiveness of mathematics:
   - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
   - Mathematical objects can either be abstract objects or useful fiction
   - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
   - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
   - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
   - These constants and quantities have to be set within a narrow range in order to permit intelligent life
   - There are three explanations for this observation: law, chance or design
   - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter
   - Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
   - We do not observe what the world ensemble hypothesis predicts that we should observe
   - Design is the best explanation for finely-tuned constants and quantities
4. The existence of objective moral values and duties
   - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
   - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
   - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
   - The best explanation for the existence of objective moral values and duties is that God exists
5. The historicity of the resurrection of Jesus
   - There are three widely-accepted facts that are best explained by the resurrection hypothesis
   - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
   - Naturalistic attempts to explain these 3 boilerplate facts fail
   - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
   - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

**Dr. Krauss' opening speech.** (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I
   - There have been lots of different gods created by people through history
   - We've gotten rid of all of them by understanding how the universe works by doing science
   - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
   - Newtonian physics refutes the idea that angels push planets around
   - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)

- Biochemistry hasn't explained how life originated, but we will have the solution soon
- Physics shows us that matter can be created and destroyed without need a God
- Physics shows us that universes can be created and destroyed "no problem"

3. Religious pluralism II
   - Since we have been able to disprove all the gods we've invented, why hang on to the last one
   - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
   - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
   - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
   - Peasants had a very low level of knowledge about the world and they believed in God
   - But our level of knowledge has increased over time, so we shouldn't believe in God now
   - Peasants thought that the Earth orbited the Sun, but this is now known to be false
   - The Scriptures said that the Earth orbited the Sun, but now we know that's false from science
7. Christianity plagiarizes from other religions I
   - There is nothing new or special about Jesus
   - He's just as unpleasant as all the other gods
   - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
   - I'll bet most Catholics don't really believe in transubstantiation
   - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
   - Dionysus, Osiris, etc.
10. There is no evidence for the resurrection
    - The stories about Jesus were written "decades or hundreds of years after the fact"
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That's like saying that all alien abductions experts agree that alien abductions happened
    - It's unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume's argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn't demand that we trust him, esteem him and consider his character when we make decisions

- The atoning death of Jesus for the sins of the world also makes no sense

14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who "uses the exact same arguments" that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms "is that morally wrong? I can't say it is frankly" (37:24)
16. Dr. Craig is irrational
    - "I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan"
    - "Any argument that validates God is reasonable to him"
    - "And any argument against it is not only unreasonable but wrong and worth distorting"
    - "Because it must be wrong – he's decided the answer in advance"
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - "So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK"
    - It's not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn't work in all cases
    - "Dr. Craig is so convinced that these arguments must be true that he won't listen to the fact that they're not"
20. Darwinian evolution explains the fine-tuning
    - "Life was fine tuned – we got rid of it with Darwin"
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - "We get back aches" therefore "This argument that [the universe] is fine-tuned for life is nonsense"
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments
    - Look, you can construct arguments that are clearly wrong
    - Premise 1: "All mammals exhibit homosexual behavior"
    - Premise 2: "William Lane Craig is a mammal"
    - Seems to be saying that logical arguments can prove false things "it's nonsense"
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig's faith is so strong that it causes him to distort what this group said

**Discussion:** (44:35)

I will not be summarizing everything that was said, just a few main points.

***The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see.*** Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can't even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don't work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don't have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) "All the evidence suggests that the universe had a beginning but WE DON'T KNOW!!!!!!!" (raising his voice)
- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you  agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this:  (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"

- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

**Audience Q and A:** (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: “I’m going to come to the defense of philosophy for the first time”. Craig: “That’s amazing!” Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

# Simon Brace on the nature of spiritual warfare and a plea to churches

**Wintery Knight** · 20 March 2016 · Archived copy · Original

C.S. Lewis has some words to live by for you

This passionate, challenging lecture has been getting shared a lot on Facebook, so I thought that I would do a summary of it.

First, you can grab the MP3 file here.

Note that this talk is given by a very conservative evangelical Christian who is speaking to Christians. So this is not intended for a non-Christian audience. However, non-Christians are free to tune in if you want to hear a really passionate, fire-breathing conservative evangelical go non-linear over the superficial turn that the evangelical church has taken. If you are familiar with J.P. Moreland's view that spiritual warfare is really about disputing speculations and falsehoods using logic and evidence, then you'll know the meaning of the term "spiritual warfare" he has in mind. When he says spiritual warfare, he means apologetics: knowledge and preparation.

I would really caution you not to listen to this if you are not passionate about defending God's honor. It will overwhelm and upset you. Having said that, this lecture reflects my convictions about the churches need to drop anti-intellectualism and take up apologetics. And not pre-suppositional apologetics, which I think is ineffective, but *evidential* apologetics. Evidential apologetics is effective, which is why everyone in the Bible used it.

About the speaker:

> **Simon Brace** is the Director of Evangelism of Southern Evangelical Seminary. Simon was born in Zimbabwe and grew up in South Africa. Simon has a construction background and has lived in a number of countries and travelled extensively. He has a MA in Apologetics and BA in Religious Studies and is currently working on an MA in Philosophy at SES. Simon leads TEAM which is the missions program of SES on local, national, and international trips. In addition, Simon has worked with Ratio Christi at SES, and has an extensive knowledge of Ratio Christi's history and operation. Simon currently resides in North Carolina with his wife Nel and children, Eva and Olivia.

I liked the second part of the lecture more than the first part, so there is less summarizing of the first part.

Topics:

- What does the New Testament say about spiritual warfare in Ephesians?
- Christian slogans about spiritual warfare sound pious, but they are mistaken
- Today, Christianity is focused on piety and zeal, not on study and knowledge

- The result is that Christianity in the West is in a state of erosion and decline
- What we are doing about spiritual warfare is not working to stop the decline
- Preaching, publishing, programs, retreats, etc. are not very useful for spiritual warfare
- Enthusiasm and passion without knowledge  are not very useful for spiritual warfare
- The Church has a theoretical understanding of spiritual warfare, but no real capability
- Doesn't work: trying to make Christianity seem popular and cool
- Doesn't work: making Christian music and art that non-Christians will like
- Doesn't work: pastors trying to be relevant by having cool clothes and cool haircuts
- Doesn't work: fundamentalists getting angry about peripheral issues
- Doesn't work: not read things apart from the Bible and sound foolish when speaking in the public square
- Doesn't work: church leaders think that careful exegesis and expository preaching is a good answer to skeptics
- What works: we need to train people who are prepared and willing to defend the truth of the Christian faith
- Evangelicalism has a deep suspicion of reading things outside the Bible, so they are unable to refute anything
- Evangelicals are hyper-spiritualized and hysterical, focusing on demons, prophecy and end-times, etc.
- Evangelicals have a pagan view of using their minds to alter reality, which is irrational and superstitious
- Evangelicals like conservative celebrity preachers who do *nothing* to correct anti-intellectualism in the church
- Evangelicals are focused on their personal relationships with Jesus instead of their whole worldview
- Evangelicals focus too much on homeschooling and not enough on how to impact the secular universities
- Church programs for youth are about "strumming guitars and eating pizza once a week", not apologetics
- Evangelicals have an over-inflated view of the effectiveness of their (non-intellectual) evangelism methods
- The primary focus and primary responsibility in spiritual warfare is not dealing with supernatural evil
- The real focus and responsibility in spiritual warfare is specified in 2 Cor 10:3-5
- What we ought to be doing is defeating speculations (false ideas), using logical arguments and evidence
- Defending the faith is not memorizing Bible verses and throwing them out randomly
- Defending the faith is not just preaching the gospel
- Demolishing an argument requires understanding arguments: premises, conclusions, the laws of logic
- We should exchange our pious Bible memorizing skills and the like for a class in critical thinking
- The New Testament requires that elders be capable of *refuting* those who oppose sound doctrine (Titus 1:9)
- It is not enough to preach a good sermon, elders have to be able to defend the Christian faith as well
- People who run conservative seminaries do not mandate that M.Div graduates study apologetics
- Famous pastors like Driscoll, Begg, etc. need to teach other pastors to emphasize apologetics in church
- People in church won't engage the culture unless they have reasons and evidence to believe Christianity is true
- We need a balance of both piety and intellectual engagement
- We need to make our evangelism rooted in the intellect in order to have an influence at the university
- Mission organizations also have a responsibility to defend the faith and not merely preach (1 Peter 3:15)

And here is his closing quote from C.S. Lewis:

> To be ignorant and simple now not to be able to meet the enemies on their own ground would be to throw down our weapons and to betray our uneducated brethren who have, under God, no defense but us against the intellectual attacks of the heathen. Good philosophy must exist, if for no other reason, because bad philosophy needs to be answered.

I was really humbled by this, because I sort of knew that the church was anti-intellectual, but I didn't really reflect on how everyone else in society thinks that we are anti-intellectual. It's troubling. The quickest way to make Biblical Christianity respectable again is to hit the books and defeat all comers in intellectual disputations. Are we ready to make the sacrifices to do that?.

# New poll: Ted Cruz poised to sweep Utah delegates, leading with 53%

**Wintery Knight** · 21 March 2016 · Archived copy · Original

Ted Cruz meets the voters at a campaign stop

The Salt Lake City Tribune reports:

> Texas Sen. Ted Cruz has zoomed to a commanding lead in Utah's GOP caucuses, according to a new poll released Saturday. It also gave a glimpse into how frustrated the state's Republicans are with Donald Trump's candidacy.
>
> The Y2 Analytics survey shows Cruz with 53 percent support among likely Republican caucus-goes and if that matches Tuesday's caucus vote, he'd win all of the state's 40 GOP delegates.
>
> Coming in second is Ohio Gov. John Kasich with 29 percent, while Trump, the national front-runner, was a distant third at 11 percent.
>
> The Y2 Analytics poll was conducted from Thursday to Saturday and included 500 respondents, capturing some of the reaction from public events held by all three of the Republican candidates. Cruz held three public events in Utah on Saturday with Sen. Mike Lee, R-Utah, commentator Glenn Beck and former presidential candidate Carly Fiorina. Kasich and Trump held events on Friday.
>
> […]This is the first poll released in the state in over a month, and the only one since the field narrowed to just three candidates.
>
> It showed that Cruz performed even better among "very likely" caucus attendees, coming in at 57 percent.
>
> **Scott Riding with Y2 Analytics said it appears that a bulk of Florida Sen. Marco Rubio's supporters went to Cruz after he dropped out earlier this week.**
>
> "It is fascinating to see how close Cruz is to wrapping it up," he said. "It is also surprising how discouraged Republicans are with the direction of the national party."

Time to review Cruz's achievements to see why he's the best candidate still running.

**Ted Cruz's record of conservative achievements**

Ted Cruz is also the most qualified candidate running.

Young Conservatives explains his achievements:

- Graduated valedictorian in 1988 from Second Baptist High School

- Graduated cum laude from Princeton University in 1992
- Graduated magna cum laude from Harvard Law School in 1995
- 1992 U.S. National Debate Champion representing Princeton
- 1995 World Debating Championship semi-finalist representing Harvard
- Served a law clerk to Chief Justice William Rehnquist, making him the first Hispanic ever to clerk for a Chief Justice of the United States
- Served as Solicitor General of Texas from 2003 to 2008, making him the first Hispanic Solicitor General in Texas, the youngest Solicitor General in the entire country and the longest tenure in Texas history
- Partner at the law firm Morgan, Lewis & Bockius, where he led the firm's U.S. Supreme Court and national appellate litigation practice
- Authored over 80 SCOTUS briefs and presented over 40 oral arguments before The Court
- Adjunct Professor of Law at the University of Texas School of Law in Austin, where he taught U.S. Supreme Court litigation

Smart guy.

Here are the specifically *conservative* achievements:

- In the landmark case of District of Columbia v. Heller, Cruz assembled a coalition of 31 states in defense of the principle that the 2nd Amendment guarantees an individual right to keep and bear arms
- Presented oral arguments before the United States Court of Appeals for the District of Columbia Circuit
- Defended the Ten Commandments monument on the Texas State Capitol grounds,
- Defended the recitation of the Pledge of Allegiance in public schools
- Defended the State of Texas against an attempt by the International Court of Justice to re-open the criminal convictions of 51 murderers on death row throughout the United States

He's 5 for 9 arguing cases before the Supreme Court. Cruz knows how to convince liberal scholars to come over to his side. That's what he enjoys – persuading people who disagree with him.

Here's some of the legislation he introduced:

- ObamaCare Repeal Act
- Disarm Criminals and Protect Communities Act
- Defund Obamacare Act of 2013
- A bill to amend the National Voter Registration Act of 1993 to permit States to require proof of citizenship for registration to vote in elections for Federal office
- State Marriage Defense Act of 2014
- A bill to amend title 18, United States Code, to prohibit the intentional discrimination of a person or organization by an employee of the Internal Revenue Service
- A bill to prohibit the Department of the Treasury from assigning tax statuses to organizations based on their political beliefs and activities
- American Energy Renaissance Act of 2014
- A bill to deny admission to the United States to any representative to the United Nations who has been found to have been engaged in espionage activities or a terrorist activity against the United States and poses a threat to United States national security interests
- SuperPAC Elimination Act of 2014
- Free All Speech Act of 2014
- A bill to prevent the expansion of the Deferred Action for Childhood Arrivals program unlawfully created by

Executive memorandum on August 15, 2012
- Sanction Iran, Safeguard America Act of 2014

And he has gotten more legislation passed than Marco Rubio in the Senate:

Laws enacted per year in Congress
He has done something to address so many of the things I've been writing about on this blog – voter fraud, IRS discriminating against conservatives, etc. I am a Cruz supporter because I like Cruz, not because I oppose Trump and Rubio.

# Should a man go into full-time apologetics ministry if he intends to marry?

**Wintery Knight** · 21 March 2016 · Archived copy · Original

Congressional Budget Office: Debt to GDP ratio

Lydia McGrew has a post up at What's Wrong With the World blog that is just excellent.

Excerpt:

> Apologetics is wonderful and incredibly important. It's a wonderful thing that a revival of specifically evidentialist apologetics is happening in the United States and even, to some extent, in the Anglophone world at large.
>
> Unfortunately, this revival of interest in apologetics and in being Christian philosophers is coming at a very bad time, economically. Even if you are a genius, your chances in 2013 and following of getting a stable job by the route of going to graduate school in philosophy (or almost any area of the humanities) are pretty darned slim. If you're not a genius, fuhgetaboutit. Nor were there ever all that many jobs in philosophy. It was always an iffy proposition, but it's much worse now than it was even twenty years ago.
>
> As for starting ministries, a poor economy makes it extremely hard to do that, too, because people don't have as much disposable income to donate. Moreover, even in a more robust economy, if all the eager young apologists were to flock to start apologetics and/or campus ministries, they would be competing among themselves for a finite number of available dollars from donors. So that's not the best idea either.
>
> **Let me speak very bluntly here: In my opinion, God doesn't need a whole raft of impractical idealists out there getting themselves into debt or half starving (or really starving) with no idea of how in the world they are ever going to support even themselves, much less a family, out at the other end of their education. That just burdens the church with a large number of able-bodied but needy Christians who are in a seemingly unending stage of transition, "getting an education for the kingdom" or "hoping to do work for the kingdom" without a viable plan in mind or any fiscal light at the end of the tunnel.**
>
> **Instead, I believe that we need an army of tentmakers. If you have a job or a marketable skill, for heaven's sake (literally), don't quit that job and join the ranks of starving students. Keep your day job, but enrich your mind and prepare yourself to answer people's questions about Christianity by studying on your own time. If you have entrepreneurial abilities and the capital, start a business. That will**

> **support not only yourself but others you employ, and if successful, you will have more money to give to Christian ministries.**
>
> **But even if you aren't the entrepreneurial type or don't have that opportunity, at least make sure (to the extent that one can in today's world) that you can pay the rent and put food on your own table as well as supporting whatever number of additional people you plan to take on. (In other words, if you are a guy who would like to get married and have children, bear that in mind.) This will inevitably mean spending time at all that distasteful stuff like networking and making a resume. Bookish types don't enjoy that stuff, because it seems bogus, but it can't be helped. It will undoubtedly mean, for most people, not being full-time students beyond the undergraduate level, especially not in the humanities, not trying to become full-time academics as a life work, and not going into full-time ministry, even if you would ideally like to do one or more of those three things.**
>
> In the end, if we can have this army of tentmakers, there will be (Lord willing) money to allow some people to work in full-time ministry. But it's going to be quite a small proportion of those who are interested or would ideally like to do so.
>
> […]Inevitably, the course of action I am suggesting will mean a bifurcation for many between their day job and what they are most passionately interested in. So be it. Indeed, so it has ever been in the world. What proportion of people at any moment in human history have been blessed enough to spend most of their time working on what they are most passionately interested in? The question answers itself. So I think that bifurcation has to be accepted by a great many people and that doing so will lead to what I might call a healthier "Christian economy" among committed Christians than what we could otherwise end up with.

So let's see her advice in bullet-point form:

- The job market for philosophers is very bad
- A bad economy means less support money is available
- It's important to have a plan to fund your ministry
- Leverage your full-time job to fund your ministry

So I want to make two comments.

**Making bad decisions because you think God is telling you to**

I often find that when I talk to Christians, there is this sort of hyper-spiritualized way of deciding what to do, and I've written about this in one of my favorite posts. Hyper-spiritual Christians read the Bible, which is good, but then they don't tend to also look at practical things like economics, science and public policy when making their decisions. The Bible doesn't say much about what to study or what job to get, but there is an example of Paul working at tent-making in order to fund his ministry. So there is precedent for the idea of learning a trade and working to earn enough money to support our families, our ministry and even other people's ministries.

I think we have an obligation to take the Bible seriously when it tells us what we can do to please God, but coming up with a plan to please God most effectively is our job. We have to make the plans to serve God. Our plans must be within the bounds of Biblical morality, but they should also reflect our knowledge of how the world really works, too. We'll be more successful with a good plan and some hard work. It's very easy to be deceived by our feelings about what we would like to do with our lives. And many people who listen to their feelings and find other impractical people to echo and affirm those feelings make many mistakes in life. I would advise people to be very careful about calling their feelings the voice of God speaking to them, then getting into trouble when their lack of wisdom blows up in their faces.

**Christian men who want marriage without having to get a job**

So that brings me to the concern that I have that I've been thinking about for the last week or so. I have been

thinking about a couple of Christian apologists I know who are interested in marriage, but unwilling to prepare themselves to prepare for a wife and children. They are both very unaware of the economic and political challenges that they are likely to face, which makes the need to prepare financially even more pressing.

One of the Christian men is getting a BA and is in his early 30s. He says that marriage would have to come second to his ministry. He has never worked a full-time job his entire life, and considers getting a full-time job to be beneath him. The other one is in his late 20s and is in a PhD program. He wants marriage right away, but he has never worked in a real job his entire life, either. Both of these Christian apologists are in debt – they have zero assets and negative net worth. How can it be that they can even be considering marriage? Don't they realize what a man's role in marriage is? He is the provider, and that means that he has to have a record of steady work, saving money and being generous at sharing with others. Neither of these men have shown any ability in those areas. Neither of them seems willing to get started on a regular, full-time, private sector job. And neither seems to want to take Lydia's advice and finance their ministry / marriage from a regular, full-time job. Neither of these students can even afford a wedding or even a wedding ring. Do they even understand what a woman needs from her husband?

So what's the problem? I talked this over with a wise friend and she said that feminism has become so widespread in this society that a lot of men think that they can contemplate marriage without having a record of earning and saving. They don't see that men have any distinct "provider" role in a marriage. They sort of expect to get the benefits of marriage with none of the "provider" responsibilities. Many women have also been taken in by feminism, and cannot evaluate men to see which ones are able to work and save and provide, and which ones aren't. I don't think young people are being taught how to apply the Bible to the practical challenges of marriage, or how to recognize the challenges of the times we live in.

# Stephen C. Meyer debates Charles Marshall on the Cambrian explosion

**Wintery Knight** · 21 March 2016 · Archived copy · Original

Christianity and the progress of science

Here is a summary of recent podcast of Unbelievable between intelligent design proponent Stephen C. Meyer and UC Berkeley evolutionary biologist Charles Marshall. Dr. Marshall had previously reviewed Dr. Meyer's new book "Darwin's Doubt" in the prestigious peer-reviewed journal "Science".

Details:

> Stephen C Meyer is the world's leading Intelligent Design proponent. His new book Darwin's Doubt claims that the Cambrian fossil record, which saw an "explosion" of new life forms in a short space of time, is evidence for ID.
>
> Evolutionary biologist Charles Marshall of the University of California, Berkeley has written a critical review of the book. He debates Meyer on whether Darwinian evolution can explain the diversity of life in the Cambrian rocks.
>
> For Meyer & Darwin's Doubt:
> http://www.darwinsdoubt.com/
>
> For Charles Marshall's review:
> http://www.sciencemag.org/content/341/6152/1344.1.full

You can get the MP3 file here.

The brief summary this time is not provided by me, it's from Evolution News.

Excerpt:

> This past weekend Britain's Premier radio network broadcast a debate between Stephen Meyer and UC Berkeley paleontologist Charles Marshall, recorded at the beginning of November. As David Klinghoffer noted yesterday, the subject of the debate was Meyer's book *Darwin's Doubt*. Yes, that's the same Charles Marshall who reviewed *Darwin's Doubt* in *Science* back in September. See here for our multiple responses.

> It was an excellent debate, with both participants offering important insights and good arguments, though in my opinion Meyer unquestionably had the better of it, especially concerning the key scientific question of the origin of the information necessary to build the Cambrian animals. Nevertheless, both parties came to the table ready to engage in serious, thoughtful, and civil discussion about the core issues raised in *Darwin's Doubt*, and we commend Marshall not only for participating, but for focusing his critique of the book on the central scientific issues, something other critics have conspicuously failed to do.
>
> The debate was consequently both constructive and civil. Both parties complimented, as well as critiqued, the work of the other. Marshall, for example, described the first third of *Darwin's Doubt* — the section that discusses the Cambrian and Precambrian fossil record, Marshall's own area of principle expertise — as "good scholarship." He also said it "looks like good science" and that Meyer "writes well," and that he (Marshall) "really enjoyed reading"*Darwin's Doubt*. Meyer, for his, part expressed his admiration for Marshall's many scientific papers in paleontology and noted that he had been looking forward to the conversation because he and Marshall clearly "shared a passion for the same subject," despite their different perspectives. Of course, Marshall is not pro-ID and both men expressed spirited disagreements, but they did so in a mostly respectful way that made the debate all the more interesting and engaging to listen to.

I was very impressed with Dr. Marshall's performance during the debate, although he did try to poison the well a bit against ID at the beginning, and he got nasty at the end. It's amazing how Dr. Meyer was able to get him to stop it with the politics and get serious, just by sticking to the science. Even when Marshall got insulting at the end, it was still valuable to see how the other side has to abandon rational argument and scientific evidence once they see that they can't win on the merits. It's "Inherit the Wind" in reverse.

Evolution News also posted a more complete guide to the debate in this post, and I recommend that you read that post before listening to the debate if you are not familiar with the science.

This is a great debate, and you definitely ought to listen to it. I hope I've posted enough here to convince you. If you haven't yet bought "Signature in the Cell" and "Darwin's Doubt", then I urge you to get them, although they are intermediate/advanced level books. The two books are the state of the art in intelligent design research, good enough to be debated with a University of California, Berkeley professor of biology. Dr. Meyer is the real deal, and if you want to be convincing on these important scientific issues, you need to learn the scientific evidence from his books.

If you are not a regular reader of the Evolution News blog, you really should be. It's also a good idea to subscribe to the Intelligent Design: The Future podcast.

# Ted Cruz raised $12 million dollars last month alone

**Wintery Knight** · 22 March 2016 · Archived copy · Original

Texas senator Ted Cruz, his wife Heidi Cruz and their two daughters

This article from the left-leaning Houston Chronicle has some amazing news about Cruz's fundraising.

It says:

> Big money flew through the checking account of Texas Sen. Ted Cruz's presidential campaign in February, when it reported its highest monthly income and expenditures to date, soaring above the GOP pack. And for the first time, the Cruz campaign spent more than it took in.
>
> Fresh federal filings posted Sunday show a dramatic uptick in campaign costs and contributions for the period that spanned from Cruz's unexpected win in Iowa, the nation's first primary contest, to the day before his momentum seemed to fall behind frontrunner Donald Trump in a string of Super Tuesday votes on March 1.
>
> Cruz's Houston-based campaign took in $12 million in February, according to Federal Elections Commission records, compared in $7.6 million in January and $20.5 million in the last three months of 2015 combined.

The article also notes that Trump is lying about his campaign being self-funded – he takes donations, just like all the other candidates:

> Trump has collected $7.7 million in contributions since he launched his campaign in June, in spite of his repeated assertion that he self-funds the operation. He has lent his campaign $17.5 million.

I don't think it's a good idea to support a candidate who says things that are not true, then has to back away from them after. If he lies about silly stuff like this, then what will happen when he has to tell the truth about something important?

It's a good thing that Cruz is surging, because the polls show that Trump cannot beat Hillary Clinton:

| | | | |
|---|---|---|---|
| General Election: Trump vs. Clinton | CNN/ORC | Clinton 53, Trump 41 | Clinton +12 |
| General Election: Trump vs. Sanders | CNN/ORC | Sanders 58, Trump 38 | Sanders +20 |
| General Election: Cruz vs. Clinton | CNN/ORC | Clinton 48, Cruz 48 | Tie |
| General Election: Cruz vs. Sanders | CNN/ORC | Sanders 55, Cruz 42 | Sanders +13 |

Latest polls show Trump losing to Clinton head-to-head, but Cruz ties with Clinton

I'm really hoping that Cruz can pull off a winner-take-all victory in Utah, which he will if he gets over 50% of the vote. And if Cruz wins in Arizona, that could mean that he will have more delegates than Trump at the time of the GOP convention.

# Pediatricians warn against indoctrinating kids in transgenderism

**Wintery Knight** · 22 March 2016 · Archived copy · Original

Lets take a closer look at a puzzle

The American College of Pediatricians, an organization that values the needs of vulnerable children above the desires of selfish adults, has issued a statement about teaching children about transgenderism. (H/T George, Katy, Kevin, William)

Intro:

> The American College of Pediatricians urges educators and legislators to reject all policies that condition children to accept as normal a life of chemical and surgical impersonation of the opposite sex. Facts – not ideology – determine reality.

They have 8 points, here they are:

1. **Human sexuality is an objective biological binary trait: "XY" and "XX" are genetic markers of health – not genetic markers of a disorder.**
2. **No one is born with a gender. Everyone is born with a biological sex. Gender (an awareness and sense of oneself as male or female) is a sociological and psychological concept; not an objective biological one.**
3. **A person's belief that he or she is something they are not is, at best, a sign of confused thinking.**
4. **Puberty is not a disease and puberty-blocking hormones can be dangerous.**
5. **According to the DSM-V, as many as 98% of gender confused boys and 88% of gender confused girls eventually accept their biological sex after naturally passing through puberty.**
6. **hildren who use puberty blockers to impersonate the opposite sex will require cross-sex hormones in late adolescence. Cross-sex hormones (testosterone and estrogen) are associated with dangerous health risks including but not limited to high blood pressure, blood clots, stroke and cancer.**
7. **Rates of suicide are twenty times greater among adults who use cross-sex hormones and undergo sex reassignment surgery, even in Sweden which is among the most LGBQT – affirming countries.**
8. **Conditioning children into believing a lifetime of chemical and surgical impersonation of the opposite sex is normal and healthful is child abuse.**

Number 7 is the one that I thought was the most interesting:

> **Rates of suicide are twenty times greater among adults who use cross-sex hormones and undergo sex reassignment surgery, even in Sweden which is among the most LGBQT – affirming countries.**[11] What compassionate and reasonable person would condemn young children to this fate knowing that after puberty as many as 88% of girls and 98% of boys will eventually accept reality and achieve a state of mental and physical health?

The source for that 88% of girls and 98% of boys is the American Psychiatric Association's DSM, 5th edition. Seems to me that it doesn't make any sense to steer these children towards something irreversible, (surgery!), when they will reverse themselves in a few years. Especially when giving them the drugs and performing the surgery can increase the risk of suicide – even in countries that are more affirming of the gay agenda.

It turns out that being "nice" by lying to someone doesn't always lead to that person's happiness. Sometimes, telling someone a hard truth that they don't want to hear is the best thing for them. A lot of things we do when we are young are not good for us, and the longer it gets dragged out, the more harm is caused.

# Professor explains how his study of the historical Jesus made him leave atheism

**Wintery Knight** · 22 March 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

Dr. Michael F. Bird has a great article in Christianity Today. I've featured his debates with atheist historican James Crossley on this blog before, and I have the book they co-wrote.

In the article, Dr. Bird writes:

> I grew up in a secular home in suburban Australia, where religion was categorically rejected—it was seen as a crutch, and people of faith were derided as morally deviant hypocrites. Rates for church attendance in Australia are some of the lowest in the Western world, and the country's political leaders feel no need to feign religious devotion. In fact, they think it's better to avoid religion altogether.
>
> As a teenager, I wrote poetry mocking belief in God. My mother threw enough profanity at religious door knockers to make even a sailor blush.
>
> Many years later, however, I read the New Testament for myself. The Jesus I encountered was far different from the deluded radical, even mythical character described to me. This Jesus—the Jesus of history—was real. He touched upon things that cut close to my heart, especially as I pondered the meaning of human existence. I was struck by the early church's testimony to Jesus: In Christ's death God has vanquished evil, and by his resurrection he has brought life and hope to all.
>
> When I crossed from unbelief to belief, all the pieces suddenly began to fit together. I had always felt a strange unease about my disbelief. I had an acute suspicion that there might be something more, something transcendent, but I also knew that I was told not to think that. I "knew" that ethics were nothing more than aesthetics, a mere word game for things I liked and disliked. I felt conflicted when my heart ached over the injustice and cruelty in the world.
>
> Faith grew from seeds of doubt, and I came upon a whole new world that, for the first time, actually made sense to me. To this day, I do not find faith stifling or constricting. Rather, faith has been liberating and transformative for me. It has opened a constellation of meaning, beauty, hope, and life that I had been indoctrinated to deny. And so began a lifelong quest to know, study, and teach about the one whom Christians called Lord.

And now specifics:

> For many secularists, Ehrman is a godsend who propagates common misconceptions about Jesus and the early church. He believes there was a spectrum of divinity between gods and humans in the ancient world.

> Therefore, he asserts that the early church's beliefs about Jesus evolved: from a man exalted to heaven to an angel who became human to a pre-existent "divine" person who became incarnate to a subordinated or lesser god to being declared one with God.
>
> **My faith and studies have led me to believe otherwise. First-century Jews and early Christians clearly demarcated God from all other reality, thus leading them to hold to a very strict monotheism. That said, Jesus was not seen as a Greek god like Zeus who trotted about earth or a human being who morphed into an angel at death. Rather, the first Christians redefined the concept of "one God" around the person and work of Jesus Christ. Not to mention the New Testament writers, especially Luke and Paul, consistently identify Jesus with the God of Israel.**
>
> **Many people get the idea that Jesus was just a prophet and never claimed to be divine. But a careful look at the Gospels shows that the historical Jesus explicitly claimed to exercise divine prerogatives. He identified himself with God's activity in the world. He believed that in his own person, Israel's God was returning to Zion, just as the prophets had promised. And he claimed he would sit on God's throne. These claims, when studied up close, are de facto claims to divine personhood, the reasons religious leaders of the day were so outraged.**
>
> Evidence shows that Jesus claimed to be God incarnate, and within 20-some years after his death and resurrection, Christians were identifying him with the God of Israel, using the language and grammar of the Old Testament to do so.
>
> Sure, some sects in the first few centuries held heretical beliefs about Jesus. But the mainstream, orthodox view of Christ's identity was always consistent with and rooted in the New Testament, though orthodox Christology became more refined in the following centuries.

It's definitely true that you can recover a high Christology (a view of Jesus as divine) from the earliest gospel, Mark. I wrote about it in a previous post. But the earliest evidence for Jesus is that creed in 1 Corinthians 15, that I blogged about recently.

Here is his conclusion:

> Some have great confidence in skeptical scholarship, and I once did, perhaps more than anyone else. If anyone thinks they are assured in their unbelief, I was more committed: born of unbelieving parents, never baptized or dedicated; on scholarly credentials, a PhD from a secular university; as to zeal, mocking the church; as to ideological righteousness, totally radicalized. But whatever intellectual superiority I thought I had over Christians, I now count it as sheer ignorance. Indeed, I count everything in my former life as loss because of the surpassing worth of knowing the historical Jesus who is also the risen Lord. For his sake, I have given up trying to be a hipster atheist. I consider that old chestnut pure filth, in order that I may gain Christ and be found in him, not having a CV that will gain me tenure at an Ivy League school, but knowing that I've bound myself to Jesus—and where he is, there I shall also be.

I recently led a Bible study on the passage he is paralleling there – it comes from my *favorite* book of the Bible, Philippians.

What I like about Bird's story is that he was a skeptic, and his study of history is what changed his mind. This contradicts a narrative that young people are sold at the university, which is that the more education you have, the more you turn away from theism in general, and Christianity in particular. I wouldn't even classify him as a super conservative scholar, by any means – he's just a good scholar who believes whatever he thinks is historically sound. It just turns out that you can recover enough historically to ground a commitment to Jesus Christ. You can't get *everything* as a historian, but you get enough to cause a change of mind about who Jesus was.

# Which government policies enable terrorist attacks like the one in Belgium?

**Wintery Knight** · 23 March 2016 · Archived copy · Original

So, there was another terrorist attack in Belgium, and before I have a stab at explaining what caused it, I want to hear from 5 prominent Democrats about what they think about terrorism.

Here's Bernie Sanders explaining his view:

And here's Hillary Clinton explaining her view:

And here's Obama and John Kerry explaining their view:

And Obama's attorney general Loretta Lynch explaining her view:

Well, that's what Democrats think about radical Islamic terrorism.

But what is the real cause of the frequent terrorist attacks in Europe that are committed by radicalized Muslims?

Muslim populations in Europe

The left-leaning The Atlantic has an article that talks about radical Islamic terrorism in Belgium:

> French authorities say they believe Abdelhamid Abaaoud, a 27-year-old Belgian man, masterminded the November 13 attacks in Paris.
>
> The focus on Abaaoud helps emphasize how tiny Belgium has taken on an oversized role in the European theater of jihad. The country has provided a steady flow of fighters to ISIS in the Middle East—including Abaaoud—and has been the site of planning of attacks in Europe. (*The Daily Beast* has a good timeline of incidents involving Belgian militants.)
>
> Abaaoud was already suspected of planning a prior attack that was foiled by Belgian authorities in the days after January's *Charlie Hebdo* attacks in Paris. Two suspects were killed in the operation. At the time, *Slate*'s Joshua Keating warned: "The Belgian police may claim today to have 'averted a Belgian Charlie Hebdo,' but it's clear that the country's radicalization problem is much larger, and will take more than police raids to address." Those words proved prophetic.
>
> Belgium has just 11 million people, and Pew estimated that about 6 percent of the population was Muslim as

> of 2010. But Belgian and French nationals make up around a quarter of the Europeans who went to fight in Iraq in the mid-2000s. While the government has acknowledged that hundreds of Belgians have gone to fight with ISIS or for other groups in the Syrian civil war, Pieter Van Ostaeyen, an independent researcher, calculated in October that 516 Belgians had fought in Iraq or Syria, far higher than the government's figures. Based on his numbers, Belgium has contributed more fighters per capita to the fight in the Levant than any other European country.
>
> […]**Belgian jihadism seems to mimic French Islamist militancy, only more concentrated—as befits the smaller country. Both have large numbers of immigrants who are poorer and isolated from the dominant culture.**

So, it's not just that the generous European socialists in Belgium took in lots and lots of Muslim immigrants, it's that they took in lots and lots of *unskilled* Muslim immigrants, who struggle to integrate because they struggle to find work. Belgium, like other socialist countries in Europe, offers generous welfare programs to those who do not work. That's a big draw to people in Middle Eastern countries.

The problem with offering generous welfare programs and welcoming in millions of illegal immigrants who cannot easily assimilate is twofold. First, eventually, socialists run out of other people's money with which to bribe their unskilled immigrants. Second, everyone knows that making your own way through your own work is what makes people happiest. No one who is dependent on others (via social welfare programs) can truly be content. All of us deep down have a desire to be the author of our own success – to eat the food that we have earned with our own productive labor. Skilled immigrants can make their own way, but unskilled immigrants cannot.

It is good to have a system of legal immigration, in order to attract the a few of the best and brightest from other countries. If we take in a few at a time, then there is time for them to assimilate. And they can earn their own pay because they are skilled immigrants who came into the country to work. But it's a mistake to let in millions and millions of unskilled immigrants who often cannot even speak the languages of Western nations.

So why did so many European countries import so many unskilled immigrants? The answer is simple.

Consider this article from the UK Daily Mail.

Excerpt:

> Ministers today faced calls for an inquiry into claims that their open-door immigration policy was designed to make Britain more multicultural and allow Labour to portray the Tories as racists.
>
> A former Labour adviser alleged that the Government opened up Britain's borders in part to try to humiliate Right-wing opponents of immigration…
>
> The Daily Mail reported on Saturday the controversial claims by Andrew Neather, who worked for Tony Blair and Jack Straw.
>
> He said Labour's relaxation of immigration controls in 2000 was a deliberate attempt to engineer a 'truly multicultural' country and plug gaps in the jobs market.
>
> He said the 'major shift' in immigration policy was inspired by a 2001 policy paper from the Performance and Innovation Unit, a Downing Street think-tank based in the Cabinet Office…
>
> Ministers were reluctant to discuss the move publicly for fear that it would alienate Labour's core working-class vote, Mr Neather said. But they hoped it would allow them to paint the Conservatives as xenophobic and out of touch.
>
> 'I remember coming away from some discussions with the clear sense that the policy was intended – even if this wasn't its main purpose – to rub the Right's nose in diversity and render their arguments out of date,' Mr Neather added.

The parties of the left in Europe viewed mass immigration of unskilled immigrants as a way of creating a voting bloc that could be counted on to vote for bigger government, higher taxes, and more spending. The frequent terrorist attacks that we are seeing now are nothing but the outworking of this policy of deliberately bringing in millions of *unskilled immigrants* in order to get their votes for more welfare spending when they could not find jobs and pay their own way. We should be very careful about doing the same here. We must learn from the mistakes of leftist policies that have been tried in other places, in other times. We have to look beyond the compassionate rhetoric and ask “then what happened next?”.

# Michigan public schools to let students choose gender, name and bathroom

**Wintery Knight** · 23 March 2016 · Archived copy · Original

National Education Association

Do you think that the decision described in this Daily Caller article was made by parents or local school boards? (H/T Kris)

Excerpt:

> Michigan's State Board of Education has drafted a guidance that would push the state's schools to allow all students, regardless of parental or doctoral input, to choose their gender, name, pronouns, and bathrooms.
>
> Spearheaded by board president John C. Austin and signed by state superintendent Brian Whiston, the guidance informs **Michigan public schools** that only the students themselves–i.e. not their parents or doctors–can determine what their individual gender identities are.
>
> "The responsibility for determining a student's gender identity rests with the student. Outside confirmation from medical or mental health professionals, or documentation of legal changes, is not needed," the guidance states.
>
> Gender identity is defined in the guidance as "a person's deeply held internal sense or psychological knowledge of their own gender, regardless of the biological sex they were assigned at birth."
>
> **Notably, the guidance makes no mention of a student's age affecting whether or not they can pick a gender without their parent or doctor.**
>
> **In fact, the guidance seems to intentionally cut parents out of the process.**
>
> The guidance states: "School staff should address students by their chosen name and pronouns that correspond to their gender identity, regardless of whether there has been a legal name change."
>
> Students can even ask to have their chosen name and gender "included in the district's information management systems, in addition to the student's legal name."
>
> **But what about when school staff members are speaking with parents about their son or daughter?**

> **The guidance states that "Transgender and GNC [gender nonconforming] students have the right to decide when, with whom, and to what extent to share private information."**
>
> **Accordingly, the board makes clear, "When contacting the parent/guardian of a transgender or GNC student, school staff should use the student's legal name and the pronoun corresponding to the student's assigned sex at birth, unless the student or parent/guardian has specified otherwise."**
>
> **In other words, a boy named "Jake" could become a girl named "Jane" at school, seemingly without his parents ever knowing.**
>
> Names, pronouns, and genders aren't the only things the board wants students to choose.
>
> The guidance informs schools that "Students should be allowed to use the restroom in accordance with their gender identity."
>
> […]Locker rooms also should become inclusive of students' many gender identities. "A student should not be required to use a locker room that is incongruent with their gender identity," the guidance states. "Locker room usage should be determined on a case-by-case basis, using the guiding principles of safety and honoring the student's gender identity and expression."
>
> […]The board quietly issued the statement and guidance on February 23rd, without a press release.
>
> […]Board president John Austin did not immediately reply to The Daily Caller's request for comment.

Previously, I wrote a post explaining why young Christians who are considering getting married and having children need to prepare themselves to bypass the public school sytem. It's becoming increasingly clear that Christian parents cannot look to the public schools as allies in parenting their children in a way that respects the Christian convictions of the parents. The public schools are not allies.

Since Christian parents are forced to pay for public schools whether they use them or not, Christian parents should be voting for the political party that seeks to lower taxes, shrink government, and push control of education down to the state and local levels. Christian parents should also support politicians who are in favor of school choice – giving parents vouchers that allow parents to use the money for private schools or homeschooling options.

We need to get a lot smarter and vote for smaller government, local control of education and accountability to parents. The public schools are basically controlled by the sexual revolutionaries, e.g. – abortion providers, gay activists, etc. And that's not even to mention the socialists, the global warming alarmists, the moral relativists, etc. If your goal for your children is to teach them marketable skills and basic moral values, then you need to get as far away from the public schools as possible. Including mandatory funding of them.

By the way, I should note that among his many other excellent qualifications, Ted Cruz also plans to abolish the federal Department of Education and push control of education down to the state and local levels. That would be a good start. He also plans to abolish four more federal departments, and push control down to the state and local level there, as well.

# Nabeel Qureshi: the Quran inspires radical Muslims to commit Islamic terrorism

**Wintery Knight** · 23 March 2016 · Archived copy · Original

A conflict of worldviews

Dr. Nabeel Qureshi, a former Muslim, explains which verses of the Qu'ran are linked to Islamic terrorism in a USA Today editorial.

Excerpt:

> As a Muslim growing up in the United States, I was taught by my imams and the community around me that Islam is a religion of peace. My family modeled love for others and love for country, and not just by their words. My father served in the U.S. Navy throughout my childhood, starting as a seaman and retiring as a lieutenant commander. I believed wholeheartedly a slogan often repeated at my mosque after 9/11: "The terrorists who hijacked the planes also hijacked Islam."
>
> Yet as I began to investigate the Quran and the traditions of Muhammad's life for myself in college, I found to my genuine surprise that the pages of Islamic history are filled with violence. How could I reconcile this with what I had always been taught about Islam?
>
> […]The Quran itself reveals a trajectory of jihad reflected in the almost 23 years of Muhammad's prophetic career. As I demonstrate carefully in my book, *Answering Jihad: A Better Way Forward*, starting with peaceful teachings and proclamations of monotheism, Muhammad's message featured violence with increasing intensity, culminating in surah 9, chronologically the last major chapter of the Quran, and its most expansively violent teaching. Throughout history, Muslim theologians have understood and taught this progression, that the message of the Quran culminates in its ninth chapter.
>
> **Surah 9 is a command to disavow all treaties with polytheists and to subjugate Jews and Christians (9.29) so that Islam may "prevail over all religions" (9.33). It is fair to wonder whether any non-Muslims in the world are immune from being attacked, subdued or assimilated under this command. Muslims must fight, according to this final chapter of the Quran, and if they do not, then their faith is called into question and they are counted among the hypocrites (9.44-45). If they do fight, they are promised one of two rewards, either spoils of war or heaven through martyrdom. Allah has made a bargain with the *mujahid* who obeys: Kill or be killed in battle, and paradise awaits (9.111).**
>
> Muslim thought leaders agree that the Quran promotes such violence. Maajid Nawaz, co-founder of the

> Quilliam Foundation in the United Kingdom, has said, “We Muslims must admit there are challenging Koranic passages that require reinterpretation today. … Only by rejecting vacuous literalism are we able to condemn, in principle, ISIS-style slavery, beheading, lashing, amputation & other medieval practices forever (all of which are in the Quran). … Reformers either win, and get religion-neutral politics, or lose, and get ISIL-style theocracy.” In other words, Muslims must depart from the literal reading of the Quran in order to create a jihad-free Islamic world.
>
> This is not at all to say that most Muslims are violent. The vast majority of Muslims do not live their lives based on chapter 9 of the Quran or on the books of jihad in the hadith. My point is not to question the faith of such Muslims nor to imply that radical Muslims are the true Muslims. Rather, I simply want to make clear that while ISIL may lure youth through a variety of methods, it radicalizes them primarily by urging them to follow the literal teachings of the Quran and the hadith, interpreted consistently and in light of the violent trajectory of early Islam. As long as the Islamic world focuses on its foundational texts, we will continue to see violent jihadi movements.

So, any attempt to engage with Muslims will require us to address the texts that they appeal to when they justify their actions. Both Republicans and Democrats try to gloss over the specific passages of the Qu’ran which are troublesome. They claim that Islam, interpreted literally, is a religion of Peace. And they claim that distorting the words of the Qu’ran results in a Jihadi ideology. That’s not accurate. It’s not distortion of the Qu-ran that is causing the problems, it’s taking those passages literally.

There are troubling passages in the Bible, as well, where God is in a theocratic relationship with the Jewish people and commands them to attack their enemies. But the difference is that those verses are not effective in the present day, for present day Christians. Christians are under a new Covenant with a new High Priest, Jesus. This new covenant tells Christians to love our enemies and to pray for those who persecute us. Are moderate Muslim scholars and Western politicians ready to face the real challenge?

# Latest poll shows Ted Cruz leading Trump 36% to 35% in Wisconsin

**Wintery Knight** · 24 March 2016 · Archived copy · Original

How to get kissed: Heidi Cruz helping her husband

Grassroots conservative web site Red State reports on the latest Monmouth poll of Wisconsin voters from Wednesday night.

Excerpt:

> We're two weeks away from the Wisconsin primary, which is shaping up to be pretty close to a must-win for Ted Cruz.
>
> […]That's why this new Monmouth poll is huge news for Cruz, if true:
>
> BOSTON, MA – As establishment Republicans look for ways to slow Donald Trump's relentless march toward the party's presidential nomination, Wisconsin's winner-take-all GOP primary contest on April 5 offers some intriguing possibilities. In a statewide Emerson College poll released today, Texas Senator Ted Cruz is not only leading Trump 36% to 35% in the upcoming primary, but Cruz is only trailing Hillary Clinton by one point in a hypothetical general election matchup, 46% to 45%. In contrast, Trump is trailing both Clinton and her Democratic rival, Bernie Sanders, by the same 9-point margin of 47% to 38% in a potential general election match-up.
>
> This is the first time this race has been polled since before Super Tuesday, so it is the only accurate picture of the race we have at all.

Unfortunately, Wisconsin has an open primary, so Cruz will have to beat not just leftist Republican voters, but also registered Democrats who cross over to vote for Trump.

**Scott Walker to endorse Cruz?**

My original first pick in the primary was Wisconsin Governor Scott Walker. Walker fought and defeated the big labor unions in Wisconsin, so that he could balance the budget for taxpayers without raising taxes on them.

The Wisconsin State Journal reports this from him:

> Texas Sen. Ted Cruz is the only viable alternative to front-runner Donald Trump in the Republican presidential primary, Gov Scott Walker said Wednesday hinting at a possible endorsement.

> "If you're someone who is uneasy with the front-runner right now, there's really only one candidate," Walker said in a taped interview that aired on WTMJ Wednesday morning. "Ted Cruz is the only one who's got a chance other than Donald Trump to win the nomination statistically, and my friend Gov. (John) Kasich cannot."

I really hope that Walker endorses Cruz, and that the people of Wisconsin vote for substance. Let's take a look at some reasons why people should prefer Ted Cruz to Donald Trump in this election.

**Ted Cruz's record of conservative achievements**

Young Conservatives explains his achievements:

- Graduated valedictorian in 1988 from Second Baptist High School
- Graduated cum laude from Princeton University in 1992
- Graduated magna cum laude from Harvard Law School in 1995
- 1992 U.S. National Debate Champion representing Princeton
- 1995 World Debating Championship semi-finalist representing Harvard
- Served a law clerk to Chief Justice William Rehnquist, making him the first Hispanic ever to clerk for a Chief Justice of the United States
- Served as Solicitor General of Texas from 2003 to 2008, making him the first Hispanic Solicitor General in Texas, the youngest Solicitor General in the entire country and the longest tenure in Texas history
- Partner at the law firm Morgan, Lewis & Bockius, where he led the firm's U.S. Supreme Court and national appellate litigation practice
- Authored over 80 SCOTUS briefs and presented over 40 oral arguments before The Court
- Adjunct Professor of Law at the University of Texas School of Law in Austin, where he taught U.S. Supreme Court litigation

Smart guy.

Here are the specifically *conservative* achievements:

- In the landmark case of District of Columbia v. Heller, Cruz assembled a coalition of 31 states in defense of the principle that the 2nd Amendment guarantees an individual right to keep and bear arms
- Presented oral arguments before the United States Court of Appeals for the District of Columbia Circuit
- Defended the Ten Commandments monument on the Texas State Capitol grounds,
- Defended the recitation of the Pledge of Allegiance in public schools
- Defended the State of Texas against an attempt by the International Court of Justice to re-open the criminal convictions of 51 murderers on death row throughout the United States

He's 5 for 9 arguing cases before the Supreme Court. Cruz knows how to convince liberal scholars to come over to his side. That's what he enjoys – persuading people who disagree with him.

Here's some of the legislation he introduced:

- ObamaCare Repeal Act
- Disarm Criminals and Protect Communities Act

- Defund Obamacare Act of 2013
- A bill to amend the National Voter Registration Act of 1993 to permit States to require proof of citizenship for registration to vote in elections for Federal office
- State Marriage Defense Act of 2014
- A bill to amend title 18, United States Code, to prohibit the intentional discrimination of a person or organization by an employee of the Internal Revenue Service
- A bill to prohibit the Department of the Treasury from assigning tax statuses to organizations based on their political beliefs and activities
- American Energy Renaissance Act of 2014
- A bill to deny admission to the United States to any representative to the United Nations who has been found to have been engaged in espionage activities or a terrorist activity against the United States and poses a threat to United States national security interests
- SuperPAC Elimination Act of 2014
- Free All Speech Act of 2014
- A bill to prevent the expansion of the Deferred Action for Childhood Arrivals program unlawfully created by Executive memorandum on August 15, 2012
- Sanction Iran, Safeguard America Act of 2014

And he has gotten more legislation passed than Marco Rubio in the Senate.

I have to be fair on this blog, so if we are going to look at the record of Ted Cruz, we should also look at the record of Donald Trump.

# Disney, Marvel, NFL and Apple threaten to boycott Georgia over religious freedom bill

**Wintery Knight** · 24 March 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

This story is from the Washington Times.

Excerpt:

> Walt Disney Co. and its subsidiary Marvel are threatening not to shoot films in Georgia if the governor signs a religious liberty bill that the opponents say is discriminatory against gays and the transgendered.
>
> "Disney and Marvel are inclusive companies, and although we have had great experiences filming in Georgia, we will plan to take our business elsewhere should any legislation allowing discriminatory practices be signed into state law," a Disney spokesman said in a statement.
>
> The boycott threat comes after Human Rights Campaign President Chad Griffin issued a clarion call for Hollywood to stop doing business in Georgia after the legislature passed the Free Exercise Protection Act.
>
> Republican Gov. Nathan Deal has not indicated whether he will sign the bill.

The bill would originally have protected religious liberty and conscience over the demand of gay activists that anyone who disagrees with them be punished:

> […]The bill initially would have allowed Georgians to decline service for same-sex weddings if doing so violated their religious beliefs. But, sensing the coming storm, Mr. Deal urged lawmakers to make substantial changes to the legislation before passing it.

But then protections for religious liberty and conscience were removed:

> "I know there are a lot of Georgians who feel like this is a necessary step for us to take," Mr. Deal said during deliberations over the bill. "I would hope that in the process of these last few days, we can keep in mind the concerns of the faith-based community, which I believe can be protected without setting up the situation where we could be accused of allowing or encouraging discrimination."
>
> The new version of the bill says the protections do not apply in cases of "invidious discrimination," which could mean religious wedding vendors would not be protected from declining to service same-sex marriage

> ceremonies.
>
> The Atlanta Convention and Visitors Bureau said this week that it has heard from at least 15 companies that are considering pulling convention business out of Atlanta if the legislation becomes law. ACVB President and CEO William Pate said the loss of that business could cost the city up to $6 billion, the Atlanta Business Chronicle reported.
>
> Conservatives accused Georgia of gutting the bill's primary purpose.
>
> "It is unfortunate that the Georgia legislature caved to pressure from big business and special interests to water down their weakened bill even further," wrote the Heritage Foundation's Roger Severino and Ryan Anderson at the Daily Signal. "Other states must stand vigilant against such cultural cronyism."

And for me, this story just reinforces why I don't have a television, why I don't go to movies in the theater, and why I don't buy comic books or other products from entertainment companies.

I also don't follow American football because the NFL has been anti-Christian and anti-family for some time.

The Daily Signal explains:

> A CBS News/Associated Press story Sunday, headlined "NFL warns state of Georgia over 'religious freedom' bill," reported that "the NFL acknowledged that the religious exemptions bill … could have an impact on the selection process for the championship game in 2019 and 2020." Atlanta is one of four cities up for the next two Super Bowls.
>
> […]"NFL policies emphasize tolerance and inclusiveness, and prohibit discrimination based on age, gender, race, religion, sexual orientation, or any other improper standard," spokesman Brian McCarthy said in a statement, adding that the NFL may evaluate "whether the laws and regulations of a state and local community are consistent with these policies" when looking at Super Bowl contenders.
>
> Yes, because tolerance and inclusiveness require making sure people of faith who don't support same-sex marriage have no freedom to live in accordance with their beliefs.

ESPN is also on record as being anti-Christian and anti-family, which is why I never tune them in. Why would I choose to be influenced by people who disagree with free speech, religious liberty and conscience protections?

I've blogged before about Apple's opposition to religious liberty and conscience rights. And they are involved in the Georgia legislation as well:

> "We urge Gov. Deal to veto the discriminatory legislation headed to his desk and send a clear message that Georgia's future is one of inclusion, diversity, and continued prosperity," said Apple in a statement. Hundreds of companies are part of Georgia Prospers, a coalition that told The New York Times that the bill "could harm our ability to create and keep jobs that Georgia families depend upon."

I don't use Apple products, not even if they are given to me for free.

**Atlanta fire chief Kelvin Cochran**

This might be a good time to recall what happened to the Atlanta fire chief Kelvin Cochran with this story is from the Daily Signal.

Excerpt:

> Cochran's book, published in 2013 and called "Who Told You That You Were Naked?," expresses a biblical view on marriage and addresses homosexuality from his Christian perspective.
>
> […]Fast-forward a few months, and Cochran received a 30-day suspension without pay, **after an LGBT**

> **activist group started to protest the book.**
>
> “LGBT citizens deserve the right to express their beliefs regarding sexual orientation, and deserve to be respected for their positions without hate and discrimination,” Cochran said, according to a January article from The Atlanta-Journal Constitution. “But Christians also have the right to express their beliefs regarding sexual orientation and be respected for their position without hate and without discrimination.”
>
> After 34 years as a firefighter, Cochran’s fairy-tale career came to a halt in January due to his personal views on gay marriage.

Just to refresh your memory, this is what religious freedom laws are supposed to defend against:

Everyone knows that big government and big labor unions are opposed to conservative values. Big business, contrary to popular myth, is also not conservative. Small businesses are conservative, but big businesses are not conservative. It’s very important for Christians to understand who is opposed to religious liberty so that we can vote accordingly. The right to behave as a Christian in public should be our number one concern.

# Is cohabitation a better way to prepare for marriage than courting?

**Wintery Knight** · 24 March 2016 · Archived copy · Original

Painting: "Courtship", by Edmund Blair Leighton (1888)
Consider this assessment of cohabitation from the liberal New York Times.

Excerpt:

> AT 32, one of my clients (I'll call her Jennifer) had a lavish wine-country wedding. By then, Jennifer and her boyfriend had lived together for more than four years. The event was attended by the couple's friends, families and two dogs.
>
> When Jennifer started therapy with me less than a year later, she was looking for a divorce lawyer. "I spent more time planning my wedding than I spent happily married," she sobbed. Most disheartening to Jennifer was that she'd tried to do everything right. "My parents got married young so, of course, they got divorced. We lived together! How did this happen?"
>
> Cohabitation in the United States has increased by more than 1,500 percent in the past half century. In 1960, about 450,000 unmarried couples lived together. Now the number is more than 7.5 million. The majority of young adults in their 20s will live with a romantic partner at least once, and more than half of all marriages will be preceded by cohabitation. This shift has been attributed to the sexual revolution and the availability of birth control, and in our current economy, sharing the bills makes cohabiting appealing. But when you talk to people in their 20s, you also hear about something else: cohabitation as prophylaxis.
>
> In a nationwide survey conducted in 2001 by the National Marriage Project, then at Rutgers and now at the University of Virginia, nearly half of 20-somethings agreed with the statement, "You would only marry someone if he or she agreed to live together with you first, so that you could find out whether you really get along." About two-thirds said they believed that moving in together before marriage was a good way to avoid divorce.

That's a nice idea – wanting protection against divorce. But I think these hopeful attitudes that young people have

about cohabitation and the utility / harmlessness of premarital sex, is so much whistling past the graveyard. The fact is that cohabitation does not improve marital stability.

The New York Times author assesses the evidence about cohabitation:

> Couples who cohabit before marriage (and especially before an engagement or an otherwise clear commitment) tend to be less satisfied with their marriages — and more likely to divorce — than couples who do not. These negative outcomes are called the cohabitation effect.
>
> **Researchers originally attributed the cohabitation effect to selection, or the idea that cohabitors were less conventional about marriage and thus more open to divorce. As cohabitation has become a norm, however, studies have shown that the effect is not entirely explained by individual characteristics like religion, education or politics. Research suggests that at least some of the risks may lie in cohabitation itself.**
>
> As Jennifer and I worked to answer her question, "How did this happen?" we talked about how she and her boyfriend went from dating to cohabiting. Her response was consistent with studies reporting that most couples say it "just happened."
>
> "We were sleeping over at each other's places all the time," she said. "We liked to be together, so it was cheaper and more convenient. It was a quick decision but if it didn't work out there was a quick exit."
>
> She was talking about what researchers call "sliding, not deciding." Moving from dating to sleeping over to sleeping over a lot to cohabitation can be a gradual slope, one not marked by rings or ceremonies or sometimes even a conversation. Couples bypass talking about why they want to live together and what it will mean.

Cohabitation is associated with *higher risks of divorce* because it works to undermine the need for quality communication during courting and the need for commitment that is based on discipline, instead of pleasure. People slide into something that looks like marriage because the sex pulls them in. But they've never taken the time to talk about what the relationship is really about, and whether they are intending to commit to the other person for life, and on what terms, and for what reason. Young people find these conversations difficult and scary for a reason – they are not capable of discussing relationships in terms of self-sacrifice, self-control, and self-denial.

The focus on early sex is caused by a focus on wanting to get to pleasure right away. They want relationships to be like a consumer good, where they get their needs met without having to talk about suitability for roles, and acceptance of responsibilities and obligations. In my experience, young people are terrified of the responsibilities, obligations and expectations of a real commitment. They want relationships to be free,easy and fun – where they just get to do whatever they feel like, moment by moment. And somehow, it's all supposed to work out, without anyone talking seriously about roles and responsibilities and commitment.

But of course that doesn't work as well as keeping your distance and getting to know each other first. It's not just compatibility that is important, though – it's that both people need to prepare for the roles and responsibilities they will have in a marriage, and demonstrate to each other that each is capable of performing those roles.

**What's the answer?**

Research has shown that pre-marital chastity produces more stable and higher quality marriages. And that's because chastity helps people to focus on *conversations and obligations* instead of the *recreational sex* which clouds the judgment and glosses over the seriousness of marriage. Premarital sex rushes the relationship to the point where it is harder to break it off because of the sunk costs of sex and the pain of the break-up. Courtship is the time to discuss the things that break up marriages, like finances and division of labor. It is the time to demonstrate self-control and fidelity. Courting doesn't allow either person to get control of the relationship through sex, so that they can get their needs met without having to care about the other person. When sex is ruled off the table, the only way to have the relationship go on is by serving the other person and showing them that you have what it takes to do the marriage role you're assigned. That's hard work, but young people need to accept that and get on with preparing for

and practicing their marriage responsibilities.

**Why not go back to courting?**

If you asked me, I would tell you that courting is protection against a painful break-up as well as protection against a bad marriage. And the aim of courting is to interview the other person so that you can see whether they understand the demands of the marriage and whether they can perform their duties to their spouse and children. In particular, men should investigate whether the woman has prepared (or is willing to prepare now) to perform her roles as wife and mother, and women should investigate whether the man has prepared to perform his roles as protector, provider and moral/spiritual leader (or is willing to prepare now). Courting is not designed to be fun, although it can be fun. It is not meant to make people feel happy, it is mean to prepare them for marriage. And this is because you cannot translate fun and happy into marriage, because marriage is about well-defined roles, self-sacrifice and commitment. Marriage is about following through for the other person, whether you get what you want or not. You'd be surprised how often people give up on courting and show that their real goal for a relationship is not lifelong self-sacrificial love at all, but just using other people for their own happiness while they keep their distance from the responsibilities, obligations and expectations of the marriage covenant.

And that's why I encourage men to very gently and subtly guide the relationship in a way that will allow both the woman and the man to practice their expected marital duties, see how they feel about their duties and get better at being able to perform them. Men have the most to lose from the divorce courts, if things go south. That's why it is the man's the responsibility to detect and reject women who are only interested in fun and thrills.

# Todd Starnes: Ted Cruz is the best candidate to defend religious liberty

**Wintery Knight** · 25 March 2016 · Archived copy · Original

Ted Cruz explains policy to little girl who wants to be President

Tony Perkins of the Family Research Council, my second favorite think tank behind the Heritage Foundation, is advising the Ted Cruz campaign about religious liberty issues. They've actually made a list of things for him to do if he is elected President. Since this issue is the core of my being – it animates my whole life plan – I was curious to see what Cruz intends to do about religious liberty.

Here is Todd Starnes of Fox News writing about it:

> America's Christian bakers and florists and wedding planners will be safe under a Ted Cruz presidency.
>
> "I am absolutely convinced in my discussions with the senator that religious liberty will be a lot better off in America with a Cruz administration," said Tony Perkins, president of the Family Research Council and Chair of Cruz's Religious Liberty Advisory Council.
>
> The council released exclusively to me its initial recommendations for both legislative and executive actions that will restore the nation's First Freedom – the freedom of religion.
>
> […]The council, made up of prominent religious leaders, recommended 15 action items that will protect Americans from discrimination by the federal government on the basis of their view of marriage and also protect employers threatened by the HHS contraception mandate.
>
> […]The council is also calling on Cruz to direct a review of the IRS' treatment of religious organizations and to direct federal agencies to respect the free exercise of religion.

The list includes measures to promote religious liberty at the Department of Education, the IRS, the Department of Health and Human Services, the armed forces, and in the federal government as a whole.

Cruz has a record on defending religious liberty:

> **Cruz has been a passionate advocate of religious liberty for years. He's been in the front line trenches defending our First Freedom – helping secure courtroom victories to preserve the Texas Ten Commandments monument and the Mojave Desert Veterans Memorial.**
>
> "As president, I have pledged on my first day in office to rescind every single one of President Obama's unconstitutional executive actions, and to direct every federal agency to respect and protect the religious

> liberty of every American," Cruz said.
>
> His vow is certainly welcome news to American Christians who have been subjected to eight years of vicious attacks by militant LGBT and atheist groups – not to mention the Obama administration.
>
> "Our constitutional liberties should not be subject to the whims of the current administration, and – whether Hobby Lobby or the Little Sisters of the Poor – people of faith should not be made to bow down at the altar of political correctness," Cruz said.

I took a look over the names of the people on his panel of policy advisors, and was surprised to see people I actually know on it. You probably know these names as well: Jay Wesley Richards, Everett Piper, Bishop Harry Jackson, Ken Blackwell, and Jason Benham. Jason Benham has had to face discrimination himself, when his show was pulled because of his Christian worldview. If I had to pick a scholar who has the same interests as me across the board, it would probably be Jay Richards. So, needless to say, I'm pretty pleased with this. Seems to me like we have been losing, losing, losing at religious liberty for the last 8 years under Obama and his Democrat allies in the House, Senate, federal government and Supreme Court. If Cruz wins, thins are going to change for us on this all-important issue. I just want to be free to be me, and not to be punished for disagreeing with other people on issues of morality and conscience.

I guess it goes without saying that Donald Trump is the polar opposite of Cruz on all of these issues. That's why it's important to me that someone with a record of standing up for religious liberty at the Supreme Court wins the nomination. I don't want someone who only has talk – and Trump's talk isn't even that encouraging. He's promised gay rights activists "forward motion" on gay rights. I think we've had enough of #NewYorkValues already under Obama, Mr. Trump.

By the way, if you're not listening the Family Research Council Washington Watch Weekly podcast, please subscribe. They cover everything from social issues, to fiscal issues, to foreign policy. One of their frequent guests is retired Lt. General William G. Boykin, who is also on Cruz's foreign policy advisory committee, which I blogged about before.

# Republican governors signing pro-life legislation in several states

**Wintery Knight** · 25 March 2016 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve of red state legislatures and governors

For the rest of Easter weekend, I have scheduled 5 posts on the resurrection. But this post is all about the wonderful pro-life legislation that our Republican governors and legislatures are enacting into law in red states.

Let's start with something from last month, with Kentucky Governor Matt Bevin.

Life Site News reports:

> Kentucky governor Matt Bevin promised to make pro-life issues a top priority, and Tuesday he made good on his promise.
>
> Matt Bevin signed an informed consent bill requiring that biological facts and medical information be given to mothers in person or by real-time video at least 24 hours before an abortion.
>
> "The overwhelming support for Senate Bill 4 in the Kentucky legislature is a positive step toward protecting the emotional and physical health and safety of women," Bevin said in a statement before signing the bill.
>
> Bill supporters say the reason the bill was necessary is because many abortionists circumvent the law by having mothers listen to a prerecorded message over the phone.
>
> […]Gov. Bevin chose this as the very first bill he signed into law. He put his signature to it as soon as legislators delivered it to him. The bill informing mothers of the medical and biological facts related to gestation and abortion becomes the Bluegrass State's first new pro-life law in twelve years.
>
> Pro-life legislation was previously roadblocked by the Democrat-controlled state House.

Here's one from earlier this month, from South Dakota Governor Dennis Gaugaard.

Life News reports:

> South Dakota just became the next state to protect unborn babies from painful, late-term abortions.
>
> On Thursday, Gov. Dennis Gaugaard signed into law a bill to ban abortions after 20 weeks and penalize doctors who do late-term abortions in non-emergency situations, the Argus Leader reports. Penalties for violations of the law include up to a year in jail and a $2,000 fine, according to the report. The only exceptions would be in certain medical emergency cases, the report states.
>
> […]The state House passed the pro-life measure last week, LifeNews reported.
>
> South Dakota has one abortion clinic left, a Planned Parenthood in Sioux Falls that does abortions up to 14 weeks; however, the new bill would ensure that later abortions will not be done in the future in the state. More than 18,000 very late-term abortions are performed every year on perfectly healthy unborn babies in America.
>
> […]The bill is modeled after the Pain-Capable Unborn Child Protection Act, which has become law in 12 states: Alabama, Arkansas, Georgia, Idaho, Kansas, Louisiana, Nebraska, North Dakota, Oklahoma, Texas, West Virginia and Wisconsin.

The next one is from Indiana, where pro-life Governor Mike Pence signed a pro-life bill into law this week. This bill will prevent abortions of babies who are the “wrong sex”, the “wrong race”, or who have disabilities such as Down syndrome.

Life News reports:

> Indiana has become the second state in the nation, following North Dakota, to ban abortions on babies who are diagnosed in the womb as having Down syndrome. Gov. Mike Pence signed the bill today to protect unborn babies from being aborted simply because of a disability, race or sex.
>
> Pence signed House Bill 1337, which would ban abortion doctors from knowingly aborting an unborn baby solely because of a genetic disability such as Down syndrome, the unborn baby’s race or sex. The bill also has several other abortion-related measures, including a requirement that aborted or miscarried babies’ bodies be cremated or buried and another requirement that abortionists who have hospital admitting privileges renew them annually. The burial/cremation requirement backs up a law passed in 2015 by Gov. Pence requiring that aborted babies’ bodies be disposed of in a humane way.
>
> “Throughout my public career, I have stood for the sanctity of life. HEA 1337 is a comprehensive pro-life measure that affirms the value of all human life, which is why I signed it into law today,” Governor Pence said in a statement.
>
> Pence continued: “I believe that a society can be judged by how it deals with its most vulnerable—the aged, the infirm, the disabled and the unborn. HEA 1337 will ensure the dignified final treatment of the unborn and prohibits abortions that are based only on the unborn child’s sex, race, color, national origin, ancestry, or disability, including Down syndrome.”

The next one concerns Arizona, where pro-life Governor Doug Ducey is set to sign three pro-life bills into law.

Life News reports:

> Three pro-life bills are on their way through the Arizona legislature and soon could be on Gov. Doug Ducey’s desk.
>
> On Wednesday, the Arizona House gave preliminary approval to the bills, and a final vote is expected on Thursday, according to the Arizona Daily Star. The bills, already passed in the state Senate, would regulate the use of dangerous chemical abortion drugs, ban the trafficking of aborted babies’ body parts and remove abortion groups from the state employee charitable giving program.
>
> Specifically, state Senate Bill 1324 would ban dangerous chemical abortions after the seventh week of

> pregnancy, as the drug label recommends. Abortion clinics often use the chemical abortion drug regimen RU-486 later in pregnancy and give smaller doses than recommended, likely in an effort to save money.
>
> […]The second bill, state Senate Bill 1474, would end the inhumane treatment of aborted babies' bodies by abortion clinics and research facilities. Arizona state Sen. Nancy Barto, R-Phoenix, introduced the bill earlier this year, saying she was "shocked" by the undercover videos by the Center for Medical Progress showing top Planned Parenthood officials selling aborted babies' body parts.
>
> […]The final bill, Arizona Senate Bill 1485, would ban abortion groups from the state employee charitable giving program. The ban is a continuation of a move last year by Gov. Ducey to kick out Planned Parenthood from the program.
>
> […]State legislators in the Senate also are considering a separate bill that would make it easier to defund the Planned Parenthood abortion business.

The fourth story is about South Carolina Governor Nikki Haley, who recently endorsed Ted Cruz for President.

The Daily Wire reports:

> South Carolina Gov. Nikki Haley, who is openly pro-life, will sign a bill into law that would ban killing babies in the womb after 20 weeks of pregnancy.
>
> The bill, titled the Pain-Capable Unborn Child Protection Act, was already passed by the South Dakota legislature on March 9; it has already been made law in Alabama, Arkansas, Georgia, Idaho, Kansas, Louisiana, Nebraska, North Dakota, Oklahoma, Texas, West Virginia and Wisconsin. Nebraska was the first state to pass the law, in 2010.
>
> Last September, Senate Democrats blocked the Senate's version of the bill, as the vote was in favor, 54-42, but fell short of a 60-vote sum that would have prevented a filibuster. Ted Cruz voted for the bill while Bernie Sanders opposed the bill; Hillary Clinton has opposed the measure.
>
> […]In 2012, Haley signed the Opt Out of Abortion Act and the Born-Alive Infant Protection Act. The Born-Alive Infant Protection Act would protect unborn children who are born alive after a failed abortion but would be left to die afterward.

And finally, for those who like some religious liberty along with their defending the lives of unborn children, Campus Reform reports that Kansas Governor Sam Brownback signed into law a bill to protect the religious liberty of student groups on public university campuses.

It was a great week!

# What's the earliest historical report of the resurrection of Jesus?

**Wintery Knight** · 25 March 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

First, the creed – which is found in 1 Corinthians 15:3-8:

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Almost all historians accept this creed as dating back to within 5 years of the death of Jesus. But why?

Here's an article about this early creed from ancient historian Gary Habermas.

Quote:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: "However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul's."[3]
>
> (2) In addition to Paul's own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all

> significant. Fuller attests to the unanimity of scholarship here: “It is almost universally agreed today that Paul is here citing tradition.”[4] Critical scholars agree that Paul received the material well before this book was written.[5]
>
> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul’s use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus’ resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).
>
> Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it “indubitably goes back to the oldest phase of all in the history of primitive Christianity.”[7] Joachim Jeremias agrees that it is, “the earliest tradition of all.”[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even “in use by the end of 30 AD . . . .”[9]
>
> Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that “the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . .”[10] Similarly, Michael Goulder thinks that it “goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion.”[11] Thomas Sheehan agrees that this tradition “probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion.”[12] Others clearly consent.[13]
>
> Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul’s reception of this report relatively soon after Jesus’ death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.
>
> (3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, “Evidently the tradition of I Cor. 15.3 had been subjected to many tests” by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul’s Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul’s word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul’s account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus’ resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus’ appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his firsthand, direct approval of their resurrection message.

Here’s a great article from Eric Chabot, director of Ratio Christi Apologetics Alliance, The Ohio State University to explain who accepts this creed. It’s not just conservatives!

Excerpt:

> Even the co-founder Jesus Seminar member John Dominic Crossan, writes:

> “Paul wrote to the Corinthians from Ephesus in the early 50s C.E. But he says in 1 Corinthians 15:3 that “I

> handed on to you as of first importance which I in turn received." The most likely source and time for his reception of that tradition would have been Jerusalem in the early 30s when, according to Galatians 1:18, he "went up to Jerusalem to visit Cephas [Peter] and stayed with him fifteen days" (11).
>
> This comment by Crossan makes sense because within the creed Paul calls Peter by his Aramic name, Cephas. Hence, if this tradition originated in the Aramaic language, the two locations that people spoke Aramaic were Galilee and Judea. (12) The Greek term "historeo" is translated as "to visit" or "to interview." (13) Hence, Paul's purpose of the trip was probably designed to affirm the resurrection story with Peter who had been an actual eyewitness to the resurrected Christ (1 Cor. 15:5).

Now the Jesus Seminar was a radical group of scholars – these were not moderates. Crossan himself admitted to being an atheist in his debate with William Lane Craig. So here you have an atheist admitting that 1 Cor. 15:3-8 is early and in contact with eyewitnesses.

# What are the historical arguments for the empty tomb story?

**Wintery Knight** · 26 March 2016 · Archived copy · Original

Sherlock Holmes and John Watson are going to take a look at the data

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection.

**The word resurrection means bodily resurrection**

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

**There are multiple early, eyewitness sources for the empty tomb**

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think otherwise. As E. L. Bode observes, the notion of the occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

A few quotes from atheist historians not from Dr. Craig's article: (thanks to Eric of Ratio Christi OSU)

> Michael Goulder (Atheist NT Prof. at Birmingham) "…it goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion." ["The Baseless Fabric of a Vision," in Gavin D'Costa, editor, Resurrection Reconsidered (Oxford, 1996), 48.]
>
> Gerd Lüdemann (Atheist Prof of NT at Göttingen): "…the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus…not later than three years… the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE." [The Resurrection of Jesus, trans. by Bowden (Fortress, 1994), 171-72.]
>
> Robert Funk (Non-Christian scholar, founder of the Jesus Seminar): "…The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about 33 C.E. On the assumption that Jesus died about 30 C.E., the time for development was thus two or three years at most." [Roy W. Hoover, and the Jesus Seminar, The Acts of Jesus, 466.]

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s. For example, the atheist scholar James Crossley dates Mark some time in the 40s. (See the debate below)

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the

> Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

So we are dealing with very early sources for the empty tomb.

**Lack of legendary embellishments**

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

**The eyewitness testimony of the women**

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover the empty tomb. The fact that women, whose testimony was worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

**The earliest response from the Jewish high priests assumes the empty tomb**

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

**See it used in a debate**

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

# Why does atheist historian Gerd Ludemann accept the post-mortem experiences of the risen Jesus?

**Wintery Knight** · 26 March 2016 · Archived copy · Original

A conflict of worldviews

William Lane Craig explains why even atheist historians like Gerd Ludemann accept that the earliest followers of Jesus had experiences in which Jesus appeared to them as resurrected Lord.

Excerpt:

> Fact #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead*. This is a fact which is almost universally acknowledged among New Testament scholars, for the following reasons:
>
> 1. The list of eyewitnesses to Jesus's resurrection appearances which is quoted by Paul in I Cor. 15. 5-7 guarantees that such appearances occurred.
>
> 2. The appearance traditions in the gospels provide multiple, independent attestation of such appearances.
>
> With respect to the first supporting line of evidence, it is universally accepted on the basis of the early date of Paul's tradition as well as the apostle's personal acquaintance with many of the people listed that the disciples did experience postmortem appearances of Christ. Among the witnesses of the resurrection appearances were Peter, the immediate circle of the disciples known as "the Twelve," a gathering of 500 Christian believers (many of whom Paul evidently knew, since he was aware that some had died by the time of his writing), Jesus's younger brother James, and a wider group of apostles. "Finally," says Paul, "as to one untimely born, he appeared also to me" (I Cor. 15.8).
>
> The second supporting line of evidence appeals again to the criterion of multiple attestation. The Gospels independently attest to postmortem appearances of Jesus, even to some of the same appearances found in Paul's list. Wolfgang Trilling explains,
>
> From the list in I Cor. 15 the particular reports of the Gospels are now to be interpreted. Here may be of help what we said about Jesus's miracles. It is impossible to 'prove' historically a particular miracle. But the totality of the miracle reports permits no reasonable doubt that Jesus in fact performed 'miracles.' That holds analogously for the appearance reports. It is not possible to secure historically the particular event. But the totality of the appearance reports permits no reasonable doubt that Jesus in fact bore witness to himself in such

> a way.38
>
> The appearance to Peter is independently attested by Paul and Luke (I Cor. 15.5; Lk. 24.34), the appearance to the Twelve by Paul, Luke, and John (I Cor. 15.5; Lk. 24:36-43; Jn. 20.19-20), the appearance to the women disciples by Matthew and John (Mt. 28.9-10; Jn. 20.11-17), and appearances to the disciples in Galilee by Mark, Matthew, and John (Mk. 16.7; Mt. 28. 16-17; Jn. 21). Taken sequentially, the appearances follow the pattern of Jerusalem-Galilee-Jerusalem, matching the festival pilgrimages of the disciples as they returned to Galilee following the Passover/Feast of Unleavened Bread and traveled again to Jerusalem two months later for Pentecost.
>
> Lüdemann himself concludes, "It may be taken as historically certain that Peter and the disciples had experiences after Jesus's death in which Jesus appeared to them as the risen Christ."39 Thus, we are in basic agreement that following Jesus's crucifixion various individuals and groups of people experienced appearances of Christ alive from the dead. The real bone of contention will be how these experiences are best to be explained.

Triablogue notes that most historians accept these post-mortem experiences of the risen Jesus:

> In their 2004 book, Gary Habermas and Michael Licona mention five facts accepted by the large majority of scholars:
>
> 1. Jesus died by crucifixion.
> 2. Jesus' disciples believed that he rose and appeared to them.
> 3. The church persecutor Paul was suddenly changed.
> 4. The skeptic James, brother of Jesus, was suddenly changed.
> 5. The tomb was empty.
>
> Habermas and Licona write:
>
> "On the state of Resurrection studies today, I (Habermas) recently completed an overview of more than 1,400 sources on the resurrection of Jesus published since 1975. I studied and catalogued about 650 of these texts in English, German, and French. Some of the results of this study are certainly intriguing. For example, perhaps no fact is more widely recognized than that early Christian believers had real experiences that they thought were appearances of the risen Jesus. A critic may claim that what they saw were hallucinations or visions, but he does not deny that they actually experienced something….roughly 75 percent of scholars on the subject accept the empty tomb as a historical fact." (The Case for the Resurrection of Jesus [Grand Rapids, Michigan: Kregel Publications, 2004], pp. 60, 70)
>
> Habermas and Licona explain that even "the majority of nonbelieving scholars" (p. 149) accept such facts, not just Christian scholars. And even many professing Christian scholars are Christian in name, but reject much of what Christians have traditionally believed. Skeptics sometimes suggest that a scholarly consensus on facts related to Jesus' resurrection isn't of much significance, because so many of the scholars are Christians, but *traditional* Christians make up only a small percentage of scholarship.

When talking about the appearances, the challenge is always to make the move from "through they saw" to "they actually saw". In chapter 6 of their introductory book on the resurrection of Jesus, "The Case for the Resurrection of Jesus", Mike Licona and Gary Habermas give some reasons why the post-mortem appearances of Jesus were not hallucinations. First, they argue that hallucinations are had by individuals, not groups. Second, they argue that the hallucination hypothesis leaves the empty tomb unexplained. It also doesn't explain the appearances to skeptical James and antagonistic Paul. Finally, the appearance narratives are too varied to be hallucinations, i.e. – individuals, groups, friends, enemies, different times and different places.

If you want to read a scholarly response to the hallucination hypothesis, it's right in the article by Dr. Craig that I was quoting from above. He assesses the hallucination hypothesis as put forward by atheist scholar Gerd Ludemann

against the standard criteria for judging multiple competing historical explanations. It's too much to quote here, but click through and read it when you can. If you want to see a good summary of the arguments for the empty tomb, go right here.

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

# Bible study: Was the resurrection body of Jesus spiritual or physical?

**Wintery Knight** · 27 March 2016 · Archived copy · Original

Sherlock Holmes and John Watson are going to take a look at the data

So, everyone from left to right accepts the early creed in 1 Corinthians 15:3-7 being dated to 1-3 years after the death of Jesus, even atheists like Crossley, Ludemann and Crossan. The thing is, some people are not sure that the appearances of Jesus to individuals, groups, and skeptics really were physical appearances. They say "well, Paul's appearance was non-physical, so the other ones must have been, too".

Let's take a look.

Here's a paragraph from my friend Eric Chabot, from his blog Think Apologetics. He explains why Paul's use of the word "resurrection" to describe what the other witnesses saw means *bodily* resurrection.

He writes:

> If Paul did have a vision then the term "vision" is vague and must be defined. As Licona points out, visions are either objective (i.e., something that is seen without the use of our natural senses) or subjective (i.e., a product of our minds). The real problem is with the vision hypothesis is that it doesn't explain Paul's use of resurrection to explain what had happened to Jesus. The two words are used for resurrection in the New Testament "anastasis" (rising up) and "egersis" (waking up), both imply a physical body**.** Furthermore, the use of the word "opethe" (the Greek word for appeared) shows the Gospel writers did believe that Jesus appeared physically. "There you will see (opethe) him" (Matt. 28:7); "The Lord has risen and has appeared (opethe) to Simon" (Luke 24:24). When they used "opethe" here, it means that He appeared physically to them.

> So when Paul gives his list of appearances in 1 Cor. 15, the issues becomes whether the appearance to him is the same as it was to the disciples. There is no doubt the post resurrection body of Jesus (after the ascension) had to be somewhat different than the body the disciples saw. Also, whenever the New Testament mentions the word body, in the context of referring to an individual human being, the Greek word "soma" always refers to a literal, physical body.Greek specialist Robert Gundry says "the consistent and exclusive use of soma for the

> physical body in anthropological contexts resists dematerialization of the resurrection, whether by idealism or by existentialism." [9] Furthermore, in N.T. Wright's The Resurrection of the Son of God shows that the Greek word for resurrection which is "anastasis" was used by ancient Jews, pagans, and Christians as bodily in nature.

Now, I think my view on this, and I'm not sure if Eric would correct me, is that Paul got an objective but non-physical vision of Jesus. There was something there that everyone else could see and hear, in my view. But in my view Paul's "veridical" vision was post-ascension, and so non-physical. Paul uses the word resurrection to describe what the other eyewitnesses saw (and he met them at least twice, according to Gal 1 and Gal 2), and that means physical resurrected body.

Eric Chabot writes this in another place:

> **Acts 9- Paul's Damascus Road Experience**
>
> Here we see whatever happened, this was after the ascension. Hence, to say Paul saw the exact same Jesus before he ascended is hard to infer from the text. There simply isn't enough information here. The Bible says, "they heard" the same voice Paul did " (Acts 9: 7). But they "did not see anyone " (Acts 9: 7). Notice Paul was physically blinded by the brightness of the light. One way or the other, the experience involved something that was external to Paul. It wasn't something that was the same thing as a vision that Paul talks about in 2 Cor. 12:1. Furthermore, the phrase "he let himself be seen"' (ōphthē , aorist passive, ), is the word Paul uses in 1 Cor. 15:7 to describe of his own resurrection appearance as the other ones in the creed. As Paul Barnett says:
>
> "It is sometimes claimed that the word appeared (ōphthē) means a mystical seeing, as of a vision, and that since this was what Paul "saw" it was what the other apostles "saw." In other words, after death, Jesus was taken directly to heaven whence he "appeared" to various people, mystically, as it were. This however, is not all the meaning of Paul's words. First, the word ōphthē, "appeared" is not limited to visionary seeing it is also used for physical seeing. Moreover, the verb raise used in the phrase 'raised on the third day" is used elsewhere in combination with the words "from the dead" which literally means "from among the corpses." Thus raised preceding appeared gives the latter a physical not a mystical meaning. Christ, as "raised from the dead" ….appeared." Furthermore, when Paul asks " Am I not free? Am I not an apostle? Have I not seen Jesus our Lord?"(1 Cor. 9: 1), he is using the ordinary word horan, "to see" for physical sight. If "seeing" the Lord "raised from the dead" qualified others to be apostles, then Paul is, indeed, an apostle. It was no mere subjective vision that arrested Paul en route to Damascus. (8) .
>
> In the end, word studies can't entirely resolve this issue. We need to remember the etymological fallacy as well. We would have to look at all the texts that speak of resurrection (including the entire 1 Cor. 15 chapter in their entire context as well as the anthropology of the New Testament. We also need to study the resurrection in light of the Second Temple Jewish period. See our reading list here for some resources that may help.

But conservative ancient historian Gary Habermas seems to think that Paul got the physical body as well.

He says:

> Now, I said before in 1 Corinthians 15, Paul could have chosen to only use the word *pneuma*. He doesn't. He does say "spiritual," but he's got an adjective there. He also says, *soma*, "body." What did Paul mean?

> Philippians Chapter 3. It's a short chapter. There are 21 verses, but Paul says three things in one chapter that indicate he's talking about a physical resurrection. In the opening verses he says, "I was a Hebrew of the Hebrews" and "as touching the law," he says, "I was a Pharisee." Now, it's very well known that the Pharisee believed in a bodily resurrection. In fact, according to Acts 23, as Paul was being taken captive by the Romans to prevent his being killed, he shouted out to the group of people and said, "Why are you taking me? Because I believe in the resurrection of the dead?" He meant a literal resurrection.
>
> When the Pharisees heard that, they said there's nothing wrong with this guy. But the Sadducees [who didn't believe in the Resurrection] didn't like it. So as a Pharisee, he's agreeing with the Pharisees.
>
> So, the first evidence is from Philippians 3. As a Pharisee, Paul believes in a physical resurrection.
>
> Secondly, in verse 11 he says, "That I may attain the resurrection of the dead." Now, the normal Greek word for resurrection is *anastasis,* but in this passage, Philippians 3:11, he puts a prefix on there, ***ek*** *anastasis.* ***Ek****anastasis*, according to all Greek scholars that I know of, is translated in this passage: "The out resurrection from among the dead." Paul said, "I want to attain the out resurrection."
>
> Now, to a Jew, "out resurrection" means "what goes down is what comes up." You come out from death. And then just a few verses later, Philippians 3:20,21, he said, "From Heaven, we look for Jesus who will change our vile *soma* (body) to be like unto His glorious *soma* (or body)," when he should have said *pneuma*, according to this other view.
>
> So he's a Pharisee who believes in a physical resurrection. ***Ek*** *anastasis*—"resurrection from out among the dead ones."
>
> Thirdly, Paul says, "He Jesus will change ***my body*** to be like ***His body***."

> So right there in Philippians 3 alone, I think the picture of Jesus being some wispy spirit that appeared to him on the road to Damascus doesn't fit Paul's own data.

Yes, that's why Philippians is my favorite book. You can get so much useful theology out of it. Something about the resurrection in Phil 3, something about Jesus' divinity in Phil 2, and loads of practical advice on stewardship, charity, fellowship, endurance and practical love for others throughout. Some of it takes a little digging, but that's what commentaries are for, am I right? But I digress.

If you want to read something a little more challenging, I found a paper from the Evangelical Theological Society (ETS) from their journal, where it talks more about soma and anastasis. If you want a bit of a challenge, download the PDF and read it. It's by Kirk R. MacGregor and the title is "1 Corinthians 15:3B–6A, 7 And The Bodily Resurrection Of Jesus".

# N.T. Wright lectures on the seven mutations caused by resurrection of Jesus

**Wintery Knight** · 27 March 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

Here's a lecture from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best). Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's a video of his case for the resurrection:

You can read a written version of the lecture here.

**N.T. Wright's historical case for the bodily resurrection of Jesus**

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable* apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond;

> second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).
5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: "Guy dies public death. People encounter same guy alive later." Plain vanilla narrative.
5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn't even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

# Against misogyny: why every conservative should #DumpTrump #NeverTrump

**Wintery Knight** · 28 March 2016 · Archived copy · Original

Heidi Cruz, a beautiful, intelligent, hard-working, successful woman

So, last week early Thursday morning, Donald Trump tweeted out a picture of his wife juxtaposed with a picture of Heidi Cruz that made her look very ugly.

In this post, I want to respond to Trump's attack on Heidi, and urge Trump supporters to reconsider their support for Trump.

**All about Heidi Cruz**

Consider this Texas Tribune article about Heidi Cruz.

It says:

> [Heidi] Cruz, 43, grew up in San Luis Obispo, Calif., the daughter of a dentist and dental hygienist who are Seventh-day Adventists.
>
> […]Cruz went to Claremont McKenna College and was active in the college Republicans and interested in appointive political office, said her mentor, Edward Haley. She also was intent on a career in business first. She moved to New York after graduation and worked on emerging markets at J.P. Morgan, an area in which she was interested after spending summers in Africa doing missionary work with her parents. **She was put on the Latin America desk and taught herself to speak Spanish between 18-hour work days.**
>
> Cruz achieved her dream of attending Harvard Business School but turned down a job at Goldman Sachs to work on George W. Bush's 2000 presidential campaign.

She later met and married Ted Cruz, and she has now put her career on hold to help her husband run for President.

More:

> She now holds her own campaign events, talking up her husband's values and laying out what the campaign sees as a grass-roots path to victory.
>
> […]She remains the campaign's top fundraiser, now making many calls from the road instead of from the campaign's airy Houston headquarters, where she installed a playroom with pillows decorated with raspberry prints for the girls. Cruz said she aims to make 30 calls a day but typically averages about 20 to 25; she is calling from the campaign and super PAC lists and trying to persuade donors to give the maximum allowed under federal election law.
>
> "I don't want to say it's easy, and I don't close every deal," she said. "I think people want to be a part of something that addresses the main issue of the day, number one, which is Washington versus the people."
>
> […]**Ted Cruz told an audience in Winterset, Iowa, on Monday that the couple's decision to run for president was difficult for his wife.**
>
> **"Heidi spent a lot of years building a very, very successful career. And when we were deciding whether to run, particularly when you're parents of young girls, that's not an easy decision. And she was struggling with it," he said.**
>
> **Ted Cruz said his wife was driving, listening to a CD of Christian music sent by her sister-in-law. She was struck by a song about seeking the face of the Lord and pulled over on the freeway and started crying, he said. That moment, he said, "changed her heart," and she decided that the race was about God, the country and the future.**
>
> **Now, Heidi Cruz says her main job is to bolster her husband's candidacy.**
>
> **"There are women who use their husband's candidacies for their own" purposes, she said recently while being driven to yet another airport. "I love my life. I love my career. This is not for me. This is for our country."**

Here is one more quote from a 2013 article on Heidi Cruz, from the radically leftist New York Times, of all places:

> In a glimpse into their marriage that Mr. Cruz called "illustrative," he recalled saying to his wife in the weeks before his Senate primary, when he was still behind in the polls, "Sweetheart, I'd like us to liquidate our entire net worth, liquid net worth, and put it into the campaign."
>
> "What astonished me, then and now, was Heidi within 60 seconds said, 'Absolutely,' with no hesitation," said Mr. Cruz, who invested about $1.2 million — "which is all we had saved," he added — into his campaign.

Here she is going door to door in New Hampshire in the winter:

Heidi Cruz waits for a New Hampshire voter to answer the door

The description of the photo by the person who posted it says:

> Here's a photo from the campaign trail that I've never shared. This is Heidi Cruz waiting in the cold to talk to a New Hampshire voter. She did this campaign work with me and three other kids. It was unglamorous: no media, no crowds, just a woman canvassing a neighborhood with a couple volunteers, trying to find someone to talk to about why she believed in her husband. Kind, genuine, humble: when the cameras she knows about are off, this is who Heidi Cruz is.

That's a great wife.

**Donald Trump's attack on Heidi Cruz**

It's a shame that Donald Trump misses all the great things that Heidi has done and attacks her for her appearance. But this is what he values most in women, and this is why he keeps committing adultery on his wives as they age, and then divorcing them to trade them in for younger women. He thinks that a woman's value is all in her appearance, so he thinks that Heidi is a loser.

Ted Cruz wasn't born rich. He has had to work his way up to get where he is. Ted knows the value of a woman as a helper, so when it came time to get married, Ted chose the best helper he could find to help him do the big things that he wanted to do. Donald Trump inherited millions and millions of dollars. When it came time for him to choose a wife, he chose supermodel after supermodel. He has no idea what most wives really do to help their husbands, he doesn't need the help of a woman, which is why he doesn't value them *as women*.

Look at what he says:

> "You know, it doesn't really matter what they write as long as you've got a young and beautiful piece of *ss."
>
> "You have to treat [women] like sh*t."
>
> "A person who is very flat-chested is very hard to be a 10. Oftentimes when I was sleeping with one of the top women in the world, I would say to myself, thinking about me as a boy from Queens, 'Can you believe what I am getting?'"

The "top women" are the ones who are "10s". And what do you do with these women? You have sex with them.

You don't commit to loving and serving a woman for life. You just use them, and throw them away. That's his view of women. That's his record.

Mona Charen wrote in defense of Heidi Cruz in National Review.

She says:

> Heidi Cruz happens to be an attractive woman, but that's beside the point. Trump is such a shallow, low human being that he cannot get beyond judging others on their appearance. Basic decent manners forbid commenting on others looks except in the mildest way. "What a lovely dress!" or "That color suits you." Polite people remember to see others in full — as professionals, wives, mothers, sisters, volunteers, patients, teachers and so forth. Trump is obsessed with people's looks. He has disdained countless formidable and impressive women for their looks (remember what he said about Carly Fiorina?), and even when searching for kind things to say about his late brother, he lingered quite a while on how handsome he was. At a meeting with the editorial board of the Washington Post, after being asked about using tactical nuclear weapons against ISIS, Trump offered that "this is pretty great looking group." As with other Trump traits, this is disturbing.

When I first saw Trump's tweet comparing Heidi Cruz against Trump's third wife, my first response was to immediately unfriend all of the Trump supporting "friends" on Facebook. That's how much I hate this idea that a woman has no value unless she is young and beautiful. For some reason, I regard this blindness / dismissiveness about the value of women as complementary to men as misogyny. I think deep down, there is something in me that recognizes that a man's job is to give a woman security. And what security can a man give a woman when she knows that her value to him is all tied up in her youth and beauty? Trump is an adulterer. He divorced his two wives when they lost their youth and beauty, and he re-married younger women who had better appearances. But what security is there for a woman in a man who sees her contribution to the marriage as youth and beauty? I don't want Trump's example to become widespread.

Youth and beauty cannot last – women know that. If we as a society decide to communicate Trump's message to women, that they only have value if they are young and beautiful, it creates a situation where women will disengage from marriage, because they know they will be abandoned. Trump's attack on Heidi Cruz is especially devastating in communicating that message. What he is really saying is that women just need to look hot and be good at sex. He is saying that they don't need to go to school, they don't need to work hard, they don't need to save money. These are all the things that Heidi did in order to make a difference, and to be a good helper to her husband.

The more that women get their idea of value from born-rich promiscuous womanizers like Donald Trump, the more women will be depressed that they cannot give anything to a man that will make him stick around. We need to be teaching women how much value they have as supporters, listeners, nurturers and teachers in the home. We need to be teaching men that women who understand male nature and know how to use their feminine gifts remain valuable through changes in age and appearance. Men have a deep need for women as companions. Ted Cruz chose Heidi Cruz because she had the knowledge, wisdom and character to be a suitable companion and confidante for him. We need to be celebrating women like Heidi Cruz, not attacking them for their looks.

# Trump has strong links to National Enquirer and David Pecker #TrumpLovesPecker

**Wintery Knight** · 28 March 2016 · Archived copy · Original

Donald Trump with some of his supporters

I'm just going to go through a few links so that we get the complete picture of the connection between Donald Trump and his good friend David Pecker, and Pecker's trashy tabloid publication.

This article from the New York Daily News is from August 2015.

It says:

> Former Donald Trump allies like Fox News and NBC have been taking shots at the presidential hopeful since his bid began — but he has at least one staunch media ally.
>
> Industry insiders tell us Trump is "very close" with David Pecker, head of The National Enquirer and CEO and chairman of American Media, which means the outlet is unlikely to dig too deeply into his personal life as he campaigns.
>
> […]"Trump is a big friend of Pecker," says our insider.
>
> […]Our source says that with Trump "protected" by the tabloid, "Some of the staff are furious. Trump's such fertile ground, and it drives them crazy to not only be staying away from it, but running puff pieces for him."
>
> Trump and Pecker have certainly been known to scratch each other's backs.
>
> This week's Enquirer features a piece under the screaming red banner: "Charismatic billionaire Donald Trump writes exclusively for the Enquirer." In the column, entitled "America is being laughed at … and things must change!" Trump outlines his qualifications for the White House, including the fact that in his view, wife Melania "would make a terrific first lady!"
>
> In 2010, Trump tweeted, "David Pecker would be a brilliant choice as CEO of TIME Magazine — nobody could bring it back like David!"

New York Magazine also notes the connection between Trump and David Pecker of the National Enquirer, in an

article from October 2015, when Carson and Trump were fighting for the lead i the GOP primary.

Excerpt:

> […][A]s Carson overtakes Trump as the GOP front-runner, it appears Trump is getting help from a media outlet known for ending presidential candidacies: the *National Enquirer*. Earlier this month, the *Enquirer* published a cover story on Carson headlined "Bungling Surgeon Ben Carson Left Sponge in Patient's Brain!" The article called Carson a "White House wannabe" and claimed he "brandished a scalpel like a meat cleaver!" It went on to quote angry former patients saying he botched surgeries that left them disfigured and in pain; one patient who sued Carson said he forgot to remove a surgical sponge from her brain after a procedure. "His presidential campaign should be dead on arrival!" *Enquirer* reporter Sharon Churcher wrote.
>
> […][Their source] **also said that Trump's campaign was a source for the article:** "His campaign provided information that was used," he explained. A Trump friend said that in the days leading up to the article's publication Trump was telling people that Carson "had a lot of medical malpractice suits" and "almost killed a guy."
>
> […]Whether or not Trump has been a source for the *Enquirer*, his friendship with Pecker has paid dividends. At key moments during the GOP primary the *Enquirer* has helped boost Trump's campaign by attacking his rivals and fawning over him. Two weeks after Trump launched his campaign in mid-June, the *Enquirer* reported that Jeb Bush was "involved in the drug trade in Florida" in the '80s and that, as governor, he was plagued by "sleazy cheating scandals … [with a] Playboy Bunny turned lawyer." In September, the *Enquirer* published an unflattering photograph of Bush's adult daughter apparently taking cigarette breaks at her office. The article hit just days after Jeb told Americans they needed to work longer hours.
>
> Carly Fiorina has also been slimed. After the former Hewlett-Packard CEO bested Trump at the second GOP debate last month, the *Enquirer* ran an article headlined "Homewrecker Carly Fiorina Lied About Druggie Daughter." The article attacked one of Fiorina's best moments at the debate: her emotional account of her daughter's struggle with drug addiction. "The *National Enquirer* has exclusively learned that Lori Ann Fiorina, who died in October 2009, was in fact Carly's stepdaughter," the tabloid reported. "She was brought up not by Carly but by her biological mom, Patricia Fiorina, whose marriage allegedly was wrecked by the 61-year-old White House hopeful who is determined to knock Donald Trump from his superior front-runner status!"
>
> […]Meanwhile, Trump has been exclusively celebrated in the *Enquirer*'s pages. As talk of a Trump candidacy heated up last winter, the tabloid published an article headlined "Trump's the One!" that reported him leading in the polls. In September, the *Enquirer* published a three-part series by Trump himself under the headline "The Man Behind the Legend!"
>
> Trump's scandal-filled personal life would be *yuge!* for the supermarket tabloid, but to the *Enquirer*, it seems, friendship is forever.

They certainly are very good friends.

National Enquirer: “Trump Must Be President!”, and Rubio has sex & drug secrets

The Daily Beast notes that Trump has also been endorsed by the National Enquirer.

Excerpt:

> The full endorsement… includes a list of “10 reasons The Donald is the ONLY choice for the White House.”
>
> […]Along with conservative website Breitbart, the *Enquirer* often reads like a political ally of Team Trump. And if it sounds like that endorsement was authored by Trump’s friends, that is because, well, it sort of was.
>
> […]Meanwhile, Trump’s other political enemies, such as Carly Fiorina, Marco Rubio, Ted Cruz (called “Boozin’ Ted” by the tabloid), and Jeb Bush have been absolutely savaged in the pages of the *Enquirer*. The supermarket tabloid reported that Bush, as governor of Florida, was embroiled in “sleazy cheating scandals…[with a] Playboy Bunny turned lawyer,” a rumor Bush had publicly denied over a decade ago.
>
> […]The unvarnished look at, say, Rubio has consisted of the Florida senator’s alleged past attendance at “gay [foam] parties” (the “Rubio is gay!” conspiracy theory is emerging asthe next big meme within certain pro-Trump and far-right communities), and a story on “NERDY” Marco Rubio’s “SEX & DRUG SECRETS.” The latter ran directly to the right of the publication’s recent endorsement of The Donald (pictured above).
>
> […]Trump became a *National Enquirer* contributor in August, writing an op-ed on his greatness. (It would not be the last time the *Enquirer* would bear his byline.)

Trump writes articles for the National Enquirer? Hmmmn. I wonder if he writes anonymous articles for the National Enquirer that insinuate nasty things about Ted Cruz, but have no evidence or statements from witnesses.

**And along came a smear**

I ask that because there is a National Enquirer story out now that smears Ted Cruz.

Here is Ted Cruz’s response to the National Enquirer story:

Everyone has to decide who to believe on their own.

**Ron Fournier and Chuck Todd**

I was surprised to see this tweet from Ron Fournier, who is a person on the far left who gets respect from conservatives like me:

Ron Fournier of National Journal re-tweets Chuch Todd and says "Bravo"
Here is the link to Chuck Todd's comments: (link has the video)

> Yesterday on Meet The Press Chuck Todd pointed out that Trump used an LBJ tactic of suggesting he hoped the National Enquirer story wasn't true while trying to fan the flames of the smear.
>
> But Todd says there's simply more evidence that ties Trump to planting the story in the National Enquirer than there is to the story itself tying anything to Cruz…
>
> Andrea Mitchell emphasized how close Trump's relationship is with the National Enquirer, pointing out that they've even endorsed him.

When you have MSNBC saying that the story's claims are less credible than the claim that Donald Trump deliberately planted the story in the National Enquierer, thanks to his good friend David Pecker, then you know the story is suspect. No one in the mainstream media has confirmed it, because there is no confirmation for it.

**Michael Savage**

The National Enquirer story so ridiculous that one of Trump's biggest supporters – national radio show host Michael Savage – has threatened to yank his endorsement of Trump.

The Right Scoop has the transcript and audio.

Transcript:

> Michael Savage said today on his radio show that the National Enquirer story smearing Ted Cruz is completely false, and he knows this based on a source he says he would trust with his life. Savage points out that Cruz is rightly offended over this utter garbage.
>
> But even more so, Savage says that he abhors these attempts of *assassination by innuendo*, as it has been done to him, and while he doesn't blame Trump for the story, he threatens to withdraw his support of Trump if he doesn't completely disavow the story and the man who owns the National Enquirer, David Pecker.

Now that Ted Cruz is gaining in the polls, I have to wonder about any National Enquirer articles that attempt to smear Cruz the same way that previous articles smeared Rubio, Bush, Carson, Fiorina, etc. Seems to me that Trump might be able to recover his lead if he could convince his good friend David Pecker to let him write an article about Ted Cruz – one with no evidence and no named witnesses. It might work to convince Trump's supporters to return

to him so that he doesn’t lose the primary to a surging Ted Cruz.

# New study: regular churchgoers and married people most satisfied with their love life

**Wintery Knight** · 28 March 2016 · Archived copy · Original

Marriage and family

This article from Science Daily.

Excerpt:

> Regular churchgoers, married people or those who enjoy harmonious social ties are most satisfied with their love life. This also goes for people who are currently in love or who experience the commitment and sexual desire of their partners, says Félix Neto and Maria da Conceição Pinto of the Universidade do Porto in Portugal. Their findings, published in an article in Springer's journal *Applied Research in Quality of Life,* look at the influences on love life satisfaction throughout one's adult life.

> The researchers associate love with the desire to enter into, maintain, or expand a close, connected, and ongoing relationship with another person. In turn, love life satisfaction is a purely subjective, overall measurement of someone's actual enjoyment of love. To investigate the factors that influence this across various age groups, 1,284 adult Portuguese women and men ranging between 18 and 90 years old were asked to evaluate and weigh specific facets of their own love lives by using the Satisfaction With Love Life Scale.
>
> […]**While education does not impact a person's love life satisfaction, religious involvement does. The finding that believers and regular churchgoers are positive about their love lives is in line with previous studies that associate religious involvement with better mental health and greater satisfaction with life and sexual relationships in general.**

Previously, I blogged about a study reported in USA Today, which showed that people who attend church have lower divorce rates than those who don't attend church.

Excerpt:

> It's been proclaimed from pulpits and blogs for years — Christians divorce as much as everyone else in America.

> But some scholars and family activists are questioning the oft-cited statistics, saying Christians who attend church regularly are more likely to remain wed.
>
> […]The various findings on religion and divorce hinge on what kind of Christians are being discussed.
>
> **Wright combed through the General Social Survey, a vast demographic study conducted by the National Opinion Research Center at the University of Chicago, and found that Christians, like adherents of other religions, have a divorce rate of about 42%. The rate among religiously unaffiliated Americans is 50%.**
>
> **When Wright examined the statistics on evangelicals, he found worship attendance has a big influence on the numbers. Six in 10 evangelicals who never attend had been divorced or separated, compared to just 38% of weekly attendees.**
>
> […]Brad Wilcox, director of the National Marriage Project at the University of Virginia, agrees there's been some confusion.
>
> "You do hear, both in Christian and non-Christian circles, that Christians are no different from anyone else when it comes to divorce and that is not true if you are focusing on Christians who are regular church attendees," he said.
>
> **Wilcox's analysis of the National Survey of Families and Households has found that Americans who attend religious services several times a month were about 35% less likely to divorce than those with no religious affiliation.**
>
> Nominal conservative Protestants, on the other hand, were 20% more likely to divorce than the religiously unaffiliated.
>
> "There's something about being a nominal 'Christian' that is linked to a lot of negative outcomes when it comes to family life," Wilcox said.

Whenever I talk to atheists about marital satisfaction and marital stability, they always tell me these myths about how atheists divorce less and are happier in their marriages than religious people. But when I ask them for studies, they don't have any, or they start to talk about the Discovery Channel or Star Trek or something. It's like they believe things without any evidence at all. Meanwhile, one also has to note that atheists have much lower rates of marriage than church-attending believers.

Now clearly, there are going to be atheists with great marriages that never break up. But individual cases do not overturn peer-reviewed research studies. The fact is that marriage is an institution that is soaked through with moral values and moral obligations. If you think that morality is just arbitrary customs and conventions that vary by time and place, as is logically consistent with atheism, then the odds are that you won't be able to stay married for long – if you even get married at all.

# Georgia governor sides with big business and gay rights lobby against religious liberty

**Wintery Knight** · 29 March 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

The Republicans in the Georgia House and Senate authored and passed a bill which would protect the citizens of Georgia from being forced to affirm and participate in same-sex marriage ceremonies, as has happened in other states like Washington (florist), New Mexico (photographer), Oregon (baker) and New York (property owner).

The bill went to the governor's desk, and he vetoed it – siding with the big corporations and the gay activists.

The Washington Times reports:

> The influence of the entertainment and business lobbies were powerfully felt Monday when Georgia Gov. Nathan Deal knuckled under to a tidal wave of pressure by vetoing a religious liberty bill.
>
> […]He vetoed the bill after several major corporations, including Walt Disney Co., the National Football League and Intel, made clear that it would impair their ability to do business in Georgia.
>
> A spokesman for Disney… said the company would "plan to take our business elsewhere should any legislation allowing discriminatory practices be signed into state law."
>
> The NFL hinted that the measure could threaten any Atlanta bid to host a Super Bowl. Other companies that urged Mr. Deal to veto the legislation included Apple, Time Warner and Salesforce.

The bill that was vetoed was re-written to remove almost all the religious protections in the original bill.

Just as an aside, big corporations are also threatening North Carolina for preventing men from using women's washrooms, and vice versa:

> North Carolina Gov. Pat McCrory, a Republican, has invited the censure of several blue-chip corporations by signing into law a bill that says sex-specific public restrooms and changing facilities must be used according to biological sex, not a person's preferred gender identification.
>
> The bill was passed in a single-day special session to strike down a Charlotte city ordinance to the contrary and prevent any other local government from following suit.
>
> […]Several companies based in North Carolina, such as PayPal, Bank of America and Dow Chemical have

> denounced the law, while the National Basketball Association is threatening to move the 2017 All-Star Game, now scheduled to be played in Charlotte, in the wake of the legislation.

This is the 4th time that a state has backed off of defending religious liberty against the gay rights activists who put the right of gay people not to be offended above the right of religious people not to violate their conscience by performing actions that they believe are immoral. It happened before in Indiana, Arizona and Arkansas, and now Georgia.

I found two great articles by two articulate defenders of religious liberty, David French and Ryan T. Anderson, to respond to Deal's decision.

Ryan T. Anderson at the Daily Signal:

> The bill that the Deal vetoed was the result of a series of compromises that significantly watered down the original version. It did not offer protections to bakers, florists and similar wedding professionals, and it adopted a very narrow definition of faith-based organizations, covering only churches, religious schools, and "integrated auxiliaries"—the same unacceptable definition used by the Obama administration to exclude the Little Sisters of the Poor.
>
> Yet liberals demagogued these very limited protections—and got the governor to veto it.

David French at National Review:

> The Georgia bill that Deal refused to defend was modest in scope, protecting the right of clergy to solemnize marriages consistent with their religious beliefs, protecting the right of faith-based institutions to use their property and resources to advance their religious mission, protecting their rights to hire and fire employees on grounds consistent with religious belief and practice, and protecting a person's free exercise of religion from a "substantial burden" unless the protected person was engaged in "invidious discrimination on any grounds prohibited by federal or state law."
>
> In other words, the bill as drafted could not be used to "bring back Jim Crow," nor could it offer any person, outside clergy and faith-based employers, any effective defense against the enforcement of state anti-discrimination laws. It wouldn't block a single gay marriage. It wouldn't deny a single gay person access to the marketplace. Instead, it would merely offer a bare minimum of legal protections to Georgia citizens who are already confronting anti-Christian bigotry and discrimination.
>
> That small amount of protection was too much not only for Apple, Disney, Salesforce.com, and a host of multinational corporations who are quite comfortable doing business in places like the People's Republic of China and Saudi Arabia.

French has a solution to the problem of Republican leaders siding with corporations over the people who elected them:

> Donald Trump, of course, has probably given less than nine seconds of thought to religious liberty. He's been too busying enjoying the full benefits of the sexual revolution to think even for a moment about the conflict between sexual hedonism and religious freedom. Ted Cruz, however, has been stalwart in defense of the faithful. He is the anti-establishment politician who actually understands the role of faith in our national history and culture and understands the direct threat from the "social justice" left. Cruz would call Disney's bluff.

Indeed, and I wrote about Cruz's strength on the religious liberty issue. If this is your issue, then Cruz is your candidate.

There is supposedly a First Amendment right in this country that protects religious liberty and conscience from coercion and threats. There is no such protection in Constitution from being “offended” when someone disagrees with you on a moral question.

So what do we learn from this? What I learned is that I need to start thinking about states to live in where I can find a way to work and earn money without having to have my conscience violated by people who think that their views on moral issues are so correct that they need to force me to agree with them using fines and imprisonment. And it’s clear from the past that the correct state will be a state where there is a conservative governor, a conservative House and Senate, and no big multinational corporations who cave in to the demands of gay rights lobbying groups like the Human Rights Campaign. Indiana, Georgia, Arizona and Arkansas are off my list. Especially Georgia.

# The biggest driver of income inequality is single motherhood

**Wintery Knight** · 29 March 2016 · Archived copy · Original

Does government provide incentives for people to NOT get married?
Indian economist Aparna Mathur, whose work I've featured here before, writes about it in Forbes magazine.

Excerpt:

> The fabric of our society is changing. In 1980, approximately 78 percent of families with children were headed by married parents. In 2012, married parents headed only 66 percent of families with children. In a new report, Bradford Wilcox and Robert Lerman explore the role of family structure with new data and analysis, and document how this retreat from marriage is not simply a social and cultural phenomenon. It has important economic implications for, amongst others, men's labor force participation rates, children's high school dropout rates and teen pregnancy rates. **Since these factors are highly correlated with economic opportunity and the ability to move up the income ladder, this suggests that income inequality and economic mobility across generations are critically influenced by people's decisions and attitudes towards marriage.** Understanding the role of family structure is therefore key to understanding the big economic challenges of our time.
>
> […]Wilcox and Lerman document how the shift away from marriage and traditional family structures has had important consequences for family incomes, and has been correlated with rising family-income inequality and declines in men's labor force participation rates. Using data from the Current Population Survey, the authors find that between 1980 and 2012, median family income rose 30 percent for married parent families, For unmarried parents, family incomes rose only 14 percent.
>
> These differential patterns of changes in family income have exacerbated family-income inequality. **Since unmarried parent families generally expand the ranks of low-income families, while high-income, high-education adults increasingly marry partners from similar socioeconomic backgrounds, inequality trends are worsened.**
>
> […]The authors estimate that approximately 32 percent of the growth in family-income inequality between 1979 and 2012 is associated with changes in family structure. Other research, studying the period 1968-2000, finds that the changing family structure, accounted for 11 percent of the rise widening of the income gap

> between the bottom and top deciles.

So, what specific policies discouraged people from marrying, especially before they have children? Was it conservative policies or liberal policies?

Robert Rector explains in The Daily Signal.

He writes:

> It is no accident that the collapse of marriage in America largely began with the War on Poverty and the proliferation of means-tested welfare programs that it fostered.
>
> When the War on Poverty began, only a single welfare program—Aid to Families with Dependent Children—assisted single parents.
>
> Today, dozens of programs provide benefits to families with children, including the Earned Income Tax Credit, Temporary Assistance for Needy Families, the Women, Infants and Children food program, Supplemental Security Income, food stamps, child nutrition programs, public housing and Section 8 housing, and Medicaid.
>
> Although married couples with children can also receive aid through these programs, the overwhelming majority of assistance to families with children goes to single-parent households.
>
> **The burgeoning welfare state has promoted single parenthood in two ways. First, means-tested welfare programs such as those described above financially enable single parenthood. It is difficult for single mothers with a high school degree or less to support children without the aid of another parent.**
>
> **Means-tested welfare programs substantially reduce this difficulty by providing extensive support to single parents. Welfare thereby reduces the financial need for marriage.** Since the beginning of the War on Poverty, less-educated mothers have increasingly become married to the welfare state and to the U.S. taxpayer rather than to the fathers of their children.
>
> **As means-tested benefits expanded, welfare began to serve as a substitute for a husband in the home, and low-income marriage began to disappear.** As husbands left the home, the need for more welfare to support single mothers increased. The War on Poverty created a destructive feedback loop: Welfare promoted the decline of marriage, which generated a need for more welfare.
>
> A second major problem is that the means-tested welfare system actively penalizes low-income parents who do marry. All means-tested welfare programs are designed so that a family's benefits are reduced as earnings rise. In practice, this means that, if a low-income single mother marries an employed father, her welfare benefits will generally be substantially reduced. The mother can maximize welfare by remaining unmarried and keeping the father's income "off the books."
>
> For example, a single mother with two children who earns $15,000 per year would generally receive around $5,200 per year of food stamp benefits. However, if she marries a father with the same earnings level, her food stamps would be cut to zero.

I blogged recently about a study that was done to make sure that welfare programs really do discourage young people from marrying, and that's exactly what the study found.

The authors of that study found that penalties to marriage "on the margin", i.e. – at lower income levels where welfare could substitute for a husband – caused lower rates of marriage:

> "The supposition that marriage penalties have an impact on decisions to marry gains credence from the simple fact that marriage rates are highest among higher-income groups that are less affected by them and for whom such penalties represent a smaller proportion of total income," they wrote.

So you see, the thing the left complains about (income inequality) is actually the thing they do the most to cause. Their big spending on welfare programs for the poor makes it easier for them not to get married and stay married before they have children. This is true across all races, too. It's an economic issue, not a race issue. People on the left are all about taxpayer-funded welfare programs and growing government to make more and more people dependent. They are causing the income inequality, and then complaining about what they have caused.

So what's the answer? It seems to me that we should be paying people to do what is best for children – marriage. People do more of what they get rewarded for doing. Right now, we're taking money from high-earning married couples, and paying people to have fatherless children. This creates more dependency, more poverty, and more income inequality. If we want to reduce income inequality, and for children to be happier, we should be encouraging people to marry.

# Matt Dillahunty debates David Robertson on atheism, morality and evil

**Wintery Knight** · 29 March 2016 · Archived copy · Original

Two horses fight it out, may the best horse win!

OK. So I think it's safe to say that of all the Christian apologists out there, David Robertson is my least favorite debater. Why? Many reasons, but mostly because he does not bring in evidence, especially scientific evidence. And he seems to make these clever quips like G. K. Chesterton. I like evidence. I would rather that he talk about scientific and historical evidence.

Dina asked me to listen to this debate a while back, between David Robertson and agnostic Matt Dillahunty (he's not an atheist, he's just an agnostic). I went in absolutely convinced that Robertson was going to have his ass handed to him by Matt Dillahunty. And I could not have been more wrong.

Here's the debate posted on YouTube (audio only):

This snarky summary is just a paraphrase from certain parts of the debate, *it is not designed for accuracy*, but for fun – to make you listen to the debate. Listen to the debate to get the exact words in context.

Summary:

- Matt Dillahunty: he's an agnostic who calls himself an atheist
- David Robertson: he's from Scotland, could we not get someone better?
- Robertson opening statement is incredibly weak, as you might expect, he only had two arguments embedded in a long list of nonsense: 1) origin and design of the universe 2) reality of evil requires objective morality

**1) Creation/Design:**

Robertson: The fact is that matter exists. There are 3 views that could account for this fact: 1) created, 2) eternal, 3) self-generated out of nothing. Option 3) is self-contradictory, 1) requires a Creator, and 2) is falsified by the Big Bang cosmology. So what's your view?

Dillahunty: You're trying to get me to say what my view is, but I can just say "I don't know" and get out of having to take any position on how matter got here.  I can say "I don't know" to all the scientific evidence for the Big Bang cosmology, too!

**2) Evil requires objective morality, requires a moral lawgiver:**

Robertson: evil exists, e.g. – the Holocaust. If atheism is true, objective morality is impossible. Richard Dawkins agrees. Therefore, theism is the best explanation for the existence of evil.

Dillahunty: In my opinion, morality means doing what helps people have well-being. And I think that the Holocaust is obviously bad, because it hurts the well-being of the victims.

Robertson: The problem is that on your view, different people decide what well-being is to them. If you were raised in the Social Darwinism of the Nazi regime, you would believe that the Holocaust was the best for the well-being of the society as a whole.

Dillahunty: Isn't it obvious that killing people is bad for their well-being?

Robertson: Is it bad for the well-being of unborn children to kill them?

Dillahunty: Yes

Robertson: So you're against abortion, then?

Dillahunty: No

Robertson: So you think that killing the child in the womb is against the well-being of the child, but you're for that?

Dillahunty: I don't know! I don't know!

**Then Dillahunty tried to claim Hitler was a Christian:**

Dillahunty: here is a quote by Hitler saying that secular schools are bad, and religious schools are good – see, he's a Christian!

Robertson: when was that said and to whom?

Dillahunty: I don't know, I don't know!

Robertson: It was said in 1933, during an election campaign, to Catholic authorities – he was a politician, looking for votes from Catholics so he could become Chancellor.

**Good and evil on atheism:**

Dillahunty: good actions results in states with more well-being, and evil actions result in states with less well-being.

Brierley: but when the Nazis slaughtered all those people, they believed they were increasing well-being

Dillahunty: But you could demonstrate to them that their action is not going to increase well-being. Survival of the fittest is descriptive of what happens, but it's not prescriptive.

Robertson: Whose well-being will human beings think about most, if not their own? Do you really think that you can stop people like Charles Manson from being evil by sitting down and trying to prove to them that they are not helping their victim's well-being?

(A BIT LATER)

Robertson (to Dillahunty): Is it a fact that Dachau (a concentration camp) was morally wrong?

Dillahunty: (literally, not a paraphrase) I DON'T KNOW

**My thoughts:**

When I listened to this debate, the overwhelming conviction that emerges is that Matt Dillahunty is not someone who forms his worldview based on evidence. His rejection of the Big Bang cosmology with "I don't know" is just atrocious. His comments about slavery in the Bible and Hitler being a Christian show that his investigations of these issues is far below the level of a responsible adult. His dallying with the Jesus-never-existed view just shows him to

be fundamentally anti-intellectual, as even atheist historian Bart Ehrman denies that view. His definition of faith has nothing to do with the Bible, or Christian authorities, or Christian scholars – he invented a definition of faith that allows him to mock Christians as morons. That's just irresponsible – letting the desire to mock others cause you to distort the definition of a word. When asked to state his positions or respond to specific evidence, his response is very often "I don't know". It seems to me that atheism, to him, means not pursuing truth with the aim of grasping it. He wants to keep reality at a safe distance – that's why he says "I don't know" so often.

On morality, it's even worse. It's not surprising to me that he is pro-abortion and has no opinion about concentration camps being objectively evil. Most atheists are pro-abortion, by the way. When it comes to morality, Dillahunty only has his own personal opinions, and they refer to nothing outside his own mind. (His opinion of morality as related to well-being is utilitarianism – a very problematic view – but moreover, it is *his subjective view* – he isn't offering it as any sort of objective moral system that would be prescriptive instead of descriptive. Without an after-life, there is no reason for anyone to care about the moral point of view when it goes against their self-interest, anyway. Atheists use moral language, but their statements are not referring to any objective, prescriptive moral reality. Atheism is materialistic and therefore deterministic – it does not even ground the free will that is needed to make moral choices. Their view is Darwinian survival of the fittest, that's what emerges from their origins story – and it does not rationally ground morality. The strong kill the weak, if they can. I've written before about how difficult it is for atheists to *rationally* condemn things like slavery, and nothing in Dillahunty's presentation led me to believe that he had solved that problem.

Anybody can be an intellectually-satisfied atheist with an empty head – it's *knowledge* that causes people to conform their beliefs to *reality*. If one strives to keep one's head as empty as possible, then of course one can believe anything one wants. I'm glad, speaking as a Christian theist, that I get to follow the evidence wherever it leads. It seems to me that we should do that, rather than decide how we want to live first, and then invent a worldview to justify our desires.

# What's the best book a woman can read to prepare herself for marriage?

**Wintery Knight** · 29 March 2016 · Archived copy · Original

A good marriage is more than fun and feelings – it takes planning and work

I found a great lecture by Sue Bohlin, who works at Probe Ministries. The lecture is about the book "The Proper Care and Feeding of Husbands" by Dr. Laura Schlessinger. I recommend this book more highly than any other book to Christian women. It really does a lot to give young women a different perspective on men and marriage. Don't be thrown off by the funny title, it's really good.

The MP3 file is here. (48 minutes)

Here is a blog post that Sue wrote that captures most of the material in the lecture.

Here's the introduction:

> Talk show host Dr. Laura Schlessinger has written a book that is improving thousands of marriages: *The Proper Care and Feeding of Husbands.* We need this book because millions of wives either don't know how to love their husbands wisely and well, or they're too self-centered to see it as important. Dr. Laura credits this dismal condition to forty years of feminist philosophy, "with its condemnation of just about everything male as evil, stupid, and oppressive, and the denigration of female and male roles in families." While the women's movement certainly had a hand to play in the disintegration of relationships and the family, I believe the core cause is our sinful self-centeredness, just as the Bible says.
>
> Which is why we need help, and God instructs older women to train younger women to love their husband and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God. *The Proper Care and Feeding of Husbands* is a great resource for learning these important values and skills.

And here's the first part I thought was most important:

> A listener to Dr. Laura's radio show named Edgar wrote, "There are a few things that men want so bad they would do anything for it. I think a good number of men want respect more than love. They like to feel they

> have some power. I nearly cry when you tell a woman caller to respect her husband. There is so much selfishness in the world—in marriages. Prosperity has allowed women to be so independent, and thus so selfish. I always feel as though I come last—my feelings come last, my needs come last."
>
> *"A good number of men want respect more than love."* God knew this when He made us. His commands to husbands and wives in Ephesians 5:33 reflects each one's deepest needs: "Each one of you also must love his wife as he loves himself, and the wife must respect her husband." Dr. Emerson Eggerichs of LoveandRespect.com points out that this verse commands a husband to love his wife. Why? She needs love like she needs air to breathe. This same verse commands a wife to respect her husband. Why? He needs respect like he needs air to breathe.
>
> - Respect means treating someone in a way that builds him up and doesn't tear him down, never denigrating or attacking.
> - Respect means always treating the other person with the dignity they deserve as a person made in the image of God.
> - Respect means grasping that a man's needs and wants are every bit as valid and important as a woman's needs and wants.
> - Respect means not venting to others, *especially* the children. One woman wrote to Dr. Laura, "No emotional outlet is worth damaging my husband's reputation."
>
> There are three A's that men long for from their wives: attention, affection, and affirmation. Respect involves paying attention to what they do simply because they're the ones doing it.

Yes, respect is very important to men, but the thing is, a woman can't respect every man equally. She should choose a man who does things that are respectable. Then respecting him will be easy. Sometimes, women overestimate how easy men are to change after marriage. It's better to just pick one who does all the important things instead of thinking that you can pick a good-looking one and make him do the important stuff like be faithful to you, hold a steady job, save money, argue without getting angry, etc. later. Men don't change much, so pick one who does things that you respect and then give him respect.

And this part also seemed important to me:

> A man named Roy wrote to Dr. Laura with some good advice for wives: "If you can't accentuate the positive, at least acknowledge it. The world is full of messages to men that there are standards we don't meet. There is always another man who is more handsome, more virile, or more athletic than we are. None of that matters if the most important person in our life looks up to us, accepts us as we are, and loves us even though we aren't perfect. . . . All I know is that the husband who has a wife who supports him and praises him for the positive things he does is the envy of all the other men who have to live with criticism, sarcasm, and constant reminders of their failures."
>
> Men desperately want and need the support of their wives. This is reflected in what God reveals in His Word when He says, "It is not good for man to be alone. I will make a helper suitable for him." And through the apostle Paul, God instructs wives to relate to their husbands in a way that meets this need when He says, "Wives, submit to your husbands as to the Lord."
>
> Submission is basically giving support with a willing, cooperative heart.
>
> A wife's submission includes knowing her gifts and strengths, and using them to serve her husband and family.
>
> Service has a bad name, but both husbands and wives are called to serve God first and then each other; husbands are called to sacrificially love and serve their wives with Jesus as their pattern.
>
> So what does support look like?
>
> - Believing in him. Telling him, "You have what it takes." Being his #1 fan.

> - Cultivating a cooperative heart.
> - Being generous and openhearted—willing to use your gifts and strengths to help him succeed.
> - Understanding the importance of making him look good: never saying anything negative in public.
> - Creating a home that's a safe haven from the world.
> - Having a warm heart with a positive, cheerful demeanor. Women set the temperature of the home; we are thermostats, not thermometers, of the family. (On the other hand, Proverbs says "A quarrelsome wife is like a constant dripping on a rainy day; restraining her is like restraining the wind or grasping oil with the hand.")
> - Being interested in him and his life.
> - Showing thoughtfulness. What does he like? Do it.
> - And though by no means exhaustive, it also means being a person of faithfulness and integrity. That means keeping your promises and being dependable. As Proverbs 31 puts it, "Her husband has full confidence in her and lacks nothing of value."

Support and encouragement is SO important to a man. A man can continue to function fine if the whole world opposes him, but not if the woman he loves doesn't support him. When a man falls in love, a woman has to realize the enormous power she has over him, and be careful not to hurt him. Men are vulnerable to the woman they choose. Although they look pretty tough on the outside, they can easily be hurt by insults or discouragement.

**Parting thoughts**

So, this lecture and the book are good, but young women should also seek out the advice of older Christian women who have been married successfully for some time. Read Titus 2:3-4 – the Bible encourages older women to mentor younger women! This is really important because we are in a time where young women are often pulled by the culture in many wrong directions, and they need help from people who know what they are doing.

One last point – I actually bought the audio version of the Dr. Laura book and noticed that it was just over two hours long. It turns out that the audio version is *abridged* – it is not as complete as the actual book. I noticed that Sue was quoting from the book passages that I had not heard in the audio recording. So, if you want the full content, get the book, not the audio recording.

# Scott Walker endorses Ted Cruz for President, Cruz trails Trump by 1 in California

**Wintery Knight** · 30 March 2016 · Archived copy · Original

Wisconsin Governor Scott Walker endorses Texas Senator Ted Cruz

The big news, which was reported *everywhere*, is that Wisconsin Governor Scott Walker, who was my first choice in the primary early on, has endorsed my current first choice in the Republican primary: Ted Cruz.

The Washington Times reports:

> Wisconsin Gov. Scott Walker endorsed Sen. Ted Cruz for president Tuesday, giving Mr. Cruz a major boost ahead of the April 5 GOP primary in the Badger State.
>
> "I am proud to endorse Ted Cruz," Mr. Walker said on WTMJ radio. "After a lot of time looking at speeches, looking at the records, looking at what the candidates not only say but what they have done in the past, it was an easy call for me to support Ted Cruz."
>
> Many Republicans in recent weeks who have endorsed or supported Mr. Cruz have cited stopping GOP front-runner Donald Trump as part of their calculus. But Mr. Walker said he wanted to make sure he was supporting someone and that he wasn't against something or someone.
>
> Mr. Walker, who called Mr. Cruz a "constitutional conservative" capable of taking on special interests, said the Texas senator is best positioned both to win the GOP nomination and defeat Democratic front-runner Hillary Clinton in the fall.
>
> Mr. Walker said he got to know Mr. Cruz a bit better during the campaign.
>
> "He is a decent man, he loves his family, he loves his wife — he adores his children," Mr. Walker said. "He loves his country. He and I are both preacher's kids, so I certainly can appreciate and feel strongly about the impact that his father had on him as a minister."
>
> […]In a statement, Mr. Cruz said Mr. Walker has been "an outstanding leader in the conservative movement."
>
> "Gov. Walker courageously stood up to special interests and won in a bitter fight in Wisconsin," Mr. Cruz said. "His leadership has made a profound impact on the people of Wisconsin and I welcome his advice on how we can unite the Republican party and defeat Hillary Clinton in November."
>
> Mr. Cruz, along with Mr. Trump and Ohio Gov. John Kasich, are in Wisconsin this week trying to build support ahead of the state's primary next Tuesday.
>
> Mr. Walker said he does anticipate campaigning with Mr. Cruz ahead of the primary next week.

Here's the actual radio recording of Walker endorsing Cruz (4 minutes):

This endorsement will help Cruz a ton in Wisconsin, because Walker has a very high approval rating among Wisconsin Republicans:

> "While Walker's approval numbers have hovered below 40 percent statewide in polling after his exit from the 2016 race, his rating among Republicans is 85 percent, according to a Marquette University Law School poll taken last month. And his actions still attract attention from conservatives across the country."

And more:

> Walker was viewed favorably by 88% of all Republicans and Republican-leaning independents (a total of 9,725 voters) surveyed by Marquette between 2012 and 2014 — and unfavorably by just 10%. His popularity is highest on the right, but his negatives are low among almost all Republican groups:
>
> - he has a 95% favorability rating among "very conservative" Republicans, a 91% favorability rating among "conservative" Republicans and a 78% favorability rating among "moderate" Republicans (pooling Marquette' s 27 surveys since 2012).
> - he has a 96% favorability rating among Republicans who like the tea party and a 75% favorability rating among Republicans who don't like the tea party.
> - he has a 90% favorability rating among Republicans who are frequent churchgoers (Walker is the son of a minister and an evangelical Christian) and an 85% favorability rating among Republicans who seldom or never go to church.
> - he has a 92% favorability rating among Republicans who are opposed to abortion (Walker is staunchly "pro-life") and an 86% rating among Republicans who favor abortion rights.
>
> "It does bolster his claim to unify the party and appeal across lines," says Marquette pollster Charles Franklin, who provided the polling data. While moderates and tea party opponents give Walker his lowest ratings among Wisconsin Republicans, "even they are three-quarters favorable,' says Franklin. "They're just not at 95%."

Cruz is doing well in other state polls, too. In a poll of likely voters in deep blue California, conducted by the radically leftist Los Angeles Times, Cruz trails Trump by 1 point.

The Hill reports:

> Republican presidential front-runner Donald Trump holds a razor-thin lead over rival Ted Cruz in California, according to a new USC Dornsife/Los Angeles Times statewide poll.
>
> Among likely June primary voters, Trump leads Cruz by just 1 point, 36 to 35 percent. John Kasich falls far behind, at 14 percent.
>
> In all, about 75 percent of voters who were surveyed in California had an unfavorable view of Trump. Among Republicans, 43 percent had an unfavorable impression, while 51 percent had a favorable view of the front-runner.

Why is Cruz surging in the polls? Well, I think part of it is that people are realizing that Donald Trump is in no way, shape or form a conservative – not in his personal life, not in his political record. He's been a Democrat all his life, and he's a Democrat playing a Republican now. But I think the change in poll numbers has something to do with Trump's constant stream of abuse against women, and in particular, against Heidi Cruz, as I blogged about before. Women voters are turning away from Trump.

But what can Ted Cruz do to convince those women voters who won't vote for Trump to vote for him instead? That question was asked of Cruz in a town hall forum last night on CNN.

Watch Cruz respond to her:

There is a lot about his family background described in his bookI do think that you can look at a person's family history and choice of spouse to find out more about them. Ted Cruz married a skilled, accomplished, hard-working woman – Heidi Cruz. And his mother studied math and then got a degree in computer science from Rice University.

Obviously, I think that women should stay home with young children when they arrive – that's what is best for the children and for the marriage. But it helps a man a lot when the woman who makes that decision to put family first has a good education, good experience and maybe even some savings to help with the downpayment on the first home. And I have to say that Heidi Cruz is doing a great job of helping her husband with this election. Her education and skills are assets, not liabilities.

# Trump campaign manager charged with battery after video evidence emerges

**Wintery Knight** · 30 March 2016 · Archived copy · Original

Donald Trump with some of his supporters

So there is some news about the Trump campaign manager Corey Lewandowski's assault of journalist Michelle Fields.

Here is what the Trump campaign manager claimed after the assault occured:

The Trump Campaign smearing and mocking women again

Trump himself backed Lewandowski's story up.

The Daily Wire has a video posted where Trump says the attack never happened:

> Upon being apprised of Fields' accusation, here was Trump's response:
>
> "Nobody saw it happened. Nobody complained….I think [she] made it up."

In this interview on the TODAY show, Trump clear says "She made up this story" and "She's got no evidence":

Basically, Trump thought he could cover up what happened by repeating the lies over and over and insulting and smearing the people who told the truth. And this refusal to admit fault and apologize went on and on and on.

The Washington Post reported:

> He retweeted news stories casting doubt on Fields's story, aided by the fact that the only footage that existed was, at best, sketchy. (He was also aided by exaggerations of Fields's original claim; at no point was it suggested that she'd been pulled to the ground.)
>
> Police in Jupiter appear to have obtained surveillance footage from inside the ballroom where the event and the incident occurred. There's no question that Fields was not, in fact, "delusional."

The video clearly shows Corey grabbing Michelle's arm and jerking her away from Trump, which resulted in bruises on her arm.

Here is an eyewitness corroboration of Michelle Field's initial report, reported by Ben Terris in the leftist Washington Post:

> As security parted the masses to give him passage out of the chandelier-lit ballroom, Michelle Fields, a young reporter for Trump-friendly Breitbart News, pressed forward to ask the Republican front-runner a question. I watched as a man with short-cropped hair and a suit grabbed her arm and yanked her out of the way. He was Corey Lewandowski, Trump's 41-year-old campaign manager.
>
> Fields stumbled. Finger-shaped bruises formed on her arm.
>
> "I'm just a little spooked," she said, a tear streaming down her face. "No one has grabbed me like that before."
>
> She took my arm and squeezed it hard. "I don't even want to do it as hard as he did," she said, "because it would hurt."

The leftist Washington Post reports on the video, and the charge of battery:

> Republican presidential front-runner Donald Trump defended his campaign manager as a "very decent man" Tuesday, hours after the staffer was charged with battery in Florida for allegedly grabbing a reporter and yanking her away from Trump.
>
> Corey Lewandowski, 42, faces one misdemeanor count of battery as a result of the March 8 incident. He voluntarily went to police headquarters in Jupiter, Fla., and signed paperwork ordering him to appear in court May 4.
>
> **The police also released a video of the primary-night news conference, taken from the security cameras at Trump's own golf club. It directly contradicted what Trump and Lewandowski said about the incident in the past.**
>
> **They had asserted that Lewandowski never touched the reporter, Michelle Fields.**
>
> **In the video, he does — grabbing her hard enough to pull her backward.**
>
> In the past, campaign staffers have been fired for far less. But Trump did not dismiss Lewandowski on Tuesday, and neither apologized. "I don't discard people. I stay with people," Trump said.
>
> It was an extreme example of Trump's approach to campaigning, one apparently based on the idea that the only mistake in politics is to apologize.

After news of the criminal charge came out, Trump didn't apologize – he went right back to trying to smear Fields as a delusional liar.

> As the day went on, Trump offered increasingly strident defenses of Lewandowski. All ran counter to his earlier statements that the contact never occurred. Trump conceded that Lewandowski had touched Fields but implied that it was Fields's fault for "grabbing" at the candidate — although the photo Trump posted didn't

> show a grab but rather the reporter brushing the candidate with the back of her hand.
>
> Then Trump wondered whether he could file charges against the reporter.
>
> And then, at the end of the day, Trump was back to implying that Fields had lied about the incident — if the grab was as bad as she said, he said, why hadn't she screamed?
>
> "How do you know those bruises weren't there before? I'm not a lawyer," Trump told reporters on his plane, referring to finger-shaped bruises that Fields showed to the police. "Wouldn't you think she would have yelled out a scream or something if she has bruises on her arm?"
>
> In an interview with Sean Hannity on Fox News on Tuesday, Trump said that Lewandowski was merely protecting him against a potential, unidentified threat.
>
> "She grabbed me and she had something in her hand. I don't know what it was," he told Hannity. "It looked like it could have been a pen. But you know, from the standpoint of where we are, who knows what it is."

Ben Shapiro notes in this interview that slandering women is is a pattern for the Trump campaign:

The Daily Wire concludes:

> Trump supporters have accused virtually every powerful anti-Trump conservative woman of some nefarious sexual activity with a rival candidate. And of course Trump himself has attacked prominent media females including Dana Perino and most egregiously Megyn Kelly ("blood coming out of her wherever"). Some of those attacks are purely political and within normal boundaries. But many of them are far more personal, obviously. This is a pattern, now, not merely a few isolated events.

Previously, I blogged about how Trump had attacked Heidi Cruz because she is supposedly not as pretty as his supermodel wife (wife number three). This seems to be a pattern that Trump has – to insult women publicly in order to shame them for opposing him.

**Trump lies all the time**

Earlier this week, Trump tried to argue that ads placed in Utah by a Super PAC that does not support Cruz were actually Cruz's fault. He went on mainstream media everywhere, and blamed Cruz for the ads. That turned out to be another lie, that was disproved by sources on the right (The Weekly Standard) and the left (The Washington Post) and every source in between. Trump lied again. This is what he does. If he's not insulting women, bragging about his penis, or giving childish answers to serious policy questions, then he's probably lying. *He's not fit to pump gas or pack bags at a grocery store.* He has one accomplishment in life – being born to a rich father. That's it. And he used that inheritance to live a life as devoid of Christian convictions and conservative actions as could be.

For a quick 6-minute listing of some of Trump's previous lies, please see this video featuring Ben Shapiro, who recently resigned from the Trump-supporting Breitbart News (following the Michelle Fields assault):

I would like to think that some Trump supporters would wake up to reality, but my experience with most of them is that they believe what they want to believe, regardless of the evidence. Whenever I present facts to them, they have some excuse why they get to retain their positive view of Trump.

Trump supporters cannot be persuaded with facts. They make decisions about who to hire as President with their feelings. They measure a man by his confidence, instead of by his record of accomplishments that are relevant for the job for which he is being interviewed. It's like Americans have lost the ability to make a moral assessment of a man – they just want to choose based on feelings. We are truly living in the age of moral relativism and postmodernism.

# The connection between our moon, plate tectonics and habitability

**Wintery Knight** · 30 March 2016 · Archived copy · Original

Christianity and the progress of science

I found an interview with Peter Ward (atheist) and Donald Brownlee (agnostic) discussing astrobiology in Forbes magazine. They were asked about how important plate tectonics are for a planet to be able to support complex life.

Excerpt:

> **Astrobiologists often cite the sheer numbers of stars and galaxies as evidence that complex life elsewhere must surely have evolved somewhere. But is probability enough?**
>
> Without a moon, we don't have any idea of how commonly a planet could have the long-term stability needed for complex life. Until we "get" that, going to the sheer numbers argument is useless. Without that moon-forming collision, we wouldn't have plate tectonics. Without plate tectonics, we might have microbes but we'd never get to animals.
>
> **What about the rarity of earth's crustal dichotomy of oceans and continents?**
>
> If you can't make granite, you're not going to have continents. But granite formation is a consequence of our moon-forming collision. That scrambled the entire density of our crust. Mars doesn't have granite; all it's got is this volcanic basalt. To build granite you need a planetary subduction [or plate tectonic] process.
>
> **In triggering complex life, how important were plate tectonics' role in the continual recycling of earth's atmosphere?**
>
> It's this recycling that allows for a very rich planetary atmosphere with an extended life. Photosynthesis gets you oxygen, but how do you get enough photosynthesis to get oxygen at 10 to 20 percent? You've got to have a shoreline next to a rich sea with rocks eroding into it in order to provide the nitrogen and phosphates for [plant] photosynthesis.

This article from Astrobiology explains more about the importance of plate tectonics.

Excerpt:

> Plate tectonics is the process of continents on the Earth drifting and colliding, rock grinding and scraping,

> mountain ranges being formed, and earthquakes tearing land apart. It makes our world dynamic and ever-changing. But should it factor into our search for life elsewhere in the universe?
>
> Tilman Spohn believes so. As director of the German Space Research Centre Institute of Planetary Research, and chairman of ESA's scientific advisory committee, he studies worlds beyond our Earth. When looking into the relationship between habitability and plate tectonics, some fascinating possibilities emerged.
>
> It is thought that the best places to search for life in the Universe are on planets situated in "habitable zones" around other stars. These are orbital paths where the temperature is suitable for liquid water; not so close to the star that it boils away, and not so far that it freezes. Spohn believes that this view may be outdated. He elaborates, "you could have habitats outside those, for instance in the oceans beneath ice covers on the Galilean satellites, like Europa. But not every icy satellite would be habitable. Take Ganymede, where the ocean is trapped between two layers of ice. You are missing a fresh supply of nutrition and energy."
>
> So planets and moons that lie beyond habitable zones could host life, so long as the habitat, such as an ocean, is not isolated. It needs access to the key ingredients of life, including hydrogen, oxygen, nitrogen, phosphorous and sulphur. These elements support the basic chemistry of life as we know it, and the material, Spohn argues, must be regularly replenished. Nature's method of achieving this on the Earth appears to be plate tectonics.
>
> Spohn found that the further he delved into the issue, the more important plate tectonics seemed to be for life. For example, it is believed that life developed by moving from the ocean to the kind of strong and stable rock formations that are the result of tectonic action. Plate tectonics is also involved in the generation of a magnetic field by convection of Earth's partially molten core. This magnetic field protects life on Earth by deflecting the solar wind. Not only would an unimpeded solar wind erode our planet's atmosphere, but it also carries highly energetic particles that could damage DNA.
>
> Another factor is the recycling of carbon, which is needed to stabilize the temperature here on Earth. Spohn explains, "plate tectonics is known to recycle carbon that is washed out of the atmosphere and digested by bacteria in the soil into the interior of the planet from where it can be outcast through volcanic activity. Now, if you have a planet without plate tectonics, you may have parts of this cycle, but it is broken because you do not have the recycling link."
>
> It has also been speculated that the lack of tectonic action on Venus contributed to its runaway greenhouse effect, which resulted in the immense temperatures it has today.

Most planets don't have a moon as massive as ours is, and the collision that formed the moon is very fine-tuned for life. This is just one of the many factors that needs to be present in order to have a planet that supports complex, carbon-based life.

If you want to learn more about this data, I recommend watching "The Privileged Planet" DVD, and someone posted it on YouTube:

If you haven't seen it, and have 90 minutes, this is time well-spent.

# Convicted sex offender crafted North Carolina LGBT bathroom bill

**Wintery Knight** · 31 March 2016 · Archived copy · Original

Chad Sevearance-Turner, former president of the Charlotte LGBT Chamber of Commerce

The Charlotte Observer reports:

> The former president of Charlotte's LGBT Chamber of Commerce has resigned after he came under fire from a conservative group, which noted that he is on a sex offender list and questioned his role in supporting the city's expanded nondiscrimination ordinance.
>
> Chad Sevearance-Turner had been the president of the chamber, which supported the newly expanded ordinance that gives legal protection for gay, lesbian, bisexual and transgender individuals.
>
> At a City Council meeting Feb. 8, Mayor Jennifer Roberts cited a survey that showed discrimination was a real problem for the LGBT community. During the meeting, she said the survey was conducted by the LGBT Chamber.
>
> That prompted questions from the N.C. Values Coalition, which opposes the new LGBT protections in the ordinance.
>
> Tami Fitzgerald, who leads the Raleigh-based coalition, first mentioned Sevearance-Turner's record at a Feb. 8 news conference outside the Government Center, which Sevearance-Turner attended. On Feb. 18, the coalition issued a news release further questioning the chamber's role in the survey.
>
> Because of his record, "any supposed evidence provided by the group is discredited," she wrote.
>
> […]**Sevearance-Turner was arrested in 1998, when he was 20, and charged in Cherokee County, S.C., with a "lewd act, committing or attempting a lewd act upon a child under 16."**
>
> **A 2000 story in the Spartanburg Herald-Journal said Sevearance-Turner had been a youth minister at a church in Gaffney. A jury there found him guilty of fondling a 15-year-old teenage church member while the boy slept**.

Charlotte's bathroom ordinance was overturned by the state. And North Carolina now requires people with male equipment to use the male washroom, and people with female equipment to use the female washroom.

National Review explains the problems with this sex-offender-designed law.

Here's one:

> The Left likes to pull out the statistic that no transgender individual has ever assaulted someone in a restroom, locker room, etc. That's great. Good for the transgendered: There are no transgender rapists. But there are plenty of other kinds who would not hesitate to take advantage of this situation.
>
> Under the Charlotte ordinance, transgender people weren't the only ones allowed to use the restroom of the opposite sex. Anyone could. All he had to do was assert that his true gender wasn't his biological gender. "Transgender" is a tricky word; it's not like "transsexual," which refers to someone who has had an operation or taken large doses of hormones. "Transgender" means simply experimentation with the stereotypes of the opposite biological gender. So a clever (or not so clever) rapist could smear on some lipstick, call himself transgender, and waltz right into a locker room full of half-dressed teenage girls.
>
> People have already taken advantage of these kinds of laws to put other people in compromising situations. In February, after the city of Seattle passed an ordinance similar to Charlotte's, a man (not transgender) entered a girls' locker room twice in one day. His goal? To "test" the limits of the new rule. An advocate of the ordinance said that the ordinance itself wasn't a problem; the man was "just taking advantage of a loophole."

People like Sevearance-Turner are backed up by some of our largest companies, as the leftist Washington Post noted:

> Companies and organizations like American Airlines, Wells Fargo, Apple, Microsoft, Dow Chemical and the NCAA — many of which have a significant presence in North Carolina — have strongly opposed North Carolina's law.

Now that we know that a convicted sex offender crafted the law, we understand what those big companies think about the safety of children compared to the desires of selfish adults. Given the choice between the sex offender agenda and the pro-child agenda, the big corporations side with the sex offender.

When you do something really, really bad and run up against the moral law, the thing to do is to realize that what you did was wrong. The thing you shouldn't do is to change the laws of the nation (which are lower than the moral law), so that you can force all the moral people to celebrate the wrong things you did. Sin is scary not just because of the harm it causes to the victims, but because the sinners are tempted to coerce acceptance from others (by exerting force against them) rather than admit their guilt and repent of the sin.

# Ted Cruz and Mike Lee go after Obama administration for intimidating pro-lifers

**Wintery Knight** · 31 March 2016 · Archived copy · Original

Ted Cruz and Mike Lee

This is from Life News.

Excerpt:

> Sens. Ted Cruz of Texas and Mike Lee of Utah are accusing the Justice Department of pursuing "frivolous prosecutions" against the pro-life movement and having, according to the senators' offices, "what appears to be an exceptionally heavy bias" in favor of abortion clinics over houses of worship in a letter sent to U.S. Attorney General Loretta Lynch Tuesday.
>
> The letter concerns the Justice Department's enforcement of the 1994 Freedom of Access to Clinic Entrances (FACE) Act, a law that prohibits any use or threat of force and physical obstruction outside abortion clinics and places of religious worship. The law, however, does not criminalize peaceful protests or other First Amendment-protected activities outside abortion facilities or places of worship.
>
> In the letter, obtained by The Daily Signal, the Republican senators write:
>
> The [Justice Department's] brazen pursuit (and subsequent online promotion) of—at best—frivolous prosecutions in the abortion context, combined with its failure to list any prosecutions or enforcement activities in the religious worship context, gives the distinct impression of a warped and biased enforcement of FACE by the [Justice Department].
>
> Cruz and Lee reference the Civil Rights Division's web page, which cites "more than 15 FACE actions in more than a dozen states" that the Justice Department has filed. The website also notes "ongoing investigations in other states," along with "several FACE cases and settlement agreements concerning abortion clinic workers or abortion facilities."
>
> "Interestingly, it does not list a single case concerning the freedom of religious exercise at houses of worship,"

> Cruz and Lee write.
>
> To further investigate the alleged double standard, Cruz and Lee are demanding that Lynch hand over a broad range of documents pertaining to the FACE Act dating back to January 2009.

Cruz has a good long record on pro-life issues – lots of pro-life actions in the past to show that the pro-life words of today can be believed.

Charisma News talked about Cruz's pro-life achievements.

Excerpt:

> On Saturday, Texas Senator Ted Cruz received a ringing endorsement from Georgia's largest pro-life organization. "Senator Cruz has an unblemished record of standing up for innocent life," said Ricardo Davis, the director of Georgia Right to Life's Political Action Committee (GRTL PAC).

And here are the pro-life achievements:

> Senator Cruz's pro-life record includes the following:
>
> - Leading the charge on behalf of 13 states in successfully defending the federal Partial Birth Abortion Act before the U.S. Supreme Court;
> - Joining 18 states in successfully defending New Hampshire's Parental Notification Act before the U.S. Supreme Court;
> - Successfully defending a Texas law that prevents state funds from being sent to organizations that perform abortions; and
> - Calling for the defunding of Planned Parenthood amid charges that the abortion giant sells aborted body parts.

That was Georgia Right to Life, but Wisconsin is the next GOP primary state. And in Wisconsin, Ted Cruz just picked up another pro-life endorsement.

Charisma News reports:

> Wisconsin and its 42 delegates are up for grabs on Tuesday in a contest where the top vote getter wins all of the delegates in each congressional district, as well as statewide. Cruz already has the endorsement of Gov. Scott Walker, who dropped out of the GOP presidential race prior to the votes being cast in neighboring Iowa.
>
> The Texas senator has picked up two more endorsements that could be critical to his winning the Badger State. The first was from Wisconsin Right to Life:
>
> Wisconsin Right to Life's Political Action Committee supports Ted Cruz as the only presidential candidate with a proven record on life who can win.
>
> "There has never been an election more important than this election, and the stakes have never been higher when it comes to protecting the unborn," stated Chelsea Shields, PAC Director of Wisconsin Right to Life. "There is only one candidate for president who has always been pro-life, who has a 100-percent pro-life voting record with National Right to Life and Wisconsin Right to Life, and who can win the Republican nomination and defeat pro-abortion Hillary Clinton in November. And that candidate is Ted Cruz."
>
> […]Cruz also picked up the personal endorsement of a key evangelical pro-family leader in Wisconsin. Julaine Appling, president of Wisconsin Family Action, said Wednesday that Cruz is a man of integrity who has kept the promises he made when he ran for Senate.

> […]In addition to Appling's personal support, Cruz also picked up Wisconsin Family Action PAC's official endorsement. The organization has the ability to immediately reach out to hundreds of thousands of evangelicals in the Badger State.

He has a 100% pro-life voting record, and specific pro-life actions in his record. We don't have to take his word for it, like we do with other candidates who say they are pro-life, but have a record of donations to pro-abortion Democrats, and a record of being "very pro-choice" and supporting partial birth abortion.

**What about Donald Trump?**

What about a person who has never thought about the pro-life view before, and who has no pro-life actions in his record? What happens when they are asked about abortion?

The Wall Street Journal reports on the latest Trump blunder:

> The first-time candidate showed how little he understands about the politics of abortion by suggesting that "there has to be some kind of punishment" if abortion were made illegal.
>
> "For the woman?" asked progressive partisan Chris Matthews of MSNBC. Mr. Trump: "Yeah, there has to be some form." He added that men who impregnate women who have an abortion should not be punished.
>
> **[…]Not even the most fervent abortion opponent favors punishing a woman who has one. If *Roe v. Wade* were overturned, opponents would try to pass laws that punish abortion providers or the clinics where they take place.** Mr. Trump's remarks were thus a political gift to Democrats and the left, who would like nothing better than to stereotype abortion opponents as misogynists who want to put women in jail.
>
> […]Mr. Trump's loyal GOP partisans have been willing to ignore his rhetorical mistakes and excesses, but Democrats will be merciless. So will the media if he secures the GOP nomination. His abortion blunder is doubly troubling because it will reinforce his growing unpopularity among women voters in both parties. Imagine his Wednesday remarks playing as part of a national advertising loop from June to November.

Anyone who has thought about the pro-life issue for more than 2 minutes knows the answer to the question: "who should be punished if abortion becomes illegal?" Answer: the person who provided the abortion, of course. That's why pro-lifers want to regulate and defund abortion providers.

# New study: natural selection can act to impede speciation

**Wintery Knight** · 31 March 2016 · Archived copy · Original

Australian Walking Stick

My friend KL sent me this press release from the University of Colorado at Boulder.

It says:

> An intriguing study involving walking stick insects led by the University of Sheffield in England and the University of Colorado Boulder shows how natural selection, the engine of evolution, can also impede the formation of new species.
>
> The team studied a plant-eating stick insect species from California called *Timema cristinae* known for its cryptic camouflage that allows it to hide from hungry birds, said CU-Boulder Assistant Professor Samuel Flaxman. *T. cristinae* comes in several different types — one is green and blends in with the broad green leaves of a particular shrub species, while a second green variant sports a white, vertical stripe that helps disguise it on a different species of shrub with narrow, needle-like leaves.
>
> While Darwinian natural selection has begun pushing the two green forms of walking sticks down separate paths that could lead to the formation of two new species, the team found that a third melanistic, or brown variation of *T. cristinae* appears to be thwarting the process, said Flaxman. The brown version is known to successfully camouflage itself among the stems of both shrub species inhabited by its green brethren, he said.
>
> Using field investigations, laboratory genetics, modern genome sequencing and computer simulations, the team concluded the brown version of *T. cristinae* is shuttling enough genes between the green stick insects living on different shrubs to prevent strong divergent adaptation and speciation. The brown variant of the walking stick species also is favored by natural selection because it has a slight advantage in mate selection and a stronger resistance to fungal infections than its green counterparts.
>
> "This is one of the best demonstrations we know of regarding the counteractive effects of natural selection on speciation," said Flaxman of CU-Boulder's Department of Ecology and Evolutionary Biology, second author on the new study. "We show how the brown population essentially carries genes back and forth between the green populations, acting as a genetic bridge that causes a slowdown in divergence."
>
> A paper on the subject appeared in a recent issue of the journal *Current Biology*.
>
> […]"This movement of genes between environments slows down the genetic divergence of these stick insect

> populations, impeding the formation of new species," said Aaron Comeault, a former CU-Boulder graduate student and lead study author who conducted the research while at the University of Sheffield.

So, in the past I had read that natural selection can act as a stabilizing force in nature – keeping the organism operating within a type. This study seems to be confirmation of that. That's a problem for naturalists, who believe that mutations and selection can drive evolution of new body plans or organ types (macro-evolution). I could even agree that mutation and selection drives changes within a kind, but that still wouldn't explain how one kind changes into another kind.

But there are other problems with generating macro-evolutionary change.

Also related to the problem raised by the study is this problem of genetic drift, which also works against the preservation of beneficial mutations.

Evolution News explains the genetic drift problem:

> Evolutionary biologists often assume that once mutations produce a functionally advantageous trait, it will easily spread (become "fixed") throughout a population by natural selection. For example, imagine a population of brown-haired foxes that lives in a snowy region. One fox is born with a mutation that turns its fur coat white, rather than brown. This fox now has an advantage in hunting prey and escaping predators, because its white fur provides it with camouflage. The white fox survives, passing its genes on to its offspring, which are also adept at surviving and reproducing. Over time, the white-haired trait spreads throughout the population.
>
> This is how it's supposed to work — in theory. In the real world, however, merely generating a functionally advantageous trait does not guarantee it will persist, or become fixed. For example, what if by chance the white fox trips, breaks a leg, and gets eaten by a predator — never passing on its genes? Random forces or events can prevent a trait from spreading through a population, even if it provides an advantage. These random forces are lumped together under the name "genetic drift." When biologists run the mathematics of natural selection, they find that unless a trait gives an extremely strong selective advantage, genetic drift will tend to overwhelm the force of selection and prevent adaptations from gaining a foothold in a population.
>
> This underappreciated problem has been recognized by some evolutionary scientists who are skeptical of the ability of natural selection to drive the evolutionary process. One of those scientists is Michael Lynch, an evolutionary biologist at Indiana University, who writes that "random genetic drift can impose a strong barrier to the advancement of molecular refinements by adaptive processes."[2] He notes that the effect of drift is "encouraging the fixation of mildly deleterious mutations and discouraging the promotion of beneficial mutations."[3]

I guess the point of this is that if someone wants to convince you that macro-evolution is possible through the mechanisms of random mutation and natural selection, then they have some work to do. And it's more work than just asserting that it happened.

People who are technical may benefit from reading Michael Behe's book "The Edge of Evolution", which studies how likely it is to get several positive adaptations in a row within a reasonable period of time.

UPDATE: A biologist friend tells me that "whether natural selection is driving speciation or preventing it, in neither case is it explaining how these organisms came to be in the first place. It only explains how existing organisms interact with their environment. And this can be explained at least as well through intelligent design as through naturalistic processes." She also says that natural selection can drive speciation, but still within a kind.

# Which candidate is the best at defending religious liberty: Trump or Cruz?

**Wintery Knight** · 1 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

First, let's see a story is from the Business Insider, about the latest attack on religious liberty. Then we'll compare the candidates on religious liberty.

Excerpt:

> An Illinois inn that refused to allow a same-sex couple hold their civil union ceremony on the property was fined more than $80,000 by the **Illinois Human Rights Commission** on Tuesday.
>
> An administrative law judge with the commission ordered TimberCreek Bed & Breakfast to pay $15,000 each to Todd and Mark Wathen for emotional distress.
>
> […]TimberCreek, located about 100 miles south of Chicago, must also pay $50,000 in attorneys' fees and $1,218.35 in costs.
>
> **"We are very happy that no other couple will have to experience what we experienced by being turned away and belittled and criticized for who we are," Todd Wathen said in a statement.**

Ah, yes. The "Human Rights Commissions" that only ever go after Christians and conservatives, never secularists and liberals. It's now more important that gays not feel "belittled and criticized" than that Christians have their religious liberty respected. Christians must be forced by the government to act like non-Christians – that's apparently the law. A law that many Christians voted for when they voted for Democrats.

OK, now let's see what the presidential candidates think about the issue of gay rights vs religious liberty. Let's start with Ted Cruz.

**Ted Cruz**

Pro-marriage activist Maggie Gallagher reports on what Ted Cruz said about the Georgia governor's decision to side with gay rights over religious liberty:

> Ted Cruz once again proved he has the courage to go up against the GOP establishment in the person of Georgia Gov. Nathan Deal, who sided with leftists, big business and Hollywood by claiming conscience protections for gay marriage dissenters are "discrimination":

> "I thought that was very disappointing to see Gov. Deal of Georgia side with leftist activists and side against religious liberty," Cruz said. "It used to be, political parties, we would argue about marginal tax rates and you could have disagreements about what the level of taxation should be. But on religious liberty, on protecting the rights of every American to practice, live according to our faith, live according to our conscience, we all came together. That ought to be a bipartisan commitment and I was disappointed not to see Gov. Deal not defend religious liberty."
>
> Now will any reporters ask John Kasich, Hillary Clinton and Donald Trump the same question?

No need to ask Hillary Clinton what she thinks, she been endorsed by the Human Rights Campaign – she's a hardcore gay activist who opposes religious liberty 100%. Bernie Sanders is the same – 100% opposed to religious liberty.

But what about Donald Trump?

**Donald Trump**

This is from Bay Windows, which bills itself as "serving New England's Lesbian, Gay, Bisexual and Transgender communities".

Here's what they wrote:

> The frontrunner for the Republican presidential nomination today promised "forward motion" on gay and lesbian equality if he is elected.
>
> In an interview with NECN's Sue O'Connell just days before the crucial New Hampshire primary, Trump cast himself as a uniter on LGBT issues.
>
> O'Connell, who is also Bay Windows' Publisher, identified herself as a lesbian in a question that noted the progress the LGBT community has made in the last two decades and asked Trump if voters can expect him to continue that momentum if elected
>
> "When President Trump is in office can we look for more forward motion on equality for gays and lesbians?" O'Connell asked him.
>
> "Well, you can," Trump answered. " And look, again, we're going to bring people together, and that's your thing and other people have their thing. We have to bring all people together and if we don't we're not going to have a country anymore."

Recall that during the Iowa primary, Trump declared how much he loves evangelicals, and even held up a Bible he supposedly got from his mother as evidence of his genuine, authentic Christian faith. But the Iowa primary is over now, so no more Bible prop needed.

What about John Kasich?

**John Kasich**

Kasich considers same-sex marriage to be the law of the land, and he opposes legal protections for Christians who are sued by gay activists.

He gets an F on marriage from pro-marriage activist Maggie Gallagher for his stance on same-sex marriage:

> The Supreme Court overturns the marriage laws of your state and many others by inventing a new right? That gets a big yawn from John Kasich: "I do believe in the traditional sense of marriage—that marriage is between a man and a woman. But I also respect the Supreme Court of the United States. The Supreme Court of the United States made the decision, and as I have said repeatedly we'll honor what the Supreme Court does—it's the law of the land."

And he opposes protections for Christians who are sued by gay activists:

> What will you do, Gov. Kasich, to protect the rights of gay marriage dissenters?
>
> […]Gov. Kasich has refused to say whether he would support [the First Amendment Defense Act].

Ted Cruz has pledged to sign the First Amendment Defense Act, and quickly, too. No hesitation, because religious liberty is in the Constitution, and Ted Cruz is *crazy* about the Constitution!

**The latest Wisconsin polls**

A Marquette University poll from Wednesday found Ted Cruz up by 10 points against Donald Trump.

That poll might have been seen as an outlier, but then a new Fox Business poll with twice the number of people polled was released Thursday:

> Cruz garners 42 percent among Wisconsin likely GOP primary voters, while Trump receives 32 percent. John Kasich comes in third with 19 percent.
>
> Among just those who say they will "definitely" vote, Cruz's lead over Trump widens to 46-33 percent, and Kasich gets 16 percent.
>
> **There is a big gender gap. Women back Cruz over Trump by a 19-point margin (46-27 percent).** The two candidates are much closer among men: Cruz gets 40 percent to Trump's 35 percent.
>
> **Cruz's advantage over the real estate mogul also comes from self-described "very" conservative voters, who give him a 36-point lead (61 percent Cruz vs. 25 percent Trump).**
>
> **White evangelical Christians voting in the GOP primary prefer Cruz over Trump by 49-28 percent.**
>
> […]Cruz is ahead of Trump among those with a college degree (42-30 percent) as well as those without a degree (44-34 percent).
>
> Independents can vote in Wisconsin's open primary — and are more inclined to back Trump (37 percent) than Cruz (26 percent) or Kasich (26 percent).

Independents are typically socially liberal, so naturally they prefer Trump and his New York values, e.g. – eliminating religious liberty.

# What happens when socialist governments runs out of other people's money?

**Wintery Knight** · 1 April 2016 · Archived copy · Original

The real face of socialism

Which socialist nation ran out of money? Brazil.

Investors Business Daily explains what happened next:

> Back to the wall, Brazil's biggest socialist manque, Luiz Inacio "Lula" da Silva, has issued a loud call for tax cuts to revive his nation's moribund economy. Why is it it takes a depression and impending political doom for socialists to recognize the truth about tax relief?
>
> Newly named as cabinet chief by embattled President Dilma Rousseff, the once-popular and much-hailed former socialist president told a press conference Monday that he wanted tax cuts (and more consumer credit) to revive Brazil's economy. He's got no support from Dilma's finance chief, and he won't improve anything with more consumer credit. But on taxes, you heard right, a heavy-duty socialist had just embraced supply-side economics as a proven means of reviving economic growth.
>
> And no question he believed it: "I am convinced that I can contribute, and it will be possible to change the mood in this country in a few months," Lula declared. Such a transformation could only come of a near-death experience. Which is about economic situation in Brazil right now.
>
> The country isn't just experiencing a bad recession. It's heading for what qualifies as a depression — a third year of economic contraction, with another negative 3.66% of GDP forecast in 2016. Inflation has topped 10% and unemployment is above 18%. Both huge industries and small businesses have gone belly-up. More than half of Brazil's 95 million consumer credit accounts are delinquent, and sovereign debt has been cut to junk.

Do tax cuts work? Only about every time they are tried. But what about raising taxes – what does that do?

> According to the Tax Foundation's William McBride, citing an aggregation of 26 studies, 26 tax hikes slashed economic growth in all but three instances, while cutting taxes consistently sets the stage for economic growth. McBride found that in one study, a 1% tax hike slashes GDP by 1.3%, while a 1% tax cut yields a 1.4% rise the first year and another 1.8% gain in the second.

> McBride also found that the most powerful impact comes from cutting the corporate tax, which mainly affects investment and capital formation, the very thing Lula said Brazil needs. Corporate tax cuts also fuel startups and entrepreneurial activity. Brazil's corporate income tax is 34%, the 16th highest in the world last year.

The U.S. corporate tax rate is the third highest in the world, 39.1%. And we just got a number for the most recent GDP change in the US economy – 1.4%. The average GDP growth under Obama is much lower than under George W. Bush.

Real Clear Markets explains:

> Right now, the nation is probably already in a recession. The BEA's first estimate of 4Q2015 RGDP growth was only 0.69%, and there is mounting evidence that this will later be revised downward. However, making the wildly optimistic assumption that 2016 RGDP growth will come in at the CBO's current forecast (2.67%), Obama will be the only U.S. president in history that did not deliver a single year of 3.0%+ economic growth.
>
> Again, assuming 2.67% RGDP growth for 2016, Obama will leave office having produced an average of 1.55% growth. This would place his presidency fourth from the bottom of the list of 39*, above only those of Herbert Hoover (-5.65%), Andrew Johnson (-0.70%) and Theodore Roosevelt (1.41%)
>
> No matter what happens in 2016, Obama's record on economic growth will be considerably worse than that of the much-maligned George W. Bush. Bush 43 delivered RGDP growth averaging 2.10%, with two years (2004 and 2005) above 3.0%.

You might remember that Bush cut taxes by over $2 trillion, and that created 8.1 million new jobs before the Democrats took over the House and Senate in January of 2007. Obama? Our labor force participation is around a 38-year low. Economic growth creates jobs, and we haven't had any under the socialist Barack Obama.

Anyway, enough of that. We're hearing a lot about socialism these days, and how great it is. The young people have been taught by their public school teachers and others about how great socialism is. But is it really? It seems to me that in order to make that decision, we should look at countries like Brazil and Argentina and Venezuela and Cuba – where socialism has been tried – and then decide based on their experiences. We know what creates economic growth, and that's leaving the money in the hands of the people who earn it.

# Jennifer Roback Morse lectures on marriage and family

**Wintery Knight** · 1 April 2016 · Archived copy · Original

Marriage and family

I am sure you will all LOVE this lecture delivered by Dr. Jennifer Roback Morse at Houston Baptist University. (60 minutes, *start listening at 11:15 though!*)

Topics:

- what is the purpose of marriage in society?
- do children really need a mother and a father?
- is each child entitled to a relationship with their 2 bio-parents?
- how is the purpose of marriage being re-defined today?
- how does same-sex marriage redefine traditional marriage?
- should the state be able to determine who counts as a parent?
- are mothers and fathers interchangeable?
- how did no-fault divorce redefine marriage?
- does the government provide an incentive to divorce?
- are men interchangeable with women?
- where did feminism come from? how did it start?
- how does the Marxist worldview view marriage and family?
- who do feminists believe should be raising the children?
- how Christianity conflicts with Utopian views
- what can a Christian university do to turn the tide?

This is a fun lecture to watch, because she's very articulate, informed, and passionate. She's an excellent speaker, because she taught economics at Yale University and George Mason University.

I've learned a ton about marriage and economics by listening to Jennifer Roback Morse. I like to complain a lot about women today not thinking much about love, marriage and parenting. But Dr. J knows *everything* about those topics. It's useful stuff for young people to know – it's never a bad idea to think deeply about marriage as an enterprise, and to understand the challenges to marriage.

# William Lane Craig lectures on the moral argument at Georgia Tech

**Wintery Knight** · 2 April 2016 · Archived copy · Original

Making sense of the meaning of atheism
This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can grab the MP3 file of the lecture, or read this essay by Dr. Craig which covers exactly the same ground as the video. The essay is for Christians already familiar with basic apologetics.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

Here's a quick couple of quotes from the essay for those who cannot watch:

> If there is no God, then any ground for regarding the herd morality evolved by homo sapiens as objectively true seems to have been removed. After all, what is so special about human beings? They are just accidental by-products of nature which have evolved relatively recently on an infinitesimal speck of dust lost somewhere in a hostile and mindless universe and which are doomed to perish individually and collectively in a relatively short time. Some action, say, incest, may not be biologically or socially advantageous and so in the course of human evolution has become taboo; but there is on the atheistic view nothing really wrong about committing incest. If, as Kurtz states, "The moral principles that govern our behavior are rooted in habit and custom, feeling and fashion,"[5] then the non-conformist who chooses to flout the herd morality is doing nothing more serious than acting unfashionably.
>
> The objective worthlessness of human beings on a naturalistic world view is underscored by two implications of that world view: materialism and determinism. Naturalists are typically materialists or physicalists, who regard man as a purely animal organism. But if man has no immaterial aspect to his being (call it soul or mind or what have you), then he is not qualitatively different from other animal species. For him to regard human morality as objective is to fall into the trap of specie-ism. On a materialistic anthropology there is no reason to think that human beings are objectively more valuable than rats. Secondly, if there is no mind distinct from the brain, then everything we think and do is determined by the input of our five senses and our genetic make-up. There is no personal agent who freely decides to do something. But without freedom, none of our choices is

> morally significant. They are like the jerks of a puppet's limbs, controlled by the strings of sensory input and physical constitution. And what moral value does a puppet or its movements have?
>
> […]Moreover, if atheism is true, there is no moral accountability for one's actions. Even if there were objective moral values and duties under naturalism, they are irrelevant because there is no moral accountability. If life ends at the grave, it makes no difference whether one lives as a Stalin or as a saint. As the Russian writer Fyodor Dostoyevsky rightly said: "If there is no immortality, then all things are permitted."

If you want to show this lecture and Q&A to your apologetics group, you can find the DVD here.

You can also read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor.

# Ryan Bell's year of atheism testimony shows need for apologetics

**Wintery Knight** · 2 April 2016 · Archived copy · Original

The Christian life requires a certain degree of mental toughness and non-conformity

Are you interested in knowing how to avoid losing your Christian faith? Well, an episode of the Unbelievable show featuring well-known apostate Ryan Bell will give you some clues.

But before we go to the podcast, I want to recap some reasons why people think that God exists.

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

In addition to these arguments for theism, Christians should be able to make a minimal facts case for the resurrection, one that leverages the early creed in 1 Corinthians 15:3-7. And some sort of case for the belief that Jesus was divine using only the earliest sources.

In addition to those positive evidences, there would be informed defenses to other questions like the problem of evil, the problem of suffering, religious pluralism, the hiddenness of God, materialist conceptions of mind, consciousness and neuroscience, the justice of eternal damnation,sovereignty and free will, the doctrine of the Incarnation, the doctrine of the Trinity, and so on.

I listed these out so that you can see how many of these positive arguments and defenses that Ryan Bell wrestles with in his deconversion testimony.

**The podcast**

Details:

> Ryan J Bell is a former pastor who has decided to try being an atheist for a year. He explains why and interacts with New Zealand apologist Matt Flannagan.

The MP3 file is here. (We only care about the first 45 minutes)

Matt Flanagan and Justin Brierley do a great job in this debate getting the real issues on the table, although you have to wait until about 20 minutes in. Quick note about Bell. He has a BA in Pastoral Ministry, an MDiv, and a doctorate in Missional Organization. Now I have a suspicion of people with a background like that – my view is that they are more likely to be impractical and/or insulated from real life.

I also noticed that his politics are liberal, and that he is featured on the web site of GLAAD, a gay rights organization, for supporting gay marriage. Why do people support same-sex marriage? I think the most common reason is because they care more about the needs of adults than they care about the needs of children for a mother and a father. That's where this guy is coming from – he is a people-pleaser, not someone who promotes the needs of children over the needs of adults.

**Summary:**

At the start of the podcast, we learn that Bell was in the Seventh Day Adventist church, which is strongly invested in young-Earth creationism. Depending on how strict his young Earth view was, this closes off many of the best arguments for theism from science, such as the cosmological argument, the cosmic fine-tuning argument, the stellar habitability argument, the galactic habitability argument, the Cambrian explosion argument, and even the origin of life argument (to a degree). These are the arguments that make theism *non-negotiable*.

When he started his journey to atheism, he says that he was reading a book called "Religion Without God" by Ronald Dworkin.I was curious to see what view of faith was embraced by this book. Would it be the Biblical view of faith, trust based on evidence? Or the atheist view of faith, belief without evidence? I found an excerpt from the book in the New York Times, which said this:

> In the special case of value, however, faith means something more, because our convictions about value are emotional commitments as well and, whatever tests of coherence and internal support they survive, they must feel right in an emotional way as well. They must have a grip on one's whole personality. Theologians often say that religious faith is a sui generis experience of conviction. Rudolf Otto, in his markedly influential book, *The Idea of the Holy*, called the experience "numinous" and said it was a kind of "faith-knowledge." I mean to suggest that convictions of value are also complex, sui generis, emotional experiences. As we will see… when scientists confront the unimaginable vastness of space and the astounding complexity of atomic particles they have an emotional reaction that matches Otto's description surprisingly well. Indeed many of them use the very term "numinous" to describe what they feel. They find the universe awe-inspiring and deserving of a kind of emotional response that at least borders on trembling.

The excerpt quotes William James, who reduces religion to non-rational emotional experiences. I don't know about you, but I don't think that view of faith is Biblical at all. Biblical faith is rooted in evidence. So clearly, what is important to this Dworkin is not objective evidence, it's feelings. And this is what Bell was reading. He was not reading academic books like "Debating Christian Theism" to get the best arguments pro-and-con. He was looking for something that "resonated" with his feelings.

His journey was prompted by a female Episcopal priest friend who was asked by an atheist "what difference does religion make in my life?". So, the framework of his investigation is set by a question that is not focused on truth, but is instead focused on emotions and life enhancement. Now Christianity might be a real stinker of a worldview for life enhancement, and the Bible warns us not to expect a bed of roses in this life. Christianity is not engineered to make you feel good or to make people like you, especially people like female Episcopal priests and GLAAD.

When talking about atheism, he is not concerned with whether atheism is logically consistent or consistent with objective evidence. He is concerned by whether atheists can have the experience of being moral without God. He sees an atheist who has moral preferences and seems like a good person by our arbitrary social standards, and he finds that as "valid" as religion. He is judging worldviews by whether people have their needs met, not by truth.

He says that as a pastor, his method of evangelizing atheists was to encourage them to "try on faith" "go through the motions" "participate in social justice outreach events", etc. His goal was that they would "step into the stream of the Christian narrative and discover that it held value and meaning to them, and find that they actually believed it". So his method of recommending Christianity to others has nothing to do with logic, evidence or truth. He is offering Christianity as life enhancement – not knowledge but a "narrative" – a story. If it makes you feel good, and it makes people like you, then you can "believe" it. He says that he was "a Christian by practice, a Christian by tradition". Not a Christian by truth. Not a Christian by knowledge. He just picked a flavor of ice cream that tasted right to him, one that pleased his parents, friends and community. And now he has new friends and a new community, and he wants to please them and feel good about himself in this new situation.

He says that the Christian worldview is "a way of approaching reality" and "creating meaning" and "identifying meaning in the experiences we have". And he says that there are "other ways of experiencing meaning". He talks a lot about his correspondence with people and reading atheists, but nothing about reading Christian scholars who deal with evidence, like William Lane Craig, Stephen C. Meyer or Mike Licona.

Literal, literal quote: (23:35) "Well I think the only access we have to the question of God's existence or not is how we feel. I mean there's no falsifiable data that says God either exists or doesn't exist. It's all within the realm of our personal experience". "If living as though God exists makes you happy and comforts you, then by all means, go for it". This attitude is so popular in our churches today, and where does it end? In atheism. I had a fundamentalist woman telling me just last night how this feelings mysticism approach was the right approach to faith, and that the head knowledge approach was bad and offensive.

I'm going to cut off my summary there, but the podcast goes on for 45 minutes. Matt Flannagan is brilliant, and went far beyond what I wanted to say to this guy, but in such a winsome way. I recommend listening to the whole thing, and be clear where this fideistic nonsense ends – in atheism.

**My thoughts**

This podcast is a great warning against two views: 1) faith is belief without evidence and 2) religion not about truth, but about life enhancement. Three other related stories might also help: the story of Dan Barker, the story of Nathan Pratt and the story of Katy Perry. I think the Christian life requires a commitment to truth above all. If you think that you can get by as a Christian relying on hymn singing, church attending, mysticism and emotional experiences, you have another thing coming. This is a different time and a different place than 50 years ago, when that sort of naivete and emotionalism might have been safe. Now we have many challenges – some intellectual and some not. To stand in this environment, it's going to take a little more than piety and emotions.

People today are very much looking for religion to meet their needs. And this is not just in terms of internal feelings, but also peer approval and mystical coincidences. They expect God to give them happy feelings. They expect God to give them peer approval. They expect God to make every crazy unBiblical, unwise selfish plan they invent "work out" by miracle. They feel very constrained by planning and moral boundaries, believing in a "God of love" who is primarily concerned with their desires and feelings, not with rules and duties. Nothing in the Bible supports the idea that a relationship with God is for the purpose of making us feel happy and comfortable. When

people realize that they will be happier in this life without having to care what God thinks, they will drop their faith, and there are plenty of non-Christians to cheer them on when they do it.

I would say to all of you reading that if the opinions of others causes you to stumble then meditate on the following passage: 1 Cor 4:1-4 too. There is only one person's opinion that matters, ultimately.

# Marquette University threatens professor with termination for helping pro-marriage student

**Wintery Knight** · 3 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

I hope everyone remembers the case of Marquette University professor John McAdams. McAdams was punished severely by the "Catholic" university for blogging about a pro-gay-rights instructor (Cheryl Abatte) who told a pro-marriage student that if he disagreed with gay rights, then he must drop her class.

Here is the latest about the university's final decision about what to do with professor McAdams from David French of National Review.

French writes:

> There's nothing like a good show trial to build confidence in the academy's commitment to academic freedom. Marquette University is demanding that embattled professor John McAdams apologize for criticizing a colleague as a condition for keeping his job. And what outrage did McAdams commit? He tried to protect the academic freedom and free speech of conservative students:
>
> On November 2014, McAdams, a tenured associate professor of political science, posted an entry on his Marquette Warrior blog describing a recorded conversation between an undergraduate student and the instructor for his "Theory of Ethics" philosophy course. The instructor, Cheryl Abbate, was recorded telling the student that the expression of certain opinions in class was inappropriate because those opinions may be considered offensive to other listeners. Abbate specifically cited the student's stated opposition to same-sex marriage as a problem.
>
> Abbate's actions were criticized by readers of McAdams' blog entry, and her alleged actions received widespread attention from national media. In response, Richard C. Holz, dean of Marquette's Klingler College of Arts and Sciences, suspended McAdams.
>
> You read that correctly. Rather than discipline the instructor who silenced a conservative student, the university suspended the whistleblower. Now it's reportedly extending the suspension through the fall 2016 semester and demanding that he apologize as a condition of returning to work. My former colleagues at the Foundation for Individual Rights in Education (FIRE) are right to label the forced apology "an age-old inquisitorial tactic used to violate freedom of conscience through compelled speech."

So, you might think that a "Catholic" University would punish the anti-marriage instructor, instead of the professor who defended the pro-marriage student, but you'd be wrong. I sure hope that none of you ever give money to Christian organizations that are not solid on issues like abortion and marriage. Because there are tons of "Christian" organizations who are aligned with the secular left on many cultural issues. It's probably a good idea to cut off this institutions from taxpayer funding until they stop discriminating against Christians and conservatives.

David French also reports on McAdams' response to the fascist college administators:

> McAdams — to his immense credit — is not backing down.
>
> Here's his response:
>
> > The addition of a demand that we abase ourself and issue an apology and sign a loyalty oath to vaguely defined "guiding values" and to the University's "mission" is obviously a ploy by Marquette to give the administration an excuse to fire us. They have calculated, correctly, that we will do no such thing.
>
> I would say that it's astonishing that a Catholic university punish a professor for *defending* the right of students to advocate the church's teaching on marriage, but politically correct nonsense is par for the course even (especially) at many religious colleges. McAdams should be applauded — and supported — for his lonely, courageous stand.

David French also wrote an article in National Review on Friday about how universities weed out conservatives who apply to be teachers and administrators. It turns out that they are not interested in diversity at all.

French writes:

> According to data compiled by the Higher Education Research Institute, only 12% of university faculty identify as politically right of center, and these are mainly professors in schools of engineering and other professional schools. Only 5% of professors in the humanities and social-science departments so identify.
>
> A comprehensive study by James Lindgren of Northwestern University Law School shows that in a country fairly evenly divided between Democrats and Republicans, only 13% of law professors identify as Republican. And a recent study by Jonathan Haidt of New York University showed that 96% of social psychologists identify as left of center, 3.7% as centrist/moderate and only 0.03% as right of center.

He's not kidding. Consider this article from the Cornell University campus newspaper.

It says:

> Of the nearly $600,000 Cornell's faculty donated to political candidates or parties in the past four years, over 96 percent has gone to fund Democratic campaigns, while only 15 of the 323 donors gave to conservative causes.
>
> The Sun's analysis of Federal Election Committee data reveals that from 2011 to 2014, Cornell's faculty donated $573,659 to Democrats, $16,360 to Republicans and $2,950 to Independents. Each of Cornell's 13 schools — both graduate and undergraduate — slanted heavily to the left. In the College of Arts and Sciences, 99 percent of the $183,644 donated went to liberal campaigns.

So how do we fix it? Well, I already mentioned that Christians should not give any money to universities, unless they are named Hillsdale College, Biola University, Grove City College, Patrick Henry College, etc. And I mentioned that Christians should not be voting for bigger government. We don't want universities to get taxpayer money that has no strings attached. They should have to please customers instead of getting taxpayer money with no accountability.

In his second article, French lists some ideas for getting universities to not discriminate against Christians and conservatives. And maybe he we elect real conservatives, instead of Democrats pretending to be conservatives, then something will be done about it.

# What percentage of Muslims approve of radical Islam and terrorism?

**Wintery Knight** · 3 April 2016 · Archived copy · Original

Muslim populations in Europe

Normally, when people ask me about this question, I go straight to the 2013 Pew Research survey which I blogged about before. But now I have something even better.

Here's a post from Ben Shapiro at Breitbart News which looks at several polls from several different countries.

Shapiro writes: (links to polls removed)

> So, here is the evidence that the enemy we face is not a "tiny minority" of Muslims, let alone a rootless philosophy unconnected to Islam entirely. It's not just the thousands of westerners now attempting to join ISIS. It's millions of Muslims who support their general goals, even if they don't support the group itself.
>
> **France.** A new, widely-covered poll shows that a full 16% of French people have positive attitudes toward ISIS. That includes 27% of French between the ages of 18-24. Anne-Elizabeth Moutet of *Newsweek* wrote, "This is the ideology of young French Muslims from immigrant backgrounds…these are the same people who torch synagogues."
>
> **Britain.** In 2006, a poll for the *Sunday Telegraph* found that 40% of British Muslims wanted shariah law in the United Kingdom, and that 20% backed the 7/7 bombers.Another poll from that year showed that 45% of British Muslims said that 9/11 was an American/Israeli conspiracy; that poll showed that one-quarter of British Muslims believed that the 7/7 bombings were justified.
>
> **Palestinian Areas.** A poll in 2011 showed that 32% of Palestinians supported the brutal murder of five Israeli family members, including a three-month-old baby. In 2009, a poll showed that 78% of Palestinians had positive or mixed feelings about Osama Bin Laden. A 2013 poll showed 40% of Palestinians supporting suicide bombings and attacks against civilians. 89% favored sharia law. Currently, 89% of Palestinians support terror attacks on Israel.
>
> **Pakistan.** After the killing of Osama Bin Laden, the Gilani Foundation did a poll of Pakistanis and found that 51% of them grieved for the terrorist mastermind, with 44% of them stating that he was a martyr. In 2009, 26% of Pakistanis approved of attacks on US troops in Iraq. That number was 29% for troops in Afghanistan.

> Overall, 76% of Pakistanis wanted strict shariah law in every Islamic country.
>
> **Morocco.** A 2009 poll showed that 68% of Moroccans approved of terrorist attacks on US troops in Iraq; 61% backed attacks on American troops in Afghanistan as of 2006. 76% said they wanted strict sharia law in every Islamic country.
>
> **Jordan.** 72% of Jordanians backed terror attacks against US troops in Iraq as of 2009. In 2010, the terrorist group Hezbollah had a 55% approval rating; Hamas had a 60% approval rating.
>
> **Indonesia:** In 2009, a poll demonstrated that 26% of Indonesians approved of attacks on US troops in Iraq; 22% backed attacks on American troops in Afghanistan. 65% said they agreed with Al Qaeda on pushing US troops out of the Middle East. 49% said they supported strict sharia law in every Islamic country. 70% of Indonesians blamed 9/11 on the United States, Israel, someone else, or didn't know. Just 30% said Al Qaeda was responsible.
>
> **Egypt.** As of 2009, 87% of Egyptians said they agreed with the goals of Al Qaeda in forcing the US to withdraw forces from the Middle East. 65% said they wanted strict sharia law in every Islamic country. As of that same date, 69% of Egyptians said they had either positive or mixed feelings about Osama Bin Laden. In 2010, 95% of Egyptians said it was good that Islam is playing a major role in politics.
>
> **United States.** A 2013 poll from Pew showed that 13% of American Muslims said that violence against civilians is often, sometimes or rarely justified to defend Islam. A 2011 poll from Pew showed that 21 percent of Muslims are concerned about extremism among Muslim Americans. 19 percent of American Muslims as of 2011 said they were either favorable toward Al Qaeda or didn't know.
>
> In short, tens of millions of Muslims all over the world sympathize with the goals or tactics of terrorist groups – or both. That support is stronger outside the West, but it is present even in the West. Islamist extremism is not a passing or fading phenomenon – it is shockingly consistent over time. And the West's attempts to brush off the ideology of fanaticism has been an overwhelming failure.

A more recent poll says that 13% of Syrian refugees support Islamic State:

> A first-of-its-kind survey of the hordes of Syrian refugees entering Europe found 13% support the Islamic State. The poll should raise alarms about the risks posed by the resettlement of 10,000 refugees in the U.S.
>
> The poll of 900 Syrian refugees by the Arab Center for Research and Policy Studies also found that another 10% of the displaced Syrians have a lukewarm, but not entirely negative, view of the terror group. That means 23% — or almost 1 in 4 — could be susceptible to ISIS recruitment.
>
> It also means as many 2,500 of the 10,000 Syrian refugees that the Obama administration is resettling inside American cities are potential terrorist threats.

Now contrast those facts with the views of Barack Obama and his allies in the mainstream media.

That video is from The Weekly Standard, here's the text:

> President Obama told CNN's Fareed Zakaria that 99.9 percent of Muslims reject radical Islam. He made the comments in response to a question about the White House avoiding using the phrase "Islamic terrorists."
>
> "You know, I think that the way to understand this is there is an element growing out of Muslim communities in certain parts of the world that have perverted the religion, have embraced a nihilistic, violent, almost medieval interpretation of Islam, and they're doing damage in a lot of countries around the world," said Obama.
>
> "But it is absolutely true that I reject a notion that somehow that creates a religious war because the overwhelming majority of Muslims reject that interpretation of Islam. They don't even recognize it as being Islam, and I think that for us to be successful in fighting this scourge, it's very important for us to align

> ourselves with the 99.9 percent of Muslims who are looking for the same thing we're looking for–order, peace, prosperity."

So Obama denies all of these surveys, and instead invents a view of the world that is consistent with his feelings. A true man of the secular left.

This gap between belief and reality explains why he is now bringing 200,000 Syrian Muslim refugees into America, keeping Syrian Christian refugees out of America, and generally underestimating Islamic State (ISIS / ISIL) because he cannot believe that radical Islam is anything for us to be concerned about.

Is the government capable of vetting Syrian refugees to find threats?

Not so much:

> The administration argues that it's conducting interviews with Syrians at camps in Turkey, Jordan and Lebanon. But without security forces on the ground in Syria who can verify details, there is no way to back-check a refugee's story to see if he is telling the truth and is, in fact, not a security threat.
>
> Even when we had people on the ground in Iraq to screen refugees, terrorists got through the safety net.
>
> In 2011, for instance, two Kentucky immigrants who had been resettled as Iraqi refugees were busted for trying to buy stinger missiles for al-Qaida.
>
> It turned out that their fingerprints matched those linked to roadside bombs in Iraq. It was a major red flag that should have barred their entry, but U.S. screeners failed to take note. And the terrorists slipped into the U.S.
>
> The administration's vetting process for the massive influx of Syrian refugees is completely unreliable, admits the FBI official in charge of such security background checks.
>
> "It's not even close to being under control," warned assistant FBI director Michael Steinbach.

We should not be believing the man who promised us that we could keep our doctor, keep our health plans, and that our health insurance premiums would go down $2,500. He is either lying, or he likes to speak on matters where he is not competent to know the truth of the matter.

UPDATE: ECM sends me this video from Ben Shapiro:

Awesome!

# Ted Cruz courts delegates in Colorado and North Dakota, ahead of Wisconsin stand

**Wintery Knight** · 4 April 2016 · Archived copy · Original

Conservative women rallying to Cruz in Wisconsin

Let's start with an article about Cruz's get-out-vote plan in Wisconsin, from the radically leftist Politico.

Excerpt:

> Just as in Iowa, Cruz arrived in Wisconsin before Trump, has worked it harder and stayed longer. He's delivered speeches at rallies across the state, shaken hands at a sandwich shop, fought for votes at a fish fry and promised to bring back American jobs at a factory in Oshkosh.
>
> Cruz has opened a "Camp Cruz" to provide free housing for volunteers who make the trek to the voter-rich Milwaukee region, as he did in Des Moines; he has again slammed Trump for refusing to debate him; and he has tried to fend off a third candidate (then Marco Rubio, now John Kasich) from serving as a spoiler.
>
> […]Cruz has the backing of one of the state's leading right-wing talk radio hosts (Charlie Sykes in Wisconsin, Steve Deace in Iowa), one of the state's leading social conservative groups (Wisconsin Family Action PAC now, The Family Leader in Iowa) and another extensive and deeply organized grass-roots network fueled by county chairs blanketing the state and a long list of supportive faith leaders. He spent Saturday night here in Ashwaubenon, screening a Christian film — just as he did in West Des Moines last fall.

The Christian film this time was "God's Not Dead 2", and it features two well-known Christian apologists – J. Warner Wallace and Lee Strobel. You can read more about what Ted thought of the movie.

The Politico article continues:

> [T]he biggest differences between Iowa and Wisconsin appear only to benefit Cruz. Then, he was under fire from the political establishment — from the popular Republican governor there (Terry Branstad) to national leaders like Bob Dole. Now, Cruz has the backing of Wisconsin's popular governor, former rival Scott Walker appears in one of his closing TV ads, as well as support from key figures in the state Legislature, including the majority leader and the Assembly speaker, both of whom previously supported Rubio.

The local conservative talk show hosts love Cruz, and they are attacking Trump for attacking Walker's successful conservative reforms:

> Local talk-radio hosts have pilloried the front-runner for denigrating Walker when he was still in the race and

> in recent days.
>
> "When Donald Trump comes into Wisconsin, knows nothing about our state, trashes all the work we've done, trashes our governor, trashes our party, we take it personally," said Vicki McKenna, another prominent conservative radio host. "It's just spectacularly stupid."
>
> Cruz, on the other hand, has taken full advantage of the two weeks leading into Wisconsin that are uninterrupted by any other primary or caucus, McKenna said.
>
> "He's actually got people here in Wisconsin advising his campaign; he's made an effort to understand even district to district, county to county," she said.
>
> […][Governor Scott] Walker and Carly Fiorina spent days crossing the state stumping for Cruz. Walker's wife, Tonette, joined Cruz's wife, Heidi, for a Saturday sprint, hitting three stops along with Utah Sen. Mike Lee.

Wisconsin votes on Tuesday, but there is more going on with the delegates from states that have voted already.

**Delegates and the GOP Convention**

Even though the delegates who attend the conference from each state are bound in the first round(s) to vote according to the primary / caucus election results for their state, they are released to vote how they want in later rounds of voting. If Trump shows up at the convention in Cleveland and doesn't have 1,237 votes, then he won't win the nomination in the first round. If no one gets 1,237 votes, then the convention becomes a "contested" convention. That's when having true conservative delegates become crucial, because delegates vote according to their conscience in the 2nd round and later. (Some unbound delegates can even vote their conscience in the first round).

The Cruz campaign knows this, and they are trying to make sure that the delegates who picked are genuine conservatives and are members of the Republican Party.

Conservative Review reports on North Carolina delegates:

> In North Carolina, Donald Trump won 30 bound delegates at the primary, and Ted Cruz won 27. That is for the first ballot, where delegates are officially bound. District Conventions were held in four of the state's thirteen congressional districts last weekend. A grassroots activist in North Carolina provided Conservative Review with the results of those districts. Nine of the 12 delegates elected yesterday are definitely Cruz supporters and have worked to elect Cruz for a significant period of time. Two others identified themselves as Cruz supporters at the convention so that 11 of the 12 are Cruz supporters.

The Washington Times reports on Colorado delegates:

> Ted Cruz on Saturday picked up the first six of 37 Colorado delegates to be chosen before the Republican National Convention, giving his candidacy a boost entering this week's Wisconsin primary. The six delegates, three each from 1st and 6th congressional districts, shut out would-be delegates for businessman Donald Trump and Ohio Gov. John Kasich at party assemblies.
>
> […]Delegates from Colorado's other five congressional districts are to be selected at assemblies leading up to Saturday's Colorado Republican Convention in Colorado Springs, which Mr. Cruz is expected to attend.

Leftist CNN reports on North Dakota delegates:

> Ted Cruz claimed a majority of delegates in North Dakota on Sunday — though the delegates are not bound to him, so their loyalty remains uncertain.
> North Dakota Republicans selected 25 national delegates and, of those, 18 were on a list of preferred delegates that Cruz circulated — a clear win for the Texas senator.

North Dakota delegates are “unbound”, so they get to vote however they want from the first round on at the convention.

# Colorado preschool kicks 4-year-old out when her parents question LGBT indoctrination

**Wintery Knight** · 4 April 2016 · Archived copy · Original

National Education Association

The radically leftist Denver Post has the story:

> A 4-year-old Aurora girl was kicked out of a preschool last month when her parents raised questions about books read in her class, including ones that told the stories about same-sex couples and worms unsure about their gender.
>
> Her mother, R.B. Sinclair, sees it as sex education and wanted to opt her daughter out of those discussions.
>
> **Instead, school officials from Montview Community Preschool & Kindergarten in Denver — run as a private, parent cooperative — explained the stories were part of the school's anti-bias curriculum, and because the discussions are embedded through the day, they told her that opting out was not possible.**
>
> **The school's anti-bias curriculum is part of a growing push in public and private school classrooms where educators use more diverse depictions of families and gender roles to expose students to differences before children have a chance to form negative opinions.**
>
> "Biases start as kids get older and start to see differences as negative. At a young age, kids are exploring all different kinds of things," said Kim Bloemen, director of early childhood education for the Boulder Valley School District. "It's about just providing them with all these experiences."
>
> In a letter sent home to Montview parents, the school defended the books and in a newsletter suggested ways for parents to discuss the topics at home.
>
> **School officials refused to comment for this story or answer questions about their curriculum or the goals they set.**
>
> […]**In Boulder's public preschools, all teachers were trained this year to integrate a broader type of diversity to include gender and sexual differences and to have conversations with young children.**

So, who is doing the training of the teachers in the public schools?

These guys:

> A Queer Endeavor, an initiative started in the School of Education at the University of Colorado at Boulder, has helped train 2,500 teachers over the past three years, including those in Boulder and in the St. Vrain Valley School District.
>
> […]The initiative helps teachers keep the focus on family structures and on being positive about differences.

More about "A Queer Endeavor" from their web site:

> Housed in the CU-Boulder School of Education and led by Bethy Leonardi, PhD, and Sara Staley, PhD, A Queer Endeavor is an initiative focused on supporting teachers and school communities around topics of gender and sexual diversity.
>
> […]The work of A Queer Endeavor is made possible through a partnership between the School of Education at the University of Colorado Boulder and the generous support of the Twisted Foundation.

And it's not just the gay activists who get into the schools to push their agenda. Schools who refuse to toe the line on gay activism will not be accredited:

Back to the Denver Post article:

> Kristen Johnson, senior director of the Academy for Early Childhood Program Accreditation from the National Association for the Education of Young Children, a nonprofit that accredits preschools, said the organization's standards require schools in some way to include depictions of nonstereotypical gender roles and families.
>
> "The early-childhood years are the prime time to help children develop healthy self-identities **as well as learn to respect and interact positively with people who are different from themselves**," Johnson said. "Reading books that are inclusive of diverse characters is an essential strategy for supporting self-esteem in children who are part of these families, as well as teaching children about the diversity of all families."

So let's see what happened:

- public school teachers were trained by gay rights groups in LGBT propaganda (undermining heterosexual norms like monogamy and exclusivity, and undermining natural marriage)
- four-year-old child indoctrinated to approve of redefinition of natural marriage and family, so that she won't judge the selfish adults for redefining marriage
- parents try to protest the LGBT propaganda, but they are told there is no opt-out, and their daughter is kicked out

Keep in mind that the parents of this four-year-old girl are taxpayers – they are forced to pay taxes that go to these public school teachers. There is no opt out of the lessons, and there is no opt-out of paying taxes for these public schools. And there is no transparency to parents or to voters – that's the whole point of it.

Team LGBT wants children to adopt an anything-goes approach to relationships and sex, so that these children have a knee-jerk reaction against natural marriage as the best arrangement for children and for society.

The problem is that moral norms around natural marriage are there for a reason. By teaching children to "celebrate diversity", they are removing the moral boundaries reduce harm in adults and in their vulnerable children. I understand what the gay activists want. They want to make a world where *no one objects* to a woman leaving husband, taking her 3 children, and moving in with her lesbian lover. They want children to think that is as good as lifelong married love between one man and one woman. But that woman's children will be raised fatherless, which

is bad for them. The gay activists and their allies in the public schools do not want selfish adults shamed or offended by anyone who articulates that natural marriage is best for kids and society. That's why they are indoctrinating your kids – for *their* benefit. They want to be selfish, and not be disagreed with.

Here's the end game of the gay activists, explained by a gay activist, and reported by The Blaze:

> A 2012 speech by Masha Gessen, an author and outspoken activist for the LGBT community, is just now going viral and it includes a theory that many supporters of traditional marriage have speculated about for years: The push for gay marriage has less to do with the right to marry – it is about diminishing and eventually destroying the institution of marriage and redefining the "traditional family."
>
> […][T]hose advocating for gay marriage have long stated that the issue will not harm traditional marriage. Ms. Gessen's comments on the subject seem to contradict the pro-gay-marriage party lines.
>
> Gessen shared her views on the subject and very specifically stated;
>
> - "Gay marriage is a lie."
> - "Fighting for gay marriage generally involves lying about what we're going to do with marriage when we get there."
> - "It's a no-brainer that the institution of marriage should not exist." (This statement is met with very loud applause.)
>
> As mentioned above, Gessen also talked about redefining the traditional family. This may have something to do with the fact that she has "three children with five parents":
>
> "I don't see why they (her children) shouldn't have five parents legally. I don't see why we should choose two of those parents and make them a sanctioned couple."

That's the real goal of these gay activists and their public school allies. Getting children to not see natural marriage as normal. Getting children to not condemn selfish adults who don't give children access to their biological mom and biological dad for life. The gay activists don't want the obligations to do relationships and marriage in a way that benefits children. They want to make a world where the next generation of children won't judge them for depriving kids of their mom and their dad. They don't want kids to expect that men and women commit to each other self-sacrificially, monogamously and faithfully. They don't want kids to expect that adults put their kids above their feelings and desires, for the benefit of the kids.

The end goal is to get rid of moral values and moral boundaries in romantic and sexual relationships, so that adults can never be judged for taking actions and living lifestyles that harm themselves and/or others – especially children who need a mom and a dad. We can allow people to live differently while still promoting natural marriage as the best environment for having and raising children. It is more important that selfish adults give children a mom and a dad, than that selfish adults indoctrinate children to affirm selfish adults who deny children a mom and a dad.

I hope everyone read my recent post about the dangers of public schools. Christians should make a plan to keep their kids away from these government-run schools. But the real solution is to stop the funding of these schools by taxpayer dollars. Parents should be able to buy the instruction they want for their kids, not be forced to pay for schools and teachers that do not reflect their values.

# UK woman explains why she chose a man who savagely attacked her

**Wintery Knight** · 4 April 2016 · Archived copy · Original

Is this man a good candidate for father/husband roles?

Trina sent me this astonishing post about a woman whose boyfriend literally gouged her eyes out. The article is written by one of my favorite authors, Dr. Theodore Dalrymple. It appears in City Journal, the famous journal of the centrist Manhattan Institute.

There are no graphic images in the article, but there is very vulgar and violent language in some parts. The author of the article is sympathetic with her suffering, but we can learn a lot from her story about how to choose a good man.

**Fatherless**

First, we learn that Ms. Nash grew up fatherless and the bills were paid by the state – she had *no idea* that women should prefer men who work hard, self-sacrificially, to be able to provide for a family:

> Nash was born in Cornwall, one of six children to a mother whose relationships with men were tumultuous. "I'd seen my mum go through hundreds of break-ups and be badly treated by men," she tells us. The mother's complex love life left little time for her children, for, as Nash observes, "I was much closer to [my grandmother] than my mum, who never seemed to have time for us." How many of the six children shared the same father we never learn, and indeed Nash makes no mention of a father of any of them, including her own. It appears that she came into a radically fatherless world, and though she does not say so, it is likely that at least some of her brothers and sisters were half-siblings; and again, though she does not say so, it is likely that the principal economic support of the family was the state, whose paid-out benefits meant that it was, in effect, father to the children. Nash grew up in public housing and seems to have lived in such subsidized housing all her life.

Not seeing her father providing for the family and loving her mother left her with no way to tell good men apart

from bad men:

> She tells us early in the book that she is a single mother of two children. Speaking of her first child, she says, "I may have had [him] when I was very young but my kids mean the world to me and not for one moment did I regret becoming a mum at sixteen."
>
> […]The next sentence reads: "My choice in men, however, left a lot to be desired." And when she reaches the beginning of the narrative of her blinding, she writes, "I had [moved back to my town of birth] with two sons by different dads and a series of dead-end relationships." **It is obvious that the suitability of men to be fathers to her children arose for her neither before nor after their births, because she deemed fathers inessential or even useless, as economically they obviously were, given her likely financial support from the state. That is why her choice in men "left a lot to be desired": nothing of long-term significance for her hung on it, or seemed to hang on it, so that the only criterion of choice was immediate attraction—commonly known as lust.**

This is the problem with feminism that I am always warning you all about. If women are taught that there are no *specific* behaviors that men are responsible for, (because that's sexist), then they will prefer men solely on surface criteria like appearance, feelings and peer-approval. They will not choose men who can actually do the jobs that men do: protect, provide, lead on moral and spiritual issues.

**Alcohol**

Drinking too much contributed to her poor choices with men:

> We arrive now at her choice of Jenkin as consort. As it happened, Nash had met him at a party some years previously, just following his release from prison after serving four and a half years "for stomping on a guy's head and giving him brain damage," as her best friend put it—adding that "he's a bloody psycho." And Nash's first experience of him was not altogether favorable: after they spent hours talking about music and "our mutual love of rapper 2pac," he tried to force himself sexually upon her. It was not love at first sight, therefore: it was love at second sight.
>
> That second sight came when "I'd had a few glasses of wine" at a restaurant and a "few shots of tequila" at a nightclub, where she ran into him again, so that she "could barely hear in my head those words of warning [about Jenkin by her best friend years earlier] for all the alcohol I had knocked back."
>
> […]When he asked for her telephone number, "I didn't hesitate for a second. **I felt I could trust him.**"

She felt (feelings) that she could trust him. But there was no evidence that he could be a good father and husband.

**Lust**

So, why did she feel she could trust him?

> **What was so attractive about Jenkin? It was his size and muscles. He was six feet, four inches tall, and "his chest was so big his T-shirt clung to him like cellophane, highlighting his pectoral muscles. His blue jeans molded to his thighs, showing off his pert bum." Nash's subsequent rationalizations for staying with him were but a smokescreen for the rawness of her desire.**

> […]But Jenkin struck Nash as a "great big teddy bear" with "puppy-dog eyes." On waking up after her first night of sex with him, however, she noticed the tattoos on his chest and arms: "Down his right arm was an image of a hooded executioner raising his sword like he was about to slaughter someone. . . . On his left chest was a tattoo of a tiger ripping someone's head off. Down his left arm was OUTLAW in big bold black letters." Still, though she knew he had served a long prison sentence for seriously injuring someone, she "chuckled at

> the thought that Shane fancied himself as a bit of an outlaw." His night of love with her resulted in him failing to get up in the morning, whereupon he lost his job as a painter and decorator, and he never found, or sought, another.

No woman who believed in traditional gender roles could ever think that this man would make a good husband. He is unemployed, unchaste, a convicted violent criminal, a drunkard and a brute.

**Violence**

The article then talks for a while about the drinking, partying and domestic violence between Nash and Jenkin. He accuses her of cheating, spits in her face repeatedly, throws a brick through her car window.

There were plenty of signs:

> **Jenkin exhibits almost every conceivable warning sign of vicious future violence. He takes anabolic steroids. He arrives one day with a crossbow—a formidable weapon—claiming that some Lithuanians with whom he has had a dispute want to kill him. He spends his days playing violent video games and his nights watching horror films of terrible sadism, including some that graphically depict people having their eyes gouged out with bare hands—scenes that obviously excite him and that he demands Nash watch with him. Nash learns that Jenkin had stabbed his own dog to death—a Rottweiler, needless to say—when he grew tired of it.**

Jenkin actually attacked her before the eyes were gouged out. And she lied in court saying he was innocent and that she fallen down the stairs. And she took him back after he was acquitted of the first attack. The second time he attacked, it cost her her eyes. And all was done in front of her children.

The article ends with this:

> In her book, Tina Nash describes how she tried bravely to get on with life after being blinded. After she finished the book, she found a new boyfriend. He has just been sent to prison for assaulting her.

Here's a news story about the new boyfriend.

The point of me posting this is as a warning to those who believe that there are no differences between men and women – no specific things that men are supposed to do for a woman that she should choose him for. A man has to be able to work in order to provide. He should be protective and gentle with women, children and animals. He should be loving and caring. He should know God and be prepared to defend God. He should have strong convictions about theology and the moral law.

A woman learns about the qualities of good men by reading stories about good men, e.g. – Austen, Dickens, Elizabeth Gaskell, etc., and also from watching her father be a protector, provider and moral/spiritual leader in the home. It is very important that her father perform the standard male roles for her mother in front of her. That's how daughters learn what it means to be a good man, and how men are supposed to love women well. It doesn't mean letting a woman be spoiled and selfish all the time. But she should always feel safe and loved, no matter what she does.

By the way, you can read Dalrymple's first book for free online. All the chapters are linked in this post.

# How well is Obamacare working, and will Ted Cruz or Donald Trump fix health care?

**Wintery Knight** · 5 April 2016 · Archived copy · Original

ObamaCare's Slippery Slope

As the cost of the cheapest plan rises in 2016 vs. the $695 individual mandate penalty, the more likely it is that the relatively young and healthy will opt out and pay a fine.

| Cheapest bronze premium | | | |
|---|---|---|---|
| Atlanta | $2,222 | All New Hampshire | $1,372 |
| Jackson, Miss. | $2,232 | Portland, Ore. | $1,360 |
| Miami | $2,220 | U.S. average | $1,320 |
| Wichita, Kan. | $2,135 | Salt Lake City | $1,324 |
| Huntington, W.V. | $2,076 | Sioux Falls, S.D. | $1,312 |
| Birmingham, Ala. | $2,062 | Omaha | $1,264 |
| Portland, Maine | $2,062 | Chicago | $1,240 |
| Columbus, Ohio | $2,062 | Cedar Rapids, Iowa | $1,240 |
| All New Jersey | $2,016 | Columbia, S.C. | $1,240 |
| Las Vegas | $1,992 | Nashville | $1,228 |
| Philadelphia | $1,992 | Fairfax County, Va. | $1,228 |
| Little Rock, Ark. | $1,944 | Phoenix | $1,216 |
| Indianapolis | $1,944 | Bozeman, Mont. | $1,204 |
| Fargo, N.D. | $1,944 | All Delaware | $1,200 |
| Cheyenne, Wyo. | $1,944 | Albuquerque, N.M. | $1,204 |
| Houston | $1,932 | New Orleans | $1,200 |
| Detroit | $1,884 | Oklahoma City | $1,140 |
| Milwaukee | $1,884 | Charlotte, N.C. | $1,116 |
| St. Louis | $1,872 | Anchorage | $400 |

Obamacare Bronze plans

Two stories, then we'll see whether Trump or Cruz is more likely to repeal Obamacare.

The Daily Signal lists 4 problems with Obamacare:

1. Rising Costs
2. Higher Taxes
3. Unstable Enrollment
4. Hostility to Personal Liberty

Let's look at the first two:

> Rising Costs
>
> Contrary to repeated administration promises, Obamacare has not only failed to lower costs, but has also imposed additional expenses on millions of already over-stretched individuals and families.
>
> Premiums in the government created exchanges were an initially jolting experience for Americans who did not qualify for taxpayer subsidies, and it appears that in 2016 premium increases in the government's health insurance exchanges will again hit enrollees in the double digit range.
>
> **When it comes to average job-based premiums, the Congressional Budget Office (CBO) says that they, too, are climbing, and will rise almost 60 percent between now and 2025. Deductibles in the Affordable Care Act exchanges have also jumped higher than officials anticipated, discouraging the purchase of the Obamacare coverage among the poor and the young.**
>
> […]Today, based on CBO data, the net cost of Obamacare's coverage provisions—subtracting the taxes and penalties—will amount to over $1.4 trillion over the next ten years.

> Higher Taxes
>
> Obama promised he would not raise taxes on the middle-class. But Congressional Budget Office data indicates that Obamacare's numerous taxes, fees, and penalties will cost about $832 billion over the years 2016 – 2025. And middle-class Americans are going to be hit—directly and indirectly.
>
> Even lower-income workers will get hit by Obamacare taxes, including the so-called Cadillac tax on expensive health plans offered by large firms, as well as the individual mandate tax penalty.
>
> For 2016, that mandate tax penalty for a single adult is $695 and up to $2,085 for a family.

We also need to remember how many companies took their employees off of the full-time work week to keep them below the 30 hours, so that they wouldn't have to buy them this expensive health care with all the new minimum coverages (drug addiction therapy coverage is mandatory now?) that raised the price of health care insurance premiums.

But there's more than just more government spending, higher premiums, higher deductibles and higher tax penalties for those who opt out of the individual mandate. There's also the regulation side of things. Doctors are now being regulated by the government to the point where they are dropping out of the field. And there are fewer people who want to become doctors, because of the regulations.

Primary care doctor shortage

So, how do we fix it? Well, one person who will not fix it is Donald Trump. Trump isn't aware of any of the problems with Obamacare – he wants to *expand* government control of health care. Make it cover more people, for more mandated coverages (toupees, wigs, Viagra, hair replacement surgery?)

When government pays for all the health care provisioning, we call that a single-payer system. And Trump is for it – that clip is from September 27, 2015. In the Fox News debate in August, he said that single payer health care "works in Canada".

Do you think more government-control of health care will make things better? Look at how things are going in the single-payer system for our armed forces veterans in the VA single-payer system – they are dying while bureaucrats collect fat bonuses for concealing the waiting lists. Just as in Canada and the UK, the patients are dying on waiting lists while waiting for care. They pay into the Trump health care system their whole lives, then when they are old and of no use to the government, they are denied care and left to die.

Single-payer health care wait times in Canada

How much do Canadians pay in taxes, in order to wait on waiting lists for the government to decide to give them health care?

This Toronto Sun article explains:

> Canadians retain just 21% of their income after paying the taxman and covering the cost of necessities, according to a Fraser Institute study.
>
> Taxes gobble up a whopping 42% of the average Canadian family's income. About 37% of income goes to cover housing, food and clothing.
>
> "We've found … that over the last five decades or so, the tax bill for the average Canadian family has grown dramatically," said study coauthor Charles Lammam.

Well, what about Ted Cruz? Has he got any sort of plan for Obamacare and consumer-centered health care reform?

**Ted Cruz**

Yes, he's going to repeal Obamacare on day one, and then work to replace it with this:

Main points:

Ted Cruz's health care plan: choice and competition

Cruz explains it himself here:

> At the eighth Republican presidential primary debate on February 6, 2016, Ted Cruz discussed repealing Obamacare: “Socialized medicine is a disaster. It does not work. If you look at the countries that have imposed socialized medicine, that have put the government in charge of providing medicine, what inevitably happens is rationing. … If I’m elected president, we will repeal every word of Obamacare. And once we do that, we will adopt common sense reforms, number one, we’ll allow people to purchase health insurance across state lines that will drive down prices and expand the availability of low cost catastrophic insurance. We’ll expand health savings accounts; and we will de-link health insurance from employment so that you don’t lose your health insurance when you lose your job, and that way health insurance can be personal, portable and affordable and we keep government from getting in between us and our doctors.”

Those of you who like to read consumer-centered health care policy scholars like me (Sally C. Pipes, Regina Herzlinger, Michael D. Tanner, Michael F. Cannon, John C. Goodman, Ilya Shapiro, Avik Roy, etc.) will recognize a lot of what he is proposing – he stole it all from the conservative and libertarian policy experts.

To me, that sounds better than Trump’s plan of expanding government-run health care into universal government-run health care. If I wanted that, I’d go to Canada or the UK, and just die on a waiting list after paying 42% of my salary into the system for my whole working life.

# Getting to know the real Ted Cruz, an account from his close friend Jay Nordlinger

**Wintery Knight** · 5 April 2016 · Archived copy · Original

Ted Cruz meets voters at a campaign event

There was a three-part series in National Review which I found just fascinating, and a good antidote to the hit pieces you see from the Republican establishment, which they attack Cruz for "likability". As regular readers of National Review know, Jay Nordlinger is more of an establishment type. But he backed Cruz from the beginning in the GOP primary, because he has known Cruz personally for a long time.

Here are the three parts:

- A Friend in the Arena, Part I
- A Friend in the Arena, Part II
- A Friend in the Arena, Part III

From part 1:

> I met Ted Cruz on the presidential campaign of George W. Bush in 2000. I had taken a leave of absence from NR to assist that campaign. This was in mid-September, for the last six or seven weeks of the campaign. […]Ted was a domestic-policy advisor on the campaign.
>
> We bonded, as they say. We had many a late-night discussion at Earl Campbell's barbecue joint and other choice spots.

On judges:

> Ted had a fancy education. He went to Princeton University, where he was a debate champion, and to Harvard Law School, where he was an editor on several publications, including the *Law Review*.

> But I noticed something on the campaign — the campaign in 2000: He had a scrappy, outsider's heart.
>
> More on his background: He clerked for Judge Mike Luttig, on the Fourth Circuit. In fact, Ted made me aware of Luttig, and I came to admire this judge almost as much as Ted did. Then Ted clerked for the chief justice of the United States: William Rehnquist.
>
> In fact, I think Ted learned to play tennis just to play with the chief. I'll have to check with Ted on that.
>
> An additional note on Mike Luttig: When a Supreme Court seat came open in 2005, Ted pushed for Luttig's nomination. So did I, in my capacity as an opinion journalist (not that I had great pull). When John Roberts got the nod, we supported this nomination, of course, as all conservatives did. But our heart was with Luttig.

I back Edith Hollan Jones and Janice Rogers Brown for Supreme Court picks, but J. Michael Luttig is on my list, further down.

On school choice:

> Tell you a story. Ted was, and is, an impassioned advocate of school choice. He thinks it's shocking — immoral — that poor kids are trapped in hopeless, violent schools. One day, he was telling me about lawyers in the opposite camp: the camp of the education establishment. (For once, I think the word "establishment" is appropriate. Or Bill Bennett's word: "Blob.")
>
> "You could practically smell the sulfur coming off them," said Ted.
>
> I don't have permission to tell that story. But what the hell. It's done. (Ted can sue me!)

Promoting school choice is the civil rights issue of our time. We have to get the money out of the government, and back into the hands of parents, so that they are free to choose schools that serve their children, instead of indoctrinating their children. We need kids who can get private sector jobs, not recite global warming dogma and put condoms on cucumbers.

On the free enterprise system:

> Ted was exceptionally versatile. He knew a lot about the law, of course. And about domestic policy, of course. He was a domestic-policy adviser. He had Medicare Part B and all that jazz down pat. I am still a little hazy about these things, never being able to get through a white paper. Even the abstract …
>
> He knew a lot about economics, and was a big free-marketeer. When he was in high school, he took part in something called the Free Enterprise Institute. They read Hayek, Friedman, Bastiat, everything. Ted imbibed. And saw the reason of.
>
> He knew a lot about foreign policy, and was a hawk. Also, he was a "social conservative." That term is weak, but it will have to do. Ted opposed abortion, for example — and knew why.
>
> This is important: Ted was amazingly free of cynicism. What do I mean by that? I mean, he really*believed* in America, free enterprise, and all that rah-rah stuff. Other people feel the need to roll their eyes a bit. Not Ted.

Here's something from part two, now:

> Ted worked at the Justice Department and at the Federal Trade Commission. Then he was solicitor general of Texas (under the attorney general, Greg Abbott, who would become governor). Frankly, I didn't know that states had solicitors general until Ted became one.

I blogged before about Ted's experience pushing for free-market policies at the Federal Trade Commission, and for gun rights and religious liberty as Solicitor General of Texas. Everywhere he has gone, he has pushed conservative positions. If you were hiring a candidate and went strictly off of resume, this would be the guy you would hire.

Trump would not get an interview – he has no resume.

Cruz's record in the Senate:

> Ted has a wider libertarian streak than I do. (Bill Buckley: "Within every conservative is a streak of libertarianism.") Also, he has less patience for the "establishment" than I do. But, you know? He was the one who got elected, and you know what else? He kept his promises to the voters.
>
> Some may not have liked those promises. But, by golly, he kept them. Which is refreshing in a politician.
>
> And he did not sit around. Oh, no. He did not mark time. A senator observed, "Ted has done more in a couple of years here than some of our colleagues have done in *decades*."

Cruz got a lot of legislation passed, more than Rubio.

And from the third part:

> Obviously, the Cruz style is not for everyone. But I can say this, to conservatives (and to anyone else, for that matter): If he is president, he will do everything humanly possible to repeal Obamacare. And to prevent Iran from going nuclear. And to do other hard, vital things. I don't know if these things can be done. But I feel sure that, if they can, Ted will do them. He will go the last mile, and beyond.
>
> Like everyone else, he likes popularity more than unpopularity. But if popularity clashes with the right course of action, popularity will have to go. Ted is used to opposition and scorn. And he would do anything — walk through fire, chew on glass — to keep this country free.

You can read more about Cruz's achievements in this post.

# Thinking practically about the gospel with an illustration from a war movie

**Wintery Knight** · 5 April 2016 · Archived copy · Original

The city of Mogadishu, in Somalia, Africa

First, let's get an overview that helps us understand the context and goals of the mission we are going to discuss.

The scene is set in Somalia, Africa, in 1992. There a civil war between two warlords: Ali Mahdi and Mohammed Farah Aidid. The war has destroyed agricultural operations, and the people are starving. The United Nations are trying to help, but Aidid hijacks the food from UN aircraft so that he can use the food to gain control of the people. Hundreds of thousands of Somalis are dying of starvation. The UN requests American military forces to secure the air-dropped supplies so they can be distributed to the starving people.

In December 1992, President George H.W. Bush answers the call, sending 25,000 troops to Somalia to protect the food from the Somali warlords. However, in 1993, Bill Clinton is elected. He orders that the number of U.S. troops be reduced to 12,000. Following an attack by Aidid on Pakistani peace-keepers, the U.N. issues a resolution to capture those responsible. The U.S. armed forces have the arms and training to battle evil, so they get the call to capture Aidid and his lieutenants.

In late August 1993, Task Force Ranger is deployed to Mogadishu to capture Aidid and his lieutenants at the Olympic Hotel. The U.S. force consists of 440 troops from the Army Rangers and Army Delta Force special forces, commanded by General William Garrison. Garrison requested light armored units (Bradley Infantry Fighting vehicles) that would offer more protection than the unarmored HMMWV Humvees. Garrison was denied the light armor by the Clinton administration. Garrison requested heavier air support (AC-130 Spectre gunships) that would offer better fire support than the UH-60 Blackhawk miniguns. Garrison was denied the air support by the Clinton administration. The Clinton administration did not want the American forces to appear too heavily armed for the peace-keeping role.

The actual mission turned out to be much harder than it needed to be, because of the resources denied by the Clinton administration. Although the Aidid lieutenants were captured, Aidid himself escaped. Eighty-four American soldiers were wounded. Eighteen American soldiers were killed, and their bodies were dragged through the streets of Mogadishu. This was shown over and over by the media, and it undermined American resolve to help the Somali people. As a result, Clinton had the excuse he needed to retreat the American military.

(Source: Nova Online)

**Two heroes lost their lives**

Today, I want to talk about two of the men who lost their lives in Operation Gothic Serpent. They are Master Sergeant Gary I. Gordon and Sergeant First Class Randall D. Shughart – a Delta Force sniper team.

Here is a clip from the movie Blackhawk Down, which shows what happened to them:

The pilot of the downed Blackhawk was protected by the two men who volunteered to go in after him.
They requested that they be inserted at the crash site, even though they knew that reinforcements were likely not going to be there in time to save them. They made the request to go and help the pilot *three times* before being allowed to go in. Their first two requests were denied by their commanding officer, because the odds against their survival were so overwhelming. The rescued pilot was later released by his captors, and the two heroes were awarded the Medal of Honor for their brave actions.

A Congressional Medal of Honor
Here is a description of the requirements to be awarded a Medal of Honor:

> The Medal of Honor is the highest military decoration that may be awarded by the United States government. It is presented by the President of the United States, in the name of Congress, and is conferred only upon members of the United States Armed Forces who distinguish themselves through **conspicuous gallantry and intrepidity at the risk of life above and beyond the call of duty**:
>
> - While engaged in action against an enemy of the United States;
> - While engaged in military operations involving conflict with an opposing foreign force; or
> - While serving with friendly foreign forces engaged in an armed conflict against an opposing armed force in which the United States is not a belligerent party.

You can read the official details of their actions.

**The point of this post**

It is important for Christians to be familiar with real-world examples of people giving their lives in order to save the lives of others. When we see real-world examples of self-sacrifice, it helps us to understand what Jesus really achieved for us, and what he must have felt making that hard choice to volunteer to go in and rescue us. In general, my philosophy when it comes to the Bible is to make every effort to connect what the Bible says to the real world. We must not push Christianity into some far-off world of piety and feelings. We must make connections to real evidence and real life, so that what the Bible says becomes practical, and so that we have a deep friendship with and sympathy for God revealed in Jesus Christ. In real life, being willing to give your life to save someone else is hard. Understanding how that really happens will help us to value what Jesus has done for us.

**Bible verses**

I saw this verse on the ground outside the Airborne & Special Operations Museum in Fayetteville, NC, where I went for my summer vacation in 2015. (Thanks to my friend Curby who hosted me)

Isaiah 6:8:

> [8] Then I heard the voice of the Lord saying, “Whom shall I send? And who will go for us?”
>
> And I said, “Here am I. Send me!”

Here is the picture I took (yes, that is my running shoe):

“Here am I, send me” Isaiah 6:8

When confronted with an opportunity to imitate Christ in his self-sacrifice, we should think less about ourselves and our own desires, and take the opportunity to serve others effectively. We do not do what makes us happy, and we do not pursue fun and thrills. We do what heals, we do what helps others. We do not push away our responsibility to imitate Christ by caring for those in danger. Christianity is not just about “not doing bad things”. It’s the good things you do because of your relationship with Jesus that show your real allegiance, and give you the experience of being a Christian in deed.

And here is another good verse:

John 15:13:

> [13] Greater love has no one than this: to lay down one’s life for one’s friends.

If you get a chance to watch the movie Blackhawk Down, then do so. I highly recommend it. You can also read the book that the movie is based on.

I love the Medal of Honor books by Edward F. Murphy. He writes about all the people who have been awarded the Medal of honor in different wars: World War II, the Korean War, and the Vietnam War.

# Ted Cruz rides pro-life endorsements to huge 48.4 to 35.0 victory in Wisconsin

**Wintery Knight** · 6 April 2016 · Archived copy · Original

I'm Scheming Unborn Baby, and I endorse Ted Cruz for President

Townhall reports that Ted Cruz got the endorsement from National Right to Life on Tuesday:

> National Right to Life announced that they will be throwing their support behind Sen. Ted Cruz (R-TX) for the upcoming primaries. NRL believes that Cruz has a stronger pro-life record and credentials than Donald Trump, and also that he has the best chance to defeat Hillary Clinton.
>
> An average of seven recent national political polls shows that Mr. Trump trails Hillary Clinton by 11.2%.
>
> In those same seven polls, Sen. Cruz trails Mrs. Clinton by an average of 3%.
>
> National Right to Life believes Sen. Cruz is the only candidate for president who has always been pro-life, who has a 100% pro-life voting record with National Right to Life, who can win the Republican nomination, and who can defeat pro-abortion Hillary Clinton in November.
>
> National Right to Life was one of the many pro-life organizations that slammed Trump for his (since-rescinded) comments that women who have abortions should be punished.

That NRLC endorsement undoubtedly helped him to a 13-point victory over Donald Trump in Wisconsin, on Tuesday night:

updated 1:40 am et, apr 6, 2016

| april 5 primary | delegate allocation: hybrid | |
|---|---|---|
| pledged 42 | total delegates 42 | unpledged 0 |

status: projected winner | est. % in: 99%

| candidate | votes | % | pledged delegates |
|---|---|---|---|
| cruz ★ | 517,050 | 48.4% | 36 |
| trump | 374,623 | 35.0% | 3 |
| kasich | 150,182 | 14.0% | 0 |

Ted Cruz wins Wisconsin, which will likely lead to a contested convention

So why did Ted Cruz get this NRLC endorsement on Tuesday? I think it might have something to do with an answer that he gave to a tough abortion question from Megyn Kelly on Monday night. Cruz was asked about his opposition to rape and incest exceptions to the pro-life view. His answer sounded like something Scott Klusendorf would say.

The Daily Wire reports:

> Stating his belief that all unborn children's lives should be protected, Senator Ted Cruz expressed his opposition to exceptional access to abortion for pregnancies resulting from rape or incest. Joining Fox News Channel's Megyn Kelly for a town hall event in Madison on Monday, Cruz made a pitch to Wisconsin voters before the Badger's State's Republican primary on Tuesday.
>
> "You don't favor rape or an incest exception to abortion," said Kelly, speculating that Cruz's position on abortion might be "too far-right" for voters.
>
> Recalling his former role as the Solicitor General for Texas, Cruz described his experience from the side of law enforcement in redressing rape.
>
> "When it comes to rape, I've spent a lot of year in law enforcement. I was the Solicitor General for the state of Texas, and I have handled horrific cases of rape, people who had committed child rape. I went before the U.S. Supreme Court and argued in defense of state laws imposing capital punishment for the very worst of child rapists," said Cruz.
>
> Cruz then expressed the logically consistent position of opposition to abortion grounded in the belief that unborn children are persons entitled to the protections of life and security of person, opting not to carve out exceptions to this position for conceptions resulting from rape or incest.
>
> **"When it comes to rape, rape is a horrific crime against the humanity of a person, and needs to be punished, and punished severely. But at the same time, as horrible as that crime is, I don't believe it's the child's fault, Said Cruz. "I don't believe it makes sense to blame the child."**

Watch:

Are you ready to have *that guy* explain to the media and the public why the pro-life view makes sense? I am.

Ted Cruz is consistently pro-life. He's not scared to defend the pro-life view that you or I would defend. He thinks his view is the right view, and he wants to defend the right view. He thinks that Roe v. Wade was a bad judicial decision, and he wants to go back to the way things were before that bad decision, such that each state would decide the life issue for themselves. That's a moderate position, well suited to the general election. As for himself, he has supported pro-life laws and policies in his career, and achieved many pro-life victories.

# If socialism is so great, why are people moving from blue California to red Texas?

**Wintery Knight** · 6 April 2016 · Archived copy · Original

Migration from California to other states – top 3 states are conservative states

A lot of young people seem to be really excited about socialism, and they want the United States to give it a try. They don't know where socialism has been tried, and they don't know what happens with it is tried. It just sounds nice to them.

Well, if you were going to pick one of the most socialist states in the United States, no one would fault you for picking California, where Democrats are running everything, and have been for a long time.

The Washington Free Beacon explains what happened next:

> The number of Californians leaving the state and moving to Texas is at its highest level in nearly a decade, according to data from the Internal Revenue Service.
>
> According to IRS migration data, which uses individual income tax returns to record year-to-year address changes, over 250,000 California residents moved out of the state between 2013 and 2014, the latest period for which data was available. The tax returns reported more than $21 billion in adjusted gross income to the IRS.
>
> Of the returns, 33,626 reported address changes from California to Texas, which has been the top destination for individuals leaving California since 2007. Californians who moved to Texas between 2013 and 2014 reported $2.19 billion in adjusted gross income.
>
> […]"California's taxes and regulations are crushing businesses, and there are more opportunities in Texas for people to start new companies, get good jobs, and create better lives for their families," said Nathan Nascimento, the director of state initiatives at Freedom Partners. "When tax and regulatory climates are bad, people will move to better economic environments—this phenomenon isn't a mystery, it's how marketplaces work. Not only should other state governments take note of this, but so should the federal government."
>
> According to Tom Gray of the Manhattan Institute, people may be leaving California for the employment opportunities, tax breaks, or less crowded living arrangements that other states offer.
>
> "States with low unemployment rates, such as Texas, are drawing people from California, whose rate is above the national average," Gray wrote. "Taxation also appears to be a factor, especially as it contributes to the business climate and, in turn, jobs."
>
> "Most of the destination states favored by Californians have lower taxes," Gray wrote. "States that have gained the most at California's expense are rated as having better business climates. The data suggest that may cost

> drivers—taxes, regulations, the high price of housing and commercial real estate, costly electricity, union power, and high labor costs—are prompting businesses to locate outside California, thus helping to drive the exodus."

Just recently, I heard some of my Democrat co-workers laughing to each other about "trickle-down economics", which is the "ridiculous" idea that if you allow businesses and workers to keep what they earn, then you'll get more economic growth than if the government takes the money to study the drug use patterns of sex workers in the far East. Actually, we've been trying socialism-lite in this country for the past 7 years. How has it worked?
Well, Obama has averaged 1.2% GDP growth through his presidency, far below average. And in order to get even that little growth, Obama will double the debt from 10 to 20 trillion in just 8 years.

Debt increase under Barack Obama
But what about tax cuts? Do tax cuts create economic growth?

The conservative Heritage Foundation think tank describes the effects of the Bush tax cuts.

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made the earlier tax relief effective immediately. Congress also lowered tax rates on capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. **Tax revenues also increased after the Bush tax cuts, due to economic growth.**
>
> […]The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.
>
> Here's what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six

> quarters following the tax cuts, the growth rate was 4.1%.
>
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next six quarters.
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy. Nor was this experience unique. The famous Clinton economic boom began when Congress passed legislation cutting spending and cutting the capital gains tax rate.

Regarding the “Clinton economic boom”, that was caused by supply-sider Newt Gingrich passing tax cuts through the House and Senate. Bill Clinton merely signed the bills into law.

Very important to compare times and places where socialism has been tried to times and places where free enterprise and limited government have been tried. We know what works. It may not be what makes us feel smug, but we know what works.

# What are all the big liberal corporations trying to protect in North Carolina?

**Wintery Knight** · 6 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

So, North Carolina passed a law that says that in the state of North Carolina, people with male equipment have to use a male bathroom, and people with female equipment have to use a female bathroom.

Lots of corporations have come out against this law, as AMAC explains:

> Here's a list of companies that have come out against the newly signed law:
>
> Salesforce, Bank of America, American Airlines, Microsoft, Apple, RedHat, PayPal, Google, Lowe's Home Improvement, NBA, NCAA, MPAA (Motion Picture Association of America), Disney, ESPN, Marvel, Facebook, Charlotte Motor Speedway, BB&T Ballpark, Biogen, DOW Chemical Company, Citrix, Bayer, NC Policy Watch, IBM, Burt's Bees, Duke University, Wake Forest University, SAS Institute.

And here is one typical response from one company – Pay Pal. The leftist Washington Post reports:

> The backlash against a North Carolina law that bars local governments from extending civil rights protections to gay and transgender people continued Tuesday, with PayPal saying it is abandoning plans to expand into Charlotte in response to the legislation.
>
> This decision came just weeks after PayPal, the California-based online payments firm spun off from eBay, said it would open a global operations center in Charlotte, a move that state officials said would bring millions to the local economy and employ 400 people.

I note that Pay Pal does business in many, many countries where homosexuality is illegal, and many, many other countries where homosexuality is punishable by death. They aren't making a fuss about those countries, though. They're just making a fuss in North Carolina. That's called hypocrisy, and most big corporations are actually like Pay Pal – not conservative in any way shape or form.

The WaPo article also notes:

> This law could also cost the state federal funding. At least five federal agencies are debating whether to withhold money because of the law.

So, that's what happens when you pay taxes to the federal government, and why we need to get the government out of anything that is not explicitly laid out in the Constitution.

**The champion of the big pro-gay corporations**

Anyway, now that we understand what those big corporations stand for, let's take a look at who they are enabling. Let's go to Canada, which is further down the road of sexual anarchy and moral relativism, and see how things are working out there.

Here is the article from the Toronto Sun:

> A sexual predator who falsely claimed to be transgender and preyed on women at two Toronto shelters was jailed indefinitely on Wednesday.
>
> Justice John McMahon declared Christopher Hambrook — who claimed to be a transgender woman named Jessica — was a dangerous offender.
>
> The judge said he imposed the indefinite prison sentence because there's a great risk that Hambrook will commit more sex crimes and require strict supervision if he returns to the community.
>
> […]He noted the Montreal man, 37, attacked four vulnerable females between the ages of five and 53 in Montreal and Toronto over the past 12 years.

How could a man dress up as a woman and be allowed into a women's space with women's bathrooms and women's showers?

Life Site News explains:

> Ontario amended its Human Rights Code to make "gender identity" and "gender expression" prohibited grounds for discrimination in 2012.
>
> […]Family advocates argued at the time that the NDP sponsored bill would create a legal right for a man who calls himself 'transgender' to use rooms and facilities intended for women so as to exploit women.
>
> The bill was subsequently dubbed the "bathroom bill" by its critics.

And what did the transgender man do with that law? This:

> [The] Court also heard evidence of Hambrook terrorizing a deaf woman living in the shelter. "The accused grabbed the complainant's hand and forcibly placed it on his crotch area while his penis was erect," court heard.
>
> The same deaf women reported that Hambrook would peer at her through a gap between the door and its frame while she showered.

And you can see similar problems already in liberal states like Washington:

> In 2012 a college in Washington state decided it would not prevent a 45-year-old man who presents himself as a transgender "female" from lounging naked in a women's locker room in an area frequented by girls as young as six. Teenage girls on a high school swim team were using the facilities when they saw "Colleen" Francis deliberately exposing male genitalia through the glass window in a sauna. Police told one outraged mother that the university could not bar the biological male from the premises.

The Daily Wire reports that the University of Toronto, which is a city in the province of Ontario, is now partially reversing itself on their transgender agenda:

> The University is temporarily changing its policy on gender-neutral bathrooms after two separate incidents of "voyeurism" were reported on campus September 15 and 19. Male students within the University's Whitney Hall student residence were caught holding their cellphones over female students' shower stalls and filming them as they showered.

Conservatives like me try to say that it's a bad situation when men can walk into women's change rooms, and walk around naked near women who are showering, going to the bathroom or changing clothes. But the big corporations disagree, they want biological men in women's spaces, and all the better if clothes are coming on and off. When the big corporations make these sorts of stands in favor of "inclusiveness" and "diversity", it's important to know what it is they really value. And what they don't value, too.

In a previous post, I explained that the lead architect (pictured above) of the Charlotte legislation that allowed men to walk around naked in women's bathrooms and showers was himself on a sex-offender registry. And that's where all of these big corporations out to be put as well. On the sex-offender registry.

# Pro-abortion attorney general raids home of Planned Parenthood whistleblower

**Wintery Knight** · 7 April 2016 · Archived copy · Original

Planned Parenthood senior executive: organ harvesting so she can get a Lamborghini

LIfe News reports:

> The pro-abortion California attorney general's office raided on Tuesday the home of the undercover investigator who exposed Planned Parenthood's trafficking of aborted babies' body parts, according to the Center for Medical Progress.
>
> David Daleiden, the head of the Center for Medical Progress, has been a target of abortion activists and their political friends ever since he released the first undercover video last summer showing a top Planned Parenthood official discussing the sale of aborted babies' body parts. Since then, CMP has released a dozen undercover videos of the abortion giant's employees and partner research groups, exposing their horrendous baby body parts trade. However, pro-abortion politicians have been ignoring the evidence of wrong-doing at Planned Parenthood and attacking CMP instead.
>
> Daleiden released the following statement about the raid of his California home:
>
> Today (Tuesday), the California Attorney General's office of Kamala Harris, who was elected with tens of thousands of dollars from taxpayer-funded Planned Parenthood, seized all video footage showing Planned Parenthood's criminal trade in aborted baby parts, in addition to my personal information.
>
> Ironically, while seizing my First Amendment work product, they ignored documents showing the illicit scheme between StemExpress and Planned Parenthood. This is no surprise–Planned Parenthood's bought-and-paid-for AG has steadfastly refused to enforce the law against the baby body parts traffickers in our state, or even investigate them–while at the same time doing their bidding to harass and intimidate citizen journalists. We will pursue all remedies to vindicate our First Amendment rights.
>
> Rachele Huennekens, a spokeswoman for state Attorney General Kamala Harris, told CBS DFW that she could not comment on any ongoing investigation.
>
> Harris, a Democrat who is running for U.S. Senate, is endorsed by the pro-abortion National Organization for Women. NOW describes her as a "longtime, vocal supporter of Planned Parenthood" who promised to investigate the Center for Medical Progress and fight for taxpayer funding of the abortion business.

This story reminds me of how the IRS treated conservative and Christian groups differently from liberal groups. It's not the big oil company who hold up your application for non-profit status because you're a conservative. It's big government. That's who has real power over you.

**What is the solution?**

One question you have to ask yourself is why the Democrats are so interested in helping out Planned Parenthood. The answer to that question is simple. The Democrats give the Planned Parenthood the taxpayer money. The Planned Parenthood uses the taxpayer money to start the abortion clinics to make more money. The Planned Parenthood gives the Democrats some of their profits as political contributions. If the Planned Parenthood goes out of business, then the political donations to the Democrats will stop. So, when the investigative journalists threaten the flow of political contributions to the Democrats, then the Democrats attack the investigative journalists.

**Who is trying to solve the problem?**

The Republican party tries to de-fund Planned Parenthood so that they don't have any more money to perform abortions and then give the Democrats political contributions.

Here was a recent attempt described in Life News.

It says:

> The House of Representatives voted today for legislation that would temporarily de-fund Planned Parenthood while an investigation continues into it s sale of aborted babies and their body parts.
>
> **The House voted 241 to 187 for the bill with 239 Republicans voting for the bill to defund the Planned Parenthood abortion business and 3 Democrats joining them. Three Republicans voted against the defunding bill while 183 Democrats voted against it.**
>
> Rep. Diane Black, a Tennessee Republican who is the pro-life lawmaker sponsoring the legislation and a nurse for more than 40 years, sponsored the legislation. The bill would freeze Planned Parenthood funding for one year while Congress conducts an investigation into its sales of aborted babies. The House vote would follow one the Senate had weeks ago, which saw Senate Democrats filibuster and block legislation to revoke $550 million in taxpayer funding. The Senate is expected to vote soon on a second attempt to de-fund Planned Parenthood.
>
> A new Congressional report finds that de-funding the Planned Parenthood abortion business — even for one year — would save "several thousand" unborn babies from the nightmare of abortion. The report also finds de-funding Planned Parenthood would save the federal government $235 million.
>
> During the debate, House Majority Leader Kevin McCarthy spoke on the House floor in defense of innocent human life and urged his colleagues to put a moratorium on Planned Parenthood funding in light of its barbaric practices.
>
> "So if we know that this organization performs hundreds of thousands of abortions per year and we know that women have access to other sources for care, the question is, should we force taxpayers to fund a business that spends its money aborting 327,653 children per year? Should we force taxpayers to fund an organization whose barbaric practices, as vividly shown in those videos, disregard and devalue the sanctity of the most innocent human lives?" he asked.
>
> He added: "There is no reason—absolutely no reason—that we must choose between funding women's health and compelling taxpayers to support abortion."
>
> Rep. Louie Gohmert (R-Texas) talked about how Planned Parenthood is not in the business of women's health care and is really just an abortion company.
>
> […]"In the history of Planned Parenthood, they have never, ever, ever done one mammogram, because they are not certified to do mammograms. They bring people in and refer them out to get their mammograms. So, for those of us –like in my case, three daughters and a wife of 37 years –look, I want good women's healthcare. So, let's fund it," he said. "But, let's give it directly to the facilities that will do the mammograms and not Planned Parenthood – for them to take their cut."

> **President Barack Obama has already threatened to veto the bill.**

Hillary Clinton also spoke out in favor of for-profit organ-harvesting from born-alive children.

> After today's House vote to de-fund the Planned Parenthood abortion business, Hillary Clinton took to twitter to adamantly defend taxpayer funding for the abortion company.

The Republicans also want to hold Planned Parenthood criminally responsible for performing abortions on born-alive babies.

This was also reported on by Life News:

> The House of Representatives today approved a pro-life bill that would hold the Planned Parenthood abortion business criminally liable for harvesting body parts from aborted babies who are technically still alive.
>
> The center for Medical Progress has released 10 videos catching and exposing Planned Parenthood officials selling aborted babies and their body parts. One of the most shocking videos caught the nation's biggest abortion business harvesting the brain of an aborted baby who was still alive.
>
> The Born-Alive Abortion Survivors Protection Act, sponsored by pro-life Congressman Trent Franks would make failure to provide standard medical care to children born alive during an abortion a federal crime. It would also apply stronger penalties in cases where an overt act is taken to kill the abortion survivor.
>
> […]Congressman Chris Smith implored the House to pass the bill.
>
> "Undercover videos by the Center for Medical Progress have again brought into sharp focus that some babies actually survive abortion," the New jersey congressman said.
>
> "Dr. Savita Ginde, Medical Director of Planned Parenthood Rocky Mountains says 'sometimes we get—if someone delivers before we get to see them for a procedure—they are intact…' that is, Madame Speaker, born alive. Breathing, crying, gasping for air. One fetal tissue broker describes on the video watching a 'fetus …just fall out.' And left to die."
>
> "We have a duty to protect these vulnerable children from violence, exploitation and death. Humanitarian due diligence requires that born alive babies be taken to a hospital to obtain care and enhance prospects of survival," Smith added. "Abortion clinics have no incentive whatsoever to save the child. Abortion clinics do not have neonatal intensive care units—they are in the business of killing babies, not saving them."
>
> "The Born Alive Abortion Survivors Protection Act (H.R. 3504), authored by pro-life champion Trent Franks simply says any child who survives an abortion must be given the same care as any other premature baby born at the same gestational age. This legislation builds on the landmark Born Alive Infant Protection Act of 2002 authored by Steve Chabot by adding important enforcement provisions," he concluded.
>
> **The House voted 248 to 177 for the bill with 239 Republicans voting for the bill and 5 Democrats joining them. No Republicans voted against the pro-life bill while 177 Democrats voted against it.** One member voted present.
>
> A pro-life Senator says he will introduce the Senate version of the bill on Monday. Senator Ben Sasse told LifeNews.com that he will introduce companion legislation in the Senate when Congress resumes its work on Monday.
>
> He said: "If this isn't the most non-controversial sentence in American politics, it's time to check our national conscience: newborn babies must receive care and attention. Societies are judged by how we care for the vulnerable and surely anyone with a heart— regardless of where they stand on the abortion debate— should be able to agree that our laws should protect newborns. I'm grateful that a bipartisan majority of the House stood up for babies and I look forward to introducing companion legislation in the Senate next week."

> **Despite passage of the bill, the Obama administration says President Barack Obama would veto the measure.**

There were a lot of “pro-life” people who voted for Obama in 2008 and 2012. I personally spoke to young evangelicals who claimed to be pro-life who but voted for Obama to stop global warming and to get condoms and free health care. Maybe next time we have an election, the pro-life people can vote pro-life for a change. Even if the Democrat is really, really good-looking, and has likability, and a nice way of speaking – let’s still vote pro-life, even then.

# Will there be a contested convention in Cleveland? Will Ted Cruz win it?

**Wintery Knight** · 7 April 2016 · Archived copy · Original

Wisconsin Governor Scott Walker, Texas Senator Ted Cruz, and Heidi Cruz

A lot of people are asking me what Cruz chances are to defeat Trump and win the nomination. I'm going to look at three columns, one from radically leftist CNN, one from the radically leftist Washington Post, and one from National Review. I found both of these stories at the Conservatives 4 Ted Cruz news aggregator, by the way. I check that site at least twice a day, and so should you.

The first one is from David Gergen at CNN. David Gergen is a senior political analyst for CNN and has been a White House adviser to four presidents. A graduate of Harvard Law School, he is a professor of public service and co-director of the Center for Public Leadership at the Harvard Kennedy School.

His headline is "Ted Cruz: Now the odds-on favorite":

> With his decisive victory in Wisconsin, Sen. Ted Cruz has not only shaken up the Republican presidential race, but heading into the homestretch, he has suddenly become the odds-on favorite to win the nomination in Ohio.
>
> With 16 primaries and caucuses remaining, Donald Trump has to win 70% of the delegates to secure the 1,237 needed to win a first ballot at the Republican convention. Several states are coming up that are more favorable territory for Trump than Cruz, especially New York and Pennsylvania where Trump still has significant leads.
>
> Even so, winning more than two thirds of the remaining delegates is a daunting challenge for him. In the 36 primaries and caucuses leading up to Wisconsin, Trump won only 46% of the delegates. And now he heads down a tough homestretch with Cruz seizing the momentum.
>
> In a year crammed with surprises, no one can say for sure what will unfold in Cleveland, Ohio. But there are two likely outcomes: First, Cruz and Trump have each vowed to vote against a change in the GOP's Rule 40. That's an obscure provision that requires any candidate to win at least eight primaries and caucuses before he or she can be nominated.
>
> Trump and Cruz will be the only two people in Cleveland with that distinction. They should also have enough delegate strength between them to block a rewrite of Rule 40. In other words, potential candidates like John Kasich, Paul Ryan and Mitt Romney won't be eligible even if many delegates think them likely to fare better against Hillary Clinton — the race could narrow to Trump vs. Cruz.

> If Trump then falls short on the first ballot, there will be a donnybrook. But it is now becoming apparent that Cruz is much better prepared to win that fight. Trump has run a campaign long on the outside game of televised rallies but short on the inside game of quietly piling up delegates.
>
> By contrast, Cruz has been superlative playing to the inside. Just look at how craftily he captured delegates away from Trump a few days ago in North Dakota. (The capacity of the Obama team to play the inside game so well helped to propel them past Hillary Clinton in 2008.)
>
> In a first ballot, delegates must vote for the candidate to whom they are pledged but thereafter, of course, may vote for someone else. Signs increasingly point to the fact that Republican party regulars pledged to Trump are ready to bolt on a second or third ballot. With Cruz the only other man in the race, that almost certainly means they will drift — rush? –toward the Texan, and he will take the crown.

That's an accurate analysis. The most likely scenario now is that Cruz capitalizes on his momentum to deny Trump the delegates he needs to get to 1,237 before the convention, then wins the nomination on round 2 or later, when the GOP delegates from each state become "unbound". And Cruz is already reaching out to the delegates to make sure that they choose him in round 2 and later rounds, as they free up.

**Can Cruz win a contested convention?**

Now, I'm going to balance that with something *hilarious* from moderate conservative Pulitzer Prize–winning syndicated columnist George Will, writing in National Review.

Will's column is entitled "Ted Cruz Is Surging by Design":

> People here at Ted Cruz's campaign headquarters are meticulously preparing to win a contested convention, if there is one. Because Donald Trump is a low-energy fellow, Cruz will be positioned to trounce him in Cleveland, where Trump's slide toward earned oblivion would accelerate during a second ballot.
>
> […]For months Cruz's national operation has been courting all convention delegates, including Trump's. Cruz aims to make a third ballot decisive, or unnecessary.
>
> On the eve of Wisconsin's primary, the analytics people here knew how many undecided voters were choosing between Cruz and Trump (32,000) and how many between Cruz and John Kasich (72,000), and where they lived. Walls here are covered with notes outlining every step of each state's multistage delegate-selection process. **(Cruz's campaign was active in Michigan when the process of selecting persons eligible to be delegates began in August 2014.)** Cruz's campaign is nurturing relationships with delegates now committed to Trump and others. In Louisiana's primary, 58.6 percent of voters favored someone other than Trump; Cruz's campaign knows which issues are particularly important to which Trump delegates, and Cruz people with similar values are talking to them.
>
> […]Usually, more than 40 percent of delegates to Republican conventions are seasoned activists who have attended prior conventions. A large majority of all delegates are officeholders — county commissioners, city council members, sheriffs, etc. — and state party officials. They tend to favor presidential aspirants who have been Republicans for longer than since last Friday.
>
> Trump is a world-class complainer (he is never being treated "fairly") but a bush-league preparer. A nomination contest poses policy and process tests, and he is flunking both.
>
> **Regarding policy, he is flummoxed by predictable abortion questions because he has been pro-life for only 15 minutes, and because he has lived almost seven decades without giving a scintilla of thought to any serious policy question. Regarding process, Trump, who recently took a week-long vacation from campaigning, has surfed a wave of free media to the mistaken conclusion that winning a nomination involves no more forethought than he gives to policy. He thinks he can fly in, stroke a crowd's**

> **ideological erogenous zones, then fly away. He knows nothing about the art of the political deal.**
>
> **The nomination process, says Jeff Roe, Cruz's campaign manager, "is a multilevel Rubik's Cube. Trump thought it was a golf ball — you just had to whack it." Roe says the Cruz campaign's engagement with the granular details of delegate maintenance is producing a situation where "the guy who is trying to hijack the party runs into a guy with a machine gun."**

Cruz graduated at the top of his classes at Princeton and Harvard Law. He clerked for Court of Appeals Justice J. Michael Luttig and Supreme Court Chief Justice William Rehnquist. Insofar as this primary election is a contest based on hard work and preparation, Cruz will win it. And then he's going to beat Hillary.

# What difference does believing in evolution make?

**Wintery Knight** · 7 April 2016 · Archived copy · Original

Investigation in progress

In this post, the word evolution refers to the theory that unguided natural forces such as mutation and natural selection can explain the emerge of life from non-life, as well as the diversification of simple single-celled organisms in the diversity of animal life that we observe today, and in the fossil record. mean merely change over time, or variations within types "micro-evolution". I mean molecules-to-man evolution, with nothing detectable done to guide any part of the process by any outside intelligence, be it natural or supernatural.

What else do people believe when they accept evolution as true?

Evolution News reports on a new poll:

> From the earliest days of civilization, humans have considered themselves exceptional among living creatures. But a new survey by Discovery Institute of more than 3,400 American adults indicates that the theory of evolution is beginning to erode that belief in humanity's unique status and dignity.
>
> According to the survey, 43 percent of Americans now agree that "Evolution shows that no living thing is more important than any other," and 45 percent of Americans believe that "Evolution shows that human beings are not fundamentally different from other animals."
>
> The highest levels of support for the idea that evolution shows that humans aren't fundamentally different from other animals are found among self-identified atheists (69 percent), agnostics (60 percent), and 18 to 29 year-olds (51 percent).
>
> The theory of evolution is also reshaping how people think about morality. A majority of Americans (55 percent) now contend that "Evolution shows that moral beliefs evolve over time based on their survival value in various times and places."
>
> "Since the rise of Darwin's theory, leading scientists and other thinkers have insisted that human beings are just another animal, and that morality evolves based on survival of the fittest," says historian Richard Weikart, author of the new book *The Death of Humanity: And the Case for Life* (Regnery).
>
> What this new survey shows is just how pervasive these ideas have become in our culture. Many people no doubt continue to believe that humans are unique, but most do not think that evolution supports that position. Many critics of my earlier scholarship will be disconcerted to see this data, which powerfully supports my

> arguments about the way that Darwinism devalues human life, a key point I explain further in my new book.
>
> Weikart is a professor of history at California State University, Stanislaus, and a Senior Fellow with Discovery Institute's Center for Science & Culture.

So, it definitely makes  a difference whether you believe in evolution or not. I have found that even Christians who believe in evolution have some very weird things going on elsewhere in their worldviews. Let's just say that I don't know any *conservative* Christians who accept evolution.

Take a look at Howard Van Till, who taught at a seminary for many years. He always asserted that evolution and Christianity were compatible. That's what he told his students. He was regarded as one of the foremost proponents of theistic evolution – the view that God exists and sits around doing nothing while animal diversity appears without any detectible design work on his part.

Take a look at this event that Van Till did for a FREETHOUGHT group a while back.

Excerpt:

> FROM CALVINISM TO FREETHOUGHT: The Road Less Traveled
> by Howard J. Van Till
>
> Professor of Physics and Astronomy, Emeritus
> Calvin College
> Presented 5/24/2006 for the Freethought Association of West Michigan
> Lightly edited 5/26/2006
>
> Precis: Born into a Calvinist family, shaped by a Calvinist catechism training, educated in the Calvinist private school system, and nurtured by a community that prized its Calvinist systematic theology, I was a Calvinist through and through. For 31 years my teaching career was deeply rooted in the Calvinism I had inherited from my community.
>
> During most of that time it was a fruitful and satisfying experience. Nonetheless, stimulated in part by the manner in which some members of that community responded to my efforts to practice what I had learned from my best teachers, I eventually felt the need to extend my intellectual exploration into philosophical territories far outside the one provided by Calvinism. Did I complete the lengthy journey from Calvinism to Freethought? The listener will be the judge.

Freethought is a politically correct happy-clappy term for atheism, by the way. Trying to put a positive spin on it, I guess.

Evolution means unguided evolution. It means that natural processes do all the work, and there is nothing required from any supervening intelligence – natural or supernatural. That idea has consequences for your worldview.

One last point, and this is important. I don't reject evolution because I find the consequences of the idea distasteful. I reject it because it is not supported by the evidence in two crucial areas: the origin of the simplest living replicating organism, and the sudden appearance of a wide variety of body plans in the Cambrian explosion within a very short period of time. I have no problem with science challenging my interpretation of the Bible – that's why I am for an old universe and an old Earth. But evolution is not scientifically grounded – it's really a philosophical speculation that is required by a metaphysical assumption called naturalism. And since I am an adherent of experimental science, and not theoretical speculative philosophy, I reject it. And so should you.

# Christian NHS worker who gave a book to Muslim co-worker loses her appeal

**Wintery Knight** · 8 April 2016 · Archived copy · Original

Judge Jennifer Jane Eady, Queens Counsel

The UK Telegraph reports on the state of religious liberty in the United Kingdom.

Excerpt:

> A Christian NHS worker suspended for giving a religious book to a Muslim colleague has lost her appeal against a ruling that the decision to discipline her was lawful.
>
> Victoria Wasteney, 39, was found guilty by her NHS employer in 2014 of "harassing and bullying" a work friend for giving her a book about a Muslim woman's encounter with Christianity, praying with her and asking her to church.
>
> She was suspended for nine months and given a written warning, even though the woman had been happy to discuss faith with her and never gave evidence about her allegations to the NHS.
>
> Ms Wasteney, a senior occupational therapist, challenged the decision by East London NHS Foundation Trust at an employment tribunal last year, but it ruled that her employer had not discriminated against her.
>
> A judge gave her the chance to appeal against that decision, saying it should consider whether the original ruling had correctly applied the European Convention on Human Rights' strong protection of freedom of religion and expression.
>
> But at a hearing in central London on Thursday, Her Honour Judge Eady QC dismissed the appeal.
>
> **Following the decision, Miss Wasteney, from Epping, Essex, said: "What the court clearly failed to do was to say how, in today's politically correct world, any Christian can even enter into a conversation with a fellow employee on the subject of religion and not, potentially, later end up in an employment tribun**al.
>
> **"If someone sends you friendly text messages, how is one to know that they are offended? I had no idea that I was upsetting her."**
>
> **[…]The woman, who quit her job shortly after making the complaints, never gave any evidence about**

> **her allegations to the NHS or later to the employment tribunal.**

It sounded to me like the Muslim woman encouraged the Christian woman and the Christian woman was later surprised by the complaints. I think most Christians can take no for an answer, but Christians are caring, and they see offering to pray and offering to bring someone to church as a caring thing to do. If they don't hear a no, then they keep right on doing what comes naturally to Christians – talking about spiritual things and trying to lead others to the Lord.

It was much easier to do this in the past, before people got more concerned about not feeling offended than they were about discussing what is or is not true. So now, even in a country like England, you can be anything you want to be as long as you're not behaving like a Christian in public. I think this is especially the case when the people who adjudicate these cases are more focused on feelings… the person who feels the most offended seems to win all the time.

Before I had an alias, I had experience dealing with co-workers who did not much like me talking about spiritual things at work. Some types of people are more risky than others, I've found. That's when I started to make rules based on my experiences, about who was and who was not safe to talk to. And that's when I decided that to really say what I wanted to say, I'd have to get an alias, and not tell too many co-workers about it.

So who is dangerous? Obviously, people who are committed to a sinful lifestyle already are dangerous to talk to. I don't talk to people about anything interesting if they are committed to a sinful lifestyle, because they will feel obligated to discuss issues defensively, rather than in a truth-focused way. I also avoid people who are more focused on feelings, family and community above truth. They tend to be more focused on feeling good and getting along, and they are the worst people to disagree with. The safest people are people who like to argue about what is true, and who respond to evidence.

So how to detect who is safe? Well, If the person talks about themselves a lot, and about their feelings, and happy experiences, and their vacations, their families and popular culture fluff, then I would avoid them. Don't say a word to them. The ones who are safer are the ones who accept disagreements and don't just rush to agree with you while hiding their own opinions in order to be liked. You also want to avoid people who take everything personally, instead of debating the outside world with a focus on what is true.

I am terrified of people who try to agree with me on everything, or who cannot explain both sides of an issue respectfully. I watch what people watch on TV in the gym – if it's sports, housewives of beverly hills, or other shallow life enhancement fluff, then I don't talk to them. If it's news or business, then it's safer to talk to them – because then you can talk about facts. Beware of people who try to jump to agreement quickly, without showing any evidence or reasons for their view. It's always better to talk about issues in the abstract, rather than offering to pray or asking someone to church. For example, you can discuss whether the universe had a beginning, or which books of the Bible were written early. Christians need to learn how to do that – how to talk about facts.

A good question to ask to test a person is to ask where they get their news. If there is no balance there, then it's a good sign to avoid them. Two of my leftist co-workers this week asked me why I thought that the Washington Post and the New York Times were "radically leftist". I asked them to name conservative columnists at either paper. They couldn't name a single one. One tried to google it right in front of me! I named Arthur Brooks, Ross Douthat, Jennifer Rubin, etc. and explained why they weren't conservative. Then I listed off a half-dozen liberal names at the Washington Post. If the person you are talking to is in a bubble, then they are too risky to talk to. Pretty much everyone on the secular left is that way, and you should check first by seeing what they read for news. If they're not safe, then get yourself an alias and write something online, instead.

# Woman invents hunky man character for her book, then leaves her husband for him

**Wintery Knight** · 8 April 2016 · Archived copy · Original

Child grabs for his mom, who is leaving for work

My good friend Dina sent me this article about a very crazy, irrational woman who does not value marriage at all.

Excerpt:

> Her steamy, bestselling novels and strong male characters have seduced hundreds of thousands of female readers worldwide.
>
> But Jodi Ellen Malpas has revealed she has split from her own Mr Right – because he no longer lives up to the fantasy she created.
>
> The 34-year-old, whose This Man trilogy has sold more than 500,000 copies, has left her husband of ten years after 'falling in love' with one of her characters.
>
> **Ms Malpas, from Northampton, says: 'All my fictional men are strong, successful, sophisticated and enigmatic. I guess it's hard for any living, breathing man to live up to such a fantasy.**
>
> **'In This Man I created Jesse Ward, whose forceful personality was appealing to me. There is no denying I fell in love with him.**
>
> **'After all, I created him and I made him the way he is for a reason. Every woman needs some fantasy lover to spice up the dull reality of her real life. I wanted to create my perfect love story.**
>
> 'But the success of my books and the popularity of my male character led to the breakdown of my marriage. Sadly it was not solid enough to withstand the changes success has brought to my life.'
>
> The mother of two, whom many believe is the new E. L. James, the housewife who wrote the Fifty Shades Of Grey trilogy, became a self-publishing sensation last year, swiftly rising to the top of the New York Times Best Seller List.
>
> The This Man trilogy explores the love affair between young interior designer Ava O'Shea and playboy Jesse Ward. The second part of her new trilogy, One Night, has just been published by Orion.
>
> **'I was 23 when Aaron and I got married, so we were both very young,' she says. 'I didn't really know who I was. I got on with being a wife and mother.**

> **‘But over time I started to feel that something was missing – my normal everyday life had become a routine. I was bored. I guess that is what couples mean when they say they’ve grown apart. Aaron couldn’t understand why I wanted to write my fiction and I couldn’t understand why he didn’t understand.’**
>
> **The couple have two children, Alfie, 14, and Patrick, ten.** But although they divorced in August last year, Ms Malpas says their relationship remains amicable. She is currently single and insists that she has no time to get involved in a relationship.
>
> **‘My children and my writing are enough for the moment,’ she adds. ‘In any case, I suspect some men might be a little intimidated by my independence and my success.’**
>
> **And she insists she has no regrets. ‘It’s been crazy, but I’m loving the stronger more liberated me,’ she says.**

They are “her” children. Not her husband’s and hers. And they don’t need a father – because children don’t have needs distinct from her own needs. Her husband doesn’t have needs distinct from her own needs. In her own mind, men are “intimidated” by her success. But that’s not true – they are intimidated because she is insane and irrational and self-centered. She is not capable of relationships, and that’s the main thing that a man wants from a woman. They avoid her because she divorced her husband of 10 years (with children) for a *fictional character!!!!!*

Good Lord. What have women come to under the influence of feminism? The feministy ones seem to place no value on what a married couple can do together. They place no value on the needs of children. Everything is about getting their own fulfillment through worldy “success” and experiences; traveling, feeling good and taking pointless risks. When I think of the men that these feministy women seem to really want (at least when they are in their teens, 20s and 30s) it really scares me. I used to think that most young, unmarried women were sensible and thought that being a wife and mother was a good way to make a difference. Now so many of them are influenced by feminism and they seem to be avoiding it in favor of making lots of money. As if that were an end in itself.

What is so boring about marriage that women no longer find it fulfilling? I go to work every day and damned if I think that is more fulfilling that loving a wife and fathering children. I don’t think any man would think that. We work because that’s how we relate to our wives and children, by providing for them and leading them. And work is not meant to be fun or fulfilling. It’s WORK. Nowadays, I am seeing a lot of men who are interested in the idea of marriage and becoming a father. But I also see more and more women more interested in careers and travel than they are in marriage and becoming a mother. Men avoid women like that – we don’t want to be accessories to a self-centered career woman, we want a partnership and a home and children raised by a mother.

# Scott Klusendorf defends the pro-life view on the Unbelievable radio show

**Wintery Knight** · 8 April 2016 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve of this debate

Here are the details:

> The abortion debate reared its head again this summer after controversial tweets by Richard Dawkins made the news.
>
> Justin hosts a discussion between Mara Clarke of the Abortion Support Network and Scott Klusendorf of the Life Training Instititute. Mara believes women need to be decide whether to terminate a pregnancy, but Scott says that all depends on whether we are dealing with a human life in the womb.
>
> MP3 of this show:
>
> http://cdnapi.kaltura.com/p/618072/sp/61807200/playManifest/entryId/1_ggc953xi/flavorId/1_vto2eisb/protocol/http/format/url/a.mp3?clientTag=feed:1_jlj47tkv

My snarky paraphrase of the debate (not exact):

- Speaker introductions
- Klusendorf: no justification for abortion is necessary if the unborn are not human
- Klusendorf: we need to address the issue "what is the unborn?" Are the unborn human?
- Klusendorf: SLED: size, level of development, environment, degree of dependency
- Klusendorf: None of these things affect the value of a human being
- Klusendorf: Even if we don't KNOW whether the unborn is human
- Mara: I'm not going to debate when life begins
- Mara: Women know when life begins by feelings

- Mara: The moral decision is “whether I can take care of this child?”
- Brierley: When is an unborn being human?
- Mara: I refuse to debate that – the real question is whether women want their babies or not
- Mara: Forced pregnancy is not OK
- Brierley: Could your justification for abortion (not wanting to care for a child) work through all 9 months?
- Mara: Late term abortions are rare, so I don’t have to answer that question
- Mara: Abortion should be OK through all 9 months of pregnancy because women cannot be restricted
- Mara: Some women are poor, they need to be able to kill expensive babies at any time
- Klusendorf: although she says she won’t debate the unborn, she does take a position
- Klusendorf: she assumes the unborn is not human, because she says that insufficient funds is justification for abortion
- Klusendorf: no one argues that you can kill a two year old because they cost money, because she thinks they are human
- Klusendorf: she is begging the question by assuming the unborn are not human, but that is the issue we must resolve
- Klusendorf: I am pro-choice on many other things, e.g. women choosing their own husbands, religion, etc.
- Klusendorf: Some choices are wrong – Mara might be right, but she needs to make the case for the unborn not being human
- Brierley: What is your reason for thinking that an unborn child is different from a 2-year old?
- Mara: An unborn child is not the same as a 2-year old, in my personal opinion
- Mara: I am not a debater, so I don’t have to provide reasoning for my assertion, I just feel it
- Mara: Not everybody agrees with Scott, they don’t have to have a rational argument, they just need to feel differently
- Mara: From my experience, when a woman doesn’t want to be pregnant, then she should be able to not be pregnant
- Mara: Women shouldn’t be punished with a baby that she doesn’t want, even if she chooses to have recreational sex
- Brierley: What do you think of women who think the unborn is human and do it anyway?
- Klusendorf: It’s interesting that they never kill their toddlers for those reasons
- Klusendorf: I layed out scientific and philosophical reasons for the humanity of the unborn
- Klusendorf: Her response was “but some people disagree with you”
- Klusendorf: People disagreed about whether slavery was wrong, or whether women should be able to vote
- Klusendorf: that doesn’t mean there is no right answer – the right answer depends on the arguments
- Klusendorf: if absence of agreement makes a view false, then it makes HER pro-choice view false as well
- Klusendorf: she did make an argument for the unborn child having no rights because of the location
- Klusendorf: she needs to explain to us why location matters – what about location confers value
- Mara: I’m not going to let Scott frame my debate for me!!!
- Mara: women get pregnant and they don’t want their babies! should we put them in jail!!!!
- Klusendorf: I didn’t just give my opinion, I had science and philosophy, the issue is “what is the unborn?”
- Mara: philosophical and scientific debates are unimportant, I am an expert in real women’s lives
- Klusendorf: Which women? Women in the womb or only those outside the womb?
- Mara: Only those outside the womb
- Klusendorf: Only those outside the womb?

- Mara: Women living outside the womb have a right to kill women inside the womb – women have bodily autonomy
- Klusendorf: then does a pregnant woman with nausea have a right to take a drug for it that will harm her unborn child?
- Mara: Unborn children are only valuable if they are wanted, unborn children only deserve protection if they are wanted
- Mara: There are restrictions on abortion – you can't get an abortion through all nine months in the US
- Mara: There is a 24-week limit in the UK as well
- Klusendorf: There are no restrictions on abortion that conflict with "a woman's health" because Supreme Court said
- Mara: where are these late term abortion clinics?
- Klusendorf: (he names two)
- Mara: that's not enough!!! we need more! where is there one in Pennsylvania?
- Klusendorf: well, there used to be Gosnell's clinic in Pennsylvania, and you could even get an infanticide there….
- Brierley: What about Dawkins' view that it is moral to abort Down's Syndrome babies?
- Klusendorf: he is ignoring the scientific case and philosophical case for the pro-life
- Klusendorf: the pro-life view is a true basis for human equality

What I wanted Scott to ask was whether sex-selection abortions were OK with her. Since her reasoning is "if it's unwanted, it has no rights", then that would mean sex-selection abortions are just fine. That's what a UK abortion expert recently argued. And I also posted recently about how sex-selection abortions are not prosecuted in the UK. If you're looking for a war on women, there it is.

# William Lane Craig asks: are there objective truths about God?

**Wintery Knight** · 9 April 2016 · Archived copy · Original

A conflict of worldviews

In a lecture entitled "Are there Objective Truths About God?", philosopher William Lane Craig discusses the problem that Christians face when they make truth claims about God to non-Christians. We think that there are objective truths about God – that there are some propositions that describe the way God really is, in reality. We think that people who don't believe in those objective are factually wrong, in the same way that someone who thinks that Toronto is the capital of Canada is factually wrong.

But some people want to say that every statement about God is true "for each person" – so that conflicting claims about God are fine and no one is wrong. This could only be the case if everyone is just describing their own preferences, though – if they are making subjective claims about themselves, and not objective claims about God. Unfortunately, Christianity claims to be true for everyone – (e.g. – God is three persons and one being), so that Christians are committed to defending the idea that there are objective truths about God.

Here's the link to a page containing the lecture audio. (H/T Be Thinking)

The MP3 file is here.

So what questions does Bill answer in the lecture?

**What is a self-refuting statement?**

The main concept in the lecture is self-refutation. A self-refuting sentence is a sentence that, if true, makes itself false or meaningless. For example, suppose someone said to you: "there are no sentences longer than 5 words" then that would be self-refuting since it falsifies itself. Bill argues that objections to the idea that there are objective truths about God are all self-refuting.

**What is truth?**

Craig holds that "truth" is a property of a proposition such that a proposition is true if it corresponds to the external world. For example, if I claim that there is a crocodile in your closet and we find a crocodile in your closet, then my statement was true. If there is no crocodile in your closet then my statement was false. The real objective world out there is what makes propositional claims true or false – these are not claims about an individual's preferences, they are claims about the world. Bill is concerned with truth claims about God that are objective – whether there are propositions about God that are true regardless of what anyone thinks.

**Objections to objective truth**

Bill discusses 3 objections to the idea that there are objective truths about God. Each objection seeks to make religion subjective, (true for each person, like food preferences or clothing fashion).

**Objection #1:The Challenge of Verificationism**

The first challenge is that religious claims cannot be verified using the 5 senses, and therefore religious statements are objectively meaningless.

Consider the statement "Only propositions that can be verified with the 5 senses are meaningful". That statement cannot be verified with the 5 senses. If the statement is true, it makes itself meaningless. It's self-refuting.

**Objection #2: The Challenge of Mystical Anti-Realism**

The second challenge is that religious claims, and claims about God, are neither true nor false.

Consider the statement "Propositions about God cannot be true or false". Craig asks – why should we accept that? Any reason given would have to assert something about God that is true or false, and those reasons would contradict the original statement. For example, "God is too great to be grasped by human categories of thought" is a proposition about God that the speaker thinks is true, which contradicts the original assertion.

**Objection #3: The Challenge of Radical Pluralism**

The third challenge is that each person invents an entire reality of their own, and that there is no mind-independent objective world shared by individuals.

Consider the statement "There is no objective reality shared by all individuals". That statement is a statement that applies to all individuals, regardless of what they think. It's self-refuting.

**Conclusion**

Craig ends the lecture by arguing that it is OK for Christians to think that other people's views are false. It does not follow that just because someone thinks other people's views are wrong that they am going to mistreat other people. In fact, in Christianity it is objectively true that it is good for Christians to love their enemies. It is objectively true that all human beings have value, because human beings are made by God. So even if Christians disagree with others, they still treat them well, because they think that there are moral truths that they have to conform to.

**My thoughts**

Sometimes, non-Christians think that it is dangerous to hold beliefs too strongly. But I think what really matters is the content of the belief – some beliefs are false and some are true – you want to believe the true beliefs as strongly as you can, as long as the evidence warrants it. In Christianity, I am absolutely obligated to treat people with whom I disagree with respect and gentleness (1 Pet 3:15-16). The more convinced I am about *that* belief, the *better* my opponents will be treated. A *stronger* belief in Christianity means *more* tolerance for those who disagree.

Why do non-Christians get so offended when Christians claim to be right about there being only one way to be rightly related to God? Well, for many it's because their worldview is a personal preference, and they feel uncomfortable having to defend it rationally and evidentially. For most people, religion is just their cultural preference – like cooking style, or favorite sport, or clothing style. That's why they respond to your truth claims with name-calling like "you're intolerant" and "you're judgmental" and "you're arrogant". These are just shorthand ways of saying, "I'm offended that you've thought things through more than I have, and now I look dumb". My family is from a non-Christian culture, so I have to talk to my relatives about this all the time. They feel judged, but it's not my fault that they haven't done any homework to prove out their beliefs.

I got this "you're mean" reaction a lot from people who are raised to think that their religion is a racial, national or cultural identity. They think that if you tell them they are wrong *on matters of fact* that somehow this amounts to some sort of racism or prejudice. You make factual claims, and they hear discrimination. But that's not how

Christians think of religion – we only care if it's true or not – just like we care whether the claims of history or science are true or not. We not trying to be mean, any more than it's mean to say things like "water boils at 100 C". That's just the way it is, and we're more than happy to discuss the reasons why we think that, and to look at your reasons to see why you don't think that.

# Why are social conservatives unable to exert political pressure?

**Wintery Knight** · 9 April 2016 · Archived copy · Original

Hillary Clinton and her ally, the Human Rights Campaign

Right now, social liberals are having great success pushing through their agenda. Social conservatives seemed to be getting coerced and/or punished so effectively that many are wondering whether the tide can be turned at all.

Ben Shapiro, who writes at the Daily Wire, explains what's been happening lately:

> Leftists, the most tolerant people in America, are now demonstrating their tolerance by boycotting entire states that do not govern in accordance with leftist social policy. On Tuesday, New York Governor Andrew Cuomo announced that he would bar non-essential state-funded travel to Mississippi after the state passed a bill re-enshrining First Amendment protections for freedom of religion and association. Cuomo, who termed the law "sad, hateful," isn't the only big government leftist to utilize the power of taxpayer-funded nastiness: the mayor of San Francisco, Ed Lee, did the same.
>
> Lee and Cuomo also announced travel bans to North Carolina, where the governor recently signed a bill that mandates that local governments may not allow people to use single-sex bathrooms based on subjective gender identity rather than biological sex; that bill also makes state anti-discrimination law supreme and exclusive over local anti-discrimination laws that would compel businesses to hire people regardless of sexual orientation or gender identity.
>
> It's not just government, either. Icons like the wildly overrated Bruce Springsteen are cancelling concerts in North Carolina; businesses like PayPal, which do business in countries like Saudi Arabia and Malaysia, which actually prosecute homosexuality. States like Virginia and Georgia have vetoed similar legislation out of fear of corporate and governmental blowback from companies ranging from Apple to Disney.
>
> The left has ratcheted up their pressure on states to crack down on Americans who don't want their daughters peeing next to grown men, to prosecute businessowners who don't want to cater same-sex weddings. They've utilized their economic power to punish *private actors* who may or may not even *agree with the left* in an attempt to coax those actors into putting indirect pressure on their representatives.

Maggie Gallagher, a pro-marriage activists who has written some great books on marriage that I really liked, has

some practical advice for social conservatives in National Review.

She has five points – here are four and five:

> ***4) Social conservatives aren't doing politics.***
>
> Before I explain what I mean, let me ask you to answer a simple question: What is the national organization that fights for religious-liberty protections by spending money in federal elections? Currently, there is none. There are many good nonprofits who issue voter guides or get pastors together. There are public-interest law firms galore. These are all good things to have — but there is a hole in the center of our movement.
>
> How big is the hole? For my own amusement, I tried to figure out how much money social conservatives (excluding pro-life groups) spent in national elections in 2014 compared to what they spend on 501(c)3 and other nonprofit strategies. I looked for every organization I could find that has marriage or religious liberty in its mission statement and then compared it with election expenditures by either c(4)s or political-action committees (PACs). Then I asked around to major social-conservative donors I know to see if I had overlooked any major organization.
>
> How big is the hole in the center of our movement?
>
> In 2014 pro-family social conservatives invested $251,633,730 in tax-deductible 501(c)3 efforts (excluding pro-life efforts).
>
> How much was spent on direct political engagement, counting both state and federal organizations? $2,484,359.
>
> That 100-to-one ratio of doing politics by indirect versus direct means explains a lot about the relative powerlessness of social conservatism.
>
> Social conservatives can't get much out of politics because we aren't in politics. We just talk like we are on television, when the Left allows us to get on television. Meanwhile, we don't build political institutions that matter.
>
> Social conservatives need to think like a minority and organize politically to protect our interests. Which leads me to Maggie's fifth Big Truth of social-conservative politics:
>
> ***5) The most important thing social conservatives could do in the 2016 cycle is to demonstrate to Democrats that extremism in pushing unisex showers on public schools or oppressing gay-marriage dissenters will cost them the White House.***
>
> In theory, this shouldn't be hard to do: A July 2015 Associated Press–GFK poll showed that 59 percent of independents and 32 percent of Democrats agree that when gay rights and religious liberty conflict, religious liberty should have priority. Social conservatives should use the issue on offense — not just to gin up "the base," but to persuade soft Democrats to abandon the party of anti-religious aggression. If intensive messaging to Democratic voters in a key swing state could move just 10 percent of them to switch their votes, the whole political dynamic of this issue would change.
>
> But proving that would require raising a significant amount of money — say at least $2 million — and demonstrating in a key swing state, such as Ohio or Pennsylvania or Florida, that the Democrats' anti-religion intolerance against gay-marriage dissenters could cost them something they care about: The White House. Power.
>
> I see no signs yet that any such thing is happening among social conservatives.
>
> But it could.
>
> We should fill the hole in the center of the social-conservative movement by getting into politics for the first time in 50 years. It could happen.

I noticed that Maggie's web site "The Pulse" is very pro-Cruz. They do not like John Kasich at all on social issues, and they were not fans of Marco Rubio's tepid response to the gay marriage ruling.

# Robin Collins explains two kinds of cosmic fine-tuning

**Wintery Knight** · 10 April 2016 · Archived copy · Original

Christianity and the progress of science

I was busy working my way through "Debating Christian Theism", a book published by Oxford University Press in August 2013. It features about 20 different topics from science, to philosophy, to history. For each topic, there is an essay by a world-class scholar in favor, and one opposed. So you get both sides of many interesting issues, at a very advanced level. The section on cosmic fine-tuning features a chapter written by Dr. Robin Collins.

About Robin Collins:

> Robin Collins (PhD, University of Notre Dame, 1993), is professor of philosophy at Messiah College, Grantham, PA specializing in the area of science and religion. He has written over twenty-five articles and book chapters on a wide range of topics, such as the fine-tuning of the cosmos as evidence for the existence of God, evolution and original sin, the Doctrine of Atonement, Asian religions and Christianity, and Bohm's theory of quantum mechanics. Some of his most recent articles/book chapters are "Philosophy of Science and Religion" in The Oxford Handbook of Science and Religion, "Divine Action and Evolution" in The Oxford Handbook of Philosophical Theology (2009) "The Multiverse Hypothesis: A Theistic Perspective," in Universe or Multiverse? (Cambridge University Press), and "God and the Laws of Nature," in Theism or Naturalism: New Philosophical Perspectives (Oxford University Press, forthcoming). He recently received a grant from the John Templeton Foundation to finish a book that presents the case for design based on physics and cosmology, tentatively entitled The Well-Tempered Universe: God, Cosmic Fine-tuning, and the Laws of Nature.

**The fine-tuning argument**

Here's a short article where Collins gives TWO examples of the fine-tuning. He is very modest in his argument, merely asserting that the fine-tuning is more compatible with theism than it is with atheism.

Excerpt:

> Science is commonly thought to have undercut belief in God. As Nobel Prize winning physicist Steven Weinberg famously remarked, "the more we find out about the universe, the more meaningless it all seems."

> Yet, the discoveries of modern physics and cosmology in the last 50 years have shown that the structure of the universe is set in an extraordinarily precise way for the existence of life; if its structure were slightly different, even by an extraordinarily small degree, life would not be possible. In many people's minds, the most straightforward explanation of this remarkable fine-tuning is some sort of divine purpose behind our universe.

> This fine-tuning falls into three categories: the fine-tuning of the laws of nature, the fine-tuning of the constants of physics, and the fine-tuning of the initial conditions of the universe. "Fine-tuning of the laws of nature" refers to the fact that if the universe did not have precisely the right combination of laws, complex intelligent life would be impossible. If there were no universal attractive force (law of gravity), for example, matter would be dispersed throughout the universe and the energy sources (such as stars) needed for life would not exist. Without the strong nuclear force that binds protons and neutrons together in the nucleus, there would not be any atoms with an atomic number greater than hydrogen, and hence no complex molecules needed for life. And without the Pauli-exclusion principle, all electrons would fall to the lowest orbital of an atom, undercutting the kind of complex chemistry that life requires.

> Some fundamental physical numbers governing the structure of the universe—called the constants of physics—also must fall into an exceedingly narrow range for life to exist. For example, many have estimated that the cosmological constant—a fundamental number that governs the expansion rate of empty space—must be precisely set to one part in $10^{120}$ in order for life to occur; if it were too large, the universe would have expanded too rapidly for galaxies and stars to form, and if it were too small, the universe would have collapsed back on itself. As Stephen Hawking wrote in his book A Brief History of Time, "The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life." Finally, the initial distribution of mass energy at the time of the big bang must have an enormously special configuration for life to occur, which Cambridge University mathematical physicist Roger Penrose has calculated to be on the order of one part in $10^{10^{123}}$. This is an unimaginably small number.

I know what you're thinking: How do we know that non-Christian scientists acknowledge the fine-tuning of gravity in the way that Collins describes?

Well, the New Scientist actually talks about the fine-tuning of the force of gravity. And they're not Christians.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$ at 1 second after the big bang, allows life to form.**

Here's a very long paper by Collins on the fine-tuning argument, where he answers several objections to the argument, including the multiverse/many-universe hypothesis.

# As Christianity declines in Europe, churches are put up for sale

**Wintery Knight** · 10 April 2016 · Archived copy · Original

I have a key that will unlock a puzzling mystery

This sad story is from the Wall Street Journal.

Excerpt:

> Two dozen scruffy skateboarders launched perilous jumps in a soaring old church building here on a recent night, watched over by a mosaic likeness of Jesus and a solemn array of stone saints.
>
> This is the Arnhem Skate Hall, an uneasy reincarnation of the Church of St. Joseph, which once rang with the prayers of nearly 1,000 worshipers.
>
> It is one of hundreds of churches, closed or threatened by plunging membership, that pose a question for communities, and even governments, across Western Europe: What to do with once-holy, now-empty buildings that increasingly mark the countryside from Britain to Denmark?
>
> […]The closing of Europe's churches reflects the rapid weakening of the faith in Europe, a phenomenon that is painful to both worshipers and others who see religion as a unifying factor in a disparate society.
>
> […]The Church of England closes about 20 churches a year. Roughly 200 Danish churches have been deemed nonviable or underused. The Roman Catholic Church in Germany has shut about 515 churches in the past decade.
>
> But it is in the Netherlands where the trend appears to be most advanced. The country's Roman Catholic leaders estimate that two-thirds of their 1,600 churches will be out of commission in a decade, and 700 of Holland's Protestant churches are expected to close within four years.
>
> […]As communities struggle to reinvent their old churches, some solutions are less dignified than others. In Holland, one ex-church has become a supermarket, another is a florist, a third is a bookstore and a fourth is a gym. In Arnhem, a fashionable store called Humanoid occupies a church building dating to 1889, with racks of stylish women's clothing arrayed under stained-glass windows.
>
> In Bristol, England, the former St. Paul's church has become the Circomedia circus training school. Operators say the high ceilings are perfect for aerial equipment like trapezes.
>
> In Edinburgh, Scotland, a Lutheran church has become a Frankenstein-themed bar, featuring bubbling test tubes, lasers and a life-size Frankenstein's monster descending from the ceiling at midnight.

> Jason MacDonald, a supervisor at the pub, says he has never heard complaints about the reuse. “It’s for one simple reason: There are hundreds and hundreds of old churches and no one to go to them,” Mr. MacDonald said. “If they weren’t repurposed, they would just lie empty.”
>
> Many churches, especially smaller ones, are becoming homes, and that has spawned an entire industry to connect would-be buyers with old churches.
>
> The churches of England and Scotland list available properties online, with descriptions worthy of a realty firm. St. John’s church in Bacup, England, for example, is said to feature “a lofty nave as well as basement rooms with stone-vaulted ceilings,” and can be had for about $160,000.

There are many reasons why Christianity has declined in Europe, but surely the widespread embrace of left-wing economic policies – even by evangelical Christians – is one of the largest.

Here’s a fairly recent paper (PDF) that explains it:

> What accounts for cross-national variation in religiosity as measured by church attendance and non-religious rates? Examining answers from both secularization theory and the religious economy perspective, we assert that cross-national variation in religious participation is a function of government welfare spending and provide a theory that links macro-sociological outcomes with individual rationality. Churches historically have provided social welfare. As governments gradually assume many of these welfare functions, individuals with elastic preferences for spiritual goods will reduce their level of participation since the desired welfare goods can be obtained from secular sources. Cross-national data on welfare spending and religious participation show a strong negative relationship between these two variables after controlling for other aspects of modernization.

I have many friends in the UK who classify themselves as evangelical Christians. They almost all embrace moderate to leftist economics, and they complain to me about why the church is in decline, why there is no interest in apologetics, why they can’t find Christian girlfriends, why they can’t get speaking engagements. The answer is, of course, that by majoring only in theology and apologetics, they have crafted the rope that their secular allies in government are using to hang them. Leftism is embraced by European Christians in part because they don’t want to be like those dastardly Americans with their free enterprise system and their rule of law and their private property and their law-abiding gun ownership.

It just goes to show you why Christianity suffers when we focus on piety at the expense of practicality. Too much A. W. Tozer, not enough F.A. Hayek. I doubt my well-meaning UK Christian friends – who are *so proud* of their laughable NHS health care – even know who F.A. Hayek is. To think that Lady Thatcher ones brandished “The Constitution of Liberty” by F.A. Hayek and declared “this is what we believe!”. But ordinary UK Christians do not believe what she believes, and now they must reap what they sowed with their knee-jerk rejection of the free enterprise system. Ignorance of economics killed Christianity in Europe, and pious, risk-averse Christians were willing participants in the murder.

# Cruz continues to win delegates in Colorado and Iowa

**Wintery Knight** · 11 April 2016 · Archived copy · Original

Wisconsin Governor Scott Walker, Texas Senator Ted Cruz, and Heidi Cruz

Colorado doesn't have a primary like other states. Delegates are elected at a convention. Colorado has 37 delegates in total, so let's see what happened with them.

Leftist CNN reports:

> Ted Cruz on Saturday clinched the support of every pledged delegate in Colorado, capturing all of the final 13 delegates who will go to the national convention in July and demonstrating his organizational strength in the all-important delegate race.
>
> Even though voters didn't head to the polls Saturday, Cruz's strength here could help deny Donald Trump the 1,237 delegates that he needs to clinch the nomination.
>
> Cruz's victory Saturday, combined with delegates he had already earned, hands him 30 of the 37 delegates across the state who are legally bound to support him on the first ballot at the convention, along with four other delegates who gave him verbal commitments of support.
>
> […]In this first round for the GOP, Team Cruz once again proved its mettle — far outpacing the efforts of Trump and Kasich in the scramble for delegates at each of the congressional district gatherings this week.

How come Cruz gets all the delegates? Is he cheating?

CNN explains that he is not cheating:

> In yet another sign of his airtight ground game, Cruz spoke before a huge screen displaying his slate of delegates for the final 13 spots, and he noted that his slate was also printed on the bright orange T-shirts that his many volunteers were wearing on the state convention floor.
>
> **Trump's campaign, by contrast, initially distributed fliers listing the campaign's national delegate candidates that were riddled with errors. The flier displaying the Trump slate is supposed to be the tip sheet that party members use to fill out their ballot. But on the first slate that the Trump campaign was giving out, more than a half dozen of their delegate candidates were listed with the wrong delegate number. At least one of the delegate numbers corresponded to a delegate supporting Cruz.**
>
> **The Trump campaign reprinted the flier, but the second flier also included several errors.**

I saw somewhere that the Trump campaign is accusing the Cruz campaign of stealing all the delegates, but the CNN report shows why that's not true. Trump is losing the delegates because his campaign is not working as hard nor as intelligently as the Trump campaign.

**What about Iowa?**

Meanwhile, delegates were also being selected in Iowa on the weekend.

The leftist Des Moines Register reports:

> Republican presidential candidate Ted Cruz captured 11 of the 12 national party convention delegates chosen at four party meetings held across Iowa on Saturday.
>
> The near-sweep in Iowa's four congressional districts is the latest evidence of a well-organized national effort by Cruz to secure support from the activists who will formally nominate a Republican presidential candidate later this year in Cleveland.
>
> That support could be crucial in the event that no Republican candidate clinches the nomination before convention — an increasingly likely prospect as the race between Cruz, Donald Trump and John Kasich drags on.

Well, this time Cruz cheated for sure, how else can we explain his getting 11 out of 12 delegates?

The Des Moines Register says no, though – no cheating again:

> **The Cruz campaign's successes on Saturday come at the expense of Trump, the Republican race's putative front-runner, whose campaign had vocal groups of supporters at each convention but showed little organizational prowess and will send zero committed delegates to Cleveland.**
>
> Delegates' supported candidate will not matter in the national convention's first round of balloting, but it could be decisive in subsequent rounds, as delegates are unbound from the results of their states' primaries and caucuses and allowed to vote their conscience.
>
> **[…]The Cruz campaign demonstrated a strong organization from the outset of Saturday's contests, peppering convention attendees with pro-Cruz text messages throughout the day and handing out half-sheets of paper at all four convention sites identifying slates of Cruz-aligned candidates for national convention delegate, national convention alternate and the nominating committee.**

And there are still more delegates to go, and the Cruz campaign is working on them as well:

> Iowa will send a total of 30 delegates to the national convention — the 12 selected on Saturday, 15 "at-large" delegates elected as a slate at next month's state convention and three statewide party leaders.

These delegates are not able to vote for Cruz in the first round, life the Colorado ones can. Still, if we end up with a contested convention, most of them will go for Cruz. I have to say, it's nice to have such a smart candidate who is so organized. I like having the smartest person – it's like having William Lane Craig in the debate.

It seems to me that the more "closed" the process is for selecting delegates – Democrats and Independents cannot cross the aisle to vote – the better Cruz does. The exit polls show that Trump does very well with people who are liberal on fiscal, social and foreign policy. If the liberals and moderates are not allowed to pick the candidate, then Cruz does really well. Maybe in 2020, we should have only closed primaries?

# Attorney general declares war on speech critical of liberal ideology

**Wintery Knight** · 12 April 2016 · Archived copy · Original

Painting: "Freedom of Speech" by Norman Rockwell
This is from the Daily Signal.

Excerpt:

> Last week, a line was crossed in the ongoing campaign of liberals to criminalize freedom of expression. The attorney general of the U.S. Virgin Islands subpoenaed a decade of materials and work by a private advocacy group that had dared to question the orthodoxy of climate change.
>
> The group is the Competitive Enterprise Institute, and the attorney general is Claude E. Walker, who had recently signed on to a campaign of over a dozen attorneys general to ferret out so-called climate change "deniers." It is possible that CEI was being targeted by Walker precisely because one of its attorneys, Hans Bader, had criticized New York Attorney General Eric Schneiderman, who was leading the campaign.
>
> This is all part of growing chorus of officials willing to use their powers to condemn climate change skeptics. A few weeks ago, for example, U.S. Attorney General Loretta Lynch had asked the FBI to look into the matter of whether climate change-denying scientists could be accused of fraud for not toeing the line.
>
> There is no other way to characterize these moves. They are blatant attempts to bend the law—in Schneiderman's case, by using consumer protection and securities laws—to shut down free and open research. It is but another example of the new illiberal attempt by progressive liberals to use the power of the law to intimidate and coerce those with whom they disagree.
>
> […]According to this mindset, it would be a "thoughtcrime" merely to question why the real-world results of global temperature change don't match up with predictions by computer models.
>
> What's going on here? The problem is that progressive liberals see too much freedom of speech as injurious to their cause. It's not only the egregious abuses that happen regularly on college campuses. It's increasingly mainstream liberals who are surrendering to a "yes but" strategy on freedom of expression—saying, in effect,

> "yes, we support it in principle, but not so much when it conflicts with our ideology."

Is this going to get better in time? Only if the next generation of college graduates respect free speech and disagreement. Well, do they?

This is the raw data is from the leftist Pew Research Center.

It says:

> American Millennials are far more likely than older generations to say the government should be able to prevent people from saying offensive statements about minority groups, according to a new analysis of Pew Research Center survey data on free speech and media across the globe.
>
> We asked whether people believe that citizens should be able to make public statements that are offensive to minority groups, or whether the government should be able to prevent people from saying these things. Four-in-ten Millennials say the government should be able to prevent people publicly making statements that are offensive to minority groups, while 58% said such speech is OK.
>
> […]In the U.S., our findings also show a racial divide on this question, with non-whites more likely (38%) to support government prevention of such speech than non-Hispanic whites (23%).
>
> Nearly twice as many Democrats say the government should be able to stop speech against minorities (35%) compared with Republicans (18%). Independents, as is often the case, find themselves in the middle. One-third of all women say the government should be able to curtail speech that is offensive to minorities vs. 23% of men who say the same.
>
> Furthermore, Americans who have a high school degree or less are more likely than those with at least a college degree to say that speech offensive to minority groups should be able to be restricted (a 9-percentage-point difference).

Why are the students do opposed to free speech that they disagree with? It's because that's what their professors are teaching them.

The Wall Street Journal notes that the professors teaching the impressionable, captive students are almost all on the secular left:

> According to data compiled by the Higher Education Research Institute, only 12% of university faculty identify as politically right of center, and these are mainly professors in schools of engineering and other professional schools. Only 5% of professors in the humanities and social-science departments so identify.
>
> A comprehensive study by James Lindgren of Northwestern University Law School shows that in a country fairly evenly divided between Democrats and Republicans, only 13% of law professors identify as Republican. And a recent study by Jonathan Haidt of New York University showed that 96% of social psychologists identify as left of center, 3.7% as centrist/moderate and only 0.03% as right of center.

I spent a few hours on the weekend talking to a reader of the blog who is in graduate school. She was told in her classroom by a liberal professor that all the students will be taught liberal views of economics, that classroom participation will be required, and that no dissenting views will be tolerated. I spent 4 hours on Sunday digging up information for her to counter a liberal text book she was assigned, which was written by two non-experts and misused statistics to push a liberal agenda. She was told all these things about forced participation and no dissent only after she had already paid for her tuition, of course. That's what happened to free speech and tolerance.

# Dept. of Energy report: fracking lowers energy prices and carbon emissions

**Wintery Knight** · 12 April 2016 · Archived copy · Original

Famous economist Dr. Stephen Moore comments on a new Department of Energy report in Investors Business Daily.

He writes:

> The U.S. Department of Energy published data last week with some amazing revelations — so amazing that most Americans will find them hard to believe. As a nation, the United States reduced its carbon emissions by 2% from last year. Over the past 14 years, our carbon emissions are down more than 10%. On a per-unit-of-GDP basis, U.S. carbon emissions are down by closer to 20%.
>
> Even more stunning: We've reduced our carbon emissions more than virtually any other nation in the world, including most of Europe.
>
> How can this be? We never ratified the Kyoto Treaty. We never adopted a national cap-and-trade system, or a carbon tax, as so many of the sanctimonious Europeans have done.
>
> The answer isn't that the EPA has regulated CO2 out of the economy. With strict emission standards, the EPA surely has started to strangle our domestic industries, such as coal, and our electric utilities. But that's not the big story here.
>
> The primary reason carbon emissions are falling is because of hydraulic fracturing — or fracking. Some readers now are probably thinking I've been drinking or have lost my mind. Fracking technology for shale oil and gas drilling is supposed to be evil. Some states have outlawed it. Hillary Clinton and Bernie Sanders have come out against it in recent weeks. Schoolchildren have been bombarded with green propaganda about all the catastrophic consequences of fracking.
>
> They are mostly lies. Fracking is simply a new way to get at America's vast storehouse of tens of trillions of dollars worth of shale oil and gas that lies beneath us, coast to coast — from California to upstate New York.

> Fracking produces massive amounts of natural gas and, as a consequence, natural gas prices have fallen in the past decade from above $8 per million BTUs to closer to $2 this year — a 75% reduction — due to the spike in domestic supplies.
>
> This free fall in prices means that America is using far more natural gas for heating and electricity and much less coal. Here is how the International Energy Agency put it: "In the United States, (carbon) emissions declined by 2%, as a large switch from coal to natural gas use in electricity generation took place."
>
> It also observes that the decline "was offset by increasing emissions in most other Asian developing economies and the Middle East, and also a moderate increase in Europe." We are growing faster than they are and reducing emissions more than they are, yet these are the nations that lecture us on polluting. Go figure.

The article goes on to note that green / environmentalists groups continue to oppose fracking.

Now, you might still say "but fracking is unsafe. I saw it in a Michael Moore documentary that they showed in my Foundations of Political Correctness class in graduate school!" Yes, well, I have something even more authoritative than such documentaries. I have peer-reviewed studies.

From Investors Business Daily.

Excerpt:

> Whether naturally occurring or not, environmentalists claim that fracking would release huge amounts of what they consider the most potent heat-trapping greenhouse gas, far outweighing the value of producing huge quantities of clean-burning natural gas.
>
> **Now comes a study, conducted by scientists at the University of Texas and published in the Proceedings of the National Academy of Sciences — and co-financed by one of the highest-profile environmentalists in the country — that shows much smaller amounts of methane emissions associated with fracking, far less than environmentalists and the Environmental Protection Agency have contended.**
>
> […]The study, billed as the first to measure the actual emissions of methane from natural gas wells, finds these emissions were, in some cases, only about 2% of the most recent national estimate by the EPA in 2011. An upcoming EPA rule, effective January 2015, requires all methane to be captured when liquids are removed after drilling.
>
> […]"For those wells with methane capture or control, 99% of the potential emissions were captured or controlled," the study notes.
>
> […]Thanks in large part to fracking, energy-related carbon dioxide emissions in 2012 were the lowest in the U.S. since 1994, at 5.3 billion metric tons. With the exception of 2010, emissions have declined every year since 2007.

OK, so now that we know that the radical environmentalists are wrong, let's ask why they are wrong. And here, I can only speak from my experience of dealing with secular leftist co-workers at work, and young evangelical leftists in church.

What I have found is that environmental extremism functions as a kind of substitute religion for the secular left, including young evangelicals on the political left. They like environmentalism as a substitute religion, because they get to do behaviors that most religions would call "sinful", while still feeling all clean and good because they recycle cans. Instead of having to actually be morally good, they can just turn their lights off for an hour per year during "Earth Hour". Much less constraining than traditional morality.

# Ryan Anderson debates Alastair Gamble on marriage at Arizona State University

**Wintery Knight** · 12 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

Details:

> A debate about what marriage is, hosted by the Federalist Society at the Sandra Day O'Connor College of Law, featuring Ryan T. Anderson and Alastair Gamble.

The debate took place at the law school at Arizona State University.

Ryan T. Anderson:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon senior research fellow in American principles and public policy at The Heritage Foundation.
>
> Anderson is the author of the "Truth Overruled: The Future of Marriage and Religious Freedom." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the book "What Is Marriage? Man and Woman: A Defense."
>
> Anderson received his bachelor's degree from Princeton University, graduating Phi Beta Kappa and magna cum laude. He holds a doctoral degree in political philosophy from the University of Notre Dame. His dissertation was titled: "Neither Liberal nor Libertarian: A Natural Law Approach to Social Justice and Economic Rights." He also holds a master's degree from Notre Dame.

Alastair Gamble:

> Alastair Gamble is an attorney in the firm's Litigation group and focuses his practice on Labor and Employment at both the trial and appellate level.
>
> From 2008 – 2012, Mr. Gamble practiced in Los Angeles, California, where he focused on Labor and Employment and Securities litigation. Before that, he served as a law clerk to Hon. Andrew Hurwitz of the Arizona Supreme Court and as a judicial extern to Hon. Michael Daly Hawkins of the U.S. Court of Appeals for the Ninth Circuit.
>
> Mr. Gamble holds the J.D., Sandra Day O'Connor College of Law at Arizona State University and

> the B.A., History, Emory University, 2000.

The video is 70 minutes:

The format is 15 minute opening speeches, 5 minute rebuttals, then Q&A.

# Obama administration threatens landlords who screen tenants for felonies

**Wintery Knight** · 13 April 2016 · Archived copy · Original

Is Barack Obama focused on protecting the American people?
Amazing article about the pro-criminal Democrats, from Investors Business Daily.

Excerpt:

> The Obama administration has just made it easier for felons to move in next door. Landlords who don't want tenants who are going to mug their neighbors or deal drugs will now be treated as racists and potentially sued.
>
> Last week, the Department of Housing and Urban Development issued new guidelines to landlords, warning that bans against renters with criminal convictions violate the Fair Housing Act because they disproportionately affect minorities.
>
> In effect, the Obama regime is now outlawing criminal background checks for apartment rentals, even though such screening is critical for the protection and security of tenants and property, and serves a legitimate business need.
>
> In a newly released 10-page missive, HUD warns landlords they can be held liable for discrimination if they deny housing over criminal records.
>
> "HUD will use the full force of the law to protect the fair housing rights of folks who've been arrested or who're returning to their communities after serving time in jail or prison," HUD Secretary Julian Castro warned.
>
> By "full force," he means the "disparate impact" theory of civil-rights enforcement, which HUD claims is written into the Fair Housing Act even though the phrase appears nowhere in the statute.
>
> Disparate impact holds businesses liable for colorblind policies and practices that may have adverse outcomes for minorities — in this case, screening all apartment applicants for criminal histories. It doesn't matter if there is zero intent to discriminate in carrying out such polices. The policies will be condemned as racist regardless.

This isn't surprising, because the Obama administration has a long history of favoring criminals' rights over the rights of law-abiding taxpayers.

Consider these numbers from CNS News.

They write:

> According to weekly detention and departure reports from U.S. Immigration and Customs Enforcement, there were 167,527 non-detained convicted criminal aliens in the United States as of Jan. 26 of this year, a congressional hearing revealed Thursday.
>
> House Oversight and Government Reform Chairman Jason Chaffetz (R-Utah.) read the statistic aloud Thursday durin a hearing examining ICE's priorities and procedures for removing criminal aliens currently living in the United States.
>
> "In that report, it said that there are 167,527 non-detained, final-order convicted criminals on the loose in the United States," Chaffetz pointed out while questioning ICE Director Sarah Saldana."These are people that are here illegally, get caught, convicted, and you release back out into the public," he said, adding that some of the crimes committed by those who have been released include homicide, sex crimes, child pornography, drunk driving, robbery and kidnapping.
>
> The federal government announced Wednesday that ICE had released about 30,000 convicted criminal aliens from ICE custody in 2014 alone, according to The Washington Times, which first reported the statistic.

Meanwhile, the Washington Times reports on some criminals who were amnestied by Obama's executive action.

Excerpt:

> Nearly two dozen of the illegal immigrants picked up in a nationwide sweep for criminal aliens earlier this month had previously been approved for President Obama's deportation amnesty, the Homeland Security Department said Wednesday.
>
> All 23 were part of Mr. Obama's original program for so-called Dreamers, which began in 2012 and which had granted tentative legal legal status to nearly 640,000 as of the end of last year.
>
> Of the 23, 15 were still actively part of the amnesty, while eight had been approved once but had not gotten their status renewed after the first two-year period expired.
>
> […]Homeland Security spokeswoman Marsha Catron said 14 of the 15 Dreamers who were still part of "deferred action" were convicted of their crimes after they were approved. The other one had a has a pending criminal charge but hadn't yet been convicted or acquitted.

This is all part of the Democrat tendency to criminalize law-abiding Americans, and de-criminalizing real criminals. They think it's better to let the guilty go free, even if the innocent are put at risk. If you want a tough on crime government policy, then you need to vote Republican.

# Christian student expelled for quoting the Bible on marriage on Facebook page

**Wintery Knight** · 13 April 2016 · Archived copy · Original

Anti-marriage gay activists vandalize church

This article is from the Christian Post, and I'm blogging about it to warn you all about Facebook, and how to use it.

Story first, though:

> A Christian student expelled from England's Sheffield University because he quoted the Bible's stance on homosexuality in a Facebook post supportive of controversial Kentucky clerk Kim Davis has lost his appeal.
>
> Felix Ngole, a 38-year-old in his second year of study for a master's degree in social work at the University of Sheffield in South Yorkshire was told that he is no longer a student at the university after a committee ruled he "may have caused offense to some individuals" by issuing a Facebook post last September quoting Leviticus on the Bible's condemnation of homosexuality.
>
> Ngole's post came in defense of Davis, the clerk of Rowan County, Kentucky, who became the center of a media firestorm last year when she refused to allow her office to issue same-sex marriage licenses with her name and title on them because of her religious objection to same-sex marriage.
>
> **Although Ngole's Facebook page is private and can only be seen by his friends, his post was brought to the attention of administrators at the university months later.**
>
> **Ngole's future at the university was then subjected to the "Fitness to Practice" committee, which ruled that his conservative Christian beliefs about marriage would negatively impact his "ability to carry out a role as a social worker" and that his post "transgressed boundaries which are not deemed appropriate for someone entering the social work profession."**
>
> **The committee ruled that Ngole was to be "excluded from further study on a program leading to a professional qualification." In late February, the school informed Ngole that he would no longer be recognized as a university student.**
>
> **"Your student record will be terminated shortly and your library membership and university computer account withdrawn," Ngole was told. "You may wish to contact your funding body for advice on your financial position."**

That's actually not such a  strange thing, as similar things have happened in the United States. Alliance Defending Freedom has a post up about one case from Eastern Michigan University.

Secret Agent John Drake
So what's the solution to this?

Three points:

1. Don't post anything publicly on your Facebook account.
2. Don't use your real name on your Facebook account, use an alias instead.
3. Don't friend everyone who sends you a friend request unless you know them personally and know that they are sympathetic to your views on controversial issues.

Obviously, there are degrees of risk. Someone in an academic environment who doesn't follow the news about what Christians are facing in different countries is the most at risk, especially compared to working in a private company. Not only are Christians in academia mingling with intolerant secular leftists, but you pay your money up front when you go to school, and getting into another school after being expelled is much harder than finding another job.

I actually have a friend who is a Christian apologist. He writes all about controversial subjects like intelligent design, gay marriage and Islam under his real name. And he friends pretty much anyone who sends him a friend request, including people who disagree with him on controversial issues. He likes to have a lot of friends, although I wouldn't classify him as someone who invests deeply in other people's lives. Publishing controversial views under his own name has actually caused him some trouble academically, where he lost a world-class PhD supervisor. And he has ignored all my warnings. Don't be like that guy. The goal of your life is not to behave recklessly, and then get destroyed before you accomplish anything. The goal of your life is to accomplish a lot over the long term, and pray that the other side never lays a finger on you.

I used to attend an Anglican church in my home town when I was an undergraduate student. The church (St. Alban's) was a wonderful stone building in the middle of downtown, with a frightfully small parking lot. The pastor (George) was excellent, and I remember many one-off things that he said. But most of all I remember this statement that George got out of the Book of Common Prayer:

> O God, from whom all holy desires, all good counsels, and all just works do proceed; Give unto thy servants that peace which the world cannot give; that our hearts may be set to obey thy commandments, and also that by thee, we, being defended from the fear of our enemies, may pass our time in rest and quietness; through the merits of Jesus Christ our Saviour. Amen.

And he would always dismiss us with this blessing:

> May the road rise up to meet you.
> May the wind be always at your back.
> May the sun shine warm upon your face;
> the rains fall soft upon your fields
> and until we meet again,
> may God hold you in the palm of His hand.

When I was in my early 20s, I used to scoff at this talk of “rest and quietness” and “wind always at your back”. I had already experienced persecution twice by that time – once in the workplace, and once at school. But I thought I was invincible. However, even back then I was tracking the censorship and persecution of Christians in countries like Canada. As time passed, I saw more cases in more countries where the secular left expelled students, got people fired, vandalized churches and private property, put people on trial, and I watched the government fine Christians for offending others with unwelcome speech. The limits on their desire to be praised for sinning disappeared. Every act of coercion became permissible in order to take away the shame and guilt.

Now that things have accelerated out of control, and even the pious pastors in their comfortable churches finally understand that secular leftism is on a collision course with free speech and freedom of religion, I find myself wishing more and more to pass my life in rest and quietness. I was careful to make a difference starting when I was young. But now rest and quietness seems like a wonderful idea as I get older. A word to the wise for you youngsters who think that you will never face persecution. Take it from someone who has faced it: it’s something to be avoided if you can, so long as you can still make a difference.

# New study: literacy more widespread around ancient Israel than previously thought

**Wintery Knight** · 13 April 2016 · Archived copy · Original

Investigation in progress

Some skeptics like to attack the traditional authorship of the gospels by arguing that the gospels couldn't have been written by anyone close to Jesus, because they were all illiterate. The impression I get from the skeptics is that they think that illiteracy was widespread in and around ancient Israel.

But then, in the radically leftist New York Times, of all places, there is news about a new peer-reviewed study:

> Eliashib, the quartermaster of the remote desert fortress, received his instructions in writing — notes inscribed in ink on pottery asking for provisions to be sent to forces in the ancient kingdom of Judah.
>
> The requests for wine, flour and oil read like mundane, if ancient, shopping lists. But a new analysis of the handwriting suggests that literacy may have been far more widespread than previously known in the Holy Land around 600 B.C., toward the end of the First Temple period. The findings, according to the researchers from Tel Aviv University, could have some bearing on a century-old debate about when the main body of biblical texts was composed.
>
> […]The new study, published on Monday in the Proceedings of the National Academy of Sciences, combined archaeology, Jewish history and applied mathematics, and involved computerized image processing and the development of an algorithm to distinguish between the various authors issuing the commands.
>
> Based on a statistical analysis of the results, and taking into account the content of the texts that were chosen for the sample, the researchers concluded that at least six different hands had written the 18 missives at around the same time. **Even soldiers in the lower ranks of the Judahite army, it appears, could read and write.**
>
> […]The study was based on a trove of about 100 letters inscribed in ink on pieces of pottery, known as ostracons, that were unearthed near the Dead Sea in an excavation of the Arad fort decades ago and dated from about 600 B.C. That was shortly before Nebuchadnezzar's destruction of Jerusalem and the kingdom of Judah, and the exile of its elite to Babylon — and before many scholars believe the major part of the biblical texts, including the five books of Moses, also known as the Pentateuch, were written down in any cohesive form.
>
> The Arad citadel was small, far-flung and on an active front, close to the border with the rival kingdom of Edom. The fort itself was only about half an acre in size, and probably would have accommodated about 30

> soldiers. The wealth of texts found there, recording troop movements, provisions and other daily activities, were created within a short time, making them a valuable sample for looking at how many different hands wrote them.
>
> […]**One of the longstanding arguments for why the main body of biblical literature was not written down in anything like its present form until after the destruction and exile of 586 B.C. is that before then there was not enough literacy or enough scribes to support such a huge undertaking.**
>
> **But if the literacy rates in the Arad fortress were repeated across the kingdom of Judah, which had about 100,000 people, there would have been hundreds of literate people, the Tel Aviv research team suggests.**
>
> **That could have provided the infrastructure for the composition of biblical works that constitute the basis of Judahite history and theology including early versions of the books of Deuteronomy to II Kings, according to the researchers.**

I just heard a debate on the weekend in which atheist historian Bart Ehrman made the argument that around the time of Jesus, almost no one was literate. Therefore, it's unlikely that anyone who was an eyewitness to Jesus' would have been able to write anything down about it.

I think this evidence does have some bearing on that question, because it shows that literacy of at least Hebrew was more widespread in the area than previously thought. That means that the people around Jesus are more likely to be able to keep their own notes, and then pass those notes off to a writer of Greek. Instead of having stories being circulated for the 30-35 years between the death of Jesus and the writing of Mark (note: I think Mark was written much earlier than that), you would have written notes by the eyewitnesses that could then be translated into Greek.

But there's more interesting stuff about Bart Ehrman's charge of widespread illiteracy. Consider this post that I found on Catholic apologist Jimmy Akin's blog, where he makes the case that Bart Ehrman is even wrong about his estimate of illiteracy. And when I say wrong, I mean it looks like Ehrman deliberately misrepresents a primary source that he quotes in order to make his point. Maybe that will be fixed in a future edition of his book, but it wasn't fixed in the debate on Saturday – he used the same botched quote then.

# Planned Parenthood declares Ted Cruz top threat to their abortion business

**Wintery Knight** · 14 April 2016 · Archived copy · Original

Hillary Clinton and Planned Parenthood

Here is a story that Jay Richards tweeted from Life News.

Excerpt:

> The Planned Parenthood abortion business is emailing its members warning that Ted Cruz is the biggest pro-life threat the abortion business faces from the Republican presidential candidates.
>
> In the email seeking funds for its political campaign supporting Hillary Clinton, Dawn Laguens, Executive Vice President of Planned Parenthood, says "every Republican candidate for president this year would be a complete disaster" but explains "Cruz could very well be the biggest threat we face."
>
> Laguesns says Cruz would be the biggest threat to the abortion corporation because "unlike Trump and Kasich, who are more or less in line with the Republican Party's already terrible positions on reproductive rights, Cruz takes things much, much further."
>
> "And he has the fan base to prove it. About 50% of Trump's and Kasich's supporters think abortion should be illegal in all or most cases, but a whopping 73% of Cruz's supporters want to ban abortion in all or most cases," the Planned Parenthood VP complains.
>
> Laguesns gripes that Cruz "consistently says he will open an investigation into Planned Parenthood on his first day in office. But maybe that's less surprising when you see some of the people who have endorsed him — people like Troy Newman, the notorious anti-abortion extremist."
>
> She says Cruz has "a real shot at the nomination and the presidency" and then makes up a false attack saying, "We can't let anyone near the White House who would force a woman to carry a dangerous or unwanted pregnancy."
>
> Ted Cruz continues to stake out a pro-life position on the issue of abortion in cases of rape.In a new interview, the pro-life Texas senator said he doesn't think it's fair to "blame the child" who is conceived in rape.

Interesting. One thing you can say about Planned Parenthood – they are not swayed by charisma or rhetoric. They've taken a good hard look at Cruz's record and the views of the people who support him, and they've decided

that he is the most pro-life of all the candidates running. This is their business, and they are calling out the biggest threat to their business to their donors.

But's not just the pro-abortion side that sees Cruz as the most solid on social issues – it's the pro-life side, too.

Rick Perry, Carly Fiorina and Ted Cruz appear on Fox News with Sean Hannity

Consider this story from Life News about an upcoming primary state – Oregon:

> The leading pro-life group in Oregon today issued its endorsement for pro-life Republican candidate Ted Cruz for President. Oregon Right to Life says Cruz has a sterling pro-life record that it described as "impeccable."
>
> "ORTL PAC is pleased to endorse Senator Cruz," said Gayle Atteberry, executive director of ORTL. "His record on pro-life issues is impeccable. We can trust that as president, he will do all he can to protect unborn babies. That includes the all-important decisions he would make in nominating new Supreme Court justices.
>
> "Both Hillary Clinton and Bernie Sanders," said Atteberry, "support abortion on demand, from conception to birth, as well as continued taxpayer funding of abortion and Planned Parenthood."
>
> Atteberry told LifeNews that the stakes in Oregon's primary election are higher than usual as every delegate counts in the battle for the Republican nomination. She said "Oregon Right to Life PAC encourages pro-life voters across Oregon to vote early for Ted Cruz to ensure that Oregon plays its part in electing a pro-life president."
>
> In fact, Cruz has a 100% pro-life voting record during his tenure in the Senate.
>
> When it comes to the issue of abortion, Cruz has compiled a 100% pro-life voting record during his tenure in the Senate. On 16 total votes on pro-life issues taken while has has served in the Senate, Cruz voted pro-life every single time.
>
> The votes tallied by the national Right to Life Committee include multiple votes supporting a bill to de-fund the Planned Parenthood abortion business over the years, votes to repeal or de-fund Obamacare, which uses taxpayer funds to pay for abortions as well as votes to protect the conscience rights of pro-life Americans.
>
> The tally of 8 votes below does not include two additional votes in August and September to end debate and stop the Democrats' filibuster of  measure that would de-fund Planned Parenthood. The August and September votes Cruz cast to defund Planned Parenthood brings the total tally to 10 pro-life votes cast during his Senate tenure.

If protecting the unborn is an important issue to you, there is one candidate still running who will move the ball

forward for you. That man is Ted Cruz.

# Should the secular left allow Christians to be social workers?

**Wintery Knight** · 14 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

This is from religious liberty rock star David French, writing in National Review. He writes about a new Tennessee bill that protects Christian social workers from having to violate their consciences when doing their jobs.

He says:

> The Tennessee legislature has passed a bill protecting from liability "counselors and therapists who refuse to counsel a client as to goals, outcomes, or behaviors that conflict with a sincerely held religious belief of the counselor or therapist."
>
> […]Two legal cases I worked on immediately come to mind. The first involved a young woman named Emily Brooker, a social-work student at Missouri State University. Emily's academic "crime" was refusing a professor's demand that she sign her name to a letter to the state legislature advocating gay adoption.
>
> Rather than recognizing that teachers can't compel students to engage in political advocacy, the professor accused her of a "Level 3" grievance (the university's most serious academic offense). The department then subjected Emily to a Star Chamber–style political inquiry, where a panel of professors demanded to know whether she was a "sinner" and kept her from having a lawyer, an advocate, or even her own mother in the room. The panel convicted her of the offense and required her to change her beliefs as a condition of graduation.
>
> In the second case, I represented Julea Ward against Eastern Michigan University. Julea was in the final stages of her graduate counseling program when she was asked to counsel a gay man about his same-sex relationship. She declined and referred the file to another counselor who had no moral objections. The client was counseled without incident. Indeed, he didn't even know his file had been referred.
>
> The university, however, found her referral intolerable and subjected Julea to a "formal review," accusing her of "imposing values that are inconsistent with counseling goals" and of discrimination based on sexual orientation. Once again, a student was summoned to the Star Chamber, and once again public officials probed a private citizen's religious beliefs. One university official actually held it *against* her that she "communicated an attempt to maintain [her] belief system." She was expelled from the program just weeks before graduation.

David French used to work at the Alliance Defending Freedom, but now he works for the American Center for Law and Justice.

I noticed that Casey Mattox at the Alliance Defending Freedom has a warning for Christians who think that the advance of the sexual revolutionaries won't affect them.

Mattox writes:

> While the anti-conscience activists pretend that conscientious objectors are declining goods or services because of sexual orientation, every case disproves that characterization. These creative professionals serve all persons. They object only to facilitating and celebrating a particular event that would require them to advance a message contrary to their religious convictions.
>
> The left had historically mocked suggestions that any pastor would ever be forced to perform a same sex wedding in violation of their faith. But the mask is slipping. See the hysterical response to a Georgia law that would have done little more than protect pastors, churches and other nonprofit religious organizations from hosting and solemnizing a same-sex marriage. Indeed, the left has already attempted to force a pastor to perform a same-sex wedding that would violate his faith. And within hours of the Supreme Court's decision finding a constitutional right to same-sex marriage, activists were urging termination of tax exemptions for churches that decline to perform same-sex weddings.
>
> Not every same-sex wedding is a church wedding, but some are. If Christian videographers, wedding coordinators, musicians, and othercreative professionals – let alone pastors themselves – are required to provide their services for same-sex weddings, some will even have to be physically present, even participating in religious worship where they believe the prayers prayed, hymns sung, and scriptures read in support are actually blaspheming their own God.
>
> The opponents of RFRA and like religious freedom protections are still quick to deploy their "separation of church and state" cliché, but one side is demanding that the state fine people for declining to participate in a religious service. It isn't mine. It's the ACLU and its allies who are ready to use the power of the state to compel unwilling people to participate in religious services.
>
> […]Of the same-sex marriage agenda, Erick Erickson has coined the phrase, "You will be made to care." But in some cases this is insufficient. You must participate. Even if the left must use the power of the government to fine you if you refuse, you will be made to worship their god.

I think a lot of Christians sort of don't think it's a problem if they keep their faith in a box and only let it out to see the light of day for purposes of feeling good, or having community. But Christianity isn't like that. It's not something for the benefit of the Christian, it's a worldview. And part of that worldview is not only doing the things that God wants us to do as individual, but also declaring and defending God's values and character to others, when the subject comes up for discussion. We are not free to promote things that God does not agree with.

# Stephen Baskerville: five myths about no-fault divorce

**Wintery Knight** · 14 April 2016 · Archived copy · Original

Marriage and family
From the Catholic News Agency.

Introduction:

> Almost four decades after the "no-fault" divorce revolution began in California, misconceptions abound. Even the many books about divorce, including myriad self-help manuals, are full of inaccurate and misleading information. No public debate preceded the introduction of no-fault divorce laws in the 1970s, and no debate has taken place since.
>
> Yet divorce-on-demand is exacting a devastating toll on our children, our social order, our economy, and even our constitutional rights. A recent study estimates the financial cost of divorce to taxpayers at $112 billion annually. Recent demands to legitimize same-sex marriage almost certainly follow from the divorce revolution, since gay activists readily acknowledge that they only desire to marry under the loosened terms that have resulted from the new divorce laws. Divorce also contributes to a dangerous increase in the power of the state over private life.

Here are the five myths about no-fault divorce:

- No-fault divorce permitted divorce by mutual consent, thus making divorce less acrimonious
- We cannot force people to remain married and should not try
- No-fault divorce has led men to abandon their wives and children
- When couples cannot agree or cooperate about matters like how the children should be raised, a judge must decide according to "the best interest of the child"
- Divorce must be made easy because of domestic violence

And the details about number three:

> Myth 3: No-fault divorce has led men to abandon their wives and children.
>
> Fact: This does happen (wives more often than children), but it is greatly exaggerated. The vast majority of no-

> fault divorces — especially those involving children — are filed by wives. In fact, as Judy Parejko, author of Stolen Vows, has shown, the no-fault revolution was engineered largely by feminist lawyers, with the cooperation of the bar associations, as part of the sexual revolution. Overwhelmingly, it has served to separate large numbers of children from their fathers. Sometimes the genders are reversed, so that fathers take children from mothers. But either way, the main effect of no-fault is to make children weapons and pawns to gain power through the courts, not the "abandonment" of them by either parent.

Al Mohler wrote about the history of no-fault divorce a while back, and I think it's worth reviewing why we have this lousy law.

> The story behind America's love affair with no-fault divorce is a sad and instructive tale. As Baskerville documents, no-fault divorce laws emerged in the United States during the 1970s and quickly spread across the nation. Even though only nine states had no-fault divorce laws in 1977, by 1995, every state had legalized no-fault divorce.
>
> Behind all this is an ideological revolution driven by feminism and facilitated by this society's embrace of autonomous individualism. Baskerville argues that divorce "became the most devastating weapon in the arsenal of feminism, because it creates millions of gender battles on the most personal level." As far back as 1947, the National Association of Women Lawyers [NAWL] was pushing for what we now know as no-fault divorce. More recently, NAWL claims credit for the divorce revolution, describing it as "the greatest project NAWL has ever undertaken."
>
> The feminists and NAWL were not working alone, of course. Baskerville explains that the American Bar Association "persuaded the National Conference of Commissioners on Uniform State Laws [NCCUSL] to produce the Uniform Marriage and Divorce Act." Eventually, this led to a revolution in law and convulsions in society at large. This legal revolution effectively drove a stake into the heart of marriage itself, with inevitable consequences. In effect, no-fault divorce has become the catalyst for one of the most destructive cultural shifts in human history. Now, no-fault divorce is championed by many governments in the name of human rights, and America's divorce revolution is spreading around the world under the banner of "liberation."

And note that Democrats oppose any effort to reform laws that make it easy to break up marriages:

> A basic dishonesty on the question of divorce pervades our political culture. Baskerville cites Michigan governor Jennifer Granholm as referring to divorce as a couple's "private decision." Granholm's comments came as she vetoed a bill intended to reform divorce law in her state. The danger and dishonesty of referring to divorce as a couple's "private decision" is evident in the fact that this supposedly private decision imposes a reality, not only on the couple, but also on children and the larger society. Indeed, the "private decision" is really not made by a couple at all–but only by any spouse demanding a divorce.

So, no-fault was pushed by two groups: feminists and trial lawyers.

There's a lot of talk these days about gay marriage and how it undermines marital norms and normalizes raising children without either their biological father or biological mother. But before there was gay marriage, there was no-fault divorce, which deprives children of their biological father. There is no provision for no-fault divorce in the Bible, so it seems to me that Christians should be against frivolous divorce just like we are against same-sex marriage.

# Canadian Liberal Party introduces bill to legalize euthanasia

**Wintery Knight** · 15 April 2016 · Archived copy · Original

Jody Wilson-Raybould, Minister of Justice and Attorney General of Canada (right)

Life Site News has a story about Canada's new assisted suicide bill:

> The Liberal government's euthanasia bill introduced Thursday will not protect vulnerable Canadians or the conscience rights of physicians, say anti-euthanasia activists.
>
> While Justice Minister Jody Wilson-Raybould's Bill C-14 is more restrictive than the legislative framework the special joint parliamentary committee recommended in its February 2016 report, it essentially provides "a perfect cover for acts of murder, absolutely," says Alex Schadenberg, executive director of the Euthanasia Prevention Coalition.
>
> The draft legislation restricts eligibility for euthanasia and assisted suicide to competent patients 18 years of age and older who have "an incurable serious and incurable illness, disease or disability" which "causes them enduring physical or psychological suffering that is intolerable to them and that cannot be relieved under conditions," who are in "an advanced state of decline in capability" and whose "natural death is reasonably foreseeable."
>
> The legislation mandates that a patient request assisted suicide or voluntary euthanasia in writing, and that this request be approved by two independent medical practitioners, or nurse practitioners.
>
> It mandates a 15-day waiting period after the request is approved, but that period can be waived if the two medical practitioners deem the patient's condition will deteriorate before that time is up.
>
> […]Schadenberg says the bill "does not provide effective oversight in the law," because while it calls for two independent physicians or nurse practitioners to approve a request for euthanasia, "this is the system where the doctor or nurse practitioner who does the act also does the reporting."
>
> The legislation also provides "legal immunity for anyone, anyone who does anything at a person's request, under Sections 241.3, 241.5," he said.
>
> […][W]hile the bill acknowledges conscience rights in its preamble, it "provides no protection for conscientious objectors," according to Albertos Polizogopoulos, a constitutional lawyer for Canadian Physicians for Life.

Canadian doctors are already forced to perform abortions against their conscience, so this last point is no great

surprise.

In a country that has single payer health care, all medical care is paid for by the federal government. You pay into the system your whole life (at an average of 42% of your income, in Canada) and then at the end, you get in line and hope that the government will treat you. It is *extremely convenient* for the government to kill off patients who are elderly. Elderly patients won't be able to vote in many more elections, but they will want to draw away funds that could be used to buy the votes of young people who want "free" breast enlargements, plastic surgery, sex changes and IVF treatment. So the government has every incentive to cut loose the old people and then buy the votes of young people with the taxpayer money they save. Single payer health care is a scam to help politicians stay in power.

Similar laws in places like Belgium and Netherlands have been used to cut down on the medical bills that the government must pay.

A Parliamentary committee brief that I found on the Canadian government web site says this:

> A study published in the NEJM entitled: Recent Trends in Euthanasia and Other End-of-Life Practices in Belgium (March 19, 2015) found that 4.6% of all deaths in the first six months of 2013, in the Flanders region of Belgium, were by assisted death and **1.7% of all deaths were assisted deaths without explicit request representing more than 1000 assisted deaths without explicit request in 2013.**
>
> The supplemental appendix in the study informs us how the researchers classified the data.
>
> It states: "If in the latter case the drugs had been administered at the patient's explicit request, the act was classified as euthanasia or assisted suicide depending on whether the patient self-administered the drugs. If drugs were used with the same explicit intention to hasten death but without the patient's explicit request, the act was classified as hastening death without explicit patient request. **This can include cases where a patient request was not judged as explicit by the physician, where the request came from the family or where the physician acted out of compassion."**
>
> This research study confirms that many intentional hastened deaths are occurring without the explicit request of the patient which contravenes the Belgian assisted death law and medical ethics.

Previously, I blogged about how the UK government provides bonuses to hospitals who put elderly patients on an end-of-life pathway.

Ethicist Wesley J. Smith comments on the Canadian law in National Review.

Excerpt:

> The Canadian government has tabled its new euthanasia bill–and as expected, it will be the most radical in the world.
>
> Since the death doctor need not be present at the demise, the bill creates an unprecedented license for family members, friends–heck, a guy down the street–to make people dead.
>
> […]In short, this provision is *the perfect defense for the murder* of sick and disabled people who requested lethal drugs.
>
> The George Delury case is an example of what I mean: Delury said he assisted wife, Myrna Lebov's suicide out of "compassion" and at her request due to MS.
>
> But his real hope was not only to be free from care giving, but become famous writing a book about her death. (He did, *What If She Wants to Die?*)
>
> It almost worked. But because assisted suicide was a criminal offense, authorities conducted an investigation and discovered his diary. It showed that contrary to the compassionate face Delury was conjuring, in reality, *he emotionally pressured Myrna into wanting to commit suicide*, telling her, for example, that she was a burden

> and ruining his life.
>
> He also withheld full dosage of antidepressants so he could use those drugs to kill her. And, he but put a plastic bag over her head to make sure she died.
>
> If euthanasia Canada's bill had been the law of New York when Delury killed Myrnov, he might have been able to coerce her into asking for lethal drugs. At that point, he could have killed her any time he wanted and there wouldn't have been a criminal investigation to find his diary.
>
> Canada has just paved the way for a person, hungry for an inheritance or ideologically predisposed, to get away with the perfect murder.

In the last election, the Liberal Party promised the Canadian voters the moon, in terms of new spending. They said it would only add 10 billion to the deficit this year. But now (after the election) the number has exploded to 30 billion this year and over 100 billion over the next five years. Could this euthanasia plan be the first step in balancing the books, so they can win re-election?

# How exposed is your state to the problem of underfunded pensions?

**Wintery Knight** · 15 April 2016 · Archived copy · Original

I am thinking about moving to a new state in the future, and one of the factors I am considering is underfunded pension liabilities. This basically refers to the ability of a state to pay out pensions to retiring public sector employees going forward. I'm going to tell you everything you need to know to solve this problem in this post.

First, Investors Business Daily explains the problem:

> A new report by Hoover Institution Senior Fellow Joshua Rauh shows that, unless action is taken soon, many local governments could face bankruptcy because they can't meet their pension obligations.
>
> […]The problem is surprisingly simple: States and cities overestimate returns on their pension fund investments, while systematically underfunding them. The result is a growing deficit that will require massive tax hikes or dramatic and painful cuts in government services and promised pensions to public workers.
>
> Rauh's study looked at 564 state and local pension systems, representing $4.8 trillion in pension liabilities and $3.6 trillion in assets — for an apparent current deficit of just $1.19 trillion.
>
> So far, so good. But Rauh notes the average *expected* return on pension assets is about 7.6% — which means a doubling every 9.5 years. He calls that assumption "wildly optimistic," and says a more realistic assumption would be the Treasury bond rate of 3% or lower — less than half the expected return.
>
> Unless pension managers, politicians and voters do something now, the unfunded liabilities of the national system will continue to grow out of control, reaching $3.4 trillion in just 10 years. States and cities across the country would have to raise taxes massively to keep from becoming insolvent.
>
> **Right now, state and local governments set aside about 7.3% of revenues for public pensions. To keep the funding gap from exploding and taking down governments across the nation, pension spending would have to rise to 17.5% of revenues on average — roughly equal to a 240% tax increase.**
>
> How did things get so bad? Generations of feckless politicians have refused to face down public employee unions, which have negotiated massively expensive pensions for their members while concealing their true cost. Politicians have gone along with it because, heck, it's not their money and anyway, the problems will take place long after they're out of office. That's where we are now.
>
> States and cities will come under intense pressure to raise taxes on local citizens to pay for this travesty. Instead, they should get rid of the public employee unions that have plundered the public for too long and have made local government inefficient, expensive and dysfunctional. If not, they can expect to face the same economy-crippling effects as Detroit, San Bernardino and a number of other cities have — financial insolvency.

Now, obviously states with kick-ass governors like Scott Walker of Wisconsin are not going to have the same exposure to such problems as incompetent governors like Maggie Hassan of New Hampshire. Scott Walker know how to rein in public sector unions.

Let's get the numbers to confirm this hypothesis.

Bloomberg has the numbers:

> Bloomberg ranked 49 U.S. states based on their pension funding ratios in 2014 under GASB 25. (Delaware is not included because of insufficient data for GASB 25.)

Here are the best states… Wisconsin is 100% funded:

| Rank | State | Funding ratio 2014 |
|---|---|---|
| 28 | Oklahoma | 73.0% |
| 29 | Arizona | 73.5 |
| 30 | Ohio | 74.9 |
| 31 | Minnesota | 76.1 |
| 32 | Arkansas | 78.1 |
| 33 | Missouri | 79.2 |
| 34 | Georgia | 79.4 |
| 35 | Texas | 79.9 |
| 36 | Wyoming | 80.0 |
| 37 | Utah | 80.2 |
| 38 | Florida | 81.8 |
| 39 | Iowa | 82.4 |
| 40 | Maine | 83.2 |
| 41 | Nebraska | 84.7 |
| 42 | Washington | 88.3 |
| 43 | New York | 88.7 |
| 44 | Idaho | 93.1 |
| 45 | Tennessee | 93.6 |
| 46 | Oregon | 95.9 |
| 47 | North Carolina | 96.0 |
| 48 | South Dakota | 100.0 |
| 48 | Wisconsin | 100.0 |

States with the best-funded pension liiabilities

And actually there is a comprehensive analysis of the fiscal solvency of all the states right here from George Mason University.

Here's the map:

Overall fiscal solvency by state

I notice that the deep blue states like California, Massachusetts, Illinois, Connecticut, New Jersey, etc. are just horrible states. No wonder everyone is fleeing them in droves. Socialism doesn't work. Eventually, the money runs out.

So, if you're thinking of moving to a new state, look at that. And if you don't want to move, then vote for governors like Scott Walker who will take on public sector unions – otherwise, you're headed for a big tax hike in the future, to pay for the big spending liberals of the past.

# Is it brave to quote the Bible to atheists who want to silence you?

**Wintery Knight** · 16 April 2016 · Archived copy · Original

C.S. Lewis has some words to live by for you

I was asked by a commenter whether my advice in a previous post was mistaken. I advised people not to make comments on issues under their real names, where the opposition is irrational and dangerous. I said that you should use an alias so that you can write frequently and effectively about controversial issues, without being subject to threats, intimidation, vandalism, violence, loss of employment etc. – common tactics of the unthinking mobs on the secular left.

So here is what I replied to him in a comment:

> I didn't advise people to be silent at all. Obviously, I have been blogging on this issue for the last 7 years – before it ever entered the radar of most Christians. So I haven't been silent. I have blogged debate summaries, secular arguments against same-sex marriage, horror stories about gay adoption and child abuse, peer-reviewed papers about the impact of no-mom or no-dad parenting, CDC health data about HIV and STIs, the impact of donor-conception on children, specific laws related to the gay agenda, and every specific case where Christian business owners were punished – in America and across the world.
>
> My alias has given me protection from the bad guys so that I could be FAR more productive and effective than the Bible-quoters who jump up in front of machine guns and call that feelings-driven irresponsibility "piety". When did being INEFFECTIVE become a Christian virtue? Seems to me that people who address the issues of the day by repeating Bible verses to people who don't accept the Bible aren't being effective. My goal is to reach more people with arguments they will actually change their minds. My blog post on a secular case against same sex marriage was linked by the Secular Outpost, a major atheist blog – THOSE are the people we need to be reaching. And so what if they were offended? Because of my alias, they couldn't get me.
>
> Christianity is about making a difference. It is not about being feeling holier-than-thou. It's about defending Christ's honor effectively and efficiently. It's about getting the job done.
>
> Here is what doesn't work: e-mailing Bible verses to the Human Rights Campaign along with the name of your employer and your home address. That will get you out of the game really fast. What does work is doing what Ryan T. Anderson is doing – getting a PhD and debating the issue with professors on college campuses. Or you could get a law degree and fight out the issue at the supreme court. But trying to spout Bible verses to people who don't believe the Bible who can then get you fired is not the answer – that doesn't work.
>
> Suppose we are playing baseball. Your team is down by 1 run and there is a runner on third and no outs. Suppose you go up to the plate and swing for the fences at the first three pitches that the pitcher throws – all of which were obvious unhittable. You get out and you hurt your team. I guess you could brag later about "I would never do anything other than try to hit a home run every time" and then claim that those who didn't were

> cowards. But that wouldn't change the fact that you would be out and you would have let your team down.
>
> Similarly, when you are on your own 20 yard line, down by 6 with 5 minutes left in the 4th quarter, you don't get out on the field and throw four hail mary passes and then turn the ball over on downs. Expecting Jesus to bail you out when you act recklessly doesn't work in any area of life.
>
> The best thing is to be intelligent. What should I study to help Jesus that will work? What job should I get to help Jesus that will work? How can I have an influence to help Jesus that will work? Doing what feels good and expecting a bailout is reckless and doesn't do anything to help Jesus. When you hand the other side your employer and your place of business and your home address, you are handing them things that they can use to hurt you. Why would you let them have something they can use to stop you from having an influence, when you can withhold that information and strike at them with impunity? These are not difficult things for a rational person to understand.

Frankly, I am at the point now where I view the spouting of Bible verses to dangerous, destructive people as a mental disorder, as much as I would view it as a mental disorder if someone decided to travel to North Korea and do street evangelism. I would urge all the Bible-quoting martyr wannabes to prove their bravery to me by doing that, if they think that the point of Christianity is to be feelings-led and reckless about the consequences of actions. Or maybe they can travel to Saudi Arabia and evangelize the people there. On the bible-quoting rule, to not do this is "cowardice". I think we are reaching the point where the sexual revolutionaries are just as dangerous as militant atheists in North Korea, or radical Islamists in Saudi Arabia.

Studying all of these issues the way I do and then writing about them costs me about 3-4 hours a night – and that's every day that I've been writing this blog. I have had 6.2 million hits in 7 years of writing. My goal is to influence people to make better decisions. And I think I've been able to be more effective at doing that when I don't hand my enemies personal information that they can use to neutralize my influence. Why would I make it easy for them to stop me from having an influence? No Christian should deny Christ when asked directly. But that doesn't mean that you should make it easy for them to destroy you.

# Ted Cruz's roommate at Princeton: Craig Mazin or David Panton?

**Wintery Knight** · 16 April 2016 · Archived copy · Original

David Panton and Ted Cruz do Princeton and Harvard conservative-style

My Dad asked me last night why Ted Cruz's roommate doesn't like him, and I couldn't understand who he was talking about, because I know that Cruz's roommate at Princeton and Harvard is a big success and a great friend of Ted Cruz.

A little research resolved the issue. Ted Cruz had a liberal artist / comedian roommate from Brooklyn, NY in his first year at Princeton, and then a black conservative roommate from Jamaica as a roommate for his remaining years at Princeton and then again at Harvard Law School.

Here is an article in the Jamaica Observer about the second roommate from 2015.

It says:

> AS Jamaica welcomes US President Barack Obama on his first visit to the island, former Jamaica Labour Party senator David Panton is backing Republican candidate Ted Cruz to become the next American president.
>
> Republican senator Cruz became the first US politician to announce his candidacy for the American presidency recently. Widely viewed as an ultra-conservative, he has the full support of his close friend, Panton — now chairman of his own PCH holdings, an investment company based in Atlanta, Georgia.
>
> Outside of politics, Obama, Cruz and Panton all share at least one thing in common — they worked for the prestigious and influential Harvard Law Review. Obama was the first black president of that institution, while Panton was the second, and Cruz was a primary editor.
>
> "I support Ted's candidacy not only because of our close friendship, but because I believe he has the bold, consistent, principled leadership that America needs. He is also the most brilliant person I know," Panton told the Jamaica Observer.
>
> Politically, Panton has donated more than US$150,000 to Cruz in various capacities — when he was running for the Senate, and to support his bid for the presidency.
>
> Panton, a former Rhodes Scholar and the first head of Generation 2000 (G2K), the group of young professionals affiliated with the JLP, believes that much of what the media has reported about Cruz is wrong.
>
> Cruz and Panton started their friendship decades ago, when they were roommates first at Princeton University

> in New Jersey (for four years) and then at Harvard University in Cambridge, Massachusetts (for one year).
>
> The two were also debate partners, and were named the number one team for the American Parliamentary Debate Association, with Cruz declared the number one speaker and Panton number two.
>
> At Princeton, both were involved in student politics. Panton first entered student politics at Belair School in Mandeville where he won election as president of the student council. He built upon that victory at Princeton, by winning election as the president of the Undergraduate Student Government. Meanwhile, Cruz was chairman of the Council of the Princeton University Community (CPUC), where we worked closely on undergraduate student affairs.
>
> Cruz was also elected president of the Cliosophic Society, a conservative political organisation at Princeton, and appointed Panton as his whip (deputy). Both worked closely on conservative politics on campus.
>
> As President Obama gets ready for his first visit, Cruz has visited Jamaica on several occasions — including as the guest speaker for a G2K event, where former Prime Minister Edward Seaga was present, and also spoke.
>
> Cruz also attended the wedding of Panton to current minister of youth, Lisa Hanna. Cruz is godfather to their son, Alexander, and he came to Jamaica to attend the christening. Panton was Cruz's best man at his wedding to Heidi Cruz.
>
> Cruz has also invested in Jamaica, and was a partner in the firm that Panton, Nigel Clarke, and Jeffrey Hall formed to invest in the Caribbean.
>
> "I speak with, and see Ted frequently as a close friend, but deliberately do not discuss his campaign strategy," Panton told the Business Observer.
>
> "As an active supporter of a SuperPac that supports him, I am not able to discuss campaign strategy with him.
>
> "Unlike the media portrayal of him as a firebrand, Ted is one of the kindest and most caring people I know. He cares deeply about other people and making a difference in their lives, as he did in mine, as a loyal friend, strong supporter, and committed mentor.
>
> "When I was elected as president of the Harvard Law Review, my first call was not to my parents or family members, but to Ted, who at the time was clerking for Judge Michael Luttig, prior to his clerkship on the Supreme Court, as the first Hispanic clerk to Chief Justice William Rehnquist," Panton said.
>
> Although the first out of the blocks, Cruz currently has an approval rating of only about two per cent among the presumed Republican candidates. But that in itself may not overly concern him, as when Cruz ran for senator in Texas, he was also at two per cent in the polls — and joked that the margin of error was three per cent.
>
> Cruz ran against the establishment, his opponent being David Dewhurst — the multi-millionaire incumbent lieutenant governor of Texas, who was endorsed by the governor, Rick Perry, and most of the Republican establishment in Texas.
>
> But, like Obama, Cruz ran a grassroots campaign that focused on the base, and, even though he was heavily outspent, he defeated Dewhurst in a run-off by 14 points and won the general election by 26 points.
>
> During that election he received about 40 per cent of the Latino vote on the same ballot where Latinos gave then-candidate Mitt Romney 27 per cent of their vote.
>
> "I believe that — like when the voters of Texas got to know Ted, the person, not the caricature — the American people will also eventually recognise that as a Hispanic with a Cuban father who fled oppression, and as a principled, experienced, eloquent advocate for the Constitution, he has the background, skills, and abilities to be an outstanding president of the United States," Panton said.

So, who is the roommate we should care about? The Hollywood liberal who tweets vulgarities at a third-grade level against a sitting U.S. senator and candidate for President? Or should we care more about the close friendship of the black conservative from Jamaica, who has a stellar education and career in areas that *actually matter*.

Hollywood is a clown industry. People dress up in costumes, and recite make-believe in order to entertain. We should not care what a little liberal perverted clown from Hollywood thinks of Ted Cruz. But we should care about what a black conservative immigrant who achieved great success thinks of Ted Cruz.

# Organized Cruz wins 14 delegates in Wyoming, delegate rules in place since 2004

**Wintery Knight** · 17 April 2016 · Archived copy · Original

Donald Trump with some of the "very best people" who are running his campaign

Trump's "very good brain" fails him again. So frustrating when tweeting abuse doesn't substitute for a ground game in all 50 states.

The leftist Washington Post explains:

> Sen. Ted Cruz (R-Tex.) continued his romp through the Republican Party's state conventions Saturday, winning 14 delegates in Wyoming to complete a near-sweep of the state. At the same time, in conventions in Virginia, Georgia and South Carolina, Cruz-friendly activists won delegate slots in congressional districts that had voted for someone else in the primaries.
>
> The events capped off three remarkable weeks for Cruz in the sort of cloistered party meetings where grass-roots organizers can dominate. Cruz, the only Republican candidate to campaign in Wyoming, told delegates here that their votes could help him win "a battle in Cleveland," where the party may host its first contested convention in 40 years.
>
> "If you don't want the convention in Cleveland to hand the election to Hillary Clinton — which is what a Donald Trump nomination does — I ask you to support this slate," Cruz said.
>
> These conventions came after Trump had spent much of the week panning Colorado for using a similar system to award 34 total delegates. As in Wyoming, activists had gathered at little-hyped local conventions, won places at the state convention, then voted for the national delegates — all while giving Cruz nine of the Wyoming delegates available in the March 1 county caucuses.
>
> **The GOP front-runner complained that the contest had been "rigged" against him, a charge that Colorado Republican leaders strongly denied, noting that they'd been using the same system since the 2004 presidential election.**
>
> **[…]In Wyoming, Trump's local operation was clearly outmatched, even though a number of attendees said they supported him.**

> **[…]Trump's campaign was late to recognize the importance of the state conventions, much less the local contests that determined who could vote at those state conventions. In Wyoming, that effectively meant that Trump's supporters were arriving at a marathon where Cruz had already run the first 25 miles.**

Trump doesn't think that TWELVE YEARS of no rule changes is enough time for him to understand how things work. His "very good brain" cannot understand state-specific rules, and he isn't allowing his "very best people" to make any decisions. Cruz's campaign has been on the ground in Wyoming *for months*. Trump cannot even find Wyoming on a map of the United States. And since he insists on controlling everything himself, rather than hiring people who know about these things, and letting them work on it, he keeps losing. He's too full of himself to delegate to experts who aren't clowns.

**Polling Data**

| Poll | Date | Clinton (D) | Trump (R) | Spread |
|---|---|---|---|---|
| RCP Average | 3/16 - 4/13 | 49.0 | 39.1 | Clinton +9.9 |
| FOX News | 4/11 - 4/13 | 48 | 41 | Clinton +7 |
| CBS News | 4/8 - 4/12 | 50 | 40 | Clinton +10 |
| McClatchy | 3/29 - 3/31 | 50 | 41 | Clinton +9 |
| IBD/TIPP | 3/28 - 4/2 | 47 | 35 | Clinton +12 |
| PPP (D) | 3/24 - 3/26 | 48 | 41 | Clinton +7 |
| Bloomberg | 3/19 - 3/22 | 54 | 36 | Clinton +18 |
| Quinnipiac | 3/16 - 3/21 | 46 | 40 | Clinton +6 |

Trump vs Clinton: General election match-up polls

How is he supposed to beat Hillary Clinton when all he can do is clown around in front of crowds of people who are more impressed with his charisma than detailed policy proposals? If you're hiring someone for a job, they have to do more than entertain you with talk. They have to know the rules in the different states, and be organized enough to win them. Trump HAS no organization , and that's another reason to think that he can't win against Hillary, as if his 70% disapproval rate and 11-point deficit in the head-to-head polls against Clinton were not enough of an indicator.

I do expect Trump to do well in the near-term in Democrat states, and that's because he is a Democrat, and Democrats vote for him. They are supportive of his "very pro-choice" views, his promises of "forward motion" on gay rights, his support for tariffs, and his intent to appoint liberal judges like his sister.

# Who suffers the most from the trend of extended adolescence?

**Wintery Knight** · 17 April 2016 · Archived copy · Original

Marriage and family

My friend Tracy sent me this interesting post. As I read it, I thought I was going to disagree with him about who is to blame for the mess he describes, but as we'll see in a bit, I don't.

Here's his intro, which pretty much everyone agrees on:

> **The Five Traditional Milestones of Adulthood**
>
> Something magically happens between adolescence and young adulthood. There are five traditional milestones of that mark entrance into adulthood that sociologists, psychologists, and the general population have used as a proxy to determine when someone has reached that tipping point of maturity. It is at this time adolescence is shed and emotional maturity comes to full fruition.
>
> These are:
>
> - Leaving Home
> - Becoming Financially Independent
> - Completing School
> - Marrying
> - Starting a Family

I hate not being married and not having any children, but I can't marry a feminist and that's all the church seems to be producing these days. The other ones I had finished by age 23 (debt-free).

He has some examples to illustrate who is and isn't mature:

> ***Examples of Adults:***
>
> - A 25-year old teacher with a college degree, who works full time, is married, has a child, owns her own home, and pays for her own living expenses
> - A 65-year old janitor with a high school diploma, who works full time, is married or widowed, has children, owns his own home, and pays for his own living expenses

> ***Examples of Extended Adolescence:***
>
> - A 30-year old who has part of their rent and bills covered by parents, endlessly enrolls in colleges or universities seeking additional degrees or credentials, single, without children.
> - A 45-year old high-school dropout living on social welfare programs who spends his days getting drunk in bars

OK, then he talks about who suffers the most from this, and it's women:

> What is particularly interesting is the interaction between biology and the paradigm shift that has occurred with so much of the younger generation suffering from extended adolescence. **Women have a specific, limited window of time in which they can genetically reproduce and to which they are attractive to potential mates**. This so-called "biological clock", written into the code at the very deepest core of our DNA, puts a limit on childbearing for females.
>
> - **Fertility:** Female fertility peaks at 20 to 30 years old. After 30 years old, fertility drops by 20%. After 35, it drops 50%. After 40, it drops 95%. As for in vitro fertilization, the American Society for Reproductive Medicine states that women in their early 40's have, on average, only a 3% to 5% chance of having a baby through this method.
> - **Down Syndrome:** At 25, a woman has about 1 chance in 1,250 of having a baby with Down Syndrome; at age 30, a 1-in-1,000 chance; at age 35, a 1-in-400 chance; at age 40, a 1-in-100 chance; and at 45, a 1-in-30- chance.
> - **Miscarriage:** Only 9 percent of recognized pregnancies for women aged 20 to 24 end in miscarriage; 15 percent of women aged 25-30 miscarry; 40 percent of women over 40 do and more than 50 percent miscarry at 42 years of age.
>
> These limitations do not apply to men (an 80 year old man can still reproduce). Men have virtually no opportunity cost to waiting to find a mate. If they want to spend their twenties working their way up their field, putting money in the bank, playing video games, and hanging out with friends, they can always wake up one morning and decide they are ready to settle down, get married, and have kids. As such, the biological cost of extended adolescence is significantly and substantially higher for women than it is for men. Females suffer from a Mother Nature-induced "use it or lose it" policy.

I don't think that a Down syndrome child is insurmountable, but it's more challenging.

So, should men be expected to ride to the rescue at the last minute, to make things "work out" for women who refused to marry when they were in their 20s, when they were fertile and attractive?

Nope:

> This fear was encapsulated by Kay Hymowitz in a book called Manning Up: How the Rise of Women Has Turned Men Into Boys.
>
> […]As one reviewer somewhat critically noted of the book, "Hymowitz wants the child-men [those suffering from extended adolescence] to man up so that women don't have to become spinsters or "choice mothers" at the expense of their careers. Might women alter their own behavior? "[T]he economic and cultural changes are too embedded, and, for women especially, too beneficial to reverse." So the answer is no. Although it is women who are becoming disenchanted with the way things are, and although it is women who have created this situation, it is [in her opinion] men who ought to change. And they are to change precisely when women are ready."
>
> The reviewer is correct because *men **are** acting rationally within the confines the new paradigm.* In today's

> world, men are presented no social, financial, emotional, or reproductive advantage by adjusting their own life to the ticking of a potential mate's biological clock. It is for the woman, to borrow a phrase, "too damn bad". It may not be fair, but in a finite world, there is an opportunity cost to every decision we make. That has always been one of the central themes of this blog. Incentive systems drive nearly everything in civilization from the type of people we attract into certain industries to the kind of behavior we reward. The incentive system for men has changed and society now reflects this reality.

I actually blame the pastors and parents for this. Pastors and parents don't challenge women's feelings with the truth about what she ought to be doing in order to grow up and be well-positioned in the future. They want to let women decide what to do at every point in their lives, based on their feelings in the moment. The refusal to make judgments leads to women having delusions like "I can have children when I'm 35" and "I can change a bad man into a good man after I marry him" and "a degree in English is as worthwhile as a degree in computer science".

Feminism has a lot to do with it. Women used to be taught by pastors and parents that they should choose chaste men with good jobs, work histories and savings. But feminism says that men don't have any special provider role, and now the main things that women look for in a man is that he is attractive, fun, and lets her do whatever she feels like doing – no matter how crazy and irrational it is.

One woman recently told me that a friend of ours who is dating a penniless 28-year-old student who has never worked a day in his life need not worry, because "if they marry, he'll drop out of school and start to work and provide for her". She is 33, and she thinks that marrying a full-time student is a good idea, because he enthusiastically supports her crazy plans to pursue fun, thrills and travel into her mid-30s. She tells him that God is telling her (through her feelings) to pursue fun and thrills through travel – a position she held when she still an atheist in college, mind you. And he, in response, is both unwilling to, and incapable of, questioning her plan from a practical point of view. She likes that he lets her fly the plane, even it it means she'll crash it and kill them both.

Pastors and parents don't dare hurt the self-esteem of sensitive little girls by telling them to study hard things, get full-time jobs, move out of the house and focus on marrying a man who can provide during their 20s. And what happens when the "fun-thrills-travel until you're 35" plan explodes and no one wants to marry her except losers? Well, then, all pastors and parents blame men for not wanting to marry her. But men don't marry 35-year-old women when the value proposition of marriage has been greatly diminished by age and infertility. (Or worse: by promiscuity, cohabitation, divorce, and children from other men)

Women who think that they can play the fool through their 20s and early 30s, calling their feelings the voice of God, and being affirmed by parents and pastors in their crazy views, are in for a surprise. Men have needs and feelings too. Men respond to incentives. Marriage-minded women need to actively repudiate feminism, or they must live with the consequences of their failure to engage.

# Mississippi Republican governor signs ban on dismemberment abortions

**Wintery Knight** · 18 April 2016 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve this law

Great news from Life News about another pro-life measure signed into law by a Republican governor.

Excerpt:

> Mississippi is the latest state to approve legislation that would ban dismemberment abortions tearing unborn babies limb from limb. Today, pro-life Governor Phil Bryant signed the bill into law.
>
> House Bill 519 authored by Rep. Sam Mims, R-McComb had overwhelming support in the legislature passing the House on a vote of 85-32 and in the Senate 40-6.
>
> Dismemberment abortion, performed on a fully-formed, living unborn baby, is a barbaric and dangerous procedure in which the unborn child is literally ripped apart in the womb and pulled out in pieces. The law embodies model legislation from the National Right to Life Committee that would ban "dismemberment abortion," using forceps, clamps, scissors or similar instruments on a living unborn baby to remove him or her from the womb in pieces. Such instruments are used in dilation and evacuation procedures.
>
> […]"Dismemberment abortion kills a baby by tearing her apart limb from limb," said National Right to Life Director of State Legislation Mary Spaulding Balch, J.D. "Before the first trimester ends, the unborn child has a beating heart, brain waves, and every organ system in place. Dismemberment abortions occur after the baby has reached these milestones."
>
> […]"When abortion textbooks describe in cold, explicit detail exactly how to kill a human being by ripping off arms and legs piece by piece, civilized members of society have no choice but to stand up and demand a change," added Spaulding Balch. "When you think it can't be uglier, the abortion industry continues to shock with violent methods of abortion."

I read a couple of mainstream news articles (e.g. – ABC News) about this story, and they basically read like they were written by Planned Parenthood. Everything about the woman, and nothing about the unborn baby. So, I always end up linking to Life News instead of the mainstream media, at least there, they talk about the issue considering the unborn child and the mother.

I don't think that it's normal or natural to be tearing unborn humans up with instruments because we don't want responsibility for our actions. If you consent the the actions that result in conception, you have to take responsibility for what you've done. You can't commit murder in order to get out of it. You have to think of that unborn person above yourself. Our laws should protect that unborn person, and Mississippi did the right thing.

# Which presidential candidate will simplify the tax code and create jobs?

**Wintery Knight** · 18 April 2016 · Archived copy · Original

How can we make the complicated tax code simpler?

Steve Forbes explains what would work, in Forbes magazine.

He writes:

> NEXT TO THE UNSTABLE DOLLAR, the biggest deadweight today on the American economy is the horrific federal income tax code. It is past time we junked this incomprehensible, opportunity-killing and corrupting monstrosity and replaced it with a simple flat tax. The returns we, the people, must file by today (even if you file for an extension, you have to pay what you owe Uncle Sam by this date) should be the last time we have to suffer through this ordeal.
>
> **More than 40 countries and jurisdictions (such as Hong Kong) have variations of a flat tax, and those systems have worked well.**
>
> For those unfamiliar with the concept, a flat tax is a single-rate income tax system that has few or no deductions. You could literally fill out your return on a single sheet of paper or with a few keystrokes on your computer.
>
> The most basic and profound argument for a flat tax is moral.
>
> The IRS estimates we spend 6 billion hours a year filling out tax forms. Experts calculate we spend over $200 billion a year complying with the income tax code.

The nice thing about the flat tax is that you can already see what happens in countries that have adopted it, by looking at the change in GDP growth in the years before the flat tax was adopted compared to the years after the flat tax was adopted.

Here's a comparison of 3 countries that adopted flat tax rates at different times:

Forget the rhetoric: what happens to GDP growth after enacting a flat tax policy?
(Source)

As you can see, when people waste less time filling in their taxes, they have more time for productive activities. And don't let anyone fool you: a productive economy creates more jobs, and builds the resumes of the workers so that they can be resilient to layoffs and other challenges to their peace of mind and security.

So which candidate is going to give us a flat tax, and the economic growth that goes with it?

Ted and Heidi Cruz have a plan to simplify the tax code
The centrist Forbes magazine summarizes Cruz's flat tax plan:

> Ted Cruz claims that his tax plan would supercharge economic growth, boosting GDP by as much as 5% a year for a decade or more. That's, umm, an ambitious goal to be sure. However, there is actually good reason to believe that he's right. As long as we're careful about how we define GDP growth and also as long as we consider all the ways in which his plan will change the economy. This does mean being a little perverse in our assumptions: but also correct in our assumptions.

> The basics of the plan are that income taxes will be cut for all. Also, that pretty much all business taxation will be replaced with a 16% flat tax. It is claimed (and Cruz has Art Laffer there claiming it with him) that such a relief from the burdens of taxation will produce an explosion of economic growth. This is not, I feel, entirely believable to put it mildly. While there may well be specific bottlenecks in the taxation system the total take, at 35 to 36% of GDP, isn't large enough for it to be causing a general lack of economic growth. Not in my opinion at least and in the opinion of vanishingly few economists too.

Conservative economist Stephen Moore says this about the Cruz plan in The American Spectator:

> Senator Ted Cruz has a flat tax plan borrowed from a blueprint in a book by Arthur Laffer and me called, *Return to Prosperity*.
>
> […]Conservatives should be excited about the Cruz flat tax. It's what tax filers have been waiting decades for:
>
> First, the Cruz plan would give America the lowest tax rates since the income tax was devised 100 years ago. For this reason, these plan are estimated by the Tax Foundation to grow the economy by a gigantic $2 trillion extra GDP per year after 10 years. That's exactly the opposite effect of the Hillary and Bernie show plans.
>
> Second, Cruz's plan eliminates almost all deductions and credits — which is how they get the rate so low. The IRS could be dramatically shrunk in size. Don't forget, when there are fewer deductions, there are fewer ways to cheat on your taxes. The lower the tax rate, the less incentive to cheat, which means greater voluntary compliance.
>
> Third, because the Cruz plan is "border adjustable," imports are taxed at the flat rate when they are brought into the U.S., but American products sold abroad are not taxed at all. This would level the global playing field for American manufacturers, tech firms, and drug companies and bring these jobs scampering back to the U.S. Blue collar union workers should love this.
>
> […]Some conservatives complain that the tax is *too* efficient and so it will raise too much money.

Moore works for the Heritage Foundation, the number one conservative think tank, which features conservative policy on social, fiscal and foreign policy issues. My favorite think tank.

And famous economist Art Laffer says this: (H/T Dad)

Art Laffer is a speaker for the American Enterprise Institute, which is a champion of the free enterprise system.

Forbes, Moore and Laffer are my three favorite authorities on tax policy and economic growth.

If you are nervous about the economy, you need to vote for Ted Cruz and get this plan enacted. Imagine not having to worry about losing your job, losing work hours, and so on. I would like to get in on a stock market boom so that I can pay off my mortgage faster. If you all join me in voting for Ted Cruz, we can all stop worrying about money for the next 10 years. But we need people to get behind economic policies that work. Steve Forbes, Stephen Moore and Art Laffer are experts in tax policy. We need to listen to the experts, and we need to do what has been proven to work, not what sounds good.

Ted Cruz discussing the plan on CNBC:

This is the United States of America – we are not some third world country that elects a charismatic socialist dictator who attacks job-creating businesses. Our country is founded on limited government, federalism, and low taxes. We need to vote for economic growth and free enterprise. If people want to punish the rich, they should move to Cuba, Venezuela, Argentina and North Korea, and get their income inequality there.

# Biomimetics again: scientists reverse engineer the design of snake scales

**Wintery Knight** · 18 April 2016 · Archived copy · Original

Christianity and the progress of science

Today, I have an example of biomimetics.

But first, here's what that is:

> Biomimetic refers to human-made processes, substances, devices, or systems that imitate nature. The art and science of designing and building biomimetic apparatus is called biomimetics, and is of special interest to researchers in nanotechnology, robotics, artificial intelligence (AI), the medical industry, and the military.

This is from Science Daily. (H/T Fuz Rana)

It says:

> A snake moves without legs by the scales on its belly gripping the ground. It generates friction at the points needed to move forwards only and prevents its scales from being worn off by too much friction. Researchers of KIT have found a way to transfer this feature to components of movable systems. In this way, durability of hip prostheses, computer hard disks or smartphones might be enhanced.
>
> "Friction and wear are two of the biggest challenges in systems of several individual components," Christian Greiner of the Institute for Applied Materials says. A solution is found in nature: Snakes, such as the ball python, or lizards, such as the sandfish skink, use friction to move forwards, but can reduce it to a minimum thanks to their scales. Together with Michael Schäfer, Greiner developed a process to transfer the scale structure of reptiles to components of electromechanical systems: With a fiber laser, they milled scales into a steel bolt of 8 mm in diameter.
>
> With the help of two different structures, the materials researchers tested whether the distance of the scales influences friction behavior. In the first structure, the scales overlap and are located very closely to each other, such as the scales on the belly of a ball python. The second structure consists of scales arranged in vertical rows at a larger distance, such as the skin of a sandfish skink. "The distance between the rows in our experiment was the smallest possible distance we could produce with the laser. The structure, hence, does not entirely

> correspond to that of the sandfish skink," Greiner says. In the future, however, the researchers plan to produce structures that are closer to the original in nature.
>
> […]To find out whether scales reduce friction, Greiner and Schäfer fixed the structured surface of the bolts to a rotating plate. The experiments were carried out without and with a lubricant (1 ml of mineral oil). For the experiments with oil as lubricant, the scientists used steel disks. Under dry sliding conditions, sapphire disks were applied. The disk diameter was 50 mm.
>
> Experiments under lubricated conditions revealed that both narrow and wide arrangements of the scales increase friction compared to the unstructured bolt: By the wide scales, friction is increased by a factor of 1.6. The narrow scales increase friction by a factor of 3. In the non-lubricated state, the wide scale structure reduced friction by more than 40 percent, while friction was reduced by 22 percent in case of a narrow scale structure.
>
> The finding that the narrow scale structure increases friction under both lubricated and non-lubricated conditions had not been expected by the researchers: "We assumed that the narrow structure is more effective, as it is closer to nature," Greiner says.

See the related posts for more examples of humans learning from the engineering designs in nature.

# Ted Cruz's position on gay marriage will work in the general election

**Wintery Knight** · 19 April 2016 · Archived copy · Original

Ted Cruz meets voters at a campaign event

Some of you may be worried that Cruz is "too conservative" to win the general election, because he is indeed very conservative. One area where this is a concern is on the gay-marriage issue.

Is Cruz's position on the same-sex marriage issue "too conservative" for the general election.

Take a look at how he answers this question:

Transcript:

> "I am a constitutionalist and under the Constitution, marriage is a question for the states. That has been the case from the very beginning of this country- that it's been up to the states. And so if someone wants to change the marriage laws, I don't think it should be five unelected lawyers down in Washington dictating that. And even if you happen to agree with that particular decision, why would you want to hand over every important public policy issue to five unelected lawyers who aren't accountable to you, who don't work for you— instead if you want to change the marriage laws, convince your fellow citizens to change the laws. And by the way, it may end up that–we've got 50 states– that the laws in one state may be different than another state and we would expect that. We would expect the people of New York to adopt different laws than perhaps the people of Texas or California and that's the great thing about a big, diverse country is that we can have different laws that respect different values."

Part of me is so angry at losing the culture wars that I long for the President to push back against the leftists like a lawless dictator. Of course, that wouldn't be Constitutional. And Ted Cruz is a Constitutional conservative. That means that he will appoint judges to the Supreme Court who do not make law from the bench, but he'll leave decisions about controversial issues like the definition of marriage at the state level. That's not as far as I would go,

but it is Constitutional.

Besides, I could never get elected with my crazy top-down pro-marriage view. My conservative dictator view won't fly in a general election, but Cruz's Constitutional view will. If he wins and picks justices to reverse Obergefell, then people in red states will pass legislature that they want, people in blue states will pass what they want, and people who don't want to be bullied by gay activists for disagreeing with redefining marriage will move to red states.

I'm sure I will be able to find a nice red state to live in that has the correct definition of marriage. I'm looking forward to a Cruz victory and no more threats to my religious liberty from the federal government.

# Does God have a soul mate picked out for you to marry?

**Wintery Knight** · 19 April 2016 · Archived copy · Original

Does God tell you through your feelings who you should marry?
OK, let's start this post with a hilarious satire from the Babylon Bee.

It says:

> Stressing the precariousness of the situation, inside sources confirmed Monday that a gridlock has been reached in the social lives of David Gall, 23, and Mark Cormier, 26, as both men are absolutely, 100% certain that God has personally instructed them to date local 22-year-old Stephanie Fair.
>
> "I sought God's will and He told me to date Stephanie," Gall confidently declared to sources. "I know He did—there's not a doubt in my mind."
>
> "God definitely told me to date Stephanie," Cormier similarly asserted. "The signs He gave me were crystal-clear. What am I supposed to do, disobey God?"
>
> Three discussion attempts between the two men have reportedly made no headway and have simply reinforced each man's belief that the other lacks godliness and is possibly being influenced by demonic forces.
>
> At publishing time, a fourth discussion was underway, and while neither man was open to the slightest possibility that perhaps God did not tell them to date Miss Fair, they seemed to be making a bit of progress as they collectively considered reexamining the Bible's teachings on polygamy.

With that said, let's look at this article from the leftist Huffington Post, of all places, which talks about what's behind this soul-mate view of marriage.

Excerpt:

> As millennial women, we were groomed for a white knight fantasy. From childhood favorites such as *Snow White* to adult rom-com staples such as *How to Lose a Guy in Ten Days* or *Sleepless in Seattle*, the media perpetuates a romantic storyline in which compatibility and lasting romance is something effortless, built on chance, sustained by good looks, fun dates and electric sexual chemistry. These story lines shape our expectations for romantic happiness. It is not enough to find someone with whom we are mostly compatible,

> who would make a good parent, with whom we could learn and grow wrinkly; now, we expect a perfect fit and an easy, instantaneous "connection." In short, we want a soul mate. But it is this desire for a soul mate that is actually the undoing of our happy ending.
>
> A "soul mate" is defined as one who is ideally suited to us, perfectly completes us, one with whom the relationship feels easy and natural. With them, a relationship is just "meant to be"…

Wow. That doesn't sound like a good approach to me. Soul mate people want relationships to be free and easy. They never have to grow up, or give up anything. It's just a transparent attempt to get out of the real work of self-sacrificial love. But real relationships involve responsibilities, expectations and obligations.

Does the "soul mate" approach work?

> We heard that those who get married later and possess a college degree have fewer divorces and more stable marriages. So we spend our twenties trying to find ourselves through travel, accumulating degrees and building a career. Marriage will be the capstone of our achievements, and nothing less than tying the knot with a soul mate will suffice. **But the tragic irony is that soul mate thinking makes us increasingly likely to divorce. A study of 1,400 married men and women shows that people who hold soul mate orientations are 150% more likely to end up divorced than those who do not.**
>
> **The widespread cultural belief in "soul mate ideology" undermines our chances at happiness because it makes us passive receivers of idyllic romantic expectations. Further, it fosters self-centeredness; one rarely longs to be a soul mate for someone *else*, which would require effort. For this reason, believing in soul mates is one of the most dis-empowering belief systems we can adopt. As millennials, we pride ourselves on actively pursuing the life we want to live, rather than simply accepting whatever hand we are dealt. We are innovative, passionate, proactive and not afraid to take risks. Yet, there is a disconnect when it comes to our desire for lasting love. Though there are prospects around us, we forgo taking the concrete steps needed to build happy compatible relationships because we do not "feel a spark." We are passively waiting on the sidelines for love to "happen," and then wonder why it is so difficult.**

I've always felt that the soul mate approach was the exact opposite to my noble plan-based approach. The soul-mate view won't let you have a plan at all. And no one has any work to do as part of the plan.

Their solution is for people to work at compatibility:

> Compatibility is something co-created through intentionality and conscious choice. It involves mutual sacrifice, effort and commitment for the sake of the other's benefit. A recent study found that of the couples who demonstrate above average daily generosity, 50% of them report being "very happy" in marriage; among the low generosity scores, only 14% can say the same. As studies indicate, selflessness is required to create mutual compatibility. It is not instantaneous, nor does it usually begin with true love's kiss.
>
> We both know from experience that there are some you naturally connect with and others you do not. This is not a call towards forced attraction or companionship. But, our romantic futures should not be placed in the hands of blind chance. It is time we roll up our sleeves and shift our expectations from unattainable perfection to realistic romance, one that accounts for imperfection. We must understand that work in a relationship is a necessary key to success, rather than an indication of imminent failure. We will be letting go of a tired plot line that sets us up for disappointment and embracing an active role in our own unique story.
>
> How refreshing to know that we do not have to be perfect to be lovable, and that our romantic success is not solely dependent on finding the "right" fit, but instead built through cultivating daily moments of generosity, sacrifice and conscious coupling.

I don’t think there is such a thing as a relationship that proceeds by magic, rather than by the hard work of the two people involved.

# Stefan Molyneux: “why I was wrong about atheists”

**Wintery Knight** · 19 April 2016 · Archived copy · Original

A long, lonely journey through the night

This guy has one of the sharpest channels on YouTube, very un-PC. I don’t agree with him on everything, but he is outrageously popular.

Watch: (20 minutes) (H/T William)

This might be a very useful thing to show to pastors who favor socialist policies and big government redistribution. He actually says that the conservative policies that conservatives embrace *attracted him to theism.* I just think that is so hilarious… because all the pastors seem to want to embrace left-wing causes. Especially things like global warming, illegal immigration, redistribution of wealth, single payer health care, etc. Well, the kinds of atheists we like – the ones who believe in liberty, prosperity, security – don’t hold our small government politics against us.

No Christian presents their views through government – that’s why we are all crazy about apologetics. We love apologetics as much as secular leftists love big government. At least apologetics is non-coercive he says. But when atheists enforce their view through big government, backed by prisons and guns, that is coercive. His arguments about demographics, and being willing to marry, have kids for the good of society are terrific to illustrate the value of *self-sacrifice* within the Christian worldview. Far from being a liability, devotion to small government, low taxes and individual liberty is actually an asset when evangelizing. Just as pious pastors are all rushing to join the open borders, global warming, single-payer health care, radical feminism team, we find out that principled atheists are uncomfortable with many of those things. Maybe we should take note of that, instead of just blindly following the crowd.

Have a look at this video, and put THIS apologetic argument into your quiver. There is much, much more to evangelism and apologetics than what you read in books on apologetics. And this is why I work so hard to connect the Christian worldview to every other area of knowledge. You don’t always have to talk about old, boring William Lane Craig style apologetics with atheists. Sometimes, you can just talk to them about tax policy and free speech. Why not? Atheists are sometimes complicated people.

# How can a successful writer who “is true to himself” end up poor?

**Wintery Knight** · 20 April 2016 · Archived copy · Original

My friend Lindsay sent me this article about a very successful writer who has trouble making ends meet.

The story appeared in left-leaning The Atlantic. I don’t want to rehash the whole thing, because I want to make a point.

So, first thing to quote, this guy looks like a success to others, even though he is actually really struggling:

> The Fed asked respondents how they would pay for a $400 emergency. The answer: 47 percent of respondents said that either they would cover the expense by borrowing or selling something, or they would not be able to come up with the $400 at all. Four hundred dollars! Who knew?
>
> Well, *I* knew. I knew because I am in that 47 percent.
>
> […]You wouldn’t know any of that to look at me. I like to think I appear reasonably prosperous. Nor would you know it to look at my résumé. I have had a passably good career as a writer—five books, hundreds of articles published, a number of awards and fellowships, and a small (very small) but respectable reputation. You wouldn’t even know it to look at my tax return. I am nowhere near rich, but I have typically made a solid middle- or even, at times, upper-middle-class income, which is about all a writer can expect, even a writer who also teaches and lectures and writes television scripts, as I do.

The thing I like about this guy is that he doesn’t blame anyone else but himself – he thinks that his own decisions led him to poverty. Rod Dreher has a nice list of the mistakes at American Conservative:

> **1) He chose to live in New York, which is one of the most expensive places to live in the country;**
> **2) He chose to be a writer, not the most lucrative and stable career;**
> 3) He and his wife chose to put their kids in private school, something they felt was necessary in their Brooklyn neighborhood, but an expense they could have avoided or dramatically lessened had they lived in another part of the country (they eventually moved to the Hamptons to get out of paying that tuition);
> 4) He and his wife believed their two children had “earned” the right to go to very expensive universities, and they spent everything they had, and the inheritance his parents planned to leave for him, on educating the girls;
> 5) They got caught in the housing crash and had to sell a Manhattan apartment they owned at fire sale prices;
> 6) Given the way his income as a writer is structured, taxes were a bitch (as a writer, trust me, this is true).

Pay close attention to 1 and 2. I would NEVER live in a garbage blue state like New York. I would rather be dead in a ditch than live in a state that is run by Democrats. I hate the high taxes and high spending of blue states. Blue states are great places to go if you want to work and have someone else steal all of your money to buy votes from lazy losers. I’m actually planning a move to a red state right now, and believe me, low taxes and low cost of live are high on my list of requirements. Oklahoma and Tennessee, I’m looking at you two, especially.

And as far as 2 goes, I don’t think that I need to repeat my warnings to everyone about non-STEM fields.

Well, OK, I will:

**Majors by Salary Potential – Full List**

| RANK | MAJOR | STARTING SALARY | MID-CAREER SALARY |
|---|---|---|---|
| 1 | Petroleum Engineering | $98,000 | $163,000 |
| 2 | Aerospace Engineering | $62,500 | $118,000 |
| 3 | Actuarial Mathematics | $56,100 | $112,000 |
| 4 | Chemical Engineering | $67,500 | $111,000 |
| 5 | Nuclear Engineering | $66,800 | $107,000 |
| 6 | Electrical Engineering (EE) | $63,400 | $106,000 |
| 7 | Computer Engineering (CE) | $62,700 | $105,000 |
| 8 | Applied Mathematics | $50,800 | $102,000 |
| 9 | Computer Science (CS) | $58,400 | $100,000 |
| 10 | Statistics | $49,300 | $99,500 |
| 11 | Physics | $51,200 | $99,100 |

Starting and Mid-Career salaries by profession (click for larger image)

Regarding the housing crash that he mentioned, Democrats caused that, by forcing banks to loan money to people who couldn't afford to pay it back. If he voted for the Democrats, then he screwed himself again.

Now, you might think that people end up poor because they want to do work that is fun and enjoyable. And that's true, I've seen that. But this guy's problem was that he just spent beyond his means. Why? Well, the writer explains that he *is compelled* to spend the money, because spending money defines who he is. He can't say no, because he thinks that he has one life, and one chance to define himself. He can't think about the future, because he has to spend every last dime today in order to be who he really wants to be.

Dreher comments:

> He felt that to choose otherwise would have made him inauthentic, untrue to himself. He felt that he deserved the life he had, and could not choose otherwise without betraying himself. I think this must be an extraordinary thing, in terms of history: people who spend recklessly to give themselves the lives they think they deserve. If you think about it, though, our culture, which valorizes Authenticity, encourages this.

I have to tell you, I just don't understand this. I define myself by Christian virtues – self-control, self-sacrifice, concern for others who I know personally and in my community. I'm not a spender. I am a saver by nature, and the older I get, the more grateful that I am closer to retirement than I was before. Working gets harder as you get older, even for jobs that don't require physical labor.

If you plan ahead, you can get all your working and saving done before you're 50. That was my approach. But I see other people who haven't started working full-time by 30 and even by 35. Every day when you are in school instead of working full-time in your field is a wasted day. With few exceptions, you will learn more on the job than in the classroom. You want get out of school and get working as soon as possible, with an eye to getting married as soon as possible – since marriage is a wealth building engine. The faster you start investing, the more time your money has to grow through interest and dividends.

The bottom line is that my obligation as a Christian is not to be true to myself, or anything weird like that. My obligation is to make sure I don't starve, and then to turn to the people around me and make sure that they don't starve. Sometimes, that means giving them good advice. Sometimes, it means recognizing their achievements with little gifts. But the main thing is that the world isn't safe enough for you to put off earning so that you can do what

you feel is the “real you”. Being independent and then serving others is more important than being the “real you”.

# New $15 minimum wage causing apparel companies to outsource manufacturing

**Wintery Knight** · 20 April 2016 · Archived copy · Original

Young people usually only get one side of every issue – because we don't tell them the other side

This story is from the radically leftist Los Angeles Times, of all places.

They write:

> Los Angeles was once the epicenter of apparel manufacturing, attracting buyers from across the world to its clothing factories, sample rooms and design studios.
>
> But over the years, cheap overseas labor lured many apparel makers to outsource to foreign competitors in far-flung places such as China and Vietnam.
>
> Now, Los Angeles firms are facing another big hurdle — California's minimum wage hitting $15 an hour by 2022 — which could spur more garment makers to exit the state.
>
> Last week American Apparel, the biggest clothing maker in Los Angeles, said it might outsource the making of some garments to another manufacturer in the U.S., and wiped out about 500 local jobs. The company still employs about 4,000 workers in Southern California.
>
> "The exodus has begun," said Sung Won Sohn, an economist at Cal State Channel Islands and a former director at Forever 21. "The garment industry is gradually shrinking and that trend will likely continue."

But some lucky people are going to get an exemption from the new minimum wage law – even though they lobbied hard in favor of it.

The radically leftist UK Guardian explains:

> Los Angeles city council will hear a proposal on Tuesday to exempt union members from a $15 an hour minimum wage that the unions themselves have spent years fighting for.
>
> The proposal for the exemption was first introduced last year, after the Los Angeles city council passed a bill that would see the city's minimum wage increase to $15 by 2020. After drawing criticism last year, the proposed amendment was put on hold but is now up for consideration once again.

> […]The amendment was originally proposed by Rusty Hicks, executive secretary-treasurer of the Los Angeles County Federation of Labor, AFL-CIO. AFL-CIO is the largest federation of labor unions in the US, with about 12.5 million members. Hicks is also the co-convener of the Campaign to Raise the Wage.
>
> At the time of its passage, Hicks lauded the $15 minimum wage.
>
> "We are one step closer to making history in Los Angeles by adopting a comprehensive minimum wage policy that will change the lives of hundreds of thousands of hard-working Angelenos," said Hicks. "The city council's action today creates a path for workers to succeed and gives our economy the boost it needs to grow."
>
> Hicks did not respond to a request for comment.

Union leaders have a reputation for being just terrible at economics. And when I say "terrible", I mean they are more ignorant of economics than inanimate objects.

I actually remember far back to when Obamacare was being passed. The big labor unions lobbied for the passage of Obamacare. And when it was passed, they lobbied the Democrats for exemptions to it for the big labor unions. Exemptions from fees, as well as exemptions from taxes. Basically, the big labor unions wanted to screw all the non-union companies with higher health care costs. Unite Blue! Socialism for thee, but not for me. That's hypocrisy.

# Peer-reviewed paper: Michael Behe's "First Rule of Adaptive Evolution"

**Wintery Knight** · 20 April 2016 · Archived copy · Original

Christianity and the progress of science

JoeCoder was writing some JavaScript code last night and he ran into a problem where a 3rd-party open source library was not performing as expected. So he got the non-minified version of the library and commented out two lines to get the behavior he wanted. He said this to me "Michael Behe's first rule of adaptive evolution has been confirmed once again." So, let's take a look at Mike Behe's first rule of adaptive evolution.

The paper was published in the Quarterly Review of Biology. I found it on PubMed.

Abstract:

> Adaptive evolution can cause a species to gain, lose, or modify a function; therefore, it is of basic interest to determine whether any of these modes dominates the evolutionary process under particular circumstances. Because mutation occurs at the molecular level, it is necessary to examine the molecular changes produced by the underlying mutation in order to assess whether a given adaptation is best considered as a gain, loss, or modification of function. Although that was once impossible, the advance of molecular biology in the past half century has made it feasible. In this paper, I review molecular changes underlying some adaptations, with a particular emphasis on evolutionary experiments with microbes conducted over the past four decades. **I show that by far the most common adaptive changes seen in those examples are due to the loss or modification of a pre-existing molecular function**, and I discuss the possible reasons for the prominence of such mutations.

By far the most common adaptive changes in the examples we have are due to loss of function or modification of pre-existing function?

Evolution News has a post up about the paper.

Excerpt:

> After reviewing the effects of mutations upon Functional Coding ElemenTs (FCTs), Michael Behe's recent

> review article in Quarterly Review of Biology, “Experimental Evolution, Loss-of-Function Mutations and ‘The First Rule of Adaptive Evolution’,” offers some conclusions. In particular, as the title suggests, Behe introduces a rule of thumb he calls the “The First Rule of Adaptive Evolution”: “Break or blunt any functional coded element whose loss would yield a net fitness gain.” In essence, what Behe means is that mutations that cause loss-of-FCT are going to be far more likely and thus far more common than those which gain a functional coding element. In fact, he writes: “the rate of appearance of an adaptive mutation that would arise from the diminishment or elimination of the activity of a protein is expected to be 100-1000 times the rate of appearance of an adaptive mutation that requires specific changes to a gene.” Since organisms will tend to evolve along the most likely pathway, they will tend to break or lose an FCT before gaining a new one. He explains:

> It is called the “first” rule because the rate of mutations that diminish the function of a feature is expected to be much higher than the rate of appearance of a new feature, so adaptive loss-of-FCT or modification-of-function mutations that decrease activity are expected to appear first, by far, in a population under selective pressure.(Michael J. Behe, “Experimental Evolution, Loss-of-Function Mutations and ‘The First Rule of Adaptive Evolution’,” Quarterly Review of Biology, Vol. 85(4) (December, 2010).)

> Behe argues that this point is empirically supported by the research reviews in the paper. He writes:

> As seen in Tables 2 through 4, the large majority of experimental adaptive mutations are loss-of-FCT or modification-of-function mutations. In fact, leaving out those experiments with viruses in which specific genetic elements were intentionally deleted and then restored by subsequent evolution, only two gain-of-FCT events have been reported

> After asking “Why is this the case?” Behe states, “One important factor is undoubtedly that the rate of appearance of loss-of-FCT mutations is much greater than the rate of construction of new functional coded elements.” He draws sound and defensible conclusions from the observed data:

> Leaving aside gain-of-FCT for the moment, the work reviewed here shows that organisms do indeed adapt quickly in the laboratory–by loss-of-FCT and modification-of-function mutations. If such adaptive mutations also arrive first in the wild, as they of course would be expected to, then those will also be the kinds of mutations that are first available to selection in nature. … In general, if a sequence of genomic DNA is initially only one nucleotide removed from coding for an adaptive functional element, then a single simple point mutation could yield a gain-of-FCT. As seen in Table 5, several laboratory studies have achieved thousand to million-fold saturations of their test organisms with point mutations, and most of the studies reviewed here have at least single-fold saturation. Thus, one would expect to have observed simple gain-of-FCT adaptive mutations that had sufficient selective value to outcompete more numerous loss-of- FCT or modification-of-function mutations in most experimental evolutionary studies, if they had indeed been available.

> But this stark lack of examples of gain-of-functional coding elements can have important implications:

> A tentative conclusion suggested by these results is that the complex genetic systems that are cells will often be able to adapt to selective pressure by effectively removing or diminishing one or more of their many functional coded elements.

> Behe doesn’t claim that gain-of-function mutations will never occur, but the clear implication is that neo-

> Darwinists cannot forever rely on examples of loss or modification-of-FCT mutations to explain molecular evolution. At some point, there must be gain of function.

Now, there was a response to this paper from Jerry Coyne on his blog, and then a rebuttal from Mike Behe in a separate article on Evolution News.

# Some tips to social justice warriors on how to fake a hate crime

**Wintery Knight** · 21 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

First, let's double-check the details of the latest hate crime hoax by a gay activist.

CNS News explains:

> The image of a cake reading "Love Wins ***" caused a stir of social media recently after an openly homosexual pastor posted a video online, but the company that sold the cake says the claim is fraudulent and they are countersuing.
>
> KEYE-TV is reporting, the attorney for Pastor Jordan Brown says he ordered a cake from the Whole Foods store in Austin, Texas with the personalized message "Love Wins," but when he received it read "Love Wins ***."
>
> […]On Tuesday, Whole Foods released store security video and a statement on the cake purchase, and they claim the cake box was altered.
>
> "Mr. Brown admits that he was in sole possession and control of the cake until he posted his video, which showed the UPC label on the bottom and side of the box." the statement reads.
>
> "After reviewing our security footage of Mr. Brown, it's clear that the UPC label was in fact on top of the cake box, not on the side of the package. This is evident as the cashier scans the UPC code on top of the box.
>
> "After a deeper investigation of Mr. Brown's claim, we believe his accusations are fraudulent and we intend to take legal action against both Mr. Brown and his attorney."
>
> Whole Foods Market has filed a defemation lawsuit against Brown and his attorney seeking $100,000 in damages.

You'll notice that I blanked out the curse word, because I think it's horrible to make people that I disagree with uncomfortable with curse words. I don't like what some gay activists are doing with respect to using the education system and government coercion to push an agenda against natural marriage and first amendment right, but I don't want to say anything intimidating. I just want to disagree.

Apparently, the hate crime guy is short of money:

> On Wednesday, Fox 7 Austin reported that Brown was sued just one month ago for nearly $30,000.

> The complaint was filed on March 11, 2016 for breach of contract by the National Collegiate Student Loan Trust for unpaid student loans related to his education at Slippery Rock University, a public, master's level university in Pennsylvania. Brown is being sued for an unpaid student loan balance of $24,885.25 and unpaid interest of $3,030.26, for a total of $27,915.51.
>
> Fox 7 Austin also reported that the Facebook page of Brown's church, the "Church of Open Doors," was soliciting donations claiming that they are moving to a new location and expanding, but when they visited the address listed, they "found nothing, just an apartment complex."
>
> A Google search for the address listed on the Facebook page brings up the AMLI South Shore apartments. A nearby address listed on the Church of Open Doors' website isn't a church either, but a postal/courier businesst hat also rents U-Haul trucks.

Anyway, so it looks like another fake hate crime. Here are some tips from The Federalist about how to commit a successful fake hate crime.

List:

1. Pick A Believable Villain
2. A Good Witness
3. Pick Better Ironclad Proof Than An Easily-Resealable Adhesive Sticker.
4. Make Your Victimization As Anonymous As Possible
5. Know What You Don't Know

Here is the most important one:

> **#4 Make Your Victimization As Anonymous As Possible**
>
> A good social justice hoax will just blame "Christians who came into my restaurant" or "someone in my town, don't know who." In these examples, you're claiming to have been victimized by someone in a pool of tens of thousands to millions of people. In the case of Brown, he named the specific Whole Foods, where specific people are on record as having decorated specific cakes. Probably with video evidence.
>
> **The specific employee who was accused of bigotry, it turns out, is, in the parlance of 2016 America, a "member of the LGBTQ community."** And the record shows, according to Whole Foods, that the cake was made as requested, with "Love Wins" written on the tip top of it.
>
> It can't be said enough: Never pin your hoax on an actual, specific person who can be questioned and who can refute your dumb story.

Dear, oh dear. The person who baked the cake is gay. That won't work for this hate crime.

I blogged before about several other fake hate crimes in this post, this post and this post. It happens a lot. It might be a good idea to assume that hate crimes committed against the secular left are false unless they are proven true. There is a lot of mental illness in the secular left crowd.

# What do men want from a marriage?

**Wintery Knight** · 21 April 2016 · Archived copy · Original

Man helping a woman with proper handgun marksmanship

Well, my friend Curby sent me this article from a very conservative Calvinist blog. It talks about one of the things that men want from a marriage. I thought I would post it here, and affirm its truth, so that all my feminist readers can have steam shoot out of their ears.

Excerpt:

> Men are created different than women. And man's priorities, deep in his very being, are very different from the woman's priorities.
>
> […]The family was created to be an institution, and that institution has a *purpose* and *function* in God's order for the things: to expand the dominion of God's people over the whole world (Gen. 1:27-28). The purpose and function were first given to the man, and he is supposed to be the chief carrier and executive of that function. And just as the woman was uniquely designed and gifted to discern and understand the issues of relationships, the man was uniquely designed and gifted to fulfill the purpose of taking dominion over the earth. **The father's and the husband's position of the man is not primarily focused on relationships – that's what he was given a wife for. That responsibility is given to man to ensure that his family fulfills its purpose in the plan of God in conquering the earth. Man's very being is *outward*-oriented, not inward-oriented. His interests would be in work and war, not in feelings and relationships.** While women also have their part in business (Prov. 31) and war (Judges 4), by creation ordinance it is man's realm and sphere of responsibility and authority.
>
> And therefore a church that preaches only relationships and no purpose, will tend to attract mostly women, not men. **And when the family is preached as mostly relationships but the purpose and the functions of the family are not preached, men influenced by that preaching won't be interested in having families.** That's just the created nature of things.

Men feel obligated to do something that is going to please God. And relationships and feelings are not the something they are trying to do:

> The Bible has little to say about a "relationship with Jesus." In fact, Jesus Himself speaks about a personal relationship between Him and His disciples only in two places, and He gives a very simple explanation of what

> a personal relationship with Him is: obedience to His will. In Matt. 12:46-50 He explains how one gets to be a member of Jesus's family: "For whoever does the will of My Father who is in heaven, he is My brother and sister and mother." And then again, in John 15:14, "You are My friends if you do what I command you." There is no special theology of "personal relationship with Jesus" in the Bible; that personal relationship is very simple: do what He commands. It is not based on emotions or feelings. It is based on the self-conscious commitment to do what He commands.
>
> But what He commands is given in the whole Bible. And it starts with the Dominion Mandate for man and his family to fill the earth, and subdue it. And this means that there is purpose and calling to man as a father and husband to work, fight, educate, care, build, lay foundations, protect, conquer, establish. **There is a purpose to man's life. And that purpose is matched by the inclination in the heart of man to do these things. A man's heart is thrilled by the possibility to work and conquer. And when the family is presented to him not as an institution of dominion – that is, an institution for work and conquering – but only as a place for "relationships," he won't get excited about it. He will leave the church and find another place to work and conquer.**

So let me say something about this, and please don't be offended. My views do go against the popular view of marriage today.

If I were to get married it would be to a woman who understood that my purpose in working from age 20 to age 60 is not primarily to provide a her with feelings and relationships and peer approval.

My purpose in marrying is to make the marriage promote the things that God likes, and oppose the things that God doesn't like.

In my case that means:

- impacting the university with apologetics and conservatism
- impacting the church with apologetics and conservatism
- impacting the public square to promote policies that enable Christian living
- producing as many effective, influential children as I can afford to raise

With goals like that, it is important for me to find a woman with a good education (STEM degree) and some work experience, because understanding education and career will help her to lead the children and mentor others effectively.

So if I were courting a woman interested in marrying me, I would be trying to convince her that we could do better for God with this plan, working as a pair than as two singles. And she would have the opportunity to listen to and improve the plan and decide whether to sign with me or not. No one is forcing her to marry me, she gets to choose if she thinks that my plan to make the marriage serve God is acceptable to her. We would look in the Bible together and then look at the culture and decide what areas needed our efforts and what would be the best way for us to impact those areas.

That's what I mean when I say that men ought to lead in a marriage. I mean that men should have a plan for making the marriage serve God in a practical way. He needs a wife in order to help him execute his plan to serve God, especially if the plan involves children and other relationships with people outside the home.

Now what shall I do if no woman accepts this idea that marriage is about negotiating a plan and then achieving it for God's benefit?

Well, that is fine with me. Although I budgeted for a stay-at-home wife and tuition for four PhD-credentialed children, if I cannot find such a woman, then I should take my earnings (after taxes) and spend them on other things, like helping young Christians to grow and become influential. And I should use some of that money on blogging and other related activities that I can do myself. At least that way, I am going to deliver some sort of a

return for my client – or Client, rather.

# Should taxpayer-funded universities allow conservative professors to work?

**Wintery Knight** · 21 April 2016 · Archived copy · Original

In the country of the blind, the one-eyed man is expelled

I guess everyone knows that conservatives are discriminated against at liberal universities. But I thought this Wall Street Journal article had some interesting insights about how far conservative professors have to go to hide their views from their colleagues on the secular left.

It says:

> Everyone knows that academia is predominantly liberal: Only 6.6% of professors in the social sciences are Republicans, according to a 2007 study. But what is life like for the pioneering conservatives who slip through the ivory tower's gates? We decided to find out by interviewing 153 of them.
>
> Many conservative professors said they felt socially isolated. A political scientist told us that he became a local pariah for defending the Iraq war in his New England college town, which he called "Cuba with bad weather." One sociologist stated the problem well: "To say a strong conservative political opinion with conviction in an academic gathering is analogous to uttering an obscenity." A prominent social scientist at a major research university spoke of the strain of concealing his political views from his colleagues—of "lying to people all the time."
>
> Some even said that bias had complicated their career advancement. A historian of Latin America told us that he suffered professionally after writing a dissertation on "middle-class white guys" when it was fashionable to focus on the "agency of subaltern peoples." Though he doesn't think the work branded him as a conservative, it certainly didn't excite the intellectual interest of his peers.
>
> A similarly retrograde literature professor sought advice from a colleague after struggling to land a tenure-track job. He was told that he had "a nice resume for 1940."

Let's put some numbers to these stories, with an article from the Washington Times.

Excerpt:

> It's not every day that left-leaning academics admit that they would discriminate against a minority.

> But that was what they did in a peer-reviewed study of political diversity in the field of social psychology, which will be published in the September edition of the journal Perspectives on Psychological Science.
>
> Psychologists Yoel Inbar and Joris Lammers, based at Tilburg University in the Netherlands, surveyed a roughly representative sample of academics and scholars in social psychology and found that "In decisions ranging from paper reviews to hiring, many social and personality psychologists admit that they would discriminate against openly conservative colleagues."
>
> […][C]onservatives represent a distinct minority on college and university campuses. A 2007 report by sociologists Neil Gross and Solon Simmons found that 80 percent of psychology professors at elite and non-elite universities are Democrats. Other studies reveal that 5 percent to 7 percent of faculty openly identify as Republicans. By contrast, about 20 percent of the general population are liberal and 40 percent are conservative.
>
> Mr. Inbar and Mr. Lammers found that conservatives fear that revealing their political identity will have negative consequences. This is why New York University-based psychologist Jonathan Haidt, a self-described centrist, has compared the experience of being a conservative graduate student to being a closeted gay student in the 1980s.
>
> In 2011, Mr. Haidt addressed this very issue at a meeting of the Society for Personality and Social Psychology — the same group that Mr. Inbar and Mr. Lammer surveyed. Mr. Haidt's talk, "The Bright Future of Post-Partisan Social Psychology," caused a stir. The professor, whose new book "The Righteous Mind" examines the moral roots of our political positions, asked the nearly 1,000 academics and students in the room to raise their hands if they were liberals. Nearly 80 percent of the hands went up. When he asked whether there were any conservatives in the house, just three hands — 0.3 percent — went up.
>
> […]"Because of the way the confirmation bias works," Mr. Haidt says, referring to the pervasive psychological tendency to seek only supporting evidence for one's beliefs, "you need people around who don't start with the same bias. You need some non-liberals, and ideally some conservatives."

But that's not all – those findings are confirmed by other studies of campaign donations by professors:

> Professors, administrators and others employed at the eight universities of the Ivy League have given $375,932 to Obama and $60,465 to Romney, according to data compiled by the Center for Responsive Politics, a Washington watchdog group that tracks campaign finance issues.
>
> […]The president's academic advantage extends behind the Northeast's ivied walls and into the Midwest.
>
> At Ohio State University in Columbus, for example, Obama has raised $18,230 from faculty and staff, compared with Romney's $3,500.

How did this massive imbalance happen? Answer: active discrimination against minority viewpoints. Secular leftists discriminate against conservatives in hiring and employment decisions. This is because liberalism is a false ideology, and the only way to maintain it is to punish anyone who disagrees with it. Allow any sort of open, rational discussion of methodology or evidence undermines the delusion that the elites are trying to maintain.

# The kalam cosmological argument defended in a peer-reviewed science journal

**Wintery Knight** · 21 April 2016 · Archived copy · Original

Here's the peer-reviewed article. It appears in a scientific journal focused on astrophysics.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

Here's an excerpt in which the author, Dr. William Lane Craig, explains the Big Bang cosmology:

> The monumental significance of the Friedman-Lemaitre model lay in its historization of the universe. As one commentator has remarked, up to this time the idea of the expansion of the universe "was absolutely beyond comprehension. Throughout all of human history the universe was regarded as fixed and immutable and the idea that it might actually be changing was inconceivable."{8} But if the Friedman-Lemaitre model were correct, the universe could no longer be adequately treated as a static entity existing, in effect, timelessly. Rather the universe has a history, and time will not be matter of indifference for our investigation of the cosmos. In 1929 Edwin Hubble's measurements of the red-shift in the optical spectra of light from distant galaxies,{9} which was taken to indicate a universal recessional motion of the light sources in the line of sight, provided a dramatic verification of the Friedman-Lemaitre model. Incredibly, what Hubble had discovered was the isotropic expansion of the universe predicted by Friedman and Lemaitre. It marked a veritable turning point in the history of science. "Of all the great predictions that science has ever made over the centuries," exclaims John Wheeler, "was there ever one greater than this, to predict, and predict correctly, and predict against all expectation a phenomenon so fantastic as the expansion of the universe?"{10}
>
> As a GTR-based theory, the Friedman-Lemaitre model does not describe the expansion of the material content of the universe into a pre-existing, empty, Newtonian space, but rather the expansion of space itself. This has the astonishing implication that as one reverses the expansion and extrapolates back in time, space-time curvature becomes progressively greater until one finally arrives at a singular state at which space-time curvature becomes infinite. This state therefore constitutes an edge or boundary to space-time itself. P. C. W. Davies comments,
>
> > An initial cosmological singularity . . . forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity. . . . On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.{11}

> The popular expression "Big Bang," originally a derisive term coined by Fred Hoyle to characterize the beginning of the universe predicted by the Friedman-Lemaitre model, is thus potentially misleading, since the expansion cannot be visualized from the outside (there being no "outside," just as there is no "before" with respect to the Big Bang).{12}
>
> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"{13}
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Every theist should be able to understand and defend this argument. It is a scientific refutation of materialism, and it is supported by six lines of scientific evidence – all of which emerged as science has progressed.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

Those are the scientific discoveries that have led us to the beginning of the universe, which support's Dr. Craig's argument.

Here's a re-cap of the three main evidences for the Big Bang cosmology from Caltech. (Numbers 2, 3 and 5 from the list above)

Excerpt:

> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theory that describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> **Why Do We Think the Big Bang Happened?**
>
> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third,

> astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

The article goes into detail about each of these three evidences.

This is the kind of evidence I expect all Christian theists to be using when discussing the question of whether God exists. Scientific evidence. When talking to non-Christians, we first need to show that we understand science, because science is a reliable and respected way of getting knowledge about the universe. Non-Christians do not accept the Bible, but they do accept science, so we begin evangelism with science. Science (experimental, testable, repeatable science) should set limits on what anyone can believe – including non-Christians, who might otherwise not be inclined to listen to Bible verses and theology.

**The Big Bang is not compatible with atheism**

According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* This falsifies eternal models of the universe, which are *required* by the atheistic worldview.

You should definitely print out both articles and get familiar with the arguments and the evidence. I have tried this argument out on atheists, and the response I usually get is that scientific discoveries will soon emerge that falsifies all of these six scientific discoveries. That sounds more like faith than reason to me. And we have to make it clear to others who are still deciding that there is a conflict between science and religion. Just not the one they're expecting. Let's make our decisions about what to believe based on what science is telling us today. Let's hold accountable people who want to have a worldview that is based on speculations.

# Georgia goes after Christian medical doctor over the content of his sermons

**Wintery Knight** · 22 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

I had friends who have been trying to get me to move to Georgia. Sure glad I didn't listen to them – it's turning out to be a very bad state for liberty.

Here's the latest from religious liberty hero David French, writing at National Review.

He writes:

> This morning, the First Liberty Institute filed a lawsuit in federal court that makes chilling claims against Georgia's Department of Public Health, claims backed by a host of damaging documents. The Institute represents Dr. Eric Walsh, a California physician and former director of public health for the city of Pasadena, Calif. Walsh is also a devout Christian, a Seventh-day Adventist who sometimes preaches in his spare time.
>
> Walsh, a former member of the President's Advisory Council on HIV/AIDS, had accepted a job in Georgia as a district health director when Georgia officials became aware that he'd delivered a number of "controversial" sermons on his own time — sermons where he articulated orthodox Seventh-day Adventist positions on, among other things, human sexuality, Islam, evolution, and the corrupting influence of pop culture.
>
> In California, Walsh had been attacked by student activists who objected to his selection as a commencement speaker at Pasadena City College. To these activists, working for former president Bush and President Obama to combat AIDS, serving as a board member of the Latino Health Collaborative, and starting California's first city-run dental clinic for low-income families dealing with HIV/AIDS wasn't sufficient to overcome the horror at Walsh's Christian views. Under fire, Walsh canceled his commencement speech — while the city, incredibly, put him on administrative leave. The college replaced him with a gay screenwriter.
>
> When Georgia officials learned of Walsh's California controversy, they responded by immediately violating the law. Title VII of the Civil Rights Act of 1964 prohibits government employers from considering an applicant's religion in employment decisions, but Georgia officials not only evaluated Walsh's religious views, the director of human resources wrote an e-mail to department employees giving them the "assignment" of listening to his sermons.
>
> And so they did. E-mails indicate that health-department employees split the sermons up, listened to Walsh's religious views, and took notes. Walsh asserts that one department official called and told him that "you can't

> preach that and work in the field of public health."
>
> […][T]wo days after health-department officials carried out their "assignment" to watch his sermons, they terminated Walsh — informing him through a mocking voice-mail message that a termination letter was on its way.

Previously, I wrote about how Georgia fired their highly-respect Fire Chief, because he wrote a book in which he supported moral views consistent with the Bible in areas of sexual behavior.

The story is from the Daily Signal.

Excerpt:

> Former Atlanta Fire Chief Kelvin Cochran lived the American dream. That is, until he was fired from his childhood dream job for writing a book during his own private time.
>
> Cochran's book, published in 2013 and called "Who Told You That You Were Naked?," expresses a biblical view on marriage and addresses homosexuality from his Christian perspective.
>
> […]Fast-forward a few months, and Cochran received a 30-day suspension without pay, **after an LGBT activist group started to protest the book.**
>
> […]After 34 years as a firefighter, Cochran's fairy-tale career came to a halt in January due to his personal views on gay marriage.
>
> […]Cochran had worked his way up, and out from the poverty he grew up in, to be named Atlanta fire chief in 2008. In 2009, he was appointed administrator of the United States Fire Administration under President Barack Obama. Less than a year later, he was back to his position as chief in Atlanta.

**Investigation into Cochran found that he did not show discrimination against anyone during employment, yet he was terminated anyway.**

[…]"The part that got me in trouble was the fact that in the book I dealt with sexual challenges that Christian men have and spoke of biblical marriage and biblical sexuality," Cochran said in August while speaking at a religious liberty rally in Iowa.

Pretty every day now I am getting a message from someone who is asking me how to have an alias, whether they need an alias, and so on. I hope that these cases show you that no amount of excellence in education or ability or work history will protect you from the fascists of the secular left. They don't care whether you are the best at doing this job or that job – it's more important to them that you share their personal opinions on moral issues. Specifically, it's more important to them that you believe that when it comes to sexuality, there are no rules. That is, that the selfishness of the adults must override all moral rules, especial moral rules around sexual behavior. There are no marriage rules, there are no children's needs, there is no chastity, there is no fidelity, there is no self-control.

When it comes to expressing your views in order to have an influence, my advice is simple. First, don't listen to anyone who is reckless about the consequences and is more interested in prancing around praising their own supposed bravery. The object of this game is to share your views with the right people as persuasively as you can, and not to find yourself silenced or sidelined because the other team hammers you and undermines your ability to be effective. Handing the other side your real name, real address, and so on, undermines your effectiveness with no compensating increase in effectiveness. It's a net loss, and not one that you should choose to take.

# ESPN fires Curt Schilling for saying that men shouldn't use women's bathrooms

**Wintery Knight** · 22 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

I noticed that the NCAA, NFL and NBA have been very energetic at promoting the gay agenda, lately – ramming gay rights down the throats of Christians and conservatives in states like Indiana, Arizona, Georgia and North Carolina. Not a problem for me, since I don't watch American professional sports of any kind, nor do I have a television. I don't give them a dime. And a new story reinforces my no-sports policy.

Here is the latest, as reported by Fox News:

> Schilling shared a photo of a portly man dressed in women's clothing – wearing a wig and holding a purse. The man's ample bosom protruded from two strategically-placed holes. Alongside the eyebrow-raising photo was a message:
>
> "LET HIM IN! to the restroom with your daughter or else you're a narrow minded, judgmental, unloving, racist bigot who needs to die."
>
> Schilling followed up with statement of his own:
>
> "A man is a man no matter what they call themselves. I don't care what they are, who they sleep with, men's room was designed for the penis, women's not so much. Now you need laws telling us differently? Pathetic."
>
> Schilling's common-sense post sent liberals scampering for safe spaces all across the fruited plain.
>
> The left-leaning sports network swiftly gave Schilling the heave-ho – much to the delight of LGBT activists and their cronies in sports journalism.
>
> "ESPN is an inclusive company," they wrote in a statement to The New York Times. "Curt Schilling has been advised that his conduct was unacceptable and his employment with ESPN has been terminated."

ESPN is an inclusive company, which is why they need to exclude Curt Schilling.

Last year, Schilling was suspended from ESPN when he tweeted something against radical Islam.

Fox News reported on that, as well:

> ESPN says commentator Curt Schilling won't appear on the air for the next month in the wake of his anti-

> Muslim tweet.
>
> ESPN said Thursday that Schilling won't be on telecasts for the rest of the regular season or the American League wild-card game on Oct. 6.

The Daily Wire had a list of 5 people who were not fired for making comments critical of Christians and conservatives.

Consider this one:

> **Tony Kornheiser.** Kornheiser still co-hosts his leftist propaganda sports program *Pardon The Interruption* with fellow approved opinionsayer Michael Wilbon, despite the fact that in October, he compared the Tea Party to ISIS – on ESPN Radio. Speaking with *Huffington Post*'s Howard Fineman, Kornheiser said of Tea Partiers in Congress, "Are they like ISIS trying to establish a caliphate here?!" No problem. Kornheiser was suspended for two weeks back in 2010 for ripping an outfit worn by Hannah Storm: "She's got on red go-go boots and a Catholic school paid skirt…way too short for somebody in her 40s or maybe early 50s by now. She's got on her typically very, very tight shirt."

Yeah, that's not a firing offense, because it's OK to insult conservatives, but not Islamic State. Because come on, Tea Party is much more evil than Islam State, right? That's what ESPN thinks.

Seems to me that it's pretty clear that ESPN supports the gay agenda and radical Islam, since they go after people who criticize them. Why are you watching ESPN on TV, and why do you have a TV at all? Be a good steward of your money, don't hand it to the people who want to punish you for your core values.

# New study: couples that delay sexual activity experience higher quality relationships

**Wintery Knight** · 22 April 2016 · Archived copy · Original

Relationship stability, quality, communication, satisfaction
From Family Studies, news about TWO new studies.

Excerpt: (links removed)

> [T]wo recently published studies call into question the validity of testing sexual chemistry early in dating.
>
> My colleagues and I published the first study a few years ago in the American Psychological Association's *Journal of Family Psychology*. This study involved a national sample of 2,035 married individuals who participated in the popular online couple assessment survey called "RELATE." **We found that the longer a dating couple waits to have sex, the better their relationship is after marriage. In fact, couples who wait until marriage to have sex report higher relationship satisfaction (20% higher), better communication patterns (12% better), less consideration of divorce (22% lower), and better sexual quality (15% better) than those who started having sex early in their dating (see Figure 2). For couples in between—those that became sexually involved later in their dating, but prior to marriage—the benefits were about half as strong.**
>
> […]These patterns were statistically significant even when controlling for a variety of other variables such as respondents' number of prior sexual partners, education levels, religiosity, and relationship length.
>
> **The second study, by Sharon Sassler and her colleagues at Cornell University, also found that rapid sexual involvement has adverse long-term implications for relationship quality.** Using data from the Marital and Relationship Survey, which provides information on nearly 600 low- to moderate-income couples living with minor children, their study examined the tempo of sexual intimacy and subsequent relationship quality in a sample of married and cohabiting men and women. Their analyses also suggest that delaying sexual involvement is associated with higher relationship quality across several dimensions.
>
> They discovered that the negative association between sexual timing and relationship quality is largely driven by a link between early sex and cohabitation. Specifically, sexual involvement early in a romantic relationship is associated with an increased likelihood of moving more quickly into living together, which in turn is associated with lower relationship quality. This finding supports Norval Glenn's hypothesis that sexual involvement may lead to unhealthy emotional entanglements that make ending a bad relationship difficult. As Sassler and her colleagues concluded, "Adequate time is required for romantic relationships to develop in a healthy way. In contrast, relationships that move too quickly, without adequate discussion of the goals and long-term desires of each partner, may be insufficiently committed and therefore result in relationship distress, especially if one partner is more committed than the other" (p. 710).

The rest of the post talks about two reasons why this works: improved partner selection and prioritizing communication and commitment. Improved partner selection occurs because you haven't committed too much too soon (sexually) and you have time to let things play out to see if you really fit with the other person. And if you take sex off the table, then you have to use other means in order to build emotional intimacy – communication, service, support, etc.

That's two studies, and there's a third. Dina sent me this article from the UK Daily Mail about a new study showing the importance of chastity for relationship quality and stability.

Excerpt:

> New couples who jump into bed together on the first date do not last as long in relationships as those who wait a new study has revealed.
>
> Using a sample of almost 11,000 unmarried people, Brigham Young University discovered a direct correlation between the length and strength of a partnership and the amount of time they took to have first have sex.
>
> **The study showed that those who waited to initiate sexual intimacy were found to have longer and more positive outcomes in their relationships while those who couldn't help themselves reported that their dalliances struggled to last more than two years.**
>
> 'Results suggested that waiting to initiate sexual intimacy in unmarried relationships was generally associated with positive outcomes,' said the report authored published by the U.S. National Library of Medicine National Institutes of Health.
>
> 'This effect was strongly moderated by relationship length, with individuals who reported early sexual initiation reporting increasingly lower outcomes in relationships of longer than two years.'
>
> The study examined four sexual-timing patterns: Having sex prior to dating, initiating sex on the first date or shortly after, having sex after a few weeks of dating, and sexual abstinence.
>
> Each one of these fields yielded different results in relationship satisfaction, stability and communication in dating situations.

Here's another recent study that shows that if a woman has more than her husband as a premarital sex partner, her risk of divorce increases.

His findings:

> Using nationally representative data from the 1995 National Survey of Family Growth, I estimate the association between intimate premarital relationships (premarital sex and premarital cohabitation) and subsequent marital dissolution. I extend previous research by considering relationship histories pertaining to both premarital sex and premarital cohabitation. I find that premarital sex or premarital cohabitation that is limited to a woman's husband is not associated with an elevated risk of marital disruption.**However, women who have more than one intimate premarital relationship have an increased risk of marital dissolution.**

Here's another study that makes it even more clear.

Findings:

> Data from the 1988 US National Survey of Family Growth (NSFG) were utilized to assess the impact of premarital sexual activity on subsequent marital stability. **Among white NSFG subjects first married in 1965-85, virgin brides were significantly less to have become separated or divorced (25%) than women who had not been virgins at marriage (35%).**
>
> **[…]The lower risk of divorce on the part of white women with no premarital sexual experience**

> **persisted even after numerous intervening and background variables were controlled.**

This study supports what the Bible says about chastity and premarital sex:

> 1 Cor. 7:8-9:
>
> 8 To the unmarried and the widows I say that it is good for them to stay single as I am.
>
> 9 But if they cannot exercise self-control, they should marry. For it is better to marry than to burn with passion.
>
> The idea of "burning" here has to do with sexual desire. Here Paul tells all unmarried people that if they cannot control their sexual desires, they need to get married. Why? Because Paul assumes that one cannot fulfill this sexual desire outside of the marital bed. While Paul would love for them to remain single (1 Cor. 7:7), he believes that sex outside of marriage is a destructive sin and *cannot* be used as a gratifying release of our sexual passions.

If you're going to talk to a young person about sex, it's a good idea to use these studies to explain what you lose by having sex too early in the relationship. Although they may respond with anecdotes to refute studies, studies are important because they represent LOTS of data points, not just one or two cherry-picked cases. My view on all this is the Bible's view – no sex before marriage. But when talking to people about this issue, I find it useful to have evidence ready in order to be convincing in every way possible.

# Democrat Governor of Virginia decides to allow 206,000 convicted felons to vote

**Wintery Knight** · 23 April 2016 · Archived copy · Original

Which states allow felons to vote? (before this decision of course)

Hans sent me a post he wrote from Liberty Unyielding about a story from Virginia.

It says:

> Democratic "Gov. Terry McAuliffe of Virginia will use his executive power on Friday to restore voting rights to more than 200,000 convicted felons, circumventing his Republican-run legislature. The action will overturn a Civil War-era provision in the state's Constitution," reported the New York Times earlier today. "The sweeping order, in a swing state that could play a role in deciding the November presidential election, will enable all felons who have served their prison time and finished parole to register to vote. Most are African-Americans, a core constituency of Democrats, Mr. McAuliffe's political party." **Even murderers and rapists are now allowed to vote.**

Naturally, convicted criminals vote almost entirely for Democrats, since Democrats are soft on criminals.

Consider this study reported in the Washington Examiner:

> A new study of how criminals vote found that most convicts register Democratic, a key reason in why liberal lawmakers and governors are eager for them to get back into the voting booth after their release.
>
> "Democrats would benefit from additional ex-felon participation,"said the authoritative study in The Annals of the American Academy of Political and Social Science.
>
> The authors, professors from the University of Pennsylvania and Stanford University, found that in some states, felons register Democratic by more than six-to-one. In New York, for example, 61.5 percent of convicts are Democrats, just 9 percent Republican. They also cited a study that found 73 percent of convicts who turn out for presidential elections would vote Democrat.

I would imagine that most criminals who have not yet been caught also vote Democrat. That's the point of this action by the Democrat governor – to get more votes cast for Democrats.

More from Hans' article:

> Gov. McAuliffe's action also allows felons to "serve on juries." Do we really need violent felons, perjurers, and thieves serving on juries? And voting on ballot initiatives in Virginia that make law? Is lawmaking a function to be performed by law breakers? Or by law-abiding people?

Good Lord. And to think that Virginia used to be a conservative state.

# Judge serves day in jail with veteran, waitress pays bill of grieving police officers

**Wintery Knight** · 23 April 2016 · Archived copy · Original

Two sweet stories to brighten up your Saturday.

First one is about a North Carolina judge, reported in the Washington Post.

It says:

> The judge knew that Sgt. Joseph Serna had been through a lot.
>
> The former Special Forces soldier did four combat tours in Afghanistan over a nearly two-decades-long career with the U.S. Army. Through those years, the Fayetteville Observer reported, Serna was almost killed three times: once, by a roadside bomb, then again by a suicide bomber.
>
> During a tour in 2008, Serna and three other soldiers were driving down a narrow dirt road in Kandahar when their armored truck toppled into a canal, the Associated Press reported. As water filled the vehicle, Serna struggled to escape.
>
> It was his fellow soldier, Sgt. James Treber, who saved him.
>
> “I felt a hand come down and unfasten my seat belt and release my body armor,” Serna recalled to the AP. “Sgt. Treber picked me up and moved me to a small pocket of air. He knew there was not enough room for both of us to breathe so he went under water to find another pocket of air.”
>
> Treber died from the accident, but Serna survived. He was the only one who did.
>
> While Serna’s years in combat earned him three Purple Hearts and other military accolades, like many combat vets, he’s been unable to leave the battlefield behind him. Since returning to the U.S., the decorated Green Beret has suffered from post-traumatic stress disorder, WTVD reported, and been charged with driving under the influence.
>
> He entered the veteran’s treatment court program in Cumberland County, N.C., over which state District Court Judge Lou Olivera presides.
>
> Serna has fought to stay sober, appearing before Olivera 25 times to have his progress reviewed. He confessed to Olivera that he lied about a recent urine test last week, according to WRAL.
>
> In response, Olivera sentenced Serna to one day in jail.
>
> The judge drove Serna to the jail in a neighboring county.
>
> “When Joe first came to turn himself in, he was trembling,” Olivera told the Fayetteville Observer. “I decided that I’d spend the night serving with him.”
>
> “Where are we going, judge?” Serna asked, the Observer’s Bill Kirby Jr., reported Wednesday.
>
> “We’re going to turn ourselves in,” the judge said.
>
> As Serna sat down on the cot in his cell, WRAL reported, he heard the door rattle open again and saw Olivera standing before him. Olivera sat down beside him. Someone came and locked the door.
>
> “This was a one-man cell so we sat on the bunk and I said, ‘You are here for the entire time with me?’” Serna told WTVD. “He said, ‘Yeah that’s what I am doing.’”

Waitress Jessica Dunbar

Second story is about a waitress who served police officers returning from a funeral, and it's reported by NBC News.

It says:

> After Columbus SWAT officer Steven Smith's funeral on Tuesday, a group of police officers went to the Red Robin in Polaris for something to eat.
>
> But they didn't have to pay a thing, thanks to a server who gave them all their meals for free.
>
> The server, whose name is Jessica Dunbar, left a note on the back.
>
> "Officers," she wrote, "Your bill is on me today. I can't imagine the day you all have had, let alone what you go through every day. I hope your days get better. So much respect. #WeSeeYou #PoliceLivesMatter #RIPOfficerSmith"
>
> "I just wanted to do something nice," Dunbar said. "You can't put a dollar amount on making somebody happy."
>
> Lt. Jeff Shelton, with the Wellington Police Department, was one of those at the restaurant.
>
> "It really touched all of our hearts," Wellington said. "We weren't expecting to be treated any different than normal, and just for somebody to come and do that, it really made our day."
>
> Dunbar's father is a retired Blendon Township police officer. She says the death of Officer Smith made her think about her own family.
>
> "He [Officer Smith] left behind a wife and kids. It could've been me. It could've been my dad.
>
> "People look up to them [the police]. To have them shake my hand and say 'thank you' to me, that was incredible."

It's always a good idea to be supportive of those who protect us from enemies like Islamic State, and criminals here at home.

# Pro-abortion students shout abuse at black pro-life speaker at Harvard University

**Wintery Knight** · 24 April 2016 · Archived copy · Original

More than 160 students attended a Harvard University forum featuring Ryan Bomberger

Bound 4 Life reports on a recent pro-life event at Harvard University, of all places.

It says:

> On Tuesday, Ryan Bomberger of The Radiance Foundation addressed a student forum at Harvard University, a 90-minute discussion on abortion in the black community that turned hostile when students began shouting and walking out during the Q & A portion.
>
> In an event co-sponsored by Law Students for Life and Harvard Black Law Students Association, Bomberger spoke opposite Professor Diane Rosenfeld, lecturer and director of the Gender Violence Program at Harvard Law School. As students filed in, the auditorium at the historic Austin Hall neared capacity.

This is pretty cool:

> A black man who recently won a lawsuit brought against him and his wife by the NAACP, Bomberger explains that abortion in the black community is a personal issue for him. "I was once considered black and unwanted. It was very hard, at the time I was born, to place black children for adoption; so few families were available, because they used same-race criteria."
>
> He continues, "Today, abortion has a hugely disproportionate impact on the black community. Part of addressing this is dispelling the myth that black children are less than others. Regardless of pigmentation or any other traits, injustice should be a concern to everyone."

To be clear: being pro-abortion means being in favor of aborting children who have an unwanted race, or an unwanted sex. And don't kid yourself, pro-abortion people – that happens a lot, according to a recent study. Every pro-abortion student who attended the event was in favor of aborting babies who are the "wrong color" or the "wrong sex". Abortion means a woman's right to choose to abort her offspring, through all 9 months of pregnancy, for any reason, *or for no reason at all.* The pro-abortion position ignores the rights of the innocent baby, who did nothing wrong to be put in this position.

Ryan faced a lot of opposition from pro-abortion students:

> Multiple sources confirm that, once the forum opened for questions following opening remarks, students repeatedly addressed Bomberger using profanity. The *New Boston Post* noted the event shifted to a "confrontational tone."
>
> Chrystal Benedict, who attended the event after a friend invited her, was disappointed many students refused to hear differing opinions. "I was surprised that what was meant to be a 'safe space for students to hear different perspectives' wasn't that at all. If you disagreed with the pro-choice opinion, you had to prepare for a verbal attack of outrage."
>
> When Bomberger began to respond to a question but was continually interrupted, he asked, "Do you want to hear my answer?" The interrupting student replied, "No! No, I don't want to hear your answer."
>
> Caleb Wolanek, Harvard J.D. candidate and Vice President of Law Students for Life, noted that Bomberger addressed students with respect despite not always being given the same courtesy. "Even when asked difficult questions, Ryan gave thoughtful, well-researched responses."

And:

> […][A] visibly angry student representing Reproductive Justice confronted the guest speaker. "The language you use is so offensive—for instance, we are not *pro-abortion*," she said. "So you're not *for* abortion?" Bomberger asked.
>
> The student retorted: "That's not what *pro-abortion* means; it implies we want everyone to have an abortion, when in fact we are *pro-choice*." Bomberger replied, "Language matters. It defines situations and brings clarity. *Pro-choice* doesn't bring any clarity to what you're talking about, while *pro-abortion* does because you are advocating for the legal right to abortion."
>
> "It's about as ridiculous as saying, those who were *pro-slavery* were *pro-jobs*," Bomberger continued, as his detractors responded with outrage. He raised his voice to be heard above the uproar: "I'm applying your same logic! *Pro-jobs* is nebulous and it doesn't mean anything. How is it any different?" The student walked out of the forum with two other Reproductive Justice activists.
>
> Bomberger commented later on the incident, "They couldn't say anything. These Harvard Law School students couldn't respond at all."

That's what students are taught at Harvard University, and nearly every university – the pro-abortion view, and how to scream insults and walk out if the pro-life view is presented. And where do they learn this intolerance? Why, from their pro-abortion professors, of course.

The Washington Times noted that the white feminist professor dismissed his concerns about abortion disproportionately affecting black children, and even suggested that Bomberger himself should have been aborted because he was conceived in rape:

> One might think an invocation of Martin Luther King Jr. commonplace at an event titled "Abortion in Black Communities," but not Harvard Law School professor Diane L. Rosenfeld, who is white.
>
> The gender-violence professor mocked her debate adversary, pro-life leader Ryan Bomberger, who is black, when he showed video clips of the civil rights leader and cited statistics showing disproportionate rates of abortions in black communities.
>
> […]When Mr. Bomberger, who was conceived by rape, shared his personal story, he said Ms. Rosenfeld continued to harp on the rape scenario to defend abortion rights.
>
> "What happens if one of his victims, after she got raped, got pregnant?" Ms. Rosenfeld said at the event. "First, there's the lack of choice of who has access to your body — and then what to do about that horrible consequence."

According to her, Bomberger should just be killed, because he is not a person, he's just a "horrible consequence". To say that to a person – that they should have been aborted… you would have to be some sort of sociopath, I guess. Her attitude towards the black victims of abortion seems to be very similar to what white slaver owners must have thought of their slaves. And indeed, the same arguments that were used by whites to justify slavery are now brought forth to justify abortion: "They're not persons, they have no rights, they're just my property".

People need to realize that sexual autonomy has to be voluntarily controlled and restrained, because of the harm that it can potentially do to unborn children. I'm sure that people who have recreational sex have just as much fun doing it as people who get drunk and then drive, but someone has to make laws based on the rights of the victims. Not every choice is moral. We can do better than selfishness. We can do better than abortion.

You can watch a clip of Ryan making his case here.

# Government investigates women for letting her children play in fenced-in backyard

**Wintery Knight** · 24 April 2016 · Archived copy · Original

Winnipeg mother Jacqui Kendrick investigated by the government for unlicensed parenting

McKenzie tweeted this story from CTV News in Canada, and I had to blog it.

Excerpt:

> A Winnipeg mother says she was investigated by Child and Family Services simply for letting her children play in her backyard.
>
> Jacqui Kendrick, a stay-at-home mom, says a CFS worker showed up unexpectedly at her door in early April. The worker told her they were doing a "well-being check" after receiving a complaint about her children being left unsupervised.
>
> Kendrick has three children ages two, five and 10, who love to play in the family's backyard after school. The backyard is fully fenced in, with a wood fence covering three sides, and a portion of the front covered by a chain link fence and gate.
>
> Kendrick told CTV Winnipeg she's always either with her kids or looking in on them from her living room windows.
>
> […]Still, the worker with the CFS — the the provincial body that apprehends abused and neglected children — insisted she was obligated to investigate and ask a few more questions.
>
> "We had to go through a whole interview asking so many questions — asking me about if we've ever dealt with CFS before, what my childhood was like, how I punish my children, whether we drink or do drugs… She had to look to see where my kids slept. She had to see if we had enough food in the house," Kendrick said.
>
> "The whole time I'm sitting there, pretty much in tears, because I couldn't understand what was going on."

Well, this is just one big misunderstanding, so there will be no permanent record in government files, right? Wrong:

> Manitoba's Child and Family Services says it will not erase the file of a Winnipeg mother who was investigated for letting her children play in her backyard.
>
> The agency would not comment on the specifics of the case of Jacqui Kendrick, a stay-at-home mother of three. But regardless of the results of their investigation, the agency said it would not erase the file because all documentation and records need to be accessible in the event that another concern arises in the future.

This is the kind of thing that parents should know about when there are deciding where to live. I can guarantee you that the person who called the government is no conservative. Now imagine a nosy neighbor decided that your views on social issues, e.g. – the definition of marriage, shouldn't be passed on to your children. Or suppose a nosy neighbor didn't like the church that your children attended. Or the yard sign for a conservative candidate in your yard. There are government agencies out there to help them to make sure that your children believe the "right" views – the things that the secular left want them to believe.

What secular leftism teaches people on the left is that some opinions and values are so wrong that they are 100% justified in using the government to stamp them out. Something to think about when you are deciding where to live and how open to be with your neighbors about what you believe. By all means, make a big impact. But be aware of what the other side thinks about what you're doing.

# Cruz campaign outmaneuvers Trump again in Maine

**Wintery Knight** · 25 April 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

The Week reports on yet more bungling from the disorganized Trump campaign.

Excerpt:

> Sen. Ted Cruz (R-Texas) snagged at least 65 of the 94 delegates awarded Saturday, boosting his shot at winning the Republican National Convention's hypothetical second ballot, should Donald Trump not secure the Republican Party's nomination outright.
>
> The senator picked up 19 of 20 delegates in Maine, 36 of 37 in Utah, nine in Minnesota, and one in South Carolina, *Politico* reports. Kentucky delegates did not reveal their leanings.

How did he do it? Was it witchcraft? That's what that clown Trump says. It's voodoo! And the media repeats everything he says, because they want the Republicans to nominate a clown.

So what really happened?

Cruz volunteer hands out signs at the Maine GOP Convention

Bangor Daily News explains:

> In a blow to Gov. Paul LePage, supporters of Republican presidential candidate Ted Cruz took at least 19 of Maine's 23 delegates to the party's national convention on Saturday.
>
> They outmaneuvered front-runner Donald Trump — who is endorsed by the governor — on the floor of Maine's state convention with an eye toward a potential contested national convention in July between Trump, Cruz and Ohio Gov. John Kasich.
>
> "The grass-roots here is unbelievable," said Senate Majority Leader Garrett Mason, R-Lisbon Falls, one of the leaders of Cruz's Maine campaign. "I've honestly never seen anything like it in my tenure in politics."
>
> The Texas senator won 12 of 23 national convention delegates at Maine's March caucuses, with Trump winning nine and Kasich two. But they're only bound to their candidates on a first ballot at the convention in Cleveland. On subsequent ballots, they can vote for anyone.
>
> Trump is in front, but he isn't on track to have enough delegates to win the nomination outright before the convention. If he falls short, it would likely go to a second ballot for the first time since 1948, leaving an opening for Cruz and Kasich.
>
> Cruz's campaign used majority support at the Maine convention to install 19 supporters — some of whom would vote for other candidates, then switch to Cruz on a second ballot — as delegates.
>
> It was a big loss for Trump and LePage, even though the governor was elected as a delegate from Maine on Saturday, overcoming an effort from Cruz supporters to reject his bid.
>
> […]**[Cruz's] campaign circulated a slate of Cruz-approved delegate candidates earlier this week and during voting, Cruz activists paced the convention floor with posters showing it, with Trump and Kasich supporters aligning behind LePage's unsuccessful ticket.**

Witchcraft!

Things will be difficult for Cruz in the near term, as Donald Trump always does well in states that are more liberal, since he is a liberal. And the next few states are filled with liberals like Trump.

As the election race continues, though, more and more of Trump's real liberal positions are coming back. Well, I mean he believed them all up until just before he decided to run, but he had to hide them to fool his gullible supporters. Last week, he came out in favor of rape and incest exceptions to the pro-life view – a position which the Republican Party does not hold. He also expressed his support for men using women's bathrooms, if they feel that is appropriate. And he wants to raise taxes.

Cruz is even running an ad about Trump's new position:

So how does the race look? This article on Soshable explains:

> Here's the reality. If Cruz can win Indiana and stay close or even beat Trump in California, it's **virtually impossible for Trump to get 1,237 delegates on the first ballot**. If it goes to a second ballot, Cruz's chances of getting to 1,237 are much higher than Trump's. New York didn't change that. Trump's upcoming victories in the Northeast states on Tuesday won't change that, either. Indiana will decide whether the race continues. After that, California will decide the outcome.
>
> Cruz will win Indiana unless the media can make their false narrative stick. Polls show it to be close. In fact, they're very similar to Iowa before Cruz came in and won. That was a caucus state, so we can't really count on the same results, but the most demographically similar state to Indiana is Wisconsin which Cruz won handily.
>
> California is a different story, but at this point in the race the polls are worthless. We have over a month until then. Early voting starts shortly after Indiana results are in, so a win becomes even more important for Cruz.
>
> With all of this understood, there's only one conclusion for Cruz supporters: keep fighting tooth and nail. Don't listen to the mainstream media's narrative. Don't lose hope. Cruz has run an incredible campaign and his strength in delegates will result in the nomination as long as we can keep the pressure up, win in Indiana, and do well in California. All of the other states are pretty much set.
>
> As Trump's policies keep shifting to the left, Republicans are starting to realize that he's a Democrat clothed in the singular conservative principle of building a wall (which Cruz has wanted to do since 2012). We need to persevere through the lies being told by the media and remain resolute in our convictions to make the last conservative in the race the next GOP nominee.

Well, Cruz himself is very busy running ads and doing interviews.

Here's one of his latest ads:

Pretty slick. And here he is on the Mark Levin show:

It all comes down to Indiana and California now, and Cruz has been in there organizing for months already.

# Women verbally abuses man for refusing to have sex with her on the first date

**Wintery Knight** · 25 April 2016 · Archived copy · Original

Click for larger image of chat between a sensible man and a crazy woman

Dina sent me this horrifying article from the UK Daily Mail.

It says:

> A man received a barrage of abuse over texts after refusing to sleep with a woman during a date.
>
> The screenshots of the messages, which were posted to image sharing site Imgur last night, show the man's female date initiate conversation before launching into an angry rant.
>
> The unnamed woman even goes so far as to suggest that her date had no right to turn down the opportunity to sleep with her, asking him whether he was gay and telling him no only means no when a woman says it.
>
> 'Can I ask you something?' the woman says.
>
> Once her unnamed date from the the night before agrees she continues. 'Why didn't we have sex last night?'
>
> The rational man writes, 'I'm not really sure. Just didn't feel like it. That bad?'
>
> It seems as though, according to the woman, it certainly is bad, as she goes on to send some foul-mouthed messages.
>
> 'It kind of ****** me off because I took a good 2 [sic] hours out of my time to get all ready, shave my legs, and what not… I'm actually super ******* ****** I wasted 2 hours of my time getting ready for nothing.'
>
> The confused woman goes on to add, 'I literally kept giving you hints and was trying all night.'
>
> However, the man stands his ground and replies: 'I just didn't want to. Sorry bout it lol. What's the big deal, it's just sex [sic].'
>
> But the woman just can't accept no for an answer and loses her cool completely at his response, as she writes: 'The big deal is I wasted 2 [sic] hours…Okay **** that a whole night trying to have sex with you and you just 'didn't want to.'
>
> 'Like what's the issue? Are you actually gay and lying? Am I that ******* hideous? Not that ******* hard to whip your **** out???'
>
> **And she even argues with the man's protestations of 'no means no' as she claims that the anti-rape catchphrase only has significance when she uses it.**
>
> **However, the man still manages to keep his composure and cooly answers the message, calling the**

> **woman 'hypocritical' and repeatedly telling her that he 'didn't need reasons' to not want to have sex with her.**
>
> **He also sarcastically remarked: 'Rape is only rape for women, got it.'**
>
> **Taking the comment seriously and without any explanation, the woman replies: 'Basically.'**

Read that part in bold carefully. She thinks that if she asks for sex, then the man has no right to tell her no. Compare that with the hysteria we are seeing from feminists over the "rape culture" on university campuses, where an unwanted kiss can now be prosecuted as sexual assault, and speech that offends a woman is "sexual harrassment". Where is the chastity and the modesty that we should expect from women? Is anyone brave enough to tell this woman that her approach to relationships is destructive and harmful?

**The real underlying problem is feminism**

I am seeing a lot of people trying to blame men for the way that the culture has gone ever since feminists pushed the sexual revolution on us. I think we should be blaming feminism. Feminism is the idea that there are no differences whatsoever between men and women. As such, the feminist prescription for the culture is that women start to work like men, drink like men, and have sex without feel bad afterwards like men. That's what they've been teaching women to do in the schools for some time, and guess what… young women believe this and they are acting on it. The normalization of fatherlessness through the generous single mother welfare programs pushed by Democrats just makes the problem worse.

Young women these days want to get attention from men, but they don't want to be saddled with the responsibilities, expectations or obligations of a relationship with him. So, they are very proud about not listening to a man, not caring for him, not investing in him, not auditioning for the role of stay at home wife and mother in any way. They try to get attention from men who have no interest or aptitude for marriage by showing skin and jumping into bed on the first date. They have been taught that their selfishness, i.e. – career, travel, fun, etc., is more important than pursuing marriage. Marriage-minded men are avoided because they are "sexist" for expecting her to develop the skills necessary to actually perform as a wife and mother. The feminist approach of promiscuity-not-marriage basically ruins the woman's ability to commit to a man for life in the way a non-promiscuous woman could.

Women have a narrow window from 18-35 where they can invest their youth and beauty into the life of marriage-minded man, in order to build relationship capital with him that will keep him committed to her as she ages and loses her looks. Obviously, the more she focuses on learning useful skills, both professional and domestic, the more she will be able to attract a good man – a man with a long-term plan who is prepared to commit to a woman through all the stages of her life. Her late teens and 20s is the time to demonstrate ability to be a wife and mother. But a feminist woman's purpose for a man has nothing to do with marriage. She doesn't look for men who want to get married, she avoids them. She just wants to get attention and to show off the handsome men she can attract to her friends.

Older women seem to be telling younger women to not marry too soon. Older women tell the younger women to have fun with their sexuality, to focus on fun and thrills and travel and having experiences. Don't worry about marriage, have fun with hot guys. But the truth is that women cannot waste a moment of time finding a good man early and building her value with him by investing in him. From the time a man starts to work, he can benefit from a woman's support. As this Washington Post article notes, a wife can have an enormously positive impact on her husband's income, career and health, during these early years. When a woman decides not to make it a priority to find a man early and apply her youth, beauty and femininity to encourage and motivate him, she is losing out on being married to a strong man who will be there for her as she ages. Men do fall in love with women who invest in them – if they are good men. It's her job to find a good man, and to make good decisions with her life in order to attract him.

Marriage to a man is not something that a woman can "put off" with impunity. The choice to party and travel and

have fun in her youth comes at a price. What sort of person would put off investing into a retirement fund early so she can waste the money of thrill-seeking and adventures? Everyone knows that sooner you find something worth investing in and start investing in it, the more of a return you will get over the long term. You can't just hope and pray for a retirement fund to materialize at age 35, after you spent all the years before having fun and traveling around. You have to build it up over a long period of time. Similarly, you can't just find a perfect husband at age 35 when you are ready to stop all your selfish fun-seeking and travel. You have to build that man into a competent husband, by helping him with his health, career, saving, and so on. Men and women benefit from each other, and they do better as a unit. The sooner they start to function as a unit, the more they can help each other, the more wealth they can build, the more of an influence they can have.

When you present the need to rollback feminism to man-blaming pastors and parents, typically, they will tell you that we have to keep the feminism intact, and men simply have to marry women who are acting like the women in our news story (until they reach age 35). I have had Christian men tell me that although I was chaste and industrious in my youth, I must now lower my criteria and continue to pursue marriage to women who, like the woman in the story, have not prepared themselves in any way to be content with the roles of wife and mother. I'm sorry, pious parents and pastors, but I am not on board with your "make it work out for her so she'll be happy" plan. Women like the ones in the news story are not prepared for a life-long commitment. Pursuing fun for the first 35 years of one's life does not prepare a woman for marriage. Feminism is not compatible with self-sacrificial love for a husband. The time to fix the new generation of young women is now, though, so you all should get started with them. Get started rolling back their feminism instead of taking it as a given. Don't talk to me about my obligation to marry, you need to focus on producing marriage-minded women who reject feminism. Then we'll talk.

# Can atheists help themselves to objective morality on atheism?

**Wintery Knight** · 25 April 2016 · Archived copy · Original

A conflict of worldviews

Here's Dr. William Lane Craig explaining why you can't:

He presents 3 reasons why in the video, all of which are also discussed in his Defenders class:

> The mention of Plato brings to mind another possible atheistic response to the first premise of the moral argument that *if God does not exist, then objective moral values and duties do not exist*. Plato thought that the Good just exists as a sort of self-subsistent idea, as an entity in and of itself. Indeed, it is the most real thing in reality. The Good simply exists. If you find this difficult to grasp, join the company! Nevertheless, that is what Plato believed. Later Christian thinkers, like Augustine, equated Plato's Good with the nature of God. God's nature is the Good, and so it was anchored in a concrete object, namely, God. But for Plato, at least, the Good just sort of existed on its own as a kind of self-existent idea.
>
> Some atheists might say that moral values, like Justice, Mercy, Love, and Forbearance, just exist all on their own as sort of abstract moral objects. They have no other foundation; they just exist. We can call this view Atheistic Moral Platonism. According to this view, moral values are not grounded in God. They just exist all on their own.
>
> Unintelligibility of Atheistic Moral Platonism
>
> What might we say by way of response to Atheistic Moral Platonism? Let me make three responses. First, it seems to me that this view is just unintelligible. I simply don't understand what it means. What does it mean, for example, to say that the moral value Justice just exists? I understand what it means to say that a *person* is just or that some *action* is just, but what does it even mean to say that in the absence of any persons or any objects at all, that Justice just exists? It is hard to understand even what this means. Moral values seem to be properties of persons, and so it is hard to understand how Justice can just exist as a sort of abstraction.
>
> Lack of Moral Obligation on Atheistic Moral Platonism
>
> Secondly, a major weakness of this view is that it provides no basis for objective moral duties. Let's suppose, for the sake of argument, that moral values like Justice, Love, Forbearance, and Tolerance just exist on their own. Why would that lay any sort of moral obligation upon me? Why would the existence of this realm of ideas make it my duty to be, say, merciful or loving? Who or what lays such an obligation upon me? Why would I have the moral duty to be merciful or loving? Notice that on this view moral vices like Greed, Hatred,

> and Selfishness presumably also exist as abstractions. In the absence of any moral law giver, what obligates me to align my life with one set of these abstract ideas rather than with some other set of abstract ideas? There just doesn't seem to be any basis at all for moral duty in this view. In the absence of a moral law giver, Atheistic Moral Platonism lacks any basis for moral obligation.
>
> Improbability of Atheistic Moral Platonism
>
> Finally, thirdly, it is fantastically improbable that the blind evolutionary process should spit forth exactly those kinds of creatures that align with the existence of this realm of abstract values.1 Remember that they have no relationship with each other at all. The natural realm and this abstract moral realm are completely separate. And yet, lo and behold, the natural realm has by chance alone evolved exactly those kind of creatures whose lives align with these moral duties and values. This seems to be an incredible coincidence when you think about it. It is almost as if the moral realm knew that we were coming! I think it is a far more plausible view to say that both the natural realm and the moral realm are under the sovereignty of a divine being, who is both the creator of natural laws that govern the physical universe and whose commands constitute the moral laws that govern our ethical duties. This is a more coherent view of reality. Theism is a more coherent view because these two realms of reality don't fall apart in this disjointed way. They are both under the sovereignty of a single natural and moral law giver.
>
> For those three reasons, Atheistic Moral Platonism is a less plausible view than theistic based ethics such as I have been defending.

And now, I must be mean to the atheists, because I think this me too nonsense is just ridiculous, desperate intellectual dishonesty.

I remember having a conversation with one of my IT project managers who was an atheist, and she asked me what I thought would happen to dogs when they died. I said "well they don't have an afterlife so they just rot away when we bury them and get eaten by worms". She was aghast and said "no they don't, they go to Heaven". That was just her wishful thinking, there. And that's what morality on atheism is: wishful thinking. It's just an appearance package that gets bolted on absolute meaninglessness and hedonism. And even if the atheist tries to make traditional decisions in their own lives, they typically push for full-on dismantling of Judeo-Christian values, especially in the sexual realm. And that spills over into abortion, divorce, same-sex marriage and government restraints on free speech, conscience and religious liberty.

Dear atheists: you cannot duct tape morality onto nihilism and have it be rational. We know you're doing it to feel good about yourselves and to appear normal instead of wearing your nihilism openly. But your faked morality is not even close to the morality of theists, and especially not of Christian theists. Christians go against their self-interest because we imitate the self-sacrificial love of Christ, who gave himself as a ransom to save others. That makes no sense on an atheistic worldview, since this life is all you have, and there is no afterlife where your actions are in the context of a relationship with that self-sacrificial Son of God. In any case, free will doesn't exist on atheism, so that means no moral choices regardless. These are the common sense implications of atheist first principles, and in fact that's what you hear expressed from the finest atheist scholars: no free will, no right and wrong, no life after death.

If you want to see what atheists really think about morality, then take a look at this post featuring Matt Dillahunty, where he is asked to condemn the Holocaust as objectively wrong, and he refuses to do it. That's intellectually consistent atheist morality right there. If the universe is an accident, and human beings evolved by accident, then there is way things ought to be, and no way we ought to act. And no one is there is no ongoing two-way relationship for our conduct to be part of, anyway. On atheism, human beings will die out individually and collectively in the heat death of the universe. Once the heat death of the universe arrives, there will be no one left to care how we lived after we're dead – there is no one waiting for us who cares how we act towards him and towards others. Atheists can arbitrarily put any limits they want on their actions, based on what makes them feel good, and what makes people like them, perhaps taking account the arbitrary customs and conventions of the time and place they find themselves in. But it's delusional and irrational make-believe for atheists to claim that morality is rational on

their worldview.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion

# Minnesota parents sue to force teachers and students to celebrate transgender child

**Wintery Knight** · 26 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

It's not about acceptance, now you have to forced to affirm and celebrate other people's moral views – or else.

The Federalist reports:

> **Parents of a 5-year-old "transgender child" have filed a complaint against a St. Paul charter school, alleging it failed to protect him from bullying and refused to teach all the students their preferred transgender-awareness curriculum.**

> **David and Hannah Edwards, whose child was born a boy but now thinks he's a girl, has filed with the city's Department of Human Rights, claiming their child "wasn't able to take full advantage of Nova's educational opportunities because of her gender identity and expression. This violated her rights."**
>
> When the boy showed up at school wearing pink tennis shoes and wanting to wear a jumper like the girls in gym class, other children reportedly pointed and laughed at him. **The parents contacted the school and wanted something done to protect their child from bullying, despite the fact that the school currently has an anti-bullying policy.**
>
> Nova Classical Academy's executive director, Eric Williams, told 5 Eyewitness News the school has a mandatory policy, called the Bullying Prohibition Policy, which they are simply trying to follow. "He says that means providing a safe and welcoming environment for all students, regardless of their status."

> **The Edwardses, however, wanted more—for the school to teach only their views of human sexuality and to be engaged in helping their five-year-old boy transition to a girl.**

When it comes to the secular left, reality itself is no defense to their need to feel good about whatever it is that they decide they want to do. You better bake them a cake, or else. You better call them the sex they want you to, or else. You better let them use the bathroom they want, or else.

**Meanwhile, in Colorado**

ABC News reports that the appeal filed by Christian baker in Colorado has been dismissed, meaning that he will be forced to violate his conscience and participate in gay wedding ceremonies.

So, the ACLU and the Colorado Supreme Court decided that:

- Christians do not have a right to own and run their own businesses in accordance with their conscience
- Christians do not have a right to their personal beliefs, they must act as if they share the secular leftist beliefs of the ACLU and Colorado Democrats
- Christians do not have the same right to equality and fairness as other minority groups favored by the secular lefist elites, including the ACLU
- it is OK to use the law to discriminate against Christians and to punish Christians for acting on their religious beliefs
- The right of LGBT people not to feel offended overrides the right of Christians to have freedom of speech and freedom of religion – in America

You will be made to care.

# Boys are falling further and further behind girls in UK public schools

**Wintery Knight** · 26 April 2016 · Archived copy · Original

Boys are enrolling in university at a much lower rate than girls
This story is from the UK Telegraph.

Excerpt:

> Each time UCAS releases statistics on equality of access to university in the UK, the gap between the entry rates for girls and boys gets a bit worse.
>
> Just before Christmas, our 2015 End of Cycle Report revealed that young women in the UK are now 35pc more likely to go to university than young men, and 52pc more likely when both sexes are from disadvantaged backgrounds.
>
> Today we publish data on the sex balance in specific degree courses, which shows that there are more women than men accepted to most subject areas.
>
> This highly entrenched trend is not just a reflection of the preferences of young men and women when it comes to making decisions about their lives after school or college.  It is a direct consequence of years of lower educational achievement by boys, particularly those from disadvantaged backgrounds, throughout primary and secondary education.
>
> At the end of primary education (age 11), only 22pc of boys achieve Level 5 or better in reading, writing and maths compared to 27pc of girls.
>
> By the age of 16, girls are over 20pc more likely to achieve five GCSEsincluding English and Maths at Grade C or better.
>
> By age 18, only 47pc of students studying for pre-university level qualifications are boys. 30,000 more girls than boys are studying for A levels or other academic qualifications which best support progression to higher tariff universities. Some 5,000 more boys than girls are doing vocational qualifications, but girls are

> outperforming boys in both academic and vocational qualifications at this level. The only exception seems to be that slightly more of the boys who are doing A levels get the very highest A* grades, and they still do rather better at maths than girls.
>
> Degrees supporting traditionally male-dominated professions such as medicine, law and dentistry now all recruit more female students than male. And move over James Herriot – 80pc of students accepted to veterinary medicine last year were female.
>
> The UCAS figures today also show that there are more women than men across a range of subjects including, pathology and anatomy, biology, genetics, nursing, social work, and English. Two years ago women overtook men in Philosophy, and the same happened with history subjects in 2011. Given that there are more men than women in the population, to achieve equality, there would need to be around 5pc more men than women across the board.

Why is this happening? Well the author of the piece nails the cause of the problem:

> **So what is going wrong? Does lower achievement for boys have anything to do with the 80pc female dominated state schools' workforce, which includes 85pc female teachers in primary schools and 62pc in secondary? Would boys respond and learn better with more male teachers and role models?**
>
> **[…]What about the curriculum and qualifications? In all the heated debates about the primary curriculum, I don't recall hearing anything about the different impacts on teaching and learning for girls and boys.**

If we were serious about fixing this, we would hire more male teachers and administrators in the schools. Boys do better studying material that is boy-friendly, and when the material is taught by male teachers. Boys tend to underperform in mixed-gender classrooms, too. But there is no effort in the schools to fix that, because men can never be victims – only women. No one in the education system wants to fix problems for boys. No one wants to speak up for boys for fear of being perceived as insufficiently feminist.

Are the UK schools doing anything to address these problems?

Of course not:

> **[…][A]lthough most schools will track the achievement of their boys and girls, there seems to be little focus on the gender gap in education policy. A recent FOI request by the men's human rights group, MRA-UK, asked the Department for Education if it recognized boys' underachievement, what initiatives are in place, and how much is budgeted for them in 2015/16. The response in July 2015 was "The Department does not fund any initiatives that just focus on addressing boys' underachievement".**

My advice to young men is to hit the math and STEM hard, and understand that the odds are stacked against you. You have to take your education seriously, because if you don't no one else will. You have to take your career seriously, because if you don't no one else will. The system isn't there to help boys. You'll have to make your own way on your own strength, and the system is there to fight you all the way.

# Are the Galapagos finch beaks evidence of Darwinian evolution?

**Wintery Knight** · 26 April 2016 · Archived copy · Original

I have a key that will unlock a puzzling mystery
Jonathan Wells has an article about it at Evolution News.

It says:

> When Charles Darwin visited the Galápagos Islands in 1835, he collected specimens of the local wildlife. These included some finches that he threw into bags, many of them mislabeled. Although the Galápagos finches had little impact on Darwin's thinking (he doesn't even mention them in *The Origin of Species*), biologists who studied them a century later called them "Darwin's finches" and invented the myth that Darwin had correlated differences in the finches' beaks with different food sources (he hadn't). According to the myth, Darwin was inspired by the finches to formulate his theory of evolution, thoughaccording to historian of science Frank Sulloway "nothing could be further from the truth."
>
> In the 1970s, biologists studied a population of medium ground finches on one of the islands in great detail. When a severe drought left only large, hard-to-crack seeds, 85 percent of the birds perished. The survivors had beaks that were about 5 percent larger than the average beak size in the original population. The biologists estimated that if similar droughts occurred once every ten years, the population could become a new species in only 200 years. In a 1999 booklet defending evolution, the U.S. National Academy of Sciences called the finches "a particularly compelling example" of the origin of species.
>
> **But after the drought, birds with smaller beaks flourished again, and the average beak size of the population returned to normal. No net evolution had occurred.** No matter; Darwin's finches became an icon of evolution that is still featured in most biology textbooks.
>
> In the 1980s, a population of large ground finches, with larger beaks than the medium ground finches, migrated to the island. When a drought in 2004-2005 again reduced the food supply, the medium and large ground finch populations both declined. But since even the largest beaks among the medium ground finches were no match for the beaks of the large ground finches, the latter pretty much monopolized the larger seeds and the former had to make do with smaller seeds. This time, the medium ground finches that survived the drought had beaks that were *smaller* than the average size in the original population. Biologists studying the finches argued that birds with smaller beaks were better able to eat the tiny seeds that were left after the large ground finches ate the big ones, and they concluded that this was again an example of "evolutionary change."

> **[…]Wait a minute. Average beak size increased slightly during one drought, only to return to normal after the rains return. Then average beak size decreased slightly during another drought. A region of DNA is correlated with beak size. And somehow that tells us how finches evolved in the first place?**

There is an important distinction to make between micro-evolution and macro-evolution. Changes within a type is micro-evolution. Evolving a new organ type or body plan is macro-evolution. There is plenty of evidence for micro-evolution, but no evidence for macro-evolution.

What needs to be proven by the Darwinists is that the same process that results in different average beak size in a population of finches after a drought can create the finches in the first place. I think that Darwinists are credulous – they believe what they want to believe because they want to believe it, even if the evidence is incredibly weak. Darwinists must demonstrate that *heritable variations can result in the generation of new organ types and body plans.* Changes in average beak size is not interesting. What is needed is to show how the beaks, much less the wings, evolved in the first place.

**Icons of Evolution**

Jonathan has actually written about a number of  misleading things that you may mind in Biology textbooks.

Here are the sections in his book "Icons of Evolution":

- The Miller-Urey Experiment
- Darwin's Tree of Life
- Homology in Vertebrate Limbs
- Haeckel's Embroys
- Archaeopteryx–The Missing Link
- Peppered Moths
- Darwin's Finches
- Four-Winged Fruit Flies
- Fossil Horses and Directed Evolution
- From Ape to Human: The Ultimate Icon

# Kansas enacts law to attach work requirement to welfare benefits

**Wintery Knight** · 27 April 2016 · Archived copy · Original

Kansas governor Sam Brownback

This story is from the Daily Signal, and it's about a new (April 2015) Kansas law that produced great effects in the last year.

It says:

> Over the past several years, the number of Americans on food stamps has soared. In particular, since 2009, the number of "able-bodied-adults" without dependents receiving food stamps more than doubled nationally. Part of this increase is due to a federal rule that allowed states to waive food stamps' modest work requirement. However, states such as Kansas and Maine chose to reinstate work requirements. Comparing and contrasting the two approaches provides powerful new evidence about the effectiveness of work.
>
> **According to a report from the Foundation for Government Accountability, before Kansas instituted a work requirement, 93 percent of food stamp recipients were in poverty, with 84 percent in severe poverty. Few of the food stamp recipients claimed any income. Only 21 percent were working at all, and two-fifths of those working were working fewer than 20 hours per week.**
>
> **Once work requirements were established, thousands of food stamp recipients moved into the workforce, promoting income gains and a decrease in poverty. Forty percent of the individuals who left the food stamp ranks found employment within three months, and about 60 percent found employment within a year. They saw an average income increase of 127 percent. Half of those who left the rolls and are working have earnings above the poverty level. Even many of those who stayed on food stamps saw their income increase significantly.**
>
> Work programs provide opportunities such as job training and employment search services. For example, in Kansas, workfare helped one man, who was unemployed for four years and on food stamps, find employment in the publishing industry where he now earns $45,000 annually. Another Kansan who was also previously unemployed and dependent on food stamps for over three years, now has an annual income of $34,000.
>
> Furthermore, with the implementation of the work requirement in Kansas, the caseload dropped by 75 percent. Previously, Kansas was spending $5.5 million per month on food stamp benefits for able-bodied adults; it now spends $1.2 million.

So, I am doing a hunt to find the best states to live in, and Kansas is in my top 5. They have Governor Sam Brownback, and he has just done a magnificent job pushing conservative policies – not just social policies, but fiscal too. It's a great state, but still edged out by Oklahoma and Tennessee, in my opinion. We'll see what else Governor Brownback has in store, though.

You might think that all the news is bad, and that no one is putting into place any conservative policies. Well, of course the good red states are putting in these policies, and of course these policies are achieving the desired objectives. If you elect Democrats, you get Detroit. If you elect Republicans, you get welfare reform that lifts people out of dependency and into earned success. I'm sure that they feel better about not being dependent, too.

# Mark D. Linville: does Darwinian evolution make morality rational?

**Wintery Knight** · 27 April 2016 · Archived copy · Original

A conflict of worldviews

Have you ever heard an atheist tell you that naturalistic evolution is an answer to the moral argument? I have. And I found a good reply to this challenge in the book "Contending With Christianity's Critics". The chapter that responds to the challenge is authored by Dr. Mark D. Linville. It is only 13 pages long. I have a link to the PDF at the bottom of this post.

First, a bit about the author:

> Blog: The Tavern at the End of the World
> Current positions:
>
> - PhD Research Fellow
> - Tutoring Fellow in Philosophy
>
> Education:
>
> - PhD in Philosophy with a minor in South Asian Studies and a specialization in Philosophy of Religion, University of Wisconsin-Madison
> - MA in Philosophy, University of Wisconsin-Madison
> - MA in Philosophy of Religion, Trinity Evangelical Divinity School
> - MA in Theology, Cincinnati Christian Seminary
> - BA in Biblical Studies, Florida Christian College

Here is his thesis of the essay:

> Darwin's account of the origins of human morality is at once elegant, ingenious, and, I shall argue, woefully inadequate. In particular, that account, on its standard interpretation, does not explain morality, but, rather, explains it away . We learn from Darwin not how there could be objective moral facts, but how we could have come to believe—perhaps erroneously—that there are.
>
> Further, the naturalist, who does not believe that there is such a personal being as God, is in principle

> committed to Darwinism, including a Darwinian account of the basic contours of human moral psychology. I'll use the term evolutionary naturalism to refer to this combination of naturalism and Darwinism. And so the naturalist is saddled with a view that explains morality away. Whatever reason we have for believing in moral facts is also a reason for thinking naturalism is false. I conclude the essay with a brief account of a theistic conception of morality, and argue that the theist is in a better position to affirm the objectivity of morality.

And here's a sample to get your attention:

> But even if we are assured that a "normal" person will be prompted by the social instincts and that those instincts are typically flanked and reinforced by a set of moral emotions, we still do not have a truly normative account of moral obligation. There is nothing in Darwin's own account to indicate that the ensuing sense of guilt—a guilty feeling—is indicative of actual moral guilt resulting from the violation of an objective moral law. The revenge taken by one's own conscience amounts to a sort of second-order propensity to feel a certain way given one's past relation to conflicting first-order propensities (e.g., the father's impulse to save his child versus his impulse to save himself). Unless we import normative considerations from some other source, it seems that, whether it is a first or second-order inclination,one's being prompted by it is more readily understood as a descriptive feature of one's own psychology than material for a normative assessment of one's behavior or character. And, assuming that there is anything to this observation, an ascent into even higher levels of propensities ("I feel guilty for not having felt guilty for not being remorseful over not obeying my social instincts…") introduces nothing of normative import. Suppose you encounter a man who neither feels the pull of social, paternal or familial instincts nor is in the least bit concerned over his apparent lack of conscience. What, from a strictly Darwinian perspective, can one say to him that is of any serious moral import? "You are not moved to action by the impulses that move most of us." Right. So?
>
> The problem afflicts contemporary construals of an evolutionary account of human morality. Consider Michael Shermer's explanation for the evolution of a moral sense—the "science of good and evil." He explains,
>
> By a moral sense, I mean a moral feeling or emotion generated by actions. For example, positive emotions such as righteousness and pride are experienced as the psychological feeling of doing "good." These moral emotions likely evolved out of behaviors that were reinforced as being good either for the individual or for the group.2
>
> Shermer goes on to compare such moral emotions to other emotions and sensations that are universally experienced, such as hunger and the sexual urge. He then addresses the question of moral motivation.
>
> In this evolutionary theory of morality, asking "Why should we be moral?" is like asking "Why should we be hungry?" or "Why should we be horny?" For that matter, we could ask, "Why should we be jealous?" or "Why should we fall in love?" The answer is that it is as much a part of human nature to be moral as it is to be hungry, horny, jealous, and in love.3
>
> Thus, according to Shermer, given an evolutionary account, such a question is simply a non-starter. Moral motivation is a given as it is wired in as one of our basic drives. Of course, one might point out that Shermer's "moral emotions" often do need encouragement in a way that, say, "horniness," does not. More importantly, Shermer apparently fails to notice that if asking "Why should I be moral?" is like asking, "Why should I be horny?" then asserting, "You ought to be moral" is like asserting, "You ought to be horny." As goes the interrogative, so goes the imperative. But if the latter seems out of place, then, on Shermer's view, so is the former.
>
> One might thus observe that if morality is anything at all, it is irreducibly normative in nature. But the Darwinian account winds up reducing morality to descriptive features of human psychology. Like the libido, either the moral sense is present and active or it is not. If it is, then we might expect one to behave accordingly. If not, why, then, as a famous blues man once put it, "the boogie woogie just ain't in me." And so the resulting "morality" is that in name only.

> **In light of such considerations, it is tempting to conclude with C. S. Lewis that, if the naturalist remembered his philosophy out of school, he would recognize that any claim to the effect that "I ought" is on a par with "I itch," in that it is nothing more than a descriptive piece of autobiography with no essential reference to any actual obligations.**

When it comes to morality, we are not interested in mere descriptions of behavior. We want to know about prescriptions of behavior, and whether why we should care about following those prescriptions. We are interested in what grounds our sense of moral obligation in reality. What underwrites our sense of moral obligation? If it is just rooted in feelings, then why should we obey our moral sense when obeying it goes against out self-interest? Feelings are subjective things, and doing the right thing in a real objective state of affairs requires more than just feelings. There has to be a real objective state of affairs that makes it rational for us to do the right thing, even when the right thing is against our own self-interest. That's what morality is – objective moral obligations *overriding* subjective feelings. I wouldn't trust someone to be moral if it were just based on their feelings.

The PDF is right here for downloading, with the permission of the author.

# Conservative speakers take on political correctness at U Mass

**Wintery Knight** · 27 April 2016 · Archived copy · Original

Conservative speakers face liberal students on campus

My friend N. sent me this video of a campus event at the EXTREMELY liberal University of Massachusetts. This is the center of the leftist universe, the worst place in the world for conservatives students.

WARNING: this video contains the most horrible swearing and language you can possibly imagine, and it will scar you for life. But it is really interesting to see how non-leftist ideas are received on a liberal university campus. It's just incredible, the screaming, shouting, insults, threats of violence – all from the secular left. It is so bad that even I cringed at some of the un-PC talk and thought the mean conservatives went too far at times. Even I was offended!

Here's the video:

Do not watch this with little kids or even teens around, it's just horrible, like watching a train wreck with everyone on fire and screaming and dying. I really feel bad about posting it, but my friend loved it so much, and I was permanently scarred by it. Holy snark, have the universities ever become radicalized by the secular left.

Speakers:

- Milo Yiannopoulos
- Christina Hoff Sommers
- Steven Crowder

**Summary:**

Feminism:

- Milo: feminism is cancer
- Sommers: feminist theory is put forward with lies, misrepresentations and false statistics
- Steven: the leftist students are shouting down the speakers because they are spoiled, entitled brats

Political correctness:

- Milo: etiquette is good for discussions, but political correctness undermines the pursuit of truth, and can even

have deadly consequences, e.g. – citizens refusing to report the Muslim rape gangs in the UK because of fear of political correctness

- Sommers: etiquette is good for discussions, but political correctness is a way of pushing one set of political views and shutting down discussions
- Steven: political correctness is a tool for shutting down discussions used by people who don't have reason or evidence on their side

Hate speech:

- Milo: we should allow people who are extremists on either side to speak, because that allows people to hear them and reject them
- Sommers: some students are shouting down speakers because they oppose intellectual diversity, and are afraid that conservative views are correct and others will be persuaded if they are allowed to hear them
- Steven: leftists fear intellectual diversity, they shout down conservative speakers because they live in a bubble where they never hear libertarian or conservative points of view
- Milo: leftists are guilty of the worst kind of bigotry: they insist that gay people be leftists, that black people be leftists and women be leftists, they treat conservatives in these minority groups horribly

Is there a wage gap between men and women?

- Sommers: the evidence shows that the differences in pay are explained by what women choose to study, time women take time off for babies, how many hours women work, and other choices
- Sommers: women should major in things like economics and engineering, not feminist dance therapy

Are 1 in 5 women sexually assaulted on campus?

- Steven: a lot of these sensationalized rape claims later turn out to be false, e.g. – Columbia mattress girl, Virginia Rolling Stone girl
- Sommers: this is another example of how feminists advance an agenda by misusing statistics, but the number from real government studies is 1 in 53

This ends the panel discussion. I cannot write what the questions are, because the questioners were almost entirely rude, and just stood up and said lots of swear words, which you can apparently get credit for at the University of Massachusetts.

Several of my friends posted this video clip, taken from a member of the audience, which gives you a close up view of how indoctrinated in leftism the students are:

It seems to me that the barbarians are inside the gates, and the zombie apocalypse is nearly upon us. Can you imagine living next to one of these little psychopaths?

# Ted Cruz picks Carly Fiorina for his running mate

**Wintery Knight** · 28 April 2016 · Archived copy · Original

Your 2016 GOP ticket: Ted Cruz and Carly Fiorina

All my Facebook friends except Doug were thrilled with this pick, especially the Republican women. Let's look at some articles to see what we are getting with this pick.

Let's start with the radically leftist Washington Post, and socially liberally columnist Jennifer Rubin.

She gives 10 reasons why the selection of Fiorina will help Cruz:

> Sen. Ted Cruz (R-Tex.) announced his VP pick, Carly Fiorina, in Indiana this afternoon, taking his best shot to rouse the GOP and stop Donald Trump. Watching first Cruz and then Fiorina, one could see why this *might* work:
>
> […]2. She, in a somewhat convincing fashion, lumped Trump and Hillary Clinton together, saying they are not going to change the system. "They are the system," she said with great deliberateness. That's a plausible argument, actually. They are two very privileged, ideologically slippery candidates who've worked the system to their advantage. Cruz has tried to convey the same, but her delivery was simply better.
>
> […]5. She is making a straight play for female voters. She stressed her own experiences in the workplace. Cruz stressed them. Cruz recounted her standing up to Trump's insult about her face. Many women will perk up and listen to that message.
>
> […]7. She tried her best to humanize Cruz, mentioning they watched the Final Four together (this is*Indiana*, folks) and singing (yeah, *singing*) one of her made-up songs to the Cruz daughters. Women, especially younger moms, are likely to find that endearing. At least it was unexpected. The campaign can use some spontaneity.
>
> […]9. She and Cruz reinforce one another's mental agility. These people are smart, whip smart.

I can't help but think that every woman who has ever struggled in the workplace is going to have some sympathy for a Cruz-Fiorina ticket. Everybody resonates with the story of the woman who starts of as a receptionist and then rises to the level of CEO. It's important that conservative women be presented to contrast with radical feminist rhetoric.

Remember how Cruz talked about his mother Eleanor and his wife Heidi as “strong women”?

Picking Fiorina reinforces that this is something important to him, and creates a clear contrast with the promiscuous, pro-abortion, twice-divorced, adulterous misogynist scumbag that he is running against.

Jim Geraghty at National Review likes the pick, but for different reasons:

> She’s strong and polished on the stump, equally at home giving a big policy speech, answering questions at a town hall, or offering one-liners on a late-night talk show. She’s an outsider, in a year when political neophytes are all the rage. And most important of all, she has the best chance of any potential running mate to negate presumptive Democratic nominee Hillary Clinton’s political strengths.
>
> “She tweets about women’s rights in this country and takes money from governments that deny women the most basic human rights,” Fiorina said at last year’s CPAC, referencing the Clinton Foundation’s unsavory donors. “I come from a world where speeches are not accomplishments. Activity isn’t accomplishment. Title isn’t accomplishment. I come from a world where you have to actually do something; you have to produce results.”
>
> Fiorina can rip into Clinton without fear of being called sexist. She can also coopt Clinton’s message to female voters, letting them know that she’s been through exactly the same aggravations and indignities they’ve experienced in their everyday lives. She made a point of claiming the feminist mantle away from Democrats even as she announced that she was suspending her campaign:
>
> Do not let others define you. Do not listen to anyone who says you have to vote a certain way or for a certain candidate because you’re a woman. That is not feminism. Feminism doesn’t shut down conversations or threaten women. It is not about ideology. It is not a weapon to wield against your political opponent. A feminist is a woman who lives the life she chooses and uses all her God-given gifts.

If I had to summarize Fiorina in one sentence, it’s that she is *competent.* She is the polar opposite of the clown Trump. She answers policy questions with so many details and so much evidence, that even an anti-feminist like me thinks “gee, I’m glad that she is up there to put forward conservative views and not someone who doesn’t know what he is talking about”. I never feel that she is a shrill-shrieking harpy like Hillary Clinton when she talks. In fact, when she talks, I want her to keep talking. She has a way of being strong and earnest that is feminine, if that makes any sense. I enjoy hearing her speak, I enjoy that she is on the conservative team.

# New Age expert explains his journey from new age mysticism to Christianity

**Wintery Knight** · 28 April 2016 · Archived copy · Original

A long journey through the night

I'm always cautious about people who convert to Christianity, because I want to make sure that they are going about their investigation the right way. I watched the testimony and when he started to talk about watching tons and tons of William Lane Craig debates, I got very interested.

I'm very skeptical of people claiming to be Christians who are raised in the church and never encounter the evidence for theism and the resurrection, and have to lookup the philosophical debate about problems like evil, suffering, hiddenness. I think the church generally does a poor job of producing converts who understand what they believe and why they believe it. In my thinking, unless you are watching debates and hearing the back and forth, and then reading about these things later on your own, you're probably not going to grasp the enormity of what Christianity is so that it will affect your priorities and decision-making.

Anyway, here is his testimony: (H/T Blake, JoeCoder, William)

I think that there is a lot of cultural Christianity and people think they can claim the label of "Christian" without re-reprioritizing, and taking some losses. All the Christians I know have things that they have had to give up, wounds that they have had to live with, problems that won't go away, hurts that are not being cared for. And yet we continue, because God is not seen as our cosmic butler. Most of the atheists I know rejected God because he interfered with their pursuit of pleasure, made them unpopular, or refused to give them what they needed to be happy. This guy is beyond all of that. He is not afraid to re-prioritize his entire life in a way that complies with the truth yet goes against his self-interest. I was not raised in the church, so I don't normally say "praise God" at every little thing, but when I finished this video, that was my first thought. We sure could use more Christians who have that understanding of Christianity.

If you grew up around Christians, and learned about what Christianity is from your parents, peers and pastors, then may I just recommend to you that you watch one or two William Lane Craig debates, then work your way through a book like "Is God Just a Human Invention?" or "God's Crime Scene". If you're not a Christian now, and all you know about Chrisitanity was what you read in the Bible, and what other Christians told you, then you aren't in a position to assess the value of what was presented to you. Every day people are giving up their pre-Christian lives because they evaluate and accept the truth of Christianity. If you haven't looked into it at the level of reason and

evidence, then you haven't looked into it at all. It's on you to puzzle out these things for yourself, and adjust.

By the way, Steve's web site is Spirit Science and Metaphysics.

# Paul Helm debates William Lane Craig on Calvinism and Molinism

**Wintery Knight** · 28 April 2016 · Archived copy · Original

Two horses fight it out, may the best horse win!

I listened to this excellent discussion between Dr. William Lane Craig and Oxford University Calvinist philosopher Dr. Paul Helm. I think this is a useful discussion in general because atheists often bring up problems with Calvinism as objections to Christianity in general, such as:

- If God exists, then he controls everything and I don't have free will
- If God knows the future, then I don't have free will
- If God controls everything, then I am not responsible for my sinning
- If God has to choose me to be saved, then I am not responsible for my damnation

Details:

> If God ordains the future, can humans have free will? Are people predestined for salvation? And what does the Bible say on the matter? William Lane Craig is a Christian philosopher and leading proponent of Molinism, a view of divine sovereignty that seeks to reconcile God's fore-ordination with human free will. Paul Helm is a leading Calvin Scholar. He defends the view that God predestines the future, limiting human freedom.
>
> MP3 of this show: http://cdnapi.kaltura.com/p/618072/sp/61807200/playManifest/entryId/1_jn0bdo52/flavorId/0_002f1k0d/protocol/http/format/url/a.mp3?clientTag=feed:1_jlj47tkv
>
> For William Lane Craig: http://www.reasonablefaith.org
>
> For Paul Helm: http://paulhelmsdeep.blogspot.co.uk/

I was surprised because my Calvinist friend Dina thought that Dr. Helm won this debate, but I thought that Dr. Craig won. So without further ado, here is the snark-free summary of the discussion. I also sent the summary to Dina to make sure that it was reasonably fair and accurate. She said it was biased, but she was predestined to say that. Anyway, there's a commentary on the debate over at Michael's Theology blog. And Calvinist Remington has a podcast review in parts. Part 1 is here.

**Summary:**

JB: Has Lewis had any impact on your apologetics?

Craig: Not as a scholar, but more as a model of a scholar who leaves a legacy through his published work

JB: How did you become interested in Calvinism?

Helm: Starting from childhood, and lately writing more on Calvinism from a philosophical point of view

JB: How do you view God's sovereignty?

Helm: Strong view of divine sovereignty, God is sovereign over all events, but that doesn't mean that they are determined by him

JB: What is Calvin's legacy?

Helm: He amplified an existing concept of predestination, and wrote on many other topics

JB: What is Molinism?

Craig: Molina affirms divine sovereignty as Paul Helm does, but he also affirms libertarian free will

Craig: Every event that occurs happens by God's will or by God's permission

JB: What about open theism?

Craig: Paul and I both oppose open theism

JB: How does Molinism reconcile human free will and divine sovereignty

Craig: God has knowledge of what would happen under any set of circumstances

Craig: God has knowledge of everything that COULD happen, and he has knowledge of everything that WILL happen

Craig: God knows what each person freely choose to do in any set of circumstances and he can place people in times and places where he is able to achieve his ends without violating creaturely freedom and creaturely responsibility

JB: How does this apply to the issue of salvation?

Craig: The circumstances in which God puts a person includes God leading people to him and he foreknows who will respond to his leading

Craig: God has ordered the world in such a way that he foreknows the exact people who will free respond to his leading if he puts them in certain circumstances

JB: Does God want to save the maximum of people?

Craig: My own view is that God does order the world in such a way that the maximum number of people will respond to God's drawing them to himself

JB: Is the Molinist view gaining ground?

Craig: Yes, Calvinists and open theists are both moving towards it, and Molinism is the dominant view among philosophical theologians

JB: Why has Molinism not convinced you?

Helm: It's an unnecessary theory, God's natural knowledge and free knowledge covers what middle knowledge covers

Helm: Calvinism has a stronger view of sin, such that God has to act unilaterally and irrestibly to save them

JB: Are creatures free on your view?

Helm: My view of free will is weaker than Craig's view of free will

Craig: For the Calvinist, grace is irresistible, but for the Molinist, grace is effective when it is met with a response from the creature

Craig: The Bible affirms the strong view of free will, when it says that in certain circumstances people can freely choose to do other than they do

Helm: But if a person is in circumstances X and they are free, then why don't they choose something that isn't what God can foresee

Craig: In identical circumstances, a person has the freedom to choose, and God doesn't determine what they choose, he just foreknows what they choose

Helm: How can God foreknow what people will freely do if people have this strong view of freedom that allows them to do anything? God would not know what people can freely do if they really are free

Craig: God has knowledge of what his creatures would freely do in any set of circumstances, he has knowledge of subjunctive statements

Craig: The Scripture is filled with statements that show that God has this knowledge of what people would do in other circumstances (e.g. – 2 Cor 2:8)

Helm: I am not denying that the Bible is full of subjunctive statements, but if humans have real libertarian free will, then God cannot know what they will do

Craig: I think God does preordain everything, Molinism has a strong sense of divine sovereignty BUT the foreordaining is done with the knowledge of what humans would do in any circumstances, so that what God ordains achieves his ends, but without violating creaturely free will

Craig: I take at face value the passages of the Bible where it says that God wants all persons to be saved

Craig: When the Bible says that God wants ALL persons to be saved (2 Pet 3:9), the Bible means that God wants ALL persons to be saved

Craig: So either universalism is true OR there is something that stops all from being saved outside of God

Craig: the something that prevents all from being saved is creaturely free will

Helm: Most people don't have the opportunity to hear the gospel, so God doesn't want all to be saved

Helm: People can still be responsible for what God "fore-ordains"

JB: Can a person really be responsible for wickedness if they didn't freely choose it?

Helm: Even though God is the only one who can act unilaterally to make save people, the people who act wickedly are still responsible

Craig: Molinism provides an answer to the problem of why not all people have heard the gospel, because by using middle knowledge he is able to know who would respond to the gospel if they heard it and he places those people in the times and places where they will hear it

Craig: That solution means that NO ONE is lost because they have not heard the gospel

Craig: There is Biblical support for (Acts 17:27) God choosing the times and places where people will live SO THAT they will be led by him and be able to respond to his leading

JB: Is God the author of sin, on Calvinism?

Craig: If Calvinists define providence to mean causal determinism, then he is the cause of every effect including human actions, and he is the one who causes people to sin

Craig: This view (determinism) impugns the character of God

Helm: I don't think that sovereignty requires determinism

Helm: God has mysterious resources – which I cannot specify – that reconcile his sovereignty with human responsibility for wickedness

JB: But if God is the cause of people doing wrong things, then how can they be responsible for it?

Helm: Well, humans do cause their own actions

Craig: Helm is right to say that God has resources to reconcile God's sovereignty with free will and human responsibility, and that resource is not an unknown mystery, it's middle knowledge

Craig: I can affirm everything in the Westminster Confession except for the one clause where they expressly repudiate middle knowledge as the mechanism for reconciling divine sovereignty and free will

Helm: Well, Calvinists have a strong view of sin so that humans cannot respond to God's leading

Craig: Yes, and that's why humans need prevenient grace in order to respond to him

Craig: God has to take the initiative and draw people to himself or they cannot be saved, but that grace is resistible, and that's what the Bible teaches (Acts 7:51), so humans are still responsible if they resist God

Helm: My view of grace is that it is monergistic and irrestible, it is a unilateral action on the part of God, like pulling someone out of an icy pond which they can't get out of

JB: If humans freely choose to respond to God's drawing and leading, does that diminish grace?

Helm: Many are called but few are chosen

Craig: Molinism does not require synergism – which is the idea that humans are partly responsible for their salvation

Craig: In Eph 2:8, Scripture is clear that faith opposite to works, and responding to God's drawing is not meritorious

JB: So receiving a gift is not meritorious?

Craig: It's the passive acceptance of what someone else has done for you

Helm: But doesn't this mean that you can lose your salvation, because you can accept and resist the gift of salvation?

Craig: That's a separate question that Christians can differ on, but if the Holy Spirit indwells a person and seals them, then that would argue for the view that salvation cannot be revoked

JB: Doesn't Romans 8 teach Calvinism pretty clearly?

Helm: This is called the "golden chain", and it does support Calvinism

Craig: Actually, this text is no problem for Molinists because the first link in the chain is foreknowledge, which, if it incorporates middle knowledge, is no problem for Molinists

Craig: What God is electing in Romans 8 is a specific group of people that he knows in advance of creating the universe will freely respond to his drawing them to him

Craig: In Acts 4:27-28, it is talking about God's foreknowledge, which involves and incorporates knowledge of what any individual would freely choose if placed in those circumstances

JB: If God actualizes a set plan with set circumstances for everyone, isn't that very similar to Calvinism?

Craig: Yes! It's a strong statement of divine sovereignty

Helm: Foreknowledge doesn't mean that God knows what people would do, it's just refering to God "knowing his own mind" about what he wants to do

JB: How do you respond to the fairness of God unilaterally and specifically choosing some people for salvation and choosing other people for damnation (because he refuses to act unilaterally for them)?

Helm: God ordinarily bypasses other people in the Bible, like when he chooses the Jews as his chosen people

Craig: The problem with that is that the Bible clearly teaches that God has a genuine will that all will be saved and he makes a genuine offer of salvation to all people

Craig: Also, just being a Jew and a member of the chosen people doesn't mean you were saved, because some Jews rebelled against God

Craig: And there were also people outside of the Jewish people who were righteous and in a relationship with God, like Job

Helm: "the fabric of our faith" depends on God's choice and his not-choice, it is fundamental to the Bible and to God's character, and choosing them "effectively" (irrestibly and unilaterally)

Helm: The idea of God considering "possible worlds", some of which are feasible and not feasible, with conflicts between the wills of free creatures in different circumstances, and then actualizing one world that achieve these ends is very messy

Craig: Some worlds may not feasible for God to create, for example a world in which everyone is saved – it is logically possible, but may not be feasible

Craig: God will not exercise any divine coercion to force people to go to Heaven against their own will

Helm: If God chooses a world because it is feasible, then he doesn't love me directly, he is choosing a world, not individuals

Craig: Well, when God actualizes a world, he specifically knows which individuals will be saved within that world, but without disrespecting free will

Craig: The world isn't primary, the individuals are primary

Helm: I think that middle knowledge can he included in God's natural knowledge and free knowledge

Craig: The knowledge of what people would do in different circumstances is based on the freedom of the individuals

JB: Make your conclusions!

Craig: Molinism is a Biblical model for reconciling divine sovereignty with human freedom

Helm: It is intellectually mystifying to introduce this strong view of human freedom and it is not Biblical

# Tennessee governor signs bill to protect freedom of conscience

**Wintery Knight** · 29 April 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

I like the state of Tennessee, it's probably the best state in the union overall, but their governor is such a moderate squish. Or, at least that's what I thought until story this happened.

Charisma News reports:

> Wednesday, Tennessee Gov. Bill Haslam signed Senate Bill 1556, which provides for "freedom of conscience" protections for counselors and therapists, into law.
>
> The bill had been blasted by the American Counseling Association, as well as a number of LGBT "rights" groups. But Haslam said in an official statement after signing SB 1556 into law that he felt it offered key protections that weren't being reported by the media.
>
> "Although Senate Bill 1556 has received attention for its perceived focus, my job is to look at the actual substance of the legislation," he said. "After considerable thought and discussion with counselors both for and against the bill, I have decided to sign Senate Bill 1556.
>
> "There are two key provisions of this legislation that addressed concerns I had about clients not receiving care. First, the bill clearly states that it 'shall not apply to a counselor or therapist when an individual seeking or undergoing counseling is in imminent danger of harming themselves or others.' Secondly, the bill requires that any counselor or therapist who feels they cannot serve a client due to the counselor's sincerely held principles must coordinate a referral of the client to another counselor or therapist who will provide the counseling or therapy.
>
> "The substance of this bill doesn't address a group, issue or belief system. Rather, it allows counselors—just as we allow other professionals like doctors and lawyers—to refer a client to another counselor when the goals or behaviors would violate a sincerely held principle. I believe it is reasonable to allow these professionals to determine if and when an individual would be better served by another counselor better suited to meet his or her needs."

The Family Research Council, the premier think tank for social conservatives, had this to say:

> "Tennessee lawmakers are right in acting to protect the ability of therapists and counselors to continue serving in their helping profession in a manner that does not conflict with their religious beliefs. America has a long

> and storied history of respecting Americans' freedom to believe and actually live their lives according to those beliefs. It was this tolerance and understanding that led the first Congress and the American people to enshrine religious freedom in our Constitution.
>
> "Senate Bill 1556 is an important first step in preserving this fundamental freedom for those who do not agree with the Left's radical ideology. Tennessee joins North Carolina and Mississippi in the growing list of states refusing to criminalize people whose beliefs about sexuality and marriage are at odds with President Obama's extreme political and social agenda.
>
> "The response from the Left to this modest bill once again reveals the absolute intolerance of those seeking to redefine human relationships and sexuality. It is clear that their goal is not access to services, it's forcing all Americans to accept their system of beliefs or face government imposed penalties. They believe that a therapist or counselor who can't in good conscience violate their deeply held beliefs should not be allowed to continue to serve. They believe that counseling students like Julea Ward should be forced to violate their conscience or be blocked from practicing.
>
> "Many therapists and counselors are motivated to serve by sincerely held religious beliefs, they and everyone else are entitled to First Amendment protections," concluded Perkins.

There was a separate press release by the FRC regarding the case of Julea Ward, in case you want to double-check the details about what universities due to Christian students when laws like this one are not in place.

Like I said, I am really surprised at Governor Bill Haslam – he has a reputation as a social moderate, fiscal conservative. It will be interesting to see how the fascists on the secular left respond to this. Tennessee does not have as many big corporations as Georgia or North Carolina do, which makes them a safer state to live in if you value your religious liberty. They might just let this one go.

# Studies show: families that pray together are stronger and closer

**Wintery Knight** · 29 April 2016 · Archived copy · Original

A family praying and reading the Bible (not sure what the baby is thinking though)

Here's an article that I found on the Family Studies blog.

It says: (links to studies removed)

> A lot of research has been devoted to the question of whether religion is a force for good among today's families, and while the findings are mixed, studies have found plenty of reason to believe that faith can be a powerful adhesive for families working hard not to come undone. Regular religious service attendance is tied to lower divorce rates, for example, and religious institutions can be powerful intermediaries in helping families in crisis and promoting chastity and fidelity, which in turn affect social ills like out-of-wedlock childbearing and divorce.
>
> […]That individual prayer can improve the lives of those who undertake it is a well-documented fact supported by even the secular, medical world. Its benefits can include reduced stress, increased self-awareness, better communication, and a more empathetic and forgiving attitude towards others.
>
> It's hardly a stretch to suggest those benefits would expand to families that then pray together. For starters, family prayer time is quality time together, time not spent in front of the television or a smartphone, but rather, time spent communicating on a deeply personal level. One study found that children with parents who pray more than once daily report better relationships with their parents, even if that prayer is not done with their children, implying that there is something contagious about the positive effects of prayer in family life. Another study found a positive correlation between increased trust and prayer time between couples.
>
> Other sociologists have argued that joint prayer can be a powerful mediation tool that leads couples to be more forgiving. As Mark Butler, a professor of marriage and family therapy at Brigham Young University, put it: "When people pray (about tensions in their relationship) they are helped to see their part in the problem. They're helped to see what they can do themselves to make a difference. And they are helped to soften. All these things help with conflict resolution."

The nice thing about prayer and church attendance is that it is an opportunity for people to tune the world out and think about the big things. It's a time to think about other people, for one thing. It's also a good time to be humble and acknowledge the things that are out of your control.

Right now, a few of my friends have been telling me about some of the problems they are facing as a result of the

declining economy. We had only 0.5% GDP growth last quarter – awfully close to a recession. I have friends who have lost work hours, friends who have lose their health care, friends who are facing liberal professors in graduate school, friends who either cannot find work or whose spouses cannot find work. And *lots* of friends who have projects and exams. That's a lot of people to think about and care about. I frequently talk to God about the problems that other people are facing and try to urge him to give them some help.

In case you are wondering how to pray to God, there is a good article about it on the Cold Case Christianity blog.

Here's the practical part:

> If you are a follower of Christ, you can have confidence that God will always say "yes" to the following requests:
>
> **Requests for Wisdom**
> "But if any of you lacks wisdom, let him ask of God, who gives to all generously and without reproach, and it will be given to him." (James 1:5)
>
> **Requests for Forgiveness**
> "If we confess our sins, He is faithful and righteous to forgive us our sins and to cleanse us from all unrighteousness." (1 John 1:9)
>
> **Requests for Salvation**
> "…for 'whoever will call on the name of the Lord will be saved.'" (Romans 10:13)
>
> While God says "yes" to these kinds of requests, He often says "no" or "not yet" to other kinds of requests.

The most frequent thing I ask for is wisdom. Wisdom for me, wisdom for my friends. I like praying for wisdom for myself and others because it's a sure thing, and I hate doing something that comes back to bite me later. I ask for God to help me to understand and accept the moral law, so that I make decisions that don't come back to hurt me later.

The other thing I pray for a lot is forgiveness. This is a big no-no for atheists, because they don't like to feel ashamed or obligated or "bad" because they are immature. But the truth is that God is knocking on the door of our hearts, each one of us, and we are not responding as much as we should. I often think of how much good I could do if I were not so selfish. I often choose to to do things that are fun instead of taking time to read the Bible or doing other things to learn more about who God is. And I don't think that I am doing as much to defend God's interests as I could be doing. I have regrets about this, and I when I pray, I tell God about how I feel about not being as faithful to him as I wish I could be.

The most frequent way that I am thankful is by thanking God for the people who do things that are consistent with a Christian worldview. I like that Steven Crowder spoke to liberal students at the University of Massachusetts. I like that conservative Republicans introduce pro-life and pro-religious-liberty laws. I like that my friends in Ratio Christi do a good job at organizing apologetics events on university campuses. I try to pay attention to all this good news and I run down the list to God when I pray, reminding him to be looking out for those who are committed to sticking by him against the selfish secular leftists.

# William Lane Craig debates Austin Dacey: Does God Exist?

**Wintery Knight** · 29 April 2016 · Archived copy · Original

Two tough rams butt heads, and may the best ram win!
Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

**The debaters:**

- William Lane Craig
- Austin Dacey

**The video:** (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

**Dr. Craig's opening statement:**

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus

6. (Religious experience) God's existence is directly knowable even apart from arguments

**Dr. Dacey's opening argument:**

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

**One final point:**

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

# Who should you marry?

**Wintery Knight** · 30 April 2016 · Archived copy · Original

Painting: “Tristan and Isolde”, by Marc Fishman

Dina found this article in the leftist Washington Post, of all places. The author explains how her husband lovingly helped her to recover from her Caesarian section. He actually had to to carry her to and from the bathroom, very slowly. Until she was better.

She writes:

> At the time, I thought: This is why I married this man. Not for his fabulous head of hair or his beautiful, light-brown eyes — though those things were certainly bonuses. But no. It was his gentleness, his thoughtfulness, his loving heart, his caring nature that sealed the deal for me.
>
> As a dating coach who works with singles in their 20s to 50s, I see a lot of people focusing on superficial things that have little to do with a potential partner’s character. I get it — I once obsessed over those things, too.
>
> **Most of all, I see how the trap of chemistry can lead people astray. Chemistry is important, but as far as relationships go, it’s only half the equation.**
>
> So how do you look for these deeper, more important qualities in the early stages of dating? Some might argue there’s no way to tell in, say, the first several months of dating someone — after all, it is the honeymoon stage — if this is the type of person who will help you onto the toilet during times of trial. I disagree.
>
> Looking back to the early days of dating Dave, all the signs were there. He treated my friends with care and kindness, which showed me he had the ability to be compassionate. The way he scoured the Internet for the perfect gifts for my parents and nephews showed me his thoughtful, generous side. He rubbed my back and wiped my tears after I suffered a heart-wrenching squash match loss, showing me that validating my feelings was important to him (even if I’m the most competitive person alive and it was just a squash match). He listened to me vent after a difficult fallout with a colleague, showing me he was ready and willing to be a part of my support system.

> When he stayed up until the early hours of the morning, helping me with Web site issues relating to my coaching business, I knew I'd found someone who would support me in my professional goals as well as physically and emotionally. When he held my hands and said "We'll figure it out" while I was dealing with a frustrating medical situation, that was probably my biggest clue that he'd be so supportive in that hospital room years down the line.
>
> **Singles should keep their eyes open for these signs. They're more telling than a person's job, salary, ambition or education; whether he or she is the "right age"; has the perfect body; or can dazzle you with their charm and wit.**
>
> Keep your eyes open for the type of person who one day might lovingly help you onto the toilet.

When you are married, the amount of time you spend having fun and feeling thrilled is minuscule. The real problems you face are money problems, sex problems, in-law problems, holiday problems, parenting problems, etc. Most often in marriage hard stuff needs to get done. Compromises need to be made. There is actually very little fun and thrills. If you want to prepare for most of what marriage is about, then it's best to focus on responsibilities, expectations and obligations. Spouses need each other, and the ability to sense someone else's needs and to care for them, even when it's not fun for you, is non-negotiable.

The bottom line for people to understand is that you can't be a selfish fun-seeking, thrill-seeking, FOMO-traveling hedonist all your life, and then jump into marriage at the last minute. You have to mature and grow your character so that you are ready for the responsibilities, expectations and obligations that marriage requires. If you go through your 20s and 30s always doing what feels good "in the moment", then don't expect that any last-second desperate marriage will last. You are are the person who makes all the decisions before you marry. If your repeated pattern of decision making is to do what feels good "in the moment", then you won't suddenly be able to turn into a person who is *comfortable* with doing what marriage requires of you. You have to form your character first so that you are comfortable with what marriage requires of you.

Believe me when I tell you that some women who hate the things I write are now divorced, unemployed and running short of money because they thought that following their heart was the right approach to life. If you're not practicing how to deny your own self-interest and practicing how to build up the people around you to practice for marriage, then your marriage won't last. If you push away people who are wiser than you are, so that you can follow your heart, your marriage won't last. If you think that you have to delay marriage in order to tick off items on a list of impressive, fun things that the feminist culture says are "more important" than marriage, then your marriage won't last. The prerequisite to a successful marriage is growing up.

# Arthur Brooks: why is the American public shifting from optimism to envy?

**Wintery Knight** · 30 April 2016 · Archived copy · Original

Labor Force Participation down to 62.8%

An editorial by Arthur Brooks appeared today in the leftist New York Times. His topic is the shift from optimism to envy, why it is happening, and whether envy makes us happier than optimism.

Excerpt: (links removed)

> The Irish singer Bono once described a difference between America and his native land. “In the United States,” he explained, “you look at the guy that lives in the mansion on the hill, and you think, you know, one day, if I work really hard, I could live in that mansion. In Ireland, people look up at the guy in the mansion on the hill and go, one day, I’m going to get that bastard.”
>
> […]Unsurprisingly, psychologists have found that envy pushes down life satisfaction and depresses well-being. Envy is positively correlated with depression and neuroticism, and the hostility it breeds may actually make us sick. Recent work suggests that envy can help explain our complicated relationship with social media: it often leads to destructive “social comparison,” which decreases happiness. To understand this, just picture yourself scrolling through your ex’s wedding photos.
>
> My own data analysis confirms a strong link between economic envy and unhappiness. In 2008, Gallup asked a large sample of Americans whether they were “angry that others have more than they deserve.” People who strongly disagreed with that statement — who were not envious, in other words — were almost five times more likely to say they were “very happy” about their lives than people who strongly agreed. Even after I controlled for income, education, age, family status, religion and politics, this pattern persisted.
>
> It’s safe to conclude that a national shift toward envy would be toxic for American culture.
>
> Unfortunately, in the wake of the Great Recession, such a shift may well be underway, given the increasing anxiety about income inequality and rising sympathy for income redistribution. According to data from

> the General Social Survey, the percentage of Americans who feel strongly that "government ought to reduce the income differences between the rich and the poor" is at its highest since the 1970s. In January, 43 percent of Americans told the Pew Research Center that government should do "a lot" to "reduce the gap between the rich and everyone else."
>
> Why the shift? The root cause of increasing envy is a belief that opportunity is in decline. According to a 2007 poll on inequality and civic engagement by the Maxwell School of Citizenship and Public Affairs at Syracuse University, just 30 percent of people who believe that everyone has the opportunity to succeed describe income inequality as "a serious problem." But among people who feel that "only some" Americans have a shot at success, fully 70 percent say inequality is a major concern.
>
> People who believe that hard work brings success do not begrudge others their prosperity. But if the game looks rigged, envy and a desire for redistribution will follow.
>
> This is the direction we're heading. According to Pew, the percentage of Americans who feel that "most people who want to get ahead" can do so through hard work has dropped by 14 points since about 2000. As recently as 2007, Gallup found that 70 percent were satisfied with their opportunities to get ahead by working hard; only 29 percent were dissatisfied. Today, that gap has shrunk to 54 percent satisfied, and 45 percent dissatisfied. In just a few years, we have gone from seeing our economy as a real meritocracy to viewing it as something closer to a coin flip.

There is a good lesson in this for people who want what is best for the poor. Simply receiving money from others is not going to make poor people happy. What we need to focus on is providing the poorest people with opportunities.

One way to help the poor is by giving poor children a better education. Conservatives support school choice, which takes money away from government and puts it back in the hands of parents, letting them choose the best school for their child. Schools have to produce good outcomes in order to earn the money, just like private businesses have to compete for customers. But Democrats oppose school choice, as when they killed the D.C. voucher program that helped poor black students. Less school choice helps public schools to be insulated from competition, which provides worse outcomes to students, especially poor minority students. If we really cared about poor, minority students, we would put pressure on public schools to compete with private schools. But the Democrats don't want that, they prefer to give favors to their teacher union allies.

Democrats also want to punish job creators with high taxes and burdensome regulations. Democrats passed Obamacare, which punishes businesses with taxes if they allow part-time workers to work for more than 30 hours a week. Many jobs were lost because of this, and many people are now struggling to pay higher premiums for plans with higher deductibles and co-pays. Obamacare is a nightmare of intrusive regulations, too. Now the Democrats are talking about raising the minimum wage, which is going to put even more pressure on employers to lay off workers, because they can't afford to pay them more money for the same work. For Democrats, this is all to the good, though. Because if the poor don't have jobs, or can't work enough hours, they start to see the economic game as "rigged" and they are more responsive to "envy rhetoric". They start to look to big government for handouts, rather than trying to prevent the government from taxing and regulating job creators.

What we need to see is that it's not the Democrats' objective to help people find jobs. They gain when people become more envious, like in European countries, and start to vote to grow the size and power of government to redistribute wealth. Speeches about income inequality never have the goal of giving people jobs. None of Obama's policies aim to do that. That's why he won't build the Keystone XL pipeline, or boost domestic energy development here at home. Instead, they want to extend unemployment benefits and pass the costs on to the next generation. Their goal is to get you unemployed or on disability or on welfare, so that you will vote for the government to continue to take your neighbor's money to give it to you. That manufactured envy is what keeps the Democrats in power.

This plan to borrow from young people to buy the votes of old people today works for a while, until the money runs

out. But by then, the politicians who put in place the redistribution programs are usually long gone .

# A lesson about men for marriage-minded women from the movie "High Noon"

**Wintery Knight** · 1 May 2016 · Archived copy · Original

Marine prays with his wife on their wedding day

One of my favorite movies for explaining the differences between men and women is "High Noon" (1952).

Here's the summary from IMDB:

> Former marshal Will Kane (Gary Cooper) is preparing to leave the small town of Hadleyville, New Mexico, with his new bride, Amy (Grace Kelly), when he learns that local criminal Frank Miller has been set free and is coming to seek revenge on the marshal who turned him in. When he starts recruiting deputies to fight Miller, Kane is discouraged to find that the people of Hadleyville turn cowardly when the time comes for a showdown, and he must face Miller and his cronies alone.

The main theme of the film concerns Amy's decision to break her wedding vows the very day that she makes them. She tells her new husband that he must bow to her will, and give up his male role as protector. When he explains his reasons for standing his ground to her practically (Miller will hunt them down) and morally (he has a duty protect the town), she dismisses both. She tells him that if he doesn't run away from Miller and his gang with her, that she will get on the train and leave town by herself.

The intro of film shows the member's of Miller's gang assembling, and the words of the song explain the central conflict between husband and wife:

Here's the part of the lyrics we care about:

*The noonday train will bring Frank Miller.*
*If I'm a man I must be brave*
*And I must face that deadly killer*
*Or lie a coward, a craven coward,*
*Or lie a coward in my grave.*

*O to be torn 'twixt love and duty!*
*S'posin' I lose my fair-haired beauty!*
*Look at that big hand move along*
*Nearin' high noon.*

*He made a vow while in State's Prison,*
*Vow'd it would be my life or his'n*
*I'm not afraid of death, but O,*
*What will I do if you leave me?*

*Do not forsake me O my darlin'*
*You made that promise when we wed.*
*Do not forsake me O my darlin'*
*Although you're grievin', I can't be leavin'*
*Until I shoot Frank Miller dead.*

What's interesting is that his new wife Amy apparently does not understand the meaning of wedding vows or the natural roles of good men as protectors of the weak, and fighters against evil. Although she vowed to stick by him and help him, the minute anything threatening appears that makes her feel unhappy, she abandons her vows and abandons her man. Let's break down her mistakes now, using actual conversations from the movie.

First, she doesn't understand or respect the man she married *as a man*:

> **Kane**: *[while riding out of town]* It's no good. I've got to go back, Amy.
>
> **Amy**: Why?
>
> **Kane**: This is crazy. I haven't even got any guns.
>
> **Amy**: Then let's go on. Hurry.
>
> **Kane**: No, that's what I've been thinkin'. They're making me run. I've never run from anybody before.
>
> **Amy**: I don't understand any of this.
>
> **Kane**: *[after looking at his vest watch]* Well, I haven't got time to tell ya.
>
> **Amy**: Then don't go back, Will.
>
> **Kane**: I've got to. That's the whole thing. *[He turns the buggy around and rides back into town]*

Her feelings and her desires for the world to be a happy place for her are so strong that they cloud her judgment.

Second, she doesn't understand the threat posed by evil men:

More:

> **Kane:** I sent a man up five years ago for murder. He was supposed to hang. But up North, they commuted it to life and now he's free. I don't know how. Anyway, it looks like he's coming back.
>
> **Amy:** I still don't understand.
>
> **Kane:** He was always wild and kind of crazy. He'll probably make trouble.
>
> **Amy:** But that's no concern of yours, not anymore.
>
> **Kane:** I'm the one who sent him up.
>
> **Amy:** Well, that was part of your job. That's finished now. They've got a new marshal.
>
> **Kane:** He won't be here until tomorrow. Seems to me I've got to stay. Anyway, I'm the same man with or without this. [He pins his badge on his vest]

> **Amy:** Oh, that isn't so.
>
> **Kane:** I expect he'll come lookin' for me. Three of his old bunch are waiting at the depot.
>
> **Amy:** That's exactly why we ought to go.
>
> **Kane:** They'll just come after us, four of 'em, and we'd be all alone on the prairie.
>
> **Amy:** We've got an hour.
>
> **Kane:** What's an hour?…What's a hundred miles? We'd never be able to keep that store, Amy. They'd come after us and we'd have to run again, as long as we live.
>
> **Amy:** No we wouldn't, not if they didn't know where to find us. Oh Will! Will, I'm begging you, please let's go.
>
> **Kane:** I can't.
>
> **Amy:** Don't try to be a hero. You don't have to be a hero, not for me.
>
> **Kane:** I'm not trying to be a hero. If you think I like this, you're crazy.

Instead of recognizing how her feelings are deceiving her about the threat and trusting her husband, she tries to force him to accept her mistaken view of reality by threatening to abandon him.

One of Kane's ex-girlfriends has a talk with Amy, which helps her to understand who Kane is, and what is expected of her:

> **Amy**: That man downstairs, the clerk, he said things about you and Will. I've been trying to understand why he wouldn't go with me, and now all I can think of is that it's got to be because of you…Let him go, he still has a chance. Let him go.
>
> **Helen**: He isn't staying for me. I haven't spoken to him for a year – until today. I am leaving on the same train you are…What kind of woman are you? How can you leave him like this? Does the sound of guns frighten you that much?
>
> **Amy**: I've heard guns. My father and my brother were killed by guns. They were on the right side but that didn't help them any when the shooting started. My brother was nineteen. I watched him die. That's when I became a Quaker. I don't care who's right or who's wrong. There's got to be some better way for people to live. Will knows how I feel about it.
>
> **Helen**: I hate this town. I always hated it – to be a Mexican woman in a town like this.
>
> **Amy**: I understand.
>
> **Helen**: You do? That's good. I don't understand you. No matter what you say. If Kane was my man, I'd never leave him like this. I'd get a gun. I'd fight.
>
> **Amy**: Why don't you?
>
> **Helen**: He is not my man. He's yours.

Helen understands the need for a wife to stand by her man. But Amy's response to evil is to shut her eyes and focus on feeling good and being happy. Notice that her "better way" is unspecified – it's just a feeling she has that pacificism and no-violence will somehow "work" to stop evil. But in reality, pacifism is not a "better way" of dealing with evil – it does not work. Her pacifist response not only does not make evil go away, it actually encourages more evil. Weakness emboldens evildoers, and laying down your arms provokes them to do more evil. Will Kane knows this, but she won't listen to him.

You can watch the final gunfight here, as well as Amy's final decision:

So, this is why I really recommend this movie as a discussion-starter when you like a girl and are thinking of marrying her. It clarifies the essential problem with many young women today not being ready for marriage. To be

fair, most women come around to respect their husbands and his different roles after they get married. However, the risk of divorce is so dangerous that it makes sense to bring it up for discussion before the marriage happens. Marriage is supposed to be an engine to serve God, and the success of that enterprise cannot be left to chance. You can't just rely on the fact that she says the words of the vow, you have to check to see if she has a habit of keeping her promises when it goes against her own self-interest.

Ask yourself: Who are you, as a man? And does your woman accept that you have obligations to stand up to evil and do good ? Will she support you in your battle against evil, or will the marriage just be about her feelings and desires? I would especially beware of women who think that God is speaking to them through their feelings and desires. Look at her friends: are they practical and successful? Or are they irresponsible, unaccountable and reckless? Look at her father: does he have a plan for her, and does he lead her to be practical, frugal and hard-working? If you are not going to get an ally and a supporter in a wife, then you will not be able to serve God well, as a married man. Think about it.

# Cruz out-organized Trump again in Arizona and Virginia

**Wintery Knight** · 1 May 2016 · Archived copy · Original

Donald Trump with some of his registered Democrat supporters

Leftist Politico reports on the battle for GOP delegates.

Excerpt:

> Donald Trump's campaign got burned again Saturday in the hunt for loyal delegates to the Republican national convention — this time on turf where he'd recently trounced his rivals in primary elections.
>
> […][H]e walked away in defeat in Arizona — losing about 40 of the 55 delegate slots that were up for grabs on the day.
>
> […]Though all of Arizona's delegates are bound to vote for Trump on the first vote at the national convention, most are likely to flip to Cruz if Trump is unable to clinch the nomination.
>
> And Cruz wasn't done racking up victories on Trump's turf. In Virginia, where Trump beat Cruz by a two-to-one margin in a March 1 primary, Cruz's forces captured at least 10 of the 13 delegates on the ballot. The Texas senator won 18 of 24 delegates in local Missouri conventions, even though Trump won that state on primary day as well.
>
> In all, Cruz won about 80 delegate slots on the day of the more than 170 up for grabs. Another handful went to Ohio Gov. John Kasich, and even Marco Rubio — who dropped out of the race on March 15 — scored about seven supportive delegates. Another dozen haven't revealed who they support yet.

What's amazing is that the Cruz campaign could have had all 13 delegates in Virginia, but the campaign let Donald Trump have 3 delegates.

ABC News explains:

> Cruz surrogate Ken Cuccinnelli argued that the outcome today was not out of line, because Trump only won 38 percent of the vote in Virginia.
>
> "Ted is successfully coalescing — unifying, most of the rest of the party and that's the only way we can do this,

> that's the only way we can win a vote like this," he told ABC after the vote.
>
> "That and having a good grassroots is why we're doing so well in these events all around the country," he added.
>
> Cuccinelli went on to say the slate was an "olive branch" to Trump supporters.
>
> "If we wanted a 13-0 slate, we could have had it. Instead we supported the mixed slate that was a unity slate, and that's an effort we're trying to make all around the country," he said.

Incredible. I don't know if you guys remember Ken Cuccinelli, but I am a huge admirer of that man. He lost the race to be governor because the GOP establishment did absolutely nothing to back him in the election, because he was seen as "too conservative". Too much of a Tea Party outsider. Cuccinelli has made positive comments about intelligent design – that's how I know of him. And he is very strong against global warming socialism, as well. Nice to see people I respect on Team Cruz-Fiorina. We have all the real conservatives.

Today, Chris Wallace interviewed Trump about his incredibly high unfavorable numbers among Hispanics and women:

I for one am not surprised that someone so self-contradictory cannot win any delegates at the state level.

# Which presidential candidate will simplify the tax code and create jobs?

**Wintery Knight** · 2 May 2016 · Archived copy · Original

How can we make the complicated tax code simpler?

Steve Forbes explains what would work, in Forbes magazine.

He writes:

> NEXT TO THE UNSTABLE DOLLAR, the biggest deadweight today on the American economy is the horrific federal income tax code. It is past time we junked this incomprehensible, opportunity-killing and corrupting monstrosity and replaced it with a simple flat tax. The returns we, the people, must file by today (even if you file for an extension, you have to pay what you owe Uncle Sam by this date) should be the last time we have to suffer through this ordeal.
>
> **More than 40 countries and jurisdictions (such as Hong Kong) have variations of a flat tax, and those systems have worked well.**
>
> For those unfamiliar with the concept, a flat tax is a single-rate income tax system that has few or no deductions. You could literally fill out your return on a single sheet of paper or with a few keystrokes on your computer.
>
> The most basic and profound argument for a flat tax is moral.
>
> The IRS estimates we spend 6 billion hours a year filling out tax forms. Experts calculate we spend over $200 billion a year complying with the income tax code.

The nice thing about the flat tax is that you can already see what happens in countries that have adopted it, by looking at the change in GDP growth in the years before the flat tax was adopted compared to the years after the flat tax was adopted.

Here's a comparison of 3 countries that adopted flat tax rates at different times:

Forget the rhetoric: what happens to GDP growth after enacting a flat tax policy?
(Source)

As you can see, when people waste less time filling in their taxes, they have more time for productive activities. And don't let anyone fool you: a productive economy creates more jobs, and builds the resumes of the workers so that they can be resilient to layoffs and other challenges to their peace of mind and security.

So which candidate is going to give us a flat tax, and the economic growth that goes with it?

Ted and Heidi Cruz have a plan to simplify the tax code
The centrist Forbes magazine summarizes Cruz's flat tax plan:

> Ted Cruz claims that his tax plan would supercharge economic growth, boosting GDP by as much as 5% a year for a decade or more. That's, umm, an ambitious goal to be sure. However, there is actually good reason to believe that he's right. As long as we're careful about how we define GDP growth and also as long as we consider all the ways in which his plan will change the economy. This does mean being a little perverse in our assumptions: but also correct in our assumptions.

> The basics of the plan are that income taxes will be cut for all. Also, that pretty much all business taxation will be replaced with a 16% flat tax. It is claimed (and Cruz has Art Laffer there claiming it with him) that such a relief from the burdens of taxation will produce an explosion of economic growth. This is not, I feel, entirely believable to put it mildly. While there may well be specific bottlenecks in the taxation system the total take, at 35 to 36% of GDP, isn't large enough for it to be causing a general lack of economic growth. Not in my opinion at least and in the opinion of vanishingly few economists too.

Conservative economist Stephen Moore says this about the Cruz plan in The American Spectator:

> Senator Ted Cruz has a flat tax plan borrowed from a blueprint in a book by Arthur Laffer and me called, *Return to Prosperity*.
>
> […]Conservatives should be excited about the Cruz flat tax. It's what tax filers have been waiting decades for:
>
> First, the Cruz plan would give America the lowest tax rates since the income tax was devised 100 years ago. For this reason, these plan are estimated by the Tax Foundation to grow the economy by a gigantic $2 trillion extra GDP per year after 10 years. That's exactly the opposite effect of the Hillary and Bernie show plans.
>
> Second, Cruz's plan eliminates almost all deductions and credits — which is how they get the rate so low. The IRS could be dramatically shrunk in size. Don't forget, when there are fewer deductions, there are fewer ways to cheat on your taxes. The lower the tax rate, the less incentive to cheat, which means greater voluntary compliance.
>
> Third, because the Cruz plan is "border adjustable," imports are taxed at the flat rate when they are brought into the U.S., but American products sold abroad are not taxed at all. This would level the global playing field for American manufacturers, tech firms, and drug companies and bring these jobs scampering back to the U.S. Blue collar union workers should love this.
>
> […]Some conservatives complain that the tax is *too* efficient and so it will raise too much money.

Moore works for the Heritage Foundation, the number one conservative think tank, which features conservative policy on social, fiscal and foreign policy issues. My favorite think tank.

And famous economist Art Laffer says this: (H/T Dad)

Art Laffer is a speaker for the American Enterprise Institute, which champions the free enterprise system that made America great.

If you are nervous about the economy, you need to vote for Ted Cruz and get this plan enacted. Imagine not having to worry about losing your job, losing work hours, and so on. I would like to get in on a stock market boom so that I can pay off my mortgage faster. If you all join me in voting for Ted Cruz, we can all stop worrying about money for the next 10 years. But we need people to get behind economic policies that work. Steve Forbes, Stephen Moore and Art Laffer are experts in tax policy. We need to listen to the experts, and we need to do what has been proven to work, not what sounds good.

# Bible study: Paul's continuing effort to disciple the Thessalonians

**Wintery Knight** · 2 May 2016 · Archived copy · Original

U.S. Marines "The Chosin Few", Dec. 1950 (Chosin Reservoir, North Korea)

I was asked by my friend Kevin to do more Bible study, and two of the books he asked me to do are 1 Thessalonians and 2 Thessalonians. He had  reason for asking this, and I found out after I sent him my reflections. So, I thought I'd better write these up so that you all get something out of this, too.

**Background**

You can read more about the author, background and dating of 1st Thessalonians.

You can read more about the author, background and dating of 2nd Thessalonians.

Obviously, go and read both letters. Why not, it's the Bible. You're supposed to be reading it anyway.

**The relevant parts**

See if you can guess the point I want to make from what I cite from each book before you read my conclusion.

1 Thessalonians 2:3-12:

> 3 For our exhortation does not come from error or impurity or by way of deceit;
>
> 4 but just as we have been approved by God to be entrusted with the gospel, so we speak, not as pleasing men, but God who examines our hearts.
>
> 5 For we never came with flattering speech, as you know, nor with a pretext for greed—God is witness—
>
> 6 nor did we seek glory from men, either from you or from others, even though as apostles of Christ we might have asserted our authority.
>
> 7 But we proved to be gentle among you,as a nursing mother tenderly cares for her own children.
>
> 8 Having so fond an affection for you, we were well-pleased to impart to you not only the gospel of God but

> also our own lives, because you had become very dear to us.
>
> 9 For you recall, brethren, our labor and hardship, how working night and day so as not to be a burden to any of you, we proclaimed to you the gospel of God.
>
> 10 You are witnesses, and so is God, how devoutly and uprightly and blamelessly we behaved toward you believers;
>
> 11 just as you know how we were exhorting and encouraging and imploring each one of you as a father would his own children,
>
> 12 so that you would walk in a manner worthy of the God who calls you into His own kingdom and glory.

1 Thessalonians 2:17-20:

> 17 But we, brethren, having been taken away from you for a short while—in person, not in spirit—were all the more eager with great desire to see your face.
>
> 18 For we wanted to come to you—I, Paul, more than once—and yet Satan hindered us.
>
> 19 For who is our hope or joy or crown of exultation? Is it not even you, in the presence of our Lord Jesus at His coming?
>
> 20 For you are our glory and joy.

1 Thessalonians 3:1-3,6-13:

> 1 Therefore when we could endure it no longer, we thought it best to be left behind at Athens alone,
>
> 2 and we sent Timothy, our brother and God's fellow worker in the gospel of Christ, to strengthen and encourage you as to your faith,
>
> 3 so that no one would be disturbed by these afflictions; for you yourselves know that we have been destined for this.
>
> 6 But now that Timothy has come to us from you, and has brought us good news of your faith and love, and that you always think kindly of us, longing to see us just as we also long to see you,
>
> 7 for this reason, brethren, in all our distress and affliction we were comforted about you through your faith;
>
> 8 for now we really live, if you stand firm in the Lord.
>
> 9 For what thanks can we render to God for you in return for all the joy with which we rejoice before our God on your account,
>
> 10 as we night and day keep praying most earnestly that we may see your face, and may complete what is lacking in your faith?
>
> 11 Now may our God and Father Himself and Jesus our Lord direct our way to you;
>
> 12 and may the Lord cause you to increase and abound in love for one another, and for all people, just as we also do for you;
>
> 13 so that He may establish your hearts without blame in holiness before our God and Father at the coming of our Lord Jesus with all His saints.

2 Thessalonians 1:3-4:

> 3 We ought always to give thanks to God for you, brethren, as is only fitting, because your faith is greatly enlarged, and the love of each one of you toward one another grows ever greater;
>
> 4 therefore, we ourselves speak proudly of you among the churches of God for your perseverance and faith in

> the midst of all your persecutions and afflictions which you endure.

2 Thessalonians 3:6-13:

> 6 Now we command you, brethren, in the name of our Lord Jesus Christ, that you keep away from every brother who leads an unruly life and not according to the tradition which you received from us.
>
> 7 For you yourselves know how you ought to follow our example, because we did not act in an undisciplined manner among you,
>
> 8 nor did we eat anyone's bread without paying for it, but with labor and hardship we kept working night and day so that we would not be a burden to any of you;
>
> 9 not because we do not have the right to this, but in order to offer ourselves as a model for you, so that you would follow our example.
>
> 10 For even when we were with you, we used to give you this order: if anyone is not willing to work, then he is not to eat, either.
>
> 11 For we hear that some among you are leading an undisciplined life, doing no work at all, but acting like busybodies.
>
> 12 Now such persons we command and exhort in the Lord Jesus Christ to work in quiet fashion and eat their own bread.
>
> 13 But as for you, brethren, do not grow weary of doing good.

OK that's all I want to quote, but do read both letters. It's good for you to read the Bible and to know what the priorities of Christians used to be. This is the real Christian deal, and you ought to be informed about it, so that you know how to make your own decisions that reflect the concerns and priorities of the first Christians.

**My thoughts**

I'm at the 1000-word limit now, so this one will go long. I don't think that quoting the Bible should count anyway, you all should be reading that all the time. Anyway, what is the point?

Well, Kevin wanted me to read this because he thinks that I hover around young Christians a lot and fuss about whether they are going to church, whether they are reading apologetics, whether they are doing their homework, and passing their exams. You would not believe some of the things happening in the lives of my Christians friends! Every day, I hear new things:

- my dog died
- my professor is a liberal bully
- I'm starting university
- I got a new job
- I am starting an internship
- I got 95+ on all my exams
- I opened an account with Fidelity
- my grandmother died
- I missed a final exam
- I cried in class
- I broke up with my boyfriend / girlfriend
- I moved into a new house
- my work hours are being reduced

- my husband can't find a job
- I hate my job
- I can study the Bible with you on Friday night
- I got a new Beta fish and here's a video of him swimming
- my team members aren't working on our course project

And more. I think Kevin wanted me to know that he was glad that I was meddling in the lives of all of these people, and that it was similar to what Paul does. Paul does not preach to people so that he will think that he is important or clever. He likes to debate and persuade, but he's not a silver-tongued orator. Paul isn't just swooping by to solicit donations or preen about how great he is and then leave. He actually has an interest in the lives of other Christians. He actually tries to live among them and set an example for them of how to live. He wants the people to follow his lead, not follow his words. He always says "do what I do" not "do what I say". His emphasis is on doing as an example, and having ongoing relationships with the people he gave an example to. He doesn't just do a big public event and then forget about the people that he spoke to. He's not doing what he's doing for himself – he has a genuine interest in the people he speaks to. He wants them to know God, and to do what God wants. And although he does want these people to love one another, that doesn't mean that he is on board with affirming sins or sinful lifestyles – especially sexual sins. He really wants people to stop sexual sins, and other sensual sins like drunkenness.

So, my point in this is for you to read the two letters to the Thessalonians closely, and don't be like these parents, pastors, apologists and celebrities who just speak and leave. Don't look to the people you have influence over as a source of money or approval. Challenge those people to change, built them up, share with them, give them gifts. Instead of telling them how to live, tell them to follow your example. And watch out for their daily struggles and troubles. Make sure you know who else is influencing them, and have your say to persuade them that your Christian viewpoint is right. Don't just talk. Don't try to just sound pious. Don't appear so perfect like you are high above the others. Instead, make your whole life an example of what you want to convince them of. Show them your plans and goals and sacrifices, don't just pontificate piously. And be willing to let them tell you the really dirty details of what they are doing. Don't be such a high-and-mighty pious fundamentalist that you are above getting down there with them and playing a video game or getting dirty with gardening or auto maintenance or upgrading a computer. Get involved in their lives and in their relationships with other people.

# Ted Cruz crosses the street and confronts Trump mob in Indiana

**Wintery Knight** · 3 May 2016 · Archived copy · Original

Ted Cruz meets voters at a campaign event

Everything you need to understand about the 2016 election is in one video.

First, the back story from the New York Times: (H/T Mysterious H.)

> Senator Ted Cruz of Texas had a date with a waiting car.
>
> It was the second of five stops on Monday, the eve of Indiana's critical primary, and the event at a restaurant here had been billed as little more than a meet-and-greet.
>
> When he got back outside, a half-dozen protesters who supported Donald J. Trump were waiting across North Washington Street, some holding signs.
>
> "Vote Trump!" one shouted.
>
> "Say something really funny!" a Cruz supporter replied.
>
> "Ted Cruz is going to win!" a Trump fan in dark sunglasses shot back.
>
> Then Mr. Cruz did something unusual: He crossed the street.

Then the video:

Here is the rest of the New York Times article, which has additional material about the confrontation:

> With a phalanx of aides and reporters trailing him, Mr. Cruz approached his critics with a question.
>
> "What do you like about Donald Trump?" he asked.
>
> "Everything," said the man in the sunglasses, who later refused to give his name.
>
> When the protester mentioned the Second Amendment, Mr. Cruz said he had defended gun rights in front of the Supreme Court. The man appeared unimpressed.

> When he mentioned immigration, Mr. Cruz was ready with a bit of opposition research.
>
> “May I ask you something?” the Texas senator said. “Out of all the candidates, name one who had a million-dollar judgment against them for hiring illegal immigrants. Name one. Donald Trump.”
>
> “Self-funding,” the man replied.
>
> “O.K.,” Mr. Cruz said, “so you like rich people who buy politicians?”
>
> The man asked Mr. Cruz where his “Goldman Sachs jacket” was, alluding to the employer of Mr. Cruz’s wife, Heidi, who took a leave from her job for the campaign.
>
> Mr. Cruz responded that he had attracted more than a million campaign contributions, with an average of $60. He was interrupted sporadically by shouts of “Lyin’ Ted” from the protester’s peers.
>
> “Sir, with all respect,” Mr. Cruz said, “Donald Trump is deceiving you. He is playing you for a chump.”
>
> Mr. Cruz conjectured that Mr. Trump would not have walked over to meet the protesters.
>
> “If I were Donald Trump, I wouldn’t have come over and talked to you,” he said. “You know what I would have done? I would have told the folks over there, ‘Go over and punch those guys in the face.’ That’s what Donald does to protesters.”
>
> The catcalls of “Lyin’ Ted!” returned.
>
> “O.K., stop,” Mr. Cruz said. “What word did I say was a lie?”
>
> “About Donald telling people to punch people,” the man said.
>
> “O.K., let me ask you, sir,” Mr. Cruz responded. “Just go home and Google ‘Donald-punched-in-the-face-protester.’ This is on national television.”
>
> The man ignored him to make a conjecture of his own: “You’ll find out tomorrow. Indiana don’t want you.”
>
> Mr. Cruz turned toward the cameras, as if making a closing argument in court.
>
> “A question that everyone here should ask,” he began.
>
> “Are you Canadian?” the man interjected.
>
> “Do you want your kids,” Mr. Cruz continued, “repeating the words of Donald Trump?”
>
> Mr. Cruz said he respected the man and believed in the people of Indiana to show good judgment. He started walking to his car.
>
> **A television reporter asked why he had bothered to engage.**
>
> **“Because I believe in the democratic process,” he said.**
>
> […]Moments later, when the cameras cleared out, the man strolled east, crossing railroad tracks with his peers in tow. He reached for a cigarette.
>
> Mr. Cruz’s nerve had surprised him, he allowed, but failed to impress him.
>
> “Anything that Donald Trump talks about,” he said, “that’s what I’m about.”

What you see in the video is a microcosm of this entire election.

Ted Cruz is a Princeton and Harvard educated Tea Party conservative who has a record of conservative achievements that runs all the way back to his days in high school, when he traveled around giving lectures on the Constitution and fiscal conservatism to different groups in his community. Ted Cruz has a 100% conservative record from Heritage Action and he has been endorsed by the National Right to Life because of his record of pro-life actions.  He defended the second amendment and religious liberty at the Supreme Court and won. And there are many, many more conservative achievements. Ted Cruz is a man who is confident in his views, and he believes that he can win over the average American voter if he is able to dialog with them, and compare arguments and evidence. He respects the American voter.

The Trump supporters know absolutely nothing about Senator Cruz's career, and his record of going against the Republican establishment. And everything they know about Donald Trump's record was what they saw when they watched him clowning around on reality TV shows and beauty pageants. In short, they know literally nothing about his past positions and past actions. They like him because he talked about his penis size in a national debate. They think that is "telling it like it is" and "not being politically correct". They don't know that he has always been a Democrat, and that he has always donated to Democrat causes. To them, entertaining words have more value than the patterns of past actions.

Trump supporters have done literally no homework at all in trying to look into the past actions and achievements of the candidates. The only thing they know how to do when confronted with Trump's liberal record, and Cruz's conservative record, is to try to drown out the truth with slogans that they obtained from the liberal media, or from their idol Trump himself. The reason why they support an airhead leftist con man like Donald Trump is because they are just not willing to invest the time to know what the candidates have done. They want to figure out who to vote for by watching television, not by researching or reading.

Trump supporters like Trump because they want to blame others for their own failure to grow up and achieve the American dream. America is a country where penniless first-generation immigrants who could not even speak English were able to come here and raise children who would later run for President, e.g. – Marco Rubio and Ted Cruz. Unfortunately, America is a country where too many who are born here think that they are entitled to such success without having to do any work to earn it. But I suspect that this failure has more to do with an attitude that disrespects knowledge and dismisses hard work.

By the way, this isn't a one-off video… this happens all the time. One previous example occurred in Iowa, where Cruz took time to talk with an angry Iowa farmer about why he opposed ethanol subsidies:

Donald Trump not only supports ethanol subsidies, he pandered to Iowans and offered to raise them – passing the costs of this vote buying on to other taxpayers.

If Ted Cruz loses this election, it will be because too many natural-born Americans abandoned learning about their own history and heritage. To learn those things, they would have to turn off the TV and do their own research. One thing is for certain – if you meet a Trump supporter, you can absolutely assume about that person that he knows literally knows nothing about the Constitution, economics, American history, foreign policy, or anything else that matters.

# Which candidate will defend religious liberty as President: Trump or Cruz?

**Wintery Knight** · 3 May 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

First, let's see a story is from the Business Insider, about the latest attack on religious liberty. Then we'll compare the candidates on religious liberty.

Excerpt:

> An Illinois inn that refused to allow a same-sex couple hold their civil union ceremony on the property was fined more than $80,000 by the **Illinois Human Rights Commission** on Tuesday.
>
> An administrative law judge with the commission ordered TimberCreek Bed & Breakfast to pay $15,000 each to Todd and Mark Wathen for emotional distress.
>
> […]TimberCreek, located about 100 miles south of Chicago, must also pay $50,000 in attorneys' fees and $1,218.35 in costs.
>
> **"We are very happy that no other couple will have to experience what we experienced by being turned away and belittled and criticized for who we are," Todd Wathen said in a statement.**

Ah, yes. The "Human Rights Commissions" that only ever go after Christians and conservatives, never secularists and liberals. It's now more important that gays not feel "belittled and criticized" than that Christians have their religious liberty respected. Christians must be forced by the government to act like non-Christians – that's apparently the law. A law that many Christians voted for when they voted for Democrats.

OK, now let's see what the presidential candidates think about the issue of gay rights vs religious liberty. Let's start with Ted Cruz.

**Ted Cruz**

Pro-marriage activist Maggie Gallagher reports on what Ted Cruz said about the Georgia governor's decision to side with gay rights over religious liberty:

> Ted Cruz once again proved he has the courage to go up against the GOP establishment in the person of Georgia Gov. Nathan Deal, who sided with leftists, big business and Hollywood by claiming conscience protections for gay marriage dissenters are "discrimination":

> "I thought that was very disappointing to see Gov. Deal of Georgia side with leftist activists and side against religious liberty," Cruz said. "It used to be, political parties, we would argue about marginal tax rates and you could have disagreements about what the level of taxation should be. But on religious liberty, on protecting the rights of every American to practice, live according to our faith, live according to our conscience, we all came together. That ought to be a bipartisan commitment and I was disappointed not to see Gov. Deal not defend religious liberty."
>
> Now will any reporters ask John Kasich, Hillary Clinton and Donald Trump the same question?

No need to ask Hillary Clinton what she thinks, she been endorsed by the Human Rights Campaign – she's a hardcore gay activist who opposes religious liberty 100%. Bernie Sanders is the same – 100% opposed to religious liberty.

But what about Donald Trump?

**Donald Trump**

This is from Bay Windows, which bills itself as "serving New England's Lesbian, Gay, Bisexual and Transgender communities".

Here's what they wrote:

> The frontrunner for the Republican presidential nomination today promised "forward motion" on gay and lesbian equality if he is elected.
>
> In an interview with NECN's Sue O'Connell just days before the crucial New Hampshire primary, Trump cast himself as a uniter on LGBT issues.
>
> O'Connell, who is also Bay Windows' Publisher, identified herself as a lesbian in a question that noted the progress the LGBT community has made in the last two decades and asked Trump if voters can expect him to continue that momentum if elected
>
> "When President Trump is in office can we look for more forward motion on equality for gays and lesbians?" O'Connell asked him.
>
> "Well, you can," Trump answered. " And look, again, we're going to bring people together, and that's your thing and other people have their thing. We have to bring all people together and if we don't we're not going to have a country anymore."

Recall that during the Iowa primary, Trump declared how much he loves evangelicals, and even held up a Bible he supposedly got from his mother as evidence of his genuine, authentic Christian faith. But the Iowa primary is over now, so no more Bible prop needed.

What about John Kasich?

**John Kasich**

Kasich considers same-sex marriage to be the law of the land, and he opposes legal protections for Christians who are sued by gay activists.

He gets an F on marriage from pro-marriage activist Maggie Gallagher for his stance on same-sex marriage:

> The Supreme Court overturns the marriage laws of your state and many others by inventing a new right? That gets a big yawn from John Kasich: "I do believe in the traditional sense of marriage—that marriage is between a man and a woman. But I also respect the Supreme Court of the United States. The Supreme Court of the United States made the decision, and as I have said repeatedly we'll honor what the Supreme Court does—it's the law of the land."

And he opposes protections for Christians who are sued by gay activists:

> What will you do, Gov. Kasich, to protect the rights of gay marriage dissenters?
>
> […]Gov. Kasich has refused to say whether he would support [the First Amendment Defense Act].

Ted Cruz has pledged to sign the First Amendment Defense Act, and quickly, too. No hesitation, because religious liberty is in the Constitution, and Ted Cruz is *crazy* about the Constitution!

# New study: Taxing top earners will not reduce wealth inequality

**Wintery Knight** · 3 May 2016 · Archived copy · Original

Lets take a closer look at a puzzle

New study! Here's a report on it from Real Clear Markets:

> The top 10% of Americans control roughly three-quarters of the nation's wealth, and the minority of Haves are continuing to accumulate more than the majority of Have-Nots.
>
> This is wealth inequality in the United States. And though it doesn't attract as much attention as income inequality, it's arguably far more important, imposing economic instabilities and social strife.
>
> To decrease wealth inequality, pundits, politicians, and economists often suggest raising income tax rates on top earners to as high as 50, 70, or even 90 percent.
>
> The idea sounds plausible, but according to a new study published to *PLoS ONE* it probably won't work in practice.
>
> […]In their model, income inequality was tied to a metric called the Gini index, a statistical measure of inequality used for decades. They found that altering income inequality to a Gini index of 0.1 (very low inequality) resulted in the top 10% controlling 78.6% of wealth in 2030, while raising income inequality to a Gini index of 0.9 (very high inequality) resulted in the top 10% controlling 79.3% of wealth in 2030, hardly a significant difference.

Do you know what does work to help people – growing the economy so that everyone can find work. It's actually been done before.

The conservative Heritage Foundation describes the effects of the Bush tax cuts from 2001 and 2003.

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made the earlier tax relief effective immediately. Congress also

> lowered tax rates on capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. Tax revenues also increased after the Bush tax cuts, due to economic growth.
>
> In 2003, capital gains tax rates were reduced. Rather than expand by 36% as the Congressional Budget Office projected before the tax cut, capital gains revenues more than doubled to $103 billion.
>
> The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.
>
> Here's what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six quarters following the tax cuts, the growth rate was 4.1%.
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next six quarters.
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy.

Please note: revenues actually went up as a result of the tax cuts, because more economic growth means more taxes are collected on the income that is generated.

Whenever people with savings take risks to grow their wealth, there will be jobs created. The solution to helping the poor isn't giving them someone else's money. The solution to helping the poor is to let productive job creators keep their own earnings, so that they use their money to create more jobs. That way, people who want to work have multiple job offers and can pick the best one. Productive people are not the enemy. Productive people give you money to work for them. That's good for you.

# Ted Cruz suspends campaign: what next for conservatives? #NeverTrump

**Wintery Knight** · 4 May 2016 · Archived copy · Original

Donald Trump with some of his supporters

I'll comment after quoting some of this brief message from Ben Shapiro, posted at Daily Wire.

Excerpt:

> So, Donald Trump is the nominee.
>
> After all the fighting, after all the lies, after all the conspiracy theories and bloviating and position-shifting and progressivism, after all the insults and racist pandering and economic illiteracy, after all the cruelty and full-fledged stupidity, Donald Trump is the nominee.
>
> What does this mean?
>
> It means that standing against Trump means more than ever.
>
> Early in this race, I stated repeatedly that the way to defeat Trump would be to point out to Republican primary voters that he wasn't conservative. After all, I reasoned, conservative voters were outraged with the Republican establishment that had caved over and over to President Obama; they'd want to nominate someone who wouldn't cut deals with the wild leftists of the Democratic Party.
>
> I got it wrong.
>
> It turns out that a huge bulk of Trump supporters don't care that he's a leftist. They think he's a tough guy who will fight for them; they think he'll fulfill the promise emblazoned on his ridiculous red "Make America Great Again" hats. They buy his two-bit promises, his stripper glitter showmanship, his foghorn bravado. And they do so because they don't give two good damns about conservatism.
>
> […][T]he Trump movement rejects conservatism. They don't care about the Constitution – it's a passé document that must be discarded in favor of a Dear Leader who can lead America back to Greatness. They don't care about the Declaration of Independence – they are an interest group, and they want their payoff. They don't care about traditional concepts of negative rights, or economic freedom, or foreign policy strength.

> They don't care about conservatives.
>
> So conservatives must stand against them.
>
> […]Trump's "something new" is something quite old, and quite un-American. If conservatives want a future, they must stand against him and his corrupt, bankrupt philosophy.
>
> 2016 could have been a time to reap the harvest of conservatism. Instead, Trump burned down the field.
>
> It's time to plant anew. We should do so with alacrity rather than embracing the man holding the match.

Right. There is not a single authentic conservative that voted for Trump. Trump is not a conservative, in any way, shape or form – on any issue. We should stay home during the general election and let him lose rather than let the label "conservative" be connected to a clownish liberal sociopath.

UPDATE: Don't stay home, go vote in the other races, and just write someone in or leave it blank for President. (I stand corrected on this)

The people who voted for Trump were basically idiots who had failed in their own lives, and wanted to blame someone other than themselves. That's what Trump promises: he will help the losers who want to win vicariously through him. Most of his support came from white registered Democrats who never completed college, and probably had never held a decent job in their lives for any length of time. But there are enough self-made losers in America, apparently, that a clown can be selected as the nominee of a major party.

Consider this post by Kevin Williamson in National Review magazine:

> The white middle class may like the idea of Trump as a giant pulsing humanoid middle finger held up in the face of the Cathedral, they may sing hymns to Trump the destroyer and whisper darkly about "globalists" and — odious, stupid term — "the Establishment," but nobody did this to them. They failed themselves.
>
> **If you spend time in hardscrabble, white upstate New York, or eastern Kentucky, or my own native West Texas, and you take an honest look at the welfare dependency, the drug and alcohol addiction, the family anarchy — which is to say, the whelping of human children with all the respect and wisdom of a stray dog — you will come to an awful realization. It wasn't Beijing. It wasn't even Washington, as bad as Washington can be. It wasn't immigrants from Mexico, excessive and problematic as our current immigration levels are. It wasn't any of that.**
>
> **Nothing happened to them. There wasn't some awful disaster. There wasn't a war or a famine or a plague or a foreign occupation. Even the economic changes of the past few decades do very little to explain the dysfunction and negligence — and the incomprehensible malice — of poor white America.** So the gypsum business in Garbutt ain't what it used to be. There is more to life in the 21st century than wallboard and cheap sentimentality about how the Man closed the factories down.
>
> The truth about these dysfunctional, downscale communities is that they deserve to die. Economically, they are negative assets. Morally, they are indefensible. Forget all your cheap theatrical Bruce Springsteen crap. Forget your sanctimony about struggling Rust Belt factory towns and your conspiracy theories about the wily Orientals stealing our jobs. Forget your goddamned gypsum, and, if he has a problem with that, forget Ed Burke, too. The white American underclass is in thrall to a vicious, selfish culture whose main products are misery and used heroin needles. Donald Trump's speeches make them feel good. So does OxyContin. What they need isn't analgesics, literal or political. They need real opportunity, which means that they need real change, which means that they need U-Haul.

David French, who grew up in Kentucky, and then attended Harvard Law School, adds this in National Review:

> These are strong words, but they are fundamentally true and important to say. My childhood was different from Kevin's, but I grew up in Kentucky, live in a rural county in Tennessee, and have seen the challenges of

> the white working-class first-hand.**Simply put, Americans are killing themselves and destroying their families at an alarming rate. No one is making them do it. The economy isn't putting a bottle in their hand. Immigrants aren't making them cheat on their wives or snort OxyContin. Obama isn't walking them into the lawyer's office to force them to file a bogus disability claim.**
>
> For generations, conservatives have rightly railed against deterministic progressive notions that put human choices at the mercy of race, class, history, or economics. Those factors can create additional challenges, but they do not relieve any human being of the moral obligation to do their best.
>
> **Yet millions of Americans aren't doing their best. Indeed, they're barely trying. As I've related before, my church in Kentucky made a determined attempt to reach kids and families that were falling between the cracks, and it was consistently astounding how little effort most parents and their teen children made to improve their lives. If they couldn't find a job in a few days — or perhaps even as little as a few hours — they'd stop looking. If they got angry at teachers or coaches, they'd drop out of school. If they fought with their wife, they had sex with a neighbor. And always — always — there was a sense of entitlement.**
>
> And that's where disability or other government programs kicked in. They were there, beckoning, giving men and women alternatives to gainful employment. You don't have to do any work (your disability lawyer does all the heavy lifting), you make money, and you get drugs. At our local regional hospital, it's become a bitter joke the extent to which the community is hooked on "Xanatab" — the Xanax and Lortab prescriptions that lead to drug dependence.
>
> Of course we should have compassion even as we call on people to do better. I have compassion for kids who often see the worst behavior modeled at home. I have compassion for families facing economic uncertainty. But compassion can't excuse or enable self-destructive moral failures.

We have Trump as the nominee because there are just too many of these low-information voters voting. Some of my friends are blaming the public school system, for destroying the quality of American education. Others are blaming the churches, for focusing on feelings rather than intellect. Those are both true, but I think we should blame the TV-watching Trump cultists themselves: first for failing at life, second for voting. If you're an illiterate loser who cannot hold a job and you blow all your money on alcohol, drugs and cigarettes, then you should not be voting.

Sadly, there is no job interview for voting. Any imbecile who knows more about sports than policy can vote. The way forward is simple. We need to play defense more than ever before, because things are going to get worse. And we need to continue to argue and explain why conservative principles and policies work better than the policies of liberal Democrats like Trump and Clinton.

# This suprises no one: Trump won Indiana with votes from fake Christians

**Wintery Knight** · 4 May 2016 · Archived copy · Original

Trump does best with registered Democrats, and in states run by Democrats
Here is an interesting article from The Stream.

Excerpt:

> Last night's Indiana primary was the final showdown for the GOP nomination, and unfortunately for #NeverTrump, Ted Cruz lost to Donald Trump. Trump won half the self-identified evangelical vote (though he did better with those who weren't evangelicals).
>
> A CBS exit poll shows how the votes played out and brings one striking feature of this race to light: the less frequently a Republican voter went to church, the more likely he or she was to vote for Trump, and vice versa.
>
> Cruz won those who attend church weekly (which includes more than once a week), while Trump won occasional churchgoers. As Ross Douthat has explained, active Christians aren't going for Trump — but cultural Christians are.

Trump also does well with registered Democrats, and he outperformed in blue states like New York – where his favored policies have been in effect for some time.

One woman who supports Trump is divorced from an adulterous ex-husband, with several fatherless children and is currently sexually involved with a non-Christian man. The non-Christian man has no college degree and is unemployed, so it's no surprise that he is a Trump supporter. The woman also has no college degree, but she fancies herself a serious Catholic. If you actually ask her questions about her faith, you'll find that her Catholicism is just "cosmic butler" Catholicism. Her "faith" is all non-cognitive spirituality and mysticism. She hopes that God will give her goodies in this life and imagines that her poor life choices result in "unexpected" disasters because the Devil is after her. Do what you feel like, act surprised when it all explodes and you go on welfare, and pray that

God will help you to win the lottery, so that all the craziness works out in the end.

I think a lot of people who make poor judgments about others based on appearances and emotions, like this divorced woman, are very impressed with Trump. He looks good, he's confident, he says entertaining things. Who needs to look for past achievements? If he says he everything will be great, then his words are better than actual demonstrated ability. Confidence and inherited wealth matters more to them than achievements. His sinfulness is not a problem to them – they're embroiled in the same sin themselves. Christianity is just a label they thrown on an otherwise non-Christian life. If they are willing to slap the label on themselves, then what's wrong with slapping the "Christian" label on Trump? Or the "conservative" label? They have no ability to make judgments about someone else's fruits, since they aren't Christian or conservative themselves. It's not a surprise to me that fake Christians and fake conservative voters cannot spot a fake Christian and a fake conservative like Trump. If they could, they would be impugning their own selves.

# Department of Justice goes after North Carolina

**Wintery Knight** · 5 May 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

Fox News reports:

> The U.S. Justice Department says a North Carolina law that limits protections to LGBT people violates federal civil rights laws.
>
> The Obama Administration agency on Wednesday put North Carolina Gov. Pat McCrory on notice that that state officials must confirm by Monday that they will not comply with or implement the law called House Bill 2.
>
> A letter from the Justice Department obtained by The Associated Press said the law violates Title IX of the Civil Rights Act, which bars discrimination in education based on sex. That could lead to North Carolina losing hundreds of millions of dollars in federal school funding.

That's what people who voted for Obama voted for.

Let's review the North Carolina law again, since the mainstream media has been deliberately misrepresenting it to push the gay agenda.

Here are a couple of myths about the law that everyone should know about:

> **The law affects all public bathrooms in North Carolina.**
>
> Mainstream media reporting about North Carolina's HB 2 has largely stated that the law prevents transgender individuals from using public bathrooms throughout the state that don't correspond with the gender on their birth certificates.
>
> Although the law does affect state government-managed bathrooms, many media organizations have not noted in their reporting that businesses and other private institutions across the state are still free to create their own bathroom policies.
>
> A New York Times report following the passage of the law in March states that the legislation is a "wide-ranging bill barring transgender people from bathrooms and locker rooms that do not match the gender on their birth certificates."
>
> Apparently that statement alone was enough to fool the Acton Institute's Peter Johnson, a libertarian-leaning

> conservative who wrote an op-ed published by The Federalist on Monday. Johnson's op-ed implied that the law applies to all public restrooms in the state.
>
> After getting much heat for mischaracterizing the law from conservatives like Heritage Foundation's Ryan Anderson, Johnson wrote a follow-up piece to explain that he was led to a faulty conclusion about the law thanks to the wording in the aforementioned New York Times article
>
> "I formed my opinion based on mainstream media characterizations of the law," Johnson wrote in his follow-up post.
>
> He also included excerpts from The Washington Post and CNN. CNN reported that the law "puts in place a statewide policy that bans individuals from using public bathrooms that do not correspond to their biological sex."
>
> **The law forces businesses to comply.**
>
> In his initial op-ed, Johnson also wrote that one of the reasons he opposed the law was because businesses should be allowed to set their own bathroom policies.
>
> However, the law explicitly protects businesses' rights to create their own bathroom policies and protects businesses from being punished by local governments for not allowing biological men into women's restrooms or vice versa.
>
> This means that the Planet Fitness in Charlotte is still free to open its men's and women's locker rooms to transgender individuals.
>
> "In the [first] article, I stated that the bill 'bars people in North Carolina from using bathrooms that do not match their birth sex,'" Johnson explained in his correction piece. "This is incorrect. The law only regulates bathroom usage in public facilities — not in private businesses."

That sounds like a sensible law to me. But now the federal government is going use our taxpayer dollars to punish North Carolina, because there's not much else going on and these government workers need something to do other than surf porn at work all day.

# Will Trump cultists apologize for their laziness and ignorance, as Trump reverts to leftism?

**Wintery Knight** · 5 May 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

Here is the latest from The Hill.

Excerpt:

> In a reversal, Donald Trump expressed openness to raising the federal minimum wage during an interview on Wednesday.
>
> "I'm looking at that, I'm very different from most Republicans," the presumptive GOP presidential nominee told CNN Wednesday about the prospect of increasing wages.
>
> "You have to have something you can live on. But what I 'm really looking to do is get people great jobs so they make much more money than that, much more money than the $15."
>
> The federal minimum wage is $7.25, but labor groups have been pushing for it to be raised to $15.
>
> During a November debate, Trump voiced opposition to raising the minimum wage.
>
> "I hate to say it, but we have to leave it the way it is," he said during the debate.

Who expected Trump to be a leftist on economic issues? Anyone with two brain cells to rub together, that's who. You could tell from his record, from his political donations, and other indicators that the man was a Democrat on economic issues. Everyone who did their homework on the candidates knew that. We all knew that he wanted to raise taxes on the most productive people, that he wanted to raise minimum wage, that he didn't want to reform the entitlements that are bankrupting the country, he thinks using eminent domain to take private property to benefit big business is a great idea, he wanted to increase agricultural subsidies, and so on. **Conservatives reject Trump, and continue to reject Trump, because Trump takes the wrong positions on economic issues.**

Here is Dr. Greg Mankiw, a professor of economics at Harvard University, explaining what economists across the ideological spectrum agree on.

He writes:

> The recent debate over the stimulus bill has lead some observers to think that economists are hopelessly

> divided on issues of public policy. That is true regarding business cycle theory and, specifically, the virtues or defects of Keynesian economics. But it is not true more broadly.
>
> My favorite textbook covers business cycle theory toward the end of the book (the last four chapters) precisely because that theory is controversial. I believe it is better to introduce students to economics with topics about which there is more of a professional consensus. In chapter two of the book, I include a table of propositions to which most economists subscribe, based on various polls of the profession. Here is the list, together with the percentage of economists who agree:
>
> 1. A ceiling on rents reduces the quantity and quality of housing available. (93%)
> 2. **Tariffs and import quotas usually reduce general economic welfare. (93%)**
> 3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
> 4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
> 5. **The United States should not restrict employers from outsourcing work to foreign countries. (90%)**
> 6. **The United States should eliminate agricultural subsidies. (85%)**
> 7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
> 8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
> 9. **The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)**
> 10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
> 11. A large federal budget deficit has an adverse effect on the economy. (83%)
> 12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
> 13. The government should restructure the welfare system along the lines of a “negative income tax.” (79%)
> 14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)
>
> If we could get the American public to endorse all these propositions, I am sure their leaders would quickly follow, and public policy would be much improved. That is why economics education is so important.

The ones in bold are the ones that Trump denies.

A person cannot be a conservative and a supporter of Donald Trump – the two are mutually exclusive. Conservatives are people who do understand basic economics, and Trump supporters are people who do not understand basic economics. There is no overlap.

A friend of mine who is being asked by Trump supporters why she will not support Trump posted this article from the American Thinker.

It says:

> […]I am not over the Constitution, although apparently many are, because they have thrown in with a man who never mentions it and often runs afoul of it. Donald Trump was born “over” the Constitution and still is. He’s never been concerned with it. New York values don’t intersect with the Constitution. No, I am not over the idea of liberty, and thus I’m not quite over the fact that the Republican nominee is a man totally unfamiliar with this concept and a man who never ever looks at increased liberty as the answer for out of control government. *Ever.*
>
> **[…]When crony capitalism is destroying our free market, does Donald want to stop government from picking winners and losers? NO! He doubles down on ethanol subsidies. He obfuscates the issue of**

> **eminent domain. And he rails against trade, not even considering the obvious conclusion that the big stick of tariffs is centralized planning and government picking winners and losers on steroids.**
>
> **[…]Trump *is* the establishment. His big check to party boss and establishment poster child Mitch McConnell has barely even cleared yet — a donation he followed up by insulting on Twitter those stupid Kentuckians who were willing to forgo McConnell's crony gravy train to his home state in favor of a principled man like Matt Bevin. Trump brags he has been giving to Republicans lately, but these donations are to establishment Republicans running against outsiders!**
>
> […]Alexander Hamilton said "if we must have an enemy at the head of Government, let it be one whom we can oppose, and for whom we are not responsible, who will not involve our party in the disgrace of his foolish and bad measures." He was right. Many of you haven not heeded that lesson. I have, and I am proudly not over the nomination of big government New York liberal Donald J Trump.

In order to support Trump, conservatives would have to value insults and clowning above the Constitution and economics. We're not willing to do that – although apparently many others are.

# Is Matthew Vines twisting Scripture to justify sinful sexual behavior?

**Wintery Knight** · 5 May 2016 · Archived copy · Original

I have a key that will unlock a puzzling mystery

Here's a post from Christian apologist Terrell Clemmons about efforts by gay activists to redefine Christianity so that it is consistent with homosexual behavior. This particular post is focused on Matthew Vines.

She writes:

> In March 2012, two years after having set out to confront homophobia in the church, Matthew presented the results of his "thousands of hours of research" in an hour-long talk titled "The Gay Debate." The upshot of it was this: "The Bible does not condemn loving gay relationships. It never addresses the issues of same-sex orientation or loving same-sex relationships, and the few verses that some cite to support homophobia have nothing to do with LGBT people." The video went viral (more than three quarter million views to date) and Matthew has been disseminating the content of it ever since.
>
> In 2013, he launched "The Reformation Project," "a Bible-based, non-profit organization … to train, connect, and empower gay Christians and their allies to reform church teaching on homosexuality from the ground up." At the inaugural conference, paid for by a $104,000 crowd-funding campaign, fifty LGBT advocates, all professing Christians, gathered for four days in suburban Kansas City for teaching and training, At twenty-three years of age, Matthew Vines was already becoming a formidable cause célèbre.

Terrell summarizes the case he makes, and here is the part I am interested in:

Reason #1: *Non-affirming views inflict pain on LGBT people*. This argument is undoubtedly the most persuasive *emotionally*, but Matthew has produced a Scriptural case for it. Jesus, in his well-known Sermon on the Mount, warned his listeners against false prophets, likening them to wolves in sheep's clothing. Then switching metaphors he asked, "Do people pick grapes from thornbushes or figs from thistles?" The obvious answer is no, and Jesus's point was, you can recognize a good or bad tree – and a true or false prophet – by its good or bad fruit. From this, Matthew concludes that, since non-affirming beliefs on the part of *some* Christians cause the bad fruit of emotional pain for*other* Christians, the non-affirming stance must not be good.

Terrell's response to this is spot on, and I recommend you read her post to get the full response.

She writes:

> Matthew Vines in particular, and LGBTs in general, appear to be drivingly fixated on changing other people's moral outlook. But *why*? Why are they distressed over the shrinking subset of Christianity that holds to the traditional ethic of sex? Note that Matthew found an affirming church in his hometown, as can most any LGBT-identifying Christian. Affirming churches abound. Gaychurch.org lists forty-four affirming denominations – *denominations*, not just individual churches – in North America and will help you find a congregation in your area. Why, then, given all these choices for church accommodation, are Matthew and the Reformers specifically targeting churches whose teachings differ from their own?
>
> One gets the sense that LGBTs *really*, *really need* other people to affirm their sexual behavior. Certainly it's human to *want* the approval of others, but this goes beyond an emotionally healthy desire for relational comity. Recall Matthew's plea that non-affirming views on the part of *some* Christians cause emotional pain for *others*. He, and all like-minded LGBTs, are holding *other people* responsible for their emotional pain. This is the very essence of *codependency*.
>
> The term came out of Alcoholics Anonymous. It originally referred to spouses of alcoholics who enabled the alcoholism to continue unchallenged, but it has since been broadened to encompass several forms of dysfunctional relationships involving pathological behaviors, low self-esteem, and poor emotional boundaries. Codependents "believe their happiness depends upon another person," says Darlene Lancer, an attorney, family therapist, and author of *Codependency for Dummies*. "In a codependent relationship, *both* individuals are codependent," says clinical psychologist Seth Meyers. "They try to control their partner and they aren't comfortable on their own."
>
> Which leads to an even more troubling aspect of this Vinesian "Reformation." Not only are LGBT Reformers *not* content to find an affirming church for themselves and peacefully coexist with everyone else, *everyone else must change* in order to be correct in their Christian expression.
>
> This is the classic progression of codependency, and efforts to change everyone else become increasingly coercive. We *must* affirm same-sex orientation, Matthew says. If we don't, we are "tarnishing the image of God [in gay Christians]. Instead of making gay Christians more like God … embracing a non-affirming position makes them less like God." "[W]hen we reject the desires of gay Christians to express their sexuality within a lifelong covenant, we separate them from our covenantal God."
>
> Do you hear what he's saying? LGBTs' relationships with God are dependent on Christians approving their sexual proclivities. But he's *still* not finished. "In the final analysis, then, it is not gay Christians who are sinning against God by entering into monogamous, loving relationships. It is *we* who are sinning against them by rejecting their intimate relationships." In other words, non-affirming beliefs stand between LGBTs and God. Thus sayeth Matthew Vines.

The rest of her article deals with Vines' attempt to twist Scripture to validate sexual behavior that is not permissible in Christianity.

Vines seems to want a lot of people to agree that the Bible somehow doesn't forbid this sexual behavior so that the people who are doing it won't feel bad about doing it. If he can just silence those who disagree and get a majority of people to agree, then the people who are doing these things will feel better.

Well. I am a chaste man now in my late 30s. I have not so much as kissed a woman on the lips. There is no societal celebration for what I am doing, not even in the church. But you don't see me complaining that people need to validate my choice to be chaste. And the reason is, that even if the entire world were against me, the morality of chastity is self-authenticating. It doesn't matter how many people make me feel bad about what I am doing, I have the direct experience of doing the right thing. Being chaste allows me to love women upward by treating them like equal partners in the gospel, and expecting them to work for the gospel like any man would.

Matthew Vines is annoyed that we expect homosexuals to work through their same-sex attractions, abstain from premarital sex, and then either remain chaste like me, or marry one person of the opposite sex and then confine

his/her sexual behavior to his/her marriage. But how is that different than what is asked of me? I have opposite sex-attractions (boy, do I!), but I am also expected to abstain from premarital sex, and either remain chaste, or marry one woman for life, and confine my sexual behavior to that marriage. **If I have to exercise a little self-control to show God that what he wants from me is important to me, then I am willing to do that.** I'm really at a loss to understand why so many people take sexual gratification as a given, rather than as an opportunity for self-denial and self-control. I am especially puzzled by sinful people demanding that other celebrate their sin – and using the power of the government now to compel others to celebrate their sin.

Believe me, I understand what it is like to be without a woman's love and support. I started out with a cold, distant, selfish, career-oriented mother. I dreamed about marriage since I was in high school – I remember praying about my future wife, even then. No one that I know has a stronger need for validation and encouragement from a woman than I do. Yet if I have to let that go in order to let God know that what he wants matters to me, then I will do it.

My service to God is not conditional on me getting my needs met. And my needs and desires are no less strong than the needs of people who engage in sex outside the boundaries of Christian teaching. We just make different decisions about what/who comes first. For me, Jesus is first, because I have sympathy with Jesus for loving me enough to die in my place, for my sins. I am obligated to Jesus, and that means that my responsibility to meet expectations in our relationship comes above my desire to be happy and fulfilled. For Matthew, the sexual desires come first, and Scripture has to be reinterpreted in light of a desire to be happy. I just don't see anything in the New Testament that leads me to believe that we should expect God to fulfill our desires. The message of Jesus is about self-denial, self-control and putting God the Father first – even when it results in suffering. I take that seriously. That willingness to be second and let Jesus lead me is what makes me an authentic Christian.

There is a good debate featuring Robert Gagnon and a gay activist in this post, so you can hear both sides.

# Trump reveals that he was lying to his gullible supporters all along

**Wintery Knight** · 6 May 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

Surprise, Trump cultists! You've been had by a con man.

Let's get right to the details, thanks to this article from the Daily Wire:

> So, you're suckers.
>
> Yes, you conservatives who keep waiting for Donald Trump to turn into Ronald Reagan, who hope to unify behind him thinking that he'll surround himself with good people and that they will guide him to all the best decisions. Yes, you conservatives who bought into the Trumpian nonsense that he would blow up the system and change things in politics. In the last 24 hours Trump has indeed pivoted – directly against all of his supposedly conservative positions. Here are four examples:
>
> **[…]Trump Won't Be Self-Funding.** Remember that time Trump said he'd self-fund, unlike his rivals? Even as donors signal that they won't be opening their pocketbooks for Trump, Trump announced that he won't self-fund his campaign. "I'll be putting up money," he said, "but won't be completely self-funding." Instead, Trump said he would build a "world-class finance organization." So all that talk about how people who take donations are being bribed to shill for donors – yeah, all that was patented Trump garbage.
>
> **Trump Hires A Former Goldman Sachs Fundraiser Who Managed Money For George Soros.**Remember that time Donald Trump suggested that Ted Cruz was in the pocket of Goldman Sachs ("I know the guys at Goldman Sachs, they have total, total control over him")? Remember Snaggletooth The Trumper™ who told Ted Cruz that Cruz should be wearing his "Goldman jacket"? Now Trump has hired Steve Mnuchin, chairman and CEO of Dune Capital Management LP and former Goldman Sachs partner, to head up his fundraising team. Mnuchin also worked at Soros Fund Management LLC. Yes, that Soros. George Soros. Mnuchin also donated thousands of dollars to Hillary Clinton, among other Democrats; since 1998, he's donated twice as much money to Democrats as Republicans.
>
> **[…]**So this is the new general election Trump. He looks just as dishonest and scheming as the old Trump, just with a fresh leftist taste sure to please the most ardent Bernie Sanders supporters. Conservative Trump voters – this is your Great Hope.

The article also mentions that Trump is open to raising the minimum wage, and that his tax plan and border security plan are just an opening statement, subject to negotiations. Two more minor things that don't matter, right?

Elsewhere, at Conservative Review:

> We've experienced this rodeo show for decades.
>
> The media picks our nominee – whether it's for president, Senate, or governor. That lucky individual has never fought a single battle for conservatives on a single issue in his entire life and has even carried water for the other side on some critically important issues. Yet, he ran as a conservative in the primary and railed against the Democrats. The media, whether local or national, anointed this individual and helped him run a dehumanization campaign against his opponent. Not surprisingly, that man wins the primary and the other man – irrespective of his lifelong reputation – is left with the image of a dirt bag in the minds of most voters by the end of the election.
>
> […]Just within the first 24 hours of becoming the presumptive nominee, Trump has floated Portman and Kasich as potential VP candidates, echoed the worst of the liberal talking points on minimum wage, and walked back his promise to self-fund his campaign – one of his most appealing taking points of the campaign.

Portman and Kasich are leftist establishment Republicans. You might remember that Portman embraced gay marriage and Kasich is opposed to protecting religious liberty from lawsuits and punishments by gay activists. Surprise! That's who Trump is, too. A New York liberal pretending to be a Republican for his gullible TV-watching followers.

Trump supporters have never looked into Trump's past positions, his political contributions, his bankruptcies, etc. They learned about Trump by watching him laugh and joke on their televisions. And their hatred for other candidates like Walker and Cruz isn't based on any knowledge of Walker and Cruz – it's just repeating the sound bites about Walker and Cruz uttered by Trump, and dutifully played over and over again by the mainstream media.

Here is what Trump would say if he were honest: "Believe me! I'm a liberal Democrat pretending to be a Republican! I can tell you that!" Just imagine that line spoken in Trump's charismatic voice, over and over, Trump supporters. Maybe then you'll realize what your laziness and ignorance cost us.

# Kansas enacts law to permanently de-fund Planned Parenthood

**Wintery Knight** · 6 May 2016 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve this legislation
Happy Friday!

Good news from Life News.

Excerpt:

> Kansas Governor Sam Brownback today signed a bill that would ensure that no taxpayer dollars are going to fund the abortion industry.
>
> Kansas Senate Bill 436 would prioritize Title X grants, which are taxpayer-funded, by awarding them to full-service public health clinics and hospitals first. Planned Parenthood, which often receives these grants from various states, would be pushed to the end of the list because it does not provide comprehensive health care and, essentially, defunded.
>
> Here's more:
>
> Gov. Sam Brownback vowed in his State of the State speech in January to make sure that "not a single dollar of taxpayer money goes to Planned Parenthood" through the Kansas Medicaid program.
>
> But reimbursements continued. In early March, the state Department of Health and Environment said it was continuing to work on the termination of Planned Parenthood's Medicaid funding "in accordance with the law."
>
> The termination letter came Tuesday from the department, Planned Parenthood officials said.
>
> The letter from the state informing Planned Parenthood that it could no longer serve as provider under the state's Medicaid program cited several reasons, including "noncompliance with applicable state laws" and "unethical or unprofessional conduct." The organization has about a month to request a review of the decision.
>
> The bill would make permanent a statute in the annual Kanasas budget that gives higher priority to

> comprehensive health care providers, according to Kansans for Life.

That's good news for a Friday, but if the Obama administration's response to states like Louisiana (school choice) or Tennessee (bathroom privacy) is any indicator, then they will go after Kansas as well. Because that's what Democrats believe in: top-down control of states by an intrusive federal government. Still, Kansas can fight that.

# Should Christians be motivated by the fear of missing out (FOMO)?

**Wintery Knight** · 6 May 2016 · Archived copy · Original

Bible study that hits the spot

My best friend Dina and I recently spent some time talking over some articles that we found on the culture. We specifically talked about what is motivating young people, so I wanted to write something about that.

**FOMO: Fear Of Missing Out**

Here's a leftist New York Times article explaining where FOMO comes from:

> It's known as FOMO, or "fear of missing out," and refers to the blend of anxiety, inadequacy and irritation that can flare up while skimming social media like Facebook, Twitter, Foursquare and Instagram. Billions of Twitter messages, status updates and photographs provide thrilling glimpses of the daily lives and activities of friends, "frenemies," co-workers and peers.
>
> […]When we scroll through pictures and status updates, the worry that tugs at the corners of our minds is set off by the fear of regret, according to Dan Ariely, author of "Predictably Irrational" and a professor of psychology and behavioral economics at Duke University. He says we become afraid that we've made the wrong decision about how to spend our time.
>
> […]A friend who works in advertising told me that she felt fine about her life — until she opened Facebook. "Then I'm thinking, 'I am 28, with three roommates, and oh, it looks like you have a precious baby and a mortgage,' " she said. "And then I wanna die."

It's like they want to run a race to do fun and exotic things with their peers, and not finish last.

Anyway, I want to begin this post with examples of FOMO behavior I have personally encountered.

**FOMO Travel**

Dina and I read and discussed this article by Alain de Botton in *The European* – notice the emphasis on travel and having fun, sophisticated experiences:

> We're continually being bombarded with suggestions about what we might do (go jet skiing, study in Colorado,

> visit the Maldives or see the Pyramids). We're always hearing of the amazing things friends have done or are going to do: 'there was this great bar we all went to …'; 'she's getting married in a little country church, then we're having a picnic…'; 'the sun was glinting on Sydney Harbour…' There are endless hints of the allure of life in other places: an article about family-friendly restaurants in Brooklyn, a crime novel set in Trieste, the departure board at the airport with its list of places only a plane trip away: Moscow, Bangkok, Addis Ababa… The modern world makes sure we know at all times just how much we're missing. It is a culture in which intense and painful doses of FOMO (Fear Of Missing Out) are almost inevitable.

What's interesting is this – how does FOMO travel affect young, unmarried Christians?

Travel through missions work seems to be the FOMO activity of choice for at least a few young, unmarried Christians. One of my best friends who is married to another of my best friends told me about her missions trip to a European country. I asked her why she did it, since it meant lost savings, lost earnings, lost work experience, etc. (She gave up a year of earnings, and she had a great job in engineering). Her answer was that she did it for the adventure. I have a hard time hearing Jesus say that he was going to do something because he was bored and wanted an adventure. Especially when it's $30,000 in costs, $60,000 of lost income, and lost work experience – per year. This was before the time of the Internet, though, when missionary work actually made sense. I just don't think it's worth spending that kind of money for the impact you make. The people I know who went on missionary trips just wanted to feel spiritual, look spiritual, and have a fun "life experience" vacation. One missionary told me that she was desperate to get away from her boring mid-Western roots.

If you really want to share Christ effectively with people in other countries, then you can start a blog and pay the tiny costs for it out of your earnings from your day job – that's what I do. I get more people from Europe reading my blog than I could contact in a year of missionary work. I Skype with the people who are interested in Christianity from these countries (Scotland, Northern Ireland, England, Canada, etc.), as well. Meanwhile, I keep working my not-exciting job, so my savings increase, and my resume remains gap-less. This is good stewardship of finances, and self-denial prepares your character for the hard work of marriage and parenting. The Bible says that those who do not work should not eat. And Paul says that he built tents so that no one could accuse him of taking on missionary work for financial gain.

You can tell whether a person is sincere in their missionary intentions by looking at how responsible they've been in their decision-making. If a person has gone into debt paying for fun, thrilling activities like skydiving, ziplining, surfing, etc., then it's FOMO travel. We must look past the spiritual smokescreen, and tell young people to grow up.

After all, if defending God's honor was the missionary's main goal, then the real battlefield would be the university.

Bill Craig puts it best:

> **William Lane Craig** (Famed Christian apologist and philosopher): "It is at the university that [our most influential people] will formulate or, more likely, simply absorb the worldview that will shape their lives. And since these are the opinion-makers and leaders who shape our culture, the worldview that they imbibe at the university will be the one that shapes our culture. If we change the university, we change our culture… If the Christian worldview can be restored to a place of prominence and respect at the university, it will have a leavening effect throughout society."[3]

If serving God is your goal, look to the university

There is already a perfectly fine university right next door – no need to fly to Europe to find one! Remember, the university that took your faith away, or maybe the faith of someone you cared about? Yeah, *it's still sitting there in your home town!* And it's still ruining the lives of thousands of young people, by peer-pressuring them into secular, liberal views – *and behaviors*. It seems to me that it's better stewardship to stay here and work, then give money to

groups like Reasonable Faith. And you can start a blog, teach in church and invite scholars to the local university, too. That costs almost nothing, and it produces better results.

**What about Jesus?**

Sometimes, it's a good idea to look beyond the words of the Bible and reflect on the overall message of it at a higher level. When I look in the Bible, I see that Jesus went through a lot of suffering in obedience to God in order to secure the salvation of people who did not even like him. And it's from this sacrifice on our behalf that his claim on our obedience comes. There are things that I don't like to do that I do anyway because they work to serve God. Jesus life's ambition was not to do things that were easy, or that made him happy. Experienced Christians do things that are not fun, because these things are right and *because they solve the real problem*.

# Dennis Prager: the feminization of America harms the whole world

**Wintery Knight** · 7 May 2016 · Archived copy · Original

My favorite painting: "Godspeed" by Edmund Blair Leighton, 1900

A few days back, I wrote a post that I really enjoyed writing about the movie High Noon. In it, I talked about the conflict between Marshal Will Kane and his new wife. He wanted to stay and protect his home town against outlaws who are coming to kill him and raze the town. His new wife cannot understand why he has to stand and fight, she wants him to run away with her. In the end, she helps him to defeat the outlaws, saving his life.

That post was inspired by something I heard Dennis Prager talking about on his radio show. He was talking about a survey of boys and girls done by the toy company Mattel. Well, I wanted to blog about his comments, so I ended up writing the High Noon post. But then Dina found an article about the Mattel survey on National Review. I think this is one of the wisest and most perceptive articles I have ever read, and it will really help you to understand what has happened in the last 50 years to this country.

Prager writes:

> Last week the *New York Times* published an article, "Sweeping Away Gender-Specific Toys and Labels," that contained three sentences that explain one of the most important phenomena in American life. In discussing the increasing move to do away with gender-specific toys — something the *New York Times* approves of — the article quoted Tania Missad, the "director of global consumer insights" at one of the world's largest toy manufacturers, Mattel:
>
> **Mattel's research showed some differences in what girls and boys wanted in their action figures, Ms. Missad said. "For boys it's very much about telling a story of the good guy killing the villain. . . . [Girls] would tell us: 'Why does the good girl have to kill the villain? Can't they be friends in the end?'"**

Prager comments on the part in red:

> This difference may be the most important of all the sex differences. Indeed, it can actually shape the future of

> America and of the world.
>
> Of course, there are women who want evil destroyed — the late Margaret Thatcher, for example. And there are men who oppose confronting evil — the men who lead the modern Democratic party, for example. (One such man is the president of the United States, who has a feminized view of those who do evil — talk to them, but don't confront them, label them, or fight them.) But these exceptions happen in large numbers under two circumstances: when women get married and when men are feminized.
>
> When women get married, they are often influenced by their husbands with regard to political and moral issues, just as married men are influenced by their wives on a whole host of micro issues. As a result, married women are more likely than single women to prefer to fight villains than to befriend them. Unfortunately, more and more American women are single.
>
> **Meanwhile American boys are increasingly raised by single women and taught almost only by female teachers. In addition, they are often taught to be ashamed of their masculine natures and to reject traditional masculine virtues.**
>
> As a result of the above two trends, the amount spent on national defense will continue to decline (while the amount spent on welfare will continue to increase), and America will confront the world's evils less and less. The consequences will be disastrous for millions of people around the globe.
>
> When America retreats from killing bad guys, bad guys kill more innocent people. We are witnessing this right now as a consequence of America's abandoning Iraq and retreating from the world generally. Islamic State took over more and more territories as America abandoned them. Ironically, therefore, as American foreign policy becomes feminized, more Middle East females are raped.
>
> Whenever I see on a car the liberal bumper sticker "War Is Not the Answer," I look to see who is driving. In years of looking, I have seen one male driver.
>
> Both women and men have flawed natures. They share human nature, which is deeply flawed, and the sexes have their own particular natures, which are also flawed. That is one reason men need women and women need men. Men need women to soften their intrinsic aggressive nature and to help them control their predatory sexuality; and women need men to, among other things, better understand that evil people and regimes must be fought, not nurtured.

So, there is something in male nature that thinks that it is acceptable to use violence as a last resort in order to defeat evil. Evil might be things like criminals, terrorists… even wolves and bears, if they attacked innocent people.

So what are the solutions?

Here's what we should do:

- We should stop paying women money to have children before they are married, so that boys have fathers to raise them who have made a commitment before they got handed free sex.
- We should rollback no-fault divorce, which leads to fatherless children. People should be less emotional about who they marry, and not think "there's an escape hatch if I feel unhappy".
- We should try to get more male teachers into classrooms, and maybe allow parents to pull boys out of failing schools and put them into all-male schools if they think those work better.
- We should try to vote for policies that empower law enforcement, national security, and our armed forces to detect, attack and defeat evil. For example, we invest in defense spending, and avoid undermining the morale of police and armed forces with political correctness.

I guess the list could be longer, but that's a start for the issues that Prager raised.

We need to work against the forces that demean male nature and male roles, and work to promote male nature and male roles.

# Four ways the Earth is fine-tuned for life, and one more

**Wintery Knight** · 8 May 2016 · Archived copy · Original

Circumstellar Habitable Zone

This is a post from J. Warner Wallace, over at Cold Case Christianity.

Let's see his four ways first, then I'll add one that I know.

He writes:

1. **The Earth's Relationship to the Sun Is Favorable to Life**
2. **The Earth's Atmospheric Conditions Are Favorable to Life**
3. **The Earth's Terrestrial Nature Is Favorable to Life**
4. **The Earth's Relationship to the Moon Is Favorable to Life**

I've blogged about the moon and plate tectonics before, so we won't pick #3 and #4 to look at. And I blogged about the stellar habitable zone before, so we won't pick #1, either.

Let's look at #2:

> **The Earth's Atmospheric Conditions Are Favorable to Life:**
> The surface gravity of Earth is critical to its ability to retain an atmosphere friendly to life. If Earth's gravity were stronger, our atmosphere would contain too much methane and ammonia. If our planet's gravity were weaker, Earth wouldn't be able to retain enough water. As it is, Earth's atmosphere has a finely calibrated ratio of oxygen to nitrogen—just enough carbon dioxide and adequate water vapor levels to promote advanced life, allow photosynthesis (without an excessive greenhouse effect), and to allow for sufficient rainfall.

Ok, that's very good.

Now here is one from me… well, it's from Science Daily, but I found it. Actually, ECM found it. But he told me.

Excerpt:

> They suggest that the size and location of an asteroid belt, shaped by the evolution of the Sun's protoplanetary disk and by the gravitational influence of a nearby giant Jupiter-like planet, may determine whether complex life will evolve on an Earth-like planet.
>
> This might sound surprising because asteroids are considered a nuisance due to their potential to impact Earth

> and trigger mass extinctions. But an emerging view proposes that asteroid collisions with planets may provide a boost to the birth and evolution of complex life.
>
> Asteroids may have delivered water and organic compounds to the early Earth. According to the theory of punctuated equilibrium, occasional asteroid impacts might accelerate the rate of biological evolution by disrupting a planet's environment to the point where species must try new adaptation strategies.
>
> The astronomers based their conclusion on an analysis of theoretical models and archival observations of extrasolar Jupiter-sized planets and debris disks around young stars. "Our study shows that only a tiny fraction of planetary systems observed to date seem to have giant planets in the right location to produce an asteroid belt of the appropriate size, offering the potential for life on a nearby rocky planet," said Martin, the study's lead author. "Our study suggests that our solar system may be rather special."

So, that's 5 ways that the Earth and our solar system are fine-tuned to be habitable for complex, embodied minds. Somebody is looking out for you, so be thankful and recognize.

# In California, even non-members of labor unions pay to advance secular left causes

**Wintery Knight** · 9 May 2016 · Archived copy · Original

Most people know that public sector unions are among the largest donors of the secular left. But most people don't know that Christians and conservatives are often forced to join unions in order to work in a particular job, and that some of their salary is automatically taken to push causes favored by the secular left.

Here is an article from the Daily Signal:

> A large California teachers union and its national affiliate are forcing nonunion teachers to pay for political activism, according to a disclosure form acquired by The Daily Signal.
>
> Under a category called "human rights," both the National Education Association and the California Teachers Association require nonunion teachers to finance LGBT leadership training and other political goals that may run counter to the teachers' convictions, The Daily Signal's analysis of the disclosure form shows.
>
> The form shows that unions charged $1.1 million in "human rights" costs to nonunion teachers as well as members in 2013-14, while identifying another $1.2 million in the same category as not chargeable to those who weren't members.
>
> A separate page lists $20,228 in chargeable costs for "Women and LGBT Issues" as a line item under the category of human rights. The same page includes a line item on "unconscious bias training" for which nonmembers must cover $5,436.
>
> The teachers unions also spend a pretty penny on annual conferences described as focused on education, some of which appear designed instead to further political causes.
>
> For the 2013-14 school year, the teachers unions charged nonmembers as well as members a total of $49,739 for an "Equity Human Rights Conference," nearly twice as much as the $25,622 deemed not chargeable to nonmembers, the disclosure form shows.
>
> **The unions charged nonmembers as well as members a total of $17,108 for an "LGBT Conference," referring to the lesbian, gay, bisexual, and transgender movement, with a lower amount, $11,358, that wasn't charged to nonmembers.**

The only way out of paying for secular left causes seems to be passing right-to-work laws, but those are strongly opposed by the Democrat Party. Why would the Democrats be in favor of forcing people to pay unions money and not letting them opt out?

**Most unions donate almost exclusively to Democrats**

This Wall Street Journal article explains that unions donate mostly to Democrats.

Excerpt:

> Corporations and their employees… tend to spread their donations fairly evenly between the two major parties, unlike unions, which overwhelmingly assist Democrats. In 2008, Democrats received 55% of the $2 billion contributed by corporate PACs and company employees, according to the Center for Responsive Politics. Labor unions were responsible for $75 million in political donations, with 92% going to Democrats.

So how much money are we talking about?

Total political contributions in 2014 election cycle (click for larger image)

To see how much unions control government, take a look at this story from National Review, written by economist Veronique to Rugy.

It says:

- The top campaign donor of the last 25 years is ActBlue, an online political-action committee dedicated to raising funds for Democrats. ActBlue's political contributions, which total close to $100 million, are even more impressive when one realizes that it was only launched in 2004. That's $100 million in ten years.
- Fourteen labor unions were among the top 25 political campaign contributors.
- Three public-sector unions were among the 14 labor groups: the American Federation of State, County, and Municipal Employees; the National Education Association; and the American Federation of Teachers. Their combined contributions amount to $150 million, or 15 percent of the top 25's approximately $1 billion in donations since 1989.
- Public- and private-sector unions contributed 55.6 percent — $552 million — of the top 25's contributions.

Where does the money go? The Daily Caller notes:

> "Nearly all of labor's 2012 donations to candidates and parties – 90 percent – went to Democrats," the report from CRP concluded. "Public sector unions, which include employees at all levels of government, donated $14.7 million to Democrats in 2014."

Although unions helped a great deal in the past to protect workers from unfair practices, their primary function now seems to be to confiscate money from their members to give to themselves and to Democrats. When we make the collection of union dues optional, then unions will have to be more responsive to their members, and less responsive to their Democrat allies.

# NC governor files suit against Obama administration

**Wintery Knight** · 9 May 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

NBC News reports:

> North Carolina on Monday filed a lawsuit against the federal government in response to a letter from the Justice Department that gave the state until the end of the day to scrap a controversial law regarding access to public bathrooms or risk losing hundreds of millions of dollars in federal funding.
>
> Gov. Pat McCrory was given until Monday to notify the Justice Department that he would not enforce House Bill No. 2, which the federal government says limits protections for LGBT people. The measure has drawn a firestorm of protest from across the country.
>
> The suit filed against the federal government, which lists McCrory and other state officials as plaintiffs, called the Justice Department's position on the law "baseless and blatant overreach."
>
> North Carolina's suit said that Title VII, which the Department of Justice said House Bill No. 2 violates, doesn't recognize transgender status as a protected class. "If the United States desires a new protected class under Title VII, it must seek such action by the United States Congress," the suit said.
>
> McCrory had already indicated that he wasn't going to back down, saying on Sunday: "It's the federal government being a bully. It's making law."
>
> […]House Speaker Tim Moore said, "That deadline will come and go. We don't ever want to lose any money, but we're not going to get bullied by the Obama administration to take action prior to Monday's date. That's not how this works."
>
> […]In letters, federal civil rights enforcement attorneys focused on provisions requiring transgender people to use public restrooms that correspond to their biological sex.
>
> **[…]If the federal government yanked funding, the 17-campus UNC system could lose more than $1.4 billion in public money.**

> **[…]Another $800 million in federally backed loans for students who attend the public universities also would be at risk if it's found that enforcing the law violates Title IX of the Civil Rights Act, which bars discrimination based on sex.**
>
> **A federal lawsuit against the state is also possible, the Justice Department said.**

In America, we have set up a system where the states are supposed to have jurisdiction over certain things that the federal government cannot control. We call this idea "federalism". And it is a major reason why we are more prosperous than other nations. We believe in pushing decision-making down to the lowest level where a problem can be solved, because then it will be solved efficiently. But apparently, the socialists in the federal government – whose salaries are paid by our taxes – have decided that they know best and must force their views down onto the states. And what view are they forcing? They want private businesses in North Carolina to be forced to allow men into women's bathrooms.

Do we not have other more pressing problems for the Obama administration to solve? Perhaps they can work on the IRS targeting of conservatives? Or perhaps they can work on the $20 trillion dollar debt, which has doubled since the Democrats took over the budget. Or perhaps they can back out of their deal to give Iran nuclear weapons? Or perhaps they can investigate their trafficking of assault weapons to Mexican drug cartels? Or perhaps they can fix the small problem of the labor force participation plunging to 62.8%? Or perhaps they can repeal Obamacare, which is set to raise health insurance premiums again by double digits in the coming year? Or perhaps they can repeal Dodd-Frank, which did nothing to fix the mortgage lending crisis that was caused in part by the two authors of the bill? Or perhaps they can privatize student loans and defuse the $1.3 trillion student loan bubble? Or perhaps they can get to work on modernizing our military – particularly our aging ballistic missiles submarines and our decrepit intercontinental ballistic missiles?

Or they could just focus on pushing a gay rights agenda down onto North Carolina. This is what you get when you elect an incompetent clown for a President, I guess.

# J. Warner Wallace: I am not a Christian because it works for me

**Wintery Knight** · 9 May 2016 · Archived copy · Original

Here's a must-read post from Cold-Case Christianity author J. Warner Wallace.

Excerpt:

> Life on this side of my decision hasn't always been easy. It's been nearly seventeen years since I first trusted Jesus as Lord and Savior. I still struggle to submit my prideful will to what God would call me to do. Christianity is not easy. It doesn't always "work" for me. There are times when I think it would be easier to do it the old way; easier to cut a corner or take a short cut. There are many times when doing the right thing means doing the most difficult thing possible. There are also times when it seems like non-Christians have it easier, or seem to be "winning". It's in times like these that I have to remind myself that I'm not a Christian because it serves my own selfish purposes. I'm not a Christian because it "works" for me. I had a life prior to Christianity that seemed to be working just fine, and my life as a Christian hasn't always been easy.
>
> I'm a Christian because it is true. I'm a Christian because I want to live in a way that reflects the truth. I'm a Christian because my high regard for the truth leaves me no alternative.

I think this is important. There are people who I know who claim to be Christian, but they are clearly believing that God is a mystical force who arranges everything in their lives in order to make them happy. They are not Christians because it's true, but because of things like comfort and community. But people ought to become Christians because they think it's true. Truth doesn't necessarily make you happy, though. Truth can impose intellectual obligations and moral obligations on you. Seeing God as he really is doesn't help us to "win" at life, as the culture defines winning.

Winning in Christianity doesn't mean making lots of money, or being famous, or winning human competitions, or being approved of by lots of people. Winning for a Christian might involve things like building relationships with people and leading them to know that God exists and who Jesus is. That has no cash value, and it's not going to make you famous. Actually, it will probably cost you money and time, and make you unpopular with a lot of people.

The Bible doesn't promise that people who become Christians will be happier. Actually, it promises that Christians will suffer for doing the right things. Their autonomy will suffer, as they sacrifice their own interests and happiness

in order to make God happy, by serving his interests. Christianity isn't something you add on to your before-God life in order to achieve your before-God goals. When you become a Christian, you get a new set of goals, based on God's character and his design for you. And although you might be very successful in the world as part of serving God, there is no guarantee of that. Christianity is not life enhancement.

# Donald Trump plans to default on our debt and/or embrace hyper-inflation

**Wintery Knight** · 10 May 2016 · Archived copy · Original

Donald Trump meeting with some of his alt-right economic policy advisers

In the past, I've given reasons to social conservatives to explain why no social conservative could vote for Donald Trump, even to stop Hillary. Trump is "very pro-choice", favors partial birth abortion, is liberal on gay rights, is an unrepentant adulterer and a serial divorcer.

But, fiscal conservatives can't vote for Trump either, and that's because Trump knows less about *basic economics* than what you flush down the toilet. This is because inheriting wealth from Daddy does not give you an understanding of basic economics.

The radically leftist New York Times reports: (H/T ALL MY DEMOCRAT CO-WORKERS)

> After assuring Americans he is not running for president "to make things unstable for the country," the presumptive Republican nominee, Donald J. Trump, suggested that he might reduce the national debt by persuading creditors to accept something less than full payment.
>
> Asked on Thursday whether the United States needed to pay its debts in full, or whether he could negotiate a partial repayment, Mr. Trump told the cable network CNBC, "I would borrow, knowing that if the economy crashed, you could make a deal."

You could make a deal with creditors – you could offer them less than what they borrowed – declare bankruptcy, in effect. That's just what he did as a businessman – over and over and over.

More:

> **Such remarks by a major presidential candidate have no modern precedent. The United States government is able to borrow money at very low interest rates because Treasury securities are regarded as a safe investment, and any cracks in investor confidence have a long history of costing American taxpayers a lot of money.**

> Experts also described Mr. Trump's proposal as fanciful, saying there was no reason to think America's creditors would accept anything less than 100 cents on the dollar, regardless of Mr. Trump's deal-making prowess.

The Weekly Standard notes who will bear the brunt of the damage:

> It's odd for the candidate who promises, seriously, to eliminate the $19 trillion national debt in eight years—without reforming entitlements—to tell America's creditors (read: mostly Americans) to accept less than they were promised.
>
> If it weren't a sad-but-true situation, that could be a more honest Trump campaign slogan: Accept Less Than Promised.
>
> **Seniors, of course, being savers, would bear the brunt of a Trump debt writedown—if such a thing could happen. But the real losers would be, well, everyone. Were Trump elected, ignoring the market shocks that the likelihood of that would bring, signalling that the U.S. might hedge on repaying its sovereign debt in full would be, effectively, a default on our debt.**

He's a lunatic. Defaulting on our debt would not just destroy the wealth of Americans, it would disrupt the world economy. But since he was on "The Apprentice", I guess Trump supporters think we can let it slide.

Oh, but his ignorance of basic economics is much worse than that.

Here is the latest Trumpfoolery reported by CNN:

> Donald Trump declared Monday the U.S. never has to default on debt "because you print the money," while trying to clarify his strategy for managing the national debt.

Got that? He's decided now that he's not going to default on our debt, he's going to print more money so he can buy back all our debt with printed money.

So, now, we're going to inflate our way out of a $20 trillion debt. Why not? It worked in Germany with the Weimar Republic. It worked more recently in Venezuela, Argentina and Zimbabwe. Why not elect a cretin to the highest office in the land? He's confident, and he has orange skin and hot supermodel wife.

We can blame the low-achieving college drop-outs who voted for Trump for this. They own it. Their stupidity caused this.

# The New York Times discovers that universities discriminate against conservatives

**Wintery Knight** · 10 May 2016 · Archived copy · Original

Academic diversity: ratio of liberals to conservatives is 36 to 1
Wow! And from that radical leftist Nicholas Kristof, of all people.

Here is the New York Times:

> We progressives believe in diversity, and we want women, blacks, Latinos, gays and Muslims at the table — er, so long as they aren't conservatives.
>
> Universities are the bedrock of progressive values, but the one kind of diversity that universities disregard is ideological and religious. We're fine with people who don't look like us, as long as they think like us.
>
> […]Four studies found that the proportion of professors in the humanities who are Republicans ranges between 6 and 11 percent, and in the social sciences between 7 and 9 percent.
>
> Conservatives can be spotted in the sciences and in economics, but they are virtually an endangered species in fields like anthropology, sociology, history and literature. One study found that only 2 percent of English professors are Republicans (although a large share are independents).
>
> In contrast, some 18 percent of social scientists say they are Marxist. So it's easier to find a Marxist in some disciplines than a Republican.
>
> […]The scarcity of conservatives seems driven in part by discrimination. One peer-reviewed study found that one-third of social psychologists admitted that if choosing between two equally qualified job candidates, they would be inclined to discriminate against the more conservative candidate.
>
> Yancey, the black sociologist, who now teaches at the University of North Texas,conducted a survey in which up to 30 percent of academics said that they would be less likely to support a job seeker if they knew that the person was a Republican.
>
> The discrimination becomes worse if the applicant is an evangelical Christian. According to Yancey's study, 59

> percent of anthropologists and 53 percent of English professors would be less likely to hire someone they found out was an evangelical.
>
> “Of course there are biases against evangelicals on campuses,” notes Jonathan L. Walton, the Plummer Professor of Christian Morals at Harvard. Walton, a black evangelical, adds that the condescension toward evangelicals echoes the patronizing attitude toward racial minorities: “The same arguments I hear people make about evangelicals sound so familiar to the ways people often describe folk of color, i.e. politically unsophisticated, lacking education, angry, bitter, emotional, poor.”
>
> A study published in The American Journal of Political Science underscored how powerful political bias can be. In an experiment, Democrats and Republicans were asked to choose a scholarship winner from among (fictitious) finalists, with the experiment tweaked so that applicants sometimes included the president of the Democratic or Republican club, while varying the credentials and race of each. Four-fifths of Democrats and Republicans alike chose a student of their own party to win a scholarship, and discrimination against people of the other party was much greater than discrimination based on race.
>
> “I am the equivalent of someone who was gay in Mississippi in 1950,” a conservative professor is quoted as saying in “Passing on the Right,” a new book about right-wing faculty members by Jon A. Shields and Joshua M. Dunn Sr. That’s a metaphor that conservative scholars often use, with talk of remaining in the closet early in one’s career and then “coming out” after receiving tenure.

I often get asked by people why I push your Christians and conservatives so hard towards STEM fields, especially math and engineering and technology. The answer is simple. For Christians, this is the safest way to get a degree that will pay for itself. The risk you take when you borrow money to go into a non-STEM field is that you will face discrimination, be graded down, and be denied your degree. Every other minority gets affirmative action on the university campus except for evangelical Christians and Constitutional conservatives. And the worst thing that you can be is what I am, a black conservative male evangelical.

I was talking to one of my mentorees who is an graduate program in computer science the other day. I said to her that I find it more difficult to get motivated to keep up with the latest programming technologies than to keep up with apologetics and politics. She asked me why I chose computer science, then. And I said “because I was good at it, and I needed a way to be able to support a wife and four children”. I was interested in English and criminal law when I was younger, but I saw that those departments were among the most liberal by taking night classes at the local universities while I was still in high school. I actually got into trouble with the law professors because I always wanted the stiffest sentences for criminals.

So this is why I push young people to STEM, or more accurately, TEM. It’s because to come out of university as a Ted Cruz, you have to be the best *by far*. You have to be ten times as smart as the typical pot-smoking, drunken, promiscuous leftist college student. They get As just for parroting what the professors indoctrinate them with. It really is much safer to stick with quantitative fields, especially engineering.

# Obama DOJ moving fast against NC HB2 but slowly on Clinton investigation

**Wintery Knight** · 11 May 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

Here is what your taxpayer dollars are going to pay for at the Department of Justice.

Religious liberty champion David French writes about it at National Review:

> At an afternoon news conference, Attorney General Loretta Lynch announced a "significant law enforcement" action — its own lawsuit. At the same time, Lynch indicated that the DOJ retained the authority to federal funding to key state entities, issuing a not-so-veiled threat of dramatic action *before* the courts issue a definitive ruling. At the same time, she preposterously compared the act of preserving bathrooms for people of the same sex to, of course, "Jim Crow" and hearkened back to the days of segregated water fountains.
>
> A public-relations battle over bathrooms and showers has transformed into a fight over the meaning and indeed authority of the Constitution itself. In its zeal to advance the sexual revolution, the Obama administration has defied the will of Congress, unilaterally rewritten federal law without even bothering to go through a statutory rulemaking process, and now seeks to bring a sovereign state to heel through a combination of threats and lawsuits.

French explains that there is no support for what the DOJ says in federal law:

> Title VII prohibits private and public employers (including state governments) from discriminating on the basis of "race, color, religion, sex, and national origin." Title IX prohibits federally funded educational institutions from discriminating on the basis of "sex." Neither statute prohibits sexual-orientation or gender-identity discrimination. For more than 20 years, LGBT activists have sought to amend federal law through the so-called Employment Non-Discrimination Act, a bill that would essentially add sexual orientation and gender identity as protected classes within federal nondiscrimination law. For more than 20 years, LGBT activists have failed.

> ENDA hasn't passed even when Democrats controlled the presidency and both houses of Congress.
>
> Rather than wait for the law to change, however, federal regulators and lawless federal judges have incrementally changed it by executive and judicial fiat, steadily expanding the scope of Title VII until July 2015, when the Equal Employment Opportunity Commission unilaterally amended the statute. In a document entitled "What You Should Know about EEOC and Enforcement Protections for LGBT Workers," the Commission declared that it interprets and enforces Title VII's prohibition of sex discrimination as forbidding any employment discrimination based on " (boldface in original).
>
> At a stroke, the EEOC decided that it was going to essentially enforce ENDA — a statute that doesn't exist. Democracy wasn't working fast enough for the Obama administration, so it decided to give authoritarianism a try.

So why exactly are social conservatives fighting the gay activists on this? Simple. We want to protect people's right to privacy, as well as protect them from sexual assaults.

Here's a case of privacy violated from last week, as reported by CBS News:

> Frisco police are looking for a man they say photographed a young girl in a Target changing room.
>
> Benito Valdez with police says it happened at the Super Target on Preston Road. "The man was in a female dressing room at the Target and was seen by the victim, over the wall with his cell phone, taking photos of the victim."

It occurred at Target, of course- they let you use any bathroom you feel comfortable with, regardless of your sex.

The Toronto Sun reported on an example of sexual assault:

> A sexual predator who falsely claimed to be transgender and preyed on women at two Toronto shelters was jailed indefinitely on Wednesday.
>
> Justice John McMahon declared Christopher Hambrook — who claimed to be a transgender woman named Jessica — was a dangerous offender.

Gay rights activists like to ask how many sexual assaults have been committed by transgendered people. The answer is none or few, but no social conservative is worried about that – we are worried about cases like the one above, where a real predator pretends to be trans in order to get access to bathrooms, showers and yes, women's shelters. But none of this is a problem for the Department of Justice, and besides, they would probably be more considered about the criminal rather than the victim anyway. That's how liberals think.

But gay rights is a priority for the Department of Justice, under Barack Obama. Do you know what isn't a priority? Criminal investigations.

This post is from Conservative Review.

Excerpt:

> President Obama's top law enforcement officer declined to give a firm answer on whether or not her department would take any action on the Hillary Clinton email scandal investigation before the end of election season.
>
> At a press conference held to announce the Department of Justice's lawsuit against the state of North Carolina over its controversial bathroom safety legislation, Attorney General Loretta Lynch was asked why the DOJ was able to move so quickly on the latter of the two cases and slowly, in contrast, on the former. When pressed, Lynch would only say that the investigation against the former Secretary of State was simply still "ongoing."

No need to investigate the IRS for persecuting conservative groups, or to investigate Hillary Clinton's unsecure private e-mail server in a timely fashion. No! The priority is to make sure that private businesses are forced to allow biological men into women's bathrooms, because that's what the gay activists want. Remember that Lynch is also passionate about prosecuting anyone who is critical of radical Islam. Not radical Islamic terrorists, but people who are critical of radical Islamist terrorists.

# Can we raise declining marriage rates by telling men to “man up”?

**Wintery Knight** · 11 May 2016 · Archived copy · Original

Marine prays with his wife on their wedding day

The latest Prager University video features pro-marriage scholar Brad Wilcox:

I watched this video, and, as a card-carrying member of the Christian men’s rights movement, I was concerned that nothing was said about how radical feminism has weakened the attractiveness of marriage to men. I mean specifically things like women carrying debt, having liberal political views, being unchaste and even promiscuous, initiating the majority of divorces (70%), withholding sex if they do marry, and denying men child visitation if they divorce, single mother welfare making men superfluous, big government replacing men as providers, etc. The consequences of divorce for men are catastrophic, and I don’t just mean financially, but emotionally as well.

I contacted Wilcox to ask him why he did not recognize how radical feminism undermines the value of marriage to men, and he pointed me to this article he wrote in the leftist Washington Post.

He writes:

> These days, 20something marriage has gotten a reputation for being a bad idea. That’s partly because parents, peers, and the popular culture encourage young adults to treat their twenties as a decade for exploration and getting one’s ducks in a row, not for settling down. In the immortal words of Jay-Z, “Thirty’s the new twenty.”
>
> Indeed, the median age-at-first marriage has climbed to nearly 30 for today’s young adults, up from about 22 in 1970. Of course, there’s an upside to that. As my coauthors and I report in  Knot Yet: the Benefits and Costs of Delayed Marriage in America, women who put off marriage and starting a family earn markedly more money than their peers who marry earlier.

And here he sort of takes on my concerns about chastity, delayed marriage, and fertility:

> First, you are more likely to marry someone who shares your basic values and life experiences, and less likely to marry someone with a complicated romantic or family history.  Those who marry in their twenties, for

> instance, are more likely to marry someone who isn't previously married and shares their level of educational attainment as well as their religious faith. Marrying at this stage in your life also allows couples to experience early adulthood together. In the words of Elizabeth Gilbert, a 31-year-old woman who married in her mid-twenties, "My husband and I got to grow up together—not apart. We learned sacrifice, selflessness, compromise, and became better people for it."
>
> Women who marry in their 20s generally have an easier time getting pregnant, and having more than one child, than their peers who wait to marry in their thirties. You'll also be around to enjoy the grandchildren for longer.

> You're less likely to lose the best possible mate for fear of getting started too young on the adventure that is married life. One single, thirtysomething woman struggling to find a good partner put it this way to psychologist Meg Jay, the author of The Defining Decade: Why Your Twenties Matter and How to Make the Most of Them Now, and whose TED Talk on twentysomethings has garnered 6.9 million views: "The best boyfriend I ever had was in my mid-twenties. I just didn't think I was supposed to be [married] with someone then." And as psychotherapist Lori Gottlieb explains in her book, Marry Him, there's a higher likelihood of finding a true peer and more appealing partner-for-life in one's twenties, before those most appealing potential mates marry somebody else by their thirties.

I cannot fault Wilcox or Prager for being ignorant of the social changes that have undermined the value proposition of marriage for men, and that have also undermined men's ability to fulfill their roles. Far from being a man-blamer, Prager is a warrior against radical feminism, and just today Wilcox tweeted a study showing the boys benefit from single-sex education – a position I favor myself. But I do want to head off the common "men need to man up" objection made by those who deny that the real problem is radical feminism.

Contrary to the "be a man / man up" crowd, my objections to marriage don't come from a desire to be lazy about education, career and finance. Rest assured that I have a BS and MS in STEM, and nearly two decades of STEM work experience (internships, summer jobs, full-time employment). I do make six figures, like the person Wilcox discussed in the video, and I have the savings you would expect with a gapless STEM resume. So, complaining about "man up" isn't going to work on me, and probably not on most men who have concerns about marriage.

Radical feminism causes women to delay marriage in order to have fun, travel and ride the carousel of promiscuity in their 20s. Women have been told that they will have more fun by delaying marriage and staying single in their 20s. Church leaders, friends and family should be discussing and demonstrating the value of marriage to women, and showing them how the lasting contentment of marriage is better than the temporary fun of drinking, sex, travel and career. Marriage is a better platform for lasting joy and for quality relationships. It's up to the woman's friends and family to make the case for marriage as more fun and fulfilling than the alternatives offered by radical feminism. Her friends and family need to be countering the feminist message that is everywhere in the culture: marriage is boring, children are a burden, and that husbands are needy and demanding fools. And women need to be told how spending a decade being selfish in their 20s undermines their suitability for marriage.

A woman's friends and family should train her not to view the moral and spiritual leadership of a man as threatening and dangerous, just because it disagrees with her feelings and desires. Instead of recoiling in horror when a well-educated, successful, wealthy man tells a woman with a history of poor decision-making to get a full-time job, pay off her debts, and start investing, her friends and family ought to welcome it. A good man's practical advice should not be seen as stifling a woman's freedom to "follow her heart". And her friends and family certainly should not celebrate when she chooses a penniless, unemployed, empty-resume man who never questions her reckless decisions. Women should be encouraged to choose men who have demonstrated ability as protectors, providers and moral and spiritual leaders, even if she would rather have a doormat who lets her be wild, selfish and irresponsible. Doormats are not intimidating, but they are also not decisive about marriage. When a man wants to marry a woman, he is very interested in encouraging her to be practical and responsible. This is a good thing.

Lesbian relationships are the most unstable and shortest-lived relationships. This suggests that there is a tendency in women to reject commitment when it goes against their feelings and self-interest. Women's emotions can make them unstable, and less capable of commitment. Friends and family need to recognize that tendency, and help women to learn practicality, responsibility and unselfishness at a young age, so that they are capable of making commitments.Men look for women who have demonstrated that they are able to complete things that they start. We know that women initiate 70% of divorces, and mostly because of feelings of unhappiness. Finish a tough STEM degree, work a tough job for a few years, pay off debts, pay off a car loan, etc. Men look for women who can make and keep commitments through good times and bad times, even when it goes against their self-interest.

A good basic book to read on this issue is Helen Smith's "Men On Strike".

Here's a short video about her book:

A longer interview from News Max:

And an even longer interview with a homeschooling man:

Some men are ignorant of how radical feminism makes women less suitable for marriage while simultaneously making school and work more difficult to boys and men. It is these men who need to "man up" and "be a man" by challenging women to reject radical feminism and embrace early marriage to strong men who lead. If you're not willing to fight the radical feminism that causes the underlying problems, then you can't complain when men wisely reject marriage to women who aren't ready to be wives and mothers.

# Fifteen reasons why Donald Trump is a liberal

**Wintery Knight** · 12 May 2016 · Archived copy · Original

Donald Trump and his friends, the Clintons

In National Review, David French lists 15 reasons why Donald Trump is a crazy liberal.

Here are the topics:

1. government-provided health care
2. raising taxes
3. touchback amnesty
4. protectionism / tariffs
5. seizing private property (eminent domain)
6. liberal judicial nominees
7. opposition to first amendment
8. raising minimum wage
9. praising Planned Parenthood
10. transgenders use bathroom / shower of their choice
11. Bush-Iraq conspiracy theories
12. bomb oil fields to stop Islamic State
13. order American troops to commit war crimes
14. 9/11 conspiracy theories
15. Cruz father conspiracy theories

These are all from the time of Donald Trump's campaign – we are not even going back to when he was "very pro-choice".

I've covered most of these already, but this one was new to me:

> 15. Finally, there is this now-infamous bit of lunacy, which can't be stressed enough: Trump tied Ted Cruz's father to John F. Kennedy's assassin:
>
> "His father was with Lee Harvey Oswald prior to Oswald's being — you know, shot. I mean, the whole thing is ridiculous," Trump said Tuesday during a phone interview with Fox News. "What is this, right prior to his

> being shot, and nobody even brings it up. They don't even talk about that. That was reported, and nobody talks about it."
>
> "I mean, what was he doing — what was he doing with Lee Harvey Oswald shortly before the death? Before the shooting?" Trump continued. "It's horrible."

Yes, really:

His source for that conspiracy theory is – of course – the National Enquirer, which is run by his very good friend Mr. Pecker. And I expect that in a Trump administration, he would put more trust in stories from the National Enquirer than Presidential Daily Briefings produced by the FBI, CIA, etc.

Trump believes this:

The National Enquirer again

This is not Trump's first brush with conspiracy theories. Nor the second. Nor the third. Nor even the fourth. And I guess that a fair number of his supporters will believe this, because maybe they consider the National Enquirer to be a reputable news source.

I wonder what would have happened to Ted Cruz if he had cited the National Enquirer as an authority when he was defending the Second Amendment before the U.S. Supreme Court. He probably wouldn't have won the case if he had, so it's a good thing he is a serious intellectual, and he won the case.

# Courageous pro-life student organizes her own conservative “Sex Week”

**Wintery Knight** · 12 May 2016 · Archived copy · Original

Ratio Christi event at Ohio State University featuring Frank Turek

I always enjoy hearing news of events on the university campuses where conservative and/or Christian viewpoints get a hearing.

The College Fix reports: (H/T Terrell)

> After eight long months of planning, Students for Life UNM brought “The Real Sex Week” to the University of New Mexico in March.
>
> We began with a workshop discussing the male and female body, the biology behind intercourse, and how the act of sex affects our minds and relationships, linking humans chemically and contrasting the notion that one-night stands have no impact on women’s psyches.
>
> Our second workshop was packed with STD education and information on contraception from a local OBGYN, Dr. Ann Church. We discussed the success and failure rate of different contraception (did you know that condoms have a 18 percent failure rate?) and looked at how hormonal contraception negatively affects the body, because those who use oral contraceptives have up to ten times the risk of developing breast cancer as does a non-user.
>
> We also taught about other forms of contraception, such as Natural Family Planning, which is an umbrella term for different methods used to cause and prevent pregnancies, all based on the observation of the naturally occurring signs of the fertile and infertile phases of a woman’s menstrual cycle. The A-word, abstinence, was also touted. Students learned that avoiding sex before marriage actually has positive effects, such as lower exposures to an STD and more positive thoughts about life in general.
>
> […]During our “Pregnant and Parenting Support” workshop, we heard from a local pregnancy center, Women’s Pregnancy Options, as well as testimonies from five mothers who are recent graduates or still in school. The advice they doled to female students who find themselves pregnant? Stick it out – there’s support available, such as pregnancy resources centers and the national Students for Life of America initiative,

> Pregnant On Campus.
>
> […]Our next night offered healing from sexual assault with counselor Rebecca Frock, as well as healing from abortion with the help of Surrendered Hearts.
>
> […]We concluded "The Real Sex Week" with a women's self-defense class offered by MMA fighters Jesonna Ollis and Greg Mundth. Instead of hearing that most college men are rapists who need to be taught to control themselves, females in our workshop gained empowerment by learning how to fight off would-be attackers.

I really like her focus on getting people to be responsible *before* they have to make a tough decision.

So, most of you know that I support apologetics events on campuses, especially debates and lectures by scholars I like. But I also support pro-life events, as well. It's very important for older Christians to keep an eye on what younger Christians are doing on university campuses and be there to help them out. It's important for us to connect with college kids and give them guidance and support. They do much better when they feel that a grown-up cares about what they are doing and planning.

I recently had my annual check up, and my doctor checked my blood pressure. It was 110 over 76. My resting heart rate was 60 beats per minute. He asked me how I managed to have such low blood pressure when I am always upset about secularism, feminism, socialism, etc. I told him that the best thing to do when you are upset about something is to do something about it. Obviously, writing this blog is my effort to do something about whatever is upsetting me. I know a lot of Christians and conservatives do more than me, too – which is very good. Think of all the people who are in Ratio Christi, or the people who counsel people considering abortion outside of abortion clinics, or the people who went door to door for Ted Cruz.

I really recommend to people that they get focused on doing something positive instead of complaining, or believing conspiracy theories that just make you feel more powerless. What you do doesn't have to be anything big, and you'll feel a lot better when you do it. And remember, you're not responsible for results, you're just responsible for doing things that are likely to move the ball forward.

# Hillary and Bill Clinton collected $100 million in donations from Middle East leaders

**Wintery Knight** · 13 May 2016 · Archived copy · Original

Hillary Clinton look bored about the deaths of 4 Americans who asked for her help

This is from Investors Business Daily.

It says:

> A new investigation reveals that Bill and Hillary Clinton took in at least $100 million from Middle East leaders. Can such a financially and ethically compromised candidate truly function as our nation's leader?
>
> The investigation by the Daily Caller News Foundation has uncovered a disturbing pattern of the Clintons' raising money for the Clinton Foundation from regimes that have checkered records on human rights and that aren't always operating in the best interests of the U.S. By the way, the $100 million we mentioned above doesn't appear to include another $30 million given to the Clintons by two Mideast-based foundations and four billionaire Saudis.
>
> All told, it's a lot of money.
>
> "These regimes are buying access," Patrick Poole, a national security analyst who regularly writes for PJ Media, told the DCNF. "You've got the Saudis. You've got the Kuwaitis, Oman, Qatar and the UAE (United Arab Emirates). There are massive conflicts of interest. It's beyond comprehension."
>
> […]Meanwhile, former U.S. Attorney Joseph E. diGenova told the Caller that he believes the FBI has launched a second, possibly more serious investigation into possible political corruption involving the Clinton Foundation. This is potentially explosive, given that the Clintons seem to have run their charity in a way that lines their own pockets.
>
> The question is an open one: Did the oil-rich Mideast nations give lavishly to the Clinton Foundation in an effort to influence future U.S. policy? And what about Bill Clinton's business partnership with Sheikh Mohammed bin Rashid Al Maktoum, Dubai's authoritarian ruler, from 2003 to 2008? Clinton took away some

> $15 million in “guaranteed payments” from the deal, his tax records show.
>
> […]In just the past three years, after her stint as the nation’s top diplomat, Hillary Clinton spoke to dozens of deep-pocket firms on Wall Street, typically charging $250,000 a pop to hear her wit and wisdom — despite her bitter condemnations of Wall Street during her campaign.
>
> All told, she took in an estimated $22 million from these speeches — an extraordinary amount, given the growing consensus among foreign-policy thinkers that Clinton was one of the worst secretaries of state *ever*.

Now, I thought that Hillary Clinton was supposed to be all concerned about women’s rights and blah blah blah. Why then is she taking in all this money from the leaders of all these Middle East (Muslim) countries, some of whom do not treat women very well at all? And why isn’t the mainstream media covering this story?

# Greg Koukl and Michael Krueger discuss Bart Ehrman's skepticism of the gospels

**Wintery Knight** · 13 May 2016 · Archived copy · Original

Here is a recent episode that I'm sure you'll enjoy.

Details:

> Michael Kruger on Bart Ehrman's claim we can't trust the Holy Week Gospel accounts (April 1, 2016)

The MP3 file is here.

Topics:

- Who is Bart Ehrman? What are his books about?
- Conservatives tend to agree with Ehrman on the facts, not on his interpretation of the facts
- Ehrman has an article claiming that the Holy Week gospel accounts are untrustworthy
- do the variants in the NT texts undermine the reliability of the texts?
- the difference between reasonable scholar-Bart and hyper-skeptical popularizer-Bart
- where does Ehrman's view of gospel reliability fit in the broad spectrum of NT scholars?
- there are 200,000 to 400,000 variants in the copies of the gospels: what is a "variant"?
- can a person be an authentic Christian if the gospels are not actual historical events?
- Ehrman's view: Christians can have feelings about events that never happened = not Biblical
- was Jesus just an itinerant preacher who spoke pithy slogans? what about his Jewish background?
- is there scholarly agreement regarding the minimal facts underlying the resurrection of Jesus?
- is there a disconnect between uneducated eyewitnesses and educated Greek gospel authors?
- is the early church an "oral culture" or a "textual culture"? Is oral transmission reliable?
- was text of the New Testament was inspired by God or dictated by God?
- do we have any reasons to think that the gospel authors were in contact with eyewitnesses?
- should be be hyper-skeptical of the gospels when we have an early creed in 1 Cor 15:3-8?

Stand to Reason does a nice job with their podcast. Not only can you download the MP3, but they have a transcript, and links to resources mentioned in each episode. First class!

# Obama administration forces transgender bathroom access in all public schools

**Wintery Knight** · 14 May 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

This is from The Stream:

> Public schools must permit transgender students to use bathrooms and locker rooms consistent with their chosen gender identity, according to an Obama administration directive issued amid a court fight between the federal government and North Carolina.
>
> The guidance from leaders at the departments of Education and Justice says public schools are obligated to treat transgender students in a way that matches their gender identity, even if their education records or identity documents indicate a different sex.
>
> "There is no room in our schools for discrimination of any kind, including discrimination against transgender students on the basis of their sex," Attorney General Loretta Lynch said in a statement accompanying the directive, which is being sent to school districts Friday.
>
> In issuing the guidance, the Obama administration is wading anew into a socially divisive debate it has bluntly cast in terms of civil rights. The Justice Department on Monday sued North Carolina over a bathroom access law that it said violates the rights of transgender people, a measure that Lynch likened to policies of racial segregation and efforts to deny gay couples the right to marry.
>
> **"We must ensure that our young people know that whoever they are or wherever they come from, they have the opportunity to get a great education in an environment free from discrimination, harassment and violence," [Education Secretary John B.] King said.**

Ah yes – the students get their educations in the bathrooms, changerooms and showers. So that's where they have to be free to pretend to be a sex they are not, or they won't learn anything in there. It's part of their education, what goes on in bathrooms, changerooms and showers.

In any case, things are going so well academically in our schools, that of course we can focus on these human rights issues instead. Our public schools are the best in the world, and our students are the most educated, right?

OK, so who is behind this power play? The largest gay activist group in the United States, of course:

> The move was cheered by Human Rights Campaign, a gay, lesbian and transgender civil rights organization, which called the guidelines “groundbreaking.”
>
> “This is a truly significant moment not only for transgender young people but for all young people, sending a message that every student deserves to be treated fairly and supported by their teachers and schools,” HRC President Chad Griffin said in a statement.

All of this Obama administration activity is being down with taxpayer dollars. Even if you disagree with it, you’re paying for it. The solution is to shrink the size of government by voting for people who want the federal government to only focus on the responsibilities outlined for it in the Constitution, and push the other responsibilities down to the state level. I can guarantee you that if you live in a red state, you would never have your state government forcing gay activist legislation down your throat. But even then, at least you could move to a more conservative state. When the federal government does it, you’re stuck.

Think of the things that the federal government should be working on like fighting wars, building up our armed forces, detecting and neutralizing terrorists, securing the border, and lowering taxes and regulations on business. But they do none of those things, and instead just do whatever the Human Rights Campaign wants them to do. And this is what people who vote for the Democrat party want.

Ted Cruz campaigned on abolishing the federal department of education, precisely because education is something that should be left to the states. But, unfortunately the Republican primary voters were not looking for someone with good policies. So this isn’t going to get fixed, no matter who wins the election in 2016. It might get fixed in 2020, if we elect a Constitutional conservative.

# Sex abuse survivors discuss consequences of transgender bathroom laws

**Wintery Knight** · 15 May 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

In this latest video from Alliance Defending Freedom:

The Daily Signal explains the new video:

> Policies allowing a person who is biologically male to access women's restrooms and locker rooms can create negative, unintended consequences, according to some sexual abuse survivors.
>
> "The presence of a male of any variety, whether he's somebody who identifies as a trans or not, whether he has deviant motives or not, that's irrelevant to the reality that for survivors of sexual trauma to just turn around and to be exposed to that is an instant trigger," Kaeley Triller, a sexual trauma survivor, said in a video created by Alliance Defending Freedom, a conservative, Christian legal organization.
>
> The video explains from a first-hand perspective how unintended victims are the consequence of open restroom and locker room policies in place at some companies like Target and in schools, such as in Fort Worth, Texas.
>
> […]"People are afraid, and with good reason, because they've had experiences where they were in places where they were vulnerable and someone hurt them," a woman named Autumn Bennett said in the video.
>
> […]Janine Simon, a sexual assault victim, shared her thoughts in the video.
>
> "I've only been telling my personal story publicly for a few months," Simon said. "I do it because I know there are so many kids out, there are so many kids out there already being abused. There's so many kids out there that pedophiles, they're just looking for a chance… We've just created a law that makes it easier for them to access their victims."
>
> […]This year in Washington state, a man was reported to have undressed in front of girls in a women's locker room.

> "As long as the person says, 'I identify as a woman,' and they're not doing something criminal like actually assaulting somebody, this rule gives them the legal right to be present," Joseph Backholm, executive director of the Family Policy Institute of Washington, told The Washington Times in February.

And as I blogged before, the Obama administration, which is in the back pocket of the gay rights lobby, has ordered all the public schools in the nation to implement transgender bathroom access. Even if you pull your kids out of the public schools, you are still paying for the public schools to be run the way that the gay rights lobby wants them to be run. You can't opt out of paying taxes to the Democrat Party.

**Fort Worth, TX**

What is scary is how this is even happening at the state and local level, in states that are supposedly conservative.

Look at this:

> The public schools in Fort Worth — *Fort Worth* — are going trans-positive. Here's a link to the new school policy, [UPDATE: Link corrected. Sorry! — RD] which is based on the new federal interpretation of Title IX. It's in Scribd, so I can't quote excerpts. Highlights include:
>
> - There doesn't need to be a medical or mental health diagnosis involved. If a male student says he's a girl, then he's a girl, and vice versa.
> - Schools are instructed to keep the student's asserted gender identity hidden from parents unless authorized to share that information with them.
> - School personnel are to consider themselves to be allies of a student undergoing gender transitioning. That means not telling their parents or guardians.
> - Transgender students must have the opportunity to participate in school sports as the gender they claim to be, though they are not guaranteed this as a right.
>
> But there's more. The Fort Worth schools are now compelling teachers and others to teach gender ideology to students. Highlights:
>
> - Teachers are no longer to call their students "boys" and "girls," but to use gender-neutral language to refer to them, e.g., "students"
> - Classrooms are to "feature diversity" in their classroom materials
>
> So, let's recap: public school teachers and personnel in the Fort Worth Independent School District are now required by policy to instruct students that gender can be whatever you want it to be. And they are required to keep parents in the dark about their kids transitioning or presenting themselves as the opposite gender at school.
>
> Not in Austin. In Fort Worth.

Where are the people in Fort Worth supposed to go to get their kids away from this? And where do they get the tax money they paid into the system back, if they do pull their kids out of these public schools?

My solution to this is to allow the victims of anything that follows from this to sue the public school administrators and the Democrat Party officials who put the policy in place, and make it very expensive for them. They understand lawsuits. But we'll have to wait for a real conservative to be elected President before that happens.

# Oklahoma attorney general signals resistance against DOJ transgender decree

**Wintery Knight** · 16 May 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

President Obama issued a Kingly decree to his subjects that all public schools in the land are to allow men to use women's bathrooms, showers, change rooms, etc., because it is part of their rigorous public school education, and will prepare them to compete for jobs.

The Weekly Standard reports:

> Late Friday afternoon Oklahoma Attorney General Scott Pruitt wrote a letter to the Justice and Education officials advising that "if you attempt to enforce this . . . letter on schools in the State of Oklahoma, we will vigorously defend the State's interests." Pruitt's letter sets forth the grounds of defense: That without warrant the administration has redefined "sex" to mean "gender identity"; that it has forced this definition on parents, students, and communities because it has "deemed unjustifiable any discomfort that [transgender students] may express," thus elevating "the status of transgender students over those who would define their sex based on biology and who would seek to have their definition honored in the most private of places"; and that it compels schools to enforce the new definition of sex "by conditioning receipt of federal funds on compliance" with the letter—"an ultimatum: take it or lose it," which is not a "real choice" for many schools.
>
> Pruitt concludes by saying that the administration's actions are unlawful and "represent the most egregious administrative overreach to date. You have taken a public policy issue that must, by our constitutional design, be worked out in the laboratory of democracy and enforced it on all people. And you have done so through a misuse of the spending power."
>
> **State attorneys general in the age of Obama have devised state coalitions to challenge federal overreach. Most notably, 26 states have joined in taking on the president's executive action on immigration, now before the Supreme Court. Watch for a new coalition to be formed, in the event of actions taken to enforce the guidance letter.**

Are you feeling sad? Then read the letter (PDF) from the Oklahoma attorney general.

Texas Governor Greg Abbott defies the tyrant

Meanwhile, the Washington Post reports on Texas' response to Obama's Kingly decree:

> Texas Lieutenant Gov. Dan Patrick said on May 13 the state will "not yield to blackmail" after the Obama administration announced a directive to public schools to give transgender students access to facilities, including bathrooms that match their chosen gender identity.
>
> […]Just hours after news outlets reported on the directive, which will be sent to all public schools across the country Friday, Texas Lt. Gov. Dan Patrick offered a doomsday outlook.
>
> "This will be the beginning of the end of the public school system as we know it," he told NBC 5.
>
> Patrick and other top Republicans in America's largest conservative state, had spent the day listening to Gov. Greg Abbott's vows to unite with the state of North Carolina as it wages a legal battle with the federal government over the Tar Heel state's new law requiring people to use the bathroom that aligns with the gender on their birth certificate.
>
> And just this week, Patrick called for the resignation of a Fort Worth schools superintendent after he proposed policies more inclusive of transgender students.

For those of you looking for a good state to move to, Oklahoma and Texas.

# Do young Americans know how well socialism is working in Venezuela?

**Wintery Knight** · 16 May 2016 · Archived copy · Original

Two socialists shake hands: Barack Obama and Hugo Chavez

I'm very interested in how economic policy in different times and places affects the ability of Christians to carry out their Christian life plans. What economic policies should Christians support in order to be able to carry out their lives? Do Christians need to eat? Do they need to be safe from criminals? Do they need to be able to work or run a business without violating their consciences? Can a Christian be as charitable when he cannot even feed himself or his family?

When I talk to young evangelicals, they seem to be pretty in lockstep with the left on policies like raising the minimum wage, having government take over health care, environmental regulations on private sector energy companies to stop global warming, etc.

So, it's worth it to look at how things work in places where socialism is actually being tried.

Here is an article from March 2013 from the radically leftist Slate. The headline is "Hugo Chavez's economic miracle: The Venezuelan leader was often marginalized as a radical. But his brand of socialism achieved real economic gains". The author is "a senior writer for the International Business Times".

He writes:

> Chavez became the bugaboo of American politics because his full-throated advocacy of socialism and redistributionism at once represented a fundamental critique of neoliberal economics, and also delivered some indisputably positive results. Indeed, as shown by some of the most significant indicators, Chavez racked up an economic record that a legacy-obsessed American president could only dream of achieving.

What did Chavez do, precisely, that caused the Venezuelan economic to boom? Well, he nationalized private industry and redistributed wealth from job creators and entrepreneurs to the poor.

> As The Week correctly put it, while "Chavez's policies of redistribution and nationalization of oil assets endeared him to Venezuela's working class" and produced many laudable results, the country's "oil-centric economy has taken away resources from other areas that are badly in need of development."

Well, what happened next?

Consider this long and detailed article from the left-leaning The Atlantic. I can only quote part of it, but you really need to read this to understand what happens when country attacks all the people who were creating wealth and jobs with regulations, taxes, price controls and property seizure.

It says:

> In the last two years Venezuela has experienced the kind of implosion that hardly ever occurs in a middle-income country like it outside of war. Mortality rates are skyrocketing; one public service after another is collapsing; triple-digit inflation has left more than 70 percent of the population in poverty; an unmanageable crime wave keeps people locked indoors at night; shoppers have to stand in line for hours to buy food; babies die in large numbers for lack of simple, inexpensive medicines and equipment in hospitals, as do the elderly and those suffering from chronic illnesses.
>
> But why? It's not that the country lacked money. Sitting atop the world's largest reserves of oil at the tail end of a frenzied oil boom, the government led first by Chavez and, since 2013, by Maduro, received over a trillion dollars in oil revenues over the last 17 years. It faced virtually no institutional constraints on how to spend that unprecedented bonanza. It's true that oil prices have since fallen—a risk many people foresaw, and one that the government made no provision for—but that can hardly explain what's happened: Venezuela's garish implosion began well before the price of oil plummeted. Back in 2014, when oil was still trading north of $100 per barrel, Venezuelans were already facing acute shortages of basic things like bread or toiletries.
>
> **The real culprit is chavismo, the ruling philosophy named for Chavez and carried forward by Maduro, and its truly breathtaking propensity for mismanagement(the government plowed state money arbitrarily into foolish investments);institutional destruction (as Chavez and then Maduro became more authoritarian and crippled the country's democratic institutions); nonsense policy-making (like price and currency controls); and plain thievery (as corruption has proliferated among unaccountable officials and their friends and families).**
>
> **A case in point is the price controls, which have expanded to apply to more and more goods: food and vital medicines, yes, but also car batteries, essential medical services, deodorant, diapers, and, of course, toilet paper. The ostensible goal was to check inflation and keep goods affordable for the poor, but anyone with a basic grasp of economics could have foreseen the consequences: When prices are set below production costs, sellers can't afford to keep the shelves stocked. Official prices are low, but it's a mirage: The products have disappeared.**
>
> When a state is in the process of collapse, dimensions of decay feed back on each other in an intractable cycle. Populist giveaways, for example, have fed the country's ruinous flirtation with hyperinflation; the International Monetary Fund now projects that prices will rise by 720 percent this year and 2,200 percent in 2017. The government virtually gives away gasoline for free, even after having raised the price earlier this year. As a result of this and similar policies, the state is chronically short of funds, forced to print ever more money to finance its spending. Consumers, flush with cash and chasing a dwindling supply of goods, are caught in an inflationary spiral.

The rest of the article has horrifying details about what socialism really means: businesses shut down, shortages of food and medicine, government waste, skyrocketing crime, failing education system, Zika epidemic, water rationing, blackouts, and so on.

There was even an article this weekend in the radically leftist New York Times about the horrifying conditions of hospitals in Venezuela:

> By morning, three newborns were already dead.

> The day had begun with the usual hazards: chronic shortages of antibiotics, intravenous solutions, even food. Then a blackout swept over the city, shutting down the respirators in the maternity ward.
>
> Doctors kept ailing infants alive by pumping air into their lungs by hand for hours. By nightfall, four more newborns had died.
>
> “The death of a baby is our daily bread,” said Dr. Osleidy Camejo, a surgeon in the nation’s capital, Caracas, referring to the toll from Venezuela’s collapsing hospitals.
>
> The economic crisis in this country has exploded into a public health emergency, claiming the lives of untold numbers of Venezuelans. It is just part of a larger unraveling here that has become so widespread it has prompted President Nicolás Maduro to impose a state of emergency and has raised fears of a government collapse.
>
> Hospital wards have become crucibles where the forces tearing apart Venezuela have converged. Gloves and soap have vanished from some hospitals. Cancer medicines are often found only on the black market. There is so little electricity that the government works only two days a week to save what energy is left.
>
> At the University of the Andes Hospital in the mountain city of Mérida, there was not enough water to wash blood from the operating table. Doctors preparing for surgery cleaned their hands with bottles of seltzer water.
>
> “It is like something from the 19th century,” said Dr. Christian Pino, a surgeon at the hospital.
>
> The figures are devastating. The rate of death among babies under a month old increased more than a hundredfold in public hospitals run by the Health Ministry, to just over 2 percent in 2015 from 0.02 percent in 2012, according to a government report provided by lawmakers.
>
> The rate of death among new mothers in those hospitals increased by almost five times in the same period, according to the report.
>
> Here in the Caribbean port town of Barcelona, two premature infants died recently on the way to the main public clinic because the ambulance had no oxygen tanks. The hospital has no fully functioning X-ray or kidney dialysismachines because they broke down long ago. And because there are no open beds, some patients lie on the floor in pools of their own blood.

This is not happening because of capitalism and the greedy rich. It is happening because of hatred and persecution of entrepreneurs and job creating private businesses. But, if you read books on economic policy like “The Spirit Level”, which is written by socialists, countries like Venezuela that have lower income inequality have lower infant mortality, lower crime rates and better health care. Socialism works great in academia, not so well in a North Korean work camp.

It’s not just Venezuela. This article from Investors Business Daily covers how well socialism is going in countries like France, Brazil and Argentina. It never works.

Now, in most churches, pastors are more concerned with making people feel good so that the coins continue to fall into the offering plate. Therefore, they carefully stay clear of topics like economics, business and entrepreneurship. The question that we need to ask ourselves is this: how easy is it for you to live out a Christian life in a country where poverty, crime, and government suppression of free speech and religious liberty are rampant? Shouldn’t part of being a Christian mean voting for public policies that actually help poor people have opportunities, children in broken homes and victims of crime, instead of just embracing what sounds nice and makes us feel good?

In case I need to be clearer, I mean that Christians who embrace socialism are taking us down the road to serfdom because of their ignorance of economics. And it’s not just the Democrats. Christians who support Donald Trump are embracing import tariffs, opposing free trade, raising taxes, raising the minimum wage, government seizing private property, and so on. That’s socialism, too. And we won’t escape the consequences of our economic ignorance anymore than the well-meaning Venezuelan voters did when they elected their strong man to rescue them.

# Supreme Court vacates lower court ruling against religious liberty

**Wintery Knight** · 17 May 2016 · Archived copy · Original

Barack Obama speaking to Planned Parenthood

Life News explained what was at stake in the "Little Sisters of the Poor" case decided yesterday by the Supreme Court:

> The Little Sisters of the Poor are asking the nation's highest court to ensure they do not have to comply with Obamacare's abortion mandate. The mandate compels religious groups to pay for birth control and drugs that may cause abortions.
>
> Without relief, the Little Sisters would face millions of dollars in IRS fines because they cannot comply with the government's mandate that they give their employees free access to contraception, sterilization, and abortion-inducing drugs.

Religious liberty champion David French writes about the decision in National Review.

Excerpt:

> First, the Supreme Court vacated the lower court ruling holding that the Little Sisters had to facilitate access to contraceptives and denied that the mandate substantially burdened their religion. Speaking as a person who's argued a few cases in courts of appeal — when the court vacates the ruling you're challenging, that's a win.
>
> Second, the Supreme Court provided a roadmap for an excellent resolution to the case…
>
> […]the Court suggested an accommodation that was far more respectful of the Little Sisters' religious liberty than the challenged Obamacare regulations, and the government will now have extreme difficulty credibly arguing in lower courts that the Supreme Court's *own suggested compromise* should be set aside.
>
> **Third, this ruling was unanimous. That means the DOJ should be far from confident that it can simply wait out the new presidential election and pursue its original claims with the same hope for success — especially if it spent the intervening years rejecting a compromise that it already seemed to accept.**

> Fourth, we can't forget the context. This the second time a unanimous Supreme Court has turned back the Obama administration's regulatory efforts to restrict religious freedom (*Hosanna-Tabor Evangelical Lutheran Church and School v. EEOC* was the first), and it represents yet another setback for the administration's contraception/abortifacient mandate. The Obama administration has pushed hard against religious liberty — on occasion too hard even for the Supreme Court's more liberal justices.

The case will now go back to the lower courts again, but SCOTUS was clear on what they expect the ruling to be – a compromise that protects religious liberty and achieves the administration's goal of providing contraception and abortifacient drugs. Unfortunately, that's what a Democrat administration thinks is a priority.

It's not a complete victory, but an 8-0 decision should be solid until Trump or Hillary packs the court with pro-abortion liberals. I expect either candidate will do that, since both candidates are "very pro-choice", and both favor partial-birth abortion.

# Gay activist apologizes after faking hate crime against himself

**Wintery Knight** · 17 May 2016 · Archived copy · Original

Young people seem to like gay marriage more than they like individual liberties

This is from the radically leftist New York Times, of all places.

Excerpt:

> The case of the chocolate cake slur, it seems, was simply a hoax.
>
> An openly gay Texas pastor who had accused Whole Foods of defacing his cake with an anti-gay slur dropped his lawsuit against the grocery chain on Monday, issuing an apology that said he was wrong to "perpetuate this story."
>
> "The company did nothing wrong," the pastor, Jordan Brown, said in a statement. "I was wrong to pursue this matter and use the media to perpetuate this story."
>
> […]Mr. Brown's apology represented a remarkable about-face from his remarks last month, delivered at a news conference alongside his lawyer, during which he choked back tears as he told the story.
>
> […]But a day after Mr. Brown's legal salvo, Whole Foods denounced the pastor as a fraud, vowing to press a countersuit that sought $100,000. At the same time, the grocery chain released surveillance footage of Mr. Brown's purchase that it said proved that the cake had not been tampered with.

I was a little worried about using a headline like that, but the Washington Post headline is "Gay pastor admits he faked homophobic slur on Whole Foods cake". So, yeah – faked.

The New York Times declined to mention a possible motive for the fake hate crime – his outstanding student loans.

But CBS News did:

> Last week, Brown said a Whole Foods baker put a gay slur on a cake he ordered.
>
> Whole Foods says Brown is lying and is suing him for defamation.
>
> The company says the accused bakery worker is part of the LGBT community.

> The Austin pastor who is suing Whole Foods over a cake he says contained a gay slur, has money troubles.
>
> Court documents show Jordan Brown is being sued for defaulting on nearly $28,000 in student loans.

I doubt that this will be the basis of a plot on Glee or Will and Grace or the other TV shows that seek to change public opinion on gay rights issues.

I blogged before about several other fake hate crimes in this post, this post and this post. It happens a lot. It might be a good idea to assume that hate crimes committed against the secular left are false unless they are proven true. There is a lot of mental illness in the secular left crowd.

# New book on intelligent design by molecular biologist Douglas Axe

**Wintery Knight** · 18 May 2016 · Archived copy · Original

Undeniable: How Biology Confirms Our Intuition That Life Is Designed

It's not out yet, but the Kindle edition is only $12.99, so I pre-ordered it. That helps to get the book up in the bestseller lists. I'll add it to my list of books that I am reading for the third quarter later, and maybe feature it in the coveted spot in the right column of the blog.

Anyway, here is the description:

> Throughout his distinguished and unconventional career, engineer-turned-molecular-biologist Douglas Axe has been asking the questions that much of the scientific community would rather silence. Now, he presents his conclusions in this brave and pioneering book. Axe argues that the key to understanding our origin is the "design intuition"—the innate belief held by all humans that tasks we would need knowledge to accomplish can only be accomplished by someone who has that knowledge. For the ingenious task of inventing life, this knower can only be God.
>
> Starting with the hallowed halls of academic science, Axe dismantles the widespread belief that Darwin's theory of evolution is indisputably true, showing instead that a gaping hole has been at its center from the beginning. He then explains in plain English the science that proves our design intuition scientifically valid. Lastly, he uses everyday experience to empower ordinary people to defend their design intuition, giving them the confidence and courage to explain why it has to be true and the vision to imagine what biology will become when people stand up for this truth.
>
> Armed with that confidence, readers will affirm what once seemed obvious to all of us—that living creatures, from single-celled cyanobacteria to orca whales and human beings, are brilliantly conceived, utterly beyond the reach of accident.
>
> Our intuition was right all along.

Trailer is here:

Evolution News has a deal for those who pre-order:

> A remarkable thing about evolutionary theory is the way it demands that we deny our intuition at almost every step. Evolutionists then assure us that the science is all figured out, so we needn't trouble our silly heads about the relevant biology.
>
> In a new book, Douglas Axe of Biologic Institute turns this standard assurance on its head. In *Undeniable: How Biology Confirms Our Intuition That Life Is Designed*, Dr. Axe restores the place of intuition alongside intellect in considering the question of life's origins.

> *Undeniable* will be published on July 12 by HarperOne, but you can **pre-order before then and participate in an exclusive, private conference call with Dr. Axe and talk- show host Michael Medved**. You'll also receive **digital versions of three complete books** from Discovery Institute Press: *Debating Darwin's Doubt*, *The Unofficial Guide to Cosmos*, and *Science & Human Origins*. **See here for easy instructions**.

And now, I have a secret story to tell you. I met Doug Axe face to face way back in the late 1990s. He told me and some other people about the post-doctoral work he was doing at Cambridge University on the probabilities of getting a functional protein by chance. He made me promise not to tell anyone, and I never did. It was from conversations like that with the intelligent design scholars that I decided to start using an alias.

From his research at Cambrudge, Dr. Axe found that the number of functional amino acid sequences is tiny:

> Doug Axe's research likewise studies genes that it turns out show great evidence of design. Axe studied the sensitivities of protein function to mutations. In these "mutational sensitivity" tests, Dr. Axe mutated certain amino acids in various proteins, or studied the differences between similar proteins, to see how mutations or changes affected their ability to function properly. He found that protein function was highly sensitive to mutation, and that proteins are not very tolerant to changes in their amino acid sequences. In other words, when you mutate, tweak, or change these proteins slightly, they stopped working. In one of his papers, he thus concludes that "functional folds require highly extraordinary sequences," and that functional protein folds "may be as low as 1 in 10^77."
>
> The problem of forming DNA by sequencing nucleotides faces similar difficulties. And remember, mutation and selection cannot explain the origin of the *first* sequence, because mutation and selection require replication, which does not exist until that first living cell is *already in place*.

He published his findings in four separate publications with the prestigious Journal of Molecular Biology, and got his PhD with it. To get a PhD from Caltech, and then do post-doctoral work at Cambridge, you have to be good. And Dr. Axe is very, very good.

I have used the papers he wrote in many, many conversations with engineers in different companies where I have worked. He hit a home run with that research. You could never look at the evidence for intelligent design the same way again. Christian parents, if you have any children, be sure that you tell them about Doug Axe's story.

# Bible study: Esther as an example of bravery and God's providence

**Wintery Knight** · 18 May 2016 · Archived copy · Original

Bible study that hits the spot

I've been listening to this FREE two-volume series on the book of Esther featuring pastor Alistair Begg. A whole bunch of interesting things stuck out to me, so I'll write about one of them today.

First, Esther is a Jewish woman whose father or mother died when she was young. She was adopted by Mordecai, another Jew. She was very beautiful, so she was picked to be part of the Persian King's harem. In fact, she is so beautiful that the King chooses her to be the Queen.

Now there is an enemy of the Jews in the King's court named Haman, and he manages to get the King to create an edict that says that all the Jews will be killed. Mordecai calls Esther to tell her that she has to stop the King from ordering this edict.

But Esther is out of favor with the King, and hasn't been asked to come in to visit him for some time. To go in and see the King without being summoned is a capital offense. Unless the King gives permission, she would be killed for intruding on the King. But in the end, she agrees to speak up and say something.

It all gets resolved in Esther chapter 4.

Esther 4:1-17:

> 1 When Mordecai learned all that had been done, he tore his clothes, put on sackcloth and ashes, and went out into the midst of the city and wailed loudly and bitterly.
>
> 2 He went as far as the king's gate, for no one was to enter the king's gate clothed in sackcloth.
>
> 3 In each and every province where the command and decree of the king came, there was great mourning among the Jews, with fasting, weeping and wailing; and many lay on sackcloth and ashes.
>
> 4 Then Esther's maidens and her eunuchs came and told her, and the queen writhed in great anguish. And she sent garments to clothe Mordecai that he might remove his sackcloth from him, but he did not accept them.
>
> 5 Then Esther summoned Hathach from the king's eunuchs, whom the king had appointed to attend her, and ordered himto go to Mordecai to learn what this was and why it was.

> 6 So Hathach went out to Mordecai to the city square in front of the king's gate.
>
> 7 Mordecai told him all that had happened to him, and the exact amount of money that Haman had promised to pay to the king's treasuries for the destruction of the Jews.
>
> 8 He also gave him a copy of the text of the edict which had been issued in Susa for their destruction, that he might show Esther and inform her, and to order her to go in to the king to implore his favor and to plead with him for her people.
>
> 9 Hathach came back and related Mordecai's words to Esther.
>
> 10 Then Esther spoke to Hathach and ordered him to reply to Mordecai:
>
> 11 "All the king's servants and the people of the king's provinces know that for any man or woman who comes to the king to the inner court who is not summoned, he has but one law, that he be put to death, unless the king holds out to him the golden scepter so that he may live. And I have not been summoned to come to the king for these thirty days."
>
> 12 They related Esther's words to Mordecai.
>
> 13 Then Mordecai told them to reply to Esther, "Do not imagine that you in the king's palace can escape any more than all the Jews.
>
> 14 For if you remain silent at this time, relief and deliverance will arise for the Jews from another place and you and your father's house will perish. And who knows whether you have not attained royalty for such a time as this?"
>
> 15 Then Esther told them to reply to Mordecai,
>
> 16 "Go, assemble all the Jews who are found in Susa, and fast for me; do not eat or drink for three days, night or day. I and my maidens also will fast in the same way. And thus I will go in to the king, which is not according to the law; and if I perish, I perish."
>
> 17 So Mordecai went away and did just as Esther had commanded him.

What Mordecai is saying here is that God is sovereign over the events that are taking place, and that even if Esther makes a free decision to not intercede to save her people, then God will do something else. Somehow, telling her that makes her agree to take the risk and go in to see the King. Even though it is illegal to go in to see the King, she is going to risk her life and do it. And the message there is that God made her beautiful, and placed her in the palace, for exactly this purpose. Her beauty has a purpose.

Before then, she may not have been the most morally pure Jew, nor the most faithful Jew, nor some great authority on theology or apologetics. She was probably keeping her faith pretty hidden. But in that one moment, she rises above being an orphan, above being a harem girl, and above being just a pretty face. God can use anyone – even a silly girl who spends all day in front of a mirror playing with cosmetics – to achieve his ends. She is not Daniel. But today she is getting the call, anyway. It's on her.

What is the lesson here? God can use *anybody.* It doesn't mean that you shouldn't be moral, study theology, and study apologetics, and keep your character clean so you have self-control. It means that any believer is just one step away from glory, no matter what they did in the past. That's how God rolls.

**Further study**

If you are interested in the story of Esther, then you should listen to the entire series by Alistair Begg.

- Volume 1 is here (download all in a zip file)
- Volume 2 is here (download all in a zip file)

The point I am making in this post is in this lecture.

Esther is about two themes: 1) how should a believer in God live in a society where believers are a minority? and 2) even when things look really out of control, God is in control, and is never more than one step away from saving his people.

I have a lot of Christian apologist friends who struggle to go to church, and struggle to read the Bible. The links above will take you to some great preaching on one of the most interesting books of the Bible. Go there, grab the MP3s, and listen to them with no distractions.

# Does archaeological evidence confirm names, dates and places in the Bible?

**Wintery Knight** · 19 May 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

I spotted this post on Be Thinking by UK apologist Peter S. Williams. (H/T Eric Chabot at Think Apologetics)

So let me pick the ones I liked most for this post.

Here's a good one:

> ### Jerusalem and The Pool of Bethesda
>
> John 5:1-15 describes a pool in Jerusalem, near the Sheep Gate, called Bethesda, surrounded by five covered colonnades. Until the 19th century, there was no evidence outside of John for the existence of this pool and John's unusual description *"caused bible scholars to doubt the reliability of John's account, but the pool was duly uncovered in the 1930s – with four colonnades around its edges and one across its middle."*[38] Ian Wilson reports: *"Exhaustive excavations by Israeli archaeologist Professor Joachim Jeremias have brought to light precisely such a building, still including two huge, deep-cut cisterns, in the environs of Jerusalem's Crusader Church of St Anne."*[39]

And this one:

> ### Jerusalem and The Pool of Siloam
>
> In the 400s AD, a church was built above a pool attached to Hezekiah's water tunnel to commemorate the healing of a blind man reported in John 9:1-7. Until recently, this was considered to be the Pool of Siloam from the time of Christ. However, during sewerage works in June 2004 engineers stumbled upon a 1st century ritual pool when they uncovered some ancient steps during pipe maintenance near the mouth of Hezekiah's tunnel. By the summer of 2005, archaeologists had revealed what was *"without doubt the missing pool of Siloam."*[40] Mark D. Roberts reports that: *"In the plaster of this pool were found coins that establish the date of the pool to the years before and after Jesus. There is little question that this is in fact the pool of Siloam, to which Jesus sent the blind man in John 9."*[41]

I just read this one because I am working my way through John. In case you haven't read John, you really should it's my favorite gospel.

Here's another one:

> ### Herod the Great
>
> We have a bronze coin minted by Herod the Great. On the obverse side (i.e. the bottom) is a tripod and ceremonial bowl with the inscription 'Herod king' and the year the coin was struck, 'year 3' (of Herod's reign), or 37 BC.
>
> In 1996 Israeli Professor of Archaeology Ehud Netzer discovered in Masada a piece of broken pottery with an inscription, called an ostracon. This piece had Herod's name on it and was part of an amphora used for transportation (probably wine), dated to c. 19 BC. The inscription is in Latin and reads, *"Herod the Great King of the Jews (or Judea)"*, the first such that mentions the full title of King Herod.
>
> Herodium is a man-made mountain in the Judean wilderness rising over 2,475 feet above sea level. In 23 BC Herod the Great built a palace fortress here on top of a natural hill. Seven stories of living rooms, storage areas, cisterns, a bathhouse, and a courtyard filled with bushes and flowering plants were constructed. The whole complex was surrounded and partly buried by a sloping fill of earth and gravel. Herod's tomb and sarcophagus were discovered at the base of Herodium by archaeologist Ehud Netzer in 2007.

And one more:

> ### The 'James, son of Joseph, brother of Jesus' Ossuary
>
> James, the brother of Jesus, was martyred in AD 62. A mid-1st century AD chalk ossuary discovered in 2002 bears the inscription *"James, son of Joseph, brother of Jesus"* ( 'Ya'akov bar Yosef akhui di Yeshua'). Historian Paul L. Maier states that*"there is strong (though not absolutely conclusive) evidence that, yes, the ossuary and its inscription are not only authentic, but that the inscribed names are the New Testament personalities."*[68] New Testament scholar Ben Witherington states that:*"If, as seems probable, the ossuary found in the vicinity of Jerusalem and dated to about AD 63 is indeed the burial box of James, the brother of Jesus, this inscription is the most important extra-biblical evidence of its kind."*[69] According to Hershel Shanks, editor in chief of the *Biblical Archaeological Review*: *"this box is [more] likely the ossuary of James, the brother of Jesus of Nazareth, than not. In my opinion … it is likely that this inscription* does *mention the James and Joseph and Jesus of the New Testament."*

And finally one short one:

> **Tiberius Caesar**
>
> The Denarius coin, 14-37 AD, is commonly referred to as the 'Tribute Penny' from the Bible. The coin shows a portrait of Tiberius Caesar. Craig L. Blomberg comments: *"Jesus' famous saying about giving to Caesar what was his and to God what* his *(Mark 12:17 and parallels) makes even more sense when one discovers that most of the Roman coins in use at the time had images of Caesar on them."*[48]

This is a good article to bookmark in case you are ever looking for a quick, searchable reference on archaeology and the Bible. There are many more examples in that post.

Now some people might be wondering why archaeology doesn't confirm *every detail* in the New Testament. And here's what J. Warner Wallace has to say about that:

> But what are we to say to those who argue the Biblical archeological record is incomplete? The answer is best delivered by another expert witness in the field, Dr. Edwin Yamauchi, historian and Professor Emeritus at Miami University. Yamauchi wrote a book entitled, *The Stones and the Scripture*, where he rightly noted that

> archaeological evidence is a matter of “fractions”:
>
> *Only a fraction of the world’s archaeological evidence still survives in the ground.*
>
> *Only a fraction of the possible archaeological sites have been discovered.*
>
> *Only a fraction have been excavated, and those only partially.*
>
> *Only a fraction of those partial excavations have been thoroughly examined and published.*
>
> *Only a fraction of what has been examined and published has anything to do with the claims of the Bible!*
>
> See the problem? In spite of these limits, we still have a robust collection of archaeological evidences confirming the narratives of the New Testament (both in the gospel accounts and in the Book of Acts). We shouldn’t hesitate to use what we do know archaeologically in combination with other lines of evidence. Archaeology may not be able to tell us everything, but it can help us fill in the circumstantial case as we corroborate the gospel record.

I think you can form an opinion about the whole New Testament based on the record of confirmations. The verdict is in: the New Testament should be presumed trustworthy.

# Bible study: the importance of truth in religion

**Wintery Knight** · 19 May 2016 · Archived copy · Original

Bible study that hits the spot

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me the dream, and I will know that you can interpret it for me."

[10] The astrologers answered the king, "There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans."

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put

them to death.

[14] When Arioch, the commander of the king's guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king's officer, "Why did the king issue such a harsh decree?" Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

"Praise be to the name of God for ever and ever;
wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king."

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, "Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him."

[25] Arioch took Daniel to the king at once and said, "I have found a man among the exiles from Judah who can tell the king what his dream means."

[26] The king asked Daniel (also called Belteshazzar), "Are you able to tell me what I saw in my dream and interpret it?"

[27] Daniel replied, "No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] "As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants

desire to survive the King's wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: "The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.". The King replies: "Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery."

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God's miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people who do not even think he exists, and without assuming that they believe in the Bible.

There are still people out there like the King who are looking for someone who can speak to them with authority. All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won't always be the case, but it is the case for some people.

# Obama administration orders all hospitals to perform abortions and sex changes

**Wintery Knight** · 20 May 2016 · Archived copy · Original

Barack Obama speaking to Planned Parenthood

This is up at The Pulse.

Wow:

> Last Friday, the Department of Health and Human Services (HHS) announced a new rule in relation to Section 1557 of the Affordable Care Act, which will require all hospitals to perform abortions and sex change operations under the auspice of Title IX protections, or lose their federal funding, which includes Medicare and Medicaid reimbursements.
>
> The rule did not include an exemption for religious freedom, although HHS does admit that "existing protections for religious freedom and conscience" may still apply — an ironic admission given the administration's unwillingness to compromise with the Little Sisters of the Poor.
>
> […]What are the real world consequences of this?
>
> Well, to start, a substantial portion of hospital revenue comes from Medicare and Medicaid reimbursements. A hospital simply can't function without this funding. It's not possible. So by potentially forcing religious hospitals to perform abortions and sex change operations against their beliefs, which most will not do, the HHS hospital mandate could effectively shut them all down.
>
> Sixty-two percent of all hospitals in the U.S. are non-profit hospitals, and the vast majority of those have religious affiliations. A mass exodus of religious hospitals would completely shake the health care system, destroy communities, ruin livelihoods, and put thousands of lives at risk.

Right now, we live in a time where health care is under the control of the federal government. Many, many people of faith voted for a secular government to be in control of health care. They thought that it would be more "fair"

than letting people control health care at the state or local level. Now they are finding out what happens when you let a big secular government take over huge parts of the economy. There are people of faith working in hospitals. If only their employer forced them to do a sex change or an abortion, they could move to another employer, perhaps in another state. But when you put the control up at the federal level, there is nowhere to run. You have to comply, or lose your job. And no matter how tough a Christian talks, no one can survive without food to eat and water to drink. We have to earn a living, and this President is making it impossible to work and be an authentic Christian at the same time.

Are we ready for pastors to talk about serious matters in church, now? Or is it still going to be the singing, the feelings, the piety? Maybe spiritual leadership needs to be expanded to include practical issues.

# Is the text of the Bible we have today different from the originals?

**Wintery Knight** · 20 May 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

First, let's introduce New Testament scholar Daniel B. Wallace:

> Daniel B. Wallace, Professor of New Testament Studies at Dallas Theological Seminary
>
> B.A., Biola University, 1975; Th.M., Dallas Theological Seminary, 1979; Ph.D., 1995.
>
> Dr. Wallace influences students across the country through his textbook on intermediate Greek grammar. It has become the standard textbook in the English-speaking world on that subject. He is a member of the Society of New Testament Studies, the Institute for Biblical Research, the Society of Biblical Literature, and the Evangelical Theological Society.
>
> […]He has been a consultant on four different Bible translations.
>
> […] He works extensively in textual criticism, and has founded The Center for the Study of New Testament Manuscripts (csntm.org), an institute with an initial purpose of preserving Scripture by taking digital photographs of all known Greek New Testament manuscripts.
>
> […]His postdoctoral work includes work on Greek grammar at Tyndale House in Cambridge, textual criticism studies at the Institut für neutestamentliche Textforschung in Münster, and the Universität Tübingen, Germany.

Eric Chabot, who blogs at Think Apologetics, found this interview that addresses the charge you often hear about how you can't get back to the original New Testament documents.

It talks about:

- textual criticism
- number of New Testament manuscripts
- earliest New Testament manuscripts
- the number and impact of textual variants
- responding to the "telephone game" objection
- responding to the scribes tampered with the text objection

And here is an article by Dr. Wallace that corrects other misconceptions about the transmission and translation of the Testament.

He lists five in particular:

- *Myth 1: The Bible has been translated so many times we can't possibly get back to the original.*
- *Myth 2: Words in red indicate the exact words spoken by Jesus of Nazareth.*
- *Myth 3: Heretics have severely corrupted the text.*
- *Myth 4: Orthodox scribes have severely corrupted the text.*
- *Myth 5: The deity of Christ was invented by emperor Constantine.*

Finally, a quote from skeptical historian Bart Ehrman, as reproduced in this post on the Christian Apologetics Alliance blog:

> The curious thing about Bart Ehrman is that the views he articulates in his popular-level work are not the same as those he espouses in his professional/scholarly publications. Indeed, readers may find this curious and very telling quotation, taken from the appendix (p. 252) of Misquoting Jesus, of interest:
>
> "Bruce Metzger is one of the great scholars of modern times, and I dedicated the book to him because he was both my inspiration for going into textual criticism and the person who trained me in the field. I have nothing but respect and admiration for him. And even though we may disagree on important religious questions – he is a firmly committed Christian and I am not – we are in complete agreement on a number of very important historical and textual questions. If he and I were put in a room and asked to hammer out a consensus statement on what we think the original text of the New Testament probably looked like, there would be very few points of disagreement – maybe one or two dozen places out of many thousands. **The position I argue for in 'Misquoting Jesus' does not actually stand at odds with Prof. Metzger's position that the essential Christian beliefs are not affected by textual variants in the manuscript tradition of the New Testament.**" [Emphasis added]

Finally, I think that the discovery of the Dead Sea Scrolls shows us that religious texts don't change as much as we think they do over time.

Look:

> The Dead Sea Scrolls play a crucial role in assessing the accurate preservation of the Old Testament. With its hundreds of manuscripts from every book except Esther, detailed comparisons can be made with more recent texts.
>
> The Old Testament that we use today is translated from what is called the Masoretic Text. The Masoretes were Jewish scholars who between A.D. 500 and 950 gave the Old Testament the form that we use today. Until the Dead Sea Scrolls were found in 1947, the oldest Hebrew text of the Old Testament was the Masoretic Aleppo Codex which dates to A.D. 935.{5}
>
> With the discovery of the Dead Sea Scrolls, we now had manuscripts that predated the Masoretic Text by about one thousand years. Scholars were anxious to see how the Dead Sea documents would match up with the Masoretic Text. If a significant amount of differences were found, we could conclude that our Old Testament Text had not been well preserved. Critics, along with religious groups such as Muslims and Mormons, often make the claim that the present day Old Testament has been corrupted and is not well preserved. According to these religious groups, this would explain the contradictions between the Old Testament and their religious teachings.
>
> After years of careful study, it has been concluded that the Dead Sea Scrolls give substantial confirmation that our Old Testament has been accurately preserved. The scrolls were found to be almost identical with the Masoretic text. Hebrew Scholar Millar Burrows writes, "It is a matter of wonder that through something like one thousand years the text underwent so little alteration. As I said in my first article on the scroll, 'Herein lies its chief importance, supporting the fidelity of the Masoretic tradition.'"{6}
>
> A significant comparison study was conducted with the Isaiah Scroll written around 100 B.C. that was found

> among the Dead Sea documents and the book of Isaiah found in the Masoretic text. After much research, scholars found that the two texts were practically identical. Most variants were minor spelling differences, and none affected the meaning of the text.
>
> One of the most respected Old Testament scholars, the late Gleason Archer, examined the two Isaiah scrolls found in Cave 1 and wrote, “Even though the two copies of Isaiah discovered in Qumran Cave 1 near the Dead Sea in 1947 were a thousand years earlier than the oldest dated manuscript previously known (A.D. 980), they proved to be word for word identical with our standard Hebrew Bible in more than 95 percent of the text. The five percent of variation consisted chiefly of obvious slips of the pen and variations in spelling.”{7}
>
> **Despite the thousand year gap, scholars found the Masoretic Text and Dead Sea Scrolls to be nearly identical. The Dead Sea Scrolls provide valuable evidence that the Old Testament had been accurately and carefully preserved.**

I hope that this post will help those who think that we can’t get back to the text of the original New Testament documents.

# Scott Klusendorf: 10 Things You Should Know about Abortion

**Wintery Knight** · 21 May 2016 · Archived copy · Original

Unborn Baby – 10 weeks old

Here are the 10 things:

1. Pro-life advocates present a formal case for their position.
2. A pro-life advocate can defend that syllogism in 1 minute or less.
3. That abortion intentionally kills an innocent human being is conceded by many who perform and defend the practice.
4. The Bible is pro-life even if the word “abortion” does not appear.
5. The Bible’s alleged silence on abortion does not mean that its authors condoned the practice.
6. Preaching on abortion is not a distraction from the Great Commission responsibilities of the local church, but integral to it.
7. The pro-life position does not rely on personal perspectives.
8. Pro-life Christians tell a better equality story.
9. Abortion-victim photography changes the narrative.
10. The remedy for post-abortion guilt is not avoidance. It’s forgiveness.

I have to share #6 here:

> 6. Preaching on abortion is not a distraction from the Great Commission responsibilities of the local church, but integral to it.
>
> P1: In the Great Commission, Christ charged the church to go make disciples.
> P2: The way we make disciples is to “teach them to obey” his commands.
> P3: One of those commands is that we are not to shed innocent blood.
> P4: Abortion is the shedding of innocent blood.

> C: Therefore, preaching on abortion relates to the Great Commission responsibilities of the local church.

There is more to spiritual leadership than just fussing about Bible verses, prayers, Bible studies, and other private, pious feelings-oriented things. To make a disciple of a person, you have to teach them right and wrong persuasively. Abortion is one of those issues that we are confronting today. People spiritualize spiritual leadership, but it's more practical than just having feelings.

You should read all 10 points – it's a short article, and well worth your time.

# What do ancient non-Christian sources tell us about the historical Jesus?

**Wintery Knight** · 22 May 2016 · Archived copy · Original

C. CORNELII
TACITI
OPERA
QVÆ EXSTANT.
IVSTVS LIPSIVS postremùm recensuit.

Apud Ioannem Moretum.
cIↃ. IↃc.
Cum Priuilegijs Cæsareo & Regio.

The Annals, by Roman historian Tacitus

This article from Biblical Archaeology covers all the non-Christian historical sources that discuss Jesus.

About the author:

> Lawrence Mykytiuk is associate professor of library science and the history librarian at Purdue University. He holds a Ph.D. in Hebrew and Semitic Studies and is the author of the book Identifying Biblical Persons in Northwest Semitic Inscriptions of 1200–539 B.C.E. (Atlanta: Society of Biblical Literature, 2004).

Here are the major sections:

- Roman historian Tacitus
- Jewish historian Josephus
- Greek satirist Lucian of Samosata
- Platonist philosopher Celsus
- Roman governor Pliny the Younger
- Roman historian Suetonius
- Roman prisoner Mara bar Serapion

And this useful excerpt captures the broad facts about Jesus that we get from just the first two sources:

> We can learn quite a bit about Jesus from Tacitus and Josephus, two famous historians who were not Christian. Almost all the following statements about Jesus, which are asserted in the New Testament, are corroborated or confirmed by the relevant passages in Tacitus and Josephus. These independent historical sources—one a non-

> Christian Roman and the other Jewish—confirm what we are told in the Gospels:31
>
> 1. He existed as a man. The historian Josephus grew up in a priestly family in first-century Palestine and wrote only decades after Jesus' death. Jesus' known associates, such as Jesus' brother James, were his contemporaries. The historical and cultural context was second nature to Josephus. "If any Jewish writer were ever in a position to know about the non-existence of Jesus, it would have been Josephus. His implicit affirmation of the existence of Jesus has been, and still is, the most significant obstacle for those who argue that the extra-Biblical evidence is not probative on this point," Robert Van Voorst observes.32 And Tacitus was careful enough not to report real executions of nonexistent people.
>
> 2. His personal name was Jesus, as Josephus informs us.
>
> 3. He was called Christos in Greek, which is a translation of the Hebrew word Messiah, both of which mean "anointed" or "(the) anointed one," as Josephus states and Tacitus implies, unaware, by reporting, as Romans thought, that his name was Christus.
>
> 4. He had a brother named James (Jacob), as Josephus reports.
>
> 5. He won over both Jews and "Greeks" (i.e., Gentiles of Hellenistic culture), according to Josephus, although it is anachronistic to say that they were "many" at the end of his life. Large growth in the number of Jesus' actual followers came only after his death.
>
> 6. Jewish leaders of the day expressed unfavorable opinions about him, at least according to some versions of the Testimonium Flavianum.
>
> 7. Pilate rendered the decision that he should be executed, as both Tacitus and Josephus state.
>
> 8. His execution was specifically by crucifixion, according to Josephus.
>
> 9. He was executed during Pontius Pilate's governorship over Judea (26–36 C.E.), as Josephus implies and Tacitus states, adding that it was during Tiberius's reign.
>
> Some of Jesus' followers did not abandon their personal loyalty to him even after his crucifixion but submitted to his teaching. They believed that Jesus later appeared to them alive in accordance with prophecies, most likely those found in the Hebrew Bible. A well-attested link between Jesus and Christians is that Christ, as a term used to identify Jesus, became the basis of the term used to identify his followers: Christians. The Christian movement began in Judea, according to Tacitus. Josephus observes that it continued during the first century. Tacitus deplores the fact that during the second century it had spread as far as Rome.

I remember reading the 1996 book by Gary Habermas entitled "The Historical Jesus: Ancient Evidence for the Life of Christ". This book is a little before the time of most of you young Christian apologists, but back before the time of Lee Strobel and J. Warner Wallace, this is the stuff we all read. Anyway, in the book he makes a list of all that can be known about Jesus from external sources. And fortunately for you, you don't have to buy the book because you can read chapter 9 of it right on his web site.

From Tacitus he gets this:

> From this report we can learn several facts, both explicit and implicit, concerning Christ and the Christians who lived in Rome in the 60s A.D. Chronologically, we may ascertain the following information.
>
> (1) Christians were named for their founder, Christus (from the Latin), (2) who was put to death by the Roman procurator Pontius Pilatus (also Latin), (3) during the reign of emperor Tiberius (14 37 A.D.). (4) His death ended the "superstition" for a short time, (5) but it broke out again, (6) especially in Judaea, where the teaching had its origin.
>
> (7) His followers carried his doctrine to Rome. (8) When the great fire destroyed a large part of the city during the reign of Nero (54 68 A.D.), the emperor placed the blame on the Christians who lived in Rome. (9) Tacitus reports that this group was hated for their abominations. (10) These Christians were arrested after pleading

> guilty, (11) and many were convicted for “hatred for mankind.” (12) They were mocked and (13) then tortured, including being “nailed to crosses” or burnt to death. (14) Because of these actions, the people had compassion on the Christians. (15) Tacitus therefore concluded that such punishments were not for the public good but were simply “to glut one man’s cruelty.”

And from Josephus he gets this:

> (1) Jesus was known as a wise and virtuous man, one recognized for his good conduct. (2) He had many disciples, both Jews and Gentiles. (3) Pilate condemned him to die, (4) with crucifixion explicitly being mentioned as the mode. (5) The disciples reported that Jesus had risen from the dead and (6) that he had appeared to them on the third day after his crucifixion. (7) Consequently, the disciples continued to proclaim his teachings. (8) Perhaps Jesus was the Messiah concerning whom the Old Testament prophets spoke and predicted wonders. We would add here two facts from Josephus’ earlier quotation as well. (9) Jesus was the brother of James and (10) was called the messiah by some.

So when you are reading the New Testament, these facts are the framework that you read within. It’s a good starting point when dealing with people who have never looked into who Jesus was and what he taught and what his followers believed about him, right from the start.

# The Democrat war on clean coal makes us all pay more for electricity

**Wintery Knight** · 23 May 2016 · Archived copy · Original

National Electricity Price Index vs CPI
This is from Investors Business Daily.

Excerpt:

> Another coal giant in America, Peabody Energy Corp., declared bankruptcy this week. This bankruptcy filing follows similar actions by Arch Coal Inc., Alpha Natural Resources Inc., and other coal producers that have filed for Ch. 11 protection from creditors.
>
> The ideologues in the White House must be uncorking the champagne. They *wanted* this to happen. It was the intended result of lawsuits and burdensome regulations by the Obama-era Environmental Protection Agency, which declared war on coal from the day Obama entered office. This was a key component of the anti-carbon agenda of the climate change fanaticism that pervades this White House.
>
> Ideas have consequences. Obama has succeeded in decimating whole towns across America — from Wyoming to Virginia to Pennsylvania — dependent on coal. An estimated 31,000 coal miners, truckers, engineers, construction workers and others have lost their jobs since 2009 as a result of this global warming jihad. Another 5,000 or so could be given pink slips at Peabody. To the left, these lives ruined is acceptable collateral damage for their utopian dream of saving the planet.
>
> The victims here aren't rich fat cats. They are middle class workers whose lives have been turned upside down by the Big Green Machine.
>
> Investors have gotten crushed too as a result of coal's demise. The coal industry has lost more than $30 billion in stock value since 2009 — with many of these losses in pension funds and 401(k) plans.
>
> What is maddening about these developments is that coal is much, much cleaner than ever before. EPA statistics show that emissions of sulfur, lead, carbon monoxide, and smog from coal plants have been reduced by more than 50% in the last 40 years. Clean coal is a reality — but that never slowed the greens down. The Natural Resources Defense Council now wants the EPA to slap $700 million in environmental fines on Peabody. These people just never stop.
>
> America is the Saudi Arabia of coal. We have an estimated 500 years supply of that energy source. Our coal is cleaner and our environmental laws are much stricter than in other nations. So for economic and ecological reasons, we should want American coal to dominate the world market.

> The demise of coal could lead to major disruptions in America's electric power supply. Before Obama entered office in 2009, America got half its electric power from coal. Coal still supplies more than one-third of our electricity, because it is cheap and highly reliable, but that percentage continues to shrink.

Higher energy prices is no problem for Democrats:

They are pretty bold about wanting to bankrupt the coal industry, and push us all onto more expensive forms of energy like wind and solar:

Cost of renewable wind and solar energy

Do you need to be paying more for electricity? Could you find something else to spend it on? How much is there left over for charity if you have to pay more for electricity?

And do you know who else pays for higher electricity prices? Your employer. Attacking cheap, clean energy puts more economic stress on the person who employs you. Think about that.

# How do you respond to the conquests and wars in the Old Testament?

**Wintery Knight** · 23 May 2016 · Archived copy · Original

Lets take a closer look at a puzzle
John Berea has an article about it on his web site.

Here's his overview:

> In the Old Testament are the military campaigns of Israel inconsistent with being led by a just and loving God, and inconsistent with his own commands? Here, I would like to make the case for consistency and justness.
>
> 1. **The nations of Canaan were evil, harming others, and needed to be stopped.** They had carried out incest with children/grandchildren and performed child sacrifice by fire. (Lev 18:6-30, Deut 12:31, Deut 18:9-10, Psalm 106:35, 37-38) They launched unprovoked attacks on Israel (Ex 17:8-9, Num 21:1, Num 21:2-23, 33) and even guerrilla attacks against Israel's "stragglers in the rear of the march when you were exhausted and tired." (Deut 25:18)
>
> **2. Warfare language was likely rhetorical.** There are five reasons to support the rhetorical nature of language such as "completely destroy" (Hebrew תחרימו, literally "ban") in Deut 20:17. It likely meant a destruction of armed soldiers, buildings, and religious icons.
>
> 1. Semitic language professor and NIV, NAB, and ESV bible translator Richard Hess argues that Hebrew "ban" is "stereotypical for describing all the inhabitants of a town or region, without predisposing the reader to assume anything further about their ages or even their genders" and "need not require that there really were children, senior citizens, or women there who were put to death" even when followed by the terms "men and women" (Joshua 8:25) or "young and old" (Joshua 8:25).
> 2. In Israel's destruction of enemies we see phrases like "left no survivor" and "utterly destroyed all who breathed" (Joshua 10:40, Judges 1:8). But in Joshua 21:12-13 the author has no problem telling us these people were still there afterward: "if you ever turn away and make alliances with these nations that remain near you… God will no longer drive out these nations". In 1 Sam 15:3-4 Israel was to "strike down the Amalekites. Destroy everything that they have. Don't spare them. Put them to death–man, woman, child, infant, ox, sheep, camel, and donkey alike." In 15:8 Saul "executed all Agag's people" and Agag himself

> was killed in 15:33. But later in 1 Sam 27:8 we're told they're still there and " had been living in that land for a long time". Hundreds of years later in Esther 3:1 we're even told Haman was an Agagite, a descendant of the Amalekite king Agag.
>
> 3. Most verses on the subject speak of "driving out" and "dispossessing" the land rather than language suggestive of genocide. E.g. Num 33:51-53, in "the land of Canaan, you must drive out all the inhabitants of the land before you. Destroy all their carved images, all their molten images, and demolish their high places. You must dispossess the inhabitants of the land and live in it, for I have given you the land to possess it." It's the same story in Lev 18:25, Num 23:31-32, Deut 6:19, 9:4, 18:12, Joshua 3:10, and 23:9.
> 4. Jer 4:20 suggests inhabitants fled before armies arrived: "At the sound of the horseman and bowman every city flees; They go into the thickets and climb among the rocks"
> 5. Deut 7:22 specifically says that Israel was forbidden to "destroy them all at once" and instead they would be expelled "little by little".
>
> So either all of these verses contradict one another, or the conquest language was rhetorical.
>
> **3. Many of the "cities" were probably military outposts.** For example with Jericho and Ai, Richard Hess argues there are no references to noncombatants (apart from Rahab), no archaeological evidence of non-military use, the term melek (Hebrew מלכי) for "king" of the cities often meant mean a military leader in Canaan (e.g. in Joshua 2:2), they were located at defensive positions, and Jericho and Ai weren't described as a large city as Gibeon and Hazor explicitly were.
>
> **4. A just God requires wrath.** It's not possible to have a God who is just but not wrathful–otherwise wrongdoers continue unabated. Paranormal investigator James Randi wrote in Skeptic Magazine, "I accuse the Christian god of murder by allowing the Holocaust to take place" yet Dawkins and Hitchens condemn God for judgment against the Canaanites. Which is it? Ultimately the the problem is we view death as the ultimate judgment, when in the theological context of the bible it's only a graduation to what's next with accountability for what we've done with what we were given.

The four points are developed with links for support. If you get this question a lot, it's a good resource to bookmark.

# Alliance Defending Freedom files brief to defend pro-marriage Wyoming judge

**Wintery Knight** · 24 May 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

Although you might think that Wyoming is conservative, it's actually quite socially liberal. Check out this story from The Stream.

It says:

> A beloved judge in a whisper of a town in Wyoming faces being thrown off the bench for stating she wouldn't be able to perform same-sex weddings due to her religious beliefs.
>
> The Wyoming Commission on Judicial Conduct and Ethics is recommending the removal of Municipal Judge and Circuit Court Magistrate Ruth Neely. The Commission also wants her to pay up to $40,000 in fines. This despite the fact Judge Neely is neither required to perform weddings, nor has even been asked to perform a same-sex wedding. Still, in the Commission's view, by stating her commitment to natural marriage, she has "manifested a bias" and is permanently unfit to serve as a judge.
>
> The troubles for Judge Neely of Pinedale, Wyoming (pop. 2030) began in 2014 after a Federal judge struck down Wyoming's ban on same-sex marriage. When asked about the decision by a reporter for the local *Pinedale Roundup,* Judge Neely responded that she wouldn't be able to perform a same-sex marriage. "When law and religion conflict, choices have to be made," she said.
>
> The Commission launched a formal investigation in 2015, and according to the *Casper Star Tribune*, accused Judge Neely of violating six rules of judicial conduct, including prejudice based on sexual orientation, acting improperly and refusing to uphold the rule of law.
>
> According to a brief filed by her attorneys, the Commission first told Judge Neely it wouldn't prosecute if she would agree to resign, admit wrongdoing and never again seek judicial office in Wyoming. Judge Neely refused.
>
> Then this February, reports the *Casper Star Tribune*, the Commission told Judge Neely she could stay on the bench if she publicly apologized and agreed to perform same-sex marriages. The judge responded that doing so would violate her religious convictions.
>
> The Commission then filed its recommendation to the Wyoming Supreme Court that Ruth Neely be ousted. According to the Becket Fund for Religious Liberty, which today filed a brief on her behalf, "This would be

> the first time in the country that a judge was removed from office because of her religious beliefs about marriage."

The heroic Alliance Defending Freedom has filed a brief in defense of the judge:

> In a recently filed brief Judge Neely's attorneys from the Alliance Defending Freedom (ADF) asked the state Supreme Court to reject the Commission's recommendation. Among the points argued by the ADF:

> - The Commission's actions violate Judge Neely's constitutional rights to free speech and free exercise of religion.

> - Judge Neely has discretion when exercising her authority to perform marriages and could refuse to do so for any number of reasons.

> - Judge Neely has been suspended from her role as magistrate and is not currently performing any marriages.

> - Any question over her authority to perform marriages has no bearing on her ability to perform her duties as a municipal court judge, of which there is no accusation she has violated any judicial rules.

You would think that at least in Wyoming, that a Christian would be allowed to serve in public office, but actually no. If you are a Christian or a Torah-believing Jew, then you are not allowed to be a judge in Wyoming. It's not a good place to live for conservatives.

# The Wintery Knight's favorite Bible verses

**Wintery Knight** · 24 May 2016 · Archived copy · Original

Crusader performs "Zealous Accusation" attack in Darkest Dungeon

Dina asked me to post my favorite Bible verses, so here are 8 of my favorites.

Psalm 27:14:

> [11] Teach me Your way, O Lord,
> And lead me in a level path
> Because of my foes.
>
> [12] Do not deliver me over to the desire of my adversaries,
> For false witnesses have risen against me,
> And such as breathe out violence.
>
> [13] *I would have despaired* unless I had believed that I would see the goodness of the Lord
> In the land of the living.
>
> **[14] Wait for the Lord;**
> **Be strong and let your heart take courage;**
> **Yes, wait for the Lord.**

1 Corinthians 4:2:

> 1 This is how one should regard us, as servants of Christ and stewards of the mysteries of God.
>
> **2 Moreover, it is required of stewards that they be found faithful.**
>
> 3 But with me it is a very small thing that I should be judged by you or by any human court. In fact, I do not even judge myself.
>
> 4 For I am not aware of anything against myself, but I am not thereby acquitted. It is the Lord who judges me.

Matthew 5:13:

> 10 “Blessed are those who have been persecuted for the sake of righteousness, for theirs is the kingdom of heaven.
>
> 11 “Blessed are you when people insult you and persecute you, and falsely say all kinds of evil against you because of Me.
>
> 12 Rejoice and be glad, for your reward in heaven is great; for in the same way they persecuted the prophets who were before you.
>
> **13 “You are the salt of the earth; but if the salt has become tasteless, how can it be made salty again? It is no longer good for anything, except to be thrown out and trampled under foot by men.**
>
> 14 “You are the light of the world. A city set on a hill cannot be hidden;
>
> 15 nor does anyone light a lamp and put it under a basket, but on the lampstand, and it gives light to all who are in the house.

2 Timothy 2:4:

> 1 You therefore, my son, be strong in the grace that is in Christ Jesus.
>
> [2] The things which you have heard from me in the presence of many witnesses,entrust these to faithful men who will be able to teach others also.
>
> [3] Suffer hardship with *me*, as a good soldier of Christ Jesus.
>
> **[4] No soldier in active service entangles himself in the affairs of everyday life, so that he may please the one who enlisted him as a soldier.**
>
> [5] Also if anyone competes as an athlete, he does not win the prize unless he competes according to the rules.

Daniel 3:18:

> [13] Then Nebuchadnezzar in rage and anger gave orders to bring Shadrach, Meshach and Abed-nego; then these men were brought before the king.
>
> [14] Nebuchadnezzar responded and said to them, “Is it true, Shadrach, Meshach and Abed-nego, that you do not serve my gods or worship the golden image that I have set up?
>
> [15] Now if you are ready, at the moment you hear the sound of the horn, flute, lyre, trigon, psaltery and bagpipe and all kinds of music, to fall down and worship the image that I have made, *very well*. But if you do not worship, you will immediately be cast into the midst of a furnace of blazing fire; and what god is there who can deliver you out of my hands?”
>
> [16] Shadrach, Meshach and Abed-nego replied to the king, “O Nebuchadnezzar, we do not need to give you an answer concerning this matter.
>
> [17] If it be *so*, our God whom we serve is able to deliver us from the furnace of blazing fire;and He will deliver us out of your hand, O king.
>
> **[18] But *even* if *He does* not,let it be known to you, O king, that we are not going to serve your gods or worship the golden image that you have set up.”**

Esther 4:14:

> [10] Then Esther spoke to Hathach and ordered him *to reply* to Mordecai:
>
> [11] “All the king’s servants and the people of the king’s provinces know that for any man or woman who comes

> to the king to the inner court who is not summoned, he has but one law, that he be put to death, unless the king holds out to him the golden scepter so that he may live. And I have not been summoned to come to the king for these thirty days."
>
> [12] They related Esther's words to Mordecai.
>
> [13] Then Mordecai told *them* to reply to Esther, "Do not imagine that you in the king's palace can escape any more than all the Jews.
>
> **[14] For if you remain silent at this time, relief and deliverance will arise for the Jews from another place and you and your father's house will perish. And who knows whether you have not attained royalty for such a time as this?"**

Philippians 1:9:

> [3] I thank my God in all my remembrance of you,
>
> [4] always offering prayer with joy in my every prayer for you all,
>
> [5] in view of your participation in the gospel from the first day until now.
>
> [6] *For I am* confident of this very thing, that He who began a good work in you will perfect it until the day of Christ Jesus.
>
> [7] For it is only right for me to feel this way about you all, because I have you in my heart, since both in my imprisonment and in the defense and confirmation of the gospel, you all are partakers of grace with me.
>
> [8] For God is my witness, how I long for you all with the affection of Christ Jesus.
>
> **[9] And this I pray, that your love may abound still more and more in real knowledge and all discernment,**
>
> [10] so that you may approve the things that are excellent, in order to be sincere and blameless until the day of Christ;
>
> [11] having been filled with the fruit of righteousness which *comes* through Jesus Christ, to the glory and praise of God.

Numbers 13:30:

> [25] When they returned from spying out the land, at the end of forty days,
>
> [26] they proceeded to come to Moses and Aaron and to all the congregation of the sons of Israel in the wilderness of Paran, at Kadesh; and they brought back word to them and to all the congregation and showed them the fruit of the land.
>
> [27] Thus they told him, and said, "We went in to the land where you sent us; and it certainly does flow with milk and honey, and this is its fruit.
>
> [28] Nevertheless, the people who live in the land are strong, and the cities are fortified *and* very large; and moreover, we saw the descendants of Anak there.
>
> [29] Amalek is living in the land of the Negev and the Hittites and the Jebusites and the Amorites are living in the hill country, and the Canaanites are living by the sea and by the side of the Jordan."
>
> **[30] Then Caleb quieted the people before Moses and said, "We should by all means go up and take possession of it, for we will surely overcome it."**

# Canada's Justice Minister calls for two-year prison sentence for critics of transgenderism

**Wintery Knight** · 25 May 2016 · Archived copy · Original

Kathleen Wynne and Justin Trudeau of the Liberal Party, marching in a gay pride parade

Bill Muehlenberg documents a few headlines from just the last week about the transgender movement's latest concerns: (H/T Dr. Michael Brown)

> **Canada Prepares Nationwide Ban on Anti-Transgender Propaganda**
> May 18, 2016
> Citing the need to make transgender people "feel safe and secure in who they are," Canada's Minister of Justice Jody Wilson-Raybould introduced legislation Tuesday that would prohibit discrimination on the basis of "gender identity" or "gender expression" and make anti-transgender "hate propaganda" punishable by up to two years in prison.
>
> **New York City imposes fines up to $250,000 for refusing to call trans person 'ze' or 'hir'**
> May 19, 2016
> New York City's human rights commission says it will fine New York employers and landlords up to $250,000 for using the wrong pronoun to refer to a transgender person.
>
> **Female security guard arrested, faces hate charge for removing man from women's restroom in D.C.**
> May 19, 2016
>
> **Girls must get over their 'discomfort' at seeing male genitals in locker room:** *Charlotte Observer*
> May 20, 2016
> Girls need to get over the "discomfort" they may feel at seeing male genitalia in the locker room, the editorial board of one of North Carolina's largest newspapers wrote in a piece supporting the Obama administration's transgender school facilities edict.
>
> **The most dangerous, and underreported, part of Obama's transgender edict**
> May 20, 2016

> School districts must allow biological males and females to spend the night together in the same hotel room on field trips; Colleges must let men who say they are transgender be roommates with one or more women; and School officials cannot even tell those young women or their parents in advance that their new roommate is a man, without risking a federal lawsuit.

Bill is in Australia, so he has a few cases listed in his post that I hadn't heard of. To be honest, their stories seemed tame compared to the Canadian story.

Let's look at the Canadian story more closely (Daily Caller):

> **Citing the need to make transgender people "feel safe and secure in who they are," Canada's Minister of Justice Jody Wilson-Raybould introduced legislation Tuesday that would prohibit discrimination on the basis of "gender identity" or "gender expression" and make anti-transgender "hate propaganda" punishable by up to two years in prison.**
>
> The proposed legislation — which was unveiled on the International Day Against Homophobia, Transphobia, and Biphobia — would amend the Canadian Criminal Code to expand existing "hate speech" prohibitions to include any public speech or communication that "promotes hatred" on the basis of "gender identity" or "gender expression."
>
> An identical ban on anti-gay "hate propaganda" has been in place for several years and has caused problems for Christians who oppose gay marriage. In 2013, the Canadian Supreme Court upheld the conviction of a Christian street preacher for distributing fliers denouncing homosexual behavior.
>
> The court justified the preacher's conviction on the grounds that he used "vilifying and derogatory representations to create a tone of hatred" against homosexuals. The court held that the pastor's religious freedom did not excuse him from violating "hate propaganda" laws.
>
> […]Prime Minister Justin Trudeau — who ideologically leans far to the left — championed the bill as a much-needed step for transgender rights in Canada. "We must continue to demand true equality," he said at a news conference.
>
> Wilson-Raybould was similarly enthusiastic about the bill. "We live in a time when discrimination in any form is completely unacceptable," she said.

Two years in prison, under the Criminal Code, for speech that offends the government's favored group. That's what Canadian taxpayers are paying their Liberal Party government to do. They elected them in a majority, so this is going to happen. No one can stop them.

You might remember that the Justice Minister is the same woman who introduced the euthanasia bill. Euthanasia is Canada's preferred method of reducing costs in their single-payer health care system. After all, they need to save money for the abortions, IVF and sex changes they cover. Canada represents the triumph of compassion over moral boundaries. "Let's not make judgments that make people feel bad" won out over "let's have moral rules that protect the weak and innocent, preserve our liberties and conscience rights, and reduce the costs to taxpayers of expensive choices made by individuals". They wanted to let everyone do what they wanted and pass the costs to taxpayers. Anyone who dissents has to be silenced or imprisoned, because dissent is judgment, and and judgment makes people feel bad.

Why is this push on transgender priorities happening? For those who have a sense of history, it's very clear that the sex-differences denying of the gay activists is nothing more than an extension of the sex-differences denying of the radical feminists. Those who looked favorably on the demands of the radical feminists in order to appear chivalrous (to the wrong kinds of women) should have expected this. It turns out that if you really believe that a woman is identical to a man, and all differences between them are cultural, then… a woman really is identical to a man, and all differences between them really are cultural. I know many pastors who were unwilling to take on radical

feminism, because they wanted to appear chivalrous. Sometimes, it is more important to say “no” than it is to be liked.

# If unborn babies don't have consciousness or don't feel pain, may we kill them?

**Wintery Knight** · 25 May 2016 · Archived copy · Original

Unborn baby scheming about pro-life apologetics

Was having a conversation by e-mail yesterday with a pro-abortion atheist, and he gave two reasons why he supported abortion in the first and second trimester. First, he said that unborn babies can't feel pain, so it's OK to kill them. Second, he said that unborn babies don't have consciousness, so it's OK to kill them. I thought it might be useful to link to something that answers both of these objections.

Frank Beckwith is the author of "Defending Life: A Moral and Legal Case Against Abortion Choice". He wrote that book for Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote four easy-to-understand essays for the Christian Research Journal. Part IV is the one that has the response to the two questions raised by my atheist friend.

Part I. The Appeal to Pity

Part II. Arguments from Pity, Tolerance, and Ad Hominem

Part III. Is The Unborn Human Less Than Human?

Part IV. When Does a Human Become a Person?

Excerpt:

> Some ethicists argue that the unborn becomes fully human sometime after brain development has begun, when it becomes sentient: capable of experiencing sensations such as pain. The reason for choosing sentience as the criterion is that a being that cannot experience anything (i.e., a presentient unborn entity) cannot be harmed. Of course, if this position is correct, then the unborn becomes fully human probably during the second trimester and at least by the third trimester. Therefore, one does not violate anyone's rights when one aborts a nonsentient unborn entity. [13]

> There are several problems with this argument. First, it confuses harm with hurt and the experience of harm with the reality of harm. [14] One can be harmed without experiencing the hurt that sometimes follows from that harm, and which we often mistake for the harm itself. For example, a temporarily comatose person who is suffocated to death "experiences no harm," but he is nevertheless harmed. Hence, one does not have to experience harm, which is sometimes manifested in hurt, in order to be truly harmed.
>
> Second, if sentience is the criterion of full humanness, then the reversibly comatose, the momentarily unconscious, and the sleeping would all have to be declared nonpersons. Like the presentient unborn, these individuals are all at the moment nonsentient though they have the natural inherent capacity to be sentient. Yet to countenance their executions would be morally reprehensible. Therefore, one cannot countenance the execution of some unborn entities simply because they are not currently sentient.
>
> Someone may reply that while these objections make important points, there is a problem of false analogy in the second objection: the reversibly comatose, the momentarily unconscious, and the sleeping once functioned as sentient beings, though they are now in a temporary state of nonsentience. The presentient unborn, on the other hand, were never sentient. Hence, one is fully human if one was sentient "in the past" and will probably become sentient again in the future, but this cannot be said of the presentient unborn.
>
> There are at least three problems with this response. First, to claim that a person can be sentient, become nonsentient, and then return to sentience is to assume there is some underlying personal unity to this individual that enables us to say that the person who has returned to sentience is the same person who was sentient prior to becoming nonsentient. But this would mean that sentience is not a necessary condition for personhood. (Neither is it a sufficient condition, for that matter, since nonhuman animals are sentient.) Consequently, it does not make sense to say that a person comes into existence when sentience arises, but it does make sense to say that a fully human entity is a person who has the natural inherent capacity to give rise to sentience. A presentient unborn human entity does have this capacity. Therefore, an ordinary unborn human entity is a person, and hence, fully human.
>
> Second, Ray points out that this attempt to exclude many of the unborn from the class of the fully human is "ad hoc and counterintuitive." He asks us to "consider the treatment of comatose patients. We would not discriminate against one merely for rarely or never having been sentient in the past while another otherwise comparable patient had been sentient….In such cases, potential counts for everything." [15]
>
> Third, why should sentience "in the past" be the decisive factor in deciding whether an entity is fully human when the presentient human being "is one with a natural, inherent capacity for performing personal acts?" [16] Since we have already seen that one does not have to experience harm in order to be harmed, it seems more consistent with our moral sensibilities to assert that what makes it wrong to kill the reversibly comatose, the sleeping, the momentarily unconscious, and the presentient unborn is that they all possess the natural inherent capacity to perform personal acts. And what makes it morally right to kill plants and to pull the plug on the respirator-dependent brain dead, who were sentient "in the past," is that their deaths cannot deprive them of their natural inherent capacity to function as persons, since they do not possess such a capacity.

These four essays are a very good introduction to common responses to pro-abortion arguments. I recommend that people get familiar with this, as once you look into it, you will see that the abortion issue can be debated with as much confidence as William Lane Craig defends Christian theism. You will have the same access to scientific evidence and rational arguments on this topic, and so you will have the upper hand. And that's fun.

The best introductory book on the abortion / right to life issue is "The Case for Life" by pro-life debater Scott Klusendorf. The best comprehensive book is a tie between "The Ethics of Abortion" by Christopher Kaczor, and Frank Beckwith's "Defending Life: A Moral and Legal Case Against Abortion Choice".

# Texas and Oklahoma sue Obama administration over transgender public school decree

**Wintery Knight** · 26 May 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

The Daily Signal reports:

> Texas, joined by eight other states and officials from two other states, sued President Barack Obama's administration on Wednesday over the president's national school bathroom directive that threatens to take away federal school funding for districts that do not follow new transgender student guidance.
>
> "This is an overreach of the federal government," Harrold Independent School District Superintendent David Thweatt told The Daily Signal in a phone call Wednesday afternoon.
>
> Texas and the Harrold Independent School District in Texas were joined by the states of Alabama, Wisconsin, West Virginia, Tennessee, Oklahoma, Louisiana, Utah, and Georgia, as well as the Arizona Department of Education, Heber-Overgaard Unified School District in Arizona, and Maine Governor Paul LePage, a Republican, in the lawsuit filed in the Northern District of Texas, Wichita Falls Division U.S. district court.
>
> **"This federal money obviously is our money to start with," Thweatt said. "It's coming from income taxes, et cetera and [the Obama administration] is taking this and using our own money against us to try to blackmail us into some kind of social engineering and social experimentation in public schools."**
>
> […]Superintendent Thweatt expressed concern to The Daily Signal that Obama administration's directive creates security and safety issues for the "privacy and dignity" of the approximately one hundred kindergarten through 12th grade students that attend and use restrooms at Harrold Independent School District.
>
> **"Not only do we have students in these restrooms, but we are also having visitors to our schools at programs and sporting events," Thweatt said. "If we open our restrooms, we could very well have grown men in our restrooms with young girls."**

If you live in Texas or Oklahoma, then congratulations – your states are actually doing something about the problem:

> **Texas Attorney General Ken Paxton, a Republican, along with Oklahoma Attorney General Scott Pruitt and West Virginia Attorney General Patrick Morrisey, sent a letter on May 17 to the Obama administration expressing legal concern over the transgender student directive.**
>
> "The president of United States has no authority under the Constitution to change the law," Paxton told The Daily Signal in a phone call Wednesday afternoon.
>
> Paxton says that his state will wait to hear if there is a response from the Obama administration and "hopefully they'll back off."
>
> "If not, we'll go to the court and we'll put our case in front of a judge and we'll let the court decide," Paxton said.
>
> The lawsuit is filed against the Education and Justice Departments, the United States Equal Employment Opportunity Commission, the Department of Labor, and officials at the respective agencies.

I doubt that people who voted for Obama are bright enough to explain what the concept of federalism is, or why it is responsible for our special success as a nation.  People don't seem to care much for the Constitutional limits on power any more. They just vote for the party that hands them goodies, and to Hell with morality and protecting the vulnerable.

# New study: father absence is a strong predictor of depression for young girls

**Wintery Knight** · 26 May 2016 · Archived copy · Original

If you want your children to grow up happy, commit yourself to marriage

The study is here on PubMed.

And here's an article about it posted at The Family in America, a public policy journal.

Excerpt:

> Who has benefitted from the war radical feminists have waged against marriage? Certainly not young women. A very large new Canadian study concludes that one of the strongest predictors of depression among young women is the loss of a biological parent. And it is the easy divorces that feminists have pushed for that have typically occasioned such a loss.
>
> Conducted by researchers at the University of Northern British Columbia, this new study isolates the factors predicting depression among Canadians ages 16 to 20. The researchers limn these factors by scrutinizing data collected between 1994 and 2007 from a nationally representative sample of 1,715 individuals tracked during this 13-year period.
>
> Predictably, the researchers adduce evidence that such things as parental rejection and childhood anxiety predict depression between a young person's 16th birthday and his or her 21st. But gender makes a difference: consistent with other inquiries, this study finds that "girls reported more [depression] than boys." However, not all girls are equally vulnerable: the data reveal that "The loss of a parent by the ages of 4 to 8 years predicted depression at ages 16 to 20 years for girls [p = 0.008] but not for boys."
>
> Of course, a girl can lose a parent through death. But the researchers realize that such tragedy occurs far less often than the trauma of parental divorce. Consequently, they know how to interpret parental loss as a predictor of girls' depression at the threshold between adolescence and young adulthood. This is a finding, they realize, that fits hand-in-glove with the results of a 2008 study establishing that "the effects of parental divorce . . . differ between genders in respect to the development of depression with risk increasing for girls but not for boys." They further realize that their study harmonizes with a 1997 study concluding that "young women whose parents had divorced reported higher levels of depression compared to young men from divorced

> families."
>
> Given the paralyzing effects of depression as "a leading cause of disability worldwide," the researchers hope their study will lead to "targeted, specific and personalized intervention" that will curb such depression. More particularly, they hope that "girls may benefit from interventions designed to address parental loss due to death, divorce, and other causes."
>
> But since nothing takes a parent away from a daughter more often in the 21st century than does parental divorce, it is very clear that the kind of intervention girls most need is the kind that will keep their parents together. Just how quickly that intervention comes will depend heavily on how much reality can puncture feminist ideology.

This study makes me think of the problems that we have these days getting married and staying married. I think that there are three kinds of challenges. The first challenge is ideology, e.g. – radical feminism. The second challenge is cultural, e.g. – the hook-up culture on campus. The third challenge is political, e.g. – no-fault divorce. It seems likes the odds are really stacked against marriage-minded people.

Most people like the idea of having someone of the opposite sex commit to them for life. I write a lot about what people should be looking for in a mate. Factors that predict a person's ability to commit, what their worldview should be, etc. But we also have to remember that we have to be turning ourselves into people who are suited to a lifetime commitment, involving self-denial and self-sacrifice.

A lot of people seem to think that if they meet the right person – the person who makes them feel good – then they won't have to do any self-denying or any self-sacrificing. But that's not true. Feelings change. It's possible for two serial killers to feel good about each other, and to having things in common, but marriage isn't about whether you "like" the other person and whether they "like" you. Marriage works when you have two people who are comfortable making commitments. Two people who are comfortable with responsibilities, expectations and obligations.

The point I am trying to make here is that not only must we be looking for someone who can be faithful, loyal, commitment through thick and thin, but we must also prepare to become a person like that. If we make choices for our own happiness every day – fun and thrills – then we are not making ourselves into the kind of people who take responsibility and make commitments.

The strange thing is that those who choose fun over and over and over again seem to make the worst decisions when it comes to choosing mates. Of course it's easier to pick someone who is not too moral and not too religious. Then they won't be able to judge you. They'll just let you do whatever you want and never shame you for anything.

The problem is that marriage works best when two people are comfortable with moral obligations to others. You have to be someone who is comfortable with obligations over the long term. And you have to choose someone who has a strong sense of morality, otherwise they won't honor their moral obligations to others. Commitment means doing what is right regardless of how you feel about it, It means giving up on the pursuit of fun, in order to build something strong that will take you into your old age.

# State Department Inspector General: Clinton e-mail use violated Federal Records Act

**Wintery Knight** · 27 May 2016 · Archived copy · Original

Hillary Clinton look bored about the deaths of 4 Americans who asked for her help

The Weekly Standard reports:

> A State Department watchdog denounced Hillary Clinton's lax use of a private email server Wednesday, writing that Clinton did not properly preserve correspondence and subjected herself to security risks without seeking counsel.
>
> The report revealed that the former secretary of state did not comply with the Federal Records Act.
>
> […]"Secretary Clinton should have preserved any Federal records she created and received on her personal account by printing and filing those records with the related files in the Office of the Secretary," the report said, according to *Politico*. "At a minimum, Secretary Clinton should have surrendered all emails dealing with Department business before leaving government service and, because she did not do so, she did not comply with the Department's policies that were implemented in accordance with the Federal Records Act."
>
> […]The IG also condemned Clinton for not seeking counsel on whether to handle work-related emails on her cell phone. Information officers "would have refused the request because of security risks," according to the Associated Press.
>
> NBC's Ken Dilanian said that the IG report shows that "key information technology officials" were "not aware" of Clinton's use of the server, though the former secretary of state's office has claimed otherwise.
>
> "They had never approved it, she never asked them. And they're saying that she should have gotten approval from them, they probably wouldn't have granted it actually," Dilanian said.

Another Weekly Standard article lists EIGHT TIMES where Clinton said everyone knew about her private e-mail server.

And her "fact sheet" on her campaign web site says this:

> "Her usage was widely known to the over 100 State Department and U.S. government colleagues she emailed, consistent with the practice of prior Secretaries of State and permitted at the time. […] The laws, regulations, and State Department policy in place during her tenure permitted her to use a non-government email for work."

Whenever a politician says that "everyone" knows something, or "everyone" believes something, it's a good idea to ask them for one name. Because once they give you a name, they are opening themselves up to fact-checking. This also works when you're discussion the Christian worldview with a skeptic. Skeptic: "I have read so many smart people with so many arguments against Christianity that I can't believe in it". You: "OK, go ahead and name your best argument and tell me who wrote it".

Now, the obvious question is this – why did Hillary want to have a private e-mail server? All of my e-mails are on my company's corporate server, and if I leave, they keep them. Why? Because it is important to company business that a record be kept, in case I was taking bribes, or exchanging favors for money. Clinton decided not to let her employers see her e-mails, or have records of them. Why do you think she did that? Remember that all the time that she was Secretary of State, she was taking donations to her "Clinton Foundation" from foreign donors. Do you think that maybe she was exchanging political favors for donations, and didn't want anyone else to have a record of her communication about that?

What difference does national security make?
Look at this article from the leftist Washington Post, of all places.

They write:

> The Clinton Foundation accepted millions of dollars from seven foreign governments during Hillary Rodham Clinton's tenure as secretary of state, including one donation that violated its ethics agreement with the Obama administration, foundation officials disclosed Wednesday.
>
> […]In one instance, foundation officials acknowledged they should have sought approval in 2010 from the State Department ethics office, as required by the agreement for new government donors, before accepting a $500,000 donation from the Algerian government.
>
> […]**Some of the donations came from countries with complicated diplomatic, military and financial relationships with the U.S. government, including Kuwait, Qatar and Oman.**
>
> […]**The Washington Post reported last week that foreign sources, including governments, made up a third of those who have given the foundation more than $1 million over time. The Post found that the**

> **foundation, begun by former president Bill Clinton, has raised nearly $2 billion since its creation in 2001.**
>
> […]**Foreign governments and individuals are prohibited from giving money to U.S. political candidates, to prevent outside influence over national leaders. But the foundation has given donors a way to potentially gain favor with the Clintons outside the traditional political limits.**
>
> […]Foreign governments had been major donors to the foundation before President Obama nominated Clinton to become secretary of state in 2009. **When the foundation released a list of its donors for the first time in 2008, as a result of the agreement with the Obama administration, it disclosed, for instance, that Saudi Arabia had given between $10 million and $25 million.**
>
> […]**Qatar, for instance, spent more than $5.3 million on registered lobbyists while Clinton was secretary of state, according to the Sunlight Foundation.The country's lobbyists were reported monitoring anti-terrorism activities and efforts to combat violence in Sudan's Darfur region. Qatar has also come under criticism from some U.S. allies in the region that have accused it of supporting Hamas and other militant groups. Qatar has denied the allegations.**

Now I know that Hillary Clinton says that she is very concerned about women's rights, but then one has to wonder how well she translates those happy sounding words in her speeches into actions with these nations like Saudi Arabia. I don't think that the women in these countries saw much help from Hillary when she was Secretary of State.

# Why sexual permissiveness is not compatible with the welfare of children

**Wintery Knight** · 27 May 2016 · Archived copy · Original

A long journey through the night

Here is a striking essay from the Public Discourse. It talks about how we, as a society, have generally taken on an anything-goes approach with respect to sex. The one exception (for now) is pedophilia, which is the sexual abuse of children by adults. The essay points out that there is no moral reason for having this one exception, on secularism. The exception exists because of a sort of "ick" factor – not because we have a moral framework that makes anything right or wrong objectively. The essay argues that we are not shy about harming children in a million other ways, and lists some examples. I just want to quote a few and then I'll comment about my own moral views around sexuality.

Quick summary of his argument:

> The moral structure of pedophilia is simply this: the welfare of children is subordinate to the sexual gratification of adults.
>
> […]We should be thankful that the Sanduskys and Laheys are still considered monstrous. But in contemporary America that condemnation rests on sentiment and not on moral reasoning. No one can simultaneously explain *why* their actions were so vile and uphold the first commandment of the sexual revolution: fulfill thy desires.
>
> […]No, it isn't *how* Sandusky and Lahey did what they did, or under what circumstances, that explains the disgust. It's *what* they did—but nobody wants to acknowledge that.
>
> The reason for that reluctance becomes clear, if we keep in mind the moral structure of pedophilia. Sexual gratification trumps. Thank goodness that for now, there aren't many men who are sexually attracted to youngsters. In that single case, we raise the banner for the children. But in no other case.

That's his argument.

Now, a quick excerpt:

> If we altered the question, and asked not how many people have done sexually abusive things with children, but

> how many people have done sexual things that redounded to the suffering of children, then we might confess that the only thing that separates millions of people from Jerry Sandusky is inclination. Everything that was once considered a sexual evil and that is now winked at or cheered, everything without exception, has served to hurt children, and badly.
>
> We might point here to divorce. Unless it is necessary to remove oneself and one's children from physical danger and moral corruption, the old wisdom regarding divorce should hold, if children themselves have anything to say about it. Parents will say, "My children can never be happy unless I am happy," but they should not lay that narcissistic unction to their souls. Children need parents who love them, not parents who are happy; they are too young to be asked to lay down their lives for someone else. It is not the job of the child to suffer for the parent, but the job of the parent to endure, to make the best of a poor situation, to swallow his pride, to bend her knees, for the sake of the child.
>
> We might point to births out of wedlock. The child has a right to enter more than a little nursery decorated with presents from a baby shower. He should enter a human world, a story, a people. He should be born of a mother and a father among uncles and aunts and cousins and grandparents, stretching into the distant past, with all their interrelated histories, with his very *being* reflected in all those mirrors of relation, not to mention his eyes and his hair, the talents in his fingers and the cleverness in his mind. This *belonging* to a big and dependable world can be secured only in the context of the *permanent* love of his mother and father, declared by a vow before the community and before the One in whom there is no shadow of alteration.

And now my comments about this article.

So pretty much all my regular readers know that I take extremely conservative views on social issues, since I am an evangelical Protestant Christian. But I don't just have conservative views – I am also chaste at a personal level. I am not one of these re-virgins – I have never had sex. Not once. And I don't mean I have never had sexual intercourse only, I mean that I have never even kissed a woman on the lips. I am a radical on the issue of chastity. I don't view chastity as depriving oneself of something good, I view it is as a thing that serious Christian men do when we want to enable and develop other capabilities. It's my conviction that chastity enables the capability to see women as God sees them, which is a precursor to growing them up to serve him. That's what women are for, on my view – exactly like men are for knowing and serving God. It's my belief that once a man has premarital sex, it becomes much harder for him to view women that way.

So, I am really really really against any kind of sexual activity of any kind prior to marriage. I think that if a man wants to show affection to a woman, then sex before marriage is not the way to do that. There are other ways, and men ought to know how to speak the language of love to a woman in many different ways apart from sex, assuming that this is his goal for her. A man needs to create a context for sex before he can have it. Marriage is how a man provides a context for sex. Not just by giving a woman safety, but by specifying a shared vision which the woman agrees to support when she agrees to marriage. Men shouldn't have intimate experiences with women who are not committed to a constructive partnership with specific goals, e.g. – birthing or adopting children in order to give them a stable, loving *sane* environment to grow up in. That is so rare nowadays, especially on college campuses which are inundated with sexual liberalism, thanks to radical feminism. My conviction that sex is not something that should be done before marriage emerges partly from a concern that children should have the best opportunity for that stable environment. And that's what I want to focus on – sexual restraint as a means of providing for children and protecting children.

First, premarital sex creates a situations where abortion happens. Men and women should not engage in activities for recreational reasons that could possibility lead to the death of another human being, period. I am not one of these people who thinks "oh, poor woman who is pregnant, what a beastly man who did that to her – but she can do the right thing and keep the baby". I think that women are equally to blame with men for even having sex before marriage – the mistake was having sex in the first place. So getting pregnant and keeping the baby is good, but preventing fatherlessness and not putting burdens on taxpayers is much, much better. People who engage in

premarital sex are not only selfish, immature and irresponsible, but they are actually acting in a *negligent* fashion towards the child that may result from their *choices*. We should not make choices that put innocent children at risk. Premarital sex can be compared with driving while drunk in that regard. You might think it's fun, but it's not a good, moral thing to do because of the harm that may result. Saying "but I didn't mean to" after the fact doesn't change the harm.

Second, I've blogged before about many studies (like this one) that show that premarital sex reduces relationship stability, duration, and quality. Another study I blogged about showed that the number of sexual partners that a man or woman has before marriage directly affects the probability that the relationship will provide a stable environment for raising children. So one of my reasons for being chaste is to maximize the probability of giving my future children that stable environment. Another reason to be chaste is to give my future wife that gift of fidelity. When a man has proven that he has the ability to restrain himself with his wife during the courtship, that is a signal to her that he is good at self-control. The ability to court without premarital sex shows her that he is able to think about her as a person, and that he is able to evaluate her objectively for the purpose of filling the roles of wife and mother. And that this is, in fact, his whole purpose for her. A purpose that will survive the decline of her appearance and youth. Security is another gift that a chaste man gives his wife, so that she can age confidently.

Thirdly, I have in the past blogged about research on gay unions showing how various factors that are more probable in gay relationships, (e.g. – elevated rates of domestic violence, low relationship stability, drug abuse, high rates of promiscuity, etc.), undermine the stability of the environment in which children grow up. More here. Dr. Ryan Anderson has argued that the norms present in gay relationships will undermine the norms of traditional marriage, (permanence, sexual exclusivity, etc.), if marriage is redefined to eliminate the gender requirement. I think we need to keep the traditional definition of marriage because it's better for children if we do (and there are other reasons to prefer natural marriage, as I've written about before).

I think I've said enough here to show that very often when it comes to sexual activity what is driving my conservative views is concern for others. Concern not just for the future children, but for the future wife. And not just for them, but for society as a whole, who would have to pay the social costs of things like divorce, and the social costs of children of divorce, etc. And not just for society, but also for God, who intends sexuality for a very specific purpose – it is a form of communication for two people who have been bonded to each other for life. Marriage has to count for God and achieve his goals. One of those goals is raising up children well for his sake. And adults need to control themselves in order to provide children with what they need.

# Is the definition of atheism “a lack of belief in God”?

**Wintery Knight** · 28 May 2016 · Archived copy · Original

I have a key that will unlock a puzzling mystery

First, let’s see check with the Stanford University Encyclopedia of Philosophy:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they  are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God. What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God.  Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.”  If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars.  There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).”  Logically where you place the negation makes a world of difference.

> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There's a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called "presumption of atheism." At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.
>
> So understood, such an alleged presumption is clearly mistaken. **For the assertion that "There is no God" is just as much a claim to knowledge as is the assertion that "There is a God." Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God's existence. He confesses that he doesn't know whether there is a God or whether there is no God.**
>
> But when you look more closely at how protagonists of the presumption of atheism used the term "atheist," you discover that they were defining the word in a non-standard way, synonymous with "non-theist." So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists). As Antony Flew confesses,
>
> the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)
>
> **Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know*. We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

**Dealing with subjective atheists**

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to

avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

**Dealing with persistent subjective atheists**

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over "I lack a belief in God, I lack a belief in God"? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: "I lack a belief in cupcakes! I lack a belief in icebergs!" What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: "Wintery Knight won't listen to me! I lack a belief in crickets!". I think at this point you have to give up and stop talking to such a person.

And that's why I moderate and filter comments on this blog. There are uneducated people out there with access to the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don't *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I'm not obligated to engage in discussions with them, either.

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 29 May 2016 · Archived copy · Original

Theology that hits the spot

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he

got up and he got out. Notice the phrase "In order that you may know". Same message, right?

3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for example, is a necessary information base that Christians must have.
2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

# Let’s celebrate our heroes for Memorial Day

**Wintery Knight** · 30 May 2016 · Archived copy · Original

Leslie Sabo

Here’s a story of heroism from Investors Business Daily.

It says:

> Leslie Sabo was killed during the Vietnam War’s 1970 Cambodian Campaign. He was nominated for the Medal of Honor, but the records were lost until a veteran rediscovered them in 1999. In 2012, Sabo’s widow received the nation’s highest military award on his behalf, the 249th for Vietnam.
>
> Sabo’s platoon and another had been ambushed from all sides by a large and well-entrenched force of communist soldiers.
>
> He repeatedly attacked and killed enemy soldiers, was wounded by a grenade as he shielded a comrade, and then was fatally shot as he provided covering fire for a medevac helicopter.
>
> “His indomitable courage and complete disregard for his own safety saved the lives of many of his platoon members,” said the Medal of Honor citation. “Spc. 4 Sabo’s extraordinary heroism and selflessness, above and beyond the call of duty, at the cost of his life, are in keeping with the highest traditions of military service and reflect great credit upon himself, Company B, 3rd Battalion, 506th Infantry, 101st Airborne Division, and the United States Army.”
>
> Leslie Jr. was born in 1948 in Kufstein, Austria, where his well-to-do family had moved after the Soviet occupation of Hungary at the end of World War II, leaving almost everything behind.
>
> They moved to America when he was 2. They lived in Youngstown, Ohio, and then Ellwood City, Pa.
>
> Leslie Sr., a lawyer in Hungary, retrained as an engineer, and both parents taught their two remaining sons (another was killed by a bomb during the war) patriotism for their adopted country.

Here are some more details from the Army web site:

> 4 Leslie H. Sabo Jr. distinguished himself, May 10, 1970, in Se San, Cambodia, while serving as a rifleman in Company B, 3d Battalion, 506th Infantry, 101st Airborne Division.

> Members of B. Co. were ambushed by a large enemy force. While conducting a reconnaissance patrol, 22-

> year-old Sabo, charged an enemy position, killing several enemy soldiers. Immediately thereafter, he assaulted an enemy flanking force, successfully drawing their fire away from friendly soldiers and ultimately forcing the enemy to retreat.
>
> When a grenade landed nearby a wounded comrade, Sabo picked up the grenade threw it away while shielding his buddy with his own body, thus absorbing the brunt of the blast and saving the man's life.

> Seriously wounded by the blast, Sabo, nonetheless, retained the initiative and single- handedly charged an enemy bunker that had inflicted severe damage on the platoon. He received several serious wounds from withering automatic weapons fire in the process. Despite being mortally injured, he crawled towards the enemy emplacement and, when in position, threw a grenade into the bunker. The resulting explosion silenced the enemy fire, but also ended Spc. 4 Sabo's life.

He gave his life to save his friends.

# Trying to make Christianity entertaining makes people think that it's fake

**Wintery Knight** · 30 May 2016 · Archived copy · Original

Church sucks, that's why men are bored there

My friend Bruce shared this article from the leftist The Atlantic on Facebook. It's written by Larry Taunton of Fixed Point Foundation.  Larry surveyed some people who had left the church, and I thought it was worth it to look at this case of Phil.

Larry writes:

> "Church became all about ceremony, handholding, and kumbaya," Phil said with a look of disgust. "I missed my old youth pastor. He actually knew the Bible."
>
> […]Phil was in my office as part of a project that began last year. Over the course of my career, I have met many students like Phil. It has been my privilege to address college students all over the world, usually as one defending the Christian worldview. These events typically attract large numbers of atheists. I like that. I find talking to people who disagree with me much more stimulating than those gatherings that feel a bit too much like a political party convention, and the exchanges with these students are mostly thoughtful and respectful.
>
> […]A smart, likable young man, he sat down nervously as my staff put a plate of food before him. Like others after him, he suspected a trap. Was he being punk'd? Talking to us required courage of all of these students, Phil most of all since he was the first to do so. Once he realized, however, that we truly meant him no harm, he started talking — and for three hours we listened.
>
> Now the president of his campus's SSA, Phil was once the president of his Methodist church's youth group. He loved his church ("they weren't just going through the motions"), his pastor ("a rock star trapped in a pastor's body"), and, most of all, his youth leader, Jim ("a passionate man"). Jim's Bible studies were particularly meaningful to him. He admired the fact that Jim didn't dodge the tough chapters or the tough questions: "He didn't always have satisfying answers or answers at all, but he didn't run away from the questions either. The way he taught the Bible made me feel smart."
>
> Listening to his story I had to remind myself that Phil was an atheist, not a seminary student recalling those who had inspired him to enter the pastorate. As the narrative developed, however, it became clear where things came apart for Phil. During his junior year of high school, the church, in an effort to attract more young

> people, wanted Jim to teach less and play more. Difference of opinion over this new strategy led to Jim's dismissal. He was replaced by Savannah, an attractive twenty-something who, according to Phil, "didn't know a thing about the Bible." The church got what it wanted: the youth group grew. But it lost Phil.
>
> An hour deeper into our conversation I asked, "When did you begin to think of yourself as an atheist?"He thought for a moment. "I would say by the end of my junior year."
>
> I checked my notes. "Wasn't that about the time that your church fired Jim?"
>
> He seemed surprised by the connection. "Yeah, I guess it was."

A couple of years ago, I was talking to a woman who grew up in a Christian home that was very focused on externals. There was a lot of bullying to get her to comply with expected Christian behavior, although the expected Christian behavior was often arbitrary, and had nothing to do with Christianity and more with just appearing "nice". There was no discussion of the evidence, no talking through objections. No focus on truth at all. She was always very curious about me, and how come I didn't drink, and how come I was able to stay a virgin through college, grad school, to the present day when many people who were raised in the church fell away from it in college. My answer was simple. I never grew up in a Christian home so I was never bullied into acting like a Christian beyond what I was convinced of myself. There was no rebellion, I just took my time and proved everything out before I had to act any particular way.

I didn't ever have to go to church. I didn't go to church until  was comfortable going, and I would say that I still am not comfortable in church – ever. If I felt bored in church, I read an apologetics book, and I did this openly. If I didn't like the words of a song, then I didn't sing. I liked to read apologetics books from the beginning, and when I talked to church Christians, I just classified the ones who didn't read apologetics as non-Christians – as fakes. So I never felt like there was anything wrong with me because I didn't sing, pray, read the Bible or do more church stuff. To me, if you didn't like apologetics, you were a fake and you were faking behaviors that you had no way of verifying. Apologetics is the baseline activity of church, and only fakers try to skip over it. From the existence of God, we move on to the accuracy of the Bible, and on to theology, and then and only then do we start the outward behaviors of a Christian. If you skip to the behaviors, that is unnatural – like acting a part of a doctor when you have never been to medical school. It's morally wrong to try to pretend to be something you are not.

Bruce commented this above the post:

> When authentic conviction is lacking in your words and actions–or your "zeal" lacks the requisite knowledge to back it up–your teenager knows it.

Right. Young people in the church can tell when old people are more interested in feelings and posing. All they have to do is ask you how much you have done to study whether the things you believe are true. If you have read more devotional literature than you have read apologetics, then you're a fraud. And that, more than anything, is what causes young people to step away from a two-way relationship with God.

My friend Stephen Bedard tweeted this, recently:

> "Frankly, I find it hard to understand how people today can risk parenthood without having studied apologetics." – William Lane Craig

I think you have to blame parents and the pastors when young people reject Christianity.  They are the ones who focus on outward behaviors, feelings and rituals instead of frank discussions about truth where reason and evidence are center stage.

It also might also be a good idea to have an occasional sermon on morality, where we talk about how the Bible condemns premarital sex, drunkenness and divorce.  Maybe quote some studies on the harm of premarital sex and

single motherhood. Maybe talk about how the divorce laws and divorce courts encourage women to initiate divorces. Something practical about moral issues, and not just the ones that are politically correct. We should be speaking out against sinful behaviors. Setting up moral boundaries against hedonism and peer pressure is an important way to protect children, for one thing. And I don't think that religious liberty can survive in a society that affirms sinful behaviors like drunkenness, premarital sex and divorce as normal. Is there a pastor alive who has ever preached against radical feminism, and how radical feminism caused the sexual revolution: premarital promiscuity, unilateral divorce and abortion?

If I had to rely on deciding what Christianity was from looking at people in the church, or from looking to my parents or peers, I would never be where I am today. I can barely tolerate church, especially the singing. Pastors who assume the Bible is true. Pastors who never connect their preaching to historical context, historical evidence, philosophical arguments or scientific evidence. Pastors who try to make me feel things, instead of engaging with non-Christian critics.  Pastors who never mention current events or public policy. Christianity ought to be more like engineering or lab work if you want to appeal to young people – testable, repeatable, practical. Think back to math class, and how teachers would insist that students show their work, instead of just writing the answer down. Instead of just saying "the Bible says", pastors and parents really need to show young people their work – how did they arrive at their worldview? It's not respectable to be ignorant about these things – there should be no respect in the church for people who put piety above truth.

# Katie Courie defends deceptive editing in her pro-gun-control documentary

**Wintery Knight** · 31 May 2016 · Archived copy · Original

[image]
Don't believe the liberal media
This story from the Washington Free Beacon is very useful for explaining what happens when a person relies on the leftist mainstream media to tell them about reality.

It says:

> The makers of a new Katie Couric documentary on gun violence deceptively edited an interview between Couric and a group of gun rights activists in an apparent attempt to embarrass the activists, an audio recording of the full interview shows.
>
> At the 21:48 mark of Under the Gun a scene of Katie Couric interviewing members of the Virginia Citizens Defense League, a gun rights organization, is shown.
>
> Couric can be heard in the interview asking activists from the group, "If there are no background checks for gun purchasers, how do you prevent felons or terrorists from purchasing a gun?"
>
> The documentary then shows the activists sitting silently for nine awkward seconds, unable to provide an answer. It then cuts to the next scene.
>
> **However, raw audio of the interview between Katie Couric and the activists provided to the Washington Free Beacon shows the scene was deceptively edited. Instead of silence, Couric's question is met immediately with answers from the activists. A back and forth between a number of the league's members and Couric over the issue of background checks proceeds for more than four minutes after the original question is asked.**

It's impossible to purchase a gun in the United States without a background check, unless it is a person to person private sale. Even if you order a gun on the Internet, it has to be shipped to a store where you pick it up – after the background check has been run. However, people on the left love to lie about gun purchases.

Now, the deceptive editing was pointed out to Katie Couric, and what do you think that she did? Did she apologize and pull the documentary?

Of course not, as David French explains in National Review:

> At this point, a responsible documentarian either immediately apologizes, promises to investigate exactly how the deception occurred, and pledges to re-edit the film — or they contest the VCDL's evidence. Instead, Soechtig issued this statement:
>
> There are a wide range of views expressed in the film. My intention was to provide a pause for the viewer to have a moment to consider this important question before presenting the facts on Americans' opinions on background checks. I never intended to make anyone look bad and I apologize if anyone felt that way.
> The Washington Post's Erik Wemple's response was exactly right, saying that he's "scarcely seen a thinner, more weaselly excuse." But, as he notes, it's not just an excuse, it reads as an admission. She's not contesting the VCDL's claims.
>
> This is exactly the point where a former network anchor — a person who still enjoys respect in the news business — should step in and impose adult supervision. But in her own comment on the controversy, Couric not only said that she was "proud of the film" she also supported Soechtig's statement.

> Dear Yahoo, let me put this in plain English for you. Your premier news personality is “proud” of lying. She “supports” a statement that purports to justify those lies as a form of creative “pause.” This would be a firing offense at any decent opinion journal, much less an organization that purports to objectively report the news. Americans can no longer trust a single news report or a single interview from Couric. They now know that she will unashamedly and proudly deceive them to advance her own ideological agenda.

Previously, I blogged about studies that actually document how far the media is biased to the left. I understand that people on the left want to be lied to, and they are entitled to consume reports from sources that affirm the lies they want to believe. But those who prefer truth should be wiser.

# New study: DNA requires maintenance from surrounding cell

**Wintery Knight** · 31 May 2016 · Archived copy · Original

Christianity and the progress of science

My friend Bruce shared this post from Reasons to Believe about some recent research on DNA.

Naturalists like to argue that DNA somehow came into existence randomly, but it turns out that not only is DNA marvelously improbable for even the simplest living organism, but it also requires a lot of support from other areas of the cell in order to remain stable.

It says:

> In 2015, three scientists won the Nobel Prize in Chemistry for decades of research into DNA—research that reinforces the idea that evolution is mythology and makes the modern evolutionary theory of abiogenesis seem more and more indefensible. It turns out that DNA is inherently unstable, and the preservation of genetic information requires a complex symbiotic relationship between the cell and DNA that is so interdependent that neither could have arisen independently of the other.
>
> DNA (deoxyribonucleic acid) is the giant organic molecule which carries and preserves an organism's genetic information. DNA is essential to the growth and reproduction of life-forms because precise copying and self-replication of DNA is a critical part of the process of cell division.
>
> Tomas Lindahl, the first Nobel laureate, has demonstrated that the rate at which DNA decays should have made the development of life on Earth impossible.[1] The Nobel Committee expresses this on a personal level: "you ought to have been a chemical chaos long before you even developed into a foetus."[2]
>
> So why doesn't our genetic material disintegrate into complete chemical chaos? It is because of molecular repair mechanisms within the cell. The three Nobel laureates "mapped, at a molecular level, how cells repair damaged DNA and safeguard the genetic information."[3] They found that a multitude of molecular systems constantly monitor the genome and repair any damage.
>
> One such mechanism discovered by Lindahl is base excision repair, which explains why our DNA doesn't collapse. A base of a nucleotide often loses an amino group and becomes unable to form a base pair, thus breaking the DNA chain. But an enzymedetects the error, and other enzymes repair it so that the DNA can replicate properly.

> Paul Modrich, the second laureate, discovered another molecular mechanism calledmismatch repair. Replication errors often occur as the DNA is copied, but Modrich found that enzymes continually detect most of these errors, and other enzymes repair them. The Nobel Committee says this “reduces the error frequency during DNA replication by about a thousandfold.”[4]
>
> One further issue that DNA must contend with is mutations, caused by DNA damage due to radiation and a variety of mutagenic substances. For example, radiation might make two base pairs bind to one another incorrectly. But the third laureate, Aziz Sancar, discovered that through a mechanism called nucleotide excision repair, enzymes will cut out, remove, and replace a damaged DNA strand.
>
> **We have long known that the cell could not reproduce without DNA, but we now know that DNA would self-destruct without the cell. It is this complex symbiotic relationship between a cell and its DNA that makes the modern evolutionary theory more difficult to defend.**
>
> […]This research shows that for abiogenesis to occur, undirected, random processes must have anticipated the inherent instability of DNA and assembled the cell with the variety of enzymes necessary to prevent the self-destruction of DNA. Additionally, the cell’s chemistry, the self-preservation instinct, and anticipatory DNA repair mechanisms must have all come together at the same instant in time within only 1 billion years; otherwise, any nascent life could not have survived. If the probability barrier to evolution seemed like climbing Mount Improbable before, it has now become climbing Mount Impossible.
>
> Could simple single-celled life-forms emerge and evolve into more complex life? Single-celled life-forms are not so simple. For example, the genome of an aerobic hyper-thermophilic crenarchaeon (a thermophilic archaea, a type of bacteria) consists of 1.7 billion base pairs, which is almost 60 percent of the 2.9 billion base pairs in thehuman genome.[5]

So, not only is it fantastically improbably to 1) get the building blocks of life, and 2) build the sequence of base pairs in DNA, but 3) you also have to have supporting systems to maintain the DNA in the cell: even more specified complexity.

# Study: biological convergence found in human and squid eye genes

**Wintery Knight** · 1 June 2016 · Archived copy · Original

Christianity and the progress of science

We have to start this post with the definition of convergence in biology.

> In evolutionary biology, convergent evolution is the process whereby organisms not closely related (not monophyletic), independently evolve similar traits as a result of having to adapt to similar environments or ecological niches.
>
> It is the opposite of divergent evolution, where related species evolve different traits.
>
> On a molecular level, this can happen due to random mutation unrelated to adaptive changes; see long branch attraction. In cultural evolution, convergent evolution is the development of similar cultural adaptations to similar environmental conditions by different peoples with different ancestral cultures. An example of convergent evolution is the similar nature of the flight/wings of insects, birds, pterosaurs, and bats.
>
> All four serve the same function and are similar in structure, but each evolved independently.

With that being said, here is an article from Real Clear Science with me.

> Eyes and wings are among the most stunning innovations evolution has created. Remarkably these features have evolved multiple times in different lineages of animals. For instance, the avian ancestors of birds and the mammalian ancestors of bats both evolved wings independently, in an example of convergent evolution. The same happened for the eyes of squid and humans. Exactly how such convergent evolution arises is not always clear.
>
> In a new study, published in *Nature Scientific Reports*, researchers have found that, **despite belonging to completely different lineages, humans and squid evolved through tweaks to the same gene.**
>
> Like all organs, the eye is the product of many genes working together. The majority of those genes provide information about how to make part of the eye. For example, one gene provides information to construct a light-sensitive pigment. Another gene provides information to make a lens.
>
> Most of the genes involved in making the eye read like a parts list – this gene makes this, and that gene makes

> that. But some genes orchestrate the construction of the eye. Rather than providing instructions to make an eye part, these genes provide information about where and when parts need to be constructed and assembled. In keeping with their role in controlling the process of eye formation, these genes are called “master control genes”.
>
> The most important of master control genes implicated in making eyes is called *Pax6*. The ancestral *Pax6* gene probably orchestrated the formation of a very simple eye – merely a collection of light-sensing cells working together to inform a primitive organism of when it was out in the open versus in the dark, or in the shade.
>
> **Today the legacy of that early *Pax6* gene lives on in an incredible diversity of organisms, from birds and bees, to shellfish and whales, from squid to you and me. This means the *Pax6* gene predates the evolutionary diversification of these lineages – during the Cambrian period, some 500m years ago.**

This is an example of convergence because the same gene is present in animals that DO NOT SHARE A RECENT COMMON ANCESTOR. In short, this is exactly identical to the case where a computer programmer reuses the same library of functions in two completely different programs. Software engineers re-use libraries all the time in different programs. It makes sense in an software engineering paradigm.

But this example of convergence makes no sense on naturalistic evolution – random mutation and selection does not create the same design in two animals with no common ancestry. It screams out design.

# The surprising pro-masculinity message in the “Far From the Madding Crowd” film

**Wintery Knight** · 1 June 2016 · Archived copy · Original

Man helping a woman with proper handgun marksmanship

So, I have about a half-dozen older and/or experienced Christian women who advise me and assist me in various ways. The wisest and most experienced is calm and thoughtful Dina. She has a very stressful job dealing with demanding women, and what she admires most in men is “masculinity”, which she defines as a man’s ability to tell a woman what is right and wrong, what God expects from her, what she should be doing with her life, and guiding her and providing for her through the steps to get there.

What makes Dina angry is when a man makes a fool of himself for youth and beauty, abdicating his role as moral and spiritual leader because of attraction / lust. According to Dina, men who have self-control think about what a woman should do that is morally right, with the goal of her producing a return for God. Men who are swayed by youth and beauty are willing to give up that leadership role in exchange for attention and/or sex.

So, with that said, Dina asked me to watch a recently-made movie called “Far From the Madding Crowd“, based on a novel by Thomas Hardy. I immediately said “no” because I know about Thomas Hardy from Tess of the D’Urbervilles, where he presents Tess as the helpless victim of Providence. I really hate that view of women, where they can do reckless, selfish things and then blame everyone but themselves for the destructive consequences of their own free-will decisions. But Dina said “wasn’t I right about the debate between David Robertson and Matt Dillahunty?” I said yes, and watched the movie. And of course, she was right, as she almost always is. This movie is a punch in the face to the radical feminism that seems to have infected so many young women, even in the church.

Here is a review of the movie by Rebekah, posted at her blog.

Rebekah writes:

> What does this 19th century tale offer to modern audiences? This latest rendering emphasizes something actually surprising and unexpected given that it is made in our age of radical feminism. It is Gabriel Oak’s character that shines the most, not the proto-feminist Bathsheba. […]In Bathsheba and Gabriel we see how men and women support one another in such a way as to ensure a flourishing in any role that fate might thrust on them.
>
> […]The relationship between Gabriel and Bathsheba, though unequal in earthly terms of authority and wealth, is one of mutual dependence. We see Oak taking on a role of both counselor and conscience with Bathsheba –

> roles that in her striving towards independence she struggles to admit her need for. She is not unlike the modern feminist in this regard, nor is she unlike all of us in our relationship with the Lord. Her struggle is best seen in the various times she repels Gabriel only to find herself in desperate situations in which only he can help. The filmmakers' clever use of a recurring theme of Bathsheba galloping after Gabriel on a horse when he is needed is particularly moving (and surprising) here. In the end, the film resists the urge to pander to our more extreme modern views on what women require to thrive.
>
> **Gabriel Oak also seems to be an embodiment of the biblical virtue of selflessness. We see in his actions towards Bathsheba the Philippians admonition to refrain from "being motivated by selfish ambition or vanity," but rather "in humility, be moved to treat one another as more important than yourself."** Indeed, vanity itself can be seen as a fateful character flaw of every major character apart from Gabriel. He alone is able to move past rejection and carry on. In fact, he is required to go so far as to be under the authority of the very woman who rejected his offer of marriage and, despite his continuing affections for her, witness her being courted and then married by another far less worthy man, Frank Troy. No other major character is able to accomplish this challenge to their pride. Though Bathsheba does eventually overcome the rejection of her husband, she only does so after tremendous tragedy and with the selfless and steady support of Gabriel.
>
> Gabriel respects her independence, but, like a good shepherd, stays close by to protect and guide her. Though he cannot protect her from her free-will choices, he does warn her. He then remains faithful to her in the midst of the trouble she brings upon herself. In this, he is not unlike our God, for he allows her to stray, all the while letting her know of a better course when asked. And, she does ask.
>
> In an important scene at a party, where Bathsheba must decide whether or not to marry a particularly obsessive suitor, when she asks, "Tell me what to do, Gabriel," he simply tells her to "Do what is right." Is that not like our Lord? Gentle shepherd, indeed, for our wild, independent hearts. In this, I see Gabriel as most suitable for the role as the husband written of in the epistle to the Ephesians. He loves Bathsheba "just as Christ loved the church and gave himself for her…"

Men and women both struggle with self-centeredness, but men usually work themselves out of it by studying hard things in school, and doing hard work that pays. Men have a natural desire to provide for others, and it is actually a duty laid out for them in the Bible. As a result of studying and working at things they don't like, men typically are better at resisting their feelings and desires. In fact, if you ever want to make a woman less self-centered and emotional, leading her to study STEM and work a demanding job is a good plan. Dina has multiple STEM degrees, and a very difficult, challenging work history.

I would be suspicious of men who don't prioritize providing, (as in 1 Tim 5:8), because working and saving gives a man practical experience at self-denial. When a man gets accustomed to working to share with others, it helps helps him to lead a woman to do the same: deny her feelings and desires, and make prudent decisions that will allow her to love and serve others – including God – in a sustainable way. Over the long-term, this practice of effective, self-sacrificial love will be worth more to the woman than the short-term pursuit of fun and thrills. To provide for a woman means to look into her future, and make a decision today to set aside something that will help her to deal with what the future has in store for her.

**Dina's advice to young women**

I asked Dina to take a look at the draft of this post before I hit "Schedule" and Dina said:

> What I would advise to all young women is not to expect a Gabriel Oak to be waiting for you at the end of your reckless years of hooking up, partying and wasting your youth on fun and men who have no desire to lead you to God or guide you to goodness. Don't expect the hot stud that your friends approve of to turn into someone with the character of Oak with the magic powers of your premarital sex life. **Find a man who doesn't give in to your every whim, because if he does, you will only resent him for it, and blame him, for being what**

> **you thought you wanted him to be.** Find a man who leads, one who demonstrates self control, self denial, who can provide and protect. And most importantly, respect him for doing it.

Emphasis mine.

Sound advice from the Dina, young ladies. By the way, Dina's favorite drama is the BBC production of "North and South" from 2004. I also give it a 10/10.

# Report: Republican-governed states score highest on fiscal measures

**Wintery Knight** · 2 June 2016 · Archived copy · Original

Ranking of states by overall fiscal solvency
(Click here for larger map image)

A new report prepared by the Mercatus Center at George Mason University finds that Republican-governed states are the strongest according to five fiscal measures. Democrat-governed states lag far behind. (H/T William)

The report says:

> The financial health of each state can be analyzed through the states' own audited financial reports. By looking at states' basic financial statistics on revenues, expenditures, cash, assets, liabilities, and debt, states may be ranked according to how easily they will be able to cover short-term and long-term bills, including pension obligations.
>
> This ranking of the 50 states and Puerto Rico is based on their fiscal solvency in five separate categories:
>
> - *Cash solvency.* Does a state have enough cash on hand to cover its short-term bills?
> - *Budget solvency*. Can a state cover its fiscal year spending with current revenues, or does it have a budget shortfall?
> - *Long-run solvency.* Can a state meet its long-term spending commitments? Will there be enough money to cushion it from economic shocks or other long-term fiscal risks?
> - *Service-level solvency.* How much "fiscal slack" does a state have to increase spending if citizens demand more services?
> - *Trust fund solvency.* How much debt does a state have? How large are its unfunded pen-sion and healthcare liabilities?

If you look at the map, you'll notice that most the worst states are run by Democrats, while the best states are run by Republicans.

Investors Business Daily explains:

> [W]hile Mercatus makes no mention of the states' political leanings, every state in the top 10 except for Florida is solidly red, meaning those states voted for the Republican in each of the past four presidential elections (see table). And Florida has had a Republican governor since 1999, and the state House and Senate are both controlled by Republicans.
>
> At the other end of the spectrum, except for Kentucky, the 10 worst states are all solidly blue. And all but two of the governors since 1947 have been Democrats.
>
> Politicians, especially the "pragmatic" ones, are always talking about how they are just interested in what works. When it comes to keeping spending, debt and long-term liabilities under control, the place to look seems obvious.
>
> The conservative approach of lower taxes and limited government is a winner, while big-spending liberalism invariably leads to financial ruin.

Kentucky, of course, is the home state of Mitch McConnell, and only just elected a Republican governor (Matt Bevin) who is a fiscal conservative. Every previous governor of Kentucky since 1971 was a Democrat, except for Ernie Fletcher.

The point here is that the real reason that some Democrat states look good is because they are borrowing money to stay afloat, an piling up debt. The same is true with our illustrious President Obama. He doubled the national debt from 10 to 20 trillion, and he has managed to deliver below average GDP growth and a 38-year-low labor force participation rate. He was the worst President in the history of the country (not just on fiscal issues, but on social issues and foreign policy, too). But, since he added 10 trillion to the debt, he looks OK. We would have had better fiscal performance in the last eight years if we had elected a honeydew melon as President.

# Thomas Sowell: does affirmative action help minorities to get ahead?

**Wintery Knight** · 2 June 2016 · Archived copy · Original

Economist Thomas Sowell – the best economist in the world

My favorite economist, Thomas Sowell has an article in Investors Business Daily that explains what affirmative action really does to minorities.

Excerpt:

> Affirmative action is supposed to benefit black and other minority students admitted with lower academic qualifications than some white students who are rejected.
>
> […]Despite much media spin, the issue is not whether blacks in general should be admitted to higher-ranked or lower-ranked institutions.
>
> The issue is whether a given black student, with given academic qualifications, should be admitted to a college or university where he would not be admitted if he were white.
>
> Much research over the years has confirmed… that admitting black students to institutions for which their academic preparation is not sufficient can be making them worse off instead of better off.
>
> I became painfully aware of this problem more than 40 years ago when I was teaching at Cornell University and discovered that half the black students there were on some form of academic probation.
>
> These students were not stupid or uneducable. On the contrary, the average black student at Cornell at that time scored at the 75th percentile on scholastic tests. Their academic qualifications were better than those of three-quarters of all American students who took those tests.
>
> Why were they in trouble at Cornell, then? Because the average Cornell student in the liberal arts college at that time scored at the 99th percentile. The classes taught there — including mine — moved at a speed geared to the verbal and mathematical level of the top one percent of American students.
>
> The average white student would have been wiped out at Cornell. But the average white student was unlikely to be admitted to Cornell in the first place. Nor was a white student who scored at the 75th percentile.

> That was a “favor” reserved for black students. This “favor” turned black students who would have been successful at most American colleges and universities into failures at Cornell.
>
> None of this was peculiar to Cornell. Black students who scored at the 90th percentile in math had serious problems trying to keep up at MIT, where other students scored somewhere within the top 99th percentile.
>
> Nearly one-fourth of these black students with stellar qualifications in math failed to graduate from MIT, and those who did graduate were concentrated in the bottom tenth of the class.
>
> There were other fine engineering schools around the country where those same students could have learned more, when taught at a normal pace, than at a breakneck speed geared to students with extremely rare abilities in math.
>
> […]Mismatching students with educational institutions is a formula for needless failures.
>
> The book “Mismatch” by Sander and Taylor is a first-rate study of the hard facts. It shows, for example, that the academic performances of black and Hispanic students rose substantially after affirmative action admissions policies were banned in the University of California system.
>
> Instead of failing at Berkeley or UCLA, these minority students were now graduating from other UC campuses. They were graduating at a higher rate, with higher grades, and now more often in challenging fields like math, science and technology.
>
> […]Does the actual fate of minority students not matter to the left as much as their symbolic presence on a campus?

Now, you might ask yourself on what basis Sowell makes all these assertions, so here are a few of his academic publications about affirmative action, which are state-of-the-art:

- Preferential Policies: An International Perspective, William Morrow & Co., 1990
- Affirmative Action Around the World: An Empirical Study, Yale University Press, 2005

Now, I was recently talking to a friend who has empirically false views on a number of topics. He is opposed to capital punishment, opposed to gun ownership, supports affirmative action, and so on. When I ask him why he believes these things, he doesn’t point to any evidence. I offered to give him studies showing that capital punishment has a deterrent effect on crime, that concealed carry laws reduce violent crime rates, that affirmative action laws harm minorities, etc.

If we really want to help minorities, we have to do what makes sense according the evidence. We have to aim to do good, not just feel good.

# Hillary Clinton e-mail administrator to plead the fifth

**Wintery Knight** · 3 June 2016 · Archived copy · Original

Hillary Clinton look bored about the deaths of 4 Americans who asked for her help

This is from The Hill.

Excerpt:

> The man believed to have set up and maintained Hillary Clinton's private email server will assert his Fifth Amendment rights against self-incrimination and refuse to answer questions as part of an open records lawsuit against the State Department.
>
> **Bryan Pagliano will decline to answer questions from Judicial Watch, the conservative legal watchdog group, during a deposition scheduled for Monday, his lawyers wrote in a court filing on Wednesday afternoon.**
>
> The move forecloses the possibility that Pagliano would break his months of silence about the server issue, even as scrutiny has intensified on his role.
>
> Pagliano's lawyers told Judicial Watch more than a week ago that he would not be answering any questions, they claimed in their filing on Wednesday, and asked that it drop its subpoena. The organization refused.
>
> In the filing, Pagliano's lawyers tried to have a federal judge block Judicial Watch from recording his deposition, given his planned refusal to answer questions.
>
> […]"Given the constitutional implications, the absence of any proper purpose for video recording the deposition, and the considerable risk of abuse, the court should preclude Judicial Watch … from creating an audiovisual recording of Mr. Pagliano's deposition," they wrote.
>
> Videotaped depositions "pose a serious danger to deponents invoking the Fifth Amendment," the lawyers added, pointing to past court decisions warning that the video makes a good "soundbite."
>
> […]The IT expert has previously refused to answer questions on Capitol Hill, invoking his Fifth Amendment rights before the House Select Committee on Benghazi and rejecting requests from leaders of the Senate

> Judiciary and Homeland Security committees to answer their questions.
>
> Last month, the State Department said that it had lost the backup archive of Pagliano's emails from his time at the department. However, it had been able to cobble together some emails through the accounts of other officials.

The sound bite of the IT administrator pleading the fifth would make a wonderful ad against Hillary. And don't forget how Lois Lerner of the IRS also pleaded the fifth about the Obama administration's persecution of conservative and Christian groups in an election year. These Democrats wouldn't want to incriminate themselves and go to jail, would they? Better to plead the fifth and avoid being held accountable for what you did. It's the Democrat way.

# New study: women who attend church regularly are healthier, and live longer

**Wintery Knight** · 3 June 2016 · Archived copy · Original

Church is good for you

CNS News reports on a new Harvard study that was published in JAMA Internal Medicine.

It says:

> A new study by the Harvard T.H. Chan School of Public Health and published online in JAMA Internal Medicine found that women who attended religious services more than once a week were more than 30% less likely to die during a 16-year-follow-up than women who never attended.
>
> The study also found that compared with women who never attended religious services, women who attended more than once per week had a decreased risk of both cardiovascular mortality (27%) and cancer mortality (21%).
>
> "Our results suggest that there may be something important about religious service attendance beyond solitary spirituality," said Tyler VanderWeele, professor of epidemiology at Harvard Chan School and senior author of the study. "Part of the benefit seems to be that attending religious services increases social support, discourages smoking, decreases depression, and helps people develop a more optimistic or hopeful outlook on life."
>
> […]Most of the women in the study were Protestant or Catholic. The baseline age of the participants was 60 years or older – and "therefore the study cannot be generalized to men or young adults."

Now, note: this is not an apologetics argument, it's just something interesting to get a discussion started. Obviously, we don't believe things *just* because they make us happier or healthier. I would raise this to get a discussion started about whether a secular life that suppresses questions of meaning and purpose can really be satisfying at all. My goal is truth, though. Not life enhancement. We have to keep the focus on truth.

# Obama administration gave Planned Parenthood $550 million in 2015

**Wintery Knight** · 4 June 2016 · Archived copy · Original

Barack Obama speaking to Planned Parenthood

The Daily Signal reports:

> Whether you're a painter, pastor, lawyer, or laborer (pro-life or pro-abortion), you work for Planned Parenthood. A portion of every paycheck goes to the world's leading abortion business through the federal and state taxes allocated by your elected representatives and the unelected bureaucrats they empower.
>
> For the fiscal year ending in June 2015 (just before the Center for Medical Progress videos were released), over $550 million of your hard-earned tax dollars went to Planned Parenthood.

Bad, especially if you are a pro-life taxpayer.

But there is good news – in the United States, we have federalism, and individual states have acted to stop the funding of abortion providers.

> Since the authenticated Center for Medical Progress videos were released showing Planned Parenthood officials bartering over the prices of baby body parts, 15 states have taken action to end or limit its taxpayer subsidies.
>
> Here are just a few examples of what state legislatures and governors have done:
>
> - New Hampshire canceled over $600,000 in annual state grants to Planned Parenthood.
> - Louisiana, Alabama, Arkansas, Oklahoma, Kansas, and Texas moved to exclude Planned Parenthood from the states' Medicaid programs "for cause," citing its waste, abuse, and potential fraud and the evidence of violations of the law and ethics demonstrated in the Center for Medical Progress videos.
> - Wisconsin and Arizona have slashed the Medicaid reimbursement for certain drugs for entities like Planned

> Parenthood that receive them at artificially low rates under a federal government program, denying them windfall profits and making those funds available to more women and families.
> - Ohio, Florida, Utah, and Wisconsin have also eliminated Planned Parenthood from other federal and state grant programs administered by the state.
>
> These actions have potentially eliminated tens of millions in annual taxpayer subsidies going to Planned Parenthood. This represents a small part of the hundreds of millions that it receives, but it is a solid start. And these efforts may at least cut into the $59 million in “excess revenue” the abortion outfit reported last year alone.

Now, I read the $59 million in “excess revenue” figure as Planned Parenthood’s PROFIT off their terminations, and selling the body parts of the unborn victims to the highest bidder.

Remember the Republican bill to de-fund Planned Parenthood? The Democrat President Obama vetoed that bill. It was passed by a majority of Congressmen and Senators, but Obama is a Democrat, and he vetoed the bill. Do you know anyone who claims to be pro-life who voted for Obama? Maybe you should ask them about that veto, and about the $550 million subsidy.

# New study: women seeking to have a child should start before age 32

**Wintery Knight** · 5 June 2016 · Archived copy · Original

Brain vs Heart, from: theawkwardyeti.com

Dina sent me this sobering piece of research from the New Scientist which is perfect for all the young feminists who have been taught in college that marriage should be put off, and women can easily get pregnant after age 40.

Excerpt:

> It's a question many people will ask themselves at some point in their lives: when should I start a family? If you know how many children you'd like, and whether or not you would consider, or could afford, IVF, a computer model can suggest when to start trying for your first child.
>
> Happy with just one? The model recommends you get started by age 32 to have a 90 per cent chance of realising your dream without IVF. A brood of three would mean starting by age 23 to have the same chance of success. Wait until 35 and the odds are 50:50 (see "When to get started").
>
> The suggestions are based on averages pulled from a swathe of data so don't give a personal prediction. And of course, things aren't this simple in real life – if only family size and feelings about IVF were the only factors to consider when planning a family. But the idea behind the model is to help people make a decision by condensing all the information out there into an accessible form.
>
> "We have tried to fill a missing link in the decision-making process," says Dik Habbema at Erasmus University in Rotterdam, the Netherlands, one of the creators of the model. "My son is 35 and many of his friends have a problem deciding when to have children because there are so many things they want to do."
>
> It's a scenario that will be familiar to many; the age at which people have their first child has been creeping up over the last 40 or so years. For example, the average age at which a woman has her first child is 28 in the UK and has reached 30 in Italy, Spain and Switzerland. In the US, the birth rate for women in their 20s has hit a record low, while the figures for those over 35 have increased over the last few decades.
>
> The decision is more pressing for women thanks to their limited supply of eggs, which steadily drop in quantity and quality with age. Female fertility is thought to start declining at 30, with a more significant fall after the age of 35.

> […]The new model incorporates data from studies that assess how fertility naturally declines with age. The team took information on natural fertility from population data collected over 300 years up to the 1970s, which includes data on 58,000 women.

I have often tried to talk to young women about the need to get their lives in gear. I advise them to work summers during high school, obtain a STEM degree in university, minimize borrowing money by going to community college for the generic prerequisites, don't have premarital sex, get a job related to their STEM field straight out of college, pay off their debts, move out of their parents' house, start investing from the first paycheck, marry between age 25-30, and then start having children after the first two "stabilizing" years of marriage. This is sound advice, rooted in my careful reconnaissance of the things that human beings care about and need in their old age. This advice is not bullying, it comes from reading many, many relevant papers. It comes from putting the knowledge gained from reading the papers into practice, and seeing results where appropriate.

I am giving you the numbers. Straight out of a peer-reviewed study. Don't follow your heart. Don't listen to your friends. Follow the science. Make your decisions within the boundaries of reality. God will not save you from foolish decisions.

# Remembering Lt. Richard Winters on D-Day: The Battle of Brecourt Manor

**Wintery Knight** · 6 June 2016 · Archived copy · Original

Richard D. Winters Monument

The caption says, “Wars do not make men great, but they do bring out the greatness in good men.” Now let’s see what Dick Winters did during World War II.

Mission: locate and destroy enemy artillery

**Brecourt Manor**

I want to link to this article from Investors Business Daily about Lt. Winters action at Brecourt Manor.

> Here’s the summary of what Dick Winters did on the morning of June 6th, 1944:
>
> First Lt. Dick Winters leapt into leadership on D-Day, June 6, 1944. His commander’s aircraft was shot down as the men parachuted at 600 feet. When Winters headed to earth, he was in charge of a small platoon.
>
> When he landed, he had to command Company E with 148 men, because his commander had been lost along with the plane.

> Yet in the chaos, Winters could locate only a dozen other soldiers for their first task: take out a 50-man German artillery battery.
>
> “Winters ordered his assault force to strip down to only essential weapons — guns and grenades — to use against the well-prepared defenses, then deployed his machine guns to cover his advances,” Keith Huxen, senior director of research at the National WWII Museum in New Orleans, told IBD. “Waiting for the proper moment, he led a charge across an open field, gaining the first gun placement, and then they moved down the trenches, systematically destroying each gun.
>
> “In the process, Winters discovered a map detailing all German gun positions to kill American soldiers coming up from Utah Beach, which saved many lives.”
>
> Joined by five reinforcements during the fight, Winters lost four dead and six wounded. The Yanks managed to kill 15 Nazis, capture 11 and wound many others.
>
> Winters’ maneuvers are still studied at West Point as a case of successfully attacking a fixed position, despite being outnumbered.
>
> Winters (1918-2011) was born in Ephrata, Pa., and the family moved to Lancaster when he was 8.
>
> He later attributed his character and desire to go to church regularly to his mother.
>
> Winters attended local Franklin & Marshall College and earned an economics degree with top honors in 1941. He enlisted in the Army in August to shorten his service time, rather than wait to be drafted if America was to join the war.

The diagram below shows where everything was positioned. The Rangers attacked through the trenches containing the four guns, while being raked with fire from multiple MG42 heavy machine guns across the open field.

Assaulting the guns at Brecourt Manor

The operation was one of the most famous actions in the Normandy invasion, and you may have seen it portrayed in the Band of Brothers DVD series. But the article notes that when Dick Winters read the script for that series, “he asked that the profanity be cut from the dialogue of his character, since he never swore”. When the producers told him it was too late to change it, he wrote them a letter of resignation from the production, because “I don’t

want these boys and girls thinking it is acceptable using profanity". In the end, the movie makers removed the swearing by the actor portraying Winters.

If you are looking for a reason to buck the culture and stop swearing, there's a good reason for you right there – Dick Winters never used profanity.

You can watch the scene from Band of Brothers in low resolution here:

If you play Combat Mission, like I do, you can watch a 28 minute AAR from the simulation of the battle.

**Operation Market Garden**

More from the article I linked above, this time from Operation Market Garden:

> Near Nijmegen on Oct. 5, Winters' platoon was a position where any movement carried risks. Rather than retreat when fired on by a larger force behind a dike, he led a charge to the top and on the other side discovered a company of 150 Nazi SS troops. Despite having only 40 men, the Americans opened up with everything they had, then shot up a company of enemy reinforcements.
>
> The fray ended with 50 Germans dead, 11 POWs and countless wounded, with few casualties among the Americans.
>
> "This was Easy Company's crowning achievement of the war and my apogee as a company commander," Winters told Kingseed. "This demonstrated its overall superiority, of every soldier, of every phase of infantry tactics: patrol, defense, attack using a base of fire, withdrawal and, above all, superior marksmanship with rifles, machine guns and mortar fire."

Dick Winters is a brave man, someone I admire him very much. And I am grateful for men like him.

I blogged about another hero of the 101st Airborne Division, Ronald Speirs, in a previous post.

# New study: Asian students outperform white students because they work harder

**Wintery Knight** · 6 June 2016 · Archived copy · Original

Asians marry before they have children, so the kids have two parents
This is from Science, one of the top peer-reviewed journals.

Excerpt:

> When it comes to academic achievement, Asian-Americans outclass every other ethnic group, with more than half over age 25 holding a bachelor's degree—well above the national average of 28%. To find what gives Asian-Americans a leg up, a team of sociologists scoured two long-term surveys covering more than 5000 U.S. Asian and white students. After crunching test scores, GPAs, teacher evaluations, and social factors such as immigration status, the team reports a simple explanation online today in the *Proceedings of the National Academy of Sciences*: Asian-American students work harder.
>
> The team found that students from all Asian ethnic groups put greater importance on effort than on natural ability. This outlook, the team argues, causes students to respond to challenges by trying harder and has a greater impact on Asian-Americans' academic achievement than does cognitive ability or socioeconomic status. However, the team says Asian-American students reported lower self-esteem, more conflict with their parents, and less time spent with friends compared with their white peers. The team suspects the high academic expectations or their "outsider" status in American society could be to blame.

I know this will come as a shock to people on the left, but race has literally nothing to do with academic achievement. If non-whites work harder than whites, then they outperform whites. Period. What matters is how hard you work.

Let's go into detail to see why Asian children are so much better than non-Asian children. It starts with their mothers.

Consider this article in the Wall Street Journal.

The article is written by Amy Chua:

> Amy Chua is the John M. Duff Professor of Law at Yale Law School. Her first book *World on Fire: How*

> *Exporting Free Market Democracy Breeds Ethnic Hatred and Global Instability* was a *New York Times* bestseller, was selected by both the *Economist* and the *Guardian* as one of the Best Books of 2003 and translated into eight languages. Her second book,*Day of Empire: How Hyperpowers Rise to Global Dominance – and Why They Fall* was a critically acclaimed Foreign Affairs bestseller. Amy Chua has appeared frequently on radio and television on programs such CNN Headline News, C-Span, The Lehrer News Hour, Bloomberg Television, and Air America. Her writings have appeared in the *New York Times*, the *Washington Post*, the *Financial Times, Harvard Business Review*, and the *Wilson Quarterly*. She lives with her husband, two daughters, and two Samoyeds in New Haven, Connecticut.

And now, an excerpt from the piece itself:

> A lot of people wonder how Chinese parents raise such stereotypically successful kids. They wonder what these parents do to produce so many math whizzes and music prodigies, what it's like inside the family, and whether they could do it too. Well, I can tell them, because I've done it.
>
> […]Despite our squeamishness about cultural stereotypes, there are tons of studies out there showing marked and quantifiable differences between Chinese and Westerners when it comes to parenting. **In one study of 50 Western American mothers and 48 Chinese immigrant mothers, almost 70% of the Western mothers said either that "stressing academic success is not good for children" or that "parents need to foster the idea that learning is fun." By contrast, roughly 0% of the Chinese mothers felt the same way. Instead, the vast majority of the Chinese mothers said that they believe their children can be "the best" students, that "academic achievement reflects successful parenting," and that if children did not excel at school then there was "a problem" and parents "were not doing their job." Other studies indicate that compared to Western parents, Chinese parents spend approximately 10 times as long every day drilling academic activities with their children. By contrast, Western kids are more likely to participate in sports teams.**
>
> What Chinese parents understand is that nothing is fun until you're good at it. To get good at anything you have to work, and children on their own never want to work, which is why it is crucial to override their preferences. This often requires fortitude on the part of the parents because the child will resist; things are always hardest at the beginning, which is where Western parents tend to give up.

And here are her three main points:

> **Chinese parents demand perfect grades because they believe that their child can get them. If their child doesn't get them, the Chinese parent assumes it's because the child didn't work hard enough.** That's why the solution to substandard performance is always to excoriate, punish and shame the child. The Chinese parent believes that their child will be strong enough to take the shaming and to improve from it. (And when Chinese kids do excel, there is plenty of ego-inflating parental praise lavished in the privacy of the home.)
>
> […]Chinese parents believe that their kids owe them everything. The reason for this is a little unclear, but it's probably a combination of Confucian filial piety and the fact that the parents have sacrificed and done so much for their children. (And it's true that Chinese mothers get in the trenches, putting in long grueling hours personally tutoring, training, interrogating and spying on their kids.) Anyway, the understanding is that Chinese children must spend their lives repaying their parents by obeying them and making them proud.
>
> […]Chinese parents believe that they know what is best for their children and therefore override all of their children's own desires and preferences. That's why Chinese daughters can't have boyfriends in high school and why Chinese kids can't go to sleepaway camp. It's also why no Chinese kid would ever dare say to their mother, "I got a part in the school play! I'm Villager Number Six. I'll have to stay after school for rehearsal every day from 3:00 to 7:00, and I'll also need a ride on weekends." God help any Chinese kid who tried that one.

Then she tells a story about how she coerced one of her children into playing a difficult piece on the piano.

Now you go read the whole article to read the coercion story. Read the coercion story now, I coerce you!

And what do we learn from it? Well, what I learned is that if we Christians want to have any hope of having an influence in the public square, then we will have to marry well, and we will have to train our children like Amy does. We should not be thinking of marriage as a way to have feelings and to gain happiness and fulfillment. Marriage should be about service to God. And one of the ways we serve is by producing children who will have an influence. I think that parents in the West tend to have the idea that the world is a safe place, and that we should try to please our children and make them like us – so that everyone will be happy. But there is one person who will not be happy if we focus on ourselves instead of serving God. Do you know who that might be?

One thing I would say in criticism of Amy is that she seems to only care about grades – which are assigned by teachers who are not necessarily going to have the same goals as a Christian parent. Liberal public schools teachers will grade conservative children down, while grade liberal children up – at least in non-STEM classes. If the class is math or computer science, then your children should be required to be the best. Honestly, public school is child abuse, you should not send your kids there except as a last resort. If you have to budget your whole pre-marriage life to have the money to keep your kids out of public schools, then do it.

# Government-run healthcare: transgender surgeries first, the rest wait in line

**Wintery Knight** · 7 June 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

How well is 100% government-run health care working in the United States? Well, the Veteran's Administration is 100% government-run health care. Let's see how it works.

The Stream explains:

> The number of veterans waiting more than a month for care just passed the 500,000 mark, according to new data on patient wait times released by the Department of Veterans Affairs.
>
> Patient data, current up through May 15, shows that the number of veterans waiting more than 30 days jumped by 10,000 in just two weeks, to exactly 505,880.
>
> And over the course of a month, the number of veterans waiting more than 30 days surged by 23,000. The average number of days to wait for a primary care appointment saw an increase to an average of 6.89 days. For days to get specialty care, the average bumped up to 10.15.
>
> The VA also provided data on vets who have had to wait for 1-2 months. There are 297,013 vets who have waited that time period, a figure which increased by 5,000. For vets in the 3-4 month category, the number jumped by 2,000 to 46,672.
>
> Although the new wait time data is not encouraging, VA Secretary Robert McDonald recently downplayed the importance of that metric, instead preferring to cite other apparently superior figures like overall veteran satisfaction with the experience. To justify his prioritizing the "satisfaction" metric, McDonald said that Disneyland does the exact same thing and doesn't place a whole lot of importance on wait times for rides as such, but rather how much its patrons enjoy their experience at the amusement park as a whole. Citing Disneyland plays to McDonald's philosophy of bringing corporate management techniques to the VA from his private sector experience as CEO of Procter & Gamble.

> "When you got to Disney, do they measure the number of hours you wait in line? Or what's important? What's important is, what's your satisfaction with the experience?" McDonald said, according to *The Washington Examiner*. "And what I would like to move to, eventually, is that kind of measure."

Shut up and wait, he says. Be happy you even get a place in line at Disneyland at all. And they get big fat bonuses for this, as I blogged previously. We are being forced to pay taxes to pay this clown's salary.

But there is one kind of treatment that is a top priority for the Democrat VA administrators.

This is from the Daily Wire.

Excerpt:

> A reported 307,000 veterans have died while awaiting health care from the Department of Veterans Affairs. In May of 2015, 53-year-old military veteran Thomas Murphy pulled into a VA parking lot, put a gun up to his head and pulled the trigger. The incident is suspected to have been done in the VA parking lot to bring awareness to the department's unacceptable shortcomings. Again, in July of 2015, 30-year-old military veteran Tom Young killed himself after being sent to voicemail when he called the VA's suicide hotline. In as recent as March of this year, another veteran set himself on fire outside a VA clinic in New Jersey.
>
> And the list, sadly, goes on.
>
> While the VA lets countless brave men and women who have served our country die due to their utter incompetence, bureaucrats from the department are focusing their attention on paying for highly controversial sex-reassignment surgeries for self-identified transgenders. As reported by the*Military Times*, a new rule proposed by the department "would remove a long-held ban on the surgery."
>
> The proposal claims that "increased understanding of both gender dysphoria and surgical techniques in this area have improved significantly, and surgical procedures are now widely accepted in the medical community as medically necessary treatment for gender dysphoria."
>
> "Gender dysphoria," states the proposal, "is a serious condition that has had severe medical consequences for certain patients if transition-related surgeries and procedures are not provided."
>
> It should be noted that though the VA is claiming that sex-reassignment surgery is the proper response to the mental illness of transgenderism, many in the medical field have warned against such action. One of the more vocal is former Chief of Psychiatry at Johns Hopkins Hospital Dr. Paul R. McHugh, a man who has studied transgenderism and sex-reassignment surgeries for 40 years, who said that those who push for such surgeries which enable the mentally ill are simply "collaborating with madness."
>
> Johns Hopkins Hospital eventually stopped providing such surgeries after psychiatrists' research led them to conclude that the hospital was "fundamentally cooperating with a mental illness."

The government controls health care for veterans – it is 100% government-controlled. Should we give them control of the res of health care? It seems to me that government-run health care is basically mandatory taxation, followed by doling out health care to those who are most likely to vote for the radical leftists who now control health care. Don't allow them to do take it over.

In other news, Obama has declared June to be gay pride month. This is what we voted for in 2008 and 2012, people. This is not an accident. All of Obama's supporters are on board with putting the gay agenda above common sense. That's what they voted for.

# New study: women who have fewer premarital sex partners have lower risk of divorce

**Wintery Knight** · 7 June 2016 · Archived copy · Original

Man helping a woman with proper handgun marksmanship

Brad Wilcox tweeted this article from Family Studies that talks about how the number of pre-marital sex partners that a woman has increases her risk of divorce.

It says:

> American sexual behavior is much different than it used to be. Today, most Americans think premarital sex is okay, and will have three or more sexual partners before marrying. What, if anything, does premarital sex have to do with marital stability?
>
> This research brief shows that the relationship between divorce and the number of sexual partners women have prior to marriage is complex. I explore this relationship using data from the three most recent waves of the National Survey of Family Growth (NSFG) collected in 2002, 2006-2010, and 2011-2013. For women marrying since the start of the new millennium:
>
> - Women with 10 or more partners were *the most likely* to divorce, but this only became true in recent years;
> - Women with 3-9 partners were *less likely* to divorce than women with 2 partners; and,
> - Women with 0-1 partners were the *least likely* to divorce.
>
> Earlier research found that having multiple sex partners prior to marriage could lead to less happy marriages, and often increased the odds of divorce.
>
> […]Even more noteworthy has been the decline in the proportion of women who get married having had only one sex partner (in most cases, their future husbands). Forty-three percent of women had just one premarital sex partner in the 1970s.
>
> […]By the 2010s, only 5 percent of new brides were virgins. At the other end of the distribution, the number of future wives who had ten or more sex partners increased from 2 percent in the 1970s to 14 percent in the 2000s, and then to 18 percent in the 2010s. Overall, American women are far more likely to have had multiple premarital sex partners in recent years (unfortunately, the NSFG doesn't have full data on men's premarital sexual behavior, and in any event they recall their own marital histories less reliably than do women).

Here's the change:

| Table 1: The Distribution of Women's Premarital Sex Partners, by Marriage Cohort | | | | | |
|---|---|---|---|---|---|
| | 1970s | 1980s | 1990s | 2000s | 2010s |
| 0 partner | 21% | 17% | 14% | 12% | 5% |
| 1 partner | 43% | 36% | 26% | 21% | 22% |
| 2 partners | 16% | 15% | 13% | 13% | 12% |
| 3 partners | 8% | 11% | 11% | 11% | 11% |
| 4-5 partners | 6% | 12% | 16% | 17% | 18% |
| 6-9 partners | 4% | 5% | 11% | 13% | 14% |
| 10+ partners | 2% | 4% | 10% | 14% | 18% |
| total | 100% | 100% | 100% | 100% | 100% |
| N | 268 | 1,921 | 4,312 | 3,598 | 273 |

Women have freely chosen to dismiss the Bible and the moral law

And the problem with this, of course, is that more premarital sex partners means a higher risk of divorce:

Even one non-husband premarital sex partner raises risk of divorce

Why is the 2-partner number so high?

> In most cases, a woman's two premarital sex partners include her future husband and one other man. That second sex partner is first-hand proof of a sexual alternative to one's husband. These sexual experiences convince women that sex outside of wedlock is indeed a possibility. The man involved was likely to have become a partner in the course of a serious relationship—women inclined to hook up will have had more than two premarital partners—thereby emphasizing the seriousness of the alternative.

The woman has an alternative, the woman makes comparisons, the woman has firsthand experience of sex with someone other than her eventual husband. This is not trivial, it should not be dismissed by men who are evaluating marriage candidates.

I was really glad to see Dr. Wilcox tweet this article, because a lot of men's rights people judge him unfairly for being blindly pro-marriage, as if he doesn't see the risks to men. No, he sees those risks, and he warns men about them, and he holds women accountable. He is saying to women: if you want your marriage to last, you are responsible to study this research, to say no to your heart, to resist the culture, and to make wise decisions to protect your future husband and children.

Now, many traditional marriage people will tell young men "feminism and the sexual revolution change nothing, go out there and get married to these women anyway". No one condemns women for their unilateral decision to believe in radical feminism, and their decisions to act against the moral laws by having premarital sex. It's like the Bible has no authority for men – it can only be used to tell men what to do. I have met pastors and parents who have

this double standard that excuses women from everything, and blames and shames men for everything. Even if the men are virgins, they are blamed and shamed by pastors and parents when the woman's poor choices do not "work out" for her.

The culture is filled with voices who rationalize women who choose to get drunk and hook up with good-looking men, including from the pulpits of churches. Few people are aware of the logical consequences of selfish actions. There is just this view that it is a terrible, horrible thing to stifle the freedom of women to "follow their hearts". Pastors and Christian parents feel that it is *wrong* to tell young women that the Bible somehow should act as a brake on their desires to have feelings with a man, and to show off a boyfriend to their friends, and to have fun – to have a good time now, in the moment. I have seen these conversations happening, where grown-ups who claim to be Bible believing Christians condemn men for not manning-up to rescue women in one breath, and then admit that those women should not be shamed or judged for not having any moral compass. It's enough that the women look pretty – that makes them "Christian", regardless of their past selfishness. No one cares about the risks that a man will face by having to take on that damage.

Previously, I blogged about how most divorces are initiated by women. If you are a man who has made good decisions with his education and finances, you need to be aware of this research. Although you may think that it's harmless that the woman you want to marry has had multiple premarital sex partners, it's not. It will affect her ability to be attracted to you, and to be satisfied by you. According to my friend Dina, previous cohabitations should be treated by men as a previous divorce. And previous divorces make a woman more unstable for marriage – that's a fact. And divorce is risky for men financially and emotionally – another fact. Men didn't ask to live in a world where they can lose all their savings, future income, and access to their children should their wives become unhappy and decide to divorce them – but that is the world that men live in.

I would like to see women make better decisions with men before they marry, rather than be influenced by their peers and culture to give themselves to men who are not marriage-minded. Maybe a little skepticism should be shown to "follow your heart"? Women need to understand what they are losing when they choose to have premarital sex.

In my group of friends, the men are aware of the Biblical prohibition on premarital sex. My friends know about the research on marriage, and what it takes to make a marriage work. We don't follow our hearts, because we do what we know will work to achieve the results we want. We don't listen to the culture, and we don't listen to radical feminists. Men generally take an engineering approach to marriage – we want to know what the best practices and tradeoffs are, and then we plan and act to succeed.

# School sends sheriff to child's home to stop him from sharing Bible verses

**Wintery Knight** · 8 June 2016 · Archived copy · Original

Anti-marriage gay activists vandalize church
In California, of course.

This is from Todd Starnes, writing at Fox News.

Excerpt:

> Mrs. Zavala made it a practice of including a Bible verse and encouraging note in her son's lunch bag. The boy would tell his friends about the note and read them aloud at the lunch table.
>
> It wasn't long before children asked for copies of the notes and Mrs. Zavala obliged – including a brief note to explain the daily Bible verse.
>
> On April 18 a teacher called Mrs. Zavala and said her son would no longer be able to share the Bible verses because he was "not allowed to share such things while at school."
>
> […]They say the teacher told Mrs. Zavala that her son "could no longer read or share Bible verses or stories at lunch" – citing "separation of church and state."
>
> So, Mr. and Mrs. Zavala complied with the school's clearly unconstitutional edict.
>
> But on May 9, the school's principal decided to implement a complete ban on the Bible verse sharing.
>
> Liberty Counsel alleges the boy was ordered to stop handing out notes because "it was against school policy." The principal told the boy and his father to move to a public sidewalk. They complied with the principal's demand.
>
> It would be just a few hours later – when the Zavala family heard a knock at their front door.
>
> "The deputy sheriff said he had been sent by the school," Liberty Counsel attorney Richard Mast told me. "The deputy went on to tell the parents that the school was worried that someone might be offended by the Bible verses."

People on the secular left often like to talk about tolerance and diversity, but, they are not tolerant of any views that challenge their own, and they don't support diversity of opinion. The truth is that they get offended very easily when

anyone disagrees with them, because they often take care to isolate themselves from different points of view. And, as the story shows, that can even involve using the force of law to threaten others who disagree with them. It's very natural for people on the secular left to resort to threats and coercion. You can see it happening all the time with secular groups and groups who promote immorality. They like to use threats and punishments to get their way. It's very natural to them to stamp out different people and different values.

# Did the city of Nazareth exist at the time of the birth of Jesus?

**Wintery Knight** · 8 June 2016 · Archived copy · Original

Israeli archaeologist Yardena Alexandre inspects Roman 1st-century pottery found from the city of Nazareth.

A while back, I was discussing a recent debate that a friend attended between an atheist musician named Dan Barker and a Christian with a doctorate in New Testament Studies named Justin Bass.

According to my friend's report, the atheist questioned the existence of Nazareth, and then went on from there to assert that everything we know about Jesus is legendary.

This is what the atheist's argument sounds like:

1. If the New Testament contains reliable history about Jesus, then Nazareth must exist.
2. Nazareth does not exist.
3. Therefore, the New Testaments does not contain reliable history about Jesus. (M.T. 1,2)

I was able to find a web site where an atheist was making the claim that Nazareth did not exist at the time of Jesus. So this is not completely outside the realm of mainstream atheism. I doubled checked with two more people who attended the debate that Barker indeed made an argument like the one above.

Two things to say about this 3-step argument. First off, when speaking to atheists, Christians only care about making a case for the resurrection. This is for two reasons. One, our goal is to disprove atheism, and the historical argument for the resurrection is the most evidenced miracle claim in the New Testament. Nazareth is not part of that core of minimal facts about the resurrection of Jesus. Second, it's possible to be a Christian by accepting a core of Christian dogma (e.g. – the Apostle's Creed), while remaining agnostic or even skeptical of other things in the Bible. Nazareth is not part of that core of minimal facts that must be affirmed in order to become a Christian.

The problem I have with atheists is that they pick and choose from the Bible according to their own agenda. Every Christian has read basic books on the resurrection by people like Lee Strobel, Michael Licona, William Lane Craig, J. Warner Wallace and so on. This is like table stakes for living a Christian life. We all know how to make a case based off of minimal facts for the resurrection. When Christians get into debates about Jesus, we want to make a case for the core of historical knowledge about him, minimal facts that almost no one disagrees with. But many atheists aren't like that. They want to pick and choose a few verses out of the Old Testament and the New Testament that they personally find distasteful *to them*, and then deny the minimal facts about Jesus on that basis. I don't think that it makes sense to deny evidence for widely-accepted facts by bringing up minor problems that are

irrelevant to the well-attested core facts.

But it's worse than that – we actually DO know that Nazareth existed, and we know it not from some fundamentalist preacher, but from atheist Bart Ehrman.

Ehrman writes in his book:

> One supposedly legendary feature of the Gospels commonly discussed by mythicists is that the alleged hometown of Jesus, Nazareth did not exist but is itself a myth. The logic of this argument, which is sometimes advanced with considerable vehemence and force, appears to be that if Christians made up Jesus' hometown, they probably made him up as well. I could dispose of this argument fairly easily by pointing out that it is irrelevant. If Jesus existed, as the evidence suggests, but Nazareth did not, as this assertion claims, then he merely came from somewhere else. Whether Barack Obama was born in the U.S. or not (for what it is worth, he was) is irrelevant to the question of whether he was born.
>
> Since, however, this argument is so widely favored among mythicists, I want to give it a further look and deeper exploration. The most recent critic to dispute the existence of Nazareth is René Salm, who has devoted an entire book to the question, called The Myth of Nazareth. Salm sees this issue as highly significant and relevant to the question of the historicity of Jesus: "Upon that determination [i.e., the existence of Nazareth] depends a great deal, perhaps even the entire edifice of Christendom."

So that seems like a fair representation of the argument I outlined above.

Bart's response is long, but here's part of it:

> There are numerous compelling pieces of archaeological evidence that in fact Nazareth did exist in Jesus' day, and that like other villages and towns in that part of Galilee, it was built on the hillside, near where the later rock-cut kokh tombs were built. For one thing, archaeologists have excavated a farm connected with the village, and it dates to the time of Jesus. Salm disputes the finding of the archaeologists who did the excavation (it needs to be remembered, he himself is not an archaeologist but is simply basing his views on what the real archaeologists – all of whom disagree with him — have to say). For one thing, when archaeologist Yardena Alexandre indicated that 165 coins were found in this excavation, she specified in the report that some of them were late, from the fourteenth or fifteenth centuries. This suits Salm's purposes just fine. But as it turns out, there were among the coins some that date to the Hellenistic, Hasmonean, and early Roman period, that is, the days of Jesus. Salm objected that this was not in Alexandre's report, but Alexandre has verbally confirmed (to me personally) that in fact it is the case: there were coins in the collection that date to the time prior to the Jewish uprising.
>
> Aalm also claims that the pottery found on the site that is dated to the time of Jesus is not really from this period, even though he is not an expert on pottery. Two archaeologists who reply to Salm's protestations say the following: "Salm's personal evaluation of the pottery … reveals his lack of expertise in the area as well as his lack of serious research in the sources." They go on to state: "By ignoring or dismissing solid ceramic, numismatic [that is, coins], and literary evidence for Nazareth's existence during the Late Hellenisitic and Early Roman period, it would appear that the analysis which René Salm includes in his review, and his recent book must, in itself, be relegated to the realm of 'myth.'"

Read Bart's whole excerpt from his book in his post.

I did a quick double check on the archaeologist Ehrman mentioned, and found an Associated Press story about another archaelogical discovery made by archaeologists in Nazareth. This time, it's not the coins, but pottery fragments. The date range on the pottery is 100 before Jesus' birth to 100 years after Jesus' birth.

Even though Ehrman is an atheist, I think that he understands how to do history. You can't be a credentialed

historian and throw out the early proclamation of Jesus' resurrection because of doubts about Old Testament violence. You can't be a credentialed historian and throw out the conversions of Paul and James because you don't know whether there was one angel or two angels at the empty tomb. Denying the core facts about Jesus by bringing up concerns about peripheral issues is not a responsible way to investigate the historical Jesus.

# Bisexual Latino professor chased out of CSU Northridge for being too conservative

**Wintery Knight** · 9 June 2016 · Archived copy · Original

Young people seem to like gay marriage more than they like individual liberties

This College Fix article is a must read. Don't just read my excerpt, you need to click through and read it all. (H/T Katy)

Excerpt:

> Even when one can check off a few "minority" or "marginalized" boxes, if they have their own opinions that run afoul of the party line, they're the enemy.
>
> Case in point: Professor Robert Lopez of California State University Northridge, who has been harassed and vilified by students and peers to the point that he can't stand his work environment anymore and he is leaving his position as an English professor — and the safety of tenure with it.
>
> […]As Lopez explained on *American Thinker* on May 26, he was also the target of frivolous student complaints, "including charges that I 'had erections while teaching,' called Helen of Troy 'promiscuous,' and said that liberals were 'nutjobs.'"
>
> As for the administrative Title IX probe into his decision to allow students to attend the pro-traditional family conference at the Reagan Presidential Library, the investigation remains "open and undecided after 600 days."
>
> "The case was based on a gay student claiming he had a nervous breakdown because of anti-gay 'targeting' at the Reagan Library and a woman who claimed I did not nominate her for an award because she alleged that the five female speakers at the Reagan Library were 'anti-female,'" Lopez explained, adding:
>
> By 2014 I could no longer trust any of my students. I was teaching like a robot: come in, hook up the laptop, give one of my canned lectures, tell the jokes at all the right junctures, try not to screw up, and get out before students can get into any unsupervised conversations. I had an inkling which of my colleagues were planting students in my class to annoy me – at first I thought I was crazy to suspect it – but when it was clear that most of the people lodging weird complaints had the same few professors as mentors, I knew that there were no real coincidences anymore. You don't try to guess who the snipers are; just assume they are all out to get you, and

> never get close.
>
> In the end, it was all too much for Lopez.
>
> “I had served for eight years under a dean trained in Women’s Studies, surrounded in her executive suite by lesbians and feminists, who hated me for celebrating the beauty and glory of chastity and Biblical love. I could not have my relationship with Jesus Christ and this job simultaneously. The choice was not that difficult,” Professor Lopez explained in a June 7 op-ed in *The Daily Caller*. “It is a rare thing for a relatively young scholar to walk away from tenure after three years. But salvation is also a rare thing. So is happiness.”

Tenure did not protect the professor at Marquette university either. This is one of the reasons that I decided to abandon my plan to go for a PhD. If tenure only protects liberals, then there is no point wasting time and money on a PhD in order to teach at a secular university. Black conservative professors face similar hatred. As the article shows, there is no tolerance or diversity at the modern secular university. Secularism doesn’t produce open-mindedness, it produces fascistic bigotry.

So what do we learn? This is yet more evidence for the advice that I give the young Christians who I mentor about what to study. If you are going to blow $15,000 a year on a university education, you cannot study politicized brainwashing nonsense that teaches you nothing useful for getting a job. You need to stick with STEM degrees – especially math, engineering, physics, chemistry, etc.  Get in, keep your mouth shut, get a job, and then when you vote, vote to cut off all subsidies for state universities.

# New study: fatherlessness linked to negative outcomes

**Wintery Knight** · 9 June 2016 · Archived copy · Original

Marriage and family

The paper is posted at NCBI NIH.

The abstract says:

> The literature on father absence is frequently criticized for its use of cross-sectional data and methods that fail to take account of possible omitted variable bias and reverse causality. We review studies that have responded to this critique by employing a variety of innovative research designs to identify the causal effect of father absence, including studies using lagged dependent variable models, growth curve models, individual fixed effects models, sibling fixed effects models, natural experiments, and propensity score matching models. Our assessment is that studies using more rigorous designs continue to find negative effects of father absence on offspring well-being, although the magnitude of these effects is smaller than what is found using traditional cross-sectional designs. The evidence is strongest and most consistent for outcomes such as high school graduation, children's social-emotional adjustment, and adult mental health.

I was curious to see what specific problems fatherlessness causes for children, according to this redo of previous studies.

The conclusion explains:

> The body of knowledge about the causal effects of father absence on child well-being has grown during the early twenty-first century as researchers have increasingly adopted innovative methodological approaches to isolate causal effects. We reviewed 47 such articles and find that, on the whole, articles that take one of the more rigorous approaches to handling the problems of omitted variable bias and reverse causality continue to document negative effects of father absence on child well-being, though these effects are stronger during certain stages of the life course and for certain outcomes.
>
> We find strong evidence that father absence negatively affects children's social-emotional development, particularly by increasing externalizing behavior. These effects may be more pronounced if father absence occurs during early childhood than during middle childhood, and they may be more pronounced for boys than for girls. There is weaker evidence of an effect of father absence on children's cognitive ability.

> Effects on social-emotional development persist into adolescence, for which we find strong evidence that father absence increases adolescents' risky behavior, such as smoking or early childbearing. The evidence of an effect on adolescent cognitive ability continues to be weaker, but we do find strong and consistent negative effects of father absence on high school graduation. The latter finding suggests that the effects on educational attainment operate by increasing problem behaviors rather than by impairing cognitive ability.
>
> The research base examining the longer-term effects of father absence on adult outcomes is considerably smaller, but here too we see the strongest evidence for a causal effect on adult mental health, suggesting that the psychological harms of father absence experienced during childhood persist throughout the life course. The evidence that father absence affects adult economic or family outcomes is much weaker. A handful of studies find negative effects on employment in adulthood, but there is little consistent evidence of negative effects on marriage or divorce, on income or earnings, or on college education.
>
> Despite the robust evidence that father absence affects social-emotional outcomes throughout the life course, these studies also clearly show a role for selection in the relationship between family structure and child outcomes. In general, estimates from IFE, SFE, and PSM models are smaller than those from conventional models that do not control for selection bias. Similarly, studies that compare parental death and divorce often find that even if both have significant effects on well-being, the estimates of the effect of divorce are larger than those of parental death, which can also be read as evidence of partial selection.

Something to think about when people on the left tell you that children don't need a father. And remember, increasing welfare payments for single mothers just encourages them to have more children, and to delay marriage. Big government takes the place of a man, and allows them to pursue men who make them feel good, rather than men who can actually do the job of being a father and a husband. The single mothers I've spoken to like government stepping in, because it allows them more freedom to follow their hearts, rather than having to give to and invest in a man. We are paying them to do this when we give them money, making fathers optional. It's child abuse, aided and abetted by government.

# How the gay agenda changes the norms of long-term relationships

**Wintery Knight** · 10 June 2016 · Archived copy · Original

Young people celebrating gay rights: but can you have lasting love without self-control? When are adultery and divorce good things?

Michael Brown comments:

> Consider this scenario. A married man and father announces that he is leaving his wife and children in order to be "true to himself." He has found another love, the most genuine love he has ever known, and he has already moved in with his new lover.
>
> How would society react to him? —
>
> "You, sir, are an unfaithful, disloyal adulterer. You should be ashamed of yourself, leaving your wife and kids for another woman."
>
> He replies, "But it's not for another woman. It's for another man. I'm gay and I've come to terms with my identity. I won't go on with the charade any longer, and I'm proud of my decision."
>
> How does society react now?
>
> "You, sir, are a courageous hero. You have set an example for others to follow, and you should be commended for your boldness and integrity."
>
> So, if you commit adultery and abandon your family out of heterosexual desires, you are a despicable human being. But if you do it out of homosexual desires, you are a hero and champion. You even become an international celebrity, albeit not without some controversy.

And he provides some examples. Do you doubt his story? Look what happened to this formerly-Christian entertainer.

Look:

> During an appearance on ABC's "The View" on Friday, Everyday Sunday's Trey Pearson, who released a letter last week to fans in which he came out as a homosexual, outlined that he has left his wife after deciding to no

> longer fight against having feelings for men.
>
> […]On “The View” on Friday, Pearson suggested that he divorced his wife and moved out, as he referred to his wife of seven years as his “ex-wife,” and said that he meets with her and his two children once a week.
>
> […]He said he wants the Church to accept homosexuality.
>
> “I want to see my church change. I want to see our denomination change,” Pearson said. “I want to see people to be willing to have the conversation in an open way where they are willing to listen to people’s stories.”
>
> The musician, who is scheduled to perform at a homosexual pride event next week, said that he finds it “damaging” when ministers call homosexuality a choice.

Yay! Everyone cheer! Hurray, for adultery and divorce! He gets to go on TV and be celebrated by leftists on “The View”. We’ve changed as a society – now chastity and fidelity are out, and divorce and adultery are in.

This story does nothing to correct my bias against artists and entertainers, by the way.

# New study: Tennessee pre-K program provides no educational benefit over control group

**Wintery Knight** · 10 June 2016 · Archived copy · Original

This is the most thorough study that I have ever seen evaluating the effectiveness of pre-K programs. The study was done by researchers at Vanderbilt University.

The study was reported on by the well-respected but leftist Brookings Institute.

They write:

> State investments in center-based school readiness programs for preschoolers (pre-K), whether targeted for poor children or universally implemented, have expanded more rapidly than evaluations of their effects. Given the current interest and continuing expansion of state funded pre-K, it is especially important to be clear about the nature of the available evidence for the effectiveness of such programs. Despite widespread claims about proven benefits from pre-K, there is actually strikingly little credible research about the effectiveness of public pre-K programs scaled for statewide implementation.
>
> Like many states that became interested in scaling up a state funded pre-K program in the early 2000's, voluntary pre-K (TNVPK) was introduced in Tennessee in 1996 as a way to provide academic enhancement to economically disadvantaged children. It expanded in 2005 to an $85 million-plus statewide investment serving 18,000 Tennessee income-eligible children in 935 classrooms across all 95 counties.
>
> Launched in 2009, the TNVPK Effectiveness Study, a coordinated effort between Vanderbilt's Peabody Research Institute and the Tennessee Department of Education, is a five-year evaluation study funded by the US Department of Education, Institute for Education Sciences. It includes the first randomized control trial of a scaled up state funded pre-K program and the first well-controlled comparison group study of the effects of program participation as children progress through elementary school..
>
> Policymakers and proponents often cite some of the famous early studies of pre-K programs that have shown long term benefits extending into adulthood for the participating children. But those were studies of especially complex programs that are unlike scaled-up public pre-K in many ways. **The Vanderbilt study is the first rigorous controlled longitudinal study to be conducted on a large-scale state-funded pre-K program.**

And here is a summary of the results:

> **Standard score results from pre-K through 3rd grade on a composite measure that averaged the six achievement subtests are presented from baseline forward in the graph below.**
>
> As is evident, pre-K and control children started the pre-K year at virtually identical levels. The TNVPK children were substantially ahead of the control group children at the end of the pre-K year (age 5 in the graph). By the end of kindergarten (age 6 in the graph), the control children had caught up to the TNVPK children, and there were no longer significant differences between them on any achievement measures. The same result was obtained at the end of first grade using two composite achievement measures (the second created with the addition of two more WJIII subtests appropriate for the later grades). In second grade, however, the groups began to diverge with the TNVPK children scoring lower than the control children on most of the measures. The differences were significant on both achievement composite measures and on the math subtests. Differences favoring the control persisted through the end of third grade.
>
> **In terms of behavioral effects, in the spring the first grade teachers reversed the fall kindergarten teacher ratings. First grade teachers rated the TNVPK children as less well prepared for school, having poorer work skills in the classrooms, and feeling more negative about school. It is notable that these ratings preceded the downward achievement trend we found for VPK children in second and third**

> **grades. The second and third grade teachers rated the behaviors and feelings of children in the two groups as the same; there was a small positive finding for peer relations favoring the TNVPK children by third grade teachers, which did not meet traditional levels of statistical significance.**

Results graph:

TNVPK data: pre-K program is in red, baseline is in blue

We are already seeing that cheap daycare in high-tax, big government provinces like Quebec cost a lot, and produce negative results. And of course Hillary Clinton is a longstanding advocate of universal pre-K. As a Senator of New York, she introduced a universal pre-K plan that would cost $10 billion over 5 years. President Barack Obama's own Preschool for All plan would cost $75 billion over 10 years. This Vanderbilt study should cause us to question whether the policies of the secular left, pushed largely because of emotions and ideology, are worth the tens of billions of dollars they want to take from us. And if you take tens of billions of dollars out of families, then families on the margin will have to give their children to the state to raise. And that includes Christian families, who would no longer be able to *afford* a stay-at-home mother.

Now, taking children away from parents so that their mothers can work is seen as a worthy goal by those on the secular left. First, communally raising the children is "good" because it removes inequalities between single mothers and traditional working-husband homes. Second, making it easier for women to "go fatherless" is "good" because fathers are not to be trusted to teach their children about morality and religion. That is best left to secular government workers. Third, mothers who choose to marry good providers pay less in taxes if they choose to stay home with their kids and not work. That is "bad" because the government wants more taxes, so they can spend it on vote-buying social programs. Fourth, children who form stable bonds with their parents are less likely to become dependent on the government, meaning their allegiance cannot be bought with government handouts. That is also "bad". Fifth, it is also "bad" that children who grow up with stay-at-home mothers are more likely to develop empathy and morality, which gives them an independent standard by which to judge the government's actions.

# Study: women who lose their virginity in their teens are more likely to divorce

**Wintery Knight** · 11 June 2016 · Archived copy · Original

College students puking in toilet

The UK Daily Mail reports on a study that shows that women who lose their virginity as teenagers are more likely to divorce.

Excerpt:

> Women who lost their virginity as young teenagers are more likely to divorce – especially if it was unwanted, according to new research.
>
> The University of Iowa study shows that 31 per cent of women who had sex for the first time as teens divorced within five years, and 47 per cent within 10 years.
>
> Among women who delayed sex until adulthood, 15 per cent divorced at five years, compared to 27 per cent at 10 years.
>
> The findings were published in the April issue of the Journal of Marriage and Family.
>
> Author Anthony Paik, associate professor of sociology in the university's College of Liberal Arts and Sciences, examined the responses of 3,793 married and divorced women to the 2002 National Survey of Family Growth.
>
> The study showed, however, that if a young woman made the choice to lose her virginity as a teenager, there was no direct link to a marital split later in life.
>
> If the sexual act took place before the age of 16 women were shown more likely to divorce, even if it was wanted.
>
> Thirty-one percent of women who lost their virginity during adolescence had premarital sex with multiple partners, compared to 24 per cent of those who waited.
>
> Twenty-nine percent experienced premarital conceptions, versus 15 percent who waited.

> One in four women who had sex as a teen had a baby before they were married, compared to only one in ten who waited until adulthood.
>
> Only one per cent of women surveyed said they chose to have sex at age 13 or younger, compared to five per cent at age 14 or 15, and 10 per cent at age 16 or 17.
>
> Forty two per cent reported that their first sexual intercourse before age 18 that was not completely wanted.
>
> Fifty eight per cent of the group waited until age 18 or older to have sex. Of those, 22 per cent said it was unwanted, compared to 21 per cent who said it was wanted.
>
> Researchers concluded sex itself may not increase the probability of divorce, while factors such as a higher number of sexual partners, pregnancy, or out-of-wedlock birth increased the risk for some.

If you want a stable marriage, then you don't have sex before you're married. There are tons of virgins out there, and there is a huge difference in the quality of romantic relationships when both parties exercise self-control with physical touching. Don't let it go too far – you lose some of what love and marriage can be.

# Study of elementary school children finds entrenched discrimination against boys

**Wintery Knight** · 12 June 2016 · Archived copy · Original

The study is here (PDF), and Susan Walsh writes about the study on her blog.

Excerpt:

> A new study of nearly 6,000 elementary school children has found that boys are discriminated against beginning in kindergarten. Christopher Cornwell, an economics professor at the University of Georgia, says that "gender disparities in teacher grades start early and uniformly favor girls."
>
> Despite having higher scores on standardized tests, boys get lower grades than girls. Why? Because teachers are basing grades at least partly on classroom behavior, and the standards are very much geared to female norms.
>
> […]Here's what the disparity looks like for kindergarten boys:
>
> | Std. Deviation | Test Scores | Grades |
> |---|---|---|
> | Reading | -.017 | -.27 |
> | Math | +.02 | -.15 |
> | Science | +.035 | -.14 |
>
> (Note: Values are approx., gauged visually from study graphic.)
>
> Another interesting finding was that boys who adhere to female norms on non-cognitive skills were not penalized. Effectively, the more female behavior was rewarded with a grade "bonus" for males.
>
> The implications of this are obvious. Masculinity, even normal maleness, is being punished in schools from a very young age. Only the most female-acting boys are rewarded with a fair assessment.

I found this story on Stuart Schnederman's blog, and this is what he had to say about it:

> The results demonstrated that schoolteachers are prejudiced against boys. When teachers do not just grade on performance, but include a number of intangible qualities that girls are more likely to possess, they are acting as bigots.

I recommend that everyone pick up a copy of "The War Against Boys" by AEI scholar Christina Hoff Sommers to learn more about this anti-male discrimination problem.

I see a lot of people raving at men to "man up" these days. Many of those people are pastors who remain ignorant about the real, systemic causes of male underachievement. Even very obvious factors – like the dominance of female teachers and administrators in schools – are ignored by the blame-men crowd. Boys generally learn better when they learn from male teachers in all-male classrooms. But unfortunately for boys, there are people who don't want to do what works for men, especially when it doesn't fit with feminist ideology.

# ACLU lawyers blame Christians for Orlando attack committed by Islamic terrorist

**Wintery Knight** · 13 June 2016 · Archived copy · Original

Omar Mateen, the Islamic Terrorist Who Attacked Orlando Gay Club

Everyone has heard the news about the latest Islamic terror attack in Orlando.

A few quick things about it before I make my main point:

First, it was another gun-free zone, and the majority of multiple-victim public shootings happen in gun-free zones. This is because attackers know that their law-abiding victims will be unarmed.

Second, Islamic terrorists have had an easy time under President Obama, who likes to blame Islamic terrorism on anyone except Islamic terrorists. This Democrat Party moral relativism has led to a staggering 85 Islamic terrorist plots since 9/11.

Third, we know that Obama has been pulling punches against Islamic terrorism throughout the last 8 years. A perfect example of this the fact that the Orlando attacker was a "person of interest" to the FBI in 2013 and 2014. But nothing was done.

Fourth, former Muslim Nabeel Qureshi what Muslims are taught about this issue:

> Islam itself has always taught that gays should be executed. Muhammad commanded: "If you find anyone doing as Lot's people did, kill the one who does it, and the one to whom it is done" (Sunan Abu Daud 4447). Imams who have been trained in these Islamic teachings are teaching in our communities. Just three months ago, an imam who is well known for proclaiming Muhammad's teachings on homosexuality spoke in Orlando. In a prior speech about homosexuals he was noted to have said, "Let's get rid of them now" (video and news article). The imam spoke at an Islamic center that is less than 20 miles from the site of today's atrocities. Some American-born Muslims, such as Omar, are taking teachings like these at face value, listening to their imams and following Muhammad.

The Obama administration is still "working to determine a motive", despite the fact that the attacker is known to have pledged allegiance to Islamic State. Of course they are. It's probably just workplace violence.

**The ACLU lays the blame on…**

But here is what I wanted to write about this time – something that my friend William found and posted, from The Daily Caller.

It's about the ACLU, which is a group that opposes civil liberties, such as religious liberty. They also oppose national security measures designed to protect the public from terrorist threats.

It says:

> Several American Civil Liberties Union (ACLU) attorneys took to Twitter to blame the "Christian Right" for Sunday's deadly terrorist attack at a nightclub in Orlando, Fla., which left 50 dead and 53 injured.
>
> Chase Strangio, a staff attorney with the ACLU's LGBT and AIDS Project, claimed the social and political environment cultivated by Christian conservatives in recent months was to blame for the shooting at Pulse, a nightclub popular with Orlando's LGBT community.
>
> Strangio also called for solidarity between American Muslims and LGBT communities, arguing both are maligned and oppressed by the religious right.

Isn't that interesting? After trying to stop common sense measures to prevent terrorist attacks, the ACLU doesn't blame themselves for what happened. They blame their enemies – the Bible-believing Christians. Bible-believing Christians respond to the gay agenda by using words to express disagreement, not by violence. The violence is done by the Islamic terrorists.

What do I think about the tweets by the ACLU attorney? Well, the ACLU is an organization that hates religious liberty, and public expressions of Christian belief and convictions. When a person denies God, they lose the rational ground for object morality, and moral reasoning becomes impossible. Anything becomes morally permissible, including lying. Some people are so deep in a sinful lifestyle, that aren't able to think clearly about facts that are plain to everyone else. The hate just dominates them to such a degree that rational thought becomes impossible.

# ADF offers advice on SCOTUS marriage redefinition ruling

**Wintery Knight** · 13 June 2016 · Archived copy · Original

States with non-discrimination laws
(Source: ACLU)

Erik Stanley of the Alliance Defending Freedom offers advice to churches on how to respond to the Supreme Court's decision to redefine marriage to remove the gender requirement.

He says:

> […][T]he greatest threat for churches lies in the application of the Court's decision to believers who live in jurisdictions covered by so-called "non-discrimination" laws and ordinances. Everywhere that marriage has been redefined in the last several years has seen an awakening of non-discrimination laws that prohibit discrimination in employment, housing, or places of public accommodation on the basis of sexual orientation or gender identity. These laws are peppered throughout the states and local governments and are a linchpin of the sexual revolution's broader legal and political strategy: to establish non-discrimination laws at all levels throughout the country and to to "ensure that religion is not used as an excuse to discriminate."
>
> In coming days, the threat from these non-discrimination laws will materialize in numerous ways as same-sex couples marry. But there are proactive steps your church can take to protect itself.

I put the map from the ACLU above. I think that's what he is talking about when he says non-discrimination states. Keep in mind that the ACLU supported redefining marriage, and opposes religious liberty.

Erik's article covers 3 areas:

1. Church's statement of faith
2. Pastors officiating same-sex marriage ceremonies
3. Church's facility usage policy

Part 3) was the most interesting to me:

> **3. Churches should ensure their facilities usage policies are revised to allow only uses consistent with the church's religious beliefs.**
>
> In the wake of the Supreme Court ruling, some churches may be approached by same-sex couples seeking to be married in the church facility. Churches should not feel as if they have to close their doors to the community just to prevent wedding ceremonies with which they disagree. Churches must continue to be a welcoming presence in the community and can do so through updating or revising their facility usage policy. The key point is to tie usage of the church's facility to the statement of faith and religious beliefs of the church. And then to make clear that uses inconsistent with those religious beliefs will not be allowed. Alliance Defending Freedom has a sample facilities usage policy available in our Protecting Your Ministry manual.

So you update your statement of faith, and then tie usage of the the facility to that statement of faith. Simple.

I took a quick look at the booklet, and it also talked about tying employment within the church and church membership to the statement of faith.

Denny Burk summarizes those:

> **2. Religious Employment Criteria**
>
> Your church can best avail itself of the First Amendment's protection in employee disputes if you create and faithfully enforce religious employment criteria for every employee. That requires churches to do at least two things: (1) require all employees and volunteers to sign a statement affirming the church's statement of faith and standards of conduct, and (2) create written job descriptions for every employee and volunteer position.
>
> **4. Formal Membership Policy**
>
> If your church does not have a membership policy, you need to change that. Biblically, this should already be a priority for your church. You need to specify what the requirements for membership are, how one joins, how one resigns, and the procedures for church discipline. If all of this isn't spelled out up front, your church could be exposed (see ADF guide pp. 17-18).

So what to make of this? Well, the ADF is an organization that I admire and trust. I cannot abide Christians who do not want to understand the details of what is happening with religious liberty in their country. The ADF has first class lawyers from the top law schools, and they defend religious liberty at every level of our justice system, up to and including the Supreme Court. If you want to help your church protect itself from prosecution, then you must point them to the ADF booklet linked above.

And this is especially true if you are in one of those states in the map above. In looking over the map, I noticed that much of the trouble we have been having with Christian businesses getting sued are in states that have these laws… Oregon, Washington, New Mexico, New York, and so on. Pay attention to that map and make decisions about where to live accordingly.

# Obama administration knew about Orlando Islamic terrorist back in 2013

**Wintery Knight** · 14 June 2016 · Archived copy · Original

Democrats think that the real threat to America is not radical Islamic terrorism

The Democrat Party likes to bash conservatives for being too tough on national security, national defense and law enforcement. And that desire to coddle criminals and terrorists naturally results in more risk and danger to the law-abiding taxpayers who pay Democrat salaries.

Investors Business Daily explains:

> FBI Special Agent in Charge Ronald Hopper told ABC News that the FBI had twice looked into Mateen: In 2013, after he made what Hopper called "inflammatory" comments to co-workers, and again in 2014, after he was linked to Moner Mohammad Abu-Salha, another American who became a radicalized Muslim, who became a suicide bomber in Syria.
>
> Given that Mateen worked for G4S, a Department of Homeland Security contractor, shouldn't this have raised significant questions?
>
> **One of Mateen's co-workers at G4S, Daniel Gilroy, told the Tampa Bay Times: "He talked about killing people all the time."**

Yes, but Americans can't say anything about potential Muslim terrorists, or Democrat Attorney General will persecute them for anti-Muslim discrimination. She says that is her top priority, in fact. Not law enforcement. Not investigating the IRS persecution of conservative groups in an election year. No – her top priority is prosecuting those who raise the alarm about potential Islamic terrorists for "hate speech". This is the Democrat Party.

More:

> Mateen was interviewed by investigators three times in relation to those probes, but the FBI determined Mateen was no threat, Hopper said.
>
> Finally, on Monday, FBI Director James Comey said Mateen showed "strong indications of radicalization" and was likely inspired by foreign terrorist organizations.
>
> In short, he was a "known wolf," not a "lone wolf." This is a disturbing pattern with terrorist mass murders,

> whether in Boston, San Bernardino or Ft. Hood, Texas. A pattern of behavior emerges, and is ignored. Ties to extremists are viewed as harmless. Then people are slaughtered.
>
> This problem will not go away. Indeed, the world has been repeatedly drenched with the blood of radical Islam's victims since 9/11 and before. As the observant Roger L. Simon noted, "Total deadly terror attacks in the name of Allah since 9/11 stand at 28,576 with who-knows-how-many corpses."

Recall that the FBI was infiltrated by secular leftist groups like the Southern Poverty Law Center. The secular leftist FBI "partners" teach the FBI that the real threats to America are conservatives, Christians, pro-lifers, law-abiding gun owners, veterans, and those who believe in traditional marriage. That's where the FBI's attention has been for the last 8 years. Not on radical Islam, which they take to be as peaceful as the Boy Scouts. Obama told them so, and they believe it. All of our national security, national defense and law enforcement organizations believe it.

Is the Democrat President Obama serious about protecting taxpayers from terrorist threats?

Of course not:

> […]President Obama's response after the attacks was not only disappointing in its failure to recognize the ongoing threat from radical Islam, but likely endangered future American lives with its obtuseness. He couldn't even bring himself to use the most obvious words of all to describe what happened: "Radical Islamic terrorism."
>
> "I think we don't yet know the motivations" of the murder, Obama said. Except, as Britain's Daily Mail points out, the terrorist "pledged his loyalty to ISIS in a 911 call as he carried out the attack." The loyalty wasn't one way: Islamic State radio called the terrorist, Omar Mateen, a "soldier of the Caliphate."

Maybe the attack was "workplace violence" again? Obama likes to call attacks that are clearly Islamic terrorism "workplace violence".

There was another attack at Fort Hood a while back, and it was proven that the attacker was in contact with Al Qaeda. Obama called that one "workplace violence".

And then there was beheading by a radical Islamist in Oklahoma, and Obama called that one "workplace violence" as well.

And the attack on the recruiting station in Chattanooga, TN was never labeled as terrorism by the Obama administration, either. Maybe it was "workplace violence"?

And of course, long after the San Bernadino terrorist attack occurred, Obama couldn't figure out what the motive of the attack was. Probably it was "workplace violence".

You can be sure that the Obama administration will spare no expense in trying to link the Orlando attack to Tea Party groups, or, failing that, to evangelical Christians. We hired people who sympathize more with our enemies than us to protect us.

# Is the Human Rights Campaign blaming Christians for Orlando terrorist attack?

**Wintery Knight** · 14 June 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

My Christian friends who follow these things and try to read the times are telling me that they are seeing a lot of articles blaming Christians for the recent terrorist attack committed by an Islamic terrorist.

National Review reports:

> Well, that didn't take long. It was just a matter of time before opposition to the Obama administration's transgender bathroom policies was linked to the massacre at an Orlando gay bar, committed by a shooter who took time out from his horrific killing spree to pledge allegiance to ISIS.
>
> And sure enough, this morning's *New York Times* reports that gay rights "movement leaders" wonder whether "high-profile policy fights like the one over the Obama administration's recent directive requiring schools to allow transgender students to use the bathrooms of their choice" is increasing violence against gays. The *Times*'s article, by reporter Sheryl Gay Stolberg, offers potential frames for the mass murder, none of which include Islamic terrorism: "What did it mean that it happened in June, Gay Pride Month? Was it a hate crime against gay people or simply evidence that gun violence is out of control — or both? Gay rights have been advancing at a rapid clip. Has that lessened homophobia? Or maybe made it worse?"
>
> *The Atlantic*'s religion reporter, Emma Green, posited a "loose connection" between what she called "anti-trans rhetoric" and the Orlando violence, during a segment on WNYC's *Brian Lehrer Show* this morning entitled "Orlando and the State of the Gay Bar": "There is a loose connection that is very difficult to pin down between some of the anti-gay and anti-trans rhetoric that we've seen in the U.S. not primarily from Muslim groups but from Christian groups that have laid a foundation for homophobia and transphobia. Although most of the groups that are supporting that type of rhetoric would not condone the type of violence we saw in Orlando, it does create an environment of bigotry and acceptance of homophobia against LGBT people." (Green went on to say that some people who hold "sincerely held beliefs" about homosexuality can "still extend messages of

> love and fellowship.”)
>
> **Chad Griffin, president of the Human Rights Campaign, told MSNBC today that what happened in Orlando was an example of the toxic mix that occurs when a “deranged, delusional person is taught to hate” by a “preacher on Sunday morning in church or by a politician.” Actually, no “Sunday preacher” taught mass murderer Omar Mateen to hate; we can be sure, however, that radical Islamic propaganda did.**

You might remember that the Human Rights Campaign has been featured on this blog a number of times, because they are the leading group seeking to silence, coerce and otherwise suppress Judeo-Christian values in the public square.

Let’s review the history the Human Rights Campaign to discover their agenda from actual actions:

- the wealthy co-founder of the Human Rights Campaign Terry Bean was arrested for sex with an underage teen
- called the Family Research Council a “hate group“, after the FRC was attacked by a gun-wielding gay rights activist, who was later convicted of domestic terrorism
- leaked the names of pro-marriage donors to the Huffington Post, names that were supplied to them by a gay rights activist working for the IRS
- published a report on Christian schools and universities who dissent from the gay agenda, in order to intimidate and coerce them into rejecting traditional Christian teachings on sexuality
- calling the employers of Christians in order to get them fired from their jobs

And so on.

A friend of mine pointed out that if you Google “Human Rights Campaign”, Google displays a special rainbow colored banner to celebrate their group. That’s not surprising since many large corporations are on board with the Human Rights Campaign agenda of anti-Christian bigotry.

Here are their Platinum corporate partners:

Human Rights Campaign Platinum Partners

Here is Hillary Clinton, being endorsed by the Human Rights Campaign:

Hillary Clinton and her ally, the Human Rights Campaign

Having strong allies in the White House will enable them to destroy his “religious right” enemies all the more effectively. How far would the Human Rights Campaign go to achieve their ends? We’re going to find out, because lots of Democrats who falsely claim to be Christians keep voting for the Democrat Party.

By the way, the Orlando Islamic terrorist was a registered Democrat.

# One charge against David Daleiden dropped by Texas judge

**Wintery Knight** · 15 June 2016 · Archived copy · Original

Planned Parenthood senior executive: organ harvesting so she can get a Lamborghini

Great news about the man who discovered the trafficking of human organs by abortion providers.

Life News reports:

> Undercover investigator David Daleiden has been vindicated. Today, a Harris County, Texas judge dismissed the bogus misdemeanor charge against David Daleiden for allegedly trying to buy body parts from the Planned Parenthood abortion business he was exposing for selling them as a part of the Center for Medical Progress' undercover investigation.
>
> Daleiden has maintained from the beginning that he and the Center for Medical Progress followed all applicable laws in the course of its investigative journalism and that the indictments were politically motivated.
>
> […]CMP responded to the dismissal in a statement to LifeNews:
>
> Judge Diane Bull's swift dismissal of the bogus charge against CMP founder David Daleiden of trafficking human organs is the latest confirmation that the indictments from a runaway grand jury in Houston were a politically-motivated sham all along. In finding that the indictment was void on its face, Judge Bull's ruling directly contradicts the District Attorney's argument that the indictment was valid despite the DA's collusion with Planned Parenthood.
>
> […]District Attorney Devon Anderson's office has indicated it will not appeal the dismissal.
>
> […]Daleiden still faces bogus charges alleging he used a false ID to gain access to a Planned Parenthood clinic for a meeting with staff.

That's good news, and nice rebuke to the district attorney Devon Anderson. You'll remember that she is alleged to be working closely with Planned Parenthood to persecute David, because they didn't like their organ trafficking operation being exposed.

The Federalist reported on that:

> Lauren Reeder, one of the prosecutors in the Harris County district attorney's office, revealed last August that she was a member of the board of directors for the Planned Parenthood affiliate that was targeted by Daleiden.
>
> Reeder's LinkedIn page indicates that she has been a Planned Parenthood board member since 2013 and a fundraiser for the abortion provider since 2009.

The maximum sentence for “tampering with a governmental record” (using a fake ID, which almost every teen does) is 20 years. That’s a serious charge that’s still outstanding.

# William Lane Craig debates Walter Sinnott-Armstrong: evil, suffering and God

**Wintery Knight** · 15 June 2016 · Archived copy · Original

This is one of the top 4 best debates that William Lane Craig has done in my opinion. (The other three are Craig-Millican debate and the first and second Craig-Dacey debates).

Sinnott-Armstrong is very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics. So if you are looking for a good first debate to watch, this is it!

The MP3 file is here.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church, this is the one to start with.

**The debaters:**

- William Lane Craig
- Walter Sinnott-Armstrong

**The format:**

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

**SUMMARY:**

**WSA opening speech:**

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.
4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

**WLC opening speech:**

Summarizing Walter's argument

1. If God exists, gratuitous evil does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while

still retaining the same amount of knowledge of God's existence and character.

- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

1. If God exists, gratuitous evil does not exist.
2. *God exists*
3. Therefore, gratuitous evil does not exist.

Four reasons to think that God exists (premise 2 from above):

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

# Obamacare in action: health insurance premiums rising by 25% in 30 states

**Wintery Knight** · 16 June 2016 · Archived copy · Original

Is Barack Obama capable of doing what he claims in his speeches?
What happens when you let someone who knows nothing about economics or healthcare push through socialist health care policies?

NBC News reports:

> Millions of people who pay the full cost of their health insurance will face the sting of rising premiums next year, with no financial help from government subsidies.
>
> Renewal notices bearing the bad news will go out this fall, just as the presidential election is in the home stretch.
>
> […]Obama's health law provides income-based subsidies for consumers who buy individual policies on HealthCare.gov and state insurance markets. About 10 million people get assistance, helping reduce the uninsured rate to a historically low 9 percent.
>
> […]But there's no subsidy for those making more than $47,520 for an individual and $97,200 for a family of four – cutoffs that represent four times the federal poverty level. Also, subsidies are not available for consumers at any income level who purchase outside of HealthCare.gov or a state marketplace. Those who remain uninsured risk fines.
>
> **Premiums are expected to climb next year in many areas because major insurers have taken significant financial losses under the health law. Enrollment has been lower than anticipated, new customers were sicker than expected and a government system to stabilize the markets had problems.**

Investors Business Daily says 30 states will face an average increase of 25%:

> Insurers covering more than half the U.S. are seeking average premium hikes of 25% for 2017 for ObamaCare policies sold on and off the public exchanges.
>
> Although the requests are preliminary and filings for 20 more states are still due, there's now little doubt that

> individual market premiums are set for a shockingly large jump next year.

We are losing taxpayer money subsidizing the costs of the bloated Obamacare health care plans. But there are also bailouts of big insurance companies at taxpayer expense, as well.

The Fiscal Times explains:

> Some lawmakers are still seething over an administration decision nearly two years ago that has shortchanged the Treasury of billions of dollars by shifting the funds to an obscure Obamacare program aimed at protecting insurers against major losses.
>
> The so-called Transition Reinsurance Program was designed as a three-year experiment to help guard against major premium hikes by offsetting the high cost to insurers of providing health care coverage to the least healthy Americans. Essentially, it helps to “smooth out losses” for insurance companies operating in the Obamacare individual market.
>
> But a tax imposed on all insurers in the country to fund the TRP and simultaneously bolster the U.S. Treasury has proven to be grossly inadequate. And an agency of the Department of Health and Human Services decided in 2014 to shift most of the funds to the reinsurance program without consulting Congress.

Senate Republicans are trying to block the bailout. And this is in addition to all the cost overruns of the Obamacare web site that taxpayers had to cover. Remember that?

Big government is inefficient and it costs taxpayers – not just the taxpayers of today, but the taxpayers who are not yet born. Obama doubled the national debt from 10 to 20 trillion, adding more to the debt than ALL the other Presidents put together. It was a mistake to elect this man, and then to re-elect him. We are paying for it now.

# William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

**Wintery Knight** · 16 June 2016 · Archived copy · Original

Below, please find my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

**The debaters**

- William Lane Craig
- Alex Rosenberg

Below is the summary.

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological

spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# DHS whistleblower: Obama administration not serious about Islamic terrorist threat

**Wintery Knight** · 17 June 2016 · Archived copy · Original

Is Barack Obama focused on protecting the American people?
This PJ Media article is by Debra Heine.

Excerpt:

> Philip Haney, the Homeland Security whistleblower whose investigation into Islamic infiltration of the U.S. might have prevented the San Bernardino attack, has written an important op-ed for The Hill, warning of President Obama's misplaced priorities when it comes to national security. In brief, says Haney, "the Obama administration is more concerned with the rights of non-citizens in known Islamist groups than with the safety and security of the American people."
>
> There are terrorists in our midst and they arrived here using legal means right under the noses of the federal law enforcement agencies whose mission is to stop them. That is not due to malfeasance or lack of effort on the part of these officers; it is due to the restrictions placed on them by the Obama administration.
>
> Not only did the Obama administration shut down an important investigation that could have connected enough dots to prevent the San Bernardino terrorist attack, they went back and erased the dots Haney was "diligently connecting." Worse yet, when he complained to the DHS inspector general, the DHS and the Department of Justice subjected him "to a series of investigations and adverse actions, including one by that same inspector general."
>
> None of them showed any wrongdoing; they seemed aimed at stopping me from blowing the whistle on this problem.

Debra links to Gates of Vienna and quotes them about that:

> The "behavioral indicators" listed to help DHS agents identify potential domestic terrorists include carrying around a copy of the Constitution, promoting First and Second Amendment rights, having a Gadsden flag sticker on one's car, and advocating for a minimal federal government.
>
> [The Obama administration's approach] is thus designed to serve a dual purpose: (1) to protect Muslim

> Brotherhood organizations and their operatives who have penetrated federal, state, and local governments, and (2) to help the Obama administration crack down on its real enemies, domestic conservatives who want to re-establish constitutional governance.

Debra wrote a couple of prior articles on this DHS whistleblower, one from 12/14 and one from 12/11.

So is it really true that the Obama administration – in their mad rush to let in hundreds of thousands of immigrants from countries that don't like Western civilization very much – is not serious about keeping terrorists out?

**Remember the recent San Bernadino attack?**

CBS News reported that 5 different Obama administration agencies failed to detect one of the San Bernadino terrorists:

> Tashfeen Malik arrived in the United States with her fiance Syed Farook in July 2014. Just two months earlier, her U.S. government background check found no suspected ties to terrorism.
>
> She was granted a K-1 visa, even though the FBI now believes she was radicalized before she met Farook.
>
> The State Department says Malik was thoroughly questioned during an interview at the U.S. embassy in Pakistan.
>
> […]Five U.S. agencies also vetted her, checking her fingerprints against two databases. Neither her name nor image showed up on a U.S. terror watch list.

It seems to me our national security agencies have been indoctrinated by their Democrat leaders to target conservative taxpayers instead of radicalized Islamists. And in fact we have evidence of that, reported in the Washington Times way back in 2009:

> The Department of Homeland Security is warning law enforcement officials about a rise in "rightwing extremist activity," saying the economic recession, the election of America's first black president and the return of a few disgruntled war veterans could swell the ranks of white-power militias.
>
> A footnote attached to the report by the Homeland Security Office of Intelligence and Analysis defines "rightwing extremism in the United States" as including not just racist or hate groups, but also groups that reject federal authority in favor of state or local authority.
>
> "It may include groups and individuals that are dedicated to a single-issue, such as opposition to abortion or immigration," the warning says.
>
> […]The nine-page document was sent to police and sheriff's departments across the United States on April 7 under the headline, "Rightwing Extremism: Current Economic and Political Climate Fueling Resurgence in Radicalization and Recruitment."
>
> It says the federal government "will be working with its state and local partners over the next several months" to gather information on "rightwing extremist activity in the United States."
>
> The joint federal-state activities will have "a particular emphasis" on the causes of "rightwing extremist radicalization."

The attacks by radical Islamic terrorists are happening because the Obama administration has taken their eyes off the threat from radical Islam, and has instead focused on YOU – the Christian conservative taxpayer who disagrees with abortion and gay marriage and big government socialism. You are the enemy they are watching. That's why the attacks that actually happen catch them by surprise.

We have terrorist attacks like San Bernadino and Orlando because the government we elected is led by moral relativists – secularist leftists who deny the reality of objective morality.  Their primary objective is not to protect

the taxpayers who pay their salaries and pensions. Their primary objective is to praise moral evil, and shame moral goodness. That's why they have nothing to say about the danger of radical Islam, and instead prefer to talk about expressing peaceful disagreement to their desire to redefine marriage. We are being governed by atheistic sociopaths who cannot reason about morality. And we elected them.

# Democrat weakness on national security and immigration causes terrorist attacks

**Wintery Knight** · 17 June 2016 · Archived copy · Original

Democrats think that the real threat to America is not radical Islamic terrorism
This is from David French in National Review.

Excerpt:

> Somehow, Omar Mateen's massacre has put American Christians on the defensive.

> We are now fully through the looking glass. A Muslim man walked into a gay nightclub and gunned down 49 men and women, most of them gay or lesbian. He paused in the middle of his massacre to call 911 and a local television station, making clear that he wanted the world to know he had pledged allegiance to ISIS. There are no dog whistles here. This is a textbook example of jihadism in action, plain and simple.
>
> Yet somehow, Omar Mateen's massacre has put American *Christians* on the defensive.
>
> Yesterday, Anderson Cooper grilled Florida attorney general Pam Bondi, accusing her of hypocrisy for expressions of support for slain Floridians. Why was she hypocritical? Because she opposed same-sex marriage:

Here's the video of that:

More from David French:

> Today, the *New York Times* editorialized about the domestic threat to LGBT Americans and declared that they were "casualties of a society where hate has deep roots." The "society" the *Times* condemned wasn't the ISIS caliphate — it was America, and specifically states such as Texas and North Carolina that are fighting federal edicts that demand that men should have access to women's restrooms. The *Times* couldn't bring itself to condemn Abu Bakr al-Baghdadi, but it attacked North Carolina governor Pat McCrory and Texas governor Greg Abbott.
>
> Even well-meaning Christians are adopting the secular-progressive line. In a viral Facebook post, popular writer and speaker Jen Hatmaker declared, "We cannot with any integrity honor in death those we failed to

> honor in life." She then proceeded to offer a standard leftist broadside against Evangelicals, arguing that *Christian* "anti-LGBTQ sentiment has paved a long runway to hate crimes."

A lot of Christians tend to go along with cultural trends because of emotions and peer pressure, especially if they haven't read anything on the issues. I expect that's what happened with Jen Hatmaker. Lack of knowledge lets emotions and peer approval dominate over Biblical convictions.

His conclusion:

> The principles, such as they exist, seem to be this: If you oppose same-sex marriage or mixed-gender bathrooms, then you not only can't legitimately grieve the loss of gay lives, you're *partially responsible* for the massacre in Orlando. Conservative efforts to protect religious freedom and freedom of association from unprecedented infringement will *kill people*. Never mind that all the actual evidence in the case points to Islamic motivations extrapolated from well-known and widely shared interpretations of Shariah law, somehow those darn Baptists are to blame.
>
> […]I don't have the words adequate to express my contempt for this view. Does any living, sentient being believe that if a Christian had launched this attack, these same liberals wouldn't blame his religious beliefs? The so-called "reality-based community" ignores the actual evidence in the attack — Mateen's own loudly declared jihadist beliefs — in an attempt to shame a community whose primary "sin" is opposing the sexual revolution.
>
> But there is something even more sinister at work than garden-variety anti-Christian bigotry, aided and abetted by gullible believers such as Hatmaker: Americans are being purposefully and intentionally distracted from our true enemies. Once again, the jihadist threat is being minimized.
>
> Some on the left simply refuse to believe what terrorists say about themselves and about their intentions. Osama bin Laden couldn't have *really* attacked the World Trade Center in part out of a desire to avenge Christians' 15th-century conquest of Muslim Spain. Iranian leaders don't *really* mean "death to America." Muslim nations that mandate the death penalty or other draconian criminal punishments for homosexuality don't *truly* express the will of their people.
>
> The result is bigotry running two ways — an unreasoning, irrational hatred of American Christians and a comprehensive denial of Muslim moral agency. American Christians are responsible for things they don't believe. Sharia-observant Muslims, by contrast, aren't responsible for the things they do believe.
>
> And make no mistake, said Muslims don't care a whit what the *New York Times*, Anderson Cooper, Jen Hatmaker, or any other anti-Evangelical terror apologist has to say. To them, one American life taken is as good as any other. They will attack again, maybe at another gay bar, or another office Christmas party, or a coffee house, or a sporting event, or a church. And when they do, there will surely be some Americans who excuse their actions out of eagerness to blame other Americans, instead.

I'm quoting a lot there, I really think it is appropriate that you read it if you feel anything like how I feel about this.

Let me make it clear. Democrats have been understating the threat of radical Islam for years. Importing radical Muslims by the bushel, appeasing Hamas, Hezbollah, etc., supporting the Muslim Brotherhood, opposing Israel, handing out billions to Iran to build nuclear bombs. They own the Orlando shooting. They own the San Bernadino shooting. They own the Boston marathon bombing. And so on. They caused all of it, and they are blaming the Christians just like Nero did, for problems they caused themselves. The Orlando shooter himself was a registered Democrat.

I feel that this foreshadows a time when Christians will be treated the same way by Democrats as the Jews were treated by the National Socialist party in 1930s Germany. It's in the ballpark. The irrational hatred and scapegoating is similar to what we've seen before from moral relativists in other times and places.

# A must-read series of posts on cosmic fine-tuning by Allen Hainline

**Wintery Knight** · 18 June 2016 · Archived copy · Original

Christianity and the progress of science

There are four posts in the series, so far. I think Allen might be done, so I'm going to link to all four and snip something I like from each one.

The first post is on whether the fine-tuning is real, and whether a multiverse explains the fine-tuning so that there is no need for a cosmic Designer.

I just have to choose this quote from the atheist Stephen Hawking on the fine-tuning:

> The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life. For example, if the electric charge of the electron had been only slightly different, stars would have been unable to burn hydrogen and helium, or else they would not have exploded. It seems clear that there are relatively few ranges of values for the numbers [i.e. the constants of nature] that would allow for development of any form of intelligent life.

And from Luke Barnes, who I've mentioned before on this blog:

> In my years of researching this topic, I'm amazed at how few scientists who have studied the fine-tuning details disagree with this core claim that the subset of life-permitting physics is a tiny fraction among possibilities. Since Luke Barnes is a top researcher on this topic, consider his input on the level of acceptance of the fine-tuning claim: *"I've published a review of the scientific literature, 200+ papers, and I can only think of a handful that oppose this conclusion, and piles and piles that support it.*[3]*"*

And on the multiverse as a way to escape the fine-tuning:

> The key issue though is that for the multiverse to be an adequate explanation for the fine-tuning it requires the conjunction of several hypotheses for which we lack *any* empirical evidence:
>
> 1. A universe-generating mechanism that generates a plethora of universes
> 2. That this mechanism doesn't itself require fine-tuning

> 3. The many-worlds interpretation of quantum physics
> 4. The ability to *widely* vary constants in those universes. If you think that it's a foregone conclusion that String Theory/M-Theory[8] will come to the rescue in this area, you should watch this video clip by Oxford physicist Roger Penrose where he exclaims that "it's not even a theory … it's a collection of hopes".
>
> Occam's razor therefore does seem to favor design over the multiverse. When one accounts for the extensive problems in affirming premise 2 and how these multiverse theories make predictions incompatible with our universe, the hypothesis that God designed the physics of the universe to bring about life is more plausible.

Here's the second post, where he explains the fine-tuning argument philosophically, and gives an example of one of the constants that has to be fine-tuned in order to support complex, embodied intelligence of any kind.

The cosmological constant:

> The inference to design will be more easily recognized if we shed some light as to the specialness of the required values. Consider the size of the bull's eye and wall based on just 1 parameter – the cosmological constant. There is a natural range for possible values for this constant because there are known contributions that are $10^{120}$times larger than the overall net value. (There is a near perfect but inexact cancellation of contributions accurate to 120 decimal places). Let's use the most conservative numbers in the physics literature that indicate a fine-tuning to 1 part in $10^{53}$. If the cosmological constant, which governs the expansion rate of the universe, had been larger than its current value by this tiny fraction, then the universe would have expanded so fast that no stars or planets would have formed and therefore no life. If the value were smaller by this amount then the universe would have rapidly collapsed before the universe cooled sufficiently to allow for stable information storage which is required by any self-replicating system such as life.

In the third post, he responds to objections to the fine-tuning argument. One objection you hear from atheists who don't understand the science is that any selection of constants and quantities is as likely as any other, so our life-permitting set is just random. Now, first off, there are only 10 to the 80 atoms in the visible universe, so if the cosmological constant is fine-tuned to 1 in 10 to the 120, it's not rational to say "it just happened randomly".

But here is Allen's response:

> However, the assumption that any set of constants is just as likely as any other is the very thing that we want to know. Starting off with that as an *assumption* begs the question against design. As Luke Barnes articulates in this excellent podcast dealing with responses to the fine-tuning claim, suppose we're playing poker and every time I deal I get a royal flush. If this continues to happen, you become increasingly convinced that I'm likely to be cheating. If I responded to an accusation of cheating by just saying "well any set of 5 cards is just as likely as any other so you can't accuse me of cheating" you would be rational to reject this explanation. The question is not "how likely is any set of 5 cards?" but rather "how likely is it I'm cheating if I just dealt myself 10 straight royal flushes?" This question accounts for the possibility that I'm cheating which would almost certainly be true in this scenario. So the right fine-question is "given the fine-tuning evidence, how likely is it that the constants were set at random?" The values for physical constants conform to a very particular pattern – that which supports life. The fact that we have so many finely-tuned constants makes it unlikely that they were all set at random (at least in the single universe scenario and I've already shown some of the problems/challenges in multiverse explanations.)

Every 5-card hand that you draw is equally unlikely, but the royal flush is the highest hand in the game and *always wins.* Every hand you draw is unlikely, but whatever you draw is overwhelmingly likely to not be a royal flush.

Finally, the fourth post deals with the objection that the constants and quantities could not have been other than they are.

He quotes physicist John Barrow giving 5 reasons why the constants can vary, and then this:

> Even if the constants and laws of physics couldn't vary, there is even more reason to think that there were many physically possible sets of initial conditions. Paul Davies states this emphatically:
>
> "Even if the laws of physics were unique, it doesn't follow that the physical universe itself is unique…the laws of physics must be augmented by cosmic initial conditions…there is nothing in present ideas about 'laws of initial conditions' remotely to suggest that their consistency with the laws of physics would imply uniqueness. Far from it…it seems, then, that the physical universe does not have to be the way it is: it could have been otherwise.[4]"
>
> John A. Wheeler agrees: "Never has physics come up with a way to tell with what initial conditions the universe was started off. On nothing is physics clearer than what is not physics."

The constants and quantities are not determined by physics. They were *selected* by whoever created nature in the first place.

So that's the series. I noticed that he kept linking to this Common Sense Atheism podcast featuring famous cosmologist Luke Barnes. I grabbed it to listen this weekend, and you might want to get it, too. It's over an hour. It seems like it is one stop shopping to understand common objections to the fine-tuning argument, and how strong each one is.

# William Lane Craig debates Peter Atkins: Does God Exist?

**Wintery Knight** · 19 June 2016 · Archived copy · Original

Here is the video of a debate with Peter Atkins, from the Reasonable Faith speaking tour in the UK:

This is a must-see debate. It was extremely fun to watch.

Details:

> On Wednesday 26th October 2011 William Lane Craig debated Peter Atkins on the topic: *Does God Exist?* This debate took place at the University of Manchester as part of the UK Reasonable Faith Tour with William Lane Craig. The debate was chaired by Christopher Whitehead, Head of Chemistry School at the University. Post-debate discussion was moderated by Peter S Williams, Philosopher in Residence at the Damaris Trust, UK.

Dr. William Lane Craig:

> **William Lane Craig** (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich in 1984.

Dr. Peter Atkins:

> **Peter William Atkins** (born 10 August 1940) is a British chemist and former Professor of Chemistry at the University of Oxford and a Fellow of Lincoln College. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, *Inorganic Chemistry*, and *Molecular Quantum Mechanics*. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.
>
> Atkins studied chemistry at the University of Leicester, obtaining a bachelor's degree in chemistry, and – in 1964 – a PhD for research into electron spin resonance spectroscopy, and other aspects of theoretical chemistry. Atkins then took a postdoctoral position at the UCLA as aHarkness Fellow of the Commonwealth fund. He returned to Oxford in 1965 as fellow and tutor of Lincoln College, and lecturer in physical chemistry (later, professor of physical chemistry).

You can get the audio of the debate here, along with links to their previous debate from 1998. This debate is accessible and understandable to novice-level Christians.

I am happy when debates like this come out. I have friends who are Christians who doubt the importance of apologetics in evangelism, because they don't think that apologists can prove anything or win arguments. I have friends who are skeptical of using arguments that assume a 14-billion year old universe, because they think that the Big Bang is compatible with atheism (!). I have friends who think that philosophical arguments have no persuasive

force. I have friends who think that nothing can be proven from history, beyond a reasonable doubt. I have co-workers who ask me whether anyone wins these debates. I think that this debate answers all of those questions.

This debate clearly shows why Christians should not shy away from studying science, philosophy and history. We will not discover anything that harms Christian theism by thinking logically and by looking at the evidence. To the contrary, it is the atheist who makes war on the progress of science, and who is forced to resist the clear experimental evidence, and to resort to baseless speculations and blind faith. If you want to see a good debate with an intelligent atheist, I recommend watching the debate between William Lane Craig and Peter Millican instead. But if you want to see a really, really overwhelming defeat for atheism, watch this debate. It is very clear at the end of this debate why Richard Dawkins refused to debate William Lane Craig at Oxford.

SUMMARY OF THE OPENING SPEECHES

I only had time to summarize the first two speeches. Keep in mind that Dr. Craig always shines in his rebuttals, and this debate is no different. So you'll want to watch those rebuttals. Dr. Atkins *literally* says in this debate in his first rebuttal "There was nothing here originally. There is nothing here now. But it is an interesting form of nothing which seems to be something." And the audience laughs nervously. This debate is like that. You will see a clear winner and clear loser in this debate. This fight is decided by knockout.

**William Lane Craig opening speech:**

1. the origin of the universe
2. the moral argument
3. the resurrection of Jesus

**Peter Atkins opening speech:**

1. Dr. Craig is stupid, lazy and evil:
– Dr. Craig's arguments are old: from the 11th century! Old arguments can't be true
– Dr. Craig is just asserting that "God did it" because he is lazy
– Dr. Craig feels pressured to agree with the theistic majority
– Dr. Craig needs a psychological crutch to comfort him
– Dr. Craig is fearful of death
– Dr. Craig is just wishing for an eternal life of bliss
– Dr. Craig is driven by his heart, and not by his head

2. Origin of the universe:
– Maybe the universe is eternal and has no beginning – we don't know
– Maybe mommy universes can give birth to daughter universes
– It is naive to think that a cause is needed to cause the creation of the universe from nothing
– Science is just about to show how it is possible that something appears out of nothing without cause
– Some scientists have already begun to speculate about about how something can come into being out of nothing
– Maybe nothing is not really nothing, but it is actually something
– It would be admitting defeat to say that God created the universe out of nothing

3. Fine-Tuning:
– It could be the case that the fundamental constants are not variable
– It could be the case that the fine-tuning of the cosmic constants is a happy accident
– It could be the case that there are billions of billions of unobservable universes that are not fine tuned
– It could be the case that the cosmic constants in these billions and billions of unobservable universes are all random so that some are fine-tuned
– Anyone who infers that an intelligence is the best explanation of a finely-tuned set of life-permitting cosmic constants is lazy

4. Purpose:
– Philosophers and theologians are stupid
– I don't think that there is purpose in the universe
– I think that the universe is more grand if there is no purpose, so there is no purpose

5. Miracles:
– I don't think that miracles happen
– The resurrection is a fabrication
– It could be the case that Jesus didn't exist
– It could be the case that Jesus wasn't really crucified
– It could be the case that Jesus didn't  really die after being crucified
– It could be the case that the disciples stole his body
– It could be the case that the women went to the wrong hole in the ground
– the gospels are political propaganda written long after the events they are reporting on

6. Theodicy:
– God has no morally sufficient reason for allowing humans to perform actions that result in suffering
– God has no morally sufficient reason for allowing nature to cause suffering

7. Morality:
–  customs and conventions emerges arbitrarily in different times and places based on an awareness of the consequences of actions, as well as various anecdotes and experiences
–  these customs and conventions are decided based on the goal for survival, in much the same way as politeness and manners emerge for decorum and to avoid offense
– it is childish to presume that there is an umpire God who decides moral values and duties

8. Religious believers are stupid, lazy and evil:
– the notion of God has arisen because people are stupid and want to be comforted
– there are no arguments or evidences for belief in God
– people who believe in God do not think, but instead take refuge in incomprehensible nonsense

# Obama administration will scrub “Islamic State” from Orlando terrorist’s 911 transcripts

**Wintery Knight** · 20 June 2016 · Archived copy · Original

Don’t worry, the real threat to America is climate change

So, Attorney General Loretta Lynch says that all references to Islamic motivations for the Orlando attack have to be removed from the 911 transcript, lest the public understand that this attack was actually another instance of radical Islamic terrorism.

Real Clear Politics reports:

> In an interview with NBC’s Chuck Todd, Attorney General Loretta Lynch says that on Monday, the FBI will release edited transcripts of the 911 calls made by the Orlando nightclub shooter to the police during his rampage.
>
> “What we’re not going to do is further proclaim this man’s pledges of allegiance to terrorist groups, and further his propaganda,” Lynch said. “We are not going to hear him make his assertions of allegiance [to the Islamic State].”

The Obama administration does not want any connection made by the public between this terrorist attack and radical Islam – even though the terrorist himself made them. It all has to be covered up, because the first duty of the Democrat Party is not to protect you from crime or terrorism. Their job is to make radical Islamic terrorists look as peaceful as the Girl Scouts. That’s what you’re paying them taxpayer dollars to do, isn’t it?

**The Obama administration’s plan to protect us**

So, there is a plan to protect us from terrorist attacks, and it was announced by Obama’s attorney general, Loretta Lynch. Are you ready for the plan? This is the great plan that moral relativists on the secular left are offering to protect us. Are you ready?

Here it is from the Daily Wire:

> Speaking to the audience at the Muslim Advocates’ 10th anniversary dinner Thursday, Lynch said her “greatest fear” is the “incredibly disturbing rise of anti-Muslim rhetoric” in America and vowed to prosecute any guilty of what she deemed violence-inspiring speech.

> "The fear that you have just mentioned is in fact **my greatest fear** as a prosecutor, as someone who is sworn to the protection of all of the American people, which is that the rhetoric will be accompanied by acts of violence," she said.
>
> […]After touting the numbers of "investigations into acts of anti-Muslim hatred" and "bigoted actions" against Muslims launched by her DOJ, Lynch suggested the Constitution does not protect "actions predicated on violent talk" and pledged to prosecute those responsible for such actions.

Attorney General Loretta Lynch declined to charge Lois Lerner for using the IRS as a weapon to persecute conservative groups in an election year.

What did the IRS do?

Wall Street Journal explains:

> Three years on, the Internal Revenue Service has finally handed over its list of the organizations the agency's tax-exempt division targeted for their political views. All it took to shake the disclosure from the agency were dozens of lawsuits and a federal appeals-court order.
>
> In a court filing last month, the IRS produced a list of 426 groups that were singled out for special scrutiny and in some cases had approval of their application for tax-exempt status delayed. The filing was in response to a lawsuit by NorCal Tea Party Patriots, which has struggled for three years to get the agency to acknowledge the names of those it mistreated, so that the targets have the option of joining the litigation. The targets run the gamut from big outfits such as the Tea Party Patriots to local groups that used the "tea party" moniker.
>
> The list doesn't include 40 groups that have already opted out of the suit, so the actual number targeted is 466. The lawsuit's goal is to find out how the targeting occurred and to seek damages for "viewpoint discrimination," among other legal violations.

So, no prosecution for the IRS fascists, but you'll likely be prosecuted by the government if you report suspicious behavior by radicalized Muslims.

Do you feel safe now? Do you think that the Democrats are serious about the threat of Islamic terrorism? Do you think that you should elect the Democrats again in November 2016?

# Southern Baptists stand up for traditional marriage, freedom of conscience and religious liberty

**Wintery Knight** · 20 June 2016 · Archived copy · Original

Winston Churchill on appeasement

Life Site News reported on a resolution by the largest Protestant denomination.

Excerpt:

> Southern Baptists voted to officially defend marriage, religious freedom and natural gender at their annual meeting this week, making strong statements against controversial measures over the last year that pose a threat to each.
>
> In addition to laying out the definition of marriage as being between one man and one woman, the Southern Baptist Convention (SBC) passed a resolution specifically rejecting last year's Supreme Court Obergefell decision redefining marriage, along with Barack Obama's "guidance" requiring public schools to provide transgender bathroom access, handed down last month.
>
> "The Supreme Court's Obergefell decision in 2015 purporting to redefine marriage does violence to the Constitution and is contrary to the Bible and natural order," the resolution states. "The Obama Administration's recent 'guidance' requiring transgender access in public school bathrooms and locker rooms based on itsunauthorized redefinition of 'sex' in federal law rejects God's design of male and female."
>
> The declaration, titled, "On Biblical Sexuality and the Freedom of Conscience," was adopted with overwhelming support from the more than 7000 conference participants, Juicy Ecumenism reports, part of what led to made many there terming the gathering a historic event.
>
> "We dissent from the Obergefell opinion that purports to redefine the institution of marriage created by God," the Baptist resolution states, along with pledging to strengthen Biblical marriage in homes, schools and communities. "We applaud and support the efforts of eleven state attorneys general in their challenge to the Obama Administration's transgender 'guidance.'"
>
> The nation's largest Protestant denomination affirmed the Biblical definition of marriage at its conference last year, just prior to the Obergefell ruing being released in late June.
>
> The year prior at the annual meeting the SBC voted to oppose "sex reassignment" surgery, urging transgender people to "trust in Christ and to experience renewal in the Gospel," and affirming "God's good design that gender identity is determined by biological sex and not by one's self-perception."
>
> Baptists met for this year's conference Tuesday and Wednesday this week in St. Louis, reaffirming love for individuals identifying as transgender in their convention statement, "seeking their good always," and offering them welcome in Baptist churches.

> "God alone is Lord of the conscience," Baptists said in their resolution, making several references supporting religious freedom protection and the Religious Freedom Restoration Act (RFRA).
>
> "Any law that directly contradicts natural law and biblical truth is an unjust law," it states. "Our highest respect for the rule of law requires that we not affirm an unjust law that directly contradicts higher law."
>
> **They also made mention of recent religious liberty attacks suffered by U.S. citizens targeted for their biblical values, stating, "Business owners and employees of various faiths are increasingly faced with decisions to submit to unjust laws about marriage and sexuality or violate their consciences."**
>
> **"Experience and recent history have shown that when the government redefines marriage as anything other than between a man and a woman, the police power of the state is brought to bear to enforce that redefinition," their resolution continued, "resulting in an inevitable collision with religious freedom and conscience rights."**
>
> **Baptist convention attendees also voted to call on the U.S. Congress to pass the First Amendment Defense Act, along with civic leaders at all levels to pass legislation supporting religious freedom, and stated their unity with those persecuted for their religious convictions on marriage.**

The First Amendment Defense Act is our best chance at stopping the attacks by the Democrats on free speech and religious liberty. Ted Cruz had vowed to pass the First Amendment Defense Act – he is the co-sponsor of the legislation. If we had selected Cruz as the nominee, we would have got this passed. But, we selected Donald Trump, who promised gay activists "forward motion" on gay rights issues. He gets an F from marriage rights activists on gay rights issues, which is not surprising given his history of political donations to Democrats and sexual immorality. Barack Obama and Hillary Clinton are (of course) champions of gay marriage and the gay rights movement, and they oppose free speech, freedom of conscience and religious liberty.

# California legislature seeks to shut down Christian colleges and universities

**Wintery Knight** · 21 June 2016 · Archived copy · Original

Young people seem to like gay marriage more than they like individual liberties

This is from Mere Orthodoxy, and it concerns Biola University, an evangelical university that specializes in Christian apologetics.

Excerpt:

> Biola University, located in Southern California and one of the country's most well-known and prestigious evangelical colleges, now finds itself arguing for its right to be evangelical. The state legislature is seeking to amend a non-discrimination law which would stipulate that the only schools that can be granted religious exemptions to the non-discrimination statutes are schools that exist for the training of pastors and theological educators. Schools that offer more general programs—like a degree in humanities, engineering, or public education—would be required to submit to the non-discrimination law, effectively ending any legal protection for colleges and universities that want to only admit professing Christians or maintain campus-wide spiritual life programs.
>
> The effect of the amendment would be to redefine religious liberty so as to make a clear distinction between institutions that integrate religious faith and public vocation and those that focus only on parochial training. Conceivably, supporters of the bill are fine with the idea of students receiving a religious education that teaches that marriage is the union of a man and a woman, and that sexual expressions outside this category are morally problematic—**as long as this education is clearly not intended to go beyond the walls of a church service or a seminary lecture hall.** Pastors and polemicists, yes. Business managers and brain surgeons, not so much.
>
> Such a distinction is one that owes much to a faulty understanding, increasingly common on the Left, of what it means to be "religious." Conservatives have warned for some time now of a serious attempt by sexual revolutionaries to make religious belief synonymous with religious worship; ergo, the private ritual of religion is what's protected by "free exercise," not the living out of such beliefs in the public square. The language desired by the California legislature feels like a clear substantiation of this concern.
>
> Would the amendment protect students from discrimination? Certainly, the amendment would probably

> initiate the shuttering of several California colleges that LGBT activists would consider “discriminatory.” Because the non-discrimination law applies just as much to religion as it does to sexual orientation or gender identity, the language would essentially force Christian schools to relinquish their confessional identity—they could be sued, for example, for refusing to hire an atheist to teach sociology, or denying tenure to a New Age transcendentalist professor of comparative religion. What sounds like fairness to many progressives is in reality the dismantling of the idea of Christian education.

The California Democrats don’t want people to have a Christian worldview outside of the doors of the church or school. You might remember that Obama himself has tried to push this view that there is no knowledge content to Christianity, that it’s just about church worship and having feelings of comfort. Democrats are fine with privatized religion like that, but not with practical application of what the Bible says, across all disciplines, out in the real world. They want to stop that, because they want to rule everything outside of the church walls.

What was really interesting to me is how the article noted that even at Biola University there are gay activist groups pushing the gay agenda. It can be very tempting to people to swing towards liberal opinions when they don’t have any grounding in facts. Is Biola doing a good job of sharing pro-marriage arguments and evidence to students? Why not make it mandatory that every student has to read books like “Truth Overruled?” by Ryan Anderson? If Christianity is just about reading the Bible and being nice to others, then there will be a falling away from Biblical moral values. Those values are not popular with the feelings crowd, and “the Bible says” does not stand up to the hurt feelings of sinners in a culture obsessed with feelings over moral obligations. A Christian has to be informed to stand up for what the Bible says. Does Biola have a plan to connect the Bible to arguments and evidence when it comes to moral issues?

# New study: birds are as intelligent as macaques and other mammals

**Wintery Knight** · 21 June 2016 · Archived copy · Original

Female cockatiel lets a trusted friend spread her wing for inspection

Evolution News reports on a new study about my favorite creatures of all: birds!

It says:

> Next time someone calls you a birdbrain, smile and say "thank you." Our feathered friends come well equipped with hardware and software for complex behaviors. A new study published in the *Proceedings of the National Academy of Sciences* puts birds on par with macaques and other mammals, and even suggests they can think.
>
> Here's what the news from Vanderbilt University says about the results of a detailed study by researchers primarily from the University of Prague, with additional team members from Austria, Brazil, and the United States:
>
> The macaw has a brain the size of an unshelled **walnut**, while the macaque monkey has a brain about the size of a **lemon**. Nevertheless, the macaw has **more neurons** in its **forebrain** — the portion of the brain associated with intelligent behavior — than the macaque.
>
> That is **one of the surprising results** of the **first study to systematically measure the number of neurons in the brains of more than two dozen species of birds** ranging in size from the tiny zebra finch to the six-foot-tall emu, which found that they**consistently have more neurons packed into their small brains**than are stuffed into mammalian or even primate brains of the same mass. [Emphasis added.]
>
> How is this possible? The answer includes miniaturization and efficient packaging:
>
> That is possible because the **neurons** in avian brains are **much smaller and more densely packed** than those in mammalian brains, the study found. **Parrot and songbird** brains, for example, contain about **twice as many neurons as primate brains of the same mass and two to four times as many neurons as equivalent rodent brains.**
>
> Not only are neurons packed into the brains of parrots and crows at a much higher density than in primate brains, but the **proportion of neurons in the forebrain** is also **significantly higher**, the study found.
>
> The scientists note that even despised birds like pigeons show much the same brain power. Powered flight, obviously, takes a lot of hardware and software to operate in any bird; how much so in the supreme flyers Illustra Media showed in *Flight: The Genius of Birds*: starlings, Arctic terns, and especially the tiny

> hummingbirds? […]The small heads of birds belie the observations of complex behaviors they perform.
>
> But it's not just routine tasks the brains must perform. Some birds can remember where they stored hundreds of seeds. Birds have been observed to hide a seed while another bird is watching, then move it when the neighbor is gone — indicative of a possible 'theory of mind' that shows planning and recognizing what the other bird is thinking.
>
> The study provides a straightforward answer to a **puzzle** that comparative neuroanatomists have been wrestling with for more than a decade: **how can birds with their small brains perform complicated cognitive behaviors?**
>
> The conundrum was created by a series of studies beginning in the previous decade that **directly compared the cognitive abilities of parrots and crows with those of primates.** The studies found that the **birds could manufacture and use tools**, use insight to **solve problems**, make **inferences about cause-effect relationships**,**recognize** themselves in a mirror and **plan** for future needs, among other cognitive skills previously considered the exclusive domain of primates.
>
> Indeed, crows have shown the ability to solve a puzzle made famous in an Aesop's fable (*Reuters*): dropping stones in a pitcher to raise the water level in order to get a drink. New Caledonian crows have shown the ability to use three tools in succession to reach a food source (*BBC News*). Owners of parrots know the cleverness of their pets; their ability to mimic human speech and singing is astonishing. Some cockatiels can even do the Riverdance.

I love cockatiels and green cheek conures, they are my absolute favorite birds. Absolutely adorable creatures!

Anyway, the rest of the Evolution News post notes that this intelligence is a problem for naturalistic evolution. Specifically, it's a convergence problem – the same capabilities being evolved independently, without recent shared common ancestry. How can birds and mammals, who don't share recent common ancestors, have evolved the same capabilities, e.g. – vocal learning pathways, by chance? There is an explanation that does explain the observations, however – common designs made by a single designer.

# Report: Common Core does not prepare students for college

**Wintery Knight** · 22 June 2016 · Archived copy · Original

Cato Institute graphs education spending against test scores

First, let's recall why Common Core was enacted by the Democrats by excerpting this post from The Pulse.

It says:

> When Common Core was sprung on the whole nation in 2010, it promised that every kid graduating high school will be "career- and college-ready." Career-readiness was quickly left by the wayside — nobody, including the NAGB [National Assessment Governing Board], could figure out what it means — but college-readiness remained the "chicken in every pot" promise of Common Core.

The Daily Signal reports on a new report by the American College of Testing, the group behind the ACT college readiness test.

Excerpt:

> A recently released report confirms what Common Core critics have suspected all along: Common Core State Standards do not adequately prepare students for college-level work.
>
> The ACT report finds many concerning shortcomings in the Common Core State Standards, which have been adopted by most states. Notably, the report reveals:
>
> - "While secondary teachers may be focusing on source-based writing [essays written about source-based documents], as emphasized in the Common Core, college instructors appear to value the ability to generate sound ideas more than some key features of source-based writing.
> - "Some early elementary teachers are still teaching certain math topics omitted from the Common Core standards, perhaps based on the needs—real or perceived—of students entering their classrooms.
> - "In addition, many mathematics teachers in grades 4–7 report including certain topics relevant in STEM coursework in their curricula at grades earlier than they appear in the Common Core."
>
> Teachers who must adjust their curriculum to fit Common Core aligned state tests now find themselves in a

> bind. As the report finds, the Common Core math standards do not adequately provide a child with the skills needed to succeed in the classroom, forcing teachers to add on extra material to their limited instruction time.
>
> Additionally, high school English teachers must now emphasize material that leaves students lacking in original thought and analytical skills, according to many college professors. For example, only 18 percent of college professors surveyed rated their students as prepared to distinguish between opinion, fact, and reasoned judgement—a skill determined to be important for college-level work.
>
> The "one-size-fits-all" national standards are underserving American children. It is nearly impossible, and does a great disservice to future generations, to demand uniformity and place restrictions on the classroom that assumes one "best practice."

Common Core was designed to better prepare students for college, but now we know that it had the exact opposite effect from what the leftists intended – and what the leftists promised us. Just like Obamacare, we elected people who didn't know what they were doing, did something that made the problem worse, and wasted a ton of taxpayer money in the process. Failure across the board.

One obvious point to make about Common Core is that conservatives are right when we say that education is a state and local issue. It shouldn't be a federal level issue. Ted Cruz was going to abolish the Department of Education at the federal level and push it down to the states, so that we wouldn't have screw-ups like this. Just think of all the money that's been wasted on Common Core, and now we find out that it's a disaster, just like Head Start.

Big government liberals like the idea of making everything equal, but if everything is equally *bad* then we really should let parents decide how to educate their kids. They'll make better choices than secular leftist educrats anyway. The right solution is to give the parents a voucher, and let them choose which school to send their child to – and homeschooling parents should not have to pay into a system that they don't even use.

# Information Enigma: 21-minute video explains intelligent design

**Wintery Knight** · 22 June 2016 · Archived copy · Original

Can random mutation and natural selection create new functional information?
The video is here:

I have read and listened and watched a lot of material on intelligent design, but I have never seen so much value packed into such a short lecture. I really hope you'll watch this and that it's helpful to you.

Summary:

- the big question when discussing the origin of life: where did the information in living systems come from?
- Until 530 million years ago, the oceans were largely devoid of life
- In a 10 million year period, many new forms of animal life emerged
- New biological forms of life require new information
- the discovery of DNA shows that living systems work because cells have information that allows them to build the components of molecular machines: cell types, proteins, etc.
- can random mutation and natural selection create new functional information?
- normally, random mutations tend to degrade the functionality of information, e.g. – randomly changing symbols in an applications code does not usually introduce useful new functions, it usually renders what is there non-functional
- the majority of possible sequences will NOT have functions, so random mutations will more likely give you non-functional code, rather than functional code
- example: a bicycle lock  with 4 numbers has many possible sequences for the 4 numbers, and only one of them has unlock functionality, the rest have no functionality
- if you have lots of time, then you might be able to guess the combination, but if the lock as has 10 billion numbers, and only one combination that unlocks, you can spend your whole life trying to unlock it and won't succeed
- how likely is it to arrive at a functional protein or gene by chance? Is it more like the 4-dial lock (can be done with lots of time) or the 10 billion dial lock (amount of time required exceeds the time available)?
- the probability is LOW because there is only one sequence of numbers that has unlock function
- consider a short protein of 150 amino acids has 10 to the 195th power possible sequences
- if many of these sequences of amino acides had biological function, then it might be easier to get to one by random mutation and selection than it is with a lock that only unlocks for ONE sequence
- how many of the possible sequences have biological function?
- Thanks to research done by Douglas Axe, we now know that the number of functional amino acid sequences for even a short protein is incredibly small…
- Axe found that the odds of getting a functional sequence of amino acids that will fold and have biological

function is 1 in 10 to the 77th power

- Is that number too improbable to reach by chance? well, there are 10 to 65th atoms in the entire Milky Way galaxy… so yes, this is a very improbable outcome
- can random genetic mutations search through all the sequences in order to find the one in 10 to the 77th power one that has biological function? It depends on how much guessers we have and how many guesses we get in the time available
- even with the entire 3.5 billion year history of life on Earth, only about 10 to the 40th organisms have ever lived, which far smaller fraction of the 10 to the 77th total sequences
- even with a very fast mutation rate, you would not be able to reach a functional protein even with all that time, and even with all those organisms

I was once having a discussion with a woman about the research that Axe did at the Cambridge University lab. He published four articles in the Journal of Molecular Biology. I held out one of the papers to her and showed her the numbers. She said over and over "I hate the Discovery Institute! I hate the Discovery Institute!" Well, yeah, but you can't make the Journal of Molecular Biology go away with hating the Discovery Institute. JMB is peer-reviewed, and this was experimental evidence – not a theory, not a hypothesis.

We have been blessed by the Creator and Designer of the universe in this time and place with *overwhelming evidence* – an abundance of riches. For those who have an open mind, this is what you've been waiting for to make your decision. For the naturalists who struggle so mightily to block out the progress of experimental science, they'll need to shout louder and shut their eyes tighter and push harder to block their ears. Maybe if they keep screaming "Star Trek" and "Star Wars" over and over to themselves, they will be able to ignore the real science a little longer.

# Obama administration rejects “right of conscience” complaint from pro-life groups

**Wintery Knight** · 23 June 2016 · Archived copy · Original

Barack Obama speaking to Planned Parenthood
This is from the radically leftist Los Angeles Times.

They write:

> Thee Obama administration on Tuesday rejected a “right of conscience” complaint from anti-abortion groups in California who objected to the state’s requirement that health insurance plans include coverage for elective abortions.
>
> The civil rights office at the Department of Health and Human Services said it had completed an investigation and dismissed several complaints after concluding California’s policy did not violate a decade-old rule adopted by Congress, known as the Weldon Amendment.
>
> The office said the provision, which protects doctors, nurses, hospitals and other healthcare providers who object to performing abortions, does not extend to health insurance firms that have no moral objection to providing abortion coverage and instead are acting on the request of religious-minded customers.
>
> The decision upholds a move by the California Department of Managed Care, which notified seven insurance providers in 2014 that state law does not allow them to offer coverage that limits or excludes abortions for some employers. The issue arose when faculty members at Loyola Marymount University in Los Angeles and Santa Clara University objected to this limitation in their insurance plans.

So, the religious schools and institutions cannot have plans that exclude abortion, because the Obama administration does not recognize the right of religious organizations to refuse to fund abortion. But the Obama administration *does recognize* the obligation of pro-life taxpayers to continue to pay the salaries and benefits of their Democrat overlords. You must pay the taxes for government, you just don’t get a say in what government does.

Alliance Defending Freedom reacted to the decision so:

> Lawyers for the Alliance Defending Freedom, which filed one of the complaints, denounced the HHS decision.
>
> “The Obama administration is once again making a mockery of the law,” said Casey Mattox, senior legal counsel for the alliance. “The state of California has ordered every insurer, even those insuring churches, to cover elective abortions in blatant violation of the law. We will continue to defend churches from this clear violation of the 1st Amendment and federal law and call on Congress to hold HHS accountable.”

I know that sometimes people vote for bigger government because they want a handout taken from their neighbors. But money isn’t everything – some things are more important. Like not violating the consciences of Christians. Don’t make Christianity harder for Christians to practice.

# New study: working longer hours harms women, but protects men

**Wintery Knight** · 23 June 2016 · Archived copy · Original

My favorite painting: "Godspeed" by Edmund Blair Leighton, 1900
This is from the UK Telegraph, and it's a nice confirmation of sex differences.

Excerpt:

> Women who put in long hours in their careers greatly increase their risk of developing life-threatening illnesses, including heart disease and cancer, a new study has shown.
>
> Work weeks that averaged 60 hours per week or more over three decades were found to triple the risk of diabetes, cancer, heart trouble and arthritis, according to new research from The Ohio State University.
>
> The risk begins to climb when women put in more than 40 hours and takes a decidedly bad turn above 50 hours, researchers found.
>
> Crucially the same pattern was not seen in men. In fact, they got healthier the longer they worked.
>
> […]Men who worked long hours had a higher incidence of arthritis, but none of the other chronic diseases.
>
> Surprisingly, those men who worked moderately long hours, 41 to 50 hours weekly, had lower risk of heart disease, lung disease and depression than those who worked 40 hours or fewer.
>
> […]The research was published in the Journal of Occupational and Environmental Medicine.

Recently, I was very much in love with a woman I'll call Gertrude and I can remember thinking often about how much I wanted to work so that she wouldn't have to work. I wanted to go out there every day and make money for us both, so that she wouldn't have to face the world and all the pressures and difficulties of a job. I wanted her to stay safe at home and make the home comfortable and raise children who would respect their father and know and serve the Lord. There is something inside a man that translates love into "wanting to take away trouble from his woman", and that was a very strong feeling for me at the time. I did not mind that she worked before we married and before children arrived. I did not mind that she pursued advanced degrees after marriage, did things in the

community, or organized Christian events at the university. I just didn't want her to have to face work. I wanted to protect and provide for her, and rescue her from work.

I think more women are expected to work today because government is so big that more taxes and more debt are needed to fund all the programs. That makes marriage and family harder to do on one man's salary. This also might be one reason why men are reluctant to marry. Every man knows for certain that a woman who does not work makes a gentler and more faithful wife and mother. A woman who works is inevitably going to have more stress, which makes being a good wife and mother harder. Women who work also cheat on their husbands more than women who don't work. My friend Dina tells me that about 90% of the women she works with withhold sex from their husbands, and many of those husbands have tuned out of the marriage, as a result of not getting their needs met. Some have gone on to have affairs, and that's to be expected, especially if the woman chose a man who had recreational premarital sex before she married him.

The bottom line is that through their voting and life decisions, women often create the very problems that they later blame on men. A little wisdom would go a long way.

# Supreme Court upholds court of appeals ruling against Obama's executive amnesty

**Wintery Knight** · 24 June 2016 · Archived copy · Original

Is Barack Obama focused on protecting the American people?
The Weekly Standard explains.

Excerpt:

> The Court's annual term is drawing to a close, and the most closely watched case was, far and away,U.S. v. Texas—the Obama administration's attempt to overturn the lower courts' decisions blocking the administration's policy of non-enforcement of federal immigration laws.
>
> This case raised technical legal issues: whether the administration violated basic requirements of federal administrative law by failing to subject the policy to public notice and comment proceedings before adopting the policy; and whether Texas and other states have legal "standing" to challenge this policy in federal court.
>
> But above all else, this case drew attention because of the basic constitutional issue: namely, whether the president was violating his constitutional duty to "take care that the laws be faithfully executed," a duty reflected in the oath each president swears to "faithfully execute the Office of President of the United States," and "to the best of my ability, preserve, protect and defend the Constitution of the United States." (Or, in the case of President Obama's first inauguration, an obligation to which he nearly swore an oath, before swearing the full oath a day later.)
>
> Those basic constitutional principles made U.S. v. Texas not just the biggest constitutional case of the year, but the most significant separation-of-powers case in recent memory. Court watchers have been waiting for the Justices' opinions, although always under the risk that Justice Antonin Scalia's passing might leave the Court deadlocked four to four.
>
> Today, the Court issued its decision—or, more specifically, its non-decision. The Justices published no opinions. In a one-page, one-sentence order, the Court announced, simply, that "[t]he judgment is affirmed by an equally divided Court." The order was unsigned, and we don't know how the eight justices voted on the issues at hand—although one would begin by guessing that the Court broke along familiar lines, with Justices Ginsburg, Breyer, Sotomayor, and Kagan generally favoring the administration, and Chief Justice Roberts and Justices Thomas, Kennedy, and Alito favoring Texas. (The breakdown may well have been quite different on

> the question of Texas's standing to sue.)
>
> As a result, the Fifth U.S. Circuit Court of Appeals' ruling against the administration stands, making today's immediate winners Texas and its fellow states. The litigation will return to the lower courts, where the case is still technically at a preliminary stage—that is, the courts granted Texas a "preliminary injunction" freezing the law while the case can be fully litigated. Yet the lower courts' decisions, while technically preliminary, were sufficiently firm in declaring the administration's policy unlawful that the Obama administration enjoys little hope of rescuing the policy before the end of President Obama's term.

Well, that's some good news, and this was an important non-decision. This isn't the first time that the President has broken the law – not by a long shot. His entire administration has been lawlessness after lawlessness. The refusal to defend the Defense of Marriage Act is one case, the persecution of conservative and Christian groups using the IRS is another. There are many more. This time, the SCOTUS finally stopped his abuse of power one time.

I wish we had a candidate running in this election who could be counted on to respect the Constitution and the rule of law, which Obama never did. Unfortunately, no matter which candidate wins, I think we can look forward to executive branch overreach.

# Wayne Grudem explains male leadership in marriage

**Wintery Knight** · 24 June 2016 · Archived copy · Original

Man helping a woman with proper handgun marksmanship

I'm not willing to take advice on this from most pastors, but Wayne Grudem is someone I respect because he does such a good job of applying the Bible to political issues. So he's practical.

Anyway, here is something he wrote that was shared by a newlywed couple I am friends with.

Excerpt:

> Someone might say, "Well, okay, fine. There's a leadership role for Adam, and I guess that means husbands should have a leadership role in their marriage of some sort. But how does it work? How does it work in practice?"
>
> In our own marriage, Margaret and I talk frequently and at length about many decisions. I can tell you that I wouldn't be here tonight unless Margaret and I had talked about this and asked the Lord about it, and she had given blessing to it, and said, "Yes, I think that's right." Sometimes we make large decisions such as buying a house or a car, and sometimes they are small decisions like where we should go for a walk together. I often defer to Margaret's wishes, and she often defers to mine because we love each other.
>
> In almost every case, each of us has some wisdom and insight that the other does not have. Usually, we reach agreement on the decisions that we make. Very seldom will I do something that she doesn't think is wise–I didn't say never. She prays; she trusts God; she loves God. She is sensitive to God's leading and direction, but in every decision, whether it large or small and whether we have reached agreement or not, the responsibility to make the decision still rests with me.
>
> Now, I am not talking about every decision they make individually. Margaret controls a much larger portion of our budget than I do because all the things having to do with the household and food and clothing and house expenses and everything . . . she writes the checks and pays the bills. I take care of buying books and some things about the car. I have appointments during the day with students. She doesn't get involved in that. She has her own appointments. She has her own calendar. I don't get involved in trying to micromanage all of that. We have distinct areas of responsibility. I am not talking about those things. I don't get involved in those things unless she asks my counsel.
>
> But in every decision that we make that affects us together or affects our family, the responsibility to make the decision rests with me. If there is genuine male headship, I believe there is a quiet acknowledgement that the

> focus of the decision making process is the husband, not the wife. Even though there will often be much discussion and there should be mutual respect and consideration of each other, ultimately the responsibility to make the decision rests with the husband. And so, in our marriage the responsibility to make the decision rests with me.
>
> This is not because I am a wiser or more gifted leader. It is because I am the husband. God has given me that responsibility. It is very good. It brings peace and joy to our marriage, and both Margaret and I are thankful for it. Now, I need to add very quickly, men, this does not mean that a husband has the right to be a selfish leader.
>
> Just about three years ago, maybe four years ago now, we started the decision making process. Margaret had been in an auto accident in Chicago. As part of the aftermath of that accident, she was experiencing some chronic pain that was aggravated by cold and humidity, and Chicago is cold in the winter and humid in the summer. Chicago was not a good place for that. Some friends said to us, "We have a second house in Mesa, Arizona, if you would ever like to go there and just use it as a vacation place, we would like you to do that."
>
> So we did. We visited Arizona. Mesa is a suburb of Phoenix. Margaret felt better. It was hot, and it was dry. And so I said, "Wow, Margaret I would love to move here, but I am only trained to do one thing; I can teach at a seminary and that is it. There aren't any seminaries here." The next day Margaret was looking in the yellow pages–literally. She said, "Wayne, there's something here called Phoenix Seminary." One thing led to another and God was at work in that seminary, and it was starting to grow.
>
> Then we went through a decision making process. When we were in the middle of that decision making process, on the very day that we were focusing on that, I came in my normal custom of reading through a section of scripture each day, I came to a Ephesians 5:28, "Even so husbands should love their wives as their own bodies."
>
> I thought if I would move to take a job in another city for the sake of my body, if I were experiencing the pain that Margaret had, and husbands should love their wives as their own bodies–then shouldn't I move? Shouldn't I be willing to move for Margaret's sake? That was really why we moved to Phoenix.

Anyway, Dina and I were talking the other night about what would happen if – hypothetically – we suddenly found ourselves stuck with a child and responsible for it's education. I said to Dina that I would have a meeting with her, and ask her to research all of the alternative forms of schooling, and look over the research on education and then come back with her recommendation about what would get us the most effectiveness for the least cost and risk. Dina said that she thought that was an excellent plan, but being the kind of person she is, she would not wait to be asked to do this, but would instead pro-actively go and do the work and then present it to me to make the decision. A wife is a chief of staff, she does the research. She has to know all the politics. She has to do the face to face conversations. She has to make all the calculations. She has to be good at putting aside her feelings and being logical and analytical, in order to get results.

I think a lot of people worry that male headship means that husbands will micromanage like a tyrant, but that's just wrong. That's not at all what a man learns about how to lead others, in his workplace. A man looks for a wife with skills and experience to solve these sorts of problems for him while he is out working, and without needing a lot of guidance or monitoring from him. Micromanaging makes them both less efficient and more stressed. The more education and work history she has before she marries, the better she will be at solving problems on her own initiative. I always encourage young women to study hard things and to do hard jobs, but to stop working when young children appear (the first five years of the child's life are critical). Learning hard things and doing hard jobs makes them more prepared for the roles of wife and mother.

Similarly, a wife does not want to choose a poor leader for a husband. She wants to choose someone who makes good decisions, and follows a plan through to a result. She should be looking at his decision making, especially in education, work and finances, and deciding whether he can do the male roles in a marriage. She should be looking at his leadership style and communication ability. These things are well-defined, and she should be able to assess his

ability by looking at his life to see if anyone follows his lead at work or outside of work on anything that matters. Does he reach the goals that he plans to reach? Is he realistic about risks and costs? She has to do an assessment of his leadership ability, because if she marries him, he will be leading her. Naturally, she will have to know something about leadership first, and know something about men, and what men expect to achieve with their marriages. What is his plan?

The easiest way for a man to avoid marrying a woman who resists his leadership is to not marry her. And the easiest way for a woman to avoid marrying a man who does not delegate tasks to her that she is better at is to not marry him. We are responsible for these decisions. As long as you don't follow your feelings and intuitions, you'll be fine. Don't marry someone unless you have observed them demonstrating their ability to do the marriage roles cheerfully and well.

# Walt Russell explains how to read the Bible effectively

**Wintery Knight** · 25 June 2016 · Archived copy · Original

Bible study that hits the spot

Dr. Walt Russell's book on the subject of interpreting the Bible is called "Playing With Fire: How the Bible Ignites Change in Your Soul". I like that book, but I found four articles that summarize the main points of the book so people can understand how to read the Bible at a high livel.

Here is part one which talks about how postmodern relativism is at odds with discovering the original intent of an author.

Excerpt:

> Twenty-four year-old "Janet" (not her real name) was angry at my emphasis on seeking to discover authors' intentions when we read their texts. She was an evangelical Christian and a second grade teacher in a public school. She prided herself in helping her 20 students learn to love literature. She would read them a story as they gathered around her, and then ask each child, "What does the story mean to you?" She prodded them to come up with their own unique meanings. With such strong encouragement, the class of 20 would eventually have 20 different meanings for the one story. Janet sensed that I was a naysayer about such "love of literature." Pouring a little emotional gasoline on the fire, I said, "Janet, you're certainly doing your part to insure that these 7 year-olds will never recover from a radically relativistic view of meaning!" Now I had her full attention.

Here is part two which talks about the importance of knowing the genre of a text before you try to interpret it.

Excerpt:

> "INDIANS SLAY TIGERS!" — the newspaper headline virtually screams out at you. The thought of something being slain is repulsive. You're gripped by a mental image of southern India's Bengal tiger. You imagine its beautiful face, its stripes and piercing eyes. Then your image is shattered by the sudden blast of a high-powered rifle. You see the exquisite creature writhe in pain, fall gracelessly in its tracks and die. Having read no further than the headline, you feel sick, as if you've witnessed something tragic.
>
> But *should* you feel this way? The slaughter of an endangered species — especially one as magnificent as the

> Bengal tiger — is horrifying, no doubt. But suppose you failed to notice that the headline "INDIANS SLAY TIGERS!" appeared in the *sports page* of the morning paper. Clearly enough, it now refers to different Indians, different Tigers and a different manner of slaying than you originally thought. And is it really that tragic that the Cleveland Indians badly beat the Detroit Tigers in a major league baseball game last night? Not unless you're a long-suffering Detroit Tigers' baseball fan. But how do you now know that the headline is about baseball and not tiger-slaying in India? You look at the words "INDIANS SLAY TIGERS" and you know exactly what each word means. When you combine these words, how can they not mean exactly what you first thought they did — that *Indians slay tigers*? Answer: because their meanings are communicated (as the meanings of *all* words are) through *genres*!

Here is part three which talks about the importance of reading the context of a verse before you try to interpret it.

Excerpt:

> "Never Read a Bible Verse!" That's the title of a little booklet my friend and Christian radio personality, Gregory Koukl, has written to help people read the Bible well. What great advice. "That's right, never read a Bible verse. Instead, always read a paragraph — at least." But the current is flowing the other way in our popular sound-bite culture. Not to be left out (or left behind!), the Church has its own version of sound-bite culture: *verse-bite culture*. In verse-bite culture we take a sentence or sentence-fragment from a biblical paragraph, memorize it out of context, write it on a little card, put it on a billboard, a plaque, a rock, etc. Somehow we think that just because this little chunk of Scripture has a verse number in front of it, it was meant to be a free-standing unit of thought. Nothing could be further from the truth.
>
> Apart from the fact that chapter and verse divisions weren't added to the New Testament text until 1560 — long after the New Testament's inspired authorship — there is a more important reason for never reading just a Bible verse, and instead reading at least the paragraph that contains it.

Here is part four which talks about the importance of applying the words of the Bible to your life.

One verse that is often misinterpreted is missing from the articles, but present in the STR lecture. It's Philippians 1:6 that says "6 being confident of this, that he who began a good work in you will carry it on to completion until the day of Christ Jesus". Russell says in the lecture that this promise is specifically intended for the church in Philippi, to whom Paul is writing, not necessarily to all Christians. He is giving them a promise just after directly referring to their good work in supporting him in his ministry. Some verses are just not meant for us, and the context reveals it.

# Author of Alberta's gay rights policy tweets anti-Christian hate propaganda

**Wintery Knight** · 26 June 2016 · Archived copy · Original

Alberta Premier Rachel Notley participating in the Edmonton Pride Parade

Watch this video from The Rebel Media about a story from Alberta, formerly known as the most conservative province in Canada.

There is a story up about it on The Rebel's web site:

> Kris Wells is an Assistant Professor and Faculty Director at the Institute for Sexual Minority Studies and Services at the University of Alberta. […]Wells is also the author of the Alberta Government's controversial new homophobic and transphobic bullying and gay-straight alliance resources. He's a high profile activist the media's "go to" guy for everything LGBTQ.
>
> **Wells tweeted and soon deleted a cartoon that depicted Christians as the mass beheaders of gay people.** It was truly shocking. A week ago an Islamic terrorist shot 101 people, killing 49, in a gay bar. Not a Christian, but an Islamist. But the self appointed spokesperson for the LGBTQ community in Edmonton is so delusional [with] hate [for] Christians that he put them in the role of the ISIS murderer.
>
> Here's where it gets worse. The tweet Wells sent was even more reprehensible than just passing the blame for Islamic terror on to innocent Christians. The cartoon Wells tweeted was altered. The original cartoon was a Christian being beheaded by an ISIS fighter. Wells made the victims into the perpetrators and proudly tweeted it.
>
> But it's worse than that, if that's even possible. The cartoon, before it was shamefully doctored, was originally drawn to honour 21 real Coptic Christian Martyrs who were beheaded on a beach in Libya by ISIS fighters in 2015. The martyr's' last words were reportedly "Lord Jesus Christ" and the water on the beach ran red with their blood. And Kris wells, this self professed, anti bullying activist, co opted their memory, their victimhood, their bravery, their Christian martyrdom for himself and his cause. Then put these Christians who died for their faith at the hands of ISIS in the role of ISIS. Deranged.

Well, how did the Canadian news media react to anti-Christian hate speech by a prominent and politically-connected gay rights activist?

> **The media is dead silent.**
>
> Kris Wells is the man who drew up the government's anti bullying, anti homophobia literature that arguably violates religious freedoms in religious schools all across the province. And he hates Christians. That's clear.

He hates Christians, and he's teaching his beliefs at a major university, and writing government policy for a whole province.

You'll recall that over in Ontario, a more liberal province, their sex education curriculum was authored by a convicted child pornographer. The Governor of Ontario is a gay activist named Kathleen Wynne. Here she is marching in a gay pride parade with the Canadian Prime Minister, Justin Trudeau:

Premier Kathleen Wynne and Prime Minister Justin Trudeau

Previously, I blogged about how the Liberal government of Canada wants to imprison those who dissent and disagree with the transgender agenda for up to two years. There is no right to free speech in Canada. There is no right to free speech enshrined in their founding documents. Speech critical of the secular left's favored groups is criminalized. Just ask Mark Steyn and Ezra Levant about being called before a "human rights" tribunal by the Canadian government, merely for speaking words that caused people on the left to feel bad. And of course, the system does not work in reverse – people who are religious or conservative have *never* had their complaints adjudicated. Because the laws and the courts don't work for the "wrong" side. The money that Christians and conservatives pay in taxes is accepted, but the laws are not there to protect them.

# Texas has sued the Obama administration 44 times for federal government overreach

**Wintery Knight** · 27 June 2016 · Archived copy · Original

Texas Governor Greg Abbott – "Broken But Unbowed"

Here is a left-leaning article from the Wall Street Journal about a Governor and an Attorney General who are not just marking time while in office.

Excerpt:

> When a deadlocked Supreme Court on Thursday blocked President Barack Obama's plan to give millions of illegal immigrants a temporary reprieve from deportation, it marked a pivotal victory for the administration's most relentless legal adversary: the state of Texas.
>
> The president "is not a king who can unilaterally change and write immigration laws," responded Republican Texas Gov. Greg Abbott, whose myriad lawsuits against the Obama administration, including the state's lead role in the immigration case, have been a trademark of his political career.
>
> During Mr. Abbott's first term as governor, and while he was state attorney general before that, Texas has challenged the president's signature issues in court—tougher carbon-emission standards, health-care reform, transgender rights and others.
>
> Texas has sued the Obama administration at least 44 times since the president took office—more than any other state over the same period.
>
> The collective, long-term impact of all the lawsuits is uncertain. But legal scholars say the aggressiveness with which Texas under Mr. Abbott's watch has fought White House policies and regulations points to a major shift in how political fights are waged.
>
> Amid congressional gridlock, arguably the most consequential power struggles are no longer fights between executive and legislative branches—but legal battles between states and the federal government.
>
> "The action is in the courts, and it's cases brought by the states. And Texas is almost always at the table," said Case Western Reserve University law professor Jonathan Adler.
>
> Texas' legal assault is part of a sweeping wave of state-level Republican activism that has marked the Obama years. Compared with the Clinton era, Republican attorneys general have been far more active in challenging federal polices, according to a recent Marquette University study on Supreme Court litigation.

> […]Most of the cases filed by Mr. Abbott and his Republican successor as attorney general,Ken Paxton, have turned on a broad theme of federalism: that the Obama administration has encroached on Texas' right to manage its own affairs.
>
> […]In February, Texas scored another major victory when the Supreme Court blocked the administration's marquee climate policy, halting enforcement of rules limiting carbon emissions from existing power plants.
>
> […]The most recent legal action came last month after the Obama administration directed public schools to let transgender students use the bathroom of their choice. Texas accused the administration of unlawfully rewriting federal discrimination law.
>
> […]"I like playing offense more than defense," said Mr. Abbott in a recent interview while crisscrossing Texas aboard a private jet for various political events.

Texas Attorney General Ken Paxton is also a hero. Here he is explaining to the Daily Signal his latest broadside against overreach by the liberal federal government;

Abbott is a former Texas Supreme Court Justice, and served 3 terms as Texas attorney general, so he is no stranger to the law. Although sometimes people get the perception that the Obama administration is not being challenged, that's not true. You just have to know where to look for the people challenging him.

# Ted Cruz holding Obama administration accountable for covering up Islamic terrorism

**Wintery Knight** · 27 June 2016 · Archived copy · Original

Texas Senator Ted Cruz

Last week, Ted Cruz decided to go after the Obama administration for covering up their deliberate weakness on Middle East foreign policy.

The Conservative Review reported on that:

> **Next Tuesday, June 28, Sen. Ted Cruz (R-TX), who chairs the Judiciary Subcommittee on Oversight, Agency Action, Federal Rights and Federal Courts, will conduct a hearing investigating the willful blindness on the part of the relevant law enforcement agencies to domestic Islamic terror networks. The subject of the hearing is "Willful Blindness: Consequences of Agency Efforts To De-emphasize Radical Islam in Combating Terrorism."**
>
> […]This hearing will likely focus on which figures within the federal government worked to squelch any research connecting the dots between local Muslim Brotherhood officials, these individual terrorists, and foreign terror networks. Senators on the committee now have an opportunity to expose the Muslim Brotherhood influence within DHS and the FBI, their invidious "Countering Violent Extremism" Agenda, and their hand in covering up counter-terrorism investigations. They can demonstrate how the federal government has hamstrung local law enforcement by refusing to cooperate and share information regarding jihadists living in their communities.

That hearing is happening tomorrow. If you want more details on what Cruz will talk about, you can read an op-ed that he wrote detailing his views here.

He writes:

> President Obama's politically correct reluctance to attribute the terrorist threat we face with radical Islam hobbles our ability to combat it by discouraging counterterrorism agents from taking radical Islam into account when evaluating potential threats. The examples of Fort Hood, Boston, San Bernardino, and Orlando demonstrate the harmful consequences of this administration's willful blindness.

> For example, before the **Fort Hood** massacre, the Obama administration knew that Nidal Hasan had been in communication with a radical Islamic cleric, Anwar al-Awlaki. The Obama administration knew that Nidal Hasan had asked al-Awlaki about the permissibility of waging jihad against his fellow soldiers. All of that was known beforehand, and yet the administration did nothing. Nidal Hasan went on to murder 14 innocent souls, yelling "Allahu Akbar" as he pulled the trigger. And yet, just to underscore the blindness of this administration, even after the terror attack, the administration insisted on characterizing the attack as "workplace violence."
>
> With respect to the **Boston bombing**, Russia had informed the Obama administration that the Tsarnaev brothers were connected with radical Islamic terrorism. The administration knew that. The FBI had even gone and interviewed them. And yet once again, the administration dropped the ball. It stopped monitoring them, so the government wasn't even aware when the elder Tsarnaev brother posted a public call to jihad on YouTube.
>
> **San Bernardino** is yet another example of the administration's abhorrent handling of the threat of radical Islamic terrorism. Once again, the administration had ample information about the individuals in question. The female terrorist had given the administration a fake address in Pakistan, and yet the so-called vetting that this administration tells us it did had failed to discover that it was a fake address. She had made calls for jihad, and yet the administration failed to discover that.

> And finally, as far as the events in **Orlando** last weekend, Omar Mateen was reportedly interviewed not once, not twice, but three times by the FBI in 2013 and 2014. The FBI interviewed him because he was talking at his place of employment, which, ironically, was a contractor to the Department of Homeland Security about his connection to terrorist organizations.

I've blogged about all four of these before, but no one is confronting the Obama administration about them, and making them pay for their moral relativism in the court of public opinion. Now Ted Cruz is going to hammer them at the highest level.

But that's not all. Here's another story from Conservative Review.

It says:

> One week after Sen. Ted Cruz (R-TX) introduced legislation to fine the State Department for delaying its annual report on Iran's human rights record, the Obama administration is acceding to his demand and finally producing the report.
>
> After delaying the release of the report since late February, apparently in an effort to play nice with Iran, the State Department is scheduled to release the report on Thursday. This comes just one week after Cruz introduced the *Human Rights Accountability Act*, which would have cut the State Department's budget by 5% for every month they continued to delay release of the report. Cruz's tactic of shaming the administration for their appeasement and enacting deserved consequences has similarly netted results earlier this month when the Department of Defense was forced to release the annual report on the military power of Iran – another report they delayed for months.

Now, I have some Democrat friends at work, and I asked them what the Obama administration was doing specifically to protect taxpayers from the threat of radical Islamic terrorism. And they had no answer. What we've seen instead is a concerted effort by the Obama administration to cover up the connections between actual terrorist attacks and radical Islam, to punish those who point out the facts linking terrorism and radical Islam, and to shame those who had nothing to do with the attacks as being somehow guilty of them. I would like to see some light shed on how far up the chain these attitudes go, so we can get some accountability.

# Study: government-run pre-school programs fail to produce expected results

**Wintery Knight** · 28 June 2016 · Archived copy · Original

TNVPK data: pre-K program is in red, baseline is in blue

The Heritage Foundation talks about three recent studies on government-run pre-K programs.

> **The Head Start Impact Study.** In late 2012, the Department of Health and Human Services released the Head Start Impact Study, a scientifically rigorous evaluation that tracked 5,000 three-year-old and four-year-old children through the end of third grade. The study found little to no impact on the parenting practices or the cognitive, social-emotional, and health outcomes of participants. Notably, on a few measures, access to Head Start had harmful effects on participating children.[7] For both the three-year-old and four-year-old cohorts, access to Head Start had no statistically measurable effects on any measure of cognitive ability, including reading, language, and math.[8] In other words, by the time they finished third grade, there was no difference between those children who attended Head Start and the control group of their peers who did not.
>
> **Vanderbilt Tennessee Voluntary Pre-K Study.** In 2015, a team of researchers from Vanderbilt University released an evaluation of Tennessee's Voluntary Pre-K (VPK) Program, a state-subsidized preschool program open to low-income children in the state. Some 18,000 children participate in the program, which was introduced in 1996. Proponents have long claimed Tennessee's VPK program is a model state-based preschool program, with standards aligned to the Obama Administration's Preschool for All initiative.[9] Teachers must be licensed, the child-adult ratio is limited to 10:1, and a structured "age-appropriate" curriculum must be used in classrooms. The program is available first to children from low-income Tennessee families, and then, space permitting, to children with special needs and children with limited English proficiency, among other children deemed "at-risk." An earlier evaluation found that gains made by participating four-year-olds had faded by kindergarten. In a follow-up evaluation released in September 2015, Mark Lipsey, Dale Farrar, and Kerry Hofer reported that there were no sustained benefits for the same children through the end of third grade.[10]
>
> […]The authors analyzed the VPK program's impact on children's math skills, emergent literacy, and language skills, as well as the program's impact on non-cognitive measures, such as behavior. "By the end of kindergarten, the control children had caught up to the TN-VPK children and there were no longer significant differences between them on any achievement measures. The same result was obtained at the end of first grade using both composite achievement measures." And notably, by second grade, "the groups began to diverge with the TN-VPK children scoring lower than the control children on most of the measures. The differences were significant on both achievement composite measures and on the math subtests." "Pre-K was generally thought

> to be better than Head Start, but that doesn't seem to be the case in Tennessee," stated University of California, Berkeley professor David L. Kirp in *The New York Times*.[11]
>
> The findings of the TN-VPK program were not limited to academic outcomes. As Lipsey et al. explain:
>
> In terms of behavioral effects, in the spring the first grade teachers reversed the fall kindergarten teacher ratings. First grade teachers rated the TN-VPK children as less well prepared for school, having poorer work skills in the classrooms, and feeling more negative about school. It is notable that these ratings preceded the downward achievement trend we found for VPK children in second and third grades.[12]
>
> **Quebec's Negative Non-cognitive Results.** The province of Quebec introduced universal low-cost day care for children through age four beginning in 1997. The program has had a large impact: privately funded child care arrangements have almost disappeared, and Quebec has the highest rate of subsidized child care in Canada, at 58 percent in 2011.[13] The program caused a 14.5 percent increase in the share of mothers of young children working outside the home.[14] The Quebec experience offers more guidance for the potential introduction of universal child care than small, targeted programs, because it implicitly includes indirect effects on non-participants and any general equilibrium effects due to the drastic shift in the way child care was funded and conducted.
>
> Regrettably, new research has found that children who became eligible for the program in Quebec were more anxious as children and have committed more crimes as teenagers. The availability of day care clearly worsened children's non-cognitive "soft" skills.
>
> Michael Baker, Jonathan Gruber, and Kevin Milligan found that children exposed to the program were 4.6 percent more likely to be convicted of a crime and 17 percent more likely to commit a drug crime. Their health and life satisfaction were worse.

The programs are sold as a way of improving children's abilities, but the studies show that it doesn't work that way. So why do we have these programs?

Democrats like these programs because they transfer wealth from taxpayers to government, hire more government workers, and get children away from the "harmful" influence of their parents. It allows the government workers to push the agenda of the wealthy donors who back the Democrat politicians, e.g. – the abortion providers, the gay rights activists, the terrorism apologists, the global warming alarmists, the radical feminists, the socialist wealth redistributors, etc.

# Is the probability of getting a universe that supports complex life 100%?

**Wintery Knight** · 28 June 2016 · Archived copy · Original

Apologetics and the progress of science

Let's have a quick review of the famous fine-tuning argument to start.

The argument from cosmic fine-tuning looks at various constants and quantities in our universe that are set at particular values and notes that if any of the values of these constants and quantities were to change, then complex embodied life of any kind could not exist. The argument is fully in line with the standard Big Bang cosmology, and is based on mainstream science.

There are two kinds of finely-tuned initial conditions: 1) constants and 2) quantities. These constants and quantities have to be set within a narrow range in order to permit intelligent life. There are three explanations for this observation: law, chance or design. Law is rejected because the numerical values of constants and quantities are set at the beginning of the universe – when there was no matter, space or time. The values of the constants and quantities were not determined by anything causally prior to the moment the universe began to exist. Chance is not a good explanation, because the probabilities are far, far too small for us to reasonably believe them (e.g. – the chance is 1 in X, where X is much higher than the number of subatomic particles in the visible universe). Since the fine-tuning is not due to law or chance, it must be due to design.

Here's one example of something that is set correctly to allow complex, embodied life from The New Scientist:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$ at 1 second after the big bang, allows life to form.**

Changing the value at all means there would be no complex, embodied life of any kind anywhere in this universe.

Here's a quick video clip to explain what The New Scientist is saying:

Now, this is going to surprise you, but there are some non-theists who try to argue that the finely-tuned constants and quantities that were set up at the beginning of the universe – long before we ever existed – are actually explained by our existence *today*.

Atheist Jeffery Lowder summarizes a debate between William Lane Craig and Doug Jesseph, and Jesseph says something like this:

> Craig's argument is like asking the question, "What are your chances of landing in a universe hospitable to life, assuming you were tossed into any old universe whatever." That is precisely not the point. It's presupposed in the question that you're already in a universe which favors life. Confuses conditional probability with unconditional probability.

Unlike me, Lowder is never snarky in his summaries, so this is guaranteed to be accurate.

Here's what Dr. William Lane Craig says to that idea that our being here explains the fine-tuning:

> Now some people have tried to avoid this conclusion by saying that we really shouldn't be surprised at the enormous improbability of the fine-tuning of the universe because, after all, if the universe were not fine-tuned then we wouldn't be here to be surprised about it. Given that we are here we should expect the universe to be fine-tuned. But I think the fallacy of this reasoning can be made clear simply by a parallel illustration. Imagine that you were traveling abroad in a third world country and you were arrested on trumped up drug charges, and you were dragged in front of a firing squad of 100 trained marksmen, all with rifles aimed at your heart to be executed. And you hear the command given – "Ready, aim, fire!" And you hear the deafening roar of the guns. And then you observe that you are still alive, that all of the 100 marksmen missed! Now, what would you conclude? Well, I guess I really shouldn't be surprised that they all missed; after all, if they hadn't all missed I wouldn't be here to be surprised about it. Given that I am here, I should expect them all to miss. Of course not. You would immediately suspect that they all missed on purpose. That the whole thing was a set up engineered by some person for some reason. And in exactly the same way, given the incomprehensible improbability of the fine-tuning of the initial conditions for intelligent life, it is rational to believe that this is not the result of chance but of design.

Does it make sense? It's true that any arrangement of bullet holes in a condemned spy is as unlikely as any other, but the vast majority of possible arrangements of 100 bullet holes result in you being dead. Being marksmen, the shooters definitely know how to hit a target at close range. It doesn't matter if some hit your head and some hit your heart and some hit your throat – the most common consequence of a hundred bullets fired by expert marksmen at you is "dead you" – regardless of the specific arrangement of bullet holes. If you find yourself not dead, that requires an explanation. The explanation is design.

# Study: relationship problems, not family rejection, leading cause of higher gay suicides

**Wintery Knight** · 29 June 2016 · Archived copy · Original

Lets take a closer look at a puzzle

Life Site News reports.

Excerpt: (links removed)

> While many assume that family rejection is the leading cause of depression among LBGTI individuals, a new study has found that in fact the problem appears to stem predominantly from the higher incidence of relationship problems among homosexuals.
>
> Dr. Delaney Skerrett led a team of researchers from the Australian Institute for Suicide Research and Prevention (AISRAP) in studying suicides in Queensland. He found that a leading cause of suicide among "lesbian, gay, bisexual, transgender, and intersex" (LGBTI) people is stress from their romantic partners.
>
> "We tend to assume that the psychological distress LGBTI people are often going through is due to family rejection. But it seems that's not so much the case. The conflict seems to be largely related to relationship problems, with partners," Dr. Skerrett said.
>
> In fact, he said, "The numbers are telling us there's a general acceptance at the family level," something he said is "great" and "really heartening!"
>
> Instead, the study, which was published on April 2 in *Asia Pacific Psychiatry*, found that "LGBT individuals experienced relationship problems more often" than heterosexuals, "with relationship conflict also being more frequent than in non-LGBT cases."
>
> That confirms previous studies finding that homosexuals also face higher rates of intimate partner violence than heterosexuals. A 2007 study in the *Journal of Urban Health*, which is published by the New York Academy of Medicine, found that 32 percent of homosexuals have been abused by at least one partner during their lifetime.
>
> The researchers with AISRAP also found that a higher percentage of homosexuals took their lives [out] of despondency, rather than other psychological illnesses. While one-eighth of all Queensland suicide victims had been diagnosed with a psychosis that impaired their judgment, Skerrett reports "there were no such diagnoses among LGBT individuals." The conclusion adds to the consensus that depression disproportionately besets

> active homosexuals.

Previously, I blogged about a gay activist who thought that disagreement with gay rights caused gays to commit suicide. I wonder what he would do with a study like this? I also blogged previously about the "epidemic" of domestic violence among gays, and the article I linked to for that was from the left-leaning Atlantic Monthly.

But there's more to say – let's look at an individual case now, which will put some meat on the bones of the studies.

Here's an article from the liberal New York Times.

Here's the set up:

> BOB BERGERON was so relentlessly cheery that people sometimes found it off-putting. If you ran into him at the David Barton Gym on West 23rd Street, where he worked out nearly ever morning at 7, and you complained about the rain, he would smile and say you'd be better off focusing on a problem you could fix.
>
> That's how Mr. Bergeron was as a therapist as well, always upbeat, somewhat less focused on getting to the root of his clients' feelings than altering behavior patterns that were detrimental to them: therapy from the outside-in.
>
> Over the last decade, he built a thriving private practice, treating well-to-do gay men for everything from anxiety to coping with H.I.V. Mr. Bergeron had also begun work as a motivational speaker, giving talks at gay and lesbian centers in Los Angeles and Chicago. In February, Magnus Books, a publisher specializing in gay literature, was scheduled to print a self-help guide he had written, "The Right Side of Forty: The Complete Guide to Happiness for Gay Men at Midlife and Beyond."
>
> It was a topic he knew something about. Having come out as gay in the mid-1980s, Mr. Bergeron, 49, had witnessed the worst years of the AIDS epidemic and emerged on the other side. He had also seen how few public examples there were of gay men growing older gracefully.
>
> He resolved to rewrite the script, and provide a toolbox for better living.
>
> "I've got a concise picture of what being over 40 is about and it's a great perspective filled with happiness, feeling sexy, possessing comfort relating to other men and taking good care of ourselves," Mr. Bergeron said on his Web site. "This picture will get you results that flourish long-term."
>
> But right around New Year's Eve, something went horribly wrong. On Jan. 5, Mr. Bergeron was found dead in his apartment, the result of a suicide that has left his family, his friends and his clients shocked and heartbroken as they attempt to figure out how he could have been so helpful to others and so unable to find help himself.

Look:

> To his friends, Mr. Bergeron maintained a positive tone. He went on vacation, dated some, visited museums.
>
> Still, he privately expressed misgivings about what the future held. Olivier Van Doorne, a patient of Mr. Bergeron and the creative director of SelectNY, a fashion advertising firm, recalled Mr. Bergeron telling him that every gay man peaks at one point in his life.
>
> "He said a number of times: 'I peaked when I was 30 or 35. I was super-successful, everyone looked at me, and I felt extremely cool in my sexuality.' "
>
> Mr. Siegel, the therapist who supervised Mr. Bergeron in the early days of his career, said: "Bob was a very beautiful younger man, and we talked a lot about how that shapes and creates a life. The thesis of his book is based very much on his own personal experience with that. And the book also emphasized what to do when you're not attractive or you no longer have the appeal you once had. The idea was to transcend that and expand your sexual possibilities."

And:

> With the book about to be printed, Mr. Bergeron became convinced that he'd written too much about the shame and isolation involved with hooking up online; that people weren't even really doing that anymore, now that phone apps like Grindr and Scruff had come along.
>
> His book, he felt, had become antiquated before it even came out.
>
> […]Though some of his friends, Mr. Rappaport among them, wondered whether drugs were involved, leading to a crash Mr. Bergeron did not anticipate, the suicide seemed to have been carried out with methodical precision. On an island in the kitchen, Mr. Bergeron had meticulously laid out his papers. There was a pile of folders with detailed instructions on top about whom to call regarding his finances and his mortgage. Across from that he placed the title page of his book, on which he also wrote his suicide note. In it he told Mr. Sackheim and Mr. Rappaport that he loved them and his family, but that he was "done."
>
> As his father remembered it, Mr. Bergeron also wrote, "It's a lie based on bad information."
>
> An arrow pointed up to the name of the book.
>
> The inference was clear. As Mr. Bergeron saw it at the end of his life, the only right side of 40 was the side that came before it.

I think that the problem is that in the gay lifestyle, you have a typically male emphasis on physical appearance, sex and pleasure. There is none of the moderating influence of women, which tends to push men into commitments, responsibility and stability. Stuff that provides fulfillment and meaning and purpose after you lose your youth and appearance.

If you really love a person, then you don't tell them that the dangerous thing they want to do is not dangerous. That's not love. It's easier for you to approve of them and be liked by everyone, but it's not love.

# Are young, unmarried women sincere about wanting to be married "some day"?

**Wintery Knight** · 29 June 2016 · Archived copy · Original

College students puking in toilet

Here's a useful video for learning about what men think of marriage now that radical feminism has redefined it:

This comment about the video by Gaza on the Elusive Wapiti blog deserves a post of it's own, so here it is:

> One thing that Helen seems to miss is how women value and prioritize marriage and what role this plays vis a vis the male corollary.
>
> The "story" isn't just about men being "on strike" or even (to Helen's credit) rationally choosing to delay and/or avoid; it must also include how women treat marriage WRT their own valuation and prioritization and life decisions (NOT merely stated desires).
>
> There are not swarms of 25 y/o female college-grads looking for a husband with no willing men within sight. There are, however, swarms of 25 y/o/ female college-grads looking to have fun, travel, chase dreams, build careers, and explore their options.
>
> I've "dated" a few of these women; most (and their social circles included) are so focused on the self-indulgence ("experience") and the status associated with sexual conquest/power that any mention of marriage is usually as a joke (enter the "boyfriends/husbands are boring/stupid/lazy" meme); marriage is merely some distant thing to be acquired at some seemingly distant age.
>
> Sure, over time (cue: the wall), the distant thing becomes a stated desire, but the transition from stated-desire to behavioral change and actual prioritization often takes years. I meet women well into their 30's who still can't alter their behaviors to demonstrate congruence with their stated desires.

> But that is when we start to hear how important marriage is, how men are avoiding commitment, why men should value marriage. All bacon-wrapped in various shaming mechanisms. The women singing the “Man-up and marry me” tune are not the 25 y/o versions; they are too busy singing the “you go girl” showtunes, exactly as prescribed by the Sandberg, lean-in, [binge drinking, continuous alpha male hookups, alpha male cohabitation], [and later, jump off the carousel into a marriage to a beta provider that makes her perpetually feel that she married down compared to the alphas that she used to hookup with while drunk].
>
> So we can plainly see how something is valued based on the prioritization of one’s choices. Most young women value marriage as an idea, as a capstone to her personal journey; an indicator of status and achievement but not as a goal in-of-itself and not as a life decision that supersedes the accumulation of personal experience, the flexing her sexual and relationship power, or the kindling her optionality.
>
> These women desire to “hang-out” with the most attractive men they can, under any number of relationship approximations while pursuing their personal journeys and then suddenly desire to elevate commitment and marriage as something paramount, right around the same time their ability to define and opt-in/out of those indulgent relationship approximations wanes. Hmm.
>
> After 10+ years of treating men and relationships as consumable commodities, marriage is now so valuable? So sacred that it will magically be more robust in the face of challenges, requiring more giving and less taking than those previous marital approximations, and yet because it is now a “Marriage”, it won’t be treated as merely a vehicle for the pursuit of her apparently perpetually fleeting “happiness”? Convince me.
>
> There is a false premise at work that assumes that it is men who are devaluing marriage. Sure, there is some truth to this, but woman are messaging their own valuation of marriage as well; in real-time, often in very overt means and often at the expense of men who are still clinging to some idealistic view of marriage.
>
> And likely those are the very men who are willing and able to be husbands at 25. The very same men who will grow to become self-sufficient 35 y/o men feeling their own blossoming optionality, harvesting their own “experiences” with the 25 y/o versions of the suddenly-marriage-minded women, while a decade of observational and experiential evidence of what women truly value buries what remains of their marital idealism.
>
> Tl:dr
> I’d consider marriage to a woman who has demonstrated through her choices, prioritization, sacrifice and delayed gratification that marriage is valuable to her and who can articulate how it would be valuable to me. [not holding breath]

What do you think? Is that something that you are seeing more of in the current generation of young, unmarried women? I have to confess, I see a lot of emphasis among Christian women on short-term missions trips and on careers, but not much planning on how to be prepared for marriage. In my experience, there is not much preparation work going on, and marriage is put off later and later. This is despite the fact that a woman’s fertility declines starting at age 27 and is pretty much dead at 35. IVF is very expensive, but has a higher risk of birth defects and and can often lead to too many embryos, some of which will then need to be aborted. Men respond to incentives, and they have certain things they are looking for out of a wife and marriage.

It would be nice if there were some wisdom being transferred from older, married women to young, unmarried women, but I don’t see it happening. What I see happening is young women, including ones raised in Christian homes, going off to college to binge drink and hookup and cohabitate, and always expressing the desire for marriage “some day”. But marriage is something you prepare for early with every decision. Some decisions are not

good preparation for marriage. I get the impression that young, unmarried women think that marriage is “boring” and not the way to “make a difference”, and so in practice, they are trying other things.

Remember, the offer that a woman such as Gaza describes to a man is not the same as the offer of marriage that was made by 20-year-old women in the 1950s.

Marriage used to mean:

> - Being the legally and socially recognized head of the household.
> - An expectation of regular sex.
> - Legal rights to children.
> - Lifetime commitment.
> - That you are guaranteed a chaste bride on your wedding night.

Men liked the original version of marriage without the modern debasements. Should they feel obligated to settle for the new version of marriage which is influenced by radical feminism? I would have to be convinced. Women are kidding themselves if they think that they can do anything they want and wait as long as they want and still be as attractive to men.

# Supreme Court upholds vicious anti-Christian decision by 9th Circuit CA

**Wintery Knight** · 30 June 2016 · Archived copy · Original

Barack Obama speaking to Planned Parenthood

Free speech and religious liberty hero David French wrote about the Stormans family case on Tuesday, in National Review.

Just as a preliminary comment, I really like how upset David French is sounding lately. I have written posts in the pasts where I was upset, and said things that I wanted to take back. And I have a whole herd of editors who regularly tell me if the drafts that I send them are "too mean". But this article by Mr. French has some comments that were I think a little over the edge, but that's just fine with me. I liked it a lot. It's time to be direct and say what is really motivating the secular left.

He says:

> Today the Supreme Court declined to hear one of the most extraordinary and plainly vicious anti-Christian cases I've ever seen. My friends and colleagues at the Alliance Defending Freedom represent the Stormans family, owner's of an Olympia, Washington, pharmacy called Ralph's Thriftway. The Stormans — like many Christians pharmacists — decline to fill prescriptions for abortifacients (drugs that can kill a fertilized egg, often by preventing implantation). When customers request abortifacients, the Stormans decline to fill the prescription and then refer them to one of "more than 30 other pharmacies within five miles of Ralph's."
>
> This process is entirely conventional and normal. Indeed, it was so mundane that the state of Washington stipulated that "facilitated referrals do not pose a threat to timely access to lawfully prescribed medications." In other words, the fact that the Stormans refuse to sell abortifacients didn't cause a single person to lose access to the drug of their choice. But to anti-Christian bigots, it is intolerable that Christian professionals exist unless they bow the knee to the Baal of the sexual revolution, so Washington's governor took action — demanding that the Washington State Board of Pharmacy issue regulations that required pharmacists to issue abortifacients regardless of religious or moral objections. In his dissent from the Court's denial of certiorari,

> Justice Alito described the state's anti-religious motivations:
>
> The District Court found that the regulations were adopted with "the predominant purpose" to "stamp out the right to refuse" to dispense emergency contraceptives for religious reasons. Among other things, the District Court noted the following. When the Board began to consider new regulations, the Governor of the State "sent a letter to the Board opposing referral for personal or conscientious reasons." The State Human Rights Commission followed with "a letter threatening Board members with personal liability if they passed a regulation permitting referral" for religious or moral reasons. And after the Board initially voted to adopt rules allowing referrals for reasons of conscience, the Governor not only sent another letter opposing the draft rules but "publicly explained that she could remove the Board members" if need be.

Ah, yes. The "Human Rights Commissions" that exist in so many countries, whose primary purpose is to stamp out the basic human rights of Bible-believing Christians using the power of the state.

The governor in question, by the way, is Christine Gregoire, who narrowly defeated a wonderful conservative a while back named Dino Rossi in 2004, and then defeated him again by a larger margin in 2008. I wonder how many "Christians" voted for Gregoire in Washington state in those elections. Rossi favors an exception for the Christian pharmacists.

More:

> Christian pharmacists could either comply with state demands or close their pharmacies — an action that could actually "reduce patient access to medication by forcing some pharmacies—particularly small, independent ones that often survive by providing specialty services not provided elsewhere—to close."
>
> **Predictably, the Ninth Circuit sided with the state. Just as predictably, our pitiful Supreme Court let the ruling stand. So Washington gets away with its pure anti-Christian animus, and it establishes a state religion to the god of sex. While Washington is an outlier (for now), it is showing Blue America the path forward — and any red state governor who refuses to defend religious liberty is completely without excuse. They can't rely on federal courts to cover for their own lack of courage and conviction. As for the church? If it keeps gutlessly delegating defense of its liberties entirely to lawyers and politicians, then it will richly deserve its legal fate. It's time to take a stand.**

So, in the state of Washington, one of the most liberal and secular states in the union, you can't be a Christian and be a pharmacist.

I think what French is trying to say there is that groups like the ADF and the ACLJ have been a thin line of resistance to judicial tyranny for many years, but Christians are not helping things by voting for Democrats – usually because they are looking for a handout from the government at their neighbor's expense. Remember, Obama got Supreme Court picks when he was elected and then re-elected. People who voted for Obama voted for a more liberal Supreme Court – and the persecution of real Christians, like the Stormans.

You can read more about the case from the Alliance Defending Freedom (ADF) web site. And the Daily Signal has more about the history of the case.

Now, keep in mind that this is the same state that is going after a Christian florist who referred her a gay customer to another florist for their wedding. She had served him faithfully for years, but when she turned him away for their wedding, then the state decided to go after her for her life savings and business. Never live in this immoral state.

# Canadian court rules that Christian university cannot uphold Christian moral values

**Wintery Knight** · 30 June 2016 · Archived copy · Original

Canada Election 2015: Socialists in red, Communists in Orange, Conservatives in blue

This article about religious liberty in Canada is from Vancouver Sun. (H/T Glenn)

Excerpt:

> Ontario's top court has dismissed an appeal from a private Christian university that forbids sexual intimacy outside heterosexual marriage, denying its proposed law school accreditation in the province.
>
> The ruling from the Ontario Court of Appeal on Wednesday dealt a significant blow to Trinity Western University in a legal battle which pitted freedom of religion against equality rights.
>
> A panel of three appeal court judges found that while the university's religious freedom had been infringed upon, the institution discriminated against the LGBTQ community.
>
> Trinity Western — which is fighting similar cases at appeal courts in Nova Scotia and British Columbia — expressed disappointment at the ruling, saying it would be taking its fight to the Supreme Court of Canada.
>
> The Ontario case saw the Evangelical Christian institution based in Langley go up against the Law Society of Upper Canada after the regulatory body voted not to accredit the university's planned law facility.
>
> At the heart of the dispute was Trinity Western's "community covenant" or code of conduct, which all students are required to agree to.

The key point about the code of conduct is that it doesn't discriminate against any particular group, e.g. – LGBT. It also forbids excessive drinking and premarital sex by heterosexuals:

> **It includes requiring students to abstain from gossip, obscene language, prejudice, harassment, lying, cheating, stealing, pornography, drunkenness and sexual intimacy "that violates the sacredness of marriage between a man and a woman."**

Now read this next part carefully. Although there was no legal support for denying a Christian university religious liberty and freedom of association, there was the hurt feelings of the LGBTQ community:

> **"The part of TWU's Community Covenant in issue in this appeal is deeply discriminatory to the LGBTQ community, and it hurts," the appeal court ruling said. "The LSUC's decision not to accredit TWU was indeed a reasonable conclusion."**

In Canada "it hurts" means the end of human rights like religious liberty and freedom of association. Why? Because the Christian community in Canada has – for decades – voted to increase the size of government at the expense of liberty, in order to get free stuff. It doesn't matter if the Christians who wanted a Christian university are hurt. Or that the Christian students at TWU are hurt. Only the hurt of the LGBT community matters, and their hurt changes laws, criminalizes dissent and annihilates natural rights. There are no such things as freedom of religion and freedom of conscience in Canada. There never was free speech, either. Anything that might hurt the feelings of left-wing groups has to be made criminal.

I'll put this as plainly as anyone can: Canadian "Christians" have been voting to transfer wealth and power to a big secular government for years. They wanted government to cover health care, and now the government thinks that health care is providing free sex changes, free IVF and free abortions. Canadian "Christians" wanted their 30 pieces of silver more than they wanted the freedom to act as if the Bible was true in public. It turns out that the more wealth and power that you transfer to a secular government, the more likely they are to abuse that wealth and power in trampling out any ideology that interferes with their buying votes from their favored special interest groups.

# Are Christians responsible for making plans and making good decisions?

**Wintery Knight** · 1 July 2016 · Archived copy · Original

Here's a wonderful post on decision making and the will of God posted on Neil's blog. In his post, Neil explains the Biblical model for making good decisions.

Excerpt:

> **Really short version:** Aside from direct and clear personal revelation from God, you don't have access to his sovereign will when making decisions. Therefore you must look at other factors. **If it isn't moral, don't do it. If it is moral but not wise, don't do it. If it is moral and wise, then use your personal preferences.**
>
> Using this model you can end up with a wise and biblical decision, but you have avoided the traps of the "God told me to ____" routine. People who run around saying that God told them this and that convey a super-spirituality that can leave less mature believers wondering if they really have a relationship with God (i.e., "God doesn't tell me every little thing to do, so maybe I don't really know him.").

He has a helpful picture posted as well:

This is actually a very important topic for me, because I like making plans and making good decisions. I like being the quarterback or squad leader of my own life. I like to pick objectives and then make plans to achieve them. (Nothing too exotic, just simple stuff like saving money or reading more books)

Actually, I really oppose the idea that God has a magical fairy tale will for each person that will make them happy and fulfilled. For me, life isn't like that. I don't expect God to lead me along like a child at a scavenger hunt. I expect to survey the battlefield where I am and then *do something* to make a difference. There are lots of things you can do that will please God. Should you focus on your career and sponsor apologetics conferences? Or should you use your spare time preparing Sunday school lessons? *There are lots of good things you could do to please God*. Your job is to pick the one that will be the most effective. It doesn't matter if it makes you happy, it only matters if it's effective and if you are good at it.

**Who is Rifleman Dodd?**

A while back, I was busily working my way through the U.S. Marine Corps Official Reading List, and I came across a book by C.S. Forester called *Rifleman Dodd*, or alternatively titled *Death to the French*. It's a work of historical fiction that takes place during the Napoleonic wars. The story is about a British marksman named Dodd, who is cut off from his own lines during a withdrawal maneuver. He is subsequently left to fend for himself behind enemy lines. An ordinary man might be full of despair and forget about his mission entirely. But Dodd is no ordinary man. Not only does he find a way to survive by finding food to eat, water to drink and places to sleep, but he also tries to remember his orders and to think about what he can do to advance the cause of his General, the Duke of Wellington.

Here's an excerpt from a gritty book review:

> It's about a green-coated British infantry rifleman in the Napoleonic Wars, an age when rifles were a novelty and most of the army was red-coated and carried muskets. Private Matthew Dodd gets separated from his regiment during a retreat and finds himself stranded behind enemy (French) lines in Portugal. With the occasional aid of some natives, but mostly on his own, he harasses the French with his rifle and tries to prevent them from building a bridge across the Tagus River. It's a remarkable tale of survival and solitary achievement, of a rank-and-file soldier who lives by his wits and slowly learns to make plans without orders, and shows leadership qualities and a knowledge of warfare.

I think we're in the same situation as Dodd.

There is no point in us looking for breadcrumb trails to happiness at this point. That's not the point of Christianity. The point of Christianity is friendship with God, imitation of Christ, honoring moral obligations, self-sacrificial love for your neighbor (and even your enemies!), and dedication to the truth – whether anyone else likes you or not. It's not supposed to make you happy, and it's not necessarily going to be a normal life like everyone else has. Things may not work out the way you'd like them to.

We seem to be making such a big deal about compassion and forgiveness in the Christian life these days – such a big emphasis on our feelings. Almost like we have forgotten that we have obligations to our friend – and his objectives. A relationship doesn't mean that one person completely disregards the character and goals of the other person and then is automatically granted forgiveness whenever they want it. That's not a friendship – that's using someone else for your own ends. Maybe it's time to remember what this is all about.

# Alistair Begg preaches on practicality and initiative in the story of Ruth

**Wintery Knight** · 1 July 2016 · Archived copy · Original

Bible study that hits the spot

I finished listening to Alistair Begg's series on Esther, and I'm now on to his series on Ruth. Sermon #3 stood out to me, because it touches on the important issues of free will vs determinism as well as the two methods of seeking God's will: mysticism vs wisdom.

The discussion centers around Ruth's decision to go to the barley fields to work, in order to get something to eat.

The MP3 file is here.

Here is the description:

> When we're facing a future devoid of prospects or possibilities, it's easy to become overwhelmed and discouraged. Ruth could relate. She was a penniless widow in a foreign land seeking a way to provide for herself and her widowed mother-in-law. Her future was totally dependent upon someone showing her unmerited grace and favor. Instead of giving up, she gives us an example of humility, initiative and faith as she seeks work and sustenance.

As things in the world spin out of control, it's important to remember that you must always have a plan and be working on that plan. Even when things look very bleak, you have to do something reasonable and practical, and then pray to God for "favor". That God will do something unexpected that will make your reasonable action bear unexpected fruit.

If you want to listen to sermons #1 and sermon #2 in the series on Ruth, you can find the whole series here. So far, I have listened to 5. The first two were also very good, so if you listen to the first 3, you will definitely benefit. Each one is 35 to 40 minutes.

# Virginia governor vetoes religious liberty bill, calls freedom of religion an “oxymoron”

**Wintery Knight** · 2 July 2016 · Archived copy · Original

Gay activist vandalizes pro-marriage sign

The Weekly Standard reports:

> Governor Terry McAuliffe of Virginia decried having to “veto a so-called ‘religious freedom’ bill. It’s such an oxymoron,” on WTOP radio Wednesday.
>
> The bill that McAuliffe vetoed is a short one, and simply states that religious organizations or clergy should not be required to participate in the solemnization of marriages and should not be penalized for their refusal to do so. Its language specifically aimed to protect the actions of those “*with a sincerely held religious belief or moral conviction that marriage is or should be recognized as the union of one man and one woman.”*
>
> It is not uncommon for Democrats to question religious freedom legislation, saying that it goes beyond defending religious freedom and into anti-LGBT discrimination.
>
> […]Upon celebrating the Supreme Court’s blocking of Texas abortion restrictions, McAuliffe said that Virginia was a few years ahead of the Supreme Court, and that these laws were enacted to shut down “women’s health clinics,” which, according to Gov. McAuliffe, “operate with no profit margin as it is.”
>
> “I’m a very fiscally conservative, pro-business Democrat,” McAuliffe said directly before rebuking a bill passed by the Virginia General Assembly to scuttle government funding for Planned Parenthood.

Every day, it seems like some new assault on Constitutional freedoms by secular leftist fascists who want to force their views on others using the power of the government.

Here’s what Jesus says about marriage.

Matthew 19:1-11:

> 1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.
>
> 2 And large crowds followed him, and he healed them there.
>
> 3 And Pharisees came up to him and tested him by asking, “Is it lawful to divorce one’s wife for any cause?”

> 4 He answered, “Have you not read that he who created them from the beginning made them male and female,
>
> 5 and said, ‘Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh’? 6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate.”
>
> 7 They said to him, “Why then did Moses command one to give a certificate of divorce and to send her away?” 8
>
> He said to them, “Because of your hardness of heart Moses allowed you to divorce your wives, but from the beginning it was not so.
>
> 9 And I say to you: whoever divorces his wife, except for sexual immorality, and marries another, commits adultery.”
>
> 10 The disciples said to him, “If such is the case of a man with his wife, it is better not to marry.”
>
> 11 But he said to them, “Not everyone can receive this saying, but only those to whom it is given.

Terry McAuliffe thinks Jesus is wrong about that, and everyone who votes for Democrats like Terry McAuliffe affirms that Jesus has no authority on moral issues.

To be a Christian, minimally, is to be a follower of Jesus Christ. That means that we accept what Jesus teaches, on whatever he teaches about. We don’t overturn the teachings of Jesus in order to make people who are rebelling against God feel better about their rebellion. It is central to the Christian worldview that Christians care more about what God thinks of them than what non-Christians think of them. But I do think that we need to do everything that is legal to protect our religious liberty, so that being faithful is no harder for us than it needs to be.

# Ontario government-run schools deny parents opt-out from pro-gay curriculum

**Wintery Knight** · 3 July 2016 · Archived copy · Original

Kathleen Wynne and Justin Trudeau march in gay pride parade

Remember the curriculum that was designed by the Liberal Party child pornographer? Well, Ontario premier Kathleen Wynne isn't going to give parents any opt out from it for their children.

Life Site News explains: (H/T Tim and William)

> If anyone doubts that Kathleen Wynne's Liberal government will overrule parental rights in favour of its inclusivity agenda on behalf of LGBTTIQ — lesbian, gay, bisexual, transgender, transsexual, two-spirited, intersex, queer and questioning — students and parents, the evidence — literally — points clearly and abundantly to the fact that it will, and is.
>
> And if anyone doubts that teachers in the public school system are encouraged to bring up references to LGBTTIQ issues in any and all subjects at their discretion, because equity and inclusivity is embedded in the curriculum, again, the evidence is in.
>
> That evidence is found in the opposition factums in the Steve Tourloukis case, heard June 23 by Ontario Superior Court Justice Robert Reid, and in which the Wynne Liberal government intervened on behalf of the Hamilton-Wentworth District School Board, as did the Elementary Teachers Federation of Ontario.
>
> "Requests to exempt students from the very portions of the curriculum that promote diversity, inclusivity and acceptance cannot be granted without the risk of appearing to endorse the non-acceptance of students of other races, sexual orientations, family backgrounds, gender expression and gender identities," states the Attorney General of Ontario's factum.
>
> […]"Children who are themselves LGBT, who had LGBT parents, family or friends, or who had experienced homophobic or transphobic bullying based on being perceived as LGBT, could feel less valued and accepted if the Applicant's children left the room every time people like them or their family or friends were discussed,"

> stated the document, submitted by lawyers Josh Hunter and Emily Bala.
>
> The government lawyers argued that, given "the Legislature's pressing and substantial objective of ensuring that public schools are accepting, inclusive, and diverse," it follows that "permitting the Applicant's children to leave the classrooms whenever planned lessons communicate acceptance of different family backgrounds, sexual orientations, gender identities or gender expression would undermine that Legislative purpose."
>
> HWDSB lawyer Mark Zega argued much the same.
>
> "How could the Board provide an accommodation that would forbid a teacher from stating that there is nothing wrong with same-sex marriage and allowing a child to leave class every time such a topic arises, when the Board is required to discourage homophobia in schools?"
>
> This, he stated, "would amount to an implicit condemnation of person who have suffered prejudice and stereotyping, and who have been singled out on the basis of their sexuality."

Christian parents are allowed (and even required by law) to pay taxes that pay the salary of the Ontario premier, the Ontario attorney general, the Ontario judges, the Ontario lawyers, the Ontario school administrators and the Ontario teachers. Their money is good enough for the Liberal Party and for the government-run public schools that serve the Liberal Party. But their human rights are not good enough for the Liberal Party. Only the human rights of the Liberal Party and their allies matter.

Let's look at the particular case where this all came out:

> Tourloukis, as readers may know, is the Hamilton dentist and father of two who asked his public school to give him advance notice when teachers would be presenting on a number of sensitive subjects, so he could decide if his children could opt out, if they risked being exposed to "false teaching" according to their Greek Orthodox faith.
>
> These topics included, among others, "discussions or portrayals of sexual conduct that he determines to be unnatural/unhealthy (anal sex, oral sex, sadism, masochism, fetishes, bondage, etc.)," and "discussions or portrayals of homosexual/bisexual conduct and relationships and/or transgenderism as natural, healthy."
>
> When Hamilton-Wentworth District School Board refused his request, Tourloukis launched a legal action in 2012, asking for court declarations that he has final say over what his kids are taught in school, and that the school board's refusal to give him advance notice violates his Charter rights.
>
> […]Tourloukis was informed "that **all** educational materials could potentially conflict with his stated objective, as equity and inclusivity principles are integrated and embedded within Ontario public education and within the Board," noted the board's factum (emphasis added).
>
> The Ontario government argued the same.
>
> If the Tourloukis children were permitted to opt out at their father's request, they could end up "missing a substantial portion of the school year given the breadth of the Applicant's religious objections, including in particular the fact that **principles of equity and inclusive education are embedded throughout the curriculum** the Board is mandated to teach to all its students" (emphasis added).
>
> That LGBTTIQ issues could be raised in any subject is clear from the 2014 update of the Equity and Inclusive Strategy (EIE), first introduced in 2009 under then education minister Kathleen Wynne, herself a lesbian "married" to another woman.
>
> The EIE Strategy aims to help school boards move "beyond tolerance and celebration to inclusivity and respect," stated the Attorney General's factum.
>
> The updated guidelines "note that the principles of equity and inclusivity need to be reflected throughout the curriculum and learning materials so that students can 'see themselves reflected in the curriculum'." One example is "using texts written by gay/lesbian authors."

As I said before, this was all done with the consent of false Christians over the last few decades – when economically illiterate “Christians” became obsessed with feelings and peer approval to the point where they were willing to vote to expand a secular leftist government in order to get free health care – which now means free sex changes, free IVF, free birth control, free abortions, etc. This was more important to Canadian “Christians” than their own freedom of conscience and religious liberty. In Canada, Christianity is shallow, anti-intellectual and disconnected from practical realities.

If you want to know how things will go in the United States, you should look north to Canada. They are about 5-10 years ahead of us. It’s very important for Christians to take note of what gay activists and their allies in secular leftist parties like the Liberal Party or the Democrat Party are doing to put gay rights above religious liberty rights.

# Happy Independence Day 2016!

**Wintery Knight** · 4 July 2016 · Archived copy · Original

The Stars and Stripes

**The Declaration of Independence**

Here's the complete text of the Declaration of Independence here.

And now let's take a look at an article at The Federalist which talks about what the Declaration of Independence tells us about the character of America.

It says:

> The Declaration of Independence, Thomas Jefferson famously wrote, was "intended to be an expression of the American mind." Although not intended as such, it was also an expression of the American character. Woven throughout the text are insights into the minds and virtues of those Lincoln called the "once hardy, brave, and patriotic, but now lamented and departed race of ancestors" who fought for the independence we still enjoy.

> This aspect of the Declaration of Independence receives scant attention from scholars and citizens, yet it must be understood. The theory of government elaborated in that text presupposes the existence of citizens who know how to govern themselves and are willing to assert their rights. The American character is the unstated premise of the argument, without which the theory, though still true, doesn't work in practice.

So, what's the American character?

> What sets us Americans apart is that we do not merely declare for liberty. We staunchly stand for it. To be an American is not only to know that you are born free, it is to have the courage to defend your freedom. This admirable aspect of the American character is evident in the fifth grievance the Declaration levels against the king.

> It reads: "He has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people." The king acted as monarchs are wont to do. Our forefathers, although they were subjects, did not take his abuses passively. They resisted—with manly firmness.
>
> Today, King George III is long gone. Our representative houses are no longer dissolved at will (although they have unconstitutionally been declared to be in recess). Our rights, however, are still encroached upon, whether by the U.S. Department of Health and Human Services or the Environmental Protection Agency. Thankfully, courageous Americans still push back, like the Green family, who challenged Obamacare's abortifacient mandate, or the Sacketts, who fought the EPA's effective seizure of their property.

> No charter of liberties or Constitution—not even one handed down by God himself—could ever, on its own, protect the rights of the people. James Madison, the father of our own Constitution, was not so foolish as to place his trust in mere "parchment barriers against the encroaching spirit of power."
>
> In Federalist No. 57, Madison takes up the question of "what is to restrain the House of Representatives from making legal discriminations in favor of themselves and a particular class of the society?" His answer: "the genius of the whole system; the nature of just and constitutional laws; and *above all*, the vigilant and manly spirit which actuates the people of America—a spirit which nourishes freedom, and in return is nourished by it."
>
> The 56 men who signed our Declaration of Independence set the example for their fellow countrymen and for future generations. They did not simply proclaim the universal rights of man. They also pledged "to each other, our Lives, our Fortunes, and our sacred Honor." And they meant it. Twelve served as combat commanders during the Revolutionary War. Five were captured and imprisoned by the British. Seventeen lost part of their fortunes.

> America is not a country for servile men and women. We not only have a *right* to be free, but a *duty* to be free. For "when a long train of abuses and usurpations, pursuing invariably the same object evinces a design to reduce them under absolute despotism, it *is their right, it is their duty*, to throw off such government, and to provide new guards for their future security." Free as we are, we have no liberty to choose despotism—even if it is sugarcoated, as it is today, with material comfort and license.
>
> […]Two centuries later, the American character endures, battered and bruised though it may be. It has been corroded by the Progressive faith in government, the sixties ethos of "if it feels good, do it," and the mindlessness and vulgarity of pop culture. But we can still readily discern among many Americans the habits of mind and the virtues of a free people. For this, we should be grateful on this Fourth of July.

To love liberty means to be willing to stand up for liberty, and that can mean something as simple as 1) not voting for bigger government just because they are handing out money to you and 2) not voting for bigger government because they are letting you do immoral things.

Standing up for liberty means standing up for your own personal responsibility. It means looking primarily to yourself for earning a living. It means choosing to behave morally so that you don't create a situation where you need the government to bail you out of your own immoral decisions with someone else's money.

# Gay rights movement is killing religious liberty and conscience protection in America

**Wintery Knight** · 5 July 2016 · Archived copy · Original

Obama speaks to the Human Rights Campaign

I wrote a couple of posts last week about how gay rights was destroying religious liberty in Canada. The first was about how Christian colleges and universities are being made illegal, the second about how parents were being prevented from opting out of gay indoctrination in public schools (schools run by the government, that the parents pay for).

But it's not just happening in Canada, there is a lot of bad news down here as well.

Ben Shapiro, an orthodox Jew and a conservative, writes about the latest at the Daily Wire:

> In the latest sign that the judiciary has gone completely off the rails, a judge has now forced the owners of ChristianMingle.com, Spark, to include same-sex matches on their website. Two gay men decided that there simply weren't enough gay dating websites on the internet, and sued ChristianMingle.com in 2013. Now, under the settlement agreement, the webpage asks merely whether you are a man or a woman, rather than a "man seeking a woman" or a "woman seeking a man." According to *The Wall Street Journal*, "Spark agreed that within two years, it would adjust other searching and profile features to give gay and lesbian singles a more tailored experience." The terms of the settlement also open up CatholicMingle.com, AdventistSinglesConnection.com, and BlackSingles.com to same-sex searches.
>
> […]**The lawsuit and settlement reveal one fundamental truth: for the LGBT community, acceptance and tolerance aren't enough. They want full-scale approval of their activity from religious Americans, and they won't stop until government shoves that approval down religious throats at point of bayonet.**

This column by Dr. Michael Brown examines several relevant items in an article posted at The Stream, most of which have been discussed on this blog before.

Here's a new one:

> Sadly, rather than refuse to comply with this ungodly and unjust ruling, *ChristianMingle.com* has agreed to introduce same-sex searches within the next two years, with Shapiro noting that the "terms of the settlement also open up*CatholicMingle.com*, *AdventistSinglesConnection.com*, and *BlackSingles.com* to same-sex searches." As he correctly states, "This is pure insanity."
>
> From a scriptural point of view, this is what Jesus warned about when He said, "For whoever would save his life will lose it, but whoever loses his life for my sake will find it" (Matt. 16:25). Unless *ChristianMingle.com* agreed to these terms simply to buy time, they have now sold their Christian soul in order to save their business, which is the guaranteed path to spiritual suicide.
>
> But it gets worse.
>
> If gay activists like Dan Savage have their way (and remember that Savage's allies include the current president of the United States), Christians will not be allowed to hold to biblical morality in any setting, since our alleged homophobia is directly linked to a radical Muslim slaughtering gays and lesbians in a gay bar. In the aftermath of the Orlando massacre, Savage wrote, "Love is the cure—love and gun control and fully funded mental-health services and zero tolerance for anti-gay and anti-trans bigotry with no exceptions for 'religious beliefs,' sincerely held or otherwise.
>
> "No sanctuary for liars, no safe place for bigots, no refuge for haters." That means "zero tolerance" for people like you and me because of our "sincerely held religious beliefs."
>
> In his podcast, Savage makes himself perfectly clear: It is time to make "demands" on our society, including "an end to homophobia and to transphobia and a demand for accountability for those who promote it whether they're promoting it in a church or a mosque or a legislature" — and bear in mind that Savage and his allies characterize traditional Judeo-Christian teaching on LGBT issues to be homophobic and transphobic.
>
> Yes, a gay activist is demanding that Christians be held accountable for believing the Bible.

In the Daily Wire article I linked above, Ben Shapiro had this to say about what comes next:

> The next steps for the left include removing non-profit status for any religious institution that "discriminates" against same-sex marriage, then suing those institutions under "anti-discrimination" laws; removing accreditation from schools that refuse to teach the beauty and joy of homosexuality and transgenderism; and finally, targeting parents who homeschool by refusing their legitimacy and calling their children truant.
>
> All of this is coming, and it's coming soon.
>
> We'd better start preparing the resistance. We're already late in starting.

What I'm seeing in the church, especially among young, unmarried happy-clappy Christian women, is a complete lack of awareness of the threats outlined by Shapiro and Brown. They aren't following the news, and they often support the secular left, for causes like universal health care (= universal abortion) and to stop "global warming". Everything is decided based on emotions and peer approval – no Christian wants to be the "bad guy" who sticks up for the Christian worldview, and keeps informed by reading and studying. Almost nothing is being done by young Christians to prepare educationally, professionally and financially for these challenges. Almost no one is planning to have an influence, either as singles or through a carefully-planned marriage that results in influential, effective children.

# Eat, Pray, Love author divorces man she married after leaving her first husband

**Wintery Knight** · 5 July 2016 · Archived copy · Original

Eat, Pray, Love: Elizabeth Gilbert and her Brazilian stud

Does abandoning your marriage in order to travel the world indicate that a woman has the character necessary for a life-long married love? Let's look at a case in which a famous feminist abandoned her husband to travel to have adventures.

The New York Times writes:

> Elizabeth Gilbert, whose best-selling 2006 memoir, "Eat Pray Love," traced a journey of self-discovery around the world that continues to resonate with fans, announced a new chapter on Friday.
>
> […]Ms. Gilbert, speaking directly to her readers in a Facebook post, said that after 12 years she was separating from José Nunes, the Brazilian importer whom she met during her travels and later married, and who was a central character in the book.
>
> "I am separating from the man whom many of you know as 'Felipe,' " she wrote of her husband, referring to his pseudonym in the book. "Our split is very amicable. Our reasons are very personal." She also asked for privacy, saying she would be "a bit absent from social media during this sensitive moment."
>
> "Eat Pray Love," a sumptuous tale of escape, self-discovery and romance, quickly became a cultural phenomenon, though not one without criticism, with some noting that not every woman who wished to escape would have the privilege to live as sumptuously as Ms. Gilbert did on her sojourn through India, Italy and Bali.
>
> The book, however, drew praise from Oprah Winfrey and was made into a 2010 film starring Julia Roberts and Javier Bardem. The tale also resonated with fans, mostly women, who either identified with being in an unhappy relationship or had managed to artfully escape one.
>
> The phenomenon has endured over the past decade: The travelogue touched so many readers that it eventually spawned a book, "Eat, Pray, Love Made Me Do It," comprising 47 essays from inspired fans who had written

> their own tales of escape and discovery. That book was released in April.
>
> […]In April, Ms. Gilbert said that she missed travel: "I've never been to Japan, Iceland, South Africa and other places that it would be a pity to come to this earth and miss."

Adventures, escape and discovery – that's what young women want today. Not marriage, and not motherhood. They believe that they can find lasting happiness through travel and adventures. Even if they change their minds later, and want to marry, repeated acts of self-centered behavior do not prepare a woman for life-long self-sacrificial married love. Promiscuity and hedonism do not prepare a woman's character to be content with the roles of wife and mother.

Here is Gilbert writing in the New York Times about her priorities:

> It started with a boy I met at summer camp and ended with the man for whom I left my first husband. In between, I careened from one intimate entanglement to the next — dozens of them — without so much as a day off between romances. You might have called me a serial monogamist, except that I was never exactly monogamous. Relationships overlapped, and those overlaps were always marked by exhausting theatricality: sobbing arguments, shaming confrontations, broken hearts. Still, I kept doing it. I couldn't not do it.
>
> […]If the man was already involved in a committed relationship, I knew that I didn't need to be prettier or better than his existing girlfriend; I just needed to be different.
>
> […]Soon enough, and sure enough, I might begin to see that man's gaze toward me change from indifference, to friendship, to open desire. That's what I was after: the telekinesis-like sensation of steadily dragging somebody's fullest attention toward me and only me. My guilt about the other woman was no match for the intoxicating knowledge that — somewhere on the other side of town — somebody couldn't sleep that night because he was thinking about me. If he needed to sneak out of his house after midnight in order to call, better still. That was power, but it was also affirmation. I was someone's irresistible treasure. I loved that sensation, and I needed it, not sometimes, not even often, but always.
>
> […]In my mid-20s, I married, but not even matrimony slowed me down. Predictably, I grew restless and lonely. Soon enough I seduced someone new; the marriage collapsed. But it was worse than just that. Before my divorce agreement was even signed, I was already breaking up with the guy I had broken up my marriage for.
>
> […][I]f you asked me what I was up to, I might have claimed that I was a helpless romantic — and how can you judge that? If really cornered, I might have argued that I was a revolutionary feminist, taking brazen agency over my own sexuality…

She didn't want to commit and love others self-sacrificially. That's boring! She wanted to get attention and drama. Men liked her because she was easy to use and easy to throw away. She wasn't anyone's "irresistible treasure", because she didn't have enough value for any of these men to commit to her for life and take care of her as she aged. The men she chose wanted sex, but they were not going to actually provide for her or protect her when she reached her 70s, 80s and 90s. The question that we need to ask is whether a woman like this can stay married. Is she capable of doing the work that ordinary wives and mothers do in a married home – the work that wins a man's loyalty for life? Is she capable of behaving in a way that leads a man to commit to caring for her when she is no longer young and pretty?

Let's review what happened after Elizabeth Gilbert divorced her first husband for travel and adventures.

Christian men's rights blogger Dalrock explains:

> Having written a book on divorce, Elizabeth decided to write a book on marriage titled *Committed*.
>
> From the *Publishers Weekly* review on Amazon:

> How did a woman who didn't want children land the only Latino hottie with a vasectomy in all of Indonesia?
>
> […][I]t turns out **he needed a visa to get into the US, so he asked Elizabeth to marry him**. After a year of bickering and unhappiness together, she finally said yes after he explained it to her.
>
> From the *Publishers Weekly* book review on Amazon.com:
>
> > When are you going to understand? As soon as we secure this bloody visa and get ourselves safely married back in America, we can do whatever the hell we want.
>
> You couldn't make stuff this romantic up!

That was 6 years ago, Elizabeth is about 47 now and divorced again. I wonder how well her plan of "seducing" men and getting no commitment in return will work over the next 40 years? Tramp stamps and belly-button rings seem fun when you are 17, but are not so fun when you are 71. Hooking up, cohabitating, traveling and having adventures seems to make sense when you are 17, but they don't result in a man standing by you when you are 71. A woman needs to invest in a marriage-minded man early, and sustain this investment if she expects him to stick around when she loses her youth and beauty. Not every man will respond to this investment, but it is her job to choose one who will – with the help of wise advisers.

UPDATE:

In early September 2016, it emerged that she is now in a relationship with her best female friend.

# FBI: if other people do what Hillary did then they will be prosecuted, but she won't be

**Wintery Knight** · 6 July 2016 · Archived copy · Original

Hillary Clinton look bored about the deaths of 4 Americans who asked for her help

A round-up of reactions from around the Internet, on the right and on the left.

First, here's radical leftist Chris Cilliza, writing in the radically leftist Washington Post, of all places:

> FBI Director James B. Comey dismantled large portions of Clinton's long-told story about her private server and what she sent or received on it during a stirring 15-minute news conference, after which he took no questions. While Comey exonerated Clinton, legally speaking, he provided huge amounts of fodder that could badly hamstring her in the court of public opinion.
>
> Most importantly, Comey said the FBI found 110 emails on Clinton's server that were classified at the time they were sent or received. That stands in direct contradiction to Clinton's repeated insistence she never sent or received any classified emails. And it even stands in contrast to her amended statement that she never knowingly sent or received any classified information.
>
> […]Comey said Clinton had used not one but multiple private email servers during her time at State. He said Clinton used multiple email devices during that time. (She had offered her desire to use a single device for "convenience" as the main reason she set up the private server.)
>
> […]**It's hard to read Comey's statement as anything other than a wholesale rebuke of the story Clinton and her campaign team have been telling ever since the existence of her private email server came to light in spring 2015. She did send and receive classified emails. The setup did leave her — and the classified information on the server — subject to a possible foreign hack. She and her team did delete emails as personal that contained professional information.**
>
> **Those are facts, facts delivered by the Justice Department of a Democratic administration. And those facts run absolutely counter to the narrative put forth by the Clinton operation: that this whole thing**

> **was a Republican witch-hunt pushed by a bored and adversarial media.**

Andrew McCarthy in National Review:

> There is no way of getting around this: According to Director JamesComey (disclosure: a former colleague and longtime friend of mine), Hillary Clinton checked every box required for a felony violation of Section 793(f) of the federal penal code (Title 18): With lawful access to highly classified information she acted with gross negligence in removing and causing it to be removed it from its proper place of custody, and she transmitted it and caused it to be transmitted to others not authorized to have it, in patent violation of her trust. Director Comey even conceded that former Secretary Clinton was "extremely careless" and strongly suggested that her recklessness very likely led to communications (her own and those she corresponded with) being intercepted by foreign intelligence services.
>
> Yet, Director Comey recommended against prosecution of the law violations he clearly found on the ground that there was no intent to harm the United States.
>
> **In essence, in order to give Mrs. Clinton a pass, the FBI rewrote the statute, inserting an intent element that Congress did not require.**

David French in National Review:

> […]Comey noted that her personal e-mail server was less secure than Google's Gmail:
>
> None of these e-mails should have been on any kind of unclassified system, but their presence is especially concerning because all of these e-mails were housed on unclassified personal servers not even supported by full-time security staff, like those found at Departments and Agencies of the U.S. Government — or even with a commercial service like Gmail.
>
> […]**I defy any member of the military or any civilian not directly affiliated with Hillary Clinton to engage in such conduct and get away with it. The first thing that would happen is you would lose your security clearance. Next, you would lose your job. Finally, good luck escaping prosecution. Comey claims that prior FBI prosecutions included "some combination of: clearly intentional and willful mishandling of classified information; or vast quantities of materials exposed in such a way as to support an inference of intentional misconduct; or indications of disloyalty to the United States; or efforts to obstruct justice."**

I blogged previously about how Clinton's private unsecure e-mail server was was definitely compromised by foreign governments and hackers. She was the top diplomat of the United States of America. Clandestine agents and their sources would undoubtedly have been compromised.

The FBI has been focusing its attention on Christians and conservatives for quite some time, and letting the real criminals on the secular left go Scot free. So their refusal to enforce the law here is no surprise. It's not the first time, it won't be the last time.

At the Daily Wire, Ben Shapiro notes that the timing of this non-prosecution is suspect:

> Just days after the Attorney General of the United States Loretta Lynch held a secret meeting aboard a plane with former President Bill Clinton – whose wife was under FBI investigation; just the day after Hillary leaked that she'd want Lynch for her own administration; just hours after the President of the United States Barack Obama flew Hillary – still under FBI investigation – down to North Carolina on Air Force One; just two hours before Obama was to open his campaign on behalf of Hillary Clinton, FBI Director James Comey announced that while Hillary Clinton had clearly engaged in criminal activity worthy of prosecution, he had recommended that she not be prosecuted.

James Taranto in the Wall Street Journal:

> After announcing his no-charge recommendation, Comey added:
>
> **To be clear, this is not to suggest that in similar circumstances, a person who engaged in this activity would face no consequences. To the contrary, those individuals are often subject to security or administrative sanctions. But that is not what we are deciding now.**
>
> In other words, laws are for little people.

So let's take stock. Nobody was prosecuted for the Clinton Foundation donations from foreign sources. Nobody was prosecuted for Fast and Furious gunrunning to Mexican drug cartels. Nobody was prosecuted for Benghazi. Nobody was prosecuted for the IRS persecution of Christians and conservatives. And nobody was prosecuted for the Clinton unsecure e-mail server.

# New study: children raised by same-sex parents have twice the risk of depression

**Wintery Knight** · 6 July 2016 · Archived copy · Original

Young people seem to like gay marriage more than they like to care for the needs of children

A new peer-reviewed study published in the journal Depression Research and Treatment confirms that children do better when raised by their mother and father.

Here's the abstract:

> The relationship of elevated depression risk recently discovered among adult persons raised by same-sex parents with possible precipitating conditions in childhood has not previously been acknowledged. This study tests whether such inattention is supportable. Logistic regression based risk ratios were estimated from longitudinal measures of mental health outcomes observed in three waves (at ages 15, 22, and 28) of the US National Survey of Adolescent to Adult Health (,701). At age 28, the adults raised by same-sex parents were at over twice the risk of depression (CES-D: risk ratio 2.6, 95% CI 1.4–4.6) as persons raised by man-woman parents. These findings should be interpreted with caution. Elevated risk was associated with imbalanced parental closeness and parental child abuse in family of origin; depression, suicidality, and anxiety at age 15; and stigma and obesity. More research and policy attention to potentially problematic conditions for children with same-sex parents appears warranted.

The Federalist commented on the new study:

> Children of same-sex parents also reported more violence, having a parent slap, hit, or kick them, or saying "things that hurt your feelings or made you feel you were not wanted or loved," or "touched you in a sexual way, forced you to touch him or her in a sexual way, or forced you to have sex relations."
>
> In conclusion:

> The emergence of higher depression risk in early adulthood, coupled with a more frequent history of abuse victimization, parental distance, and obesity, suggests that the inattention of research and policy to the

> problems of children with same-sex parents is unwarranted.
>
> > As initial results, the present findings should be interpreted with caution and balance, based on the limited evidence presented, and (it is hoped) neither exaggerated nor dismissed out of hand on preconceived ideological grounds. However, well-intentioned concern for revealing negative information about a stigmatized minority does not justify leaving children without support in an environment that may be problematic or dangerous for their dignity and security.
>
> Sullins' study is not alone in suggesting more research needs to be done in this area. The U.S. Department of Health and Human Services published an extensive study proving the importance of *biological* fathers in the "healthy development of children." In addition, "the most careful, rigorous, and methodologically sound study ever conducted" on the issue of homosexual parenting found "numerous and significant differences" between children raised by biological parents and children of homosexuals, "with the outcomes for children of homosexuals rated 'suboptimal' in almost every category."

Very important to understand that same-sex couples who bring children into their relationship are intentionally depriving the child of a relationship with one or more of her biological parents. Just imagine growing up in the world and not having access to the people who made you. It's not fair, and adult selfishness should have to give way to the needs of vulnerable children. Motherlessness is bad for children, and fatherlessness is bad for children.

Let's go back and look at a previous study from Canada.

The Public Discourse reported on it.

Excerpt:

> A new academic study based on the Canadian census suggests that a married mom and dad matter for children. Children of same-sex coupled households do not fare as well.
>
> There is a new and significant piece of evidence in the social science debate about gay parenting and the unique contributions that mothers and fathers make to their children's flourishing. A study published last week in the journal *Review of the Economics of the Household*—analyzing data from a very large, population-based sample—reveals that the children of gay and lesbian couples are only about 65 percent as likely to have graduated from high school as the children of married, opposite-sex couples. And gender matters, too: girls are more apt to struggle than boys, with daughters of gay parents displaying dramatically low graduation rates.
>
> Unlike US-based studies, this one evaluates a 20 percent sample of the Canadian census, where same-sex couples have had access to all taxation and government benefits since 1997 and to marriage since 2005.
>
> […]Three key findings stood out to Allen:
>
> children of married opposite-sex families have a high graduation rate compared to the others; children of lesbian families have a very low graduation rate compared to the others; and the other four types [common law, gay, single mother, single father] are similar to each other and lie in between the married/lesbian extremes.
>
> Employing regression models and series of control variables, Allen concludes that the substandard performance *cannot* be attributed to lower school attendance or the more modest education of gay or lesbian parents. Indeed, same-sex parents were characterized by higher levels of education, and their children were more likely to be enrolled in school than even those of married, opposite-sex couples. And yet their children are notably more likely to lag in finishing their own schooling.
>
> […]The truly unique aspect of Allen's study, however, may be its ability to distinguish gender-specific effects of same-sex households on children. He writes:
>
> the particular gender mix of a same-sex household has a dramatic difference in the association with child

> graduation. Consider the case of girls. . . . Regardless of the controls and whether or not girls are currently living in a gay or lesbian household, the odds of graduating from high school are considerably lower than any other household type. Indeed, girls living in gay households are only 15 percent as likely to graduate compared to girls from opposite sex married homes.
>
> Thus although the children of same-sex couples fare worse overall, the disparity is unequally shared, but is instead based on the combination of the gender of child and gender of parents.
>
> […]Thus the study undermines not only claims about "no differences" but also assertions that moms and dads are interchangeable. *They're not.*

Here's the study.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. Neither of these factors is good for children. So we have three reasons to think that normalizing gay relationships as "marriage" would not be good for children.

# Why does the law say that killing an unborn child is OK, but not a born child?

**Wintery Knight** · 7 July 2016 · Archived copy · Original

I'm Scheming Unborn Baby, and I approve this message

This article from Nancy Flory in The Stream really caused me to stop and think about the plight of unborn children in our age of selfishness.

Nancy starts her piece like this:

> As someone who's faced an unexpected pregnancy — and now has a rambunctious two-year-old — I came across two stories in the last week that stopped me cold. As I explained in an earlier article, I faced uncertainty, financial hardships and downright fear when I discovered I was pregnant. I know what it's like not to know what the future holds, not to know how I'm going to buy food for my children, to know I'm going to lose my car and go for months without gainful employment, all while unexpectedly pregnant. So I can speak with candor about the two mothers who made headlines this week regarding what they chose to do when faced with an unexpected pregnancy.

I'm just going to quote the second one, you can click through for the first.

She writes:

> **Emile Weaver — Having Too Much Fun to Stop for Parenthood**
>
> An Ohio judge this week sentenced sorority girl Emile Weaver to life in prison without parole for throwing away her newborn baby girl after giving birth in her sorority house's restroom. The 20-year-old texted her boyfriend following the child's death, saying, "No more baby," and "taken care of."
>
> **Prosecutors made the case that Weaver knew all along she wasn't going to keep the baby and engaged in risky behaviors such as drinking, smoking marijuana and playing in a volleyball tournament while**

> **pregnant, reported *The Blaze*.**
>
> Although she apologized during her trial for killing her child and testified that she thought the baby was dead before she put her in the trash, she made legal moves to plead not guilty by reason of insanity and, after the trial, vowed that she would appeal.
>
> The judge did not believe that she was remorseful and handed down the stiff sentence.

Nancy goes on to make the point about abortion. Why is it OK for a woman to kill her unborn child in its 6th, 7th, 8th month of gestation but it suddenly becomes wrong after the child is born? Why is abortion morally right 5 minutes before birth, but morally wrong 5 minutes after birth? What is it that the baby acquires after passing through the birth canal a few inches that gives them the right to life?

Or, isn't it the case the the location of the child is meaningless, and the child had all the value in the world the moment it was conceived, and a new DNA signature of a human being was created that is distinct from the mother and the father. A new person was made. That new person is not the father, and is not the mother. It's a new person. And it's not right to kill innocent people just because the mother wants to have fun and thrills, and escape the responsibility for her actions. That's really what abortion is – two unmarried people get drunk, have sex for fun and thrills, and then they kill the child because they don't want their pursuit of fun and thrills to be impacted with expectations, responsibilities or obligations.

This is why I am so suspicious of the women I knew when I was younger who pushed me to have fun, and who hated expectations, responsibilities and obligations. There is a lot of drinking and pleasure-seeking that goes on with young women, and I didn't want anything to do with it. Fun makes me suspicious. For young people, it seems to go along with playing the victim, avoiding responsibility, and running away from moral obligations. So many young, unmarried women seem to have this desperate desire for fun, thrills and travel. And they are revolted by expectations, responsibilities and moral obligations. Not me – I am deeply suspicious of fun and thrills. It strikes me as childish, and when I read stories about women who have had abortions, I understand what is behind my suspicion.

I'm not killing any unborn children, not for any fun in the world. Not for the best fun the world has to offer. Fun isn't that important to me, not if I have to break moral laws and even be complicit in murder. No way.

# Atheist Jerry Coyne explains why morality is impossible for atheists

**Wintery Knight** · 7 July 2016 · Archived copy · Original

Sherlock Holmes and John Watson about to do philosophy

Let's review what you need in your worldview in order to have a rationally grounded system of morality.

You need 5 things:

1) Objective moral values

There needs to be a way to distinguish what is good from what is bad. For example, the moral standard might specify that being kind to children is good, but torturing them for fun is bad. If the standard is purely subjective, then people could believe anything and each person would be justified in doing right in their own eyes. Even a "social contract" is just based on people's opinions. So we need a standard that applies regardless of what people's individual and collective opinions are.

2) Objective moral duties

Moral duties (moral obligations) refer to the actions that are obligatory based on the moral values defined in 1). Suppose we spot you 1) as an atheist. Why are you obligated to do the good thing, rather than the bad thing? To whom is this obligation owed? Why is rational for you to limit your actions based upon this obligation when it is against your self-interest? Why let other people's expectations decide what is good for you, especially if you can avoid the consequences of their disapproval?

3) Moral accountability

Suppose we spot you 1) and 2) as an atheist. What difference does it make to you if you just go ahead and disregard your moral obligations to whomever? Is there any reward or punishment for your choice to do right or do wrong? What's in it for you?

4) Free will

In order for agents to make free moral choices, they must be able to act or abstain from acting by exercising their free will. If there is no free will, then moral choices are impossible. If there are no moral choices, then no one can

be held responsible for anything they do. If there is no moral responsibility, then there can be no praise and blame. But then it becomes impossible to praise any action as good or evil.

5) Ultimate significance

Finally, beyond the concept of reward and punishment in 3), we can also ask the question "what does it matter?". Suppose you do live a good life and you get a reward: 1000 chocolate sundaes. And when you've finished eating them, you die for real and that's the end. In other words, the reward is satisfying, but not really meaningful, ultimately. It's hard to see how moral actions can be meaningful, ultimately, unless their consequences last on into the future.

Theism rationally grounds all 5 of these. Atheism cannot ground *any of them.*

Let's take a look at #4: free will and see how atheism deals with that.

**Atheism and free will?**

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality.

Here are some more atheists to explain how atheists view morality.

William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

When village atheists talk about how they can be moral without God, it's important to ask them to justify the minimum requirements for rational morality. Atheists may act inconsistently with their worldview, believing in free will, expecting praise and blame for complying with the arbitrary standards of their peer group, etc. But there is

nothing more to morality on atheism that imitating the herd – at least when the herd is around to watch them. And when the herd loses its Judeo-Christian foundation – watch out. That's when the real atheism comes out – the atheism that we've seen before in countries that turned their backs on God, and the moral law. When God disappears from a society, anything is permissible.

# 17-year-old girl uses firearm to defend herself from burglar

**Wintery Knight** · 8 July 2016 · Archived copy · Original

Guns are for self-defense against criminals

My friend Terrell posted this story from Fox 59 local news.

Excerpt:

> A 17-year-old girl in Franklin Township is safe after a scary brush with a burglar at her family's home on Knapp Road Wednesday.
>
> Faith Shilkett was home alone around 2 p.m., when her dog Duke started barking. She walked out of her room and saw a man knocking on the front door.
>
> "He was big. He was muscular. He looked like he could do damage if he got a hold of you," said the teen. "I was scared if he got in, he could've hurt me."
>
> Faith then took off through the house to lock the other doors. When she did that, she got a glimpse of the man at a deck door. She says the man then went to the garage door and jiggled the handle, trying to get in, and even peered in the window. Faith then ran to her mom's room and pulled out a gun.
>
> "I stayed back here and I started yelling 'I'm here. I have a gun. I'm going to shoot,'" she said.
>
> Faith called for help and waited. She said she heard rustling in the garage and the man took off in a white van.
>
> […]Faith says the man was roughly six feet tall, white, and had brown hair.

Guns are a great equalizer for a contest between a 17-year-old girl and a 6-foot-tall man.

It's very important that everyone remember what the second amendment is used for in the United States. The second amendment allows law-abiding people to purchase firearms in order to defend themselves from criminals.

Although there is opposition to gun ownership in certain circles, the academic literature is quite clear and decisive. Legal ownership of firearms reduces rates of violent crime. Whenever laws that allow law-abiding citizens to carry firearms for self-defense, violent crime rates decrease. Whenever laws are passed that restrict law-abiding citizens from owning and carrying firearms for self-defense, violent crime rates increase.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England"s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, but both studies affirm the same conclusion – more legal firearm ownership means less crime.

# Reasonable Faith podcast: the real consequences of atheism

**Wintery Knight** · 8 July 2016 · Archived copy · Original

I have a key that will unlock a puzzling mystery

If you love to listen to the Please Convince Me podcast, as I do, then you know that in a recent episode, J. Warner Wallace mentioned a blog post on an atheistic blog that clearly delineated the implications of an atheistic worldview. He promised he was going to write about it and link to the post, and he has now done so.

The latest episode of Reasonable Faith discusses the post mentioned in the episode.

Details:

> An atheist blogger gets brutally honest about his view and tells other atheists to quit fooling themselves!

The MP3 file is here on the Reasonable Faith web site. (23 minutes)

Kevin Harris (KH) and William Lane Craig: (WLC) discuss this post on the Wintery Knight blog.

Summary:

- KH: New Atheists always try to portray themselves as having meaningful lives, and good without God
- WLC: Exactly, they would say you don't nee God to do positive things, so God makes no difference
- KH: but what happens when an atheist explains the real consequences of atheism?

KH then reads a quote by an atheist blogger:

> "[To] all my Atheist friends.
>
> Let us stop sugar coating it. I know, it's hard to come out and be blunt with the friendly Theists who frequent sites like this. However in your efforts to "play nice" and "be civil" you actually do them a great disservice.
>
> We are Atheists. We believe that the Universe is a great uncaused, random accident. All life in the Universe past and future are the results of random chance acting on itself. While we acknowledge concepts like morality, politeness, civility seem to exist, we know they do not. Our highly evolved brains imagine that these things have a cause or a use, and they have in the past, they've allowed life to continue on this planet for a short blip of time. But make no mistake: all our dreams, loves, opinions, and desires are figments of our primordial imagination. They are fleeting electrical signals that fire across our synapses for a moment in time. They served

> some purpose in the past. They got us here. That's it. All human achievement and plans for the future are the result of some ancient, evolved brain and accompanying chemical reactions that once served a survival purpose. Ex: I'll marry and nurture children because my genes demand reproduction, I'll create because creativity served a survival advantage to my ancient ape ancestors, I'll build cities and laws because this allowed my ape grandfather time and peace to reproduce and protect his genes. My only directive is to obey my genes. Eat, sleep, reproduce, die. That is our bible.
>
> We deride the Theists for having created myths and holy books. We imagine ourselves superior. But we too imagine there are reasons to obey laws, be polite, protect the weak etc. Rubbish. We are nurturing a new religion, one where we imagine that such conventions have any basis in reality. Have they allowed life to exist? Absolutely. But who cares? Outside of my greedy little gene's need to reproduce, there is nothing in my world that stops me from killing you and reproducing with your wife. Only the fear that I might be incarcerated and thus be deprived of the opportunity to do the same with the next guy's wife stops me. Some of my Atheist friends have fooled themselves into acting like the general population. They live in suburban homes, drive Toyota Camrys, attend school plays. But underneath they know the truth. They are a bag of DNA whose only purpose is to make more of themselves. So be nice if you want. Be involved, have polite conversations, be a model citizen. Just be aware that while technically an Atheist, you are an inferior one. You're just a little bit less evolved, that's all. When you are ready to join me, let me know, I'll be reproducing with your wife.
>
> I know it's not PC to speak so bluntly about the ramifications of our beliefs, but in our discussions with Theists we sometimes tip toe around what we really know to be factual. Maybe it's time we Atheists were a little more truthful and let the chips fall where they may. At least that's what my genes are telling me to say."

Back to the summary:

- WLC: this quote explains that on naturalism, moral values and duties are just the by products of biological evolution
- WLC: he is deriding other atheists who put on a civil facade, and that the superior atheist is the one who acts openly like an atheist
- KH: he wants atheists to stop acting like Christians (being outwardly nice)
- WLC: there is no evidence for atheism presented in the quote, so why should he think that morality and meaning are illusory
- WLC: he is saying that morality is not real because our beliefs form by Darwinian evolution
- WLC: even if those beliefs formed that way, that doesn't mean that our moral judgments are not true (genetic fallacy)
- KH: the moral judgments are only false if naturalism is true, and he didn't defend that
- WLC: if objective moral values and duties exist, then naturalism is false

KH quotes Richard Dawkins:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music.

More:

- WLC: yes, that's his view, but what reason is there to accept the naturalism that requires all that?
- KH: yet he pushes various moral judgments

- WLC: yes, in his book, he pushes a bunch of moral judgments in his book, all of which are invalid on naturalism?
- KH: he wants humans to choose to show pity, even though nature is pitiless
- WLC: he thinks that these altruistic behaviors can emerge because humans are sociable beings
- WLC: but this "herd morality" is just an evolved convention, there are not objective moral truths

KH quotes Will Provine:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

More:

- WLC: it's his naturalism that is causing him to say that, theistic evolution is compatible with morality
- WLC: naturalism is what conflicts with objective morality, science doesn't invalidate objective morality
- KH: atheists deny objective meaning, but atheists can invent subjective meanings and purposes
- WLC: yes, but these invented subjective meanings and purposes are illusory
- WLC: I don't think that anyone can live happily by think

KH quotes Michael Ruse:

> "The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory."

- WLC: again, science is neutral against morality, it's the philosophy of naturalism that is inconsistent with objective morality
- KH: just because theists and atheists get along, it's still important to remind atheists of the consequences of their view
- WLC: I do that in my work on the absurdity of life without God, and in the moral argument for God's existence
- WLC: I love it when they say things like this, because it supports the first premise in Craig's moral argument
- KH: even if the evidence were 50-50, why would atheists lean towards the meaningless view
- WLC: yes, if the evidence is 50-50, then people ought to prefer life, significance and moral value
- KH: you're not saying that people ought to the believe that in theism because it's more palatable to us
- WLC: right, I am saying that naturalism should be rejected on the evidence, including our experience of moral values

If you like this podcast, the RSS feed for the Reasonable Faith podcast is here. I subscribe to it. If you liked the post they were discussing, please click here and share and/or tweet it.

# What criteria do historians use to get to the minimal facts about the historical Jesus?

**Wintery Knight** · 9 July 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus in a debate by saying that the resurrection is the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates. Minimal facts are the parts of the New Testament that meet a set of strict historical criteria. These are the facts that skeptical historians agree with, totally apart from any religious beliefs.

So what are the criteria that skeptical historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.
>
> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:

> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book.

Try this approach instead:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)
6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And remember that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8.

The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

# How do atheists try to accommodate the Big Bang in their worldview?

**Wintery Knight** · 10 July 2016 · Archived copy · Original

J. Warner Wallace: God's Crime Scene

OK, so J. Warner Wallace has a new book out and it's about science and God.

I wanted to link to something about Lawrence Krauss trying to accommodate the Big Bang within his worldview of atheism.

Wallace writes:

> One of the key pieces of evidence in the universe is simply it's origin. If our universe began to exist, what could have caused it's beginning? How did *everything* (all space, time and matter) come into existence from *nothing*? One way atheist physicists have navigated this dilemma has simply been to redefine the terms they have been using. What do we mean when we say "everything" or "nothing"? At first these two terms might seem rather self-explanatory, but it's important for us to take the time to define the words. As I've already stated, by "everything" we mean all space, time and matter. That's right, space is "something"; empty space is part of "everything" not part of "nothing". For some of us, that's an interesting concept that might be hard to grasp, but it's an important distinction that must be understood. When we say "nothing", we mean the complete absence of everything; the thorough non-existence of anything at all (including all space time and matter). These two terms, when defined in this way, are consistent with the principles of the Standard Cosmological Model, but demonstrate the dilemma. If everything came from nothing, what caused this to occur? What is the non-spatial, atemporal, immaterial, uncaused, first cause of the universe? A cause of this sort sounds a lot like a supernatural Being, and that's why I think many naturalists have begun to redefine the terms.
>
> Lawrence Krauss, Arizona State University Professor (School of Earth and Space Exploration and Director of the Origins Initiative) wrote a book entitled, *"A Universe from Nothing: Why There Is Something Rather than Nothing"*. As part of the promotion for the book, Krauss appeared on the Colbert Report where he was interviewed by comedian Stephen Colbert. During the interview, Krauss tried to redefine "nothing" to avoid the

> need for a supernatural first cause:
>
> *"Physics has changed what we mean by nothing… Empty space is a boiling, bubbling brew of virtual particles popping in and out of existence… if you wait long enough, that kind of nothing will always produce particles." (Colbert Nation, June 21st, 2012)*
>
> Now if you're not careful, you might miss Krauss' subtle redefinition. In describing the sudden appearance of matter ("particles"), Krauss assumes the prior existence of space ("empty space") and time ("if you wait long enough"). If you've got some empty space and wait long enough, matter appears. For Krauss, the "nothing" from which the universe comes includes two common features of "everything" (space and time), and something more (virtual particles). This leaves us with the real question: "Where did the space, time and virtual particles come from (given all our evidence points to their origination at the beginning of our universe)?" Krauss avoids this inquiry by moving space and time from the category of "something" to the category of "nothing".
>
> If you've got a teenager in your house, you might recognize Krauss' approach to language. I bet you've seen your teenager open the refrigerator door, gaze at all the nutritious fruits and vegetables on the shelves, then lament that there is "nothing to eat."

I used to say that when I was a teenager, but I grew out of it. I didn't go on the Comedy Channel and try to convince everyone that what I was saying about the refrigerator was scientifically accurate.

Anyway, here is a debate between William Lane Craig and Lawrence Krauss, if you want to see how Krauss defends his "refrigerator has nothing to eat" view of cosmology. I know everybody and even many Christians all think that we have something to hide when it comes to science, but if you would just watch these debates, you would see that there is nothing to fear from science at all. We own it.

Meanwhile, I want to show you that this is not at all rare among atheists.

Look, here is Peter Atkins explaining how he makes the Big Bang reconcile with his atheism – and notice that it's a completely different view than Krauss:

So, just who is this Peter Atkins, and why is he a good spokesman for atheism?

From his Wikipedia bio.

**Peter William Atkins** (born August 10, 1940) is an English chemist and a fellow and professor of chemistry at Lincoln College of the University of Oxford. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, 8th ed. (with Julio de Paula of Haverford College), *Inorganic Chemistry*, and *Molecular Quantum Mechanics*, 4th ed. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.

[…]Atkins is a well-known atheist and supporter of many of Richard Dawkins' ideas. He has written and spoken on issues of humanism, atheism, and what he sees as the incompatibility between science and religion. According to Atkins, whereas religion scorns the power of human comprehension, science respects it.

[…]He was the first Senior Member for the Oxford Secular Society and an Honorary Associate of the National Secular Society. He is also a member of the Advisory Board of The Reason Project, a US-based charitable foundation devoted to spreading scientific knowledge and secular values in society. The organisation is led by fellow atheist and author Sam Harris.

Now watch that 6-minute video above. Peter Atkins thinks that nothing exists. He thinks he doesn't exist. He thinks that you don't exist. This is how atheism adapts to a world where the Big Bang creation event is fact.

I think Peter Atkins should join Lawrence Krauss on the Comedy Channel and present that view. I would laugh. Wouldn't you?

# Where is the outrage in the black community for black-on-black crimes?

**Wintery Knight** · 11 July 2016 · Archived copy · Original

Walter Williams

A recent editorial by George Mason University professor of economics Walter Williams.

Excerpt:

> Each year, roughly 7,000 blacks are murdered. Ninety-four percent of the time, the murderer is another black person.
>
> According to the Bureau of Justice Statistics, between 1976 and 2011, there were 279,384 black murder victims. Using the 94-percent figure means that 262,621 were murdered by other blacks.
>
> Though blacks are 13 percent of the nation's population, they account for more than 50 percent of homicide victims. Nationally, the black homicide victimization rate is six times that of whites, and in some cities, it's 22 times that of whites.
>
> Coupled with being most of the nation's homicide victims, blacks are most of the victims of violent personal crimes, such as assault and robbery.
>
> The magnitude of this tragic mayhem can be viewed in another light. According to a Tuskegee Institute study, between 1882 and 1968, 3,446 blacks were lynched at the hands of whites. Black fatalities during the Korean War (3,075), Vietnam War (7,243) and all wars since 1980 (8,197) come to 18,515, a number that pales in comparison with black loss of life at home.
>
> It's a tragic commentary to be able to say that young black males have a greater chance of reaching maturity on the battlefields of Iraq and Afghanistan than on the streets of Philadelphia, Chicago, Detroit, Oakland, Newark and other cities.

This is not even to mention abortion, which disproportionately affects blacks. Yet it is overwhelmingly supported by blacks who vote more than 90% Democrat. Maybe we should be more focused on black-on-black crime and black genocide, since these are bigger problems.

# Alexander Vilenkin: “All the evidence we have says that the universe had a beginning”

**Wintery Knight** · 11 July 2016 · Archived copy · Original

I’ve decided to explain why physicists believe that there was a creation event in this post. That is to say, I’ve decided to let famous cosmologist Alexander Vilenkin do it.

From Uncommon Descent.

Excerpt:

> Did the cosmos have a beginning? The Big Bang theory seems to suggest it did, but in recent decades, cosmologists have concocted elaborate theories – for example, an eternally inflating universe or a cyclic universe – which claim to avoid the need for a beginning of the cosmos. Now it appears that the universe really had a beginning after all, even if it wasn’t necessarily the Big Bang.
>
> At a meeting of scientists – titled “State of the Universe” – convened last week at Cambridge University to honor Stephen Hawking’s 70th birthday, cosmologist Alexander Vilenkin of Tufts University in Boston presented evidence that the universe is not eternal after all, leaving scientists at a loss to explain how the cosmos got started without a supernatural creator. The meeting was reported in *New Scientist* magazine (Why physicists can’t avoid a creation event, 11 January 2012).
>
> […]In his presentation, Professor Vilenkin discussed three theories which claim to avoid the need for a beginning of the cosmos.

The three theories are chaotic inflationary model, the oscillating model and quantum gravity model. Regular readers will know that those have all been addressed in William Lane Craig’s peer-reviewed paper that evaluates alternatives to the standard Big Bang cosmology.

But let’s see what Vilenkin said.

More:

> One popular theory is eternal inflation. Most readers will be familiar with the theory of *inflation*, which says that the universe increased in volume by a factor of at least 10^78 in its very early stages (from 10^−36 seconds after the Big Bang to sometime between 10^−33 and 10^−32 seconds), before settling into the slower rate of expansion that we see today. The theory of *eternal inflation* goes further, and holds that the universe is constantly giving birth to smaller “bubble” universes within an ever-expanding multiverse. Each bubble universe undergoes its own initial period of inflation. In some versions of the theory, the bubbles go both backwards and forwards in time, allowing the possibility of an infinite past. Trouble is, the value of one particular cosmic parameter rules out that possibility:
>
> > But in 2003, a team including Vilenkin and Guth considered what eternal inflation would mean for the Hubble constant, which describes mathematically the expansion of the universe. They found that the equations didn’t work (Physical Review Letters, DOI: 10.1103/physrevlett.90.151301). “You can’t construct a space-time with this property,” says Vilenkin. It turns out that the constant has a lower limit that prevents inflation in both time directions. “It can’t possibly be eternal in the past,” says Vilenkin. “There must be some kind of boundary.”
>
> A second option explored by Vilenkin was that of a cyclic universe, where the universe goes through an infinite series of big bangs and crunches, with no specific beginning. It was even claimed that a cyclic universe could explain the low observed value of the cosmological constant. But as Vilenkin found, there’s a problem if you

> look at the *disorder* in the universe:
>
> > Disorder increases with time. So following each cycle, the universe must get more and more disordered. But if there has already been an infinite number of cycles, the universe we inhabit now should be in a state of maximum disorder. Such a universe would be uniformly lukewarm and featureless, and definitely lacking such complicated beings as stars, planets and physicists – nothing like the one we see around us.
> >
> > One way around that is to propose that the universe just gets bigger with every cycle. Then the amount of disorder per volume doesn't increase, so needn't reach the maximum. But Vilenkin found that this scenario falls prey to the same mathematical argument as eternal inflation: if your universe keeps getting bigger, it must have started somewhere.
>
> However, Vilenkin's options were not exhausted yet. There was another possibility: that the universe had sprung from an eternal cosmic egg:
>
> > Vilenkin's final strike is an attack on a third, lesser-known proposal that the cosmos existed eternally in a static state called the cosmic egg. This finally "cracked" to create the big bang, leading to the expanding universe we see today. Late last year Vilenkin and graduate student Audrey Mithani showed that the egg could not have existed forever after all, as quantum instabilities would force it to collapse after a finite amount of time (arxiv.org/abs/1110.4096). If it cracked instead, leading to the big bang, then this must have happened before it collapsed – and therefore also after a finite amount of time.
> >
> > "This is also not a good candidate for a beginningless universe," Vilenkin concludes.
>
> So at the end of the day, what is Vilenkin's verdict?
>
> > "All the evidence we have says that the universe had a beginning."

This is consistent with the Borde-Guth-Vilenkin Theorem, which I blogged about before, and which William Lane Craig leveraged to his advantage in his debate with Peter Millican.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, can be eternal into the past. *No one* denies the expansion of space in our universe, and so we are left with a cosmic beginning. Even speculative alternative cosmologies do not escape the need for a beginning.

**Conclusion**

If the universe came into being out of nothing, which seems to be the case from science, then the universe has a cause. Things do not pop into being, uncaused, out of nothing. The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

Now, let's have a discussion about this science in our churches, and see if we can't train Christians to engage with non-Christians about the evidence so that everyone accepts what science tells us about the origin of the universe.

# The link between single mother welfare, fatherlessness, poverty and crime

**Wintery Knight** · 12 July 2016 · Archived copy · Original

Government pays people welfare not to get married before having kids

What is the root cause of criminal behavior? This article by sociologist W. Bradford Wilcox, who points out the link between fatherlessness and crime.

The article appears in National Review.

Wilcox writes:

> Another shooting, another son of divorce. From Adam Lanza, who killed 26 children and adults a year ago at Sandy Hook School in Newtown, Conn., to Karl Pierson, who shot a teenage girl and killed himself this past Friday at Arapahoe High in Centennial, Colo., one common and largely unremarked thread tying together most of the school shooters that have struck the nation in the last year is that they came from homes marked by divorce or an absent father. From shootings at MIT (i.e., theTsarnaev brothers) to the University of Central Florida to the Ronald E. McNair Discovery Learning Academy in Decatur, Ga., nearly every shooting over the last year in Wikipedia's "list of U.S. school attacks" involved a young man whose parents divorced or never married in the first place.
>
> […]The social scientific evidence about the connection between violence and broken homes could not be clearer. My own research suggests that boys living in single mother homes are almost twice as likely to end up delinquent compared to boys who enjoy good relationships with their father. Harvard sociologist Robert Sampson has written that "Family structure is one of the strongest, if not the strongest, predictor of variations in urban violence across cities in the United States." His views are echoed by the eminent criminologists Michael Gottfredson and Travis Hirschi, who have written that "such family measures as the percentage of the population divorced, the percentage of households headed by women, and the percentage of unattached individuals in the community are among the most powerful predictors of crime rates."
>
> Why is fatherlessness such a big deal for our boys (almost all of these incidents involve boys)? Putting the argument positively, sociologist David Popenoe notes that "fathers are important to their sons as role models. They are important for maintaining authority and discipline. And they are important in helping their sons to

> develop both self-control and feelings of empathy toward others, character traits that are found to be lacking in violent youth." Boys, then, who did not grow up with an engaged, attentive, and firm father are more vulnerable to getting swept up in the Sturm und Drang of adolescence and young adulthood, and in the worst possible way.

So where do fatherless children come from? It turns out that government programs incentivize women to make them.

Dr. Michael Tanner of the libertarian Cato Institute explains how welfare causes fatherlessness in his testimony to Congress:

> Welfare contributes to crime in several ways. First, children from single-parent families are more likely to become involved in criminal activity. According to one study, children raised in single-parent families are one-third more likely to exhibit anti-social behavior.(3) Moreover, O'Neill found that, holding other variables constant, black children from single- parent households are twice as likely to commit crimes as black children from a family where the father is present. Nearly 70 percent of juveniles in state reform institutions come from fatherless homes, as do 43 percent of prison inmates.(4) Research indicates a direct correlation between crime rates and the number of single-parent families in a neighborhood.(5)
>
> As Barbara Dafoe Whitehead noted in her seminal article for The Atlantic Monthly:
>
> The relationship [between single-parent families and crime] is so strong that controlling for family configuration erases the relationship between race and crime and between low income and crime. This conclusion shows up time and again in the literature. The nation's mayors, as well as police officers, social workers, probation officers, and court officials, consistently point to family break up as the most important source of rising rates of crime.(6)
>
> At the same time, the evidence of a link between the availability of welfare and out-of-wedlock births is overwhelming. There have been 13 major studies of the relationship between the availability of welfare benefits and out-of-wedlock birth. Of these, 11 found a statistically significant correlation. Among the best of these studies is the work done by June O'Neill for the U.S. Department of Health and Human Services. Holding constant a wide range of variables, including income, education, and urban vs. suburban setting, the study found that a 50 percent increase in the value of AFDC and foodstamp payments led to a 43 percent increase in the number of out-of-wedlock births.(7) Likewise, research by Shelley Lundberg and Robert Plotnick of the University of Washington showed that an increase in welfare benefits of $200 per month per family increased the rate of out-of-wedlock births among teenagers by 150 percent.(8)
>
> The same results can be seen from welfare systems in other countries. For example, a recent study of the impact of Canada's social-welfare system on family structure concluded that "providing additional benefits to single parents encourages births of children to unwed women."(9)

The secular left in this country believes that fathers need to be separated away from their children, and that's why they support welfare programs that redirect money from husbands in intact families to single mothers. They believe that fathers are harmful because they set boundaries on children, and judge them and punish them when they act immorally. To the secular left, boundaries, judgments and punishments on children are bad, and must be stopped. So how can the secular left discourage men from marrying and teaching their own children morality? Well, they can tax married men, and they can give the money to single mothers.

Not only is crime caused by fatherlessness, but poverty is. as well.

Here is Dr. Robert Rector of the Heritage Foundation to explain:

> Census data and the Fragile Families survey show that marriage can be extremely effective in reducing child poverty. But the positive effects of married fathers are not limited to income alone. Children raised by married parents have substantially better life outcomes compared to similar children raised in single-parent homes.

> When compared to children in intact married homes, children raised by single parents are more likely to have emotional and behavioral problems; be physically abused; smoke, drink, and use drugs; be aggressive; engage in violent, delinquent, and criminal behavior; have poor school performance; be expelled from school; and drop out of high school.[19] Many of these negative outcomes are associated with the higher poverty rates of single mothers. In many cases, however, the improvements in child well-being that are associated with marriage persist even after adjusting for differences in family income. This indicates that the father brings more to his home than just a paycheck.
>
> The effect of married fathers on child outcomes can be quite pronounced. For example, examination of families with the same race and same parental education shows that, when compared to intact married families, children from single-parent homes are:
>
> - More than twice as likely to be arrested for a juvenile crime;[20]
> - Twice as likely to be treated for emotional and behavioral problems;[21]
> - Roughly twice as likely to be suspended or expelled from school;[22] and
> - A third more likely to drop out before completing high school.[23]
>
> The effects of being raised in a single-parent home continue into adulthood. Comparing families of the same race and similar incomes, children from broken and single-parent homes are three times more likely to end up in jail by the time they reach age 30 than are children raised in intact married families. [24] Compared to girls raised in similar married families, girls from single-parent homes are more than twice as likely to have a child without being married, thereby repeating the negative cycle for another generation.[25]
>
> Finally, the decline of marriage generates poverty in future generations. Children living in single-parent homes are 50 percent more likely to experience poverty as adults when compared to children from intact married homes. This intergenerational poverty effect persists even after adjusting for the original differences in family income and poverty during childhood.[26]

People on the left claim that poverty causes crime, but they don't look for the root cause of poverty. The root cause of poverty is the decline of marriage, which produces fatherless children.

# How the presence and quality of fathers affects belief in God

**Wintery Knight** · 12 July 2016 · Archived copy · Original

A father in the home helps children to reconcile love and moral boundaries

Here's an article by Paul Copan which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.*It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own*rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of François-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.

> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]
>
> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never

> darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an enormously difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others. If you want your child to be religious and moral, you have to pick a man who is religious and moral. And it can't just be a faith commitment that he makes, he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading.

A child's relationship with God begins before he/she is even born. It begins with his/her mother's ability to control herself and choose the right man for the job of being a father. Note that superficial qualities like "deep voice", "broad shoulders", "expensive shoes", "likes dogs" and "makes me laugh" have no bearing on a man's ability to commit and lead on moral/spiritual issues. Christians don't really do a good job of showing the practical consequences of bad choices to women in the church. The ones I talk to impress on me how "unpredictable" men are, so that they are justified in choosing one that they like based on tingles, and hoping it will work out. We should be telling women that poor choices with men are wrong, and it leads to fatherlessness and abortion.

# Archaeologists make first-time discovery of Philistine cemetary

**Wintery Knight** · 13 July 2016 · Archived copy · Original

Investigation in progress
Reported by radically leftist CNN, of all places.

Excerpt:

> Archaeologists have unearthed the first Philistine cemetery ever discovered, shedding light on an ancient civilization that was home to one of the Bible's most famous villains.
>
> Historians have long hoped to learn more about the Philistines, and the burial ground offers insight into this ancient and historic population.
>
> The Philistines are best known for Goliath, the giant who challenged a young David to battle near the Valley of Elah; the pair's story is recounted in the biblical books of Samuel.
>
> The 3,000-year-old site was found at Ashkelon, in southern Israel; its discovery marks the culmination of more than 30 years of exploration at the site.
>
> […]Archaeologists unearthed skeletons, individually buried with their own jugs, storage jars, and bowls. The small jugs are assumed to have been filled with perfumed oil.Some skeletons were even found wearing bracelets and earrings, while others had weapons.
>
> The cemetery also had evidence of cremations, pit internments, and multi-chambered tombs.
>
> "Ninety-nine percent of the chapters and articles written about Philistine burial customs should be revised or ignored now that we have the first and only Philistine cemetery found just outside the city walls of Tel Ashkelon," said Lawrence Stager, a professor of archaeology at Harvard University and a co-director of the expedition.
>
> Bone samples taken from the site will undergo three different types of testing – DNA, radiocarbon and biological distance studies – to help determine the origin of the Philistines. Biblical passages suggest the community came by sea from ancient Crete.

Here is a previous discovery from August last year reported by Live Science:

> A massive gate unearthed in Israel may have marked the entrance to a biblical city that, at its heyday, was the

> biggest metropolis in the region.
>
> The town, called Gath, was occupied until the ninth century B.C. In biblical accounts, the Philistines — the mortal enemies of the Israelites — ruled the city. The Old Testament also describes Gath as the home of Goliath, the giant warrior whom the Israelite King David felled with a slingshot.
>
> The new findings reveal just how impressive the ancient Philistine city once was, said lead archaeologist of the current excavation, Aren Maeir, of Bar-Ilan University in Israel.
>
> “We knew that Philistine Gath in the 10th to ninth century [B.C.] was a large city, perhaps the largest in the land at that time,” Maeir told Live Science in an email. “These monumental fortifications stress how large and mighty this city was.”
>
> […]Both the impressive settlement size and mentions in biblical accounts suggest to scholars that the site is the historic city of Gath, which was ruled by the Philistines, who lived next to the Jewish kingdoms of Judah and Israel. Most scholars think that Gath was besieged and laid to waste by Hazael, King of Aram Damascus, in 830 B.C., Maeir said.
>
> […]The team also found ironworks and a Philistine temple near the monumental gate, with some pottery and other finds typically associated with Philistine culture. Though the pottery represents a distinctive Philistine style, it also shows elements of Israelite technique, suggesting the cultures did influence each other in ways unrelated to war.

The story of David and Goliath is found in 1 Samuel 17. Why don’t you give it a read? It’s a great story.

# Physicist Michael Strauss discusses Christianity and science at Stanford University

**Wintery Knight** · 13 July 2016 · Archived copy · Original

Christianity and the progress of science
This is one of my favorite lectures.

**The lecture:**

Dr. Strauss delivered this lecture at Stanford University in 1999. It is fairly easy to understand, and it even includes useful dating tips.

Here is a clip:

The full video can be watched on Vimeo:

I pulled the MP3 audio from the lecture in case anyone wants just the audio.

**Summary:**

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range in order for the universe to support the minimal requirements for life

– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

It's a good lecture explaining basic arguments for a cosmic Creator and Designer. If you add the origin of life and the Cambrian explosion (Stephen C. Meyer's arguments), then you will be solid on science apologetics. That's everything a rank-and-file Christian needs.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# Sean McDowell explains how to make Christian apologetics into a career

**Wintery Knight** · 14 July 2016 · Archived copy · Original

Two Air Force JTACs discuss mission parameters prior to calling in CAS

Sean McDowell has managed to integrate apologetics pretty tightly with his career, and in this recent blog post, he offers some options to others who might want to follow suit.

He writes:

> We live in a golden age of apologetics. There are more books, curricula, blogs, conferences, academic programs, and people interested in apologetics than ever before. As my friend (and boss) Craig Hazen says, "Apologetics is a growth industry."
>
> Part of the vision of our Biola M.A. Christian Apologetics program is to train apologists to be a resource for the local church. In fact, our dream is that churches would consider the need for a "Pastor or Apologetics" as important as a men's ministry leader or a youth pastor. Until this dream becomes a reality, here's a few ways to make a career in apologetics (If you think I have missed any, please let me know):

He has several options listed in the post:

- Professor of Apologetics
- Ratio Christi
- Author
- Blogger
- Speaker
- Christian School Teacher

At least one personal friend of mine does each of these six options! They are all doable, but you really have to be the best at what you do if you want to pursue them, simply because of the lower demand. People don't value truth these days as much as they value fun and entertainment.

Let's look at number 6 in particular, because this one seems to me to offer the most linear, low-risk, option:

> **6.Christian School Teacher**. Before accepting a teaching position at Biola University, I taught theology and apologetics full-time at a private Christian school in southern California. Since teaching high school involves grading and disciplining students, it is very different than writing or speaking. But it is a valuable way to help Christian students think deeply about their faith, and also to critically engage non-Christian students (I had many atheist, Buddhist, and Muslim students in my classes). If you want to teach at a Christian school, you will need both apologetics/theology knowledge (an undergraduate degree or M.A. is probably sufficient) as well as training as a classroom teacher.

Of course, there is a rival view to the view of doing apologetics full time, and that view is that you should do your regular job full time, and try to have an apologetics ministry on the side. J. Warner Wallace calls such people "tent-making apologists" because, like the apostle Paul, they fund their ministry by working a normal job (Paul made tents to drive his ministry).

Air Force TACPs confirm target locations with their map

Wallace lists 10 reasons why tent-making apologists are effective, and this is one I have personal experience with:

> **Tent-Making Christian Case Makers Reach a Skeptical Audience**
> As an atheist, I was very skeptical of Christians when I thought they were trying to sell me something. In fact, this was a major stumbling block for me. As a high school student, I used to watch local televangelists with scorn if they repeatedly asked their viewers to send them money. Don't underestimate this disdain on the part of skeptics. As a tent-maker, I've had many conversations with skeptics who have given me a hearing simply because they respected my position as a volunteer Case Maker. One told me, "At least I know you're not in this for the money." Tent-making Case Makers are uniquely positioned to reach a skeptical world.

This blog has no ads, because I pay wordpress to have them removed. I do post Amazon links in the What I am Reading section, but that's only to recommend to people what I am actually reading, not to make money.

And these two are near and dear to me:

> **Tent-Making Christian Case Makers Thrive in Any Economy**
> I started thinking again about the power of tent-making Case Makers after reading Lydia McGrew's fantastic

> post, “An Army of Tent Makers.” Lydia is a brilliant Case Maker who continues to have a powerful impact even though she’s not a vocational apologist. In her post, Lydia discusses the current financial climate and the limited opportunities for people seeking full-time employment as apologists. While it’s often difficult to find full-time employment in the field of Christian apologetics or start a donor-funded apologetics ministry in a challenging economy, tent-making Case Makers aren’t limited by bad economic climates. In addition, as Lydia points out, “In the end, if we can have this army of tentmakers, there will be (Lord willing) money to allow some people to work in full-time ministry. But it’s going to be quite a small proportion of those who are interested or would ideally like to do so.”
>
> **Tent Making Christian Case Makers Survive in Any Political Climate**
> Times are changing and our politicians and judges are less and less friendly to non-profit organizations. A federal judge recently struck down a law giving clergy tax-free housing allowances, and atheist groups continue to challenge the tax exempt status of religious non-profits. If the non-profit status of apologetics ministries is someday successfully abolished, vocational Christian Case Makers will have to rethink their strategy. Tent-making Case Makers will already be standing in the gap. Tent-makers are flexible enough to survive, even in difficult political environments.

My regular readers know that I follow current events and what I see worries me. Earning and saving is my way of weakening the fear of the future, so that I can make a small difference today without being paralyzed by worry about tomorrow. It really is important for Christians to earn and save so that they can do ministry today without crashing and burning tomorrow when things get difficult. Although some silly people think that the height of Christian ability is to disregard the future and do wild, adventurous things today, those people are wrong. A Christian ought to be wise about balancing ministry and finances, so that they aren’t an embarrassment to the Kingdom, or a financial burden to others. Any of the young Christians who I mentor regarding college and careers and finances will tell you that I am an absolute bully when it comes to making young people study useful subjects, get early work experience, and curtail spending on fun and thrills in favor of saving and investing.

Wallace wrote another post where he listed the occupations of a bunch of tent-making apologists, including me. I think the important thing is that you have to earn money and you have to do apologetics. Finding the right balance is your decision, but whatever you decide, make sure you are effective and make sure that you don’t starve now, or in the future when you are older. We all have to retire some day, you probably don’t want to be working full time in your 70s at a job you don’t love, just to put food on the table.

# Wayne Grudem explains what the Bible says about spending, saving and charity

**Wintery Knight** · 14 July 2016 · Archived copy · Original

Bible study that hits the spot

A practical lecture on money – spending, saving, charitable giving – from famous pastor Wayne Grudem.

I like the way that Wayne Grudem navigates the Bible finding the passages that tell you who God is, so that you can make better decisions by analyzing alternatives and choosing the one that gives your Boss a maximum return on investment. He's very practical.

The MP3 file is here.

The PDF outline is here.

Spending:

- Christianity does not teach asceticism (= don't enjoy anything in this world), Paul condemns it in 1 Timothy 4:1-5
- When you buy nice things, even if it is a little more expensive, it's an opportunity to be thankful for nice things that God has provided
- Even being rich is OK, but don't let it make you haughty and arrogant, and don't set your hopes on your money (see 1 Tim 6:17)
- It is important for you to earn money, and you are supposed to use it to support yourself and be independent
- It is possible to overspend and live recklessly (Luke 15:13) and it's also possible to overspend and live too luxuriously
- *Increasing your income through career progression is wise*, because it allows you to give away more and save more
- God gives us freedom to decide how much we spend, how much we give away, and how much we save
- every choice a Christian makes with money will give him or her more or less reward in his or her afterlife
- Do not spend more than you have – you should make every effort to get out of debt as quickly as possible

Saving:

- Saving money is wise so you can help yourself and others, and have money in your old age when you will not be working
- If you do not save your own money, you end up being dependent on others (e.g. – family or taxpayers)
- Not saving money for the future is a way of "putting God to the test" (Matt 4:7)
- You are to "be dependent on no one", to the extent that you can (1 Thes 4:12)
- We don't know the future, that's why we should prepare for an emergency, and buy insurance to guard (James 4:13-17)
- It's right for us to learn how to save to be able to buy bigger assets, like a car or a college education
- Saving and investing in stocks and bonds lets people in business start and grow companies, creating jobs and new products
- *Don't over-save, trusting too much in money more than you trust in God* (Ps 62.10; Matt 6:19,24; Luke 12:15-21)

Giving:

- it is required for the people of God to give something out of what they earn, but no percentage is specified (Deut 26:12-13)
- you do not give money to become right with God, you can't earn your salvation
- *a Christian gives to show God that you trust him to take care of you, and to experience trusting him through your giving*
- the quality of your resurrection life with God is affected by giving you do for the Kingdom (Phil 4, Matt 6:19-21; 1 Tim 6:18-19)
- when you get involved in the lives of others and give to them, you have the joy of experiencing caring for others (Acts 20:35)
- it's possible to give too little, but it's also possible to give too much – be careful about pride creeping in as well

The first part of this lecture made me think of my treat for the week, which is to get a double chicken burrito bowl after my weight lifting. It is very easy to say grace when you are hovering over a double chicken burrito bowl. It is good to have nice things especially when it makes you thankful for what you have.

I was so happy listening to this talk because he was condemning bad stewardship, which I see in a lot of young people these days. I was happy until he got to the part about trusting in your savings for your security, and then I thought – that's what I do wrong! I save a lot but it's not just for emergencies and to share with others, like he was saying – I want a sense of security. This was more of a temptation in my 20s than it is now in my 30s, though.

**Charity should hurt**

I can remember being in my first full-time job as a newly hired junior programmer when the 2001 recession struck. I would cry while signing checks to support William Lane Craig's Reasonable Faith ministry, because I was so scared. I had no family or friends where I lived to help me if anything went wrong, and that's been the story of my working life. If anything goes wrong, there is no backup. But it's that experience of crying when I gave that allows me to say today "that's when I became the man I am, that's what a man does when he is a follower of Jesus". If you are not doing the actions of charity, then you will not having the experience of trusting God and letting him lead you. There is more to the Christian life than just saying the right things – you have to do the right things.

**Don't follow your heart**

If you're scared about giving when you are young, then do what I did in my 20s: work 70-hour weeks, get promoted often, and save everything you earn. I volunteered every Saturday for 9 months in order to get my first white-collar part-time job when I was still in high-school. The faster you increase your savings, the easier it's going to be to take

a *genuine interest* in caring for the people around you. Read Phil 1 (fellowship), Phil 2 (concern for others), and Phil 4 (charity). Turn off your emotions and desires when it comes to choosing what to study and what work to do, and put Philippians into practice. Your freedom to give is very much tied to the quality of your decisions of what to study, where to work, how much you spend on entertainment, and so on. That's why you need to turn off your feelings and desires and do what works, even it it's not fun, and even if it involves responsibilities, expectations and obligations.

# Daleiden: organ trafficking scheme “an illicit, for-profit scheme all the way through”

**Wintery Knight** · 15 July 2016 · Archived copy · Original

Planned Parenthood senior executive: organ harvesting so she can get a Lamborghini

I spent a lot of time last year blogging about each of the sting videos released by the Center for Medical Progress. Following the release of the videos, there was a Congressional investigation. David Daleiden, the man responsible for leading the effort to expose Planned Parenthood, gives us an update on what has been discovered so far.

The Blaze has the story:

> A year after his first video went viral, the filmmaker behind the Center for Medical Progress’ undercover videos said that he didn’t quite anticipate how much of an impact the videos would have.
>
> “A year later, a year after the initial release of the videos, all of the best evidence available shows that not only is Planned Parenthood guilty of harvesting and selling baby body parts for profit, that they’re even more guilty than any of us ever really imagined starting this out,” David Daleiden, the founder of the Center for Medical Progress, told TheBlaze in an interview.
>
> […]“The work that’s been done by the Select Panel in Congress is just incredible,” Daleiden said, noting that the panel uncovered contracts between Planned Parenthood Mar Monte, Planned Parenthood Shasta Pacific and Planned Parenthood Santa Barbara, Ventura, & San Luis Obispo and StemExpress detailing their financial arrangements.
>
> “We tried so hard to get those contracts,” Daleiden said, calling them the “final proof” of a financial benefit to Planned Parenthood.
>
> “A year later, Planned Parenthood has yet to acknowledge whether or not their senior-level leadership implicated in the undercover videos, whether or not any of them have been fired or disciplined, or if they’re still working at Planned Parenthood,” he said. “We have none of those details from Planned Parenthood, no accountability about the leadership of their organization.”
>
> “Planned Parenthood has yet to disclose exactly how much money their affiliates received from companies like StemExpress and Advanced Bioscience Resources and Novagenix,” he continued, “and they have yet to produce any documentation whatsoever showing that they had any shipping costs or transportation costs or any reimbursable costs whatsoever under the law for the transfer of fetal tissue, which is what they’ve been insistantly claiming. They’ve provided no proof whatsoever, they’ve only provided short press releases.”
>
> **“Meanwhile, we have hundreds and hundreds of pages of documents – from the select panel and other sources – showing that this was an illicit, for-profit scheme all the way through,” he added.**

If you somehow missed the original videos last year, CMP has released a 5-minute re-cap showing some of the highlights:

The Democrats and their allies in the mainstream media have been trying desperately to cover up these videos and to prosecute Daleiden and the Center for Medical Progress. Remember, if you vote Democrat, you're voting for Planned Parenthood to continue selling the body parts of innocent unborn children for money.

Barack Obama supports Planned Parenthood:

Barack Obama speaking to Planned Parenthood
Hillary Clinton supports Planned Parenthood:

Hillary Clinton speaking to Planned Parenthood
Be careful who you vote for.

# Luke Barnes discusses the fine-tuning of the fine structure constant

**Wintery Knight** · 15 July 2016 · Archived copy · Original

Fine-tuning of the strong nuclear force and the fine structure constant

Here is an article from The New Atlantis written by cosmologist Luke Barnes about one specific example of cosmic fine-tuning. (H/T Uncommon Descent via J. Warner Wallace tweet)

Excerpt:

> Today, our deepest understanding of the laws of nature is summarized in a set of equations. Using these equations, we can make very precise calculations of the most elementary physical phenomena, calculations that are confirmed by experimental evidence. But to make these predictions, we have to plug in some numbers that cannot themselves be calculated but are derived from measurements of some of the most basic features of the physical universe. These numbers specify such crucial quantities as the masses of fundamental particles and the strengths of their mutual interactions. After extensive experiments under all manner of conditions, physicists have found that these numbers appear not to change in different times and places, so they are called the fundamental constants of nature.
>
> These constants represent the edge of our knowledge. Richard Feynman called one of them — the fine-structure constant, which characterizes the amount of electromagnetic force between charged elementary particles like electrons — "one of the greatest damn mysteries of physics: a magic number that comes to us with no understanding by man."
>
> […]A universe that has just small tweaks in the fundamental constants might not have any of the chemical bonds that give us molecules, so say farewell to DNA, and also to rocks, water, and planets. Other tweaks could make the formation of stars or even atoms impossible. And with some values for the physical constants, the universe would have flickered out of existence in a fraction of a second. That the constants are all arranged in what is, mathematically speaking, the very improbable combination that makes our grand, complex, life-bearing universe possible is what physicists mean when they talk about the "fine-tuning" of the universe for

> life.

Atheists, both rank-and-file and expert, almost universally misunderstand the fine-tuning argument. They imagine that if the constants and quantities specified at the origin of the universe were different, then humans would just have green skin, or maybe forehead ridges, or pointy ears. Atheists tend to get their view of science from science fiction in novels or television or movies, and they base their worldview off of fantasies, since this is less thinking and feels better than letting the scientific evidence influence their worldview.

So what does the scientific evidence actually show?

Barnes explains:

> The strong nuclear force, for example, is the glue that holds protons and neutrons together in the nuclei of atoms. If, in a hypothetical universe, it is too weak, then nuclei are not stable and the periodic table disappears again. If it is too strong, then the intense heat of the early universe could convert all hydrogen into helium — meaning that there could be no water, and that 99.97 percent of the 24 million carbon compounds we have discovered would be impossible, too. And, as the chart to the right shows, the forces, like the masses, must be in the right balance. If the electromagnetic force, which is responsible for the attraction and repulsion of charged particles, is too strong or too weak compared to the strong nuclear force, anything from stars to chemical compounds would be impossible.
>
> Stars are particularly finicky when it comes to fundamental constants. If the masses of the fundamental particles are not extremely small, then stars burn out very quickly. Stars in our universe also have the remarkable ability to produce both carbon and oxygen, two of the most important elements to biology. But, a change of just a few percent in the up and down quarks' masses, or in the forces that hold atoms together, is enough to upset this ability — stars would make either carbon or oxygen, but not both.

It's very important that theists are well-equipped to explain how individual cases of fine-tuning work. We need to know what you lose if you alter these constants and quantities even slightly. You can read about some more examples in this previous post.

# William Lane Craig lectures on naturalistic alternatives to the Big Bang

**Wintery Knight** · 16 July 2016 · Archived copy · Original

William Lane Craig lecturing to university students

Here's the lecture, which was given in 2004 at the University of Colorado, Boulder.

This lecture might be a little advanced for beginners, but if you stretch your mind first, you shouldn't tear anything. (Note: standard disclaimers apply if you do tear something!)

The description of the video states:

> This is quite simply one of the best lectures William Lane Craig (a philosopher of science) has given. Craig explores the origins of the universe. He argues for a beginning of the universe, while refuting scientific models like the Steady State Theory, the Oscillating Theory, Quantum Vacuum Fluctuation Model, Chaotic Inflationary Theory, Quantum Gravity Theory, String Theory, M-Theory and Cyclic Ekpyrotic Theory.

And here is the description of the lecture from Reasonable Faith:

> A Templeton Foundation lecture at the University of Colorado, Boulder, laying out the case from contemporary cosmology for the beginning of the universe and its theological implications. Includes a lengthy Q & A period which features previous critics and debate opponents of Dr. Craig who were in attendance, including Michael Tooley, Victor Stenger, and Arnold Guminski.

Craig has previously debated famous atheists Stenger and Tooley previously. And they both asked him questions in the Q&A time of this lecture. Imagine – having laid out your entire case to two people who have debated you before and who know your arguments well. What did they ask Craig, and how did he respond?

**The scientific evidence**

The Big Bang cosmology that Dr. Craig presents is the standard model for how the universe came into being. It is a theory based on six lines of experimental evidence.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

It's probably a good idea to be familiar with these if you are presenting this argument, because experimental science is a reliable way of knowing about reality.

**Published research paper**

This lecture by Dr. Craig is based on a research paper published in an astrophysics journal, and was delivered to an audience of students and faculty, including atheist physicist Victor Stenger and prominent atheist philosopher Michael Tooley, at the University of Colorado at Boulder.

Here's the peer-reviewed article that the lecture is based on.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

If you want something to post on your Twitter or Facebook that is much shorter than this lecture, then you should check out this quick 4-minute explanation of the kalam argument.

# Robin Collins lectures on fine-tuning for discoverability from particle physics

**Wintery Knight** · 17 July 2016 · Archived copy · Original

Christianity and the progress of science
Here's the lecture:

This lecture is 29 minutes long, the Q&A is 15 minutes. I highly recommend this lecture to *all audiences* of *all levels of ability*, for the simple reasons that apart from the content, this lecture is a how-to clinic in the tone, body language, slides and so on for you to use when trying to be persuasive when making your case. Science is king in this lecture. The scientific method is defined and applied in a winsome way. Making science understandable *should be* the bread and butter approach to Christian apologetics, and this lecture rivals the Mike Strauss lecture at Stanford University and the Mike Strauss lecture at the University of Texas – Dallas as the ideal lectures for showing that. It's not just the scientific material that makes this lecture by Collins work, it's the narrative and the style that make the lecture work.

About Robin Collins:

> Robin Collins (PhD, University of Notre Dame, 1993), is professor of philosophy at Messiah College, Grantham, PA specializing in the area of science and religion. He has written over twenty-five articles and book chapters on a wide range of topics, such as the fine-tuning of the cosmos as evidence for the existence of God, evolution and original sin, the Doctrine of Atonement, Asian religions and Christianity, and Bohm's theory of quantum mechanics. Some of his most recent articles/book chapters are "Philosophy of Science and Religion" in The Oxford Handbook of Science and Religion, "Divine Action and Evolution" in The Oxford Handbook of Philosophical Theology (2009) "The Multiverse Hypothesis: A Theistic Perspective," in Universe or Multiverse? (Cambridge University Press), and "God and the Laws of Nature," in Theism or Naturalism: New Philosophical Perspectives (Oxford University Press, forthcoming). He recently received a grant from the John Templeton Foundation to finish a book that presents the case for design based on physics and cosmology, tentatively entitled The Well-Tempered Universe: God, Cosmic Fine-tuning, and the Laws of Nature.

His thesis in one slide:

Fine-tuning for discoverability – the DLO thesis
Summary:

- Thesis: the universe is more intelligible than we would expect it by chance
- The regular fine-tuning argument says that complex embodied observers are very rare
- But the number of highly-discoverable universes that have complex embodied observers is rarer still
- Why do we exist in a highly-discoverable universe?
- Can we quantify and test discoverability?
- Yes: by varying fundamental parameters and seeing how it affects discoverability
- Conclusion of his calculations: The Discoverability-Liveability Optimality range is an even smaller range within the Liveablity Optimality range of the standard fine-tuning argument
- Fine-tuning #1: the fine structure constant, governs the strength of the electro-magnetic force
- If larger, wood-burning fire becomes impossible because fires won't stay lit, and therefore forging metals becomes unlikely
- If smaller, wood-burning fires won't go out, e.g. – from lightning strikes, so that wood would be less accessible
- Other constraints: smaller value decreases effectiveness of light microscopes, drastically lowers efficiency of transformers and motors
- Fine-tuning #2: the cosmic microwave background radiation (CMBR), radiation left over from the Big Bang
- humans need to discover the CMBR in order to confirm the Big Bang creation out of nothing, and it depends on baryon/pothon ratio
- his calculations show that the actual value of CMBR is exactly at the peak for detectability by humans
- if baryon/photon ratio larger, CMBR is less discoverable
- if baryon/photon ratio smaller, CMBR is less discoverable
- Fine-tuning #3: parameters related to subatomic particles are fine-tuned for their discovery and usefulness, e.g. – the bottom quark, the charm quark, the tau lepton and the Higgs Boson
- the lifetime of the particles affects their usefulness to scientists who want to investigate the Standard Model of physics

- decay rates of these subatomic particles are related to several of the finely-tuned parameters
- for example, the mass of the bottom quark is finely-tuned for its discoverability by scientists
- the tau lepton and the charm quark are similarly fine-tuned for disoverability
- the mass of the Higgs boson is finely-tuned for discoverability and for making further discoveries
- Conclusion: the DLO thesis is strongly confirmed – this is an even greater degree of fine-tuning that the already astonishing probabilities of the fine-tuning for complex, embodied intelligent beings
- The formalized version of the philosophical argument based on this evidence is impervious with some of the traditional objections to the standard fine-tuning argument
- #1 multiverse/selection effect: it is not subject to multiverse / observer selection objections
- #2 normalizeability: it is not subject to the McGrew-Vestrup objection because the range of possible values is *finite* not *infinite*
- #3 falsifiability: it makes falsifiable predictions, and in fact Collins' earlier calculations of the CMBR discoverability contained an error that falsified the thesis – until he found the error and corrected for it
- #4 usefulness: it gives clues about the Creator's purpose for us, namely that the universe was created for us to be able to do science and find evidence of the Creator's existence – there is no expectation for us to exercise blind faith, trust in God is meant to be a plausible deduction from the progress of experimental science

Sample slide:

Bottom quark lifetime is finely-tuned for discoverability
And another:

Higgs boson mass is finely-tuned for discoverability
Earlier, I blogged about a Robin Collins lecture on the fine-tuning that allows complex, embodied life to exist.

Another must-see lecture. If you are looking for something to study in university, and you have funding, then physics, mathematics and philosophy are the best places to be for a Christian scholar.

# Report: Women more likely to live in poverty than men

**Wintery Knight** · 18 July 2016 · Archived copy · Original

Young women vote overwhelmingly for Democrats – is it working for them?

Brad Wilcox tweeted this article from the leftist The Daily Progress. Let's see what it says, then I'll comment.

The article identifies three reasons why women are poorer than men: single motherhood, divorce and the "pay gap".

Look:

> During their working years, women tend to earn less than men, and when they retire, they're more likely to live in poverty.
>
> These are women who raised children and cared for sick and elderly family members, often taking what savings and income they had and spending it on things besides their own retirement security.
>
> The National Institute on Retirement Security, a nonprofit research center, reports that women are 80 percent more likely than men to be impoverished at age 65 and older. Women age 75 to 79 are three times more likely.
>
> **While experts cite a pay gap as a major cause for retirement insecurity, other factors play a role, from single parenthood and divorce to the fact that women typically live longer than men.**

Dr. Wilcox makes the point that this poverty is due to a retreat from marriage. That's true. But look at the three factors the left-wing article itself cites: single motherhood, divorce and pay gap. Are these policies instances of women being victimized, or are their problems self-inflicted?

1) Single motherhood is caused by the welfare policies that young women favor when they vote overwhelmingly for bigger government. If we take money from working taxpayers, or borrow it from the next generation, and we give it to women to pay them to have fatherless children, then more women will do this. And of course this is a path to poverty. There just isn't enough money to steal from taxpayers or borrow from future taxpayers to pay for women to have children with no man in the home who can provide for those children. People do more of what you pay them to do. The more money we give to single mothers, the more fatherless children we get, and it creates a host of problems that we can't continue to pay for as a society, e.g. – crime. The mistake was paying women to make poor decisions in the first place, but welfare spending a policy that most young, unmarried women support. They're not victims, they're doing this to themselves.

This new Prager University video from Larry Elder explains why women embrace single motherhood:

We're paying them to make bad decisions, and it creates more poverty.

2) No-fault divorce was caused by the radical feminism that many young, unmarried women support. This policy was brought in to make it easy for women to divorce without having to have a good reason (70% of divorces are initiated by women, mostly over "unhappiness"). Feminists don't like the idea of being "constrained" to marry a man because he is a good provider, protector and moral/spiritual leader. A strong man is intimidating – he will want to make decisions and lead, and we can't let him do that. A better idea is to marry a man who doesn't provide, protect or lead – that way, we don't have to respect him or let him lead. Naturally, when this entertaining, irresponsible man is unable to provide, then women divorce him and find themselves poor and unable to remarry – having lost their youth and beauty to "fun" men. No-fault divorce is not a policy that men supported. It is a policy that feminists supported, because they want to be able to nuke relationships that don't make them feel happy. The most volatile, short-lived relationships are lesbian relationships, because women naturally expect relationships to fulfill them instead of expecting relationships to be tough and challenging. There just isn't a path to prosperity for women into old age if they value feeling happy over self-sacrificial love and moral obligations. We need to teach women to prefer marriage-capable of men instead of fun, entertaining, no-leadership men. We need to teach women to make commitments that override their changing feelings. The problem of divorce is self-inflicted.

3) Lastly, the pay gap. I have written before about how the pay gap is largely related to women's own choices about what to study, what job to take, and how many hours to work. It is simply not possible for a woman to earn as much as a man when she does a degree in English, women's studies or other nonsense. Men don't study what we want to study. We study things we hate – like petroleum engineering and software engineering. We do this so that we can provide for a wife and children, so that we can get what we we want most: respect and the (earned) authority to lead a home. Most men are commitment machines. We hate fun, we want to do hard things, and to be respected for being reliable and steady. The problem of the "pay gap" is self-inflicted.

So, in conclusion, yes – many women are poorer than men, especially as they age. But their poverty is *self-inflicted.* They are poor because they embraced ideas that would make them poorer. Three ideas destroyed their prosperity: single mother welfare, no-fault divorce, and following your heart in education and career. None of these things will provide women with security or prosperity – especially now that the debt has doubled to $20 trillion, and *there is no more to borrow to continue the government-as-sugar-daddy plan of feminists.* No amount of reassurance from pious pastors and permissive parents can save women from the consequences of their own irrational embrace of radical feminism. It turns out that there is no escape from economics, and the universe does not magically adjust to make the feelings and intuitions of entitled Disney princesses "work out".

# Feminist explains how she chose to drink alcohol before recreational sex

**Wintery Knight** · 18 July 2016 · Archived copy · Original

College students puking in toilet

Guess where I'm linking today? To a radical feminist web site named Jezebel, to an article written by a radical feminist who writes for the radically leftist Slate.

No, I'm not crazy. Just read it:

> Much of the conversation around alcohol and sex has focused on assault—the line at which intoxication becomes incapacitation, for instance—**but what we fail to mention is how haunted people can be by the sex they actually, technically consented to.**
>
> […]I wonder what my sex life would even look like if alcohol hadn't been there. Alcohol gave me comfort in my own body, and it allowed me to turn my erotic curiosity and hunger for experience into an action plan. I was tired of being the stuttering girl sucking in her stomach after the lights went out. I wanted to be the woman who roamed wild and free.
>
> Alcohol also helped me cut the girlish strings on my heart, an action my college years demanded. Three months into my freshman year, I split a six pack with a dashing sophomore, and we wound up partially clothed on his bed, my bare legs wrapped around his waist, my hands around his neck. I pulled back slightly and asked him the question, the naive question of a girl who does not yet understand her fate: "What does this mean?"
>
> He looked past me, into his studio apartment, and then back into my eyes. "It means that I'm a 19-year-old boy, and we're having fun."

What is interesting is that she didn't see this man's using her for fun after getting her drunk as any disqualification for a serious relationship. On the contrary, she believes that a serious relationship built on self-sacrificial love and commitment that lasts through difficulties can be found in a man who uses her for fun sex:

> I'm not saying I didn't enjoy that night with the dashing sophomore. I'm saying the fun part for me might have been turning our physical intimacy into a sustained attachment.

Amazing. She wasn't looking for men with good educations, good jobs, lots of savings, who were sober and chaste – they would have made her unhappy with their bossy leading, and strict plans about courting and marriage. Nope, she wanted the drunken slut who didn't ask her any questions or have any plan for her to develop into a wife and mother. That's who she wanted. He was hawt! And he was free, easy and fun.

She is 35 now, and still single. I'm sure if you ask her, she would like to be married "some day", but who could look at 20 years of drunken sex and say that this is good preparation for the challenges of marriage? Marriage is about self-sacrificial love, and endurance. To prepare for it, you learn self-denial and self-control. You learn how to accept expectations, obligations and responsibilities.

Anyway, back to the article by the drunken, promiscuous feminist. The point that I wanted to make is that she *chose the alcohol* herself, and that she did it for a very specific reason:

> I wanted to have fun, too. *And alcohol evened the score.* I cared less about everything when I was drinking: What you thought of me, what I looked like in this dress, whether that taco was warm or cold when I stuffed it in my mouth. I don't want to make it sound like I drank *in order to* have sex. I drank for a million reasons.
>
> […]Booze downshifted my intense body consciousness, and it revved up my bravado. Sex was scary—but alcohol made me feel safe.

She drank in order to have sex. Got it? *She chose to get drunk in order to have sex.* This is the part that permissive parents and pious pastors need to understand about their darling daughters. Many young women think that recreational sex with hot guys is a pathway to marriage. They drink in order to make progress towards the marriage they want – the marriage to the man who is fun. Not the man who is serious. They don't want the serious man who makes plans and expects them to behave responsibly and honor obligations. They want the fun, hot man – the bad boy – and they expect to change him into a faithful, sober, responsible provider through the magical power of vagina. And if that doesn't work, by threatening him with divorce.

Why are millenials acting like children into adulthood?
This reminds me of the Institute for American Values study. Despite their name, it is not a conservative

organization

Look at this citation from p. 15:

> A number of students noted that being drunk could later serve as your excuse for the hook up.
>
> **A Yale University student said, "Some people like hook up because they're drunk or use being drunk as an excuse to hook up."**
>
> **A New York University student observed, "[Alcohol is] just part of an excuse, so that you can say, oh, well, I was drinking."**
>
> **A Rutgers University student commented, "If you're drinking a lot it's easier to hook up with someone… [and] drugs, it's kind of like a bonding thing… and then if you hook up with them and you don't want to speak to them again, you can always blame it on the drinking or the drugs."**
>
> **[…]A University of Chicago junior observed, "One of my best friends… sometimes that's her goal when we go out. Like she wants to get drunk so I guess she doesn't have to feel guilty about [hooking up]."**

I think at this point you should assume that if your daughter is not passionate about chastity, natural marriage and pro-life, then she is probably somewhere on this *drinking – recreational sex – cohabitation – abortion – no-fault divorce* path. The more fun-loving and emotional a woman is, the more likely she is to fall into it, and some of them just work it together with Christianity. Once woman I know was living with a non-Christian man and praying fervently for God to make her career take off. God is there for hope and comfort, not to impose any sort of moral boundaries. And parents and pastors are oblivious – they just want to let women do whatever they want, and then blame men for not making it "work out". Parents and pastors are not doing the job of explaining to women what their lives will really be like from age 40 to 90, and urging women to make a plan that provides lasting love and and security even as they experience declining youth, declining beauty, and declining fertility.

I hope that many of the men out there who refuse to hold women accountable for their own desires start to understand that not everything a woman wants is good, and not every plan a woman makes will work. Sometimes, you need to calmly and constructively challenge them about their priorities, plans and actions. It's for their own good.

# Republican platform stays pro-marriage, pledges to defund Planned Parenthood

**Wintery Knight** · 19 July 2016 · Archived copy · Original

There's always 2020 to run a conservative Republican candidate for President

Although it is a mistake to run a lifelong Democrat clown as the Republican nominee for President, at least the party platform of the Republican Party as a whole is conservative on social issues.

The Daily Signal reports:

> A dramatic effort to change the GOP's stance on LGBT issues ended with a whimper Monday as the Republican National Convention kicked off officially.
>
> **The document, adopted Monday on the floor of Quicken Loans Arena, codifies the traditional definition of marriage and denounces the administration's school bathroom directive.**
>
> **"It's the most conservative platform we've ever adopted," Rep. Virginia Foxx, R-N.C., platform committee co-chair, told The Daily Signal. "It's absolutely pro-marriage. It's a wonderful platform to unite all Republicans and all Americans."**
>
> Last week, it wasn't clear if the platform would be agreed to at all.
>
> Delegates and operatives associated with American Unity Fund, an LGBT lobbying organization bankrolled by billionaire Paul Singer, mounted an operation to completely scrap the party's platform supporting traditional marriage in favor of a shorter document that didn't include any language about marriage.
>
> The plan hinged on a parliamentary measure known as a minority report. It would trigger a messy debate on the floor of the convention if just 28 of the 112 delegates signed onto the measure.
>
> Last Wednesday the minority report had 37 signatures, CNN reported.
>
> But four of those delegates told The Daily Signal that they were lied to about what they were signing. They thought they were signing a short statement of principle authored by Utah delegate Boyd Matheson.
>
> "When we found out about it, we alerted the people who signed it that the one page 'statement of principle' didn't contain support for traditional marriage and family values," Indiana delegate Jim Bopp told The Daily Signal.
>
> By the time the convention convened Monday, more than half of the 37 delegates who had signed the minority report removed their names, delegates Bopp, Matheson, and Ben Marchi told The Daily Signal. The loss of signatures killed the initiative.

> […]Marchi, who described the minority report tactic as "the filthiest thing I've ever seen in politics," said the episode should put conservatives on alert.

Not only is the party platform still pro-marriage, (and therefore pro-child), but the party platform is the most pro-life ever.

March for Life reports:

> Today the Republican National Convention voted to pass the most detailed pro-life Platform ever – in direct sharp contrast to the draft Democratic Platform which is the most pro-abortion Platform ever. On the ground in Cleveland to assist the pro-life delegates was March for Life Action Vice President Tom McClusky.
>
> […]"The delegates deserve a lot of credit for creating this document which, in great detail, explains what the pro-life movement is for and just how radical the pro-abortion position is," said March for Life Action Vice President Tom McClusky. **"For the first time ever the Republican Platform calls out abortion giant Planned Parenthood by name and says tax dollars should not go to subsidize the death industry."** In addition support for bans on dilation and extraction abortions as well as bans on sex selection and abortions based on disability are, for the first time, in the Platform.
>
> **Language defending the conscience rights of individuals and institutions was included as well, fitting after the successful vote on the Conscience Protection Act in the U.S. House of Representatives. In addition, the Republican Platform calls for protection against attacks on the Hyde Amendment. Since the 1970's the Hyde amendment has been the firewall preventing certain tax dollars being used to pay for abortions.**

I know that a lot of people who claim to be pro-marriage and pro-life vote for the Democrat party because they are dependent on the government for handouts. But the truth is that if a person is consistently pro-marriage and pro-life, then they ought to be a Republican. I just assume that when someone tells me that they are a Democrat, that they are anti-marriage and pro-abortion. If you're pro-marriage and pro-life, then you vote Republican. Period.

# William Lane Craig lectures on the evidence for the resurrection of Jesus

**Wintery Knight** · 19 July 2016 · Archived copy · Original

Sherlock Holmes and John Watson: let's take a look at the facts

Here is Dr. William Lane Craig giving a long-form argument for the historical event of the resurrection of Jesus, and taking questions from the audience.

The speaker introduction goes for 6 minutes, then Dr. Craig speaks for 35 minutes, then it's a period of questions and answers with the audience. The total length is 93 minutes, so quite a long period of Q&A. The questions in the Q&A period are quite good.

**Introduction:**

- Many people who are willing to accept God's existence are not willing to accept the God of Christianity
- Christians need to be ready to show that Jesus rose from the dead as a historical event
- Private faith is fine for individuals, but when dealing with the public you have to have evidence
- When making the case, you cannot assume that your audience accepts the Bible as inerrant
- You must use the New Testament like any other ancient historical document
- Most historians, Christian and not, accept the basic minimal facts supporting the resurrection of Jesus

**Fact #1:** the burial of Jesus following his crucifixion

- Fact #1 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #1 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #1 passes the criterion of enemy attestation, since it praises one of the Sanhedrin
- Fact #1 is not opposed by any competing burial narratives

**Fact #2:** on the Sunday following his crucifixion, Jesus' tomb was found empty by some women

- Fact #2 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #2 is implied by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #2 is simple and lacks legendary embellishment, which argues for an early dating
- Fact #2 passes the criterion of embarrassment, because it has female, not male, witnesses
- Fact #2 passes the criterion of enemy attestation, since it is reported by the Jewish leaders

**Fact #3:** Jesus appeared to various people in various circumstances after his death

- Fact #3 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #3 is supported by multiple, independent reports of the events from all four gospels
- Fact #3 explains other historical facts, like the conversion of Jesus' skeptical brother James

**Fact #4:** the earliest Christians proclaimed their belief in the resurrection of Jesus

- Fact #4 explains why the earliest Christians continued to identify Jesus as the Messiah
- Fact #4 explains why the earliest Christians were suddenly so unconcerned about being killed

Dr. Craig then asks which hypothesis explains all four of these facts. He surveys a number of naturalistic hypotheses, such as the hallucination theory or various conspiracy theories. All of these theories deny one or more of the minimal facts that have been established and accepted by the broad spectrum of historians. In order to reject the resurrection hypothesis, a skeptic would have to deny one of the four facts or propose an explanation that explains those facts better than the resurrection hypothesis.

I listened to the Q&A period while doing housekeeping and I heard lots of good questions. Dr. Craig gives very long answers to the questions. One person asked why we should trust the claim that the Jewish leaders really did say that the disciples stole the body. Another one asked why we should take the resurrection as proof that Jesus was divine. Another asks about the earthquake in Matthew, which Mike Licona and I doubt is intended to be historical, but is more likely to be apocalyptic imagery. Dr. Craig is also asked about the Jewish scholar Geza Vermes, and how many of the minimal facts he accepts. Another questioner asked about the ascension.

You can see this evidence used in an actual debate, against a historian who disagrees with Dr. Craig. That post contains a point by point summary of the debate that I wrote while listening to it.

If you are looking for a good book to read on this topic, the best introductory book on the resurrection is "The Case for the Resurrection of Jesus" and the best comprehensive book is "The Resurrection of Jesus".

# Heather Mac Donald's new book: The War on Cops

**Wintery Knight** · 20 July 2016 · Archived copy · Original

12 officers shot, 5 fatally, by snipers in Dallas during protest over police shootings

So, Ben Shapiro said in yesterday's podcast episode that this new book by Heather MacDonald was the book of the year so far.

You can listen to his podcast to hear him interview the author.

Here's a good review / summary that I found on the Washington Post:

> Violent crime has been rising sharply in many American cities after two decades of decline. Homicides jumped nearly 17 percent in 2015 in the largest 50 cities, the biggest one-year increase since 1993. The reason is what Heather Mac Donald first identified nationally as the "Ferguson effect": Since the 2014 police shooting death of Michael Brown in Ferguson, Missouri, officers have been backing off of proactive policing, and criminals are becoming emboldened.
>
> This book expands on Mac Donald's groundbreaking and controversial reporting on the Ferguson effect and the criminal-justice system. It deconstructs the central narrative of the Black Lives Matter movement: that racist cops are the greatest threat to young black males. On the contrary, it is criminals and gangbangers who are responsible for the high black homicide death rate.
>
> The War on Cops exposes the truth about officer use of force and explodes the conceit of "mass incarceration." A rigorous analysis of data shows that crime, not race, drives police actions and prison rates. The growth of proactive policing in the 1990s, along with lengthened sentences for violent crime, saved thousands of minority lives. In fact, Mac Donald argues, no government agency is more dedicated to the proposition that "black lives matter" than today's data-driven, accountable police department.
>
> Mac Donald gives voice to the many residents of high-crime neighborhoods who want proactive policing. She warns that race-based attacks on the criminal-justice system, from the White House on down, are eroding the authority of law and putting lives at risk. This book is a call for a more honest and informed debate about policing, crime, and race.

She lays out the stakes of this debate in this interview with Frontpage Magazine:

**MT**: *What were your thoughts upon hearing of last week's Dallas shooting in progress, when police were dying and being wounded even as they tried to protect the demonstrators who had gathered there to protest their supposed racial bias?*

**HM**: I was overcome by acute fear for this country. The elite establishment has been playing with fire in stoking the Black Lives Matter hatred of the police, and that fire may now be raging out of control.

**MT**: *With the rise of Black Lives Matter and a news media and government administration that are fomenting anti-cop sentiment, is it too alarmist to suggest that we are headed toward a breakdown of civil society if nothing is done?*

**HM**: It is not only not alarmist to warn of a breakdown of civil society, it is imperative to issue such a warning. Officers working in inner-city areas face animus and resistance to their lawful authority on a daily basis. Law and order, and respect for the law, are disintegrating. A Chicago police officer told me last month that he has never experienced such hatred in his twenty years on the job. The Dallas assassinations, like the assassinations of two New York City police officers in December 2014, are just a more extreme, horrific version of the animus that officers encounter regularly in the wake of the Black Lives Matter movement.

I found this 47-minute lecture that she did at the conservative Hilldsale College, in Michigan:

I do think it's important to be aware of what the Democrats who push anti-police hate speech and policies are going to cause. It will start with a refusal by the police to enforce the law, especially in poor black neighborhoods. The first victims of law enforcement pulling out will be the very people who need the police the most. Expect to see a surge in gang activity as people look to gangs for security instead of the police.

# Genome mapper Francis Collins changes his mind on “junk DNA”

**Wintery Knight** · 20 July 2016 · Archived copy · Original

Christianity and the progress of science

First, let’s see what Darwinian evolutionists predict about junk DNA, before we look at what the experiments show.

Here’s biologist John Timmer to explain the orthodox Darwinian view of DNA from 2007:

> Personally, I fall into the “it’s all junk” end of the spectrum. If almost all of these sequences are not conserved by evolution, and we haven’t found a function for any of them yet, it’s hard to see how the “none of it’s junk” view can be maintained. There’s also an absence of support for the intervening view, again because of a lack of evidence for actual utility. The genomes of closely related species have revealed very few genes added from non-coding DNA, and all of the structural RNA we’ve found has very specific sequence requirements. The all-junk view, in contrast, is consistent with current data.

Got that? According to Darwinists, DNA is almost entirely junk – this is what is consistent with the view that creatures have evolved through a process of random mutation and selection. The estimates that I’ve seen from evolutionary biologists range from 95% to 99% junk. Now let’s compare the religion with science, and separate mythology from reality.

Regarding this junk DNA, commenter Thomas A alerted me to this article from Evolution News about famous theistic evolutionist Francis Collins.

It says:

> Count on Marvin Olasky at *World* Magazine not to miss something like this. In*The Language of God*, theistic evolutionary icon Francis Collins used so-called Junk DNA as homerun evidence against intelligent design. He has since backed down on that, honorably, admitting “hubris” in the process. Olasky:
>
> Collins claimed on page 136 that huge chunks of our genome are “littered” with ancient repetitive elements (AREs), so that “roughly 45 percent of the human genome [is] made up of such genetic flotsam and jetsam.” In his talk he claimed the existence of “junk DNA” was proof that man and mice had a common ancestor, because God would not have created man with useless genes.
>
> Last year, though, speaking at the J.P. Morgan Healthcare Conference in San Francisco, Collins threw in the

> towel: "In terms of junk DNA, we don't use that term anymore because I think it was pretty much a case of hubris to imagine that we could dispense with any part of the genome, as if we knew enough to say it wasn't functional. … Most of the genome that we used to think was there for spacer turns out to be doing stuff."
>
> Good for Collins — and maybe he'll go on to deal with other times scientists feel sorry for God as they look at His purportedly poor design. For example, evolutionists use the retina of the eye as evidence against creation, because nerve endings are at the front rather than at the back, which at first glance seems better placement. Yet, as Lee Spetner explains in *The Evolution Revolution*(Judaica Press, 2014), physicists now see front placement as the best one for "ingeniously designed light collectors."
>
> The list of needed retractions should include what you probably learned in high school about apparently purposeless human vestigial organs. Robert Wiedersheim's 1895 list of 86 has shrunk, as almost all of them have proved to have functions. For example, the most famous vestigial organ — the vermiform appendix — is a crucial storage place for benign bacteria that repopulate the gut when diarrhea strikes. The appendix can be a life-saver.

Who knew? Well, intelligent design proponents knew.

Here's intelligent design theorist William Dembski's view of "junk" DNA, from 1998:

> Even if we have a reliable criterion for detecting design, and even if that criterion tells us that biological systems are designed, it seems that determining a biological system to be designed is akin to shrugging our shoulders and saying God did it. The fear is that admitting design as an explanation will stifle scientific inquiry, that scientists will stop investigating difficult problems because they have a sufficient explanation already.
>
> But design is not a science stopper. Indeed, design can foster inquiry where traditional evolutionary approaches obstruct it. Consider the term "junk DNA." Implicit in this term is the view that because the genome of an organism has been cobbled together through a long, undirected evolutionary process, the genome is a patchwork of which only limited portions are essential to the organism. **Thus on an evolutionary view we expect a lot of useless DNA. If, on the other hand, organisms are designed, we expect DNA, as much as possible, to exhibit function. And indeed, the most recent findings suggest that designating DNA as "junk" merely cloaks our current lack of knowledge about function… Design encourages scientists to look for function where evolution discourages it.**

Now let's look at the experimental evidence and see whose prediction was proven right by the progress of science.

Science Daily reports on a recent study that confirms the previous study that falsified Darwinian predictions about junk DNA.

Excerpt:

> Researchers from the Gene and Stem Cell Therapy Program at Sydney's Centenary Institute have confirmed that, far from being "junk," the 97 per cent of human DNA that does not encode instructions for making proteins can play a significant role in controlling cell development.
>
> […]Using the latest gene sequencing techniques and sophisticated computer analysis, a research group led by Professor John Rasko AO and including Centenary's Head of Bioinformatics, Dr William Ritchie, has shown how particular white blood cells use non-coding DNA to regulate the activity of a group of genes that determines their shape and function. The work is published today in the scientific journal*Cell*.
>
> "This discovery, involving what was previously referred to as "junk," opens up a new level of gene expression control that could also play a role in the development of many other tissue types," Rasko says. "Our observations were quite surprising and they open entirely new avenues for potential treatments in diverse diseases including cancers and leukemias."

Now, this is yet another falsification of Darwinism, to go with the other papers that I keep posting about new research that falsifies Darwinism. How many papers do we need to falsify Darwinism? I think if you are in an argument over Darwinism, and you produce these articles, then you win, so long as the other person cannot produce anything. It's also a good idea to couple these pieces of evidence with a positive case for intelligent causes operating during the origin of life and the Cambrian explosion. You can't just argue that Darwinism is false, you have to also show that life shows the same signs of design as software code or blog posts. Information.

# Ted Cruz refuses to endorse Trump, tells voters to “vote your conscience”

**Wintery Knight** · 21 July 2016 · Archived copy · Original

One single, solitary man refuses to salute Hitler at a Nazi party rally

I have to say something about Ted Cruz’s speech at the Republican national convention in Cleveland, OH.

This article from The Federalist was the best summary:

> Ted Cruz knows exactly what he’s doing. On Wednesday night at the Republican National Convention, Cruz walked onto the stage in Cleveland to thunderous applause, smiled, waved, and then openly defied the Republican Party.
>
> Not only did Cruz fail to endorse Donald Trump, in a master stroke of rhetorical understatement he also implored Republicans to “vote your conscience” in November. It was all he needed to say.
>
> Cruz uttered the name of the GOP nominee only once, right at the beginning. “I congratulate Donald Trump on winning the nomination last night,” Cruz told the crowd.
>
> That was it. The very next thing he said was a rhetorical shot across Trump’s bow: “I want to see the principles of our party prevail in November.”
>
> For the rest of his remarks, Cruz’s theme was freedom—not Trump or party unity or even Hillary Clinton. He took up his theme by talking about something he’s been talking about for years: the frustrations of average Americans with what Cruz calls the “Washington cartel.” Recall that early in the primaries, Cruz made common cause with Trump as an outsider candidate, lambasting not just the Obama administration but also a Republican establishment he said was woefully out of step with ordinary Americans.
>
> “Voters are overwhelmingly rejecting big government,” he said. “That’s a profound victory. People are fed up with politicians who don’t listen to them, fed up with a corrupt system that benefits the elites, instead of working men and women.”
>
> He lambasted a “political establishment that cynically breaks its promises and ignores the will or the people,” a shot aimed not just at the Obama administration, but at his GOP establishment rivals in Congress.
>
> But it was clear, to those who have ears to hear, that Cruz was not making a case for Trump. “We’re fighting

> not for a particular candidate or campaign," he said. Americans deserves leaders who "stand for principles" and "shared values."
>
> The closest Cruz came to an endorsement of anyone was a plea for the beleaguered down-ballot Republicans who in many places across the country face tough odds in November with Trump at the top of the GOP ticket.
>
> **"To those listening, please, don't stay home in November," he said. "Stand, and speak, and vote your conscience, vote for candidates up and down the ticket who you trust to defend our freedom and to be faithful to the Constitution."**

That's what I've been telling people as well. Don't vote for Trump, but do vote for solid conservatives at every level of government in your home state.

Here is the full speech: (Transcript at Caffeinated Thoughts)

Ted explained his actions like this:

Not everyone who runs for office is a "politician"
Donald Trump repeatedly insulted the much better conservatives who were running against him in the primary. Most of those conservatives, like Rubio, have apologized, grovelled, and kissed his ring after they lost. Not Ted Cruz. Ted Cruz is as far above Trump in intelligence and morality as Hyperion to a satyr, to quote Shakespeare. There is no way that Cruz could kowtow to an immoral imbecile like Trump.

Jonah Goldberg says this at National Review:

> Well here comes Ted Cruz providing exactly the sort of drama they yearned for and many of these same voices are aghast at Ted Cruz's effrontery. The word has gone out across the land: This is an outrage! Not since Caligula appointed his horse to the Roman senate has a political figure showed such contempt for decorum and the solemnity of politics!
>
> […]I understand that Chris Christie will spew whatever fake outrage his masters instruct, like a trained seal barking for another herring. But I don't see why so many supposedly seasoned political observers are volunteering for service.
>
> […]This is part of the corruption of Trump. He called Ted Cruz a liar every day and in every way for months (it used to be considered a breach in decorum to straight up call an opponent a liar, never mind use it as a nickname). The insults against his wife, the cavalier birtherism, the disgusting JFK assassination theories about his Dad: These things are known. And yet the big conversation of the day is *Ted Cruz's* un-sportsmanlike behavior? For real?

> […]Ted Cruz has never been my favorite politician. And I am not so naïve that I don't recognize the gamble Cruz is making.
>
> **But if the choice is between forgiving Ted Cruz's obvious political calculation to become the standard bearer of an authentic conservatism or Donald Trump's lizard-brain narcissism where no principle or cause outranks his own glandular desire to be worshipped, like a conqueror atop the carcass of conservatism, I choose Ted.**
>
> **If the choice is between, say, congratulating the Boy Scoutish obedience of Mike Pence as he sells off bits and pieces of his soul like jewels from a family heirloom just to survive another day, or Ted Cruz who took the tougher road and refused to join the mewling mobs of toadies, apologists, human weather vanes, difference-splitters and vacillators, I choose Ted.**
>
> **If the choice is between suspending the rules of decorum, decency, and civility for Donald Trump as he casually bad mouths his own country to the New York Times just as he secures the presidential nomination of the Republican Party or accepting that we are in dark and uncharted waters and conscience must light the way, I choose Ted.**

I wasn't worried about what Cruz would say at the convention. More than anyone else speaking, I trusted him not to stain his honor by endorsing someone he didn't support, for political gain. There was just no way that someone with the education, achievements, moral character and conservative principles of Ted Cruz would lower himself into the gutter to support a disgusting piece of godless left-wing filth like Donald Trump. Ted Cruz will be back in 2020. Maybe then American voters will care enough to actually look into the backgrounds and achievements of the candidates.

I can only hope that God will give this nation one more chance to turn off of the road to serfdom. But even if he does not, we can't say that we were not warned.

# What is the difference between capitalism and socialism?

**Wintery Knight** · 21 July 2016 · Archived copy · Original

Over 100,000 Venezuelans cross into Colombia in order to buy food
*(This photo H/T Prager University)*

One country that has done a good job of implementing socialism is Venezuela.

Here is an article from March 2013 from Slate, a web site that strongly favors socialism. The headline is "Hugo Chavez's economic miracle: The Venezuelan leader was often marginalized as a radical. But his brand of socialism achieved real economic gains". The author is "a senior writer for the International Business Times".

He writes:

> Chavez became the bugaboo of American politics because his full-throated advocacy of socialism and redistributionism at once represented a fundamental critique of neoliberal economics, and also delivered some indisputably positive results. Indeed, as shown by some of the most significant indicators, Chavez racked up an economic record that a legacy-obsessed American president could only dream of achieving.

What did Chavez do, precisely, that caused the Venezuelan economic to boom? Well, he nationalized private industry and redistributed wealth from job creators and entrepreneurs to the poor.

> As The Week correctly put it, while "Chavez's policies of redistribution and nationalization of oil assets endeared him to Venezuela's working class" and produced many laudable results, the country's "oil-centric economy has taken away resources from other areas that are badly in need of development."

OK, so that's pretty much what the Democrat party wants to do in the United States as well. Nationalize the energy sector, nationalize health care, etc. Let the government take over the private sector industries in order to eliminate "inequalities". Raise taxes, and redistribute the money to the low income people via social programs, also known as welfare.

So, how does it work? Is socialism really an "economic miracle"?

Here is the latest from Venezuela, as reported by CNN Money. (H/T William)

Excerpt:

> Venezuelans cried at the sight of fully-stocked supermarket shelves in Colombia.
>
> Pregnant women, children and even elderly Venezuelans crossed into Colombia on Sunday after the border was temporarily reopened, allowing them to buy basic foods and toiletries — rare commodities in their home country.
>
> Tearful Venezuelans had gone weeks without basic food items like milk, flour and toilet paper. It's a sad but common part of daily life today in crisis-ridden Venezuela, a country that has the world's largest proven reserves of oil. Colombian officials estimate that about 100,000 Venezuelans crossed the border.
>
> Venezuela is expected to dive deeper into the abyss this year, according to new projections published Wednesday by the International Monetary Fund.
>
> The IMF forecasts Venezuela's economy will shrink 10% this year, worse than its previous estimate of 8%. It also estimates that inflation in Venezuela will catapult to 700% this year, up from the earlier guess of about 480%.
>
> "Venezuela's economic condition continues to deteriorate," says Alejandro Werner, chief Latin America economist at the IMF. The estimates for growth and inflation are the worst worldwide.
>
> The numbers are just the tip of the iceberg. Venezuela is deep into a humanitarian crisis — people are dying in ill-equipped hospitals and many live without basic food items. Venezuela can't pay to import goods because its government is desperately strapped for cash after years of mismanagement of its funds, heavy spending on poorly-run government programs, and lack of investment on its oil fields.
>
> […]**It's all even more tragic given that despite Venezuela's oil abundance, its state-run oil company, PDVSA, is broke. Venezuela's oil production fell to a 13-year low in June, according to OPEC, of which it's a member.**

That's what you get when you let the government take over the free enterprise system, or even when you just stifle the free market with burdensome regulations and high taxes. That's what socialists in Venezuela did. That's what the Democrat party would do. They're  two sides of the same coin.

**Dennis Prager**

Dennis Prager put out a good video recently explaining the problems with socialism:

Why would anyone prefer a system that encourages some people to feel entitled to what other people create and earn? We want a system that is focused on serving your neighbor – not stealing from them.

**Arthur Brooks**

If you would like a very brief introduction to capitalism, also known as the free enterprise system or the free market system, then you can watch the videos below, featuring Arthur Brooks, president of the American Enterprise Institute.

Here is the first one, which explains the myths that most Americans are taught about capitalism in school and in the culture:

An important advantage of capitalism is that it lifts people out of poverty. The poorest people in America live much better than the wealthy in Venezuela.

And the second video explains what capitalism offers to individuals for their fulfillment, which socialism does not:

Earned success makes people happier, which is at least as important as the wealth benefit.

We can compare the results of each system by looking at where it's been tried. Capitalism lifts people out of poverty – all the people in the society who are willing to work are lifted out of poverty. Even the people who can't work in a capitalist society enjoy the benefits of charity from their neighbors – when people do well, they give more money away. Socialism drives those who work and those who don't work into poverty, and eliminates charity. No one has anything to share when everyone is poor.

# North Carolina State University loses court battle to silence Christian students

**Wintery Knight** · 22 July 2016 · Archived copy · Original

Alliance Defending Freedom: for religious liberty and protection of conscience

Friday – that means you get good news, courtesy of the Alliance Defending Freedom.

Excerpt:

> As part of a settlement with a Christian student group, officials with North Carolina State University have revised the school's solicitation policy so that it no longer unconstitutionally censors the free speech of students. In light of the policy change, Alliance Defending Freedom attorneys representing the student group, Grace Christian Life, withdrew their lawsuit against the university on Tuesday.
>
> Last month, the U.S. District Court for the Eastern District of North Carolina issued a preliminary injunction that halted the university's former policy, which required a permit for nearly any kind of non-commercial student speech or communication anywhere on campus.
>
> "Students of any religious, political, or ideological persuasion should be able to freely and peacefully speak with their fellow students about their views without interference from university officials who may prefer one view over another. NC State did the right thing in revising its policy to reflect this instead of continuing to defend its previous policy, which was not constitutionally defensible," said ADF Senior Counsel Tyson Langhofer.
>
> ADF-allied attorney Edmund LaCour of Bancroft PLLC served as co-counsel in the lawsuit, *Grace Christian Life v. Woodson*, and argued before the U.S. District Court for the Eastern District of North Carolina in favor of the preliminary injunction that the court granted. The settlement essentially incorporates the terms of the injunction and requires the university to adopt a policy that protects the First Amendment freedom of all students to engage in speech throughout the campus without prior permission from the university.
>
> The university only selectively enforced its permit policy and did so against Grace Christian Life, a registered student organization, when officials told members of the group that they needed a permit to speak with other students in the student union.

You can learn more about the ADF by reading about them on their web site.

Well, that's your good news for Friday. ADF is one of the best Christian organizations for solving the real problems that Christians actually face. I really am grateful for their work defending religious liberty. Somebody has to hold the line against the efforts by those on the secular left to deny basic rights to Christians, such as freedom of speech, freedom of association, and conscience protection. It seems like it is open season on Christians, these days. Hardly a day goes buy where some organization or other (often taxpayer-funded!) is trying to intimidate Christians from exercising their Constitutional rights. Well, if nobody shows up to fight a battle, then the other side wins. If we don't have groups like the ADF showing up to fight for us, we will lose these legal battles. Make sure that you honor those who are fighting for you and for your freedom to be who you are.

# When talking with a non-Christian, make truth – not behavior – the main issue

**Wintery Knight** · 22 July 2016 · Archived copy · Original

Bible study that hits the spot

Pastor Matt posted about something that I think all Christian apologists believe, deep down. (H/T The Poached Egg)

He writes:

> Typically, the church has defined loving one's neighbor as in line with Jesus' parable of the Good Samaritan (Luke 10:25-37) and Christ's teaching in passages such as Matthew 25:31-46, in which we are commanded to love the imprisoned, the homeless, the hungry, etc. as if they were Jesus himself. Of course all believers should do so whether by volunteering at a soup kitchen or donating money to ministries like World Help.
>
> But there is more to loving one's neighbor these days than caring for the poor, as important as that is. Those of us who live in a first world western country now dwell in a post-Christian society. Our neighbors are inundated with naturalism masquerading as good science and sound philosophy. Non-Christians believe the faith is intellectually vacuous.
>
> **It shocks many people when those trained in apologetics point out that atheists cannot answer questions like, "How did the universe come into existence?" "Why is our planet so finely tuned for life despite all the odds against it?" "How did life begin?" "Why do humans have consciousness?" "How is there truth or right and wrong without God?" "Why did the disciples die horrible deaths as impoverished traveling peasants rather than deny the resurrection of Jesus?", etc.**
>
> If we are to help bring our neighbors to saving faith, we must first destroy their false ideas of what Christianity is and is not. That means we must preach the Gospel (2 Cor. 5:21), knock down specious views of the faith and present the truth of what we believe.
>
> Apologetics is not just an intellectual exercise for nerds like me or a debate to be won on college campuses but an increasing tool in loving our neighbors. For if they do not understand the faith, they will likely not come to faith and that is what the God we love wants and how we must show love to our neighbors. So, let's study not just to win arguments but to love others.

That reminds me of 2 Corinthians 10:3-5. Our job is to beat up on false ideas and speculations.

Pastor Matt's point is critical, I think. Just stop and think for a minute about your non-believing co-workers. Do they know that the universe began to exist? Do they know that the initial conditions and the cosmological constants have to be finely tuned to support things like galaxies, stars, planets and elements heavier than hydrogen? Do they know how much information is in a protein, and how many proteins would be needed to make the first living cell? Do they know what it takes to make a planet that can support life? What facts from the gospels and the Pauline letters pass the tests for historicity? What is the best explanation of those minimal facts?

These are the facts that we share when we discuss spiritual things with people. They are not Christian facts, they are public, testable facts. And yet, almost no one in the culture who is not already a believer is curious to find out these things on their own. But without the evidence, how are they supposed to take the first step towards a relationship with God through Jesus Christ? It's not possible. This is a propositional faith, and we know it's true by evidence. To share the evidence with someone so they can decide is as loving as sharing the evidence about retirement planning, or the evidence about nutrition, or the evidence about fitness and exercise, or the evidence about career planning. When you love someone, you tell them the facts, and then they decide. Evangelism is *the same thing*.

Here's something from a recent post by J. Warner Wallace, where he talks about doing apologetics with people who have not yet decided whether God exists or not.

> **The Undecided**
>
> In many ways, this group holds the most promise. People who are undecided usually fall into two categories. Some have never really given the issue much thought. They're neither for nor against; they've simply been living *unaware*. You may be the first person to introduce them to the issues you are trying to share. If so, remember the importance of a first impression. What you say or do will have an impact on the work of those who follow you. The second group of "undecideds" are people who have given the issue some thought, but are just beginning to make their decision. For this group of people, your defense of Christianity may very well be the deciding factor. The responsibility you and I have with the undecided is daunting, but it's a privilege to play a small part in their decision.

OK, so I want to make a point about this. So often, I see Christian parents and leaders trying to focus on changing people's behaviors, and not by giving them evidence. Instead of trying to convince them about what's true, they tell them Bible verses, or maybe tell them they are going to Hell. But given what Matt and J. Warner said, I don't want us to be focused on changing outward behavior. I want us to be focused on showing people what is true and showing our work – how we arrived at these true beliefs. You are doing Christianity wrong if you focus on getting behaviors from people by shaming them, overpowering them or scaring them.

So in my case, I'm not trying to get non-Christians to act like Christians when they have no reasons to be one. I'm trying to get them to settle on true beliefs – so that each of them and God can shake hands and be reconciled, responding to his drawing them of their own free will. Then, they can decide how they are going to act. And how they act might be even better than what we had in mind for them when all we wanted was for them to quit swearing and eat their vegetables. The Christian life is bigger than just making people do what we want them to do.

# San Antonio man uses legally-owned firearm to defend his home from burglar

**Wintery Knight** · 23 July 2016 · Archived copy · Original

A message from Females with Firearms (firearm pictured: Steyr AUG M3 A1)
Another day, another defensive handgun use to stop a criminal from committing a crime.

Daily Wire reports:

> A would-be San Antonio intruder died at the scene of the home he was trying to break into Thursday morning after being shot by the homeowner.
>
> Police said the criminal was a man in his 40's attempting to burglarize the home at around 9:30 a.m. The homeowner, a man in his late 70's, and his wife heard a commotion and went to investigate.
>
> Police spokesman Doug Greene told KSAT12 that "the homeowner and his wife warned the man to leave, but when he broke the front door handle, the homeowner fired a shot through the door, striking the man in the chest."
>
> "He was really trying to make a strong effort to get into the house," Greene said. "They felt the need to defend themselves and their property."
>
> Paramedics arrived shortly after the shooting and performed live-saving measures but were unable to revive the suspect.
>
> Police told reporters that the homeowner is not expected to face any charges in the incident. Detectives also said they recovered a vehicle near the scene that may have belonged to the suspect, but they are still working to accurately identify the man.
>
> The homeowner's neighbor, Carl Rick Jr. told the reporter that he wasn't surprised the homeowner made it out without a scratch.
>
> "They picked the wrong man because Bill was ex-Special Forces Lt. Colonel. He was at one time dropped

> behind enemy lines in North Vietnam."

It's very important that everyone remember what the second amendment is used for in the United States. The second amendment allows law-abiding people to purchase firearms in order to defend themselves from criminals.

Although there is opposition to gun ownership in certain circles, the academic literature is quite clear and decisive. Legal ownership of firearms reduces rates of violent crime. Whenever laws that allow law-abiding citizens to carry firearms for self-defense, violent crime rates decrease. Whenever laws are passed that restrict law-abiding citizens from owning and carrying firearms for self-defense, violent crime rates increase.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England"s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people. The book by economist John Lott, linked above,compares the

crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, but both studies affirm the same conclusion – more legal firearm ownership means less crime.

# How to apologize effectively: responsibility, restitution, repentance

**Wintery Knight** · 24 July 2016 · Archived copy · Original

Lets take a closer look at a puzzle

I guess everyone already knows about Gary Chapman and his 5 Love Languages. But have you heard of his 5 Love Languages of apologies?

I want to focus on two of them that I think are important, because I don't want people to think that just saying "I'm sorry" is good enough.

Here they are (straight out of his book):

***Apology Language #3: Making Restitution***

In the public arena, our emphasis upon restitution is based upon our sense of justice. The one who commits the crime should pay for the wrongdoing. In contrast, in the private sphere of family and other close relationships, our desire for restitution is almost always based upon our need for love. After being hurt deeply, we need the reassurance that the person who hurt us still loves us.

"How could they love me and do that?" is the question that lingers in our minds. The words "I'm sorry; I was wrong" may not be enough.

For some people, restitution is their primary apology language. For them the statement, "It is not right for me to have treated you that way," must be followed with "What can I do to show you that I still care about you?" Without this effort at restitution, this person will question the sincerity of the apology. They will continue to feel unloved even though you may have said, "I am sorry; I was wrong." They wait for the reassurance that you genuinely love them.

The question, then, is how do we make restitution in the most effective way? Since the heart of restitution is reassuring the spouse or family member that you genuinely love him or her, it is essential to express restitution in the love language of the other person.

[…]If restitution is the primary apology language of an individual, then this becomes the most important part of the apology. "I'm sorry; I was wrong" will never be taken as sincere if these words are not accompanied by a sincere effort at restitution. They wait for the assurance that you still genuinely love them. Without your effort to make amends, the apology will not have the desired results of forgiveness.

***Apology Language #4: Genuinely Repenting***

The word repentance means “to turn around” or “to change one’s mind.” In the context of an apology, it means that an individual realizes that his or her present behavior is destructive. The person regrets the pain he or she is causing the other person, and he chooses to change his behavior.

Without genuine repentance, the other languages of apology may fall on deaf ears. What people who’ve been hurt want to know is, “Do you intend to change, or will this happen again next week?”

How then do we speak the language of repentance?

> - **It begins with an expression of intent to change.** When we share our intention to change with the person we have offended, we are communicating to them what is going on inside of us. They get a glimpse of our heart—and this often is the language that convinces them we mean what we say.
> - **The second step down the road of repentance is developing a plan for implementing change.**Often apologies fail to be successful in restoring the relationship because there is no plan for making positive change.
> - **The third step down the road of repentance is implementing the plan.** Following through with the plan gives evidence to the offended party that your apology was sincere.

Most people do not expect perfection after an apology, but they do expect to see effort.

Thus, expressing your desire to change and coming up with a plan is an extremely important part of an apology to this person. Inviting the offended person to help you come up with a plan for change is perhaps the best way to effectively show repentance.

Here are some practical tips that I recommend to someone who has done something morally wrong and who wants to apologize.

**To fix the problem you need more than talk**

To me, the only thing that needs an apology is breaking a moral rule – you can’t beat someone up for just making a mistake. Whenever someone breaks a moral rule with me, like disrespecting me or being selfish, then I pick out a book for them to read and ask them to read it and then write something about how what they learned in the book applies to what they did to me. I don’t pick very long books! But I do this for a very important reason.

The very important reason is that I don’t trust people who just agree with me. I don’t trust people’s words. If someone is really sorry about something, then I want them to read something that describes the moral rule that they broke, and to be willing to listen to the feelings of the person they harmed by breaking that rule. That goes a long way in my mind.

# Is Hillary Clinton's VP pick of Tim Kaine conservative or liberal?

**Wintery Knight** · 25 July 2016 · Archived copy · Original

Hillary Clinton and Planned Parenthood

First, lets see where he stands on social issues, then we'll go to fiscal issues.

Life News reports:

> Abortion activist Hillary Clinton today tapped pro-abortion Virginia Senator Tim Kaine has her vice-presidential running mate.
>
> The Virginia politician is on record as trying to have it both ways — saying he is both a "traditional Catholic" and a strong supporter of abortion. Kaine has a pro-abortion record and the potential Clinton running mate is not following anyone. As LifeNews previously reported, Kaine said he is a "strong supporter of Roe v. Wade" despite supposedly being a "traditional Catholic."
>
> […]Leading pro-life groups know Kaine is pro-abortion.
>
> "Like Hillary Clinton, Sen. Tim Kaine supports the current policy of abortion on demand," said Carol Tobias, president of National Right to Life. "Like Hillary Clinton, Sen. Kaine is so extreme on abortion he opposes even the Pain-Capable Unborn Child Protection Act, legislation to protect unborn children from abortion after 20 weeks, when they are capable of feeling excruciating pain during dismemberment or other late abortion methods."
>
> As a U.S. senator, Kaine has voted against the pro-life position every chance he got. Sen. Kaine voted to allow government funding of abortion providers, and he voted against legislation to require an abortionist to notify at least one parent before performing an abortion on a minor girl from another state.
>
> Kaine took his most extreme pro-abortion action yet with his recent co-sponsorship of the so-called "Women's Health Protection Act" (S.217), known to pro-lifers as the "Abortion Without Limits Until Birth Act." This bill would nullify nearly all existing state and federal limitations on regulation of abortion, and prohibit states from enacting meaningful pro-life laws in the future. This revamped version of the long-stalled "Freedom of Choice Act" is a priority of the pro-abortion forces in Washington, D.C.
>
> "Sen. Kaine is good at hiding behind his Catholic background – but no one should be fooled," Tobias said. "His record, and his openly declared legislative goals, are as pro-abortion as they come."
>
> […][Kain says] "So for example, Monday, the Supreme Court's likely to decide a really important case about

> abortion rights. Which is many states including Virginia have tried to basically take out the constitutional right that gives women the ability to choose by putting these onerous regulations on clinics, health clinics where abortions are provided. We fought those off in Virginia when I was governor because you have to let people make their own moral judgments."Kaine is a longtime abortion advocate who has sought to appear moderate on abortion. But he was pro-abortion enough for Democrats for Life to yank its endorsement of him. His spokesman and website are now identifying him as a pro-choice Democrat.
>
> Kaine says on his own web site that he doesn't want to put any limits on the Roe v. Wade decision that allowed virtually unlimited abortions throughout pregnancy for any reason and has resulted in 55 million abortions.
>
> "I strongly support the right of women to make their own health and reproductive decisions and, for that reason, will oppose efforts to weaken or subvert the basic holding of Roe v. Wade," Kaine says, adding that he doesn't support "criminalizing women's reproductive decisions."
>
> "Tim Kaine will do nothing more than rubberstamp President Obama's expanding abortion agenda," said Marjorie Dannenfelser, President of the Susan B. Anthony List in 2012 when Kaine was running for the Senate.
>
> Kaine avoided directly giving his stance on abortion, in order to appear more conservative. However, his refusal to defend life in his political career tells the voters that Kaine supports abortion.

Whenever you are trying to evaluate whether a candidate is conservative or liberal, it's best to use rating systems from groups like Heritage Action or the American Conservative Union.

Here is his rating from Heritage Action, which is part of the Heritage Foundation:

Tim Kaine's radical leftist voting record

He's to the left of the average Democrat in the very liberal U.S. Senate. It you check the Heritage Action page, it actually shows all of his votes and explains why he got the 2% rating.

The American Conservative Union has an article discussing the voting record of Clinton, Sanders, Warren, Obama and Kaine.

They write:

> "Another interesting fact in our analysis is the stark reminder that Sec. Hillary Clinton is no moderate. While

> many in the media portray her as more centrist than self-described Socialist Sen. Bernie Sanders (I-VT) or fringe activist Sen. Elizabeth Warren (D-MA), Clinton's lifetime rating of 8.13% is within two percentage points from those extremists. And shockingly, all three of these presidential hopefuls are even more liberal than President Barack Obama's Lifetime Rating of 10% from when he served in the U.S. Senate. If America wants a third Obama term, three candidates will not disappoint.
>
> **"Finally, Sen. Tim Kaine (D-VA) is the only Member of Congress with a 0% ACU Lifetime Rating. Kaine is not the moderate Democrat that he likes to pretend he is. We can only conclude that the former Democratic National Committee Chairman plans to serve one-term representing the Commonwealth of Virginia before he returns to lead the fringe portion of the liberal activist base."**

Finally, here is Citizens Against Government Waste:

> The Council for Citizens Against Government Waste (CCAGW) today released its congressional rating of the presumptive Democratic Vice Presidential nominee, Sen. Tim Kaine (D-Va.).
>
> Sen. Kaine has served in the U.S. Senate since 2013. He holds a lifetime CCAGW rating of 7 percent, making him one of the Senate's most "hostile" members toward taxpayers. In 2014, Sen. Kaine earned a dismal zero percent rating. CCAGW's Congressional Ratings, which have been issued annually since 1990, identify which members of Congress voted to protect taxpayers and which voted against their interests on spending and taxes.
>
> **CCAGW President Tom Schatz said, "Sen. Kaine has spent his time in the Senate supporting the big-spending agenda of President Obama, so he makes for an ideal running mate for the fiscally reckless Hillary Clinton. Sen. Kaine's miserable 7 percent CCAGW lifetime rating is worse than Mrs. Clinton's 8 percent lifetime score, which included two years – her first and last – at zero percent. By comparison, President Obama's lifetime CCAGW rating was 16 percent and Vice President Joe Biden's lifetime rating was 21 percent. In other words, a President Clinton and a Vice President Kaine could be twice as damaging to the fiscal interests of the United States than the current administration, and would be highly likely to make the government bigger and more intrusive than any administration in history.** That is certainly something to keep in mind as the presidential campaign goes into full swing after the Democratic convention next week."

As Governor of Virginia, he was also far to the left, especially on social issues. Although the Democrats might like to present him as a moderate, he is no such thing. And you discover that if you are willing to do the work of looking at voting records. No one can hide from their voting record.

# National Press Secretary of Human Rights Campaign to speak at Democrat convention

**Wintery Knight** · 25 July 2016 · Archived copy · Original

Hillary Clinton and her ally, the Human Rights Campaign

If I had to pick the organization that used the most intolerant coercion against Christians, I'd pick the Human Rights Campaign.

Well, guess who Hillary invited to speak at her convention?

The Hill reports:

> The national press secretary for the Human Rights Campaign Foundation will speak at the Democratic National Convention in Philadelphia this week, marking the first time an openly transgender person will address a major party's convention.
>
> "Hillary Clinton won't be the only woman to make history this Thursday. When Sarah McBride takes the stage, she will become the first transgender person to speak at a national Democratic or Republican convention," Human Rights Campaign President Chad Griffin said in a statement on Sunday.
>
> "Sarah's inclusion in Thursday's program is a significant milestone for our community, and it sends a strong message that transgender people and their voices matter."
>
> Sarah McBride was invited to speak at the convention by the Congressional LGBT Equality Caucus.
>
> […]"I'm so proud to stand with the LGBT Caucus and speak out in support of Hillary Clinton, because we know she stands with us."
>
> Griffin, who will also speak at the convention, said the event will show a clear contrast between the Democratic and Republican tickets.
>
> "I'm also honored to address a national convention where LGBTQ advocates will play such an integral and historic role," he said.
>
> "Next week's Democratic National Convention will underscore the stark contrast between Hillary Clinton and Tim Kaine's vision for a more equal America, and [Republican presidential nominee]Donald Trump and Mike

> Pence's agenda of hate and division."
>
> The Human Rights Campaign endorsed Clinton, the presumptive Democratic presidential nominee, in January.

You might remember that the Human Rights Campaign has been featured on this blog a number of times, because they are the leading group seeking to silence, coerce and otherwise suppress Judeo-Christian values in the public square.

Let's review the history the Human Rights Campaign to discover their agenda from actual actions:

- the wealthy co-founder of the Human Rights Campaign Terry Bean was arrested for sex with an underage teen
- called the Family Research Council a "hate group", after the FRC was attacked by a gun-wielding gay rights activist, who was later convicted of domestic terrorism
- leaked the names of pro-marriage donors to the Huffington Post, names that were supplied to them by a gay rights activist working for the IRS
- published a report on Christian schools and universities who dissent from the gay agenda, in order to intimidate and coerce them into rejecting traditional Christian teachings on sexuality
- calling the employers of Christians in order to get them fired from their jobs

And so on.

Many large corporations are on board with the Human Rights Campaign agenda of anti-Christian bigotry.

Here are their Platinum corporate partners:

Human Rights Campaign Platinum Partners

How far would the Human Rights Campaign go to achieve their goal of stamping out any disagreement with their morality? We're going to find out, because lots of Democrats who falsely claim to be Christians keep voting for the Democrat Party.

# Leaked DNC e-mails show that Democrat primary was rigged to favor Clinton

**Wintery Knight** · 26 July 2016 · Archived copy · Original

Hillary Clinton look bored about the deaths of 4 Americans who asked for her help

The radically leftist Washington Post posted an article that explained the big story on Monday.

Excerpt:

> Thousands of leaked emails have sealed the fate of Rep. Debbie Wasserman Schultz's uneven five-plus-year tenure as DNC chair.
>
> Wasserman Schultz's resignation announcement Sunday afternoon comes as a bad situation just keeps getting worse — and appears as though it might continue to do so. That's because WikiLeaks has so far released nearly 20,000 emails, new details are still being discovered, and there is still the prospect of additional, damaging emails coming to light.
>
> Many of the most damaging emails suggest the committee was actively trying to undermine Bernie Sanders's presidential campaign. Basically all of these examples came late in the primary — after Hillary Clinton was clearly headed for victory — but they belie the national party committee's stated neutrality in the race even at that late stage.

One of the biggest revelations from these e-mails was how the DNC, which is supposed to be fair to all the candidates running, basically threw the primary for Hillary Clinton – it was rigged that she would win the primary, and the DNC was actively opposing Sanders at every step.

The NY Post explains:

> Democratic Party bigwigs enlisted prominent media outlets to slant coverage to boost Hillary Clinton and sandbag Bernie Sanders, according to some of the 19,000 e-mails hacked from the Democratic National

> Committee's servers and posted to WikiLeaks.
>
> The messages reveal behind-the-scenes meetings and off-the-record exchanges between DNC operatives and staffers at newspapers, networks and news Web sites, including The Washington Post, The Wall Street Journal, CNN, MSNBC, Politico and RealClearPolitics.
>
> In one case, an investigative reporter at Politico gave DNC officials a sneak peek at an article about Clinton's state-party fund-raising — before his editor even saw the piece.
>
> "Per agreement . . . any thoughts appreciated," wrote Politico's Ken Vogel to the DNC's national press secretary, Mark Paustenbach, on April 30.
>
> "Vogel gave me his story ahead of time/before it goes to his editors as long as I didn't share it," Paustenbach told his boss, communications director Luis Miranda.
>
> The communication officials cherry-picked reporters.
>
> "We [have] been working him for weeks in general on writing up something positive," Miranda wrote of The Washington Post's Greg Sargent on May 20. "We think he'd play ball."

But, there were other big surprises, like this one reported by the Daily Caller about the Democrat party's plans to reward big donors with cushy federal appointments funded by taxpayer dollars.

Excerpt:

> Democratic National Committee documents recently released by WikiLeaks include spreadsheets and emails that appear to show party officials planning which donors and prominent fundraisers to provide with appointments to federal boards and commissions.
>
> The documents, which were circulated among top DNC officials in April, could raise legal questions for the party, says Ken Boehm, the chairman of the National Legal and Policy Center, a government watchdog group.
>
> "The disclosed DNC emails sure look like the potential Clinton Administration has intertwined the appointments to federal government boards and commissions with the political and fund raising operations of the Democratic Party," Boehm told The Daily Caller.
>
> "That is unethical, if not illegal."
>
> […]President Obama has been criticized for appointing dozens of top fundraisers — called "bundlers" in the political fundraising realm — to ambassadorships and other cushy federal positions.

Well, yes. That's no surprise to anyone who has followed his many scandals, especially the green energy subsidies given to his top bundlers.

I guess it's no surprise that 5 seconds that the DNC chair Debbie Wasserman Schultz, after receiving news that she wsa being released, immediately signed up with the Clinton campaign. She might as well have been working for them all along, for all the good the DNC did Bernie Sanders.
