> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others." Even determinist Michael Gazzaniga conceded: "It seems that not only do we believe we control our actions, but it is good for everyone to believe it."" The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here's the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons' belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in

> free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you're alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

## Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

# I went on a date with a Christian woman who couldn't defend the pro-life view

**Wintery Knight** · 19 December 2023 · Archived copy · Original

I've been thinking lately about how to measure how committed and capable a person is on issues of interest to conservatives. For example, on abortion, most conservatives will say, "I vote pro-life". But I think a higher level of conviction and commitment is shown when a person can show WHY they are pro-life. And I'm not looking for feelings, here. I'm looking for handling scientific evidence.

So, when it comes to the abortion issue, the first step is to answer the question "what is the unborn?" And again, I'm not looking for an opinion here. I'm not looking for feelings. I'm not looking for what your parents, or your pastor, or your church choir says. I'm interested in whether a person can cite some scientific evidence.

Fortunately, we have first class scientists who have collected the relevant information for us, like Dr. Maureen Condic, She's an Associate Professor of Neurobiology and Adjunct Associate Professor of Pediatrics at the University of Utah School of Medicine, and recently served on the National Science Board. She earned her Ph.D. from University of California, Berkeley, and has published papers in peer-reviewed journals.

One of her publications (PDF) explains what science tells us about the unborn. The title is "When Does Human Life Begin? The Scientific Evidence and Terminology Revisited". A good paper to have available, especially if your opponent has nothing but purple hair, tattoos and nose piercings. But if you want something easy, you can just use quotations from a variety of embryology textbooks (PDF).

Like this one:

> "Human development begins at fertilization, when a sperm fuses with an oocyte to form a single cell, the zygote. This highly specialized, totipotent cell (capable of giving rise to any cell type) marks the beginning of each of us as a unique individual."

Source: Keith L. Moore, The Developing Human: Clinically Oriented Embryology, 10th edition. Philadelphia, PA: Saunders, 2016. p. 11

Don't just use one quotation, use lots.

Also useful to know is what the unborn baby can do during the process of developing.

Here's an article from the famous Cleveland Clinic that explains:

> At the moment of fertilization, your baby's genetic make-up is complete, including its sex. The gender of your baby depends on what sperm fertilizes the egg at the moment of conception.

And a bit further along:

> **Month 1 (weeks 1 through 4)**
>
> In these first few weeks, a primitive face will take form with large dark circles for eyes. The mouth, lower jaw and throat are developing. Blood cells are taking shape, and circulation will begin. The tiny "heart" tube will beat 65 times a minute by the end of the fourth week.

And a bit further along:

> **Month 2 (weeks 5 through 8)**
>
> Facial features continue to develop. Each ear begins as a little fold of skin at the side of the head. Tiny buds

> that eventually grow into arms and legs are forming. Fingers, toes and eyes are also forming.
>
> The neural tube (brain, spinal cord and other neural tissue of the central nervous system) is well formed now. The digestive tract and sensory organs begin to develop too. Bone starts to replace cartilage.
>
> The head is large in proportion to the rest of the body at this point. At about 6 weeks, a heartbeat can usually be detected.

Most abortions happen in the first trimester, and that's why pro-lifers say "abortion stops a beating heart". It's definitely human, and it's definitely killed in an abortion.

So, what's the point of this post? I'm saying that if you are a conservative, then you have to be familiar with enough evidence to be persuasive to others who do not share your views. Not just on the issue you like, but on EVERY issue – social issues, foreign policy issues, fiscal issues.

It's not enough for you to be happy that you have the right opinion about one issue. It's not enough that the people around you like you because they agree with your "right answer". You have to be able to make a case that crushes your opponent with evidence. Being a conservative isn't about you or your feelings. It's about the world out there – can you make a difference by being convincing to other people?

Of course if doesn't feel good to have to learn how to talk about issues using scientific evidence. It's work. And of course it doesn't feel good to disagree with people about controversial issues. But you have to get used to not being ignorant and not being liked. I know a lot of feelings-based Christians who know a lot about sports, fiction, music, essential oils, and other nonsense. They want me to be satisfied that they have the right answer to questions like "Does God exist?", "does military preparedness deter aggression?" and "does the free market system make people more prosperous than socialism?" But if I am out on a date with you, and I ask you these questions, I'm looking for more than the right answer. I want you to show your work. I want to see you demonstrate your ability to persuade people on the other side, either in your writings or in your discussions.

Don't cry to me about how you can't find a husband when you can't do anything that a husband needs you to do. There is no path to impressing a conservative man that allows you to be lazy, ignorant and cowardly. I expect performance. If you are smart enough to get a college education and a job in the competitive private sector providing value to paying customers, (not a public school teacher or anything disconnected from reality, like that), then you are smart enough to be able to explain your views on moral issues and public policy.

# The authors of the gospels of Mark and Luke knew eyewitnesses to the life of Jesus

**Wintery Knight** · 20 December 2023 · Archived copy · Original

Were the authors of the gospels of Mark and Luke connected to eyewitnesses to the life of Jesus? Well, it turns out that there are good reasons to think that Mark was linked to the eyewitness Peter, and Luke was linked to Paul, who had a post-mortem appearance of Jesus in 1 Cor 15:8, and who met with Peter and James in Galatians 1 and again in Galatians 2.

There is a list of evidence for Peter's influence on Mark on the Cold Case Christianity blog.

Here's my favorite one from the list:

> **Peter's Embarrassments Have Been Omitted**
>
> There are many details in the Gospel of Mark consistent with Peter's special input and influence,including omissions related to events involving Peter. How can Mark be a memoir of Peter if, in fact, the book contains so many omissions of events involving Peter specifically? It's important to evaluate the entire catalogue of omissions pertaining to Peter to understand the answer here. The vast majority of these omissions involve incidents in which Peter did or said something rash or embarrassing. It's not surprising these details were omitted by the author who wanted to protect Peter's standing in the Christian community. Mark was quite discreet in his retelling of the narrative (other Gospel writers who were present at the time do, however, provide details of Peters 'indiscretions' in their own accounts. See *Cold-Case Christianity* for a more detailed explanation).

It makes me laugh to imagine Peter looking over Mark's shoulder and saying "no, don't put that in it" and "no, don't tell them I did that". Funny! But also very good evidence. The rest of Wallace's list makes it even more clear.

And what about the gospel of Luke? Well, did you know that the author of Luke's gospel knew Paul? If you read it carefully, you'll see that Luke switches from describing history from an "I" perspective to describing things from a "we" perspective in the book of Acts (which he also wrote). Who is the "we" he is talking about?

Here's famous Christian scholar William Lane Craig to explain:

> Now who was this author we call Luke? He was clearly not an eyewitness to Jesus's life. But we discover an important fact about him from the book of Acts. Beginning in the sixteenth chapter of Acts, when Paul reaches Troas in modern-day Turkey, the author suddenly starts using the first-person plural: "we set sail from Troas to Samothrace," "we remained in Philippi some days," "as we were going to the place of prayer," *etc.* The most obvious explanation is that the author had joined Paul on his evangelistic tour of the Mediterranean cities. In chapter 21 he accompanies Paul back to Palestine and finally to Jerusalem. What this means is that the author of Luke-Acts was in fact in first hand contact with the eyewitnesses of Jesus's life and ministry in Jerusalem.
>
> […]There is no avoiding the conclusion that Luke-Acts was written by a traveling companion of Paul who had the opportunity to interview eyewitnesses to Jesus's life while in Jerusalem. Who were some of these eyewitnesses? Perhaps we can get some clue by subtracting from the Gospel of Luke everything found in the other gospels and seeing what is peculiar to Luke. What you discover is that many of Luke's peculiar narratives are connected to women who followed Jesus: people like Joanna and Susanna, and significantly, Mary, Jesus's mother.
>
> Was the author reliable in getting the facts straight? The book of Acts enables us to answer that question decisively. The book of Acts overlaps significantly with secular history of the ancient world, and the historical accuracy of Acts is indisputable.

> This has recently been demonstrated anew by Colin Hemer, a classical scholar who turned to New Testament studies, in his book *The Book of Acts in the Setting of Hellenistic History.* [5] Hemer goes through the book of Acts with a fine-toothed comb, pulling out a wealth of historical knowledge, ranging from what would have been common knowledge down to details which only a local person would know. Again and again Luke's accuracy is demonstrated: from the sailings of the Alexandrian corn fleet to the coastal terrain of the Mediterranean islands to the peculiar titles of local officials, Luke gets it right.

I know a lot of people (like my Dad) read the Bible devotionally, looking for feelings or trying to "get right with God" so they get blessings. But I think it's helpful to look at things from an evidential point of view – how am I going to make a case for this? When you look at things from that perspective, the Bible gets a whole lot more interesting. And you can talk about it with non-Christians when you know about these interesting details.

# Trump wants the most conservative Congressman to lose in 2024

**Wintery Knight** · 20 December 2023 · Archived copy · Original

If you asked me why I opposed Trump in during the 2016 Republican primary, I would have pointed at his extensive record of siding with Democrats on nearly every issue. He surprised me during his first term, by being American's most conservative president. But something seems to have gone wrong. He is no longer the conservative that he was during his first term.

Here's the latest story from Daily Wire:

> Late on Monday, former President Donald Trump called for someone to take up a primary challenge against Rep. Chip Roy (R-TX), who has endorsed Trump's primary rival, Florida Governor Ron DeSantis, for president.
>
> "Has any smart and energetic Republican in the Great State of Texas decided to run in the Primary against RINO Congressman Chip Roy," Trump said, using the acronym for "Republican in name only," in a post to his Truth Social platform. "For the right person, he is very beatable. If interested, let me know!!!"

Is Chip Roy a "RINO"? Let's take a look at the data.

> Voters first elected Roy to the House in 2018 after he established himself in politics working for other prominent Texas Republicans, including former Governor Rick Perry and Sen. Ted Cruz (R-TX). Now in his third term, Roy represents the 21st Congressional District in Texas, which includes South Austin, North San Antonio, and the Texas Hill Country.
>
> As a congressman, Roy has pressed for reining in government spending, grilled and blasted Democrats over the border and immigration crisis, advocated for the development and better access to lifesaving medicines, and challenged leadership over COVID-19 vaccine and mask mandates during the pandemic.
>
> Roy became a member of the House Freedom Caucus and boasts a "Liberty Score" of 100% as well as a 98% on the Heritage Action's Scorecard, which looks at how conservative members are in their voting records and co-sponsorships. A few weeks ago, Roy shot back at keyboard warriors who call GOP legislators like him a "RINO," saying, "You can kiss my a**," adding, "I've spent a lifetime fighting for limited government conservatism."

Whenever I want to know whether a legislator is conservative, I always go straight for the Heritage Foundation scorecard. Chip Roy's score is 98%, and his lifetime rating is 97%. That makes him tied for FIRST PLACE for most conservative member of the House of Representatives. Why would Trump oppose such a conservative legislator? Maybe it's because Trump isn't a conservative at all, and doesn't care about conservatives winning the House and the Senate. He just cares about himself. He's a narcissist.

How do so many left-wing fake Republicans get into the House and Senate? Could it because of people like Trump demanding that they get primary challengers, so that the most conservative candidates don't get elected? Can we really trust someone who only cares about himself to be the leader of the conservative movement? This would be like picking a quarterback who refuses to throw the ball to the star receiver, because the star receiver doesn't like the quarterback's hairstyle. It's that level of childish and stupid. And we can't afford to pick a stupid child to run as the Republican nominee. Especially if that stupid child is in prison in Spring of 2024.

One of the of reasons why Republican voters might want to choose DeSantis over Trump in 2024 is that Trump is *almost certain* to be convicted and imprisoned in early 2024. Even if he were to run and win, he would be a lame duck president. We would only get one term out of him. But most of all, some of his comments lately clearly show that he's returning to his Democrat roots. Especially his opposition to pro-life legislation at the state level. We can

do better than Trump in 2024. A lot better.

# Church of England and Catholic Church offer blessings to same-sex couples

**Wintery Knight** · 21 December 2023 · Archived copy · Original

In this post, I wanted to first review Jesus' position on marriage, and then we'll look at a couple major churches that have decided to bless same-sex relationships. And not minor churches, either. The Church of England and the Roman Catholic church. Let's take a look at what Jesus says, and then what these two major churches say.

We find Jesus' teaching on marriage in Matthew 19.

Matthew 19:1-6:

> 1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.
>
> 2 And large crowds followed him, and he healed them there.
>
> 3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"
>
> 4 He answered, "Have you not read that he who created them from the beginning made them male and female,
>
> 5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?
>
> 6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."

To be a Christian, minimally, is to be a follower of Jesus Christ. That means that we accept what Jesus teaches, on whatever he teaches about. We don't overturn the teachings of Jesus in order to make people who are rebelling against God feel better about their rebellion. It is central to the Christian worldview that Christians care more about what God thinks of them than what non-Christians think of them. In fact, Christians are supposed to be willing to endure suffering rather than side with non-Christians against God's authority.

So, with that said, let's take a look at what the Church of England is doing about marriage.

Look at this article from the UK Telegraph:

> For the first time in history, same-sex partners can receive a blessing to celebrate their unions…
>
> […]With the rainbow LGBTQIA+ flag waving outside, Jane Pearse and Catherine Bond became one of the first couples in England to receive a prayer that would publicly affirm and celebrate their union. A move made legal at the turn of midnight Saturday – instead of the usual clink of teacups, the pop of champagne corks punctured the post-service chatter, with congregants and the women, both vicars, well aware of the magnitude of the morning's celebration.

I thought this part was interesting:

> Bond and Pearse got together six years ago, when working in the same benefice (an ecclesiastical office), and now live in Felixstowe and are both associate priests… Both have adult children from their prior marriages, to men.

So both of these women were married to men, and left those marriages. That's how they got their children. And they inflicted divorce on those children.

The Church of England was not the only organization trying to gain the respect of the secular left by compromising on the plain meaning of Jesus' words about marriage. They are event investigating a vicar who called the the

institution's first transgender archdeacon a "bloke".

The UK Telegraph reported on that, too:

> The Church of England (CofE) is investigating a vicar after he called the institution's first transgender archdeacon a "bloke".
>
> The Rev Brett Murphy faces an official rebuke from the CofE over "intentionally derogatory and disrespectful" remarks he made about the Rev Canon Dr Rachel Mann shortly after her appointment in June.
>
> LGBT+ campaigners had hailed her appointment as a "beacon of light and hope".

For Protestant Christians, it's easy to switch from Bible-denying denominations to Bible-believing denominations. But it's not so easy for Roman Catholics to do the same.

Here's another story reported by Crux, a Catholic news source:

> In the hours that followed release of a Vatican note outlining the pastoral grounds for same-sex blessings, reactions among American Catholics seemed to run the gamut from styling it as a major step forward to insisting on hitting the brakes, on the grounds that not much has really changed.
>
> […]The declaration outlines situations in which blessings are appropriate for same-sex couples or those in irregular unions. It states that these blessings should never be given "in concurrence with the ceremonies of a civil union, and not even in connection with them."
>
> The declaration continues that the blessing cannot be performed with any clothing, gestures, or words that are proper to a wedding. Conversely, the declaration states that the blessings can be provided in informal situations such as a visit to a shrine, a meeting with a priest, a prayer group, or during a pilgrimage.
>
> Still, despite its narrow scope, LGBTQ Catholics view the declaration as a significant step forward.
>
> Francis DeBernardo, executive director of the Catholic advocacy organization New Ways Ministry, said in a statement that "it cannot be overstated how significant the Vatican's new declaration is," for the fact that it "expands the ways that LGTBQ+ Catholics can know God's love."
>
> Father James Martin, a leading minister to and advocate for LGTBQ Catholics, in a series of statements called the declaration "a major step forward in the church's ministry to LGBTQ people and recognizes the deep desire in many Catholic same-sex couples for God's presence in their loving relationships."
>
> "Along with many priests, I will now be delighted to bless my friends' same-sex unions," Martin said.

So, that's where we are now. Major denominations have abandoned Jesus' teaching on marriage. And why? Who are these church leaders trying to impress with their faithlessness? Wouldn't it be much better if they dug into some studies and make a defenseof the teachings of Jesus using evidence? It's not that hard. I've been doing it for nearly 15 years on this blog. But you just have to accept that it may not win you respect from the secular leftists who run the corporate news. I accept that. Why can't they?

# What are undesigned coincidences, and how are they used in apologetics?

**Wintery Knight** · 22 December 2023 · Archived copy · Original

When you're reading the Bible, you may find passages in one book that are mysterious on their own, but then they make sense if you add missing details from a parallel account from a different source inside or even outside the Bible. I think these "undesigned coincidences" are helpful for answering the question of that skeptics often ask: "is the Bible history or myth?" Let's see some examples.

So, there are two kinds of undersigned coincidences. In the "internal" kind, the clearing up is done by another source in the same book. In the external kind, the clearing up is done by a source outside the same book.

Here's an article from Apologetics UK with some internal examples:

> In John 6:1-7, we are told:
>
> Some time after this, Jesus crossed to the far shore of the Sea of Galilee (that is, the Sea of Tiberias), and a great crowd of people followed him because they saw the signs he had performed by healing the sick. Then Jesus went up on a mountainside and sat down with his disciples. The Jewish Passover Festival was near.When Jesus looked up and saw a great crowd coming toward him, he said to Philip, "Where shall we buy bread for these people to eat?" He asked this only to test him, for he already had in mind what he was going to do.Philip answered him, "It would take more than half a year's wages to buy enough bread for each one to have a bite!"
>
> Now, Philip is a fairly minor character in the New Testament. And one might, naturally, be inclined to wonder why Jesus hasn't turned to someone a little higher in the pecking order (such as Peter or John). A partial clue is provided in John 1:44: "Philip, like Andrew and Peter, was from the town of Bethsaida." Likewise, John 12:21 refers to "Philip, who was from Bethsaida in Galilee"
>
> And what is so significant about Philip being from the town of Bethsaida? We don't learn this until we read the parallel account in Luke's gospel (9:10-17). At the opening of the account (verses 10-11) we are told, "When the apostles returned, they reported to Jesus what they had done. Then he took them with him and they withdrew by themselves to a town called Bethsaida, but the crowds learned about it and followed him. He welcomed them and spoke to them about the kingdom of God, and healed those who needed healing."
>
> And so, we are informed by Luke that the event was actually taking place in Bethsaida — the town from which Philip was from! Jesus thus turns to Philip, whom, he believed, would be familiar with the area. Notice too that Luke does not tell us that Jesus turned to Philip.
>
> But it gets even more interesting still. In Matthew 11, Jesus denounces the unrepentant cities, saying, "Woe to you, Chorazin! Woe to you, Bethsaida! For if the miracles that were performed in you had been performed in Tyre and Sidon, they would have repented long ago in sackcloth and ashes." The reader is left wondering what miracles were performed in these cities. We are not told in Matthew's gospel. It is only in light of Luke's account of the feeding of the five thousand (chapter 9), in which we are told of the event's occurrence in Bethsaida, that this statement begins to make sense!

This one is pretty clever:

> In Matthew 2 6:67-68, we read, "Then they spat in His face and beat Him; and others struck Him with the palms of their hands, saying, "Prophesy to us, Christ! Who is the one who struck You?"" This raises the natural question, why are they asking "Who hit you?" It is not until we read the parallel account in Luke's gospel (22:64) that we learn that they had blindfolded him, thereby making sense of their taunts "Who hit you?"

Another one:

> In Luke 23:1-4, w e read,
> Then the whole assembly rose and led him off to Pilate. And they began to accuse him, saying, “We have found this man subverting our nation. He opposes payment of taxes to Caesar and claims to be Messiah, a king.”
>
> So Pilate asked Jesus, “Are you the king of the Jews?”
>
> “You have said so,” Jesus replied.
>
> Then Pilate announced to the chief priests and the crowd, “I find no basis for a charge against this man.”
> On the surface, this seems to be a rather strange declaration to make. Jesus has just declared Himself to be a King, and has been charged with subverting the nation and opposing paying taxes to Caesar. Why has Pilate found no basis for a charge against him?
>
> The answer lies in the parallel account in John’s gospel (18:33-38):
>
> Pilate then went back inside the palace, summoned Jesus and asked him, “Are you the king of the Jews?”
>
> “Is that your own idea,” Jesus asked, “or did others talk to you about me?”
> “Am I a Jew?” Pilate replied. “Your own people and chief priests handed you over to me. What is it you have done?”
>
> Jesus said, “My kingdom is not of this world. If it were, my servants would fight to prevent my arrest by the Jewish leaders. But now my kingdom is from another place.”
>
> “You are a king, then!” said Pilate.
>
> Jesus answered, “You say that I am a king. In fact, the reason I was born and came into the world is to testify to the truth. Everyone on the side of truth listens to me.”
>
> “What is truth?” retorted Pilate. With this he went out again to the Jews gathered there and said, “I find no basis for a charge against him.
>
> It is only when you read John’s account that you learn that Jesus had told Pilate that “My kingdom is not of this world. If it were, my servants would fight to prevent my arrest by the Jewish leaders. But now my kingdom is from another place.”

And the same article has some external undesigned coincidences:

> In Matthew 2:22, we are told:
>
> But when [Joseph] heard that Archelaus was reigning in Judea in place of his father Herod, he was afraid to go there. Then after being waned by God in an dream, he left for the regions of Galilee…
>
> Josephus’ Antiquities 17.3.1 tells us that the domain of Herod the Great was divided among his sons, with Archelaus having authority in Judea but not in Galilee, which was governed by his younger brother, Herod Antipas.
>
> We also know that Archelaus had acquired quite a bloody reputation (e.g. Antiquities 17.13.1-2 and 17.9.3). The latter of these references describes how Archelaus slaughtered 3,000 Jews at Passover. Thus, Joseph decides not to return to Judea and, instead, goes further north to the regions of Galilee, governed by Herod Antipas.

And another one:

> In Matthew 2:22, Archeleaus is reigning as king in Judea; in Matthew 27:2, Pilate is governor of Judea; in Acts 12:1, Herod is king of Judea; and in Acts 23:33, Felix is governor of Judea. This becomes extremely confusing.

> But here's the thing: Josephus attests to the accuracy of every one of these titles. Herod the Great was made King of Judea by Mark Anthony. Archelaus was deposed in the year 6 A.D., after only a ten-year reign, and a series of procurators ruled over Judea (of whom Pilate was fifth). The Herod of Acts 12 is Agrippa I. He was made king by Claudius Caesar. After his death, Judea was, once again, placed under the government of procurators (one of them being Felix).

And another one:

> When Luke tells us of the riot in Ephesus, he reports that the city clerk tells the crowd that "There are proconsuls". A proconsul is a Roman authority to whom a complaint may be taken. Normally, there was only one proconsul. Just at that particular time, however, there seems to have been two as a result of the assassination of Silanus (the previous proconsul) by poisoning in the Fall of AD 54, by the two imperial stewards at the urging of Nero's mother. This event is independently documented by Tacitus in his Annals (13.1). Indeed, Luke's accuracy has allowed historians to date the event which Luke narrates with incredible precision since we know when Silanus was poisoned.

If you think that these are clever, then share this post, and encourage your non-Christian friends and family to consider one of the many reasons why so many scholars have considered the New Testament books to be so reliable.

I wish that Christian parents and pastors were more thoughtful about how they present the Bible to young people. Instead of just saying "the Bible says" and praising blind faith acceptance of the Bible, why don't we think a little harder, and look for some confirmation of the Bible from historical methods like undesigned coincidences, and from non-Biblical authors, and from archaeology, etc.? Surely adding more evidence for taking the Bible seriously is the right approach, if the goal is to be persuasive? It's not like we're see good results from the current "blind faith" approach to raising Christian children, right?

# Famous cancer researcher cannot find work after being fired for consensual office romance

**Wintery Knight** · 23 December 2023 · Archived copy · Original

I sometimes get into discussions with social conservatives about why I am not at least *trying* to get married. I have a lot of reasons for not trying to get married. For one, I don't want to fall under the authority of hierarchies (school, work or church) who don't think that women should ever be held responsible for their own choices. Let's take a look at a news story that illustrates the problem.

Once upon a time, men would meet their wives in school, workplaces or churches. As long as the man was not in the reporting hierarchy of the woman, (i.e. – as long as he was not her manager or her director, etc.), then it was fine for people to meet up, date, get engaged, and get married. But that's all changed now.

Consider this story from the New York Post:

> A renowned Massachusetts Institute of Technology biologist who was axed after having what he said was a consensual fling with a much younger colleague, said the mushrooming scandal forced him on the unemployment line.
>
> David Sabatini, 54, whose research involved unraveling how tumors develop, resigned from MIT last month and has been surviving on employment after fellow scientist Kristin Knouse claimed he "groomed" and "coerced" her into a sexual relationship, according to a report and court papers.
>
> A longtime friend and dean at the NYU Grossman School of Medicine tried to offer him a job, but after an uproar, the school announced on May 3 that it would not hire him despite the fact that colleagues described him in a recent article as one of the world's greatest scientists — a "genius" in line for the Nobel Prize.
>
> "What wormhole did my life take, to … protests and being called a sexual predator? What quirk in the universe allowed this to happen?" said Sabatini, who has denied wrongdoing and noted Knouse did not work in his lab or report to him.
>
> In an October lawsuit against MIT, Sabatini said that his relationship with Knouse, who is 21 years his junior, was consensual — and told a reporter he was shocked to find himself the subject of protests at NYU when the school explored the possibility of hiring him.
>
> Sabatini has contended he and Knouse began their fling during a 2018 conference, while he was in the midst of a divorce. By 2020, he thought the affair had cooled, though he claims Knouse wanted to continue. By October 2020, she complained she'd been harassed, and in a later lawsuit alleged Sabitini oversaw a "sexualized" environment in his lab.

What's interesting about this story to me is that it's been reported that this woman entered into this relationship with this man after he clearly communicated to her that he was only looking for something casual. I.e. – he was not trying to hide that he did not want to be tied down. He was telling her that up front.

There are more details about the story in Common Sense.

After their initial hook-up…

> …they met up at Knouse's condo near Boston Common where they discussed a few ground rules for their tryst. They agreed they could see other people. Knouse, Sabatini remembers, had ongoing flings with men who she referred to with nicknames like "anesthesiologist f*** buddy," "finance bro," and "physics professor," **and she wanted to keep it that way.** Also, they wouldn't tell anyone. Why complicate things at work? It was all supposed to be fun.

Why did this woman get the man fired? Well, there is an old saying about women that goes like this: “Hell hath no fury like a woman scorned”. Apparently, Sabatini was getting interested in another woman, and less interested in Knouse:

> Things were fizzling… he was getting involved with another woman, a microbiologist in Germany.
>
> Knouse didn’t want to let go. In January 2020 she texted, in part: “I get anxious when I don’t hear back from you and then I see you post stuff on Twitter and it provides an admittedly small and silly but still another bit of evidence to this growing feeling that you don’t care about me in the way that I care about you.” He wrote back: “I am sorry but you are being crazy.” In another text, Knouse admitted feeling “stung.” She added: “I think it’s worth thinking about whether you want someone who matches your passion, intellect, and ambition.”

Feminists think that people are faithful and committed because of self-interest, e.g. – “passion, intellect, and ambition”, i.e. – self-interest. They think that a woman can just like fun, and choose a man who likes fun, and have a permanent, exclusive relationship based on continuous fun. No need to care about religion. No need to care about the rationality of moral behavior. No need to care about traditional gender roles. Things will just work out, if each person acts selfishly all the time.

So what happened to Sabatini next?

This:

> In October 2020, Knouse texted her friends that she was “unpack[ing] a ton of suppressed abuse and trauma from an obvious local source”—an apparent reference to Sabatini. Knouse’s fellowship at the Whitehead was ending, and she didn’t apply for any faculty jobs there. When the new director, Ruth Lehmann, called Knouse to ask why, Knouse complained for the first time of being “harassed.”
>
> In November, Knouse warned her friend—an incoming Whitehead fellow—to “squeeze out as much advice as possible before your mentor is Weinstein’ed out of science.”
>
> In December, at Lehmann’s behest, the consulting firm Jones Diversity sent the Whitehead employees a survey “based in part on Dr. Knouse’s false complaint about Dr. Sabatini,” according to a complaint later brought by Sabatini. All participants were anonymous. Five or so of the nearly 40 employees in Sabatini’s lab took part.
>
> The next month, two former Sabatini lab members lodged complaints to H.R.—the first complaints against him in his 24-year tenure—about “bro culture” in the lab.
>
> This prompted the Whitehead to hire the law firm Hinckley, Allen & Snyder to conduct an investigation on “gender bias and/or inequities and a retaliatory leadership in the Sabatini lab.” The Whitehead never told Sabatini what he was accused of. Former lab members told me their co-workers were sobbing when they came out of meetings with the lawyers, saying that the lawyers had put words in their mouths. “They had a very strong agenda,” one of them told me.

Knouse was 29 years old. She was not a child. Sabatini never worked with her. He never supervised her. He never threatened her or pressured her. This was a relationship between two consenting adults. But that doesn’t matter, because in every school and workplace, women cannot be held responsible for their own bad choices. Women are always victims of men. It is always the man who must be punished. And men have to go to school and work in these environments for their entire lives – walking on thin ice, never knowing when the axe will fall.

Sabatini is ruined:

> In the 24 hours after the report came out, Sabatini’s life fell apart. MIT put him on administrative leave. The Howard Hughes Medical Institute, another prestigious non-profit that funds biomedical research and was paying Sabatini’s salary, fired him. He resigned from the Whitehead, and eventually MIT, at the advice of his

> lawyers who thought it would help him secure his next job. ("I one hundred percent regret that," Sabatini told me).
>
> Soon, the biotech startups he'd helped found— Navitor Pharmaceuticals, KSQ and Raze Therapeutics—started severing their relationships with him. Sabatini was axed from professorships, fellowships, and professional societies. Awards and grants were pulled. His income disappeared.

Knouse is still working. They decided that she didn't violate the policy – only he violated it. She has no problem at all with this outcome – she really believes she is a victim, and shouldn't have to take responsibility for her own choices. Can you imagine being married to a woman who does whatever she wants, then blames you when things go wrong? And worse – goes to the authorities to have them punish you, when she is the one who chose poorly?

This was a consensual relationship. Expectations were set at the beginning – this was casual, no commitment. She agreed to the casual nature, she was sleeping with several other men. Suddenly, she reached age 29, and decided it was time to get serious. He reminded her about their arrangement – nothing serious.

They were BOTH EQUALLY in violation of the company rule. Abuse was alleged by her, but there was no police involvement to verify it. He was punished, but there was no criminal trial where he could defend himself. He was not given due process. No lawyer. No self-defense. This lack of due process is common on college campuses, workplaces, and even in religious organizations. Women who are jilted by men are able to make these allegations and get these men fired without any due process.

Some people might say "well, he was treating her badly, so he deserved it". The issue is not whether he is to blame, or whether she is to blame. The issue is what message it sends to men about the safety of having relationships with women. Women aren't punished for breaking the same rules as men break. And men are learning from that not to engage in relationships with women, because the authorities always side with the women even if their own decisions have gotten them into trouble.

Some people might say, "well as long as you act morally, then this won't happen to you". But these accusations can also be made against innocent men who are just "guilty" of offending women in the school or workplace with their conservative or Christian views. This was already happening to people in companies like Mozilla and Google. Men sometimes get accused of false rape and sexual harassment for rejecting a woman's advances.

I know that a lot of pro-marriage social conservatives love to load men up with duties, and blame them when things go wrong. But those social conservatives cannot expect men to continue to marry in an environment where men are always to blame, men must always be punished, men must always pay alimony and child support, men must always go to jail, men must always lose their jobs or custody of their kids. Men are learning NOT to talk to women, date them, mentor them, or marry them.

It's lots of fun for pro-marriage social conservatives to treat women like children, and embrace chivalry in public. It's a form of virtue-signaling. But if you ignore the incentives facing men, then you are causing the very decline of marriage that you claim to oppose.

# Should we expect to know what God's reason is for allowing evil and suffering?

**Wintery Knight** · 24 December 2023 · Archived copy · Original

Here is an article by Steven Cowan about the problems of evil and suffering.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude.

Now let's find out what a noseeum is, and how it relates to the existence of evil and suffering:

> However, perhaps God's existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God's existence is inconsistent with pointless or gratuitous evil. By "pointless evil," Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe's argument may be simply stated as follows:
>
> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that there is pointless evil, Rowe introduces what he calls the "noseeum inference." Like the pesty little bugs that some readers may be familiar with, a "noseeum" is something that you cannot see—it is a "no-see-um." And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I "no-see-um" a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in

> concluding that there was no such planet.

In that example, the planet is the noseeum. Just because you look really hard, you can't be confident that the planet is not there. And similarly with the problem of evil and suffering, looking really hard and finding no reason does not mean that there is no reason. It just means that you are not in a good position to see the reason. You don't know enough to to be sure that there is no reason, because of your limitations as a human being.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous.

According to the paper, human beings just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a noseeum. To know for sure that there is no reason, we would need to have more knowledge than we do.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very difficult thing for an atheist to show, given our human cognitive limitations.

# Did the early church invent the divinity of Jesus over a long period of time?

**Wintery Knight** · 25 December 2023 · Archived copy · Original

How early is the doctrine of the divinity of Jesus? When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography. The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

**1 Corinthians**

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

**Philippians**

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

**Mark's gospel**

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

**The "Q" source for Matthew and Luke**

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

# For Christmas Day, let's remember George Washington and the Battle of Trenton

**Wintery Knight** · 25 December 2023 · Archived copy · Original

My favorite book about the American Revolutionary war by far is called "1776". It's written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington's line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington's retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington's army at White Plains, New York, British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan.  Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was

> surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

**Washington crosses the Delaware**

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their

> crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

**The Battle of Trenton**

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall

> decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.
>
> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

# New study: #MeToo caused men to reject collaborations with women

**Wintery Knight** · 26 December 2023 · Archived copy · Original

People in our society who are driven by their desires and emotions tend to struggle to answer the question: what are the consequences for all the people who are affected by my actions? The feelings-oriented people tend to follow their hearts. Thinking too much about the consequences of their actions would slow them down. In today's post, we'll look at some of these unintended consequences.

Here's the study, up at SSRN.

Abstract:

> How did #MeToo alter the cost of collaboration between women and men? I study research collaborations involving junior female academic economists and show they start fewer new research projects after #MeToo. The decline is driven largely by fewer collaborations with new male co-authors at the same institution. I show that the drop in collaborations is concentrated in universities where the perceived risk of sexual harassment accusations for men is high – that is, when both sexual harassment policies are more ambiguous exposing men to a larger variety of claims and the number of public sexual harassment incidents is high. The results suggest that the social movement is associated with increased cost of collaboration that disadvantaged the career opportunities of women.

Honestly, to me it doesn't matter whether the policies are more or less ambiguous. The risk of facing serious consequences – loss of job, loss of reputation, loss of income, loss of future job offers, exposure to anti-male courts – outweigh any benefits. What does a man have to gain by helping women, when there is a chance that she could destroy his whole life, up to and including imprisonment? The reward is not worth the risk.

The author of the study is very much a feminist, and enthusiastic about feminism. She tweeted about her paper in a long thread.

This tweet was interesting:

> Women don't make up for the loss in projects with men by collaborating more with other women or solo work. Junior men do make up for lost collaborations with women by collaborating more with men. So, men don't have a loss in projects overall.

I keep seeing feminists insist that they can do everything that men can do, and they don't need men. It sounds like when men decline to participate in the task of helping women, then the women themselves don't step in and make up for the loss. Even though there is much less risk of false accusations between women.

The feminist movement can be described as a non-stop chain of demands by women, which were granted to women. And when got what they wanted, they complained that it wasn't what they expected. Then they turn to the men who are now paying the costs of their behavior, and demand that those men fix it.

I think men need to take a step back and decline to participate. Men have enough trouble in this world taking care of ourselves. In the pre-feminist world, we were not discriminated against in school and at work. We had enough job security and money to look out for others. We knew that our protection, provision and leadership was seen as an asset. Well, that world is now gone. We have to decline to produce the same outputs in this new post-feminist world that we did in the world before feminism. We cannot take on unnecessary risks to help people who do not respect us.

# Christian woman finds a way to discuss her faith with non-Christians

**Wintery Knight** · 27 December 2023 · Archived copy · Original

I found an interesting article where a Christian woman explains how she used to share her testimony with non-Christians. But that wasn't working. So she decided to try something different.

She writes:

> I'll never forget the first time I shared my personal testimony with a non-Christian.
>
> When the opportunity arose and I shared my story with an unbelieving friend, she replied, "That's so cool. I'm so happy you found something that works for you."
>
> *For me?*
>
> "It's not about what works *for me*," I said, trying to hide my discouragement. "It's about what's true for everyone."
>
> "That doesn't make sense," she responded. "That's *your experience*, not mine. I had a similar revelation when I realized I could leave the church, and I've become a better person for *my* decision. Just as you were freed from your heaviest burdens by finding God, I was freed from mine by leaving God behind."
>
> I was devastated but I chalked it up to my friend's hardheartedness. I decided to shake the dust off my feet and look forward to the next opportunity.
>
> But time after time of sharing my testimony resulted in similar responses. People expressed enthusiasm that I was happy, that Christianity worked for me, and that I had "found my niche." Yet no one considered my experience as anything more than just that—my own personal experience.
>
> […]I had been taught that sharing what God had done in my life was the ideal way to witness to non-Christians. A personal testimony was interesting yet non-confrontational, compelling but inoffensive. And yet, despite having shared my testimony with dozens of unbelievers, not a single person felt challenged to consider the truth claims of Christianity.

She noticed that her approach wasn't actually in the Bible. There was a different approach being demonstrated by Jesus, and later by his disciples.

She writes:

> When Jesus called his first disciples, he taught truth and provided evidence (miracles) to support his claims, then he asked people to follow him (Luke 5:1–11). In fact, this was his method whenever he went into new regions (see Luke 4:14–44; John 4:7–26). People decided to follow Jesus not on blind faith or a subjective feeling, but based on the evidence they had seen and heard.[i]
>
> Jesus also used evidence to assuage the doubts of even those who had been with him a long time. John the Baptist was Jesus' cousin, who leapt in the womb during Mary's visit (Luke 1:39–45), baptized Jesus in the Jordan River, heard God's voice from heaven, and saw the Holy Spirit descend on Jesus in bodily form like a dove (Luke 3:21–22). Yet when John experienced unexpected suffering, he began to doubt.
>
> Jesus didn't respond as many do today, by insisting that John "just believe" or "have faith" or "prayer harder." Rather, he responded with more evidence, saying, "Go and tell John what you hear and see: the blind receive their sight and the lame walk, lepers are cleansed and the deaf hear, and the dead are raised up, and the poor have good news preached to them. And blessed is the one who is not offended by me." (Matt. 11:2–6).
>
> […]At Pentecost, the apostle Peter offered signs and wonders, fulfilled prophecy, and relayed eyewitness

> testimony to persuade people from all over the Roman Empire that the most reasonable explanation for what they were seeing was not morning drunkenness, but a risen Messiah (Acts 2:1–41).
>
> On his missionary journeys, the apostle Paul reasoned with the Jews from the Scriptures, explaining and proving that Jesus was the Messiah who needed to suffer and rise from the dead (Acts 17:1–3, 17). And he reasoned with the Gentiles from outside the Scriptures, making a case with their own accepted beliefs to convince them (Acts 17:17–34).
>
> In fact, in describing his mission, Paul told the Philippians, "I am put here for the defense of the gospel" (1:7, 16). This word translated defense is the same word from which we get our English word "apologetics," meaning to make reasoned arguments or to provide evidence as justification. Using this same word, Peter commanded believers to "always [be] prepared to make a defense to anyone who asks you for a reason for the hope that is in you"(1 Pet. 3:15).

So, she decided to dump the testimony approach, and try the Biblical approach. But she had to change it a little bit, since she couldn't perform miracles herself:

> We are not eyewitnesses to Jesus's life and resurrection, but we have the accounts of those who were. We don't typically see miracles, but we have millennia of biblical scholarship and archaeology that provide reasons to believe the accounts are trustworthy. We don't often hear God speaking audibly or see him parting seas, but we have significant scientific evidence that shows the universe had a beginning, and millennia of observation to confirm the scientific principle that everything that begins to exist has a cause.

I think a lot of Christians never move on from approach she described that wasn't getting results. And there's a reason for that – studying evidence is hard work. But I can tell you from my experience as a software engineer, there is no better way to convince other people to adopt your view than to show them working code that produces results. If they have a prototype, they will adopt your design. Similarly with Christianity. If you have evidence, then you will be persuasive.

When talking about spiritual things with non-Christians, always remember the joke about the two men walking in the woods who meet a bear. One man starts to put on his running shoes. The other man says "what are you doing? you can't outrun a bear!" And the first man says "I don't have to. I only have to outrun you". It's the same with apologetics. You don't have to be William Lane Craig to talk about your faith to non-Christians. You just have to know more than your non-Christian opponent knows about evidence.

The way things are going these days with the public schools and the mainstream news media, this is actually pretty easy to do. One or two introductory books on the origin of the universe, the fine-tuning for intelligent life, the origin of biological information, the origin of body plans, the historical reliability of the New Testament, the minimal facts case for the resurrection, etc. will do the job. You might need another one on philosophical challenges like evil, suffering, divine hiddenness, etc. But we're talking no more than 5 books, and you'll be effective in the vast majority of your conversations. If you can only get one book, I like Sean McDowell and Jonathan Morrow's "Is God Just a Human Invention?" best.

# Survey: young, unmarried women explain why they avoid having children

**Wintery Knight** · 28 December 2023 · Archived copy · Original

Why do so many women end up involuntarily childless? Is it because men are ruining their lives, with sexism and discrimination and refusal to commit? OR is it because women are deliberately making choices that lead them to involuntary childlessness? This interesting article answers that question. It comes from the far leftist Huffington Post.

They write:

> The Huffington Post and YouGov asked 124 women why they choose to be childfree. Their motivations ranged from preferring their current lifestyles (64 percent) to prioritizing their careers (9 percent) — a.k.a. fairly universal things that have motivated men not to have children for centuries. To give insight into the complex, layered decisions women make, HuffPost asked childfree readers to discuss the reasons they have chosen not to have kids and gathered 270 responses here.

They grouped the responses into 5 categories:

1. I want to prioritize my career
2. I don't like children
3. I had a bad relationship with my parents
4. I don't want the financial responsibility
5. I like my life as it is

And here are some interesting quotations:

Category 1:

> I am a first-generation college graduate in my family. My mother was a single mom my entire childhood, and I was there to see that struggle. Being a parent, for a woman, means for life. Being a parent, for men, seems to be something very different. I understand raising children is a big life change and I don't want to sell myself short on my potential to become something more and maybe even create change. **I am childfree because I want to travel, move, pursue my career wholly** and be able to push myself to be an inspiration to other women. If a child comes into my life, it won't be until I am happy and successful in my work life, and not until I am secure with my finances and a marriage. I don't want to one day wake up as an old woman wishing I had waited to have children so I could live my own life first, make mistakes, learn new things and find myself. Today kids are not for me.

Category 2:

> I'm nearly 47; my boyfriend (domestic partner) of 17 years is nearly 50. I've never been pregnant and have taken every precaution to remain childfree. I tolerate other people's children when I have to. I'm happiest when there are NO children around. I definitely don't want them in my home. I like my life as it is. My boyfriend and I are both scientists. We also raise snakes and spiders! **We like to travel. We travel to ride roller coasters (members of ACE — American Coaster Enthusiasts) and to attend rock concerts.** I am also a performer in a senior winter guard. My plate overfloweth! I see no reason to procreate. I would be unhappy. Why be unhappy?

Category 3:

> I have a great relationship with my husband. **We have the time and money to travel, and that gives us precious memories.** I had a bad relationship with my dad, and maybe I'm scared to treat my children like that. I'm very happy with my decision. I have a great relationship with myself too.

Category 4:

> My spouse and I have talked in depth about having children. However, **we both decided that our desire to travel the world is a financial burden in itself. If we have kids, we will never have the means to travel**, and at the end of our life, we would rather be 100 percent committed to fulfilling our own realistic dreams rather than only able to provide a subpar life for a child. Comes down to the fact we are selfish, but at least we recognize this and made the choice early enough to avoid damaging a kid

Category 5:

> The thought of having to do kiddie crap every weekend makes me want to shoot myself. I like having the extra money to save for retirement and not worry about braces, summer camp or college tuition. **I can travel on a moment's notice.** I can give my all to my job and not have to worry about daycare, sick days, or having to leave my co workers to pick up my slack. I'm the "cool aunt" to all my nieces and nephews. I have more time to do the things that make me happy and productive. My relationship with my guy is not strained due to the constant neediness of children. I don't want to put my body through pregnancy and childbirth. I can give my dog all the attention he needs and deserves.

If I had to choose one comment to represent the entire survey, it would be this one:

> The moment you have children, you're life ceases to be about yourself. Kids always take priority and I feel like I can do more for this world than just generate offspring.

These quotations are very troubling to me. I've been serious about obtaining STEM degrees, saving money by *not traveling*, and making a plan to have a marriage and family that will serve God. I haven't used my freedom to buy alcohol or to play the field sexually. I don't see women being serious about choosing men who are serious about marriage – especially men who are financially prepared to pay for things like houses and children. A lot of women are even interested in men who are younger than they are, despite the fact that these men have not proven themselves in their careers and finances. But younger men are easier to manipulate, and are less concerned about leading a woman to choose wife and mother roles.

Many women try to communicate maturity to others by saying that they want to get married "some day". But all the actions *right now* show that they really see marriage as "boring" and "demanding". Marriage and children "some day" is like planning for your retirement by winning the lottery. The every day actions of spending money aren't preparing you in any way to win the lottery. Talking about marriage "some day" is just a way for the woman to signal to her family and friends that she will *eventually* want the responsibility of a husband and kids, but not right now. The problem with that is that making selfish decisions over and over and over is not the way to prepare your character to be content with caring for the needs of a husband and children. Being unselfish is a skill that you have to build by repetition and practice. Just like any other virtue. And men know that. Men don't marry women who won't care for them or care for their children.

# Should Christians respect Francis Collins as an authority on science?

**Wintery Knight** · 29 December 2023 · Archived copy · Original

Dr. Francis Collins is apparently in the news again. He claims to be an evangelical Christian, and pushed Christians to wear cloth masks and get vaccinated. Should Christians trust Collins as a scientific authority? Or is he just a willing pawn of the secular left? Let's take a look at an article from Megan Basham, and find out.

This article from February 2022 is originally from Daily Wire, but full text here. The title is "How The Federal Government Used Evangelical Leaders To Spread Covid Propaganda To Churches".

Excerpt:

> In September, Wheaton College dean Ed Stetzer interviewed National Institutes of Health Director Francis Collins on his podcast, "Church Leadership" about why Christians who want to obey Christ's command to love their neighbors should get the Covid vaccine and avoid indulging in misinformation.
>
> […]Their conversation also turned to the subject of masking children at school, with Collins noting that Christians, in particular, have been resistant to it. His view was firm—kids should be masked if they want to be in the classroom. To do anything else is to turn schools into super spreaders. Stetzer offered no pushback or follow-up questions based on views from other medical experts. He simply agreed.
>
> […]Collins participated in a livestream event, co-hosted by Christianity Today… During the panel interview, Collins continued to insist that the lab leak theory wasn't just unlikely but qualified for the dreaded misinformation label. "If you were trying to design a more dangerous coronavirus," he said, "you would never have designed this one … So I think one can say with great confidence that in this case the bioterrorist was nature … Humans did not make this one. Nature did."

I blogged previously about how several federal government departments now think that this is the most plausible theory, and how the CIA bribed experts to change their testimony about the lab leak theory. So Collins was actually the one spreading misinformation.

Collins takes secular left positions on abortion and transgenderism:

> He has not only defended experimentation on fetuses obtained by abortion, he has also directed record-level spending toward it. Among the priorities the NIH has funded under Collins — a University of Pittsburgh experiment that involved grafting infant scalps onto lab rats, as well as projects that relied on the harvested organs of aborted, full-term babies. Some doctors have even charged Collins with giving money to research that required extracting kidneys, ureters, and bladders from living infants.
>
> He further has endorsed unrestricted funding of embryonic stem cell research, personally attending President Obama's signing of an Executive Order to reverse a previous ban on such expenditures.
>
> […]When it comes to pushing an agenda of racial quotas and partiality based on skin color, Collins is a member of the Left in good standing, speaking fluently of "structural racism" and "equity" rather than equality. He's put his money (or, rather, taxpayer money) where his mouth is, implementing new policies that require scientists seeking NIH grants to pass diversity, equity, and inclusion tests in order to qualify.
>
> […]Having declared himself an "ally" of the gay and trans movements, he went on to say he "[applauds] the courage and resilience it takes for [LGBTQ] individuals to live openly and authentically" and is "committed to listening, respecting, and supporting [them]" as an "advocate."
>
> […]Under his watch, the NIH launched a new initiative to specifically direct funding to "sexual and gender minorities." On the ground, this has translated to awarding millions in grants to experimental

> transgender research on minors, like giving opposite-sex hormones to children as young as eight and mastectomies to girls as young as 13. Another project, awarded $8 million in grants, included recruiting teen boys to track their homosexual activities like “condomless anal sex” on an app without their parents’ consent.

Megan’s got the names of the people who promoted him in her article: Tim Keller, Rick Warren, N. T. Wright, Ed Stetzer, Russell Moore, and David French:

> Keller, Warren, Wright, and Stetzer all publicly lauded him as a godly brother. When presenting Collins to Southern Baptists, Moore gushed over him as the smartest man in a book club he attends…
>
> [I]nfluential evangelical pundit David French deemed Collins a “national treasure” and his service in the NIH “faithful.”

Dr. Collins is a Darwinian evolutionist, so you can guess how evidence-based his views are about the origin of life and the Cambrian explosion. I think Christians need to be skeptical of believers in naturalistic religion: Darwinism, man-made catastrophic global warming, abortion, transgenderism, etc. It’s pretty clear that these naturalistic views are not the result of study and debate. People who jump on the speculations of the secular left, and pronounce them as infallible, are not doing it to promote truth. They do it because they want the respect of powerful secular leftists. Dr. Collins is not an independent thinker. He is someone who adopts the views of secular leftist elites automatically and without thinking. He wants to get ahead in the world. That’s it.

# Dr. Walter Bradley lectures on scientific evidence the creation and design of the universe

**Wintery Knight** · 30 December 2023 · Archived copy · Original

This lecture is special to me, because I bought a VHS tape of it just after I started working full-time, and watched it a million times. A lot of people come to their convictions about God's existence because of parents or church or intuitions, but for me it's all about the scientific evidence. This lecture changed my life. I wish more people taught their children about this evidence! This lecture was delivered at the University of California, Santa Barbara.

About the speaker:

> Dr. Bradley received his B.S. in Engineering Science and his Ph.D. in Materials Science from the University of Texas in Austin.
>
> Dr. Bradley taught for eight years at the Colorado School of Mines before assuming a position as Professor of Mechanical Engineering at Texas A&M University (TAMU) in 1976.
>
> During his 24 years at Texas A&M, Dr. Bradley served as Head of the Department of Mechanical Engineering at Texas A&M University and as Director of the Polymer Technology Center, and received five College of Engineering Research Awards. He has received over $4,500,000 in research grants and has published over 140 technical articles and book chapters. He has also co-authored "The Mystery Of Life's Origin: Reassessing Current Theories. He is a Fellow of the American Society for Materials and of the American Scientific Affiliation and serves as a consultant for many Fortune 500 companies.
>
> He currently serves as Distinguished Professor of Engineering at Baylor University.

The lecture: (63 minutes lecture, 25 minutes audience Q&A)

Summary slide:

This slide summarizes the content of the lecture

Introduction:

- At the beginning of the 20th century, people believed that the progress of science was pointing away from an intelligent Creator and Designer, and towards naturalism

- A stream of new discoveries has shifted the support of science towards theism, and away from naturalism
- Richard Dawkins, an atheist, says that nature only has the appearance of design, but that if you look closer, naturalistic mechanisms can account for the appearance of design
- When deciding between design and apparent design ("designoid"), it matters whether you think there is an intelligence there to do the designing

Evidence #1: The Big Bang:

- an eternal "steady state" universe is more compatible with naturalism, but a created universe is more compatible with a Creator
- In 1929, Hubble used telescopes to observe that the light from distant galaxies was *redshifted.* The further away galaxies were, the faster they were moving away. Therefore, space is expanding in all directions, suggesting an explosive origin of the universe
- In 1965, the discovery of the cosmic microwave background radiation matched a prediction of the Big Bang cosmology, and of the creation event
- In 1992, the COBE space telescope allowed us to test four specific predictions of the Big Bang model, especially the predictions for light element abundances (hydrogen and helium), which matched the predictions of the creation model

Evidence #2: Simple mathematical structure of the physical laws

- the simple mathematical structure of natural laws allows us to understand these laws, make discoveries, and engineer solutions to problems
- early scientists saw the mathematical structure of the universe to mean that nature was designed by an intelligent to be understood
- the fundamental equations of the laws of the universe can be easily written on one side of one sheet of paper
- Eugene Wigner's famous paper, "The Unreasonable Effectiveness of Mathematics in the Physical Sciences" makes the point that this simple structure is an unexpected gift that allows is to do science

Evidence #3: fine-tuning of the physical constants and quantities

- in order for any kind of complex life to survive, we need stars that provide energy within specific ranges for long periods of time
- in order for any kind of complex life to survive, we need planets with stable orbits that will not suffer from extreme temperature swings as it varies in distance from its star
- in order for any kind of complex life to survive, we need stable atomic structure
- in order for any kind of complex life to survive, we need to have chemical diversity and correct relative abundances of each element
- organic life has minimum requirements: process energy, store information, replicate, and you can't fulfill those functions if there is only one element, e.g. – hydrogen
- the energy level from the photons from the sun have to match the energy levels of the different elements in order to drive the chemical bonding needed for life
- These requirements for life of any imaginable type depend on the values of the constants and quantities. The constants and quantities cannot vary much from what they are, or the universe will lose the characteristics (above) that allow it to support complex life of any imaginable time
- For example, ratio of strong force to electromagnetic force:
  – if 2% larger, then no stable hydrogen, no long-lived stars, no compounds containing hydrogen, e.g. – water
  – if 5% smaller, no stable stars, heavy hydrogen would be unstable, few elements other than hydrogen

Evidence #4: initial conditions for habitability

- Universe: expansion rate of the universe must be fast enough to avoid a re-collapse, but slow enough to allow matter to clump together and form stars and planets for complex life to live on
- Planet: right distance from the star to get the right climate
- Planet: right mass to retain the right atmosphere

Evidence #5: origin of life and information theory

- It's possible to explain every process in an automobile engine using plain old naturalistic mechanisms – no supernatural explanation is necessary to understand the processes
- But the existence of engine itself: engineering all the parts has to be explained by the work of an intelligence
- Similarly, we can understand how living systems work, but the existence of the living systems requires an intelligence
- Even the simplest living system has to perform minimal function: capture energy, store information and replicate
- Living systems are composed of objects like proteins that are composed of sequences of components complex such that the order of the components gives the overall structure function
- Developing the components for a simple living cell is very improbable – even given the large number of galaxies, stars and planets in the universe, it is unlikely that complex, embodied life would exist *anywhere* in the universe

Evidence #6: more initial conditions for habitability

- Location within the galaxy: you need to be away from the center of the galaxy, because the explosions from dying stars, and excessive radiation will kill life
- Location within the galaxy: you need to be close enough to the center in order catch the heavy elements you need for life from the explosions of other stars
- Location within the galaxy: the best location is between two arms of a spiral galaxy, where you can get the heavy elements you need from dying stars, but without being hit with explosions and harmful radiation
- Star mass: determines rate at which the sun burns, determines the energy level of photons that are used to drive chemical bonding reactions, determines the length of time the star will be stable
- Star mass: star mass must be the correct value in order to allow liquid water on the planet's surface, while still preserving stable orbit

I wish there was more curiosity about science in churches, and young Christians understood *how critical science is* for grounding the rationality of the Christian worldview. We need to be training up more scientists who think about the big questions, like Dr. Walter Bradley.

# Should conservatives trust the FBI to be impartial and unbiased?

**Wintery Knight** · 31 December 2023 · Archived copy · Original

It's the end of the year, and I thought it would be a good time to review five FBI scandals. Then you can decide for yourself whether you think that the FBI is doing a good job of enforcing the law. And remember, you're paying their salaries with your tax dollars, so you have to decide whether you are getting good value for your money. Let's take a look at some of the scandals.

Here is an article about the scandals from Fox News.

Attack Republicans:

> Former counterintelligence FBI special agent Charles McGonigal — who led New York's counterintelligence division and played a critical role in the alleged Trump-Russia collusion investigation — was earlier this month sentenced to four years in prison for charges related to colluding with a Russian oligarch.
>
> […]In May, Special Counsel John Durham released a long-awaited final report to the Justice Department, which spans more than 300 pages of his years-long investigation into the origins of "Crossfire Hurricane." Durham found that both the DOJ and FBI "failed to uphold their mission of strict fidelity to the law" when it launched the Trump-Russia investigation.
>
> Durham said his investigation also revealed that "senior FBI personnel displayed a serious lack of analytical rigor towards the information that they received, especially information received from politically-affiliated persons and entities."

Protect Democrats:

> While Trump and members of his inner circle remain at the center of several investigations, the bureau faced backlash for declining requests from House Republicans to release an unclassified FBI document that contained claims from an informant that President Biden was allegedly involved in foreign business dealings with his family.
>
> But after the bureau balked for months to turn over the document to lawmakers, Sen. Chuck Grassley, R-Iowa, obtained the internal material — known as an FD-1023 — and released it to the public. The document accused the FBI of improperly delaying or completely shutting down a full investigation into the Biden family.

Pre-dawn raiding the homes of peaceful pro-lifers:

> When the FBI wasn't focused on — or allegedly turning a blind eye to — the White House, the bureau was slapped with a $1.1 million lawsuit in November brought by Catholic father and pro-life activist Mark Houck, who was arrested in his home in 2022 by FBI agents over a previous altercation outside a Planned Parenthood. A 12-person jury later unanimously acquitted Houck on all charges of violating the Freedom of Access to Clinic Entrances Act.
>
> Houck filed a lawsuit against the Justice Department seeking restitution for what it called "a faulty investigation" and "excessive force" after a SWAT team of around 25 people arrested him in front of his children. The lawsuit alleges government agents deprived Houck of his Fourth Amendment rights by using excessive force to arrest him on non-violent charges.

Persecute taxpayers for their religious views:

> Perhaps the bureau's most shocking moment in 2023 came in February when former FBI agent Seraphin exposed an unclassified intelligence document from the FBI's Richmond field office in Virginia that appeared

> to target traditional Catholics as so-called potential domestic terrorists, which immediately forced the bureau's headquarters in Washington, D.C., to purge the anti-Catholic memo from its system.
>
> After the bureau said it would "never conduct investigative activities or open an investigation based solely on First Amendment protected activity," lawmakers in the House Judiciary Committee and the Select Subcommittee on the Weaponization of the Federal Government launched an investigation into the FBI and discovered that the bureau interviewed a priest and a choir director affiliated with a Catholic church in Richmond, Virginia.

You have to decide for yourself whether the FBI uses it's power to break laws for the benefit of the Democrat party. You have to decide for yourself whether they've abandoned their duty to protect the Americans who pay their salaries. You have to decide for yourself whether the FBI persecutes American taxpayers solely on the basis of their first amendment activities. You have to decide whether the FBI is in violation of the Constitution – or maybe even at war with the Constitution. Vote accordingly in 2024.

# The DeSantis plan: pay teachers well, and put teacher unions out of business

**Wintery Knight** · 1 January 2024 · Archived copy · Original

The GOP primary is about to begin in Iowa, and it's a contest between a man who talks about himself, and a man who solves problems. One BIG problem in this country is teacher unions. Teacher unions collect mandatory dues from teachers, and they use those to advocate for far-left policies. But in Florida, DeSantis made a plan, and he executed that plan. And now the results are here.

Here's the latest from Florida Voice:

> As much as 60% of Miami-Dade public school educators could be withheld from representation after the state's largest teachers union failed to meet membership requirements under state law.
>
> United Teachers of Dade, the largest union in the country, reportedly did not meet the required threshold after some teachers opted out of paying membership dues.
>
> […]Signed by Gov. Ron DeSantis, SB 256 mandates a union must apply for recertification if its membership dues fail to reach 60%. According to a report, UTD's membership dues reached 58.4%.
>
> […]Under the law, unions are barred from directly withdrawing funds from public employee paychecks. An employee, such as a teacher, also must opt into a union to send payments.

SB 256 is a DeSantis bill. Passed by the legislators he helped to elect. And so when it got to his desk, he signed it.

> "If United Teachers of Dade spent half as much time paying attention to their members' interests as they have been pushing a political agenda with Randi Weingarten and running for office with Charlie Crist, they probably wouldn't even be in this position," Freedom Foundation Director or Labor Relations Allison Beattie said.
>
> […]"We were approached this summer by a number of teachers in Miami-Dade County who were unhappy seeing their hard-earned paychecks going into the pockets of union officers while those same officers have consistently negotiated away pay and benefits," Beattie said.
>
> […]"We're not surprised UTD couldn't make the 60 percent threshold, because they've lost focus of their mission – representing rank and file teachers," Beattie continued. "The union sends 46 percent of its budget to unions like the AFL-CIO, National Education Association, and Randi Weingarten."

This is a historic win for conservatives:

> According to the Freedom Foundation, United Teachers of Dade's fracture is the largest decertified vote in American history.

How did DeSantis get the teachers to want to opt out of paying union dues? Well, Florida is a right-to-work state, so workers don't have to join a union in order to work. They have the freedom to work without having to join a union. If they think that the union provides value worth their dues, then they can join and pay the dues. Traditionally, labor unions have pressured employers for higher pay. And that's where the genius of Ron DeSantis can be seen. He has been taking away the need for teacher unions by paying teachers very well. That's why the enrollment in unions has come down in Florida. This is wonderful for conservatives, because teacher unions are *major* proponents of every secular left policy you can imagine. Not just on fiscal issues, but on social issues, and foreign policy.

This article from Fox News explains why teacher unions are bad:

> Universal school choice made significant gains in 2023 when a wave of red states passed legislation. Now,

> more states are looking to join the fold next year, a phenomenon called a “school choice revolution.”
>
> American Federation For Children Senior Fellow Corey DeAngelis told Fox News Digital recently to look out for more states passing universal school choice legislation because a sea change is underway.
>
> […]DeAngelis added that school choice is difficult to pass in traditionally blue states like California, Illinois, and New York because the Democratic Party is “owned by the teachers union.”
>
> “You look at Randi Weingarten, the American Federation of Teachers, in 2022, according to Open Secrets, 99.97% of the contributions from Randi’s AFT went to Democrats as opposed to independents or Republicans,” DeAngelis said.
>
> He explained further, “It’s basically an elaborate money laundering scheme where the Democrats funnel the money to the government schools and then the teachers unions take that money and they give it back to the Democratic Party. It’s a nonstop wash, rinse, repeat money laundering scheme where the teachers unions are basically an arm of the Democratic Party at this point.”

When Donald Trump was president for four years, he did absolutely nothing to take on teacher unions. Ron DeSantis is doing it now. If he loses the GOP primary, he’ll keep on fighting teacher unions. But if he wins, he’ll be fighting teacher unions at the federal level, in all 50 states. We can have that, if we vote wisely.

# Which country is the most dangerous for Christians?

**Wintery Knight** · 2 January 2024 · Archived copy · Original

I saw an interesting article over at Daily Wire that talks about the most dangerous country in the world for Christians: Nigeria. I thought Nigeria has Boko Haram running around kidnapping people, but the article says that "roughly 90% of all martyrs in 2022 — over 5,000 Christians murdered for their faith — were from Nigeria." The author of the article is from ADF, so it's reliable.

The article is paywalled, but here's an archived copy.

Excerpt:

> Northern Nigeria is a place where the Church faces some of the worst persecution on earth. According to Open Doors, roughly 90% of all martyrs in 2022 — over 5,000 Christians murdered for their faith — were from Nigeria.
>
> One of those martyrs was Deborah Emmanuel Yakubu, a Christian student at a university in Sokoto State, who in May 2022 was stoned to death and burnt by her Muslim classmates because of her faith in Jesus. Another Christian woman, Rhoda Jatau, faced a mob and was arrested for blasphemy after the mob accused her of sharing a video that insulted Islam because it condemned the lynching of Deborah.
> Rhoda sat in a jail in Bauchi State, Nigeria, for over 18 months because of the accusations. She only saw her family and lawyers at court hearings.
>
> But through her witness to the injustice of the treatment of Christians in Northern Nigeria, both by extremist Islamist mobs and baseless prosecutions, her case caused national outrage.
> Earlier this month, after enormous national outcry, Rhoda was finally released on bail, able to spend Christmas this year with her family in safety. While the charges against her are still pending, many within Nigeria and internationally are pushing for them to be dropped fully.

There are a couple of signs that things are improving in the article, here's one:

> As with many places where Christians are a religious minority, converts to Christianity, particularly from Islam, often find it extremely dangerous to practice their faith. Daniel Kefee* was an evangelist in Northern Nigeria who brought a young Muslim woman, Hafsatu*, to Christ. But when her family found out, members of her family threatened to kill her. She sought out help from Daniel, who found a Christian residential school that could care for her.
>
> For helping Hafsatu, Daniel was charged by Nigerian authorities with kidnapping. Yet Daniel and his lawyers bravely presented to the court the reality of what had happened. In an astonishing result given the region, the judge not only acquitted Daniel, but prodded the prosecutors, asking them, "should the defendant have left the girl, what would have happened with her?"

And another one:

> Also this year, in another state in Northern Nigeria, a young woman named Mary Olowe* similarly converted to Christianity and faced death threats from her family. She was able to flee and filed for a restraining order against those who threatened her. Once again, the court issued a remarkable decision, granting the order and explicitly recognizing as a fundamental right Mary's ability to change her religion from Islam to Christianity without facing any threat of violence.

If you like to pray for Christians in other countries, Nigeria should probably be your first pick. The Muslims there are clearly out gunning for Christians. It would be nice if our elected officials in the Biden administration were

doing something about this, but I don’t think they care. They have other priorities.

# Should men marry women who think relationship boundaries are "emotional abuse"?

**Wintery Knight** · 3 January 2024 · Archived copy · Original

One of the reasons that I am not married today is because I tried to set spiritual and moral boundaries with women I wanted marry, but those boundaries were rejected. The purpose of the boundaries was to get the woman to be suitable for a marriage designed to serve God. In every case, the relationships ended. And this is actually becoming more common, under the influence of feminism.

Here is an article from The Federalist, written by Kylee Griswold.

She writes:

> Who would have thought perpetual adolescent Jonah Hill would be good at grown-up relationships? Well, he is, judging by some apparent texts his surfer ex-girlfriend Sarah Brady shared to Instagram over the weekend — despite the out-of-control media screeching to the contrary.
>
> […]According to Brady and the TikTokkers, self-proclaimed therapists, media, and fellow thirst-trappers who came to her defense, Hill is a controlling narcissist and misogynist — all for the crime of allegedly asking his then-girlfriend to please put on some clothes.

So, a man told a woman that he was interested in that he proposed certain rules in the relationship, rules that would allow him to get serious, and point the relationship towards commitment (as you'll see). But the woman, and all of her supportive allies, from the secular left to the religious right, all agreed with her that a man setting boundaries on a woman to make her safe for a marriage commitment is "emotional abuse".

More:

> Specifically, Hill laid down some boundaries for his partner:
>
> […]Plain and simple: If you need: Surfing with men[,] Boundaryless inappropriate friendships with men[,] to model[,] to post pictures of yourself in a bathing suit[,] to post sexual pictures[,] friendships with women who are in unstable places and from your wild recent past beyond getting a lunch or coffee or something respectful[,] I am not the right partner for you. If these things bring you to a place of happiness I support it and there will be no hard feelings. These are my boundaries for romantic partnership.
>
> Hill's detractors say this is "emotional abuse." But can something really be described as "abuse" if the alleged perpetrator tells you "no hard feelings" if you'd rather walk away than agree to the terms?

Feminism has made it a lot harder for men to set boundaries that will orient women towards marriage. No matter how wise the man, and how good the advice, it must all be rejected. But the demands for men to get married to rebels remain. Especially when the feminists are hitting 35, and their friends are all getting married. They feel entitled to marriage, and how dare men tell them no? Many women today don't want to hear a man *talk about the Bible* or hear a man *talk about right and wrong*, they just want weddings, wedding rings, vacations, and things to be fixed around the house. It would be better if men were just walking ATMs that didn't talk at all.

More:

> To protect the health and integrity of his relationship, Hill established reasonable and respectable parameters for how his girlfriend was to behave toward him through how she acted toward other men. Don't sexualize yourself for other guys or engage in other relationship-compromising behaviors. And he made clear how he would respond if she didn't respect those limits. I'm not the right man for you.

In my cases, my boundaries were always things that were clearly good for the women, and also good for commitment. For example, I might say "stop spending money on travel, get a private sector job in your field, and pay off your student loans". But these conditions were rejected. Later on, when the woman reached her early 30s, I would get e-mails about wanting to get back together. But the student loans had only increased, and the resumes now had huge gaps. I can only assume that the body counts had also increased from all the "traveling". No thanks, I said. No thank you. I can do something more productive than bail women out. I especially don't want to bail women out *who have no respect for men who know how to lead*.

This behavior of calling moral and spiritual leadership "emotional abuse" and "controlling" is common – even in Christian circles – because of feminism. In general, the only acceptable male roles are "protect and provide". Men are supposed to take on all the accountability, but with none of the authority to defend the truth, or to defend morality. On any topic. For example, if you try to tell a single woman in her late 20s about infertility, it's "emotional abuse". No amount of evidence can ever beat "follow your heart". And she has legions of supporters who will shame you for trying to argue from scientific studies.

If you think I am mean, then read Kylee:

> Enter feminism, which loves female autonomy and sold women lots of lies about it. Feminism said love yourself. If that means wreaking all kinds of havoc, your second "X" chromosome trumps the consequences. Unrestrained sex and unintended pregnancy? Abort the baby. Not happy in your marriage? Divorce him. Unfulfilled at home? Leave the kids with an underpaid immigrant and climb that corporate ladder. No boundaries. No bonds. No bras.
>
> But news flash: Relationships take two. And sadly, thanks to that third-wave wrecking ball, some dating women need to be told some obvious things when it comes to romantic fidelity, even if those things have to come from their partners: Seeking the approval of other men for how you look is a bad idea. Worse, it communicates lots of bad things about your priorities and desires.
>
> Frankly, a man who's willing to say that tough thing is probably a man worth holding onto. Thanks in part to "toxic masculinity" messaging and the militant feminization of America, a man who shoots for commitment and faithfulness, and communicates those aims in a straightforward way while proposing an amicable split as the alternative, is a rarity.

Oh, how I love those words.

Sadly, Kylee's view is in the minority today, thanks to feminism. And if men are not allowed to lead a relationship, then the marriage rate will continue to decline. Neither shaming of men nor blaming of men will cause men to accept marriage without leadership.

For more on this topic, I recommend this excellent article by Mark McDonald, M.D., entitled "Why American Women Are Undatable" The subtitle is "No One Wants to Play with a Porcupine". Indeed not.

# What effect will the $34 trillion national debt have on you and your family?

**Wintery Knight** · 4 January 2024 · Archived copy · Original

My podcast partner Rose suggested that I blog about the rapidly increasing national debt. This will not be a political post, as the federal national debt increased a ton under Obama, again under Trump, and again under Biden. (If you want fiscal responsibility, you have to look for governors of red states who are running surpluses). Let's see the latest news, then talk about what it means.

Here's the news from the Epoch Times:

> The U.S. national debt recorded its third "depressing achievement" in the past 12 months, topping $34 trillion for the first time to close out 2023, according to the latest Treasury Department Debt to the Penny data.
>
> On Dec. 29, 2023, the debt climbed about $90 billion in one day, to exceed $34.001 trillion. It took Washington roughly three months to add $1 trillion to the gross federal debt and six months to amass $2 trillion.
>
> In a single year, the federal government's total public debt outstanding rocketed by about $2.65 trillion. By comparison, it took the United States more than 200 years to cross the $1 trillion mark in October 1981.

The long-term predictions are even worse:

> In the coming months, the Treasury forecasts that it'll borrow roughly $1 trillion to fund higher budget deficits and manage growing interest costs. The Congressional Budget Office (CBO) projected this past summer that the national debt will nearly double and account for 183 percent of gross domestic product by 2053.
>
> […]According to President Joe Biden's 2024 budget, the federal deficit is expected to be close to $1.9 trillion this year. The annual budget gap is predicted to remain above $2 trillion after 2030.

Let me give my thoughts about this.

Right now, you can already see that interest rates are rising due to counter the inflation caused by massive government spending. Higher interest rates make it harder for innovators to borrow money in order to take risks on new products and services. So, the economy slows down.

Our creditors may demand higher interest rates on our borrowing, because of the rising risk that we will be unable to pay them back. That will increase the amount that we are paying in interest. My concern about this is that we won't have money available to deploy our military in the event of aggressive behavior from countries that don't like us very much.

Speaking of interest, our interest payments on the debt are taking up more and more of our discretionary spending. Soon, we won't have any money to spend after spending on mandatory programs, like Social Security and Medicare. Eventually, we won't have money for those. Pity the young people who are paying into social programs that are about to go into deficit.

That leads to my last point. The current generation is seeing the benefits of all this spending, but the upcoming generation is going to get the bill. What's amazing is that the younger generation is so brainwashed by the schools that they can't even vote in their own interest. They come out of the schools voting for more government, more spending, and higher taxes. They don't realize that they are the ones who are going to get the bill. They want to be communist, like Venezuela, but they don't really understand what it will be like.

# Iowa: another mass shooting by a transgender terrorist who uses pronouns

**Wintery Knight** · 5 January 2024 · Archived copy · Original

Does it really make a difference whether a person thinks that God is objectively real, and has designed the universe in such a way that human beings have objective moral duties? Well, we just had a recent shooting featuring a transgender terrorist attacking a Christian school in Nashville. Now, we have another shooting featuring another transgender terrorist.

Here's the latest from Mia Cathell, writing for Townhall:

> The now-deceased suspected gunman who shot at least six victims—killing one, a sixth-grade middle schooler—at a small-town high school in Perry, Iowa, early Thursday morning has been identified by authorities as 17-year-old student Dylan "DJ" Butler.
>
> […]An emoji of the gay Pride flag was featured in the TikTok page's bio and an image of an anime girl was selected as the profile's avatar. In another TikTok video, the account used the hashtag "genderfluid." Using an identical profile picture on Instagram, user @DylanSayWhat212 identified as trans non-binary with "he/they" pronouns. However, the account has also since been scrubbed.

Reddit comments:

> According to a series of Reddit posts that Butler appears to have authored, he interacted with transgender and "femboy" forums.
>
> In response to the question "For those who haven't started transitioning yet. What's holding you back?" posted to the r/Trans subreddit, the username u/Dylanpickle1996 replied, "I don't want to look ugly." Other replies were comments on pornographic ocntent. Over on the platform X, formerly Twitter, the since-suspended account @DylanSayWhat212, under the screenname "Dylan Jesse," professed his love for My Little Pony and "f*cking furries" while replying to a Happy Pride Month post. Officials have yet to verify these social media posts—all of which were subsequently deleted in the aftermath of Thursday's tragedy.

LibsOfTikTok has more:

https://twitter.com/libsoftiktok/status/1743027883029987547

And more generally:

> Colorado Springs shooter: nonbinary
> Nashville school shooter: trans
> Aberdeen shooter: trans
> Denver school shooter: trans
> Iowa school shooter: trans/genderfluid
>
> The modern LGBTQ+ movement is radicalizing our youth into becoming violent extremists.
>
> — Libs of TikTok (@libsoftiktok) January 4, 2024

On the positive side, the response from law enforcement was pretty fast and extensive. But all they can do is respond. They can't do anything to fix the source of the problem: public schools run by "don't judge" secular leftists who manufacture students with mental illnesses.

The public schools administrators choose the easiest majors in college. They often have student loans for useless non-STEM degrees. They have little or no work experience in the competitive private sector. They make decisions with their feelings, instead of using reason and evidence. They can't solve any real-world problems. And they are passing on their emotion-dominated behaviors to the children. This will not be the last time something like this happens, because the secular left keeps making more people with serious mental illnesses.

Homeschool your kids, and vote for politicians who have a record of supporting school choice.

# Full video of Ron DeSantis' recent appearance on CNN town hall

**Wintery Knight** · 6 January 2024 · Archived copy · Original

The Iowa GOP primary vote is coming up very soon, and I just want to make sure that everyone has a chance to get to know the candidate with the best record of achievements. DeSantis' appearance on CNN was praised by CNN and others as the strongest they have seen him speak. He's improving his speaking ability, and so I thought I would post it along with an article.

Here's the video:

And the article from the far-left Iowa Capital-Dispatch.

**Birthright citizenship:**

> DeSantis said that if elected, he would sign an executive order eliminating the constitutional guarantee of citizenship for children of undocumented immigrants born in the U.S., also known as "birthright citizenship." While president in 2018, Trump said he would sign an executive order to eliminate it, but never did so.
>
> "The 14th Amendment obviously applies to U.S. citizens," DeSantis told CNN moderator Kaitlan Collins. "It was never the intent to say, 'you come illegally across the border, have a kid and all of a sudden, the kid is an American citizen.' That creates an anchor in the society so that you then can't deport the illegal aliens who came in. It's an incentive to come in illegally. That was not the intention of that."
>
> […]The governor then followed up by bashing Trump for saying that he would do the same thing, but never did so. "What is he now telling people in Iowa this time around? He says he's going to do the same thing that he didn't do the first four years. I mean sometimes you can say 'Congress stymied you' and all this other stuff. All he had to do was put his John Hancock on a piece of paper, and he did not do it. When I tell you I'm going to do something, you can take it to the bank. I'm going to do it."

**Abortion legislation:**

> On abortion, DeSantis defended his signing of a bill last year that would ban abortions in Florida after six weeks of pregnancy, with some exceptions (the law has not gone into effect as the Florida Supreme Court is reviewing a legal challenge to the 15-week ban passed in 2022. If they do maintain that law, the six-week ban would go into effect short afterwards). And he said Trump was weak on the issue.
>
> "This was a guy who was at the March for Life in January of 2020, and he said that all life was a gift from God. He said the unborn was made in the image of God. He said that there should be protections. That's what he was saying when he was president at the March for Life. Now he's saying it's a terrible, terrible thing. So how do you reconcile those two views. Did he flipflop? Did he not believe it at the time?"
>
> When Collins asked him if he thought that Trump wasn't actually "pro-life," DeSantis replied, "Of course not."
>
> "Some issues are pretty fundamental," DeSantis added. "How do you flipflop on something like the sanctity of life?" as the audience cheered.

Trump supported pro-life during his first term as president, but recently he's been critical of the repeal of Roe v. Wade decision, and also critical of states like Florida, that have restrictions on abortion.

**All 99 counties:**

> DeSantis has gone all in on Iowa, the first state in the country where Republican voters will be able to decide on who their presidential nominee will be in November. He's campaigned in all 99 counties in the state and received the endorsement of Iowa Gov. Kim Reynolds.

**Gun rights:**

> […]The town hall took place just hours after six people were shot at a high school in Perry, Iowa, approximately 40 miles northeast of Des Moines earlier in the day. DeSantis called the shooting a tragedy, and then pivoted to how he had worked to enact a comprehensive gun safety law that was passed by the Florida GOP-controlled Legislature in the immediate wake of the massacre at Marjory Stoneman Douglas High School in Parkland in February 2018 that killed 17 people.
>
> Collins asked him about one provision in the law that GOP lawmakers now say that they want to repeal: a three-day waiting period to purchase a firearm in the state.
>
> "I think the background checks should be instant," he said, giving a boost to the proposed legislation. He added that if the background check reveals a criminal conviction or a mental health issue, the purchase would then be prevented. "But I think that you want instant background checks, and so that's what I support."

**Ukraine funding:**

> DeSantis… said on Thursday that "we need to bring it to a conclusion."
>
> Did that mean ending U.S. support for Ukraine? Collins asked.
>
> "It means end the conflict," DeSantis responded, before blasting President Biden for not giving the American people a clear message on what the U.S. objective is in the conflict. Collins again pressed him what "ending the conflict" actually meant – did that mean no more American dollars or military aid to the Volodymyr Zelensky administration?
>
> "What it means is bringing it to a situation where Russia is in a box and you're not having wars break out to Europe," he said, adding that he would never send U.S. troops to fight in the conflict – something that Joe Biden said when the war began nearly two years ago. He did say that he would be willing to help out Europe "to bring it to a conclusion."
>
> As he had done on the campaign trail, DeSantis spoke about his own military experience, saying that if elected he would be the first veteran to serve in the White House since George H.W. Bush in 1988.

Just to help the author of the article out, DeSantis wants no more funding, and no more weapons. He thinks that Europe should supply Ukraine with funding and weapons, because the United States has to prioritize the threats from China and America's Southern border.

# Stephen C. Meyer lectures on intelligent design and the origin of life

**Wintery Knight** · 7 January 2024 · Archived copy · Original

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell". One of my favorite 6 arguments for a Creator and Designer is the origin of the simplest replicating living system. When you look into the cell, what you'll find is carefully sequenced components that for complex structures, like proteins. In this lecture, you'll learn all about this "biological information".

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of bases that code for proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator

- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive
- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

**Proteins are constructed from a sequence of amino acids:**

A sequence of amino acids forming a protein

**Proteins sticking onto the double helix structure of DNA:**

Some proteins sticking onto the sugar phosphate backbone
I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

There is a good breakdown of some of the slides with helpful flow charts here on Uncommon Descent.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# All he does is win: DeSantis cuts health care costs by importing Canadian drugs

**Wintery Knight** · 8 January 2024 · Archived copy · Original

There are two kinds of voters in the United States right now. First, there's the kind that is voting for Ron DeSantis in the GOP primary. Second, there's the kind who doesn't know what Ron DeSantis has accomplished in Florida. He has achievements in every single area that conservatives care about, even foreign policy! Let's see the latest demonstrated achievement from Ron DeSantis.

This report is from the CBS News:

> For the first time, the U.S. Food and Drug Administration has authorized a Florida program to import certain prescription drugs in bulk from Canada, where drug prices are much cheaper, to significantly cut costs for American consumers.
>
> Floria's proposal specifies a number of drug classes, including medications for asthma; chronic obstructive pulmonary disease, or COPD; diabetes; HIV and AIDS; and mental illness. The medications would be only for certain people, including foster children, prison inmates, certain elderly patients and, eventually, Medicaid recipients.
>
> Republican Gov. Ron DeSantis signed the plan into law in 2019, but it required federal review and approval by the FDA, which controls prescription drug imports.
>
> […]DeSantis celebrated the FDA's move Friday, saying that the program will save the save up to $180 million in its first year alone by bringing lower cost drugs to Floridians.
>
> "After years of federal bureaucrats dragging their feet, Florida will now be able to import low-cost, life-saving prescription drugs," DeSantis said. "It's about time that the FDA put patients over politics and the interests of Floridians over Big Pharma."
>
> […]Florida has estimated that the program could save it up to $150 million annually. The FDA authorized the state's importation program for two years once the agency is notified of the first shipment of drugs ordered from Canada. State officials must first test the drugs to make sure they're authentic and relabel them so that they comply with U.S. standards.

I just want to stress this. If you are the kind of conservative who cares about results, then the best candidate in the 2024 election is Ron DeSantis.

DeSantis also promised to end the Bureau of Alcohol, Tobacco, and Firearms.

Here's the latest about that.

> Republican presidential candidate Ron DeSantis joined the Dana Show with Dana Loesch Thursday afternoon where he vowed to abolish the ATF should Congress pass the appropriate legislation.
>
> The Bureau of Alcohol, Tobacco, and Firearms was established in 1886 and is responsible for the enforcement of specific guns and tax laws.
>
> DeSantis also commented on a recent school shooting in Iowa and the current crop of 'Red Flag' laws across the United States.
>
> "They try and use these things as leverage to advance a political agenda," explained DeSantis.

Eliminating the ATF is *in addition to* his promise to eliminate the Departments of Education, Commerce, Energy, and the IRS. Would you like to see that happen? If you do, vote for DeSantis. Trump had 4 years to do this, 2 with

a Republican House and Senate, and he did not get it done. In the same clip, DeSantis opposes Red Flag laws, and he refuses to build a new headquarters for the FBI. He wants to move as many agencies as possible out of Washington, D.C. as well!

What about Trump? Trump allied with Anthony Fauci to lock America down, and with Christopher Wray, to corrupt the FBI. Trump promised to build the wall, he didn't. Trump promised to end birthright citizenship, he didn't. Trump promised to drain the swamp, he didn't. Trump did nothing at all during the BLM and Antifa rioting. Trump is now criticizing pro-life laws at the state level. Trump wants to build the FBI a brand new, state-of-the-art Kremlin-sized headquarters near Washington.

America can do better than Trump in 2024.

# Atheist woman who had sex with 300 men in one year expects to marry “some day”

**Wintery Knight** · 9 January 2024 · Archived copy · Original

Cultural leaders decided a while back to teach young women that they should not conform to traditional roles of wife and mother. Traditional female roles are terrible, the leaders said, because being a wife and mother makes a woman unhappy. What women need to do instead to be happy is that they need to act like hot alpha male bad boys. They need to reject religion. They need to reject morality. They need to take out student loans to do worthless degrees in women’s studies. They need to get public sector jobs that aren’t challenging. They need to delay marriage for as long as possible, so they can get as much promiscuous sex with hot no-commitment bad boys as they can. And when they are ready to marry and have children (at age 38), then they should feel entitled to a man who has all the best characteristics of all the hot bad boys they slept with over the years. He will perform the traditional male roles: protect and provide. (But obviously not moral leader and spiritual leader) And of course, after a fairy tale wedding, these women will work outside the home, and the children can just go to daycare and public schools.

Now, obviously there are lots of women who are raised in good homes who reject all this nonsense. They follow traditional paths, and they expect to marry a traditional man, and homeschool their traditional kids. If they go to college or trade school, they learn STEM fields. If they get jobs, it’s in the private sector. If they have boyfriends, they don’t sleep with them before marriage. If they get married, it’s for life. If they have kids, they stay home with them. If those kids go to school, it’s homeschool. Those are traditional women. Traditional men get a lot of value out of marrying a traditional women.

But what happens to the feminist women? Are they bringing anything to the table that might attract a traditional man?

Take a look at this story from the New York Post:

> An Australian woman who says she had sex with more than 300 people in one year found the experience “empowering.”
>
> Annie Knight, 26, told “The Kyle and Jackie O Show” that she even managed to bed five people in a single day during the frisky, fun-filled year.
>
> “I felt empowered afterward,” the amorous Aussie declared. “Sex makes me feel good. It’s meant to make you feel good.”
>
> Knight sleeps with men and women and told the radio program that she met many of her sex partners on dating apps. However, she also has a roster of “regulars” on speed dial that she calls up whenever she feels like getting down and dirty.
>
> “The messier the sex, the better,” she enthused.
>
> Knight… added that nothing is off limits when it comes to experimenting in the bedroom, saying: “I’m down to try anything.”
>
> Knight, who has an OnlyFans account… told “The Kyle and Jackie O Show” that there’s no shortage of kinky content on her page as she does “pretty much everything” on camera.

She’s making money on OnlyFans, because men who ought to choose better women are foolishly giving her money:

> [S]he now earns around $1,000 a day with her risque content, which fans pay a monthly subscription to view.

I saw a clip of her being interviewed on the Joe Khamou show.

Here’s the last few minutes of the interview:

I was curious to hear that her religious upbringing was Catholic. She was baptized. She went to an all-girls school. And she is an atheist now. She also explained what she sees in the future, as far as relationships, marriage and children. She says she wants to settle down when she finds the right guy, and she's "just doing this for fun" until she "finds the right person". She expects a traditional man to commit to her, but she is anything but a traditional woman. She is a completely untraditional woman. So, she has everything to gain from this traditional man, but nothing to offer this traditional man.

Her actions have formed habits and a character that will make it impossible for her to perform traditional roles well, and impossible to be content with performing them. She has not read anything about how to do it. She has not submitted to wise leadership from adults who were good at it. She has no rational basis behaving morally when it goes against her self-interest. And she has no practice at doing anything that a traditional man would find useful for a long-term marriage and parenting enterprise.

Good men don't marry women who do this. A good man wants to marry a woman who commits to him early on, and supports him during his difficult early years. The more a woman invests in a good man, the more he loves her. The more difficulties they go through together, the tighter the bond. The earlier they start building, the stronger the castle. Women who have not experienced the truth of this are the ones like Annie, who keep going for entertainment and excitement with the hot bad boys. They choose bad men, they complain about them, and then they imagine that there are no good men. Because they don't choose good men.

Men understand that women who have intimacy with many different men train themselves to decouple intimacy from relationship. Such women learn to see sex as something self-centered, rather than related to a relationship's purpose and goal. They don't see it as a way of affirming the unity of two people who have committed to loving each other exclusively and for life. Married sex is designed to express unity of purpose and mutual support. In the long-term, women like Annie find it unbearable to participate in marital sex. They only ever wanted sex for themselves, with hot bad boys. They are completely unequipped for sex during a long-term commitment, where sex is about unity and support. Promiscuous women imprint themselves with the physical appearances of hot bad boys who didn't commit to them, so that they no longer find the husband they "settled" for sexually attractive. And that's why studies show that marriages with promiscuous partners are far more unstable.

Traditional men have learned to avoid the marital instability that comes from promiscuity. They understand that when marriages end, the woman typically gets the house, car, savings, full custody of the kids, alimony and child support. So, they are determined not to be the sucker that women like Annie Knight "settle" for.

Please help me to educate young feminists. Explain to them that getting social media attention and hook-up sex in the short term does not guarantee them a traditional man in the long term. Traditional men don't find feminists attractive.

# My libertarian friend says intelligence agencies will stop DeSantis from winning

**Wintery Knight** · 10 January 2024 · Archived copy · Original

I have a friend who is a libertarian. He has a very negative view of intelligence agencies today, e.g. the FBI, the CIA, and the NSA. He thinks they're all spying on us all the time. He thinks they use their power to get Democrats, so their budgets, power and salaries will increase. And he thinks that after DeSantis' Tuesday night town hall, that these agencies are going to stop him from being president.

***Before we get started, please be aware that there is a Republican primary debate on CNN tonight at 9 PM Eastern. If you don't have CNN like me, you can watch it free and live right here.***

So, let's take a look at what DeSantis said, starting with the clip that my friend thinks will get him "stopped" by the FBI, the CIA, and the NSA. This is real Barry Goldwater level stuff.

This is a really good clip. We don't see politicians talking like this much any more. It's really something else. I have been very disturbed by Obama weaponizing the IRS. Democrat-ordered pre-dawn raids on pro-life homes. Democrats designating concerned parents as "domestic terrorists", and turning a blind eye to violence coming from BLM and Antifa. We really do need someone who will hold government employees accountable for using their power to elect big-government Democrats.

Anyway, I have another wonderful friend who reads the blog, and follows me on Twitter. And he has the view that Trump *has to be the nominee* because he is the only one who will stop the weaponization of government by the Democrat party. But when I watch that clip, DeSantis really does not sound anything like Trump. He sounds like he's going to solve the problem in a way that Trump never did in 4 years of being president.

Remember, Trump had 4 years as president, 2 of those with a Republican House and Senate. He could have drained the swamp. But like so many of his other promises, he never did. And now, in 2023, he is going around explaining that he couldn't do what he promised, because the left would get angry with him. Trump nominated Christopher Wray, who led the FBI. And Trump wants to build the FBI an enormous new state-of-the-art headquarters.

Trump is currently facing 91 indictments across several states, and many of those cases will be decided by judges and juries hostile to the Republican party. Even if he somehow manages to beat all these charges, and I don't see how he could, the charges and accusations will still be used against him during the election. Polls show that if Trump gets convicted, he will lose over 10% of his support. Why would Republican voters take that chance, when we can run a candidate who doesn't have personality disorders and criminal charge baggage?

Trump just isn't the same guy that he was in 2016. This new ad from the DeSantis campaign is really good. It contrasts Trump's bold, brash, confident talk from 2016, with his excuses and evasions in 2023:

He promised a lot, but he didn't deliver. And we don't have to choose him. He's not the best candidate for conservatives. He's not the best candidate for Christians. We will get more of what WE want if we choose DeSantis to be the Republican nominee, instead.

Anyway, some nice long clips from the Tuesday night town hall on Fox News.

Illegal immigration and deportations:

Right to life and Nikki Haley:

Israel, Ukraine and Nikki Haley:

If you want more, I tweeted out a whole bunch from my Twitter account on Tuesday night.

# Theistic evolutionists and the two-platoon strategy

**Wintery Knight** · 11 January 2024 · Archived copy · Original

What should we make of theistic evolutionists telling us that you can *believe* in God, while still *knowing* that matter, law and chance explain the full development of all of life?

Consider this quotation from from famous intelligent design Phillip E. Johnson.

Quote:

> The National Academy's way of dealing with the religious implications of evolution is akin to the two-platoon system in American football. When the leading figures of evolutionary science feel free to say what they really believe, writers such as Edward O. Wilson, Richard Dawkins, Daniel Dennett, Carl Sagan, Steven Pinker, Stephen Jay Gould, Richard Lewontin and others state the "God is dead" thesis aggressively, invoking the authority of science to silence any theistic protest. That is the offensive platoon, and the National Academy never raises any objection to its promoting this worldview.
>
> At other times, however, the scientific elite has to protect the teaching of the "fact of evolution" from objections by religious conservatives who know what the offensive platoon is saying and who argue that the science educators are insinuating a worldview that goes far beyond the data. When the objectors are too numerous or influential to be ignored, the defensive platoon takes the field. That is when we read those spin-doctored reassurances saying that many scientists are religious (in some sense), that science does not claim to have proved that God does not exist (but merely that he does not affect the natural world), and that science and religion are separate realms which should never be mixed (unless it is the materialists who are doing the mixing). Once the defensive platoon has done its job it leaves the field, and the offensive platoon goes right back to telling the public that science has shown that "God" is permanently out of business. (The Wedge of Truth, IVP 2000, pp. 88-89).

So what naturalistic scientists believe is that God didn't do anything to create the diversity of life – that nature does all of its own creating. In fact, it doesn't matter if the best naturalistic explanation is improbable or implausible – scientists *must* bitterly cling to materialistic explanations of natural phenomena.

The problem for these scientists is that they are taxpayer-funded, and religious people don't like paying to have scientists shoehorn reality into a pre-supposed naturalistic framework. Sometimes, religious people get annoyed about being told that sparking gases can create functional proteins. And sometimes, religious people get annoyed about being told that the universe oscillates eternally despite observations that falsify that speculative theory. And sometimes, religious people get annoyed about being told that there are as yet undiscovered fossilized precusors to the Cambrian era fossils.

Naturalists think that opposition to these lame naturalistic theories only ever be religiously-motivated. They cannot accept that people might question their naturalistic just-so stories on scientific grounds. So what do the naturalists do when faced with scientifically-motivated dissent that *they think* is religiously motivated? Well, they trot out "religious" scientists. These "religious" scientists claim to have a deep personal faith in God, and a belief in miracles. But these religious scientists believe that what actually happened is that law, matter and chance did all the creating of life. This is the "second platoon". They are sent out to mislead the public by talking about their personal faith, and what God could and couldn't do, and how evolutionists can believe in God without any evidence of intelligent causes in the history of life. The one question they most want to avoid is whether science, done in the ordinary naturalistic way, can discover evidence of intelligent agency in the history of the development of life.

So what is theistic evolution? Theistic evolutionists believe no intelligent causes are detectable in nature by science, and that no intelligent causes are needed to explain life. They like to say phrases like "God could" and "God might" and "I believe" and "I attend this church" and "I received a Christian award" and "I believe in miracles too". But

atheists and theistic evolutionists agree on what science shows about the diversity of life – *intelligent causes didn't do anything*.

The quickest way to disarm a theistic evolutionist is to refuse to talk about religion or God, and to ask them to show you the naturalistic explanation of the Big Bang. And the naturalistic explanation of the fine-tuning. And the naturalistic explanation of the origin of life. And the naturalistic explanation of the Cambrian explosion. And so on. Focus on the science – don't let them turn the conversation to their personal beliefs, or to the Bible, or to religion, or to philosophy. Ask them what they can show in the lab. If naturalistic mechanisms can do all the creating they say it can do, let's see the demonstration in the lab.

# New survey: high school boys twice as likely to be conservative than high school girls

**Wintery Knight** · 12 January 2024 · Archived copy · Original

Did you know that women tend to be further to the left than men? According to surveys, women are more leftist than men on abortion, same-sex marriage, and a host of other policies. I'll show you a few surveys below. But even more interesting is that there is a link between support for leftist policies, and higher mental illness. Let's take a look at it.

First, here is an article from The Hill:

> Forty-four percent of young women counted themselves liberal in 2021, compared to 25 percent of young men, according to Gallup Poll data analyzed by the Survey Center on American Life. The gender gap is the largest recorded in 24 years of polling. The finding culminates years of rising liberalism among women ages 18 to 29, without any increase among their male peers.

That article is a bit old, here's a new one from this week in The Post Millennial:

> In annual surveys over the last few years, data pulled from Monitoring the Future has shown that about a quarter of high school seniors identify as conservative or very conservative. Only 13 percent of the 12th grade boys identify as liberal.
>
> […]The graph excludes moderate students, but of those high school seniors that do identify politically, around 65 percent of boys were conservative while only around 31 percent of girls identified that way.

According to surveys, young women are also more likely to support abortion under any circumstances (40 to 27) and more likely to support same-sex marriage than men.

I don't support abortion because I favor the rights of unborn babies over the happiness of adults. I don't support same-sex marriage because studies show children do better when they are raised by a mother and a father. And I think that's why most of these men are with me, they follow that same reasoning, and side with the children against the adults.

I thought this part of the article was interesting:

> As one Politico analyst put it, "Democrats have a masculinity problem." Citing trends among black and Latino voters, the analyst pointed out that even in minority communities that have voted majority Democrat, men have been turning to the Republican party at higher rates than women.
>
> Some conservative figures such as Jordan Peterson and Dennis Prager (through PragerU) have millions of followers on YouTube, a platform where the users are majority male.
>
> In addition, one of the more popular conservative political podcasts, The Ben Shapiro Show, has an audience that skews overwhelmingly male at 86 percent. The audience also skews younger, 18-44, in comparison to Fox's former show with Tucker Carlson, 25-54, which skews slightly female at 53 percent.

This is good news. Boys are finding themselves role models who they see as "strong". And those new role models are conservative. These stronger role models champion truth, and they make moral judgements. Even if it hurts other people's feelings.

Let's go on to the second point. These leftist policies are having a bad effect on young women's mental health.

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

I found an interesting article in the Wall Street Journal that talked about how one leftist policy concern (global warming alarmism) is tied to higher rates of mental illness.

It says:

> A study in 2021 of 16- to 25-year-olds in 10 countries including the U.S. reported that 59% were very or extremely worried about climate change, and 84% were at least moderately worried. Forty-five percent claimed they were so worried that they struggled to function on a daily basis, the definition of an anxiety disorder.

The study found that the mental illness was more common in younger people:

> Climate anxiety and dissatisfaction with government responses are widespread in children and young people in countries across the world and impact their daily functioning.

So now we are looking at a direct link between the policies of the left, and the lower mental health of the left. And we know that more women than men are on the left. And we see more mental illness among women.  Interesting, isn't it?

And this has consequences. Leftist women are noticing that men are more conservative than they are, and it's affecting their dating:

The marriage rate is also declining. Could this decline in marriage be related to the increase in leftist women, and all the related mental illnesses that leftist women have? Does it make sense for a conservative man to enter a relationship where he pays all the costs and bears all the risks, but all the decisions are being made by a leftist woman? It's dangerous for a man to do that.

Consider that the divorce rate is very high right now, and divorce takes away a man's money, his access to his kids, and his freedom. Women initiate 69% of divorces. College-educated women – who are especially leftist – initiate 90% of divorces. This high divorce rate cannot be blamed on men, because the divorce rate of lesbians is the highest of all. No man to blame in that situation.

Why would a man sign up to be controlled by feminist institutions, like the divorce courts? Men are not interested in projects where they have to pay for everything, but someone else is making the decisions. Especially if they get blamed when things go wrong.

Facing all of these risks, a man would have to be crazy to even talk to a leftist woman – much less date her. Unfortunately, we aren't making enough young conservative women for these conservative young men to marry. And so, the marriage rate is declining. Young women today are not as conservative as previous generations.

I know a lot of people today are worried about young men falling under the influence of bad role models. But the surveys show that boys tend to have the right role models, and the right political views. So, we need to work on making young women more conservative.

# Knight and Rose Show #43: Testimony as a Tool for Evangelism?

**Wintery Knight** · 13 January 2024 · Archived copy · Original

Welcome to episode 43 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose evaluate the use of personal testimony as a tool for evangelism. It's an hour long! If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode 43:**

**Episode Summary:**

Wintery Knight and Desert Rose evaluate the use of personal testimony as a tool for evangelism. What does the testimony approach offer to non-Christians? How is testimony used in the Bible? How should Christians engage in conversations with non-Christians? How does the widespread use of testimony change the way that Christianity is perceived by non-Christians in the culture?

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Green New Deal: Canadians told to conserve energy to avoid blackouts

**Wintery Knight** · 14 January 2024 · Archived copy · Original

This story from Canada is interesting. In America, the secular left wants to use global warming myths to control energy production and energy consumption. I call it "global warming socialism". They want to force people to own smaller homes, stop using electricity, stop owning gas cars, stop having children, stop owning appliances, and so on. Let's look at how it works in Alberta, Canada.

Here's the story from Canada's far-left CTV:

> Albertans were asked for the second evening in a row on Saturday to limit their electricity usage to essential needs only.
>
> According to an alert issued by the Alberta Emergency Management Agency to all cell phones shortly before 7 p.m., a high demand for power during the extreme cold placed the province at a "high risk" of rotating power outages.
>
> "On top of high demand of our own energy generation, Alberta's grid receives electricity from neighbouring provinces. Extreme weather in Saskatchewan and British Columbia is impacting electricity sharing, which is also a contributing factor to tonight's grid alert," Nathan Neudorf, the province's utilities minister, said in a statement.
>
> "The Alberta Electric System Operator has activated its emergency grid management plan to work with local distribution utilities to avoid potential rolling brownouts."
>
> […]A similar request was made of Albertans on Friday, when the Alberta Electric System Operator recorded a new record for power use.

How come Saskatchewan has power to share, but Alberta doesn't? Well, Alberta had elected a far-left communist Rachel Notley as Premier, and she embraced Green New Deal energy policies. Notley has no earned STEM

degrees, and no relevant private sector STEM experience. She literally knows nothing about mathematics or science. And that's what Alberta voters wanted. They wanted a pretty face to tell them things that felt good, and made people like them. They didn't want a problem solver. Now, Alberta has to beg for energy from their neighbor, Saskatchewan. Because she shut down their cheap, reliable energy production from 2015-2019.

Wikipedia says:

> On November 22, 2015, Notley unveiled Alberta's updated climate change strategy, in time for the COP 21 conference in Paris. The plan included an economy-wide carbon price starting in 2017 and a cap on emissions from the oil sands. The plan also included a phase-out of coal-fired electricity by 2030, a 10-year goal to halve methane emissions, as well as incentives for renewable energy.
>
> In November 2016, $1.4 billion was paid to compensate three major Albertan power producers (ATCO, Capital Power, and Transalta) to expedite the transition caused by the closure of six coal-fired power plants. The compensation was derived from the carbon tax and was to be paid over a period of 14 years.[48]

Over in Saskatchewan, they elected a very conservative premier, who rejects green energy policies.

Far-left CTV reports on that:

> Saskatchewan provided Alberta with over 150 megawatts of power over the weekend – as the province faced the possibility of rotating power outages due to extreme cold.
>
> In a post to X Saturday evening, Premier Scott Moe announced the province was assisting its western neighbour.
>
> "SaskPower is providing 153 MW of electricity to AB this evening to assist them through this shortage," Moe said in the post.
>
> The premier added that the electricity would be provided by SaskPower's natural gas and coal-fired power plants – taking the opportunity to criticize the federal government's environmental policies.
>
> "That power will be coming from natural gas and coal-fired plants, the ones the Trudeau government is telling us to shut down (which we won't)," Moe said.

As Americans, we have to learn from the mistakes of other countries. We have people in America who want to impose Green New Deal socialism policies. They don't know how to do math. They've never solved a problem in the private sector. But they have tremendous confidence in their moral superiority over you. They think they should be allowed to decide how much energy companies can produce, and how much energy you can use, and what kind of car you can drive, and how many kids you can afford. Their brains are filled with irrational, unfounded fears about overpopulation, resource exhaustion, and other untestable, indefensible nonsense. Don't let them get control of your country.

# Why you should read “Up From Slavery” by Booker T. Washington

**Wintery Knight** · 15 January 2024 · Archived copy · Original

Lately, my friends have been very excited that I’m a non-white conservative. They want me to answer the grievances of BLM people, and explain from my own experiences what Christianity and conservative policies have to say about making the lives of non-whites better. My friend Wes recommended “Up From Slavery” by Booker T. Washington to help me focus my thoughts.

Here’s a summary of the book:

> ### Dignity through Labor
>
> Over the course of *Up From Slavery,* Washington develops the idea and ideal of dignity through labor. For Washington, the gravest aspect of the institution of slavery is the denigration of labor for both blacks and whites. Because the enslaved had no personal investment or return on their labor, they did not complete their work with an attitude toward improvement. Likewise, whites, largely deprived of meaningful labor, were robbed of the ability to achieve self-sufficiency. In both races, this produced personalities and characters that seek to escape labor. Washington emphasizes labor as the only way to make oneself useful in an interdependent, modern society. Throughout the whole of *Up From Slavery*, Washington searches for and obtains work. Further, once he obtains it, Washington completes all labor to best of his ability, no matter how lowly the task. At the Tuskegee Institute, Washington makes this idea and ideal a foundational ethos. All students who study at the Tuskegee Institute must learn a trade or industry alongside their more traditional academic pursuits. In addition, many of the buildings, most of the furniture, the wagons, and the materials used at the school are produced by students. This level of practical skill and diligence also acts as the foundation of Washington’s theory and program for racial uplift.
>
> ### Selflessness, Desire to Be Useful to One’s Community
>
> The people that Washington most admires and models himself after are those he labels selfless. Washington defines this as the willingness to work on the behalf of others. For Washington, this is not only about duty or labor, but also about the willingness to do one’s best for the benefit of the collective good. Washington believes that racial prejudice can be overcome if black people make themselves indispensable to their communities and their nation. The brick-making episode provides an example. Though the brick-making enterprise at Tuskegee felled three kilns before successfully producing bricks, the venture eventually proved successful and the school began to sell its bricks on the open market. Washington describes how whites who were unsympathetic or apathetic to the education of blacks and the overall project of the Tuskegee Institute were willing to purchase Tuskegee bricks due to their quality and convenience. Washington suggests that if black race can find their niche in society by fulfilling a need, then they can co-exist peacefully and productively with whites.
>
> ### Impracticality of Political Agitation
>
> Throughout *Up From Slavery*, Washington defends his ideas about racial advancement and uplift by subtly undermining the proposals of his critics. Though Washington does not explicitly state his objection to the strategies of specific thinkers like W.E.B. Dubois or even his predecessor, Frederick Douglass, he nevertheless highlights the wastefulness of political agitation for equal rights at every chance he gets. To do this, Washington shows that political agitation results in worse relations and outcomes than those that existed before. For example, when he goes home to Malden after his second year at the Hampton Institute, Washington finds that both the salt-furnace and the coal-mine are not in operation due to worker’s strikes. In Chapter IV, Washington describes how strikers usually spent all their savings during the strikes and returned to work in debt, but at the same wages. He raises the impracticality of political agitation again after his

> controversial Atlanta Exposition speech. After the success of his speech, he hypothetically asks if a black man would have been invited to give a speech had people agitated to put a black person on the program. He answers in the negative, saying that such opportunities can only arise through merit.

And here's a summary of his most famous speech:

> On September 18, 1895, Booker T. Washington was selected to give a speech that would open the Cotton States and International Exposition in Atlanta, Georgia. The speech, which is often referred to as the "Atlanta Compromise," was the first speech given by an African American to a racially-mixed audience in the South. In it, Washington suggested that African Americans should not agitate for political and social equality, but should instead work hard, earn respect and acquire vocational training in order to participate in the economic development of the South. By doing so, eventually, he stated, African Americans would gain the respect of white society and be granted the rights of full citizenship.

There's a free full audio version of the book, and the full text is online. I recommend this book to people of all races, because as the sexual anarchy brought on by feminism becomes widespread, the majority of the children of tomorrow will face the same kinds of challenges.

I see Washington's ideas as consistent with a Christian worldview, where we don't expect to be treated fairly. We expect sinful people to treat us badly. What Christianity says is to be patient, and focus on your relationship with God and loving your neighbor. And one way to love your neighbor is to sell them something valuable that you made through your labor. Another way is to work and save, and give to charity.

Government solutions to problems like racism and poverty aren't a top priority for Christians. Most of all, we need the freedom to be good, and to do good. That's priority one. You may not make your life better by being moral and diligent, but it's rare that doing so causes you to harm yourself. It's very important that you not harm yourself.

So, this dovetails nicely with my own story. My married non-white parents were not smart enough or willing enough to monitor my education, but they were clear that they wanted me to do well in order to find good-paying work. So I completed my BS and MS in a STEM field, and went to work right away, and I've been at it continuously for 22 years now. I save most of what I earn for charity and early retirement.

I've never experienced any of the racism or police brutality that American blacks complain about. And that's because I follow what Washington is teaching. I dress in a clean way that doesn't communicate danger to others. I'm careful to spend my time reading apologetics, economics and military history. I don't listen to popular music or watch popular TV or movies. I don't hang out with people who blame other people for their lack of success.

I got my first job by volunteering to do it for free on Saturdays for 7 months. My first full-time job salary after college was $50,000. Then I got a raise of $6,000 and then a raise of $9,000. I used to work 70 hour weeks in my 20s. I graduated college with $9,000 dollars in the black, because I went to a small local college and lived at home, and never spent any money on alcohol. My net worth is now about $1.35 million. By the way, the secret to becoming wealthy is to not spend money on showing off. You can be very generous to your friends and still get rich. Just never buy anything that is designed to communicate "status" to anyone. And never spend money on alcohol or chasing sex outside of marriage.

At no time did I accept that the problems defined by the secular left were my real problems. And at no time did I accept their "solutions" as real solutions to anything. As black economist Thomas Sowell writes, the "solutions" of the left are not effective at helping people like me. The "solutions" of the left are designed to make leftists feel better, and look more virtuous to others. You are much better off reading the Bible, Christian apologetics, free market economics, American military history, etc., and then respecting what you learn from that in your decision-making. I think that reading the right stuff is even more important than having good parents or attending church.

# GOP Primary: The Ron DeSantis origin story, and some of his accomplishments

**Wintery Knight** · 15 January 2024 · Archived copy · Original

I have today off, so I have been mostly tending to the outdoor bird feeders, keeping the water from freezing, and making sure that all the birds are sharing the food. But, I did want to post something about Ron DeSantis today, since we are starting the Republican Primary Election. This is when Republicans choose a candidate to represent the party in the presidential elections.

Whatever I was going to write, it's not going to be as good as this tweet from Josh Power, a Ron DeSantis supporter:

> Ron DeSantis: His great-grandparents immigrated to the United States from Italy. They settled in Western PA and OH, where Ron's parents were born. His mom was a nurse and his dad worked with his hands, installing cable boxes and such.
>
> They moved to Florida in the 70's and Ron was born in Jacksonville and grew up as a middle class kid in the Tampa Bay area. He played baseball, worked minimum wage jobs and excelled in school. He was recruited to play baseball at Yale, and his middle class parents were proud and excited for him to have the opportunity at such a great education.
>
> He excelled at both athletics and academics at Yale – he was selected by his teammates to be the captain of the baseball team, due to his leadership skills and the respect of his peers. He did well enough in class at Yale to be accepted into one of the best law schools in the world – Harvard Law. He excelled in his time there, graduating with Honors.
>
> As he neared the completion of his degree, he knew he had the opportunity to cash in on his fancy education and take a high paying job, but he decided instead to join the military, largely because what he saw during 9/11. He felt a call to serve the Country, as American Patriotism had been engrained in him by his family and community since he was a child.
>
> While at Harvard, he earned a commission in the US Navy's JAG Corps. He served as a lieutenant in the Judge Advocate General's Corps of the U.S. Navy Reserve. Deployed to Iraq as an advisor to Seal Team 1, Naval Special Warfare. During his military career, DeSantis was awarded the Bronze Star Medal, the Navy and Marine Corps Commendation Medal, the Global War on Terrorism Service Medal, and the Iraq Campaign Medal.
>
> After his military service, Ron came back home and ran for Congress in 2012, in Florida's 6th Congressional District. He would later become the 46th Governor of the State of Florida.
>
> He served his home State with honor and courage throughout the Covid pandemic and the ensuing insanity which gripped much of the Nation, and the world. As a result of his leadership, and thanks to the rebellious nature of Floridians themselves, Florida became known throughout the Country as The Freedom State.
>
> Governor DeSantis, now in his 2nd term, has been one of the most productive, effective conservative governors in American history.
>
> Some of his greatest accomplishments include:
>
> Made child mutilating surgeries illegal
> Protects women's spaces & sports
> Protects Life
> Made child rape a death penalty offense
> #1 economy in America
> #1 for education

> $20B budget surplus with no state income tax
> Largest tax cuts in FL history & paid down 24% of Florida's debt
> Crime at 50 year low
> Turned battleground state deep red
> Fights and wins against CRT, DEI, ESG
> Banned Chinese land ownership
> Banned sexualization of kids in school
> Parents Bill of Rights
> Largest School Choice program in American History
>
> I wanted you all to know this about Ron. I myself am a Native Floridian, 4th generation. My wife, Lauren is a Georgia Girl. We're both big supporters. And we'd be happy to tell you why if you'd like to talk. We support DeSantis because he's a good dude, a family man, and he gets RESULTS. Everyone can talk a big game, but we need people who can DO IT. Ron is a Florida Boy, the best governor in our state's history, and we're proud to have him.
>
> We're both wishing him the best in the Iowa Caucus tonight!!

## For Ron DeSantis in 2024

Ron DeSantis is my pick for the 2024 Republican primary. The primary arguments against Ron DeSantis are as follows:

- he is too short
- his shoes are funny
- he's too young to be President

These arguments come from people who put zero effort into looking at the accomplishments of each candidate. They think that presidential elections are like a classroom election: you pick what you like. You pick what feels good. Or many people, mainly men, think it's a football team. You pick who you think is going to win, so that you can vicariously win. My case for Ron DeSantis is simple: he is the governor of the most successful state in the United States. He won election 50-49 in a purple state. Then by the time he got to re-election, he won by 20 points, and had turned his state deep red. That's what I want in America. Not moderate conservatives like Trump who push amnesty for 2 million illegals (in 2018) and who lock the country down because the Swamp told him to (in 2020). We can do better than Trump in 2024.

# Update on Donald Trump's 4 criminal investigations, and 91 felony charges

**Wintery Knight** · 16 January 2024 · Archived copy · Original

I watched Iowa voting results last night. It was disappointing. I wondered, "do Trump voters know that he is facing 4 criminal investigations, with 91 separate indictments?" So, I asked my Dad, who is very old and retired, and watches Fox News all day and all night. And he said "Yes, but they are all politically motivated, and they will all be dismissed". So, let's take a look.

This is from the far-left New York Times, updated January 9th, 2024:

> State and federal prosecutors are pursuing multiple investigations into Donald J. Trump's business and political activities, with the cases expected to play out over the coming months. Here is a guide to the major criminal cases involving the former president.

**January 6th riot:**

> Related to Mr. Trump's efforts to retain power after the 2020 election and the Jan. 6, 2021, attack on the Capitol. A federal special counsel's sprawling inquiry has been examining the various ways in which Mr. Trump sought to stay in power despite losing to Joseph R. Biden Jr., culminating in the attack on the Capitol by a mob of Mr. Trump's supporters.
>
> On Aug. 1, Mr. Trump was indicted on four charges: one count of conspiracy to violate rights, one count of conspiracy to defraud the government, and one count each of obstructing an official proceeding and conspiring to do so.

That one has a trial date set for March 2024.

**Election interference in Georgia:**

> Related to efforts to reverse Mr. Trump's 2020 election loss in Georgia. Mr. Trump and 18 of his associates were indicted in Fulton County, Ga., in August. All of them face conspiracy charges related to attempts to overturn the state's results and subvert the will of voters. Three have already pleaded guilty.

The charges have been filed on this one, but no trial date has been set.

**Handling of classified documents:**

> Related to Mr. Trump's handling of sensitive government documents he took with him when he left office. In June, a federal grand jury in Florida charged Mr. Trump with 37 criminal counts, including unauthorized retention of national security secrets and obstruction of efforts by the government to retrieve the files. One of his aides, Walt Nauta, was also named in the indictment.
>
> On July 27, three more charges against Mr. Trump were added, and prosecutors unsealed charges against a third defendant, Carlos De Oliveira, a property manager at Mr. Trump's Florida residence.

The trial date on this one is set for May 2024.

**Porn star hush money payments:**

> Related to hush-money payments to cover up a sex scandal during the 2016 presidential campaign. Mr. Trump was charged in April with 34 counts of falsifying Trump Organization business records related to reimbursing

> Michael D. Cohen, his lawyer and fixer, for payments made to Stormy Daniels, an adult film actress.

The trial date for this one is set for March 2024.

According the New York Post, the amount of jail time Trump would get if convicted on all 91 felony charges is "up to 712 years and six months".

So, the chance that Trump supporters are taking is that Trump will be found not guilty of all of these 91 criminal charges, even though some of these trials are going to happen in very blue states.

Have you ever heard the phrase "tarbaby"? It's a metaphor for a sticky situation that gets worse, the more effort you commit to it. Right now, Republican voters are committing a lot of delegates to a man who I think will be behind bars on election day. And polls – yes, the polls that Trump voters love so much – clearly show that Trump loses a ton of support if he is convicted of a felony.

The Hill puts the number at "almost a quarter":

> Nearly a quarter of former President Trump's supporters say he should not be the Republican nominee for president in 2024 if he is convicted of a crime, according to a survey released Tuesday.
>
> The New York Times/Siena College poll found 24 percent of respondents who said they would vote for Trump in the upcoming election also say he should not be the nominee if found guilty in one of his legal trials, "even if he has won the most votes."

Now it's time to ask one of my favorite questions to Trump supporters: What did you hope to achieve in the long-term by doing what felt good to you in the short-term? I would really like an answer from Trump supporters. What is the evidence that Trump will not get convicted of at least some of these charges, and then lose tons of votes in the general election, especially the trials taking place in blue states, with blue state juries? What is the evidence that a felony conviction will not cause Republicans to lose the general election in November?

# LGBT activist charged with committing sex crimes against children

**Wintery Knight** · 17 January 2024 · Archived copy · Original

It's pretty late here, so I just have time to cut and paste an excerpt from a Life Site News story. I like to blog on these so that I have them handy in case it comes up in a debate. I often debate with atheists who assure me that they have a very strong, objective moral foundation for morality. Then I look at their voting, and they vote for laws to normalize this sort of behavior. And cheer for it.

Full text:

> The longtime president of a British Columbia LGBT activist group has been arrested and charged with committing various sex crimes against children.
>
> On January 1, North Peace Pride Society (NPPS) president Sean Gravells was arrested and charged with committing sexual crimes against children, according to the British Columbia Prosecution Service.
>
> "The BC Prosecution Service can confirm that Sean Edward Leonard Gravells is charged with sexual interference, sexual exploitation, possession of child pornography and distribution of child pornography," BC Prosecution Service Communications Counsel Daniel McLaughlin told LifeSiteNews.
>
> "The first two offences are alleged to have occurred on December 29, 2023 and the child pornography offenses are alleged to have occurred on December 31, 2023," he added. "All at or near Fort St. John, BC."
>
> According to McLaughlin, Gravells made his first appearance on January 1, 2024, before being released from custody on $2,000 bail. Gravells is expected to return to court on January 29 for an arraignment hearing.
>
> The NPPS announced Gravells' dismissal in a January 5 Facebook post, but their official statement notably neglected to mention the nature of his crimes or that it was their president of 18 years who had been charged.
>
> Instead, the LGBT organization merely referred to the charges as "severe charges inconsistent with the North Peace Pride Society's mission and code of conduct."
>
> Additionally, Gravells was referred to as "one of our board members," not as the group's president.
>
> The group's neglect to recount the details of the situation comes as the LGBT movement is increasingly encouraging children to attend LGBT "pride" parades and promoting the LGBT agenda in schools.
>
> For example, the Toronto "pride" parade this past June featured nudist men and performers dressed in grotesquely sexual costumes, causing many to question why police did not prevent the public displays of indecency, especially since many children were in attendance.

I'm sure that some atheists reading will say "this is wonderful, I'm proud of him!" and "that's some solid objective morality right there, rationally-grounded!" and "this is why I vote for the Democrat party!" and "I told you that pride, diversity, and tolerance were better than nasty Christian morality and judging!" I hope the atheists will understand that I am a bit skeptical of their ability to rationally ground objective morality.

# Trump and his lawyer clash with judge, but at least his lawyer is hot

**Wintery Knight** · 18 January 2024 · Archived copy · Original

A concern I have with men is their habit of rating women out of 10, based solely on the woman's appearance. Then those same men cry when the women they choose solely based on appearance divorces them, take their kids and half their stuff. I have the same problem with Trump. He seems to choose people based on their appearance, and based on whether they say flattering things about him.

Trump was in court on Tuesday, and we're getting reports about how his lawyer performed. So, do you think that Trump chose a lawyer based on education and demonstrated ability? Or do you think that he chose based on appearance – what he could see with his eyes?

Here is his lawyer Alina Habba:

Trump Lawyer Alina Habba Widerner Law School
Image source: Reddit

I solve problems in Information Technology by writing code. So, if I were hiring a lawyer, I would ask "where did the candidate go to law school?" and "how many years of legal experience does the candidate have" and "how many trials like this one has the candidate won in federal court?". I'm concerned about hiring someone who can do the job. Not about how someone looks, or what someone wears.

Where did Alina go to school? "Widener University Commonwealth Law School". I've never heard of Widener University. And it's not ranked very highly as a law school. And Alina is very young, without a lot of experience.

So how did Alina Habba do in court, defending Trump?

Here's an article from Newsweek, entitled "Alina Habba 'Violated Court Order' Within First 10 Seconds of Opening":

> Legal experts have suggested one of Donald Trump's lawyers violated a gag order early on in a trial in New

> York.
>
> Alina Habba is representing the former president in the civil defamation case brought in New York by columnist E. Jean Carroll. The trial in the case began with jury selection earlier this week.
>
> Multiple news reports said Habba earned a stern comment from U.S. District Judge Lewis Kaplan, who is presiding over the case.

Making the judge angry doesn't sound smart to me.

Another article from Newsweek, entitled "Alina Habba Blasted by Judge in Fiery Courtroom Exchange: 'Sit Down'":

> Amid court proceedings on Wednesday in former President Donald Trump's defamation trial brought by E. Jean Carroll, Trump's lawyer, Alina Habba faced a "testy" courtroom exchange as Judge Lewis Kaplan told her to "sit down."
>
> […]On Friday, lawyers for Trump requested that Kaplan, who is overseeing the trial, postpone the trial to the following week because of the sudden death of Trump's mother-in-law, Amalija Knavs, as the former president will be traveling on Wednesday to attend the funeral scheduled for Thursday.
>
> However, Kaplan denied the request and said that while the court "offers its condolences" to the Trump family, the trial would continue as scheduled.
>
> On Wednesday, Habba, who is representing Trump in the case, had a tense courtroom exchange with Kaplan after she asked for an adjournment of the trial tomorrow so that Trump could attend his mother-in-law's funeral.
>
> In response to Habba's request, Kaplan said her application had been denied and for Habba to sit down.

I should be happy about this, but actually, I'm furious. If Trump somehow becomes the nominee, then these courtroom antics are sure to land him in prison. And we know from polls that this will lose him 10-15% of his support, ensuring a Biden victory in 2024.

Here's a 6-minute video from CNN summarizing the fiasco, featuring Former Trump White House lawyer Ty Cobb (!):

We are in a Republican primary. We don't have to choose the weaker candidate. We have to pick the candidate who is best for the country, and best for us. We need to pick a candidate who can beat Joe Biden (or Michelle Obama) in November. We owe Trump nothing. He was an employee, and he did some things well, and other things poorly. Now we have a new position open. And we have to pick the best candidate available. Someone who is involved in 4 criminal trials, facing 91 felony indictments, who picks lawyers like Alina Habba, is not the right candidate for us.

# Are puberty blockers “reversible”?

**Wintery Knight** · 19 January 2024 · Archived copy · Original

I noticed an article about puberty blockers on Daily Caller, that I thought would be really useful in a debate. Normally, transing kids involves 1) social transitioning, 2) puberty blockers, 3) hormone replacement therapy, 4) sex mutilation surgery. Pro-transing doctors often tell parents that puberty blockers are “reversible”. But are they really?

The article says:

> Prominent World Professional Association for Transgender Health (WPATH) physicians acknowledged that puberty blockers are more invasive than portrayed in the media and can have irreversible effects on minors such as infertility, bone loss and disruption of brain development, according to WPATH educational sessions obtained by the Daily Caller News Foundation.
>
> WPATH is a transgender medical organization that has published influential clinical guidance for the sex reassignment industry, called Standards of Care, which recommend children receive puberty suppression, cross sex hormones and sex reassignment surgery. However, during educational sessions recorded in September 2022 that were part of a transgender medicalization certification program offered to WPATH licensed clinicians, WPATH doctors revealed that the consequences of puberty blockers for minors are often far more disruptive than portrayed in the media.

Calcium stores:

> In an educational session titled “Foundations in Gender Affirming Hormone Therapy: Adults and Adolescents,” Dr. Daniel Metzger, a WPATH certified pediatric endocrinologist, explained how puberty blockers impede adolescents from developing the calcium stores needed to prevent osteoporosis later in life.

Brain development:

> “Obviously teenagers, their brains are changing. They’re unwiring, they’re rewiring. And if we’ve started one kid unwiring and half rewiring, and then we changed their puberty the other way and we’re unwiring, people have been trying to figure out what this does for kids’ brains,” said Metzger.
>
> “They seem to do reasonably the same as their friends but we’re not looking at their IQ and their learning ability and lots of other things.”

Fertility:

> During a question and answer segment, Metzger discussed the impact of puberty blockers on a child’s fertility, explaining how puberty blockers stop males from developing sperm. He said it was unknown if girls placed on puberty blockers during the initial stages of puberty, as recommended by WPATH, would have eggs mature enough for fertility preservation.
>
> “Kids have zero idea about their fertility,” said Metzger.

Reversible?

> During a session titled, “Foundations in Clinical Care for Transgender and Gender Diverse Adolescents,” Dr. Scott Leibowitz, a co-lead in the development of the adolescent chapter of the WPATH Standards of Care and member of the WPATH Board of Directors, challenged the reversibility of puberty suppression.

> “I think when we just say, ‘Oh puberty blockers are just reversible and it’s a very noninvasive treatment,’ I would say it’s more invasive than often times the media makes it out to be or other people,” he said.
>
> Leibowitz explained how puberty blockers suppress the release of sex hormones (estrogen and testosterone) that cause puberty, stopping puberty and the essential brain and bone maturation that occurs during pubertal development, calling the body’s need for binary sex hormones a challenge.
>
> “There’s challenges with puberty suppression that we have to acknowledge and that’s why it’s ‘reversible asterisks,’” Leibowitz said. “One cannot be on puberty suppression endlessly. You get to a place where physiologically we need hormones.”

So, the take-away lesson from this is that puberty blockers are less reversible and more invasive than is portrayed by the media. And that’s according to the people who know the most about it, and who push for it the most.

# What criteria do historians use to get to the minimal facts about the historical Jesus?

**Wintery Knight** · 20 January 2024 · Archived copy · Original

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus in a debate by saying that the resurrection is the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates. Minimal facts are the parts of the New Testament that meet a set of strict historical criteria. These are the facts that skeptical historians agree with, totally apart from any religious beliefs.

So what are the criteria that skeptical historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.
>
> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel*

> *Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book. You want to look at it as a historical book, and use historical criteria to get to some facts that critical historians would accept. From that, it's possible to make a case for the resurrection, which is the guarantee that the words of Jesus are authoritative. Including the words of Jesus where he describes the Bible as a whole as God's revelation of Himself to his creatures.

Here is the approach I use when talking to non-Christian co-workers:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)

6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And remember that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8. That passages is universally accepted as early, eyewitness testimony from Paul, and represents the core of early Christian beliefs about the death and resurrection of Jesus. Everyone who takes evidence seriously has to account for that early creed, which passes the historical tests I outlined above.

The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

# DeSantis wins again: Florida bans DEI programs at public colleges

**Wintery Knight** · 21 January 2024 · Archived copy · Original

On this blog, I've covered many DeSantis wins: tax cuts, budget surpluses, 20-point re-election win, school choice, import cheap Canadian drugs, 6-week abortion ban, no boys in girls' bathrooms or girls' sports, fire far-left Soros-backed district attorneys, crack down on BLM and Antifa violence, beat the Trump-Fauci lockdowns,beat the teacher unions, beat the woke corporations, etc.

This time, DeSantis decided to take on the woke universities in Florida. And he won. Again.

Leftist Florida's Voice has the story:

> The Florida State Board of Education created a new rule Wednesday to bar member schools of the Florida College System from spending taxpayer dollars on "diversity, equity and inclusion" programs.
>
> The rule also applies to federal funds, in addition to state funds, given to public colleges.
>
> It defines "diversity, equity and inclusion," or "DEI," as "any program, campus activity, or policy that classifies individuals on the basis of race, color, sex, national origin, gender identity, or sexual orientation and promotes differential or preferential treatment of individuals on the basis of such classification."
>
> Specifically, such colleges cannot use taxpayer funds to "promote, support, or maintain any programs or campus activities" advocating for DEI or "political or social activism."
>
> "Higher education must return to its essential foundations of academic integrity and the pursuit of knowledge instead of being corrupted by destructive ideologies," said Florida Commissioner of Education Manny Diaz, Jr. "These actions today ensure that we will not spend taxpayers' money supporting DEI and radical indoctrination that promotes division in our society."
>
> […]Florida's new rule comes after Gov. Ron DeSantis signed a law in May 2023 eliminating DEI in higher education.

Now, Trump supporters have an answer to all of DeSantis past demonstrated achievements: future achievements. They say "Trump will do even better things when he gets the chance!" In Christian apologetics, we call this approach to debate "making a phantom argument". Debater A makes an argument that is logical and based on public, testable evidence. Debater B says "I have a book at home that can refute your argument and evidence". That's what the Trump supporters are doing – I have a future achievement that beats your past achievement. Trump had 4 years to do all the things that DeSantis has already done, and he failed to do them. He isn't someone who can get things done. If we want the swamp drained and the Deep State purged, we should pick the man who will actually do what he says. Not the one who talks, but doesn't do.

If you missed the most recent CNN town hall, DeSantis leveled up again, winning accolades from the CNN panel for his improved skills at answering voter's questions.

Here's a clip:

He's just a better candidate than some washed-up old wrinkly has-been like Biden or Trump. Those old men need to retire. They are past their primes, and they need to step aside.

The president is an employee of the people. We don't owe a past employee who failed another chance. We have to upgrade to a better employee. DeSantis is a better employee.

# Have Diversity, Equity and Inclusion (DEI) policies made air travel unsafe?

**Wintery Knight** · 22 January 2024 · Archived copy · Original

I have a few related articles that will really make you question whether you want to get on a plane in America. It's not just the DEI hiring policies at the airlines. It's also the DEI hiring policies at the airplane parts manufacturers. And the DEI hiring policies in the FAA. And the DEI hiring policies in the Biden administration.

First one from Newsweek:

> Alaska Airlines has grounded its entire fleet of Boeing 737 MAX-9 aircraft after a section of fuselage broke off mid-flight.
>
> Alaska Airlines flight 1282, bound for Ontario, California, successfully made an emergency landing at Portland International Airport after the section of the plane separated from the aircraft body shortly after take off.
>
> […]Images and videos posted online show a rectangular section of the plane broken off, exposing the night sky and insulation material around the damaged area.

Matt Walsh had an interesting video related to this:

> Ladies and gentlemen, meet the "dream team" at the manufacturer that made the plane door that just blew off in the middle of a flight pic.twitter.com/gZ2AboGnpR
>
> — Matt Walsh (@MattWalshBlog) January 11, 2024

This is the "Spirit Aerosystems Engineering Dream Team". It's all women! Could this really be the people who engineer plane parts? The company is very big on DEI hiring.

Second one from Newsweek:

> A video on social media shows flames apparently coming from a Boeing plane shortly after takeoff.
>
> The brief clip, captured by someone on the ground, shows flames trailing an Atlas Air flight minutes after it took off from Miami International Airport on Thursday night.
>
> The aircraft, a Boeing 747-8, took off from the Miami airport at 10:32 p.m. ET and had been heading to Puerto Rico when it was diverted, according to FlightAware.
>
> […]The Federal Aviation Administration (FAA) will investigate the incident.

Oh! The FAA is going to investigate the incident!

Third one is from New York Post:

> The Federal Aviation Administration is actively recruiting workers who suffer "severe intellectual" disabilities, psychiatric problems and other mental and physical conditions under a diversity and inclusion hiring initiative spelled out on the agency's website.
>
> "Targeted disabilities are those disabilities that the Federal government, as a matter of policy, has identified for special emphasis in recruitment and hiring," the FAA's website states. "They include hearing, vision, missing extremities, partial paralysis, complete paralysis, epilepsy, severe intellectual disability, psychiatric disability and dwarfism."

> The initiative is part of the FAA's "Diversity and Inclusion" hiring plan, which claims "diversity is integral to achieving FAA's mission of ensuring safe and efficient travel across our nation and beyond."
>
> […]The FAA, which is overseen by Secretary Pete Buttigieg's Department of Transportation, is a government agency charged with regulating civil aviation and employs roughly 45,000 people.

Pete Buttigieg? He is just the former mayor of a small town in Indiana. What does he know about transportation? Why was he picked for such an important job, when he has no education or experience in that area?

I have a trip coming up. I'm driving and staying in a hotel halfway.

# Chairman of Siemens Energy says: consumers will pay MORE for green energy

**Wintery Knight** · 23 January 2024 · Archived copy · Original

I have a very smart, but also ignorant, co-worker who loves renewable energy. He also loves Star Wars and Star Trek. Anyway, he keeps telling me that although green energy is expensive and unreliable now, we should keep throwing taxpayer money at it, so that magic will happen, and it will get cheaper. Like the transporter or the warp drive. Let's take a look.

Here's an article from the centrist UK Telegraph:

> The German boss of Britain's biggest wind turbine maker has warned energy bills will have to keep rising to pay for the green transition as he attacked "fairytale" thinking about net zero.
>
> Joe Kaeser, chairman of Siemens Energy, suggested higher energy bills were inevitable as turbine makers grapple with huge losses, forcing them to pass on costs to their customers.
>
> The company is the owner of the UK's biggest wind turbine manufacturing site, in Hull, and employs thousands of British workers.
>
> […]Mr Kaeser told The Telegraph: "Every transformation comes at a cost and every transformation is painful. And that's something which the energy industry and the public sector – governments – don't really want to hear.
>
> "I believe that for a while [customers] need to accept higher pricing.

MAYBE the costs will go down:

> "And then there might be innovation – about the weight of the blades, other efficiency methods, technology – so the cost can then go down again.

Will we see the UK returning to reliable, cheap sources of energy? Other countries have done it.

**Sweden**

Sweden had been focused on renewables, but they're now moving back to nuclear.

Here's the story from the The Blaze:

> > The Swedish parliament determined last week that in order to ensure the country has a "stable energy system," it will have to abandon its goal of "100 per cent renewable electricity production by 2040."
> >
> > To satisfy electricity demand, which is set to double to around 300 TwH by 2040, Sweden's right-of-center government announced June 20 that it would instead lean more heavily on nuclear energy and subsidize the construction of new nuclear plants — plants green-lit in 2016 but sidelined for fear they would be too expensive, reported Reuters.
> >
> > The country, home to just over 10.5 million people, presently has three nuclear plants with six nuclear reactors in commercial operation. The state-owned Vattenfall aims to bring the tally up to eight reactors and refurbish extant facilities.
>
> Wow, what accounts for this big change in direction? Well, the country experiences very cold winters. After poor performance from the renewables during the winter, the people started to demand results – which is why they elected a right-of-center government to make changes.

> > Swedish support for nuclear energy is presently at a record high of 56%, up from 42% in 2022, reported Bloomberg.

And it's not just Sweden.

**South Korea**

South Korea is going back into nuclear. This article from far-left CNN is from July 2022:

> South Korea, one of the world's most fossil fuel-reliant economies, is re-embracing nuclear energy, with the government announcing Tuesday it will restart construction on two nuclear reactors and extend the life of those already in operation.
>
> By 2030, the Energy Ministry wants nuclear to make up at least 30% of the country's power generation – a step up from its previous goal of 27%.
>
> To meet this, South Korea is restarting construction on two new reactors at the Hanul Nuclear Power Plant on the country's east coast. Construction on the two reactors has been stalled since 2017, when former President Moon Jae-in – who had pushed hard to phase out nuclear energy – took office.
>
> But with a new President in office, South Korea's nuclear industry is returning at full speed.

Japan is restarting their idled nuclear power plants, and planning to build more next-generation nuclear reactors. They need reliable power, and they don't want to count on their neighbors to sell it to them. They want to develop their own energy at home, and lower the prices that their citizens have to pay.

# Frank Turek lectures on the case against same-sex marriage

**Wintery Knight** · 24 January 2024 · Archived copy · Original

About the speaker Frank Turek:

Frank Turek is one of my favorite speakers, and I admire him for being willing to take a public stand on controversial issues like gay marriage. He's actually had to pay a price for that in his professional life, and I blogged about that before.

Here's the lecture on gay marriage, featuring Christian apologist Frank Turek.

Outline:

Outline of Frank Turek's lecture on same sex marriage

Introduction:

- how to present your case against marriage safely
- Christians are required to go beyond tolerance
- loving another person can mean opposing the person when they want to do something wrong, even if they hate you
- what did Jesus say about marriage? (see Matt 19:4-6)
- what did Jesus say about sexual morality? (Matt 15, Matt 19)

Summary:

- the same-sex marriage debate is about whether to compel people who disagree with the gay lifestyle to validate and normalize it
- P1: the government has an interest in marriage because it perpetuates and stabilizes society – this is the purpose of marriage
- P2-4: government can take 3 kinds of stances towards behaviors: promote, permit or prohibit
- government promotes behaviors when it has an interest in them
- same-sex relationships should be permitted, but not promoted
- Q1: if same-sex marriage had serious negative consequences, would you reconsider their position?

- Q2: are heterosexual relationships the same as homosexual relationships?
- Q3: what would society be like if everyone married according to the natural marriage definition: one woman, one man, for life?
- Q4: what would society be like if everyone married according to the same-sex marriage definition: man/man and woman/woman?
- Should Christians care about law and politics? or should they just preach the gospel?
- They should care because people often get their cues about what is moral and immoral based on what is legal and illegal
- Many of the social problems we see today can be traced back to problems with marriage and family
- Children do much better when they have a relationship with their mother and their father
- Same-sex marriage necessarily destroys the relationship between a child and its mother or its father
- When a country embraces same-sex marriage, it reinforces the idea that marriage is not about making and raising children
- same-sex marriage shifts the focus away from the needs of the children to the feelings of desires of the selfish adults
- does homosexuality impose any health and mental health risks?
- what has the impact of legalizing same-sex marriage been in Massachusetts to individuals, schools, businesses and charities?
- how same-sex marriage poses a threat to religious liberty
- how should you respond to the view that homosexuality is genetic?

And at the very end, he shows this short video, which is only 5 minutes and explains the logic of opposing the redefinition of marriage:

My biggest concern is religious liberty, and we are seeing how same-sex marriage has proven to be incompatible with religious liberty. But I also care about children… I want them to have mothers and fathers who put their needs first. Marriage is about a commitment – it is the subjugation of feelings and desires to responsibilities and obligations. It is a promise. A promise to commit to love your spouse and children regardless of feelings and desires. It requires more self-denial, self-control and self-sacrifice. Not less.

# Trial begins for 6 pro-life demonstrators targeted by Biden administration

**Wintery Knight** · 25 January 2024 · Archived copy · Original

A lot of people are paying attention to a Canadian court's ruling against Justin Trudeau and the Liberal Party of Canada. You'll remember that the Trudeau administration used armored vehicles, assault weapons, horses, and beatings to break up peaceful protests against health care mandates. Americans like to think that this could never happen here. But it already does.

Daily Wire reports:

> The trial for six pro-lifers targeted by the Biden administration for peacefully protesting a Tennessee abortion facility back in 2021 began in federal court in Nashville on Wednesday.
>
> The pro-life activists are accused of violating the FACE Act and civil rights conspiracy for a protest that took place in a hallway outside of a Mount Juliet abortion provider on March 5, 2021.
>
> […]Eleven of the protesters were arrested for trespassing at the time after local police arrived and dispersed the crowd. In October 2022, the 11 pro-lifers were indicted by a federal grand jury after the Justice Department pursued charges against them arguing that there was conspiracy by the group to stop the women from accessing so-called "reproductive health care" and violating federal law ensuring access to abortion facilities. If convicted, the pro-lifers could face up to 11 years in prison and $250,000 worth of fines.
>
> […]During the opening statement, the federal government accused the pro-lifers of plotting to "block doors to a health care clinic" and saying that the demonstrators planned on being arrested. The DOJ also said that the demonstration was not a protest, but a violation of federal law.

Police officer testifies:

> After the opening statements, the government called on Mount Juliet police officer Lance Scheider to testify. During his testimony, Schneider, who has been a police officer for 24 years, said that police were called to the scene because business was being disrupted. He said that the protesters were "not being violent" and were offering no physical resistance. While he was guiding one woman into the facility, several people did stand in his way and he said he was able to gently move them to the side.

The article talked about one of the defendants, Paul Vaughn:

> Vaughn has previously spoken about how the FBI raided his home with guns out in front of his wife and 11 children. He told the Daily Signal that federal agents came to his home "guns pointed at the door, banging on the house, yelling and screaming."

This isn't the only time that the Biden administration has conducted pre-dawn raids of the homes of pro-life demonstrators.

The Epoch Times reported on that story:

> Jonathan Darnel woke at 5:30 a.m. to fists pounding on his door.
>
> There was a crash as it was torn from its hinges, then shouts of armed men, he told The Epoch Times.
>
> Without warning, FBI agents swarmed in to arrest him.
>
> His crime: participating in what he calls a "peaceful pro-life protest" nearly two years prior.

> Similar scenes have played out at the homes of several of the 26 pro-life activists arrested nationwide in 2022 and 2023. Some were given the opportunity to turn themselves in. At least one was arrested at work.
>
> Many of these pro-life activists now face up to a year in prison for violating the Freedom of Access to Clinic Entrances (FACE) Act. They also could be sentenced to more than 10 more years for the charge of "conspiracy against rights," because they were acting in a group.

And another report from CBN:

> Mark Houck woke up on September 23, 2022, to an incessant banging on his door. When he opened it, he saw more than 15 FBI agents crowded on his front porch and the front lawn with guns pointed at him.
>
> "They were all the way lined down my driveway," Houck told The Daily Signal. "I had agents on my porch with long guns."
>
> Despite putting his hands up and willingly cooperating, multiple agents pointed guns in Mark's face as his family – including his seven young children – were forced to watch their dad "shackled" and taken away, family representative Brian Middleton told CBN's Faithwire at the time.
>
> The harrowing experience has left each member of the family with emotional wounds.

I'm paying attention to this story, because people need to understand how far the Democrat party are marching down the road of fascism. They are convinced that they are right, and that they have a right to ram their views down the throats of Christians and conservatives. Remember that when you're voting in elections. I certainly will.

# News media silent about jihadi-style shooting attack in Canada

**Wintery Knight** · 26 January 2024 · Archived copy · Original

Big story from Canada is not getting much coverage in the Canadian news. I wonder if it has something to do with the fact that the criminal was using firearms, and shouting slogans in Arabic? The Canadian view is that if you give people from the Middle East free stuff (paid for by taxpayers) then they will turn into law-abiding citizens. But is it true?

Here's a security cam photo:

I'm told by Trudeau-supporters that terrorist shootings never happen in Canada.

Toronto Sun reports:

> It's not every day there is a jihadist-inspired terror attack in Canada related to Israel's war in Gaza that few seem to know about.
>
> But it did happen and the country is just fortunate no one was murdered in the process. The potential was definitely there.
> This was an all-out Gaza-inspired, jihadist terror attack with gunfire and home-made bombs at Edmonton's City Hall on Tuesday and not a word out of Prime Minister Justin Trudeau about it so far. In fact, on X he was talking about being at the women's professional hockey game in Ottawa.
>
> This was a terrifying incident. Security video shows a man entering Edmonton's City Hall wearing a Commissionaires Security jacket and carrying a long gun and appearing to shoot it. Police say he was "heavily" armed.

How did he get into the country? Well Trudeau lets in millions of refugees from Middle Eastern countries. And if anyone protests, he calls them "racists".

There's a taped manifesto with Arabic language:

> In addition to the horror of security video showing the armed man during his attack, a taped manifesto which

> included Arabic greetings was also discovered. This was one close call to being something nobody could even attempt to downplay.
> […]"At approximately 10:18 a.m. on Tuesday, Jan. 23, 2024, a male parked his vehicle in the City Hall underground parkade, then entered the building from the parkade access," Edmonton Police say. "Once inside City Hall, he lit several handheld incendiary devices, believed to be Molotov cocktails, that caused one small fire outside an elevator. He then fired several rounds from a long gun into the ceiling, walls and windows."

No word yet on whether Justin Trudeau will be cracking down on Jihadi mass shootings the way he did with peaceful protests of his policies by law-abiding Canadians.

Tear gas:

Beatings:

Tramplings:

Armored vehicles and assault rifles:

An attempted mass-shooting is a lot more serious than what happened when a few dozen truckers protested against the healthcare mandates. But Trudeau doesn't seem to care much about it. He doesn't want to confiscate the firearms of the Middle Eastern terrorists he's been importing. He wants to confiscate the guns of law-abiding Canadians. He doesn't want to freeze the bank accounts of the Middle Eastern terrorists he's been importing. He wants to freeze the bank accounts of law-abiding Canadians.

# On wargames, history and heroes: “this story shall the good man teach his son”

**Wintery Knight** · 27 January 2024 · Archived copy · Original

Last night I was reading Stephen Ambrose’s famous book “Pegasus Bridge: June 6, 1944” after having watched an anti-communist movie “Guilty of Treason” (1950). I was thinking about how much I love to read about the bravery of people in the past. I also like to replay their battles, either on the computer or with board games. So I thought I would write about why I like to do that.

I play wargames, because I think that it is important to recognize and celebrate those who have demonstrated good character, whether it be now, or in the past. I think that it is important for us to search out the best role models ourselves, so that they will influence the way we act in our own lives. The second world war was a clear example of good versus evil. Anyone on the Allied side who demonstrated bravery and courage should be celebrated for safeguarding the security, liberty and prosperity that we enjoy today. In the case of Pegasus bridge, the hero is Major John Howard of the British paratroops.

Here is a quick re-cap of his exploits that day from the New York Times:

> Maj. John Howard, the commander of glider-borne British infantrymen who seized the strategically vital Pegasus Bridge in the first battle of the D-Day invasion of Normandy, died Wednesday in a hospital in Surrey, England. He was 86 and had lived in Burford, near Oxford.
>
> Under cover of night on June 6, 1944, six gliders carrying 181 officers and men of the Second Oxfordshire and Buckinghamshire Light Infantry landed on the eastern flank of a 60-mile invasion front on the northern coast of France. The regiment had a heritage going back to the battles of Bunker Hill and New Orleans, to Waterloo and to World War I. Now its soldiers were in the vanguard of the invasion of Hitler’s Europe.
>
> Major Howard’s D Company was ordered to seize two bridges, one over the Caen Canal and the other spanning the parallel Orne River. If the Germans held on to those bridges, panzer units could move across them in a counterattack isolating 10,000 British paratroopers jumping behind the British invasion beach known as Sword, where infantry forces would arrive at daybreak. And Major Howard’s men sought to strike swiftly to prevent the Germans from blowing up the bridges if they were overwhelmed; the British needed those bridges to resupply their airborne units.
>
> [image]British Halifax bombers towed the gliders over the English Channel, then cut them loose.

> Major Howard’s lead glider landed at 12:16 A.M., only 50 yards from the Caen Canal bridge, but the glider’s nose collapsed on impact, knocking everybody aboard unconscious for a few seconds. The soldiers quickly emerged, and over the next five minutes the men directly under Major Howard killed the surprised German defenders.
>
> The nearby Orne River bridge was captured by other troops in Major Howard’s unit, and soon the words ”Ham and Jam,” signifying mission accomplished, were radioed to the airborne.
>
> Two British soldiers were killed and 14 wounded in the operation.
>
> Over the next 12 hours, British paratroopers and commandos reinforced Major Howard’s men, and British forces were able to move toward the city of Caen, their flank having been protected by the capture of the bridges.
>
> On July 16, Major Howard received the Distinguished Service Order, Britain’s second-highest award for valor. On the 10th anniversary of D-Day, he received the Croix de Guerre Avec Palme from the French Government, which had renamed the Caen Canal span Pegasus Bridge, for the flying horse symbolizing the British airborne. The road crossing the bridge was later renamed Esplanade Major John Howard.

Why is this important? Well, it's important to think on the things that are excellent. There are so many things in the culture that are not excellent that we are confronted with every day. We have to make it our business to do things together where goodness is celebrated. Especially when manly virtues like courage are celebrated. We don't do that much anymore. And I think there's a connection between wargames and Christian apologetics that we need to *deliberately* encourage.

Here's an excellent passage from Shakespeare's "Henry V" that makes the point:

> This day is called the feast of Crispian:
> He that outlives this day and comes safe home,
> Will stand a tip-toe when this day is named,
> And rouse him at the name of Crispian.
> He that shall live this day, and see old age,
> Will yearly on the vigil feast his neighbours,
> And say, 'To-morrow is Saint Crispian:'
> Then will he strip his sleeve and show his scars,
> And say, 'These wounds I had on Crispin's day.'
> Old men forget: yet all shall be forgot,
> But he'll remember with advantages
> What feats he did that day. Then shall our names,
> Familiar in his mouth as household words,
> Harry the King, Bedford and Exeter,
> Warwick and Talbot, Salisbury and Gloucester,
> Be in their flowing cups freshly remembered.
> **This story shall the good man teach his son;**
> And Crispin Crispian shall ne'er go by,
> From this day to the ending of the world,
> But we in it shall be rememberèd;
> We few, we happy few, we band of brothers;
> For he to-day that sheds his blood with me
> Shall be my brother; be he ne'er so vile
> This day shall gentle his condition:
> And gentlemen in England, now a-bed
> Shall think themselves accursed they were not here,
> And hold their manhoods cheap whiles any speaks
> That fought with us upon Saint Crispin's day. (4.3.43)

This is from the famous speech in which King Henry charges his men to fight well before the famous Battle of Agincourt.

You can read more about the history of the British Airborne division and Pegasus bridge. The famous historian of the second world war Stephen E. Ambrose also wrote a history of the Pegasus bridge battle, called "Pegasus Bridge: June 6, 1944". You won't find many military historians better than Stephen E. Ambrose!

You might be surprised how many men are interested in military history and wargames, precisely because men instinctively look up to men like John Howard who embody qualities like bravery and courage. We have a dearth of moral character in this society. And we don't do much to teach young men about manly virtues, even in the church. I think that it is important for us to think of creative ways for us to present good character to our young men.

# Luke Barnes on the fine-tuning of the strong force and fine structure constant

**Wintery Knight** · 28 January 2024 · Archived copy · Original

By now, anyone who has had discussions about scientific evidence for the existence of God knows about the fine-tuning argument. In a nutshell, if the fundamental constants and quantities given in the Big Bang were even slightly other than they are, then the universe itself would not be hospitable for complex, embodied intelligent life.

Here is an article from The New Atlantis written by Australian cosmologist Luke Barnes.

Excerpt:

> Today, our deepest understanding of the laws of nature is summarized in a set of equations. Using these equations, we can make very precise calculations of the most elementary physical phenomena, calculations that are confirmed by experimental evidence. But to make these predictions, we have to plug in some numbers that cannot themselves be calculated but are derived from measurements of some of the most basic features of the physical universe. These numbers specify such crucial quantities as the masses of fundamental particles and the strengths of their mutual interactions. After extensive experiments under all manner of conditions, physicists have found that these numbers appear not to change in different times and places, so they are called the fundamental constants of nature.
>
> […]A universe that has just small tweaks in the fundamental constants might not have any of the chemical bonds that give us molecules, so say farewell to DNA, and also to rocks, water, and planets. Other tweaks could make the formation of stars or even atoms impossible. And with some values for the physical constants, the universe would have flickered out of existence in a fraction of a second. That the constants are all arranged in what is, mathematically speaking, the very improbable combination that makes our grand, complex, life-bearing universe possible is what physicists mean when they talk about the “fine-tuning” of the universe for life.

Let’s look at an example – the strong force. Not only must the strong force be fine-tuned so we have both hydrogen and helium, but the ratio of the strong force must also be fine-tuned with the fine structure constant.

Barnes writes:

> The strong nuclear force, for example, is the glue that holds protons and neutrons together in the nuclei of atoms. If, in a hypothetical universe, it is too weak, then nuclei are not stable and the periodic table disappears again. If it is too strong, then the intense heat of the early universe could convert all hydrogen into helium — meaning that there could be no water, and that 99.97 percent of the 24 million carbon compounds we have discovered would be impossible, too. And, as the chart to the right shows, the forces, like the masses, must be in the right balance. If the electromagnetic force, which is responsible for the attraction and repulsion of charged particles, is too strong or too weak compared to the strong nuclear force, anything from stars to chemical compounds would be impossible.

Here’s the chart he’s referencing:

Fine-tuning of the strong nuclear force and the fine structure constant

As you can see from the chart, most of the values that the constants could take would make complex, embodied intelligent life impossible.

We need carbon (carbon-based life) because they form the basis of the components of life chemistry, e.g. proteins, sugars, etc. We need hydrogen for water. We need chemical reactions for obvious reasons. We need the light from the stars to support plant and animal life on the surface of a planet. And so on. In almost every case where you change the values of these constants and quantities and ratios from what they are, you will end up with a universe that does not support life. Not just life as we know it, but life of any conceivable kind under these laws of physics. And we don't have any alternative laws of physics in this universe.

By the way, just to show you how mainstream these examples of fine-tuning are, I thought I would link to a source that you're all going to be familiar with: The New Scientist.

## The fine-tuning of the force of gravity

So here is an article from the New Scientist about a different constant that also has to be fine-tuned for life: the force of gravity.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by

> now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$ at 1 second after the big bang, allows life to form.**

Notice how the article also mentioned “the universe’s birth”, which is part of mainstream science.

When I’m writing to you about things like the origin of the universe, or the cosmic fine-tuning, I’m not talking to you about things that pastors found in the Bible. These discoveries are known and accepted by mainstream scientists. It’s amazing that people are constructing their worldviews without having to account for the birth of the universe and this cosmic fine-tuning. We all, as rational individuals, have to bound our view of the universe with the findings of science. Right now, those findings support the existence of a Creator and a Designer. So why am I seeing so many atheists who are just plain ignorant about these facts? Maybe we should tell them about this evidence. Maybe we should ask them why they don’t account for scientific evidence when forming their beliefs.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

# Knight and Rose Show #44: John Sailer: DEI in Higher Education

**Wintery Knight** · 28 January 2024 · Archived copy · Original

Welcome to episode 44 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome John Sailer to the show, to discuss DEI in higher education. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode 44:**

**Episode Summary:**

Wintery Knight and Desert Rose interview John Sailer of the National Association of Scholars about DEI (Diversity, Equity and Inclusion) policies in higher education. We discussed DEI in faculty hiring, referencing guidelines ("rubrics") from major universities. We discussed DEI in research grant applications. We discussed John's victories so far, and how this battle affects ordinary Americans.

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

John Sailer is Senior Fellow and Director of University Policy at the National Association of Scholars. He graduated from The King's College with a bachelor's in politics, philosophy, and economics, and from Columbia University Teachers College with a master's in philosophy and education. Prior to joining the team at NAS, John worked as a teacher. John's Twitter / X account is @JohnDSailer.

# Secular left funding new David French / Russell Moore church curriculum

**Wintery Knight** · 29 January 2024 · Archived copy · Original

If there is one person who you have to follow on Twitter, because of her amazing reporting on the state of Christian churches in America, it's Megan Basham. Megan Basham comes out with absolute bombshell news stories every 1-2 months. She punches back at all the weakling appeasement evangelical leaders who are ruining the reputation of Christianity in America.

This time, she takes on 2 of the people who try to present themselves as Christians, even as they are doing everything they can to destroy Christianity in America: David French and Russell Moore.

Here's her latest report in First Things:

> Secular news outlets from NPR to the New York Times are hailing Tim Alberta's new book, The Kingdom, The Power, and the Glory, for furthering the popular thesis that evangelicals have abandoned themselves to political idolatry. By "political idolatry" they mean "political conservatism," as neither Alberta's book nor the many prestige outlets enthusing over it have a word of criticism for Christians who advance left-wing causes. However, a curious passage in the book suggests that those leveling this charge may be most guilty of infecting the church with partisanship.
>
> Alberta reports on The After Party, a forthcoming program led by Duke Divinity consulting professor Curtis Chang and developed with New York Times columnist David French and Christianity Today editor in chief Russell Moore. The program offers pastors and small groups a curriculum "reframing Christian political identity from today's divisive partisan options."
>
> According to Alberta, during its germination phase, the project hit a roadblock. Evangelical donors had little interest in funding an explicitly political Bible study. Thus, to get The After Party off the ground, the trio (all frequent critics of evangelicals who voted for Donald Trump) turned to "predominantly progressive" "unbelievers." In fact, they turned to secular left-wing foundations.

I don't want to say any more about what she found out in this post. I want you to read it yourselves – the whole thing. It's just what you would expect, though. Wealthy left-wing billionaires, LGBT activists, pro-abortion activists, gender ideologues, transgender activists, and more.

She adds this, though:

> Does anyone really believe these secular progressive grant-makers are interested in developing a church curriculum about politics without an eye toward affecting policy? Or that this curriculum will strengthen evangelicals' commitment to the very causes progressives despise? Between 2013 and 2014, the Ford, Rockefeller, and Tides foundations contributed a combined $1.3 million to the Evangelical Immigration Table's "Bibles, Badges, and Business" initiative, launched to mobilize evangelical support for amnesty legislation such as the failed Gang of Eight bill. Hewlett and a host of other major left-wing donors bankrolled the Evangelical Environmental Network's Evangelical Climate Initiative with the aim of generating churchgoer support for cap and trade legislation. Secular progressive foundations have not hesitated to leverage new evangelical ministries to sway Christians to their political will.

Today, it's a rare church that does not have some group of people who are trying to drag the church leadership to the left. They say it's because of "empathy" or because of the need to gain respect from the secular left. But what it means in practice is that the church is stepping away from the Bible's teachings. What we need are rank-and-file Christians to know what is going on, and speak up to make sure that their churches aren't being led by secular

leftists.

The funny thing about the secular leftists and their puppets David French and Russell Moore. They don't realize this, but any Christian faith that is divorced from the Bible, and wedded to the Democrat party, loses it's ability to save. There are people in this country who have dug themselves into a hole. Sometimes because of their parents. Sometimes because of their friends. Sometimes because of their teachers. And they need the hard truths and the hard moral boundaries in the Bible to step out and out of where they started. They don't just need Jesus the Savior, they need Jesus the Lord, and that means submitting to his leadership. By trying to curry favor with the secular left, French and Moore are robbing people of that leadership. The secular left will never accept the truth claims of Jesus, but that's what people who are lost need.

# Good news: Gavin Newsom loses battle against Christian preschool

**Wintery Knight** · 30 January 2024 · Archived copy · Original

Mary from Marin tweeted out this article about California last night. I expected it to be bad news, but it was good news. Gavin Newsom tried to force a preschool in El Cajon to deny their Christian convictions, and accept his atheist convictions. The school filed a lawsuit, they had a trial, and the school won. Pretty surprising for California! But this was more towards the San Diego end of it.

The article is from California Family Council:

> The Newsom Administration's California Department of Social Services (CDSS) tried but failed to force an El Cajon Christian preschool to abandon its religious beliefs on sexuality and gender or be kicked out of participating in a federally funded USDA food program. After the church filed a federal civil rights lawsuit, Attorney General Rob Bonta's Justice Department refused to defend the state's actions and settled for nearly $200,000.

It's wonderful that we have so many Christian lawyers. I know that I harp on how everyone has to do STEM degrees, but if you have a lot of family support, then it might be better to go to law school. Because look what you can do with that degree:

> Attorneys for the Church of Compassion and its Dayspring Christian Learning Center were represented by the National Center for Law and Policy (NCLP), Alliance Defending Freedom (ADF) and Advocates for Faith and Freedom (AFF). They filed a lawsuit and motion for preliminary injunction against the Biden administration and California state officials last year, challenging the suspension of the Church's preschool from a federal food program due to their beliefs about human sexuality.

Comment from the ADF:

> "Ironically, in the name of combatting discrimination, government officials have excluded the church and preschool from serving the El Cajon community based solely on their religious beliefs and exercise," said ADF Senior Counsel Jeremiah Galus. "This is antithetical to the First Amendment's promise of religious freedom and only hurts needy families and children."

So, the Christians who work at that school were seen as "good enough" to pay taxes to the government for this program, nut not good enough to be eligible for any grants. That's always the way with the secular left. They think that taxpayers are smart enough to earn the money, but not smart enough to spend it. We need the secular left to tell us how to spend it.

Here's the final result of the lawsuit ruling:

> The settlement reinstated Dayspring in the Food Program, reimbursed suspended funds, removed the preschool from the National Disqualified List, and required the CDSS to issue clear guidance regarding the existence of exemptions for religious institutions in California's food programs. The CDSS also agreed to pay $160,000 in legal fees. This outcome is a significant win for religious freedom in California and sets a precedent for similar religious institutions.

I thought this was interesting – the discrimination was caused by Joe Biden:

> After the Biden administration expanded the definition of "sex" in Title IX to encompass sexual orientation

> and gender identity, California's Department of Social Services (CDSS) implemented new mandates. But these new rules restricted religious organizations from participation in the food program if their orthodox biblical views on human sexuality affected they way they operated their church or ministry.

It's so strange to me that people who claim to be religious vote for Joe Biden. And yet here he is going after people who take the Bible seriously. I guess the religious people who support him don't really care about taking the Bible seriously.

# What are the historical arguments for the post-mortem appearances of Jesus?

**Wintery Knight** · 31 January 2024 · Archived copy · Original

Eric Chabot of Ratio Christi Ohio State University has a *great* post up about the post-mortem appearances of Jesus.

The post contains:

- a list of the post-mortem resurrection appearances
- quotations by skeptical historians about those appearances
- alternative naturalistic explanations of the appearances
- responses to those naturalistic explanations

Although there is a lot of research that went into the post, it's not very long to read. The majority of scholars accept the appearances, because they appear in *so many different sources* and because some of those sources are very early, especially Paul's statement of the early Christian creed in 1 Corinthians 15:3-7, which is from about 1-3 years after Jesus was executed by the Romans. Eric's post lists out some of the skeptical scholars who the appearances, and you can see how they allude to the historical criteria that they are using. (If you want to sort of double-check the details, I blogged about how historians investigate ancient sources before)

Let's take a look at some of the names you might recognize:

> **E.P. Sanders:**
>
> That Jesus' followers (and later Paul) had resurrection experiences is, in my judgment, a fact. What the reality was that gave rise to the experiences I do not know. "I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: 'I saw him first!' 'No! I did.' Paul's tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus' followers suffered mass hysteria. But mass hysteria does not explain the other traditions." "Finally we know that after his death his followers experienced what they described as the 'resurrection': the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it."[1]
>
> **Bart Ehrman:**
>
> It is a historical fact that some of Jesus' followers came to believe that he had been raised from the dead soon after his execution. We know some of these believers by name; one of them, the apostle Paul, claims quite plainly to have seen Jesus alive after his death. Thus, for the historian, Christianity begins after the death of Jesus, not with the resurrection itself, but with the belief in the resurrection.[2]
>
> **Ehrman also says:**
>
> We can say with complete certainty that some of his disciples at some later time insisted that . . . he soon appeared to them, convincing them that he had been raised from the dead.[3]
>
> **Ehrman also goes onto say:**
>
> Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus' resurrection, since this is a matter of public record.[4]
>
> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don't doubt at all that some disciples claimed this. We don't have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don't think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19).[5]

> **Marcus Borg**
>
> The historical ground of Easter is very simple: the followers of Jesus, both then and now, continued to experience Jesus as a living reality after his death. In the early Christian community, these experiences included visions or apparitions of Jesus. [8]

The references to Paul are because of the early creed he records in 1 Corinthians 15:3-7, and his conversations with the other eyewitnesses in Galatians. Eric has another post where he goes over that early creed, and it is something that every Christian should know about. It's really kind of surprising that you never hear a sermon on that early creed in church, where they generally sort of assume that you believe everything in the Bible on faith. But skeptical historians don't believe in the post-mortem appearances by faith – they believe it (in part) because of 1 Corinthians 15:3-7.

If you want to see a Christian scholar make the case for the resurrection appearances in a debate, then here is a post I wrote with the video, audio and summary of the William Lane Craig vs James Crossley debate on the resurrection.

# Christians and conservatives should be careful where they bank

**Wintery Knight** · 1 February 2024 · Archived copy · Original

I'm sure that my readers who have been following the story of what happened in Canada with the Trudeau Liberal Party and the peaceful trucker protests in Ottawa will know how much the secular left loves to freeze the bank accounts of people who challenge them. Well, you might be surprised to find out that it happens in America, too. Well, with certain banks.

My podcast partner Rose sent me this article by Jeremy Tedesco of Alliance Defending Freedom, which appeared in the Daily Wire (full text archived).

It starts by talking about a New York State case that is going before the U.S. Supreme Court:

> [T]he National Rifle Association is challenging New York's attempt to coerce banks and insurance companies to withdraw services from the group. The NRA alleges that the Department of Financial Services — at the behest of then-Governor Andrew Cuomo — used its vast power to regulate "reputational risk" along with back-channel meetings, public investigations, and threats of fines to punish the group for its Second Amendment advocacy.

What I liked about this article, but you might find it disturbing, is the list of other times when banks tried to "de-bank" Christians and conservatives:

> As Alliance Defending Freedom points out in a friend-of-the-court brief filed in support of the NRA's position, pro-life group Heartbeat International was recently canceled by its insurance provider over its "anti-abortion" advocacy.

He linked to a whole list of de-bankings here. Some of the victims are famous, like former Republican Senator Sam Brownback! And The Ruth Institute – I've blogged many times about the founder of The Ruth Institute, Dr. Jennifer Roback Morse.

More from the article:

> […]Former Brexit leader Nigel Farage's high-profile case resulted in the ouster of megabank NatWest's CEO. Serial offender JPMorgan Chase's hit list includes the Arkansas Family Council, Defense of Liberty, and U.S Ambassador Sam Brownback's National Committee for Religious Freedom.

You can check how bad your bank is at this link (from the article). I was happy to see that my bank was pretty good, but I chose them after looking at their political donations on OpenSecrets.org. Mind you, I'm trying to switch over to a state-level bank right now.

But another step I took was to move to a red state, and that's something that might help me in the future:

> The solution to this problem may lie with the states. This state legislative season presents an opportunity for states interested in protecting against politicized de-banking to act. Any such law should focus on the worst actors – the largest banks and payment processors.

The conservative states are more likely to do something about this, just like you see Texas fighting back against Biden to secure the border. I can't imagine why someone would live in a leftist state – it's just too easy for them to persecute you there.

# DeSantis beats Disney's lawsuit, while Trump loses defamation lawsuit

**Wintery Knight** · 2 February 2024 · Archived copy · Original

This week, we had some lawsuit news. First, Donald Trump lost a defamation lawsuit to a crazy lady, and now he has to pay $83 million. You'll remember that Ron DeSantis decided to sign legislation that protected young children from LGBT indoctrination in schools. Disney, one of the biggest corporate promoters of LGBT activism, sued him. And the lost their case.

Here's the first story about Trump, reported by Daily Wire:

> A jury found former President Donald Trump should pay writer E. Jean Carroll $83.3 million in damages in a defamation trial that ended on Friday.
>
> The amount awarded to Carroll is well over three times more than her legal team asked for in its closing argument – $24 million – and more than eight times the amount Carroll requested in her initial lawsuit — $10 million, according to CNN.
>
> The jury found that Trump owed Carroll $11 million to cover the costs of a campaign to repair the harm done to her reputation and $7.3 million to address the emotional harm the 80-year-old writer sustained from remarks Trump made in 2019 about her and her accusations of rape. The jury ordered Trump to pay another $65 million in punitive damages.

Trump likes to run his mouth when he has nothing to gain for his supporters, and everything to lose. And then he gets hammered for it. He lacks discipline. He lacks self-control.

Meanwhile, DeSantis got sued by Disney, except he got sued for doing the right thing for his supporters – he passed the Florida Parental Rights in Education Act, and Disney was mad.

Daily Wire reported on his win:

> Florida Governor Ron DeSantis beat Disney on Wednesday after a federal judge tossed the company's lawsuit that claimed the governor retaliated against the company.
>
> The company filed the lawsuit after DeSantis dismantled a special Disney-controlled tax district that gave them the power to govern themselves, claiming that he retaliated against them for publicly criticizing his Florida Parental Rights in Education Act, which empowers parents to make the best decisions for raising their children and protects children from being exposed to dangerous leftist gender ideologies in school.

Disney employees have been involved in a lot of disgusting situations with kids. It's nice when someone competent goes up against them, and wins. We need a winner. Someone who knows policy and the law. Someone with self-control, who isn't an easy target for the secular left. Someone without baggage, who has won elections as a Congressman and as Governor of Florida. Twice.

# William Lane Craig lectures on the evidence for the resurrection of Jesus

**Wintery Knight** · 3 February 2024 · Archived copy · Original

Here is Dr. William Lane Craig giving a long-form argument for the historical event of the resurrection of Jesus, and taking questions from the audience.

The speaker introduction goes for 6 minutes, then Dr. Craig speaks for 35 minutes, then it's a period of questions and answers with the audience. The total length is 93 minutes, so quite a long period of Q&A. The questions in the Q&A period are quite good.

**Introduction:**

- Many people who are willing to accept God's existence are not willing to accept the God of Christianity
- Christians need to be ready to show that Jesus rose from the dead as a historical event
- Private faith is fine for individuals, but when dealing with the public you have to have evidence
- When making the case, you cannot assume that your audience accepts the Bible as inerrant
- You must use the New Testament like any other ancient historical document
- Most historians, Christian and not, accept the basic minimal facts supporting the resurrection of Jesus

**Fact #1:** the burial of Jesus following his crucifixion

- Fact #1 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #1 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #1 passes the criterion of enemy attestation, since it praises one of the Sanhedrin
- Fact #1 is not opposed by any competing burial narratives

**Fact #2:** on the Sunday following his crucifixion, Jesus' tomb was found empty by some women

- Fact #2 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #2 is implied by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #2 is simple and lacks legendary embellishment, which argues for an early dating
- Fact #2 passes the criterion of embarrassment, because it has female, not male, witnesses
- Fact #2 passes the criterion of enemy attestation, since it is reported by the Jewish leaders

**Fact #3:** Jesus appeared to various people in various circumstances after his death

- Fact #3 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #3 is supported by multiple, independent reports of the events from all four gospels
- Fact #3 explains other historical facts, like the conversion of Jesus' skeptical brother James

**Fact #4:** the earliest Christians proclaimed their belief in the resurrection of Jesus

- Fact #4 explains why the earliest Christians continued to identify Jesus as the Messiah
- Fact #4 explains why the earliest Christians were suddenly so unconcerned about being killed

Dr. Craig then asks which hypothesis explains all four of these facts. He surveys a number of naturalistic hypotheses, such as the hallucination theory or various conspiracy theories. All of these theories deny one or more of the minimal facts that have been established and accepted by the broad spectrum of historians. In order to reject the resurrection hypothesis, a skeptic would have to deny one of the four facts or propose an explanation that

explains those facts better than the resurrection hypothesis.

I listened to the Q&A period while doing housekeeping and I heard lots of good questions. Dr. Craig gives very long answers to the questions. One person asked why we should trust the claim that the Jewish leaders really did say that the disciples stole the body. Another one asked why we should take the resurrection as proof that Jesus was divine. Another asks about the earthquake in Matthew, which Mike Licona and I doubt is intended to be historical, but is more likely to be apocalyptic imagery. Dr. Craig is also asked about the Jewish scholar Geza Vermes, and how many of the minimal facts he accepts. Another questioner asked about the ascension.

You can see this evidence used in an actual debate, against a historian who disagrees with Dr. Craig. That post contains a point by point summary of the debate that I wrote while listening to it.

If you are looking for a good book to read on this topic, the best introductory book on the resurrection is "The Case for the Resurrection of Jesus" and the best comprehensive book is "The Resurrection of Jesus".

# Pre-ban study: 53% of mothers with gender-confused boys have mental illness

**Wintery Knight** · 4 February 2024 · Archived copy · Original

Normally, on this blog, every other post is some "new study" that I can use in discussing the controversial issues of the day. A lot of the best new studies get unpublished if they go against the worldview of the secular left, for example, the famous ROGD study. (That one was later re-published). Or they don't get published at all. It's fun to see what was allowed to get published pre-ban.

Here's a study that's on PubMed, one of my favorite web sites for studies.

Abstract:

> This pilot study compared mothers of boys with gender identity disorder (GID) with mothers of normal boys to determine whether differences in psychopathology and child-rearing attitudes and practices could be identified. Results of the Diagnostic Interview for Borderlines and the Beck Depression Inventory revealed that mothers of boys with GID had more symptoms of depression and more often met the criteria for Borderline Personality Disorder than the controls. Fifty-three percent of the mothers of boys with GID compared with only 6% of controls met the diagnosis for Borderline Personality Disorder on the Diagnostic Interview for Borderlines or had symptoms of depression on the Beck Depression Inventory. Results of the Summers and Walsh Symbiosis Scale suggested that mothers of probands had child-rearing attitudes and practices that encouraged symbiosis and discouraged the development of autonomy.

Fifty-three percent of the mothers of boys with gender identity disorder were diagnosed with Borderline Personality Disorder or had symptoms of depression.

Now, there are concerns I have about this study. First, it's a small number of research subjects, which is understandable because back in 1991, there were not a lot of kids with gender identity disorder.

So what is Borderline Personality Disorder? Here is the description from the NIH:

> People with borderline personality disorder may experience intense mood swings and feel uncertainty about how they see themselves. Their feelings for others can change quickly, and swing from extreme closeness to extreme dislike. These changing feelings can lead to unstable relationships and emotional pain.
>
> People with borderline personality disorder also tend to view things in extremes, such as all good or all bad. Their interests and values can change quickly, and they may act impulsively or recklessly.

I don't know much about mental illness, but I've been told never to date (much less marry) someone with BPD, because it is the most serious mental illness.

This finding from the study is interesting to me, because it suggests a reason why we are seeing this enormous surge in LGBT identification among young people. Sure, there is peer pressure, that's what the study on ROGD was about. But now it suggests a chain between radical feminism, the Sexual Revolution, the decline of women's happiness, and their transgender children.

We know for certain that women are experiencing far greater unhappiness after radical feminism became widespread, because they don't like the goodies of radical feminism – promiscuity, abortion, careers, etc. – as much as they liked being married to a good man, and being a stay-at-home mother.

Daily Wire noted this in 2017:

> According to a recent study from Yale University researchers, liberated, college educated women are freezing

> their eggs because they can't find a man to marry and have children with before their natural childbearing years expire. In the U.K., for instance, one in five women is childless when their natural reproductive years expires, as opposed to one in ten women a mere generation prior.
>
> So what's to blame for this onslaught of college-educated yet terribly empty women?
>
> The short answer is feminism.

The short answer is feminism, because although women claim that it's men's fault for not marrying them, no man with a brain would ever marry a feminist. It's actually become too dangerous for men to even date feminists. I don't even talk to them. The character traits that go with the feminist worldview are not just anti-marriage, they're dangerous to men. Women who blame the bad results of their own choices on men are not safe to even speak to.

And as I've noted before, the decline of marriage is causing a massive spike in mental illness. Not in conservative women – just in progressive women.

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

Here's the part of the data I thought was most interesting:

It turns out that marriage accounts for a lot of women's happiness. But by allying themselves with radical feminism, women have made themselves totally unattractive to marriage-minded men. I think that the explosion of kids with gender identity disorder is just one of the ways that feminism is working itself out.

# N.T. Wright lectures on the seven mutations caused by resurrection of Jesus

**Wintery Knight** · 5 February 2024 · Archived copy · Original

Here's a lecture from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best). Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's a video of his case for the resurrection:

**N.T. Wright's historical case for the bodily resurrection of Jesus**

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable* apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the

Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).

5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: "Guy dies public death. People encounter same guy alive later." Plain vanilla narrative.
5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn't even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

# Mark D. Linville: does Darwinian evolution make morality rational?

**Wintery Knight** · 6 February 2024 · Archived copy · Original

Have you ever heard an atheist tell you that naturalistic evolution is an answer to the moral argument? I have. And I found a good reply to this challenge in the book "Contending With Christianity's Critics". The chapter that responds to the challenge is authored by Dr. Mark D. Linville. It is only 13 pages long. I have a link to the PDF at the bottom of this post.

First, a bit about the author:

> Blog: The Tavern at the End of the World
> Current positions:
>
> - PhD Research Fellow
> - Tutoring Fellow in Philosophy
>
> Education:
>
> - PhD in Philosophy with a minor in South Asian Studies and a specialization in Philosophy of Religion, University of Wisconsin-Madison
> - MA in Philosophy, University of Wisconsin-Madison
> - MA in Philosophy of Religion, Trinity Evangelical Divinity School
> - MA in Theology, Cincinnati Christian Seminary
> - BA in Biblical Studies, Florida Christian College

Here is his thesis of the essay:

> Darwin's account of the origins of human morality is at once elegant, ingenious, and, I shall argue, woefully inadequate. In particular, that account, on its standard interpretation, does not explain morality, but, rather, explains it away . We learn from Darwin not how there could be objective moral facts, but how we could have come to believe—perhaps erroneously—that there are.
>
> Further, the naturalist, who does not believe that there is such a personal being as God, is in principle committed to Darwinism, including a Darwinian account of the basic contours of human moral psychology. I'll use the term evolutionary naturalism to refer to this combination of naturalism and Darwinism. And so the naturalist is saddled with a view that explains morality away. Whatever reason we have for believing in moral facts is also a reason for thinking naturalism is false. I conclude the essay with a brief account of a theistic conception of morality, and argue that the theist is in a better position to affirm the objectivity of morality.

And here's a sample to get your attention:

> But even if we are assured that a "normal" person will be prompted by the social instincts and that those instincts are typically flanked and reinforced by a set of moral emotions, we still do not have a truly normative account of moral obligation. There is nothing in Darwin's own account to indicate that the ensuing sense of guilt—a guilty feeling—is indicative of actual moral guilt resulting from the violation of an objective moral law. The revenge taken by one's own conscience amounts to a sort of second-order propensity to feel a certain way given one's past relation to conflicting first-order propensities (e.g., the father's impulse to save his child versus his impulse to save himself). Unless we import normative considerations from some other source, it seems that, whether it is a first or second-order inclination,one's being prompted by it is more readily understood as a descriptive feature of one's own psychology than material for a normative assessment of one's

> behavior or character. And, assuming that there is anything to this observation, an ascent into even higher levels of propensities ("I feel guilty for not having felt guilty for not being remorseful over not obeying my social instincts…") introduces nothing of normative import. Suppose you encounter a man who neither feels the pull of social, paternal or familial instincts nor is in the least bit concerned over his apparent lack of conscience. What, from a strictly Darwinian perspective, can one say to him that is of any serious moral import? "You are not moved to action by the impulses that move most of us." Right. So?
>
> The problem afflicts contemporary construals of an evolutionary account of human morality. Consider Michael Shermer's explanation for the evolution of a moral sense—the "science of good and evil." He explains,
>
> By a moral sense, I mean a moral feeling or emotion generated by actions. For example, positive emotions such as righteousness and pride are experienced as the psychological feeling of doing "good." These moral emotions likely evolved out of behaviors that were reinforced as being good either for the individual or for the group.2
>
> Shermer goes on to compare such moral emotions to other emotions and sensations that are universally experienced, such as hunger and the sexual urge. He then addresses the question of moral motivation.
>
> In this evolutionary theory of morality, asking "Why should we be moral?" is like asking "Why should we be hungry?" or "Why should we be horny?" For that matter, we could ask, "Why should we be jealous?" or "Why should we fall in love?" The answer is that it is as much a part of human nature to be moral as it is to be hungry, horny, jealous, and in love.3
>
> Thus, according to Shermer, given an evolutionary account, such a question is simply a non-starter. Moral motivation is a given as it is wired in as one of our basic drives. Of course, one might point out that Shermer's "moral emotions" often do need encouragement in a way that, say, "horniness," does not. More importantly, Shermer apparently fails to notice that if asking "Why should I be moral?" is like asking, "Why should I be horny?" then asserting, "You ought to be moral" is like asserting, "You ought to be horny." As goes the interrogative, so goes the imperative. But if the latter seems out of place, then, on Shermer's view, so is the former.
>
> One might thus observe that if morality is anything at all, it is irreducibly normative in nature. But the Darwinian account winds up reducing morality to descriptive features of human psychology. Like the libido, either the moral sense is present and active or it is not. If it is, then we might expect one to behave accordingly. If not, why, then, as a famous blues man once put it, "the boogie woogie just ain't in me." And so the resulting "morality" is that in name only.
>
> **In light of such considerations, it is tempting to conclude with C. S. Lewis that, if the naturalist remembered his philosophy out of school, he would recognize that any claim to the effect that "I ought" is on a par with "I itch," in that it is nothing more than a descriptive piece of autobiography with no essential reference to any actual obligations.**

When it comes to morality, we are not interested in mere descriptions of behavior. We want to know about prescriptions of behavior, and whether why we should care about following those prescriptions. We are interested in what grounds our sense of moral obligation in reality. What underwrites our sense of moral obligation? If it is just rooted in feelings, then why should we obey our moral sense when obeying it goes against out self-interest? Feelings are subjective things, and doing the right thing in a real objective state of affairs requires more than just feelings. There has to be a real objective state of affairs that makes it rational for us to do the right thing, even when the right thing is against our own self-interest. That's what morality is – objective moral obligations *overriding* subjective feelings. I wouldn't trust someone to be moral if it were just based on their feelings.

# How Howard W. Gilmore, commander of the USS Growler, earned the Medal of Honor

**Wintery Knight** · 7 February 2024 · Archived copy · Original

Today is the 81st anniversary of a very brave, self-sacrificial act that is well known by all American submariners. The story I talk about below occurred on February 7th, 1943, when America was at war against Japanese imperialists. It took place aboard the USS Growler, a Gato-class submarine. The hero of the story is Commander Howard W. Gilmore. Let's take a look.

My first brush with the story of the Growler occurred when I was very young, and was playing a game called "Gato" (made by Spectrum Holobyte) on the Macintosh computer that my parents bought for my older brother. In the game, you played as the commander of the USS Growler. COMSUBPAC (Commander of Submarines in the Pacific) would send me missions, and I would execute them. I was able to find an online version that ran in Microsoft's Edge browser on archive.org.

So, here is an article from the Submarine Force Museum about the USS Growler and Commander Howard W. Gilmore.

It says:

> Howard Walter Gilmore was born in Selma, Alabama on September 29, 1902. He enlisted in the Navy on November 15, 1920 and was appointed to the US Naval Academy in 1922. In 1926 he was sent to his first station on the battleship *USS Mississippi* (BB-41). By 1930, Gilmore was seeking something new and exciting and underwent submarine training in New London.
>
> […]By March of 1942, construction of the *Growler* was finished, and Gilmore and his crew would operate out of Pearl Harbor in the Pacific theater.
>
> Their first war patrol would come in late June 1942 in the Aleutian Islands. During this patrol, Gilmore once again narrowly escaped disaster, avoiding two torpedoes that were fired at him during an attack by three Japanese destroyers. In August, they would leave for their second patrol in the East China Sea near Taiwan. During what would end up being Growler's most successful war patrol, they sunk four merchant ships totaling 15,000 tons. Her third patrol was quiet, and she would remain in Brisbane, Australia for the rest of 1942.
>
> The Growler and her crew left Brisbane on New Year's Day 1943 for her fourth war patrol. Her mission was to target Japanese shipping lanes in the Bismarck Archipelago. In early February, while charging her batteries on the surface, Gilmore spotted a provision ship and prepared for a surface attack. The 900-ton provision ship Hayasaki saw the on-coming submarine and attempted to ram the Growler. In the darkness, Gilmore "sounded the collision alarm and shouted, 'Left full rudder!'-to no avail.
>
> Perhaps inadvertently, Growler hit the Japanese adversary amidships at 17 knots, heeling the submarine 50 degrees, bending sideways 18 feet of her the bow, and disabling the forward torpedo tubes." The Japanese crew began firing at the bridge, killing the assistant officer and a lookout who were on deck. Gilmore and two other men were also wounded during the burst of gun fire. Gilmore, without thinking, called for the bridge to be cleared. Gilmore realized that if they dove, the Growler could be saved, but there was no time for him to make it below. Despite this, he gave the call to "Take her down!"
>
> LCDR Arnold Schade, shaken and unsure, followed the last order his captain would ever give him. Schade would surface the ship a few hours later but found no sign of the *Hayasaki*. There was also no sign of Gilmore. Schade and the crew were able to keep the battered ship together long enough to make it back to Brisbane on February 17th. Gilmore's death would unfortunately not be the only tragedy for the *Growler*. On her 11th war patrol in 1944, she was lost at sea. By her end, The *Growler* received eight battle stars for her role in the Pacific War.

> CDR Howard Gilmore was posthumously awarded the Medal of Honor for his sacrifice to save his ship.

Whenever I see that someone has earned a Medal of Honor – the highest military award that can be given – I always look up their Medal of Honor citation.

Here is Gilmore's.

There's a good episode of "The Silent Service" about Gilmore:

As a Christian, I try to make the words of the Bible more practical by reading stories that parallel some of the teachings of Jesus. In this case, Gilmore is pretty clearly living out that command to "love your neighbor as yourself" and "in humility consider others more important than yourselves" and "greater love has no one than this, that he lay down his life for his friends". What's interesting to me about this story is that it's not an enlisted man or a lower officer who is doing it, it's the Commander of the boat.

If you're at all interested in getting started in learning military history, a good place to start is with the American submarine commanders in the Pacific. The enemy we fought was very clearly evil, and treated civilians and prisoners horribly. They attacked us first at Pearl Harbor. I have found the commanders to be mostly men of extraordinary intelligence and character. I especially recommend the books "Wahoo" and "Clear the Bridge!" by Richard O'Kane, and "Thunder Below" by Eugene Fluckey. At the operational level, I enjoyed Charles Lockwood's "Sink 'Em All". Those can all be obtained as audio books, too. I just got "Silent Victory: The U.S. Submarine War against Japan" in the mail. No audio book for that one, though.

If you like board games, there is a good board game called "Silent Victory". The manufacturer is taking pre-orders for the third printing now. If you prefer computer games, "Crash Dive 2" puts you in command of a Gato-class submarine, and it's not too complicated.

# Astrophysicist explains the problems with naturalistic origin of life

**Wintery Knight** · 8 February 2024 · Archived copy · Original

There's an interesting article posted at Universe Today by Dr. Paul M. Sutter. Although he does accept unguided evolution after the origin of life, he doesn't think that naturalism can account for the origin of life. On this blog, I've talked about three problem's with life's origin: 1) getting the right building blocks, 2) getting the right information, and 3) irreducible complexity. Let's take a look.

Here is a link to the article from Universe Today.

Here is a quick bio of the author:

> Paul M. Sutter is a theoretical cosmologist, award-winning science communicator, NASA advisor, U.S. Cultural Ambassador, and a globally recognized leader in the intersection of art and science. Paul is a research professor at the Institute for Advanced Computational Science at Stony Brook University and a visiting professor at Barnard College, Columbia University.
>
> […]Paul earned his PhD in physics in 2011 as a Department of Energy Computational Science Graduate Fellow at the University of Illinois. He then spent three years as a research fellow at the Paris Institute for Astrophysics followed by two years at the Trieste Observatory in Italy. Prior to his current appointment, he held a joint position as the chief scientist at the Center of Science and Industry in Columbus, Ohio and as a cosmological researcher at the Ohio State University.

Now let's turn to his article.

It's always good to remind people what is required for the simplest kind of life, and he does that:

> To succeed at evolution and separate itself from mere chemical reactions, life must do three things. First, it must somehow store information, such as the encoding for various processes, traits, and characteristics. This way the successful traits can pass from one generation to another.
>
> Second, life must self-replicate. It must be able to make reasonably accurate copies of its own molecular structure, so that the information contained within itself has the chance to become a new generation, changed and altered based on its survivability.
>
> Lastly, life must catalyze reactions. It must affect its own environment, whether for movement, or to acquire or store energy, or grow new structures, or all the many wonderful activities that life does on a daily basis.

I remember listening to lectures about the origin of life by Dean Kenyon, Charles Thaxton, and Walter Bradley in my younger years. If I remember correctly, the minimal functions of a living system are capture energy, store information, and replicate. Sutter does a nice job of describing an even longer list.

So what's the problem with appealing to chance and necessity to create all that? Well, in order to do all that, we need to have three components in place: DNA, RNA and molecular machines.

He writes:

> Put exceedingly simply (for I would hate for you to mistake me for a biologist), life accomplishes these tasks with a triad of molecular tools.
>
> One is the DNA, which through its genetic code stores information using combinations of just four molecules: adenine, guanine, cytosine, and thymine. The raw ability of DNA to store massive amounts of information is nothing short of a miracle; our own digital system of 1's and 0's (invented because it's much simpler to tell if a circuit is on or off than some stage in-between) is the closest comparison we can make to DNA's information

> density. Natural languages don't even earn a place on the chart.
>
> The second component is RNA, which is intriguingly similar to DNA but with two subtle, but significant, differences: RNA swaps out thymine for uracil in its codebase, and contains the sugar ribose, which is one oxygen atom short of the deoxyribose of DNA. RNA also stores information but, again speaking only in generalities, has the main job of reading the chemical instructions stored in the DNA and using that to manufacture the last member of the triad, proteins.
>
> "Proteins" is a generic catch-all term for the almost uncountable varieties of molecular machines that do stuff: they snip apart molecules, bind them back together, manufacture new ones, hold structures together, become structures themselves, move important molecules from one place to another, transform energy from one form to another, and so on.
>
> Proteins have one additional function: they perform the job of unraveling DNA and making copies of it. Thus the triad completes all the functions of life: DNA stores information, RNA uses that information to manufacture proteins, and the proteins interact with the environment and perform the self-replication of DNA.

What's the problem? The problem is that this all has to come together at the start, in order to have life. You can't build up gradually, from one component, to two components, to three components. All three are needed at the start. This is what Michael Behe calls irreducible complexity, but others have described it as minimal complexity.

Sutter says:

> The interconnected nature of DNA, RNA, and proteins means that it could not have sprung up *ab initio* from the primordial ooze, because if only one component is missing then the whole system falls apart – a three-legged table with one missing cannot stand.

And just to be clear, he would have to provide some evidence of "primordial ooze". As I've blogged about before, life appears almost instantaneously after the cooling of the Earth. He might like to appeal to "billions of years" to get that first replicator, but he doesn't have billions of years. Molecular oxygen, which is poisonous to origin of life chemistry, was present right after the Earth cooled. And that's not my opinion – that's right out of the prestigious peer-reviewed journal *Nature*.

Evolution News notes:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

I understand that naturalists want to believe that nature is self-contained, and can do it's own creating. That belief is practically *required* in order to have careers in academia. Scientists have to at least *claim* that "naturalism can do it" or they would draw the unwanted attention of the Darwin mob – the people who got people like William Dembski, Guillermo Gonzalez, Richard Sternberg, etc. fired. However, the scientific evidence doesn't support naturalism. I

wish more people would form their views based on scientific evidence, rather than on the religion of naturalism.

# If we seriously want men to marry and become fathers, let's repeal no-fault divorce

**Wintery Knight** · 9 February 2024 · Archived copy · Original

I saw a very good article at the Heritage Foundation web site about the importance of fathers for children. The author Virginia Allen listed out some of the benefits that fathers provide to children:

> Studies have found that children raised without a father are:
>
> - At a higher risk of having behavioral problems.
> - Four times more likely to live in poverty.
> - More likely to be incarcerated in their lifetime.
> - Twice as likely to never graduate high school.
> - At a seven times higher risk of teen pregnancy.
> - More vulnerable to abuse and neglect.
> - More likely to abuse drugs and alcohol.
> - Twice as likely to be obese.
>
> From education to personal health to career success, children who lack a father find themselves at a disadvantage to their peers raised in a two-parent household.

I was looking for a good analysis of why there's been a decline of marriage and fatherhood, and I found an article by Joe Carter on far-left The Gospel Coalition, of all places. By looking at marriage rates and historical events that changed the marriage rate, he was able to identify the cause of the decline of marriage – and fatherhood.

Marriage and divorce rates per capita

I'll spare you the statistical analysis, which is excellent, and give you the conclusion – although you can guess it from the graph above:

> Now that we've explored the data, what year should we use as the marker for the beginning of the decline of marriage in the United States? I would argue for 1985, the last year that the marriage rate topped 10 percent.
>
> […]What changed in 1985 that could have led to the decline in marriage? There are likely numerous factors—which we'll examine in future articles—but one stands out in particular: By 1985, all states (except

> for New York) had enacted no-fault divorce legislation.

The most helpful book I know of about no-fault divorce is "Taken Into Custody", by Dr. Stephen Baskerville. He wrote a column for Crisis magazine that summarizes some of his ideas.

Excerpt:

> Feminists were drafting no-fault divorce laws in the 1940s, which the National Association of Women Lawyers now describes as "the greatest project NAWL has ever undertaken."
>
> The result effectively abolished marriage as a legal contract. Today it is not possible to form a binding agreement to create a family.
>
> The new laws did not stop at removing the requirement of citing grounds for a divorce, to allow divorce by mutual consent, as deceptively advertised at the time. Instead they created unilateral and involuntary divorce, so that one spouse may dissolve a marriage without any agreement or fault by the other.

Here's what divorce does to the spouse who is the victim of the unilateral "no-fault" divorce:

> Though marriage is a civil matter, the logic quickly extended into the criminal, including a presumption of guilt against the involuntarily divorced spouse ("defendant"). Yet formal due process protections of criminal proceedings did not apply, so forcibly divorced spouses became quasi-criminals not for recognized criminal acts but for failing or refusing to cooperate with the divorce by continuing to claim the protections and prerogatives of family life: living in the common home, possessing the common property, or—most vexing of all—parenting the common children.
>
> Following from this are the horrendous civil liberties violations and flagrant invasions of family and individual privacy that are now routine in family courts. A personalized criminal code is legislated by the judge around the forcibly divorced spouse, controlling their association with their children, movements, and finances. Unauthorized contact with their children can be punished with arrest. Involuntarily divorced parents are arrested for running into their children in public, making unauthorized telephone calls, and sending unauthorized birthday cards.

In my conversations with men, no-fault divorce laws, and anti-male divorce courts are the main reasons given for why they do not pursue marriage and fatherhood. Men do not want to be coerced in a marriage with the threat of divorce by an unhappy wife. Men do not want to be subject to the government in so many areas of their lives if the wife does carry out the threat. They especially don't want to be separated from their children. One my secular male friends told me that he would not marry unless the woman had evidence in her past of hating radical feminism and no-fault divorce. This was the main criteria. He actually was able to find a woman who was a men's rights activist who hated divorce. But that was the only way he would marry.

Statistically speaking, the wife is more likely to initiate divorce than the husband. Women initiate 70% of divorces, the majority of those just because she is "unhappy". I think this is because women get into marriage based on their feelings, and they think that it is the husband's job to make them feel good. They see their happiness as the primary goal of the marriage, and see a marriage that does not make them happy as a marriage that needs to be ended.

**Are we going to repeal no-fault divorce, then?**

No-fault divorce was seen as a boon to women who had married the wrong men by following their hearts. It's an interesting question to ask whether women really would want no-fault repealed. It would mean that they would have to get serious about who they marry, instead of just getting into marriage based on feelings. They would have to evaluate men according to expectations of what a man does in a marriage, instead of on feelings. They would have to think about what men want out of a marriage, and prepare themselves to provide for his needs. They would have

to say no to their feelings, when choosing a man, and in keeping a man after the wedding.

If women aren't willing to demand the repeal of no-fault divorce laws and get serious about men and marriage, then what's the point of complaining that men don't want to marry and become fathers? If you're not willing to fix the root cause of the problem, then don't complain about the problem.

# Scott Klusendorf discusses right to life, assisted reproduction, and end of life

**Wintery Knight** · 10 February 2024 · Archived copy · Original

Here's the video, featuring my favorite pro-life speakers Scott Klusendorf. Scott is the founder and President of the Life Training Institute. LTI's mission is to make a rigorous, rational defense for pro-life positions with respect to a variety of ethical issues. If you listen to Scott, you will learn a lot, and learn it from someone who has been tested on the battlefield of ideas.

Three topics:

- right to life of the unborn
- reproductive technologies
- end of life questions

40 minutes of guided discussion, 20 minutes of Q&A. This video was apparently recorded in the summer of 2016.

Abortion:

- the 1-minute case for the pro-life position (excellent)
- dealing with those who dismiss the pro-life case as religious
- how and when do people win arguments?
- how does one get better at discussing moral issues?
- who are some of the best books to get informed about life issues?
- what are some of the best books from the other side?
- what is the SLED test? do pro-abortion scholars accept it?
- if abortion were illegal, who should be punished and how much?
- is it inflammatory and dangerous to say that abortion is killing?

Assisted reproductive technologies:

- how should we speak to people considering ARTs?
- what is the underlying issue in ART discussions?
- should pro-lifers be opposed to all use of ARTs?
- what should pro-lifers think about surrogacy?
- which books provide an introduction to ART ethics?

End of life issues:

- what is the central issue in end of life discussions?
- should treatment always be continued or are there situations where treatment can be withdrawn?

Final issues:

- if a student wants to take courses in bioethics, where should they go to take courses or do a degree?
- what is the policy situation for pro-lifers in terms of legislation and SCOTUS decision-making?
- what are some policies that pro-lifers can support as incremental measures that move the issue in the right direction?

I liked this discussion. I tried to listen as someone new to the issue and he did a good job of not assuming any prior knowledge of the debate. My favorite part was his survey of books and arguments on the other side, and what they

say. I don't think that most people realize what the implications of the pro-abortion worldview really are for things like infanticide, and so on. The discussion about who should be punished for abortion and how much was new to me – and that actually came up during the last election, during the GOP primary. Personally, I would let the woman get off, and just prosecute the doctor.

It's very very good to listen to crystal clear thinking on these controversial issues from someone who has encountered the other side in their writings, and in public debates with them. Not to mention having to interact with people making decisions in these areas.

# What's the best explanation for the origin of life for atheists?

**Wintery Knight** · 11 February 2024 · Archived copy · Original

I just ordered the newest edition of "The Mystery of Life's Origin", which is a classic book on the origin of life by pro-design authors. The new edition has several new chapters. It reminded me of my interest in the origin of life when I was a younger man, just starting full-time work with a hot Internet start-up in the big city.

Back then, I liked to listen to debates about the origin of life (e.g. – Walter Bradley versus Robert Shapiro, etc.), as well as lectures and interviews. I ordered tons of academic lectures and debates, especially from Access Research Network. Two of my favorite interviews from ARN featured Dr. Charles Thaxton and Dr. Dean Kenyon.

Let's start with Charles Thaxton's interview.

And here are the questions:

1. How did you first get interested in the origin of life?
2. How did you come to write The Mystery of Life's Origin with Walter Bradley and Roger Olsen?
3. Was there an advantage to having the three of you collaborate on the project?
4. What is the primary argument of your book, The Mystery of Life's Origin?
5. Have scientists come close to developing a plausible naturalistic explanation to the origin of life or do you still consider the origin of life to be a mystery?
6. Do you see a particular irony in the timing of Stanley Miller's experiments and the discovery of DNA by Watson and Crick?
7. How does the emergence of modern genetics tie in with the Darwinian scenario of life going from simple to complex?
8. What are the major problems with origin of life simulation experiments?
9. Isn't it rather impressive that amino acids were produced in the Miller experiments?
10. How close is the development of amino acids to the threshold of life?
11. What are the steps involved in producing proteins from amino acids?
12. Why are amino acids isolated during this process?
13. How can the investigator affect the outcome of a simulation experiment?
14. How did you evaluate the different chemical evolution experiments?
15. Are the initial conditions in the simulation experiments plausible?
16. What did the earth's early atmosphere contain?
17. Will the simulation experiments work with this atmosphere?
18. There seems to be an underlying assumption that the origin of life resulted without any intelligent input whatsoever yet the simulation experiments appear to rely upon intelligent guidance. Could you comment on this irony?
19. Are there any natural processes that would have filtered out destructive ultraviolet light?
20. What additional steps beyond creating amino acids would be required to develop life?
21. What is so difficult about making proteins or nucleic acids?
22. In addition to the energy problem in protein synthesis isn't there a sequencing problem?
23. Are DNA sequences analogous to a written language?
24. Has Hubert Yockey made similar claims?
25. In The Mystery of Life's Origin you refer to order, randomness, and specified complexity. Could you give us an overview of these concepts?
26. What do you think the presence of specified complexity in a living system indicates about its origin?
27. In inferring the necessity of intelligence to produce life haven't you ventured from the realm of science to religion?
28. Could you summarize the reasons why you believe intelligence was involved in the origin of life?

29. What are the major objections to your current point of view?
30. How was The Mystery of Life's Origin received by the scientific community?
31. What was Dean Kenyon's response to your critiques of his book, Biochemical Predestination?
32. What was Dean Kenyon's response to The Mystery of Life's Origin?
33. Were you a bit apprehensive about meeting Kenyon after writing a book which was quite critical of his views in Biochemical Predestination?
34. Are self-organizational theories plausible?
35. Would you comment on the work done by Prigogine and Eigen?
36. What is your assessment of RNA scenarios?
37. What other problems do you see with an RNA world?

You can learn more about Charles Thaxton here.

And here's the interview with Dean Kenyon:

And here are the questions:

1. What first interested you in biology and the origin of life? What is your academic background in this area?
2. What was your viewpoint on the origin of life when you wrote Biochemical Predestination?
3. How have your views on the origin of life changed since you wrote Biochemical Predestination?
4. Do many of your colleagues support your new position? If not, why not?
5. What are the general presuppositions that scientists make who study the origin of life?
6. What is the Oparin-Haldane hypothesis, and what role does it play in current research and teaching on the origin of life?
7. What are the major underlying assumptions of the Oparin (chemical evolution) hypothesis?
8. Are there any other important assumptions in origin of life theories?
9. How well are these assumptions supported by currently available scientific data?
10. What is your evaluation of the Miller type of simulation experiment? What do these experiments tell us about possible chemical events on the prebiotic Earth?
11. Is it possible that interfering cross-reactions might prevent life from arising naturalistically?
12. Stanley Miller's pioneering work in the origin of life assumed a reducing atmosphere of methane, ammonia, water vapor, and carbon dioxide? Is there sufficient empirical support for this assumption?
15. How large a gap is there between the most complex "protocell" model and the simplest living cell?
16. What is the biologically relevant information content of the simplest living organism known to exist? What are estimates for a theoretical minimum information content of the first living cell?
17. How probable is it that such complexity could arise by undirected chemical processes?
19. What are the major unsolved problems in research on the origin of life?
20. What is the relevance of the Second Law of Thermodynamics to the origin of life?
21. Is it plausible that an "RNA world" was the precursor of the first living cells?
25. If life did not originate by chemical evolution on the primitive Earth, what other possible scientific explanations exist?
26. What do you mean by your statement that "perhaps scientism is more widespread than we like to think"?
27. Is it possible that natural processes are insufficient to account for the origin of all biological information?
28. Can science rule out the possibility that most biological information had an intelligent cause?
29. What alternatives are there to pursuing purely naturalistic explanations for the origin of life?
30. What do you mean by "intelligent design" as it relates to the origin of life?
31. Why is an intelligent design or creationist interpretation of scientific data bearing on origins not acceptable to many scientists?
32. What criteria could be used to determine if the information content of living organisms had an intelligent or natural cause?
34. Does academic freedom allow you to discuss the difficulties of scientific naturalism and origin of life theories?

If not, why are they protected from criticism?
35. How should the origin of life be taught in light of the California Science Framework policy which states that "nothing in science or in any other field of knowledge shall be taught dogmatically"?
36. How is scientific progress impacted when critiques of current theories are suppressed?

You can learn more about Dean Kenyon here.

The challenge for naturalists posed by the origin of life makes it well worth your time to learn and understand. I used to explain this argument to my entire IT department on white boards when I was a young man. It's fascinating, and more convincing than personal testimonies or abstract philosophical arguments. Although I read books on the origin of life, I learned how to present the information as an argument by watching the interviews above over and over.

People sometimes ask me how I was able to survive 22 years in IT with my theism intact. It turns out that there are no shortcuts to a theistic worldview. You have to support it with evidence. You have to be able to show your work about how you reached your conclusions. I'm a theist today because I never found a single atheist in any software development job who could even begin to challenge the evidence that I collected from listening to all those lectures and debates that I started from in my early 20s. It was as easy to defeat them as taking candy from a baby.

If only Christian parents and Christian leaders understood the importance of scientific facts when they talk to young people about Christianity. We need to be less worried about hurting the feelings of young people by making them "feel dumb". Christianity isn't supposed to be easy. It's not a bad thing to ask people to work hard at learning how to rationally ground it with evidence. If we want to stop our young people from being lazy, ignorant and cowardly, then the right way to do it is to make them work. Make them learn. Make them fight.

# Are the Galapagos finch beaks evidence of Darwinian evolution?

**Wintery Knight** · 12 February 2024 · Archived copy · Original

Were you taught in biology class that the changing lengths of finch beaks was a good proof of Darwinian evolution? Many students were… but is it true?

Jonathan Wells has an article about it at Evolution News.

It says:

> When Charles Darwin visited the Galápagos Islands in 1835, he collected specimens of the local wildlife. These included some finches that he threw into bags, many of them mislabeled. Although the Galápagos finches had little impact on Darwin's thinking (he doesn't even mention them in *The Origin of Species*), biologists who studied them a century later called them "Darwin's finches" and invented the myth that Darwin had correlated differences in the finches' beaks with different food sources (he hadn't). According to the myth, Darwin was inspired by the finches to formulate his theory of evolution, thoughaccording to historian of science Frank Sulloway "nothing could be further from the truth."
>
> In the 1970s, biologists studied a population of medium ground finches on one of the islands in great detail. When a severe drought left only large, hard-to-crack seeds, 85 percent of the birds perished. The survivors had beaks that were about 5 percent larger than the average beak size in the original population. The biologists estimated that if similar droughts occurred once every ten years, the population could become a new species in only 200 years. In a 1999 booklet defending evolution, the U.S. National Academy of Sciences called the finches "a particularly compelling example" of the origin of species.
>
> **But after the drought, birds with smaller beaks flourished again, and the average beak size of the population returned to normal. No net evolution had occurred.** No matter; Darwin's finches became an icon of evolution that is still featured in most biology textbooks.
>
> In the 1980s, a population of large ground finches, with larger beaks than the medium ground finches, migrated to the island. When a drought in 2004-2005 again reduced the food supply, the medium and large ground finch populations both declined. But since even the largest beaks among the medium ground finches were no match for the beaks of the large ground finches, the latter pretty much monopolized the larger seeds and the former had to make do with smaller seeds. This time, the medium ground finches that survived the drought had beaks that were *smaller* than the average size in the original population. Biologists studying the finches argued that birds with smaller beaks were better able to eat the tiny seeds that were left after the large ground finches ate the big ones, and they concluded that this was again an example of "evolutionary change."
>
> **[…]Wait a minute. Average beak size increased slightly during one drought, only to return to normal after the rains return. Then average beak size decreased slightly during another drought. A region of DNA is correlated with beak size. And somehow that tells us how finches evolved in the first place?**

There is an important distinction to make between micro-evolution and macro-evolution. Changes within a type is micro-evolution. Evolving a new organ type or body plan is macro-evolution. There is plenty of evidence for micro-evolution, but no evidence for macro-evolution.

What needs to be proven by the Darwinists is that the same process that results in different average beak size in a population of finches after a drought can create the finches in the first place. I think that Darwinists are credulous – they believe what they want to believe because they want to believe it, even if the evidence is incredibly weak. Darwinists must demonstrate that *heritable variations can result in the generation of new organ types and body plans.* Changes in average beak size is not interesting. What is needed is to show how the beaks, much less the wings, evolved in the first place.

**Icons of Evolution**

Jonathan has actually written about a number of  misleading things that you may mind in Biology textbooks.

Here are the sections in his book "Icons of Evolution":

- The Miller-Urey Experiment
- Darwin's Tree of Life
- Homology in Vertebrate Limbs
- Haeckel's Embroys
- Archaeopteryx–The Missing Link
- Peppered Moths
- Darwin's Finches
- Four-Winged Fruit Flies
- Fossil Horses and Directed Evolution
- From Ape to Human: The Ultimate Icon

Dr. Wells holds a Ph.D in Molecular and Cell Biology from the University of California at Berkeley.

# Is the “RNA world” hypothesis a good naturalistic explanation for the origin of life?

**Wintery Knight** · 13 February 2024 · Archived copy · Original

A very good book on science apologetics was published recently, called “The Comprehensive Guide to Science and Faith: Exploring the Ultimate Questions About Life and the Cosmos“. Well, there’s an ongoing series of posts about the book at Evolution News, and one of them caught my eye. They are talking about the origin of life, and what’s needed to create life from non-life.

Here is the post from Evolution News.

The article starts by explaining the what is required to show how non-living components could be organized into a living system:

- plausible biochemical paths from individual bio-building blocks like amino acids or nucleic acids to functional polymers such as proteins and DNA.
- ways to speed up chemical reactions that are naturally slow.
- the ordering of amino acids in proteins and nucleotide bases in RNA and DNA that allows them to function properly.

The leading naturalistic explanation to solve these problems is called the “RNA world” hypothesis:

> The most popular proposal for the first self-replicating molecule is RNA — where life was first based upon RNA carrying both genetic information (akin to modern DNA) and performing catalytic functions (akin to modern enyzmes), in what is termed the *RNA world*.

The article lists several problems with the RNA world hypothesis. Dr. Walter Bradley lists two of those problems.

First, the assembly of RNA requires intelligent design:

> First, RNA has not been shown to assemble in a laboratory without the help of a skilled chemist intelligently guiding the process. Origin-of-life theorist Steven Benner explained that a major obstacle to the natural production of RNA is that “RNA requires water to function, but RNA cannot emerge in water, and does not persist in water without repair” due to water’s “rapid and irreversible” corrosive effects upon RNA.[3] In this “water paradox,” Benner explains that “life seems to need a substance (water) that is inherently toxic to polymers (e.g., RNA) necessary for life.”[4]
>
> To overcome such difficulties, Benner and other chemists carefully designed experimental conditions that are favorable to the production of RNA. But Robert Shapiro explains that these experiments do not simulate natural conditions: “The flaw is in the logic — that this experimental control by researchers in a modern laboratory could have been available on the early Earth.”[5] Reviewing attempts to construct RNA in the lab, James Tour likewise found that “[t]he conditions they used were cleverly selected,” but in the natural world, “the controlled conditions required to generate” RNA are “painfully improbable.”[6] Origin-of-life theorists Michael Robertson and Gerald Joyce even called the natural origin of RNA a “Prebiotic Chemist’s Nightmare” because of “the intractable mixtures that are obtained in experiments designed to simulate the chemistry of the primitive Earth.”[7] In the end, these experiments demonstrate one thing: RNA can only form by intelligent design.

The second problem is that the RNA world hypothesis is that it requires the existence of a self-replicating RNA molecule in order to get started. But this self-replicator contains a lot of biological information that is beyond the reach of chance to produce:

> The most fundamental problem with the RNA world hypothesis is its inability to explain the origin of information in the first self-replicating RNA molecule — which experts suggest would have had to be at least 100 nucleotides long, if not between 200 and 300 nucleotides in length.[10] How did the nucleotide bases in RNA become properly ordered to produce life? There are no known chemical or physical laws that can do this. To explain the ordering of nucleotides in the first self-replicating RNA molecule, origin-of-life theorists have no explanation other than blind chance. As noted, ID theorists call this obstacle the information sequence problem, but multiple mainstream theorists have also observed the great unlikelihood of naturally producing a precise RNA sequence required for replication.

Whenever I sit down to write some code or to write a blog post, I can start with one letter, then add another, then add another, until I have a functioning program, or a legible blog post. It might be possible for random chance to make a meaningful word out of 3 letters, like “the” or “hat”. But it’s not possible to make a self-replicating RNA molecule that way. The required sequence is just too long, and every letter has to be just right in order for it to function as a self-replicating system. The simplest self-replicating molecule is extremely complicated.

Anyway, check out the article, and if you want to read all about Walter Bradley (my role model), there is a new book out about him called “For a Greater Purpose: The Life and Legacy of Walter Bradley” which I finished, and it was great.

# Lectures on science apologetics for a general audience

**Wintery Knight** · 14 February 2024 · Archived copy · Original

I noticed that there is a new Dallas, TX Science and Faith conference scheduled for February 17th, 2024. This one is offering online viewing, if you can't make it to Dallas. Well, I thought it might be fun to review some lectures from the 2019 Dallas, TX Science and Faith conference, because they posted them online. It's a nice way to get an easy, popular-level introduction to science apologetics.

Here are a few of the sessions I'm looking forward to:

- **How Earth is Designed for Life**
  *Bijan Nemati*
- **How Earth is Designed for Scientific Discovery**
  *Jay Richards & Guillermo Gonzalez*
- **How Earth is Designed for Technological Advancement**
  *Brian Miller*
- **Intelligent Design as a Scientific Theory**
  *Stephen Meyer*
- **Can Evolution and Intelligent Design Be Combined? Why the Front-End Loaded Concepts of Design Fail**
  Stephen Meyer

When it comes to scientific arguments, I have 6 that I usually use:

- origin of the universe
- fine-tuning of the initial conditions of the universe
- origin of the life
- sudden origin of body plans in the Cambrian explosion
- habitability and discoverability
- molecular machines

Well, they did one of these conferences 5 years ago in 2019, and they posted the videos. And they actually covered a few of these arguments. Here is the YouTube playlist.

The origin of the universe:

The origin of life:

Habitability and Discoverability:

Cambrian explosion:

If you're wondering, "is this the lecture where James Tour got really, really excited with a church audience?" Yes, this is the one.

The 2024 edition seems to be superior to the 2019 edition, because they added two people I really like: Brian Miller and Guillermo Gonzalez. The one I've never heard of is Dr. Bijan Nemati, but he has impressive credentials:

> Bijan Nemati is a Principal Research Scientist at the University of Alabama in Huntsville. He received his Ph.D. in high energy physics from the University of Washington, based on his research on heavy quark decays detected at the Stanford Linear Accelerator Center. After post-doctoral work at the Cornell synchrotron, he

> left particle physics to work on advanced astronomical instruments at the Jet Propulsion Laboratory.

I wonder if he will be a good speaker? He certainly has an impressive resume, that's for sure. I wish we had a 100 scholars for everyone one who is speaking at the conference, but maybe if we can get Christian parents excited about the scholars we have, then we can make more of them.

People sometimes try to talk to me about charismatic pastors, and Big Eva politicians, famous Christian athletes, famous Christian artists, etc. And I just have no regard for people who talk about things that they haven't investigated themselves. I'm even a little suspicious of analytic philosophers! The guys who I admire and look up to are the STEM guys. The mathematicians and the scientists. The guys who work in the labs. The guys who move the ball forwards by giving us evidence that we can talk about and use with people who don't even know where to begin looking for evidence.

# How is “don’t judge” compassion working out in Denver, Colorado?

**Wintery Knight** · 15 February 2024 · Archived copy · Original

Whenever I think of the secular left, I think of people who are desperately trying to portray themselves to others as generous and compassionate, even as they pass the risks and costs of their actions off to the people they hate. That was on display when Martha’s Vineyard – a Democrat stronghold – immediately deported the illegal immigrants that Ron DeSantis bused over to them.

And that’s not unusual. Let’s take a look at a real sanctuary city, Denver, Colorado.

The Federation for American Immigration Reform lists them on their sanctuary cities page:

> The City and County of Denver – the capital city of Colorado with a population of 727,000 – became an illegal alien sanctuary on the basis of an April 2014 Sheriff Department memo stating that Denver no longer honors immigration detainers. This was codified into law by a City Council ordinance from August 2017.
>
> Also in 2017, the city stopped sending federal officials its daily booking sheets in order to limit immigration officials awareness of criminal alien activities.

And I found a story on it in the far-left Denver Post:

> Denver’s new immigration measures aim to resist federal enforcement in several ways, but Denver Police Chief Robert White summarized them bluntly at a signing ceremony Thursday.
>
> “We do not do the work of ICE,” he said, referring to U.S. Immigration and Customs Enforcement in a comment that prompted wild applause inside Denver’s city hall from the immigrants, advocates and city officials who filled the room.
>
> Minutes later, Mayor Michael Hancock sat down at a table and put his pen — actually 10 pens, in succession — to a new immigration ordinance, with City Council sponsors Paul López and Robin Kniech at his side. He then signed a companion executive order, which directs city agencies to coordinate on additional help for immigrants living in the country illegally and set up a donation-based legal defense fund for people facing deportation proceedings.

Wild applause! Wow! It sounds like all the people in Denver are really proud of their police and government. This is what they voted for, so they are sure to be thrilled with the results. Right?

Well… not so much.

Here’s an article from the New York Post, dated January 30, 2024:

> Colorado’s capital has joined the evergrowing list of cities that have become overwhelmed by the influx of migrants — with over 38,000 asylum seekers arriving in Denver in the past year.

How could this happen? As long as the people enacting the policy are virtuous, then how could there ever be any bad consequences? THEIR SUPERIOR VIRTUE MAKES IT WORK OUT. Or does it?

Whenever you bring in a huge number of unskilled immigrants – many of whom don’t speak the language – you end up causing shortages of products and services. The most obvious shortages appear in housing, health care, education and policing.

The article notes:

> Dr. Steven Federico, a pediatrician and chief of government and community affairs at Denver Health, told the outlet that hospitals like his have become a “safety net” for the city.
>
> […]Federico says hospital officials have begged state and federal officials for help covering $10 million in unpaid medical bills from migrants.

What do leftists do when the bill comes due for their “don’t judge” compassion? Why, they pass the bill to other people. People who never approved of their “don’t judge” compassion in the first place. People who warned them about the costs of their “don’t judge” compassion. The grown-ups always get the bill for the children.

Not just health care – education, too:

> Denver Public Schools has seen an additional 3,000 students enter the system since July, putting a strain on their budget as funding gets set based on the district’s population the previous October, according to Adrienne Endres, who oversees multilingual education for the district.

Why is housing so expensive? Why is health care so expensive? Why is education so expensive? Why is policing so expensive? These things become expensive when you import millions of unskilled immigrants who *use more in services* than they *pay in taxes*.

Let’s look at an article from Denver local news channel KUSA 9NEWS.

It says:

> No part of the City of Denver will be spared from proposed budget cuts to help pay for the migrant crisis. Every office, from the police department to the animal shelter, is being asked to cut money. It could even impact the funding our elections department gets this year.
>
> In a critical 2024 election year, the Denver Clerk and Recorder’s Office says Mayor Mike Johnston has asked to cut nearly a million dollars from the department that oversees elections. The money, they say, is needed to help pay for the migrant crisis.
>
> Down the street at the police department, Denver Police Department (DPD) says they’re working on finding places to cut their budget. So is the Department of Public Safety, and the animal shelter, and the health department. Every agency in Denver has been told to find ways to cut its budget for the same reason.
>
> […]Last Friday, Johnston announced publicly the first two cuts. $5 million from the Department of Motor Vehicles (DMV) and Denver Parks and Recreation.
>
> The Denver District Attorney’s Office says they’ve been asked to cut their 2024 budget by 5%. The Department of General Services says they’re looking to cut 15%. Even the Department of Human Services, which is leading the efforts to help migrants, has already diverted $15 million from other projects towards the crisis and is looking for ways to cut more money.
>
> Even the Department of Transportation and Infrastructure, which is responsible for everything from trash pickup to potholes, may soon have to cut funding.

So, I hope voters can learn from the mistakes of Democrat sanctuary cities. Contrast the jubilant tone, when the city government was crowing about their “don’t judge” compassion, with their anguish now that the bill has come due. But do you think they have learned anything from it, now that they have to beg and plead for money from other taxpayers? Of course not. The virtue signaling is like crack cocaine to them. Once people give up on the objective morality of Christianity, they become obsessed with signaling their virtue to their neighbors, since that’s all morality is to them. Compliance with the expectations of their neighbors. And they can’t stop doing it, because that’s how they deal with the guilt from their own sins, and the consequences of those sins. Sadly, they rarely pay the costs of their virtue signaling. They pass the bill to you.

# William Lane Craig explains how Christianity answers evil and suffering

**Wintery Knight** · 16 February 2024 · Archived copy · Original

A lot of people in the West complain too much about any little suffering they have to experience. But sometimes, when a very harsh suffering is felt by someone who has tried to follow Jesus, an explanation is necessary. I found something very good on the Reasonable Faith web site, written by Dr. William Lane Craig.

He makes the following points:

1. *We are not in a good position to assess the probability of whether God has morally sufficient reasons for the evils that occur.*
2. *The Christian faith entails doctrines that increase the probability of the co-existence of God and evil.*
3. *Relative to the full scope of the evidence, God's existence is probable.*

I've written before about point #1, in which Dr. Craig's describes the limitations of human knowledge that make it hard for us to know for certain that a specific evil or suffering does not have a good reason for God to allow it. And I've written about #3, in which Dr. Craig makes some arguments for God's existence. But #2 might be new to some of you, so let's look at that.

He makes four sub points in section 2 about Christian doctrines that make the existence of evil and suffering more reasonable.

- 2. a)*The chief purpose of life is not happiness, but the knowledge of God.*
- 2. b) *Mankind is in a state of rebellion against God and His purpose.*
- 2. c) *The knowledge of God spills over into eternal life.*
- 2. d) *The knowledge of God is an incommensurable good.*

My favorite one is 2. a), so let's look at that one. He says:

> 2. a. *The chief purpose of life is not happiness, but the knowledge of God.* One reason that the problem of evil seems so puzzling is that we tend to think that if God exists, then His goal for human life is happiness in this world. God's role is to provide comfortable environment for His human pets. But on the Christian view this is false. We are not God's pets, and man's end is not happiness in this world, but the knowledge of God, which will ultimately bring true and everlasting human fulfillment. Many evils occur in life which maybe utterly pointless with respect to the goal of producing human happiness in this world, but they may not be unjustified with respect to producing the knowledge of God. Innocent human suffering provides an occasion for deeper dependency and trust in God, either on the part of the sufferer or those around him. Of course, whether God's purpose is achieved through our suffering will depend on our response. Do we respond with anger and bitterness toward God, or do we turn to Him in faith for strength to endure?

You know, I always get confused when I see Christians trying to follow the script of the world and trying to make themselves feel good with consumer purchases, travel, fun experiences, showing off to others, etc. When I read the story of Jesus, it's pretty clear that the normal Christian life, if the person is following Jesus at all, is about suffering the disapproval and opposition of non-Christians while you remain faithful and obedient to God. Today, there's probably no better example of this than defending unborn children from adult selfishness. Although, defending born children from selfish adults who seek to deprive children of their biological mother and father is pretty bad, too. Nobody is going to like you for restricting their fun (i.e. – abortion, divorce, adultery, homosexuality, etc.), but being willing to take the heat from non-Christians for the sake of promoting what God thinks is right is true Christianity. It's what Jesus would do.

Anyway, the one I've been thinking about more lately is 2. d), where Dr. Craig writes this:

> *2. d) The knowledge of God is an incommensurable good.* To know God, the source of infinite goodness and love, is an incomparable good, the fulfillment of human existence. The sufferings of this life cannot even be compared to it. Thus, the person who knows God, no matter what he suffers, no matter how awful his pain, can still say, "God is good to me," simply by virtue of the fact that he knows God, an incomparable good.

I sometimes feel pretty stressed out about Americans who were born in conservative states, raised by two married Christian parents, attended Christian schools and youth groups, and then abandoned their faith for atheism as soon as they hit college. It really bothers me how people who had all these advantages turned their backs on God, and they're ungrateful for all their blessings. They show no curiosity about God – they don't want to know him. But when you read the gospels to see what Jesus has to say about these sorts of people, it's very comforting. He really sees the problem, and he is on the side of the little guy who has to struggle to be faithful and obedient to God. The Bible has nothing to say to people who are able to feel happy and successful apart from God. It speaks to people who are struggling to follow God. Even when things are difficult, Jesus speaks to the problem of being an alien and a stranger in a world that turns its back on him.

# Alexander Vilenkin: “All the evidence we have says that the universe had a beginning”

**Wintery Knight** · 17 February 2024 · Archived copy · Original

I’ve decided to explain why physicists believe that there was a creation event in this post. That is to say, I’ve decided to let famous cosmologist Alexander Vilenkin do it.

From Uncommon Descent.

Excerpt:

> Did the cosmos have a beginning? The Big Bang theory seems to suggest it did, but in recent decades, cosmologists have concocted elaborate theories – for example, an eternally inflating universe or a cyclic universe – which claim to avoid the need for a beginning of the cosmos. Now it appears that the universe really had a beginning after all, even if it wasn’t necessarily the Big Bang.
>
> At a meeting of scientists – titled “State of the Universe” – convened last week at Cambridge University to honor Stephen Hawking’s 70th birthday, cosmologist Alexander Vilenkin of Tufts University in Boston presented evidence that the universe is not eternal after all, leaving scientists at a loss to explain how the cosmos got started without a supernatural creator. The meeting was reported in *New Scientist* magazine (Why physicists can’t avoid a creation event, 11 January 2012).
>
> […]In his presentation, Professor Vilenkin discussed three theories which claim to avoid the need for a beginning of the cosmos.

The three theories are chaotic inflationary model, the oscillating model and quantum gravity model. Regular readers will know that those have all been addressed in William Lane Craig’s peer-reviewed paper that evaluates alternatives to the standard Big Bang cosmology.

But let’s see what Vilenkin said.

More:

> One popular theory is eternal inflation. Most readers will be familiar with the theory of *inflation*, which says that the universe increased in volume by a factor of at least 10^78 in its very early stages (from 10^−36 seconds after the Big Bang to sometime between 10^−33 and 10^−32 seconds), before settling into the slower rate of expansion that we see today. The theory of *eternal inflation* goes further, and holds that the universe is constantly giving birth to smaller “bubble” universes within an ever-expanding multiverse. Each bubble universe undergoes its own initial period of inflation. In some versions of the theory, the bubbles go both backwards and forwards in time, allowing the possibility of an infinite past. Trouble is, the value of one particular cosmic parameter rules out that possibility:
>
> > But in 2003, a team including Vilenkin and Guth considered what eternal inflation would mean for the Hubble constant, which describes mathematically the expansion of the universe. They found that the equations didn’t work (Physical Review Letters, DOI: 10.1103/physrevlett.90.151301). “You can’t construct a space-time with this property,” says Vilenkin. It turns out that the constant has a lower limit that prevents inflation in both time directions. “It can’t possibly be eternal in the past,” says Vilenkin. “There must be some kind of boundary.”
>
> A second option explored by Vilenkin was that of a cyclic universe, where the universe goes through an infinite series of big bangs and crunches, with no specific beginning. It was even claimed that a cyclic universe could explain the low observed value of the cosmological constant. But as Vilenkin found, there’s a problem if you

> look at the *disorder* in the universe:
>
> > Disorder increases with time. So following each cycle, the universe must get more and more disordered. But if there has already been an infinite number of cycles, the universe we inhabit now should be in a state of maximum disorder. Such a universe would be uniformly lukewarm and featureless, and definitely lacking such complicated beings as stars, planets and physicists – nothing like the one we see around us.
> >
> > One way around that is to propose that the universe just gets bigger with every cycle. Then the amount of disorder per volume doesn't increase, so needn't reach the maximum. But Vilenkin found that this scenario falls prey to the same mathematical argument as eternal inflation: if your universe keeps getting bigger, it must have started somewhere.
>
> However, Vilenkin's options were not exhausted yet. There was another possibility: that the universe had sprung from an eternal cosmic egg:
>
> > Vilenkin's final strike is an attack on a third, lesser-known proposal that the cosmos existed eternally in a static state called the cosmic egg. This finally "cracked" to create the big bang, leading to the expanding universe we see today. Late last year Vilenkin and graduate student Audrey Mithani showed that the egg could not have existed forever after all, as quantum instabilities would force it to collapse after a finite amount of time (arxiv.org/abs/1110.4096). If it cracked instead, leading to the big bang, then this must have happened before it collapsed – and therefore also after a finite amount of time.
> >
> > "This is also not a good candidate for a beginningless universe," Vilenkin concludes.
>
> So at the end of the day, what is Vilenkin's verdict?
>
> > "All the evidence we have says that the universe had a beginning."

This is consistent with the Borde-Guth-Vilenkin Theorem, which I blogged about before, and which William Lane Craig leveraged to his advantage in his debate with Peter Millican.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, can be eternal into the past. *No one* denies the expansion of space in our universe, and so we are left with a cosmic beginning. Even speculative alternative cosmologies do not escape the need for a beginning.

**Conclusion**

If the universe came into being out of nothing, which seems to be the case from science, then the universe has a cause. Things do not pop into being, uncaused, out of nothing. The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

Now, let's have a discussion about this science in our churches, and see if we can't train Christians to engage with non-Christians about the evidence so that everyone accepts what science tells us about the origin of the universe.

# New study: Harvard professor finds no racial bias in police shootings

**Wintery Knight** · 18 February 2024 · Archived copy · Original

If there's one thing that the secular left wants you to believe about the police, it's that white police officers are constantly shooting innocent black people with no criminal records for "crimes" like wearing "baggy pants". When I speak with secular leftists, especially women, this view is taken as being as true as the fact that the Earth orbits the Sun. But is it?

You might not know about this, but there is a pretty interesting black professor of Economics teaching at Harvard University. The Free Press has an article about him:

> Roland Fryer, an economics professor at Harvard, is a superstar by any measure. At the age of 30, he became the youngest black person ever to receive tenure at the Harvard. The MacArthur Foundation declared him a genius in 2011. And in 2015 Fryer won the prestigious John Bates Clark Medal, given yearly to the most promising economist under 40.
>
> […]Abandoned at birth by his mother, Fryer clawed his way out of poverty to land a spot at the University of Texas, Arlington, earned his Ph.D. at Penn State, done postdoctoral research at the University of Chicago with the Nobel Laureate Gary Becker, and, finally, wound up at Harvard, where he eventually met his wife, a biologist, and became one of the university's most celebrated professors.

OK, that's very interesting. But now he's authored a new study that has caused him to require armed security.

Here's a report about it from the Daily Caller, based on a recent interview with Bari Weiss.

> Harvard economics Professor Roland Fryer needed armed security with him to go out in public after he published a study finding no evidence of racial bias in officer-involved shootings, he said in an interview with The Free Press founder Bari Weiss.
>
> Fryer, a top economist who became the youngest tenured black professor in Harvard's history at just 30 years old, published a study in 2016 showing there was "no racial differences in officer involved-shootings." After he published the study, "all hell broke loose," Fryer told Weiss, noting people "lose their mind when they don't like the result."
>
> "I lived under police protection for about 30 to 40 days," he said during the interview. "I had a seven day old daughter at the time…I was going to the grocery store to get diapers with an armed guard."

And here is his conclusion:

> "On the most extreme use of force – officer involved shootings – we find no racial differences in either the raw data or when contextual factors are taken into account," Fryer's study found.
>
> […]He said he was "surprised" by the result because he expected to find evidence of bias.
>
> […]After the study was complete, Fryer said he hired eight additional freshmen to redo the study but came up with the same result.

Here's a clip from the podcast that was posted on Twitter:

> "We didn't find any racial bias in police shootings."
>
> Economist Roland Fryer tells @bariweiss at @uaustinorg about the 2016 paper on policing bias that led to his

> need for an “armed guard” for over a month and the academics who told him not to publish. https://t.co/dklaGtiMxT pic.twitter.com/95FbOe3jhJ
>
> — The Free Press (@TheFP) February 15, 2024

If you want to listen to the full podcast, it’s up at The Free Press.

# Biden DOJ sues Tennessee for law against HIV-positive prostitution

**Wintery Knight** · 19 February 2024 · Archived copy · Original

What would you think if I told you that the same member of the Biden administration who was responsible for raiding the homes of peaceful pro-lifers and persecuting police officers for protecting the public from criminals is now suing the state of Tennessee? Why is she suing the state of Tennessee? Because Tennessee has a law that is tough on prostitutes who have HIV.

Her name is Kristen Clarke.

Let's start with pre-dawn raiding the home of a pro-life activist.

Daily Signal reports:

> Republican Texas Rep. Chip Roy grilled the assistant attorney general for civil rights at the Department of Justice on Tuesday over the DOJ's targeting of pro-life activists like Catholic father Mark Houck.
>
> Kristen Clarke, who oversees investigations into violations of the Freedom of Access to Clinic Entrances Act, came before the House Judiciary Subcommittee on the Constitution and Limited Government on Tuesday for a hearing on the "Oversight of the Department of Justice Civil Rights Division."
>
> […]Roy drew attention to the fact that Clarke's division charged at least 26 individuals with FACE Act violations in 2022 and more in 2023.
>
> "Even under your watch, it's at least 35 to 1 or 2," Roy emphasized. "That is not even-handed. It's far from even handed. And importantly, Mark Houck, who was targeted, had a raid of his home, prosecuted under this, was acquitted by a jury! Have you apologized to him on behalf of the Department of Justice for that grave violation of his civil rights? Having his family have to watch him being raided at his home? And then he's acquitted by a federal jury? Have you apologized to him?"

She refused to apologize to Mark Houck. Roy replied to her non-apology:

> "So the answer to that is no," Roy said.

Houck was arrested at his home by heavily armed police, in front of his wife and 7 children, who were traumatized. Houck is now suing the Biden DOJ for "malicious and retaliatory prosecution."

In a different Daily Signal article, Virginia Allen notes that Clarke has a reputation for far-left activism:

> Well, the DOJ's Civil Rights Division is responsible for investigations into crimes against pro-life pregnancy centers, and the Civil Rights Division of the DOJ is run by a woman named Kristen Clarke. Kristen Clarke is pro-defund the police. She is for supporting Antifa, BLM, and she is on her own Twitter account vehemently opposed to pro-life pregnancy centers. So, you've got a major conflict of interest within the DOJ, and you've got [Attorney General] Merrick Garland running cover for her, insisting that the DOJ is being perfectly evenhanded.

Virginia says "Kristen Clarke is pro-defund the police". To assess that, let's take a look at this article from Daily Wire:

> The U.S. Department of Justice is opening a civil rights investigation into the City of Memphis and the Memphis Police Department to determine whether there is a pattern or practice of conduct that violates the constitution or federal civil rights law, the U.S. Justice Department announced Thursday.

Time will tell whether this is a serious investigation, or something more like what happened with Mark Houck. One thing for sure – Memphis has a reputation as an extremely high-crime, high-violence area.

According to this article by WREG News Channel 3:

> Homicide rates dropped dramatically across the country in 2023, but Memphis is bucking the national trend with a triple-digit increase in killings.
>
> Memphis Police records show 393 homicides in Memphis as of Dec. 28 this year, and 337 of them were considered murders. At least two more people have been killed in the past 24 hours.
>
> The city is poised to end the year with about 400 homicides. That is roughly 100 more than last year and 50 more than 2021.

Do you think that Kristen Clarke's actions will produce good results for law-abiding Memphis taxpayers?

OK, now let's look at Kristen Clarke's actions against the conservative state of Tennessee.

This is from April 2023, in Christian Post:

> The U.S. Department of Justice has filed a lawsuit against Tennessee for passing a law that bans chemical castration and body mutilating surgeries from being performed on youth who are confused about their sexual identity.
>
> […]Assistant Attorney General Kristen Clarke of the Justice Department's Civil Rights Division said in a statement that she believed no one "should be denied access to necessary medical care just because of their transgender status."

And here is the very latest from February 2024, in Daily Wire:

> The Biden administration's Justice Department filed a lawsuit Thursday against Tennessee's aggravated prostitution law for people with HIV.
>
> […]"People living with HIV should not be subjected to a different system of justice based on outdated science and misguided assumptions," Assistant Attorney General Kristen Clarke of the Justice Department's civil rights division said in a statement.

If you think that I am being rough on Kristen Clarke, then take a look at these interesting articles from Daily Signal:

- Kristen Clarke Is Unfit to Be in Government
- DOJ's Kristen Clarke: A Pro-Abortion Activist Enforcing the Law Against Pro-Lifers
- This Fits the Definition of 'Domestic Terror,' Pregnancy Care Center CEO Says After 2nd Attack
- DOJ Hiding Data on FACE Prosecutions, Congressman Says

I really recommend that you check those articles out.

Also, pray for Kristen Clarke. I noticed that she comes from a West Indian black background like me. (Except I have multiple STEM degrees, and immigrated here by merit through employer sponsor). Pray that God would lead her and give her more wisdom to treat Christians and conservatives fairly. It's too bad that we can't have more Bible-believing Christians in high places, but we can always pray that God would change the hearts and minds of those who are there now.

# The Lion of the Andes: Javier Milei is smashing socialism in Argentina

**Wintery Knight** · 20 February 2024 · Archived copy · Original

Regular readers will know that I am a West Indian black, and so I try to follow what's happening in Latin America and South America. Everyone knows that Venezuela elected socialists and they are in a death spiral, but Argentina wasn't far behind. Argentina's been electing leftist after leftist, and their economy kept going down. Then they did the unexpected. They elected an economist.

First, let's find out about him, and the recent election:

> Javier Gerardo Milei (born 22 October 1970) is an Argentine politician and economist who has served as President of Argentina since December 2023. Milei has taught university courses in macroeconomics, economic growth, microeconomics, and mathematics for economists. He is an author on economics and politics, and also hosted radio programs on the subject.
>
> Milei is known for his flamboyant personality, distinctive personal style, and strong media presence. He has been described politically as a right-wing populist and right-wing libertarian, and supports laissez-faire economics, aligning specifically with minarchist and anarcho-capitalist principles. Milei has proposed a comprehensive overhaul of the country's fiscal and structural policies.

I have my disagreements with libertarians. Usually, they are terrible on foreign policy and social issues – although Milei is pretty moderate on both of those. But if there's one thing that libertarians know well, it's economics.

When Milei took over, Argentina was ranked #27 out of 32 countries in the Americas region on the Index of Economic Freedom. They're just above socialist disaster zones like Venezula, Cuba and Haiti. As soon as Milei got into office, he took a wrecking ball to the big government socialism of the previous leftist regimes. And now the results are starting to roll in.

This is from far-left Barron's:

> The Argentine government in January saw its first monthly budget surplus in nearly 12 years, as new President Javier Milei continues to push for strong spending cuts, the Economy Ministry announced.
>
> January was the first full month in office for Milei, a far-right libertarian who took office in December, and it ended with a positive balance for public-sector finances of $589 million at the official exchange rate, the government said late Friday.

> The figure includes payment of interest on the public debt.
>
> It is "the first (monthly) financial surplus since August 2012, and the first surplus for a January since 2011," the Economy Ministry said, according to the official Telam news agency.
>
> […]Milei, an economist, has advocated sharp cuts in spending and a reduction of public debt on the way to a dollarization of the economy.
>
> Following a 50 percent devaluation of the peso, a lifting of price controls and strong rate increases, Argentina saw an inflation rate for January of 20.6 percent, with a 12-month rate of 254.2 percent.
>
> The year 2023, the final year of the center-left government of Alberto Fernandez, ended with a 211 percent inflation rate.
>
> With poverty affecting 45 percent of the population, Milei has predicted an economic rebound within three months.

Now, if you are a Thomas Sowell fan like I am, then you will be able to recognize some of these economic polices that Milei has adopted:

- sharp cuts in government spending
- reduction of public debt
- switch economy to a stable currency (U.S. dollar)
- remove price controls (price controls means government sets the prices, e.g. – setting and raising the minimum wage)
- raising interest rates (a way to curb inflation)
- shutting down useless government departments
- privatize public companies (e.g. – USPS, AMTRAK)
- cutting subsidies to economic sectors
- eliminate rent control (a form of price control)
- open-sky policy (deregulate commercial air industry)
- ending import restrictions
- de-regulate satellite services
- lower the fiscal deficit

Conservatives love these economic policies. You can see economic policies like these in states where free market capitalists dominate, like Tennessee and Florida. Leftists hate these economic policies. You don't see these policies in states where leftists dominate, like New York and California. These are the policies that communists hate.

I suggest that we keep watching countries in Latin America and South America that adopt free market principles, and then share those articles with other Americans, so they can learn what works and what doesn't work. We can't keep talking about follow your heart and don't judge forever. We are running out of "other people's money" to pay for this feelings-based nonsense. Already the next generation of Americans will be inheriting much more debt than you or I were born with. We have to vote smarter – vote for leaders who have a proven record of doing the things that Milei is doing.

# Twenty questions about the Big Bang answered in less than 20 minutes

**Wintery Knight** · 21 February 2024 · Archived copy · Original

My favorite source for evidence related to science these days is the Discovery Institute. Not only do they employ the rock star of science and religion, Dr. Stephen C. Meyer, but they have a bunch more excellent speakers. They publish a lot of books, and many of those are made into audio book versions. One of the guys I like the most is Brian Miller, who contributes to their books and does videos.

He did a recent video talking about the Big Bang cosmology, and its relevance to the question of God's existence. It's important for people who prefer the young-Earth interpretation of Genesis to realize that the Big Bang is not compatible with naturalism. It's actually lethal to naturalism, because it requires a SUPER-natural cause to bring the natural world into being. I have friends who prefer the young Earth interpretation of Genesis who argue with the co-workers and family members from the Big Bang, just to get them started on their spiritual journey.

Anyway, here is the video:

And here are the questions that he answers:

- What is the big bang theory?
- Why did scientists initially dispute the big bang?
- What did scientists believe before the big bang?
- What models have been proposed to maintain the idea of an eternal universe?
- Why did scientists come to accept the big bang?
- Who is Georges Lemaitre?
- How did the scientific community receive Lemaitre's idea?
- How did Edwin Hubble contribute to the big bang theory?
- What is the most compelling evidence for the big bang?
- What does the big bang imply about belief in God?
- Are there current critics of the big bang model?
- Why is an eternal universe so important to atheists?
- Why is the big bang theory still being challenged?
- Did the universe have a beginning?
- What are the arguments against a beginning to the universe?
- What is a singularity?
- Does the universe need a creator?
- What about the idea of a multiverse?
- Lawrence Krauss thinks the universe possibly came from "nothing." How would you respond?
- What does Lawrence Krauss mean by nothing?

If this is something that you have not looked into, this video is a pretty good primer. He only mentions the expanding universe and the cosmic microwave background radiation as evidences. But there are other good ones, such as the light element abundance predictions (75% hydrogen, 24% helium) and the second law of thermodynamics (entropy) that he could have mentioned.

There are definitely open problems with the Big Bang cosmology, but the main thing that Christians should know is that this evidence is used in formal academic debates by people like William Lane Craig, Stephen C. Meyer, etc. to

annihilate atheism. Personally, I would be thrilled if the scientific evidence tilted towards a young Earth. And it very well could, and there are good people working on that problem. But I do think that all Christians should at least be aware that the current “best” cosmological model is lethal to atheism.

# Does the Bible teach Christians to expect happiness or suffering?

**Wintery Knight** · 22 February 2024 · Archived copy · Original

Is God your cosmic butler? Do you just ring a bell to summon him so that he can give you whatever you want? Let's see what the Bible teaches in the book of 1 Peter. Peter is writing to all the Christians who are spread out all over the place, trying to survive in a world that doesn't care much about things that they think are meaningful.

Pay attention to these verses:

1 Peter 1: 3-7:

> [3] Praise be to the God and Father of our Lord Jesus Christ! In his great mercy he has given us new birth into a living hope through the resurrection of Jesus Christ from the dead,
>
> [4] and into an inheritance that can never perish, spoil or fade. This inheritance is kept in heaven for you,
>
> [5] who through faith are shielded by God's power until the coming of the salvation that is ready to be revealed in the last time.
>
> [6] In all this you greatly rejoice, though now for a little while you may have had to suffer grief in all kinds of trials.
>
> [7] These have come so that the proven genuineness of your faith—of greater worth than gold, which perishes even though refined by fire—may result in praise, glory and honor when Jesus Christ is revealed.

Suffering is normal and expected.

1 Peter 2:6-8:

> [6] For in Scripture it says:
>
> "See, I lay a stone in Zion,
> a chosen and precious cornerstone,
> and the one who trusts in him
> will never be put to shame."
>
> [7] Now to you who believe, this stone is precious. But to those who do not believe,
>
> "The stone the builders rejected
> has become the cornerstone,"
>
> [8] and,
>
> "A stone that causes people to stumble
> and a rock that makes them fall."
>
> They stumble because they disobey the message—which is also what they were destined for.

Rejection by "those who do not believe" is normal and expected.

1 Peter 2:18-24:

> [18] Slaves, in reverent fear of God submit yourselves to your masters, not only to those who are good and considerate, but also to those who are harsh.
>
> [19] For it is commendable if someone bears up under the pain of unjust suffering because they are conscious of God.
>
> [20] But how is it to your credit if you receive a beating for doing wrong and endure it? But if you suffer for

> doing good and you endure it, this is commendable before God.
>
> [21] To this you were called, because Christ suffered for you, leaving you an example, that you should follow in his steps.
>
> [22] "He committed no sin,
> and no deceit was found in his mouth."
>
> [23] When they hurled their insults at him, he did not retaliate; when he suffered, he made no threats. Instead, he entrusted himself to him who judges justly.
>
> [24] "He himself bore our sins" in his body on the cross, so that we might die to sins and live for righteousness; "by his wounds you have been healed."

When people attack you personally for being a Christian, you don't retaliate against them.

1 Peter 3:14-18:

> [14] But even if you should suffer for what is right, you are blessed. "Do not fear their threats; do not be frightened."
>
> [15] But in your hearts revere Christ as Lord. Always be prepared to give an answer to everyone who asks you to give the reason for the hope that you have. But do this with gentleness and respect,
>
> [16] keeping a clear conscience, so that those who speak maliciously against your good behavior in Christ may be ashamed of their slander.
>
> [17] For it is better, if it is God's will, to suffer for doing good than for doing evil.
>
> [18] For Christ also suffered once for sins, the righteous for the unrighteous, to bring you to God. He was put to death in the body but made alive in the Spirit.

Jesus sets the example for Christians of being willing to suffer for obedience to God.

1 Peter 4:1-5:

> [1]Therefore, since Christ suffered in his body, arm yourselves also with the same attitude, because whoever suffers in the body is done with sin.
>
> [2] As a result, they do not live the rest of their earthly lives for evil human desires, but rather for the will of God.
>
> [3] For you have spent enough time in the past doing what pagans choose to do—living in debauchery, lust, drunkenness, orgies, carousing and detestable idolatry.
>
> [4] They are surprised that you do not join them in their reckless, wild living, and they heap abuse on you.
>
> [5] But they will have to give account to him who is ready to judge the living and the dead.

The normal Christian life involves some non-Christians heaping abuse on you, *precisely because* you don't participate in their sins, or celebrate their sins. For example, attending or participating in a same-sex marriage ceremony.

1 Peter 4:12-19:

> [12] Dear friends, do not be surprised at the fiery ordeal that has come on you to test you, as though something strange were happening to you.
>
> [13] But rejoice inasmuch as you participate in the sufferings of Christ, so that you may be overjoyed when his

> glory is revealed.
>
> [14] If you are insulted because of the name of Christ, you are blessed, for the Spirit of glory and of God rests on you.
>
> [15] If you suffer, it should not be as a murderer or thief or any other kind of criminal, or even as a meddler.
>
> [16] However, if you suffer as a Christian, do not be ashamed, but praise God that you bear that name.
>
> [17] For it is time for judgment to begin with God's household; and if it begins with us, what will the outcome be for those who do not obey the gospel of God?
>
> [18] And,
>
> "If it is hard for the righteous to be saved,
> what will become of the ungodly and the sinner?"
>
> [19] So then, those who suffer according to God's will should commit themselves to their faithful Creator and continue to do good.

Christians who experience shame and/or suffering at the hands of some non-Christians for obeying God, are imitating Christ. They should expect to be vindicated, just as Christ was vindicated through his resurrection.

1 Peter 5:5-6:

> [5] In the same way, you who are younger, submit yourselves to your elders. All of you, clothe yourselves with humility toward one another, because,
>
> "God opposes the proud
> but shows favor to the humble."
>
> [6] Humble yourselves, therefore, under God's mighty hand, that he may lift you up in due time.

Authentic Christianity involves obeying God's commandments, and defending God's truth claims and moral values. It doesn't mean virtue signaling to Christians, (or non-Christians, which seems very popular these days among pious Christian leaders). Humility means thinking of yourself less, and comparing yourself to others less. Just do your job as a Christian, and don't think about what it says about you. To anyone. What people think of you doesn't matter.

Look at 1 Corinthians 4:1-5:

> [1] This, then, is how you ought to regard us: as servants of Christ and as those entrusted with the mysteries God has revealed.
>
> [2] Now it is required that those who have been given a trust must prove faithful.
>
> [3] I care very little if I am judged by you or by any human court; indeed, I do not even judge myself.
>
> [4] My conscience is clear, but that does not make me innocent. It is the Lord who judges me.
>
> [5] Therefore judge nothing before the appointed time; wait until the Lord comes. He will bring to light what is hidden in darkness and will expose the motives of the heart. At that time each will receive their praise from God.

Christianity isn't there for you to use to make yourself happier, or to make other people like you. You're not supposed to agree with non-Christians so that they like you. That's missing the entire point of Jesus' example. Jesus obeys God. Some non-Christians get mad at him. Some non-Christians shame Jesus, and make him suffer, for obeying God. God vindicates Jesus. That's the plan. You're supposed to follow that plan, not make up some other compromise and virtue signal plan!

By the way, in no way am I telling Christians to be impractical. You should be as smart as you can, work as hard as you can, and save as much money as you can, in order to make your shame and suffering bearable, without compromising your principles. For example, you could try to make a network of like-minded friends who can support one another when you become a target. You can donate to organizations like Alliance Defending Freedom, a legal group that defends Christians from persecution by the secular left.

But just understand that being rejected, and being mistreated, is part of the normal, authentic Christian life. You're not supposed to agree with non-Christians, or celebrate them, or affirm them, in order to escape feeling shame, and suffering persecution. I don't know how people can read the Bible and not understand what the life of Jesus means. We're supposed to follow Jesus.

# Indiana government removes child from home for lack of trans acceptance

**Wintery Knight** · 23 February 2024 · Archived copy · Original

How will gay marriage affect your marriage? That's what LGBT activists said, when they were arguing for greater acceptance of LGBT causes. At work, you now have to sit through LGBT indoctrination. At school, your child is taught that your Judeo-Christian values and Bible-based theology are wrong. And at home, you'd better affirm the secular left's religion, OR ELSE.

Here's the story from Christian Post:

> An Indiana Catholic couple whose child was removed from their home following disagreements over their son expressing a desire to identify as the opposite sex are asking the U.S. Supreme Court to hear their case.
>
> Parents Mary and Jeremy Cox follow the Bible's teachings on human sexuality, ascribing to the belief that God designs humans as male and female. Because of their religious beliefs and adherence to biological reality, they could not abide using feminine pronouns to identify their son, who demanded to be called by a female name after he told his parents in 2019 that he identified as a girl.
>
> In 2021, the Indiana Department of Child Services initiated an investigation into the parents following a report that they weren't affirming their son's chosen identity as a girl. The boy was eventually removed from his parents' care and placed in a home that affirmed his self-declared gender identity.

The parents are appealing to the Supreme Court:

> According to the law firm Becket, the parents have filed a petition with the Supreme Court asking the justices to hear the case, stating that "this Court should grant this petition and affirm its precedents on the right of fit parents to custody of their children."
>
> In the petition, the attorneys argue that if the Supreme Court does not intervene, other states might use a statute similar to Indiana's to justify removing a child from the home if their parents adhere to biological reality and refuse to affirm their child's self-declared gender identity.
>
> The attorneys highlighted that the state "found the parents fit but still removed the child over an ideological dispute: a disagreement over gender identity."

Becket is a pretty good law firm, so they have a chance. And they'd better win, or this will affect everyone in every state.

But my point about this is… what message does this send to the kinds of people who are still interested in marriage and children? We know that the secular left has given up on marriage and children. You can look at the marriage rates and rates of reproduction in blue states, and clearly see that there is a huge decline in marriage and child-bearing. The only people still having lots of kids are the religious people. So what message does this send to them?

I think that the secular left is dominated by feelings-based "don't judge" "compassion" people. These people are narcissistic – they adopt policies based on how it makes them feel, and how it makes them look to others. They don't care about what incentives they are creating for others, or about how children are affected. Their ambition is to destroy traditional morality in order to appease the self-centered adults, whose approval they crave. They don't know how to lead on moral and spiritual issues – not if that leading causes other people to think they are "mean".

So, how do conservative, religious people see a case like this? The message it sends to them is, don't get married, don't have children. And men especially get this message. The main reason that men get married is to gain the leadership of a home, in order to pass on their values and worldview. Take that away, and men disengage from

marriage and parenting. It even happens with men who are already married. The minute that leftist wives, public school teachers  or family courts overrule a father, the father stops wasting time on leading his home, and withdraws.

I understand that people will want to blame and shame men for declining to participate in marriage and parenting. But we don't care. If you want to reduce men to slaves who just protect and provide, but don't lead on moral and spiritual issues, then we'll decline your offer to marry and have children. You can blame and shame all you want, but if you allow the "don't judge" compassion crowd in the (taxpayer-funded!) schools and courts to overrule men, then you will cause men to decline to participate in marriage and parenting. Good men have other valuable things to do, like serve God directly in ministry. We have a choice.

# Does the Miller-Urey experiment explain how life originated on Earth?

**Wintery Knight** · 24 February 2024 · Archived copy · Original

There are two problems related to the origin of the first living cell, on atheism:

1. The problem of getting the building blocks needed to create life – i.e. the amino acids
2. The problem of creating the functional sequences of amino acids and proteins that can support the minimal operations of a simple living cell

Normally, I concede the first problem and grant the atheist all the building blocks he needs. This is because step 2 is impossible. There is no way, on atheism, to form the sequences of amino acids that will fold up into proteins, and then to form the sequences of proteins that can be used to form everything else in the cell, including the DNA itself.

Today, let's take a look at the problems with step 1.

The Miller-Urey experiments

**The problem of getting the building blocks of life**

Now you may have heard that some scientists managed to spark some gasses to generate most of the 20 amino acids found in living systems. These experiments are called the "Miller-Urey" experiments.

The IDEA center has a nice summary of origin-of-life research that explains a few of the main problems with step 1.

Miler and Urey used the wrong gasses:

> Miller's experiment requires a reducing methane and ammonia atmosphere,[11, 12] however geochemical evidence says the atmosphere was hydrogen, water, and carbon dioxide (non-reducing).[15, 16] The only amino acid produced in a such an atmosphere is glycine (and only when the hydrogen content is unreasonably high), and could not form the necessary building blocks of life.[11]

Miller and Urey didn't account for UV of molecular instability:

> Not only would UV radiation destroy any molecules that were made, but their own short lifespans would also

> greatly limit their numbers. For example, at 100ºC (boiling point of water), the half lives of the nucleic acids Adenine and Guanine are 1 year, uracil is 12 years, and cytozine is 19 days[20] (nucleic acids and other important proteins such as chlorophyll and hemoglobin have never been synthesized in origin-of-life type experiments[19]).

Miller and Urey didn't account for molecular oxygen:

> We all have know ozone in the upper atmosphere protects life from harmful UV radiation. However, ozone is composed of oxygen which is the very gas that Stanley Miller-type experiments avoided, for it prevents the synthesis of organic molecules like the ones obtained from the experiments! Pre-biotic synthesis is in a "damned if you do, damned if you don't" scenario. The chemistry does not work if there is oxygen because the atmosphere would be non-reducing, but if there is no UV-light-blocking oxygen (i.e. ozone – $O_3$) in the atmosphere, the amino acids would be quickly destroyed by extremely high amounts of UV light (which would have been 100 times stronger than today on the early earth).[20, 21, 22] This radiation could destroy methane within a few tens of years,[23] and atmospheric ammonia within 30,000 years.[15]

And there were three other problems too:

> At best the processes would likely create a dilute "thin soup,"[24] destroyed by meteorite impacts every 10 million years.[20, 25] This severely limits the time available to create pre-biotic chemicals and allow for the OOL.

> Chemically speaking, life uses only "left-handed" ("L") amino acids and "right-handed" ("R)" genetic molecules. This is called "chirality," and any account of the origin of life must somehow explain the origin of chirality. Nearly all chemical reactions produce "racemic" mixtures–mixtures with products that are 50% L and 50% R.

Two more problems are not mentioned in the article. A non-peptide bond anywhere in the chain will ruin the chain. You need around 200 amino acids to make a protein. If any of the bonds is not a peptide bond, the chain will not work in a living system. Additionally, the article does not mention the need for the experimenter to *intervene* in order to prevent interfering cross-reactions that would prevent the amino acids from forming.

Now keep in mind that even if you get the building blocks, you are left with the sequencing problem. Like the letters of the words in this blog post, the building blocks of life also need to be put in a meaningful sequence in order to do work in a living system – but that's another topic for another day.

# Is homosexual behavior consistent with the Bible's teachings?

**Wintery Knight** · 25 February 2024 · Archived copy · Original

Here's a post from Christian writer Terrell Clemmons about efforts by gay activists to redefine Christianity so that it is consistent with homosexual behavior. This particular post is focused on Matthew Vines.

She writes:

> In March 2012, two years after having set out to confront homophobia in the church, Matthew presented the results of his "thousands of hours of research" in an hour-long talk titled "The Gay Debate." The upshot of it was this: "The Bible does not condemn loving gay relationships. It never addresses the issues of same-sex orientation or loving same-sex relationships, and the few verses that some cite to support homophobia have nothing to do with LGBT people." The video went viral (more than three quarter million views to date) and Matthew has been disseminating the content of it ever since.
>
> In 2013, he launched "The Reformation Project," "a Bible-based, non-profit organization … to train, connect, and empower gay Christians and their allies to reform church teaching on homosexuality from the ground up." At the inaugural conference, paid for by a $104,000 crowd-funding campaign, fifty LGBT advocates, all professing Christians, gathered for four days in suburban Kansas City for teaching and training, At twenty-three years of age, Matthew Vines was already becoming a formidable cause célèbre.

Terrell summarizes the case he makes, and here is the part I am interested in:

Reason #1: *Non-affirming views inflict pain on LGBT people*. This argument is undoubtedly the most persuasive *emotionally*, but Matthew has produced a Scriptural case for it. Jesus, in his well-known Sermon on the Mount, warned his listeners against false prophets, likening them to wolves in sheep's clothing. Then switching metaphors he asked, "Do people pick grapes from thornbushes or figs from thistles?" The obvious answer is no, and Jesus's point was, you can recognize a good or bad tree – and a true or false prophet – by its good or bad fruit. From this, Matthew concludes that, since non-affirming beliefs on the part of *some* Christians cause the bad fruit of emotional pain for*other* Christians, the non-affirming stance must not be good.

Terrell's response to this is spot on, and I recommend you read her post to get the full response.

She writes:

> Matthew Vines in particular, and LGBTs in general, appear to be drivingly fixated on changing other people's moral outlook. But *why*? Why are they distressed over the shrinking subset of Christianity that holds to the traditional ethic of sex? Note that Matthew found an affirming church in his hometown, as can most any LGBT-identifying Christian. Affirming churches abound. Gaychurch.org lists forty-four affirming denominations – *denominations*, not just individual churches – in North America and will help you find a congregation in your area. Why, then, given all these choices for church accommodation, are Matthew and the Reformers specifically targeting churches whose teachings differ from their own?
>
> One gets the sense that LGBTs *really*, *really need* other people to affirm their sexual behavior. Certainly it's human to *want* the approval of others, but this goes beyond an emotionally healthy desire for relational comity. Recall Matthew's plea that non-affirming views on the part of *some* Christians cause emotional pain for *others*. He, and all like-minded LGBTs, are holding *other people* responsible for their emotional pain. This is the very essence of *codependency*.
>
> The term came out of Alcoholics Anonymous. It originally referred to spouses of alcoholics who enabled the alcoholism to continue unchallenged, but it has since been broadened to encompass several forms of dysfunctional relationships involving pathological behaviors, low self-esteem, and poor emotional boundaries. Codependents "believe their happiness depends upon another person," says Darlene Lancer, an attorney, family

> therapist, and author of *Codependency for Dummies*. "In a codependent relationship, *both* individuals are codependent," says clinical psychologist Seth Meyers. "They try to control their partner and they aren't comfortable on their own."
>
> Which leads to an even more troubling aspect of this Vinesian "Reformation." Not only are LGBT Reformers *not* content to find an affirming church for themselves and peacefully coexist with everyone else, *everyone else must change* in order to be correct in their Christian expression.
>
> This is the classic progression of codependency, and efforts to change everyone else become increasingly coercive. We *must* affirm same-sex orientation, Matthew says. If we don't, we are "tarnishing the image of God [in gay Christians]. Instead of making gay Christians more like God … embracing a non-affirming position makes them less like God." "[W]hen we reject the desires of gay Christians to express their sexuality within a lifelong covenant, we separate them from our covenantal God."
>
> Do you hear what he's saying? LGBTs' relationships with God are dependent on Christians approving their sexual proclivities. But he's *still* not finished. "In the final analysis, then, it is not gay Christians who are sinning against God by entering into monogamous, loving relationships. It is *we* who are sinning against them by rejecting their intimate relationships." In other words, non-affirming beliefs stand between LGBTs and God. Thus sayeth Matthew Vines.

The rest of her article deals with Vines' attempt to twist Scripture to validate sexual behavior that is not permissible in Christianity.

Vines seems to want a lot of people to agree that the Bible somehow doesn't forbid this sexual behavior so that the people who are doing it won't feel bad about doing it. If he can just silence those who disagree and get a majority of people to agree, then the people who are doing these things will feel better.

Matthew Vines is annoyed that Bible-believing Christians expect homosexuals to work through their same-sex attractions, abstain from premarital sex, and then either remain chaste like me, or marry one person of the opposite sex and then confine his/her sexual behavior to his/her marriage. But how is that different than what is asked of me? I am single, and have opposite sex-attractions, but I am also expected to abstain from sex outside of marriage. I have two choices: either remain chaste or marry one woman for life, and confine my sexual behavior to that marriage. I'm not married, so I've chosen to remain chaste. **If I have to exercise a little self-control to show God that what he wants from me is important to me, then I am willing to do that.** I'm really at a loss to understand why so many people take sexual gratification as a given, rather than as an opportunity for self-denial and self-control. I am especially puzzled by sinful people demanding that other celebrate their sin – and using the power of the government now to compel others to celebrate their sin. Christianity is a religion where the founder prioritized self-sacrificial obedience above pleasure and fulfillment. You really have to wonder about people who miss that core element of Christianity.

My service to God is not conditional on me getting my needs met. And my needs and desires are no less strong than the needs of people who engage in sex outside the boundaries of Christian teaching. We just make different decisions about what/who comes first. For me, Jesus is first, because I have sympathy with Jesus for loving me enough to die in my place, for my sins. I am obligated to Jesus, and that means that my responsibility to meet expectations in our relationship comes above my desire to be happy and fulfilled. For Matthew, the sexual desires come first, and Scripture has to be reinterpreted in light of a desire to be happy. I just don't see anything in the New Testament that leads me to believe that we should expect God to fulfill our desires. The message of Jesus is about self-denial, self-control and putting God the Father first – even when it results in suffering. I take that seriously. That willingness to be second and let Jesus lead me is what makes me an authentic Christian.

There is a good debate featuring Robert Gagnon and a gay activist in this post, so you can hear both sides.

# Should you be worried about blue state refugees invading your red state?

**Wintery Knight** · 26 February 2024 · Archived copy · Original

I live in a very, very red state. I love my state so much that I can't even conceive of why I would ever want to move. But sometimes, when I'm driving around, gloating about our latest awesome law, I see a license plate that worries me. A license plate that says "Illinois" or "California" or "Oregon" or "Washington" or "New York". It seems to be happening more and more. Should I be worried?

According to the Wall Street Journal (archived), I should not be worried.

The article begins by talking about South Carolina:

> A Wall Street Journal analysis of census data found that a third of the state's new residents between 2017 and 2021 hailed from blue states and a quarter from red ones, according to census data. The remainder came from closely divided states, including nearby Georgia and North Carolina, or are immigrants.
>
> Yet the new arrivals are disproportionately Republican. Estimates from the nonpartisan voter file vendor L2 suggest about 57% of voters who moved to South Carolina during that time are Republicans, while about 36% are Democrats and 7% are independents. That places them roughly in line with recent statewide votes in South Carolina.
>
> […]The Palmetto State is a prime example of why a yearslong wave of migration to the South has largely failed to change its partisan tint. Many people who leave blue states are Republicans gravitating toward a more politically favorable new home.

And they also cover Florida:

> In Florida, for instance, 48% of people who moved there between 2017 and 2021 came from blue states while 29% came from red states, Census figures show. Among those who registered to vote, 44% are Republicans, 25% are Democrats and 28% are nonpartisan, according to L2 data.

And Texas:

> Texas also has a heavier flow of newcomers from blue states but a greater share who L2 data estimates are Republican.

I guess we will find out what happens when we see the election numbers in November. I am hoping that the number of people who vote Democrat goes down in every county of my state. That would mean that the right kind of people were moving here.

What I would really like my state, and other red states, to do is pass laws that chase the secular left riff raff out of the state. For example, strict laws against abortion and against LGBT indoctrination of children. Strict laws reining in labor unions, especially teacher unions. Strict laws against criminals and violent protestors. All of these laws that promote hard work and frugality will cause the wrong kind of people to leave our red states. And that will make those of us who are already here much happier.

# Resurrection scholar Michael Licona coming to Ohio State University

**Wintery Knight** · 27 February 2024 · Archived copy · Original

I noticed that one of the top Ratio Christi leaders, Eric Chabot, has a plan to bring in one of the best scholars on the resurrection to speak at a major university campus – the Ohio State University. I thought I would bring it to your attention, in case you want to know what sorts of things are good to support. I learned a lot about Christian apologetics while at university, it's the perfect time to learn.

Here's the flyer for the event:

Michael Licona Easter Lecture on Resurrection of Jesus at Ohio State University

**IMPORTANT: You can donate to Eric Chabot, who leads Ratio Christi Ohio State University to help pay for this event if you want to help.**

Here's the biography of the speaker, Dr. Michael Licona:

> Born in Baltimore, Maryland in 1961, Mike became a Christian at the age of 10 and grew up in a Christian home. He attended Liberty University where he earned his Bachelor's Degree in Music Performance (Saxophone). During his undergraduate studies, he had a strong desire to know God, devoting himself to studying the Bible daily. He decided to learn Koine Greek in order to read the New Testament in its original language and later completed a Master's Degree in Religious Studies.
>
> […]Mike has a Ph.D. in New Testament (University of Pretoria). He completed all requirements "with distinction" and the highest marks. He is a frequent speaker on university campuses, churches, Christian groups, retreats, frequently debates, and has appeared as a guest on dozens of radio and television programs. He is a member of the Evangelical Theological and Philosophical Societies, the Institute for Biblical Research, the Society of Biblical Literature, and the prestigious Studitorum Novi Testamenti Societas. Mike is Professor of New Testament Studies at Houston Christian University and the president of Risen Jesus, Inc.

> Mike is married to Debbie and they have two grown children, Alexandra and Zachary.

His wife is very clever at Christian living, I remember there was some famous Christian artist who was having doubts, and she took it on herself to create an event where he could ask his questions to Christian scholars who had debates all these issues with atheists. I mean, she married Mike, and that makes her very clever already.

If you check out Dr. Licona's web site, Risen Jesus, then you can find a whole section of helpful FREE resources.

Dr. Licona has a mix of books – some for general audiences, and some for academic audiences. I've been snooping around in the Audible store this week, and I noticed that his older popular-level book, co-authored with the famous Gary Habermas, is "INCLUDED" if you have an Audible Plus membership.

The Case for the Resurrection of Jesus
By: Michael R. Licona, Gary R. Habermas
Narrated by: David Cochran Heath
Length: 7 hrs and 31 mins
Release date: 03-30-21
Language: English
★★★★★ 189 ratings

Michael Licona – The Case for the Resurrection of Jesus
His most famous book is probably the one that he published with Oxford University Press, which is entitled "Why Are There Differences in the Gospels?: What We Can Learn from Ancient Biography". I bought it, but I have not yet read it.

But another of his academic books is also available on Audible:

The Resurrection of Jesus
A New Historiographical Approach
By: Michael R. Licona
Narrated by: Lyle Blaker
Length: 21 hrs and 42 mins
Release date: 05-17-22
Language: English
★★★★★ 12 ratings

Michael Licona – The Resurrection of Jesus
Finally, I noticed that he has a NEW book coming out. It looks like it is a popular-level version of the one that I linked you to, above.

Jesus, Contradicted
Why the Gospels Tell the Same Story Differently
By: Michael R. Licona
Narrated by: Tom Parks
Length: 10 hrs and 41 mins
Release date: 05-28-24
Language: English
Not rated yet

Michael Licona – Jesus Contradicted
And here are the details about the new book:

> The differences and discrepancies in the Gospels constitute the foremost objections to their reliability and the credibility of their message. Some have tried to resolve Gospels contradictions with strained harmonization efforts. Many others conclude that the Gospels are hopelessly contradictory and, therefore, historically unreliable accounts of Jesus.
>
> In *Jesus, Contradicted*, New Testament scholar Michael Licona shows how the genre of ancient biography, to which the Gospels belong, actually allows biographers to be flexible in how they report events, construct a narrative, and make an argument. Licona demonstrates that the intentional changes to the Jesus tradition by the Evangelists reveal that the differences in how the Gospels report events are not grounds for their rejection. Instead, they are a result of the Gospel writers employing standard literary conventions common in their time for writing ancient biography.
>
> Licona introduces listeners to the genre of ancient biography through Plutarch, who wrote 48 of the 90 extent biographies written within 150 years of Jesus, giving numerous examples of compositional devices employed by Plutarch, and comparing them with instances in the Gospels where the Evangelists appear to use similar techniques. Licona also examines Theon's Progymnasmata, a first-century textbook that provides six techniques for paraphrasing one's sources when writing a narrative. In doing so, he helps listeners understand why the Gospels report many events differently. Finally, Licona concludes by addressing the thorny question of whether the editorial moves commonplace in ancient biography are compatible with the doctrines of the divine inspiration and the inerrancy of Scripture.
>
> Rather than trying to resolve discrepancies by bending the Gospel narrative, which risks making them say things they aren't saying, *Jesus, Contradicted* situates the Gospels within their proper context and helps listeners account for differences in the Gospels in a cohesive and historically cogent way.

I saw him debate on this exact topic at a recent National Apologetics Conference. They have those every year at Southern Evangelical Seminary. Have you ever been to one? They are really good.

If you don't yet feel comfortable answering questions about whether the resurrection of Jesus was a historical event, then definitely pick up Mike's books. And if you are in the Columbus, OH area on April 11th, then go see Dr. Licona speak. Tell Eric that Wintery Knight sent you.

# Is Tennessee a more conservative state than Florida?

**Wintery Knight** · 28 February 2024 · Archived copy · Original

Some people think that the formerly purple state of Florida is the best state. It seems like every day, you hear about some new conservative thing coming out of Florida's excellent governor. Tennessee's governor isn't as good, of course. But who has the better legislature? I think that Tennessee has the edge there. Let's see some of the latest conservative mischief.

Let's do Tennessee first, starting with this Daily Wire article:

> The Tennessee state House passed a bill on Monday that would prohibit the flying of any flag other than the American flag and a few other official flags in public school classrooms, legislation that was sparked by the prevalence of pride flags in recent years.
>
> The bill states in part that it is prohibited for to display "a flag other than the following on or in a public school: (i) the U.S. flag; (ii) the official Tennessee state flag; (iii) a flag that cannot be disturbed or altered pursuant to the law relevant to Tennessee heritage protection; (iv) the POW/MIA flag," and several other flags that are acceptable to fly in schools.
>
> The bill, introduced by Republican state Rep. Gino Bulso, passed with a 70 – 24 vote along party lines.
>
> Bulso brought the bill forward as a result of constituent parents who were concerned about the flying of LGBTQ Pride flags in class, reports The Tennessean.
>
> On the House floor, Bulso rhetorically asked if parents have the right to teach a particular set of values to their own children.
>
> "If you have parents across the state who want to instill in their children values represented by the pride flag, they are certainly entitled to do that," he said. "On the other hand, if you have parents who want to instill values in their children that are not consistent with the values represented by the pride flag, they have the ability to do that."
>
> […]Democratic members of the state House offered two amendments to the bill, both of which were rejected by Republican members.
>
> […]A companion bill in the state's Republican-controlled Senate is expected to be voted on this week. If it passes, it will head to the desk of Republican Governor Bill Lee.

And this part is the key part – the very shocking part:

> The bill also gives parents or guardians the right to file a lawsuit if the flag prohibition is breached by the schools.

Honestly, I don't know if Bill Lee has the gumption to sign a bill that is so awesome. But can you imagine a state that is so amazing that it not only gets a bill like that to the governor, but the bill is supported UNANIMOUSLY by the Republicans? Whatever mistakes the Republicans are making elsewhere, Tennessee Republicans are not part of that. They are not doing "socialism, but more slowly". They are moving things in a conservative direction.

Here's another thing that the Tennessee lawmakers are up to, reported by Daily Wire:

> Tennessee lawmakers heard on Tuesday the accounts of religious groups that had lost access to their bank accounts for what they suspect to be ideological reasons.
>
> One group, the National Committee for Religious Freedom, had only had a bank account open with JPMorgan Chase for several weeks before the organization's head and former Kansas Governor Sam Brownback

> attempted to make a deposit only to be told the account no longer existed.
>
> […]The National Committee for Religious Freedom was one of the groups warning about de-banking during testimony on Tuesday in support of a proposed Tennessee bill that would prevent banks from discriminating against people based on their political or religious views. The group testified in front of the Tennessee House of Representatives' Subcommittee on Banking and Consumer Affairs at the Cordell Hull Building in Nashville.

Do you live in a state that isn't Tennessee? Then you might get de-banked by the secular left. If those Canadian truckers had done their rally against health care mandates in Tennessee, then they wouldn't be de-banked. But then again, they wouldn't have had to do the protest, either, if they lived in conservative counties like Maury county. You just have to be careful where you live.

Just to put some numbers on this, Tennessee is ranked as the #1 most conservative legislature in the United States for all-time. Florida is #2 for all-time. If you have a work from home job, these are the states where you need to live and pay your taxes.

Speaking of #2 state Florida, let's see what young DeSantis and his friends in the Florida legislature are up to. Are you worried about getting banned online because you disagree with Big Tech? Well, DeSantis has you covered, in the free state of Florida.

Florida Voice reports:

> The U.S. Supreme Court Monday is hearing oral arguments for and against Florida and Gov. Ron DeSantis' restrictions on massive social media, or "Big Tech" corporations aimed at protecting individuals' speech.
>
> […]In 2021, DeSantis signed a new law implementing the following:
>
> - Giving Floridians the right to sue "Big Tech platforms" for monetary damages if users are not given proper notice of policy changes, and allowing them more rights to obtain their information if they are "deplatformed"
> - Allows the Florida attorney general to bring legal action for companies that violate new restrictions, such as standards on shadow banning, deplatforming, censorship and transparency requirements
> - Bars the platforms from deplatforming political candidates in Florida, and imposes $250,000 fines per day if a statewide candidate is deplatformed, and $25,000 per day for non-statewide offices
>
> "Florida passed protections three years ago, for individuals who've been deep platformed or censored based on the content or viewpoint of their political speech," DeSantis said Monday. "Texas passed a similar law. This has been making its way through the courts, we knew it was going to end up at the floor at the U.S. Supreme Court."
>
> "These tech companies, on the one hand, are private – and normally a private company can house whatever speech or viewpoints it wants. In this case, these companies get liability protection from the federal government, because they say that they're not publishers, they're not making editorial judgments about what speech is good and what speech is bad," the governor said. "They're just a platform."

And that's not all. According to a recent analysis, Tennessee has the highest score for election integrity in the United States. Florida was tied for second best. Florida isn't giving up, though.

Take a look at this article from Florida Voice:

> U.S. District Judge Mark Walker ruled in favor of an embattled 2021 Florida election integrity law that cracked down on ballot harvesting and strictly regulated how ballot drop boxes can be utilized.
>
> The judge said Florida's restrictions do not keep Floridians from voting, according to the Associated Press.

> Walker ruled that the voting rights groups challenging state law did not adequately show that the drop box regulations burdened voters enough to unduly disenfranchise anyone.
>
> The decision also upheld the law's stricter provisions on third-party voter registration.
>
> […]"Floridians can rest assured that our state will remain a leader in ballot integrity. Elections should be free and fair, and these changes will ensure this continues to be the case in the Sunshine State," Gov. Ron DeSantis said when he signed the bill in May 2021.

Tennessee better do something, or they are going to lose their #1 ranking to Florida in the next State Super Bowl. How about you? Do you live in one of these red states? Do you wake up every morning laughing at the U-Haul in front of the house with the Democrat "in this house" sign on it? You need to live in a state that takes out the trash. Make a plan, and then make your move.

# Which state is the most conservative?

**Wintery Knight** · 29 February 2024 · Archived copy · Original

In yesterday's post, I looked at a few recent stories from the two best states in the country, Florida and Tennessee. Each of these states seems to have fresh new "good news" stories for conservatives each and every day. When I think about the legislators who write these bills, especially at a time where Christians are losing everything, it really makes me feel respect for them.

Anyway, here is the latest news from Tennessee, as reported by the Christian Post:

> A new Tennessee law will allow public officials to refuse to perform same-sex marriages if their religious beliefs make them unable to do so in good conscience.
>
> Tennessee's Republican Gov. Bill Lee signed into law House Bill 878 last Wednesday.
>
> The Republican-controlled Tennessee Senate approved the bill in a 27-5 vote earlier this month after the House of Representatives passed the legislation in a 74-22 vote last year.
>
> While the vote fell along party lines, one House Democrat joined all House Republicans in supporting the legislation.

Every. Single. Republican. Legislator. Voted. For. It.

This is why I have no patience for people who like to throw up their hands and say "both parties are the same" or "it doesn't matter if you vote" or "I don't pay attention to politics" or "I don't like to talk about religion and politics" or "all the states are the same". All they are doing is taking the easy road, and trying to sound like they know more than they actually do. The truth is that these things matter, and they matter a lot.

I have been working in America for nearly 25 years now, and these are the kinds of things I hear from men in the workplace – especially from men who chose secular left women to marry, because of how they looked. After they realize that their entire legacy has been ruined by a bad marriage, then they say things like this to explain why they are completely ineffective. First, they choose a wife based on what's best for them. Then, they ignore politics, because that's easier for them. Disgusting.

More from the article:

> The bill's text declares, "A person shall not be required to solemnize a marriage if the person has an objection to solemnizing the marriage based on the person's conscience or religious beliefs."
>
> […]Republican Rep. Monty Fritts, who sponsored the bill, argued before a subcommittee last year that "officiants must be able to refuse to solemnize marriages that are contrary to their beliefs" even as "societal views change about what constitutes a marriage."
>
> "The government has a responsibility to protect the exercise of religious beliefs," he said. "Those with the authority to perform civil ceremonies would also be permitted to refuse to solemnize marriage for reasons of conscience."

My favorite part of this story has to do with Representative Monty Fritts. I read an article about this legislation over at the far-left CNN, to see if they had an additional details.

And in that CNN article, it said this:

> CNN reached out to Fritts for comment, but he declined a phone interview.

I have to say this again. If you are in a blue state, and you think that states like Tennessee are the same as your blue

state, then you are wrong. Do not be like these men in my office who just want to dismiss politics and policy because it's easier for them. Real men foresee future dangers, and they make plans and execute them in order to avoid those dangers. You need to make a plan to get a good education, then find a good job in Tennessee or Florida or Oklahoma, and move to one of these good red states. Do not be paying your taxes to governments that do not give you rights like these red states give you.

I left a nearly communist country in order to come to America, and I had to wait for many, many years to get a FT100 employer to sponsor me for my green card. Moving from one state to another for natural-born citizens is child's play in comparison. Especially if you already have a work from home job. What are you waiting for? Things are only going to get worse in blue states as the government's spending money runs out.

# New study: virgins have happiest marriages, more sex partners means more unhappiness

**Wintery Knight** · 1 March 2024 · Archived copy · Original

Although we live in a culture that is dominated by the thoughts and opinions of secular leftists, science provides useful information for those who want defend Biblical morality. Consider the issue of sexuality and marriage. Secular leftists claim that sex outside of marriage is natural, and produces happiness. Bible believing Christians and Jews say chastity is best. Who is right?

Here is the latest study authored by Dr. Nicholas Wolfinger, a sociologist at the University of Utah. His previous book on relationships was published by Oxford University Press. In his analysis of the data, Wolfinger controlled for divorce rates, religiosity, and socioeconomic status.

Here's the most important graph:

Study: virgins have the happiest marriages, more partners means less happiness

Other factors that increased marital happiness: having a 4-year college degree (5%), having a salary > 78K (5%), regular church attendance (6%). Notice that women are more dissatisfied with marriage (in general) than men are, and they tend to blame the spouse they freely chose for that unhappiness.

The Federalist also reported on previous research relevant to this study:

> Psychologists Galena K. Rhoades and Scott M. Stanley found that women who have had sex with someone other than their husband report statistically significant drops in marital quality over those who don't. A 2004 study by sociologist Jay Teachman showed that intimate premarital activities such as cohabitation and intercourse increased the rate of marital dissolution by anywhere between 28 and 109 percent, depending on the activity.

Wolfinger also noted in a previous study that only 5% of women were virgins when they married.

Wolfinger noted that a possible explanation for the link between promiscuity and unhappiness is that people look

back on their past partners and compare their spouse unfavorably to them. This is especially the case with women. My concern about this is that feminism has taught women to try to increase their social standing by having hook-up sex with attractive bad boys. If those women ever marry, they do it when they are older, less fertile, and less attractive. The husband they eventually "settle" for will (in their minds) always compare unfavorably to the hot bad boys they had sex with when they were younger and prettier. This, I believe, is what leads to their unhappiness with the man they chose to marry.

**More partners also means more marital instability**

In a previous post, I blogged about several studies linking virginity to marital stability. Couples who don't have sex before marriage, or even who delayed it, reported better communication, higher satisfaction, better quality sex, and a lower chance of divorce.

Men ought to be aware of this research when they are choosing a spouse. Women initiate 69% of divorces, and the most common reason given is "unhappiness". Well, now we know what's causing that unhappiness – a high number of sexual partners prior to marrying. Smart men should prefer a virgin, for the increased happiness and increased stability. A large number of past sexual partners teaches women that relationships are engines for them to be happy, not commitments that are permanent and exclusive. They'll have internalized the view that relationships are not commitments to invest in self-sacrificially. The pattern will be: "if it doesn't make me feel happy right now, then it should be ended". It will be seen as the man's fault that she is unhappy, even if the study I talked about above shows the real reason is her past promiscuity. Men who aren't serious about evaluating the character of the women for the marriage enterprise are running the risk of divorce, it's that simple.

The best way to make sure that you have a clear head when evaluating a woman is to stay sober, and keep her hands off of you. When a man refuses to let a woman cloud his judgment with sex, then she is forced to learn how to love him in marriage-oriented ways, e.g. – help him, support him, and submit to his leadership. Male chastity encourages women who have been influenced by feminism to abandon selfishness, fun-seeking, and thrill-seeking, so that they learn to care for others. Male chastity also helps a man to resist older women who chose bad boys in their teens and 20s and want to get married to a good provider in their 30s. The studies discussed above clearly show that such women are more likely to be unhappy, and their future marriages are more likely to be unstable. Avoid them. You don't want to be in a marriage to someone who isn't very good at it, because she never prepared herself for it.

# New study: the majority (69%) of divorces are initiated by women

**Wintery Knight** · 2 March 2024 · Archived copy · Original

This new report from Live Science gives us some numbers about who initiates divorces most frequently.

It says:

> Women are more likely than men to initiate divorce in the United States, but they are no more likely than men to initiate breakups in a dating relationship, a new study finds.
>
> "The breakups of nonmarital heterosexual relationships in the U.S. are quite gender-neutral and fairly egalitarian," study author Michael Rosenfeld, an associate professor of sociology at Stanford University, said in a statement. "This was a surprise because the only prior research that had been done on who wanted the breakup was research on marital divorces."
>
> Previous research had found that women are more likely to initiate divorce, at least in the United States, Europe and Australia. In the new study, Rosenfeld compared divorces to nonmarital breakups, in an effort to understand the driving forces behind each type of breakup.
>
> To investigate, he looked at data from the 2009 to 2015 waves of How Couples Meet and Stay Together, a nationally representative survey spearheaded by Rosenfeld and his colleagues. The new study includes 2,262 adults, ages 19 to 64, who reported having opposite-sex partners in 2009. By 2015, 371 of the participants had broken up or gotten divorced.
>
> Women initiated 69 percent of the 92 divorces, Rosenfeld found. But there was no statistically significant difference between women and men when it came to nonmarital breakups, regardless of whether they were living together, he said.

The Ruth Institute reports on a few studies:

> Female unions seem to have the highest divorce rates, followed by male unions, followed by opposite sex unions.
>
> "For Sweden, the divorce risk for partnerships of men is 50% higher than the risk for heterosexual marriages, and that **the divorce risk for female partnerships is nearly double that for men."**
>
> "For Norway, **divorce risks are 77% higher in lesbian partnerships than in those of gay men."** (The Norwegian data did not include a comparison with opposite sex couples.)
>
> In California, the data is collected a little differently. The study looks at couples who describe themselves as partners, whether same sex or opposite sex. The study asks the question, how likely is it that these couples live in the same household five years later. **Male couples were only 30% as likely, while female couples were less that 25% as likely, as heterosexual married couples, to be residing in the same household for five years.**

It really seems as if there is something about women in particular that causes them to be unable to keep to commitments *in their actions*, despite what they might say *with their words*.

So I am seeing a couple of problems in young, unmarried women that might explain this.

**Feminism is bad**

First, there is the feminism. Feminism was the driving force behind no-fault divorce. Today, young unmarried women are being taught to view marriage as stifling to their freedom. So if they do get married, they are often resolved that marriage should not affect their freedom in any way. That is just not the way marriage works, though – both spouses need to be equally ready to have their freedom infringed upon by things that HAVE TO GET

DONE. Lots of things that have to get done will not be fun, thrilling or amusing – and that's why it's good to be prepared to do them before you marry.

My friend Dina says that she only knows one happily married couple from among her friends. The most frequent case she sees is wife is working in order to pay for big house, two cars, etc. and wife is denying husband sex, which makes him disengage from the marriage. A working wife tends to not be as responsive to the needs of husband and kids as a non-working wife, probably in part due to work stress. There is an epidemic of sex-withholding by women, and it causes men to disengage from marriage because they feel unloved. Although women tend to rebel against the idea that the man's bad behavior is their fault, and that there is a "contractual" nature to marriage, that is how marriage works. You cannot stay married, women, by just doing whatever you feel like, and NOT doing whatever you DON'T feel like. Men will disengage when their needs are not supplied, and that's no fault of theirs. It's your fault. Denying relationship obligations causes men to underperform.

Feminism is often linked closely to "independence". There is a lot of confusion over what the word independence means among young, unmarried women. A man uses that word to mean "lack of financial dependence on parents, the state, etc. because of good decisions in education, career and finances". But a woman means "not having to care about the needs of a man and the leadership of a man, or the needs of children while still getting what I want from men and children". That attitude is not compatible with life-long married love.

**Emotions are bad**

Second, emotions. In my experience, young, unmarried women are less likely to have reasoned out their own life plan in a practical step-by-step manner. Instead, they tend to do whatever makes them feel good moment-by-moment without any realistic plan. One Christian woman was recently telling me how attracted she was to an atheist moral relativist who had been promiscuous from the age of 15. She explained that her emotions were kindled by his GQ looks, 6-pack abs, mysterious European accent, seductive manner and witty conversations. Although she is apparently a Christian, she doesn't take Christianity seriously in her decisions about relationships and marriage.

Peer-approval and culture play a large part in determining what women think is attractive in a man, as well as their life goals, and women are driven by these cultural standards more than men who focus on honoring their commitments *regardless* of their emotions. In my experience, women struggle to make their day-to-day actions match their socially-acceptable goal of getting married "some day". Marriage is for "some day" for today's busy women, but fun and thrills is for today. "Live in the moment", they often tell me. If you try to talk to them about roles and responsibilities in a marriage, they will withdraw and rebel. But marriage is about each spouse doing his or her job, and feeling content about what the couple is building together. You can't make life-long married love from emotional craziness and pursuing fun and thrills with seductive promiscuous moral relativist atheists.

**How to pick a woman who won't divorce you**

Young men, I advise you to choose wives who have had to do things that they did not feel like doing. That can involve things like getting a STEM degree, getting a job in STEM, moving out of her parents' house, getting a "boring" job that helps her pay off her debts, keeping commitments when she doesn't feel like it, and caring for other people and even animals.

Basically, the more the woman has ground down any narcissism and hedonism she may have, by having to do nasty calculus and horrid lab work, the better. The more accustomed she is to constraints, responsibilities, expectations and obligations, the less likely it is that she'll divorce you for unhappiness. And all of this goes for men, as well. STEM degree, STEM job, save money, serve others, give to charity.

Marriage is not the time for people to be carried away by their emotions. It's an enterprise, and it works when both people are rational, practical, hard-working and self-controlled.

# Are all sins equally bad? Or are there degrees of severity for different sins?

**Wintery Knight** · 3 March 2024 · Archived copy · Original

This question came up recently so I did some digging on theology web sites to find what Bible verses applied to the question.

Here's what Ligonier said:

> It's clear that we have different degrees of sin when we consider the warnings of Scripture. There are at least twenty-two references in the New Testament to degrees of rewards that are given to the saints in heaven. There are different levels, different rewards, and different roles in heaven. The Bible warns us against adding to the severity of our judgment. Jesus said to Pontius Pilate, "He who delivered me over to you has the greater sin" (John 19:11). Jesus measures and evaluates guilt, and with the greater guilt and greater responsibility comes the greater judgment. It's a motif that permeates the New Testament.
>
> The idea of gradation of sin and reward is based upon God's justice. If I commit twice as many sins as another person, justice demands that the punishment fits the crime. If I've been twice as virtuous as another person, justice demands that I get more of a reward. God tells us that entrance into heaven will be only on the basis of the merit of Christ, but once we get to heaven, rewards will be dispensed according to works. Those who have been abundant in good works will receive an abundant reward. Those who have been derelict and negligent in good works will have a small reward in heaven. By the same token, those who have been grievous enemies of God will have severe torments in hell. Those who have been less hostile will have a lesser punishment at the hands of God. He is perfectly just, and when He judges, He will take into account all of the extenuating circumstances. Jesus said, "I tell you, on the day of judgment people will give account for every careless word they speak" (Matt. 12:36).

A while back, my friend Dina sent me a sermon where that exact passage (John 19) was brought up by the pastor.

I think the correct position is that *any sin* is enough to separate you from God, but some sins are more severe than others in God's objective standard of right and wrong.

OK, that was fine and good, but then I noticed a few days later that Michael Krueger had also blogged about this "all sin are equal" view, too.

Krueger says this:

> First, to say all sins are the same is to confuse the *effect* of sin with the *heinousness* of sin. While all sins are equal in their effect (they separate us from God), they are not all equally heinous.
>
> Second, the Bible differentiates between sins. Some sins are more severe in terms of impact (1 Cor 6:18), in terms of culpability (Rom 1:21-32), and in terms of the judgment warranted (2 Pet 2:17; Mark 9:42; James 3:1).

Even more Bible references, so we're not on the wrong track.

So then why do some people insist that all sins are equal? It turns out that it is coming from the secular ideal of *non-judgementalism*.

Regarding the "all sin are equal" view, Krueger explains:

> We should begin by observing that this phrase does not come from Scripture. People do not use it because it appears in the Bible. Why then do they use it?

> One reason, as noted above, is that some Christians use this phrase to uphold the seriousness of sin. It is viewed as a way to remind people not to be dismissive about their sin or regard it is a triviality.
>
> Others use this phrase as way to "flatten out" all sins so that they are not distinguishable from each other. Or, to put it another way, this phrase is used to portray all human beings as precisely the same. If all sins are equal, and all people sin, then no one is more holy than anyone else.
>
> In a world fascinated with "equality," this usage of the phrase is particularly attractive to folks. It allows everyone to be lumped together into a single undifferentiated mass.
>
> Such a move is also useful as a way to prevent particular behaviors from being condemned. If all sins are equal, and everyone is a sinner, then you are not allowed to highlight any particular sin (or sinner).
>
> Needless to say, this usage of the phrase has featured largely in the recent cultural debates over issues like homosexuality. Yes, homosexuality is a sin, some Christians reluctantly concede. But, they argue, all sins are equal in God's sight and therefore it is no different than anything else. Therefore, Christians ought to stop talking about homosexuality unless they are also willing to talk about impatience, anger, gluttony, and so on.

Krueger also posted this fascinating follow up post, where he looks at how the phrase is being used by people on Twitter.

Look at these tweets:

> - All sins are equal. People tend to forget that. There is no bigger or smaller sin. Being gay and lying, very equal.

> - all sins are equal in God's eyes. whatever you're doing, is no better than what someone else is doing.

> - If you have sex before marriage please don't come on social media preaching about the wrongs of homosexuality. All sins are equal

> - Need people to realize that all sins are equal… don't try to look down on me or question my faith just cuz you sin differently than I do.

> - Don't understand why you're so quick to judge me, when all sins are equal. So much for family..

> - if you think being gay is a sin, let me ask you something, have you not done anything wrong in your life? all sins are equal. we're sinners

> - Nope no difference at all. All sins are equal no matter what you're running for. The bible says do not judge lest ye be judged

> - A huge problem I have with religion is the notion that all sins are equal. Like pre-martial sex and murder are the same amount t of bad.

> - people do bad things because they believe that all sins are equal and ~god~ loves y'all equally so he's going to forgive you naman ha ha ha

> - It a sin to condemn another sinner and their actions. All sins are equal. So what makes you better than the person you're condemning?

> - I think so b/c having sex before marriage doesn't make you less of a women then if you waited until marriage.. all sins are equal soo

> - friendly reminder, all sins are equal in gods eyes so you're not better than I am in any way. please worry about your own sins before mine.

> - People don't like when I suggest abortion as an option. This is a free country and all sins are equal so mind your business!!!

> - What I do is no worse than wat you do… all sins are equal no matter what it is… a sin is a sin

> - to god all sins are equal so you have no right to compare your sins to someone else's bc in the end it doesn't matter

The first thing that I noticed is that premarital sex and homosexuality are the most popular sins. I would think that divorce and abortion would be up there in the rankings, as well.

Something strange has happened in our society such that more and more people want to be led by their feelings, rather than be bounded by rules or standards. When people get caught breaking moral rules, rather than be accountable, they attack the person judging them. They would rather escape the judgment of their peers than admit fault and try to fix the mistake, and do better next time.

It's so bad now, that the people who *have* morals and who *make* moral judgments are seen as the real bad people. The immoral people are on the offense, and even trying to ban people from being able to disagree with them. We're seeing that with people who are being attacked for defending natural marriage against divorce and redefinition of marriage. In France, they want to make speech critical of abortion a criminal offense. And in Canada, they've now made speech critical of the gay agenda a criminal offense. (It's already a human rights tribunal offense)

What is even more interesting is when the people who push the "don't judge me" line try to justify it from the Bible. Very strange, but we seem to have forgotten the value of setting moral boundaries. Now moral boundaries are "evil". Instead, having compassion for people who break the moral boundaries and harm themselves and others is "good".

# Woman who embraced feminism rejects it for Christianity

**Wintery Knight** · 4 March 2024 · Archived copy · Original

I've been busy making a new friend on Twitter recently, Kelley Keller. Kelley is interesting because she has a neat story of going pretty far down a feminist road, and then coming back out of it to return to Christianity. What's interesting about her story is that she is using her experience to advise young women on what does and doesn't work for them in the long term. Let's take a look.

So, here is her article in Christian Post:

> After high school, I bumped around a bit, ultimately landing in Erie, Pennsylvania, with my parents who'd relocated from my hometown in Florida. Penn State Erie was local, so I began classes in the Spring of 1993, a decision that changed my life forever.
>
> Just two semesters in, I had been radicalized in the critical theories and loved every minute of it … until I didn't.
>
> Marxism had been mainstreamed on university campuses just a few years before I enrolled. Critical theory had replaced traditional theory, the gender sameness/difference debate was in full swing, and the newly organized LGBT movement had secured political power.
>
> The gospel of Freud, Marx, Hegel, and Darwin replaced Matthew, Mark, Luke, and John. The salvation message of Jesus Christ was mere mythology invented by men to subordinate women. Christianity was a patriarchal discourse keeping women from escaping the evil prisons of the Gnostic demiurge who was blocking their access to the divine within.
>
> Radical feminist Mary Daly wrote: "'God's plan' is often a front for men's plans and a cover for inadequacy, ignorance, and evil." Her claim seemed far-fetched, but maybe it had a kernel of truth? I started to believe her. I had no clue how to defend my anemic Christianity against these critics or their claims, so I was a sitting duck, a ripe recruit for the consciousness-raising cadres on campus.
>
> Waking up to my own oppression as a woman whose body had been ill-considered and whose sexuality had been condemned to monogamy felt like the most honest thing I'd done in all of my life. I was laying bare the contradictions of my soul and asking anyone and everyone to help me make sense of them. The church was ineffective, the feminists took me in. Their position was well-articulated by Susie Bright: "When a young woman discovers her power, both sexual and intellectual, she unleashes her own voice, her righteousness." I woke up to my voice and my victimhood and things were beginning to make sense. I became "woke."
>
> The next several years saw the exploration of intellectually seductive, albeit highly manipulative, thought forms that challenged me to examine the belief systems on which I was raised and that I'd trusted without question. I needed to test my newly acquired knowledge before self-amputating from everything, and possibly everyone, I knew.
>
> Slowly, I began to resist Christianity, or at least what I understood Christianity to be, primarily on the grounds the moral straight jacket it required cramped my ability to break free from years of abusive oppression. I was finally on a path to self-righteousness. My liberation would come from leveraging my sexual and intellectual power in spite of the dominant ideologies (aka Christianity) that say women should stay home and make babies (even though they don't say that at all). Freedom for women comes not from Christ's atoning work on the cross, but through the grandiose release of collective libidinal energy from all of the whores next door.

Wow. I messaged Kelley a bit, and she mentioned that she was following Kate Millett. If you know who that is, then you know that you can't go any further to the left than Kate Millett. She's the far left feminist edge!

So here's how she got out of it. She studied, and she found her views changing:

> While studying, I learned the concept of worldview and its epic usefulness in understanding why we think the way we do. It was exactly what I needed to comprehend the hivemind infiltrating my inbox. It was also what I needed to finally understand the full story of Christianity, that is, historic biblical Christianity, not the littered mess of modern-day Christendom promoting counterfeit Christ throughout the culture.
>
> By reverse engineering the range of worldviews underlying our modern ideas, I was able to work meticulously through the logical consequences that flow from their systematic implementation, from the beginning of time to the end of time. It wasn't long before I realized that the biblical worldview, not a Marxist, Postmodernist, New Age, or another worldview, was the only internally consistent, sufficient, coherent, and complete one on the menu. Nothing else even came close, at least not without borrowing from the biblical worldview to fill in the missing parts, such as an inalienable pre-political right to life.
>
> I was utterly dumbfounded. Not only was biblical Christianity true, it provided a comprehensive explanation for the world and everything in it. It provided rational answers to every question I could find about the nature and purpose of life. All I had to do was believe it.

This is the interesting part:

> I'd never heard Christianity described this way, and I'm a little bummed it took so many years for me to hear it.

If you read the article, she had grown up in a church-going home. But, I don't think she had ever been told that Christianity is a worldview, and you can have a lot of fun thinking about it and testing it and comparing it to other worldviews, using reason and evidence. And I think that's why the feminism was so compelling to her. Christianity wasn't presented to her in a way that engaged her mind. Then she got to college, and her mind was engaged by Marxism and feminism. It would have been wonderful if her parents had presented some thoughts about economics from say, Thomas Sowell, and then some thoughts on feminism from say, Jennifer Roback Morse. But they didn't do that, and so she had to go the long way around.

And at the very bottom of the article, there's this: "Kelley holds a J.D. from The Catholic University of America and is a D.Min. candidate in Christian Apologetics at Southern Evangelical Seminary. " That's a really good school. So, her change of mind resulted in a deep study of Christian apologetics. They take an evidential approach, so she will have fun doing that degree.

What I like about this experience of getting to know Kelley is that I was sort of tip-toeing around her, worrying what she would think of my tweets disagreeing with feminism. And I am delighted to report that she was fine with them. I get scared about people getting upset with me when I try to stick with the Bible on controversial issues. I don't want to get fired or have my house burned down or whatever. I don't want people to attribute all sorts of motives to me when I say things that make them feel bad.

So, it's really great when you meet Christians who let you (gently) disagree with things that they've done, and are even warning other people based on their experiences. Kelley is going to be a lot more persuasive on these issues than people who have never thought about them, or experienced the limits of these secular left views. Instead of trying to defend her past, and attack people for judging what she did, she's going to use her experiences to do Kingdom work for the Boss. She's going to be great for us.

This is great! This is what makes Christianity so amazing. One minute, you are going in your own direction, and then the next minute, you can leverage those pre-Christian experiences to do amazing things in a completely different direction. It helps other people when you teach them how to avoid mistakes. We need people like Kelley to teach what they've learned to others.

# Walgreens and CVS have decided to sell abortion pills

**Wintery Knight** · 5 March 2024 · Archived copy · Original

The title says it all. Walgreens and CVS are selling abortion drugs, and there is a connection to the Biden administration. Let's see the story and then take a look at what you should know about these drugs. After all, you might get into a conversation about this story, and I want you to have the facts.

Here's the story from Daily Wire:

> Pro-life advocates slammed a decision on Friday from pharmacy giants Walgreens and CVS to begin selling abortion pills.
>
> Both retailers announced that they would start selling mifepristone, the pill that is used in over half of all abortions, at certain locations. The announcement, which was applauded by the Biden administration, comes ahead of a Supreme Court hearing on whether the FDA improperly approved mifepristone and other restrictions on the pill.
>
> "As two of the world's largest, most trusted 'health' brands, the decision by CVS and Walgreens to sell dangerous abortion drugs is shameful, and the harm to unborn babies and their mothers incalculable," Susan B. Anthony Pro-Life America's State Policy Director Katie Daniel said in a statement shared with The Daily Wire. "This reckless policy was made possible by the Biden administration, which is pushing to turn every pharmacy and post office in America into an abortion center for the sake of abortion industry greed."
>
> […]President Joe Biden called the decision a "major milestone" in a statement praising the move.

Why is this important? Well, after the repeal of abortion on demand through all 9 months of pregnancy at the Supreme Court, abortion activists like Joe Biden have been looking for a way around the ruling. And shipping abortion drugs across state lines is one way for them to do it:

> Medication abortion has increasingly become a more common form of abortion, especially in states that have sought to ban abortion. Activist networks have been shipping foreign-made abortion drugs in red states to bypass state laws protecting the unborn.

So, when it comes to this issue, I like to look for the peer-reviewed research. What is this drug? Should they be selling it? Are they liable if something bad happens to the mother?

Well, I have good news, and bad news. The good news is that there is published journal articles that discuss the risks of this drug. The bad news is that the journals decided – right before they went on sale – that these papers were very, very bad.

Daily Wire has that story as well:

> Major scientific studies on the potential harm of abortion pills were retracted on Monday by their publisher, just weeks before the Supreme Court is set to hear arguments on the availability of such drugs.
>
> Three studies, including two on the potential harms of the abortion pill just, were retracted on Monday by Sage Publishing, an independent academic publishing company.
>
> […]The authors of the studies say the retractions are a politically-motivated effort to discredit research that was cited in U.S. District Judge Matthew Kacsmaryk's April 2023 decision to suspend approval of mifepristone, the drug used in roughly half of all abortions in the United States. The Supreme Court is set to hear arguments in March on the legality of restricting the abortion pill based on Kacsmaryk's ruling, proceedings that will certainly be impacted by the retractions.

> Dr. James Studnicki, a listed author on all three studies in question, told The Daily Wire that the retractions were “completely unjustified” and that the retractions were meant to discredit scientific research that challenged the pro-abortion bias engrained in academia.
>
> Studnicki, who trained at Johns Hopkins University and has spent decades conducting scientific research, said that he and his fellow researchers were targeted “because of the visibility of our work, because of the fact that our work was having such an influence on the discussion about abortion that was occurring in the states and in the courts at the highest levels.”

OK, great. Show me the numbers.

> One of the now-retracted studies, published November 9, 2021, found that the rate of emergency room visits following chemical abortions had spiked 500% from 2002-2015, according to Medicaid claims data. Another one of the studies, published May 20, 2022, analyzed the likelihood of recurring emergency room visits for women who did not disclose to doctors that they had a chemical abortion.
>
> These two studies were cited in Kacsmaryk’s decision to suspend FDA approval of mifepristone.

So what should happen?

Well, red states should just pass laws that allow people who take these drugs to sue the companies if there are complications. Or, they can just go after the businesses, if they choose to ship drugs into states that have banned late-term abortions. I would expect that states like Florida and Oklahoma will take the lead on this. Ron DeSantis has shown that he’s been willing to go after companies that try to mess with Florida’s conservative laws. He’ll probably go first. I’ll keep an eye out, and update you if anything happens.

In the meantime, stop shopping at CVS and Walgreens. I already have. They don’t deserve your business. Just keep driving and go somewhere else.

# Syrian refugee promoted by BBC journalists convicted of raping child

**Wintery Knight** · 6 March 2024 · Archived copy · Original

If I asked you to name two dominant characteristics of secular leftists today, what would you say? I would say their morality is "don't judge" and they don't like to be held accountable for their poor choices. Usually, the decisions of these secular leftists only costs them in their personal lives. But sometimes, innocent bystanders are the victims.

Let's start back in 2016, when some Syrian refugees were let into the UK.

Here is an article from the far left BBC from 2016: (archived)

> Three Syrian men have been cleared of sexually assaulting two schoolgirls in a park.
>
> Mohammed Alfrouh, 20, Omar Badreddin, 18, and Mohammed Allakkoud, 18, of Newcastle, were cleared of all charges at Newcastle Crown Court.
>
> Mr Badreddin was cleared of sexually assaulting a 14-year-old in Leazes Park, Newcastle, in May.
>
> Mr Alfrouh was cleared of three counts of sexual assault and Mr Allakkoud of a single charge of sexual assault.

Pay close attention to that name "Omar Badreddin". Remember that name.

Here is how the BBC covered the refugees: (archived here)

The text says:

> Over the course of 11 months, Newsnight's Katie Razzall and producer Maria Polachowska chart one family's journey from a war-ravaged Syrian town to a new life in Newcastle. When their son, Omar, is accused of sexual assault, their nightmare continues. After a three-week trial, Omar was found not guilty.

So this piece was focused on Omar Bahreddin, the guy I told you to remember. And the secular leftists responsible for it are Katie Razzall and Maria Polachowska. The BBC made this documentary to try to put the immigration policy in a good light, and cast blame on those who objected to it.

Now let's go back to the present day, and we will see the rest of the story.

This report is from the left-leaning Newcastle Chronicle, from this week:

> A grooming gang who repeatedly raped and sexually assaulted a young girl in Newcastle city centre while passing her around "like a toy" have been jailed for a total of 36 years.
>
> Four men sexually exploited a girl when she was aged just 13 and 14 years old. After meeting her one day in Newcastle, brothers Mohamed and Omar Badreddin quickly identified her as someone who could be easily manipulated and she was groomed with alcohol, cigarettes and compliments before being abused.

That's the same Omar Badreddin who the secular leftists were defending and painting as a victim in their little BBC documentary. These secular leftists were so indoctrinated in "don't judge" that they wanted to praise the results of the immigration policy. And they wanted to condemn anyone who objected to the immigration policy as "racists".

The UK is one of the most anti-masculine countries in the world, going all the way back to Minister of Equality Harriet Harman, and her outrageous anti-male policies. In the UK, self-defense has been outlawed. You can be jailed for "hate speech". Government regularly overrules the authority of fathers. Fathers are routinely ejected

from the home, only to be replaced with secular leftist social workers and welfare benefits. The male protector role has been utterly destroyed by feminists. The police and the courts in the UK DO NOT EXIST TO STOP CRIME. They exist to stop moral judgments, spiritual leadership, and acts of self-defense by law-abiding taxpayers against criminals.

You can read the article to find out what the little girl had to say about what happened to her. She describes it as "torture".

By the way, this is not the only time that UK police and UK judges have gone easy on certain criminals. The police in the UK are constantly ignoring victims of grooming gangs run by men of Middle Eastern origin. I've written about it many times; here is one and here is another. Their society is set up to ignore the little girls who are victims of these men.

But that's not the point of this post. The point of this post is that I want everyone to have an accurate understanding of how secular leftists operate. They loudly proclaim the virtue of their "don't judge" worldview. They think that they are better than you.

By the way, this is how the secular leftists respond to people who are asking them for comments about their puff piece on the Syrian refugees:

Secular Leftists Do Not Like Accountability

**Two gay Dads are better than one Dad in a natural marriage**

And this isn't the only time this has happened. It happens a lot. In 2013, I blogged about a case out of Australia, where another secular leftist virtue-signaled about her great tolerance for gay men adopting children born through surrogacy. You can guess what happened to the child next.

The most amazing thing about my post is what the journalist did when she found it and read it. She left a comment saying that her good intentions should have produced good results. She followed her heart, and wasn't responsible for any harm caused by her actions. She asked me to take the post down, because it made her look bad. No remorse, no accountability, just an attempt to bully me out of judging the results of her actions. "Don't judge!" she cried.

**The silence of the men**

Many men today are silent about abortion, no-fault-divorce, single mother welfare, false accusations, biased custody laws, anti-gun laws, daycare, public schools, green energy, black lives matter, transgender indoctrination of kids, etc. Those men have compared the rights of the weak with the sex offered by secular left women, and decided that sex is more important. But one day, I believe that those men are going to change their position and choose to protect the little ones. And no amount of shaming, blaming, make-up and cosmetic surgery is going to deny their birthright as men.

# Leaked e-mails: doctors admit link between transgender treatment and cancer

**Wintery Knight** · 7 March 2024 · Archived copy · Original

You might be thinking that I'm going to be linking to LifeSiteNews or Lifenews or MercatorNet for this one. After all, the title sounds pretty far-fetched. After all, how could the secular left be so bold as to want to push unproven medical procedures onto children, if there could be such costly side effects? But, today's article is from the UK Telegraph. Prepare to be shocked.

Here is the article from the UK Telegraph: (archived)

> Leaked emails show other medical professionals admitting that trans patients do not always understand the consequences of gender reassignment.
>
> The cache of files from the World Professional Association for Transgender Health (WPATH), which sets guidelines that have influenced NHS treatment, show that doctors are carrying out life-changing surgery and prescribing puberty blockers even though they are aware the adults and children may not fully understand the long-term ramifications.
>
> One doctor talked about a transgender person who died of cancer as a result of his hormone treatment.
>
> "I have one transition friend/colleague who, after about eight to 10 years of [testosterone] developed hepatocarcinoma [a form of liver cancer]," the doctor wrote.
>
> "To the best of my knowledge, it was linked to his hormone treatment… it was so advanced that he opted for palliative care and died a couple of months later."
>
> It's not clear from the documents if the person who died was made aware or knew about the side effect.

It was a 16-year-old girl:

> Another said they would go ahead with a double mastectomy (called "top surgery") on a 16-year-old girl even though hormones had likely given her liver cancer.

I blogged before about how cavalier the doctors are about giving letters to health insurance companies, explaining that they approve of the need for sex-change drugs and surgery.

The e-mails reveal more:

> A gender therapist said they had only turned one person down for treatment in 15 years.
>
> "I have also intervened on behalf of people who have been diagnosed with major depressive disorder, complex post-traumatic stress disorder, homeless and got at least an orchiectomy [testicle removal]," they said.
>
> "In the last 15 years, I had to regrettably decline writing only one letter, mainly because the person evaluated was in active psychosis and hallucinated during the assessment session.
>
> "Other than that – nothing – everyone got their assessment letter, insurance approval, and are living (presumably) happily ever after."
>
> A number of doctors admitted that their patients often did not understand the ramifications of hormone treatment or surgery – such as developing facial hair.
>
> A child psychologist said in a leaked email featured in the report: "[It is] out of their developmental range to understand the extent to which some of these medical interventions are impacting them.
>
> "They'll say they understand, but then they'll say something else that makes you think, oh, they didn't really

> understand that they are going to have facial hair."

If you're wondering why the secular left is so committed to transing children, just because they ask for it, and even though they can't possible understand the consequences, it's the money.

Here is a story about one expose reported by Daily Wire:

> "It's a lot of money," VUMC Clinic for Transgender Health's Dr. Shayne Sebold Taylor said at one Medicine Grand Rounds lecture, video reveals. "These surgeries make a lot of money."
>
> Taylor noted that a "chest reconstruction" can bring in $40,000 per patient, and someone "just on routine hormone treatment, who I'm only seeing a few times a year, can bring in several thousand dollars … and actually makes money for the hospital."
>
> Citing the Philadelphia Center for Transgender Surgery, Taylor said vaginoplasty surgeries can generate $20,000, gushing that it "has to be an underestimate," since hospital stay, anesthesia, post-op visits, and other add-ons are not included in the total.
>
> "And the female-to-male bottom surgeries, these are huge money makers," the doctor continued, adding that such surgeries could bring in "up to $100,000" for the hospital.
>
> Some clinics are "entirely" "supported" financially by such phalloplasty surgeries, Taylor boasted.
>
> "These surgeries are labor intensive, there are a lot of follow-ups, they require a lot of our time, and they make money," she emphasized. "They make money for the hospital."

If you don't believe that God exists, then this life is all you have. So, you find ways to justify getting more and more money any which way you can. You're not out there trying to help people. After all, on the secular leftist view, human beings are just the accidental by products of natural processes that did not have them in mind. There's no free will. No objective morality. No consequences for moral choices after death. Right and wrong are just "customs" that different societies have developed. They vary by time and place, and none of them is any more valid than cooking customs or dressing customs. It makes a huge difference what people believe. Beliefs are the rails on which they run their lives.

# Court rules Biden admin can't force Christians to do trans surgeries

**Wintery Knight** · 8 March 2024 · Archived copy · Original

One of the scariest things about the secular left is the comfort and confidence they have about ramming their views down the throats of people who disagree with them. It's not that they can beat you in an argument about which worldview is true. They can't. Their only way to get what they want is by using force. And they don't hesitate to do that.

Here's the story from Daily Caller:

> A district court ruled Monday that the Equal Employment Opportunity Commission (EEOC) violated the First Amendment by attempting to force religious health care workers to provide gender transition procedures.
>
> In 2021, the Christian Employers Alliance (CEA) filed a lawsuit against the EEOC over two mandates requiring religious employers to provide health insurance that covered gender transitions as well as forcing religious physicians to perform sex-change procedures or face charges of discrimination based on gender identity. The District Court of North Dakota ruled in favor of the CEA, arguing that the rules would violate an employer's or doctor's religious beliefs.

Who are the big heroes who argued the case? Alliance Defending Freedom, of course:

> The Alliance Defending Freedom (ADF), which represented CEA, argued that not only did the mandates require employers and doctors to cover and perform sex-change procedures, but it also demanded that they speak positively of them even if they objected, according to the press release.
>
> […]"By misinterpreting and improperly enforcing federal law, President Biden has far overreached his constitutional authority, to the detriment of people of faith across the country," Matt Bowman, senior counsel for ADF, said in the press release. "The government cannot force Christian employers to pay for, or physically perform, harmful medical procedures that contradict their religious beliefs. The Constitution protects religious healthcare providers and employers and allows them to go about their work in a manner compatible with their deeply held convictions and faith."
>
> The EEOC did not immediately respond to the Daily Caller News Foundation's request for comment.

Alliance Defending Freedom is a great conservative organization that defends religious liberty and conscience protections. They regularly win cases at the Supreme Court. If you don't know about the ADF, it's a great organization to support with your charity budget.

# Knight and Rose Show #45: Boldness in the Face of Compromise

**Wintery Knight** · 9 March 2024 · Archived copy · Original

Welcome to episode 45 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss boldly defending the Bible's teachings on moral issues, in a culture that preaches "don't judge". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode 45:**

**Episode Summary:**

Wintery Knight and Desert Rose discuss the task of defending the Bible's moral teachings in a culture that rejects moral knowledge. We discuss what the Bible teaches about making moral judgements. We discuss the arguments of churches that reject the Bible's moral teachings, and whether their approach succeeded. We discuss strategies for speaking boldly, and evaluate the long-term consequences of silence.

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Study: “social contagion” is a major factor in teen and young adult gender dysphoria

**Wintery Knight** · 10 March 2024 · Archived copy · Original

Previously, I had blogged about a small study published in 2018 by Brown University’s Dr. Lisa Littman. That study was controversial, because it falsified the narrative about transgenderism held by secular leftists. The new study, published in March 2023 in Archives of Sexual Behavior, confirms the Rapid Onset Gender Dysphoria theory first advanced by Littman. Let’s take a look.

The study is here, on Springer Link.

Excerpt from the Abstract:

> During the past decade there has been a dramatic increase in adolescents and young adults (AYA) complaining of gender dysphoria. One influential if controversial explanation is that the increase reflects a socially contagious syndrome: Rapid Onset Gender Dysphoria (ROGD).
>
> We report results from a survey of parents who contacted the website ParentsofROGDKids.com because they believed their AYA children had ROGD. Results focused on 1655 AYA children whose gender dysphoria reportedly began between ages 11 and 21 years, inclusive. These youths were disproportionately (75%) natal female. Natal males had later onset (by 1.9 years) than females, and they were much less likely to have taken steps toward social gender transition (65.7% for females versus 28.6% for males). Pre-existing mental health issues were common, and youths with these issues were more likely than those without them to have socially and medically transitioned.
>
> Parents reported that they had often felt pressured by clinicians to affirm their AYA child’s new gender and support their transition. According to the parents, AYA children’s mental health deteriorated considerably after social transition.

Breitbart reported about the study and noted:

> When asked if their child had friends who “came out as transgender around the same time,” 55.4 percent said “yes,” with that response being significantly higher for females, (60.9 percent) than it was for males (38.7 percent).
>
> […]The study also revealed that parents said they oftentimes felt pressured by clinicians to go along with their child’s new gender identity and support their transition. The parents added that their children’s “mental health deteriorated considerably after social transition.”
>
> […]Parents also estimated that before developing gender dysphoria, their child was spending an average of 4.5 hours per day “on the internet and social media.”
>
> When asked whether a stressful event in their child’s life may have contributed to the onset of gender dysphoria, 72.6 percent of parents answered “yes.”

One of the differences between men and women, in my experience, is that the majority of men tend to generate their worldview by making plans that are likely to achieve goals, whereas the majority of women tend to get their goals from the culture, and pursue those goals by doing what feels good “in the moment”. I have been told this by women who were never like this, and by women who grew out of this once they experienced failure. That’s why transgenderism is especially problematic for girls, because if it is being spread by social cues and pressures, then girls are typically going to be more susceptible to that than boys.

Let’s talk about the previous study.

Here's how the study was first reported by Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE.*

Peer pressure / The Internet:

> The pattern of clusters of teens in friend groups becoming transgender-identified, the group dynamics of these friend groups and the types of advice viewed online led her to the hypothesis that friends and online sources could spread certain beliefs.
>
> [….]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

Mental disorders / traumatic events:

> Additionally, 62 percent of parents reported their teen or young adult had one or more diagnoses of a psychiatric disorder or neurodevelopmental disability before the onset of gender dysphoria. Forty-eight percent reported that their child had experienced a traumatic or stressful event prior to the onset of their gender dysphoria, including being bullied, sexually assaulted or having their parents get divorced.

This article at The Federalist had a few examples to illustrate the conclusion of the study. I'll pick two.

> The study includes other eye-opening information, such as case studies of several children's stories.
>
> > - "A 14-year-old natal female and three of her natal female friends were taking group lessons together with a very popular coach. The coach came out as transgender, and, within one year, all four students announced they were also transgender."
> >
> > - "A 14-year-old natal female and three of her natal female friends are part of a larger friend group that spends much of their time talking about gender and sexuality. The three natal female friends all announced they were trans boys and chose similar masculine names. After spending time with these three friends, the 14-year-old natal female announced that she was also a trans boy."

I thought this quote from that article was interesting as well, given the culture's obsession with "bullying", which is a nebulous term that can mean actual bullying, or mere disagreement.

> > The study also may indicate that school "anti-bullying" programs typically created by LGBT activist organizations such as the Human Rights Campaign may help accelerate children identifying as transgender by pushing peers and authority figures to profusely express their support.

Coming out as transgender means instant fame and popularity, because you're a victim, and everyone has to be nice to you… or else:

> "Great increase in popularity among the student body at large. Being trans is a gold star in the eyes of other teens," wrote one parent on the study response form. Another wrote, "not so much 'popularity' increasing as 'status' … also she became untouchable in terms of bullying in school as teachers who ignored homophobic bullying …are now all at pains to be hot on the heels of any trans bullying."

So becoming transgender has social rewards, especially for people who are being bullied. White girls are constantly being bullied for their race in public schools, so identifying as transgender is a quick and easy way for them to get out of the oppressor class and into the victim class

# How the presence and quality of fathers affects belief in God

**Wintery Knight** · 11 March 2024 · Archived copy · Original

Here's an article by Paul Copan which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.* It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own* rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of François-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]

> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an more difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others. If you want your child to be religious and moral, you have to pick a man who is religious and moral. And it can't just be a faith commitment that he makes, he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading.

My advice to Christian women is this. When you are picking a man, be sure and choose one who is already invested

in Christian things and producing results. It's very unlikely that he's going to start from nothing after you marry him. If you value your kids, make a man's interest in developing and acting on a Christian worldview the main thing you are looking for.

# Canada's government plans to increase punishments for "hate speech" online

**Wintery Knight** · 12 March 2024 · Archived copy · Original

I keep warning Americans never to visit Canada, at least while the secular left Liberal Party is in control. Visiting Canada is like visiting a police state. As soon as you enter the country, anything you say can and will be used against you in a kangaroo court. If you criticize the government, or the government's favored groups, then you are guilty. They are going to make you pay.

Let's take a look at this article from True North:

> In a move aimed at curbing the spread of what it terms "online hate," the Liberal government of Canada has revealed its plan, including hefty fines for online speech and stringent punishment including up to life imprisonment for hate crimes.
>
> The centrepiece of this initiative is the proposed Online Harms Act, details of which were unveiled during a technical briefing released to reporters on Monday.
>
> […]The bill will include amendments to the Criminal Code aimed at addressing hate crimes more effectively.
>
> […]These amendments include the introduction of a standalone hate crime offence applicable across all criminal offences, with penalties extending up to life imprisonment.
>
> Maximum punishments for existing hate propaganda offences are also set to be increased substantially.
>
> […]Also, the bill would add a definition of "hatred" based on the past decision of the Supreme Court of Canada to the Criminal Code.
>
> The text of the bill defines "content that foments hatred" as any content "content that expresses detestation or vilification of an individual or group of individuals on the basis of a prohibited ground of discrimination, within the meaning of the *Canadian Human Rights Act*, and that, given the context in which it is communicated, is likely to foment detestation or vilification of an individual or group of individuals on the basis of such a prohibited ground."
>
> "For greater certainty and for the purposes of the definition content that foments hatred, content does not express detestation or vilification solely because it expresses disdain or dislike or it discredits, humiliates, hurts or offends," adds the government.

Keep in mind that in Canada, people who disagree with policies favored by the Liberal party are routinely prosecuted by the state. People get prosecuted for posting Bible verses in Canada, because they offend people.

Your fellow citizens can report you to the government for "hate speech":

> Anybody will also be able to file complaints against others for "posting hate speech online" that is discriminatory against protected categories such as gender, race, disability and others.
>
> Amendments to the Canadian Human Rights Act will let anybody file complaints against persons posting so-called hate speech with the Canadian Human Rights Commission. If found guilty, the Canadian Human Rights Tribunal can order those found to violate the government's definition of hatred with fines up to $70,000 and takedown orders for content.
>
> According to the text of the bill, the Tribunal has the power to order payments of up to $20,000 for victims of so-called online hate, as well as an order to pay the government $50,000 "if the member panel considers it appropriate."

You may recall, if you follow Canadian law, that the Human Rights Commissions are kangaroo courts that are only ever used to punish Christians and conservatives. They are never used against the Liberal Party or groups that support the Liberal Party. Human Rights Commissions are like social media "fact checkers". On paper, they're unbiased. In practice, they only censor speech critical of the regime, and the regime's supporters. Famous Canadians like Ezra Levant and Mark Steyn have been dragged in front of these Human Rights Commissions. And citizens almost never win their cases. These are kangaroo courts.

You don't have to speak words directly to a person in order to be guilty of hate speech. Your speech online can be reported as "hate speech":

> "It is a discriminatory practice to communicate or cause to be communicated hate speech by means of the Internet or any other means of telecommunication in a context in which the hate speech is likely to foment detestation or vilification of an individual or group of individuals based on a prohibited ground of discrimination," Bill C-63's text reads.

You may never know the identity of your accuser. And if you do know, then you cannot name them publicly:

> The Tribunal will also have powers to hide the identity of those who bring complaints against anybody whom they deem to have posted online hate speech. Additionally, it can compel those who face complaints to not reveal the identity of those involved upon discovery.

It goes without saying that if you cannot expose them publicly, then you have no recourse to counter them.

The government will be monitoring speech online:

> The government plans to establish a new organization. This body, comprising the Digital Safety Commission, the Digital Safety Ombudsperson, and the Digital Safety Office, will work to ensure compliance with regulations and protect users from online harm.

Naturally, the Conservative Party leader opposes the bill:

> Prior to the bill's unveiling, Conservative leader Pierre Poilievre said he would oppose the law, accusing the government of using the issue to legislate censorship and infringe Canadians' free speech.
>
> "We will oppose Justin Trudeau's latest attack on freedom of expression," Poilievre responded to a question from True North's Andrew Lawton last week.
>
> "What does Justin Trudeau mean when he says the worst hate speech? He means speech he hates."

Will there ever be another election in Canada? It's hard to say. Trudeau may not allow another election, especially when he is losing in the polls:

Canada Election Projection 2024

If you're in Canada right now, and you have the education and/or skills to get out, then get out. Yes, the Conservatives are leading in the polls. But until they win, that country is not safe.

Let's hear from some Canadians, courtesy of Rebel News:

Americans – you must never travel to this country. The bill doesn't just undermine freedom of speech, it destroys it. It would be like going to North Korea or Iran. They freeze the bank accounts of peaceful protestors, while letting Hamas supporters run wild in their streets. It is not a free country.

# Children will no longer be prescribed puberty blockers in the UK

**Wintery Knight** · 13 March 2024 · Archived copy · Original

I have been following the progress of the transgender agenda in different countries. Some left-wing countries that started out strongly in favor of transing children are now reversing course. I wrote before about how this was happening in France, Finland and Sweden. The UK National Health Service even lost a lawsuit to former patients who regretted transitioning as children.

Well, today we have fresh good news about the UK.

Here's the story from GB News:

> Children will no longer be prescribed controversial puberty blockers – medicines used to postpone puberty in minors – at gender identity clinics, NHS England has confirmed.
>
> The government said it welcomed the "landmark decision", adding it would help ensure care is based on evidence and is in the "best interests of the child".
>
> Puberty blockers, which pause the physical changes of puberty such as breast development or facial hair, will now only be available to children as part of clinical research trials.
>
> The move follows a public consultation and an interim policy on the issue, which stems from a 2020 NHS England review of gender identity services for under-18s.

The review "pointed to a lack of long-term evidence and data collection on what happens to children and young people who are prescribed medication."

The UK is only the latest country to get more cautious as they learn more about how these things really work.

The New York Post reported on Sweden last month:

> In February, Sweden — a progressive country previously on the cutting edge of providing medical services to transgender youth — also reversed course. The Swedish National Board of Health and Welfare updated its guidelines for treating trans youth, scaling back the use of puberty blockers and cross-sex hormones, saying there hasn't been enough research on their efficacy or side effects.

The Epoch Times reported about France and Finland in May 2022:

> France's National Academy of Medicine posted in March this year (pdf) that "great medical caution must be taken in children and adolescents, given the vulnerability, particularly psychological, of this population and the many undesirable effects and even serious complications that can be caused by some of the therapies available."
>
> […]Finland also announced in 2020 a policy shift for gender dysphoria treatment, with the Finnish Health Authority issuing new guidelines backing psychotherapy rather than puberty blockers and cross-sex hormones for children.

I think that sometimes, people in America see these issues through the lens of the corporate news media. We think that conservatives are losing everywhere, and that the secular left has all the momentum. But, if you look at some of the countries that are even further to the left, you realize that the pendulum is already winging back to the right.

Yesterday, I blogged about how Canada's secular left government is seeing record unpopularity. Even the young people are turning against them, because they can't afford homes or get timely health care. Even feminism has run into a brick wall, as young women find that by discriminating against men in schools and workplaces, they have

actually cut off the supply of men who can protect and provide. Many single mothers who bought into the lies of feminism are watching the slow-motion destruction of their kids who are being raised fatherless.

I think there are some dark times ahead, but already we are seeing signs of a recovery. So keep up your spirits.

# He just wins: DeSantis' Parental Rights in Education bill survives legal challenge

**Wintery Knight** · 14 March 2024 · Archived copy · Original

Do you remember how angry the corporate news media was with Governor Ron DeSantis when he signed a Parental Rights bill into law? DeSantis didn't want LGBY activists imposing their views on children in Florida schools. The corporate news media were MAD! They mocked the bill as the "Don't Say Gay" bill. But the bill didn't say that. It actually just banned grooming children.

So, there was a big legal battle over it, and DeSantis won.

This was reported by The Blaze:

> Florida Gov. Ron DeSantis (R) ratified House Bill 1557 in March 2022, making the Parental Rights in Education Act the law of the land despite sustained opposition and mischaracterizations by woke corporations, the liberal media, and radical leftists in the Biden administration.
>
> After the bill's passage, critics' hopes centered on a legal challenge brought against Florida by a band of LGBT activists keen on nullifying the law. The challengers' desperate two-year effort to scale back parental rights and ensure that sexualizing propaganda could thrive in the classroom did not ultimately have the impact they likely hoped for.
>
> The DeSantis administration and the LGBT challengers filed a settlement Monday, bringing the legal battle to an end.
>
> […]"We fought hard to ensure this law couldn't be maligned in court, as it was in the public arena by the media and large corporate actors," stated Ryan Newman, general counsel for the DeSantis administration. "We are victorious, and Florida's classrooms will remain a safe place under the Parental Rights in Education Act."

Do you know what's better than people who just talk about things that they would like to do? People who do the things that they would like to do. And even better: when people who do things fight and win against people who want to destroy their good work.

According to the Governor's official web site, the law:

- Prohibits classroom instruction about sexual orientation or gender identity in K–3 classrooms, and after 3rd grade, these conversations need to be age-appropriate.
- Ensures that at the beginning of every school year, parents will be notified about healthcare services offered at the school, with the right to decline any service offered.
- Ensures that whenever a questionnaire or health screening is given to K–3 students, parents receive it first and provide permission for the school to administer the questionnaire or health screening to their child.

That's the law of the land in Florida, now.

Wouldn't it be great if we could have a president who stands up for conservatives, passes intelligent laws, defends those laws from the secular left in court, and then WINS. Of course it would.

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 15 March 2024 · Archived copy · Original

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses? God said, See that staff? Throw it down. Moses threw it down and it turned into a serpent. God said, See that serpent? Pick it up. And he picked it up and it turned back into a staff. God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention. And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone? Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home? Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened. But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful. Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you. Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for

example, is a necessary information base that Christians must have.

2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

# Meritus Medical Center in Hagerstown, MD fires nurse for opposing DEI

**Wintery Knight** · 16 March 2024 · Archived copy · Original

Most people in the traditional, pro-marriage camp have noticed that the marriage rate is in a freefall. I'm talking about people like the Daily Wire hosts, Brad Wilcox, etc. They ignore the disincentives facing men, and just slam their fists on the table and cry "Get Married!" to men. But they have no interest in fixing the root cause. They think that shaming men will make them marry.

Here's a story from the Wall Street Journal (archived) about a male nurse – a good man – who lost his job:

> It's fine to oppose diversity, equity and inclusion as long as you keep it to yourself. The moment you speak out, you have a target on your back. That's the lesson I learned in February. I made the mistake of questioning DEI on my personal social-media account. The hospital where I worked fired me within days.
>
> I've been a registered nurse for 16 years. In 2021 I began working in the emergency department at Meritus Medical Center in Hagerstown, Md., rising to assistant clinical manager in February 2023. Since I oversaw nurses, my highest priority after providing the best care to patients was protecting my team. That's what got me into trouble.

I do think it's important to note that this man made a terrible mistake by thinking that it was safe to work in a blue city in a blue state. He does bear some responsibility for that choice, as well as the choice to speak out from a social media account with his real name. That's why I use an alias. Sure, he gets into the Wall Street Journal, but at what cost?

> Like many states, Maryland has been foisting DEI courses on medical professionals for several years. Since 2022 the state has required that all healthcare professionals take "implicit bias" training, largely in response to worries about black maternal mortality. The state has also committed to reducing disparities in severe maternal morbidity between black and white women over the next three years. My hospital began using a course called "B.I.R.T.H Equity Maryland," which stands for Breaking Inequality Reimagining Transformative Healthcare.
>
> I took the first session of the course in July 2023. I was bombarded with evidence-free claims that implicit bias has caused a crisis of maternal mortality in black women. The course ignored the complex factors that contribute to higher black maternal mortality, including comorbidities, while defining any death from any cause after a year of giving birth as maternal mortality—a logical stretch.
>
> Overall, the course implied that white nurses like me are killing black mothers. I was supposed to internalize this message and somehow apply it to the management of my team.

It's funny because you think that when you are going to a health care provider, that they are going to improve your health. But, because they have subscribed to a fact-free mythology, they lie to you to you, which can actually hurt you in the long run.

> In January, Meritus sent me materials for another DEI course for hospital leaders. The materials asserted, among other things, that the U.S. is built on "an ideology of White supremacy that justifies policies, practices and structures which result in social arrangements of subordination for groups of color through power and White privilege."
>
> I quickly decided I wouldn't spread these hateful messages to the nurses under my supervision. I didn't attend the course and wasn't punished for it. A few weeks later, I received an email instructing me to register for an in-person implicit-bias seminar in March. I declined to do so, again with no punishment. The advocacy group Do No Harm has shown how medical professionals are often penalized for not taking such training, so I was

> grateful I got off easy.
>
> The mounting politicization of the workplace frustrated me, so on Feb. 7 I posted what I thought was an innocuous message to my Facebook page: “No employer has the right to invade the unconscious spaces of it’s [sic] employees minds in an attempt to reprogram them into thinking certain ways. If your employer signs you up for an ‘Unconscious Bias’ aka ‘Implicit Bias’ training, then they are doing exactly that.”
>
> My Facebook page doesn’t link me to Meritus, nor did I mention the hospital by name. I didn’t mention the courses, either. All I did was criticize the idea that people should be forced to accept a hateful worldview.

I would imagine that his reason for speaking out was to provide superior medical care to his patients – to all of his patients. Sadly, his employer had a different goal in mind. Their goal was to virtue signal. And that’s more important to them than serving customers.

> That was my mistake—speaking out publicly. The next day I received a call from my manager, who informed me that Meritus had placed me on administrative leave. She said she believed human resources intended to fire me and told me to attend a meeting on Feb. 12. At that meeting, Scott Salzetti, Meritus vice president of team member services, handed down my sentence. He provided me with a document that cited my post and referred to several other posts that “could be reasonably viewed as offensive” or “were misleading, or false.”
>
> I wasn’t told what those posts were, though after reviewing my Facebook account, I suspect it was a January post in which I stated that “corporate healthcare has shifted its focus from patient centered care directives to diversity of the workforce and inclusive excellence training (aka thought reform) for its leaders.” Nothing in that sentence is false or misleading, and again I didn’t mention my employer or a training course. No matter: For openly questioning DEI, instead of keeping my concerns to myself, I was fired. (In response to an inquiry from a Journal editor, a Meritus Medical Center spokeswoman confirmed the termination of my employment but otherwise declined to comment.)
>
> […]In the meeting where I was fired, a Meritus representative repeatedly said I had waded into “a touchy subject.” That’s exactly my point. DEI is inherently divisive and discriminatory to boot. No hospital or medical provider should touch something so touchy, much less fire someone for daring to question it.

I hope this will help young Christians and conservatives to think carefully about what field they choose to go into, and maybe even where they live. You can’t be guided by your feelings. You have to have a plan to reduce your vulnerability to the secular left fascists.

# William Lane Craig debates Austin Dacey: Does God Exist?

**Wintery Knight** · 17 March 2024 · Archived copy · Original

Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

**The debaters:**

- William Lane Craig
- Austin Dacey

**The video:** (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

**Dr. Craig's opening statement:**

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

**Dr. Dacey's opening argument:**

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

**One final point:**

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

# New study: trans women's self-ending rate doubles after sex surgery

**Wintery Knight** · 19 March 2024 · Archived copy · Original

I just finished reading the third edition of Frank Turek's "Correct, Not Politically Correct: About Same-Sex Marriage and Transgenderism". The book talks about the effects of taking drugs and undergoing surgeries to deny your biological sex. It costs a lot of money. It creates chronic pain. It requires continuous visits to the doctors ($$$ for them). And there's higher risk of self-ending.

Here's the latest study published in the peer-reviewed journal American Urological Association. They don't like people quoting their web site, so I had to look for a mainstream news report about it.

The Daily Caller reported on the study:

> The suicide rate for men identifying as transgender women in California doubled among those who receive vaginoplasty, a new study found.
>
> More than twice as many men who identify as transgender women had attempted suicide after receiving the surgery when compared to those who had not undergone the procedure, according to AUA Journals.

If you don't know what a vaginoplasty is, Daily Caller had a helpful blurb about it:

> Vaginoplasty "involves the removal of a man's penis, testicles and scrotum" to sculpt a "feminine-appearing" vaginal canal and vulva, according to John Hopkins Medicine.

Basically, the idea is to create the appearance of being the opposite sex. But these are not as sensitive as the real things, they require constant painful and expensive maintenance, and they are expensive. We are all paying for these procedures, when our health insurance goes up to pay for the people who are getting them.

> More:
>
> "Rates of psychiatric emergencies are high both before and after [surgery]. Although both the phalloplasty and vaginoplasty patients have similar overall rates of psychiatric encounters, suicide attempts are more common in the [latter]. In fact, our observed rate of suicide attempts in the phalloplasty group is actually similar to the general population, while the vaginoplasty group's rate is more than double that of the general population. Patients undergoing [vaginoplasty] with a history of prior psychiatric emergencies or feminizing transition are at a higher risk and should be counseled appropriately," study authors concluded.
>
> Why is the suicide rate higher for men? I think I have the answer. Men seem to enjoy and desire sex more than women. I think the men are surprised and confused that the thing that looks like a woman's vagina doesn't actually work to produce sexual pleasure.

Now, when I go to buy a car, I don't do it on the basis of feelings. I do it on the basis of user reviews, long-term driving evaluations, warranty ratings, etc. I cannot imagine how blind a person would have to be to chop off a functioning reproduction organ and think that they will be able to enjoy sex as much as they could before. And I can't imagine why the doctors would go along with it, except that they want lots of insurance company money. And why don't the insurance companies stop it? Oh, because they just raise the premiums of the other people who use health care responsibly.

# New study: Significant parallels found between anorexia and gender dysphoria

**Wintery Knight** · 20 March 2024 · Archived copy · Original

A common objection against transgenderism by biological realists is to make a parallel argument from anorexia. Conservatives say "we wouldn't want to help a skinny anorexic person lose weight because they thought they were too fat, would we?" Transgender activists reply that these two things are completely different. Who is right? Well, now we have a peer reviewed study to help us decide.

The new study was published in the peer-reviewed journal Sexuaologie, which is the journal of the *German Society for Sexual Medicine, Sexual Therapy and Sexual Science/DGSMTW*.

The Society for Evidence-Based Gender Medicine reported on it:

> A new publication* in Sexuologie (the journal of the German Society for Sexual Medicine, Sexual Therapy and Sexual Science/DGSMTW) takes on the issue of the sharp rise in transgender identification in adolescent females, which remains poorly understood. The authors, Korte and Gille, present an intriguing hypothesis for this novel phenomenon, comparing and contrasting gender dysphoria to anorexia nervosa, and finding a number of important similarities. The authors conclude that clinicians working with gender-dysphoric adolescents must familiarize themselves with the complex dynamics of female adolescent development, and that trans-affirmative medical interventions should not be considered until adolescent development is complete.

SEGM got permission to post the full English language translation of the study, but I didn't. So you have to click through to read it.

But here's the interesting part of SEGM's synopsis of the paper:

> Drawing on their clinical work with such patients, Korte and Gille observe that trans identification in adolescent girls may reflect the desire to circumvent the challenges of female adolescence rather than a deep identification with maleness. They note that "although there is pronounced rejection of the female body and/or the female gender role," there is frequently no pronounced desire for the primary or even secondary physical characteristics of the opposite sex.
>
> […]The authors note several similarities between anorexia and gender dysphoria. Both involve body image disorders where aggression is "turned against one's own self, inward, but also outward, against important others." The authors note:
>
> "*…in both anorexic eating disorders and gender identity disorders (gender dysphoria), relatives, especially parents, are exposed to strong feelings of helplessness and powerlessness in addition to the massive feelings of guilt and failure that often arise. In both disorders, this sometimes exacerbates the symptoms" of the … patient within a correspondingly pathological relationship dynamic*."
>
> Korte and Gille conclude by outlining concrete steps that pediatricians, child and adolescent psychiatrists, gynecologists, and other medical providers can take to help girls navigate puberty in a way that averts or mitigates these developmental crises. They caution clinicians that in the vast majority of cases of gender dysphoria arising around adolescence, it is likely temporary and represents a maturation crisis or insecurity of 'sexual, rather than gender identity."
>
> The authors criticize the "trans-affirmative" (gender-affirming) model of care for adolescents, which is focused on the provision of physical body modifications, as inconsistent with the principles of adolescent development. They highlight the importance of addressing adolescent gender dysphoria within a developmental framework, recognizing the complexity of adolescent experiences and the need for tailored interventions that address underlying conflicts and promote adaptive coping strategies.

I think this study is very helpful for understanding what's really going on in the mind of young people when they reject their own gender.

In the most recent episode of Knight and Rose, Rose and I were talking about how to be more bold when discussing controversial issues. Our advice was to be the smartest person in the room. I remember when homosexuality was becoming a big issue, I went out and read a whole bunch of books about it, from people like Jeffrey Satinover and Charles Socarides. It's similar to how I am handling transgenderism now.

Christians should always be the smartest people in the room when these topics come up. Nobody should be listening to the "compassionate" virtue signalers, who just want to jump to affirmation and approval. And the way you beat those people is by asking them a few simple questions about what they know, to show that they aren't operating from knowledge at all.

The doctors and the surgeons are often just trying to hook a young person onto constant surgeries, drugs and treatments. They want money, lots of money. All you have to do is to ask them what liability they have if their treatment results in regret and the desire to detransition. Is there a warranty? Of course not. Would they put their promises about "pauses" and "rollbacks" in writing? Of course they won't.

What about the emotion-based friends and relatives? All you have to do is ask them about technical issues. What are the long-term effects of these drugs? How much does it cost? How painful is it? Are there permanent effects? They are supporting the transition because they want to feel good. They want to be liked. When you ask them knowledge questions, the children can see that the feelings-based adults are only serving themselves.

It's much better to discuss these issues by pointing out the long-term consequences of decisions. Of course young people have feelings. Of course they want to act on those feelings. But young people also need to hear from people who understand what is further down the road. They don't know that, and they need to rely on adults who know for help. Not the greedy health care workers. And not the low-self-esteem feelings-based crowd.

# How strong are naturalistic hypotheses about the origin of life?

**Wintery Knight** · 21 March 2024 · Archived copy · Original

The origin of life is easy to explain if it is the result of intelligent design, because intelligent agents know how to engineer the building blocks, and how to assemble them into the components of a living system: proteins and nucleic acids. But how can you do it when there are no intelligences allows in your worldview? There is a new article in Nature about that.

The authors write:

> To understand how life might have begun, researchers must stop cherry-picking the most beautiful bits of data or the most apparently convincing isolated steps, and explore the implications of these deep differences in context. Depending on the starting point, each hypothesis has different testable predictions. For example, if life started in a warm pond on land, the succession of steps leading from prebiotic chemistry to cells with genes is surprisingly different from those that must be posited if the first cells emerged in deep-sea hydrothermal vents.
>
> Building coherent frameworks — in which all the steps in the continuum fit together — is essential to making real progress. To see why, here we highlight two of the most prominent frameworks, which propose radically distinct environments for the origin of life.

Let's see what the authors say about the prebiotic soup:

> This framework posits that nucleotides are concentrated in a small pond. To form RNA, the simplest and most versatile genetic material, nucleotides must polymerize. That is most easily achieved by drying them out (polymerization is a type of dehydration reaction). Proponents imagine a succession of wet–dry cycles, in which the pond dries out to form polymers of RNA, then fills again with water containing more nucleotides and so on, cycle after cycle, making more and more RNA3.

This is the "RNA World" hypothesis, which I've blogged about before. The authors don't like it:

> But this concept raises some difficult questions. It places the onus on an 'RNA world', in which RNA acts both as a catalyst (in a similar way to enzymes) and as a genetic template that can be copied. The problems are that there is little evidence that RNA can catalyse many of the reactions attributed to it (such as those required for metabolism); and copying 'naked' RNA (that is not enclosed in compartments such as cells) favours the RNA strands that replicate the fastest. Far from building complexity, these tend to get smaller and simpler over time. Worse, by regularly drying everything out, wet–dry cycles keep forming random groupings of RNA (in effect, randomized genomes). The best combinations, which happen to encode multiple useful catalysts, are immediately lost again by re-randomization in the next generation, precluding the 'vertical inheritance' that is needed for evolution to build novelty.
>
> If selection on RNA in drying ponds could somehow be made to generate greater complexity, what must it achieve? To make cells that grow and reproduce, RNA must encode metabolism: the network of hundreds of reactions that keeps all cells alive. Modern-day metabolic reactions bear no resemblance to the cyanide chemistry that makes nucleotides in this model. Evolution would therefore need to replace each and every step in metabolism, and there is no evidence that such a wholesale replacement is possible.

The authors are saying that they need to build up complexity from simple to more complex, in order to get the bare minimum they need for simple life. Life basically requires four different capabilities: membrane, energy capture, metabolism, and information storage. And they all have to be there and working right from the start. It's a frightful amount of complexity to get right – unless you appeal to intelligence.

The authors also talk about life forming from non-living materials in hydrothermal vents:

> Our own favoured scenario is that the chemistry of life reflects the conditions under which life began, in deep-sea hydrothermal systems on the early Earth4. In broad brush strokes, this means that gases such as carbon dioxide (the near-universal source of carbon in cells today) and hydrogen feed a network of reactions with a topology resembling metabolism. Genes and proteins arise within this spontaneous protometabolism and promote the flux of materials through the network, leading to cell growth and reproduction. There are plenty of problems here, too, but they differ from those in the prebiotic soup framework.

The first problem is that they need enzymes in order go from simple gases to nucleotides, and they don't have them:

> The first problem is that H2 and CO2 are not particularly reactive — indeed, their chemistry was largely ignored for decades, although rising interest in green chemistry is changing that. But deep-sea vents are labyrinths of interconnected pores, which have a topology resembling cells — acidic outside and alkaline inside. The flow of protons from the outside to the inside of these pores can drive work in much the same way that the inward flow of protons can drive CO2 fixation in cells today5.
>
> […]But many chemists are troubled by the idea that, in the absence of enzymes to serve as catalysts, hydrothermal flow could drive scores of reactions through a network that prefigures metabolism, from CO2 right up to nucleotides. The chemist Leslie Orgel once dismissed this scenario as an "appeal to magic". Certainly, further data are required, supporting or otherwise.

They have problems sequencing nucleotides into functioning components:

> Polymerization is another stumbling block. Nucleotides have been polymerized in water on mineral surfaces9, but this raises similar questions to those noted for wet–dry cycles about how selection could act. If the problem is solved by polymerizing nucleotides inside growing protocells, mineral surfaces would not have been available. Polymerization would then have needed to happen in cell-like (aqueous gel) conditions, but without enzymes. If serious attempts to synthesize RNA under those conditions fail, the overall framework would need to be modified.

I'm not convinced that mineral surfaces can help with the nucleotide sequencing problem, but they don't even have those available in the hydrothermal vents.

I studied computer science in university, so biochemistry is all new to me. I am trying to learn it, but I also have to write code all day for work. But thankfully, there are experts who can sort this out for us.

Here is a podcast from the fellows over at the Discovery Institute, and they talked about this article. Podcasts are a great way to try to understand these complex problems.

# Canadian Federal Police: Canadians may revolt over deteriorating economy

**Wintery Knight** · 22 March 2024 · Archived copy · Original

Whenever I have conversations with people about economics, they frequently like to point to Canada as an example of big government socialism that works. “I just want free single-payer health care and diversity” they cry. “Canada is doing fine, they’re wealthy”. Well, let’s take a look at a report from the federal police in Canada, and find out what they think is really going on.

This is from National Post, one of Canada’s national newspapers:

> A secret RCMP report is warning the federal government that Canada may descend into civil unrest once citizens realize the hopelessness of their economic situation.
>
> “The coming period of recession will … accelerate the decline in living standards that the younger generations have already witnessed compared to earlier generations,” reads the report, entitled Whole-of-Government Five-Year Trends for Canada.

> “For example, many Canadians under 35 are unlikely ever to be able to buy a place to live,” it adds.
>
> The report, labelled secret, is intended as a piece of “special operational information” to be distributed only within the RCMP and among “decision-makers” in the federal government.
>
> […]Right from the get-go, the report authors warn that whatever Canada’s current situation, it “will probably deteriorate further in the next five years.”
>
> […]In terms of declining living standards and inaccessible home ownership, the RCMP’s warnings are indeed in line with available statistics.
>
> Canadian productivity — measured in terms of GDP per capita — has been trending downwards since at least the 1980s. But this has accelerated dramatically in recent years — even as per-worker productivity rises in many of our peer countries.

If you remember Canadian politics, Canada was doing well under conservative Prime Minister Stephen Harper, an economist. But then, they decided to elect a part-time drama teacher and snowboarding instructor, with a famous last name, and nice hair. That happened in 2015, and it’s been downhill for Canada’s economy ever since.

More:

> An analysis last year by University of Calgary economist Trevor Tombe found that if Canada had merely kept pace with U.S. productivity growth for the last five years, Canadian per-capita earnings would be $5,500 higher than they are now.
>
> Meanwhile, housing affordability has reached “worst-ever” levels in most of Canada’s major markets, according to a December analysis by RBC. On average, even condos are now so unaffordable that only 44.5 per cent of Canadian households had sufficient income to buy one at current prices. As for single-family homes, only the richest 25 per cent of Canadian households had any hope of obtaining one.
>
> “Economic forecasts for the next five years and beyond are bleak,” reads the RCMP’s assessment of the rest of the decade, even adding a quote from French President Emmanuel Macron that “the end of abundance” is nigh.

By the way, Canada was also in the news this week for their new hate speech / hate crime legislation. Any dissent

from the secular leftism of the ruling communist party will be met with massive fines and up to life in prison.

# Knight and Rose Show #46: Dr. Michael Licona on the Resurrection of Jesus

**Wintery Knight** · 23 March 2024 · Archived copy · Original

Welcome to episode 46 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome Dr. Michael Licona to discuss how historians investigate the resurrection of Jesus. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode 46:**

**Episode Summary:**

Just in time for Easter, Wintery Knight and Desert Rose interview Dr. Michael Licona about how historians can investigate miracle claims, such as the resurrection of Jesus. Can historians control for their biases and presuppositions? What are the most reliable sources for the life of Jesus? Can Christians make a compelling case for the resurrection to non-Christians? How do naturalists explain the evidence for the resurrection?

**Speaker biographies**

Dr. Michael Licona is a world-class scholar on the topic of the resurrection of Jesus. Mike has a Ph.D. in New Testament with distinction at the University of Pretoria. He has spoken on many university campuses and frequently engages in formal academic debates. Mike is Professor of New Testament Studies at Houston Christian University and the President of Risen Jesus, Inc. His most recent books include "Why Are There Differences in the Gospels? What We Can Learn From Ancient Biography" (Oxford University Press, 2017) and "The Resurrection of Jesus: A New Historiographical Approach" (IVP Academic, 2010). He also has a forthcoming book called, "Jesus, Contradicted: Why the Gospels Tell the Same Story Differently" published by Zondervan Academic.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Gay marriage debate: Michael Brown debates Eric Smaw on same-sex marriage

**Wintery Knight** · 24 March 2024 · Archived copy · Original

About the debate:

> On April 21, 2011 at 7:30pm at UCF's Health and Public Affairs Building (Room 119), Rollins College professor, Dr. Eric Smaw and author and seminary professor Dr. Michael L. Brown will debate the question "Should same sex marriage be legalized in America?" The event will be held at 4000 Central Florida Blvd and is open to the public. After the formal portion of the debate, Brown and Smaw will field questions from the audience.

About the speakers:

> **Dr. Smaw** will be responding in the affirmative. He earned his Ph.D. in Philosophy of Law from the University of Kentucky in 2005. His areas of expertise are philosophy of law, international law, human rights, ethics, and modern philosophy. He has published articles on human rights, terrorism, and cosmopolitanism. His most recent publication is "Swaying in the Balance: Civil Liberties, National Security, and Justice in Times of Emergency".
>
> **Dr. Brown** will be responding in the negative. He earned his Ph.D. in Near Eastern Languages and Literatures from New York University and is a nationally known evangelical lecturer and radio host. He is the author of numerous scholarly articles and twenty books, including the recently published study "A Queer Thing Happened to America", which is quickly being recognized as the definitive work on the history and effects of gay activism on American culture.

Here are the first two parts:

Part 1 of 10:

Part 2 of 10:

The rest of the segments are here.

**Summaries of the opening speeches**

Summary of Dr. Brown's opening speech:

There is no compelling reasons by the state should change the definition of marriage

The reason the state conveys benefits for marriage is because marriage is beneficial for the state

Traditional marriage is recognized by the state for several reasons:
– it domesticates men
– it protects women
– it provides a stable, nurturing environment for children

Marriage has three public purposes:
– to bind men and women together for RESPONSIBLE procreation
– to get the benefit
– to provide children with two parents who are bonded to them biologically
– to create the next generation of people to keep the society going

Normally, opposite sex couples create children

Homosexual couples can NEVER create children together

Men and women are differences that are complementary

Monogamy is the norm for opposite sex couples.

For gay men, open relationships / cheating is the norm.
This is because women have a tempering effect on sexuality.

There is no evidence that recognizing same-sex civil unions and marriages have changed this trend.

Same-sex marriage guarantees that children will either not have a father or a mother
So which of the sexes is dispensable when raising children?

For example, consider Dawn Stefanowicz, who grew up with a gay father and no mother
She never got a chance to see a man model love and protect a women within a marriage
That makes an enormous difference in a woman's life – in the way she relates to men

Even with scientific advancements, every baby has a mother and a father

If we change the definition of marriage so that it is based on consent, then why limit it to just two people
If marriage is not the union of male and female, then why have only TWO people
In Canada, you have civil liberties lawyers arguing for for polygamy
In the United States, Professor David Epstein was in a consensual relationship with his daughter
Should incestuous relationships also be celebrated as marriage? Why not?
Should polyamorous relationships also be celebrated as marriage? Why not?

Sexual orientation is not the same as race
Men are women are different in significant ways, but different races are not
You need separate bathrooms for men and women, but not for people of different races

Summary of Dr. Smaw's opening speech: (He ended his speech after only 10 minutes)

You can redefine marriage so that it no longer based on the public purposes he mentioned (controlling procreation, fusing complementary male and female natures, providing children with mothers and fathers who are biologically linked to them, providing children with a comparatively stable development environment that offers comparatively less instability, promiscuity and domestic violence rates compared to cohabitation, etc.), but is instead based on consent and feelings, and that redefinition of marriage won't open marriage up to polygamy, polyamory, etc.

If you like feminism, then you should allow same-sex marriage

If you like abortion rights, then you should allow same-sex marriage

Homosexuals participate in society by working at various jobs, so they are participating in society

Homosexuals should be given the same tax breaks as married people because they work at various jobs for money

Working at a job for money achieves the same public purpose as procreating and staying together to raise children in a stable environment

You can listen to the rest for the rebuttals, and cross-examination. Oh yes – there was cross-examination! It starts two thirds of the way through Part 5, if you want to jump to it. And sparks were flying! There is also Q&A from the audience of students.

This is such a great debate – I love to hear two passionate guys disagreeing about something. I love to hear both sides of the issues. There is always something to learn by listening to the other side. It makes me more effective and more tolerant when I stand up to defend my side of the argument.

By the way, my own secular case against same-sex marriage is right here, if you want to see how I would debate this

issue. Also check out the recent studies on the effects of gay parenting on children.

# Should government get out of the marriage business?

**Wintery Knight** · 25 March 2024 · Archived copy · Original

Here are three articles by Jennifer Roback Morse posted at The Public Discourse. The articles answer the charge from social liberals and libertarians that government should "get the government out of marriage".

Here's the first article which talks about how government will still be involved in marriage, even if we get rid of the traditional definition of marriage, because of the need for dispute resolution in private marriage contracts. She uses no-fault divorce as an example showing how it was sold as a way to get government out of the divorce business. But by making divorce easier by making it require no reason, it increased the number of disputes and the need for *more government intervention* to resolve these disputes.

Here's the second article which talks about how the government will have to expand to resolve conflicts over decisions about who counts as a parent and who gets parental rights. With traditional marriage, identifying who the parents are is easy. But with private marriage contracts where the parties are not the biological parents, there is a need for the state to step in and assign parental rights. Again, this will require an expansion of government to resolve the disputes.

Here's the third article which talks about how marriage is necessary in order to defend the needs and rights of the child at a time when they cannot enter into contracts and be parties to legal disputes.

The third article was my favorite, so here is an excerpt from it:

> The fact of childhood dependence raises a whole series of questions. How do we get from a position of helpless dependence and complete self-centeredness, to a position of independence and respect for others? Are our views of the child somehow related to the foundations of a free society? And, to ask a question that may sound like heresy to libertarian ears: Do the needs of children place legitimate demands and limitations on the behavior of adults?
>
> I came to the conclusion that a free society needs adults who can control themselves, and who have consciences. A free society needs people who can use their freedom, without bothering other people too much. We need to respect the rights of others, keep our promises, and restrain ourselves from taking advantage of others.
>
> We learn to do these things inside the family, by being in a relationship with our parents. We can see this by looking at attachment- disordered children and failure-to-thrive children from orphanages and foster care. These children have their material needs met, for food, clothing, and medical care. But they are not held, or loved, or looked at. They simply do not develop properly, without mothers and fathers taking personal care of them. Some of them never develop consciences. But a child without a conscience becomes a real problem: this is exactly the type of child who does whatever he can get away with. A free society can't handle very many people like that, and still function.
>
> In other words I asked, "Do the needs of society place constraints on how we treat children?" But even this analysis still views the child from society's perspective. It is about time we look at it from the child's point of view, and ask a different kind of question. *What is owed to the child*?
>
> **Children are entitled to a relationship with both of their parents. They are entitled to know who they are and where they came from. Therefore children have a legitimate interest in the stability of their parents' union, since that is ordinarily how kids have relationships with both parents. If Mom and Dad are quarreling, or if they live on opposite sides of the country, the child's connection with one or both of them is seriously impaired.**
>
> **But children cannot defend their rights themselves. Nor is it adequate to intervene after the fact, after harm already has been done. Children's relational and identity rights must be protected proactively.**

> **Marriage is society's institutional structure for protecting these legitimate rights and interests of children.**

I recommend taking a look at all three articles and becoming familiar with the arguments in case you have to explain why marriage matters and why we should not change it. I think it is important to read these articles and to be clear that to be a libertarian doctrine does not protect the right of a child to have a relationship with both his or her parents.  Nor does libertarianism promote the idea that parents ought to stick together for their children. Libertarianism means that adults get to do what they want, and no one speaks for the kids.

The purpose of marriage is to make adults make careful commitments, and restrain their desires and feelings, so that children will have a stable environment with their biological parents nearby. We do make exceptions, but we should not celebrate exceptions and we should not subsidize exceptions. It's not fair to children to have to grow up without a mother or father just so that adults can pursue fun and thrills.

# Ron DeSantis bars minors under 14 from creating social media accounts

**Wintery Knight** · 26 March 2024 · Archived copy · Original

There's been more excellent news from Governor Ron DeSantis in Florida. I have to write about this, because people are getting really down on the way things are going these days. I just want to remind everyone that it really makes a huge difference to your mental health when you live in a red state like Tennessee or Florida. If you're a Christian or conservative, every day in a red state is Christmas.

Here's the latest Christmas gift from Ron DeSantis for the people of Florida, as reported in Florida's Voice:

> Gov. Ron DeSantis signed a bill on Monday barring minors under 14 from creating accounts on social media platforms that employ addictive features and data collection software.
>
> The legislation allows for 14 and 15-year-olds to create accounts on the apps with parental consent.
>
> Additionally, the bill requires adequate age verification measures for internet sites that contains obscene or "harmful" content, unsuitable for minors.
>
> The legislation, HB 3, was sponsored by Reps. Tyler Sirois, R-Merritt Island, Fiona McFarland, R-Sarasota, and Michele Rayner, D-St. Petersburg. Sen. Erin Grall, R-Fort Pierce, sponsored the Senate version of the bill.
>
> House Speaker Paul Renner, R-Palm Coast, also spearheaded the effort.
>
> The purpose of the legislation is meant to specifically target platforms that use addictive features with content catered to individuals based on algorithms that analyze user information.
>
> Addictive features include infinite scrolling, auto-play and live streaming.
>
> The bill does not target platforms that are simply used for one function, such as emailing and texting.

Here's another big gift for conservatives in Florida, reported by Florida's Voice:

> Gov. Ron DeSantis signed legislation on Wednesday to crack down on public homeless encampments across Florida.
>
> The new Florida law bars local governments from allowing public sleeping or camping on public property without a lawful permit.
>
> Instead, the local jurisdictions can set certain public properties or venues to be used for public camping or sleeping for up to one year.
>
> DeSantis highlighted the massive impact of homeless camps on cities across the country and in Florida.
>
> "We do not have any cities in the top 10 with respect to homeless," he said. "Part of that, I think, is because we have different policies."
>
> […]The legislation was brought by Sen. Jonathan Martin, R-Fort Myers, and Rep. Sam Garrison, R-Fleming Island.

And one more, also reported by Florida's Voice, about illegal immigrants from Haiti:

> Gov. Ron DeSantis on Friday signed three bills passed this year by lawmakers aimed at further cracking down on illegal immigration and illegal aliens in Florida.
>
> He made the announcement in Polk County with Sheriff Grady Judd and other officials and lawmakers.
>
> One bill **increases penalties for illegal aliens** who commit crimes in the state after already having been deported for being there illegally. The legislation increases the severity of each degree of felony by one degree:

> a third degree would become a second degree, a second degree a first degree, and a first degree turns into a life felony.
>
> - DeSantis vowed that Florida will “throw the book” at illegal aliens who come back to Florida to commit crimes.
> - It also increases a second degree misdemeanor to a first, and a first degree misdemeanor to a third degree felony.
> - Sen. Blaise Ingoglia, R-Spring Hill, sponsored it. Reps. Kiyan Michael, R-Jacksonville, and Berny Jacques, R-Seminole, carried the House version.
> - It takes effect Oct. 1.
>
> Another bill **prevents local governments from validating community IDs for illegal aliens**.
>
> - The governor noted that giving out such IDs is already not allowed, but the measure goes further in preventing them from validating such IDs.
> - Ingoglia, Michael and Jacques carried the legislation.
> - It takes effect July 1.
>
> The third bill **increases penalties on those who drive without a valid driver’s license**.
>
> - The legislation hikes penalties on those with a revoked, suspended, or revoked license, along with increasing penalties on repeat offenders.
> - It was sponsored by Ingoglia, along with Rep. Rachel Plakon, R-Lake Mary.
> - It takes effect July 1.
>
> Lt. Gov. Jeanette Nunez and Attorney General Ashley Moody praised lawmakers for forwarding the bills and DeSantis for signing them.

This is all very good news for conservatives. If you live in Florida, people are not able to play the victim, and pass the costs of their decisions off onto other people.

# Everyone should watch Climate: The Movie to understand climate change

**Wintery Knight** · 27 March 2024 · Archived copy · Original

In this post, I'll be posting links to watch the new documentary for free on YouTube and Twitter (with captions in English). I also link to a a review of the movie, and a post that has citations for 70 of the major claims. And a post from just yesterday, showing how climate change alarmism causes real problems for people like you and me. Not just higher electricity prices, but harming the environment.

First, here's the documentary available at YouTube:

It has over 142,000 views in just four days, as of time of writing.

And if you prefer Twitter / X, then you can watch it there:

> Ask and you shall receive: Here's an X copy of Climate: The Movie with English captions. pic.twitter.com/FYbHW45yuX
>
> — Tom Nelson (@TomANelson) March 23, 2024

With captions in English.

Here is a review from NetZero Watch.

Excerpt:

> The first part of the film is about the science, about temperature and carbon-dioxide levels and their respective influences and timescales. It shows that the 'climatic extremes' so often reported are not extremes at all. Then it goes into the politics, examining the role of the establishment, the media and net zero, making the point that if we aren't going to be mauled by the planet, we will be by our reaction to the putative climate crisis.

The other of that review is David Whitehouse, who has a Ph.D in Astrophysics, and has carried out research at Jodrell Bank and the Mullard Space Science Laboratory. He is a former BBC Science Correspondent and BBC News Science Editor.

That page also has the video embedded, hosted by Vimeo.

If, by some stroke of censorship, it's taken down in all of these places, you can find it on Rumble, as well.

You can find the Annotated Bibliography for Climate: The Movie here.

Finally, I wanted to link to this post from Daily Caller, that shows how climate change alarmism costs you. Everyone knows about how green energy relies on subsidies, and raises the prices of electricity. And that happens everywhere it's tried – California, Europe, Canada, etc.

But there are other problems with green energy, too:

> A severe Texan hail storm damaged thousands of solar panels at a Fort Bend County farm causing neighbors to fear potential chemical leakage from the panels, ABC 13 reported.
>
> The freak and severe hail storm hit the farm and its environs on March 16, causing massive property damage throughout the affected area, the outlet reported.

Are the young people who believe in global warming mythology going to be happy with results like this? Maybe we

should be telling them what they are voting for.

# The simplest argument against Darwinian evolution is Junk DNA

**Wintery Knight** · 28 March 2024 · Archived copy · Original

The Discovery Institute has a new video out in their series on intelligent design, about so-called "junk DNA". Basically, there are two sides to the origins issue: the design-deniers and the design-recognizers. (And theistic evolutionists belong in the former group). These two groups make different predictions about the information in the human genome. And we can check their predictions.

First, here's the new video:

Here is description from Evolution News:

> The myth of junk DNA is much more than just an evolutionary idea that turned out to be mistaken. As the new episode of Long Story Short makes amusingly clear, it also reflects a "battle of predictions" with intelligent design. Going back to the 1970s, evolutionists predicted that, in line with their premise of a randomly generated genome, DNA would turn out to be full of Darwinian debris, playing no functional role but merely parasitic (atheist Richard Dawkins's term) on the small portion of functional DNA.
>
> Proponents of intelligent design said the opposite. William Dembski (1998) and Richard Sternberg (2002) predicted widespread function for the so-called "junk." After all, as a product of care and intention, the genome ought to be comparable in a way with products of human genius, with every detail there for a reason.
>
> On that, ID has since been massively vindicated. Scientific theories are tested by the predictions they make. If those fail, it's a bad sign for the theory. Mainstream science journals like Science are admitting the truth about the erstwhile "junk" — even as a few diehard Darwinists like Laurence Moran at the University of Toronto deny it.

And these predictions by the design side are not new. My young Earth creationist friend even sent me this today (today is Wednesday, I always write these posts the night before and schedule them for the next morning):

> While a Creation/Fall model could account for the accumulation of some random, mutationally defective "extra copies," evolutionists felt they had a strong point that 97% "junk" DNA pointed more to evolution than intelligent design. Creationists have long suspected that this "junk DNA" will turn out to have a function. In fact, junk DNA research is now a hot topic; not only are more and more functions being detected, but it is suspected that junk DNA is full of yet-to-be-discovered "intellectual riches.

That prediction is from 1994. My friend has a whole article about Junk DNA here, with all the predictions from each side.

He says "Carl Wieland founded CMI". CMI is Creation Ministries International, which is supposed to be the best YEC web site.

Anyway, if you missed the other videos in the series, there is a playlist, but all the videos are out of order! If you want a quick and snarky introduction to intelligent design, this is it.

# William Lane Craig explains the doctrine of penal substitutionary atonement

**Wintery Knight** · 29 March 2024 · Archived copy · Original

Probably one of the most common questions that you hear from people who don't fully understand Christianity is this question: "why did Jesus have to die?". The answer that most Christians seem to hold to is that 1) humans are rebelling against God, 2) Humans deserve punishment for their rebellion, 3) Humans cannot escape the punishment for their rebellion on their own, 4) Jesus was punished in the place of the rebellious humans, 5) Those who accept this sacrifice are forgiven for their rebelling.

**Are humans rebellious?**

Some people think that humans are not really rebellious at all, but it's actually easy to see. You can see it just by looking at how people spend their time. Some of us have no time for God at all, and instead try to fill our lives with material possessions and experiences in order to have happy feelings. Some of us embrace just the parts of God that make us feel happy, like church and singing and feelings of comfort, while avoiding the hard parts of that vertical relationship; reading, thinking and disagreeing with people who don't believe the truth about God. And so on.

This condition of being in rebellion is universal, and all of us are guilty of breaking the law at some point. All of us deserve to be separated from God's goodness and love. Even if we wanted to stop rebelling, we would not be able to make up for the times where we do rebel by being good at other times, any more than we could get out of a speeding ticket by appealing to the times when we drove at the speed limit, (something that I never do, in any case).

This is not to say that all sinners are punished equally – the degree of punishment is proportional to the sins a person commits. However, the standard is perfection. And worse than that, the most important moral obligation is a *vertical* moral obligation. You can't satisfy the demands of the moral law just by making your neighbor happy, while treating God like a pariah. The first commandment is to love God, the second is to love your neighbor. Even loving your neighbor requires you to tell your neighbor the truth – not just to make them feel good. The *vertical* relationship is more important than the *horizontal* one, and we've all screwed up the vertical relationship. We all don't want God to be there, telling us what's best for us, interfering with our fun. We don't want to relate to a loving God if it means having to care what he thinks about anything that we are doing.

**Who is going to pay for our rebellion?**

The Christian answer to the problem of our rebellion is that Jesus takes the punishment we deserve in our place.

However, I've noticed that on some atheist blogs, they don't like the idea that someone else can take our punishment for us to exonerate us for crimes that we've committed. So I'll quote from this post by the great William Lane Craig, to respond to that objection.

Excerpt:

> The central problem of the Penal Theory is, as you point out, understanding how punishing a person other than the perpetrator of the wrong can meet the demands of justice. Indeed, we might even say that it would be wrong to punish some innocent person for the crimes I commit!
>
> It seems to me, however, that in other aspects of human life we do recognize this practice. I remember once sharing the Gospel with a businessman. When I explained that Christ had died to pay the penalty for our sins, he responded, "Oh, yes, that's imputation." I was stunned, as I never expected this theological concept to be familiar to this non-Christian businessman. When I asked him how he came to be familiar with this idea, he replied, "Oh, we use imputation all the time in the insurance business." He explained to me that certain sorts of insurance policy are written so that, for example, if someone else drives my car and gets in an accident, the responsibility is imputed to me rather than to the driver. Even though the driver behaved recklessly, I am the

> one held liable; it is just as if I had done it.
>
> Now this is parallel to substitutionary atonement. Normally I would be liable for the misdeeds I have done. But through my faith in Christ, I am, as it were, covered by his divine insurance policy, whereby he assumes the liability for my actions. My sin is imputed to him, and he pays its penalty. The demands of justice are fulfilled, just as they are in mundane affairs in which someone pays the penalty for something imputed to him. This is as literal a transaction as those that transpire regularly in the insurance industry.

So, it turns out that the doctrine of substitutionary atonement is not as mysterious or as objectionable as everyone seems to think it is.

# Christopher Hitchens debates William Lane Craig: Does God Exist?

**Wintery Knight** · 30 March 2024 · Archived copy · Original

Here is the video of the debate:

**TOPIC: DOES GOD EXIST?**

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

**WC opening speech:**

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws
– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)
– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument
– objective moral values are values that exist regardless of what humans think

– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

**CH opening speech:**

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus
– god wouldn't have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that's a bad design
– the universe is so vast, why would god need so much space, that's a bad design
– there is too much destruction in the universe, like exploding stars – that's a bad design
– the heat death of the universe is a bad design
– too many of the other planets don't support life, that's a bad design
– the sun is going to become a red giant and incinerate us, that's a bad design

3. hitchens' burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can't prove there is no god
– but they can prove there is no good argument for god

4. craig's scientific arguments don't go far enough, they only prove deism, not theism
– the scientific arguments don't prove prayer works
– the scientific arguments don't prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn't be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig's evidence was extraordinary

7. science can change, so craig can't use the progress of science
– it's too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god's existence should trump contradicting evidence
– but then he isn't forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don't believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

**WC first rebuttal:**

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you've got is agnosticism
– because CH did not claim to know there is no God
– and he gave no arguments that there is no God

CH's evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH's argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn't need to be efficient

CH's argument that god waits too long to send Jesus
– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH's argument that Craig's scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work

– all that deism denies is miraculous intervention

CH's argument that Craig has a burden of proof
– theism doesn't need to be proven with certainty
– must only prove best explanation of the evidence

CH's citation of Craig's book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH's rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH's rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for  minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH's argument about heat death of the universe
– duration of design is irrelevant to whether something was designed
– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

**CH first rebuttal:**

it's not agnosticism
– if there are no good arguments for theism
– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old

– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do
– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

**WC cross-examination of CH:**

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

**CH cross-examination of WC:**

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

**WC second rebuttal**

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing
– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

**CH second rebuttal:**

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon
– that is why there are so many religions

**WC concluding speech**

no arguments for atheism presented

What CH has said during the debate:

– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it's just a genetic predisposition to act in a certain way – that's not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

**CH concluding speech**

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

**Further study**

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

# William Lane Craig debates James Crossley on the resurrection of Jesus

**Wintery Knight** · 31 March 2024 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
  - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
  - the response was that the disciples stole the body

  - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
  - this material is extremely early, withing 1-3 years after the cross
  - James, the brother of Jesus, was not a believer when he got his appearance
  - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
  - Peter: attested by Luke and Paul
  - The twelve: attested by Luke, John and Paul
  - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections

- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection,

and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was

- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# Ron DeSantis signs legislation banning squatters on private property

**Wintery Knight** · 1 April 2024 · Archived copy · Original

A squatter is someone who enters a building without permission and proceeds to live in it, without any ownership or rental agreement. It's legal in many blue and purple states, and even in some red states. So, if you go on vacation for a few weeks, you might return to find people living in your home. In this post, we'll see an example of "squatting", and then see how Florida dealt with squatting.

From the New York Post, an example of what squatting looks like in a blue state, with a blue mayor, and a blue governor:

> A New York City property owner recently ended up in handcuffs following a fiery standoff with alleged squatters who she has been trying to boot from her family's home, tense footage shows.
>
> Adele Andaloro, 47, was nabbed after changing the locks last month on the $1 million home in Flushing, Queens, that she says she inherited from her parents when they died, ABC's Eyewitness News reported.
>
> […]Andaloro claims the ordeal erupted when she started the process of trying to sell the home last month but realized squatters had moved in — and brazenly replaced the entire front door and locks.
>
> She said she got fed up, and went to her family's home on 160th Street — with the local TV outlet in tow — on Feb. 29 and called a locksmith to change the locks for her.
>
> […]In New York City, a person can claim "squatter's rights" after just 30 days of living at a property.
>
> Under the law, it is illegal for the homeowner to change the locks, turn off the utilities, or remove the belongings of the "tenants" from the property.

They're not really "tenants", as they haven't signed a lease. But what else would you expect from a sanctuary state, which is home to sanctuary cities?

More:

> "By the time someone does their investigation, their work, and their job, it will be over 30 days and this man will still be in my home," Andaloro said.
>
> "I'm really fearful that these people are going to get away with stealing my home," she added.
>
> […]Following a flurry of 911 calls, responding cops told Andaloro she had to sort the saga out in housing court because it was considered a "landlord-tenant issue."
>
> Andaloro was ultimately given an unlawful eviction charge because she had changed the locks and hadn't provided a new key to the person staying there, the NYPD confirmed to The Post.
>
> She was slapped with a criminal court summons, cops added.

So, if you're the legal owner of a property in New York, people who don't own it can move in, and then you get arrested for changing the locks to keep them out. It's New York.

This article from Florida's Voice explains what happens in Florida:

> Gov. Ron DeSantis signed anti-squatter legislation on Wednesday, seeking to combat individuals who illegally reside in a house that they do not own or pay rent for.
>
> The bill would allow law enforcement to remove squatters who can't produce a notarized lease signed by the landowner or proof that they are paying rent for the property.

> Additionally, there would be penalties for individuals who produce fraudulent leases that are commonly used by squatters.
>
> Rep. Kevin Steele, R-Dade City, sponsored HB 621 and Sen. Keith Perry, R-Gainesville, championed the Senate version.

If Ron DeSantis were elected President in 2024, then I assume this sort of law would be enacted, and apply to all 50 states.

# Young women vote Democrat, then complain about Democrat policies

**Wintery Knight** · 2 April 2024 · Archived copy · Original

If I had to boil down the wisdom of my years into one sentence, that sentence would be "you must not advocate for anything that will eventually harm you". Sadly, we live in a world of virtue signaling. People want to advocate for things that feel good in the moment, even if it hurts them in the long run.

Let's start with this story from New York Post:

> A series of women have posted alarming TikTok reports about being randomly punched by a stranger while walking in New York, including at least two daylight attacks reported to cops this week.
>
> Halley Kate… posted a video Monday after one attack being investigated by the NYPD, saying it caused her to fall to the ground and black out.
>
> "You guys, I was literally just walking, and a man came up and punched me in the face," Kate said through tears in a post on Monday morning.

And again:

> A woman named Mikayla Toninato, whose bio said she attends Greenwich Village's Parsons School of Design, tagged Kate in a post six hours later, where she recounted a similar story.
>
> "I just got punched in the face, walking home," the TikToker claimed.

And again:

> Another woman named Oliva Brand took to the platform on March 17 to report the same experience, in a clip filmed on Mulberry Street in Nolita.
>
> […]The NYPD confirmed the narratives of Kate and Brand, saying that a 23-year-old woman reported an assault at West 16th Street and 7th Avenue at 10:20 a.m. Monday, as with Kate's report.
>
> […]On March 17, a 25-year-old was walking her dog just before noon at Kenmare and Mulberry streets when an "unknown individual punched her in the head," according to officials when asked about Brand's video.
>
> […]The recent complaints echoed the purported plight of a fourth young female TikToker, Jill Burke, who said on Feb. 8 she was attacked near Union Square and that the suspect was arrested and released on his own recognizance.

Now, whenever I hear stories like this, I always wonder "what is the context of this story? Is the victim leaving out facts that make them less of a victim?" and also "was a police report filed?". The police report is important, because although there are no consequences for making false accusations, there are consequences for filing a false police report. And the police will look for evidence to confirm or deny the victim's story. In this case, we have police reports for all of these attacks, so they are likely to be true.

In response to all this violence, feminists are asking: "why don't the good men save women from the bad men?" They want chivalry, even after killing chivalry by advocating for feminism. Chivalry is absolutely out of the question for good men today – it's too risky.

Here's a story from Fox News:

> As Marine veteran Daniel Penny watched an erratic homeless man allegedly threaten to murder terrified

> passengers on a New York City subway — including women and children — he said he felt a moral obligation to act.
>
> […]Penny, 24, dragged Jordan Neely, 30, to the floor of a northbound F train on May 21, and put him in a chokehold that was caught on cellphone video. Neely ended up dead.
>
> "If [Neely] had carried out his threats, he would have killed somebody," said Penny, who remains so traumatized by the experience he has not boarded a subway train since.

He's facing a prison sentence of 5 to 15 years, now.

More:

> Neely's death spurred widespread protests across the city with many demonstrators and even politicians calling Penny a "murderer" and a racist. Penny is White; Neely was Black.
>
> "The majority of the people on that train that I was protecting were minorities, so it definitely hurts a lot to be called that," Penny said. "It has obviously taken a toll."
>
> Celebrity civil rights activist Rev. Al Sharpton gave a eulogy at Neely's funeral blasting the decision not to arrest Penny on the spot.

This shouldn't be unfamiliar to us. Democrats love to criminalize gun ownership and self-defense by law-abiding people. They want criminals to have space to commit crimes with impunity. They don't want the criminals to be interrupted by law-abiding people with legally-owned firearms.

I can tell you right now that I would not lift a finger to save people in New York City from the consequences of their actions. They vote for Democrats, they live in Democrat cities, and they have to live with the results of their actions. When I was doing my concealed carry permit, the instructor, a former police officer, warned us to never step in to defend anyone else but ourselves, and only from an "imminent threat of death or serious bodily injury". The legal consequences could be extremely damaging, he said. In the old days, before criminals became the darlings of the secular left, good men would step in. But not any more.

It's significant that young women are complaining about crime. Young women are voting for soft-on-crime policies these days – they are all in favor of open borders, soft-on-crime policies, Hamas terrorists, gun bans, and punishing Good Samaritans.

Financial Times reports: (archived)

> In the US, Gallup data shows that after decades where the sexes were each spread roughly equally across liberal and conservative world views, women aged 18 to 30 are now 30 percentage points more liberal than their male contemporaries. That gap took just six years to open up.
>
> […]The #MeToo movement was the key trigger, giving rise to fiercely feminist values among young women who felt empowered to speak out against long-running injustices.
>
> […]In the US, UK and Germany, young women now take far more liberal positions on immigration and racial justice than young men, while older age groups remain evenly matched. The trend in most countries has been one of women shifting left while men stand still.

They don't seem to be able to see the long-term consequences of their voting. Being "compassionate" works "in the moment", and that rush of good feelings and social approval is what they choose. Later on, they can complain about the results of their voting, and paint themselves as innocent victims. "The world is so unpredictable!"

I think that these young secular leftist women would benefit from reading C.S. Lewis' essay "Men Without Chests", and maybe ask their wise elders what long term consequences to actions will be.

# Why are teachers and other talkers paid less than engineers and other doers?

**Wintery Knight** · 3 April 2024 · Archived copy · Original

The meme below makes fun of unionized public school teachers, who feel entitled to the same salary and benefits as doctors, software engineers, etc. in the private sector. So, the point of this meme is simple, it's to point out that the teachers who belong to teacher unions are ignorant of basic economics, specifically, the law of supply and demand.

Basic Economics: In a free market, prices are set by supply and demand
When there is more demand for a product or service than there is a supply for it, then prices go up. When there is more supply for a product or service than there is a demand for it, prices go down.

A good place to see this explained is in a book by famous black economist Thomas Sowell. Thomas Sowell has written many books, but he wrote one book in particular for people who have no knowledge of basic economics. It's called "Basic Economics: A Citizen's Guide to the Economy". And the first few chapters explain how prices are set by supply and demand:

1. What is Economics?
2. The Role of Prices
3. Price Controls
4. An Overview of Prices

It turns out that there are two views of how wages are set in an economy:

> The labor theory of value (LTV) is a theory of value that argues that the economic value of a good or service is determined by the total amount of "socially necessary labor" required to produce it.
>
> LTV is usually associated with Marxian economics… The LTV is central to Marxist theory, which holds that the working class is exploited under capitalism, and dissociates price and value. Marx did not refer to his own theory of value as a "labour theory of value".
>
> Mainstream neoclassical economics tends to reject the need for a LTV, concentrating instead on a theory of price determined by supply and demand.

Marxists economists believe that the value of a good or service is determined by the "social utility" of the work produced. But classical ("free market") economists believe that value is determined by the scarcity of the good or service relative to the demand from consumers.

So, a Marxist economist might say "teaching English to 5 year olds is valuable because it is relevant and meaningful". But, a classical economist would say "conducting a security audit on distributed point-of-sale system is valuable, because very few people can do it, but many people want it".

I've noticed that school teachers and non-STEM university students and professors are very likely to hold to the labor theory of prices and wages. Robert Nozick wrote a paper about why this happens. It turns out that "wordsmiths" (his word) are conditioned by their performance in the classroom to expect success in the free market economy. But when they find that their "brilliance" in English poetry, Medieval history, or lesbian dance theory has no value to anyone else, they complain that the economy is being manipulated by powerful people. Marxism is a coping mechanism for people who value academic acclaim more than doing something useful for their neighbors. The Marxists study easy things that no one cares about, and then they can't get paid because millions of people can do them. The free market people focus on the customer, so they study hard things like computer science and petroleum engineering that are in demand from customers. And they get paid more.

**Majors by Salary Potential – Full List**

| RANK | MAJOR | STARTING SALARY | MID-CAREER SALARY |
|---|---|---|---|
| 1 | Petroleum Engineering | $98,000 | $163,000 |
| 2 | Aerospace Engineering | $62,500 | $118,000 |
| 3 | Actuarial Mathematics | $56,100 | $112,000 |
| 4 | Chemical Engineering | $67,500 | $111,000 |
| 5 | Nuclear Engineering | $66,800 | $107,000 |
| 6 | Electrical Engineering (EE) | $63,400 | $106,000 |
| 7 | Computer Engineering (CE) | $62,700 | $105,000 |
| 8 | Applied Mathematics | $50,800 | $102,000 |
| 9 | Computer Science (CS) | $58,400 | $100,000 |
| 10 | Statistics | $49,300 | $99,500 |
| 11 | Physics | $51,200 | $99,100 |
| 12 | Mechanical Engineering (ME) | $60,100 | $98,400 |
| 13 | Biomedical Engineering (BME) | $54,900 | $98,200 |

Starting and Mid-Career salaries by profession (click for larger image)
Consider this article from College Pulse about a survey of 10,590 undergraduate students:

> Students with certain majors are far more likely than their peers to approve of socialism. Philosophy majors, in particular, have a positive view of socialism. Nearly 8 in 10 (78%) say they view the economic system favorably, followed by 64% of anthropology majors, and 58% of both English and international relations majors. Accounting and finance majors are least likely to view socialism positively (20% and 22% respectively).

Do you know what accounting and finance students have to study? *Basic economics.*

As soon as I got my first job as a software engineer, and finished my study of Christian apologetics, the very next thing I studied was economics. It was Dr. Jay Richards who got me interested in it, when I heard him speaking about economics in an apologetics lecture for Stand to Reason. I contacted him, and he recommended the works of two famous economists, F. A. Hayek and Thomas Sowell. And that's what I want to recommend to you, too. Our

continued liberty and prosperity depends on ordinary Americans taking the time to educate themselves about basic economics.

# Scotland's new hate speech law has maximum sentence of 7 years in prison

**Wintery Knight** · 4 April 2024 · Archived copy · Original

Should Americans travel to Scotland? Well, it's a beautiful country, but there's a problem – their new hate speech law. If you say anything that offends a leftist, then you might get charged with hate speech. Maybe you said some controversial things online. If anyone on the left recognizes you in Scotland, they might file a complaint for your past hate speech. The penalty is up to 7 years in jail.

Here's an article from Christian Today to explain:

> The Hate Crime and Public Order (Scotland) Act, [was] passed three years ago. It was the brainchild of the then justice secretary for the Scottish government, Humza Yousaf. Yousaf is now the Scottish First Minister and his bill is about to become law on April 1st.
>
> […]The problem with the bill is that it does not clearly define what 'stirring up hatred' means… the subjective feeling of a perceived victim, or of a policeman, could be enough to have you accused of a hate crime – one which carries a sentence of up to seven years. Take for example JK Rowling. If she tweets that a man cannot become a woman, she could be arrested for hate crime. Same for a Christian preacher who says that he does not believe that Muhammad is a prophet or a teacher who says they believe marriage is between a man and a woman.

The Scottish police have no time for real crimes, their priority is investigating you for hate speech:

> The police in Scotland have said they will investigate every report of hate crime, despite having recently announced that they would not be investigating every case of 'low level' crime, including apparently some cases of theft!

The law will be used to target Christians and conservatives:

> In an astonishing statement they give an example of the kind of people who commit hate crimes as those with "deep-rooted feelings of being socially and economically disadvantaged, combined with ideas about white-male entitlement".
>
> […]Now we have the State creating a two-tier justice system where some groups are afforded 'protected' status and others are attacked.
>
> […]This Act will pervade through all of Scottish society. Even children are to be targeted. School handbooks now explain that all hate crimes should be reported to the police. Journalist Jim Spence wrote in the *Courier* that Scotland is about to become a "two-tier society" where "some folk are given protection by the law from some kinds of hate crimes, while others will simply have to suck up abuse." For example, "while it will be an offence to stir up hate against trans folk", it "won't break the law to stir up hate against women", because astonishingly under this Act sex is not a protected characteristic.

Anyone can report you and get you into trouble:

> The police are to set up Third Party Reporting Centres throughout Scotland where you can go and 'clipe' (a Scots word for snitch or tell-tale) on anyone.
>
> […]*The Herald* reported on police training which encouraged officers to go after anyone who produces material deemed 'threatening and abusive'. You could be prosecuted for a negative portrayal of a trans person in a play, for example.

> […]If you repeat a joke on the internet which someone in the 'protected' characteristic finds offensive, you could be guilty of a hate crime.
>
> And as if that were not extreme enough, you could be reported for expressing 'hate' in your own home.

This part is key – anything you say or write in other countries that can be read about in Scotland will be grounds for arrest and imprisonment for "hate speech":

> The law holds that anything that can be read in Scotland is to be considered as published in Scotland.

Let's look at a couple of articles from earlier this year, that show who is likely to be targeted by the Scottish Police. Surprise! It's Christians and conservatives.

An article from the ADF explains how free speech is regulated in Scotland:

> The police force… issued a warning notice to [Christian leader, Dia Moodley, a Bristol-based pastor and father of four], who has engaged in occasional street evangelism for the past five years, which forbade him from, inter alia, "passing comments on any other religion or comparing them to Christianity" and "passing comments on beliefs held by Atheists or those who believe in evolution".
>
> […]In addition to forbidding criticism of religions other than Christianity, the warning notice further encroached on Moodley's right to freedom of expression by banning him from "delivering a sermon or religious address at a time or place that has not had prior consent and approval of Avon & Somerset Constabulary."

Here's another example of free speech that offended the secular left – except it wasn't even speech at all:

> The charitable volunteer who was arrested for praying silently in a controversial "buffer zones" case in Birmingham will today testify to Holyrood about her experience of being prosecuted for a "thoughtcrime".
>
> Isabel Vaughan-Spruce was seen being arrested on a viral video last winter when she said she "might be praying inside [her] head". She was charged with "engaging in an act that is intimidating to service users" within the buffer zone of an abortion clinic – despite the clinic having been closed.

For the secular left in Scotland, freedom of expression is not important at all. This legislation allows people to punish Christians and conservatives, if they just feel that our free speech is offensive. It's not a safe place to visit.

# Are Mormon doctrines supported by philosophy, science and history?

**Wintery Knight** · 5 April 2024 · Archived copy · Original

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

**The scientific evidence**

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end."
> ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo*."
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

**Philosophical problems**

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

**The historical evidence**

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years

> too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

# Knight and Rose Show #47: Dr. Fazale Rana on the Origin of Life

**Wintery Knight** · 6 April 2024 · Archived copy · Original

Welcome to episode 47 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome Dr. Fazale "Fuz" Rana to discuss how scientists investigate the origin of life. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode 47:**

**Episode Summary:**

Wintery Knight and Desert Rose interview Dr. Fazale "Fuz" Rana about the appearance of first life on Earth. What are the minimum functions of a simple living system? When did life appear on the Earth? What are the best naturalistic hypotheses for the origin of life? Are any of these scenarios plausible? What is the best explanation for the information and algorithms in the cell? Is design a better explanation?

**Speaker biographies**

Biochemist Fazale "Fuz" Rana is president, CEO, and senior scholar of Reasons to Believe. Dr. Rana earned a BS in chemistry with highest honors (West Virginia State College) and a PhD in chemistry with an emphasis in biochemistry (Ohio University) and completed postdoctoral work at the Universities of Virginia and Georgia. He worked for seven years as a senior scientist in research and development for Procter & Gamble. To date, Fuz has addressed more than 500 university, church, and conference audiences in the US and abroad. He has debated against prominent naturalistic scholars, including Dr. Michael Ruse and Dr. PZ Myers. His books include Origins of Life, The Cell's Design, Creating Life in the Lab and Fit for a Purpose. He was also featured in Museum of the Bible's *Scripture and Science* exhibit in Washington, DC.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Is the acceleration of the universe's expansion compatible with Hinduism?

**Wintery Knight** · 7 April 2024 · Archived copy · Original

First, a news story – and then we'll see how the accelerating universe relates to the existence of God.

Excerpt:

> Three astrophysicists who discovered that the universe's expansion is accelerating rather than decelerating, as had been expected, win the Nobel Prize in physics.
>
> Adam Riess was sure he'd spotted a blatant error in his results. It was 1997, and the young post-doc's measurements of distant, exploding stars implied that the universe was expanding at a faster and faster rate, instead of slowing down, as he had expected.
>
> It wasn't an error at all. Instead, what was at fault were some basic assumptions about the workings of the universe.
>
> On Tuesday, the Johns Hopkins University astrophysicist received the Nobel Prize in physics for the revolutionary discovery and its implications, along with team leader Brian Schmidt of Australian National University and astrophysicist Saul Perlmutter of UC Berkeley and Lawrence Berkeley National Laboratory, who had reached the same conclusion independently.
>
> At the time of their work, astrophysicists believed that the rate of expansion of the universe — set in motion by the Big Bang 13.7 billion years ago — would be slowing down as matter was pulled together by gravity. The goal at the time was to figure out how rapid the deceleration was.
>
> What the two teams found instead was that the expansion of the universe was accelerating — an observation that could best be explained by the existence of a mysterious "dark energy" that pushes matter farther and farther apart.
>
> Many scientists had thought that, just as the universe started with the Big Bang, it would end with a Big Crunch — with gravity pulling all the matter in the universe inward.

Does anyone remember that week that I wrote those posts about "Why I am not a… <insert some religion here>"? I explained why I was not all kinds of different religions and denominations, including Roman Catholicism, Calvinism, Hinduism, Judaism, Islam, etc. Everyone was offended and we fought about it. Ah, I remember it well.

Now let's apply science to the Hindu religion and see if they go together, especially this new discovery about the expansion of the universe.

**Why I am not a Hindu**

1. Hindu cosmology teaches that the universe cycles between creation and destruction, through infinite time.
2. The closest cosmological model conforming to Hindu Scriptures is the eternally "oscillating" model of the universe.
3. The "oscillating" model requires that the universe exist eternally into the past.
4. But the evidence today shows the the universe, and time itself, had a beginning at the big bang.
5. The "oscillating" model requires that the expansion of the universe reverse into a collapse, (= crunch).
6. In 1998, the discovery of the year was that the universe would expand forever. There will be no crunch.
7. Therefore, the oscillating model is disconfirmed by observations.
8. The oscillating model also faces theoretical problems with the "bounce" mechanism.

So that's one reason why I am not a Hindu. And now we have more scientific confirmation that there is no cycle of

universes coming into being and going out of being.

The absolute origin of the universe out of nothing is also incompatible with Buddhism and Mormonism and maybe other religions. They also require an eternally existing universe.

**And modern cosmology disagrees with atheism, too**

I think it's important for all of you to be familiar with the scientific evidence for the Big Bang. It will help you with your cosmological argument, and it will help you to refute many, many other religions that require eternal universes, including atheism.

I wrote about how the Big Bang cosmology falsifies atheism before.

Excerpt:

> According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* The Big Bang has been confirmed by experimental evidence such as redshift measurements, light element abundances and the cosmic microwave background radiation. This falsifies eternal models of the universe, which are *required* by atheist Scriptures.

The experimental evidence that confirms the Big Bang creation out of nothing falsifies many worldviews. Those who care about evidence will have to choose some other religion that is compatible with what we know from science today.

# New study: most children suffering from gender confusion grow out of it

**Wintery Knight** · 8 April 2024 · Archived copy · Original

Are you having any conversations about transgenderism these days? It seems like there is a big push for transing kids, mostly coming from pharmaceutical companies and their allies in the public schools. They believe that children should be able to request drugs and surgeries based on their feelings. Even if parents disagree. But what if children's discomfort with their biological sex is temporary?

Take a look at this study, which appeared in the peer-reviewed scientific journal Archives of Sexual Behavior.

There's a nice article about this study over at the left-leaning UK Daily Mail:

> The majority of gender-confused children grow out of that feeling by the time they are fully grown adults, according to a long-term study.
>
> Researchers in the Netherlands tracked more than 2,700 children from age 11 to their mid-twenties, asking them every three years of feelings about their gender.
>
> Results showed at the start of the research, around one-in-10 children (11 percent) expressed 'gender non-contentedness' to varying degrees.
>
> But by age 25, just one-in-25 (4 percent) said they 'often' or 'sometimes' were discontent with their gender.
>
> The researchers concluded: 'The results of the current study might help adolescents to realize that it is normal to have some doubts about one's identity and one's gender identity during this age period and that this is also relatively common.'

This paragraph was interesting:

> According to the findings, females were more likely to report being unhappy with their gender and both increasing and decreasing 'non-contentedness' were associated with lower self-reported self worth, more behavioral problems and an increase in emotional struggles.

If you are raising daughters, you might want to have a plan to counter this. I think the best way to build up a girl's self-esteem is to give her interesting things to do, and help her to excel at them. And I mean things like writing code, reading Thomas Sowell, learning self-defense, shooting guns, fixing machines, understanding classical literature, etc. Useful stuff. Girls need to do useful things together with their Dads, that way, when they have bad feelings, they can think of all the things that they know how to do, and all the people that ask them for help. It's hard to feel bad when you know how to achieve results. And you know that you are good at achieving results. I'm not an expert in women, but it seems to me that they have trouble when they dwell too much on their own feelings, and too much on what other people think about them, or what other people are doing. Girls should just not care about all that. Girls should just be good at doing things that matter. Girls should know how the world works.

The conclusion of the Daily Mail article features Christian scholar Dr. Jay Richards, was also interesting:

> Dr Jay Richards, director of the Richard and Helen DeVos Center for Life, Religion, and Family, told DailyMail.com: 'We've known for over a decade that most kids who experience distress with their sexed bodies resolve those feelings after they pass through natural puberty.
>
> 'Indeed, we can infer from the DSM 5 [2013] and other sources that as many as 88 percent of gender-dysphoric girls and as many as 98 percent of gender-dysphoric boys in previous generations desisted if allowed to go through natural puberty.

> ‘These two facts make it clear why “gender-affirming care” on minors is such an outrage. It leads, in the end, to sterilization and in many cases to a complete loss of natural sexual function.
>
> ‘There is no good evidence that this helps minors long term. Moreover, it medicalizes what could very well be temporary psychological symptoms.
>
> ‘History will judge this medicalized “gender-affirming care” on minors as we now judge eugenics and lobotomies.’

I was pretty impressed with Jay. Of all the people they could have quoted, they went to Jay Richards, who has put a lot of effort into understanding these issues.

Do you know what would be wonderful? If children who take these drugs and submit to these surgeries could then sue all the people who told them to do it. They’re being told one thing, but getting something else entirely. If a child gets hit with sterilization or loss of sexual function, then they should be able to clean out the bank accounts of the people who did this to them. Public school teachers, nurses, doctors, drug manufacturers, etc. Just bankrupt them. Because children shouldn’t be lied to by adults, who know better.

# William Lane Craig lectures on the moral argument at Georgia Tech

**Wintery Knight** · 9 April 2024 · Archived copy · Original

This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can read this essay by Dr. Craig which covers exactly the same ground as the video. The essay is for Christians already familiar with basic apologetics.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

Here's a quick couple of quotes from the essay for those who cannot watch:

> If there is no God, then any ground for regarding the herd morality evolved by homo sapiens as objectively true seems to have been removed. After all, what is so special about human beings? They are just accidental by-products of nature which have evolved relatively recently on an infinitesimal speck of dust lost somewhere in a hostile and mindless universe and which are doomed to perish individually and collectively in a relatively short time. Some action, say, incest, may not be biologically or socially advantageous and so in the course of human evolution has become taboo; but there is on the atheistic view nothing really wrong about committing incest. If, as Kurtz states, "The moral principles that govern our behavior are rooted in habit and custom, feeling and fashion,"[5] then the non-conformist who chooses to flout the herd morality is doing nothing more serious than acting unfashionably.
>
> The objective worthlessness of human beings on a naturalistic world view is underscored by two implications of that world view: materialism and determinism. Naturalists are typically materialists or physicalists, who regard man as a purely animal organism. But if man has no immaterial aspect to his being (call it soul or mind or what have you), then he is not qualitatively different from other animal species. For him to regard human morality as objective is to fall into the trap of specie-ism. On a materialistic anthropology there is no reason to think that human beings are objectively more valuable than rats. Secondly, if there is no mind distinct from the brain, then everything we think and do is determined by the input of our five senses and our genetic make-up. There is no personal agent who freely decides to do something. But without freedom, none of our choices is morally significant. They are like the jerks of a puppet's limbs, controlled by the strings of sensory input and physical constitution. And what moral value does a puppet or its movements have?
>
> […]Moreover, if atheism is true, there is no moral accountability for one's actions. Even if there were objective moral values and duties under naturalism, they are irrelevant because there is no moral accountability. If life ends at the grave, it makes no difference whether one lives as a Stalin or as a saint. As the Russian writer Fyodor Dostoyevsky rightly said: "If there is no immortality, then all things are permitted."

If you want a much shorter, slicker version of this argument to share, Reasonable Faith has produced this nice 5-minute video that you can tweet or share on your Facebook page or whatever:

The moral argument is the easiest argument in the world to discuss with non-Christians, as everyone has to have an answer to questions like "what makes humans valuable?" and "why should I do the right thing when it goes against my self-interest?" and "will evildoers who escape justice in this life be punished when they die?" and "do humans have free will to make moral choices?" These are interesting questions, and people can just give their opinion and then think about it as they discuss it.

You can read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor. I found this debate very helpful for answering the question that everyone should be able to answer: "why should I be moral?"

# Senior editor at NPR explains “how we lost America’s trust”

**Wintery Knight** · 10 April 2024 · Archived copy · Original

Several people mentioned an article published at Free Press to me. The senior editor writes: “By 2023, the picture was completely different: only 11 percent [of NPR listeners] described themselves as very or somewhat conservative, 21 percent as middle of the road, and 67 percent of listeners said they were very or somewhat liberal.” And then he explains how it happened. Let’s take a look.

First thing, is that they reported on the Trump-Russia collusion story, and then when it was revealed that there was no collusion, and it was all just based on opposition research funded by Democrats, NPR forgot all about the story:

> Like many unfortunate things, the rise of advocacy took off with Donald Trump. As in many newsrooms, his election in 2016 was greeted at NPR with a mixture of disbelief, anger, and despair. (Just to note, I eagerly voted against Trump twice but felt we were obliged to cover him fairly.) But what began as tough, straightforward coverage of a belligerent, truth-impaired president veered toward efforts to damage or topple Trump’s presidency.
>
> Persistent rumors that the Trump campaign colluded with Russia over the election became the catnip that drove reporting. At NPR, we hitched our wagon to Trump’s most visible antagonist, Representative Adam Schiff.
>
> Schiff, who was the top Democrat on the House Intelligence Committee, became NPR’s guiding hand, its ever-present muse. By my count, NPR hosts interviewed Schiff 25 times about Trump and Russia. During many of those conversations, Schiff alluded to purported evidence of collusion. The Schiff talking points became the drumbeat of NPR news reports.
>
> But when the Mueller report found no credible evidence of collusion, NPR’s coverage was notably sparse. Russiagate quietly faded from our programming.

People noticed how NPR handled that story. And they didn’t do a good job of reporting how the fake Trump-Russia dossier came into being, and was used to get the surveillance warrant. People reasonably thought “listening to NPR is just listening to lies”.

More:

> What’s worse is to pretend it never happened, to move on with no mea culpas, no self-reflection. Especially when you expect high standards of transparency from public figures and institutions, but don’t practice those standards yourself. That’s what shatters trust and engenders cynicism about the media.

Here’s my 2020 post about Trump-Russia collusion, which was better than anything that NPR wrote about it. I remember when you couldn’t even say these things, because the big social media companies, who were being guided by NPR misinformation, would ban your account.

He has another example:

> In October 2020, the New York Post published the explosive report about the laptop Hunter Biden abandoned at a Delaware computer shop containing emails about his sordid business dealings. With the election only weeks away, NPR turned a blind eye. Here’s how NPR’s managing editor for news at the time explained the thinking: “We don’t want to waste our time on stories that are not really stories, and we don’t want to waste the listeners’ and readers’ time on stories that are just pure distractions.”
>
> But it wasn’t a pure distraction, or a product of Russian disinformation, as dozens of former and current intelligence officials suggested. The laptop did belong to Hunter Biden. Its contents revealed his connection to

> the corrupt world of multimillion-dollar influence peddling and its possible implications for his father.
>
> The laptop was newsworthy. But the timeless journalistic instinct of following a hot story lead was being squelched. During a meeting with colleagues, I listened as one of NPR's best and most fair-minded journalists said it was good we weren't following the laptop story because it could help Trump.
>
> When the essential facts of the Post's reporting were confirmed and the emails verified independently about a year and a half later, we could have fessed up to our misjudgment. But, like Russia collusion, we didn't make the hard choice of transparency.

Here's my 2022 post on the Hunter Biden laptop, which is, again, better than anything NPR wrote about it. If you told the truth about the laptop, then the social media companies who were influenced by NPR misinformation would ban your account.

And, like most of the Facebook-approved "fact checkers", NPR opposed the lab-leak theory of COVID:

> Politics also intruded into NPR's Covid coverage, most notably in reporting on the origin of the pandemic. One of the most dismal aspects of Covid journalism is how quickly it defaulted to ideological story lines. For example, there was Team Natural Origin—supporting the hypothesis that the virus came from a wild animal market in Wuhan, China. And on the other side, Team Lab Leak, leaning into the idea that the virus escaped from a Wuhan lab.
>
> The lab leak theory came in for rough treatment almost immediately, dismissed as racist or a right-wing conspiracy theory. Anthony Fauci and former NIH head Francis Collins, representing the public health establishment, were its most notable critics. And that was enough for NPR. We became fervent members of Team Natural Origin, even declaring that the lab leak had been debunked by scientists.
>
> But that wasn't the case.

My 2023 article on the lab leak theory was much better than anything NPR has ever done on it. But again, because big tech was relying on NPR misinformation, you would get banned on social media, if you told the truth about these things.

I think every conservative is conservative in part because they realize how they've been lied to by the secular left, and found out the truth later on their own. Whether it's the "simple" origin of life in a "prebiotic soup", the fossil record that supposedly shows a gradual increase in phylogenetic complexity, the "eternal universe", global cooling / warming, etc., conservatives have learned not to trust the wordsmiths. We know that journalists are typically stupid people who don't know anything about evidence-based subjects like science, math, or economics. They just believe what they want to believe – whatever will give them the largest epistemic distance from God, and the least felt accountability to a Moral Lawgiver.

# What should Christians bring up when discussing truth with Muslims?

**Wintery Knight** · 11 April 2024 · Archived copy · Original

I have some experience dicussing Islam because my mother's side of the family is all Muslim. My go-to argument has always been to confront them about the Qur'an's claim that Jesus did not die of crucifixion. But I noticed a different argument from Laura Powell, who knows far more about this topic than I do. Do you think her approach is the best one?

She writes about it over at her blog, An Affair with Reason:

> The crux of the argument is this: The Qur'an affirms the inspiration, authority, and preservation of the New Testament Gospels;[2] yet the Qur'an also contradicts the Gospels on major theological and historical points. Therefore, the Qur'an cannot be reliable.
>
> According to the Qur'an, the Gospel is the trustworthy, reliable revelation of God given as a guidance for mankind (Qur'an 3:3-4). These Scriptures from God were available and trustworthy when the Qur'an was revealed in the 7th century A.D., and those who had access to them were repeatedly told to obey them, judge by them, submit to their teaching, and stand fast upon them. In other words, according to the Qur'an, the Gospels are the inspired and authoritative words of God.
>
> Qur'an 5:47 says, "And let the People of the Gospel judge by what Allah has revealed therein. And whoever does not judge by what Allah has revealed—then it is those who are the defiantly disobedient."
>
> Furthermore, Qur'an 5:68 states, "Say, 'O People of the Scripture, you are [standing] on nothing until you uphold [the law of] the Torah, the Gospel, and what has been revealed to you from your Lord'" (see also 6:114; 3:3-4).

What I like about her argument is that she's just taking the words of the Qur'an seriously, and asking the Muslims who claim to believe it what's going on here. Why say that the gospels are unreliable today, when the Qur'an said that the gospels were reliable, yesterday.

My argument about the death of Jesus requires us to ask Muslims "where is the non-Muslim historian who thinks that Jesus did not die?" There isn't one.

But my argument requires that the Muslim know something about historical scholarship, to know what non-Muslim historians think.Laura's argument has wider appeal, because it doesn't require that the Muslim have *any* knowledge about history – only knowledge about what their own holy book says.

She concludes with this:

> What we see here is that the Qur'an teaches the inspiration, authority, and preservation of the Gospels. The Qur'an was intended as an Arabic version of the message of truth found in the Jewish and Christian Scriptures, but this presents a huge problem for Muslims because the Qur'an contradicts the Christian Scriptures on essential doctrines. Most notably, the Qur'an teaches that Jesus was not God incarnate, he did not die on a cross, and he was not raised from the dead (Qur'an 4:157; 5:116).
>
> Here's the dilemma for Muslims: If the Gospels *are not* trustworthy, then the Qur'an is false because it teaches that the Gospels are the inspired, perfectly preserved, authoritative words of God. But if the Gospels *are* trustworthy, then the Qur'an is false because it teaches contradictory, mutually exclusive facts about key issues. Either way, the Qur'an is false.
>
> This, of course, is a huge problem for Muslims. The validity of Islam rests upon the reliability of the Qur'an, just as Christianity rests upon the truth of the divinity, death, and resurrection of Jesus. If the Qur'an is

> unreliable, then Islam is a false religion.

I like that she's comfortable having disagreements with people. That's not very common in the church today, in my experience.

By the way, this is the same Laura who wrote that really good article about how she found a better way to discuss her Christian worldview when she moved on from sharing her testimony. I blogged about it here.

# William Lane Craig and James White debate Calvinism vs Molinism

**Wintery Knight** · 12 April 2024 · Archived copy · Original

In a recent episode of the Unbelievable show, Calvinist pastor / theologian James White discussed middle knowledge (a.k.a. Molinism) with philosopher / theologian William Lane Craig. In this post, you'll find a link to the audio, the YouTube video, and my comments on the debate. My comments were quoted in an episode of William Lane Craig's Reasonable Faith podcast.

Here is a link to the details from Unbelievable: (with MP3 download link)

> Calvinism and Molinism are two very different ways of understanding God's sovereignty. But which one best addresses the problem of evil?
>
> James White argues that Calvinism – God foreordaining all human behaviour both good and evil – is the more Biblical and coherent view. William (Bill) Lane Craig argues that Molinism – a view which reconciles human freedom and divine sovereignty – is Biblically consistent without making God the author of evil.

And the video:

**Summary:**

**JB:** Why is there evil?

**JW:** Natural and moral evil are the results of God's divine decree to create the world.

**WLC:** God has knowledge of what individual humans would do in different circumstances prior to his divine decree to create the world. God's decree takes into account the free decisions of people in different situations. With regard to natural evil, Calvinists and Molinists do not differ much – they are permitted to achieve a greater good. But for moral evil, there is a difference. Moral evil is the result of free decisions by individual humans. They are not God's will. God permits people to perform evil actions, because those free actions will lead to him achieving his ultimate purposes. God does not override human free will. He achieves his ultimate purposes through the actions of his free creatures. On the Calvinist view, God moves the will of creatures to do evil. God is the cause of their evil acts.

**JB:** God sees all of the possible worlds and instantiates a world where he is able to achieve his ultimate purposes while respecting the free decisions of his creatures.

**WLC:** God does not see what humans WILL do, and decree based on that. He sees what they WOULD do in different circumstances, and articulates a world where the free decisions they make in the circumstances he decrees lead to his ultimate purposes being fulfilled.

**JB:** And this view achieves God's sovereignty (God gets the result he wants) with human freedom (God is not responsible for moral evil)

**JB:** James, isn't it better for God to get what he wants while respecting free will, rather than micromanaging every thought and action of the people?

**JW:** There's micromanaging on both sides. On Molinism, God micromanages the circumstances. On Calvinism, God micromanages everything. But how could God have that knowledge of what people would do, prior to actually creating those people? The Bible teaches Calvinism, and so we should go with that. Calvinists are concerned when Craig says that God does not determine the truth value of these subjunctive conditionals (i.e. – what free individuals would do in different circumstances) The individuals determine what they will do in different circumstances. And Calvinists would prefer that God determine (i.e. – exhaustive determinism) what individuals do in different circumstances. WLC, would you agree that the knowledge of these subjunctive conditionals are the

essence of what middle knowledge is? (WK note: micromanaging circumstances doesn't violate free will, micromanaging everything does violate free will)

**WLC:** No, but it is an essential aspect of it. According to Molinism, God does not determine what free individuals would do in different situations in which they find themselves. The Calvinist view is that in any situation, God actually moves the will of the creature, so God is the author of moral evil. On the Molinist view, creatures are responsible for moral evil, not God.

**JW:** So you're saying that these subjunctive conditionals are not under God's control. How can they be under the control of the creatures, since prior to God's creative decree, the creatures do not exist yet? Where do these truth values come from.

**WLC:** This objection to Molinism is called the "grounding objection". The counterfactuals of creaturely freedom are true without having to be grounded by the created individuals. This objection presupposes a view of truth called "truth-maker" theory. This theory says that in addition to propositions that are true, there are things that make propositions true. There are many counterexamples to this view. For example, if you deny the existence of something that does not exist, then there is no truth maker that makes that claim true. (WK note: E.g. – a unicorn does not exist) Another example is "If WLC were rich, WLC would buy a Mercedes" but there is no truth-maker situation that makes that true, except maybe if he were rich. (WK note: I think that the created individual WLC would be the truth-maker in that case?)

**JW:** The decisions that I make are caused by God's decree of what gifts I have or don't have. He has freedom to decree those gifts, and then that has an effect of what I am free to do. E.g. – I am not 6'11" so I am not free to be a center in the NBA. So on the Molinist view, what is the basis for these subjunctive counterfactuals that limit what God can do?

**WLC:** The grounding objection presupposes the truth-maker theory, and a particular strain of that theory called truth-maker maximalism, and counterfactuals of creaturely of creaturely freedom would be prime candidates to be exceptions to the truth-maker theory.

**WLC:** Regarding the point about how people don't exist in a vacuum but have a whole history, background, characteristics, etc. to shape their decisions. That's right. But the counterfactuals of creaturely freedom factor all that in. The key point that divides us is that God doesn't determine what creatures decide, he decides the circumstances. And so the creature is responsible for moral evil, not God. And so God doesn't cause people to commit moral evils, then punish them for it.

**WLC:** We should guide our views based on what is in the Bible. But even Calvinist theologians affirm things about God that are not taught explicitly in the Bible, such as God's spacelessness and timelessness. And Molinism makes the best sense of divine sovereignty and human freedom. On the Calvinist view, God determines how anyone would act in any situation God might place him in, so God is responsible for the moral evil committed by his creatures.

**JW:** (repeats) If God is limited in what he can do by counterfactuals of creaturely freedom, then we have to know where these counterfactuals come from. (WK note: the counterfactuals of creaturely freedom come from… creaturely freedom.)

**JW:** Genesis 50:20 says that God used the moral evil committed by some creatures to achieve the good purposes he intended. (WK note: that's exactly what the Molinist view is, God permits moral evil by his creatures, as long as it achieves his ultimate good purposes)

**JW:** Molinism is unknown in the church for 1500 years. (WK note: Molinism is in Acts 17:24-27, and also, Calvin and Luther were unknown in the church for 1500 years)

**JB:** Is Genesis 50:20 a good example of Calvinism?

**WLC:** (very excited) NO!!!!!! It's a great example of Molinism!!!! The text says that God didn't move the bad actors to perform sinful actions – that would make God the author of evil. But God knew that if they were in this

situation, they would behave in these evil ways, but ultimately it would lead to good results that God wanted. There is a chain of people partially articulating the middle knowledge view prior to Molina.

**JW:** You shouldn't believe Molinism, because it comes from Jesuits. (WK Note: this is the genetic fallacy)

**JW:** The Bible has examples where God "hardens hearts", e.g. Pharaoh.

**WLC:** It's not that the Bible authors had Molinism in mind. It's that this theory is consistent with what the Bible teaches.

**JW:** Ephesians 1 teaches that God unilaterally determines who the elect are. Calvinism emerges from the text. But in Genesis 50:20, Molinism doesn't emerge from it.

**WLC:** We're both trying to make sense of the data of Scripture. Scripture doesn't teach the universal divine determinism of every human act, especially evil acts. The Bible says thate God is not evil, and cannot even be tempted with evil, but on the Calvinist view, God is causing the evil actions of his creatures, and then he punishes them for it. If it's evil to cause someone to do evil, it makes God himself evil.

**JW:** In Isaiah 10, God uses the Assyrians to punish Israel, then he punishes the Assyrians for the haughty attitude of their heart.

**WLC:** The Molinist view of Ephesians 1 is that part of God's good pleasure is to respect human freedom, and not to unilaterally divinely determine them to sin. Regarding Isaiah 10, you're asking how God can punish the Assyrians for something he causes them to do? No, God knows that the Assyrians are going to do this moral evil and he uses that for his purposes, and he is free to punish their immoral act, because they did it of their own free will.

**JW:** But if you need Molinism to understand these texts, then what did the authors intend for people to think before Molinism.

**WLC:** People understand from Genesis 50:20 that people do evil things, but God gets a good outcome out of it.

**JW:** As a Calvinist, I do not believe that God respects human freedom.

**JW:** I don't think that individuals have control of the circumstances in which they are born or where they live that limits God's sovereignty. (WK note: he doesn't understand Molinism or Acts 17:24-27. Individuals control their own decisions. But God controls the circumstances – i.e. – everything else). There is no essence of James White that determines where I am born, my physical characteristics, my siblings, etc. God decrees everything about who I am.

**WLC:** "That's because you're a determinist, James, and I'm not"

**JW:** "Yes. Yes. OK."

**WLC:** There are number of possible worlds where James White could exist. Different country, different education, different language, different family. God decides the circumstances for James White. James White makes the decisions. God doesn't cause James White's moral evil. James White does. The counterfactuals of creaturely freedom must exist prior to the divine decree in order for humans to be responsible for their evil actions.

**JW:** You're using philosophy. But your view should come from the Bible. (WK note: look at Acts 17:24-27)

**WLC:** Universal divine determinism isn't taught in the Bible.

**JW:** Yes, in Ephesians 1.

**WLC:** The Molinist affirms Ephesians 1.

**JW:** It doesn't mention respecting free will there, it's teaching universal divine determinism.

**WLC:** The Bible teaches that God does have knowledge of counterfactuals of creaturely freedom, e.g. 2 Cor 2:8. So the question is whether God has this knowledge logically prior the decree (Molinism requires this), or is it

logically after. If it is logically after, then it makes God the cause of human moral evil.

**JW:** The verses raised by Craig can be subsumed under God's natural knowledge and free knowledge.

**JW:** Some Molinists believe that the only people who are lost in this world are people who cannot freely respond to God's saving initiative in any circumstances (WK note: this is called trans-world damnation (TD), and I hold this view). Does anyone in the Bible know about this idea? That changes God's expression from universal divine determinism to accepting human free will and human responsibility for sin (which Calvinism denies).

**WLC:** Yes, there are two different views. The one view takes human free will, and human responsibility for sin, seriously. The other view makes God the cause of human sin, and therefore makes God evil for being the author of evil.

**JW:** On Molinism, God knew that if he actualized this world, then he knew the evil that would result, but he didn't do it for some purpose, like revealing his own character?

**WLC:** No, he didn't bring the evil into the world. He actualized a set of circumstances, and a set of free creatures. And he knew that in those circumstances, he knew that the creatures would choose to do evil. His absolute will is for all his creatures to always do the right thing. But he knows that often they will do evil. He permits that to happen, but in the end he achieves the good purposes. E.g. – achieving the redemption of mankind through Jesus through the evil decisions of the rulers at that time.

**WLC:** I love the Westminster Confession. But without middle knowledge, that Confession is incoherent. Middle knowledge explains how things work, so that the Westminster Confession's affirmations are logically coherent.

**JW:** What you're saying is that God respects human free will and human responsibility.

**WLC:** Molinism is extremely fruitful theologically. I have applied to the problem of exclusivity of salvation, to the perseverance of the saints, to the inspiration of Scripture… but the focus of the discussion today is on moral evil. Who is the cause of human evil?

**JW:** Only universal divine determinism and the denial of human free will and human responsibility are consistent with Scripture.

**WLC:** Scripture alone is my authority, not church tradition. But Reformed theology is permeated with concepts that are not described in Scripture, but are consistent with Scripture, e.g. – timelessness, spacelessness, simplicity.

**JW:** I disagree, ALL the concepts in Calvinism emerge directly from the text. Isaiah 40-48 clearly teaches divine necessity, that God exists necessarily, in every possible world. (WK note: Calvinist thought emerges 1500 years after the Bible was written)

**JW:** Middle knowledge is a Catholic dogma, which is why even the Catholics rejected it.

**WLC:** (holds up 2 volumes of a 4 volume, 2144 page set of books on Reformed theology) Anyone who thinks that Reformed Dogmatics are simply read out of Scripture "doesn't know the history of Reformed theology". These volumes are permeated with theological constructs, philosophical models, philosophical principles. The necessity of God's existence, timelessness, spacelessness, etc. are all affirmed by Reformed theologians, and were inherited from medieval scholastics (Catholics).

**JW:** The central claim of middle knowledge, that counterfactuals of creaturely freedom are known by God, are not in the Bible. (WK note: Craig gave an example of counterfactuals of creaturely freedom in the Bible. There are lots of them.)

Four volume 2144-page book set on Reformed dogmatics

**My thoughts:**

I think that it was a good debate. Well worth watching. I don't promise that my summary is 100% accurate. Please leave room for a little snark, and watch the debate yourself. I like to take the spin off of people's words, when I feel that they are trying to weasel out of the conclusions of their own views. It's 2 AM on Monday morning now, and I don't want to proof-read. Please point out errors in the comments.

If I could boil down the mistake that James White makes to one sentence, it would be to say that he comes to the text with a *philosophical* presupposition (determinism), and this causes him to misinterpret the plain meaning of the text as a whole. And this misinterpretation isn't about peripheral teachings of the Bible. His embrace of God as the cause of moral evil means that he denies the goodness of God – a basic Christian doctrine. (This is compounded by his embrace of double-predestination, although that was not the topic of the debate). Christians shouldn't let a philosophy – determinism – override the plain meaning of Scripture. Determinism is *man's philosophy* – it's a Greek philosophy that existed centuries before Christ.

White also was clearly unfamiliar with the philosophy of religion of his own Reformed tradition, and especially with the history of the development of Reformed theology. Craig was able to correct him, by showing him the books on Reformed Dogmatics and explain the historical antecedents of Reformed thought.

James White is not a "hyper-Calvinist". He is a normal Calvinist. Calvinism teaches universal divine determinism. Calvinism teaches that where each individual goes after the judgment is decided unilaterally by God. Calvinism teaches that human moral evil is caused by God. Calvinism teaches that God punishes people for this moral evil. Calvinism teaches *intentional* double-predestination.

I wrote about the problems with Calvinism, citing Calvinist D.A. Carson and William Lane Craig, in a previous post. Determinism denies free will, and therefore undermines all meaning in life. That's not consistent with the Bible's clear teaching that God issues commands to his creatures, because he expects (free will) obedience. That is how we develop our relationship with God after becoming Christians (sanctification), and those relationships have ultimate significance.

Note: I link to James White's work on this blog. He does a great job of fighting cultural and political enemies. I really appreciate his conservative perspective on issues like abortion, and his sensitivity to the totalitarian impulses of the secular left. His work on KJV-only and and debating Catholics is excellent. I don't always agree with Craig. I recently posted disagreement with Craig on his latest work on the historical Adam and evolution. I have other minor disagreements with him as well, in substance and method. The only theology books in my house are by R. C. Sproul, Wayne Grudem, D.A. Carson, Millard Erickson, John MacArthur, etc. – all Calvinists.

If you missed Craig's debate with Paul Helm, which is mentioned in the debate, I blogged about that previously, as well.

# There are Roman Catholics in my family but I'm not one: why not?

**Wintery Knight** · 13 April 2024 · Archived copy · Original

In this post, I explain why I'm not Roman Catholic. And I also explain how Protestant Christians arrive at their beliefs. We'll start with J. Warner Wallace on Purgatory, then I'll go second.

**Purgatory**

Here's the first article from Cold Case Christianity, by the Master of the Evidence J. Warner Wallace. He writes about the Roman Catholic doctrine of purgatory, and his experience with studying and then rejecting it.

Here is his introduction:

> The notion of purgatory assumes many of us die with unforgiven sins that need to be purged from our account; some of us are not good enough to go to heaven, but not bad enough to go to hell. Purgatory, therefore, is a temporary, intermediate place (or state of being) where good deeds and works can be performed in order to purge our impurity prior to our final destiny with God. Although millions of Catholics believe purgatory to be a reality, the idea needs to be tested in light of the Scripture. Is purgatory something we, as Bible believing Christians, should accept as true?

He's got a stack of Bible verses to make two points against Purgatory: first, that Jesus' death on the cross is sufficient to atone for *all* our rebellion against God, and we don't need to endure any suffering or punishment to supplement it. And second, the teaching about the afterlife in the Bible says that believers are immediately ushered into the presence of God after they die (without resurrection bodies, yet), while unbelievers are separated away from God.

Here's what he says about the first point:

> **Our Salvation Isn't Based On Our Good Works**
> According to the Biblical doctrine of Salvation, forgiveness is not based on the good works of the believer. For this reason, deeds or works performed for those in purgatory are both unnecessary and ineffectual:
>
> **Romans 3:21-24, 27-28**
> But now a righteousness from God, apart from law, has been made known, to which the Law and the Prophets testify. This righteousness from God comes through faith in Jesus Christ to all who believe. There is no difference, for all have sinned and fall short of the glory of God, and are justified freely by his grace through the redemption that came by Christ Jesus… Where, then, is boasting? It is excluded. On what principle? On that of observing the law? No, but on that of faith. For we maintain that a man is justified by faith apart from observing the law.
>
> **Romans 8:1**
> Therefore, there is now no condemnation for those who are in Christ Jesus, because through Christ Jesus the law of the Spirit of life set me free from the law of sin and death. For what the law was powerless to do in that it was weakened by the sinful nature, God did by sending his own Son in the likeness of sinful man to be a sin offering.
>
> **Our Salvation Is Based On Jesus' Work on the Cross**
> According to the Biblical doctrine of Salvation, Jesus' work on the cross (His blood) purifies us from allsin. For this reason, there isn't a lingering sin problem requiring the existence of a place like purgatory:
>
> **Titus 2:13-14**
> …we wait for the blessed hope—the glorious appearing of our great God and Savior, Jesus Christ, who gave himself for us to redeem us from all wickedness and to purify for himself a people that are his very own, eager to do what is good.

> **1John 1:7b**
> …the blood of Jesus, his Son, purifies us from all sin.
>
> **1John 1:9b**
> …he is faithful and just and will forgive us our sins and purify us from all unrighteousness.
>
> **1John 2:2**
> He is the atoning sacrifice for our sins, and not only for ours but also for the sins of the whole world.
>
> **Hebrews 10:14**
> …because by one sacrifice he has made perfect forever those who are being made holy.
>
> **Our Salvation Has, Therefore, Already Been Guaranteed**
> According to the Biblical doctrine of Salvation, Jesus has already purified and purged believers of sin based on our faith in Him. For this reason, there is no need for a place like Purgatory where additional purging must be performed…
>
> […]The Biblical doctrine of Salvation clearly eliminates the need for purgatory.

I was never able to find anything in the Bible to support purgatory. It's a very very late doctrine that was unknown to the early church until the late 2nd / early 3rd century, where it is spoken about by a handful of people. But lots of weird doctrines were creeping up on the fringe around that time, so we shouldn't be surprised… the point is that they have no support from the Bible, and not in the community of believers for the first 150 years after the death of Jesus.

**The bodily assumption of Mary**

Anyway, my turn now. The Roman Catholic church teaches that Mary was "bodily assumed" into Heaven. Let's see if that is in the Bible or in the early church.

Here's what I found:

1. To be a Roman Catholic, you need to believe in Papal infallibility in matters of dogma.
2. In 1950, the Pope pronounced the assumption of Mary to be infallible dogma.
3. This pronouncement was solicited by a petition featuring over 8 million signatures.
4. There is no historical record of this doctrine in the Bible.
5. No early church father mentions the assumption until 590 AD.
6. Documents dated 377 AD state that no one knows how Mary died.
7. The assumption appears for the first time in an apocryphal gospel dated about 495 AD.

**Data**

I only cite Roman Catholic sources for my facts.

6. "But if some think us mistaken, let them search the Scriptures. They will not find Mary's death; they will not find whether she died or did not die; they will not find whether she was buried or was not buried … Scripture is absolutely silent [on the end of Mary] … For my own part, I do not dare to speak, but I keep my own thoughts and I practice silence … The fact is, Scripture has outstripped the human mind and left [this matter] uncertain … Did she die, we do not know … Either the holy Virgin died and was buried … Or she was killed … Or she remained alive, since nothing is impossible with God and He can do whatever He desires; for her end no-one knows." (Epiphanius, Panarion, Haer. 78.10-11, 23. Cited by Juniper Carol, O.F.M. ed.,*Mariology*, Vol. II (Milwaukee: Bruce, 1957), pp. 139-40).

7. "The idea of the bodily assumption of Mary is first expressed in certain transitus–narratives of the fifth and sixth centuries. Even though these are apocryphal they bear witness to the faith of the generation in which they were written despite their legendary clothing. The first Church author to speak of the bodily ascension of Mary, in

association with an apocryphal transitus B.M.V., is St. Gregory of Tours." (Ludwig Ott, *Fundamentals of Catholic Dogma*(Rockford: Tan, 1974), pp. 209–210).

It should be noted that the apocryphal gospel in which the doctrine of the assumption of Mary first appeared was condemned as heretical by two Popes in the 5th and 6th centuries. However, I was not able to find a CATHOLIC source for this fact, so I deliberately chose not to use it in my case.

**Conclusion**

The first thing I want to say is that the Bible is not the only place you look to decide these issues. You also look in church history, and you are looking for a clear chain of custody of the doctrine as far back as it can go. Purgatory and the perpetual virginity of Mary have some track record, but the bodily assumption of Mary is just nowhere – not in the Bible, not in the Early Church fathers. So that's the silver bullet against Roman Catholicism, since they made it "infallible".

This post is more directed to non-Christians to sort of show you how we do our homework. I am the first Protestant in my family. We have half the family who is Muslim, and the other half mostly Hindu, with some Catholic. I had to debate all these people growing up, and I wiped the floor with them. It was not even close. I simply settled on the beliefs that allowed me to win every argument, every time. That's how you do religion. If you have to go against your whole family in order to be right, you do it. It's not good to be wrong about things just because that's what your family believes. These things were not pushed hard on me by my parents, I studied them on my own in order to win arguments. After a while of winning, I found myself acting consistently with what I was arguing for. Although that might sound really weird to you, that's probably the right way to do this. Don't listen to parents and church, find your own way forward by winning arguments, and believing only what the evidence supports.

Although most people think that if I had kids, I'd bully them into my beliefs, I actually would not. Because that's not what worked on me. What really works is fighting about evidence, welcoming questions, and allowing differences of opinion. Being free to pursue truth is more important in the long run than coercing your kids to act nicely.

# Peter J. Williams debates Bart Ehrman on his book “Misquoting Jesus”

**Wintery Knight** · 14 April 2024 · Archived copy · Original

I have to re-post this debate between Bart Ehrman and Peter J. Williams, because Dr. Williams just followed me on Twitter. I noticed that he had re-tweeted one of the two senators I follow on Twitter, so I re-tweeted him. I like Tom Cotton and Josh Hawley, and he re-tweeted Senator Hawley talking about free speech.

Bart Ehrman posted the debate audio on YouTube:

**Details:**

> Bart Ehrman is the US author of the bestselling book “Misquoting Jesus” (In the UK “Whose word is it?”). He calls into question the authority of the New Testament as scribal changes over time have changed the documents.
>
> So can we trust the scripture? Bible scholar Peter Williams believes in the reliability of the New Testament and that Bart’s prognosis is far too pessimistic.

This post is a re-post from 2011. I have been listening to this lecture by Peter J. Williams on “Misquoting Jesus” this week, and it reminded me to re-post this debate. (I checked to make sure the MP3 link is still good, and it is)

**Summary of the Williams-Ehrman debate:**

Note: this summary is *snarky*. If you want an accurate view of the debate, then listen to it. My summary is meant to be humorous.

Ehrman:

- I had a mystical experience in childhood and became an evangelical Christian
- I went to Moody Bible Institute, and they told me that the Bible was inerrant
- For a while, I was committed to the view that there are no mistakes in the Bible
- At Princeton, I was taught *and graded* by professors who did not accept inerrancy
- By a strange coincidence, I began to see that the Bible did have errors after all!
- We don’t have the original documents written by the original authors, we only have thousands of copies
- if the words of the Bible are not completely inerrant, then none of it is historical
- if all of the words in all the copies of the Bible are not identical, then none of it is historical

Williams:

- I would say the New and Old testaments are the Word of God
- We don’t need to have the original Greek writings in order to believe in the authority of the Bible
- I believe in inerrancy, but doesn’t mean there are no problems
- the doctrine of inerrancy has always referred to the original Greek copies, not the translations

Moderator:

- what are the main points of Misquoting Jesus?

Ehrman:

- we don’t have the originals of any of the books of the New Testament

- we have copies that are much later, sometimes even centuries later!!1!
- the copies we have all differ from one another – they were changed by scribes!!1!
- we have 5000 manuscripts in the original Greek language
- there are hundreds of thousands of differences!!1!
- most of the differences don't matter
- some differences are significant for meaning or doctrine
- errors are propagated because the next scribe inherits the mistake of their source copy
- a large gap between the time of writing and the first extant copy means more errors have crept in

Williams:

- the reason we have so many variants is because the number of manuscripts is large

Angry Jesus or compassionate Jesus in Mark

Ehrman:

- most manuscripts say that Jesus was compassionate when healing a leper, but one says he was angry
- it makes a huge huge huge really really big difference if Jesus is compassionate or angry
- the whole Bible needs to be thrown out because of this one word between different in one manuscript

Williams:

- this variant is important for understanding the passage, but it has no great meaning
- the change is probably just an accident – the two words are very similar visually in Greek
- it's just an accident – it emerged in one manuscript, and it impacted a few more
- the tiny number of manuscripts that have the error are geographically isolated
- I'm pretty sure that WK prefers the angry Jesus anyway – so who cares?

Ehrman:

- no! someone changed it deliberately! it's a conspiracy! you should buy my book! it's a *big deal*!!!!!1!!1!one!!eleventy-one!

The woman caught in adultery in John

Ehrman:

- it is isn't in any of the earliest manuscripts
- this is an apocryphical story that some scribe deliberately inserted into the text
- most people don't even know about this! it's a cover-up! you need to buy my scandalous book!

Williams:

- that's right, it's a late addition by some overzealous scribe
- and it's clearly marked as such in every modern Bible translation
- the only people who don't know about this are people who don't read footnotes in their Bible
- and in any case, this isn't a loss of the original words of the New Testament – it's an addition

Grace of God or apart from God in Hebrews

Ehrman:

- well this is just a one word difference, but it makes a huge huge really really big difference!

- the words are very similar, so it's could be an accident I guess
- but it wasn't! this was a deliberate change! it's a conspiracy! it's a cover-up! scandal!
- buy my book! It's almost as good as Dan Brown!

Moderator:

- hmmmn…. I kind of like "apart from God" – why is this such a big scandal again?

Ehrman:

- you don't care? how can you not care? it has to be inerrant! or the whole thing is false!
- Moody Bible Institute says!

Williams:

- yeah Bart is always saying that every change is deliberate but it's just an accident
- the words are very similar, just a few letters are different, this is clearly an accident
- I have no problem with apart from God, or by the Grace of God
- please move on and stop screaming and running around and knocking things over

Moderator:

- but what if pastors try to use this passage in a sermon?

Williams:

- well, one word doesn't make a big different, the meaning that appears is fine for preaching
- it's only a problem for people who treat the Bible as a magic book with magical incantations
- they get mad because if one word is out of place then the whole thing doesn't work for their spell
- then they try to cast happiness spells but the spells don't work and they experience suffering
- the suffering surprises them since they think that fundamentalism should guarantee them happiness
- then they become apostates and get on TV where they look wide-eyed and talk crazy

Ehrman:

- hey! are you talking about me? a lot of people buy my books! i am a big success!
- it is very important that people don't feel bad about their sinning you know!

Is Misquoting Jesus an attack?

Williams:

- it's rhetorically imbalanced and misleading
- it tries to highlight change and instability and ignore the majority of the text that is stable
- he makes a big deal out of 5 or so verses that are different from the mainstream text
- he says that scribes deliberately changed the scriptures, but he doesn't prove that
- it's just as likely that the differences are just scribal errors made by accident

Ehrman:

- well, maybe the variants aren't a big deal, but what about one angel vs. two angels?
- that's a significant issue! significant enough for me to become an apostate – a *rich* apostate
- if one word is different because of an accident, then the whole Bible cannot be trusted

- it has to be completely inerrant, so a one word difference means the whole thing is unreliable
- we don't even know if Jesus was even named Jesus, because of one angel vs two angels!!!1!
- buy my book! you don't have to read it, just put it on your shelf, then you'll feel better about not having a relationships with God – because who's to say what God really wants from you? Not the Bible!

# Communist China interfered in Canadian elections to help Justin Trudeau

**Wintery Knight** · 15 April 2024 · Archived copy · Original

According to a recent Abacus Data Poll, the Conservative Party of Canada is now leading the Liberal Party 44% to 24%, putting the conservatives in a position to win a supermajority of Canadian ridings. But now news is emerging that foreign nations interfere in Canadian elections, and Liberal Party leader Justin Trudeau not only knew about it, but he let it happen.

Here's the story from The Federalist:

> On Monday, Ottawa's lead spy agency, the Canadian Security Intelligence Service (CSIS), confirmed that Communist China interfered in Canada's 2019 and 2021 federal elections. These efforts "focused primarily on supporting those viewed to be either 'pro-PRC' or 'neutral' on issues of interest to the [Chinese] government," a slide shown to Canadian officials reads, according to Reuters.
>
> According to The Toronto Star, the briefing provided to the Foreign Interference Commission further revealed that, during the 2021 contest, the CCP specifically aimed "to deter Canadians, especially those 'of Chinese heritage,' from backing the Conservative party, then-leader Erin O'Toole, and B.C. Conservative candidate Kenny Chiu." Conservative candidates took a hardline approach to China during the 2021 campaign, often highlighting the CCP's brutal treatment of Uyghurs and criticizing Huawei, a Chinese tech giant suspected of facilitating spyware for Beijing.
>
> Chiu ultimately lost his 2021 election bid, while Trudeau's Liberal Party won both the 2019 and 2021 elections.

The language of the articles that interfered with the elections was similar to the language of articles published by Communist China's state-run media:

> "The timing of these efforts to align with Conservative polling improvement; the similarities in language with articles published by PRC state media; and the partnership agreements between these Canada-based outlets and PRC entities; all suggest that these efforts were orchestrated or directed by the PRC," the CSIS assessment reads, according to the Star.

Trudeau is using all of his authority as a part-time drama teacher and former snowboarding instructor to explain why people should believe him, rather than believe Canada's most prestigious intelligence agency:

> Despite CSIS's findings, Trudeau seemingly isn't convinced that China's 2021 efforts were designed to benefit the Liberal Party.
>
> According to The Epoch Times, the prime minister cast doubt on intelligence suggesting Beijing was attempting to boost his party's electoral prospects, saying: "While individual officials may well have expressed a preference or another … it would just seem very improbable that the Chinese government itself would have a preference in the election."
>
> As noted above, these remarks contradict the intelligence provided by CSIS, which highlighted the CCP's aim to undermine Conservative Party candidates.

The next Canadian election is scheduled for October 2025, unless the Liberal Party fascists fail a no-confidence vote. So far, the communist New Democrat Party has been backing the fascist Liberal Party every time a no-confidence vote has been held, including supporting the fascist Liberal Party's back-breaking carbon tax.

But there are signs that support may be ending, as more and more NDP voters are turning away from the communist NDP. A recent article from the state-run propaganda outlet CBC states “NDP MPs Charlie Angus, Carol Hughes and Rachel Blaney all announced Thursday that they will not be seeking re-election.”

You’ll notice from the recent poll I posted above that the communist NDP’s numbers are also declining. They know that the writing is on the wall, and a quick election is their best hope for not losing ALL of their voters. The longer that Canadian voters have to live under the poverty-inducing policies of the fascist-communist coalition, the worse the results will be for the secular left.

# Bill Maher: Americans should learn from Canada's failure

**Wintery Knight** · 16 April 2024 · Archived copy · Original

Normally, I do not care about Bill Maher's occasional bouts of sanity. He's a secular leftist clown. He doesn't know how the world works. He chooses policies with his feelings, based on how it makes him look to other people. But this time, I really think that he put some effort into his rant against Canada. And I agree with him that American voters will vote smarter if they look closely at Canada.

This article from the Toronto Sun explains what happened:

> During a monologue last week on *Real Time With Bill Maher*, the late-night personality compared Canada to America and carefully demonstrated how high unemployment, unchecked immigration, skyrocketing debt and lack of productivity are seeing the country falling further and further behind its G7 counterparts.

Unemployment and air pollution:

> Maher then compared the unemployment rate in America (3.8%) and Canada (6.1%), and revealed that his neighbours to the north has more cities with worse air pollution than in the U.S.

Housing shortage:

> "Last year, Canada added 1.3 million people, which is a lot in one year — the equivalent of the U.S. adding 11 million migrants in one year. And now, they're experiencing a housing crisis even worse than ours and we're sleeping in tents. The median price of a home here is $346,000. In Canada converted to U.S. dollars, it's $487,000."

National debt:

> Maher noted that because of mortgage debt, "Canada has the highest debt to GDP ratio of any G7 nation."

Health care:

> "(It) ranks dead last [in health care] among high income countries, and access to primary health care, and the ability to see a doctor in a day or two. And it's not for lack of spending. Of the 30 countries with universal coverage, Canada spends over 13% of its economy on it, which is a lot of money for free health care. Look, I'm not saying Canada still isn't a great country, it is, but those aren't paradise numbers. If Canada was an apartment, the lead feature might be: 'America adjacent.'"

Immigration:

> Jumping to immigration, he cited Sweden opening its borders to "over a million and a half immigrants since 2010" which led to "20%" of its citizens being foreign born, its education system "tanking," and Europe's leader in "gangland killings."
>
> "One result is that the far-right parties are in the government now there for the first time. To which liberals say blaming immigrants for the rising crime rate is racist. Yeah, but is it true? Of course it's true. It's not a coincidence the quality of life went down after the Somali gangs started a drug turf war using hand grenades. Calling it racist doesn't solve the problem.

The Toronto Sun article then helps Maher out with some recent numbers:

> Last month, the Canadian Press reported that people in Ontario and British Columbia increasingly missed payments on mortgages and credit cards in the fourth quarter of 2023, citing stats from Equifax Canada.
>
> In Ontario, the mortgage delinquency rate was up 135.2% compared with a year earlier, while B.C.'s rate rose by 62.2%.

What do you think? Do you think that conservatives argue better when they argue from the demonstrated achievements of different countries?

The Toronto Sun noted:

> On X, Maher's comments went viral, drawing nearly 42 million views and nearly 5,000 comments with many calling the TV personality's assessment spot on.

I think it's a great approach. Why should America try policies that have been known to fail elsewhere? But we can't count on the ignorant "don't judge" public school teachers to tell voters what's happening in other countries. We shall have to tell them ourselves. So, make sure you share this article.

# Bank of America accused of discriminating against Christians and conservatives

**Wintery Knight** · 17 April 2024 · Archived copy · Original

Would a bank close your account just because they don't like your Christian religious beliefs or conservative political beliefs? I try to choose my banks by looking at their political donations. On that score, Bank of America, J. P. Morgan Chase, Wells Fargo, Citigroup and US Bancorp are all bad banks. But is there any evidence that banks discriminate against Christians and conservatives?

Here's an interesting article written by Reagan Reese, over at the Daily Caller:

> One of the left's biggest political targets recently found himself "de-banked" with no warning and little avenue for recourse, the Daily Caller has learned.
>
> John Eastman, once an attorney for former President Donald Trump, was de-banked twice in the span of several months by two prominent financial institutions, Bank of America and USAA, he told the Daily Caller. His accounts were closed as he faced substantial backlash for his work advising Trump around the time of the 2020 election.
>
> Eastman said he had switched most of his banking from Bank of America to USAA, a company that provides financial services exclusively to military veterans as well as their families, due to the former's "wokeness." Both corporations are federally insured, and Bank of America was bailed out with billions of dollars in taxpayer funds during the global financial crisis.
>
> Bank of America alerted Eastman in September of 2023 that it would be closing his accounts, a letter obtained by the Daily Caller shows. Shortly thereafter, USAA notified Eastman in November that his two bank accounts with the company would be closed, a separate letter shows.
>
> "And then two months later, we get a similar letter from USAA saying that they've decided that they're going to close your account and they did like three weeks later," Eastman told the Daily Caller. "And so that was where all of our automatic payments were coming out of, all our automatic deposits. So it was a real pain to shift everything. We had to get a new bank account opened and shift everything over."

Republican leaders are concerned about Americans being de-banked for their political views:

> A number of red state attorneys general — including from Florida, Iowa, Missouri, Indiana and Montana — voiced their opposition to the de-banking trend after the Daily Caller laid out Eastman's situation. Many of the state AGs pointed to politics as a potential reason Eastman's accounts were closed.

And it's not just talk. According to the left-leaning UK Daily Mail (archived), Republican leaders are holding the leftist banks accountable:

> A dozen Republican-led states plan to send a letter to Bank of America demanding an explanation for why it allegedly de-banked Christian and other conservative groups.
>
> The letter obtained first by DailyMail.com, led by Kansas Attorney General Kris Kobach, demands that the financial institution turn over documents related to its account cancellation policies and requested that the bank update its terms of services to not discriminate against clients with certain political or religious beliefs.
>
> The notice comes after it was revealed that Bank of America sent the FBI and U.S. Treasury private consumer financial data to help the agencies investigate crimes related to the January 6 Capitol protest.
>
> 'Unfortunately, Bank of America appears to be conditioning access to its services on customers having the bank's preferred religious or political views,' Kobach writes in the letter to Bank of America CEO Brian

> Moynihan obtained by DailyMail.com.
>
> ‘Your discriminatory behavior is a serious threat to free speech and religious freedom, is potentially illegal, and is causing political and regulatory backlash.’
>
> ‘Your bank needs to be transparent with and assure us, its shareholders, and others that it will not continue to de-bank customers for their speech or religious exercise.’
>
> […][T]he memo details several instances of apparent discrimination against Christian groups where Bank of America canceled their accounts.

Here are the Republican governors who signed it:

> The letter is co-signed by officials from Alaska, Arkansas, Indiana, Iowa, Mississippi, Missouri, Montana, Nebraska, South Carolina, Texas and Utah.

If you are looking for a bank that donates to the Republican Party, you should check out opensecrets.org. I think it’s important for Christians and conservatives to choose wisely when they choose what state to live in, what company to work for, and which bank to bank at. It really is important to choose wisely.

# Katherine Maher, the new CEO of NPR, is a wealthy, white radical leftist

**Wintery Knight** · 18 April 2024 · Archived copy · Original

Last week, I blogged about a long-time employee of taxpayer-funded National Public Radio, who lamented his employer's turn from moderately leftist to far-left extremism. He himself was a leftist, but he was getting concerned that NPR had lost any appearance of being a news organization. He expressed hope that the new incoming CEO would be moderate. He was wrong.

Here's an excellent article from City Journal about the new CEO, written by anti-woke activist Chris Rufo:

> Katherine Maher has a golden résumé, with stints and affiliations at UNICEF, the Atlantic Council, the World Economic Forum, the State Department, Stanford University, and the Council on Foreign Relations. She was chief executive officer and executive director of the Wikimedia Foundation. And, as of last month, she is CEO of National Public Radio.
>
> Mere weeks into this new role, Maher has stepped into controversy. Long-time NPR senior editor Uri Berliner published a scathing indictment of the self-professed "public" media service's ideological capture. Rather than address the substance of these criticisms—which will ring true to anyone who has listened to NPR over the past decade—Maher punished Berliner with a five-day unpaid suspension. (Berliner announced his resignation from NPR earlier today.)

And here is what Rufo's article is about:

> I have spent the past few days exploring Maher's prolific history on social media, which she seems to have used as a private diary, narrating her every thought, emotion, meeting, and political opinion in real-time. This archive is a collection of her statements, but at a deeper level, it provides a window into the soul of a uniquely American archetype: the affluent, white, female liberal—many of whom now sit atop our elite institutions.

Her tweets about how feminism and global warming validate her failure to marry and have children are very amusing. It's what you would expect from someone with no earned STEM degrees, and no private sector work experience.

But here is the best part of the article:

> The most troubling of these conclusions is her support for radically narrowing the range of acceptable opinions. In 2020, she argued that the New York Times should not have published Senator Tom Cotton's op-ed, "Send in the Troops," during the George Floyd riots. In 2021, she celebrated the banishment of then-president Donald Trump from social media, writing: "Must be satisfying to deplatform fascists. Even more satisfying? Not platforming them in the first place."
>
> As CEO of the Wikimedia Foundation, Maher made censorship a critical part of her policy, under the guise of fighting "disinformation." In a speech to the Atlantic Council, an organization with extensive ties to U.S. intelligence services, she explained that she "took a very active approach to disinformation," coordinated censorship "through conversations with government," and suppressed dissenting opinions related to the pandemic and the 2020 election.
>
> In that same speech, Maher said that, in relation to the fight against disinformation, the "the number one challenge here that we see is, of course, the First Amendment in the United States." These speech protections, Maher continued, make it "a little bit tricky" to suppress "bad information" and "the influence peddlers who have made a real market economy around it."

> Maher's general policy at Wikipedia, she tweeted, was to support efforts to "eliminate racist, misogynist, transphobic, and other forms of discriminatory content"—which, under current left-wing definitions, could include almost anything to the right of Joe Biden.

If you are wondering what she did to the NPR whistleblower, she suspended him without pay, and he later resigned, after an uproar from the mob of whiny diversity hires who work at NPR.

Because I work in IT, I am used to working with people who have earned STEM degrees, years of work experience in the private sector, and knowledge of how to solve real-world problems. But occasionally I have a brush with a white female receptionist or administrative assistant or HR generalist, and this is how they talk. Their university experience hasn't prepared them to produce value for customers. They've just memorized a bunch of left-wing slogans and gotten good grades for parroting them. They don't actually know which policies obtain which results. This talk-your-way-through-life strategy doesn't work well for most people as far as earning money in the real world. But if you come from a wealthy family, then you can survive, because you have connections to other wealthy people.

Should taxpayers really be forced to subsidize an organization led by a trust-fund baby, who has grown up into an uneducated, unskilled, radical leftist activist?

# Cosmologist Luke Barnes answers 11 objections to the fine-tuning argument

**Wintery Knight** · 19 April 2024 · Archived copy · Original

This is from the blog Common Sense Atheism.

Atheist Luke Muehlhauser interviews well-respect cosmologist Luke Barnes about the fine-tuning argument, and the naturalistic response to it.

Luke M. did a good job explaining the outline of the podcast.

Details:

> In one of my *funniest* and *most useful* episodes yet, I interview astronomer Luke Barnes about the plausibility of 11 responses to the fine-tuning of the universe. Frankly, once you listen to this episode you will be better equipped to discuss fine-tuning than 90% of the people who discuss it on the internet. This episode will help clarify the thinking of anyone – including and perhaps *especially* professional philosophers – about the fine-tuning of the universe.
>
> The 11 responses to fine-tuning we discuss are:
>
> 1. "It's just a coincidence."
> 2. "We've only observed one universe, and it's got life. So as far as we know, the probability that a universe will support life is one out of one!"
> 3. "However the universe was configured, evolution would have eventually found a way."
> 4. "There could be other forms of life."
> 5. "It's impossible for life to observe a universe *not* fine-tuned for life."
> 6. "Maybe there are deeper laws; the universe *must* be this way, even though it *looks* like it could be other ways."
> 7. "Maybe there are bajillions of universes, and we happen to be in one of the few that supports life."
> 8. "Maybe a physics student in another universe created our universe in an attempt to design a universe that would evolve intelligent life."
> 9. "This universe with intelligent life is just as unlikely as any other universe, so what's the big deal?"
> 10. "The universe doesn't look like it was designed for life, but rather for empty space or maybe black holes."
> 11. "Fine-tuning shows there must be an intelligent designer beyond physical reality that tuned the universe so it would produce intelligent life."
>
> **Download** CPBD episode 040 with Luke Barnes. Total time is 1:16:31.

There is a very good explanation of some of the cases of fine-tuning that I talk about most on this blog – the force of gravity, the strong force, etc. as well as many other examples. Dr. Barnes is an expert, but he is also very very easy to listen to even when talking about difficult issues. Luke M. is very likeable as the interviewer.

# Knight and Rose Show #48: Krista Bontrager on Diversity

**Wintery Knight** · 20 April 2024 · Archived copy · Original

Welcome to episode 48 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome Krista Bontrager to discuss diversity, equity and inclusion. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode 48:**

**Episode Summary:**

Wintery Knight and Desert Rose interview Krista Bontrager about diversity, equity and inclusion. What is diversity? Are there any benefits to diversity? Are there any disadvantages to diversity? How does the concept of representation apply to diversity? Should Christians try to redeem DEI, or should we just avoid it? What is the future of DEI in companies and schools?

**Speaker biographies**

Krista holds a B.A. in Communications from Biola University. She has two degrees from the Talbot School of Theology: an M.A. in Theology and M.A. in Bible Exposition. She is currently working on a D. Min in Apologetics at Birmingham Theological Seminary. She is an author, podcaster, and former university professor. She has worked professionally in theology and apologetics for 25 years and transitioned into full time ministry with the Center for Biblical Unity in 2021. Krista is co-author of a new book, entitled “Walking in Unity: Biblical Answers to 10 Questions on Race and Racism”.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Evidence for design in living systems is changing the way scientists work

**Wintery Knight** · 21 April 2024 · Archived copy · Original

If you look over in the right column of the blog, you'll see that I am reading "The Comprehensive Guide to Science and Faith". It's a collection of short essays intended for laymen to explain all aspects of the design debate. I'm actually listening to the audio book version, and just looking in the book for diagrams. I wanted to talk about a few resources that are similar to what I'm seeing in the book.

First, there's this excellent post from Evolution News, where Dr. Casey Luskin (who recently appeared on the Apologetics 315 podcast) lists out all the areas where intelligent design is fruitful for studying living systems.

Here is his list:

- Protein science
- Physics and cosmology
- Information theory
- Pharmacology
- Evolutionary computation
- Anatomy and physiology
- Bioinformatics
- Molecular machines
- Cell biology
- Systematics
- Paleontology
- Genetics

These are all good, but I'm going to focus on some of them that are interesting to me coming from a software engineering background.

> Information theory: ID leads scientists to understand intelligence as a cause of biological complexity, capable of being scientifically studied, and to understand the types of information it generates.

I looked into this one when naturalists were trying to argue that specified complexity was just the same as Shannon information. Shannon information is just concerned with the complexity, or information carrying capacity, of strings. But specified complexity is a step further, where certain strings have meaning or purpose, because they conform to a pattern. A random set of characters the same length as this blog post is complex (like Shannon information), but it's not specified. What makes my letter sequences specified is that it conforms to the English language, and conveys meaning.

Here's another:

> Evolutionary computation: ID produces theoretical research into the information-generative powers of Darwinian searches, leading to the discovery that the search abilities of Darwinian processes are limited, which has practical implications for the viability of using genetic algorithms to solve problems.

When I was in grad school, there were courses on using "genetic algorithms" to solve problems. But thanks to the work of ID proponents like William Dembski, we now know that these algorithms only work if constraints are put on the search algorithm up front. As such, they don't support undirected evolution at all.

> Bioinformatics: ID has helped scientists develop proper measures of biological information, leading to concepts like complex and specified information or functional sequence complexity. This allows us to better quantify complexity and understand what features are, or are not, within the reach of Darwinian evolution.

Before ID came along, people weren't really interested in calculating the probability of sequencing amino acids into a protein by chance. They just wanted to assume that it happened, because what else could have happened? Sometimes, you make better decisions when you listen to both sides of a debate. Now we have two sides to the debate on origins, and it helps both sides to defend their views.

> Molecular machines: ID encourages scientists to reverse-engineer molecular machines — like the bacterial flagellum — to understand their function like machines, and to understand how the machine-like properties of life allow biological systems to function.

I've blogged before about how human inventors are regularly reverse-engineering natural designs in order to come up with designs for man-made machines.

> Genetics: ID has inspired scientists to investigate the computer-like properties of DNA and the genome in the hopes of better understanding genetics and the origin of biological systems.15 ID has also inspired scientists to seek function for noncoding junk-DNA, allowing us to understand development and cellular biology.

By now, everybody has heard about the predictions by Darwinists about the "uselessness" of junk DNA. That all went out the window with the data from the ENCODE project, that found that the so-called junk DNA was almost all useful. Another Darwinian prediction falsified by the progress of science.

**A 40-minute lecture**

I saw a nice lecture from the recent Science & Faith conference that was held in Dallas this year. The speaker was Dr. Brian Miller:

> Dr. Miller is Research Coordinator at Discovery Institute's Center for Science and Culture. He holds a Ph.D. in Physics from Duke University.
>
> More about him and the articles he has written can be found here: https://www.discovery.org/p/miller/

The video talks about all the areas where evidence for design is changing the way that scientists look at living systems.

The talk was very cutting edge, with a lot of new stuff I had not seen before. It's worth the time to watch it. There were also a couple of prior lectures from the conference. One from Eric Hedin, where he talked about being "canceled" by Darwinists for teaching both sides of origins issues at Ball State University. Another from Stephen C. Meyer talks about the Judeo-Christian origins of modern science. I've only watched the Miller lecture so far, but that's what Saturdays are for! Watching lectures and debates.

# How to defend the kalam cosmological argument just like William Lane Craig

**Wintery Knight** · 22 April 2024 · Archived copy · Original

*Today, I decided to go back in time, and re-post something from April 2009. I started this blog in January 2009. It's funny to see what I sounded like when I was just starting out. Dr. Craig has a short video about this argument, and Rose and I did a podcast about it, where we focused on the scientific evidence for a beginning of the universe. This is a simple argument. I wish Christian leaders taught it in church.*

I've been watching Bill Craig debates for a long time now, ever since I did my first degree in computer science a dozen years ago. Today I thought we could all learn how to argue Craig's first argument for God, which he used in his debate with Christopher Hitchens.

Let's go over Craig's *kalam* argument in brief.

**The *kalam* cosmological argument**

The argument goes like this:

1. Whatever begins to exist requires a cause
2. The universe began to exist
3. Therefore, the universe requires a cause (M.P. 1,2)

The most important thing for you to realize is that *nothing* can be sustained in a debate unless it can be phrased as a valid argument according the rules of inference. All of Craig's arguments can be broken down into logical propositions that use the standard laws of logical reasoning in order to force their conclusions *deductively*, so long as the premises are true.

**Understanding the logical form of the *kalam* argument**

The form of the *kalam* argument is valid because it allows for a *modus ponens* inference. (Here's a primer on logical reasoning)

- if p is true, then q is true
- p is true
- therefore, q is true

That means that so long as premise 1 and 2 are true, the conclusion follows necessarily. This is the same form of argument (deductive) used by Sherlock Holmes in his cases.

**Proving the premises**

Can the atheist deny that either or both of these premises are true?

1. "Whatever begins to exist requires a cause"
   If the atheist denies this premise, then they are denying a fundamental law of natural science, namely, that matter can neither be created or destroyed. That is natural law.
2. "The universe began to exist"
   The universe came into being. If the atheist denies this they are denying the state of the art in modern cosmology.

First, quantum mechanics is not going to save the atheist here. In QM, virtual particles come into being *in a vacuum.* The vacuum is sparked *by a scientist.* The particles exist for a period of time *inversely proportional to their mass.* But in the case of the big bang, there is no vacuum – there's nothing. There is no scientist – there's nothing.

And the universe is far too massive to last 14 billion years as a virtual particle.

Secondly, atheists will say that the big bang is speculative physics that could change at any moment. But the trend is in favor of an absolute beginning out of nothing. We have had a string of solid, recent scientific discoveries that point in a definite direction, as follows:

- Einstein's theory of general relativity, and the scientific confirmation of its accuracy
- the cosmic microwave background radiation
- red-shifting of light from galaxies moving away from us
- radioactive element abundance predictions
- helium/hydrogen abundance predictions
- star formation and stellar lifecycle theories
- the second law of thermodynamics applied to nuclear fusion inside stars

So, insofar as atheists question these discoveries and the origin of the entire physical universe out of nothing, they are opposing the progress of science.

**What came into being at the moment of creation?**

You need to understand that the big bang theory states that space, time and matter were all created at the moment of creation.

1. There was no space causally prior to the universe beginning to exist
2. There was no time causally prior to the universe beginning to exist
3. There was no matter causally prior to the universe beginning to exist

All of these things *began to exist* at the first moment.

**What can we infer about the cause?**

So, space, time, and matter began to exist. What could have caused them to begin to exist?

1. Whatever causes the universe to appear is not inside of space, because there *was no space* causally prior to the creation event. The cause must therefore be non-physical, because physical things exist in space.
2. Whatever causes the universe to appear is not bound by time (temporal). It *never began to exist.* There was no passage of time causally prior to the big bang, so the cause of the universe did not *come into being.* The cause existed *eternally*.
3. And the cause is not material. All the matter in the universe came into being at the first moment. Whatever caused the universe to begin to exist cannot have been matter, because there was no matter causally prior to the big bang.

So what could the cause be? Craig notes that we are only familiar with *two kinds* of non-material realities:

1. Abstract objects, like numbers, sets and mathematical relations
2. Minds, like your own mind

Now, abstract objects don't cause of any effects in nature. But we are very familiar with the causal capabilities of our own minds – just raise your own arm and see! So, by process of elimination, we are left with a mind as the cause of the universe. As Sherlock Holmes says, "*When you have eliminated the impossible, whatever remains, however improbable, must be the truth.*"

This cause created the entire physical universe. The cause of this event is therefore *supernatural, b*ecause it brings nature into being and is not inside of nature itself. The cause of the universe violates the law of conservation of matter is therefore performing a miracle.

**Responding to alternative naturalistic cosmologies**

In this published research paper from the journal *Astrophysics and Space Science*, William Lane Craig responds to the several naturalistic attempts to evade the implications of the *kalam* argument. I will list each one by name and explain the main problem with each. I highly recommend you read the paper and become conversant with the arguments and evidences.

1. The steady-state model: disproved by recent empirical observations of radio galaxy distributions, as well as red-shifting of light from distant galaxies moving away from us at increasing speeds
2. The oscillating model: disproved in 1998 by more empirical measurements of mass density which showed that the universe would expand forever, and never collapse (was named Discovery of the Year)
3. The vacuum fluctuation model: the theory allows for universes to spawn at every point in space and coalesce into one extremely old universe, which contradictions observations of our much younger universe
4. The chaotic inflationary model: does not avoid the need for an absolute beginning in the finite past
5. The quantum gravity model: makes use of imaginary time which cannot be mapped into a physical reality, it's purely theoretical

**Why the *kalam* cosmological argument matters**

We need to make a decision *today* about how we are going to live. The evidence available *today* supports the creation of the entire physical universe from nothing, caused by a supernatural mind with immense power. The progress of science has strengthened this theory against determined opposition from rival naturalistic theories.

Those are the facts, and we must all choose what to do with them.

# How to defend the fine-tuning argument just like William Lane Craig

**Wintery Knight** · 23 April 2024 · Archived copy · Original

*Today, I decided to go back in time, and re-post something from April 2009. I started this blog in January 2009. It's funny to see what I sounded like when I was just starting out. Dr. Craig has a short video about this argument, and Rose and I did a podcast about it, where we focused on the scientific evidence for cosmic fine-tuning. This is a simple argument. I wish Christian leaders taught it in church.*

First of all, if you're not clear on the fine-tuning argument, click here and read Walter Bradley's exposition of it. Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor University. He was also a professor and department head at Texas A&M before going to Baylor. He had his Ph.D at age 24 from the University of Texas and was a tenured professor at 27.

The first argument presented by Bradley in that post is the same argument that Craig used against Hitchens in their debate. (It's Craig's second argument in the set of five). Bradley's version of the argument has been presented *live*, *in-person* by Bradley at dozens of universities here and abroad, in front of students *and faculty*.

**The fine-tuning argument**

The argument goes like this:

1. The fine-tuning of the universe to support life is either due to law, chance or design
2. It is not due to law or chance
3. Therefore, the fine-tuning is due to design

**What does it meaning to be fine-tuned for life?**

Here are the facts on the fine-tuning:

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- The constants are *selected* by whoever creates the universe. They are not determined by physical laws. And the extreme probabilities involved required put the fine-tuning beyond the reach of chance.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

**Examples of finely-tuned constants**

Here are a couple of examples of the fine-tuning. Craig only gave one example in the debate and didn't explain how changes to the constant would affect the minimal requirements for life. But Bradley *does* explain it, and he is a professional research scientist, so he is speaking about things he worked in his polymer research lab. (He was the director)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – "carbon-based life), but the bonds are not so tight that they can't be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

Either way, you've got no life of *any conceivable kind.*

**Is the fine-tuning real?**

Yes, it's real and it is conceded by the top-rank of atheist physicists. Let me give you a citation from the best one of all, Martin Rees. Martin Rees is an atheist and a qualified astronomer. He wrote a book called "Just Six Numbers: The Deep Forces That Shape The Universe", (Basic Books: 2001). In it, he discusses 6 numbers that need to be fine-tuned in order to have a life-permitting universe.

Rees writes here:

> These six numbers constitute a 'recipe' for a universe. Moreover, the outcome is sensitive to their values: if any one of them were to be 'untuned', there would be no stars and no life. Is this tuning just a brute fact, a coincidence? Or is it the providence of a benign Creator?

There are some atheists who deny the fine-tuning, but these atheists are in firm opposition to the progress of science. The more science has progressed, the more constants, ratios and quantities we have discovered that need to be fine-tuned. Science is going in a theistic direction. Next, let's see how atheists try to account for the fine-tuning, on atheism.

**Atheistic responses to the fine-tuning argument**

There are two common responses among atheists to this argument.

The first is to speculate that there are actually an infinite number of other universes that are not fine-tuned, (i.e. – the gambler's fallacy). All these other universes don't support life. We just happen to be in the one universe is fine-tuned for life. The problem is that there *is no way of directly observing these other universes and no independent evidence that they exist.*

Here is an excerpt from an article in Discover magazine, (which is hostile to theism and Christianity).

> Short of invoking a benevolent creator, many physicists see only one possible explanation: Our universe may be but one of perhaps infinitely many universes in an inconceivably vast multiverse. Most of those universes are barren, but some, like ours, have conditions suitable for life.
>
> The idea is controversial. Critics say it doesn't even qualify as a scientific theory because the existence of other universes cannot be proved or disproved. Advocates argue that, like it or not, the multiverse may well be the only viable nonreligious explanation for what is often called the "fine-tuning problem"—the baffling observation that the laws of the universe seem custom-tailored to favor the emergence of life.

The second response by atheists is that the human observers that exist today, 14 billion years after the universe was created out of nothing, actually caused the fine-tuning. This solution would mean that although humans did not exist at the time the of the big bang, they are going to be able to reach back in time at some point in the future and manually fine-tune the universe.

Here is an excerpt from and article in the New Scientist, (which is hostile to theism and Christianity).

> …maybe we should approach cosmic fine-tuning not as a problem but as a clue. Perhaps it is evidence that we somehow endow the universe with certain features by the mere act of observation… observers are creating the universe and its entire history right now. If we in some sense create the universe, it is not surprising that the universe is well suited to us.

So, there are two choices for atheists. Either an infinite number of unobservable universes that are not fine-tuned, or humans go back in time at some future point and fine-tune the beginning of the universe, billions of years in the past.

**Why the fine-tuning argument matters**

We need to make a decision *today* about how we are going to live. The evidence available *today* supports the fine-tuning of the universe by a supernatural mind with immense power. The progress of science has strengthened this theory against determined opposition from rival naturalistic theories.

Those are the facts, and we must all choose what to do with them.

**Further study**

Here is a paper by Walter L. Bradley that contains many more examples of the fine-tuning, and explanations for *what happens* when you change the constants, quantities and rations even slightly.

# New study: parent's political ideology significantly affects adolescent mental health

**Wintery Knight** · 24 April 2024 · Archived copy · Original

If you like to get into debates with secular leftists in the office, like I do, then you need a lot of STUDIES. Secular leftists are taught that conservatives and Christians have not done any work to form their views, whereas all the smartest people are secular leftists, because they are data-based. So, let's take a look at a new study on political ideology, and see who produces better results?

This research seems to be some sort of collaboration between the moderate Institute for Family Studies, and the far-left Gallup polling company.

Here is the PDF of the publication.

And Fox News has an article about it:

> Parenting styles and political beliefs can play a major role influencing teenagers' mental health, new research from Gallup says.
>
> A June 2023 study surveying 6,643 parents and 1,580 adolescents found that conservative and very conservative parents were the "most likely to adopt the parenting practices associated with adolescent mental health," the research reported in the Institute for Family Studies found.
>
> "Adolescents with very conservative parents are 16 to 17 percentage points more likely to be in good or excellent mental health compared to their peers with very liberal parents," the report said. "Only 55% of adolescents of liberal parents reported good or excellent mental health compared to 77% of those with conservative or very conservative parents."

Why would conservative parents produce such a huge beneficial result for their children? Well, I would guess it's because conservative parents are more firm about having a vision for how their children are raised. They want their kids to do well in school, follow the law, and serve others. All things that will help them in the real free market world of serving customers. But conservative parents also reject "don't judge" compassion and moral relativism. Whereas secular leftist parents take an "anything goes" approach to raising their kids, conservatives are more strict about truth, and moral values. Secular leftist parents hate the idea of punishment. They just want their kids to like them.

More:

> Conservative parents were more likely to adopt an "authoritative parenting style, characterized by both warmth and a high level of discipline," Gallup economist and study author Jonathan Rothwell explained to Fox News Digital.
>
> "Parents who set boundaries, establish routines, convey warmth and affection, and enforce rules effectively report a less contentious relationship with their adolescent child than parents who do not do these things, and this relationship is recognized by that child to be stronger and more loving. Each of the two factors related to parenting practices has a similar effect on the relationship as an index of adverse experiences, related to parental drug abuse, death, or abandonment," he described in the report.
>
> Liberal parents, however, scored lowest in the survey, primarily because they were least likely to report successfully disciplining their child.

Homes with conservative parents will typically be homes where there is a "Constitution" of the relationship. And I mean a recognized authority that governs how the relationship will proceed. And that authority compels each adult

to deny themselves, and sacrifice their own interests, in order to serve others, and keep the relationship amicable and stable. Secular leftists don't have that, because they are trying to claw happiness out of everyone and everything around them. Secular leftists have no rules, and no reason to sacrifice your own interests for anyone or anything else. It's basically the Wild West. And in the Wild West, no one has an *obligation* to love anyone else when it doesn't *feel good* to them to do the work.

More:

> Teens' mental health outcomes were 8 percentage points lower when parents reported having difficulty disciplining their child.
>
> "By contrast, conservative parents enjoy higher quality relationships with their children, characterized by fewer arguments, more warmth, and a stronger bond, according to both parent and child reporting," the report said.
>
> While 80% of very conservative parents said their child did not get their way in an argument, only 53% of liberal parents could say the same. The most conservative parents were also more likely to report showing affection to their children every day.

I would think that a lot of these secular left parents are really just secular left single moms. Either by premarital sex with the hot bad boys, or by frivolous divorce. Even secular leftist women with men in the home will prevent those men from "judging" and "punishing" the children. Women are just not as good as men (generally speaking) at disciplining children. Secular leftist women might think that they are strong, independent boss babes who don't need no man, but the results show very different outcomes.

# Australia's Prime Minister Anthony Albanese bans memes as "disinformation"

**Wintery Knight** · 25 April 2024 · Archived copy · Original

I know that several left-wing countries have recently passed or are about to pass legislation that restricts free speech. Scotland, Ireland and Canada come to mind. All of those countries are led by secular-left fascists, so it's not surprising. However, did you know that the secular left fascist who is leading Australia also wants to ban speech critical of his regime? Let's take a look.

Consider this story from the radical left extremist UK Guardian, about a recent stabbing that occurred in a church in Australia:

> Facebook's parent company Meta and X/Twitter have been told to remove violent and distressing videos and imagery of the stabbing of a prominent Orthodox Christian leader in Sydney's west on Monday evening.
>
> The eSafety commissioner, Julie Inman Grant, told reporters on Tuesday that X and Meta had been issued with notices to remove material within 24 hours that depicted "gratuitous or offensive violence with a high degree of impact or detail", with the companies facing potential fines if they fail to comply.
>
> The notices relate to the alleged stabbing of Emmanuel at a service at the Assyrian Christ the Good Shepherd church in Wakeley just after 7pm on Monday. The service was being livestreamed and a recording of it has circulated online.

In Australia, the e-Safety commissioner, Julie Inman Grant is known as "eKaren". According to her biographies online, eKaren has no earned degrees in STEM and no private sector work experience in STEM. She has nevertheless been thrust into a position of authority, leading the government's online censorship efforts.

Now, you might be asking "I wonder what made eKaren choose this particular act of violence to be censored". And the answer is obvious. The victim is a Christian, and the aggressor was, of course, a Muslim – a fact which the UK Guardian declined to mention for obvious reasons. The secular left does not want voters to see Christians as victims. And the secular left does not want voters to see unskilled Muslims immigrants as violent. That's why eKaren was deployed to ban the video so that voters could not see it.

Far-left Reuters (also known as Al-Reuters) reports:

> Australian police on Tuesday said a knife attack on an Assyrian church bishop and some followers in Sydney was a terrorist act motivated by suspected religious extremism, as the country reeled from a second stabbing incident in three days.
>
> At least four people were wounded in the attack, including Bishop Mar Mari Emmanuel of the Assyrian Christ The Good Shepherd Church, when a man lunged at him with a knife during a service live-streamed on Monday.

The Premier of Australia is an extreme secular leftist. He had nothing specific to say to condemn the attacker, or defend Christians. Why would he? Like most secular leftists, he is in favor of opening the border to criminals – to get more votes from people who want higher taxes and bigger government.

In response to these attempts at censorship, Australians began posting memes mocking the secular left Prime Minister, his airhead chief censor eKaren, and his entire fascist regime. If you've read about other secular left dictators in history, you can guess what happened next.

Reclaim the Net reports:

> Australia's Prime Minister, Anthony Albanese has endorsed social media censorship of satirical memes about him.
>
> Albanese insinuated that social media platforms are duty-bound to suppress the so-called "misinformation" present on their sites.
>
> […]X has initiated a legal challenge against the Australian government following an unprecedented court order mandating global content censorship. This move comes after the Australian Federal Court ordered X to block worldwide access to posts showing a violent stabbing in a Sydney church, despite X already geo-blocking the content within Australia.
>
> Musk has openly criticized the Australian government, accusing it of attempting to impose censorship on a global scale. He argues that such court orders set a dangerous precedent, allowing any country to exert control over the entire internet. This approach threatens the foundational principles of free speech and the open internet, undermining users' rights to access information from around the world.

Here is an example meme:

A lot of people who vote for the secular left believe that their votes won't harm basic human rights, like free speech. But they are mistaken. Secular leftists are champions of making big promises, failing to deliver on them, and then censoring any criticisms of their failure. Communist regimes killed over 100 million people in the 21st century alone. We need to be careful about not electing uneducated, inexperienced, incompetent people to government.

# New study: no evidence that extreme weather events increased since 1950

**Wintery Knight** · 26 April 2024 · Archived copy · Original

Do you ever get into debates about global warming? I do. And when I do, I find it useful to have all the studies I need available to counter the slogans of the secular left true believers. In this post, we will take a look at a recent study from 2024 published by the Fraser Institute in Canada. They're using data from the United Nations Intergovernmental Panel on Climate Change.

Here is the link, from True North, my favorite source for Canadian news. (Bookmark them!)

Excerpt:

> A Fraser Institute study found that although global temperatures have increased "moderately" since 1950, there is no evidence to suggest that extreme weather events are on the rise despite the assertions of climate activists and Canada's government.
>
> The study analyzed data found in the United Nations Intergovernmental Panel on Climate Change (UN IPCC) and found that in many cases the frequency and severity of extreme weather events decreased or stayed the same rather than escalating.
>
> The author of the study, Kenneth Green, a senior fellow at the Fraser Institute spoke to True North about his findings.
>
> Green has a doctoral degree in Environmental Science and Engineering from UCLA, and has been studying environmental policy since before receiving his doctorate in 1984.
>
> "When you dig into the actual underlying data on what's happening, rather than the claims of politicians, you find that extreme weather events are pretty uncertain as to whether we're seeing extreme weather changing or will see extreme weather changing," said Green.

Put this link away for the next time that you get into a debate on global warming! I think you'll have fun with it.

By the way, if you know any young Christians, remind them of the need to do well in their studies. It sure is nice to find someone who doesn't swallow global warming propaganda, but who has a doctoral degree in Environmental Science and Engineering from UCLA. Make sure your kids or the kids at church aim high, because we can all use this kind of data.

# Biden uses taxpayer money to pay $250,000 student loan of a violinist

**Wintery Knight** · 27 April 2024 · Archived copy · Original

Regular readers of this blog will know that I encourage young people to do STEM degrees or high-paying trades in order to avoid running up student loans. Many Americans don't listen to me – they follow their hearts. They do useless degrees in English, Psychology, Music, etc. and then they can't find work. But that doesn't stop them from stealing the money of people who made better decisions.

Far-left Business Insider reports:

> Joel Lambdin finished graduate school in 1998 — but as a professional musician, he was hardly making enough money to pay off his student loans and other bills.
>
> So Lambdin, now 49, said his only option to make ends meet was to put his student loans in forbearance — in which he was not making payments but interest was still accumulating.

Then Joe Biden used taxpayer money – much of that from children who haven't even started to work – to pay off this violinist's loans:

> That account adjustment led to a letter Lambdin received on January 31, reviewed by BI, from his student-loan servicer Aidvantage. It said: "Congratulations! The Biden-Harris Administration has forgiven your federal student loan(s) listed below with Aidvantage in full."
>
> For Lambdin, that letter meant his $249,255 outstanding student-loan balance was effectively wiped out.
>
> […]Beyond financial goals, Lambdin said the relief was also allowing him the freedom to pursue some of his long-term dreams, including taking a sabbatical to study with his meditation teacher in India.

Yes! This man who made so many wonderful decisions can now decide to stop working and go study meditation in India. And your children get to pay him to do that.

# Did an increase in oxygen levels trigger the Cambrian explosion?

**Wintery Knight** · 28 April 2024 · Archived copy · Original

The Cambrian explosion is the name given to the sudden origin of basically all of the major body plans in nature. It happened in a 3-5 million year period about 540 million years ago. It's a problem for naturalists, because of the enormous amount of information needed to make these new (and different) body plans. The best explanation they had was that rising oxygen levels did it. Is that right?

Here's an excellent post by Günter Bechly, writing for Evolution News.

Here's the naturalistic scenario:

> For more than seventy years it was the scientific consensus and undisputed textbook wisdom that the origin of multicellular life in the late Precambrian was triggered by increased oxygen levels (Fike et al. 2006, Sahoo et al. 2012, Lyons et al. 2014, Reinhard et al. 2016, Anonymous 2023, Harrison 2023, Ralls 2023, UCPH 2023). For example, McFadden et al. (2008) identified two pulses of oxidation in the Precambrian and found that "following this second oxidation event, between 550 and 542 million years ago, there was a worldwide increase of Ediacaran organisms, complex macroscopic life forms, an event recently dubbed the Avalon Explosion" (Virginia Tech 2008). Similarily, the study by Pogge von Strandmann et al. (2015) was promoted in a press release as demonstrating that "oxygen provided breath of life that allowed animals to evolve" (Hickey et al. 2015).

This was all a lot of theorizing in order to save naturalism from scientific evidence. But science makes progress, and the smoke gets cleared:

> Now a new study (Ostrander et al. 2023) by group of researchers from Denmark has overturned decades of evolutionary dogma and claims the exact opposite: "oxygen didn't trigger multicellular organisms" (Anonymous 2023, UCPH 2023). What this study found was instead clear evidence of a lower oxygen content correlated with the Avalon Explosion of the Ediacaran biota. The authors summarize their surprising findings as: "Contrary to a classical hypothesis, our interpretations place the Shuram excursion, and any coeval animal evolutionary events, in a predominantly anoxic global ocean." Co-author Christian Bjerrum commented "Specifically, it means that we need to rethink a lot of the things that we believed to be true from our childhood learning. And textbooks need to be revised and rewritten. So, if not extra oxygen, what triggered the era's explosion of life? Perhaps the exact opposite" (Anonymous 2023, UCPH 2023). Some even went further and suggested to "forget everything you thought you knew about how life evolved on Earth" (Ralls 2023) because it "turns out we might be very wrong about how life arose on Earth" (Harrison 2023).

Prior to the "increase in oxygen" hypothesis, naturalists used to explain away the Cambrian explosion by saying that we had not studied the fossil record for long enough. "Eventually, we will have a better picture of the fossil record, and that will show that we started with a few simple life forms, and then branched out into more and more complex life forms, over an hundreds of millions of years".

But that's not what they are saying now, because the evidence is in:

> Here is what Professor Derek Briggs, a world-renowned expert on Cambrian fossils, has to say on this issue: "We now know that the sudden appearance of fossils in the Cambrian (541–485 million years ago) is real and not an artefact of an imperfect fossil record" (Briggs 2015). Likewise, Zhang & Shu (2021) admitted that "multiple sources of evidence are strongly suggestive of a real evolutionary event being recorded rather than an artifact of an imperfect fossil record." Cabej (2020) put it even more clearly: "Nevertheless, now, 150 years after The Origin, when an incomparably larger stock of animal fossils has been collected, Darwin's gap

> remains, the abrupt appearance of Cambrian fossils is a reality, and we are still wondering about the forces and mechanisms that drove it.

How many times does this have to happen, before naturalists admit that they are committing the “atheism-of-the-gaps” fallacy?

Before science, atheists told us that the universe was eternal. Then science progressed, and we now know that the universe – space, time, matter and energy – all came into being out of nothing about 14 billion years ago. What could cause that? Well, the cause of all of nature must be *supernatural.*

Before science, atheists told us that any old universe would support life. If gravity was a little different, then people would just have pointy ears, like you see on Star Trek. But then science progressed, and we now have a long list of dozens of constants and quantities in nature that must be finely-tuned to an incredibly high degree in order for complex life of any kind to exist. Fine-tuning requires an intelligent agent – that’s the only explanation that we have experience with.

Before science, atheists told us that the origin of life was easy. Life is just a clump of jello, very boring and simple. No need for a cosmic engineer. But then science progressed, and we discovered biological information, such as DNA, inside the cell. Naturalists tried to say that most (or all) of that information was “junk DNA”, but more science happened proving them wrong again.

I could go on and on with example after example. Naturalism is about faith. They start with the desire for personal autonomy. Autonomy from the moral law. They speculate about how nature can be explained without a Creator and Designer. They take refuge in gaps in our scientific understanding. But then science progresses, the gaps close, and everyone knows for certain.

# What is the criterion of embarrassment, and what are some examples of it?

**Wintery Knight** · 29 April 2024 · Archived copy · Original

The criterion of embarrassment is just one of the historical criteria used to select the parts of a piece of ancient literature that are likely to be historical. Other things in the source may have happened, but we can't know them as history. If significant parts of a text are historical, it is possible to accept it as historical until there are specific reasons to say that some part of it is NOT historical.

Here is William Lane Craig's list of criteria for a saying ("S") or event to be historical:

1. Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
2. Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
3. Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
4. Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
5. Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
6. Coherence: S is consistent with already established facts about Jesus.

The criteria is the same for liberal historians and conservative historians, although some historians weight one criteria more than others when trying to evaluate the historicity of different New Testament parts.

What's amazing is that even liberal historians will give you facts that are embarrassing to the authors as "historical".

Anyway, here are 8 examples of parts of the New Testament that exhibit the criterion of embarrassment, thanks to theologian C. Michael Patton.

1. Jesus' Baptism
2. Jesus' Family Did Not Believe
3. John the Baptist's Doubt
4. The Disciples Doubted After the Resurrection
5. Jesus Does not Know the Time of His Coming
6. Women are the First to Witness the Resurrection
7. Jesus Cursed a Fig Tree
8. Death and Resurrection of Christ

I think 6 and 8 are the ones I want you to take away with you when you finish this post.

Here they are:

> Women are the First to Witness the Resurrection
>
> This is one that is often brought up. Craig Keener puts it well enough: "The witness of women at the tomb is very likely historical, precisely because it was so offensive to the larger culture — not the sort of testimony one would invent. Not all testimony was regarded as being of equal merit; the trustworthiness of witnesses was considered essential. Yet most of Jesus' Jewish contemporaries held much less esteem for the testimony of women than for that of men; this suspicion reflects a broader Mediterranean limited trust of women's speech and testimony also enshrined in Roman law." (Keener, The Historical Jesus, 331)

And:

> Death and Resurrection of Christ
>
> This easily escapes our notice since the basic story of Christ is so well known. However, both the death and resurrection of Christ are, from the standpoint of the culture of the day, embarrassing and damaging. Concerning the death of Christ on a cross, Paul sees this problem: “But we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles” (1 Cor. 1:23). The word used for “stumbling block” is skandalon. Louw-Nida defines this as “that which causes offense and thus arouses opposition.” Why? Because the Jews would never have thought their Messiah would have been hung on a tree. “Cursed is one who hangs on a tree” (Gal. 3:13; Deut 21:23). The Greeks thought of the resurrection as foolishness as they were dualist, essentially believing that the material world was evil and the spiritual world good. They would have scoffed at the idea that Christ returned to physical form. This is why later Greeks attempted to adapt the Christ story, doing away with the physical resurrection. Marcion is the most famous promoter of this view (see Docitism).

Now, when you are talking about the New Testament to your non-believing friends, you definitely want to draw attention to passages that are embarrassing to the authors. It will help you to be more convincing when you explain the New Testament like a historian.

# New study: men experience domestic violence at the same rate as women

**Wintery Knight** · 30 April 2024 · Archived copy · Original

I've noticed that young women are quite frightened of men, because they are taught that men are dangerous. I'm concerned that these beliefs will deter women from choosing men wisely, and marrying them. One way to counter these fears about "domestic violence" is to take a look at the studies, and see who is really doing the violence. Is it always men, or is there a balance?

The study was published in the Journal of Aggression, Maltreatment & Trauma.

Here's the abstract:

> Recent debates surrounding intimate partner violence (IPV) have focused on its gender symmetry and gender-oriented nature. These debates center on findings from various data sources, like victimization or self-reported surveys and police-based reports. Data by Statistics Canada, from 1999 to 2014, has shown that the prevalence of IPV is similar for male and female victims, except for sexual assaults. However, there has been a paucity of studies on the severity and risk factors of IPV against men by female partners. Thus, this paper examines the severity of and risk factors for physical IPV against heterosexual men in Canada using the General Social Survey (Victimization) data of 2014. This study revealed that there is a symmetry in the experiences of physical violence between male and female victims. This study also revealed that male victims experience more severe violence than female victims. Using binary logistic regression analysis, years of dwelling together, the victim's age, childhood victimization, and marijuana use were found to predict physical IPV against heterosexual men. This paper concludes with suggestions about how these predicting factors can be used to identify male victims and the need for a more inclusive approach toward addressing IPV, which should include male victims.

The key points for us:

- scholars typically ignore violence against men committed by women: "However, there has been a paucity of studies on the severity and risk factors of IPV against men by female partners."
- men and women commit domestic violence at roughly equal rates: "This study revealed that there is a symmetry in the experiences of physical violence between male and female victims."
- Men are the victims of more severe violence than women: "This study also revealed that male victims experience more severe violence than female victims."

This confirms data from a blog post I wrote a long time ago (2011) about this issue.

I found that:

> Data from Home Office statistical bulletins and the British Crime Survey show that men made up about 40% of domestic violence victims each year between 2004-05 and 2008-09, the last year for which figures are available. In 2006-07 men made up 43.4% of all those who had suffered partner abuse in the previous year, which rose to 45.5% in 2007-08 but fell to 37.7% in 2008-09.

That's the UK.

And:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family

> violence.

That's Canada.

It's interesting to note that the police and the courts do not acknowledge that women commit domestic violence. Whenever there is a report of domestic violence, the man is ALWAYS assumed to be the attacker, and ALWAYS arrested and removed from his home. That is the way that domestic violence works, according to the famous "Duluth model". The Duluth model actually discourages men from getting into relationships that lead to marriage. Men don't want to be attacked by women, and then treated as the aggressors by police.

Another factor also deters men from relationships and marriage: courts that are biased against men. When there is domestic violence, women are treated far more leniently than men. I blogged about a study about this recently, and found:

> The estimated gender disparities are strikingly large, conditional on observables. Most notably, treatment as male is associated with a 63% average increase in sentence length, with substantial unexplained gaps throughout the sentence distribution.

I see stories all the time where women are violent, and get no jail time. Here is one story from January 2024 and here is another from March 2024.

Men do look at these studies, and they decide on their life goals accordingly. Don't blame men for aligning their goals and decisions with the way that the world really is. If women want men to engage the way that men used to, they should stop being so defensive and fix the problems that are deterring men from relationships.

# New Tennessee law requires public schools to show development of unborn babies

**Wintery Knight** · 1 May 2024 · Archived copy · Original

Which state is the best state in the union? For me, it comes down to Florida and Tennessee. Florida has a great legislature, and the best governor in the USA. Tennessee has a great legislature, and an above average governor. If you're a taxpayer in one of these states, you've chosen wisely. You're getting good value for your taxes. Let's take a look at the latest win from the great state of Tennessee.

Life Site News reports: (H/T Sandra)

> On Tuesday, Tennessee Governor Bill Lee signed the 'Baby Olivia Act' into law, requiring public schools to show school children a "high-quality, computer-generated animation or high-definition ultrasound" of unborn babies developing in the womb.
>
> The law cites Live Action's computer-animated "Baby Olivia" video depicting fertilization and fetal development from conception as an example of an animation that would meet the law's requirements, which include the depiction of "the development of the brain, heart, and other vital organs in early fetal development."
>
> […]Live Action has verified that the video accurately depicts fetal development, citing the review and certification of "leading OBGYNs and medical professionals" including Dr. David Bolender, who has a PhD in Cell Biology, Neurobiology & Anatomy, and Michelle Cretella, MD, Executive Director of the American College of Pediatricians. The information in the video was derived from the Endowment for Human Development, a bioethics nonprofit.

There are 1 million students in Tennessee public schools, and now, they'll be making decisions about sex based on evidence.

The bill's sponsor is Gino Bulso, a Republican who represents Brentwood, a wealthy and prestigious area of Tennessee.

He said:

> "It is a scientific fact that human life begins at conception," said Republican state Rep. Gino Bulso, the bill's lead sponsor, in March. "At fertilization, you've got all 46 chromosomes, you have the entire genetic makeup of the child, and from that point on, it's simply a matter of growth and development. So if you've got something that's growing from the moment of conception on, I have no idea how anybody could say that you did not have life. You obviously, you've got life, because something is growing."

Other states have passed or are considering similar legislation:

> LifeSiteNews has previously reported that similar legislation is also being advanced in Iowa and West Virginia; Live Action notes it has also been introduced in Kentucky, Missouri, and Virginia, and enacted in North Dakota.

Is the video accurate? Well, we have first class scientists who have collected the relevant information about this question for us, like Dr. Maureen Condic. Dr. Condic an Associate Professor of Neurobiology and Adjunct Associate Professor of Pediatrics at the University of Utah School of Medicine, and recently served on the National Science Board. She earned her Ph.D. from University of California, Berkeley, and has published papers in peer-reviewed journals.

One of her publications (PDF) explains what science tells us about the unborn. The title is “When Does Human Life Begin? The Scientific Evidence and Terminology Revisited”. A good paper to have available, especially if your opponent has nothing but purple hair, tattoos and nose piercings. But if you want something easy, you can just use quotations from a variety of embryology textbooks (PDF).

Like this one:

> “Human development begins at fertilization, when a sperm fuses with an oocyte to form a single cell, the zygote. This highly specialized, totipotent cell (capable of giving rise to any cell type) marks the beginning of each of us as a unique individual.”

Source: Keith L. Moore, The Developing Human: Clinically Oriented Embryology, 10th edition. Philadelphia, PA: Saunders, 2016. p. 11

If you don’t live in a state where public schools teach these facts, then maybe it’s time to think about moving? Why pay taxes in a state that doesn’t take science seriously.

# California raised the minimum wage to $16, then $20: did it help the poor?

**Wintery Knight** · 2 May 2024 · Archived copy · Original

I remember a while back having a conversation with a Christian philosopher who assured me that raising the minimum wage would be a great policy, and put more money in the hands of the "working poor". But when you study economics, one of the views that has the highest level of acceptance is that raising the minimum wage harms the poorest people, and especially young minorities.

Let's take a look at what happened in one state that raised the minimum wage a lot.

This is from September 2023, from the far-left UK Guardian. You cannot go any farther left than the UK Guardian.

Excerpt:

> In the face of recent intense pressures on fast-food workers, employees in the sector in California are about to get a boost with the creation of a body that will set wages and other standards for the industry.
>
> The move is a hard-fought win for the labor movement in the state…
>
> […]Fast-food workers in California have held over 450 strikes since 2020, according to the labor group Fight for $15.
>
> […]The bill creating the body will also raise the minimum wage for fast-food workers in California to $20 an hour on 1 April 2024, with the council able to set annual wage increases beginning in 2025.

It's a "win"! The fast-food workers are going to get a "boost"! Their wages are going to go up to $20 an hour! That's what the secular left thinks will happen. And how could it NOT happen? After all, it makes the secular left feel so good. They feel so generous, handing out money that isn't theirs. How could it not work, when it shows everyone how morally superior the secular leftists are? It HAS to work. It feels good, so it MUST produce good results.

So what happened next? The first thing that happened is that fast-food restaurants raised prices for consumers, because they had to pay for the generosity of the secular leftists or go out of business.

New York Post reports:

> Menu prices at fast food chains across California have increased, as a new law went into effect requiring them to pay a $20-an-hour minimum wage to workers from Monday.
>
> […]The biggest leap was at a Burger King, where a Texas Double Whopper meal cost $15.09 on March 29 but surged to $16.89 on April 1, a whopping increase of $1.80 (nearly 12%) for the same meal.
>
> The Big Fish meal also jumped from $7.49 on the menu before April 1 to $11.49 after — an increase of $4 (53%).
>
> Most other items increased anywhere from 25 cents to a dollar.

Who buys fast food? Fast food is cheap food. The people who are hit with these higher prices are precisely the poor people that the secular left promised to "boost" with a big "win".

What next? Well, these business owners are closing their restaurants because they cannot afford to pay their employees – even with higher prices. Why not? Because when you raise the prices of items without increasing the value, people find alternatives that are cheaper and better. And when sales go down, businesses close.

Here's another article from New York Post:

> Subway shrunk its sandwich chain in the US by 443 stores last year, a surprise downsizing that experts said could continue as the chain's California shops face an increased minimum wage.
>
> […]The threat of further closures hangs over 2024, according to John Gordon, a restaurant analyst at Pacific Management Consultant Group — and a major reason is the increased labor costs in California, he said.
>
> There were 2,719 Subways in California at the beginning of 2017. That number had plunged to 1,934 as of Dec. 31 — although Subway still operates the most locations in the state behind Starbucks. On April 1, the state's minimum wage rose to $20 an hour from $16 an hour.

California has the highest unemployment rate in the continental United States. The minimum wage advocates don't understand that mandating a $20 minimum wage doesn't mean that workers will collect that wage. When they're fired or laid off, they collect the REAL minimum wage – which is ZERO. The businesses just close, or they stay open and replace low-wage workers with machines.

The problem with California is that almost no one there understands basic economics. Nobody is reading economists like Thomas Sowell in California. Not the leaders of the state. Not the people who vote for those leaders.

Be careful what state you live in.

# California man chooses to make a baby with a progressive woman, disaster ensues

**Wintery Knight** · 3 May 2024 · Archived copy · Original

So, there was a time when men could be less picky with women, and everything would be fine. The woman would not turn crazy, and attack the man. The government would not step in and get involved. But today, men need to accept that times have changed. And men have to be more careful about who they marry. And the government and the courts are much more likely to step in an ruin the man's life.

Here's a story Rose sent me from Daily Wire.

Excerpt:

> A San Francisco dad is fighting a nightmarish custody battle for his toddler son, who he says is being raised "non-binary" by his mother, who claims to be genderless.
>
> Harrison Tinsley, 31, is seeking full custody of his son Sawyer, 3, who currently spends half of his time with Tinsley's ex-girlfriend, the boy's mother. Sawyer's mother, 30, uses they/them pronouns for the boy and puts him in dresses and makeup, photos provided by Tinsley appear to show. Sawyer also told his dad that his mother put him in princess shoes on a trip to Disneyland, a video of the conversation shows. Sawyer's mother may have thought about raising her son "non-binary" before he was even born. In what appears to be a Facebook post during her pregnancy, she refers to Sawyer as "my sweet baby boy or girl or neither if that's what you feel."
>
> Sawyer himself rebels against his mom and insists he is a boy, his dad says.
>
> […]Gender confusion is not Tinsley's only concern for his son — he is also concerned for the child's immediate safety.
>
> Back in 2021, Sawyer's mother was arrested and booked in jail for felony child endangerment when then-1-year-old Sawyer fell off a bed during an altercation between the mother and her roommate, police body cam footage viewed by The Daily Wire shows.
>
> The San Francisco police gave custody of Sawyer to the mother's two dads for the night and put her on a psychiatric hold at the hospital. She was ultimately not convicted of a crime.

This sounds terrible, but what can single men learn from this? Well, we recently had a story where an Army vet was charged and convicted of murder for defending himself from an Antifa terrorist who was armed with an AK-47. Why? Because this happened in Austin, TX, which is incredibly liberal. So, step one would probably be to be careful where you live. Harrison lives in California.

Second, he shouldn't be making babies with women he's not married to. The whole point of marriage is to make sure that there has been some communication and vetting before you get into the bedroom and make babies. Marriage protects babies from parents who are only interested in fun. Babies aren't fun. That's why we used to make people commit before having them.

This, look at this woman's background. I always ask women "are your parents still married?" when taking them out on dates. It's a very important question.

Now watch this:

> The mother herself now identifies as "non-binary," although she did not when she was dating Tinsley, court documents show.

Fourth, she runs an ultra-progressive non-profit:

> LGBT issues have been a major theme in her life — she was adopted and raised by two older gay men in the Bay Area, where she still lives and runs an ultra-progressive non-profit.

What a woman does for a living is a really important clue to their personality. Don't get involved with ultra-progressive women. Recent studies show that white progressive women have extremely high rates of mental illness and drug use.

Speaking of mental illness, here's number five:

> During the psychiatric hold at the hospital, Sawyer's mother told a psychiatrist that she has borderline personality disorder, a condition that can involve impulsive and risky behavior, the psychiatrist later testified in San Francisco family court.
>
> Child Protective Services investigated the police incident and concluded that Sawyer's mother was not a safety threat to her son. Her mental health was a "complicating factor, but not a safety issue," reads the CPS report, provided by Tinsley.
>
> Sawyer's mother was on five different medications for PTSD, mood stabilization, ADHD, and anxiety at the time of the CPS investigation, the CPS report said.
>
> Sawyer's mom can be heard on the police body cam footage mentioning that she drank alcohol earlier the same day.

You can't count on government and courts to do the right thing for children. They don't see women as guilty, they don't punish them as long as they punish men, and they don't think that male leadership is good for children. ("Smash the patriarchy") This is why you don't make babies with progressive women. They will do terrible things to your children (abortion, transing, let live-in boyfriends molest them, etc.) and no one will listen to you. I blogged about a case from British Columbia, Canada, and then another case from California.

Look:

> Sawyer's pediatrician, Dr. Danielle Alkov, works at a youth gender clinic that offers hormone therapy and so-called gender-affirming surgery referrals. She testified as an expert witness in court and said she has worked with children as young as 12. She also mentioned a nearby clinic that works with children as young as 3, Sawyer's current age.
>
> The court ordered that Alkov continue to be Sawyer's primary care physician.

This part reminds me of the case from California that I mentioned, where the female judge refused to let the father present scientific evidence about the harm of transing his child:

> Tinsley's lawyer said he had planned to present scientific materials demonstrating the harm of treating Sawyer as if he had no gender, but they ran out of time in court.
>
> During that trial, Sawyer's mother said in court that she has had suicidal ideations multiple times in her life.

Also, false accusations are normally taken seriously in blue cities and blue states:

> Meanwhile, she has defamed Tinsley repeatedly, he said. Sawyer's mother has called the father of her child a rapist and even claimed Sawyer is the product of rape and that Tinsley has raped other people as well, a friend told police. She began making these allegations when Tinsley started fighting for custody, he said.

This is not the way that men should be spending their life savings:

> Tinsley said he has spent all the money he ever saved on legal bills. His mother even contributed additional money, but funds are running low, he said. He recently started a fundraiser in hopes he can afford to continue fighting for custody of his son.
>
> “I will do anything to keep my son safe and happy with who he is. I hope to inspire other parents with similar situations to be brave and speak up,” Tinsley told The Daily Wire.
>
> In the meantime, Tinsley says he takes off work on the days he takes care of Sawyer, reading to him, taking him to the park, and spending as much time as possible with his young son.

My advice to men is to only have children with women who are staunch conservatives who hate feminism, CPS, public schools, divorce courts, socialism, etc. Otherwise, they are going to turn on you and hurt your children.

# Knight and Rose Show #49: Frank Turek: Same-Sex Marriage & Transgenderism

**Wintery Knight** · 4 May 2024 · Archived copy · Original

Welcome to episode 49 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview Dr. Frank Turek about the revised and updated edition of "Correct, Not Politically Correct". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose interview Christian apologist Frank Turek about the updated and expanded edition of his book "Correct, Not Politically Correct: About Same-Sex Marriage and Transgenderism". Why should the government favor natural marriage? How should we respond to arguments for same-sex marriage? How has same-sex marriage change society?

**Outline and transcript**

Downloadable PDF of the show outline. (Hosted by Mega) This is the outline that we made for this episode. It contains extra points that may not have been addressed in the actual show.

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 49:**

**Speaker biographies**

Dr. Frank Turek is the author or coauthor of five books, including I Don't Have Enough Faith to be an Atheist and Stealing from God:  Why Atheists Need God to make their Case. As the President of CrossExamined.org, Frank presents evidence for Christianity at churches, high schools, and secular college campuses. He has also debated several prominent atheists including Christopher Hitchens and Michael Shermer, Founding Publisher of Skeptic Magazine. Frank hosts an hour-long TV program each week called I Don't Have Enough Faith to Be an Atheist which is broadcast Wednesday nights on DirecTV Channel 378 (NRBTV). His radio program and podcast called I Don't Have Enough Faith to Be an Atheist with Frank Turek airs on 182 stations every Saturday morning at 10 a.m. eastern and is available continuously on the free CrossExamined App.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# How to explain the gospel in less than 1000 words

**Wintery Knight** · 5 May 2024 · Archived copy · Original

A friend sent me a draft e-mail, that he wrote to a family member, who has rejected historic Christianity for progressive Christianity. He was asked to give the basics of salvation, and his attempt to explain the gospel to her is below. My advice included taking out the Christianese terms. Do you think he did a good job? I think his emphasis on what is not the gospel (what needs to be rejected) makes this a first-class explanation of the gospel.

---

So, you've asked the 10,000 talent question (alluding to Matthew 18:23-35). You are basically asking me what I think the Gospel is. I'll try to answer that in a minimalistic way, using my own characterization of it rather than just making doctrinal statements.

One must accept that there is a God, who is a higher authority than themselves. How much one must first believe about that God is debatable, but candidate beliefs would be that He is personal (having a mind like, but greater than, ours), powerful, and the creator of this cosmos and everything in it — He owns it all. Our natural intuition is to see beauty, order, complexity, and "design" in nature. There is a difference in belief vs unbelief in that some think it is just the appearance of design and some acknowledge their intuition that it actually is designed.

One must acknowledge their moral intuitions, and recognize that there are actually right and wrong things in this world. It's not just whatever you want to do, or whatever society decides in a given time or culture.

Given that morality is then understood to be a transcendent thing (universal and independent of time and culture), the connection is made to God as the author of this moral law.

One must then recognize that he/she regularly fails to live up to this law, even according to just their meager understanding of it, and even by the standards of morality that they make up for other people.

One must not try to suppress this, or therapize it away. One must recognize there is a problem and real moral culpability. One must recognize that they feel guilty and have self-esteem issues because they actually do have guilt and issues.

One must make the connection between guilt and their standing before God. Being good sometimes and in some ways does not erase the bad you do, past, present, or future. One must be willing to bend the knee to God's will regarding morality.

One must also come to see the moral failure (sin) in their lives as a bad thing that they'd like to be rid of, rather than excusing it as the fault of others, or revelling in it as part of the pleasure of life, or shrugging it off as just "who I am."

One must appeal to God in these matters for both forgiveness and help in living as they should.

Given that God has provided a champion for the problem that humanity faces (the backstory of which not all will fully know), one whose heart is truly yielded to all these things will naturally and eagerly receive Word of this as Good News. God has solved the seemingly irreconcilable demands of both justice and forgiveness in that champion.

Those with ears to hear will receive this solution — Jesus — and believe what He has done in life and on the cross for their sake — the resurrection being both confirmation of His divine authority and also the sign of the defeat of death which awaits us all, and is the only barrier between us and facing this God whom we fail at every turn. They will believe on (or upon) Jesus as Lord and their means of salvation, surrendering dependence upon their own ideas of self-righteousness and earning the favor of God.

The outward expression that we have understood and accepted these things is that we have made Jesus Lord and

committed ourselves to following Him, conform our character to His, resist our sinful inclinations, and are interested in learning all about Who God is and what has been done for us in Christ.

This commitment to the Lordship of Christ naturally leads to the acceptance of subsequent beliefs. If Jesus is indeed Lord, then He holds all authority, and what He said and taught to His followers is our guide — the New Testament. And if this is the divine story, as intended by God for men, then we have reason to believe that it is comprehensible to us, and He will insure (in spite of the fallibility of men and demonic plots) that its essential message will not be lost or corrupted until all things are completed. Given that Jesus affirmed every categorical section of the Old Testament, and claimed to be its promised Messiah, then that, too, is a source of truth and understanding.

Those doctrines that are sometimes characterized as “essential” for salvation, are merely the highlights of this redemption narrative, which are those things being clear and consistent, and which indicate that someone has yielded themselves to the authority of Christ and the scriptures, and understands these things. It is not that believing them is what saves, but they are what the saved naturally come to believe. Confessing them is the tangible, verbal act of affirming the Gospel, but is not necessarily identical to a life committed to putting it into practice, which is saving faith.

# New study: gender-affirming surgery associated with suicide attempts

**Wintery Knight** · 6 May 2024 · Archived copy · Original

My understanding of how the secular left pushing transitioning kids onto parents is that the teacher, the guidance counselor, the health care workers, etc. tell the parents "would you rather have a dead girl than a live boy?" This approach is in keeping with the compassionate "don't judge" worldview, which emphasizes emotions over moral standards and truth. But does it work?

Here is the latest study that I found on Pubmed, entitled "Risk of Suicide and Self-Harm Following Gender-Affirmation Surgery". (archived)

The Abstract says:

> **Introduction**
>
> With the growing acceptance of transgender individuals, the number of gender affirmation surgeries has increased. Transgender individuals face elevated depression rates, leading to an increase in suicide ideation and attempts. This study evaluates the risk of suicide or self-harm associated with gender affirmation procedures.
>
> **Methods**
>
> This retrospective study utilized de-identified patient data from the TriNetX (TriNetX, LLC, Cambridge, MA) database, involving 56 United States healthcare organizations and over 90 million patients. The study involved four cohorts: cohort A, adults aged 18-60 who had gender-affirming surgery and an emergency visit (N = 1,501); cohort B, control group of adults with emergency visits but no gender-affirming surgery (N = 15,608,363); and cohort C, control group of adults with emergency visits, tubal ligation or vasectomy, but no gender-affirming surgery (N = 142,093). Propensity matching was applied to cohorts A and C. Data from February 4, 2003, to February 4, 2023, were analyzed to examine suicide attempts, death, self-harm, and post-traumatic stress disorder (PTSD) within five years of the index event. A secondary analysis involving a control group with pharyngitis, referred to as cohort D, was conducted to validate the results from cohort C.
>
> **Results**
>
> Individuals who underwent gender-affirming surgery had a 12.12-fold higher suicide attempt risk than those who did not (3.47% vs. 0.29%, RR 95% CI 9.20-15.96, $p < 0.0001$). Compared to the tubal ligation/vasectomy controls, the risk was 5.03-fold higher before propensity matching and remained significant at 4.71-fold after matching (3.50% vs. 0.74%, RR 95% CI 2.46-9.024, $p < 0.0001$) for the gender affirmation patients with similar results with the pharyngitis controls.
>
> **Conclusion**
>
> Gender-affirming surgery is significantly associated with elevated suicide attempt risks, underlining the necessity for comprehensive post-procedure psychiatric support.

This reminds me of how doctors in gender-bender clinics see their work. Are they helping children? Or are they virtue-signaling to parents about how much more moral they are than parents?

Here is a story from Daily Wire about that:

> "It's a lot of money," VUMC Clinic for Transgender Health's Dr. Shayne Sebold Taylor said at one Medicine Grand Rounds lecture, video reveals. "These surgeries make a lot of money."
>
> Taylor noted that a "chest reconstruction" can bring in $40,000 per patient, and someone "just on routine hormone treatment, who I'm only seeing a few times a year, can bring in several thousand dollars … and actually makes money for the hospital."

> Citing the Philadelphia Center for Transgender Surgery, Taylor said vaginoplasty surgeries can generate $20,000, gushing that it “has to be an underestimate,” since hospital stay, anesthesia, post-op visits, and other add-ons are not included in the total.
>
> “And the female-to-male bottom surgeries, these are huge money makers,” the doctor continued, adding that such surgeries could bring in “up to $100,000” for the hospital.
>
> Some clinics are “entirely” “supported” financially by such phalloplasty surgeries, Taylor boasted.
>
> “These surgeries are labor intensive, there are a lot of follow-ups, they require a lot of our time, and they make money,” she emphasized. “They make money for the hospital.”

The interesting thing about these stories is how often it’s white progressive women doing the virtue-signaling, and collecting the money for their new cars, traveling and cosmetic surgeries.

I recently spoke to my doctor about my concerns that medicine was becoming too politicized, and that their motivations seemed to be to follow the priorities of politicians and special interest groups. He actually lost his temper, and insisted that doctors are guided by “evidence” in every respect, and that people who oppose doctors are guided by “social media”. He was quite upset.

That might be the case for him, but I don’t think it’s unreasonable for patients to ask their doctors what’s guiding their decisions.

# Ron DeSantis signs legislation against teacher indoctrination and ESG

**Wintery Knight** · 7 May 2024 · Archived copy · Original

I'm keeping a close eye on Florida and Tennessee, to see who is winning the race to be the best state. Last time, we saw that Tennessee was scoring points, by passing a law forcing public schools to show children videos showing the development of unborn children. But now Florida has scored two points, and both of those in the last week. Let's take a look.

Here's the first win from last Thursday, reported by Florida's Voice:

> Gov. Ron DeSantis signed legislation on Thursday prohibiting ideology-based requirements for teacher certifications in the state.
>
> The bill, HB 1291, prevents teacher certification programs from "distorting historical events" or embracing politically ideological positions on race, sex and gender.
>
> Specifically, the programs will not be allowed to claim that things like systemic racism, sexism, oppression or privilege are inherent in systems of power.
>
> DeSantis explained during a press conference that even if the state bans critical race theory or other ideological curriculum, teachers are still learning to teach students these concepts during their educator preparation training.
>
> "This bill prohibits the indoctrination in teacher preparation," DeSantis said. "There's not gonna be DEI, there's not gonna be any of the bogus history, it's just gonna be standard teacher preparation without having an ideological agenda."
>
> "Parents want to send their kids to school knowing they get an education," he continued. "I don't think they're interested in an indoctrination."
>
> "To say you're going to take one viewpoint, one perceptive, and try to impose that as the standard for curriculum, that doesn't work in Florida and we don't do it," he added.

That's an excellent law. Many teachers seem to think that their job is to teach children their spiritual views and their moral views. But that's not what they're paid to do. Their job is to teach facts, and prepare children to find jobs in the competitive private sector of the economy.

By the way, don't forget they also have mandatory teaching about the actual historical record of communism. It's important for people to have a worldview based on evidence, not ideology.

But Florida's not done scoring points. There's more.

Here's another article from last Thursday, also reported in Florida's Voice:

> ov. Ron DeSantis signed legislation on Thursday protecting businesses from financial institutions that promote environmental, social and corporate governance policies, also known as ESG.
>
> The legislation, HB 989, expands consumer protections and amends certain roles and responsibilities of the state's chief financial officer position, currently held by Jimmy Patronis.
>
> "This will enhance Florida's consumers against ESG activism in our financial system and it protects them against a social credit system or discrimination based on their viewpoints," DeSantis said during a press conference.
>
> "There's now going to be a more robust process for people who have been in this situation," he said. "So if you own a firearm store, federal firearm license, following the laws everyday, if they just cut you off because they

> don't like that business, you have recourse here in this new piece of legislation."

I know that lots of red states are passing legislation that's good for conservatives, but it just seems like Florida is passing as much as every other state, except for Tennessee.

# Bible study: what difference does the resurrection of Jesus make?

**Wintery Knight** · 8 May 2024 · Archived copy · Original

Here's an article from Bible.org, written by famous New Testament manuscript expert Dan Wallace.

What does the Old Testament say about the doctrine of the resurrection in Judaism?

He says:

> The resurrection of the dead was not *plainly* revealed in the OT until very late in salvation history. It was not until the Jews were taken in captivity, in the sixth century BC, that this was clearly articulated. Daniel 12:1-2 is the principal text: it speaks of the resurrection of both the righteous and the unrighteous:
>
> At that time shall arise Michael, the great prince who has charge of your people. And there shall be a time of trouble, such as never has been since there was a nation till that time; but at that time your people shall be delivered, every one whose name shall be found written in the book. And many of those who sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt. (RSV)
>
> Why was it not *clearly* revealed till then? It was not revealed until there was a *felt* need for it. When the Jews had no present (because of the captivity) they had to look to the future. The revelation of the resurrection came at precisely the time when the people of God needed *hope* for the future.
>
> What is significant about this is how masterful are God's insights into human nature. In the NT era, one religious group in Palestine did not embrace the resurrection as a true doctrine: the Sadducees (cf. Mark 12:18)–that is why they were "sad, you see!" The Sadducees were in charge of the temple. They derived their income from the sacrifices. In a sense, they were the precursors to modern TV evangelists. They had it good! They were the rich aristocracy that ran the place.
>
> **Those who have it good in this life don't often long for the next. The Sadducees illustrate this. The resurrection is a truth especially precious to those who are poor and those who are hopeless. It is precious to those who long for heaven enough that earth holds no sway over them.**

This means something to me. I didn't grow up with parents who had any plan for me. I had to figure out what I was supposed to be doing with my life on my own, because they were both too busy doing their own things. This is true even to this day. After I became a Christian, there were many things that I wanted to achieve in this life. But for a variety of reasons, those most of those things never happened. I wanted to do great things for God, like getting married, having a family, getting a PhD and teaching computer science in a secular university. But things that I had intended to do for God just didn't happen the way I had hoped.

I often find myself thinking of Heaven, and having that eternal perspective on this life. One of the things that is the hardest to accept is that being a Christian makes many things I'd like to do a lot harder. It certainly didn't open any doors at school, or now, at work. I'm glad my salvation doesn't depend on achieving anything in particular. And I'm especially glad that my salvation doesn't depend on what anyone thinks of me. I find it almost impossible in this culture to get any respect by doing the things that I think are really important.

I think if a person were really successful at what they tried to do, then it would be really hard for them to give up living and go to be with Jesus.

**What did Jesus intend to achieve with his resurrection?**

Did you know that Jesus provided the resurrection as evidence for those who were skeptical of his claims to be God stepping into history?

Here's an article from Got Questions? on the "Sign of Jonah", which appears in the gospels of Matthew and Luke.

It says:

> The phrase “sign of Jonah” was used by Jesus as a typological metaphor for His future crucifixion, burial, and resurrection. Jesus answered with this expression when asked by the Pharisees for miraculous proof the He was indeed the Messiah. The Pharisees remained unconvinced of Jesus’ claims about Himself, despite His having just cured a demon-possessed man who was both blind and mute. Shortly after the Pharisees accused Jesus of driving out demons by the power of Satan, they said to Him, “Teacher, we want to see a sign from you.” He answered, “A wicked and adulterous generation asks for a sign! But none will be given it except the sign of the prophet Jonah. For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth. The men of Nineveh will stand up at the judgment with this generation and condemn it; for they repented at the preaching of Jonah, and now something greater than Jonah is here” (Matthew 12:38–41).
>
> To fully appreciate the answer that Jesus gave, we must go to the Old Testament book of Jonah. In its first chapter, we read that God commanded the prophet Jonah to go to the city of Nineveh and warn its people that He was going to destroy it for its wickedness. Jonah disobediently ran from the Lord and headed for the city of Tarshish by boat. The Lord then sent a severe storm that caused the crew of the ship to fear for their lives. Jonah was soon thrown overboard and swallowed by a great fish where he remained for “three days and three nights” (Jonah 1:15–17). After the three-day period, the Lord caused the great fish to vomit Jonah out onto dry land (Jonah 2:10).
>
> It is this three days that Jesus was referring to when He spoke of the sign of Jonah.

I often bring up the Sign of Jonah when I am dealing with Christians who don’t want to learn how to explain their faith to non-Christians persuasively. I’m glad that story is in there!

The resurrection is a very important part of the life of the Christian. I argued in this post that it makes a difference to your feelings about your own life, and it makes a difference to your case-making with non-Christians.

# Is our society discriminating against women, or against men?

**Wintery Knight** · 9 May 2024 · Archived copy · Original

I love to read long essays in City Journal, the journal of the center-right Manhattan Institute. One of the biggest problems we're facing as a society right now is the decline of marriage, and the resulting crisis of fatherlessness. The correct diagnosis is very unpopular, because it attacks feminism. Even traditional conservatives don't want to see the truth. But City Journal gets it right.

Excerpt:

> Smug misandry has been box-office gold for Barbie, which delights in writing off men as hapless romantic partners, leering jerks, violent buffoons, and dimwitted tyrants who ought to let women run the world.
>
> Numerous studies have shown that both sexes care more about harms to women than to men. Men get punished more severely than women for the same crime, and crimes against women are punished more severely than crimes against men. Institutions openly discriminate against men in hiring and promotion policies—and a majority of men as well as women favor affirmative-action programs for women.

I went through kindergarten and public schools before going on to university and grad school. University was OK, but most of my teachers in public schools were women. It was pretty obvious that male students were being treated differently than female students:

> The education establishment has obsessed for decades about the shortage of women in some science and tech disciplines, but few worry about males badly trailing by just about every other academic measure from kindergarten through graduate school. By the time boys finish high school (if they do), they're so far behind that many colleges lower admissions standards for males—a rare instance of pro-male discrimination, though it's not motivated by a desire to help men. Admissions directors do it because many women are loath to attend a college if the gender ratio is too skewed.
>
> Gender disparities generally matter only if they work against women. In computing its Global Gender Gap, the much-quoted annual report, the World Economic Forum has explicitly ignored male disadvantages: if men fare worse on a particular dimension, a country still gets a perfect score for equality on that measure. Prodded by the federal Title IX law banning sexual discrimination in schools, educators have concentrated on eliminating disparities in athletics but not in other extracurricular programs, which mostly skew female. The fact that there are now three female college students for every two males is of no concern to the White House Gender Policy Council. Its "National Strategy on Gender Equity and Equality" doesn't even mention boys' struggles in school, instead focusing exclusively on new ways to help female students get further ahead.
>
> Women have been a majority of college graduates since 1982 and dominate by many other key measures.

I knew that the majority of health care spending is for women, but they have other advantages over men:

> [Women] not only live longer than men but also benefit from a higher share of federal funding for medical research. They're much less likely to be fatally injured on the job or commit suicide. They receive the lion's share of Social Security and other entitlement payments (while men pay the lion's share of taxes). They decide how to spend most of the family income. Women initiate most divorces and are much likelier to win custody of the children. While men are ahead in some ways—politicians love to denounce the "gender pay gap" and the "glass ceiling" supposedly limiting women—these disparities have been shown to be largely, if not entirely, due to personal preferences and choices, not discrimination.

Whenever I bring up women initiating most of the divorces, and the most common reason being "unhappiness", the

universal response I get from Christian traditional women is that women are forced to do this, because the men they freely chose have not changed into what the women wanted them to be. Also, I am told, women only divorce in order to save the children from having an unhappy mother. I wonder if these women have ever looked at the research about what fatherlessness does to children.

I talk to Christians about these issues, and the most common response is ignorance or disbelief. “How could men be victims of discrimination? If they were, I would have heard about it”.

> Yet most people still believe in the “myth of pervasive misogyny,” as the social psychologists Cory Clark and Bo Winegard concluded in Quillette after surveying the research literature on gender bias. Noting that a Google Scholar search for “misogyny” yielded 114,000 results, while a search for “misandry” yielded only 2,340, they write: “We suspect this difference in interest in misogyny over misandry reflects not the relative prevalence of each type of prejudice, but rather greater concern for the well-being of women than men. All of the arguments, anecdotes, and data forwarded to support the narrative that we live in an implacably misogynistic society, in fact, may be evidence of precisely the opposite.”

What’s the workplace like for men?

> In 2016, the Australian national government launched a rigorous quest to combat its own misogyny. As part of its “Gender Equality Strategy,” it brought in Harvard economist Michael J. Hiscox to address a disparity in the government workforce: women held 59 percent of the jobs but only 49 percent of the executive positions.
>
> […]The experiment produced an “unintended consequence,” as the researchers ruefully noted in their report, “Going Blind to See More Clearly.” When managers evaluated a résumé with a female name like Wendy Richards, they were more likely to shortlist it than if they saw that same résumé with no name. And they were less likely to shortlist it if the name was Gary Richards. Australia’s public servants were clearly guilty of bias against men—and that was just fine with the architects of the Gender Equality Strategy.

But what about the so-called “gender pay gap”? Aren’t women earning less than men because of discrimination?

> In the real world, a full-time female worker over 25 in America earns 84 cents for every dollar a male earns, but even equalitarian researchers acknowledge that this gap is not due to overt sexual discrimination (illegal since the Equal Pay Act of 1963). It’s due mainly to men choosing higher-paying professions, like coding, instead of, say, teaching, and to the “motherhood penalty.” There’s no significant gender gap between childless singles in their twenties, but once they become parents, mothers tend to reduce their hours, switch to a lower-paying job with more flexibility, or drop out of the workforce. To equalitarians, these differences are the result of systemic sexism: gender stereotypes that discourage girls from seeking high-paying jobs and saddle them with an unfair share of child-care responsibilities.
>
> […]On average, women care more about “work-life balance” and finding a job that seems personally and socially meaningful—typically, one in a comfortable environment that involves working with people rather than things. Men prioritize making money, so they’re willing to take less appealing jobs—work that’s tedious, outdoors, dirty, dangerous—with longer, less predictable hours. The gender pay gap among graduates of elite business schools is due in significant part to their job choices. The male MBAs are likelier to take jobs in finance and consulting, whereas the women tend to choose lower-paying industries that are less competitive and less risky.

What about in the dating world? Well, what we are seeing today when we look at data from different dating apps is that 80% of the women are focused on pursuing men with the top 20% best appearances. The best height, the best handsomeness, the best displayed wealth. Although women complain that men treat them poorly, what they mean is that *the men they are attracted to* treat them poorly. The men in the bottom 80% (of appearance) are invisible to

them.

More:

> Women still prefer winners. They're the pickier sex—on Tinder, they're much likelier to swipe left—and they're especially picky when it comes to a partner's income, education, and professional accomplishments, as researchers have found in analyses of mate preferences, activity on dating websites, and patterns of marriage and divorce. Most American women still want a man who makes at least as much as they do—and wealthier women are more determined than less affluent women to find someone with a successful career.
>
> While some traditional attitudes about wives' roles have shifted, husbands are still typically expected to be breadwinners. An American couple is more likely to divorce if the husband lacks a full-time job, but the wife's employment status doesn't affect the odds. Studies of divorce rates in dozens of other countries have confirmed this peril to unemployed men, which comedian Chris Rock has also observed: "Fellows, if you lose your job, you're going to lose your woman. That's right. She may not leave the day you lose it, but the countdown has begun."

When I've raised concerns that I've read about in books like Warren Farrell's "The Myth of Male Power" and Christina Hoff Sommers's "The War Against Boys", Stephen Baskerville's "Taken Into Custody" and Helen Reynolds "Men on Strike", the response from pastors, parents and "traditional" Christian women has been almost universal. They don't know, and they don't care. (The lone exception was my Scottish friend Dina, who sadly passed away).

What about the decline in the marriage rate? Surely men are the cause of that, and women are the victims, right?

> Both sexes have also been hurt by the misandrist excesses of the #MeToo movement. With a few exceptions—like the actress Amber Heard, successfully sued by her husband, Johnny Depp—women who wreck men's reputations and careers with false accusations suffer few consequences in the media or the courts. Police and prosecutors have routinely refused to act, even in clear cases of perjury, as Bettina Arndt has documented. These injustices, along with the draconian punishments and policies imposed by the (mainly female) managers of human resources, have instilled fear in workplaces, stifling office romances (which, in the past, frequently led to marriage) as well as valuable professional relationships. Most women still want men to make the first move in courtship, but who wants to risk being reported to HR for subjecting a colleague to "unwanted attention"? Even a purely professional meeting in private is risky if something innocent gets misconstrued—or falsely described by a hostile colleague exploiting the believe-all-women bias.

There were a lot more interested studies quoted in the article. If you are male, or you know one, it's worth checking out those studies. That way, you can talk about them, and maybe understand why men are making some of the decisions that we're making.

# Will the Biden administration and Big Tech interfere with the federal election?

**Wintery Knight** · 10 May 2024 · Archived copy · Original

Read this article from The Federalist. The opening quotation from Democrat senator Mark Warner says that federal agencies in the Biden administration have "restarted discussions" with Big Tech platforms, in order to remove postings "as the November presidential election nears". What postings does the Biden administration want to remove, ahead of the election?

Excerpt:

> On Monday, Sen. Mark Warner, D-Va., the chair of the Senate Intelligence Committee, told reporters that federal agencies such as the FBI and Cybersecurity and Infrastructure Security Agency (CISA) restarted discussions with Big Tech platforms. According to NextGov/FCW, this coordination will focus on "removing disinformation on their sites as the November presidential election nears." Warner claimed these talks resumed in March, around the same time oral arguments in Murthy v. Missouri — which centers on the feds' censorship efforts — were heard before the U.S. Supreme Court.
>
> When pressed on the validity of Warner's remarks, an FBI representative confirmed to The Federalist that the agency has resumed communications with social media companies ahead of the 2024 election.

The Biden administration is already on trial in another case where they are alleged to have pressured social media companies to censor free speech online:

> The issue of government-compelled censorship is front and center in Murthy v. Missouri, a case before SCOTUS focused on allegations from Missouri and Louisiana that the federal government's pressuring of social media companies to censor free speech online constitutes a violation of the First Amendment. U.S. District Court Judge Terry Doughty issued a preliminary injunction in July 2023 barring federal agencies from colluding with Big Tech to censor posts they don't like. In his ruling, Doughty wrote, "If the allegations made by Plaintiffs are true, the present case arguably involves the most massive attack against free speech in United States' history."

The preliminary injunction was later upheld by the Fifth Circuit Court of Appeals, but then lifted by the Supreme Court. So, there's nothing stopping the government from censoring posts critical of the Biden administration, as the election nears. However, the Federalist says that the ruling on this case is expected in the summer, and so that might stop the federal agencies from censoring posts ahead of the federal election.

The article talks about the kinds of posts that were previously censored by the federal government working with Big Tech:

> Largely ignored by legacy media, the collusion between the federal government and Big Tech to silence online speech the feds do not approve of is extensive and unprecedented. For example, the Biden administration pressured social media companies to censor Covid-related posts they deemed to be "misinformation" shortly after coming into power, even if such posts contained information that is factually true.
>
> Emails unearthed in Murthy v. Missouri indicate health agencies such as the Centers for Disease Control and Prevention (CDC) held regular "misinfo/debunking meeting[s]" with Facebook to discuss the latter's censorship efforts.
>
> But these efforts are just one facet of the government's censorship operations. CISA regularly facilitated meetings "between Big Tech companies, and national security and law enforcement agencies to address 'mis-, dis-, and mal-information' on social media platforms."

> Leading up to the 2020 election, for instance, the agency upped its censorship efforts by flagging posts for Big Tech companies it claimed were worthy of being censored, some of which called into question the security of voting practices such as mass, unsupervised mail-in voting. This was done despite CISA privately acknowledging the risks associated with such practices.

What kinds of posts will the Biden administration agencies tell Big Tech companies to censor, ahead of the election? Well, look at their previous actions, e.g. – the Trump-Russia collusion hoax, or the 50 intelligence officials who claimed that the Hunter Biden laptop was Russian disinformation. We can look at the past and make judgments about the integrity and professionalism of people in these Biden administration agencies.

There was a very interesting article about one of those people in Daily Signal:

> Before becoming one of the Justice Department's top leaders, Assistant Attorney General Kristen Clarke was allegedly involved in a violent domestic dispute, according to court documents, records, and text messages—an incident that ended in her arrest and was ultimately expunged. During her Senate confirmation, Clarke specifically denied ever having been arrested for or accused of committing a violent crime.

You might remember that this is the woman who has been persecuting pro-life demonstrators:

> The Daily Signal previously reported that Clarke, who oversees investigations into violations of the Freedom of Access to Clinic Entrances (FACE) Act, has used FACE to charge dozens of pro-life individuals since the overturn of Roe v. Wade. This includes Mark Houck, a Catholic father of seven arrested at gunpoint by the FBI and charged with violating FACE in September 2022 (a jury found Houck was not guilty in January 2023, and the DOJ has not commented on this verdict publicly).

Maybe the people in these Biden administration agencies are not the best and brightest people. Many of them are just incompetent, immoral people who were chosen for these jobs like the ex-president of Harvard University was chosen for that job. They were pushed through college (non-STEM degrees) without being able to actually do the work, because their politics were what the university professors wanted. And now they are working in federal agencies, even as their personal lives are a disaster (think of Peter Strozk and Lisa Page). Do you want to be ruled by secular leftists like this? Then you'd better try to have an influence with other voters now. While you still can. Share articles that let other voters know why you support Republican policies. At the very least, you should be sharing articles about Ron DeSantis and what he's doing in Florida, so that all the voters understand what real conservatives stand for. And what results real conservatives produce.

# Stephen C. Meyer and Marcus Ross lecture on the Cambrian explosion

**Wintery Knight** · 11 May 2024 · Archived copy · Original

Cambrian Explosion

Access Research Network is a group that produces recordings of lectures and debates related to intelligent design. I noticed that on their Youtube channel they are releasing some of their older lectures and debates for FREE. So I decided to write a summary of one that I really like on the Cambrian explosion. This lecture features Dr. Stephen C. Meyer and Dr. Marcus Ross.

The lecture is about two hours. There are really nice slides with lots of illustrations to help you understand what the speakers are saying, even if you are not a scientist.

Here is a summary of the lecture from ARN:

> The Cambrian explosion is a term often heard in origins debates, but seldom completely understood by the non-specialist. This lecture by Meyer and Ross is one of the best overviews available on the topic and clearly presents in verbal and pictorial summary the latest fossil data (including the recent finds from Chengjiang China). This lecture is based on a paper recently published by Meyer, Ross, Nelson and Chien "The Cambrian Explosion: Biology's Big Bang" in *Darwinism, Design and Public Education*(2003, Michigan State University Press). This 80-page article includes 127 references and the book includes two additional appendices with 63 references documenting the current state of knowledge on the Cambrian explosion data.
>
> The term *Cambrian explosion* describes the geologically sudden appearance of animals in the fossil record during the Cambrian period of geologic time. During this event, at least nineteen, and perhaps as many as thirty-five (of forty total) phyla made their first appearance on earth. Phyla constitute the highest biological categories in the animal kingdom, with each phylum exhibiting a unique architecture, blueprint, or structural body plan. The word *explosion* is used to communicate that fact that these life forms appear in an exceedingly narrow window of geologic time (no more than 5 million years). If the standard earth's history is represented as a 100 yard football field, the Cambrian explosion would represent a four inch section of that field.
>
> For a majority of earth's life forms to appear so abruptly is completely contrary to the predictions of Neo-Darwinian and Punctuated Equilibrium evolutionary theory, including:
>
> - the gradual emergence of biological complexity and the existence of numerous transitional forms leading to new phylum-level body plans;
> - small-scale morphological diversity preceding the emergence of large-scale morphological disparity; and

> - a steady increase in the morphological distance between organic forms over time and, consequently, an overall steady increase in the number of phyla over time (taking into account factors such as extinction).
>
> After reviewing how the evidence is completely contrary to evolutionary predictions, Meyer and Ross address three common objections: 1) the artifact hypothesis: Is the Cambrian explosion real?; 2) The Vendian Radiation (a late pre-Cambrian multicellular organism); and 3) the deep divergence hypothesis.
>
> Finally Meyer and Ross argue why design is a better scientific explanation for the Cambrian explosion. They argue that this is not an argument from ignorance, but rather the best explanation of the evidence from our knowledge base of the world. We find in the fossil record distinctive features or hallmarks of designed systems, including:
>
> - a quantum or discontinuous increase in specified complexity or information
> - a top-down pattern of scale diversity
> - the persistence of structural (or "morphological") disparities between separate organizational systems; and
> - the discrete or novel organizational body plans
>
> When we encounter objects that manifest any of these several features and we know how they arose, we invariably find that a purposeful agent or intelligent designer played a causal role in their origin.
>
> *Recorded April 24, 2004. Approximately 2 hours including audience Q&A.*

I learned a lot by watching great lectures from Access Research Network. Their YouTube channel is here. I recommend their origin of life lectures – I have watched the ones with Dean Kenyon and Charles Thaxton probably a dozen times *each*. Speaking as an engineer, you never get tired of seeing engineering principles applied to questions like the origin of life.

If you'd like to see Dr. Meyer defend his views in a debate with someone who reviewed his book about the Cambrian explosion, you can find that in this previous post.

**Further study**

The Cambrian explosion lecture above is a great intermediate-level lecture and will prepare you to be able to understand Dr. Meyer's new book "Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design". The Michigan State University book that Dr. Meyer mentions is called "Darwin, Design and Public Education". That book is one of the two good collections on intelligent design published by academic university presses, the other one being from Cambridge University Press, and titled "Debating Design: From Darwin to DNA". If you think this lecture is above your level of understanding, then be sure and check out the shorter and more up-to-date DVD "Darwin's Dilemma".

# J. Warner Wallace: I am not a Christian because it works for me

**Wintery Knight** · 12 May 2024 · Archived copy · Original

Some of my favorite Christians are the ones that start out as atheists, and do very well at life, but just change direction because they investigate the evidence. One person who had a fabulous career in law enforcement switched sides because of the evidence: J. Warner Wallace. And in a must-read post from Cold-Case Christianity, he explains his motive.

Excerpt:

> Life on this side of my decision hasn't always been easy. It's been nearly seventeen years since I first trusted Jesus as Lord and Savior. I still struggle to submit my prideful will to what God would call me to do. Christianity is not easy. It doesn't always "work" for me. There are times when I think it would be easier to do it the old way; easier to cut a corner or take a short cut. There are many times when doing the right thing means doing the most difficult thing possible. There are also times when it seems like non-Christians have it easier, or seem to be "winning". It's in times like these that I have to remind myself that I'm not a Christian because it serves my own selfish purposes. I'm not a Christian because it "works" for me. I had a life prior to Christianity that seemed to be working just fine, and my life as a Christian hasn't always been easy.
>
> I'm a Christian because it is true. I'm a Christian because I want to live in a way that reflects the truth. I'm a Christian because my high regard for the truth leaves me no alternative.

I think this is important. There are people who I know who claim to be Christian, but they are clearly believing that God is a mystical force who arranges everything in their lives in order to make them happy. They are not Christians because it's true, but because of things like comfort and community. But people ought to become Christians because they think it's true.

Truth doesn't necessarily make you happy, though. Truth can impose intellectual obligations and moral obligations on you. Seeing God as he really is doesn't help us to "win" at life, as the culture defines winning. But it does offer the opportunity for us to walk a similar path to the one Jesus walked. And that is very appealing for real Christians.

The Bible doesn't promise that people who become Christians will be happier. Actually, it promises that Christians will suffer for doing the right things. Their autonomy will suffer, as they sacrifice their own interests and happiness in order to make God happy, by serving his interests.

Christianity isn't something you add on to your before-God life in order to achieve your before-God goals. When you become a Christian, you get a new set of goals, based on God's character and his design for you. And although you might be very successful in the world as part of serving God, there is no guarantee of that. Christianity is not life enhancement. I do think that Christians do well at not hurting themselves though, but because they eliminate selfish desires, not because God gives them stuff.

By the way, if you're looking for a great speaker to invite to your university campus, J. Warner Wallace is the best, then Frank Turek is my number two choice. Wallace has the homicide detective background, and Turek is a former naval aviator. Two tough guys who are tough-minded about the Christian faith.

# Secular leftists claim that conservatives want to ban books: is it true?

**Wintery Knight** · 13 May 2024 · Archived copy · Original

I found a very interesting article from January 2024 in The Free Press that sheds some light on the claims by the secular left that conservatives want to ban books. In the article, the author James Fishback looked a variety of school districts to see which conservative books they stock in their libraries. Then he compared those numbers with the numbers of liberal books.

Here's the article from The Free Press:

> Over the last couple years, the media have peddled a narrative of "book bans" sweeping the nation. Book bans (ostensibly by the right) are "eating away at democracy," according to The Guardian, and are "taking an emotional toll," warned CNN.
>
> […]So I decided to investigate just how one-sided things actually are. I surveyed the library catalogs of 35 of the largest public school districts in eight red states and six blue states, representing over 4,600 individual schools. All of these records are publicly available online. (Here are just three online catalogs I searched: Broward County, FL, Austin, TX, and Oklahoma City, OK.) What I discovered isn't so much a problem of banned books. It's that kids are often exposed to only one side of the story.

And here are the leftist books:

> I looked up books written by some of the world's most well-known progressive thinkers. Here is the percentage, out of the 35 school districts, that stock each book:
>
> Title and Percentage of 35 Districts
>
> The Communist Manifesto (Karl Marx) — 75%
>
> Caste: The Origins of Our Discontent (Isabel Wilkerson) — 60%
>
> The 1619 Project (Nikole Hannah-Jones) — 54%
>
> Stamped (Jason Reynolds and Ibram X. Kendi) — 71%
>
> An African American and Latinx History of the U.S. (Paul Ortiz) — 40%
>
> The New Jim Crow (Michelle Alexander) — 60%
>
> Guide to Political Revolution (Bernie Sanders) — 40%
>
> White Fragility (Robin DiAngelo) — 54%
>
> So You Want to Talk About Race (Ijeoma Oluo) — 57%
>
> This Book Is Anti-Racist (Tiffany Jewell) — 45%
>
> White Rage (Carol Anderson) — 17%

And here are the conservative books:

> Meanwhile, I looked up books written by some of the world's most well-known conservative thinkers. Here is the percentage, out of the 35 school districts, that stock each book:
>
> Capitalism and Freedom (Milton Friedman) — 8%
>
> Created Equal (Dr. Ben Carson) — 5%
>
> Woke Racism (John McWhorter) — 3%

> Breaking History (Jared Kushner) — 2%
>
> Social Justice Fallacies (Thomas Sowell) — 0%
>
> The War on the West (Douglas Murray) — 0%
>
> The 1619 Project: A Critique (Phillip W. Magness) — 0%
>
> The Case Against Impeaching Trump (Alan Dershowitz) — 0%
>
> Decades of Decadence (Marco Rubio) — 0%
>
> The Diversity Delusion (Heather Mac Donald) — 0%
>
> The Case for Trump (Victor Davis Hanson) — 0%

This is not surprising for anyone who understands the public school and library industries. These places are staffed and run by secular leftists. So of course they are going to cry about book banning, even when they are the ones banning the books.

Look:

> It's no secret that many school libraries have become reflections of politicized librarians. Take Emily Drabinski, president of the American Library Association and a self-proclaimed Marxist, who said during a socialism conference last September in Chicago that public education "needs to be a site of socialist organizing. I think libraries really do, too. We need to be on the agenda of socialist organizing."

One last thing, I thought this was a very interesting quote from the article, especially since Christian parents and leaders seem to be fond of blaming men for the decline of dating and marriage:

> And is it any surprise that 76 percent of Gen Z and millennial women wouldn't date a Republican, according to a Change Research poll from September? They've likely never been exposed to conservative ideas, and thus, entirely dismiss conservatives as people.

Public schools should be a last resort for education the children of Christians and conservatives. They are not fair and balanced. They are biased. And they are dishonest. If I had children, I would never send them to public schools. I would make sure before marrying that we could afford to homeschool or send the kids to private schools. Government schools and libraries are child abuse.

# Corey DeAngelis: Teacher's unions fanatical hatred for children

**Wintery Knight** · 14 May 2024 · Archived copy · Original

One of my favorite people on Twitter is Corey DeAngelis. Every day I see him fighting for the rights of parents to get the education that they want for their kids. And he follows all the legislation that is being pushed in all the states. What I like about him is that like Ron DeSantis, he always seems to be taking ground from the secular left. Well, he has a new article in the The Federalist. Let's read it.

It says:

> Not a single state had universal school choice prior to 2021. In the past three years, eleven states have enacted it. This is a monumental achievement — and more victories for America's children are imminent. School choice advocates are grateful to the power-hungry teachers unions, which overplayed their hand and sparked a parent revolution.

He says that there 11 states that have it, but there are more that have introduced legislation to get it.

What I like about Corey is that he's not afraid to have an enemy in life. I was raised on Cyrano de Bergerac, a play about a French musketeer who always speaks his mind, and offends a lot of bad people. For me, it was always a good sign for your honor if you could point to bad people who opposed you. But today, it seems like the default view, especially of feelings-focused people, is to try to be liked by everyone. Well, Corey likes parents, and parents like Corey. But the teachers unions… they're his enemies.

He writes:

> The teachers unions-induced school closures harmed students academically, mentally, and emotionally, with virtually no reduction in overall coronavirus transmission or child mortality. Parents were understandably furious at the public schools that had broken faith with them during their time of need, and they weren't going to just sit there and take it.
>
> How did the unions respond to efforts to exert more control? By attacking parents, of course. No, it wasn't the virus that needed to be defeated. It was you, mom and dad.
>
> The unions publicly smeared parents who had the temerity to suggest that schools should do their jobs. In Chicago, home of the nation's third-largest public school system, the local union took to Twitter to demonize those who favored reopening schools: "The push to reopen schools is rooted in sexism, racism and misogyny," tweeted the Chicago Teachers Union (CTU) on Dec. 6, 2020.

By the way, I noticed a Daily Wire article last week about how the Chicago Teachers Unions wanted 50 BILLION DOLLARS to fund abortions and migrant services, even as student performance is dropping:

> Last year, Chicago Public Schools spent nearly $22,000 per student, much higher than the national average of $14,347.
>
> Meanwhile, in 2022, only 12% of Chicago's eighth graders were proficient in math, and only 19% were proficient in reading.

But let's get back to Corey's article. It's funny that the teacher unions are claiming that parents who wanted schools to re-open were motivated by "racism".

Take a look at this:

> According to McKinsey, by the end of the 2020–21 academic school year, students "in majority-Black schools

> ended the school year six months behind in both math and reading, while students in majority-white schools ended up just four months behind in math and three months behind in reading." If any policy had racist results, it was the union-pushed school closures and remote learning — which really should be called *remotely* learning — not parent-backed school re-openings.

Wow! So, the teacher unions fighting against re-opening schools actually hurt BLACK students the most. To me, it looks like the teacher unions are the real racists – the ones who deliberately cause harm to visible minorities.

I just want to quickly add that there are plenty of studies showing the harm that school shutdowns did to kids:

- Science Advances: The youth mental health crisis: Quasi-experimental evidence on the role of school closures
- Perspectives on Psychological Science: The Impact of School Closures on Learning and Mental Health of Children: Lessons From the COVID-19 Pandemic

But it's not just name-calling, there's also spying on parents and persecuting them for wanting the schools open:

> The California Teachers Association (CTA) even stooped to spying on parents, conducting what amounts to opposition research, the same as political candidates do on their opponents. A public records request uncovered emails from a union employee asking a public school principal for information about "the ideological leaning of groups that are funding the reopen lawsuits." She noted that she had heard the principal had "lots of information regarding the Parents Association."

I've read in other places that the secular leftists want to go after parents who oppose them personally – whether that be with doxing, death threats, violence, or other tactics. It's a labor union, after all.

Elsewhere in the article, Corey notes how the union thugs went after parents who enrolled their kids in small "micro-schools". These micro-schools would teach kids how to code, using free tools and online teaching videos.

The National Education Association (I think that's the largest teacher union in America) wrote up opposition research reports to scare parents away from the micro-schools:

The first one warned union members and their allies: "The Opposition Report has documented widespread support for micro-schools."

> The report identified more than 20 additional microschool networks and related organizations, and recommended that their staff and allies familiarize themselves with a list of anti-microschool talking points the NEA had developed, such as that the microschools "do not guarantee students or educators the same civil rights protections that are required in public schools," their staff are "not required to be credentialed," and their students "are not held accountable to state standards of learning."

Well, that's enough for now. Corey has a new book out about the fight between parents and teacher unions. It's called "The Parent Revolution: Rescuing Your Kids from the Radicals Ruining Our Schools". Check it out. I have the audio version on my wishlist.

# Non-profits making billions from Biden's open border, and you're paying for it

**Wintery Knight** · 15 May 2024 · Archived copy · Original

I found a very interesting article about how non-profits are making big money off of Biden's open border. Biden's bringing in millions of unskilled illegal trespassers. Some of them are dangerous. But that isn't stopping non-profits from cashing in. How much money are we talking about? Where is it coming from? Let's take a look at this article from The Free Press and find out.

It says:

> The Free Press examined three of the most prominent NGOs that have benefited: Global Refuge, Southwest Key Programs, and Endeavors, Inc. These organizations have seen their combined revenue grow from $597 million in 2019 to an astonishing $2 billion by 2022, the last year for which federal disclosure documents are available. And the CEOs of all three nonprofits reap more than $500,000 each in annual compensation, with one of them—the chief executive of Southwest Key—making more than $1 million.

Where is the money coming from? You're paying them this money through your taxes:

> The Administration for Children and Families, a division of the U.S. Department of Health & Human Services, funds the nonprofits through its Office of Refugee Resettlement, and its budget has swelled over the years—from $1.8 billion in 2018 to $6.3 billion in 2023. The ORR is expected to spend at least $7.3 billion this year—almost all of which will be funneled to NGOs and other contractors.

And it's not just you. Biden's socialist regime is spending more and more money, so much that they have to borrow in order to spend. And who is going to pay for all this borrowing? Well, young adults and children, some of who aren't even born yet. They're going to be paying for Biden's "generosity". And the harder you work to teach your children how to earn money, the more they're going to pay in taxes.

Well, maybe these non-profits NEED all that money, because the need for their services is so great.

Nope:

> But while it's true the number of migrants has exploded in recent years, critics say these enormous federal grants far exceed the current need. The facilities themselves are generally owned by private companies and are leased to the NGOs, which house the unaccompanied minors and attempt to unite them with family members or, if that's not possible, people who will take care of them—their so-called sponsors. The ORR does not publicly list the specific number of shelters it funds in its efforts to house migrants, a business The New York Times once described as "lucrative" and "secretive."

Well, stop worrying. Because the money is being well spent, and the people getting it are transparent and accountable.

Just kidding:

> While some NGOs have long had operations at the border, "what is new under Biden is the amount of taxpayer money being awarded, the lack of accountability for performance, and the lack of interest in solving the problem," said Jessica Vaughan, director of policy studies at the Center for Immigration Studies, a think tank that researches the effect of government immigration policies and describes its bias as "low-immigration, pro-immigrant."

Well, even so. At least this isn't some kind of Democrat boondoggle where taxpayers are just handing over money to Democrats. Right? Right?

WRONG:

> Vignarajah, a former policy director for Michelle Obama when she was first lady, took the top job at Global Refuge in February 2019 after she lost her bid to be elected governor of Maryland. She has since become one of the most prominent advocates for migrants crossing the southern border, appearing frequently on MSNBC and other media as an immigration advocate. Her incoming salary was $244,000, but just three years later, her compensation more than doubled to $520,000.

Well, I'm sure they are doing a good job. At least they're not sexually abusing all the kids that taxpayers are paying them to provide for. Right? RIGHT?

WRONG:

> The man with the $1 million salary is Dr. Anselmo Villarreal, who became CEO of Southwest Key Programs, headquartered in Austin, Texas, in 2021.
>
> […]Despite a number of scandals in the recent past, including misuse of federal funds and several instances of employees sexually abusing some of the children in its care, Southwest Key continues to operate—and rake in big government checks. In 2020, the year of Covid-19, its government grant was $391 million; by 2022, its contract was nearly $790 million.

And then there's this guy, who was in the Obama administration:

> Endeavors, Inc., based in San Antonio, Texas, is run by Chip Fulghum. Formerly the chief financial officer of the Department of Homeland Security, he signed on as Endeavors' chief operating officer in 2019 and was promoted to CEO this year.
>
> In 2022, Fulghum was paid almost $600,000, while the compensation for Endeavors' then-CEO, Jon Allman, was $700,000. Endeavors' payroll went from $20 million in 2018 to a whopping $150 million in 2022, with seven other executives earning more than $300,000.

This was a very interesting article and there was more to it than I quoted here. But it really makes you understand what the attitude of these people is towards future Americans – your children. They expect your children to pay for their expensive living today. And Biden is making it happen for them.

# The worst mistake you can make when defending the Christian worldview

**Wintery Knight** · 16 May 2024 · Archived copy · Original

So, this is just an advice post for doing apologetics.

Here are three situations I've run into while doing apologetics in the last month.

First situation. I was talking with a lady who is an atheist. I had a copy of "God's Crime Scene" in my hand, and she asked me about it. I told her that it was a book written by the guy who solved the homicide case that I asked her to watch on Dateline. She remembered – it was the two-hour special on the woman who was killed with a garrotte. She pointed at the book and said "what's in it?" I said, it has 8 pieces of evidence that fit better with a theistic worldview than with an atheistic one, and some of them scientific. Her reply to me was – literally – "which denomination do you want me to join?"

Second situation. I was talking with a friend of mine who teaches in a Catholic school. She was telling that she got the opportunity to talk to her students about God, and found out that some of them were not even theists, and many of them had questions. So she asked them for questions and got a list. The list included many hard cases, like "what about the Bible and slavery" and "why do Christians oppose gay marriage?" and so on.

Third situation. Talking to a grad student about God's existence. I'm laying out my scientific arguments for her, holding up the peer-reviewed papers for each discovery. I get to the Doug Axe paper on protein folding probabilities, and she holds up her hand. One question: "Am I going to Hell?"

So think about those three situations. In each case, the opponent is trying to reject Christianity by jumping way, way ahead to the very end of the process. When you do Christian apologetics, you do not take the bait and jump to the end of the process dealing with nitty gritty details until you have made your case for the core of the Christian worldview using your strongest evidence. Let me explain.

So, your strongest evidence as a Christian are the scientific arguments, along with the moral argument. Those would include (for starters) the following:

1. kalam cosmological argument
2. cosmic fine-tuning
3. galactic and stellar habitability
4. origin of life / DNA
5. molecular machines / irreducible complexity
6. the moral argument

The problem I am seeing today is that atheists are rejecting discussions about evidence because they think that all we are interested in is getting them to become Christians. Well, yes. I want you to become a Christian. But I know perfectly well what that entails – it entails a change of life priorities. Both of the women I spoke to are living with their boyfriends, and the kids in the Catholic school just want to have fun. None of them wants to believe in a God who will require self-denial, self-control, and self-sacrifice. Nobody wants God to be in that leader position in their lives. Christianity is 100% reversed from today's me-first, fun-seeking, thrill-seeking, fear-of-missing-out travel spirit of the age.

So, how to answer all these late-game questions? The answer is simple. You don't answer any late-game questions until the person you are talking with accounts for the widely-accepted data in your list. These are things that have got to be accepted before any discussion about minor issues like one angel vs two angels at the empty tomb can occur. When we discuss all the basic issues where the evidence is the strongest, then we can go on to discuss issues where the evidence is debatable, then finally, in the last bits before the end, we can discuss these other kinds of

questions.

How to explain why this process must be followed to the person who asks specific questions about minor issues? Simple. You explain that your goal is *not* to get them to become a Christian right now. That you want to let them believe *anything thing they want.* That's right. They can believe *anything they want to believe.* As long as what they believe is *consistent with the evidence.* And what I am going to do is give them the evidence, and then they can believe whatever they want – so long as it's consistent with the evidence.

So, for example, I'm going to tell them 3 pieces of evidence for a cosmic beginning of the universe: the expanding universe (redshift), the cosmic microwave background radiation, and the light element abundances. That's mainstream science that shows that the universe came into being out of nothing, a finite time in the past. And I will charge them not to believe in any religion that assumes that the universe has always been here. For example, Mormonism is ruled out, they believe in eternally existing matter. See how that works? Hey, Ms. Atheist. You can believe anything you want. *As long as what you believe is consistent with the evidence.*

I think this approach of not letting them rush you to the end at the beginning is important for two reasons. First, we can get our foot in the door to talk about things that are interesting to everyone, in a non-stressed environment. Everyone can talk about evidence comfortably. Second, we show that we hold our beliefs because we are simply letting evidence set boundaries for us on what we are allowed to believe. We can't believe not-Christianity, because not-Christianity is not consistent with the evidence. And you start with the most well-supported evidence, and eliminate worldviews that are falsified by the most well-supported evidence. Atheism actually gets falsified pretty quickly, because of the scientific evidence.

So, that's my advice. Had a friend of mine named William try this out about a week ago. It went down like this:

William to me:

> This guy I know messaged me and bragged for a while about how easy he can dismantle Christianity. He said: "present the gospel to me as you understand it. I'll simply ask questions to demonstrate it is not worth your belief."

WK to William:

> First of all, he isn't allowed to just sit there and poke holes in your case, he has to present a positive case for atheism. Second, don't discuss Christianity with him at all until you first discuss the evidence for theism – start with the good scientific evidence.

And William wrote this to his friend:

> The way I'm wired is that I process all competing theories and go with the best one. By doing a comparative analysis of worldviews I find that Christian theology easily explains the most about the world I find myself living in.
>
> I'm pretty sure that a God of some sort exists because of the scientific evidence for the origin of the universe and the fine tuning in physics. From there I find it quite intuitive that if a God went through the trouble of creating and tuning a universe for life that this God likely has some sort of interest in it and has revealed Himself to humanity in some way.
>
> From there I can look at the major world religions and compare them to see which one explains the past and the present the best. Christianity easily comes out on top.

And then a few days later, I got this from William:

> I finally got the agnostic to tell me what he thinks about origin and fine tuning. When I started pointing out that his views were unscientific, he blew a gasket, called me dishonest and told me he didn't want to discuss anything further.

And that's where you want to be. Cut off all discussions where the challenger tries to jump to the end and get you to debate the very last steps of your case. Present the strongest evidence for your core claims, and get him to account for this evidence within his own worldview. Lead the discussion with public, testable evidence. All warfare depends on picking the terrain, weapons and tactics that allow you to match your strength against your opponent's weakness.

# Feminists outraged over NFL player who believes in marriage, right to life

**Wintery Knight** · 17 May 2024 · Archived copy · Original

Commenter Craig alerted me to this story about an NFL player who defended traditional marriage and opposed abortion in a commencement speech. He's getting a lot of trouble from the secular left. Let's see the story, and then I'll comment about what message this sends good men about value proposition of marriage and parenting.

Here's the story from the Christian Post:

> Kansas City Chiefs kicker Harrison Butker urged Catholic college graduates last weekend to reject the "Church of nice," calling out President Joe Biden and other Catholics who support abortion and other practices that run counter to the teachings of the faith politically.
>
> […]Butker used his speech to highlight how "bad policies and poor leadership have negatively impacted major life issues."
>
> "Things like abortion, [in-vitro fertilization], surrogacy, euthanasia as well as a growing support for degenerate cultural values and media all stem from the pervasiveness of disorder," Butker said. "Our own nation is led by a man who publicly and proudly proclaims his Catholic faith but at the same time is delusional enough to make the sign of the cross during a pro-abortion rally."
>
> "He has been so vocal in his support for the murder of innocent babies that I'm sure to many people, it appears that you can be both Catholic and pro-choice," he added. "He is not alone. From the man behind the COVID lockdowns to the people pushing dangerous gender ideologies onto the youth of America, they all have a glaring thing in common: They are Catholic."

There's been a huge response to these comments from the secular left. They are enraged. They don't want to have to conform their desires to any sort of specification for marriage that might limit their narcissistic hedonism. And they certainly don't want to be burdened with the needs of children that they create through their reckless recreational sex.

Here are my thoughts:

First, the only kinds of men who are willing to marry and have kids today are men who have traditional views, including supporting natural marriage and protecting unborn children from reckless, selfish adults. So, if a woman wants to get married, then she has one option – to choose a traditional man. And in order to find a traditional man, a woman has to encourage men through her actions to be traditional, lest the supply of these men dry up.

Sadly, most young, unmarried women today are under a delusion. They think that they can behave non-traditionally, and still find a traditional man to marry them after their selfish, reckless youth. That might have been true in the past, when the culture was Christian, but it's not true in an age of secularism and feminism. And the reason why is simple.

All men today – good and bad – understand that marriage is an enormous risk and threat to their freedom and prosperity. They have heard the stories about no-fault divorce laws, false accusations, outrageous alimony and child support payments, biased courts, denial of visitation and even IMPRISONMENT. The only reason they would marry is if they were able to find a traditional woman who not only opposed feminism, but had a long public record of fighting against it. Not just words, but many, many years of public opposition to atheism, feminism, and socialism. That is the only kind of woman who might have a chance at marriage today. Good men today don't believe that women can magically change from non-traditional to traditional at age 30 (or later). We know that shotgun conversions are unlikely to be sincere, or to last. We know that a woman's past actions are a more accurate guide to her beliefs than her words. And no amount of shaming and blaming of men by pious conservative leaders

is going to change that fact.

But families, churches, and society in general are not producing women who respect traditional men. 75% of young women today vote for policies that are opposed by good men. No one has the courage to tell young women that hatred of good men today is NOT compatible with marriage tomorrow.

Instead, pro-marriage leaders  think that good men should just be forced (by shaming) to forgive feminists for their poor decisions. Good men should just have to make the lives of women who hate them “work out”. Unfortunately for these pro-marriage people, good men have got the message. Good men look at stories like this, and realize that society hates men who have strong views on religion and morality. And that hatred extends from birth, through school, into the workplace, into laws, and into the courts.

It seems crazy to think that young women feel entitled to protection and provision in a marriage, even as they expect retain their opposition to male leadership. But that is universal today – non-traditional women who despise good men, expect to get all the benefits of a traditional man, with none of the responsibilities, expectations or obligations of traditional marriage. Only a stupid man would choose a non-traditional woman who hates him and hates his traditional views. And yet this is what the pro-marriage crowd expects men to do. They see men as 100% expendable.

# Nabeel Qureshi: the Quran inspires radical Muslims to commit Islamic terrorism

**Wintery Knight** · 18 May 2024 · Archived copy · Original

Dr. Nabeel Qureshi, a former Muslim, explains which verses of the Qu'ran are linked to Islamic terrorism in a USA Today editorial.

Excerpt:

> As a Muslim growing up in the United States, I was taught by my imams and the community around me that Islam is a religion of peace. My family modeled love for others and love for country, and not just by their words. My father served in the U.S. Navy throughout my childhood, starting as a seaman and retiring as a lieutenant commander. I believed wholeheartedly a slogan often repeated at my mosque after 9/11: "The terrorists who hijacked the planes also hijacked Islam."
>
> Yet as I began to investigate the Quran and the traditions of Muhammad's life for myself in college, I found to my genuine surprise that the pages of Islamic history are filled with violence. How could I reconcile this with what I had always been taught about Islam?
>
> […]The Quran itself reveals a trajectory of jihad reflected in the almost 23 years of Muhammad's prophetic career. As I demonstrate carefully in my book, *Answering Jihad: A Better Way Forward*, starting with peaceful teachings and proclamations of monotheism, Muhammad's message featured violence with increasing intensity, culminating in surah 9, chronologically the last major chapter of the Quran, and its most expansively violent teaching. Throughout history, Muslim theologians have understood and taught this progression, that the message of the Quran culminates in its ninth chapter.
>
> **Surah 9 is a command to disavow all treaties with polytheists and to subjugate Jews and Christians (9.29) so that Islam may "prevail over all religions" (9.33). It is fair to wonder whether any non-Muslims in the world are immune from being attacked, subdued or assimilated under this command. Muslims must fight, according to this final chapter of the Quran, and if they do not, then their faith is called into question and they are counted among the hypocrites (9.44-45). If they do fight, they are promised one of two rewards, either spoils of war or heaven through martyrdom. Allah has made a bargain with the *mujahid* who obeys: Kill or be killed in battle, and paradise awaits (9.111).**
>
> Muslim thought leaders agree that the Quran promotes such violence. Maajid Nawaz, co-founder of the Quilliam Foundation in the United Kingdom, has said, "We Muslims must admit there are challenging Koranic passages that require reinterpretation today. … Only by rejecting vacuous literalism are we able to condemn, in principle, ISIS-style slavery, beheading, lashing, amputation & other medieval practices forever (all of which are in the Quran). … Reformers either win, and get religion-neutral politics, or lose, and get ISIL-style theocracy." In other words, Muslims must depart from the literal reading of the Quran in order to create a jihad-free Islamic world.
>
> This is not at all to say that most Muslims are violent. The vast majority of Muslims do not live their lives based on chapter 9 of the Quran or on the books of jihad in the hadith. My point is not to question the faith of such Muslims nor to imply that radical Muslims are the true Muslims. Rather, I simply want to make clear that while ISIL may lure youth through a variety of methods, it radicalizes them primarily by urging them to follow the literal teachings of the Quran and the hadith, interpreted consistently and in light of the violent trajectory of early Islam. As long as the Islamic world focuses on its foundational texts, we will continue to see violent jihadi movements.

So, any attempt to engage with Muslims will require us to address the texts that they appeal to when they justify their actions. Both Republicans and Democrats try to gloss over the specific passages of the Qu'ran which are

troublesome. They claim that Islam, interpreted literally, is a religion of Peace. And they claim that distorting the words of the Qu'ran results in a Jihadi ideology. That's not accurate. It's not distortion of the Qu-ran that is causing the problems, it's taking those passages literally.

There are troubling passages in the Bible, as well, where God is in a theocratic relationship with the Jewish people and commands them to attack their enemies. But the difference is that those verses are not effective in the present day, for present day Christians. Christians are under a new Covenant with a new High Priest, Jesus. This new covenant tells Christians to love our enemies and to pray for those who persecute us. Are moderate Muslim scholars and Western politicians ready to face the real challenge?

# Are atheists unbiased about the question of God's existence?

**Wintery Knight** · 19 May 2024 · Archived copy · Original

Brian Auten has a book review posted up at Apologetics 315.

The book is "If There's A God, Why Are There Atheists?", by theologian R.C. Sproul. R.C. Sproul is one of my favorite theologians. The book in question has a very, very special place in my heart, because I think that it is one of the major reasons why I was able to resist pernicious ideas like religious pluralism and postmodernism for so long. Once you put on the glasses of Romans 1 and see for the first time what man is really doing with respect to God, you can never see things the same again. I'll say more about this at the end, but let's see what Brian wrote first.

**The review**

So often, you hear atheists complaining about religion is nothing but wish-fulfillment or some sort of crutch for people who are frightened by a variety of things. They think that God is invented to solve several problems. 1) how does the world work?, 2) is there meaning to suffering and evil?, 3) why should I be moral?, and 4) what will happen to me and my loved ones when I die?. On the atheistic view, God is just a crutch that people cling to out of weakness and ignorance. But is this really the case?

Sproul starts the book by investigating three atheists who sought to explain religious belief as a result of psychological factors.

Brian writes:

> Before tackling the psychology of atheism, Sproul spends a chapter on the psychology of theism, from the perspective of Freud's question "If there is no God, why is there religion?"11 What follows is an overview of various psychological explanations of theistic belief: Feuerbach's "religion is a dream of the human mind."12 Marx's belief that religion is "due to the devious imagination of particular segment of mankind."13 And Nietzche's idea that "religion endures because weak men need it."14 The author properly reiterates: "We must be careful to note that the above arguments can never be used as proof for the nonexistence of God. They can be useful for atheists who hear theists state that the only possible explanation for religion is the existence of God."15 That being said, Sproul also reveals what these arguments presume:

> Their arguments already presupposed the nonexistence of God. They were not dealing with the question, Is there a God? They were dealing with the question, Since there is no God, why is there religion?16

> Sproul points out the weaknesses of each of these approaches and says "there are just as many arguments showing that unbelief has its roots in the psychological needs of man."

Wow, could that really be true? What are the real reasons why people reject God? Does the Bible have anything to say about what those reasons are?

Brian cites Sproul's contention:

> The New Testament maintains that unbelief is generated not so much by intellectual causes as by moral and psychological ones. The problem is not that there is insufficient evidence to convince rational beings that there is a God, but that rational beings have a natural hostility to the being of God.
>
> […]Man's desire is not that the omnipotent, personal Judeo-Christian God exist, but that He not exist.

In Romans 1:18-23, the apostle Paul explains what is really going on:

> [18]The wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness,
>
> [19]since what may be known about God is plain to them, because God has made it plain to them.
>
> [20]For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse.
>
> [21]For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened.
>
> [22]Although they claimed to be wise, they became fools
>
> [23]and exchanged the glory of the immortal God for images made to look like mortal man and birds and animals and reptiles.

Do you believe that? I believe that. I have never in my life met an atheist who varied from what Paul is saying here.

On this blog, I have presented many, many arguments for theism in general, and Christian theism in particular:

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

Sproul explains why atheists cannot allow themselves to live according to the evidence that is presented to them:

> The cumulative effect of this knowledge that is clearly seen is to leave men 'without excuse.' Herein lies the basis of the universal guilt of man. No one can claim ignorance of the knowledge of God. No one can cite insufficient evidence for not believing in God. Though people are not persuaded by the evidence, this does not indicate an insufficiency in the evidence, but rather an insufficiency in man.
>
> […]The basic stages of man's reaction to God can be formulated by means of the categories of trauma, repression, and substitution.
>
> […]If God exists, man cannot be a law unto himself. If God exists, man's will-to-power is destined to run head-on into the will of God.

So, it's pretty clear that there are huge implications to the question of God's existence, and that the atheist will be affected by these implications when weighing evidence.

Here's something Thomas Nagel, an excellent atheist philosopher, said:

> “In speaking of the fear of religion, I don’t mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers.
>
> I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn’t just that I don’t believe in God and, naturally, hope that I’m right in my belief. It’s that I hope there is no God! I don’t want there to be a God; I don’t want the universe to be like that.”
>
> (”The Last Word” by Thomas Nagel, Oxford University Press: 1997)”

The rest of the book review, and the book, deals with explaining in detail how atheists respond to an all-good, all-powerful, all-knowing Creator/Designer. I encourage you to click through and read the whole book review. You can read the review, and the book, and then investigate for yourself whether the atheists are effected by this bias against moral accountability.

# Over 1 million views for intelligent design: Stephen C. Meyer and Piers Morgan

**Wintery Knight** · 20 May 2024 · Archived copy · Original

The video below was uploaded about 2 weeks ago, but it already has well over 1 million views. In this video, you will get coverage of 5 arguments for a Creator / Designer: origin of the universe, origin of life, cosmic fine-tuning, sudden origin of new body plans in the fossil record, stellar and planetary habitability and they also mentioned consciousness.

Here is the video:

And the description:

> In a lively yet in-depth discussion, Piers Morgan drills down to the core of human existence with Stephen C. Meyer, the prominent 'intelligent design' advocate.
>
> In this Piers Morgan Uncensored special, Meyers firmly rejects the idea that a scientific worldview leads to atheism, arguing instead that 'the universe requires a creator or cause'. When Richard Dawkin's name is mentioned, Meyer claims that he actually really loves the atheist firebrand and admires his intensity. Lastly, Morgan and Meyers agree that the question of God's existence is tied to more than just cold hard facts, but also human nature itself.
>
> 00.00 – Who is Dr Meyer?
> 02.23 – Is Darwin Wrong?
> 06.03 – Scientific evidence for God
> 15.58 – The Multiverse
> 19.29 – What is the meaning of life?
> 22.52 – Atheists' anger
> 25.48 – Why is there suffering?

Dr. Stephen C. Meyer directs Discovery Institute's Center for Science and Culture. He is my favorite Christian scholar. Why? Because he keeps writing books about what the latest scientific evidence tells us about reality. I understand that many theists and atheists want to keep evidence at a distance, and just decide for themselves what they will accept as true, based on their feelings and communities. But for those who like to have true beliefs, then Stephen Meyer is for you. He is basically the Thomas Sowell of the origins debate.

By the way, if you watch this video and you enjoy it, then please share. A lot of people need to start thinking about these issues based on what science has revealed. People who have not thought about these issues need to start grounding our beliefs on reality. And we have to help them.

# Former Facebook and Nike DEI manager gets prison for stealing $5 Million

**Wintery Knight** · 21 May 2024 · Archived copy · Original

A lot of Christians today seem to think that it's a good idea to deal with the DEI crowd with "compassion". Instead of laying out standards of merit, and asking everyone to measure up, they want to give special carve out benefits to certain victim groups. But are people who take out student loans for non-STEM degrees really victims? Are people who claim victimhood good people?

Take a look at this story from the New York Post:

> From approximately January 2017 to September 2021, [Barbara Furlow-Smiles] "led diversity, equity, and inclusion (DEI) programs at Facebook and was responsible for developing and executing DEI initiatives, operations, and engagement programs," prosecutors said.
>
> […]Barbara Furlow-Smiles, 38, set up fake business deals, invoices and events — including a Juneteenth celebration — to line her own pockets, the Justice Department said.
>
> […]To cover her tracks, the disgraced DEI officer submitted fake expense reports claiming her associates had performed work for Facebook, such as providing swag or marketing services.
>
> […]Furlow-Smiles pleaded guilty in December to the wire fraud scheme, which saw her take more than $4.9 million from Facebook before bilking a six-figure amount from Nike "to fund a luxury lifestyle in California, Georgia, and Oregon," the DOJ said.

This part was interesting, because the virtue of accountability is the exact opposite of the victimhood of the woke secular leftists:

> [Facebook] claimed her "crimes also resulted in anguish amongst those employees that worked closely with her," while Nike said her "complete lack of accountability or remorse was incredibly disappointing," according to sentencing memos obtained by CNBC.
>
> […]When she was fired from Facebook, Furlow-Smiles "carelessly continued her fraudulent schemes at Nike, thinking she was untouchable," said Keri Farley, special agent in charge of FBI Atlanta.

I talk to a lot of men who are struggling in the current dating environment. And their number one complaint about the secular left young women they encounter is a complete lack of accountability. Young women don't want to be judged, and they don't want to face consequences for their poor choices. They want to make decisions in the moment, based on feelings, and then play the victim to get out of the consequences further down the road.

Facebook and Nike are known to be far-left companies. So it's not surprising that they declined to respond to requests for comments. But I hope that other companies begin to realize the risks and costs of hiring people on the woke secular left, who have absolutely zero foundation for morality. And you should be careful about trusting them, too.

# Does the fossil record match Darwinist predictions or Design predictions?

**Wintery Knight** · 22 May 2024 · Archived copy · Original

Recently, I wrote a post about how you can make a simple argument for intelligent design based on junk DNA. Step 1: find out what Darwinian naturalists claim about junk DNA. Step 2: find out what design proponents claim about junk DNA. Step 3: compare those predictions with scientific discoveries about junk DNA over the past decades. Today we'll do it with the fossil record.

I'm going to use an amazing article from Günter Bechly from over at Evolution News. Günter writes an article about fossils every Friday (he calls it "Fossil Friday").

Here's last Friday's article, where he gave a nice overview of why Christians should care about the fossil record.

He writes:

> This Fossil Friday I want to address the common request to provide an expanded written form of my lectures on discontinuities in the fossil record (e.g., on YouTube) together with references to mainstream scientific papers that back up these arguments against neo-Darwinism. Since the sudden appearance of trilobites in the Cambrian Explosion is one of the best known examples for discontinuities in the fossil record, I chose the early trilobite Wanneria sp. from the Lower Cambrian of Canada as today's featured fossil. So let's jump right in.

Then he talks about the predictions of Darwinists and design proponents:

> Every theory makes certain predictions and these predictions have to be tested with empirical evidence. Charles Darwin's theory of evolution necessarily predicts a gradual development of life. Therefore he insisted on gradualism, against the advice of his good friend Thomas Huxley. Darwin quoted in his magnum opus *The Origin of Species* (Darwin 1859) not less that six times the Latin dictum "*natura non facit saltus*", nature does not make jumps, because he wanted to present a fully naturalistic explanation for the history of life on our planet, knowing perfectly well that saltations would have tacitly implied miracle-like intelligent interventions. The prediction of gradualism is not accidental and not a dispensable side issue in Darwinism. This was made clear by Richard Dawkins, arguably the most ardent modern popularizer of Darwinism, in his bestselling book *The Greatest Show on Earth* (Dawkins 2009), where he explicitly clarified that "Evolution not only is a gradual process as a matter of fact; it has to be gradual if it is to do any explanatory work." In another book titled *Climbing Mount Improbable* (Dawkins 1996) he explained the reasons with a beautiful metaphor: Imagine the task to reach the top of a steep and tall cliff from the sea shore. It would be an improbable (or rather impossible) miracle to achieve this task with a single big jump. However, if there was a gentle slope on the backside of the cliff, you could easily and effortlessly climb the mountain with a lot of small successive steps. This is the way evolution must operate according to Darwin and Dawkins: not by sudden miraculous jumps, but many small steps, that are each not unlikely to happen accidentally without intelligent intervention, and which accumulate over long periods of time to add up to big biological differences.

Engineers don't check in code gradually, one letter at a time. We check in a bunch of related changes to different files that implement some feature. Some days, I have a lot of meetings. Some days, I spend time doing code reviews or making diagrams or writing documentation. And some days, I get to write code all day. So, if you look at my Github history, you'll see that some days I have 35 commits, and other days none. That's consistent with having a "designer". The complexity increases in "jumps", with each jump containing changes to several files, and the changes add some new feature. But that's not available to Dawkins and Darwin, they don't like engineers, or sudden jumps in complexity.

Günter lists out a bunch of biological “jumps”, where God pulled an all-nighter, with pizza and Mountain Dew, and checked in a whole bunch of new code all at once.

Here are a few from his list of about 15 of them:

- The Origin of Life (3.8 bya)
- The Origin of Photosynthesis (3.8 bya)
- The Cambrian Explosion (537-508 mya)
- The Carboniferous Insect Explosion (325-314/307 mya)
- The Early Triassic Marine Reptile Radiation (248-240 mya)
- The Mid Triassic Gliding / Flying Reptile Radiation (230-210 mya)
- Upper Triassic Dinosaur Explosion (234-232 mya)
- The Abominable Mystery of the Origin of Flowering Plants (130-115 mya)
- The Paleogene Big Bang of Modern Birds (65-55 mya)

Günter has the details of each of these, but if you have listened to our recent episode about the origin of life with Dr. Fazala Rana, then you already know about the first one. The point is that the fossil record has a whole bunch of “big bangs”, where God checked in a whole bunch of new code in a very short period of time. This is strictly forbidden in Darwinian theory, but the fossil record doesn’t care about theories.

Günter concludes:

> The gradualistic core predictions of any unguided evolutionary mechanisms such as neo-Darwinism are strongly contradicted by the empirical evidence. The cumulative conflicting evidence from molecular biology, genetics, population genetics, and the discontinuous fossil record can no longer be explained away as anomalies or as artifacts such as under-sampling of an incomplete fossil record. The total evidence is better explained with pulses of infusion of new information from outside of the system (top-down), rather than with a purely mechanistic stepwise bottom-up process. The only known cause in the universe that is able to produce significant amounts of new complex specified information is the activity of an intelligent conscious agent, so that intelligent design theory qualifies as superior alternative to unguided Darwinian evolution in an inference to the best explanation (abductive reasoning) among competing hypotheses. This is not an argument from ignorance (i.e., God of the gaps) as is often incorrectly claimed by critics, but is based on empirical data and our positive knowledge about the regular causal structure of the universe and the type of causes that exclusively are known to produce certain effects.

The article was tough for me to understand, but I think I got the big picture of what he was saying. I blogged on it so that I can find it again if I get questions about what evidence there is for a designer. I sure hope that we are making more scientists like him for Team Design, because his post was quality work.

# New studies: problems with temperature records used by climate models

**Wintery Knight** · 23 May 2024 · Archived copy · Original

Most people who disagree with the hypothesis of catastrophic man-made global warming have their doubts about official temperature record collection. But unless you are really following the issue closely, it might be hard for you to find peer-reviewed papers that question the majority view. Let's take a look at some recent peer-reviewed papers that will help skeptics make their case.

This article is from the Epoch Times. They sometimes hide their articles behind paywalls, but this out is available to all. Just in case, I found an archive of it.

It says:

> Temperature records used by climate scientists and governments to build models that then forecast dangerous manmade global warming repercussions have serious problems and even corruption in the data, multiple scientists who have published recent studies on the issue told The Epoch Times.
>
> […]Problems with temperature data include a lack of geographically and historically representative data, contamination of the records by heat from urban areas, and corruption of the data introduced by a process known as "homogenization."

I already know about that problem of measuring stations being located in areas of high ambient heat, like busy streets, industrial areas, solar panel farms, etc. But I had not heard about homogenization.

I looked up homogenization, and it's referring to the need to remove the impact of "non-climatic changes" on the temperature data. That could be changes caused by changing sensor technology, moving the weather station, or other factors unrelated to climate.

The article says:

> For instance, if a temperature station was originally placed in an empty field but that field has since been paved over to become a parking lot, the record would appear to show much hotter temperatures. As such, it would make sense to try to correct the data collected.

That was an interesting point. So, the warming would be actually caused by increased heat from cars, buildings, Sun reflections, etc. as the sensor got surrounded by civilization. It's readings would change, but not because of changes in the climate.

But there's a problem with the way that scientists have been adjusting the raw data:

> Virtually nobody argues against the need for some homogenization to control for various factors that may contaminate temperature data.
>
> But a closer examination of the process as it now occurs reveals major concerns, Ronan Connolly, an independent scientist at CERES, said.
>
> "While the scientific community has become addicted to blindly using these computer programs to fix the data biases, until recently nobody has bothered to look under the hood to see if the programs work when applied to real temperature data," he told The Epoch Times.
>
> Since the early 2000s, various governmental and intergovernmental organizations creating global temperature records have relied on computer programs to automatically adjust the data.
>
> Mr. Soon, Mr. Connolly, and a team of scientists around the world spent years looking at the programs to

> determine how they worked and whether they were reliable.
>
> One of the scientists involved in the analysis, Peter O'Neill, has been tracking and downloading the data daily from the National Oceanographic and Atmospheric Administration (NOAA) and its Global Historical Climatology Network since 2011.
>
> He found that each day, NOAA applies different adjustments to the data.
>
> "They use the same homogenization computer program and re-run it roughly every 24 hours," Mr. Connolly said. "But each day, the homogenization adjustments that they calculate for each temperature record are different."
>
> This is "very bizarre," he said.
>
> "If the adjustments for a given weather station have any basis in reality, then we would expect the computer program to calculate the same adjustments every time. What we found is this is not what's happening," Mr. Connolly said.
>
> These concerns are what first sparked the international investigation into the issue by Mr. Soon and his colleagues.
>
> Because NOAA doesn't maintain historical information on its weather stations, the CERES scientists reached out to European scientists who had been compiling the data for the stations that they oversee.
>
> They found that just 17 percent of NOAA's adjustments were consistently applied. And less than 20 percent of NOAA's adjustments were clearly associated with a documented change to the station observations.
>
> "When we looked under the hood, we found that there was a hamster running in a wheel instead of an engine," Mr. Connolly said. "It seems that with these homogenization programs, it is a case where the cure is worse than the disease."

For me, that is the take home lesson for the whole article.

Well, how much of a difference do these problems make for climate change models?

It's a huge problem:

> The flaws are so significant that they make the temperature data—and the models based on it—essentially useless or worse, three independent scientists with the Center for Environmental Research and Earth Sciences (CERES) explained.
>
> The experts said that when data corruption is considered, the alleged "climate crisis" supposedly caused by human activities disappears.
>
> Instead, natural climate variability offers a much better explanation for what is being observed, they said.

I waited a few days to blog this article, so that I could check up on the studies. Here is one, and here is another. There are a lot of authors on these studies, and they are from good journals: *Climate* and *Atmosphere*. The authors are from a variety of academic institutions from different countries, like Germany, Ireland, Hungary, Austria, Sweden, Italy and the Netherlands.

If you like to debate climate change like I do, then you might want to bookmark this article. To me, this is another new, peer-reviewed piece of evidence that argues against the catastrophic man-made global warming view. And we have to be guided by evidence.

# Miranda Devine asks: where are the men of courage?

**Wintery Knight** · 24 May 2024 · Archived copy · Original

Men tend to focus more on quietly enduring suffering, and they rarely speak up when they have been hurt. That's why we get excited when women speak up for us. But it's rare for a woman to see what men's plans and motivations are. Rarer still to see who is standing in opposition to those plans and motivations. And rarest of all is to speak up to defend men from their opponents.

So, this post is about a woman doing all three. And not just any woman, but famous conservative woman Miranda Devine, who recently wrote the book "Laptop from Hell: Hunter Biden, Big Tech, and the Dirty Secrets the President Tried to Hide", which is all about Hunter Biden's laptop, and how Big Tech and the Biden administration tried to cover it all up.

Anyway, here is her article in the New York Post:

> We pathologize manly virtues and bow to the tyranny of identity politics that seeks power by overthrowing a make-believe patriarchy. We raise boys in a soup of reproach and negativity that tells them their intrinsic nature is diseased.
>
> "Traditional masculinity is psychologically harmful," the American Psychological Association declared in 2019. These were the masculine attributes it listed as diseased: "stoicism, competitiveness, dominance, aggression, anti-femininity, achievement, eschewal of the appearance of weakness, and adventure, risk and violence."
>
> The only acceptable man now is a man who wants to be a woman. We celebrate "pregnant men" and "chestfeeding" men.
>
> […]We ignore the crisis that sees men commit suicide at ever increasing rates or succumb to drug abuse and porn addiction while savvy young women graduate from college in disproportionate numbers. Trained from childhood to be entitled and unrealistic about relationships, their fertility and the sacrifices and joys of motherhood, many become bitter and blame men for their confusion.

I'll be writing an article for Friday about the unrealistic expectations of young feminist women.

But for now, here's more Miranda, and quoting C.S. Lewis:

> Along the way, we emasculate the institutions that were necessarily masculine for our protection, notably the military. As an example, on Wednesday, the US Marines celebrated Lesbian, Gay, Bisexual, Transgender, Queer and Intersex Pride Month by tweeting a picture of a combat helmet adorned with rainbow-colored bullets.
>
> So, what do men do? They recoil and retreat. They leave the stage for hysterical epsilon men like Beto O'Rourke who whine and posture but can't protect a thing.
>
> Then when we need a strong, quick-thinking Gary Cooper to save us from outlaws, he's nowhere to be found.
>
> "We make men without chests and expect from them virtue and enterprise," C.S. Lewis foretold in his dystopian 1943 book "The Abolition of Man."
>
> "We laugh at honor and are shocked to find traitors in our midst. We castrate and bid the geldings be fruitful."

Maybe men have had it with being screeched at, so no more protecting and providing? (or leading, but *nobody* wants the leading anymore) Society can't spend all of their time attacking masculinity, then demand men perform male roles just when it suits them.

You would expect to see men retreating from traditional masculinity precisely in the states that attack traditional

masculinity as “toxic”.

The American Thinker notes:

> On May 28, Sky News Australia posted a video titled “New York bearing signs of ‘societal decay.'” The video shows a man (who seems as if he is on drugs) entering a train car and sitting next to a young woman. He then touches her without consent, grabs her, drags her around a bit, and generally is an extremely unpleasant nuisance.
>
> […]During the video, the young woman is seen looking at other passengers, with obvious worry in her eyes, begging somebody to please “help me.” Nobody tries to help her.

Where were the men? The author speculates:

> If I had to guess, they were standing in their place, checking their male privilege, toning down their toxic masculinity, and coping with how their Time’s Up.
>
> […]My guess is that none of the men watching wanted to become the next George Zimmerman. We all saw the emotional toll Kyle Rittenhouse suffered for defending himself.

The article notes New York’s laws against self-defense:

> New York has a duty to retreat, after all. Besides, New York has been in the habit of arresting those who defend themselves.

New York is a very feminized state. Male nature is suspicious – something for the government to outlaw and restrain by force. But when videos like this emerge, they reverse themselves and ask “where are all the good men?”

Matt Walsh has been talking about how the effeminate, weak Prime Minister of Canada just recently announced that there is no right to self-defense in Canada. No castle doctrine. No stand your ground. No use of force at all is allowed to defend yourself *(or your family)* from criminals.

Daily Wire reported:

> Guns are for hunting and target practice, but never for self defense, Canadian Prime Minister Justin Trudeau said this week, continuing his crusade against firearms.
>
> Trudeau, who is pushing a sweeping measure aimed at freezing the sale, purchase, or transfer of handguns in Canada, told the Pod Save America podcast his country takes a completely different view of firearms than its southern neighbor. No one in Canada has a right to defend themselves, their family or their property with a firearm, Trudeau declared.
>
> “We have a culture where the difference is: Guns can be used for hunting or for sport shooting in Canada – and there are lots of gun owners, and they’re mostly law-respecting and law-abiding – but you can’t use a gun for self-protection in Canada,” Trudeau said. “That’s not a right that you have in the Constitution or anywhere else.”

Matt noted on his show that this doesn’t just apply to guns. It applies to every form of self-defense, e.g. – pepper spray. The victim of a criminal is more likely to run afoul of the “law enforcement” in Canada than the actual criminal. For Trudeau, to lift up evil, and to stamp down good, is “compassionate”. He’s very compassionate.

It makes you wonder why anyone would live there, doesn’t it? I mean, especially men. Why would a man live there, and pay taxes there, knowing that the clown in charge makes it illegal for him to defend himself, or defend others? But Trudeau won re-election, so they must believe he is a good Prime Minister, and that his view of male nature is

accurate and good.

# Correcting four myths about the history of the Crusades

**Wintery Knight** · 25 May 2024 · Archived copy · Original

Here is an interesting article from Intercollegiate Studies Institute.

Intro:

> The verdict seems unanimous. From presidential speeches to role-playing games, the crusades are depicted as a deplorably violent episode in which thuggish Westerners trundled off, unprovoked, to murder and pillage peace-loving, sophisticated Muslims, laying down patterns of outrageous oppression that would be repeated throughout subsequent history. In many corners of the Western world today, this view is too commonplace and apparently obvious even to be challenged.
>
> But unanimity is not a guarantee of accuracy. What everyone "knows" about the crusades may not, in fact, be true. From the many popular notions about the crusades, let us pick four and see if they bear close examination.

The four myths:

- Myth #1: The crusades represented an unprovoked attack by Western Christians on the Muslim world.
- Myth #2: Western Christians went on crusade because their greed led them to plunder Muslims in order to get rich.
- Myth #3: Crusaders were a cynical lot who did not really believe their own religious propaganda; rather, they had ulterior, materialistic motives.
- Myth #4: The crusades taught Muslims to hate and attack Christians.

Here's the most obvious thing you should know. The Crusades were *defensive* actions*:*

> In a.d. 632, Egypt, Palestine, Syria, Asia Minor, North Africa, Spain, France, Italy, and the islands of Sicily, Sardinia, and Corsica were all Christian territories. Inside the boundaries of the Roman Empire, which was still fully functional in the eastern Mediterranean, orthodox Christianity was the official, and overwhelmingly majority, religion. Outside those boundaries were other large Christian communities—not necessarily orthodox and Catholic, but still Christian. Most of the Christian population of Persia, for example, was Nestorian. Certainly there were many Christian communities in Arabia.
>
> By a.d. 732, a century later, Christians had lost Egypt, Palestine, Syria, North Africa, Spain, most of Asia Minor, and southern France. Italy and her associated islands were under threat, and the islands would come under Muslim rule in the next century. The Christian communities of Arabia were entirely destroyed in or shortly after 633, when Jews and Christians alike were expelled from the peninsula.[6] Those in Persia were under severe pressure. Two-thirds of the formerly Roman Christian world was now ruled by Muslims.
>
> What had happened? Most people actually know the answer, if pressed—though for some reason they do not usually connect the answer with the crusades. The answer is the rise of Islam. Every one of the listed regions was taken, within the space of a hundred years, from Christian control by violence, in the course of military campaigns deliberately designed to expand Muslim territory at the expense of Islam's neighbors. Nor did this conclude Islam's program of conquest. The attacks continued, punctuated from time to time by Christian attempts to push back. Charlemagne blocked the Muslim advance in far western Europe in about a.d. 800, but Islamic forces simply shifted their focus and began to island-hop across from North Africa toward Italy and the French coast, attacking the Italian mainland by 837. A confused struggle for control of southern and central Italy continued for the rest of the ninth century and into the tenth. In the hundred years between 850 and 950, Benedictine monks were driven out of ancient monasteries, the Papal States were overrun, and Muslim pirate

> bases were established along the coast of northern Italy and southern France, from which attacks on the deep inland were launched. Desperate to protect victimized Christians, popes became involved in the tenth and early eleventh centuries in directing the defense of the territory around them.

If you asked me what are the two best books on the Crusades, I would answer God's Battalions: The Case for the Crusades by Baylor professor Rodney Stark and The Concise History of the Crusades by Professor Thomas F. Madden. If you get this question a lot from atheists, then I recommend you pick these up. Anything by Rodney Stark is useful for Christians, in fact.

# Three reasons why Christians should read military history

**Wintery Knight** · 26 May 2024 · Archived copy · Original

A while back, I finished a book called "Beyond The Call: The True Story of One World War II Pilot's Covert Mission to Rescue POWs on the Eastern Front". It's about a World War 2 heavy bomber pilot who completes 35 missions, and then goes into the Soviet Union (our allies, at the time) to rescue American POWs who were starving or being kidnapped or murdered by the Soviet secret police.

I found a very good article about it from Stripes, to just quickly introduce the story:

> Later, after making contact with POWs roaming the Polish countryside, [Capt. Robert Trimble] fully embraced his mission. He saw the desperate plight of those who had been liberated from Third Reich prison camps. Many were sick, emaciated, often clothed in rags and left to fend for themselves during a brutally harsh winter.
>
> Trimble risked his life numerous times over six weeks, helping to rescue hundreds of POWs. He came to the aid of others, too. In one daring rescue, nearly foiled by Russian agents who had become suspicious of his activities, Trimble helped 400 French women make it out of Poland and back to France.

Although he was being constantly trailed by Russian spies and informers, he would evade them, and bring food and money to the POWs, then put them on a train to Odessa, Ukraine, where they could get onto a ship going home.

Roger Trimble, standing second from the left, in front of his B-24 Liberator

**Why I read military history**

It is hard to develop virtues just by wishing and hoping. Something has to go into your mind that causes you to think differently, and feel differently. Everything that you watch on TV, hear on the radio, or see in the movie theater, is made by secular leftists. They aren't trying to build your moral character. They're goal is to break down your resistance to their unBiblical worldview and moral values. Instead of giving people who hate Jesus your money, just so you can be entertained, why not try to put something in front of your eyes that will make you better?

Look at this famous passage from the Bible.

Romans 12:1-2:

*1Therefore I urge you, brethren, by the mercies of God, to present your bodies a living and holy sacrifice, acceptable to God, which is your spiritual service of worship.*

*2 And do not be conformed to this world, but be transformed by the renewing of your mind, so that you may prove what the will of God is, that which is good and acceptable and perfect.*

And also this from Philippians, my favorite book of the Bible.

Philippians 4:8:

*8 Finally, brethren, whatever is true, whatever is honorable, whatever is right, whatever is pure, whatever is lovely, whatever is of good repute, if there is any excellence and if anything worthy of praise, dwell on these things.*

So you can see that when I am reading, my goal is to work on my character. I want to have feelings about things that are appropriate for a Christian man.

So why military history? Here are three reasons why I read these military history books.

**Humility**

First, **humility**. Humility used to be one of my biggest challenges. So I thought to myself "instead of seeing yourself as some heroic figure, why don't you read about some real heroes… people who willingly gave their lives for their friends, like the Bible urges, and like Jesus did by example".

Remember this from John 15:13?

*13 Greater love has no one than this, that one lay down his life for his friends.*

Military history is filled with stories of courage, bravery, self-sacrifice, endurance, unselfishness, and many other virtues. When you read about people who are better than you, doing more important things than what you're doing, it really helps you to be humble.

The best thing for humility is reading Medal of Honor citations. You can find a bunch of them online here. And if you want a book to read, try these books about Medal of Honor recipients:

- Heroes of World War II
- Korean War Heroes
- Vietnam Medal of Honor Heroes

**Endurance**

Second, **endurance**. I sometimes feel badly about not having found someone to marry and not having lots of children. I wanted a good marriage to be a model for others, and also to have an influence in the next generation through my children. However, whenever I read military history, I see a lot of young men dying in battle. And I think, they too won't know what sex is like. And, they too won't know what marriage is like. And, they too won't know what having children is like. But it's not just the ones who die, it's the hardships they have to go through, as well. Cold, hunger, imprisonment, pain, loss of their friends, etc.

I remember reading about one of my favorite battles – probably the most famous battle of the Korean War, which is our most moral war. It's about Fox Company of the 2nd Battalion, 7th Regiment, 1st Marine Division. They had to hold a hill beside a vital road against overwhelming numbers of Chinese soldiers during the freezing cold North Korean winter. I remember reading about how one soldier got up to go to the bathroom, and was nearly shot by a sniper. He fell over on his own poop, which had already frozen by the time it hit the ground. For months after, I would always think about this whenever I went into a bathroom. We have pre-warmed water in our bathrooms at work, along with soap, lysol spray, febreeze, contact lense cleaner, hand sanitizer, and other things. Just understanding what other people have to go through in war helps me to be more patient with the little tiny setbacks

that I experience. I used to get very anxious when anything went wrong, because of I was raised by strict immigrant parents. That anxiety seemed to last a long time, but since I started to read military history, I've been much more patient. I know that things could be worse.

**Thankfulness**

The third thing that I've experienced is **thankfulness**. Not just for all the things that I have because of what our armed forces have done, e.g. – basic human rights, prosperity, liberty, security, etc. But also specifically about those who gave their lives so that I could live free in a free country, and practice my Christian faith without fear.

Here are two of my favorite Medal of Honor stories from World War 2, in the Battle of Pearl Harbor:

*Congressional Medal of Honor*
*Awarded Posthumously*
*PETER TOMICH*

*Rank and organization: Chief Watertender, U.S. Navy.*
*Place and date: Pearl Harbor, 7 December 1941.*
*Born: 3 June 1893, Prolog, Austria.*

*Although realizing that the ship was capsizing as a result of enemy bombing and torpedoing, Tomich remained at his post in the engineering plant of the U.S.S. Utah, until he saw that all boilers were secured and all fireroom personnel had left their stations, and by so doing lost his own life.*

And:

*Congressional Medal of Honor*
*Awarded Posthumously*
*JAMES RICHARD WARD*

*Rank and organization: Seaman First Class, U.S. Navy.*
*Place and date: Pearl Harbor, 7 December 1941.*
*Born: 10 September 1921, Springfield, Ohio.*

*When it was seen that the U.S.S. Oklahoma was going to capsize and the order was given to abandon ship, Ward remained in a turret holding a flashlight so the remainder of the turret crew could see to escape, thereby sacrificing his own life.*

I do think that it's important for Christians to read these kinds of stories in order to feed their own awareness of what it must have been like for Jesus to give his life *voluntarily* for us.

There is no shortcut to gratitude. You have to constantly reflect on the sacrifices made by others for you, if you are to have any concrete reason for feeling grateful. The more you read about examples of people giving their lives for others, the more you'll appreciate what Jesus did for you. It will make you grateful.

There is a very annoying idea out there in the culture that says that people just do whatever is easy and fun for themselves, and since everyone else is always doing what makes them feel good, then there is no need to be thankful for anything. It's comforting for people to delude themselves with that belief, but it's false.

**My reading list**

You can check out the "What I am Reading" section of the blog to see which military history books I've been reading.

# Memorial Day: little destroyers fought like battleships in the Battle off Samar

**Wintery Knight** · 27 May 2024 · Archived copy · Original

I thought about what story from military history to share with you all for Memorial Day. This time, I decided on the story of Lieutenant Commander Robert W. Copeland and his ship the *Samuel B. Roberts.* The story takes place during World War 2, in the Pacific Theater, as the American fleet is battling with the Japanese to re-take the Philippine Islands.

I read about this story in "World War II at Sea: A Global History" by Craig L. Symonds and in "The Last Stand of the Tin Can Sailors" by James D. Hornfischer.

Before we get started, let's learn about some ship classes and weapon capabilities.

**Japanese Yamato-class battleship:**

- displacement: 72,809 tons
- speed: 27 knots
- 9 x 18.1″ guns
- 12 x 6.1″ guns
- 12 x 5″ guns

**Japanese Takao-class heavy cruiser:**

- displacement: 15,781 tons
- speed: 35.5 knots
- 10 x 8″ guns
- 4 x 5″ guns

**American Fletcher-class destroyer:**

- displacement: 2,500 tons
- speed: 36.5 knots
- 5 x 5″ guns

**American John C. Butler-class destroyer escort:**

- displacement: 1,370 tons
- speed: 28.7 knots
- 2 x 5″ guns

So, this story is from October 25th, 1944. It takes place east of the Philippine islands. The American force "Taffy 3" consists of 6 escort carriers, 3 destroyers, 4 destroyer escorts. An escort carrier is a light aircraft carrier. The Japanese force has 4 battleships, including the Yamato (!), 6 heavy cruisers, 2 light cruisers, and 11 destroyers. The Yamato is the largest and most powerful battleship ever built. The Americans are severely outnumbered and outgunned.

Normally, American escort carriers would be escorted by much larger ships, because they are so valuable. Carrier aircraft have much longer range and striking power than a battleship. But the Japanese had made a plan to lure Admiral William "Bull" Halsey away from the escort carriers and the invasion force, which he was supposed to be protecting. They used some aircraft carriers as bait, and Halsey chased after them with his battleships, cruisers and destroyers. The Japanese aircraft carriers had few aircraft and air crews, and were thus a weak threat. Halsey also

declined to communicate his decision to leave the escort carriers to his superiors. He also refused to respond to messages from Fleet Admiral Nimitz. By the time Halsey returned to his duty, he arrived too late to have any impact on the Battle off Samar.

But what about that force of destroyers and destroyer escorts that stayed with the escort carriers?

Here is an article from Warfare History Network that tells the story:

> At exactly 6:45 on the morning of October 25, 1944, Rear Admiral Clifton A.F. Sprague received a message from one of his pilots on antisubmarine patrol. The admiral recalled that the message went something like this: "Enemy surface force of 4 battleships, 7 cruisers, and 11 destroyers sighted 20 miles northwest of your task group and closing in on you at 30 knots."
>
> […]At 6:58, the ships opened fire. Less than a minute later, colored splashes from the Japanese shells landed astern of Taffy 3.

Two more things I need to explain. First, a "rain squall" is the equivalent of a foxhole in naval warfare. Ships inside the rain squall are invisible to ships outside the rain squall. Second, aircraft carriers must be sailing against the wind in order to launch aircraft.

More:

> Sprague was fully aware of his predicament and did not think that his force of "baby flattops" and their escorts would last 15 minutes against the oncoming battleships and cruisers. As soon as the approaching task force was confirmed as Japanese, he "took several defensive actions in quick succession." He ordered a change in course from north to due east, which pointed Taffy 3 "at full speed toward a friendly rain squall nearby." The new course also turned his carriers into the wind, and at 6:56 Sprague ordered all carriers to begin launching aircraft for torpedo and bombing attacks against Kurita's force. A minute later, he ordered the carriers and their escorts to make as much smoke as possible to screen Taffy 3 from the Japanese gunners. A smokescreen offered scant protection against large-caliber enemy shells, but it was better than nothing.

This part is interesting. I have to highlight the bravery of the torpedo, bomber and fighter pilots:

> After they dropped their bombs, the pilots made dry runs on the enemy ships to distract the Japanese gunners. The commander of Gambier Bay's air group flew his Avenger through enemy flak for two hours after he dropped his bombs. The pilots of the Wildcat fighters were sent in to strafe "with the hope that their strafing would kill personnel on the Japanese warships, silence automatic weapons, and, most important, draw attention from the struggling escort carriers." When their ammunition ran out, the fighter pilots also resorted to dry runs to harass the enemy. One pilot made 20 strafing runs, 10 of them without ammunition.

To me that is astonishing. I would only order my strike aircraft to strafe after dropping their ordnance if the enemy ship was on fire, moving slowly, and far away from her allies.

But it worked:

> "The bombers and torpedo planes were very aggressive and skilful and the coordination was impressive," a Japanese officer told his American interpreter after the war, "even in comparison with the many experiences of American attacks we had already had, this was the most skilful work of your planes."

Next, the American destroyers – *Hoel, Heermann and Johnston* – attacked:

> In addition to his carrier's air groups, Sprague also sent his destroyers and destroyer escorts against Kurita's

> force. The normal job of these screening warships was to protect the escort carriers from submarines, but now they would be performing a completely different task.

The destroyers did a great job of disrupting the advance of the much stronger Japanese ships with gunfire and torpedoes. The Japanese ships had to dodge the torpedoes, delaying their pursuit of the valuable escort carriers:

> American torpedoes were not fast and were easily avoided. However, the evasive action not only slowed the advance of the Japanese warships but also created confusion. Admiral Kurita himself said, "Major units [warships] were separating all the time because of the destroyer torpedo attacks." He realized that he was losing more tactical control every time his ships had to turn to avoid Taffy 3's torpedoes.
>
> […]Yamato turned away to evade the torpedoes, heading north and keeping on that course for about 10 minutes. This effectively took Yamato out of the fight.

You can read all the details in the article I'm quoting from, but I want to focus on the destroyer escorts – *Dennis, John C. Butler, Raymond, Samuel B. Roberts*.

More:

> Kurita was becoming convinced that he was facing a major American task force, not just a few escort carriers and destroyers. However, the battle was far from over. At about the same time that Hoel was firing her torpedoes at Haguro, Sprague ordered his destroyer escorts to begin their runs at Kurita's warships: "Little Wolves form up for a second attack," he barked. "Wolves" was code for the destroyers, while the radio call sign for the destroyer escorts was "Little Wolves." So far, the destroyer escorts had been assigned almost exclusively to antisubmarine patrols. Torpedo attacks against cruisers and battleships were something new to Taffy 3's Little Wolves.
>
> They threw themselves into the task. Raymond took on Haguro, the leading Japanese cruiser. Just before 8 am, she launched three torpedoes at a range of about 6,000 yards. Haguro turned to avoid them while Raymond changed course and got away from the scene as quickly as possible.
>
> Dennis followed the same course of action. She fired her torpedoes at the nearest Japanese cruiser, either Chokai or Tone, and turned sharply to the southwest. At about 8:10, Dennis opened fire with her after 5-inch battery on a cruiser that was already under air attack.

Robert Copeland told the crew of the Samuel B. Roberts:

> We're making a torpedo run. The outcome is doubtful, but we will do our duty.

They set off on their torpedo run, charging the Takeo-class heavy cruiser Chokai. The Roberts launched 3 torpedoes, and one scored a direct hit on the Chokai's stern, contributing to damage that would eventually sink her. The little destroyer got so close to the Chokai that her big 8 inch guns could not lower far enough to hit the Roberts.

On her way back to the escort carriers, the Roberts encountered the Chikuma, a Tone-class heavy cruiser. The Roberts engaged in a running gun battle with the heavy cruiser, firing off over 600 5 inch shells at the much larger ship. She destroyed one of the Chikuma's gun turrets and set fires all over the superstructure of the heavy cruiser. Japanese heavy cruisers and battleships fired at the Roberts. The Kongo, a Kongo-class battleship, hit the Roberts several times below the water line. Copeland gave the order to abandon ship, and the Roberts sunk a bit later, still under fire from larger Japanese ships. 90 of her crew perished, and 120 escaped on life rafts.

Copeland had broadcast this message to his crew before the battle:

> This will be a fight against overwhelming odds from which survival cannot be expected. We will do what

> damage we can.

And here is a short 12-minute animation that shows what happened in the battle:

In Fredericksburg, TX, at the National Museum of the Pacific War, there is a wonderful movie that shows the whole battle. I've been there.

Since this is Memorial Day, I want to highlight the American casualties of the Battle off Samar:

- 2 escort carriers sunk
- 2 destroyers sunk
- 1 destroyer escort sunk
- 23 aircraft lost
- 4 escort carriers damaged
- 1 destroyer damaged
- 2 destroyer escorts damaged
- 1,161 killed and missing
- 913 wounded

The casualty list would have been a lot worse, if not for the bravery of the pilots, and the crews of the destroyers and destroyer escorts who charged much larger ships to protect the valuable escort carriers.

# Study: belief in free will linked to ability to behave morally and to help others

**Wintery Knight** · 28 May 2024 · Archived copy · Original

A while back I finished reading “God’s Crime Scene”, the new book by J. Warner Wallace. I wanted to post something about some studies he mentioned in Chapter 6, on free will. This is one of the places where he found evidence in a surprising area.

Wallace says that free will makes more sense if theism is true, because we have non-material souls that interact with our bodies, but are not causally determined by them. On atheism, only matter exists, and you can’t get free will (or consciousness) from matter. So atheists like Sam Harris and Alex Rosenberg, for example, deny free will, because they are materialists and atheists.

Anyway, here’s what he writes on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others.” Even determinist Michael Gazzaniga conceded: “It seems that not only do we believe we control our actions, but it is good for everyone to believe it.”” The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here’s the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons’ belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in

> free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you're alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

## Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

# Biden administration is weaponizing the justice system against Christians

**Wintery Knight** · 29 May 2024 · Archived copy · Original

If you're not following the writing of Mary Margaret Olohan at Daily Signal, you should be. She's writing about how the Biden administration is using the legal system to punish Christians and pro-lifers, even as they turn a blind eye to crimes committed by secular leftist criminals and terrorists. I'll post one story below, and then you can check her recent headlines yourself.

Here's the story from Daily Signal:

> Republican Utah Sen. Mike Lee accused President Joe Biden's Department of Justice on Tuesday of "unjustly" persecuting pro-life activists exposing the "horrors of abortion."
>
> "The Biden administration is using the FACE Act to give pro-life activists and senior citizens lengthy prison terms for non-violent offenses and protests—all while turning a blind eye to the violence, arson, and riots conducted on behalf of 'approved' leftist causes," Lee told The Daily Signal in a Tuesday statement.
>
> The senator added: "Unequal enforcement of the law is a violation of the law, and men and women who try to expose the horrors of abortion are being unjustly persecuted for their motivations."

Now, you might remember how the Biden Justice Department gave very lenient sentences of about 12 and 15 months to two secular leftist domestic terrorists who fire-bombed a police car. So what kinds of sentences are Mike Lee's "pro-life activists and senior citizens" getting?

> Lee's comments come after news that pro-life activist Lauren Handy has been sentenced on DOJ charges to almost five years in prison for attempting to stop abortions of unborn babies from taking place at a Washington, D.C., abortion clinic.
>
> Handy will spend 57 months in prison and is the first person sentenced for violating the Freedom of Access to Clinic Entrances (FACE) Act, a 1994 law that supposedly protects both abortion clinics and pregnancy resource centers, but has been heavily enforced by Biden's DOJ against pro-lifers since the June 2022 overturning of Roe v. Wade.

Here's something interesting from the background of the woman who is pushing these cases:

> Those efforts are led by Assistant Attorney General Kristen Clarke, the head of the DOJ's Civil Rights Division, who recently admitted following a report from The Daily Signal that she hid an arrest and its subsequent expungement from investigators when she was confirmed to her Justice Department post.

If she had revealed the arrest, then I don't think she would be eligible for a Justice Department post.

And here's Mary's conclusion:

> The president's critics have accused Biden and the DOJ of weaponizing the FACE Act against pro-lifers while failing to charge pro-abortion criminals for the hundreds of attacks on pregnancy resource centers since the May 2022 leak of the draft Supreme Court opinion indicating Roe would soon be overturned.

Here are some of Mary's other columns from Daily Signal, if you want to double-check the details about what the Biden administration is doing to Christians, conservatives and pro-lifers:

- DOJ Puts Pro-Life Grandmother Behind Bars for Trying to Stop Abortions

- Biden DOJ Ramps Up War on Pro-Lifers With Lawsuit
- DOJ Attorney Expressed Concerns About Conservative Media Coverage of Biden Admin Persecuting Christians, Pro-Lifers
- DOJ's Kristen Clarke Celebrates Prison Time for Pro-Life Activists
- Pro-Life Activist Charged by Biden DOJ Gets Almost 5 Years in Prison for Trying to Stop Abortions
- DOJ's Kristen Clarke Asked Ex-Husband to Say She Wasn't an Abuser During Confirmation Process, Ex Alleges

Well, this is all very troubling. I always get upset when evidence emerges about the Democrat party persecuting Christians and conservatives. I don't want to believe that I live in a country where secular leftists are presiding over a two-tier justice system. There's one (lenient) justice system for the criminals who commit domestic violence, domestic terrorism, arson and infanticide, and then there's another (harsh) justice system for the married people who read the Bible, pray, attend church, homeschool their children, and don't need student loan bailouts.

There's an easy way for voters to give an opinion about the Biden administration – all they have to do is show up and vote for it, or against it, in November. And if you think that someone you know would be interested in these Daily Signal articles, then it might be a good idea to send them to all your friends.

# Reason #736 why men are opting out of dating and marriage: paternity fraud

**Wintery Knight** · 30 May 2024 · Archived copy · Original

Statistics show that men are choosing to disengage from dating and marriage. There are many reasons for this. I can name a dozen. One of the reasons is "paternity fraud". Paternity claims occur when a woman has a child, and then tries to collect child support from a man by claiming that he is the father. Sometimes, the man she identifies as the father is not the actual father. This is "paternity fraud".

Before I get started on paternity fraud, let me explain how child support works today, from this article in USA Today:

> The most well-known case was of a Kansas boy who, at age 13, impregnated his 17-year-old baby-sitter. Under Kansas law, a child under the age of 15 is legally unable to consent to sex. The Kansas Supreme Court in 1993 ruled that he was liable for child support.
>
> California issued a similar state court ruling a few years later in the case of a 15-year-old boy who had sex with a 34-year-old neighbor. In that case, the woman had been convicted of statutory rape.
>
> In both cases, it was the state social-services agency that pursued the case after the mother sought public assistance.
>
> […]In Arizona, the Department of Economic Security oversees child–support enforcement. Its written policy is not to exempt situations like Olivas' from child-support responsibilities, unless the parent seeking child support has been found guilty of sexual assault with a minor or sexual assault.
>
> […]The state has more routes than the courts to acquire money from a parent. It can garnishee wages up to 50 percent of disposable income. It can take a tax refund. It can put a lien on a home or a vehicle. It can suspend driver's licenses or revoke passports. And it can seize money out of bank accounts.

And another one from Fox 2 Detroit:

> A Metro Detroit man cleared his name after Friend of the Court sent him a letter saying he had a baby with a woman he never met.
>
> […]Late last year, DeAngelo received a letter from Friend of the Court in Berrien County saying that he was the father of a baby girl.
>
> "Said she's a stripper from Detroit, we had a one-night stand at some hotel, and this is the story that was told to me," DeAngelo said.
>
> His wife first spotted the letter in the mail from Friend of the Court.
>
> "Let's just set the record, I trust my husband," Tyahvia Smith said. "I know his character, man of integrity."
>
> While waiting for the child's mother to take the baby for a DNA test, DeAngelo said the school where he teaches received an inquiry for possible garnishment in case the child was his.
>
> "It made it something that is not being alleged, but now it's something that's being taken into action and no paternity has been established," he said.
>
> Finally, the woman had the DNA test done, and DeAngelo has since gotten a letter confirming he was not the father.

The request for money comes to the man's employer first, the DNA test comes later, and only if the man fights the system to get it.

I show these cases, so that people will understand what men are facing from social services agencies and courts. Basically, in cases where a woman statutory rapes a man, she is still entitled to child support from the victim of the rape. One can imagine the uproar if the sexes were reversed. The laws are anti-male in many ways, this is just one example. Anti-male laws deter men from dating and marrying women.

Now let's look at paternity fraud, another example of anti-male bias in the legal system.

Here's a story about it from CBS News Detroit:

> A Detroit man has been ordered to pay $30,000 in back child support for his ex-girlfriend's child — even though he's not the father.
>
> Carnell Alexander brought his case to Wayne County Circuit Court with hopes for a fix. Instead, Judge Kathleen McCarthy told him Tuesday he waited too long to challenge the situation and "failed to take this matter seriously."
>
> Alexander said the paternity case started in the 1980s when the woman gave his name to a case worker so she could get assistance for her baby, who was born in 1987.
>
> The woman agrees that Alexander wasn't the father and a DNA test taken in 2013 backs that up. But that wasn't enough to sway McCarthy, who ruled that despite the case being decades old, Alexander still has to pay.

Here's another story of paternity fraud from NBC News Miami:

> A man in North Florida is fighting the state after he was told to pay child support despite DNA tests proving that he was not the father.
>
> Joseph Sinawa told NBC affiliate WTLV-TV that he signed the birth certificate because he did truly believe he was the father – adding that the mother of the child doesn't want him to have to pay, but the state is forcing the issue.
>
> "She told the judge she just wants this to be done and over with, and so do I," he said from his home in St. Augustine.
>
> Sinawa found out he was not the father after the DNA test was administered by a St. Johns County court following a custody question – but the state's Department of Revenue appealed the decision because they say Sinawa has not properly attempted to disestablish paternity.
>
> "At the time it had been taking $83 out of my paycheck, more than 1/3 of my pay," he says. "When I thought I was the father I didn't have a problem with it."
>
> Sinawa is currently representing himself in court cases due to financial issues and has filed the necessary paperwork, but no time table has been set and it is unknown if he will be refunded any of the money spent.

According to this study in the peer-reviewed journal Epidemiology & Community Health, the median rate of paternity fraud across various studies is 3.7%:

> Paternal discrepancy (PD) occurs when a child is identified as being biologically fathered by someone other than the man who believes he is the father. This paper examines published evidence on levels of PD and its public health consequences. Rates vary between studies from 0.8% to 30% (median 3.7%, n = 17).

Even men who are not at risk for paternity fraud understand the lesson of paternity fraud. The courts are anti-male, and men need to stay well clear of those courts. And that means minimizing exposure to those courts. And that means keeping to themselves, and tending to their own problems and pursuing their own goals.

Men are getting smarter now. Men understand that society does not have their interests at heart. Now men want to

be left alone.

# Recent polls: voters less likely to support Trump after felony convictions

**Wintery Knight** · 31 May 2024 · Archived copy · Original

During the GOP primary, I wrote a lot about Ron DeSantis' many policy wins. He won re-election in Florida by 20%, winning over many moderates and independents to his ultra-conservative platform. But, voters chose Trump as the GOP nominee. This was in spite of polls showing Trump losing many supporters in the (likely) event that he was convicted of felonies. And that's now happened.

First, I wrote about Trump's 4 trials and 91 felony charges, after the Iowa caucus results, when voters in Iowa voted for Trump above DeSantis.

I wrote this:

> I watched Iowa voting results last night. It was disappointing. I wondered, "do Trump voters know that he is facing 4 criminal investigations, with 91 separate indictments?" So, I asked my Dad, who is very old and retired, and watches Fox News all day and all night. And he said "Yes, but they are all politically motivated, and they will all be dismissed". So, let's take a look.

And I went over all the trials and charges. Then I wrote this:

> Now it's time to ask one of my favorite questions to Trump supporters: What did you hope to achieve in the long-term by doing what felt good to you in the short-term? I would really like an answer from Trump supporters. What is the evidence that Trump will not get convicted of at least some of these charges, and then lose tons of votes in the general election, especially the trials taking place in blue states, with blue state juries? What is the evidence that a felony conviction will not cause Republicans to lose the general election in November?

By the way, I did call my Fox-News-Watching Dad and asked him whether he was surprised by the news of Thursday, and he said it was all so unexpected. That's despite me telling him that this was guaranteed to happen, and that Trump would be in a prison cell in the months leading up to election day (and after). But he's a Trump supporter, and the Fox News told him it would never happen.

Let's take a look at recent polls about Trump's felony convictions, and see whether he's going to lose any votes over these felony convictions that are now happening exactly as DeSantis supporters had predicted they would.

This is from Fox News, which strongly backed Donald Trump against Ron DeSantis:

> Would a Trump guilty verdict dramatically alter the current state of play in the presidential showdown?
>
> Recent national polling points to a very small — but potentially decisive — drop in support for Trump if he's convicted in court.
>
> Sixty-two percent of registered voters questioned in a Quinnipiac University survey said a guilty verdict would make no difference to their vote for president. Fifteen percent said it would make them more likely to cast a ballot for Trump and 21% said it would make them less likely to vote for the former president.
>
> Additionally, eight out of 10 Trump supporters surveyed in an ABC News/Ipsos poll said they would still back the presumptive GOP presidential nominee if he was found guilty in court. Sixteen percent said they would reconsider their support and 4% said they would no longer back Trump.
>
> Additionally, a Reuters-Ipsos poll indicated a two-point shift away from Trump if the former president is convicted, with a bigger six-point shift if Trump is put behind bars.

The future is hard to predict. The polls I was seeing previously predicted a 10% shift away from Trump to Biden, if Trump was convicted of a felony. That's why I urged people to vote for DeSantis, and persuade others to vote for DeSantis.

I have no doubt Trump's 34 felony convictions, each with a max sentence of 4 years in prison, will make Trump supporters even more likely to vote for Trump. But even if they are angry enough to vote twice for Trump, they only get one vote. And I doubt that Trump supporters will be able to convince moderates and independents to support a convicted felon with their rage alone.

Trump is not the candidate who turned a 0.5% win in 2018 into a 20% win in 2022. In a purple state. That would be Ron DeSantis. It's too bad we didn't vote for someone who was great on policy, and great at winning over moderates and independents. Trump has zero appeal to moderates and independents. If we wanted to win in November, we would have chosen Ron DeSantis.

I would say that right now, the only way for Republicans to win in November is to dump Trump, and let DeSantis be the candidate. The problem is that Trump is focused on himself. He's always been more concerned about himself. He doesn't support conservative candidates, he supports candidates who kiss his ring. This is not the person who is going to bow out in order to help Republicans win. Maybe when he loses, his supporters will understand (during the next 4 years of socialist tyranny), that it is important to vote with your mind, and not with your feelings. Maybe if we start to choose candidates based on policies and persuading independents, then we win the next election in 2028.

# New study: there is no gay gene that causes homosexuality

**Wintery Knight** · 1 June 2024 · Archived copy · Original

I heard one of the authors of this new study commenting on how he was a gay man, and the purpose of his research was to show a genetic basis for homosexuality, in order to make it equal to race. His goal was to make it impossible to disagree with homosexual behavior, because homosexual behavior would be seen as natural and normal. Let's see if his new study helps him out.

The blog of the peer-reviewed journal PLOS One reported on the new study, which was published in the prestigious journal Science.

Excerpt:

> The once-prevailing concept of a "gay gene" dictating sexual orientation has been put to rest in a powerhouse study published today in *Science*. The work brilliantly illustrates the very nature of science: evolving with the input of new data, especially the large-scale contributions of bioinformatics and crowd-sourcing.
>
> "We formed a large international consortium and collected data for more than 500,000 people, comparing DNA and self-reported sexual behavior. This is approximately 100 times bigger than any previous study on this topic," said lead author Andrea Ganna, of the Institute of Molecular Medicine in Finland and an instructor at Massachusetts General Hospital and Harvard Medical School, opening a news conference earlier this week.
>
> […]The investigation estimates a genetic contribution to same-sex sexual behavior as under 1 percent, thanks to analysis of a trove of data from the UK Biobank and the consumer genetic testing company 23andme.

So, there you have it, there is no gay gene. But this is of course something we've known for decades, as all the previous studies had found the same thing.

The normal way that people do these studies is to analyze identical twins, and see how often both identical twins are gay.

> Eight major studies of identical twins in Australia, the U.S., and Scandinavia during the last two decades all arrive at the same conclusion: gays were not born that way.
>
> "At best genetics is a minor factor," says Dr. Neil Whitehead, PhD. Whitehead worked for the New Zealand government as a scientific researcher for 24 years, then spent four years working for the United Nations and International Atomic Energy Agency. Most recently, he serves as a consultant to Japanese universities about the effects of radiation exposure. His PhD is in biochemistry and statistics.
>
> Identical twins have the same genes or DNA. They are nurtured in equal prenatal conditions. If homosexuality is caused by genetics or prenatal conditions and one twin is gay, the co-twin should also be gay.
>
> "Because they have identical DNA, it ought to be 100%," Dr. Whitehead notes. But the studies reveal something else. "If an identical twin has same-sex attraction the chances the co-twin has it are only about 11% for men and 14% for women."
>
> Because identical twins are always genetically identical, homosexuality cannot be genetically dictated. "No-one is born gay," he notes. "The predominant things that create homosexuality in one identical twin and not in the other have to be post-birth factors."
>
> Dr. Whitehead believes same-sex attraction (SSA) is caused by "non-shared factors," things happening to one twin but not the other, or a personal response to an event by one of the twins and not the other.

By the way, a previous study also found that transgender behavior was not genetic, but was clearly linked to environmental factors such as peer approval and social media.

Here is the report from Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE.*
>
> Littman surveyed more than 250 parents of children who suddenly developed gender dysphoria symptoms during or after puberty.
>
> […]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

A previous study also found that children are more likely to be gay if they are raised by gay adults. It was reported in AOL News.

Excerpt:

> Walter Schumm knows what he's about to do is unpopular: publish a study arguing that gay parents are more likely to raise gay children than straight parents. But the Kansas State University family studies professor has a detailed analysis that past almost aggressively ideological researchers never had.
>
> […]His study on sexual orientation, out next month, says that gay and lesbian parents are far more likely to have children who become gay. "I'm trying to prove that it's not 100 percent genetic," Schumm tells AOL News.
>
> His study is a meta-analysis of existing work. First, Schumm extrapolated data from 10 books on gay parenting… [and] skewed his data so that only self-identified gay and lesbian children would be labeled as such.
>
> […]Schumm concluded that children of lesbian parents identified themselves as gay 31 percent of the time; children of gay men had gay children 19 percent of the time, and children of a lesbian mother and gay father had at least one gay child 25 percent of the time.
>
> […]Finally, Schumm looked at the existing academic studies… In all there are 26 such studies. Schumm ran the numbers from them and concluded that, surprisingly, 20 percent of the kids of gay parents were gay themselves. When children only 17 or older were included in the analysis, 28 percent were gay.

It's very important for people to understand that there is a trend in society to make every behavior traditionally seen as sinful into something caused by genetics. The twin goals of this effort are to insulate the behaviors from criticism, and to minimize evaluation of the effects of these behaviors on society as a whole. The genetic argument was used extensively to normalize same-sex marriage and transgenderism. I have seen the genetic argument used to defend other behaviors like pedophilia and incest. But the scientific research does nothing to support any of these arguments. What's amazing is how a majority of people in the United States have such false beliefs about the scientific research. They vastly overestimate the number of gay people, and also the influence of genetics.

# New study: children of same-sex parents have more emotional problems

**Wintery Knight** · 2 June 2024 · Archived copy · Original

I like to have all the research papers I need on hand to "show my work" to people who want to know why I have certain views on moral issues. This study entitled "Emotional Problems among Children with Same-Sex Parents: Difference by Definition" was published in the peer-reviewed journal "British Journal of Education, Society and Behavioural Science" is good research.

Here's what it says:

> Aims: To test whether small non-random sample findings that children with same-sex parents suffer no disadvantage in emotional well-being can be replicated in a large population sample; and examine the correlates of any differences discovered.

A big sample size makes the study more reliable:

> Methodology: Using a representative sample of 207,007 children, including 512 with same-sex parents, from the U.S. National Health Interview Survey, prevalence in the two groups was compared for twelve measures of emotional problems, developmental problems, and affiliated service and treatment usage, with controls for age, sex, and race of child and parent education and income. Instruments included the Strengths and Difficulties Questionnaire (SDQ) and the Kessler Scale of Psychological Distress (SPD). Bivariate logistic regression models tested the effect of parent psychological distress, family instability, child peer stigmatization and biological parentage, both overall and by opposite-sex family structure.

This is the key part. "Emotional problems were over twice as prevalent… for children with same-sex parents than for children with opposite-sex parents." That's not what you'll see on TV or in the corporate news media, but that's what you find if you're looking for peer-reviewed studies with good methodology and large sample sizes.

> Results: Emotional problems were over twice as prevalent (minimum risk ratio (RR) 2.4, 95% confidence interval (CI) 1.7-3.0) for children with same-sex parents than for children with opposite-sex parents. Risk was elevated in the presence of parent psychological distress (RR 2.7, CI 1.8-4.3, p (t) < .001), moderated by family instability (RR 1.3, CI 1.2-1.4) and unaffected by stigmatization (RR 2.4, CI 1.4-4.2), though these all had significant direct effects on emotional problems. However, biological parentage nullified risk alone and in combination with any iteration of factors. Joint biological parents are associated with the lowest rate of child emotional problems by a factor of 4 relative to same-sex parents, accounting for the bulk of the overall same-sex/opposite-sex difference.

And here's the conclusion:

> Conclusion: Joint biological parentage, the modal condition for opposite-sex parents but not possible for same-sex parents, sharply differentiates between the two groups on child emotional problem outcomes. The two groups are different by definition. Intact opposite-sex marriage ensures children of the persistent presence of their joint biological parents; same-sex marriage ensures the opposite. However, further work is needed to determine the mechanisms involved.

I blogged recently about another study that found other differences between the children of same-sex couples and the children of heterosexual couples.

From a public policy point of view, there are always going to be times where there is a conflict between the needs of small children, and the wants of selfish adults. In that case, I think we should side with the small children, since they are more vulnerable. It's alarming to me to see many "conservatives" put the desires of adults over the needs of children. That doesn't seem like a good position to take, morally speaking. Children do better when they are raised by a Mom and a Dad. We should pass laws to encourage grown-ups to live their lives in a way that they don't harm children.

# 1 million conservative United Methodist members leave denomination

**Wintery Knight** · 3 June 2024 · Archived copy · Original

How are things working out for the United Methodists? They used to be a pretty moderate denomination. Not as Bible-based as the Presbyterian Church in America, but not as secular and leftist as the Episcopal Church. But recently, they've taken positions on theology and morality that no Bible-Believing Christian could accept. How did the Bible-believing Christians in the church respond to that?

Here's the story from Christian Post:

> A regional body of the United Methodist Church with approximately 1 million members has voted to leave the mainline denomination over its acceptance of gay marriage and noncelibate gay clergy.
>
> The Côte d'Ivoire Conference based in West Africa voted earlier this week to leave the UMC after the denomination's decision to remove rules banning the blessing of same-sex unions and the ordination of people in romantic same-sex relationships from its Book of Discipline.
>
> With approximately a million members, the conference was one of the largest regional bodies within the worldwide denomination, according to UM News.
>
> The approved decision argues that "the new United Methodist Church has preferred to sacrifice its honorability and integrity to honor the LGBT" and that "the new United Methodist Church is now based on sociocultural and contextual values which have consumed its doctrinal and disciplinary integrity."

This is not the only group to leave the United Methodist Church:

> Over the past few decades, the UMC had been embroiled in a divisive debate over whether to remove language from its Book of Discipline that prohibited the blessing of gay unions, the ordination of noncelibate homosexuals, and the funding of LGBT advocacy groups.
>
> In response to the never-ending nature of the debate and many liberal leaders within the UMC refusing to follow or enforce the rules, around 7,500 mostly conservative congregations disaffiliated from the denomination over the last few years.
>
> Most of these departing congregations opted to affiliate with the Global Methodist Church, a theologically conservative alternative to the UMC launched in 2022.
>
> At the UMC General Conference earlier this year, delegates overwhelmingly voted to remove the Book of Discipline language, opening the door for the acceptance of same-sex marriage and ordaining clergy in gay unions.
>
> At the same General Conference, delegates voted to approve the departure of the UMC Eurasian Episcopal Area, which has four annual conferences in Eastern Europe and Central Asia.

The United Methodists aren't the only denomination who find Jesus' definition of marriage in Matthew 19:1-6 to be factually incorrect.

American Protestant denominations, such as United Church of Christ, Evangelical Lutheran Church in America, The Episcopal Church USA, Presbyterian Church USA, Disciples of Christ, United Methodists generally oppose Jesus' definition of marriage.

Outside of America, the Church of England approves blessing same-sex unions and Pope Francis formally approved letting Catholic priests bless same-sex couples.

How is all of this apostasy working out for the secular left denominations?

According to Religion Unplugged, it's not working out well:

- United Church of Christ -52%
- Evangelical Lutheran Church in America -41%
- The Episcopal Church USA -36%
- Presbyterian Church USA -58%
- United Methodist Church -31%

Meanwhile, conservative denominations are thriving:

- Presbyterian Church in America +101%
- Assemblies of God +51%

This isn't the first time that United Methodists have gotten into trouble for choosing feelings over truth. The United Methodists recently adopted women pastors. Maybe that decision has something to do with their continued decline, in both orthodoxy and attendance?

# What can Christians learn from the bravest naval aviator at the Battle of Midway?

**Wintery Knight** · 4 June 2024 · Archived copy · Original

I have been reading lots of books about the World War II battles in the Pacific theater lately, and I wanted to write a post about one of the heroes I found who was the most compelling to me. You may have seen him in the old 1976 Midway movie or the new 2019 Midway movie. But neither movie tells the full story. The man I am talking about is Lt. Commander John C. Waldron.

John Waldron was the leader of the torpedo bomber squadron on the Hornet. This squadron was composed of outdated and slow Devastator torpedo bombers, armed with the Mark 13 Mod 1 torpedoes, which malfunctioned about 90% of the time.

I found an article on the Federalist that tells the story of John Waldron:

> Now there are countless men and woman who deserve to be singled out for their valor, but with the 75th anniversary of the Battle of Midway just around the corner, I thought it would be appropriate to call your attention to one of the bravest men who ever lived. A man who, knowing he was facing certain death, led the first attack against the Japanese aircraft carriers and played a direct role in what would be a decisive victory for the United States, and a defeat from which Japan would never recover. That man was Lt. Commander John C. Waldron.
>
> Now for those who don't know, the Battle of Midway was the turning point in the Pacific theater. The Japanese had an elaborate plan that involved attacking the U.S. base on Midway Island in order to lure the Americans into a battle which the Japanese High command felt their experience and tactics would overwhelm and annihilate the American fleet. With no significant U.S. naval presence, Hawaii and the entire West Coast would be at risk of invasion. But the Americans broke the Japanese code and set a trap of their own – hoping to destroy their enemy's carriers and thereby establish U.S. dominance in the Pacific. And that was exactly what happened : The U.S. fleet surprised the Japanese, sank their four carriers, and took the first real step to winning the Second World War.
>
> John Waldron was 42 years old when the *USS Hornet* steamed towards Midway on June 1st, 1942. Born and raised on a reservation in South Dakota, he had never seen the ocean until he attended the Naval Academy. It wasn't long after he graduated that he moved into naval aviation. He had been assigned to be the squadron leader of the *Hornet's* torpedo bombers in late 1941 and had been drilling his men tirelessly ever since. Waldron had the reputation of a tough as nails, no-nonsense commander. Not surprising, since Waldron was a direct descendant of the warriors from the Oglala Lakota tribe – part of the Great Sioux Nation. The tough skin he developed came from decades of derision from his peers over his meager beginnings, and from the racism directed at his Native American heritage. Waldron didn't care what anyone thought of him – all he wanted to do was fight for his country. He was a natural leader and his men would follow him into the gates of Hell, which, as fate would have it, is exactly what they would do in the upcoming battle.
>
> On the morning of June 4th, the Americans were ready to spring their trap, but in the preflight briefing aboard the *Hornet* there was a problem. Stanhope Ring, who was in command of the carrier's air group, directed his pilots to head northwest of the last reported position of the Japanese fleet. Waldron disagreed with this decision, feeling that they should head in the exact direction of that last sighting. He wasn't shy about expressing this opinion, much the displeasure of Ring. Waldron continued to lobby his superior officer several times after the briefing ended, but to no avail.

The Federalist article doesn't talk much about Stanhope Ring, but the book I just finished called "The Battle of Midway" by Craig L. Symonds did. Ring was a very tall, good-looking, and white officer who had breezed up the

chain of command thanks to his good looks and confident manner. He loved to show off for cameras, and pull rank on subordinates. He was too proud to admit that Waldron was right in front of the other pilots.

More:

> The air strike force took off from the deck of the *Hornet* – fighters, dive bombers, and the 15 planes in Waldron's torpedo squadron. This force would be joined in the air by similar strike forces from the other U.S. carriers – the *Yorktown* and the *Enterprise*. Shortly after the Hornet's air group was airborne, Waldron couldn't contain his anger anymore. He broke radio silence to tell Ring that they were headed in the wrong direction. He repeated that comment and Ring issued a terse reply that he was in charge of this group and to stay the hell off the radio. Waldron waited a couple of minutes before replying "The hell with you" and peeled his squadron off and headed due west, where he felt the Japanese fleet was.
>
> Less than an hour later, Waldron was proved right. He had led his squadron on a direct line to the enemy. Waldron broke radio silence again to signal to Ring that he had found the fleet, but Ring and the rest of the *Hornet's* planes were too far away to hear. So now, Waldron was faced with a brutal decision. If he went in to attack, he would do so without any fighter protection, and they'd be totally at the mercy of the Japanese fighters. To make matters worse, the U.S. planes (Douglas Devastators) were hopelessly outdated aircraft – their top speed was about a third of what the Japanese fighters could do. They had hoped to get the newer Grumman Avengers, but the *Hornet* had left Pearl Harbor before they had arrived from the mainland. All of this meant that Waldron and Torpedo 8 were looking at a suicidal attack run. […]Waldron got on the radio again and told his men "We will go in. We won't turn back. Former strategy cannot be used. We will attack. Good luck!"
>
> And with that, the planes of Torpedo 8 closed up their formation and bore down on the Japanese fleet, some seven miles distant.
>
> The Japanese fighters quickly pounced on the Americans, who were going in low and slow – the only way torpedo bombers can attack. One by one the planes from Torpedo 8 were shot down. […]Every single plane in Torpedo 8 was destroyed and not one torpedo hit a Japanese ship.

Not only were the torpedo bombers of John Waldron's VT-8 (Hornet) shot down, but two more waves led by Eugene Lindsey VT-6 (Enterprise) and Edward Massey VT-3 (Yorktown) were also repulsed without a hit.

More:

> History might have viewed Waldron's attack as more insane than brave, and utterly pointless….except for what happened next. Shortly after his failed attack, the torpedo squadron from the *Enterprise* attacked the fleet – and right after that the torpedo squadron from the *Yorktown*. Both of those squadrons had devastating casualties as well (10 of 14 planes lost and 10 of 12 respectively) without inflicting any damage on any Japanese ship. But these three attacks in succession drew the Japanese fighter cover down so low, that it left their carriers exposed to dive bomber attacks. It also burned up a lot of fuel for the fighters, who now needed to land before they could continue their defense of the fleet. The attacks also forced the Japanese carriers into defensive maneuvers, so they were unable to land any planes or launch any for a strike on the American carriers.

In addition to using up their fuel and coming down to low altitude, the Japanese CAP (combat air patrol) fighters also used up most of their dangerous 20 mm ammunition. They mostly had much weaker 7.7 mm ammunition remaining when the dive bombers from the Enterprise and Yorktown arrived.

More:

> As the Japanese were trying to compose themselves after the three fierce but harmless attacks, the American dive bombers from the *Enterprise* and *Yorktown* arrived and quickly struck. Within minutes, three of the

> Japanese carriers were in flames – the heart of the Imperial Navy had been gutted.
>
> […]The other planes from the Hornet never found the Japanese ships. Ring kept his planes flying in that northwesterly direction until they were too low on fuel to keep going. They returned to the *Hornet* with their full payload of bombs.
>
> […]Now, there were a lot of heroes that day – some who lived and some who died, but the valor that John Waldron displayed in defying orders he knew were wrong and then attacking the enemy when he knew it meant certain death, place him on a special level. His actions directly helped the Americans win this crucial battle, which turned the tide of the war in the favor of the United States. He got the Navy Cross for his actions that day, but it seems astonishing to me that he wasn't awarded the Medal of Honor – he is definitely worthy of it.

You can learn more about the Battle of Midway in this helpful video:

So, here is what I wanted to say about this.

John Waldron was not properly equipped by his organization to make a difference at Midway. His planes were too old and slow, his torpedoes almost never worked. His leader was an arrogant, incompetent coward who prevented him from leading others to find and attack the actual targets. The only way he could do something to his enemy was to disobey orders and go off on his own. If he had lived, he probably would have been court-martialed for insubordination. After Waldron was shot down, every single one of the men in his squadron continued their attack until they too were all shot down. Everyone watching must have thought "what a waste of effort". It was only later that it became evident to all that what he did was necessary for the second wave to succeed.

This plaque at the United States Naval Academy Club honors the three commanders of the torpedo bomber squadrons:

Plaque honoring the Midway torpedo bomber squadron commanders

According to the Family Research Council, the plaque reads:

> The torpedo attacks of Waldron, Lindsey, and Massey had followed hard upon each other by luck. What was not luck, but the soul of the United States in action, was the willingness of the torpedo plane squadrons to go in against hopeless odds. This was the extra ounce of martial weight that in a few decisive minutes tipped the balance of history.

When I read this story, it immediately occurred to me that this is the problem that serious Christians are facing today. Parents and pastors are not equipping young people to actually make a difference. Instead of finding and

fighting the real targets: atheism, radical feminism, communism, etc., all our forces have been sent on wild goose chases, so that now “Christians” are actually trying to promote the priorities of the secular left, e.g. – global warming, wealth redistribution, affirming sexual immorality, open borders, critical race theory, etc.

The few of us who actually know how to do our jobs are poorly equipped. We are prevented from leading by organizations that are focused on feelings rather than results. We can only hope that our decision to attack against hopeless odds somehow paves the way for a second wave to succeed. It has happened before, and that’s why we should be brave and continue to engage our opponents using tools that work (philosophy of religion, evidential apologetics, scientific research, historical evidence, chastity, sobriety, self-control, good stewardship of our educations, careers and finances, effective charitable giving, self-sacrificial love, etc.).

# New study: Mental health issues persist after receiving “gender-affirming” treatment

**Wintery Knight** · 5 June 2024 · Archived copy · Original

This brand new study is authored by one of the pioneers in “gender-affirming” treatment. It was published in the peer-reviewed “European Psychiatry”. The title of the article is “Have the psychiatric needs of people seeking gender reassignment changed as their numbers increase? A register study in Finland”. Let’s take a look at the findings.

The researchers looked at 3,665 people who received gender identity services between 1996 to 2019. This is a huge study. And we’ll see in a minute that the author used to be in favor of gender-affirming treatment – so she’s not biased against it.

Here’s the results section:

> The GD [gender dysphoria] group had received many times more specialist-level psychiatric treatment both before and after contacting specialized GIS [gender identity services] than had their matched controls. A marked increase over time in psychiatric needs was observed. Among the GD group, relative risk for psychiatric needs after contacting GIS increased from 3.3 among those with the first appointment in GIS during 1996–2000 to 4.6 when the first appointment in GIS was in 2016–2019. When index period and psychiatric treatment before contacting GIS were accounted for, GR [gender reassignment] patients who had and who had not proceeded to medical GR had an equal risk compared to controls of needing subsequent psychiatric treatment.

Receiving “many times more specialist-level psychiatric treatments” resulted in “A marked increase over time in psychiatric needs”.

And the conclusion reaffirms that:

> Contacting specialized GIS [gender identity services] is on the increase and occurs at ever younger ages and with more psychiatric needs. Manifold psychiatric needs persist regardless of medical GR [gender reassignment].

Psychiatric needs persist REGARDLESS of medical gender reassignment. That means gender reassignment – so-called “gender-affirming care” – makes no difference to the patient’s mental health.

This study got picked up in the news, as you might expect, since it contradicts the narrative of the secular left. What’s the narrative of the secular left? “Right and wrong don’t exist. My feelings are very important. You need to not judge me. You need to affirm me.”

Here’s an article from the UK Daily Mail that talks about the author of the study:

> A woman who led European efforts to give puberty blockers to trans children has bared all about U-turning on gender-affirming care, as it is known, and debunks treatments she now calls ‘dangerous.’
>
> Dr Riittakerttu Kaltiala, chief psychiatrist at the Tampere University Hospital Department of Adolescent Psychiatry in Finland, has revealed why she changed her mind about helping minors medically transition.
>
> Writing in The Free Press, Dr Kaltiala says the Western medical establishment has been cowed by trans activists into a ‘dangerous groupthink’ of pushing risky sex-altering drugs on children.
>
> ‘Gender transition has gotten out of hand,’ says Dr Kaltiala.

What I'd like to see now is for conservatives to pass laws that allow people who were victimized by the secular leftist butchers to sue those butchers for compensation. It's very important that the "don't judge" crowd is punished for the harm caused by their not judging. That's the only way that they will understand that the people they think are evil (the moral people, the boundary setters) are actually good. And the people they think are good (the feelings people, the don't judge people) are evil.

Let's see some money change hands over this controversy, so everyone can be clear about the value of moral leadership and spiritual leadership.

# Meet four heroes of the D-Day invasion of Normandy on June 6th, 1944

**Wintery Knight** · 6 June 2024 · Archived copy · Original

I thought it might be a good idea to write up something about D-Day in order to help people understand some of our military history, and to put the spotlight on some real heroes. I don't regard artists, athletes, dancers, singers, actors, or other celebrities as heroes. It really alarms me that so many people know more about these fake heroes than they do about real ones.

**Weakness emboldens aggressors**

For one thing, many people don't understand how British and American libertarian isolationism made World War 2 into a much bigger mess than it needed to be. As historian Victor Davis Hanson explains in the lecture I linked below, the Allied nations were much stronger and better equipped than the Axis nations before the war started. The Axis nations developed better weapons after the war started. But Germany and Japan didn't think that the Allied nations would do anything if they were aggressive. We know this from their writings and correspondence. They thought that British and Americans were just too scared of war to stop them.

Germany and Japan tested their hypothesis out by re-arming and annexing territory from their neighbors. Britain and America were led by libertarian isolationists, so they didn't fight back. The aggressors correctly understood that libertarian isolationists didn't have the will to oppose them, even if they were weaker than the Allies. But the more they re-armed and annexed territory, the stronger they became. The Allied nations waited too long to confront them. And that's why World War 2 was much harder to win than it needed to be.

Here's a very good lecture about the causes of World War 2 by an actual military historian, Victor Davis Hanson:

So, that's the first point I wanted to make: libertarian isolationism causes wars. Although libertarians claim to oppose war, they actually cause war, due to their weakness in the face of evil. So who stops wars? People who favor a strong defense, and show a willingness to fight back against aggression are the ones who REALLY oppose wars. This is called "peace through strength", and you can see it in action in the Cold War, where Ronald Reagan defeated the Soviet Union by making their aggression costly.

THE CANADIAN PRESS

**Heroes of D-Day**

My second concern was to promote the real heroes of D-Day, over the fictional heroes of movies, fiction, music,

dancing, sports, and other entertainment nonsense.

Here are the four heroes I chose:

- Major John Howard
- Lieutenant Colonel Benjamin Vandervoort
- Brigadier General Norman Cota
- Major Richard Winters

Let's take a look at each of them.

**John Howard**

Major John Howard led elements of the British 6th Airborne Division to take two vital bridges southeast of Sword beach. He did this in order to prevent German socialist counterattacks coming from the east. After they took the bridges, they had to repulse German tanks with nothing more than their useless PIAT (Projector Infantry Anti-Tank) grenade launchers. The PIAT was nothing more than a grenade launcher powered by a coiled spring. It was very inaccurate, and only effective to 50 yards. But that's all the British paratroops had to stop tanks, and they made it work. You can read about him in this book by Stephen E. Ambrose, entitled: "Pegasus Bridge: June 6, 1944". This New York Times article tells the story in brief. He also is played by Richard Todd in the famous movie "The Longest Day".

**Benjamin Vandervoort**

Lt. Col. Ben Vandervoort served with the 82nd Airborne Division. I read about how he lead an infantry attack against German Tiger tanks (!) and infantry in Stephen E. Ambrose's book "Citizen Soldiers: The U.S. Army from the Normandy Beaches to the Bulge to the Surrender of Germany". Ben Vandervoort broke his ankle during the D-Day landing, but he insisted that the medic just "lace it up tight" so that he could supervise the attacking and holding of Ste. Mere Eglise, southwest of Utah beach, against a vastly superior enemy force. This article tells about how he defended against elite German SS infantry and heavy Tiger tanks at Trois-Ponts, during the Battle of the Bulge. He was outgunned and outnumbered 20 to 1, and had just a few lightly-armed soldiers, two weak 57mm anti-tank guns and some bazookas. He is portrayed by John Wayne in the famous movie "The Longest Day".

**Norman Cota**

Brig. General Norman Cota is my favorite person in World War 2. At 51 years old, he nevertheless landed at D-Day, and rallied terrified Army Rangers to follow him up the bluff, by telling them that Rangers ought to lead the way. "Rangers Lead The Way" later became the motto of the Army Rangers. He always led from the front, demonstrating how to attack a German machine gun position in a farmhouse to a group of American soldiers who were pinned down. He actually grabbed a bunch of grenades and led the assault team against a heavy machine gun! You can read about him in this short article and in Stephen E. Ambrose's "D-Day: June 6, 1944: The Climactic Battle of World War II". He is portrayed by Robert Mitchum in the famous movie "The Longest Day".

**Richard Winters**

Major Richard Winters served in the 101st Airborne Division. Winters led an assault against a superior force of heavy machine guns and 105mm field guns. His tactics were so brilliant that they are still studied at West Point today. You can see Richard Winters and Carwood Lipton in the HBO "Band of Brothers" series, or read this book by Stephen E. Ambrose entitled "Band of Brothers: E Company, 506th Regiment, 101st Airborne, from Normandy to Hitler's Eagle's Nest", which is the basis for that series.

I hope this convinces you that military heroes are far more important than the "heroes" of fiction and entertainment. It's alarming to me that people invest more and have more respect for characters in Hollywood science fiction movies, and other such make-believe nonsense. We need to be rooted in reality. In reality, men who fight and die fighting evil to protect your freedoms are the real heroes. People who take military history seriously are able to give

respect and gratitude where it is due – a very important part of being a mature, moral human being.

# Study: sentences are 63% more severe for men than for women

**Wintery Knight** · 7 June 2024 · Archived copy · Original

So, in response to yesterday's post, I have been asked what are some of the other reasons that cause men to become disinterested in dating and marriage. I have a list as long as my arm. But here's another one for today. Today's reason is that the legal is system is biased against men. There many examples of the bias, but I'll focus on sentencing.

The study I want to talk about today is called "Estimating Gender Disparities in Federal Criminal Cases", and it's published in the peer-reviewed journal "*American Law and Economics Review".*

The abstract says this:

> This paper assesses and decomposes gender disparities in federal criminal cases. It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables. Decompositions show that most of the unexplained disparity appears to emerge during charging, plea-bargaining, and sentencing fact-finding. The approach provides an important complement to prior disparity studies, which have focused on sentencing and have not incorporated disparities arising from those earlier stages. I also consider various plausible causal theories that could explain the estimated gender gap, using the rich dataset to test their implications.

The key sentence there is "It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables."

I also found this paragraph interesting:

> The estimated gender disparities are strikingly large, conditional on observables. Most notably, treatment as male is associated with a 63% average increase in sentence length, with substantial unexplained gaps throughout the sentence distribution.

This anti-male discrimination becomes apparent to men when they are going through the divorce process.

About 70% of divorces are initiated by women, and most of them for frivolous reasons (reasons that were not recognized as valid in the law prior to "no-fault-divorce" being enacted). The reasons are also not recognized in the Bible. Throughout the divorce process, men encounter anti-male bias. This begins with the common use of false accusations against the man, in order to get sole custody, which provides the woman with greater child support payments from the man. These false accusations are usually not based on any evidence, such as police reports. They just emerge during the divorce proceedings and are used to eject the man from the home, and get the woman sole custody of the kids. In 90% of cases, the woman gets sole custody of the kids. And this is despite the fact that single-father homes have similar outcomes for children as married two-parents homes. The results of single-mother homes are disastrous for children in many areas, including poverty, crime, mental health, sexual activity, etc. But the court system insists on doing what is worse for children by separating the father from the child. Even the meager visitation rights that fathers get are not enforced.

Failure to pay alimony and child support can land men in prison. And the laws are enforced very unfairly there, as well. Consider this case from Canada:

> A wealthy businessman will have to pay more than $50,000 a month in spousal support for 10 years to a woman with whom he had a long-term romantic relationship even though they kept separate homes and had no children together, Ontario's top court has ruled.

Seeing this, many men today have declined to participate in dating and marriage. And I could come up with *dozens* more reasons like this one. Based in peer-reviewed studies. It's not one reason deterring men from marrying, it's dozens of reasons. In every case, society has decided that men are expendable. And sadly, the church has largely ignored the root causes of men's retreat from dating and marriage. The church simply has nothing at all to say to men who are faced with these risks, costs and disincentives.

When I explain these problems to pro-marriage conservatives, they confess to never having heard about any of these issues. They say "I just like the idea of people falling in love and having lots of cute babies". They haven't really bothered to think about the calculations that men run before deciding what to do with women. Maybe it's time for Christian leaders to do a little more homework about these issues. Maybe there is something Christian churches can do to make marriage a bit more appealing to men.

We are already seeing this happening in conservative states like Florida and Tennessee. In Florida, there are new laws requiring that child custody be 50-50 in most circumstances. This acts as a deterrent against women who want to file frivolous divorces just to get child support from wealthy men. Florida also banned permanent alimony, which is another positive step to make marriage more fair for men. (Although many women in Florida were furious about it). In Tennessee, it is now a misdemeanor to claim child support payments from a man who is not the biological father of the child.

These are the kinds of policy solutions that will bring marriage back. But I've never heard Christians talking about these issues. All I ever hear from pious Christian leaders is that men need to "man up", as if manning up makes the threats from feminist laws and courts disappear. It doesn't work, but it does signal virtue, which seems to be the goal of many pious Christian leaders. We're going to have to do better than virtue-signaling if we want to reverse the decline of marriage. It's not going to be solved by shaming and blaming men.

# Knight and Rose Show #50: Identity in Christ

**Wintery Knight** · 8 June 2024 · Archived copy · Original

Welcome to episode 50 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discussing how your "identity in Christ" helps you to leave behind your old self and do useful work for Boss. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose discuss the concept of "identity in Christ". We discuss how your identity in Christ changes your desires, capabilities, priorities and goals. We contrast your identity in Christ with non-Christian ways of viewing yourself. We discuss the ways that a stronger identity in Christ helps you to resist the culture and have an active, productive relationship with God.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 50:**

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

**Podcast RSS feed:**

# Six reasons why you should believe in non-physical souls

**Wintery Knight** · 9 June 2024 · Archived copy · Original

This podcast is a must-listen. Please take the time to download this podcast and listen to it. I guarantee that you will love this podcast. I even recommended it to my *Dad* and I almost never do that.

Details:

> In this podcast, J. Warner examines the evidence for the existence of the mind (and inferentially, the soul) as he looks at six classic philosophical arguments. Jim also briefly discusses Thomas Nagel's book, Mind and Cosmos and discusses the limitations of physicalism.

The MP3 file is here. (67 MB, 72 minutes)

Topics:

- Atheist Thomas Nagel's latest book "Mind and Cosmos" makes the case that materialism cannot account for the evidence of mental phenomena
- Nagel writes in this recent New York Times article that materialism cannot account for the reality of consciousness, meaning, intention and purpose
- Quote from the Nagel article:

> Even though the theistic outlook, in some versions, is consistent with the available scientific evidence, I don't believe it, and am drawn instead to a naturalistic, though non-materialist, alternative. Mind, I suspect, is not an inexplicable accident or a divine and anomalous gift but a basic aspect of nature that we will not understand until we transcend the built-in limits of contemporary scientific orthodoxy.

- When looking at this question, it's important to not have our conclusions pre-determined by presupposing materialism or atheism
- If your mind/soul doesn't exist and you are a purely physical being then that is a defeater for Christianity, so we need to respond
- Traditionally, Christians have been committed to a view of human nature called "dualism" – human beings are souls who *have* bodies
- The best way* to argue for the existence of the soul is using philosophical arguments

The case:

- The law of identity says that if A = B' if A and B have the exact same properties
- If A = the mind and B = the brain, then is A identical to B?
- Wallace will present 6 arguments to show that A is not identical to B because they have different properties

Not everyone of the arguments below might make sense to you, but you will probably find one or two that strike you as correct. Some of the points are more illustrative than persuasive, like #2. However, I do find #3, #5 and #6 persuasive.

1) First-person access to mental properties

- Thought experiment: Imagine your dream car, and picture it clearly in your mind
- If we invited an artist to come and sketch out your dream car, then we could see your dream car's shape on paper
- This concept of your dream car is not something that people can see by looking at your brain structure

- Physical properties can be physically accessed, but the properties of your dream care and privately accessed

2) Our experience of consciousness implies that we are not our bodies

- Common sense notion of personhood is that we own our bodies, but we are not our bodies

3) Persistent self-identity through time

- Thought experiment: replacing a new car with an old car one piece at a time
- When you change even the smallest part of a physical object, it changes the identity of that object
- Similarly, your body is undergoing changes constantly over time
- Every cell in your body is different from the body you had 10 years ago
- Even your brain cells undergo changes (see this from New Scientist – WK)
- If you are the same person you were 10 years ago, then you are not your physical body

4) Mental properties cannot be measured like physical objects

- Physical objects can be measured (e.g. – use physical measurements to measure weight, size, etc.)
- Mental properties cannot be measured

5) Intentionality or About-ness

- Mental entities can refer to realities that are physical, something outside of themselves
- A tree is not about anything, it just is a physical object
- But you can have thoughts about the tree out there in the garden that needs water

6) Free will and personal responsibility

- If humans are purely physical, then all our actions are determined by sensory inputs and genetic programming
- Biological determinism is not compatible with free will, and free will is required for personal responsibility
- Our experience of moral choices and moral responsibility requires free will, and free will requires minds/souls

He spends the last 10 minutes of the podcast responding to naturalistic objections to the mind/soul hypothesis.

*Now in the podcast, Wallace does say that scientific evidence is not the best kind of evidence to use when discussing this issue of body/soul and mind/brain. But I did blog before about two pieces of evidence that I think are relevant to this discussion: corroborated near-death experiences and mental effort.

You might remember that Dr. Craig brought up the issue of substance dualism, and the argument from intentionality ("aboutness"), in his debate with the naturalist philosopher Alex Rosenberg, so this argument about dualism is battle-ready. You can add it to your list of arguments for Christian theism along with all the other arguments like the Big Bang, the fine-tuning, the origin of life, stellar habitability, galactic habitability, irreducible complexity, molecular machines, the Cambrian explosion, the moral argument, the resurrection, biological convergence, and so on.

# FBI and ERLC wanted to cover-up anti-Christian motives of LGBT terrorist

**Wintery Knight** · 10 June 2024 · Archived copy · Original

The manifesto of the transgender terrorist who shot up a Christian school in Nashville has finally been released, despite the efforts of the Biden administration and the ERLC.

Here's the latest from the UK Daily Mail:

> Transgender killer Audrey Hale wrote about her 'imaginary penis' and how she would 'kill' to get puberty blockers in the weeks before her horrific attack on the Covenant School in Nashville last year.
>
> The Tennessee Star obtained some four dozen pages of Hale's writings that shed light on her female-to-male transition and why she shot and killed six people at the elementary school in March 2023.
>
> Hale wrote about anger toward her parents, how she hated her conservative Christian upbringing, and how she had suffered because hormone blockers were not available when she was as a child.
>
> The explosive writings, sometimes referred to as Hale's 'manifesto,' have been a source of controversy, with many accusing officials of keeping them secret because they would hurt the trans community.
>
> Now released, they help explain why the 28-year-old artist, who identified as a male named Aiden, shot her way into the Tennessee school, killing three adults and three nine-year-olds, before responding officers killed her.

A big Democrat city and the Democrat Biden federal law enforcement opposed the release of the shooter's manifesto:

> After the shooting, Nashville's Metropolitan Police Chief John Drake said his force had recovered the shooter's manifesto, as well as hand-drawn maps in her car, and said they would eventually be made public.
>
> But both city police and the FBI later said the material shouldn't be released because it could hurt the investigations.

But they could not escape the investigative efforts of the conservative Tennessee Star:

> The Star and others have been part of a lawsuit seeking to compel the Metro Nashville Police Department (MNPD) and the FBI to release Hale's writings.
>
> The FBI reportedly advised the MNPD not to release them and other 'legacy tokens' in the wake of mass shootings.

Daily Wire had more to say: (archived)

> So there's nothing political in the manifesto, according to the director of the Tennessee Bureau of Investigation. There's nothing coherent at all, except maybe a desire to emulate school shooters. That's what they told us, and if you asked questions — as you just saw — the media labeled you a conspiracy theorist. But at the same time, they wouldn't let us see the manifesto for ourselves. That was a pretty big clue that they were lying to us. And indeed, once again thanks to the Tennessee Star, we have the proof.
>
> […]You know that's a lie because the FBI's failure to release the manifesto is what led to false narratives, as you just saw. Without the manifesto, the media was free to lie to us — and pretend that there was no relation whatsoever between the shooter's transgender identity and the killings. But in fact, there was a clear relationship. This shooter was clearly enraged about the fact she couldn't be a man. Joe Biden's DOJ

> understands that this kind of revelation might be a set back for the White House's narrative, so they just covered it up. They told you that the "trans community" was in danger instead.
>
> In a country where the government actually cared about the well-being of its own citizens, and felt the slightest need to be honest with them, this would be a national scandal. The FBI director and the senior leadership of the Tennessee Bureau of Investigation would all be fired immediately, at a minimum. But our government instead lies as a matter of course — and they're not subtle about it. That's why the government's narrative about the Tennessee shooter is just one of several mainstream lies, cooked up by the government and promoted by the media, that we're only learning about this week.

If you're looking for a good conservative news source, you might want to check out the Tennessee Star. They stayed on the case and finally got us the information, despite the efforts of the secular leftists to cover up the details of a terrorist attack against conservative Christians.

# New study: Covid vaccines could be partly to blame for rise in excess deaths

**Wintery Knight** · 11 June 2024 · Archived copy · Original

Matt Walsh linked to this article from the UK Telegraph in his article about how federal and state law enforcement covered up the motive of the Nashville shooter (archived). The UK Telegraph talks about a new study that suggests that a rise in "excess deaths" since the pandemic. The study does not conclude that vaccines were responsible for excess deaths.

Here's the article from the UK Telegraph: (archived)

> Covid vaccines could be partly to blame for the rise in excess deaths since the pandemic, scientists have suggested.
>
> Researchers from The Netherlands analysed data from 47 Western countries and discovered there had been more than three million excess deaths since 2020, with the trend continuing despite the rollout of vaccines and containment measures.
>
> They said the "unprecedented" figures "raised serious concerns" and called on governments to fully investigate the underlying causes, including possible vaccine harms.
>
> […]The study found that across Europe, the US and Australia there had been more than one million excess deaths in 2020, at the height of the pandemic, but also 1.2 million in 2021 and 800,000 and 2022 after measures were implemented.
>
> **Researchers said the figure included deaths from Covid-19, but also the "indirect effects of the health strategies to address the virus spread and infection".**
>
> **They warned that side effects linked to the Covid vaccine had included ischaemic stroke, acute coronary syndrome and brain haemorrhage, cardiovascular diseases, coagulation, haemorrhages, gastrointestinal events and blood clotting.**

I think this is significant, because there was always concern among taxpayers that these vaccine mandates were being pushed by secular leftist fascists who were irrationally overexuberant about the idea of forcing people to act uniformly. The fascists don't like differences of opinion or behavior. That's why they like things like mass transit, but despise individual retirement accounts. They long for a "unity" brought about through the use of government power.

Secular left fascists realize that science has the respect of taxpayers, so they want to misuse science to compel taxpayers to behave uniformly. You can see it with the way that global warming hysteria is used to control the decision-making of taxpayers around energy consumption.

Another problem with the vaccines was how it was impossible for taxpayers to sue the vaccine manufacturers in case the product caused harm. I can't think of another product that has an exemption like that. You would think that Ralph Nader socialists would want to protect taxpayers from big corporations, but we saw the opposite. Secular leftists sided with corporations, and the propaganda against dissent was so strong that the secular left had many people believing that firings, imprisonment and seizing of children were all appropriate ways of dealing with dissenters.

# What useful things can Christians learn by studying metaphysics?

**Wintery Knight** · 12 June 2024 · Archived copy · Original

I have a little experience with metaphysics – just what I learned from a few lectures by the wonderful Christian professor Dr. J. P. Moreland. What I remember from those lectures is that metaphysics can be useful for defending the reality of non-physical minds, and dogmatic skepticism is self-refuting. But I found a nice, easy article by Tyson James to give us a real overview of metaphysics.

His article is on Worldview Bulletin.

He starts like this:

> One day, a close church friend asked me, "What is metaphysics?" Dr. Paul Gould notes in a previous article that local bookstores often locate the subject of metaphysics somewhere around tarot cards and astrology. It may be surprising, then, for some to learn that metaphysics is actually the name of a very important field in philosophy.
>
> So, what is metaphysics to philosophers and what in the world does it have to do with Christianity? These are actually very important questions, since metaphysics is a subject which touches on some of the most fundamental elements of the Christian faith.

So, I looked down the list and he has these:

- Is there a first cause?
- Do we have free will?
- Are there any unchanging truths?
- What are space and time?
- How do things which change maintain their identity over time?
- Is the physical universe all there is?
- Are objective morals real?

This is what he has to say about the one I remember:

> How do things which change maintain their identity over time? Christians believe that the same person who was a sinner may also accept Christ, be saved from his sins, and enjoy eternity with God. But some people say that there is no "self" which maintains identity over time, that we're just collections of atoms which change every time an atom is gained, lost, or rearranged. So, answering this question is important for showing that the same person who is lost without Jesus may be saved and restored in Jesus.

As a software engineer from an immigrant family, reading philosophy is as painful to me as a root canal. I just keep thinking "why do I have to know this if no one will pay me to know this?" But I like to win apologetics battles more, so I have forced myself to learn a little about some of the topics in his list. Every good Christian apologist knows how to defend philosophical attacks, like the problem of evil, religious pluralism, postmodernism, physicalism of minds, the hiddenness of God, rational unbelief, animal pain, etc. And we know how to go on the attack with objective morality, mind-body dualism, persistent identity through time, free will, etc. Not to mention first cause arguments, but I try to only think about that as a scientific problem. Metaphysics is useful for many of these tasks.

Anyway, metaphysics. Let me find you something useful to teach you some metaphysics. Here is a good short essay from Dr. John Depoe, who defends the reality of the non-physical minds, which is also known as "substance dualism", because there are two substances – your body and your mind.

He writes about the persistent identity argument for the soul:

> Another argument supporting substance dualism is that one maintains personal identity through change. Even though one is continuously going through physical changes and experiencing different mental states, a person continues to be the same person. If persons were identical with their physical parts or mental states, they would cease to be the same persons as these changes occurred. Therefore, it is necessary to postulate an immaterial, substantial self that endures through change.
>
> Suppose that someone believes that people do not maintain identity through change and concludes that the previous argument for substance dualism fails. This denial of personal identity through change, I contend, presents untenable difficulties. First, there is one's own awareness of being the same person through change. Moreover, if one is not literally the same person through these changes, how can a person maintain long-term goals and desires?

If you are your body, and your body is always changing, then you aren't the same person now as 5 minutes ago.

There are many other good arguments for real non-physical minds. First of all, we know about the existence of at least one non-physical mind. God. That's who brings the physical universe into being. He's not physical. And there is also our first-person awareness of our mental state, our experience of consciousness, our ability to think about other things ("intentionality"), and our experience of free will.

So you see, this is all very practical, even if it frightens my practical West Indian parents if I talk about it too much.

# Biden admin launches prosecution of doctor who exposed child mutilation

**Wintery Knight** · 13 June 2024 · Archived copy · Original

One o the most interesting things about secular leftists is their terrible fear that people who disagree with them will use coercion or force. But actually, if you look at secular left regimes throughout history, it's the secular leftists who love to resort to coercion and even violence to force people who disagree with them into silence or compliance or worse.

Here's the latest article from Christopher Rufo, writing for City Journal, the journal of the center-right Manhattan Institute.

He writes:

> A few years ago, Texas Children's Hospital made no secret of its support for transgender medicine. Its doctors proudly administered puberty blockers, cross-sex hormones, and other medical interventions to children who self-identified as "trans."
>
> Then the tone shifted. In the face of public pressure, CEO Mark Wallace announced that he was shutting down the child gender clinic. But doctors at the hospital, including Richard Ogden Roberts, David Paul, and Kristy Rialon, never stopped.
>
> The public would not have known if not for a courageous surgeon, Eithan Haim, who felt morally obligated to expose the subterfuge. He contacted me about how the hospital had lied about terminating the transgender medicine program, and that doctors were, in fact, continuing to perform sex-change procedures on children as young as 11.
>
> The story rocketed across the world. The hospital immediately went on the defensive. Within a week, Texas legislators passed a bill confirming that transgender medical procedures for minors were illegal.
>
> But the story also attracted attention from another powerful source: federal prosecutors. The Department of Justice has not shied from targeting political opponents of the Biden administration: former President Trump; conservative school board protesters; persons praying outside of abortion clinics; and now, doctors who dissent from transgender ideology.
>
> On the morning in June 2023 that Haim was to graduate from Texas Children Hospital's residency program, federal agents knocked on his door. They had identified him as a potential "leaker," presumably through forensic examination of the hospital's computer systems. Shortly thereafter, Assistant U.S. Attorney Tina Ansari began threatening Haim with prosecution.
>
> Now, Ansari has made good on those threats. Earlier this week, U.S. marshals appeared at Haim's home and summoned him to court to face an indictment on four felony counts of violating HIPAA. His initial appearance is next Monday, where he will learn more about the charges against him.

It's important for Christians and conservatives to understand that secular leftists are not just Christians with the God removed. They have no rational foundation for free will. They have no rational foundation for objective morality. And they have no rational basis for human rights, like religious liberty. When their will to power runs up against your conscience, then anything is possible.

This story reminds me of how secular leftists in Wisconsin organized pre-dawn raids against conservatives who disagreed with them.

**Pre-dawn raids in Tennessee**

Here's another case of secular leftists in government acting like domestic terrorists, this time from The Federalist:

> Pennsylvania family the FBI raided last September over the father's pro-life advocacy filed two claims today for a total of $4.35 million in damages due to the FBI's unconstitutional, "malicious," and "corrupt" use of "excessive force."
>
> Mark Houck and Ryan-Marie Houck say in their legal filings obtained by The Federalist that their seven children continue to suffer as a result of the FBI raiding — with battering rams, ballistic shields, armor, and long rifles — the home of a nonviolent pro-lifer who didn't own any guns and whose seven children were just waking for breakfast.
>
> The Houcks "have lost three babies from miscarriages due to the stress of the FBI's conduct and resulting prosecution" and subsequently been diagnosed with infertility, Ryan-Marie Houck's filing says. She says she still cries for hours and the family's high anxiety provoked by the raid has caused them to install security cameras and rarely leave home.
>
> In the Sept. 23, 2022 raid, "Government agents aimed rifles and handguns at Mr. Houck from his porch and from behind vehicles in his yard and driveway," Ryan-Marie Houcks' complaint says. "They also aimed their weapons at Mrs. Houck, who slowly walked down a staircase to approach the Houcks' front door. Mrs. Houck approached after Mr. Houck had already walked peacefully outside with his hands up. Any bullet that missed Mr. Houck could have struck Mrs. Houck or her children, who were stirring throughout the house and had gathered behind her on the staircase. The entire family was located directly downrange."
>
> The sunrise raid that included approximately 20 law enforcement officers was conducted after Mark Houck's lawyer had informed the Department of Justice he would voluntarily turn himself in if requested. Mark Houck's complaint says his 9-year-old daughter was terrified to find two officers dressed in black carrying rifles looking into their home through a back window.
>
> The Houcks' lawsuits say that, as a result of the "unnecessary" raid, "The children continually come to her [Ryan-Marie] crying and suffering from nightmares." Ryan-Marie and their five oldest children, ages 7 to 13, now must take medication "to get a few hours of sleep" each night.
>
> "Joshua was six years old at the time he saw his father taken away at gun point," says Ryan-Marie's complaint. "He cried the entire time and yelled to the FBI, 'Please don't take him he is my best friend.' To this day, any time someone brings up the raid or tells the story, he starts to cry as if he is reliving the day all over again. He constantly worries that he will lose his father or mother."
>
> Their 4-year-old has started sleepwalking, the claims say. The entire family seizes up with anxiety any time they have an unannounced visitor. Once, a friend showing up unannounced gave Ryan-Marie a panic attack, her filing says.

The accused man was found not guilty by a jury.

> A Pennsylvania jury acquitted Mark Houck in January on all charges the Department of Justice brought against him. The DOJ argued Houck had violated a federal law that prohibits physically obstructing abortion facilities. Houck and his son were 100 feet away from the facility when they were accosted by a pro-abortion escort.

The laws are not being enforced impartially:

> Mark Houck's complaint notes that, except for one single recent case, the DOJ has prosecuted only pro-lifers for alleged violations of the FACE Act used against him. The law is supposed to apply both to abortion supporters and pro-lifers, but the DOJ has almost exclusively used it against pro-lifers.

Sounds like stuff that you would see with other secular leftist regimes. Stalin in the Soviet Union. Mao in China. Pretty standard secular left morality. They hate people who disagree with them.

**Pre-dawn raids in Wisconsin**

In Wisconsin, Democrat District Attorney John Chisolm had no problem at all using law enforcement to go after conservatives who supported Act 10. He sent armed police to conduct pre-dawn raids on people like Cindy Archer, who were advocating for the law.

National Review reported on the Chisholm police raids:

> In two separate reports, National Review described these raids in detail. (The court cited our reports in its opinion.) On October 3, 2013, multiple Wisconsin conservatives were awakened by a persistent pounding on the door, their houses were illuminated by floodlights, and police — sometimes with guns drawn — poured into their homes. Once inside, the investigators turned the private residences of these innocent conservative citizens "upside down," seeking an extraordinarily broad range of documents and information. These raids were supplemented by subpoenas that secured for investigators massive amounts of electronic information.
>
> […]The raid victims have suffered severe, long-term consequences as a result of these raids. Almost to a person, they say they no longer feel secure in their own homes. They report watching what they say, terrified that overt political involvement could lead their homes to be invaded again. One victim said, "I tried to create a home where the kids always feel safe. Now they know they're not. They know men with guns can come in their house, and there's nothing we can do." Another victim — whose son was home alone when police arrived, guns drawn — is haunted by this chilling thought: "He could have been in the shower. They could have broken the door down. He could have been shot. Over politics."

By the way, this Legal News Online article about his wife, Colleen Chisolm, sheds light on his motivation for using law enforcement as a weapon against conservatives.

> Now a longtime [John] Chisholm subordinate reveals for the first time in this article that the district attorney may have had personal motivations for his investigation. Chisholm told him and others that Chisholm's wife, Colleen, a teacher's union shop steward at a school in St. Francis, which is near Milwaukee, had been repeatedly moved to tears by Walker's anti-union policies in 2011, according to the former staff prosecutor in Chisholm's office. Chisholm said in the presence of the former prosecutor that his wife "frequently cried when discussing the topic of the union disbanding and the effect it would have on the people involved … She took it personally."
>
> […]Chisholm added… that "he felt that it was his personal duty to stop Walker from treating people like this."

She cried, then he sent armed police to their houses. Law enforcement isn't to protect taxpayers. Apparently, it's to enforce secular leftist views on taxpayers.

# What can we learn about communist leaders from the record of history?

**Wintery Knight** · 14 June 2024 · Archived copy · Original

Now that we have atheistic communists in the majority of the House, Senate and White House, it might be a good idea to take a look at what atheistic communist leaders have done in history. First, let's see how the atheistic worldview of communist leaders affected religious people.

Here is what Josef Stalin did during his rule of Russia in the 1920s and 1930s.

The Library of Congress offers this in their "Soviet Archives exhibit":

> The Soviet Union was the first state to have as an ideological objective the elimination of religion. Toward that end, the Communist regime confiscated church property, ridiculed religion, harassed believers, and propagated atheism in the schools. Actions toward particular religions, however, were determined by State interests, and most organized religions were never outlawed.
>
> The main target of the anti-religious campaign in the 1920s and 1930s was the Russian Orthodox Church, which had the largest number of faithful. Nearly all of its clergy, and many of its believers, were shot or sent to labor camps. Theological schools were closed, and church publications were prohibited. By 1939 only about 500 of over 50,000 churches remained open.

What's the attitude of Democrat candidates to Bible-believing Christians? My read is that they think that Christian values need to be suppressed by the government lest they offend Democrat voters, who seem to be very easily offended these days. You can already see their animus towards Christians in their Equality Act, which eradicates conscience rights in order to protect (some) LGBT people from feeling offended.

**The Ukraine Famine**

Take a look at this UK Daily Mail article about Josef Stalin.

Excerpt:

> Now, 75 years after one of the great forgotten crimes of modern times, Stalin's man-made famine of 1932/3, the former Soviet republic of Ukraine is asking the world to classify it as a genocide.
>
> The Ukrainians call it the Holodomor – the Hunger.
>
> Millions starved as Soviet troops and secret policemen raided their villages, stole the harvest and all the food in villagers' homes.
>
> They dropped dead in the streets, lay dying and rotting in their houses, and some women became so desperate for food that they ate their own children.
>
> If they managed to fend off starvation, they were deported and shot in their hundreds of thousands.
>
> So terrible was the famine that Igor Yukhnovsky, director of the Institute of National Memory, the Ukrainian institution researching the Holodomor, believes **as many as nine million may have died.**
>
> […]Between four and five million died in Ukraine, a million died in Kazakhstan and another million in the north Caucasus and the Volga.
>
> By 1933, 5.7 million households – somewhere between ten million and 15 million people – had vanished. They had been deported, shot or died of starvation.

The Holodomor is just one of the atrocities committed by Soviet Union communists. You may also have heard that they operated a system of labor camps for dissidents that killed millions more. The total number of people killed by

Stalin is estimated at 20 to 40 million.

Stalin actually wasn't very good at mass murder compared to another communist, Mao Zedong.

> Can you name the greatest mass murderer of the 20th century? No, it wasn't Hitler or Stalin. It was Mao Zedong.
>
> According to the authoritative "Black Book of Communism," an estimated 65 million Chinese died as a result of Mao's repeated, merciless attempts to create a new "socialist" China. Anyone who got in his way was done away with — by execution, imprisonment or forced famine.
>
> For Mao, the No. 1 enemy was the intellectual. The so-called Great Helmsman reveled in his blood-letting, boasting, "What's so unusual about Emperor Shih Huang of the China Dynasty? He had buried alive 460 scholars only, but we have buried alive 46,000 scholars." Mao was referring to a major "accomplishment" of the Great Cultural Revolution, which from 1966-1976 transformed China into a great House of Fear.
>
> The most inhumane example of Mao's contempt for human life came when he ordered the collectivization of China's agriculture under the ironic slogan, the "Great Leap Forward." A deadly combination of lies about grain production, disastrous farming methods (profitable tea plantations, for example, were turned into rice fields), and misdistribution of food produced the worse famine in human history.
>
> Deaths from hunger reached more than 50 percent in some Chinese villages. The total number of dead from 1959 to 1961 was between 30 million and 40 million — the population of California.
>
> […]Mao kept expanding the laogai, a system of 1,000 forced labor camps throughout China. Harry Wu, who spent 19 years in labor camps, has estimated that from the 1950s through the 1980s, 50 million Chinese passed through the Chinese version of the Soviet gulag. Twenty million died as a result of the primitive living conditions and 14-hour work days.

Whenever I bring up the historical record of communism to Democrats, they always tell me that their leaders have good intentions. But the communist leaders of the past aren't any different from the communist leaders of today. Communist leaders all start out with noble ambitions of wanting to help the poor. The problem is that they don't know anything about economics, so whatever they try doesn't work. Communist policies like nationalizing private industries, printing money, purging wealthy people, imposing tariffs, and imposing price controls cause enormous poverty. And then they need someone to blame for their failure to produce the results they promise.

If we were serious about helping the poor, then we would elect leaders who had experience lifting the poor out of poverty. A business leader or a governor of a state. It's not a popularity contest. We need to choose someone who has already had success at helping the poor. And the best way to help the poor is by helping them to find work so they can earn their own success and chart their own course. After all it's not words that affect our lives. Or the feelings we have about words we like. What affects our lives is policies that produce results. Intentions and rhetoric don't matter, ultimately.

# William Lane Craig debates Walter Sinnott-Armstrong: evil, suffering and God

**Wintery Knight** · 15 June 2024 · Archived copy · Original

This is one of the top 4 best debates that William Lane Craig has ever done in my opinion. (The other three are Craig-Millican debate and the first and second Craig-Dacey debates). If you've never seen Dr. Craig in a debate with a non-Christian, this one is probably the best introductory one out there. Dr. Craig is the foremost defender of Christian theism on the planet, and probably of all time.

Sinnott-Armstrong is very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics. So if you are looking for a good first debate to watch, this is it! Normally, Dr. Craig debates at major universities in front of students and faculty.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church, this is the one to start with.

**The debaters:**

- William Lane Craig
- Walter Sinnott-Armstrong

**The format:**

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

**SUMMARY:**

**WSA opening speech:**

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.

4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

**WLC opening speech:**

Summarizing Walter's argument

1. If God exists, gratuitous evil does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the

knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while still retaining the same amount of knowledge of God's existence and character.

- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

1. If God exists, gratuitous evil does not exist.
2. *God exists*
3. Therefore, gratuitous evil does not exist.

Four reasons to think that God exists (premise 2 from above):

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

# Most Americans think cohabitation leads to a stable marriage, but what does the data say?

**Wintery Knight** · 16 June 2024 · Archived copy · Original

Men who cohabitate are not certain that the relationship is permanent

If there's one thing that ought to lead people to Christianity, it's the proven ability of the Christian moral rules to guide believers away from the sins that destroy them. A lot of modern "Christians" have reduced Christianity to being about their feelings and their community, while allowing the culture to determine their goals and moral boundaries. But that won't protect them from danger.

Cohabitation describes the situation of a couple moving into the same home and being sexually active, but without any legally-recognized commitment. It's extremely popular among young people today, and even Christians.

Consider this article from The Federalist about cohabitation:

> A new Pew Research Center study shows Americans both cohabitate ("live with an unmarried partner") and find cohabitation acceptable more than before.
>
> […]More young adults have cohabited than have married. Pew's analysis in the summer of 2019 of the National Survey of Family Growth found that, for the first time ever, the percentage of American adults aged 18-44 who have ever cohabited with a partner (59 percent) exceeded the percentage of those who have ever married (50 percent).

I thought this was very interesting, especially for the Christian parents and pastors who imagine that their lovely pious daughters all have a Christian worldview just because they sing in the church choir:

> Just 14 percent hold a view consistent with a biblical sexual ethic, that cohabitation with an unmarried romantic partner outside of marriage is "never acceptable."

Just to be clear, in my life I've met about 6 non-Christian men who cohabitated with women, and every single one

of them cohabitated with a Christian-raised woman. That should tell you what young women are being told about relationships in their homes and churches about sex and marriage. “Do whatever you want”.

So what purpose does cohabitation serve?

> A majority of Americans (69 percent) say that “it is acceptable for an unmarried couple to live together even if they don’t plan to get married.” They may assume that they can decrease their chances of a bad marriage and increase their chances of a good one by giving the relationship a cohabitation “test run.”
>
> […]A plurality of Americans believe cohabitating before marriage yields more successful unions. Nearly half of Americans (48 percent) believe that couples who live together before marriage “have a better chance of having a successful marriage.” This view is even more prevalent among young adults aged 18-29 (63 percent).
>
> Another 38 percent of all Americans say cohabitation “doesn’t make much difference” on marital success. Only 13 percent of Americans believe cohabiting couples have “a worse chance” of having a successful marriage.
>
> […]Most Americans believe cohabitating couples raise children just as well as married couples. Pew also surveyed people’s opinions about cohabiting couples raising children, and 59 percent of Americans declared that cohabiting couples “can raise children just as well as married couples.” Again, the younger respondents were most likely to have a favorable view of cohabitation: among adults aged 18 to 49, 67 percent agreed cohabiting couples do just as well, while 32 percent said: “Married couples do a better job raising children.”

Yes, cohabitation is seen as a test run, and it’s supposed to make stable marriage more likely and not be harmful to children at all.

But why think that a test run should be part of getting married? After all, when I buy a parrot from the pet store, I don’t expect to later return that parrot. Why not? Because I am not buying the parrot to enhance MY life. I am buying the parrot to make a commitment to care for the parrot. Whether the parrot fulfills any of my needs is irrelevant to me. I want the bird in my house so that I can decide what it eats, what it drinks, and invest myself into making it happy, according to its birdish nature. This is because I think that parrots have value in and of themselves, and they deserve a certain quality of life. When I buy the parrot, I am guaranteeing a permanent commitment to the bird to provide for its needs, physical and emotional. And that commitment carries forward to the time (now) when the bird is elderly, and can’t even fly up to his cage or down to the floor. He calls for me, and I go over and pick him up and move him. That’s commitment.

Cohabitation, on the other hand, is the practice of saying to another *human being*: “I am going to try you out as an entertaining commodity in my home, but if you don’t fulfill *my needs* then I’m going to send you right back.” That’s not a commitment. That’s self indulgence. It’s defining a relationship as *entertainment* that is designed to meet *my needs* and *make me happy*. And that’s because the concept of commitment in relationships is not presented to young people at any time in their lives. Not from parents. Not in churches. Not in the secular left culture as a whole. Everything is a consumer good designed for the purpose of entertainment – including people. It was only the Christian worldview that had a view of people as creatures made by God for eternal life, so that marriage was about guarding the other person’s faith, and building them up to achieve all the things that God wanted them to achieve for his purposes.

But does cohabitation really work to create stable relationships? After all, anyone can find a partner when they’re young and pretty. The real question is whether that partner will stick around when you’re old and ugly and can’t be as “fun” as you used to be.

Here’s a recent (2018) study on cohabitation and stability:

> A new study published in the *Journal of Marriage and Famil*y finds that the “premarital cohabitation effect” lives on, despite what you’ve likely heard. The premarital cohabitation effect is the finding that those who live

> together prior to marriage are more likely, not less, to struggle in marriage.
>
> […]Michael Rosenfeld and Katharina Roesler's new findings suggest that there remains an increased risk for divorce for those living together prior to marriage, and that prior studies suggesting the effect has gone away had a bias toward short versus longer-term effects. **They find that living together before marriage is associated with lower odds of divorce in the first year of marriage, but increases the odds of divorce in all other years tested, and this finding holds across decades of data.**

Strategy advice to those who debate this issue: just be aware that Team Secular Leftist is using papers that have short-range samples, which don't show the instability problem, because they deliberately cherry-pick recently married couples.

And what about children raised in cohabitating relationships?

> While Americans are optimistic about the ability of cohabiting couples to raise children, a study published by the American College of Pediatricians in 2014 reported that children whose parents cohabit face a higher risk of: "premature birth, school failure, lower education, more poverty during childhood and lower incomes as adults, more incarceration and behavior problems, single parenthood, medical neglect and chronic health problems both medical and psychiatric, more substance, alcohol and tobacco abuse, and child abuse," and that "a child conceived by a cohabiting woman is at 10 times higher risk of abortion compared to one conceived in marriage."

I'm just going to be blunt here. The majority of young people are progressives, and they vote for candidates who believe in abortion through all nine months of pregnancy, and even after birth. Why? Because they don't want to have their right to seek happiness impacted by the needs of other people. Progressives believe that children, if they exist at all, should enhance the lives of their adult owners. No one should be surprised that people who think that killing inconvenient children is moral are willing to inflict other bad outcomes on them by raising them in an unstable cohabitation environment.

# Discovery Institute's new chemistry course for homeschool students!

**Wintery Knight** · 17 June 2024 · Archived copy · Original

One of my favorite things to do every week is to listen to Rose's adventures with the kids in her awesome, awesome church. Unlike practically every church I've ever been to, Rose's church is CRAZY about apologetics. Each week, I get to hear stories from her about how it's going. The parents write to her, and tell her how the kids are getting into more and better conversations.

Anyway, that brings me to a new course offered by Discovery Institute. You might remember that Discovery Institute does all sorts of research on intelligent design. If you want to know how science is related to your worldview, they are the place to go.

So, without further introduction, here is a link to their latest offering.

It says:

> High School Chemistry 1 & 2 is a two-semester online course for homeschool students that covers the fundamentals of chemistry as well as introducing students to the evidence of intelligent design in chemistry. Students will meet with the teacher for 90 minutes online on Tuesdays and Thursdays. Additional time available for drop-in sessions. Space is limited, so register early!

The course runs August 26, 2024 – May 30, 2025, and costs only $350 per semester. CHEAP. and they have a $25 off coupon code.

If this is something that you're interested in, I would encourage you to take a look at it.

I took a look in the syllabus and it tells who it is for:

> **Prerequisite(s): Algebra 1**
>
> Please Note: It is strongly recommended that students have taken one year of algebra as some chemistry units will
> require students to set up and solve algebraic equations and create/interpret graphs
>
> **Suggested Grade Level for Student: 11th grade**
>
> Please Note: Grade level is not a requirement. The grade level is only suggested as most students will have completed
> the prior algebra 1 prerequisite by grade 11.

Please forward it along to anyone you know who might be interested! I would like to see more young Christians learning about the hard sciences, especially when it is getting harder and harder to find jobs in non-STEM areas, unless you are willing to toe the secular left's line. That's why I chose computer science, but I had a 96% in chemistry in grade 11 chemistry. I loved it!

# How to respond to an atheist who complains about slavery in the Bible

**Wintery Knight** · 18 June 2024 · Archived copy · Original

I often hear atheists going on and on about how the Bible has this evil and that evil. Their favorite one seems to be slavery. Here are three things I say to atheists when they push this objection.

**The Bible and slavery**

First, you should explain to them what the Bible actually says about slavery. And then tell them about the person responsible for stopping slavery in the UK: a devout evangelical named William Wilberforce.

Here's an article that works.

Excerpt:

> We should compare Hebrew debt-servanthood (many translations render this "slavery") more fairly to apprentice-like positions to pay off debts — much like the indentured servitude during America's founding when people worked for approximately 7 years to pay off the debt for their passage to the New World. Then they became free.
>
> In most cases, servanthood was more like a live-in*employee*, temporarily embedded within the employer's household. Even today, teams trade sports players to another team that has an owner, and these players belong to a franchise. This language hardly suggests slavery, but rather a formal contractual agreement to be fulfilled — like in the Old Testament.3

**Atheism and moral judgments**

Second, inform them that moral values are not rationally grounded on atheism. In an accidental universe, there is no way we ought to be. There is no design for humans that we have to comply with. There are no objective human rights, like the right to liberty (that would block slavery) or the right to life (that would block abortion). Although you may find that most atheists act nicely, the ones who really understand what atheism means and live it out consistently are not so nice.

Famous atheist Richard Dawkins has previously written this:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

When atheists like Dawkins talk about morality, you have to understand that they are pretending. To them, morality is just about personal preferences and cultural conventions. They just think that questions of right and wrong are *arbitrary*. Things that are wrong in one time and place are right in another. Every view is as right as any other, depending on the time and place. That's atheist morality.

**What's worse than slavery? Abortion!**

Third, you should ask the atheist what he has done to oppose abortion. Abortion is worse than slavery, so if they are sincere in thinking that slavery is wrong, then they ought to think that abortion is wrong even more. So ask them what they've done to oppose the practice of abortion. That will tell you how sincere they are about slavery.

Here's atheist Richard Dawkins explaining what he's done to stop abortion:

That's right. The head atheist supports killing born children.

# Is there evidence of systemic racism in the United States?

**Wintery Knight** · 19 June 2024 · Archived copy · Original

Systemic racism is the idea that people can't lift themselves out of poverty by making good decisions, because powerful groups in society that hold the poor down, regardless of their decisions. Do you think that America is a place where no matter what choices you make, you'll never be able to be more prosperous? That's what the leaders of Black Lives Matter think.

Here's what Nikole Hannah-Jones, creator of the 1619 Project, says in the New York Times (a former newspaper):

> To summarize, none of the actions we are told black people must take if they want to "lift themselves" out of poverty and gain financial stability — not marrying, not getting educated, not saving more, not owning a home — can mitigate 400 years of racialized plundering.

Got that? It doesn't matter what individual choices a non-white person takes in America, they're going to be poor. The "systemic racism" of the powerful whites will always keep them down. Single motherhood doesn't make people poor, and marriage doesn't make people wealthier. Dropping out of high school doesn't make you poor, and getting a Masters degree in computer science won't make you wealthier.

But let's take a look at the data from the 2019 Census, and see the evidence:

| Median US Household Income by Selected Ancestry Groups, 2019 | | |
|---|---|---|
| Indian | Americans | $126,705 |
| Taiwanese | Americans | $102,405 |
| Filipino | Americans | $100,273 |
| Indonesian | Americans | $93,501 |
| Pakistani | Americans | $87,509 |
| Iranian | Americans | $87,288 |
| Lebanese | Americans | $87,099 |
| Japanese | Americans | $85,007 |
| Turkish | Americans | $83,375 |
| Chinese | Americans | $82,281 |
| Korean | Americans | $76,674 |
| Syrian | Americans | $74,047 |
| Hmong | Americans | $73,373 |
| Vietnamese | Americans | $72,161 |
| Cambodian | Americans | $72,038 |
| **White** | **Americans** | **$69,823** |
| Ghanaian | Americans | $69,021 |
| Bangladeshi | Americans | $67,944 |
| Guyanese | Americans | $67,772 |
| Egyptian | Americans | $67,187 |
| Palestian | Americans | $67,157 |
| Thai | Americans | $66,763 |
| Laotian | Americans | $66,117 |
| Nigerian | Americans | $65,672 |

Carpe Diem AEI

Income By Ethnicity in America
White people are doing a bad job of keeping non-whites down

Well, it looks like at least SOME people of color are able to do well in America despite all the "systemic racism" that keeps non-whites down. And do you know what those non-white groups at the top have in common? They've made good decisions, they've worked hard, they haven't blamed other people when they fail, and they've saved their money instead of spending it on shiny junk.

Let's look at some decisions that the non-whites who are prosperous have made, that those further down have not.

Asians marry before they have children, so the kids have two parents

**Education and marriage**

This article is written by the far-left radical Nicholas Kristof, writing in the radically-leftist New York Times (a former newspaper).

Excerpt:

> A new scholarly book, "The Asian American Achievement Paradox," by Jennifer Lee and Min Zhou, notes that Asian-American immigrants in recent decades have started with one advantage: They are highly educated, more so even than the average American. These immigrants are disproportionately doctors, research scientists and other highly educated professionals.

> It's not surprising that the children of Asian-American doctors would flourish in the United States. But Lee and Zhou note that kids of working-class Asian-Americans often also thrive, showing remarkable upward mobility.
>
> […]There's also evidence that Americans believe that A's go to smart kids, while Asians are more likely to think that they go to hard workers… Asian-American kids are allowed no excuse for getting B's — or even an A-. The joke is that an A- is an "Asian F."

One reason Asians students do so well is because their parents are usually married:

> > Strong two-parent families are a factor, too. Divorce rates are much lower for many Asian-American communities than for Americans as a whole, and there's evidence that two-parent households are less likely to sink into poverty and also have better outcomes for boys in particular.

American blacks have a 73% out-of-wedlock birth rate. A huge difference compared to Asians.

So, when Nikole Hannah-Jones tells you that education and marriage don't matter, she's just wrong.

**Compound interest**

Education and marriage are important, but so is saving your money. The wealthiest people in America are typically the ones who are experts at saving money early, and investing it. They know about the law of compound interest. If

you invest money early and leave it alone, then it will grow into a fortune by the time you are read to stop working.

This graph explains compound interest:

Investing $24,000 from age 21 to 41 vs investing $24000 from age 47 to 67

What does Nikole Hannah-Jones say when she looks at that graph? She doesn't think that saving money makes a difference to having more or less wealth. She thinks skin color determines whether saving money makes you wealthy or not. The graph clearly shows what we should be recommending to young people of color. They need to stop spending money and start saving it, and the earlier the better. It doesn't matter what your skin color is, saving money early JUST WORKS.

Similarly, when she says that home ownership doesn't make you more wealthy, this is just terrible advice. It's always better to pay down your own mortgage (at least when interest rates are low like they are now) than to pay someone else rent. You have to live somewhere, and paying for your own home is better because it costs about the same as rent, and then you get to keep the home when you're done paying for it.

**Communism**

Nikole Hannah-Jones does have a "solution" to disparities in wealth. Her solution is communism. She wants to transfer money from those who earn, to those who don't. But we already have tried that in the 20st century and it resulted in the deaths of over 100 million people. That's not my opinion, that's all documented in a book published by Harvard University Press.

Socialism Communism Countries Per Capita GDP Income
You don't even have to read the book to know the truth – just look at countries that score low on the Index of Economic Freedom, and compare their GDP per capita to countries that score high on the Index of Economic Freedom. The more communist a nation goes, the less wealth there is for the citizens. That's why people in Venezuela are eating zoo animals and selling their bodies in prostitution for food, while nearby capitalist countries like Panama and Chile prosper. Nikole Hannah-Jones wants to reduce economic freedom, but we know by looking at other countries that this lowers per-capita GDP.

There's a lot more than could be said here, but the point is that we need to be telling American blacks to make decisions that match the decisions of other successful non-white communities in America. We need to start teaching young people basic economics so they don't fall prey to charlatans.

# Should the Gospel of Thomas be included in the New Testament?

**Wintery Knight** · 20 June 2024 · Archived copy · Original

Should the Gospel of Thomas be included with the four canonical gospels? Is it early? Is it the same historical genre as the four gospels? Does it give us eyewitness evidence of the life and teachings of Jesus? Here's an article about it that references the chapter from Lee Strobel's "The Case for the Real Jesus".

First reason, Thomas has literary dependence on TONS of other New Testament books, which favors a date for Thomas AFTER the books it quotes:

> **The Gospel of Thomas Cites Too Much Of The New Testament.**
>
> Publishing writings in the first century was nothing like it is today. If you want a copy of something, you take a quill and some papyrus and you just copy it. That is how the books of the New Testament circulated. It was a very slow process. By the early second century, only a few of the books of the New Testament were in full circulation. Christians of that time only had a few of the books of the New Testament to reference. The epistles of Ignatious, written in AD 110, does not even quote half of the New Testament.
>
> But the gospel of Thomas shows familiarity with 15 of the 27 books of the New Testament! Doctor Craig Evans pointed out that he was not aware of any Christian writing which referenced this much of the New Testament prior to AD 150. The Gospel of Thomas simply references far too many books to be dated early. But despite that, the Jesus Seminar attempts to date Thomas between AD 60 and 70.
>
> Further, this gospel not only cites too much New Testament material. It cites the later New Testament material. Mark was not very strong in Greek grammar and etiquette, so when Matthew and Luke quoted Mark, they polished his wording. The gospel of Thomas quotes the polished wording, the later version. In fact, Thomas even has material from the gospel of John – penned in about AD 90. How can a book from AD 60 or 70 quote a book from AD 90? Thomas is not independent of the other gospels, it quotes the later ones and it is not early, it quotes too much of the New Testament to be considered early.

Second reason, Thomas shows signs of being based on a Syriac translation:

> **The Gospel of Thomas Shows Syrian Development.**
>
> The gospels are published in the Koine Greek language, which was the most conventiant language of that time if the goal was to spread them far and wide. But when Christianity began to spread eastward, the gospels were translated into Syriac. But this did not happen immediately.
>
> A student of Justin Martyr named Tatian compiled a Syriac translation of the four gospels in AD 175, which was named the Diatessaron (meaning 'through the four'). He made the four gospels available to those who spoke Syriac. What makes this significant is that the gospel of Thomas shows traces of the Syrian language forms! Indeed, the gospel of Thomas adopts concepts that were only found in the Syrian church. It refers to Thomas as Judas Thomas, which was a concept that began with the Syrian church. The Syrians did not like ascetics, wealth, businessmen, commercialism, and were interested in elitism and mysticism. Precisely everything that the Syrians were not interested in, the gospel of Thomas was not interested in, and that which they were interested in, the gospel of Thomas was interested in.
>
> Further, and critically, if we read the gospel of Thomas in English, it sort of looks like a non-contextual group of proverbs and sayings. It is just randomly assorted. It appears randomly assorted in Koine Greek as well. But if you translate it to Syrian, it is not random at all. There are literally hundreds of catchwords in Syrian that are meant to help people memorize the gospel. There are memory aids written in Syrian. The gospel of Thomas was written in Syrian.

Two other reasons would be:

- it contains gnostic overtones, and that movement started in the 2nd century
- none of the early Church Fathers quote it, but they quote the four gospels and the letters of Paul, etc.

I really enjoyed the Case for the Real Jesus, and if you like audio books, you can get it as an audio book. By the way, the audio versions of the unabridged “Case For” books are read by Lee Strobel himself – HIGHLY recommended. You will not lose interest.

# The seven fatal flaws of moral relativism

**Wintery Knight** · 21 June 2024 · Archived copy · Original

Moral relativism is the view that moral values and moral duties do not exist in reality, but only exist as opinions in people's minds. When you ask a moral relativist where the belief that stealing is wrong comes from, he may tell you that it is his opinion, or that it is the opinion of most people in his society. But he cannot tell you that stealing is wrong independent of what people think, because morality (on moral relativism) is just personal preference.

So what's wrong with it?

I found this list of the seven flaws of moral relativism at the Salvo magazine web site.

Here's the summary:

1. *Moral relativists can't accuse others of wrongdoing.*
2. *Relativists can't complain about the problem of evil.*
3. *Relativists can't place blame or accept praise.*
4. *Relativists can't make charges of unfairness or injustice.*
5. *Relativists can't improve their morality.*
6. *Relativists can't hold meaningful moral discussions.*
7. *Relativists can't promote the obligation of tolerance.*

Here's my favorite flaw of relativism (#6):

> *Relativists can't hold meaningful moral discussions.* What's there to talk about? If morals are entirely relative and all views are equal, then no way of thinking is better than another. No moral position can be judged as adequate or deficient, unreasonable, acceptable, or even barbaric. If ethical disputes make sense only when morals are objective, then relativism can only be consistently lived out in silence. For this reason, it is rare to meet a rational and consistent relativist, as most are quick to impose their own moral rules like "It's wrong to push your own morality on others". This puts relativists in an untenable position – if they speak up about moral issues, they surrender their relativism; if they do not speak up, they surrender their humanity. If the notion of moral discourse makes sense intuitively, then moral relativism is false.

I sometimes get a lot of flack from atheists who complain that I don't let them make any moral statements without asking them first to ground morality on their worldview. And that's because on atheism morality IS NOT rationally grounded, so they can't answer. In an accidental universe, you can only describe people's personal preferences or social customs, that vary by time and place. It's all arbitrary – like having discussions about what food is best or what clothing is best. The answer is always going to be "it depends". It depends on the person who is speaking because it's a subjective claim, not an objective claim. There is no objective way we ought to behave.

So, practically speaking, everyone has to decide whether right and wrong are real – objectively real. If they are objectively real, that means that there is a right way for human beings to behave, and a wrong way for human beings to behave. It means that things that are really objectively wrong like rape are wrong for all times and all places, regardless of what individuals and societies might think of it. In order to rationally ground that kind of morality, you have to have a foundation for it – a cosmic Designer who decides for all times and places what the conduct of his creatures ought to be. And then our moral duties are duties that are owed to this Designer. It is like playing football or playing a boardgame – the person who invents the game decides the rules. But if there is no designer of the game, then there are no rules.

Without a designer of the universe, the question of how we ought to act is decided by people in different times and different places. It's arbitrary and variable, and therefore it doesn't do the job of prescribing behavior

authoritatively. It's very important not to get involved in any serious endeavor with another person or persons if they don't have a sense of right and wrong being absolute and fixed. A belief in objective moral values is a necessary pre-requisite for integrity.

# Knight and Rose Show #51: Dr. Casey Luskin on Junk DNA

**Wintery Knight** · 22 June 2024 · Archived copy · Original

Welcome to episode 51 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome Dr. Casey Luskin to discuss how the progress of science debunked the myth of junk DNA. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose interview Dr. Casey Luskin about junk DNA. Is your DNA assembled by undirected forces, or is it intelligently designed? First, we look at the predictions of evolution and design proponents about junk DNA. Then, we look at the latest scientific discoveries, and see which side is changing their mind to adapt to the evidence. Casey reports about his recent debate on this topic with a biology professor.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 51:**

**Speaker biographies**

Casey Luskin holds a PhD in Geology from the University of Johannesburg in South Africa. He earned a law degree from the University of San Diego. Dr. Luskin has been a California-licensed attorney since 2005, practicing primarily in the area of evolution-education in public schools and defending academic freedom for scientists who face discrimination because of their support for intelligent design (ID). His B.S. and M.S. degrees in Earth Sciences are from the University of California, San Diego. In his role at Discovery Institute, Dr. Luskin works as Associate Director of the Center for Science and Culture, where he helps direct the ID 3.0 Research Program. Dr. Luskin has lectured widely on ID at university campuses and conferences on four continents. He has coauthored or contributed to multiple books. His most recent book, co-edited with William Dembski and Joseph Holden, is “The Comprehensive Guide to Science and Faith: Exploring the Ultimate Questions About Life and the Cosmos”.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Is the definition of atheism “a lack of belief in God”?

**Wintery Knight** · 23 June 2024 · Archived copy · Original

First, let’s see check with the Stanford University Encyclopedia of Philosophy:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they  are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God. What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God.  Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.”  If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars.  There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).”  Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this.  Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist.  Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.
>
> So understood, such an alleged presumption is clearly mistaken.  **For the assertion that “There is no God” is just as much a claim to knowledge as is the assertion that “There is a God.”  Therefore, the former assertion requires justification just as the latter does.  It is the agnostic who makes no knowledge claim at all with respect to God’s existence.  He confesses that he doesn’t know whether there is a God or whether there is no God.**
>
> But when you look more closely at how protagonists of the presumption of atheism used the term “atheist,” you discover that they were defining the word in a non-standard way, synonymous with “non-theist.”  So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists).  As Antony Flew confesses,

> the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)
>
> **Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know*. We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

**Dealing with subjective atheists**

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

# If you accept Jesus and become a Christian, will God make you happy?

**Wintery Knight** · 24 June 2024 · Archived copy · Original

This is a wonderful, wonderful post from Amy Hall, who writes for the Stand to Reason blog.

She writes:

> I had a brief interaction with an atheist on Twitter a couple of weeks ago that unexpectedly turned to the issue of suffering when she said:
>
> You clearly never had a time you were hurt. I don't mean sick. I don't mean heart broken. I mean literally a near death experience or rape or abusive relationship…. You can keep floating on a [expletive] cloud thinking Jesus will do everything for you but it's a lie. What makes you so special?
>
> That surprised me at first because it didn't seem to have anything to do with the tweet she was responding to, and I was confused as to why she would assume I'd never been through anything traumatic. But then in subsequent tweets, when she revealed she had been raped, it became clear that her trauma had played a central role in her becoming an outspoken, obviously angry "antitheist." She's a self-described antitheist now because she thinks Christianity teaches Jesus "will do everything for you" to give you a perfect life, and now she knows that's a lie. The rape proved her understanding of Christianity false.
>
> So it made sense for her to reason that since I believe Christianity is true, I must still be under the delusion that Jesus is making my life special, which means I obviously never encountered any evil or suffering to shake that delusion.

All right, readers. I don't want any of you to be thinking that if you become a Christian that these things should be expected to happen:

- you will feel happy all the time
- you will be able to sense God's secret plan for your life through your feelings
- God's secret plan for your life will automatically work, even though it's crazy
- God will give you a perfect spouse and lots of money without you having to study anything hard, or do any hard work
- you get permission to do things that that make you happy, even if they are expressly forbidden by the Bible
- you don't have to do anything that makes you feel bad (e.g. – talk to non-Christians about Christian truth claims), because God wants you to be happy

No! Where do people get this idea that if they convert to Christianity, then God will become their cosmic butler?

Amy has the answer: (emphasis mine)

> Hear me, everyone: **This is a failure of the church.**
>
> A friend of mine who was deeply suffering once said to me that many Christians are in for "an epic letdown" when they realize their preconceived notions about what God is expected to do for us are false. Pastors who preach a life-improvement Jesus are leading people down this precarious path to disillusionment.
>
> If suffering disproves your Christianity, you've missed Christianity. The Bible is filled with the suffering of those whom God loves. The central event of the Bible is one of suffering. Love involves suffering. "We know love by this, that He laid down His life for us; and we ought to lay down our lives for the brethren." That means suffering.

It's the church. It's the focus on happy things and having of happy feelings and happy songs and preaching designed to make us feel good. I would say the comforting devotional reading doesn't help to make us any tougher or more practical, either. That happy-clappy stuff just gives you a false sense of safety about your precarious situation. God's job is not to prevent you from suffering. In fact, even if you make really smart, practical decisions, you can expect to get creamed *anyway*.

Please take 15 minutes and read the book of 1 Peter in the New Testament.

Here's a summary from GotQuestions.org:

> **Purpose of Writing:** 1 Peter is a letter from Peter to the believers who had been dispersed throughout the ancient world and were under intense persecution. If anyone understood persecution, it was Peter. He was beaten, threatened, punished and jailed for preaching the Word of God. He knew what it took to endure without bitterness, without losing hope and in great faith living an obedient, victorious life. This knowledge of living hope in Jesus was the message and Christ's example was the one to follow.
>
> **Brief Summary:** Though this time of persecution was desperate, Peter reveals that it was actually a time to rejoice. He says to count it a privilege to suffer for the sake of Christ, as their Savior suffered for them. This letter makes reference to Peter's personal experiences with Jesus and his sermons from the book of Acts. Peter confirms Satan as the great enemy of every Christian but the assurance of Christ's future return gives the incentive of hope.
>
> **Practical Application:** The assurance of eternal life is given to all Christians. One way to identify with Christ is to share in His suffering. To us that would be to endure insults and slurs from those who call us "goodie two shoes" or "holier than thou." This is so minor compared to what Christ suffered for us on the Cross. Stand up for what you know and believe is right and rejoice when the world and Satan aim to hurt you.

Recently, I blogged about how suffering is compatible with an all-powerful God, so you might want to read that too if you missed it.

# CBO: Biden plan to subsidize health care for illegal immigrants costs billions

**Wintery Knight** · 25 June 2024 · Archived copy · Original

If there is one thing that secular leftists believe in, it's the need to feel good about themselves by spending other people's money. They don't want to give their own money to others. They want to give your money to others, and then feel good about it. And they want everyone to know how generous they are, too, with your money. And your children's money.

Here's the latest from Daily Caller:

> The Biden administration's plan to open Obamacare enrollment to DACA recipients will add billions to the national deficit, a Congressional Budget Office (CBO) report found.
>
> Roughly 110,000 illegal immigrants on the Deferred Action for Childhood Arrivals (DACA) program will sign up for Obamacare, adding about $7 billion to the federal deficit over the 2025-2034 period, according to an analysis released Monday by the CBO. The new estimate comes after President Joe Biden said he would change the rules to Obamacare to make DACA recipients eligible.

If the tax credits are made permanent, then the bill will be $9 billion:

> The CBO predicts that DACA recipients enrolling in subsidized coverage would increase by 140,000, making the final cost of the new rule around $9 billion, if these tax credits are made permanent.

Who is going to pay for all this spending? You are paying for it right now, in the higher prices of goods and services. And your children will be paying for it – they are not going to have the standard of living and prosperity that you have today.

That's the price of electing leaders who believe that they can be generous by spending other people's money, instead of their own money.

Daily Caller also reminded us of this:

> Biden announced an executive order last week giving amnesty to well over half a million illegal immigrants in the country who are married to U.S. citizens, a move that critics have panned as another incentive for illegal immigration amid an ongoing border crisis.

Canada has been importing millions of unskilled immigrants since they elected an unqualified, uneducated socialist. The result for taxpayers is a disaster. Higher taxes, more spending on social programs and policing, skyrocketing inflation. And shortages of education, health care and housing. That's what happens when you import millions of people who use more in services than they pay in taxes. We should learn from their mistakes.

# New study: 46% of Americans who own an EV want to return to a gas vehicle

**Wintery Knight** · 26 June 2024 · Archived copy · Original

What does it mean when a person owns an electric vehicle, or declares their intention to purchase one? I think they would like us to believe that it makes them a virtuous person. But according to a new study, it probably just makes them a stupid person. Someone who makes decisions involving tens of thousands of dollars, without evaluating the consequences of their own actions.

Here's the report from Daily Signal:

> Nearly half of American electric vehicle owners want to buy an internal combustion engine model the next time they buy a car, according to a new study from McKinsey and Co., a leading consulting firm.
>
> Approximately 46% of Americans who own an EV want to go back to a standard vehicle for their next purchase, citing issues like inadequate charging infrastructure and affordability, according to McKinsey's study, which was obtained and reviewed by the Daily Caller News Foundation.

People don't like owning these vehicles. They are not practical, and they might even be dangerous if they catch fire.

If you thought that the Biden administration was competent about making electric vehicles more practical, think again:

> Consumers' concerns about EV charging infrastructure are notable given the slow rollout of the Biden administration's $7.5 billion public EV charger program, which so far has led to the construction of only a few public chargers in nearly three years.
>
> The Biden administration has a stated goal of having EVs make up 50% of all new car sales by 2030. The Environmental Protection Agency finalized stringent regulations in March that will force manufacturers to ensure that up to 56% of their light-duty vehicles are EVs by 2032.
>
> The EPA has also finalized strict emissions standards for medium- and light-duty vehicles, while the National Highway Traffic Safety Administration has locked in fuel economy standards that will further push manufacturers to produce more EVs.

The Biden administration is trying to push these electrical vehicles on the public with regulations, but the public chargers are just not there. The performance of these vehicles is just not there either. Maybe it's time to put the brakes on these green efforts, before it starts to affect your life?

# It happened again: transgender suspect attacks Denver police with knife

**Wintery Knight** · 27 June 2024 · Archived copy · Original

On this blog, I've covered all sorts of violence committed by transgender activists. Not just with knives, but axes, guns, and more. Should we really be encouraging this, the way that the Biden administration is encouraging it? If we encourage it, we're sure to get more of it. Below, I'll talk about the latest TWO examples of violence committed by transgender people.

Here's the first one, from Daily Wire:

> The Denver Police Department said this week that a person they shot and killed last week was a transgender individual who tried to attack a police officer with a large knife.
>
> The suspect, 52-year-old Miguel Tapia, a man who claimed that he was a woman, tried to attack a police officer last week with a 7-inch knife, according to body camera footage that was released of the incident.
>
> The shooting happened last Sunday in an intersection when police confronted Tapia and told him to drop what he was holding and to put his hands on his head.
>
> Tapia started aggressively moving toward the police officer with the knife in his hand, at which point two police officers fired tasers at him in an effort to stop him.
>
> When the tasers were unsuccessful, the police officer that he was running after pulled out his pistol and unloaded several shots into the attacker. Another officer also fired at the suspect.
>
> […]Police said at a press conference that it was possible that he was also an illegal alien. The Daily Wire has reached out to U.S. Immigration and Customs Enforcement (ICE) for comment about the matter.

I did a quick check around and could not find confirmation that this person was an illegal immigrant, but I do know that, according to Newsweek, California is paying for the transgender transitions of illegal immigrants.

Here's another recent transgender violence story from a few days ago, reported by Breitbart News:

> A transgender suspect who allegedly shot and killed his parents in Washington, Utah, Tuesday was captured Wednesday and has been charged with numerous felonies.
>
> ABC 4 noted that the shooting suspect, originally named Collin Troy Bailey, now goes by Mia Bailey, and is "a transgender male transitioning to female."
>
> KSLTV reported that police confirmed Bailey's "name and gender were legally changed in 2023."
>
> […]2 KUTV reported that law enforcement documents claimed Bailey told them, "She did not have remorse for her actions and that she would not change what she had done."
>
> Bailey allegedly said, "I would do it again. I hate them."

Previously, I blogged about the Nashville transgender shooter, who also wrote about hating her parents.  Where are these children getting these ideas? Is there anything that parents can do to protect their children from this ideology?

# High-ranking Democrat gay activist and his underage boy r*pe fantasies

**Wintery Knight** · 28 June 2024 · Archived copy · Original

My friend William sent me a very interesting article about a prominent Democrat gay activist who got caught in a compromising situation. He isn't the first, and he won't be the last. Let's take a look at the story, and then we'll look at some prominent Democrat donors and same-sex marriage activists who were also caught in similar situations. What does "morality" mean to a secular leftist?

Here's the story from The Blaze:

> The Maryland Democratic Party has scrubbed its webpage and social media histories of all traces of its LGBTQ+ Diversity Leadership Council chairman Michael Knaapen following his fateful encounter with Predator Poachers in Montgomery County.
>
> Democrats are apparently desperate to hide their previous celebrations of Knaapen as a Marylander "making a difference" because of his apparent admissions Thursday that he allegedly sent depraved sexual messages and videos to an individual named "Luke" whom he figured for a 14-year-old boy. That boy turned out to be the invention of Predator Poachers, whose leader Alex Rosen confronted Knaapen Thursday with all of the receipts.

The article notes that  Knaapen visited with White House staff last year, and also attended two White House events. He's just the sort of person who would be welcomed by the Biden administration. The article also notes that Knaapen thought the fictional boy was underage, and that he gave the fictional boy his address and invited him over on at least two occasions. He also sent an image of his genitals to the fictional boy, and a video of Knaapen pleasuring himself. He expressed the hope that the fictional boy would "try to get away" during sex, so that the experience would seem more like r*pe to Knaapen.

This is the kind of person that Democrats promote to leadership. It's not an accident. It happens all the time.

**Related stories**

Fox News reports about the co-founder of the Human Rights Campaign, organization that frequently invites high-profile Democrats to speak at their events:

> Prominent Democrat donor Terry Bean was indicted earlier this month on two counts of sodomy and one count of sex abuse for allegedly having sex with a teenage boy.
>
> Bean was arraigned Thursday on the charges, TV station KGW8 reported. He pleaded not guilty and was taken into custody at Lane County jail in Oregon. He was released Thursday and told KGW8 he was "innocent."
>
> The indictment was filed on Jan. 4 but made public following the arraignment.
>
> Bean, a gay rights activist who donated almost $70,000 of his own money to former President Barack Obama's campaign, was charged with sexual abuse in 2014 but the case was dismissed after the alleged victim did not testify. Prosecutors refiled the charges after this, court records stated, according to The Oregonian. The "alleged victim is not named in the new indictment" but the dates are similar to the previous charges, KGW8 noted.
>
> Bean, a real estate developer, and his former boyfriend, Kiah Lawson, allegedly had sex with a 15-year-old boy in a Eugene, Oregon, hotel in September 2013. They allegedly used the app Grindr to arrange the sexual encounter. Lawson was also charged but his case was dismissed.

The Human Rights Campaign has a lot of corporate partners, who agree with the vision of Terry Bean and his

organization. You can see a list of HRC corporate supporters right here.

The far-left New York Times reported on a recent case:

> The mayor of Seattle, Ed Murray, said on Tuesday that he would resign after announcing in May that he would not seek a second term. Several men have come forward to accuse Mr. Murray of sexually abusing them decades ago, when they were underage.
>
> The announcement came just hours after The Seattle Times published a story with an account by a fifth man, Mr. Murray's cousin, who said Mr. Murray had abused him in the 1970s.
>
> [..]Mr. Murray, 62, a Democrat, is the city's first openly gay mayor, and had served in the State Legislature for many years before being elected in 2013.
>
> […]**The liberal Mr. Murray is generally considered a father of Washington's same-sex marriage law, which he pressed in the State Legislature for years.**

In a previous blog post, I listed SIX more cases like this:

- a university professor at USC
- a member of the San Francisco Human Rights Commission
- two men who adopted nine children
- two men who adopted a boy
- an activist who ran an organization for boys
- two men who adopted a boy from Russia

Now you know what people really mean when they say that they support "gay rights".

**What does morality mean to atheists?**

Let's review what objective morality (moral realism) really means in practice for atheists:

> In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.
>
> (Richard Dawkins, "God's Utility Function," Scientific American, November, 1995, p. 85)

Whatever morality atheists try to claim, the truth is that their worldview cannot ground it rationally. What do atheists believe? This universe is an accident. There are no objective human rights. There is no objective morality. There is no free will nor moral agency. There is no judge of our actions when we die. Other human beings are just lumps of matter to be used for our own pleasure, as long as the atheists are powerful enough to escape the disapproval of those dangerous Bible-believers. Survival of the fittest.

# What is the definition of marriage according to Jesus?

**Wintery Knight** · 29 June 2024 · Archived copy · Original

It's Pride Month! This is when Big Corporations spend an entire month celebrating the LGBT community, and pressuring everyone else to celebrate behaviors and lifestyles that are at odds with the teachings of Jesus. So, since the LGBT activists are about to get 30 days of celebration, I thought I would celebrate what Jesus taught about marriage on my little blog.

Here's what Jesus says about marriage.

Matthew 19:1-11:

> 1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.
>
> 2 And large crowds followed him, and he healed them there.
>
> 3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"
>
> 4 He answered, "Have you not read that he who created them from the beginning made them male and female,
>
> 5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?
>
> 6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."
>
> 7 They said to him, "Why then did Moses command one to give a certificate of divorce and to send her away?"
>
> 8 He said to them, "Because of your hardness of heart Moses allowed you to divorce your wives, but from the beginning it was not so.
>
> 9 And I say to you: whoever divorces his wife, except for sexual immorality, and marries another, commits adultery."
>
> 10 The disciples said to him, "If such is the case of a man with his wife, it is better not to marry."
>
> 11 But he said to them, "Not everyone can receive this saying, but only those to whom it is given.

To be a Christian, minimally, is to be a follower of Jesus Christ. That means that we accept what Jesus teaches, on whatever he teaches about. We don't overturn the teachings of Jesus in order to make people who are rebelling against God feel better about their rebellion. It is central to the Christian worldview that Christians care more about what God thinks of them than what non-Christians think of them. In fact, Christians are supposed to be willing to endure suffering rather than side with non-Christians against God's authority.

Matt Walsh had a fine article about this issue.

He said:

> As Christians, our goal is not to avoid being like the big bad "other Christians," but to strive to be like Christ Himself. This is one of the advantages to having an Incarnate God. He went around acting and speaking and teaching and generally functioning in our realm, thereby giving us a model to follow. This is the model of a loving and merciful man, and *also* a man of perfect virtue who fought against the forces of evil, condemned sin, defended his Father in Heaven with sometimes violent force, spoke truth, and eventually laid down His life for those He loved (which would be all of us).
>
> […]This is what it means to believe in Christ. Not just to believe that He existed, but to believe that Christ is Truth itself, and that everything He said and did was totally and absolutely and irreversibly true forever and always. Many Christians today — not only the ones in the video, but millions alongside them — seem to think

> we can rightly claim to have “faith” in Jesus or a “relationship” with Him while still categorically denying much of His Word. This is a ridiculous proposition. We can’t declare, in one breath, that Christ is Lord, and in the next suggest that maybe God got it wrong on this or that point. Well, we *can* make that declaration, but we expose our belief as fraudulent and self-serving. We worship a God we either invented in our heads, which is a false idol, or a God who is fallible, which is a false idol.

If you really accept Jesus as God, then you can’t think he is wrong when he explains what marriage is. Period. End of issue.

Real Christians don’t make excuses for sin. Real Christians present the gospel. The gospel is that all men have rebelled against God and fallen short of perfect submission to and obedience of him. For this, they deserve to be separated from God eternally. Jesus paid the price for this rebellion on the cross, and anyone who accepts him as Savior *and Lord* will be with God eternally after they die. There is no salvation apart from Jesus. That’s what Christians say. And they say it regardless of how weird they look, and how many non-Christians don’t like them for saying it.

# Playboy bunnies shocked that their own free decisions did not make them happy

**Wintery Knight** · 30 June 2024 · Archived copy · Original

I'm seeing a lot of stories in the news lately about how women are unhappy after being given exactly what they asked for. Feminists who wanted to abolish sex differences are mad that biological men are in their spaces. Feminists who demanded preferential treatment in colleges and workplaces are mad that men don't earn more than they do. And now… the Playboy bunnies are mad.

Story from the New York Post:

> "He was a predator," Hefner's ex-girlfriend Sondra Theodore, 65, told The Post. "I watched him, I watched his game. And I watched a lot of girls go through [the Playboy Mansion] gates looking farm-fresh, and leaving looking tired and haggard."
>
> The former Sunday school teacher-turned-1977 Playboy magazine centerfold model began dating Hefner after meeting him at one of his many lascivious mansion parties.

Former Sunday school teacher. Got that? Former Sunday school teacher.

She says that she's a victim:

> "He groomed me and twisted my mind into thinking his way was normal," she said of Hef… "He introduced me to drugs. I'd never had a drink or a drug before going up to the Playboy Mansion. And my first night there I was handed champagne and the drugs came later, and I was underage."

So, I have two points about this. I think that Hugh Hefner was a big hero to the secular left, because he helped them to throw off the shackles of sobriety and chastity that were part of America's Christian past. The secular left wanted freedom from Christianity's "repressive" rules on dating, relationships, marriage and sexuality, and Hefner gave them what they wanted. I hope we learn a lesson about trusting atheists to tell us what is moral.

Second point is about the women. Did everyone see that post from earlier in the week about the woman who ran up hundreds of thousands of dollars in student loan debt, then demanded a bailout from taxpayers? What I would like to see is women make better decisions. It would probably help that they rely more on evidence than on feelings, and call for advisors if they don't feel comfortable.

We're not helping women by telling them to "follow their hearts". People don't make good decisions when they "follow their hearts". Even worse is to follow the crowd. Hugh Hefner was in high demand by women when he was young. He's tall, he's handsome, he's rich, and he's morally permissive and non-judgmental. A lot of young women wanted all that he had to offer. But just because a lot of women wanted all that, doesn't mean that Sondra Theodore was right to wish for what what many women desired.

Another thing about the women – I don't like how they blame men for their own free will decisions. They don't take responsibility the way that I expect them to take responsibility. They're saying "It was the man's fault" instead of asking "why did I choose that man?" I'd like to see women ask themselves these hard questions. Just because these questions feel bad, it doesn't mean that they shouldn't be asked. The only way to learn is to take responsibility. If everything is someone else's fault, then you never change yourself. And you are the one you need to fear the most.

Finally, I don't think it's a good message to send our young men that tall, hot, rich bad boys get all the best looking young women. When a young woman chooses a bad man, it's a signal to all the young men about what is working – what is in demand. Women need to understand that their decisions are being watched, and they are making the world a worse place when they choose to reward secular left psychopaths like Hugh Hefner. He should have been

shunned by women – that would have made sure that no men imitated him.

# How do you respond to the conquests and wars in the Old Testament?

**Wintery Knight** · 1 July 2024 · Archived copy · Original

John Berea has an article about it on his web site.

Here's his overview:

> In the Old Testament are the military campaigns of Israel inconsistent with being led by a just and loving God, and inconsistent with his own commands? Here, I would like to make the case for consistency and justness.
>
> 1. **The nations of Canaan were evil, harming others, and needed to be stopped.** They had carried out incest with children/grandchildren and performed child sacrifice by fire. (Lev 18:6-30, Deut 12:31, Deut 18:9-10, Psalm 106:35, 37-38) They launched unprovoked attacks on Israel (Ex 17:8-9, Num 21:1, Num 21:2-23, 33) and even guerrilla attacks against Israel's "stragglers in the rear of the march when you were exhausted and tired." (Deut 25:18)
>
> **2. Warfare language was likely rhetorical.** There are five reasons to support the rhetorical nature of language such as "completely destroy" (Hebrew תחרימו, literally "ban") in Deut 20:17. It likely meant a destruction of armed soldiers, buildings, and religious icons.
>
> 1. Semitic language professor and NIV, NAB, and ESV bible translator Richard Hess argues that Hebrew "ban" is "stereotypical for describing all the inhabitants of a town or region, without predisposing the reader to assume anything further about their ages or even their genders" and "need not require that there really were children, senior citizens, or women there who were put to death" even when followed by the terms "men and women" (Joshua 8:25) or "young and old" (Joshua 8:25).
> 2. In Israel's destruction of enemies we see phrases like "left no survivor" and "utterly destroyed all who breathed" (Joshua 10:40, Judges 1:8). But in Joshua 21:12-13 the author has no problem telling us these people were still there afterward: "if you ever turn away and make alliances with these nations that remain near you… God will no longer drive out these nations". In 1 Sam 15:3-4 Israel was to "strike down the Amalekites. Destroy everything that they have. Don't spare them. Put them to death–man, woman, child, infant, ox, sheep, camel, and donkey alike." In 15:8 Saul "executed all Agag's people" and Agag himself was killed in 15:33. But later in 1 Sam 27:8 we're told they're still there and " had been living in that land for a long time". Hundreds of years later in Esther 3:1 we're even told Haman was an Agagite, a descendant of the Amalekite king Agag.
> 3. Most verses on the subject speak of "driving out" and "dispossessing" the land rather than language suggestive of genocide. E.g. Num 33:51-53, in "the land of Canaan, you must drive out all the inhabitants of the land before you. Destroy all their carved images, all their molten images, and demolish their high places. You must dispossess the inhabitants of the land and live in it, for I have given you the land to possess it." It's the same story in Lev 18:25, Num 23:31-32, Deut 6:19, 9:4, 18:12, Joshua 3:10, and 23:9.
> 4. Jer 4:20 suggests inhabitants fled before armies arrived: "At the sound of the horseman and bowman every city flees; They go into the thickets and climb among the rocks"
> 5. Deut 7:22 specifically says that Israel was forbidden to "destroy them all at once" and instead they would be expelled "little by little".
>
> So either all of these verses contradict one another, or the conquest language was rhetorical.
>
> **3. Many of the "cities" were probably military outposts.** For example with Jericho and Ai, Richard Hess argues there are no references to noncombatants (apart from Rahab), no archaeological evidence of non-military use, the term melek (Hebrew מלכי) for "king" of the cities often meant mean a military leader in Canaan (e.g. in Joshua 2:2), they were located at defensive positions, and Jericho and Ai weren't described as a

> large city as Gibeon and Hazor explicitly were.
>
> **4. A just God requires wrath.** It's not possible to have a God who is just but not wrathful–otherwise wrongdoers continue unabated. Paranormal investigator James Randi wrote in Skeptic Magazine, "I accuse the Christian god of murder by allowing the Holocaust to take place" yet Dawkins and Hitchens condemn God for judgment against the Canaanites. Which is it? Ultimately the the problem is we view death as the ultimate judgment, when in the theological context of the bible it's only a graduation to what's next with accountability for what we've done with what we were given.

The four points are developed with links for support. If you get this question a lot, it's a good resource to bookmark.

Also, if you're looking for a short video to share, here is a 6-minute one featuring Frank Turek:

That's from commenter WorldGoneCrazy. It's really good.

# Christian pro-lifer to be sentenced today by female judge appointed by Bill Clinton

**Wintery Knight** · 2 July 2024 · Archived copy · Original

Many popular Christian speakers have told me they can't imagine why it might be an advantage to work with an alias, not get married, not have children, and not expose your personal life to everyone on social media. But the fact is, it's much easier to say what you really think when no one can punish you. Even people who do make bold stands understand that.

Here's the article from Daily Wire:

> A Christian pro-life father of 11 facing over a decade in prison will be sentenced on Tuesday for his conviction over a peaceful protest in Tennessee at an abortion facility in 2021.
>
> Paul Vaughn, who was convicted of violating the FACE Act and conspiracy against civil rights in January, was targeted by the Biden administration in October 2022 after he participated in a peaceful protest at an abortion facility in Mt. Juliet, Tennessee in March 2021. He will be sentenced by U.S. District Judge Aleta Trauger on Tuesday in Nashville. He faces hundreds of thousands of dollars in fines and up to 10.5 years in prison.

I checked, and District Judge Aleta Trauger was appointed by former president Bill Clinton, a radical pro-abortion activist.

This is the key point made by Vaughn:

> "It's real easy for me. I can go and go to battle and go to jail as an individual, and it's not a big loss," Vaughn said. "The challenge comes when you're leading your family through it, when you're talking to your 3-year-old and your 23-year-old and your other family."

Yes, that's how things really work in the real world. It's admirable to perform these actions and take the hit from the secular left fascists. But it's harder to do that when you have dependents. Many of the most prominent Christian leaders who don't have an alias keep well clear of politics. They don't say anything about abortion or homosexuality, especially then they are married with children. That decision (to marry and have children) actually has a dampening effect on the witness of most Christians.

By the way, I checked up a bit more on the judge. The judge who is handing out the sentence is the same one who found the Christians guilty.

But look at this Nashville NPR:

> A federal judge has struck down a Tennessee law that would've required businesses and schools to post a warning sign if they allow transgender people to use the restroom that aligns with their gender.
>
> The same judge had granted a temporary injunction against the law, stopping it from taking effect last summer. Judge Aleta Trauger ruled that the law violated the First Amendment rights of trans-friendly businesses.
>
> "Transgender Tennesseans are real," Trauger wrote. "The businesses and establishments that wish to welcome them are real. And the viewpoints that those individuals and businesses hold are real, even if they differ from the views of some legislators or government officials."

If the accused people are expecting this radical Clinton-appointee to interpret the law fairly, I think they'll be disappointed. Radical feminist judicial activists tend to legislate from the bench. Many didn't get into law in order to understand legal principles and apply laws fairly. Many got into law so they could conduct judicial activism. Many got into law in order to push a political agenda.

One more thing. A lot of prominent Christian leaders support the idea of marrying young. They look at the threats to marriage for men, and they say “just choose a better wife”.

Here are some the threats that men are facing from the decision to get married:

- most young women are liberal, and therefore not safe for good conservative to marry
- no-fault divorce is unfair to men, e.g. – alimony, child support and unfair denial of custody and visitation
- biased application of domestic violence laws
- church siding with women against men, often in direct opposition to the clear teachings of the Bible
- false accusations against men, e.g. – at work or at school
- paternity fraud
- unfairly severe criminal sentences show bias against men in criminal justice system
- high taxes, inflation, caused by the welfare state

Choosing the right woman can protect you from some of those threats, but not all of them. Even if you marry the perfect Christian woman, you won’t be safe from a radical feminist man-hating Christianity-hating judge who can slap hundreds of thousands of dollars in fines on you, and throw you into prison for a decade. Maybe Christian leaders could first do something about radical feminists in power before they get on to bullying good men into marriage and parenting. There’s a reason why good men have to be careful about being vulnerable to the wrong people.

# Young women in Europe disappointed with the results of their own votes

**Wintery Knight** · 3 July 2024 · Archived copy · Original

If you're like me, then you'll have read books about how Europe opened up their borders to unskilled radicalized Muslim immigrants from anti-Western, anti-Christian countries. I read "America Alone" by Mark Steyn, and "The Strange Death of Europe" by Douglas Murray. At the time, European voters thought that giving the reins of power to the secular left would be a good idea. But did it work?

Here's a great article from the Daily Caller:

> The left seems confused as to why citizens of Europe are "all of a sudden" voting and chanting populist policies.
>
> It's not hard to see why if your brain hasn't been melted by social justice and faux outrage. These citizens are merely fed up with left-wing policies that turned their cities boasting idyllic Western culture into rampant crime-laden third-world subsidiaries.
>
> These policies are rapidly losing appeal in France, Germany, and Ireland. Their citizens, especially the younger generation, are begging for someone to come in and save their homelands, like this French girl, Lili R, who posted how "unbearable" daily life has become.
>
> "I am 26 years old, blonde, with light eyes, and I have always lived in the 6th arrondissement of Lyon, which is thought of as the poshest area in Lyon, and my daily life has become unbearable. I write this because, ten years ago, I could go out with my friends in the evening, at any hour, without being bothered, insulted, followed, or stabbed," she wrote, according to an online translation.
>
> The left seems confused as to why citizens of Europe are "all of a sudden" voting and chanting populist policies.
>
> It's not hard to see why if your brain hasn't been melted by social justice and faux outrage. These citizens are merely fed up with left-wing policies that turned their cities boasting idyllic Western culture into rampant crime-laden third-world subsidiaries.

And they have an example of someone who is fed up with these left-wing policies:

> These policies are rapidly losing appeal in France, Germany, and Ireland. Their citizens, especially the younger generation, are begging for someone to come in and save their homelands, like this French girl, Lili R, who posted how "unbearable" daily life has become.
>
> "I am 26 years old, blonde, with light eyes, and I have always lived in the 6th arrondissement of Lyon, which is thought of as the poshest area in Lyon, and my daily life has become unbearable. I write this because, ten years ago, I could go out with my friends in the evening, at any hour, without being bothered, insulted, followed, or stabbed," she wrote, according to an online translation.
>
> Her life has completely changed in ten years, and she blames unchecked illegal immigration, a policy France's left-wing parties not only support but actively aid.

And if you say anything about it, then you're "racist", because the "don't judge" people are in charge:

> "Every single one of the actions I mentioned (and they are only a part of what we have gone through) is the fact of men of sub-Saharan African or North African origin," Lili wrote. "Is it racist to call out what my daily life has become as a woman, because of immigration? Is my reality, my daily life, racist? Am I not as legitimate as any other person to call out traumatising acts of violence, just because they are done by foreigners

> or immigrants?"

In Douglas Murray's book, you can get all of the details about how each of the European countries elected secular leftists, and then those secular leftists invited the unskilled immigrants from Muslim countries in through their opened borders. These secular leftists were elected in large part through the votes of young unmarried women, who lean further and further to the left.

Here's the story from Financial Times:

> In countries on every continent, an ideological gap has opened up between young men and women. Tens of millions of people who occupy the same cities, workplaces, classrooms and even homes no longer see eye-to-eye.
>
> In the US, Gallup data shows that after decades where the sexes were each spread roughly equally across liberal and conservative world views, women aged 18 to 30 are now 30 percentage points more liberal than their male contemporaries. That gap took just six years to open up.
>
> Germany also now shows a 30-point gap between increasingly conservative young men and progressive female contemporaries, and in the UK the gap is 25 points. In Poland last year, almost half of men aged 18-21 backed the hard-right Confederation party, compared to just a sixth of young women of the same age.

One other point. The young French woman who was quoted isn't getting the worst of the Muslim immigrants. There is worse stuff being done to young women in Europe. I've blogged many times about the "grooming gangs" set up by recent male immigrants from majority-Muslim countries. The call it "grooming gangs" but it really amounts to sex-trafficking underage girls, most if not all of them fatherless. See the related posts.

# For Independence Day, let's learn about George Washington and the Battle of Trenton

**Wintery Knight** · 4 July 2024 · Archived copy · Original

My favorite book about the American Revolutionary war by far is called "1776". It's written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington's line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington's retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington's army at White Plains, New York, British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan.  Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was

> surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

**Washington crosses the Delaware**

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their

> crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

**The Battle of Trenton**

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall

> decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.
>
> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

# Women want to complain to Human Resources because man is reserved at work

**Wintery Knight** · 5 July 2024 · Archived copy · Original

I have spent over 24 years in information technology, and most of the companies were large IT companies. Large IT companies tend to emphasize diversity, equity, and inclusion more than smaller companies, which have to perform in order to stay afloat. And that means making sure there is an equal balance of genders, ethnicities, etc. in every different area.

Here is a very interesting post on the relationship advice forum of Reddit:

> Hi all I'm posting this on an alt because I know a few of my friends are following me on here and I don't want this spilling out until I have some clear thoughts on what I want to do.

The author – who uses Commonwealth spelling – has a short summary of her post at the top:

> A colleague (27M) joined our firm last year and since then he has had zero issues socialising with the guys we work with but always finds an excuse or says no to hanging out with the girls after work, even if we go out together as a whole he rarely talks to us and its making some of my friends uncomfortable.

And then here is the long version:

> So early last year our firm hired Dan (27M). In the first few weeks he was really quiet and didn't talk much and that's just how we thought he was. Every conversation with him was short and to the point and never deviated from work, asides from pleasantries (Have a nice weekend etc). About 2 months in he started becoming a bit more friendly with the guys in our office and they would hang out every so often and have normal conversations. However, whenever any of the girls in the office tried to do so he would quickly change the conversation back to work or just not reply. Even now after a year of Dan working with us he straight up refuses to socialise with the girls in the office and it is making them feel uncomfortable. He avoids any discussion of himself outside of work related events and future plans and doesn't ask any of the girls either. Where as he is, what I can only assume, pretty good friends with the guys in the office.
>
> Even on work meals out to celebrate events he is only doing the bare minimum when it comes to conversation with the girls where again with the guys he talks to them like there is no problem whatsoever. I don't know if I'm overreacting but one of the girls is considering go to HR about this because she is saying its creating a hostile work environment. Dan treats us like he treats clients we work with; cordial and strictly about business and its wearing thin now.
>
> Any advice is appreciated.

Many young people today don't see the workplace as being about work. They see it as a time of socializing. And they get angry when people don't socialize with them. They want to be allowed into a man's personal space, even though they are the kind of people who go straight to HR whenever anyone disagrees with them, or refuses to make them happy. Many of these women are single mothers who divorced the father of their kids.

I actually left my last job and took a lower salary job, because I was being harassed by a woman who had *no college degree*. Her official title was "Software Engineer", but she didn't write code. She just supervised deployments to production. She was very attractive, and had had cosmetic surgery done – her chest was super-sized. (I heard her explaining why she did it to one of the Indian workers one day). She was also about 6-8 years older than me. She started to get very angry with me for not giving her attention at work. She would come to my desk and talk about how politically conservative she was (she must have heard that I was conservative). But I didn't want to have

anything to do with her.

I blogged previously about a woman who accused a man of grooming her because he didn't want to get more serious with her. Men are getting tired of this. If you know any young women who are wondering why men don't talk to them, maybe it's because many young women are not pleasant or safe to talk to. Even if a particular young unmarried woman is safe to talk to, men will judge her based on the majority of single, unmarried women. It's just not safe for men to have non-business conversations in the workplace with young, unmarried women.

The juice isn't worth the squeeze.

# William Lane Craig debates atheist Lawrence Krauss: Does God Exist?

**Wintery Knight** · 6 July 2024 · Archived copy · Original

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

**Summary**

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

**Dr. Craig's opening speech.** (4:50)

1. The kalam cosmological argument:
    - God is the best explanation of the origin of the universe
    - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
    - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning
    - Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
    - Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
    - Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
    - A mind is the best explanation for the origin of the universe
2. The unreasonable effectiveness of mathematics:
    - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
    - Mathematical objects can either be abstract objects or useful fiction
    - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
    - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
    - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
    - These constants and quantities have to be set within a narrow range in order to permit intelligent life
    - There are three explanations for this observation: law, chance or design
    - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter

    - Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
    - We do not observe what the world ensemble hypothesis predicts that we should observe
    - Design is the best explanation for finely-tuned constants and quantities
4. The existence of objective moral values and duties
    - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
    - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
    - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
    - The best explanation for the existence of objective moral values and duties is that God exists
5. The historicity of the resurrection of Jesus
    - There are three widely-accepted facts that are best explained by the resurrection hypothesis
    - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
    - Naturalistic attempts to explain these 3 boilerplate facts fail
    - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
    - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

**Dr. Krauss' opening speech.** (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I
    - There have been lots of different gods created by people through history
    - We've gotten rid of all of them by understanding how the universe works by doing science
    - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
    - Newtonian physics refutes the idea that angels push planets around
    - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)
    - Biochemistry hasn't explained how life originated, but we will have the solution soon
    - Physics shows us that matter can be created and destroyed without need a God
    - Physics shows us that universes can be created and destroyed "no problem"
3. Religious pluralism II
    - Since we have been able to disprove all the gods we've invented, why hang on to the last one
    - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
    - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
    - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
    - Peasants had a very low level of knowledge about the world and they believed in God
    - But our level of knowledge has increased over time, so we shouldn't believe in God now
    - Peasants thought that the Earth orbited the Sun, but this is now known to be false

- The Scriptures said that the Earth orbited the Sun, but now we know that's false from science

7. Christianity plagiarizes from other religions I
   - There is nothing new or special about Jesus
   - He's just as unpleasant as all the other gods
   - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
   - I'll bet most Catholics don't really believe in transubstantiation
   - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
   - Dionysus, Osiris, etc.
10. There is no evidence for the resurrection
    - The stories about Jesus were written "decades or hundreds of years after the fact"
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That's like saying that all alien abductions experts agree that alien abductions happened
    - It's unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume's argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn't demand that we trust him, esteem him and consider his character when we make decisions
    - The atoning death of Jesus for the sins of the world also makes no sense
14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who "uses the exact same arguments" that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms "is that morally wrong? I can't say it is frankly" (37:24)
16. Dr. Craig is irrational
    - "I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan"
    - "Any argument that validates God is reasonable to him"
    - "And any argument against it is not only unreasonable but wrong and worth distorting"

    - “Because it must be wrong – he’s decided the answer in advance”
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - “So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK”
    - It’s not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn’t work in all cases
    - “Dr. Craig is so convinced that these arguments must be true that he won’t listen to the fact that they’re not”
20. Darwinian evolution explains the fine-tuning
    - “Life was fine tuned – we got rid of it with Darwin”
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - “We get back aches” therefore “This argument that [the universe] is fine-tuned for life is nonsense”
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments
    - Look, you can construct arguments that are clearly wrong
    - Premise 1: “All mammals exhibit homosexual behavior”
    - Premise 2: “William Lane Craig is a mammal”
    - Seems to be saying that logical arguments can prove false things “it’s nonsense”
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig’s faith is so strong that it causes him to distort what this group said

**Discussion:** (44:35)

I will not be summarizing everything that was said, just a few main points.
***The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see.*** Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can’t even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don’t work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don’t have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) “All the evidence suggests that the universe had a beginning but WE DON’T KNOW!!!!!!!” (raising his voice)

- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this: (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

**Audience Q and A:** (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: "I'm going to come to the defense of philosophy for the first time". Craig: "That's amazing!" Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

# William Lane Craig debates Daniel Came: Does God exist?

**Wintery Knight** · 7 July 2024 · Archived copy · Original

Dr. Craig's opening speech summary slide

The video of the debate was posted by ReasonableFaith.org – Dr. Craig's organization. This debate occurred in March 2017 at the University of Dublin, in Ireland.

The video: (91 minutes)

My non-snarky summary is below.

**Dr. Craig's opening speech**

Two claims:

1. There are good reasons to think that theism is true.
2. There are not comparably good reasons to think that atheism is true.

Five reasons for God's existence:

1. The beginning of the universe
– actual infinite past is mathematically impossible
– BGV theorem: any universe that is on balance expanding in its history (like ours) cannot be past eternal

2. Fine-tuning of cosmic quantities and constants
– slight changes to quantities and constants prevent a universe from supporting complex embodied life
– the multiverse response of atheists conflicts with observations, e.g. the Boltzmann Brains problem

3. Objective moral values
– God's existence is required to ground objective moral values and duties

4. Minimal facts case for the resurrection of Jesus
– there are good reasons to accept the most widely accepted facts about the historical Jesus (empty tomb, appearances, early widespread belief in the resurrection)
– the best explanation of these minimal facts is that God raised Jesus from the dead

5. Experience God directly
– in the absence of any defeaters to belief in God, a person can experience God directly

**Dr. Daniel Came's opening speech**

1. The hiddenness of God
– if God wants a personal relationship with us, and a relationship with God would be the greatest good for us
– God ought to reveal himself to us, but he does not reveal himself to many people, the "non-resistant non-believers"

2. The inductive problem of evil
– many evil events occur that are pointless – there is no morally sufficient reason why God would allow them to occur
– examples: animal suffering, children born with disease, tsunamis
– the theistic response to this is that humans are not in a position to know whether there are morally sufficient reasons, due to our limitations of knowing the consequences
– but this ripple effect defense has 4 possible outcomes, 3 of which don't do the job of justifying

**Dr. Craig's first rebuttal**

1. The hiddenness of God
– God's goal is not to make his existence known, but to draw them into a love relationship
– it's speculative that overt displays of God's existence would draw people to him in a love relationship, they might resent his bullying
– atheist would have to prove that God could draw more people into a love relationship with him by revealing himself more overtly

2. The inductive problem of evil
– as humans, we are not in a position to know for certain that any apparently pointless evil really is pointless
– William Alston article: 6 limitations of human knowing make it impossible to judge that an evil is actually "pointless"
– Dr. Came says that there are 4 possibilities for the ripple effects, and since 3 are bad, it's likely that there are not morally sufficient reasons for a apparently pointless evil
– it is logically fallacious to assert probability conclusions without knowing the probabilities of those 4 options
– there is actually an argument from evil: since the problem of evil requires an objective standard of good and evil by which to measure, and God is the only possible ground of objective morality, then pressing the problem of evil actually requires the atheist to assume God, in order to ground this objective moral standard

**Dr. Came's first rebuttal**

3. Objective moral values
– there are naturalistic theories of moral realism where objective moral duties and objective moral values exist in a naturalistic universe
– I'm not saying that any of them are correct, but there are many theories about object morality in a naturalistic universe

There are naturalistic theories for all of the 5 arguments that Dr. Craig presented. It is Dr. Craig's responsibility to present those naturalistic theories and prove that they are not as good as his explanations. I'm not going to defend (or even name!) a single naturalistic theory for any of these 5 arguments by Dr. Craig.

Dr. Craig's explanations for the 5 evidences he gave can't be admitted, because we have to know how God did something *in naturalistic terms* before we can know that God did it supernaturally. Explanations are only valid if they are naturalistic.

1. The beginning of the universe
– naturalism explains how the universe expands after it came into being, so that explains how it came into being
– the God explanation, that God created the universe out of nothing, is not admissible, because it is not naturalistic
– how does God, as an unembodied mind interact with the physical world?
– the only agency that we know about is human agents, and we have bodies, so how could God perform actions

without having a body?

The theistic hypothesis does not make any predictions, but naturalism makes lots of testable predictions. God could do anything, so he is not constrained and is therefore untestable. We can't infer God as an explanation in principle because we can't predict what is more probable if God exists than if he does not.

2. Fine-tuning of cosmic quantities and constants
– the university was not set up to make embodied intelligence plausible, because the vast majority of the universe is hostile to life
– there are models of the multiverse that escape the Boltzmann Brains problem that Dr. Craig raised

**Dr. Craig's second rebuttal**

Some of Dr. Craig's arguments are deductive (e.g. – the beginning of the universe, objective moral values), so that the conclusion follows from the premises if the premises are true. The resurrection passes the standard tests for historical explanations.

1. The beginning of the universe
– the whole point of the argument is that there is no naturalistic explanation for an ultimate beginning of the universe

2. Fine-tuning of cosmic quantities and constants
– the whole point of the argument is that there is no naturalistic explanation for a design of the universe to support life
– he has to prove that intelligences has to be attached to bodies
– human beings are non-physical minds united to physical bodies
– naturalistic attempts to explain mental operations fail
– the arguments *prove* that unembodied minds exist
– the vast expanse of the universe is required in order to form the galaxies, stars and heavy elements needed for complex life
– why expect that the entire universe should be small, or that life would be everywhere?
– a non-fine-tuned world is more likely in the multiverse, and in a multiverse, we are more likely to have a Boltzmann brain world than a world with complex, embodied life
– Dr. Came has not advanced any naturalistic explanation for the fine-tuning

3. Objective moral values
– non-theistic ethical theories cannot account for the ontological foundations of objective moral values and duties
– atheistic theories of moral realism simply assume objective moral values out of thin air
– it is especially hard to find any basis for objective moral duties in the absence of God

**Dr. Came's second rebuttal**

5. Religious experience
– Dr. Craig should not bring up religious experience in a debate where arguments and evidence are central
– people who have dreams, hallucinations and psychotic delusions could appeal to religious experience
– religious experience is by no means universal, and it is possible to doubt it

3. Objective moral values
– there are lots of atheists who hold to objective moral values
– Dr. Craig has to explain how God grounds objective moral values and duties
– Dr. Craig has to explain why atheist moral realist theories don't work to ground objective moral values and duties

1. The beginning of the universe
– Dr. Craig claims that something can't come from nothing, that's not an argument
– there are numerous models that don't require an absolute beginning of the universe

– Dr. Craig cites the BGV theorem, but Guth (one of the authors) says that only the inflation has a beginning, not the whole universe

**Dr. Craig's conclusion**

1. The beginning of the universe
– on theism, there is an efficient cause, but no material cause, for the origin of the universe
– on atheism, there is neither an efficient cause nor a material cause, for the origin of the universe: that's worse!
– if he thinks that there are models of the universe that don't require a beginning, then let him name a viable eternal model of the universe
– he never refuted the mathematical argues against an infinite past

2. Fine-tuning of cosmic quantities and constants
– nothing to refute

3. Objective moral values
– God is a better ground for morality than humans, because he is ultimate, and not contingent and arbitrary
– God is a being who is worthy of worship, and therefore command his creatures with moral duties

4. Minimal facts case for the resurrection of Jesus
– nothing to refute

5. Religious experience
– only justified because there are no defeaters to it

1. The hiddenness of God
– atheist has to show that if God's existence were more obvious, that it would result in more people being drawn to him

2. The inductive problem of evil
– Dr. Came's argument was logically fallacious, and makes errors in probability theory

**Dr. Came's conclusion**

Sometimes, people can't prove something, but lack of evidence is a justification for doubting it, e.g. – werewolves.

If none of Craig's arguments work, then it follows that it is not rational to believe that God exists, and it is rational to believe that God does not exist.

Atheists shouldn't have a burden of proof for what they know, only theists have a burden of proof for what they know.

**My thoughts**

One quick point. If life were common everywhere then atheists would infer that God wasn't involved in it. Period. "Life is everywhere, so it's common, why do we need a designer?" they'd say. I agree with Dr. Came about denouncing religious experience in a formal debate. I don't like when Dr. Craig brings this up, but I see why he does it – he's an evangelist, and that's a good thing, too. I just worry about how it looks to atheists, although it's good for sincere seekers. I'm not the one on the stage, though, Dr. Craig is.

I think the point about more overt revealing by God would annoy people and make them turn away. Think of how gay people respond to the suggestion that there is anything wrong with them, with rage, vandalism, threats, coercion, attempts to get you to lose your job and business, and using government as a weapon to fine and imprison you. It's really obvious to me that more God does not mean more *love* of God. For those who don't want God, the hiddenness is respect for their choice to put pleasure above the search for truth. (I mean the gay activists – I have great sympathy for people who struggle with same-sex unwanted attractions because they were impacted by a failed bond with their parent of the same sex as they are).

Whenever I meet people like Dr. Came, I always urge them to keep investigating and pursuing truth, because they will find it if they are sincerely seeking after God. Some atheists do sincerely seek God, but I don't know any who haven't found him. I'm not sure if that's because those atheists who claim to be non-resistant and rational are in fact resistant and non-rational, or what the real reason is. If you believe the Bible, *all* unbelief is non-rational and resistant (see Romans 1). Regarding the werewolves, we don't have any good arguments for werewolves, we do have good arguments for God. Dr. Came didn't refute the arguments that Craig raised, nor did his own arguments for atheism work. And there are many, many more arguments (origin of life, Cambrian explosion, habitability-discoverability, molecular machines) that Craig did not raise, too.

# Dying from “don’t judge”: 13 Americans whose deaths were caused by illegal immigrants

**Wintery Knight** · 8 July 2024 · Archived copy · Original

Many people in America today vote in order to feel good about themselves, and to look good to others. But what is the long-term effect of voting this way? In this post, we will look at 13 stories of Americans who died at the hands of illegal immigrants who were welcomed in by the “don’t judge” crowd. Will the “don’t judge” crowd face any consequences for their actions?

Here is the article by Virginia Allen up at Daily Signal:

> Over the past 12 months, illegal aliens have been arrested in connection with the deaths of at least 13 Americans. Seven of those victims were minors.
>
> “The simple fact is that every crime committed by an illegal alien is one committed by an individual who should not have been at large in the country in the first place,” House Homeland Security Committee Chairman Rep. Mark Green told The Daily Signal.

That’s a key point. A lot of secular leftists like to claim that illegal immigrants don’t commit huge numbers of crimes compared to legal American taxpayers. But the issue is that every single crime committed by an illegal immigrant could have been avoided if that person was never able to get in. Also, the whole job of the people in government is to work for the people who pay their salaries. And that work is supposed to mean protecting the taxpayers from criminals. They’re not being paid by illegal immigrants to make their lives better.

Anyway, the Daily Signal article has 13 stories of taxpayers being killed by illegal immigrants, and here’s one of them:

> Victor Antonio Martinez-Hernandez, 23, crossed the U.S. southern border illegally in February 2023, according to Harford County, Maryland, Sheriff Jeffrey Gahler. Six months later, in August 2023, Hernandez is suspected of attacking, raping, and killing Rachel Morin, a mother of five, while she exercised on the MA & PA Heritage Trail in Bel Air, Maryland, about 30 miles northeast of Baltimore.
>
> After a lengthy investigation, authorities arrested Hernandez in Tulsa, Oklahoma, on June 14 on charges of rape and murder.

Now, you might expect that Christian leaders would be speaking out about these kinds of crimes, and advocating for government workers to protect the taxpayers who pay their salaries. But you’d be wrong. Many Christian leaders, including Southern Baptist leaders, have decided that open borders are more consistent with Christianity than protecting innocent people from criminals. They just want to “love everyone” and “don’t judge”.

# California judge hides entire “trans the child” case from the public

**Wintery Knight** · 9 July 2024 · Archived copy · Original

I try to write about every one of these cases that I can, no matter what country they occur in. Why? Because I think these cases do the best job of illustrating the hostility that the feminist culture has to male leadership in the home. It’s terrifying for men to see emotion-driven female judges, lawyers, teachers, social workers, therapists, etc. using the law as a weapon to overrule protective fathers.

Here’s the latest from Daily Signal:

> A Texas father is fighting in court to prevent his ex-wife from subjecting their son to experimental transgender medical interventions after she moved to California, seemingly taking advantage of the Golden State’s “transgender sanctuary” law.
>
> A California judge has taken the extraordinary step of hiding the entire case from the public in the lead-up to trial, and even preventing lawyers from accessing case documents.
>
> “My ex-wife, Anne Georgulas, wants to castrate my son, James,” Jeff Younger, the father, told The Daily Signal in a statement Wednesday. James is 12 years old. “Judge Michelle Kazadi denied me access to my own case records. She illegally sealed my case with no public access.”
>
> He also blamed Presiding Judge Shelley Kaufman and Judge Mark Juhas of abusing the system against his claims.
>
> “Judge Shelley Kaufman’s court has misrouted orders to the wrong address,” he added. “Judge Mark Juhas denied me access to crucial evidence by setting a too-early trial date. I can’t even get an independent medical exam of my son.”
>
> “The corrupt Los Angeles courts sealed my case to hide their corruption as they castrate my son,” Younger concluded.

Just like the case that I blogged about before from California, the problems were initiated by the wife that Younger chose:

> Jeff Younger has been fighting to preserve the bodily integrity of his son, James, since 2018. That year, Georgulas filed a restraining order seeking to prevent Younger from entering James’ school and referring to James as male. A jury declined to give Younger or Georgulas full custody and required Younger’s consent for any medical procedures.
>
> […]Younger appealed to the Texas Supreme Court, warning that Georgulas intended to subject his son to irreversible transgender interventions. The court rejected Younger’s case after Georgulas told the court she did not intend to subject her son to those “treatments.” However, in February, she filed a motion in Los Angeles County Superior Court, aiming to dissolve the protective order preventing her from subjecting James to “gender-affirming care.” Georgulas’ motion cites the opinions of psychologist Brigid Mariko Conn, who stated that James “is interested” in “puberty blockers,” estrogen, and “bottom surgery,” i.e. the removal of his penis and testicles.

She promised not to trans the boy, but then she just changed her mind later. Did she do it to feel better about herself? Or to virtue signal to others about her cool new trans child, like women celebrities do? Or did she do it to get revenge on her ex-husband? Who knows. But the key point about these sorts of cases is that men looking on understand that regardless of who they choose to marry, there is a whole team of radical feminist lawyers, judges, social workers, therapists, teachers, etc. arrayed against male leadership in the home. And very often, the man-blamers in the churches are completely on the side of those feminists.

At the very least, traditional conservatives have very little to say about this, and I doubt they even see the common denominator in all these cases that interest men. The common denominator is the view that men should just be slaves who exist only to protect and provide, but they have no authority to lead on moral and spiritual issues. And also that men should not be allowed to have any standards or plan for relationships – they should just sign up to be slaves whenever a woman decides that she wants them to sign up. This is the same view that you find in the books of popular evangelical feminists and egalitarians. It's held by some of the most pious and chivalrous pro-traditional marriage Christians.

On the one hand, evangelical feminists and egalitarians want to take the view that women are always the real leaders in the home. Then on the other hand, they expect men to sign up to pay all the bills and fight all the battles, but with no leadership role. Do they really think that men will take an offer like that? Do they really think that men are stupid, and can be shamed into being the victim of a system that hates traditional male roles? I don't think it's going to work.

# DNA repair is essential to DNA maintenance and has to be present at origin of life

**Wintery Knight** · 10 July 2024 · Archived copy · Original

We recently did an episode of the Knight and Rose Show with Dr. Fazale Rana of Reasons to Believe about the origin of life. In that episode, we talked about all of the components that have to be present in the first living cell in order for it to perform the minimal functions of a living system. One component that was not specifically talked about is the DNA repair.

First we will look at an article, but don't let complexity bother you, because there is a Discovery Institute animated video that goes with it. The article just provides scientific evidence to support the cartoon.

Here's an article about that from Evolution News:

> Damage to the "factory" of the cell occurs on two levels: damage to the stored information (either during replication or by natural degradation over time) and damage to the manufacturing machinery (either from faulty production of new machinery or damage incurred during use). Each type of damage requires specific repair mechanisms that demonstrate foresight — the expectation that damage will occur and the ability to recognize, repair and/or recycle only those components that are damaged. All known life requires these mechanisms.

So, from a Darwinist perspective, you would have to be able to show that DNA repair can evolve a little bit at a time, with each iteration providing a little more functionality. But what if science found that all the functionality has to be there right at the beginning, or there is no DNA repair? That would look more like design.

More:

> The initial process of DNA replication is facilitated by a polymerase enzyme which results in approximately one error for every 10,000 to 100,000 added nucleotides.1 However, no known life can persist with such a high rate of error, if left uncorrected.2 Fortunately, DNA replication in all life includes a subsequent proofreading step — a type of damage repair — that enhances the accuracy by a factor of 100 to 1,000. T
>
> […]Following the replication of DNA, a daily barrage of DNA damage occurs during normal operating conditions. Life therefore requires sophisticated and highly specific DNA repair mechanisms. In humans, DNA damage response is estimated to involve a hierarchical organization of 605 proteins in 109 assemblies.4 Efforts to make the simplest possible cell by stripping out all non-essential genes has successfully reduced DNA repair to a minimal set of six genes.5 But, these six genes are encoded in thousands of base pairs of DNA, and the machinery to transcribe and translate those genes into the repair enzymes requires a minimum of 149 genes.6 Thus, the DNA code that is required to make DNA repair mechanisms easily exceeds 100,000 base pairs.

And this is the key point:

> Here, we encounter a great paradox, first identified in 1971 by Manfred Eigen[7]: DNA repair is essential to maintain DNA but the genes that code for DNA repair could not have evolved unless the repair mechanisms were already present to protect the DNA.

And at the very end of the article, the most common response from Darwinian naturalists is rebutted:

> Those who promote unguided abiogenesis simply brush off all of these required mechanisms, claiming that life started as simplified "proto-cells" that didn't need repair. But there is no evidence that any form of life could

> persist or replicate without these repair mechanisms. And the presence of the repair mechanisms invokes several examples of circular causality — quite a conundrum for unintelligent, natural processes alone. Belief that simpler “proto-cells” didn’t require repair mechanisms requires blind faith, set against the prevailing scientific evidence.

A good article to bookmark, especially if the origin of life is one of your main arguments.

And here is the short video that they made to go with it:

If you’re looking for a good simple podcast about the need for a Designing Intelligence to explain the origin of life, check out our episode with Dr. Fazale Rana.

# Should Christians respect Francis Collins as an authority on science?

**Wintery Knight** · 11 July 2024 · Archived copy · Original

Dr. Francis Collins is apparently in the news again. He claims to be an evangelical Christian, and pushed Christians to wear cloth masks and get vaccinated. Should Christians trust Collins as a scientific authority? Or is he just a willing pawn of the secular left? Let's take a look at an article from Megan Basham, and find out.

This article from February 2022 is originally from Daily Wire, but full text here. The title is "How The Federal Government Used Evangelical Leaders To Spread Covid Propaganda To Churches".

Excerpt:

> In September, Wheaton College dean Ed Stetzer interviewed National Institutes of Health Director Francis Collins on his podcast, "Church Leadership" about why Christians who want to obey Christ's command to love their neighbors should get the Covid vaccine and avoid indulging in misinformation.
>
> […]Their conversation also turned to the subject of masking children at school, with Collins noting that Christians, in particular, have been resistant to it. His view was firm—kids should be masked if they want to be in the classroom. To do anything else is to turn schools into super spreaders. Stetzer offered no pushback or follow-up questions based on views from other medical experts. He simply agreed.
>
> […]Collins participated in a livestream event, co-hosted by Christianity Today… During the panel interview, Collins continued to insist that the lab leak theory wasn't just unlikely but qualified for the dreaded misinformation label. "If you were trying to design a more dangerous coronavirus," he said, "you would never have designed this one … So I think one can say with great confidence that in this case the bioterrorist was nature … Humans did not make this one. Nature did."

I blogged previously about how several federal government departments now think that this is the most plausible theory, and how the CIA bribed experts to change their testimony about the lab leak theory. So Collins was actually the one spreading misinformation.

Collins takes secular left positions on abortion and transgenderism:

> He has not only defended experimentation on fetuses obtained by abortion, he has also directed record-level spending toward it. Among the priorities the NIH has funded under Collins — a University of Pittsburgh experiment that involved grafting infant scalps onto lab rats, as well as projects that relied on the harvested organs of aborted, full-term babies. Some doctors have even charged Collins with giving money to research that required extracting kidneys, ureters, and bladders from living infants.
>
> He further has endorsed unrestricted funding of embryonic stem cell research, personally attending President Obama's signing of an Executive Order to reverse a previous ban on such expenditures.
>
> […]When it comes to pushing an agenda of racial quotas and partiality based on skin color, Collins is a member of the Left in good standing, speaking fluently of "structural racism" and "equity" rather than equality. He's put his money (or, rather, taxpayer money) where his mouth is, implementing new policies that require scientists seeking NIH grants to pass diversity, equity, and inclusion tests in order to qualify.
>
> […]Having declared himself an "ally" of the gay and trans movements, he went on to say he "[applauds] the courage and resilience it takes for [LGBTQ] individuals to live openly and authentically" and is "committed to listening, respecting, and supporting [them]" as an "advocate."
>
> […]Under his watch, the NIH launched a new initiative to specifically direct funding to "sexual and gender minorities." On the ground, this has translated to awarding millions in grants to experimental

> transgender research on minors, like giving opposite-sex hormones to children as young as eight and mastectomies to girls as young as 13. Another project, awarded $8 million in grants, included recruiting teen boys to track their homosexual activities like "condomless anal sex" on an app without their parents' consent.

Megan's got the names of the people who promoted him in her article: Tim Keller, Rick Warren, N. T. Wright, Ed Stetzer, Russell Moore, and David French:

> Keller, Warren, Wright, and Stetzer all publicly lauded him as a godly brother. When presenting Collins to Southern Baptists, Moore gushed over him as the smartest man in a book club he attends…
>
> [I]nfluential evangelical pundit David French deemed Collins a "national treasure" and his service in the NIH "faithful."

I notice that Seth Gruber, who I've met in person during his early pro-life training, had a very recent article about Dr. Collins.

He writes:

> But after Megan Basham's Daily Wire article that caused Big Eva to start collapsing in on itself like a dying star, Daily Wire reached out to those five men to ask if they had changed their views on Collins given these revelations. NONE OF THEM RESPONDED. And that remains true to this day. None of these supposedly godly Christian leaders has anything to say about his "brother in Christ" funding the live dissections of infants for fresh organs, sexualizing teenage boys, carving the breasts off of healthy teenage girls, chemically castrating children, praising eugenic abortions, and buying the organs of our preborn brothers and sisters. In fact, Megan Basham once found herself waiting to board the same flight as Dr. Moore. When she approached him to question him about his involvement with Collins, he promptly ran away.

And this was the part that is so unlike almost all of the popular Christian leaders of today – Seth named names:

> Russell Moore, Rick Warren, Ed Stetzer, David French, Tim Keller (in his day), and the rest of Big Eva all have one thing in common with the "progressive" revolutionaries of today's culture: the belief that God's children are indeed for sale. They only differ on the price tag and form of payment. Like Lot, if provided with the right incentives, our theological betters will not hesitate to toss God's children into the arms of the mob.

Dr. Collins is a Darwinian evolutionist, so you can guess how evidence-based his views are about the origin of life and the Cambrian explosion. I think Christians need to be skeptical of believers in naturalistic religion: Darwinism, man-made catastrophic global warming, abortion, transgenderism, etc. It's pretty clear that these naturalistic views are not the result of study and debate. People who jump on the speculations of the secular left, and pronounce them as infallible, are not doing it to promote truth. They do it because they want the respect of powerful secular leftists. Dr. Collins is not an independent thinker. He is someone who adopts the views of secular leftist elites automatically and without thinking. He wants to get ahead in the world. That's it.

# The authors of the gospels of Mark and Luke knew eyewitnesses to the life of Jesus

**Wintery Knight** · 12 July 2024 · Archived copy · Original

Were the authors of the gospels of Mark and Luke connected to eyewitnesses to the life of Jesus? Well, it turns out that there are good reasons to think that Mark was linked to the eyewitness Peter, and Luke was linked to Paul, who had a post-mortem appearance of Jesus in 1 Cor 15:8, and who met with Peter and James in Galatians 1 and again in Galatians 2.

There is a list of evidence for Peter's influence on Mark on the Cold Case Christianity blog.

Here's my favorite one from the list:

> **Peter's Embarrassments Have Been Omitted**
>
> There are many details in the Gospel of Mark consistent with Peter's special input and influence,including omissions related to events involving Peter. How can Mark be a memoir of Peter if, in fact, the book contains so many omissions of events involving Peter specifically? It's important to evaluate the entire catalogue of omissions pertaining to Peter to understand the answer here. The vast majority of these omissions involve incidents in which Peter did or said something rash or embarrassing. It's not surprising these details were omitted by the author who wanted to protect Peter's standing in the Christian community. Mark was quite discreet in his retelling of the narrative (other Gospel writers who were present at the time do, however, provide details of Peters 'indiscretions' in their own accounts. See *Cold-Case Christianity* for a more detailed explanation).

It makes me laugh to imagine Peter looking over Mark's shoulder and saying "no, don't put that in it" and "no, don't tell them I did that". Funny! But also very good evidence. The rest of Wallace's list makes it even more clear.

And what about the gospel of Luke? Well, did you know that the author of Luke's gospel knew Paul? If you read it carefully, you'll see that Luke switches from describing history from an "I" perspective to describing things from a "we" perspective in the book of Acts (which he also wrote). Who is the "we" he is talking about?

Here's famous Christian scholar William Lane Craig to explain:

> Now who was this author we call Luke? He was clearly not an eyewitness to Jesus's life. But we discover an important fact about him from the book of Acts. Beginning in the sixteenth chapter of Acts, when Paul reaches Troas in modern-day Turkey, the author suddenly starts using the first-person plural: "we set sail from Troas to Samothrace," "we remained in Philippi some days," "as we were going to the place of prayer," *etc.* The most obvious explanation is that the author had joined Paul on his evangelistic tour of the Mediterranean cities. In chapter 21 he accompanies Paul back to Palestine and finally to Jerusalem. What this means is that the author of Luke-Acts was in fact in first hand contact with the eyewitnesses of Jesus's life and ministry in Jerusalem.
>
> […]There is no avoiding the conclusion that Luke-Acts was written by a traveling companion of Paul who had the opportunity to interview eyewitnesses to Jesus's life while in Jerusalem. Who were some of these eyewitnesses? Perhaps we can get some clue by subtracting from the Gospel of Luke everything found in the other gospels and seeing what is peculiar to Luke. What you discover is that many of Luke's peculiar narratives are connected to women who followed Jesus: people like Joanna and Susanna, and significantly, Mary, Jesus's mother.
>
> Was the author reliable in getting the facts straight? The book of Acts enables us to answer that question decisively. The book of Acts overlaps significantly with secular history of the ancient world, and the historical accuracy of Acts is indisputable.

> This has recently been demonstrated anew by Colin Hemer, a classical scholar who turned to New Testament studies, in his book *The Book of Acts in the Setting of Hellenistic History.* [5] Hemer goes through the book of Acts with a fine-toothed comb, pulling out a wealth of historical knowledge, ranging from what would have been common knowledge down to details which only a local person would know. Again and again Luke's accuracy is demonstrated: from the sailings of the Alexandrian corn fleet to the coastal terrain of the Mediterranean islands to the peculiar titles of local officials, Luke gets it right.

I know a lot of people (like my Dad) read the Bible devotionally, looking for feelings or trying to "get right with God" so they get blessings. But I think it's helpful to look at things from an evidential point of view – how am I going to make a case for this? When you look at things from that perspective, the Bible gets a whole lot more interesting. And you can talk about it with non-Christians when you know about these interesting details.

# Dr. Walter Bradley lectures on scientific evidence the creation and design of the universe

**Wintery Knight** · 13 July 2024 · Archived copy · Original

This lecture is special to me, because I bought a VHS tape of it just after I started working full-time, and watched it a million times. A lot of people come to their convictions about God's existence because of parents or church or intuitions, but for me it's all about the scientific evidence. This lecture changed my life. I wish more people taught their children about this evidence! This lecture was delivered at the University of California, Santa Barbara.

About the speaker:

> Dr. Bradley received his B.S. in Engineering Science and his Ph.D. in Materials Science from the University of Texas in Austin.
>
> Dr. Bradley taught for eight years at the Colorado School of Mines before assuming a position as Professor of Mechanical Engineering at Texas A&M University (TAMU) in 1976.
>
> During his 24 years at Texas A&M, Dr. Bradley served as Head of the Department of Mechanical Engineering at Texas A&M University and as Director of the Polymer Technology Center, and received five College of Engineering Research Awards. He has received over $4,500,000 in research grants and has published over 140 technical articles and book chapters. He has also co-authored "The Mystery Of Life's Origin: Reassessing Current Theories. He is a Fellow of the American Society for Materials and of the American Scientific Affiliation and serves as a consultant for many Fortune 500 companies.
>
> He currently serves as Distinguished Professor of Engineering at Baylor University.

The lecture: (63 minutes lecture, 25 minutes audience Q&A)

Summary slide:

This slide summarizes the content of the lecture

Introduction:

- At the beginning of the 20th century, people believed that the progress of science was pointing away from an intelligent Creator and Designer, and towards naturalism

- A stream of new discoveries has shifted the support of science towards theism, and away from naturalism
- Richard Dawkins, an atheist, says that nature only has the appearance of design, but that if you look closer, naturalistic mechanisms can account for the appearance of design
- When deciding between design and apparent design ("designoid"), it matters whether you think there is an intelligence there to do the designing

Evidence #1: The Big Bang:

- an eternal "steady state" universe is more compatible with naturalism, but a created universe is more compatible with a Creator
- In 1929, Hubble used telescopes to observe that the light from distant galaxies was *redshifted.* The further away galaxies were, the faster they were moving away. Therefore, space is expanding in all directions, suggesting an explosive origin of the universe
- In 1965, the discovery of the cosmic microwave background radiation matched a prediction of the Big Bang cosmology, and of the creation event
- In 1992, the COBE space telescope allowed us to test four specific predictions of the Big Bang model, especially the predictions for light element abundances (hydrogen and helium), which matched the predictions of the creation model

Evidence #2: Simple mathematical structure of the physical laws

- the simple mathematical structure of natural laws allows us to understand these laws, make discoveries, and engineer solutions to problems
- early scientists saw the mathematical structure of the universe to mean that nature was designed by an intelligent to be understood
- the fundamental equations of the laws of the universe can be easily written on one side of one sheet of paper
- Eugene Wigner's famous paper, "The Unreasonable Effectiveness of Mathematics in the Physical Sciences" makes the point that this simple structure is an unexpected gift that allows is to do science

Evidence #3: fine-tuning of the physical constants and quantities

- in order for any kind of complex life to survive, we need stars that provide energy within specific ranges for long periods of time
- in order for any kind of complex life to survive, we need planets with stable orbits that will not suffer from extreme temperature swings as it varies in distance from its star
- in order for any kind of complex life to survive, we need stable atomic structure
- in order for any kind of complex life to survive, we need to have chemical diversity and correct relative abundances of each element
- organic life has minimum requirements: process energy, store information, replicate, and you can't fulfill those functions if there is only one element, e.g. – hydrogen
- the energy level from the photons from the sun have to match the energy levels of the different elements in order to drive the chemical bonding needed for life
- These requirements for life of any imaginable type depend on the values of the constants and quantities. The constants and quantities cannot vary much from what they are, or the universe will lose the characteristics (above) that allow it to support complex life of any imaginable time
- For example, ratio of strong force to electromagnetic force:
  – if 2% larger, then no stable hydrogen, no long-lived stars, no compounds containing hydrogen, e.g. – water
  – if 5% smaller, no stable stars, heavy hydrogen would be unstable, few elements other than hydrogen

Evidence #4: initial conditions for habitability

- Universe: expansion rate of the universe must be fast enough to avoid a re-collapse, but slow enough to allow matter to clump together and form stars and planets for complex life to live on
- Planet: right distance from the star to get the right climate
- Planet: right mass to retain the right atmosphere

Evidence #5: origin of life and information theory

- It's possible to explain every process in an automobile engine using plain old naturalistic mechanisms – no supernatural explanation is necessary to understand the processes
- But the existence of engine itself: engineering all the parts has to be explained by the work of an intelligence
- Similarly, we can understand how living systems work, but the existence of the living systems requires an intelligence
- Even the simplest living system has to perform minimal function: capture energy, store information and replicate
- Living systems are composed of objects like proteins that are composed of sequences of components complex such that the order of the components gives the overall structure function
- Developing the components for a simple living cell is very improbable – even given the large number of galaxies, stars and planets in the universe, it is unlikely that complex, embodied life would exist *anywhere* in the universe

Evidence #6: more initial conditions for habitability

- Location within the galaxy: you need to be away from the center of the galaxy, because the explosions from dying stars, and excessive radiation will kill life
- Location within the galaxy: you need to be close enough to the center in order catch the heavy elements you need for life from the explosions of other stars
- Location within the galaxy: the best location is between two arms of a spiral galaxy, where you can get the heavy elements you need from dying stars, but without being hit with explosions and harmful radiation
- Star mass: determines rate at which the sun burns, determines the energy level of photons that are used to drive chemical bonding reactions, determines the length of time the star will be stable
- Star mass: star mass must be the correct value in order to allow liquid water on the planet's surface, while still preserving stable orbit

I wish there was more curiosity about science in churches, and young Christians understood *how critical science is* for grounding the rationality of the Christian worldview. We need to be training up more scientists who think about the big questions, like Dr. Walter Bradley.

# Hate speech: Democrat party Biden incites violence: “put Trump in a bullseye”

**Wintery Knight** · 14 July 2024 · Archived copy · Original

I collected together a few articles below connecting the Democrat party and the Biden administration to the attempt on Trump’s life. Each article makes a different point that was significant to me.

Democrat party’s attempt to take away Trump’s security detail: (Daily Caller)

> Months before the shooting at former President Trump’s rally in Butler, Pennsylvania, on Saturday, Democratic Mississippi Rep. Bennie Thompson introduced a bill in April that would have removed Trump’s Secret Service detail.
>
> The Disgraced Former Protectees Act was introduced by Democratic Mississippi Rep. Bennie Thompson of the House Committee on Homeland Security in April, with the bill aiming to remove “Secret Service protection for those who have been sentenced to prison following conviction for a Federal or State felony,” according to a press release from April. In light of the shooting at Trump’s rally, the importance of the Secret Service protection given to former presidents was demonstrated for all to see.

Biden hate speech inciting violence against Trump: (Politico)

> A defiant President Joe Biden insisted to his donors on Monday that he is “done talking about the debate” and implored the party to ignore any further distractions and direct its attention back to Donald Trump.
>
> “We need to move forward. Look, we have roughly 40 days til the convention, 120 days til the election. We can’t waste any more time being distracted,” Biden said in a private call with donors Monday, according to a recording obtained by POLITICO.
>
> “I have one job, and that’s to beat Donald Trump. I’m absolutely certain I’m the best person to be able to do that. So, we’re done talking about the debate, it’s time to put Trump in a bullseye,” Biden said.

Biden says that Trump is a threat to democracy: (Toronto Sun)

> Just two weeks earlier, Biden told supporters that Trump was a threat to America’s existence.
>
> “Donald Trump is a genuine threat to this nation. That is not hyperbole. He’s a threat to our freedom. He’s a threat to our democracy,” Biden said, adding that he wouldn’t let Trump destroy America just before the 250th anniversary of the Declaration of Independence.

The corporate news media tried to cover for the Democrat party: (Daily Caller)

> Multiple corporate media outlets initially did not report that shots were fired at a campaign rally featuring former President Donald Trump in Butler, Pennsylvania, on Saturday.
>
> […]Screenshots of corporate media sites showed that they did not initially report the shots in their headlines.
>
> “Secret Service rushes Trump off stage after popping noises heard at his Pennsylvania rally,” a headline from NBC News said, according to a screenshot posted on X by Drew Holden.
>
> “Trump whisked off stage in Pennsylvania after loud noises rang through the crowd,” a Los Angeles Times headline read, according to another screenshot Holden posted.

CNN tried to portray it as Trump’s fault: “Secret Service rushes Trump off stage after he falls at rally.”

Congerssman Steve Scalise, a previous victim of Democrat domestic terrorism, spoke up in the Wall Street Journal:

> House Majority Steve Scalise (R., La.,) who was himself seriously injured during a shooting in 2017, criticized Democratic leaders' political rhetoric in his statement Saturday night. The shooter in the 2017 attack, who was killed by police, had belonged to several anti-Republican groups and volunteered for Sen. Bernie Sanders's presidential campaign. There was no immediate information Saturday about who the shooter was or the motivation behind the attack.
>
> "For weeks Democrat leaders have been fueling ludicrous hysteria that Donald Trump winning re-election would be the end of democracy in America," Scalise said in a statement. "Clearly we've seen far left lunatics act on violent rhetoric in the past. This incendiary rhetoric must stop."

Time will tell about whether this case is similar to the plot to kidnap the Governor of Michigan: (Washington Times)

> Defense attorneys wanted jurors to see more communications between FBI handlers, undercover agents and paid informants who had fooled Fox and Croft and got inside the group. They argued that any plan to kidnap Whitmer was repeatedly pushed by those government actors.
>
> But at the 2022 trial, U.S. District Judge Robert Jonker greatly restricted the use of certain text messages and audio recordings under his interpretation of evidence rules.
>
> "Trials are about telling your story, giving your narrative, trying to persuade," Croft's appellate lawyer, Timothy Sweeney, told the 6th U.S. Circuit Court of Appeals, which posts audio on its website.
>
> "When you're denied the ability to use the rules of evidence where they benefit you, that is an unfair trial. … This case needs to be reversed and sent back for a new trial for that reason," Sweeney said.
>
> He might have Judge Joan Larsen on his side. She was the most aggressive on the three-judge panel, at one point seeming incredulous with the government's stance on an important legal precedent at play in the appeal.
>
> "Oh, come on," she told Assistant U.S. Attorney Nils Kessler. "Really?"
>
> Larsen said defense lawyers wanted jurors to see that "government informants were just pounding" Fox and Croft.
>
> "Make a plan, make a plan, make a plan – you're just sitting around. You're all talk, you're no action, make a plan," she said. "Surely that's relevant."

That article is from June 2024, so we are still waiting on answers in that case. Given what we know about the FBI's involvement in pushing the Steele dossier to influence an election, and the statements of elite national security people denying that the Hunter Biden laptop was real, anything is possible. Don't count on Democrats to have any morality, they're atheists, and atheists cannot rationally ground morality. When objective morality goes against their self-interest, they choose their self-interest. That's why 100 million people died as a result of godless communism in the last century. These people are not like William Wilberforce. The Christian worldview comes up with "free the slaves" and "let the babies live" and "adults should stay married and love their children". The atheist worldview comes up with "anybody who threatens my power has to be arrested, tortured and sent to a forced labor camp to die of starvation".

Certainly it looks like the Biden administration Secret Service acted strangely. They either failed to do their jobs, or they intentionally did not do their jobs. Was this a consequence of Democrat DEI policies or typical government incompetence, or was this similar to the case of FBI agents vowing to stop Trump from becoming President?

> "[Trump's] not ever going to become president, right? Right?!" Page texted Strzok in August 2016.
>
> "No. No he won't. We'll stop it," Strzok responded.

This isn't the first time that violence like this has been committed against Republicans by Democrats. After all, if your most sacred belief is in abortion, then any kind of violence is possible. Abortion is the act of murdering an unborn child that you created with your own actions, in order to avoid having to lose your happiness. The people who have them value reckless, irresponsible sex more than they value taking responsibility to care for the most innocent and needy human beings. If that's your core view, then anything is possible. You literally have no morals. And those are the types of people who are running federal law enforcement today. They focus on pre-dawn raiding the homes of peaceful pro-life demonstrators, while ignoring gun violence against Republicans from their allies in the Democrat party. That's what sin does to a person.

# Texas surgeon facing 10 years in prison for exposing trans surgeries on children

**Wintery Knight** · 15 July 2024 · Archived copy · Original

When Christians are assessing which of the political parties is more moral, abortion is obviously a big issue. After all, if a person resorts to murdering an innocent person to avoid consequences for their own behavior, that's pretty immoral. But do you know what else is pretty immoral? Inflicting harm on children that exposes them to severe mental and physical pain, and permanent disabilities.

Here's a recent article from Christian Post:

> A Texas surgeon, who is potentially facing 10 years in prison for having leaked information exposing Texas Children's Hospital for allegedly continuing to perform trans procedures on minors despite claiming otherwise, said his ordeal has convinced him of God's providence.
>
> Dr. Eithan Haim, 34, told The Christian Post that he feels God is with him in his battle against the U.S. Department of Justice, which slapped him earlier this month with four felony counts after he "obtained personal information including patient names, treatment codes and the attending physician from Texas Children's Hospital's (TCH) electronic system without authorization," according to a DOJ press release.
>
> Haim reportedly leaked such records to journalist Christopher Rufo last year because the hospital told the public it had paused such procedures after Texas Gov. Greg Abbott labeled them child abuse, though Haim uncovered documents that showed otherwise.

I thought his explanation about what is going on in society was very interesting:

> Haim believes every major institution in the U.S. has been "captured by this ideology" that endeavors to elevate narcissistic, selfish desires above objective reality and that anyone attempting to expose such things risks being attacked.
>
> "So if someone within those institutions is willing to tell the truth, it shines a light on their own degradation, which is why they try so hard to destroy those people," he said. "Because if they can destroy the one person who's telling the truth, who's shining the light, then they can reestablish the balance where everyone's degraded. But once you have one person who's going to speak the truth, who's willing to stand up, it will inevitably inspire others to do the same thing, too. And the process becomes exponential."

The article quotes Texas senator Ted Cruz expressing his concerns about anti-Christian bias within the Department of Justice, but everybody already knows that there are two systems of justice in America. One for Democrats, and one for the enemies of the Democrats.

I did want to add a quick point about what is really evil on the Christian worldview. Today, many people assume that Christianity is a religion of love, and you just have to love everyone, and never judge. And they think you can be a good Christian by doing that. We've turned not rocking the boat into a virtue. I've heard so many adult Christians excuse themselves from truth-telling exactly along those lines. "You just have to love everybody, what's the point of getting into disagreements with people".

So, what does Christianity really say about right and wrong? Well, here is an interesting passage with the words of Jesus about that.

Matthew 18:6-9:

> 6 "If anyone causes one of these little ones—those who believe in me—to stumble, it would be better for them to have a large millstone hung around their neck and to be drowned in the depths of the sea.

> 7 Woe to the world because of the things that cause people to stumble! Such things must come, but woe to the person through whom they come!
>
> 8 If your hand or your foot causes you to stumble, cut it off and throw it away. It is better for you to enter life maimed or crippled than to have two hands or two feet and be thrown into eternal fire.
>
> 9 And if your eye causes you to stumble, gouge it out and throw it away. It is better for you to enter life with one eye than to have two eyes and be thrown into the fire of hell.

Here's a picture of a millstone.

I don't think this passage is a warning just for Christians. If I were a non-Christian, and read this passage, I would immediately understand that God does not want me to interfere with children who are seeking God. So, even if I didn't want to follow Jesus like a Christian, I would know "well, I have to be careful about doing things that could cause children to turn away from God". And a lot of non-Christians know this intuitively. I used to work with an atheist software developer who was very concerned about making life difficult for people who were either coming towards God, or who were taking their faith seriously.

A lot of people today are so unaware of what the Bible teaches, that they think being "good" means "loving everyone" and "don't judge". They think that God, if he exists, would want us all of us humans to feel good, and to always get along with everyone. Well, tough news for them. Following God – obeying God – does not make Christians feel good, and it does not make non-Christians like us. You can see it in the story of Jesus, who obeyed God, and did not feel good and people did not like him. I am not sure how we got to the point where Christianity is seen as a kind of Disney fairy tale, but when you actually read the Bible, you understand that you are not supposed to do anything that keeps kids from Jesus, and you're not supposed to punish Christians like this medical doctor who stand up for God and his purposes in the world. It's worse than murder to punish an authentic Christian for his decision to obey God.

You would think that in America, even secular leftists would have some shame about this and say "well, we are going to live with our girlfriends but we're not going to abort babies. We're also not going to mutilate kids, because that would probably cause them to turn their backs on God". But sadly, we don't live in a world where secular leftists know that. They think "I'm a good person. I follow my own made-up morality, and so of course God is going to think I'm a good person". Just because you feel good now, and people like you now, don't make the mistake of thinking that's the criterion for avoiding the millstone. Read the Bible, that's the standard you have to meet.

# Did your science textbook tell you that embryo drawings prove evolution?

**Wintery Knight** · 16 July 2024 · Archived copy · Original

When you learned about evolution in public school, what did they show you for evidence to support the theory? Some people say finch beaks changing size, some people say a feathered dinosaur, some people say similar features in different animals, and some people say embryo drawings. Let's take a look at that last one and see if it's good evidence for evolution.

Jonathan Wells, a biologist with Ph.Ds from Yale and UC Berkeley, writes about one example of fake evidence here:

> Charles Darwin thought that "by far the strongest" evidence that humans and fish are descended from a common ancestor was the striking similarity of their early embryos. According to Darwin, the fact that "the embryos of the most distinct species belonging to the same class are closely similar, but become, when fully developed, widely dissimilar… reveals community of descent." [2] To illustrate this, German Darwinist Ernst Haeckel made some drawings in the 1860s to show that the embryos of vertebrates (fish, amphibians, reptiles, birds and mammals) look almost identical in their earliest stages.
>
> But Haeckel faked his drawings. Not only do they distort vertebrate embryos by making them appear more similar than they really are (in a way that Stephen Jay Gould wrote "can only be called fraudulent" [3]), but they also omit classes and stages that do not fit Darwin's theory. *Most significantly, Haeckel omitted the earliest stages, in which vertebrate embryos are strikingly different from each other.* The stage he portrayed as the first is actually midway through development. Yet according to Darwin's logic, early *dis*-similarities do *not* provide evidence for common ancestry.
>
> Haeckel used his faked drawings to support not only Darwinian evolution, but also his own "Biogenetic Law," which stated that embryos pass through the adult stages of their ancestors in the process of development.
>
> …Haeckel's drawings were exposed as fakes by his own contemporaries, and his Biogenetic Law was thoroughly discredited by 20th century biologists. It is now generally acknowledged that early embryos never resemble the adults of their supposed ancestors. A modern version of recapitulation claims that early embryos resemble the *embryos* of their ancestors, but since fossil embryos are extremely rare, this claim is little more than speculation based on the assumption that Darwin's theory is true.

Now the standard response from Darwinists: *no textbooks are still using the fraudulent embryo images.*

Haeckel's embryos and scientific fraud
You can see the actual faked pictures from the modern textbooks here. These textbooks were being produced as late as 2004, even though the fraud was detected in the 1800s! Is this the vaunted self-correction of science, or science being twisted to support social and political goals?

And this excerpt from that article is interesting:

> Some Darwinists continue to deny that there has been any misuse of Haeckel in recent times. If that is the case, why did Stephen Jay Gould attack how textbooks use Haeckel in 2000? Gould wrote: "We should… not be surprised that Haeckel's drawings entered nineteenth-century textbooks. But we do, I think, have the right to be **both astonished and ashamed by the century of mindless recycling that has led to the persistence of these drawings in a large number, if not a majority, of modern textbooks!**" (emphasis added) Similarly, in 1997, the leading embryologist Michael K. Richardson lamented in the journal *Anatomy and Embyology* that "Another point to emerge from this study is the **considerable inaccuracy of Haeckel's famous figures**. These drawings are **still widely reproduced in textbooks** and review articles, and continue to exert a significant influence on the development of ideas in this field." (emphases added)

Here is a link to the peer-reviewed journal Science, where there is an article talking about the fraudulent embryo drawings. Yes – the drawings really are fraudulent.

And finally, Casey Luskin has a post up at Evolution News that lists all the textbooks that contain the fraudulent drawings. One is dated 2013! The drawings just keep getting recycled over and over as a "proof" of evolution.

By the way, if you were told that finch beaks prove evolution, then read this post.

# What's the best book for introducing all the basics of defending the faith?

**Wintery Knight** · 17 July 2024 · Archived copy · Original

Let's look at the table of contents of my favorite introduction to Christian apologetics, which is "Is God Just a Human Invention?" written by Sean McDowell and Jonathan Morrow.

In that book, you will find 18 topics.

1. Is Faith Irrational? (Commentary by: Gregory Koukl)
2. Are Science and Christianity at Odds? (Commentary by: John Warwick Montgomery)
3. Are Miracles Possible? (Commentary by: Gary R. Habermas)
4. Is Darwinian Evolution the Only Game in Town? (Commentary by: William A. Dembski)
5. How Did the Universe Begin? (Commentary by: R. Douglas Geivett)
6. How Did Life Begin? (Commentary by: Fazale R. Rana)
7. Why Is the Universe Just Right for Life? (Commentary by: Jay W. Richards)
8. Has Science Shown There Is No Soul? (Commentary by: Dale Fincher and Jonalyn Fincher)
9. Is God Just a Human Invention? (Commentary by: Garry DeWeese)
10. Is Religion Dangerous? (Commentary by: Douglas Groothuis)
11. Does God Intend for Us to Keep Slaves? (Commentary by: Paul Copan)
12. Is Hell a Divine Torture Chamber? (Commentary by: Frank Turek)
13. Is God a Genocidal Bully? (Commentary by: Clay Jones)
14. Is Christianity the Cause of Dangerous Sexual Repression? (Commentary by: Kerby Anderson)
15. Can People Be Good Without God? (Commentary by: Mark D. Linville)
16. Is Evil Only a Problem for Christians? (Commentary by: Randy Alcorn)
17. What Good Is Christianity? (Commentary by: Glenn S. Sunshine)
18. Why Jesus Instead of the Flying Spaghetti Monster? (Commentary by: Darrell L. Bock)

Prominent atheist scholars are quoted in each chapter to introduce the challenges, and then scholarly arguments and evidence are presented to defend the Christian worldview. The language is simple enough, but the material is solid enough to use in a real debate. I would say that introductory books like this one are more than enough to equip you for everyone who will challenge you.

Why are these 18 topics important? Because these are the questions that atheists ask. These are the questions that cause Christians to leave the faith. These are the questions that your children will face in high school and college, which might cause them to leave the faith.

Let's start with chapter one. One of the most prominent arguments by atheists is that faith is irrational. This chapter allows you to define faith using the Bible's definition of faith, which relies on logic and evidence.

Atheists also say that Christianity is at war with science. In chapter 2, they discuss the history of science and how Christianity provided the framework that allowed scientific method to take root and flourish.

Atheists like to claim that miracles are impossible. Chapter 3 defends the view that God, if he exists, is capable of interacting with his created world.

Atheists love to put forward Darwinism as means to deny that God is the designer of life. Chapter 4 explains the concept of intelligent design, and why intelligent design is a better explanation for the history of life.

Atheists love to talk about how the universe has always existed, and there's no need for a Creator. Chapter 5

contains a philosophical argument that is supported by mainstream science to argue that the universe had a beginning, just like the Bible says.

Atheists love to argue that life can emerge from non-life, and the process is simple. Chapter 6 is written by a biochemist, and it takes a look at the real complexity of the simplest living cell.

Atheists like to argue that the universe itself is just an accident, and there is no need for a Designer. Chapter 7 introduces the scientific evidence for fine-tuning and habitability.

Atheists like to say that there is no soul and no afterlife. Chapter 8 gives some arguments for the existence of the soul.

Atheists like to argue that Christians invent God because God makes them feel good. But chapter 9 explains that having an all-powerful God who can hold humans accountable is the last thing any human would want to invent.

Atheists like to talk about how religion, with it's habit of teaching to believe in things that can't be tested, causes religious people to do a lot of harm. Chapter 10 takes a look at the real record of Christianity as a force for good in the world.

Atheists like to talk about slavery in the Bible. Chapter 11 talks about what the Bible really says, and provides some rational responses to the accusation.

Atheists like to talk about eternal punishment in Hell isn't a just punishment for just getting a few questions wrong on a theology exam. Chapter 12 provides an explanation and defense of the concept of Hell.

Atheists love to talk about how God commanded the Israelites to attack their enemies in the Bible. Chapter 13 explains who their enemies really were, and what was really happening in those wars.

Atheists feel that unrestricted sexual activity is very healthy and normal, and that the Biblical prohibitions outside of male-female marriage are repressive and unhealthy.  Chapter 14 explains why God has these rules in place, and supports his rules with evidence.

Atheists love to assert that they don't need God, because they can behave morally on their own. Chapter 15 explains how to answer this claim by talking about how well atheism grounds objective moral values, objective moral duties, free will and moral accountability: the minimum requirements for objective morality.

Atheists think that the mere existence of natural disasters and human immorality are incompatible with the God of the Bible. Chapter 16 explains why this argument doesn't work, and why even the concept of evil requires God to exist.

I have an atheist friend in my office who can't defeat my scientific arguments for the origin of the universe, the fine-tuning and the origin of life. But still, he says to me, even if God exists, why would that matter to my life? Chapter 17 explains what difference Christianity makes in a person's life.

Atheists think that the life of Jesus has no relevance to their life, and that he has nothing to offer them anyway. Chapter 18 explains the uniqueness of Jesus and explains why his resurrection is relevant to our lives today.

It's important to understand that this book is not on the level of A. W. Tozer, G.K. Chesterton, Francis Chan, John Piper, etc. Those authors write for a Christian audience and therefore they do not equip you to answer realistic challenges from non-Christians. But the apologetics book we looked at actually equips you to answer challenges from non-Christians using logical arguments and evidence from mainstream history and science. You can use the material in that book in discussions outside the confines of your home and your church.

# Bible study: Was the resurrection body of Jesus spiritual or physical?

**Wintery Knight** · 18 July 2024 · Archived copy · Original

One of the leading naturalistic attempts to account for Jesus' death, empty tomb, post-mortem appearances, and the early proclamation of the resurrection is that the disciples had individual and group hallucinations. In this case, the New Testament authors would not have meant that the resurrected body of Jesus was physical. But is that what they recorded?

Here's a quotation from my friend Eric Chabot, from his blog Think Apologetics. He explains why Paul's use of the word "resurrection" to describe what the other witnesses saw means *bodily* resurrection.

He writes:

> The two words are used for resurrection in the New Testament "anastasis" (rising up) and "egersis" (waking up), both imply a physical body**.** Furthermore, the use of the word "opethe" (the Greek word for appeared) shows the Gospel writers did believe that Jesus appeared physically. "There you will see (opethe) him" (Matt. 28:7); "The Lord has risen and has appeared (opethe) to Simon" (Luke 24:24). When they used "opethe" here, it means that He appeared physically to them.

OK so all the words they used for resurrection imply a physical body.

But what about the word for body. Do they imply a physical body?

Yes:

> So when Paul gives his list of appearances in 1 Cor. 15, the issues becomes whether the appearance to him is the same as it was to the disciples. There is no doubt the post resurrection body of Jesus (after the ascension) had to be somewhat different than the body the disciples saw. Also, whenever the New Testament mentions the word body, in the context of referring to an individual human being, the Greek word "soma" always refers to a literal, physical body. Greek specialist Robert Gundry says "the consistent and exclusive use of soma for the physical body in anthropological contexts resists dematerialization of the resurrection, whether by idealism or by existentialism." [9] Furthermore, in N.T. Wright's The Resurrection of the Son of God shows that the Greek word for resurrection which is "anastasis" was used by ancient Jews, pagans, and Christians as bodily in nature.

What about the nature of Paul's appearance? Was that a hallucination, or seeing some objective reality? Did the people with Paul see or hear anything?

Eric Chabot writes this in another place:

> The Bible says, "they heard" the same voice Paul did " (Acts 9: 7). But they "did not see anyone " (Acts 9: 7). Notice Paul was physically blinded by the brightness of the light. One way or the other, the experience involved something that was external to Paul. It wasn't something that was the same thing as a vision that Paul talks about in 2 Cor. 12:1. Furthermore, the phrase "he let himself be seen"' (ōphthē , aorist passive, ), is the word Paul uses in 1 Cor. 15:7 to describe of his own resurrection appearance as the other ones in the creed.

Paul didn't get a bodily resurrection appearance, but he got an objective appearance that people nearby could see (as a bright light) and hear. His appearance, coming 5-8 years after the appearances to the disciples, should not be seen as overriding their appearances, which were appearances of the bodily resurrected Jesus.

If you want to read something a little more challenging, I found a paper from the Evangelical Theological Society (ETS) from their journal, where it talks more about soma and anastasis. If you want a bit of a challenge, download the PDF and read it. It's by Kirk R. MacGregor and the title is "1 Corinthians 15:3B–6A, 7 And The Bodily Resurrection Of Jesus".

# Mental illness: 34% of Democrats believe assassination attempt conspiracy

**Wintery Knight** · 19 July 2024 · Archived copy · Original

I saw an interesting story in the Washington Free Beacon and thought I would link to it, then show two more stories that are related. The first story talks about a recent survey that shows how many Democrat voters believe in conspiracy theories. Rather than aligning their beliefs with evidence, they choose to believe what they want to believe based on their feelings.

Here's the story from Washington Free Beacon:

> One in three registered Democrats believe it is "credible" that the shooting Saturday in Butler, Pa., was staged and not intended to kill Trump, according to a Morning Consult poll released Monday. The findings show that large swaths of the Democratic base have fallen prey to the phenomenon known as "BlueAnon," a play on the far-right QAnon conspiracy theory that once gripped portions of the Republican base and served as an obsession of the mainstream media throughout the first Trump administration.
>
> But the Morning Consult poll shows that BlueAnon adherents among the Democratic base far outnumber their QAnon counterparts on the right. The poll showed that 34 percent of Democratic voters found it either definitely or probably credible that Trump staged Saturday's shooting, with less than half—45 percent—saying the conspiracy theory is not credible. By comparison, a widely cited 2021 poll found that only 23 percent of Republicans were QAnon believers.

You might be thinking that this is a problem being driven from the Antifa / BLM rank-and-file of the Democrat party, but actually it's being affirmed from the top, by the "sensible" Democrat elites:

> The rise of BlueAnon can be attributed to prominent Democratic activists and liberal media commentators egging on the notion that Trump staged Saturday's shooting.
>
> Democratic powerbroker Dmitri Mehlhorn, an ally of President Joe Biden who has made at least 10 visits to his White House, wasted no time fanning the flames of conspiracy in the immediate aftermath of Saturday's assassination attempt. Mehlhorn on Saturday evening sent a memo to reporters imploring them to portray the shooting as a false-flag operation straight from Vladimir Putin's playbook, designed to give Trump a good photo opportunity.

It's the Russians, again. It's always the Russians.

What else? Well, here's a Wall Street Journal article about a Gallup survey entitled "Look Who's Irrational Now". (full text)

Excerpt:

> The reality is that the New Atheist campaign, by discouraging religion, won't create a new group of intelligent, skeptical, enlightened beings. Far from it: It might actually encourage new levels of mass superstition. And that's not a conclusion to take on faith — it's what the empirical data tell us.
>
> "What Americans Really Believe," a comprehensive new study released by Baylor University yesterday, shows that traditional Christian religion greatly decreases belief in everything from the efficacy of palm readers to the usefulness of astrology. It also shows that the irreligious and the members of more liberal Protestant denominations, far from being resistant to superstition, tend to be much more likely to believe in the paranormal and in pseudoscience than evangelical Christians.
>
> The Gallup Organization, under contract to Baylor's Institute for Studies of Religion, asked American adults a

> series of questions to gauge credulity.
>
> […]The answers were added up to create an index of belief in occult and the paranormal. While 31% of people who never worship expressed strong belief in these things, only 8% of people who attend a house of worship more than once a week did.

One last point about Democrat voters. A significant number of Democrat voters have messed up their lives with their feelings-based decision-making, and they've turned to psychiatric drugs in order to deal with their mental illnesses. Not all Democrats are stupid and insane, of course!

# Utilitarianism and the Moral Life by J. P. Moreland

**Wintery Knight** · 20 July 2024 · Archived copy · Original

I found this essay on After All, but it looks like their site is not working well, so I'm just going to steal it and post it here, in case it disappears completely. This is one of my favorite short essays on utilitarianism, and it's a wonder that the thing can't stay up somewhere. Well, it will have a home here now. I'd be surprised to see anyone else be this awesome in a measly 1000 words as Dr. Moreland is below.

—-

## Utilitarianism and the Moral Life

### What Is Utilitarianism?

Utilitarianism (also called consequentialism) is a moral theory developed and refined in the modern world by Jeremy Bentham (1748-1832) and John Stuart Mill (1806-1873). It can be defined as follows:

> *An action or moral rule is right if and only if it maximizes the amount of nonmoral good produced in the consequences that result from doing that act or following that rule compared with other acts or rules open to the agent.*

By focusing on three features of utilitarianism, we can clarify this definition.

### (1) Utilitarian theories of value.

What is a nonmoral good? Utilitarians deny that there are any moral actions or rules that are intrinsically right or wrong. But they do believe in objective values that are nonmoral.

*Hedonistic utilitarians* say that the only intrinsic good is pleasure and the avoidance of pain. Quantitative hedonists (Bentham) say that the amount of pleasure and pain is the only thing that matters in deciding between two courses of action, I should do the one that produces the greatest amount of pleasure and the least amount of pain (measured by factors like the duration and intensity of the pleasure). Qualitative hedonists (Mill) say that pleasure is the only intrinsic good, but the type of pleasure is what is important, not the amount. They would rank pleasures that come from reading, art, and friendship as more valuable than those that come from, say, a full stomach.

*Pluralistic utilitarians* say there are a number of things that have intrinsic, nonmoral value: pleasure, friendship, health, knowledge, freedom, peace, security, and so forth. For pluralists, it is not just the pleasure that comes from friendship that has value but also friendship itself.

Currently, the most popular utilitarian view of value is subjective preference utilitarianism. This position says it is presumptuous and impossible to specify things that have intrinsic nonmoral worth. So, they claim, intrinsic value ought to be defined as that which each individual subjectively desires or wants, provided these do not harm others. Unfortunately, this view collapses into moral relativism.

### (2) Utilitarians and maximizing utility.

Utilitarians use the term utility to stand for whatever good they are seeking to produce as consequences of a moral action (e.g., "pleasure" for the hedonist, "satisfaction of subjective preference" for others). They see morality in a means-to-ends way. The sole value of a moral action or rule is the utility of its consequences. Moral action should maximize utility. This can be interpreted in different ways, but many utilitarians embrace the following: the correct moral action or rule is the one that produces the greatest amount of utility for the greatest number of people.

### (3) Two forms of utilitarianism: act utilitarianism and rule utilitarianism.

According to act utilitarianism, an act is right if and only if no other act available maximizes utility more than the act in question. Here, each new moral situation is evaluated on its own, and moral rules like “don’t steal” or “don’t break promises” are secondary The moral agent must weigh available alternatives and choose the one that produces the best consequences. Rule utilitarianism says that correct moral actions are done in keeping with correct moral rules, However, no moral rule is intrinsically right or wrong. Rather, a correct moral rule is one that would maximize utility if most people followed it as opposed to following an alternative rule. Here, alternative rules (e.g., “don’t lie” vs. “don’t lie unless doing so would enhance friendship”) are compared for their consequences, not specific actions.

## What Is Wrong with Utilitarianism?

**Several objections** show the inadequacy of utilitarianism as a normative moral theory.

**First**, utilitarianism can be used to justify actions that are clearly immoral. Consider the case of a severely deformed fetus. The child is certain to live a brief, albeit painless life. He or she will make no contribution to society. Society, however, will bear great expense. Doctors and other caregivers will invest time, emotion, and effort in adding mere hours to the baby’s life. The parents will know and love the child only long enough to be heartbroken at the inevitable loss. An abortion negates all those “utility” losses. There is no positive utility lost. Many of the same costs are involved in the care of the terminally ill elderly. They too may suffer no pain, but they may offer no benefit to society. In balancing positives and negatives, and excluding from the equation the objective sacredness of all human life, we arrive at morally repugnant decisions. Here deontological and virtue ethics steer us clear of what is easier to what is right.

**Second**, in a similar way, utilitarianism denies the existence of supererogatory acts. These are acts of moral heroism that are not morally obligatory but are still praiseworthy. Examples would be giving 75 percent of your income to the poor or throwing yourself on a bomb to save a stranger. Consider the bomb example. You have two choices — throwing yourself on the bomb or not doing so. Each choice would have consequences and, according to utilitarianism, you are morally obligated to do one or the other depending on which option maximized utility. Thus, there is no room for acts that go beyond the call of morality.

**Third**, utilitarianism has an inadequate view of human rights and human dignity. If enslaving a minority of people, say by a lottery, would produce the greatest good for the greatest number, or if conceiving children only to harvest their parts would do the same, then these could he justified in a utilitarian scheme. But enslavement and abortion violate individual rights and treat people as a means to an end, not as creatures with intrinsic dignity as human beings. If acts of abortion, active euthanasia, physician-assisted suicide, and so forth maximize utility, then they are morally obligatory for the utilitarian. But any moral system that makes abortion and suicide morally obligatory is surely flawed.

**Finally**, utilitarianism has an inadequate view of motives and character. We should praise good motives and seek good character because such motives and character are intrinsically valuable. But utilitarianism implies that the only reason we should praise good motives instead of bad ones, or seek good character instead of bad character, is because such acts would maximize utility. But this has the cart before the horse. We should praise good motives and blame bad ones because they are good or bad, not because such acts of praising and blaming produce good consequences.

**In sum**, it should be clear that utilitarianism is an inadequate moral theory. Unfortunately, ours is a pragmatic culture and utilitarianism is on the rise. But for those of us who follow Christ, a combination of virtue and deontological ethics is a more adequate view of common sense morality found in natural law and of the moral vision contained in the Bible.

# New survey: high school boys twice as likely to be conservative than girls

**Wintery Knight** · 21 July 2024 · Archived copy · Original

Did you know that women tend to be further to the left than men? According to surveys, women are more leftist than men on abortion, same-sex marriage, and a host of other policies. I'll show you a few surveys below. But even more interesting is that there is a link between support for leftist policies, and higher mental illness. Let's take a look at it.

First, here is an article from The Hill:

> Forty-four percent of young women counted themselves liberal in 2021, compared to 25 percent of young men, according to Gallup Poll data analyzed by the Survey Center on American Life. The gender gap is the largest recorded in 24 years of polling. The finding culminates years of rising liberalism among women ages 18 to 29, without any increase among their male peers.

That article is a bit old, here's a new one from this week in The Post Millennial:

> In annual surveys over the last few years, data pulled from Monitoring the Future has shown that about a quarter of high school seniors identify as conservative or very conservative. Only 13 percent of the 12th grade boys identify as liberal.
>
> […]The graph excludes moderate students, but of those high school seniors that do identify politically, around 65 percent of boys were conservative while only around 31 percent of girls identified that way.

According to surveys, young women are also more likely to support abortion under any circumstances (40 to 27) and more likely to support same-sex marriage than men.

I don't support abortion because I favor the rights of unborn babies over the happiness of adults. I don't support same-sex marriage because studies show children do better when they are raised by a mother and a father. And I think that's why most of these men are with me, they follow that same reasoning, and side with the children against the adults.

I thought this part of the article was interesting:

> As one Politico analyst put it, "Democrats have a masculinity problem." Citing trends among black and Latino voters, the analyst pointed out that even in minority communities that have voted majority Democrat, men have been turning to the Republican party at higher rates than women.
>
> Some conservative figures such as Jordan Peterson and Dennis Prager (through PragerU) have millions of followers on YouTube, a platform where the users are majority male.
>
> In addition, one of the more popular conservative political podcasts, The Ben Shapiro Show, has an audience that skews overwhelmingly male at 86 percent. The audience also skews younger, 18-44, in comparison to Fox's former show with Tucker Carlson, 25-54, which skews slightly female at 53 percent.

This is good news. Boys are finding themselves role models who they see as "strong". And those new role models are conservative. These stronger role models champion truth, and they make moral judgements. Even if it hurts other people's feelings.

Let's go on to the second point. These leftist policies are having a bad effect on young women's mental health.

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

I found an interesting article in the Wall Street Journal that talked about how one leftist policy concern (global warming alarmism) is tied to higher rates of mental illness.

It says:

> A study in 2021 of 16- to 25-year-olds in 10 countries including the U.S. reported that 59% were very or extremely worried about climate change, and 84% were at least moderately worried. Forty-five percent claimed they were so worried that they struggled to function on a daily basis, the definition of an anxiety disorder.

The study found that the mental illness was more common in younger people:

> Climate anxiety and dissatisfaction with government responses are widespread in children and young people in countries across the world and impact their daily functioning.

So now we are looking at a direct link between the policies of the left, and the lower mental health of the left. And we know that more women than men are on the left. And we see more mental illness among women.  Interesting, isn't it?

And this has consequences. Leftist women are noticing that men are more conservative than they are, and it's affecting their dating:

The marriage rate is also declining. Could this decline in marriage be related to the increase in leftist women, and all the related mental illnesses that leftist women have? Does it make sense for a conservative man to enter a relationship where he pays all the costs and bears all the risks, but all the decisions are being made by a leftist woman? It's dangerous for a man to do that.

Consider that the divorce rate is very high right now, and divorce takes away a man's money, his access to his kids, and his freedom. Women initiate 69% of divorces. College-educated women – who are especially leftist – initiate 90% of divorces. This high divorce rate cannot be blamed on men, because the divorce rate of lesbians is the highest of all. No man to blame in that situation.

Why would a man sign up to be controlled by feminist institutions, like the divorce courts? Men are not interested in projects where they have to pay for everything, but someone else is making the decisions. Especially if they get blamed when things go wrong.

Facing all of these risks, a man would have to be crazy to even talk to a leftist woman – much less date her. Unfortunately, we aren't making enough young conservative women for these conservative young men to marry. And so, the marriage rate is declining. Young women today are not as conservative as previous generations.

I know a lot of people today are worried about young men falling under the influence of bad role models. But the surveys show that boys tend to have the right role models, and the right political views. So, we need to work on making young women more conservative.

# Who will be the Democrat nominee for President in 2024?

**Wintery Knight** · 22 July 2024 · Archived copy · Original

I'm trying to find good articles to tell me who the replacement candidates are, and what are the complications with choosing one of these replacements at this late date. In this post, we'll look at three potential candidates, and talk about the complications of changing candidates after the primary is already over.

Here's the first article from Daily Signal.

First, what will happen at the convention?

> Democrats already have held their primary elections across America. The result was a resounding victory for Biden in a virtually uncontested race. Their options are now limited.
>
> The party can't hold another primary and the Democratic National Convention, set to begin Aug. 19 in Chicago, is just around the corner.
>
> […]Biden's 3,896 pledged convention delegates are free to vote for a replacement at the Democratic National Convention. The total number of Democratic delegates is 3,949, so the president had nearly all of them. If the delegates don't reach a majority decision with 1,976 votes on a nominee, the party's so-called superdelegates, over 700 of them, will decide who to nominate.
>
> Superdelegates are party leaders, and the list typically consists of officeholders and former officeholders.
>
> That convention process leaves the field open in a limited sense. To get into the running at the convention, a candidate would have to receive over 300 signatures from delegates. Only a maximum of 50 delegates may come from individual state delegations.

The article mentions California governor Gavin Newsom, Michigan governor Gretchen Whitmer, and vice president Kamala Harris. They think that Harris is the most likely candidate to replace Biden, and they note that she is polling well against him:

> A CBS/YouGov poll reported last week that Trump leads Harris 51% to 48% in a hypothetical match-up by popular vote. But Forbes reports that the Democratic polling firm Bendixen & Amandi showed Harris could beat Trump 42% to 41%.

Harris has early endorsements from Biden himself, and the Clintons, and she has easier access to Biden's election campaign money. If she is the nominee, then she gets all of the $91 million.

This editorial from Fox News explains:

> **If Kamala Harris becomes the Democrat Party presidential nominee, does she get access to the campaign cash?**
>
> Yes, because when the Biden for President committee filed its registration statement with the FEC, it registered itself as the "principal campaign committee" for both Joe Biden and Kamala Harris.
>
> **If someone other than Kamala Harris becomes the presidential nominee, can that individual access the $91.5 million for his or her presidential campaign?**
>
> No, under FEC regulations, the new nominee would have no access to or control over the Biden for President campaign cash. Biden for President would be limited to giving no more than a $2,000 contribution to the new presidential nominee's campaign committee.
>
> **Could the funds be transferred to the Democratic Party?**
>
> Yes, under FEC regulation 11 CFR 113.2, there is no limit on the transfer of funds from a candidate

> committee to party committees. Biden for President could, therefore, transfer all of its cash to the Democratic National Committee, Democratic congressional and senatorial committees, and state and local party committees, which could then use the money to support their federal, state and local candidates. Additionally, pursuant to the regulation, it could make donations to “State and local candidates subject to the provisions of State law.”
>
> However, because political party committees have expenditure limits (a vestige of the 1970s post-Watergate federal campaign finance reforms), the DNC is limited in the amount of its expenditures that it is permitted to make in coordination with the new nominee’s campaign committee.
>
> For the 2024 campaign, the limit is $32.4 million. A party committee could make independent expenditures regarding the presidential campaign, but it could not make unlimited coordinated expenditures of the newly transferred funds.

The article also notes all the money could be sent to Democrat SuperPACs, but there cannot be any coordination between them and the new nominee’s campaign.

I scanned some articles from the secular left news sites, and they seemed to think that Harris was going to be the nominee. I guess we’ll find out on August 19th. If they go with her, then they won’t have to change the names on all the state ballots. But if they choose someone else, there could be problems changing the name.

# How do secular leftists view the authority of parents to lead their children?

**Wintery Knight** · 23 July 2024 · Archived copy · Original

This news story happened recently, and I think it's worth blogging about to show how secular leftists see marriage, family, and parent's rights. Now, you would think that since 1) the parents are paying the salaries of the secular leftists in government and 2) parents are paying the bills for all of the children's needs, that secular leftists would respect parent's leadership. Let's take a look.

Here's the first article from Daily Signal:

> California Gov. Gavin Newsom signed a bill into law Monday banning schools from implementing policies that require parents be notified if their child requests to be identified as a different gender.
>
> AB 1955, also known as the Support Academic Futures and Educators for Today's Youth (SAFETY) Act, strikes down policies that some California schools have already implemented protecting parents' rights to be made aware of issues and make decisions regarding their children.

So, parents are "good enough" to pay the salaries of secular leftists in the California government and public schools. But they are not "good enough" to be told what is happening to their own children in the schools that they are paying for. Parents and families have no role to play in the lives of young people. Only the secular leftists are allowed to teach the children about anything.

Secular leftists think that parents are just slaves, and that the slaves have to let the masters take their money and indoctrinate their children. The masters don't want the slaves to tell their children that the masters are bad. But when the children run into problems, it's the parents they turn to for love and support. The masters don't spend their own money and time fixing anyone's problems. They're "generous" with other people's time and money, not their own.

And it's not just California, it's in the Biden administration as well. This is how the federal government thinks, too.

Here's another article from Daily Signal:

> The chief pediatrician at Texas Children's Hospital resigned in April 2022 after just seven months in her role, shortly after Gov. Greg Abbott forced the hospital to pause attempted sex-change procedures on children, such as puberty blockers, hormones, and surgeries.
>
> Now she's working for President Joe Biden's administration in a high-ranking position at the National Institutes of Health as Biden's Justice Department targets whistleblowers exposing alleged ongoing transgender practices at Texas Children's.
>
> […]This appointment came after conversations with trans-identifying Rachel Levine, the biologically male assistant secretary at HHS who identifies as a woman, according to emails obtained by America First Legal (AFL) through litigation against HHS.
>
> AFL believes that the emails illustrate "the Biden administration's conscious decision to continue pushing the harmful practice of child transgender surgeries and to assist in stepping up HHS Office for Civil Rights (OCR) investigations in Texas following the state's ban of such medical treatments on children in March 2022."

Something to think about now that we are having elections. Have you checked voter guides to see which candidates are the most conservative? I have. Make sure you let all your friends know who you are voting for and why, so they can vote too.

# Female fans of a convicted murderer want him spared from the death penalty

**Wintery Knight** · 24 July 2024 · Archived copy · Original

I saw that there was a capital punishment case in the news, coming out of Florida. A very handsome bad boy with tattoos on his face murdered two women. Prosecutors are seeking the death penalty. But the judge in the case has received letters from female admirers of the killer arguing against the death penalty. Is it wrong to have the death penalty as a punishment for murderers? What does the Bible say?

First, here's the case reported by the far-left UK Independent:

> Women have been sending letters to a Florida judge begging him to spare the life of a heavily-tattooed convicted killer who brutally murdered two women in 2019.
>
> Wade Wilson, 30, was found guilty last month of killing Kristine Melton, 35, and Diane Ruiz, 43.
>
> The defendant killed the women within hours of each other. He met Melton at a live music bar on 6 October 2019 before strangling her to death at her home in Cape Coral, where her body was discovered, prosecutors said.
>
> The following day, Ruiz was reported missing. She was walking to the bar where she worked when Wilson approached her in a car that he had stolen from Melton's home and asked her for directions.
>
> Ruiz got in the car, Wilson strangled her and "ran her over until she looked like spaghetti" the court heard.

I thought this part was interesting:

> Wilson has also been flooded with love letters, according to the Lee County Sheriff's Office.
>
> He has received nearly 4,000 messages online 754 photos and 65 letters in the mail, in total. The sheriff's office said they rejected 163 photos for their "inappropriate nature."
>
> A sheriff's office spokesperson told The Independent that "inappropriate" was classed as "sexual organs, content that is deemed indecent or controversial."

What should Christians think about the death penalty? Reformed Baptist theologian Wayne Grudem did a Sunday school lesson about Bible and capital punishment. Let's look at it.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.

The MP3 file is here.

The PDF outline is here.

Topics:

- what kinds of crimes might require CP?
- what did God say to Noah about CP?
- what does it mean that man is made in the image of God?
- is CP just about taking revenge?

- what does CP say about the value of human life?
- does CP apply to animals, too?
- could the statements supporting CP be understood as symbolic?
- one purpose of CP is to protecting the public
- another purpose of CP is to deter further wrongdoing
- but the Biblical purpose of CP is to achieve justice by retribution
- does the Pope make a good argument against CP?
- what is the role of civil government in achieving retribution?
- do people in Heaven who are sinless desire God to judge sinners?
- should crimes involving property alone be subject to CP?
- is the Mosaic law relevant for deciding which crimes are capital today?
- should violent crimes where no one dies be subject to CP?
- is CP widespread in the world? why or why not?
- what are some objections to CP from the Bible?
- how do you respond to those objections to CP?
- should civil government also turn the other cheek for all crimes?
- what is the “whole life ethic” and is it Biblical?
- what do academic studies show about the deterrence effect of CP?
- how often have innocent people been executed in the USA?
- should there be a higher burden of proof for CP convictions?

The Bible is awesome because it gives us knowledge about God’s character. How are we supposed to act in a way that is pleasing to God if we don’t know what he thinks of the issues of the day? We won’t know how we are supposed to act unless we know who God is first. And that’s why when we read the Bible we should be looking to find out the truth about who God is.

# Why are Christians allowed to eat shellfish but not allowed to have sex before marriage?

**Wintery Knight** · 25 July 2024 · Archived copy · Original

Here's a wonderful article from Peter Saunders.

The challenge:

> An argument frequently advanced by those attempting to defend homosexual practice is that Christians 'cherry pick' the commands in the Bible – that is, they chose to emphasise some commands while ignoring others.
>
> The Old Testament may forbid homosexual acts (Leviticus 18:2; 20:13) but it also forbids eating seafood without fins and scales (Leviticus 11:9-12; Deuteronomy 14:9, 10).
>
> So how can Christians then justify upholding laws on sexual morality whilst at the same time ignoring the food laws from the very same books of the Bible? Why may they eat shellfish but not be allowed to have sex outside marriage? Isn't this inconsistent and hypocritical?

The solution is that God enters into "covenants" with his people, and the terms of those covenants change.

Especially dietary laws:

> The answer to this question lies in an understanding of biblical covenants.
>
> A covenant is a binding solemn agreement made between two parties. It generally leaves each with obligations. But it holds only between the parties involved.
>
> There are a number of biblical covenants: Noahic, Abrahamic, Sinaitic (Old), Davidic and New.
>
> Under the Noahic covenant, which God made with all living human beings (Genesis 9:8-17), people were able to eat anything:
>
> *'Everything that lives and moves about will be food for you. Just as I gave you the green plants, I now give you everything' (Genesis 9:3).*
>
> But under the Sinaitic (Old) Covenant, which God made with the nation of Israel, people were able to eat certain foods, but not others.

Jesus clearly created a new covenant with his followers, where the dietary laws are lifted:

> Jesus said that he had come to fulfil the 'Law and the Prophets' (Matthew 5:17; Luke 24:44). He would establish this new covenant with new laws, with himself as high priest based on his own sacrificial death on the cross.
>
> This new covenant would completely deal with sin (Hebrews 10:1-18) and protect all those who put their faith in him from God's wrath and judgement…
>
> *[…]'In the same way, after the supper (Jesus) took the cup, saying, "This cup is the **new covenant** in my blood, which is poured out for you"' (Luke 22:20). '…we have been made holy through the sacrifice of the body of Jesus Christ once for all' (Hebrews 10:10)*
>
> People would come under the protection of this new covenant, not by virtue of belonging to the nation of Israel, but through faith in Christ. In fact the function of the Old Testament Law (Sinaitic covenant) was to point to Christ as its fulfilment.
>
> […]So what then did Christ say about foods? He pronounced all foods clean for his followers to eat:
>
> *' "Don't you see that nothing that enters a person from the outside can defile them? For it doesn't go into their*

> *heart but into their stomach, and then out of the body." (In saying this, Jesus declared all foods clean.) He went on: "What comes out of a person is what defiles them. For it is from within, out of a person's heart, that evil thoughts come—sexual immorality, theft, murder, adultery, greed, malice, deceit, lewdness, envy, slander, arrogance and folly. All these evils come from inside and defile a person." (Mark 7:18-23)*
>
> Jesus was making that point that under the new covenant God required purity of the heart. Internal thoughts and attitudes were as important as external actions.

Food is OK for Christians, but sexual immorality – which includes premarital sex and adultery – are NOT OK for Christians.

I think sometimes when you are talking to people whose motivation is just to get rid of any objective moral law entirely, they tend to ask questions without really wanting a good answer. This is especially true when it comes to the morality of sex. They ask the question not to get an answer, but to justify getting rid of the moral rules governing sexuality. The answers are there for people who are willing to respect God in their decision-making to find. The answers are not found only by people who have a reason to not want to find them.

In case you're wondering, I am one of those Christian men who takes chastity seriously. Marriage is about having a close connection with your spouse. Sure, I could break the rules and have a lot of fun now. A lot of Christians have a hard time turning down fun. But when I look at Jesus, I don't see a man who is pursuing fun and thrills. I see a man who sees a need and then sacrifices his own interests to rescue others from peril.

# Three things you should know about the moral character of Kamala Harris

**Wintery Knight** · 26 July 2024 · Archived copy · Original

VP candidate Kamala Harris was able to get picked for cushy high-paying jobs by having an affair with a married man. She used the resources of the state to persecute pro-lifers simply because she disagreed with their pro-life views. And she thinks that Joe Biden sexually assaulted women, but that's no big deal.

Let's start with having affairs for career advancement. The Washington Free Beacon reports:

> Former San Francisco mayor Willie Brown broke his silence on his relationship with Democratic senator Kamala Harris on Saturday, admitting in his weekly column that he used his powerful post to boost her young career when they dated.
>
> Brown… was openly in an extramarital relationship with Harris when he was speaker of the California State Assembly and running for mayor…
>
> […]Brown goes on to address the fact that he appointed Harris, who was just a few years out of law school and working at the Alameda County district attorney's office, to two well-paid posts on California state commissions and later helped her in her first election.

This isn't a problem for Democrats, because they don't believe in chastity, fidelity, or marriage. Whenever I see people voting for someone like Kamala Harris, I try to imagine what their personal life must be like. Democrat voters aren't Christians. They don't believe the Bible. They don't believe in chastity. They think infanticide is no big deal. And they have an extremely high rate of out-of-wedlock births, together with an extremely low marriage rate. So, these are not people who are successful at marriage and family. These are not people who do fidelity, honor and lifelong married love well.

Second, what about using the power of the state to attack people who you disagree with? Kamala Harris is an expert in fascism and the persecution of moral reformers.

Life News reported this in April 2019:

> David Daleiden and the Center for Medical Progress filed a lawsuit Wednesday against some of California's most powerful politicians for prosecuting him for exposing Planned Parenthood's aborted baby body parts harvesting practices.
>
> The lawsuit accuses U.S. Sen. Kamala Harris, state Attorney General Xavier Becerra, Planned Parenthood and others of conspiracy to violate First and Fourteenth Amendment civil rights.
>
> "The California Attorney General first admitted that they are enforcing the video recording law solely based on how they feel about the message being published, and then further admitted they are not even trying to follow the text of the law as written," Daleiden said.
>
> The lawsuit says Harris, the former attorney general, and Becerra used state video-recording laws as a "political weapon" to silence speech that they disagree with.
>
> […]Becerra and Harris both are pro-abortion Democrats who have received campaign donations from Planned Parenthood.
>
> Documents reveal that Harris, while running for U.S. Senate in 2016, had a secret, in-person meeting with Planned Parenthood leaders to discuss the investigation; two weeks later, the California Department of Justice raided Daleiden's home.
>
> According to the lawsuit, Daleiden "seeks justice for a brazen, unprecedented, and ongoing conspiracy to selectively use California's video recording laws as a political weapon to silence disfavored speech."

Again, this isn't going to be a problem for Democrat voters who think that murdering children who dare to get in the way of their recklss pursuit of sexual pleasure is perfectly fine. And that's every single Democrat politician, and every single Democrat voter. Their god is sex. They sacrifice their innocent children to their god.

Third, Kamala Harris thinks that the multiple accusations of rape and sexual assault against Biden are credible, but these things are not really important parts of a man's character.

The Hill reports:

> Sen. Kamala Harris (D-Calif.) said Tuesday that she believes women who say they felt uncomfortable after receiving unwanted touching from former Vice President Joe Biden.
>
> "I believe them and I respect them being able to tell their story and having the courage to do it," Harris said at a presidential campaign event in Nevada.

But now she's Biden's VP. Because women being sexually assaulted or even raped by their bosses in the workplace is no big deal for Kamala Harris. In fact, that's how women get ahead, right?

This woman has no moral character. She's an exemplary Democrat, and Democrat voters will support her as Vice President, and eventually as President.

# Will Venezuela's socialist totalitarians finally be voted out on Sunday?

**Wintery Knight** · 27 July 2024 · Archived copy · Original

If I had to think of a country that has been impoverished and crushed by secular leftist policies, I would pick Venezuela. Venezuela used to be such a prosperous country, but that all changed when they adopted socialism. Now, the country is among the poorest in the world. They are having an election this Sunday (tomorrow), and the opposition is led by a conservative superhero.

Let's take a look at what happens when a country votes for "Democrat socialism" of the sort represented by Kamala Harris and the Democrat party.

Far-left CNN explains:

> As Venezuela girds for what could be a historic presidential election this weekend, one of the most important names in the race isn't on the ballot: María Corina Machado – the woman who galvanized Venezuela's opposition movement, and whom many voters see as the real challenger to socialist incumbent Nicolás Maduro.
>
> […]On Sunday, once again, Machado will not be on the ballot – but not for lack of popularity. An avowed capitalist who has promised privatization of several state industries, Machado won more than 90% of the opposition primary vote last year, but has been barred from running for office following allegations that she didn't include some food vouchers on her assets declaration. Machado has described the decision to bar her – upheld by Venezuela's Supreme Court – as illegitimate, unjustified and unconstitutional.
>
> The current opposition candidate for president, Edmundo González, is backed by Machado, who has campaigned on his behalf to mobilize voters. Experts say that their efforts may now pose the most significant threat to Maduro's grip on power in years, as he fights to claim a third term.

As you would expect from the secular left, they plan to resort to election fraud in order to avoid losing their power. The conservatives are trying to monitor polling places to stop the fraud, but it's challenging.

This article from Unherd explains:

> Little wonder this 56-year-old woman, an admirer of Margaret Thatcher, has been nicknamed the Iron Lady. As she admits, it will be tough to defeat one of the world's most repulsive regimes — and there have been previous false dawns. If the elections were fair, her rival President Nicolás Maduro would be ousted along with his gangster pals in the United Socialist Party of Venezuela after overseeing the impoverishment of an oil-rich nation and driving out 7.7 million citizens — one-fifth of the population. The polls suggest the opposition has more more than twice the support of the ruling party. But they are taking on a government with a record of electoral fraud and frustrating democracy.
>
> So Machado plans to mobilise hundreds of thousands of supporters to monitor all the polling stations during Sunday's vote, which is being held after a deal was brokered last year in Barbados for fair elections in return for lifting United States sanctions and allowing in some outside observers. "We are not naive knowing what the regime will do," she told fellow dissidents attending the Oslo Freedom Forum. "We've been facing persecution, violation of human rights. But the regime is weaker and weaker every day. They have totally lost their social base and at the same time the networks they use for terror in the population are breaking down."

Do you remember what happened in Venezuela after the socialists took power?

> Venezuela's economy ended up suffering the biggest collapse outside of wartime in the past half-century. A

> country with the world's biggest oil reserves was hit by severe blackouts, hyperinflation and mass hunger as bakeries could not find flour, hospitals ran out of medicines and pro-government militia terrorised urban areas.
>
> […]As the journalist and historian Anne Applebaum dissects in her book Autocracy, Inc, Venezuela has evolved under Chávez and Maduro into a central player in an international alliance of repressive regimes. These states assist each other with a sinister and self-serving web of kleptocratic financial systems, surveillance technologies and propaganda machines to defy sanctions, shred internal dissent and challenge democratic freedoms. So Caracas developed commercial, fiscal and political links with Beijing and Moscow while Cuban security experts helped stifle opposition and showed them how to weaponise chronic food shortages created by theft and incompetence. Few were surprised when, in March, Maduro hailed the re-election of his Russian ally Vladimir Putin as "a flawless electoral process".

It's very strange to me to walk around my neighborhood and not see any election signs, other than my own. We are facing the same kind of poverty and repression from our secular left fascists, and yet people are just going about their lives as normal. They're not having conversations, they're not posting signs, they're not voting.

Two socialists shake hands: Barack Obama and Hugo Chavez

It's so depressing to me that people don't realize how hard it is to fix socialism once you vote it into power. Why think that the Democrat party is any different from Chavez and Maduro? They're not. Their policies lead to the same place.

# Two reasons why Christians and conservatives should not donate to United Way

**Wintery Knight** · 28 July 2024 · Archived copy · Original

Well, it's that time of year again, when corporations bully their employees into donating to the United Way. I thought it might be a good idea to urge all Bible-believing Christians to avoid donating to the United Way. *Please share this post if you agree with it!*

Let's start with abortion. The United Way gives TONS of money to fund abortion providers.

In 2008, United Way affiliates send $1.9 million to Planned Parenthood:

> The national United Way does fund Planned Parenthood; their website states:
>
> United Way funded programs through Planned Parenthood include community health maintenance, e.g. communicable disease prevention; medical care service; family planning; health education; public awareness services; and family preservation and strengthening services, e.g. counseling and family life education.
>
> Nationally in 2008, local United Ways distributed an estimated $1.9 million to Planned Parenthood agencies.
>
> Any finances being donated to Planned Parenthood (even if not specifically for abortion services) will free up more of their money to be used toward abortion services.

In 2015, United Way sent $3 million to Planned Parenthood:

> Last year, on the heels of shocking videos showing the Planned Parenthood abortion business selling the body parts of aborted babies, a new expose' from a group that monitors corporations that finance the abortion giant reveals the United Way is a major donor. That expose found United Way agencies giving $2 million to the abortion giant.
>
> A new expose' released this week shows that figure has increased to $3 million.

In 2016, United Way sent $3 million to Planned Parenthood:

> Analysis of the most recent IRS Form 990 filings and other documentation found 62 United Way affiliates sent $2,756,799 to Planned Parenthood abortion organizations in tax year 2016. 2ndVote's latest findings indicate an increase of $168,806 from the $2,590,994 United Way funneled to Planned Parenthood in 2015.

We're living in a time when abortion rights involves such issues as sex-selection abortions, race-selection abortions, covering up statutory rapists, Democrat support for infanticide, attacking Supreme Court nominee Brett Kavanaugh, selling the body parts of unborn babies, etc. I don't think we can count on United Way to come down on the right side of these issues. We're already being forced to fund abortions with our tax dollars, thanks to Democrats. I don't think we should give any more money to abortion providers and their secular leftist allies.

That's abortion. What about gay rights? We've seen a lot of pressure on traditional values coming from the secular left lately. They redefined marriage AGAIN to deprive children of their biological mothers or fathers. They're pushing for the Equality Act, which would have huge religious liberty repercussions for Christians.

Texas attorney Maria Martinez explains on the American Thinker:

> The Equality Act is more draconian that any state or city conversion therapy ban to date because it takes away the traditional constitutional exemption for religious freedom. The act specifically states that the Religious Freedom Restoration Act (RFRA) may not be invoked as a defense, marking the *first time in history that*

> *Congress has limited the reach of RFRA*. This means that it could become illegal for Christian pastors, churches, schools, and ministries to communicate a message that sexual orientation or gender identity can change. The Equality Act is unprecedented in its overreach, impacting even adults who are *willingly seeking counseling*.
>
> By contrast, therapy of any kind that pushes a person *toward* same-sex attraction or gender transition is not impacted by the law at all.
>
> Banning counseling isn't the only thing the Equality Act will do:

> - Parents could lose custody of their children if they decline to assist in their gender transition. Parents in Ohio recently lost custody of their female child because they would not give her testosterone supplements to help her "transition" to look like a male.

> - Doctors and hospitals could be subject to lawsuits for refusing to perform so-called "sex change" surgeries. In California and New Jersey, Catholic hospitals are already being sued for discrimination for refusing to perform these surgeries.

> - Battered women's shelters could be required to admit members of the opposite sex. In Anchorage, Alaska, a male who was refused access to a shelter for abused and trafficked women sued the shelter for "gender identity discrimination."

> - Faith-based adoption and foster care agencies that believe that children do best with both a mother and a father could be forced to shut down. This has already occurred in at least six states in this country.

I wonder what United Way thinks about attacks on Bible-believing Christians by LGBT activists? I posted what they shared on Facebook at the top of this post, and this is what I found on their Twitter:

United Way Twitter Gay Rights Pride Month LGBT

I don't find that very encouraging, do you?

As a Bible-believing Christian, maybe I would be better off giving money to an organization that protects religious liberty, like Alliance Defending Freedom. I understand that many people who call themselves Christians think that the United Way's positions are compatible with the Bible. But not everyone who calls herself a Christian actually takes the Bible seriously. Especially when it interferes with their career advancement and peer approval. This is especially true of people who work in Human Resources.

## Please, don't give money to the United Way

You don't HAVE to give money to the United Way, just because the godless progressives in your office try to bully you into it. Instead, why not send the money to the Life Training Institute, or Ratio Christi, or Alliance Defending Freedom? These are groups do operate on Bible-based principles. I do think that Christians need to be careful about who they donate their money to. It doesn't make sense for Christians to get up and go to work and earn money, and then give it away to anti-Christian groups who want Christianity to disappear from American life. Paul talks about how God rewards those who give gifts to partner for the gospel in Philippians. Make sure that you are not wasting your money on anything less.

# What would Kamala Harris do as president? Her record on policy issues

**Wintery Knight** · 29 July 2024 · Archived copy · Original

Kamala Harris has received over $200 million of donations, some from Democrat billionaires, and many more from first time donors. It's not going to be easy for Republicans to beat her in November with her huge advantage in fundraising. But, one thing we can do right now is to take a look at her record on issues, and then share these stories with our friends and family members.

Here's the first article from Daily Signal:

> The "Biden Accountability Tracker" presents a list of "disturbing and harmful actions," including "each significant policy decision made, executive action taken, or regulation promulgated by the administration that hurts the American people," the organization's letter to lawmakers explains.
>
> "Our organization has kept a rolling record of the failures of the Biden-Harris administration since 2021, from reversing Trump-Pence border policies, to pushing an expensive and burdensome climate agenda, failing to protect women's sports, and using the FDA to make the dangerous abortion drug mifepristone available by mail," Teller told The Daily Signal. "Kamala Harris owns each and every one of these failings, along with her own record from her time as California attorney general and as a senator."
>
> "It is clear her policies are left of Biden and that she has it out for conservatives and the freedom-loving community," Teller added.
>
> Teller's reference to Harris' having it out for conservatives touched on the vice president's record from her time as California attorney general. For example, Harris directed her office to search the home of pro-life investigative journalist David Daleiden, who had exposed Planned Parenthood officials' selling aborted baby body parts for profit. She prepared a legal case against Daleiden, which her successor as California attorney general—now Health and Human Services Secretary Xavier Becerra—brought against the pro-life journalist.
>
> Harris also demanded sensitive donor information from two conservative organizations, Americans for Prosperity and the American Freedom Law Center, after her office had leaked sensitive donor information and after some on the Left had launched a video game in which players acted out a shooting at Americans for Prosperity headquarters.

If you look through that issue tracker, you're bound to find something to convince an independent voter not to vote for Harris. Stuff like climate regulation (which caused our energy prices to skyrocket) and open borders (which caused housing prices to increase due to a shortage of housing) should be of interest to anyone.

Here are a few more of Kamala Harris' specific actions, reported by the Daily Signal:

> A newly resurfaced memo put out by Vice President Kamala Harris' 2020 presidential campaign outlines her plan to "fundamentally transform" the criminal justice system by reducing penalties for criminals.
>
> In 2019, Harris promised to end cash bail, get rid of court-ordered fines, expunge the records of some felons, discontinue federal mandatory minimum sentences, and to place greater federal scrutiny on local police departments, according to a memo resurfaced Thursday by the Washington Free Beacon.
>
> […]"It is long past time to re-envision public safety by strengthening and supporting our communities and drastically limiting the number of people we expose to our criminal justice system," the memo reads. "As president, Kamala will fundamentally transform how we approach public safety."

And ending cash bail, which has already been tried in many Democrat cities:

> “Excessive cash bail disproportionately harms people from low-income communities and communities of color,” Harris’ 2019 memo reads. She characterized cash bail systems as “criminalizing poverty” and vowed to end them.
>
> Ending cash bail has led to a backlash in some major cities, with New Yorkers in February 2022 overwhelmingly supporting tightening bail laws following an increase in crime, the New York Post reported. The Texas Organizing Project, a George Soros-backed nonprofit that opposes cash bail, bonded out a man who allegedly went on to murder six people and shoot three others in December 2023.

I remember that she’s a big supporter of “defunding the police” as well, but that’s not all:

> She also supported restoring voting rights to all those who have served criminal records, per the memo, and advocated for more federal oversight of local police departments, citing alleged “racial profiling” and “excessive force.”
>
> The now-vice president proposed a “National Police Systems Review Board” that “would collect data and review police shootings and other cases of severe misconduct,” according to the memo. She also promised to provide the Department of Justice with resources to provide grants to fund greater scrutiny of officers who shoot suspects and pledged to reinstate an executive order restricting the sale of certain military equipment to police departments.

So, it’s not enough for her that unvetted illegal immigrants are coming into the country in droves. She looks at the taxpayers who pay her salary, and she thinks “I side with the killers and the rapists against those taxpayers – my job is to help the killers and the rapists, and not the taxpayers who pay my salary”. Do you think that independents would care about that? I think they would.

# Good review of Megan Basham's new book "Shepherds for Sale" and my thoughts

**Wintery Knight** · 30 July 2024 · Archived copy · Original

I have the audio book on order, and it's read by THE Megan Basham herself. But you can already get it in some stores. The audio book is live TODAY (July 30th, 2024). Anyway, I'm excited about this book for many reasons. One reason is that I've long held the conviction that evidential apologetics is needed in order for Christians to be bold. I think their compromising with the left is related to that.

Anyway, here is the early book review from Amy Simmons, published in Truth Script. (H/T Dr. Jonathan Sarfati)

First, let's just see what the book is even about, and then I'll share my favorite paragraph in the review.

This is what the book is about:

> In this extensively researched exposé, Basham unravels how the progressive left has infiltrated the conservative church through shadowy non-governmental organization (NGO) initiatives with benign-sounding front groups that well-respected pastors, theologians, and para-church leaders promoted under the banner of "loving your neighbor." Based on a compilation of her years of reporting on church issues for the conservative news and media outlet The Daily Wire, Shepherds uncovers the behind-the-scenes political machinations of evangelical elites that have led venerated Christian institutions and publications.
>
> Utilizing her research acumen, personal anecdotes, and connections with evangelical insiders, Basham systematically unmasks the benefactors of current progressive left ideologies being pushed into conservative evangelical churches. The amount of players involved in what is akin to a conservative evangelical "deep state" is overwhelming at times, but that serves to show the level of obfuscation under which the current regime operates. Basham writes with precision and thoroughness while still wearing her layperson's hat. The reader senses her righteous indignation as she does not hide her own beliefs and convictions, and her commentary is fortified throughout with biblical refutations. The following are some takeaways one can glean from a good-faith reading of Shepherds.

So, I have some experience dealing with this compromise myself, as someone who has tried to get evidential Christianity into the church. I have seen all kinds of pushback to learning how to defend your faith from within the church, and this paragraph from the review nails what I've seen in many different churches:

> Since our society has become more feminized, we've seen a propensity for leaders to cater to the whims of those who are led by their emotions. Rigney is again helpful here by describing this inclination as "untethered empathy," which is "a concern for the hurting and vulnerable that is unmoored from truth, goodness, and reality." Basham goes to great lengths to show how the SBC abuse reforms are based on specious arguments from "trauma-informed" counseling and the now-rescinded Obama-era Title IX Sexual Abuse guidance. In fact, it's a deception that will keep women in bondage to a "victim status" rather than taking accountability for their own actions, which Basham demonstrates through powerful anecdotes.

You can read the review to see which specific areas Megan talks about in her book.

So I want to make one point about why church leaders are so prone to bend over backwards to please the secular left.

In my experience with apologetics, my goal has been to provide evidence to people, because I think that evidence sets boundaries on what a person can and cannot believe. And then their actions run within the boundaries of their beliefs. I think the root cause of our problems in the church is that pastors and other church leaders have not rooted their beliefs in evidence. People like Russell Moore and JD Greear don't know whether God exists, or whether

Jesus rose from the dead. They don't know where to look in nature for signs of intelligent design. They don't know how to answer philosophical challenges to Christian doctrines. They don't study these topics, and they can't convince non-Christians about any of it. On the contrary, for them Christianity is about proving to other people how good they are. And it's this mad rush to feel good and look good to others that causes them to capitulate to the secular left, lest they appear to be "mean".

So, on global warming, I would immediately go to the evidence, from books by authors like Judith Curry, Fred Singer, Roy Spencer, Roger Pielke, etc. On economics, I would immediately go to Thomas Sowell, Jay Richards, Jennifer Roback Morse, F. A. Hayek, etc. On race / CRT, I would immediately go to Thomas Sowell, Heather MacDonald, Voddie Baucham, etc. On abortion, I would look to people like Robert George, Maureen Condic, Scott Rae, Francis J. Beckwith, Christopher Kaczor, etc. On marriage, I would immediately go to Ryan T. Anderson, Jennifer Roback Morse, Robert George, etc. And so on. I look for people who have studied, published and debated on these topics. Not people who are trying to be noticed by secular leftist elites in the New York Times. Basically, you have to study the evidence if you want to have convictions. And our Christian leaders haven't done that. They think studying is a waste of time.

# Father wins custody of son from woman who wanted to raise him non-binary

**Wintery Knight** · 31 July 2024 · Archived copy · Original

There are a bunch of these cases going on in Canada and America right now. Usually, the wife wants the child to go transgender. The father opposes it, and points to evidence. The wife divorces the father. The courts, medical experts, therapists, public school teachers, social workers, etc. all side with the wife. The wife gets full custody and transes the kid. The father pays all the costs.

So, I was shocked to hear about this case on the Daily Signal podcast, which is the best podcast… except for the Knight and Rose Show, of course.

There are two episodes to this story. One is from November 2023, where Harrison Tinsley explains the situation to Virginia Allen, the interviewer:

And then this week, we got the happy news:

This transcript is from November 2023 and was reported in Daily Signal.

It says:

> Harrison Tinsley's son, Sawyer, will turn 4 in December. He likes to play hockey and football with his dad and also enjoys singing. According to his father, Sawyer is a happy little boy, but the child's mother is attempting to raise him not as a boy, or as a girl, but nonbinary.
>
> Tinsley has seen photos of his son in dresses on social media, and Sawyer told his dad that when his mother took him to Disneyland, "she wouldn't let him go on the rides unless he wore princess shoes."
>
> Tinsley is concerned for his son's well-being and is seeking full legal and physical custody of Sawyer, and arguing that his son should be treated as a male.

This was a podcast episode, and there's a transcript. Here is the background:

> **Allen:** It's special to have that relationship. And I know you said before we started, he turns 4 in December. I want to dive into some of the details behind this custody battle. What exactly is going on here? Sawyer's mother is your ex-girlfriend. You have partial custody right now of your son, but you're seeking full custody in part because you say that Sawyer's mom is seeking to raise him as nonbinary. Can you just explain what exactly is happening here? What is the situation?
>
> **Tinsley:** Well, I have half custody. So I mean, me and his mom both have 50%. And his mom makes the claim that she is now nonbinary and that Sawyer is nonbinary or that she's at least trying to raise him that way. Although, some of the things she does seem more girly to me than nonbinary.
>
> Not that I admit that's a real thing. I radically disagree that it is or it's an appropriate thing, rather, for children. But I think putting them in dresses and princess shoes seems girly to me and not so much nonbinary, not so much neutral.
>
> However, Sawyer knows he's a boy, loves being a little boy. He's adamant about it. If you give him a girly toy, he'll yell and scream at you, "I'm not a girl, I'm a boy." So thankfully he's a strong-willed rebel like me, and that hasn't been working and I'm extremely thankful for that.

And then this part about why he fights was interesting:

> **Allen:** Harrison, how have you held up through this whole court fight?

> **Tinsley:** It's been almost four years, but it's hard sometimes. But I just do what I can to be the best version of myself I can be and be as strong as I can be. And I accept the responsibility. I look the evil right in the eye and say, "This is life. This is what I have to do." I have a duty to Sawyer. I have a duty to children everywhere to stand up to this and to fight for what's right.
>
> And I know that I'll be able to sleep at night because I choose to do the right thing. No matter how hard it is, no matter how much pain it causes me, I'm never backing down. I don't care. I've accepted life for what it is and what I have to do. And I just look at it with that attitude that I have a responsibility to do it and I'm going to do it regardless.
>
> **Allen:** Where does that conviction come for you?
>
> **Tinsley:** All my life I've always, regardless of how terrified or scared I am of things, the one thing I'm most proud of about myself is that I've always been brave. Whether it's singing in front of people or doing a back flip on my snowboard, I've always been able to find courage to do things in life. And I think that's a big part of it.
>
> Music affects me incredibly. I mean, I get chills when I listen to music. I love music so much. It makes me feel inspired. I listen to some Jordan Peterson or different stoics that just give me wisdom to guide me through this and the Bible, and there's just all these different things that help inspire me.
>
> And at some point in your life, you just have to make a choice: Who do you want to be? Do you want to be strong or do you want to be weak? And I just choose to be strong.

That was the first episode, and then this week we got the good news in the second episode.

I have some thoughts about this.

I rarely ever heard much admiration from women for men who have character and convictions. Usually, women today don't like when men have firm religious and moral convictions. One of the first questions that young women like to ask men to test them is "are you pro-choice?" because pro-life men are immediately disqualified from relationships. Too judgy. Too narrow-minded. Too mean. Young women today like the idea of men protecting and providing, but they don't like the idea of spiritual and moral leadership. Especially when doing the right thing goes against their feelings or their desires. Good men often end up having to choose between being good, and being liked.

Whether they know it or not, what men really want and need most is respect. And we have to get it for being good – good for Boss. It's not good when men seek respect by adapting their behavior to what the selfish, evil people around them demand.

In my IT career, I've worked with many intelligent, wealthy, programmers who changed their convictions 180 degrees opposite to how they were raised, in order to get women to like them and to marry them. I worked with US-born, Christian-raised, church-attending men who voted for Joe Biden in order to keep peace in their homes – and to keep the bedroom door open. This is the opposite of masculinity. Men are masculine when they fight evil, and women have to respect them for putting right and wrong above her feelings and desires.

# I'm not a Jehovah's Witness for the same reason I'm not a global warming alarmist

**Wintery Knight** · 1 August 2024 · Archived copy · Original

In the summer, a couple of Jehovah's Witness ladies were going door-to-door and they stopped by my house while I was out mowing. I decided to talk to them. They asked me why I was an evangelical Protestant rather than a JW. Rather than go into a lot of theology about the Trinity and the Watchtower translation, I decided to to just tell them about the false predictions their group has made.

So, let's just quickly review that using this article from Watchman fellowship, which quotes JW publications:

> Initially the organization taught the "battle of the Great Day of God Almighty" (Armageddon) would end in 1914. Every kingdom of the world would be overthrown in 1914 which was "God's date" not for the beginning but "for the *end"* of the time of trouble.
>
> "…we consider it an established truth that the final end of the kingdoms of this world, and the full establishment of the Kingdom of God, will be accomplished by the end of A.D. 1914" (Watchtower founder, Charles Taze Russell, *The Time is at Hand,* p. 99).
>
> "…the 'battle of the great day of God Almighty' (Rev. 16:14), which will end in A.D. 1914 with the complete overthrow of earth's present rulership, is already commenced" (*Ibid.,* p. 101).
>
> "CAN IT BE DELAYED UNTIL 1914?…our readers are writing to know if there may not be a mistake in the 1914 date. They say that they do not see how present conditions can last so long under the strain. We see no reason for changing the figures – nor could we change them if we would. They are, we believe, God's dates not ours. But bear in mind that the end of 1914 is not the date for the *beginning,* but for the *end* of the time of trouble" (*Watch Tower,* 15 July 1894, p. 226).

Clearly, the world did not end in 1914, and it did not end at subsequent JW predictions, either, e.g. 1925, 1975.

So, as the title of the post says that I can't be a global warming alarmist for the same reason I can't be a Jehovah's Witness: failed predictions.

Here's an excellent article from Daily Signal by famous black economist Walter Williams, who explains the connection:

> As reported in The New York Times (Aug. 1969) Stanford University biologist Paul Ehrlich warned: "The trouble with almost all environmental problems is that by the time we have enough evidence to convince people, you're dead. We must realize that unless we're extremely lucky, everybody will disappear in a cloud of blue steam in 20 years."
>
> In 2000, David Viner, a senior research scientist at University of East Anglia's climate research unit, predicted that in a few years winter snowfall would become "a very rare and exciting event. Children just aren't going to know what snow is."
>
> In 2004, the U.S. Pentagon warned President George W. Bush that major European cities would be beneath rising seas. Britain will be plunged into a Siberian climate by 2020. In 2008, Al Gore predicted that the polar ice cap would be gone in a mere 10 years. A U.S. Department of Energy study led by the U.S. Navy predicted the Arctic Ocean would experience an ice-free summer by 2016.
>
> In May 2014, French Foreign Minister Laurent Fabius declared during a joint appearance with Secretary of State John Kerry that "we have 500 days to avoid climate chaos."
>
> Peter Gunter, professor at North Texas State University, predicted in the spring 1970 issue of The Living Wilderness:

> Demographers agree almost unanimously on the following grim timetable: by 1975 widespread famines will begin in India; these will spread by 1990 to include all of India, Pakistan, China and the Near East, Africa. By the year 2000, or conceivably sooner, South and Central America will exist under famine conditions. … By the year 2000, thirty years from now, the entire world, with the exception of Western Europe, North America, and Australia, will be in famine.

> Ecologist Kenneth Watt's 1970 prediction was, "If present trends continue, the world will be about four degrees colder for the global mean temperature in 1990, but eleven degrees colder in the year 2000." He added, "This is about twice what it would take to put us into an ice age."

Williams concludes:

> Today's wild predictions about climate doom are likely to be just as true as yesteryear's. The major difference is today's Americans are far more gullible and more likely to spend trillions fighting global warming. And the only result is that we'll be much poorer and less free.

We have known for decades that the Earth's temperatures were much warmer during the "Medieval Warming Period", hundreds of years ago. But some people are just having irrational fears about overpopulation, resource shortages, etc. and so they will promote nonsense to try to scare people into doing what they want. World history is full of pious-sounding attention-seeking hoaxsters who try to scare the gullible masses into giving them money and/or power. It's not new.

# Jay Richards: How to end poverty in 10 tough steps

**Wintery Knight** · 2 August 2024 · Archived copy · Original

Jay Richards: How to end poverty in 10 tough steps

Why are some nations more prosperous than others? Is it because the wealthier nations exploit the poorer ones, keeping them poor? Or are there certain policies, laws, and cultural beliefs that lead to prosperity? Dr. Jay Richards delivers a lecture for Impact 360, in which he identifies 10 different factors that lift nations out of poverty, and explains why they work.

Summary:

1. Establish and maintain the rule of law.
2. Focus the jurisdiction of government on maintaining the rule of law, and limit its jurisdiction over the economy and the institutions of civil society.
3. Implement a formal property system with consistent and accessible means for securing a clear title to property one owns.
4. Encourage economic freedom: Allow people to trade goods and services unencumbered by tariffs, subsidies, price controls, undue regulation, and restrictive immigration policies.
5. Encourage stable families and other important private institutions that mediate between the individual and the state.
6. Encourage belief in the truth that the universe is purposeful and makes sense.
7. Encourage the right cultural mores—orientation to the future and the belief that progress but not utopia is possible in this life; willingness to save and delay gratification; willingness to risk, to respect the rights and property of others, to be diligent, to be thrifty.
8. Instill a proper understanding of the nature of wealth and poverty—that wealth is created, that free trade is win-win, that risk is essential to enterprise, that trade-offs are unavoidable, that the success of others need not come at your expense, and that you can pursue legitimate self-interest and the common good at the same time.
9. Focus on your comparative advantage rather than protecting what used to be your competitive advantage.
10. Work hard.

Solving economic problems is just like solving any other problem. First, we read to learn what has been proven to work. Then, we do what works. I want to encourage Christians to move beyond good intentions to good results when voting for economic policies. Often, people on the left want to “fix” inequalities by doing what feels good to them, or what sounds good to them. Economics is about choosing policies that we know have worked in other times and places.

Let's talk more about #4 from Richards' list.

**Economic freedom linked to prosperity**

Consider the book "The Poverty of Nations: A Sustainable Solution" by famous conservative theologian Wayne Grudem.

You can even read an article about it from the left-wing Christian Post here:

> In a presentation of his new book at the Family Research Council, biblical theologian Wayne Grudem argued that poor countries can become rich only by producing their own prosperity, and that the free market is not only the economic answer, but in tune with the Bible's moral teachings.
>
> "Every nation that has escaped poverty has done so by producing its own prosperity," said Grudem, professor of theology and biblical studies at Phoenix Seminary in Arizona. Perhaps best known for his book Systematic Theology: An Introduction to Biblical Doctrine, Grudem presented the key themes in his new book The Poverty of Nations: A Sustainable Solution. The very first of his 79 factors to help nations escape poverty in "a free market economy."
>
> […]Grudem argued that the wealth of a country is determined by its per-capita income – the average amount of money each citizen makes. The only way to increase this is to increase the production of goods and services, creating more wealth for everyone, he said.
>
> […]The professor pointed to 79 factors to help a country produce more goods and services, in three different key areas: the economic system, government, and cultural beliefs and values.
>
> For the economic system, Grudem mentioned the Index of Economic Freedom, a report put out by the Heritage Foundation to judge each country's openness to trade and wealth creation.

You can find the Heritage Foundation Index of Economic Freedom right here. Take a look at the countries at the top… these countries also have a very high per capita income. Their citizens are earning a lot of money by selling what they produce to willing customers. The ones at the bottom are run by socialist governments. You wouldn't want to try to make a living in Venezuela or Cuba or North Korea. But these are the places that American socialists admire and support. Does that tell you something about what they would do to you, if they got hold of the reins of government?

The Fraser Institute in Canada did a similar ranking of economic freedom (economic freedom = low taxes, low regulation, free trade), and they concluded:

> Countries in the top quartile (25 per cent) of economic freedom (such as the U.K., Japan and Ireland) had an average per-capita income of US$40,376 in 2016 compared to US$5,649 for the bottom quartile countries (such as Venezuela, Iran and Zimbabwe). And life expectancy is 79.5 years in the top quartile of countries compared to 64.4 years in the bottom quartile.

Economic freedom works best.

# Scott Klusendorf discusses right to life, assisted reproduction, and end of life

**Wintery Knight** · 3 August 2024 · Archived copy · Original

Here's the video, featuring my favorite pro-life speakers Scott Klusendorf. Scott is the founder and President of the Life Training Institute. LTI's mission is to make a rigorous, rational defense for pro-life positions with respect to a variety of ethical issues. If you listen to Scott, you will learn a lot, and learn it from someone who has been tested on the battlefield of ideas.

Three topics:

- right to life of the unborn
- reproductive technologies
- end of life questions

40 minutes of guided discussion, 20 minutes of Q&A. This video was apparently recorded in the summer of 2016.

Abortion:

- the 1-minute case for the pro-life position (excellent)
- dealing with those who dismiss the pro-life case as religious
- how and when do people win arguments?
- how does one get better at discussing moral issues?
- who are some of the best books to get informed about life issues?
- what are some of the best books from the other side?
- what is the SLED test? do pro-abortion scholars accept it?
- if abortion were illegal, who should be punished and how much?
- is it inflammatory and dangerous to say that abortion is killing?

Assisted reproductive technologies:

- how should we speak to people considering ARTs?
- what is the underlying issue in ART discussions?
- should pro-lifers be opposed to all use of ARTs?
- what should pro-lifers think about surrogacy?
- which books provide an introduction to ART ethics?

End of life issues:

- what is the central issue in end of life discussions?
- should treatment always be continued or are there situations where treatment can be withdrawn?

Final issues:

- if a student wants to take courses in bioethics, where should they go to take courses or do a degree?
- what is the policy situation for pro-lifers in terms of legislation and SCOTUS decision-making?
- what are some policies that pro-lifers can support as incremental measures that move the issue in the right direction?

I liked this discussion. I tried to listen as someone new to the issue and he did a good job of not assuming any prior knowledge of the debate. My favorite part was his survey of books and arguments on the other side, and what they

say. I don't think that most people realize what the implications of the pro-abortion worldview really are for things like infanticide, and so on. The discussion about who should be punished for abortion and how much was new to me – and that actually came up during the last election, during the GOP primary. Personally, I would let the woman get off, and just prosecute the doctor.

It's very very good to listen to crystal clear thinking on these controversial issues from someone who has encountered the other side in their writings, and in public debates with them. Not to mention having to interact with people making decisions in these areas.

# Ryan T. Anderson lectures on marriage and why it matters

**Wintery Knight** · 4 August 2024 · Archived copy · Original

Here's the lecture:

About the speaker:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson, who joined the leading Washington think tank's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work at Heritage focuses on the constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012).

The lecture starts at 7:20 in. The lecture ends at 49:35. There are 32 minutes of Q&A.

Introduction:

- When talking about marriage in public, we should talk about philosophy, sociology and public policy
- Gay marriage proponents need to be pressed to define what marriage is, on their view
- Every definition of marriage is going to include some relationships, and exclude others
- It's meaningless to portray one side as nice and the other mean
- Typically, marriage redefiners view marriage as a more intense emotional relationship
- Marriage redefiners should be challenged in three ways:
- 1) Does the redefined version of marriage have a public policy reason to prefer only two people?
- 2) Does the redefined version of marriage have a reason to prefer permanence?
- 3) Does the redefined version of marriage have a reason to prefer sexual exclusivity?
- Also, if marriage is just about romance, then why is the state getting involved in recognizing it?
- The talk: 1) What marriage is, 2) Why marriage matters, 3) What are the consequences of redefining marriage?

What marriage is:

- Marriage unites spouses – hearts, minds and bodies
- Marriage unites spouses to perform a good: creating a human being and raising that human being
- Marriage is a commitment: permanent and exclusive
- Male and female natures are distinct and complementary

The public purpose of marriage:

- to attach men and women to each other
- to attach mothers and fathers to their children
- there is no such thing as parenting, there is only mothering and fathering
- the evidence shows that children benefit from mothering and fathering
- boys who grow up without fathers are more likely to commit crimes
- girls who grow up without fathers are more likely to have sex earlier
- Children benefit from having a mother and a father

- can't say that fathers are essential for children if we support gay marriage, which makes fathers optional
- without marriage: child poverty increases, crime increases, social mobility decreases, welfare spending increases
- when government encourages marriage, then government has less do to – stays smaller, spends less
- if we promote marriage as an idea, we are not excluding gay relationships or even partner benefits
- finally, gay marriage has shown itself to be hostile to religious liberty

Consequences redefining marriage:

- it undermines the norm in public like that kids deserve a mom and a dad – moms and dads are interchangeable
- it changes the institution of marriage away from the needs of children, and towards the needs of adults
- it undermines the norm of permanence
- we learned what happens when marriage is redefined before: with no-fault divorce
- no-fault divorce: after this became law, divorce rates doubled – the law changed society
- gay marriage would teach society that mothers and fathers are optional when raising children
- if marriage is what people with intense feelings do, then how can you rationally limit marriage to only two people?
- if marriage is what people with intense feelings do, then if other people cause intense feelings, there's no fidelity
- if marriage is what people with intense feelings do, then if the feelings go away, there is no permanence
- the public policy consequences to undermining the norms of exclusivity and permanence = fatherless children and fragmented families
- a final consequences is the decline and elimination of religious liberty – e.g. – adoption agencies closing, businesses being sued

We're doing very well on abortion, but we need to get better at knowing how to discuss marriage. If you're looking for something short to read, click here. If you want to read a long paper that his book is based on.

# Are puberty blockers “reversible”?

**Wintery Knight** · 5 August 2024 · Archived copy · Original

I noticed an article about puberty blockers on Daily Caller, that I thought would be really useful in a debate. Normally, transing kids involves 1) social transitioning, 2) puberty blockers, 3) hormone replacement therapy, 4) sex mutilation surgery. Pro-transing doctors often tell parents that puberty blockers are “reversible”. But are they really?

The article says:

> Prominent World Professional Association for Transgender Health (WPATH) physicians acknowledged that puberty blockers are more invasive than portrayed in the media and can have irreversible effects on minors such as infertility, bone loss and disruption of brain development, according to WPATH educational sessions obtained by the Daily Caller News Foundation.
>
> WPATH is a transgender medical organization that has published influential clinical guidance for the sex reassignment industry, called Standards of Care, which recommend children receive puberty suppression, cross sex hormones and sex reassignment surgery. However, during educational sessions recorded in September 2022 that were part of a transgender medicalization certification program offered to WPATH licensed clinicians, WPATH doctors revealed that the consequences of puberty blockers for minors are often far more disruptive than portrayed in the media.

Calcium stores:

> In an educational session titled “Foundations in Gender Affirming Hormone Therapy: Adults and Adolescents,” Dr. Daniel Metzger, a WPATH certified pediatric endocrinologist, explained how puberty blockers impede adolescents from developing the calcium stores needed to prevent osteoporosis later in life.

Brain development:

> “Obviously teenagers, their brains are changing. They’re unwiring, they’re rewiring. And if we’ve started one kid unwiring and half rewiring, and then we changed their puberty the other way and we’re unwiring, people have been trying to figure out what this does for kids’ brains,” said Metzger.
>
> “They seem to do reasonably the same as their friends but we’re not looking at their IQ and their learning ability and lots of other things.”

Fertility:

> During a question and answer segment, Metzger discussed the impact of puberty blockers on a child’s fertility, explaining how puberty blockers stop males from developing sperm. He said it was unknown if girls placed on puberty blockers during the initial stages of puberty, as recommended by WPATH, would have eggs mature enough for fertility preservation.
>
> “Kids have zero idea about their fertility,” said Metzger.

Reversible?

> During a session titled, “Foundations in Clinical Care for Transgender and Gender Diverse Adolescents,” Dr. Scott Leibowitz, a co-lead in the development of the adolescent chapter of the WPATH Standards of Care and member of the WPATH Board of Directors, challenged the reversibility of puberty suppression.

> “I think when we just say, ‘Oh puberty blockers are just reversible and it’s a very noninvasive treatment,’ I would say it’s more invasive than often times the media makes it out to be or other people,” he said.
>
> Leibowitz explained how puberty blockers suppress the release of sex hormones (estrogen and testosterone) that cause puberty, stopping puberty and the essential brain and bone maturation that occurs during pubertal development, calling the body’s need for binary sex hormones a challenge.
>
> “There’s challenges with puberty suppression that we have to acknowledge and that’s why it’s ‘reversible asterisks,’” Leibowitz said. “One cannot be on puberty suppression endlessly. You get to a place where physiologically we need hormones.”

So, the take-away lesson from this is that puberty blockers are less reversible and more invasive than is portrayed by the media. And that’s according to the people who know the most about it, and who push for it the most.

# New study: an example of the function of so-called “junk DNA”

**Wintery Knight** · 6 August 2024 · Archived copy · Original

Rose and I interviewed Dr. Casey Luskin a while back on the Knight and Rose Show about junk DNA. (We are still making episodes, but Rose is very busy with her D. Min degree, conference speaking, and teaching kids in her church). Casey told us about is how the progress of science is finding new functions for DNA that was thought to be “junk”. And he has a new post about it.

Here’s the new post from Evolution News.

Here’s the topic:

> One of the most common functions of non-coding / junk DNA is to regulate gene expression. When a given non-coding / junk element is working properly, it regulates the gene it’s supposed to be regulating; it does its job, and nobody notices it. But what happens when a mutation arises in that junk DNA genetic element? Well, one common result is that it will affect expression of the gene, and the gene will no longer be regulated in the manner that it’s supposed to be regulated. This then leads to a disease. The disease associated with some junk DNA element is evidence of some useful function gone wrong, not no function at all. Let’s consider a few examples.

So, my understanding of junk DNA is that it is parts of the DNA that does not code for proteins. People really think that the only parts of DNA that are useful are the parts that contain instructions for making more proteins. Darwinists dismiss the non-coding parts of DNA as “junk”. Just leftovers from supposed evolution that doesn’t do anything useful.

One of the studies he quotes explains it like this:

> While the coding genes provide blueprints for building proteins, which direct most of the body’s functions, some of the noncoding sections of the genome, including regions previously dismissed as “junk,” seem to turn up or down the expression of those genes.

The way I understand this is by thinking of a cookbook. The coding parts of the cookbook talk about what ingredients you need and how much of each you need. For some reason, people thought that this is the best part of the cookbook, the part about the ingredients. In this cookbook analogy, the Darwinists might think that the part about what to do with the ingredients is just “junk”. Stuff like the actual recipe steps, where to cook it, what temperature to use, how long to cook it for, and so on.

So what does the non-coding part of the DNA do that gives it “function” (makes it useful). Well, he has examples, and one of them is some “junk DNA” that regulates gene expression. What happens when that junk DNA gets bad mutations, changing the instructions?

This:

> This junk DNA element contains an enhancer that helps regulate the gene ETS2, but mutations in that region deleteriously affect gene regulation, potentially causing various diseases.

You can imagine if your cookbook had a recipe that said “set the oven the 350 degrees Fahrenheit, and put the chicken breasts in for 30 minutes.” But then a mutation happened, and suddenly the so-called junk part of the cookbook said: “set the oven the 350 degrees Fahrenheit, and put the chicken breasts in for 300 minutes.” You would not get a good result from that. That part of the recipe is not junk! It’s important.

He has a bunch more examples, including how mistakes in the non-coding DNA causes increased susceptibility to

certain psychiatric disorders.

I thought it was an interesting add-on to our episode, because it explains what a useful non-coding function would look like.

Here is his conclusion:

> In other words, once again, the “junk DNA” is functional. That is reflected by the fact that when you mess with the “junk,” the result is problems. That doesn’t sound like junk DNA to me.

If you missed the episode, you can get the MP3 here, and the YouTube episode is here.

# What can we expect from a Harris-Walz ticket?

**Wintery Knight** · 7 August 2024 · Archived copy · Original

I collected together a few stories that show some of the past actions of the two members of the Democrat party presidential ticket. Some of these you may already know, and some may be new to you. The appeal of the ticket is surface-level. Kamala is so brown and female, and Tim Walz is so nice. This is interesting to some people, but more interesting to me is what policies I would have to live under.

Here's a couple of articles about the vice presidential candidate Tim Walz, who is the current governor of Minnesota.

Washington Free Beacon:

> Walz… came under scrutiny over his response to both the coronavirus pandemic and riots in the wake of the death of George Floyd, who was killed by a Minneapolis police officer in May 2020.
>
> Walz waited days after riots in Minneapolis to call in the National Guard. By then, anti-police protesters had burned down a police station in Minneapolis and caused $500 million in damage.
>
> Walz signed a bill last year to restore voting rights to 55,000 convicted felons in Minnesota as part of an initiative to "expand the right to vote." And Walz signed a bill last year to provide free college and health care to illegal immigrants, even as he raised taxes on gasoline, cars, retail deliveries, and other items.

We'll find out more about his response to COVID in this article from the UK Daily Mail:

> Minnesota Republicans also singled out Walz for mishandling coronavirus funds that sent $250 million to a nonprofit group Feeding Our Future, ignoring warning signs that the organization was mishandling the funds.
>
> The organization was using the funds for luxury cars, jewelry, travel and property, according to reports, while only using a small portion of the money from the federal government for feeding children.
>
> At the time, Republicans blamed Walz for failing basic oversight and continuing to allow the non-profit to receive funds.
>
> The Minnesota Department of Education flagged serious concerns about the group in 2018, but failed to address them, and gave even more funding to the organization.

According to this article from The Blaze:

> As thousands of BLM rioters who burned down half of Minneapolis remain out of jail, and as a record number of criminals remain on the streets, a business owner is now sitting in de facto solitary confinement for 90 days for the crime of having her restaurant open during the illegal lockdowns.

Business owners go to jail, but rioters and arsonists get released. Also during COVID, Walz set up an anonymous snitch hotline so that progressives could report their conservative neighbors for non-compliance. Is that the sort of country you want to live in?

What else has Walz accomplished?

The Federalist on his abortion legislation, which Walz signed into law:

> Minnesota Democrats are poised to ignore the at least 69 percent of Americans who say they want significant limits on abortion to pass the state's most radical abortion bill, which would legalize taxpayer-funded on-demand abortion for all.

> The Protect Reproductive Options Act (PROA), the first bill Democrats introduced in both the state House and Senate this session, would repeal dozens of the state's protections for women and babies and expand legal immunity for abortions up until the moment of birth and beyond.

Speaking of the abortion issue, lets' move on to the Democrat presidential nominee, Kamala Harris.

Here's an article about her from the New York Post:

> Kamala Harris stands accused of "weaponizing" the California Attorney General's office against a pro-life activist who alleges he was exposing the illegal sale of aborted fetuses.
>
> David Daleiden, whose nine-year legal saga instigated by Harris is still ongoing, released shocking undercover videos he took of Planned Parenthood executives discussing fees and prices for fetal tissues in July 2015.
>
> He now faces eight felony charges and possible jail time for making the videos without getting the executives' permission to film them, as well as "manufacturing" a fake driving license.
>
> Daleiden's lawyers say it's one of the first times the California AG's office has ever undertaken a stand-alone prosecution involving the state's video-recording law.
>
> His lawyers, who include Steve Cooley, Los Angeles's second-longest serving DA, contend Harris — who served as California Attorney General from 2011 to 2017 — singled him out to do the bidding of Planned Parenthood, who have contributed heavily to her campaigns for office.
>
> "What Kamala Harris did was unconstitutional and vindictive," Cooley told The Post. "It was a selective prosecution for huge donors.
>
> "Kamala Harris opened this investigation at the behest of Planned Parenthood and the two AGs that followed her have kept it alive."

That one is particularly important for me, because I already have concerns about federal law enforcement singling out Christians and social conservatives, while they let real criminals and terrorists get a free ride. This would likely get worse under a Harris presidency.

And of course there is her record as the person responsible for securing the Southern border.

Daily Signal explains:

> "The fact is she has a long track record of opposing border security and immigration enforcement, whether as a senator, a presidential candidate, or as Joe Biden's 'border czar,'" Rep. Mark Green, R-Tenn., chairman of the Homeland Security Committee, recently said on the House floor.
>
> […]Just over 31% of illegal aliens encountered at the nation's borders were removed during the Trump-Pence administration, according to the National Immigration Center for Enforcement. During the Biden-Harris administration, by contrast, 4.4% of illegal aliens encountered at the borders have been removed.
>
> Harris previously advocated "progressive" immigration policies. Most notably, during her brief run for the Democratic presidential nomination in 2020, she expressed support for providing government health care to illegal aliens and decriminalizing border crossings by foreign nationals.

That's what you're going to get on border security from a Harris-Walz presidency. Is that what you want?

# Should men marry women who think relationship boundaries are “emotional abuse”?

**Wintery Knight** · 8 August 2024 · Archived copy · Original

One of the reasons that I am not married today is because I tried to set spiritual and moral boundaries with women I wanted marry, but those boundaries were rejected. The purpose of the boundaries was to get the woman to be suitable for a marriage designed to serve God. In every case, the relationships ended. And this is actually becoming more common, under the influence of feminism.

Here is an article from The Federalist, written by Kylee Griswold.

She writes:

> Who would have thought perpetual adolescent Jonah Hill would be good at grown-up relationships? Well, he is, judging by some apparent texts his surfer ex-girlfriend Sarah Brady shared to Instagram over the weekend — despite the out-of-control media screeching to the contrary.
>
> […]According to Brady and the TikTokkers, self-proclaimed therapists, media, and fellow thirst-trappers who came to her defense, Hill is a controlling narcissist and misogynist — all for the crime of allegedly asking his then-girlfriend to please put on some clothes.

So, a man told a woman that he was interested in that he proposed certain rules in the relationship, rules that would allow him to get serious, and point the relationship towards commitment (as you’ll see). But the woman, and all of her supportive allies, from the secular left to the religious right, all agreed with her that a man setting boundaries on a woman to make her safe for a marriage commitment is “emotional abuse”.

More:

> Specifically, Hill laid down some boundaries for his partner:
>
> […]Plain and simple: If you need: Surfing with men[,] Boundaryless inappropriate friendships with men[,] to model[,] to post pictures of yourself in a bathing suit[,] to post sexual pictures[,] friendships with women who are in unstable places and from your wild recent past beyond getting a lunch or coffee or something respectful[,] I am not the right partner for you. If these things bring you to a place of happiness I support it and there will be no hard feelings. These are my boundaries for romantic partnership.
>
> Hill’s detractors say this is “emotional abuse.” But can something really be described as “abuse” if the alleged perpetrator tells you “no hard feelings” if you’d rather walk away than agree to the terms?

Feminism has made it a lot harder for men to set boundaries that will orient women towards marriage. No matter how wise the man, and how good the advice, it must all be rejected. But the demands for men to get married to rebels remain. Especially when the feminists are hitting 35, and their friends are all getting married. They feel entitled to marriage, and how dare men tell them no? Many women today don’t want to hear a man *talk about the Bible* or hear a man *talk about right and wrong*, they just want weddings, wedding rings, vacations, and things to be fixed around the house. It would be better if men were just walking ATMs that didn’t talk at all.

More:

> To protect the health and integrity of his relationship, Hill established reasonable and respectable parameters for how his girlfriend was to behave toward him through how she acted toward other men. Don’t sexualize yourself for other guys or engage in other relationship-compromising behaviors. And he made clear how he would respond if she didn’t respect those limits. I’m not the right man for you.

In my cases, my boundaries were always things that were clearly good for the women, and also good for commitment. For example, I might say “stop spending money on travel, get a private sector job in your field, and pay off your student loans”. But these conditions were rejected. Later on, when the woman reached her early 30s, I would get e-mails about wanting to get back together. But the student loans had only increased, and the resumes now had huge gaps. I can only assume that the body counts had also increased from all the “traveling”. No thanks, I said. No thank you. I can do something more productive than bail women out. I especially don’t want to bail women out *who have no respect for men who know how to lead*.

This behavior of calling moral and spiritual leadership “emotional abuse” and “controlling” is common – even in Christian circles – because of feminism. In general, the only acceptable male roles are “protect and provide”. Men are supposed to take on all the accountability, but with none of the authority to defend the truth, or to defend morality. On any topic. For example, if you try to tell a single woman in her late 20s about infertility, it’s “emotional abuse”. No amount of evidence can ever beat “follow your heart”. And she has legions of supporters who will shame you for trying to argue from scientific studies.

If you think I am mean, then read Kylee:

> Enter feminism, which loves female autonomy and sold women lots of lies about it. Feminism said love yourself. If that means wreaking all kinds of havoc, your second “X” chromosome trumps the consequences. Unrestrained sex and unintended pregnancy? Abort the baby. Not happy in your marriage? Divorce him. Unfulfilled at home? Leave the kids with an underpaid immigrant and climb that corporate ladder. No boundaries. No bonds. No bras.
>
> But news flash: Relationships take two. And sadly, thanks to that third-wave wrecking ball, some dating women need to be told some obvious things when it comes to romantic fidelity, even if those things have to come from their partners: Seeking the approval of other men for how you look is a bad idea. Worse, it communicates lots of bad things about your priorities and desires.
>
> Frankly, a man who’s willing to say that tough thing is probably a man worth holding onto. Thanks in part to “toxic masculinity” messaging and the militant feminization of America, a man who shoots for commitment and faithfulness, and communicates those aims in a straightforward way while proposing an amicable split as the alternative, is a rarity.

Oh, how I love those words.

Sadly, Kylee’s view is in the minority today, thanks to feminism. And if men are not allowed to lead a relationship, then the marriage rate will continue to decline. Neither shaming of men nor blaming of men will cause men to accept marriage without leadership.

For more on this topic, I recommend this excellent article by Mark McDonald, M.D., entitled “Why American Women Are Undatable” The subtitle is “No One Wants to Play with a Porcupine”. Indeed not.

# Does the “legacy of slavery” explain black women’s 72% out-of-wedlock birth rate?

**Wintery Knight** · 9 August 2024 · Archived copy · Original

James White asks: does the Bible apply to black women?

I don’t like Calvinist theologian James White very much, but at least he’s willing to defend the moral teachings of the Bible against the woke identity politics that is taking over Christian churches. A few months ago he tweeted something very controversial (see above), and got into a lot of hot water with fake Christians. In this post, I’ll explain why he is right.

So, as you can see above, James is concerned that black women are having so many abortions, and he thinks that the solution to this is to encourage black women to take the Bible’s advice on sexual morality. Shocking, I know.

If you read the replies to his tweet on Twitter, you’ll see millions and millions of comments calling him a racist, and telling him that slavery is to blame for EVERYTHING that black women do wrong. Basically, the James haters say that black women can do anything they want, and should never be told that it’s wrong according to the Bible, because their bad choices are all the fault of slavery. So the Bible doesn’t even apply to them, or something.

Here is an example from a radical feminist progressive named Karen Swallow Prior:

Karen Swallow Prior says that unlike whites, blacks have no moral agency

According to the fake Christians, it's not that black women make poor choices with sex, it's that the ghosts of white slavers who raped their great-great-great grandmothers reach through time with magic and force them to have sex with hunky bad boys who won't commit to them before sex. It's not rap music calling black women hoes! It's the ghosts of slavery past. And even if this ghost theory isn't true, we shouldn't tell black women not to sin, because… it would hurt their feelings. After all, the Bible isn't a book that's designed to set boundaries to prevent self-destructive behaviors. It encourages us to listen to our hearts, be reckless, and sin as much as we can.

So when did black community problems with sex and abortion start? Did it start with slavery times? Actually, blacks were doing GREAT at marriage and sexual matters just 50 years ago.

This reply to James White explained:

Blacks married at rates comparable to whites before welfare

That's true. Black children weren't fatherless, so they weren't having early sex outside of marriage, and so they weren't getting abortions.

As the header graphic shows, black women were just as likely to be married as white women in the 1960s, FAR AFTER the days of slavery.

The reason that the graph is going upward is because daughters raised in fatherless homes tend to engage in sexual activity at younger ages, because they are seeking approval from a man which their (single) mother cannot give them. It's a tragic downwards spiral, and it affects all races. The only way to stop it is to tell women to choose marriage-minded men (not hot bad boys) and marry before having sex, like the Bible says. But woke fake Christians think the Bible is too mean, and better to allow sin by saying that sin is inevitable because slavery ghosts or something.

What's neat is that black men who take Christianity seriously are totally on board with the facts:

Black man here. Can confirm that the Bible applies to black women.
On this blog, I don't talk about my ethnicity myself, for confidentiality reasons, but I have said that my skin is darker than Barack Obama. I'm not white or Asian. And the reason that I don't fall into this trap of causing babies to be born out of wedlock is because I think that when the Bible says that sex outside of marriage is a sin, that this is true. I don't make excuses or shift blame. It's incumbent on me to obey, since I claim to be a follower of Jesus.I'm not interested in identity politics. I'm not interested in racial divisions. I'm not interested in blame-shifting. The rules are the rules. And my following of the rules caused me to not cause abortions, according to Christian specifications. Period.

When it comes to sex outside of marriage, the answer of every Bible believing Christian is simple: I'm against it. That is the correct answer, and anything more or less than this answer is demonic. If you are a Christian, sex outside of marriage is always morally wrong. And if you try to justify it, or blame someone else, in order to excuse it, then you're not a Christian at all. If you try to make excuses for why someone did it, you're not a Christian. Whether you have had it and been forgiven, or never had it, the answer is always the same: it's morally wrong. Don't do it. Never do it.

What I am seeing from people who are critical of James White's tweet is that they are basically trying to attack those who make moral judgments based on what the Bible says. They want to make room for sinners to sin. The root of abortion sin is sexual sin. Real Christians discourage sexual sin, and therefore protect unborn children. Fake Christians want to be liked by appearing compassionate, so they make excuses for sexual sin. If you take the Bible seriously on morality, you won't be liked. Those who try to excuse sin do so because their need to be liked is more important than their need to promote what the Bible teaches.

Some fake Christians will say "oh, but I do think the Bible is right about sex and marriage, but we have to care about slavery reparations and global warming and refugees and illegal immigrants and trasnsgender rights, too". Baloney. An authentic Christian is concerned about the things that the Bible teaches are "major" things. Drunkenness is a major thing. Sexual immorality is a major thing. Divorce is a major thing. Homosexuality is a major thing. If you meet a Christian who treats those issues as minor issues, and instead majors in what the secular

left tells them are major issues, then you’re talking to a fake Christian.

Christianity isn’t a brain-dead faith. You get your priorities from the Bible, and you argue those priorities using facts. The facts about marriage rates are clear and they show that the problems in the black community aren’t caused by slavery. They’re caused by single mother welfare programs. Those welfare programs taught women of all races that they didn’t have to listen to their fathers when choosing men. Those welfare programs taught women that feelings were a better guide in relationships than the Bible. Those welfare programs taught women that their eyes were a better judge of character than performance of traditional marriage roles. Those welfare programs taught women that recreational sex was a way to get a man to commit and stop being a bad boy. We need to go back to the root cause of the problem. The root cause of the problem was making excuses for disobedience to the Bible, and transferring money from married homes to out-of-control women. Of all races.

# New study: women who have fewer premarital sex partners have lower risk of divorce

**Wintery Knight** · 10 August 2024 · Archived copy · Original

Consider this article from Family Studies that talks about how the number of pre-marital sex partners that a woman has increases her risk of divorce.

It says:

> American sexual behavior is much different than it used to be. Today, most Americans think premarital sex is okay, and will have three or more sexual partners before marrying. What, if anything, does premarital sex have to do with marital stability?
>
> This research brief shows that the relationship between divorce and the number of sexual partners women have prior to marriage is complex. I explore this relationship using data from the three most recent waves of the National Survey of Family Growth (NSFG) collected in 2002, 2006-2010, and 2011-2013. For women marrying since the start of the new millennium:
>
> - Women with 10 or more partners were *the most likely* to divorce, but this only became true in recent years;
> - Women with 3-9 partners were *less likely* to divorce than women with 2 partners; and,
> - Women with 0-1 partners were the *least likely* to divorce.
>
> Earlier research found that having multiple sex partners prior to marriage could lead to less happy marriages, and often increased the odds of divorce.
>
> […]Even more noteworthy has been the decline in the proportion of women who get married having had only one sex partner (in most cases, their future husbands). Forty-three percent of women had just one premarital sex partner in the 1970s.
>
> […]By the 2010s, only 5 percent of new brides were virgins. At the other end of the distribution, the number of future wives who had ten or more sex partners increased from 2 percent in the 1970s to 14 percent in the 2000s, and then to 18 percent in the 2010s. Overall, American women are far more likely to have had multiple premarital sex partners in recent years (unfortunately, the NSFG doesn't have full data on men's premarital sexual behavior, and in any event they recall their own marital histories less reliably than do women).

Here's the change:

**Table 1: The Distribution of Women's Premarital Sex Partners, by Marriage Cohort**

| | 1970s | 1980s | 1990s | 2000s | 2010s |
|---|---|---|---|---|---|
| 0 partner | 21% | 17% | 14% | 12% | 5% |
| 1 partner | 43% | 36% | 26% | 21% | 22% |
| 2 partners | 16% | 15% | 13% | 13% | 12% |
| 3 partners | 8% | 11% | 11% | 11% | 11% |
| 4-5 partners | 6% | 12% | 16% | 17% | 18% |
| 6-9 partners | 4% | 5% | 11% | 13% | 14% |
| 10+ partners | 2% | 4% | 10% | 14% | 18% |
| total | 100% | 100% | 100% | 100% | 100% |
| N | 268 | 1,921 | 4,312 | 3,598 | 273 |

Women have freely chosen to dismiss the Bible and the moral law

And the problem with this, of course, is that more premarital sex partners means a higher risk of divorce:

Even one non-husband premarital sex partner raises risk of divorce
Why is the 2-partner number so high?

> In most cases, a woman's two premarital sex partners include her future husband and one other man. That second sex partner is first-hand proof of a sexual alternative to one's husband. These sexual experiences convince women that sex outside of wedlock is indeed a possibility. The man involved was likely to have become a partner in the course of a serious relationship—women inclined to hook up will have had more than two premarital partners—thereby emphasizing the seriousness of the alternative.

The Christian Post had an article about some recent numbers from the Centers for Disease Control about virgins.

Excerpt:

> A new Centers for Disease Control study examines teenage health behaviors in connection to their self-reported sexual activity and shows those who remain abstinent are much healthier on many fronts than their sexually active peers.
>
> The report, titled "Sexual Identity, Sexual Contacts, and Health-Related Behaviors Among Students in Grades 9-12, United States and Selected Sites," showcased the results from a 2015 survey that monitored several categories of health-related behaviors like tobacco usage, drug and alcohol use, sexual habits, unhealthy dietary behaviors, and behaviors that contribute to unintentional injuries and violence.
>
> The report concludes "that students who had no sexual contact have a much lower prevalance of most health-risk behaviors compared with students" who had sexual contact.

The article quotes Dr. Jennifer Roback Morse, who I have featured on this blog many times:

> In a Monday interview with The Christian Post, Jennifer Roback Morse, founder and president of the Ruth Institute, said, "this study is remarkable because it asks questions and reports the answers, rather than avoiding questions or assuming answers."
>
> As Glenn Stanton noted last week in The Federalist, the results from those questions and answers are remarkable.
>
> With regard to smoking, teenage virgins are 3,300 percent less likely to smoke daily than their peers who are sexually involved with someone of the opposite sex, Stanton computed from the report's data. Teen virgins are 9,500 percent less likely to smoke daily than their peers who are sexually involved with someone of the same sex or in a bisexual relationship, he added. Chaste young people are also extremely less likely to use indoor tanning beds, binge drink, smoke marijuana, ride in cars as passengers with a drunk driver, and get into

> physical fights than their sexually active peers. Abstinent youth are also more likely to get a solid eight hours of sleep every night and eat breakfast daily.
>
> […]The CDC report also included findings from 25 state surveys, and 19 large, urban school district surveys conducted among students in grades 9–12 which took place between December of 2014 and September of 2015.

Now, many pro traditional marriage people will tell young men “feminism and the sexual revolution change nothing about a woman’s suitability for marriage, so go out there and get married to these women anyway”. In my experience, no one is telling women NOT to follow their hearts, and explaining to them the harm that they do by allowing their feelings to determine who they will engage in relationships.

I would like to see women make better decisions with men before they marry, rather than be influenced by their peers and culture to give themselves to men who are not marriage-minded. Maybe a little skepticism should be shown to “follow your heart”? Women need to understand what they are losing when they choose to have premarital sex.

In my group of friends, the men are aware of the Biblical prohibition on premarital sex. My friends know about the research on marriage, and what it takes to make a marriage work. We don’t follow our hearts, because we do what we know will work to achieve the results we want. We don’t listen to the culture, and we don’t listen to radical feminists. Men generally take an engineering approach to marriage – we want to know what the best practices and tradeoffs are, and then we plan and act to succeed.

# Britain descends into fascism with two-tier policing, criminalizing speech

**Wintery Knight** · 11 August 2024 · Archived copy · Original

I'm not sure if you heard about this, but Britain had an election recently, and they decided to elect secular leftists. What is the secular left championing? Open borders immigration policies, two-tier policing, and suppression of speech critical of the regime's policies or ideology. Let's take a look at what it's like to be a taxpayer in the UK and live under secular left fascism.

Consider this article by Tim Dieppe, which appeared in The Critic.

> There is a perception that the police can treat Muslim protestors differently to white protestors. Scenes of police running away from an Asian-led protest in Leeds contrasted with riot police responding in Southport. Indeed, protestors in London mocked the police there, chanting, "Where the f*** were you in Leeds?"

I disagree with any armed protests, and would never attend one. Violence is never justified, except as a last resort in self-defense when all other options have been exhausted. (Although in the UK, self-defense against violent criminals is effectively illegal – it is illegal to brandish a kitchen knife at trespassers from inside your own home)

But there's more evidence of two-tier policing in the past, as the article explains:

> Two years ago I wrote about how Christian evangelist Hatun Tash was arrested by police in Speakers' Corner after having her Qur'an stolen from her. You can watch footage of the incident here. Hatun had broken no laws and done nothing wrong. In fact, she was the victim. No one was arrested for stealing her Qur'an. The crowd of Muslims mocked her as she was brutally frog-marched off into a police van amidst chants of "Allahu Akbar".
>
> Only after being strip-searched, having her glasses removed from her so that she could not read, being questioned at 4:00am, arrested again, and detained for a total of 15 hours was she finally released without charge.
>
> Hatun's stolen Qur'an was later found by the police. She deliberately uses a large copy of the Qur'an with holes drilled through it to remind Muslims that a famous Islamic apologist admitted that "the standard narrative [of the origins of the Qur'an] has holes in it." This is undoubtedly provocative, but it is nowhere near being a crime. Astonishingly, video footage shows the police later finding her copy of the Qur'an and handing it to Muslim onlookers! One Muslim shortly afterwards brazenly put out video footage of himself holding the stolen Qur'an! Isn't there an offence of handling stolen goods? Did the police take any action? Did they heck.
>
> This was not the first time that Hatun has been wrongfully arrested. Metropolitan Police paid out £10,000 for wrongful arrests in 2020 and 2021. They also issued a statement of apology. Sadly, they don't seem to have learned their lesson.
>
> Police policy appears to be to effectively to enforce elements of sharia law. If you offend Muslims you will be arrested. Hatun has proven this several times. There are no arrests, however, for offending Christians. Not that there should be any arrests for causing offence at all. Being offensive is, after all, not an offence. If it were, we would not have free speech at all. Not that the police seem to understand this or be at all interested in protecting free speech, particularly when it comes to Islam.
>
> What really grates, is that there are also no arrests for assaulting or stealing from Christians — even when done in broad daylight with multiple witnesses and video footage. Even when repeated requests are made for action to be taken. What other conclusion are we supposed to draw than that two-tier policing is a reality?

The police are warning people not to talk about two-tier policing on social media, and threatening action against anyone who does. Why would they try to suppress this? Well, the police in the UK want potential tourists in the

West to think of the UK as a peaceful country, where tourists are safe from criminals. “Our open border immigration policies are working fine”, they say, “nothing for you to worry about here”.

But there’s a lot for you to worry about:

> Since 7 October we have seen police stand by while protestors call for Jihad or chant antisemitic slogans. The police response to Islam-related protests or riots is clearly muted in comparison to the reaction to white protests. Video-footage of an unarmed 72-year-old white woman with a pacemaker being arrested by five riot police in London went viral on the internet.
>
> Videos of pro-Palestine groups of masked and sometimes armed men congregating and threatening or attacking people with no police presence to be seen, contrast with riot police out in force for unarmed white groups.

Here’s what we mean by two-tier policing:

> Video footage emerged on Saturday showing a police liaison officer in Stoke-on-Trent telling Muslim protestors that they could leave their weapons at the mosque. He said:
>
> We will work with you guys for the best solution. The EDL lot I’ve been assured have left.
>
> If there are any weapons or anything like that, then what I would do is discard them at the mosque.
>
> Don’t give anybody any reason to have any interaction with the police, so if there’s any weapons, get rid of them, we are not going to arrest anybody. You don’t want us to make arrests or start dispersing people. Is that alright?
>
> Police have now admitted that public confidence was undermined by this incident and are said to be reviewing the incident. It is a criminal offence to carry a knife or a weapon. Allowing Muslims to leave their weapons at the mosque rather than arresting them for this crime is another example of two-tier policing.

This is similar to how the British police declined to investigate complaints from mothers about their daughters being sex-trafficked by Muslim men. They didn’t want to “inflame racial tensions”. And if you criticize them for what they’ve done, then they want to punish you for it. But if you post a meme that criticizes the secular left, then the police are all over you. This is fascism.

The article notes:

> Even more concerningly, Met Police Commissioner, Sir Mark Row1ey, appears to want to criminalise people who claim that there is two-tier policing. In an interview with Sky News he suggested that people who say that there is two-tier policing are legitimising violence. He added: “If you’re a keyboard warrior, you’re not safe from the law if you incite violence.”

Would you live in a country like that? Would you even visit it? I would expect the police in the UK to join in the murdering of me, rather than protect me from actual criminals. They are serious about collecting their salaries paid for by taxpayers, but not serious about doing their job of protecting those taxpayers. At what point can we just describe law enforcement in the UK as Gestapo or Stasi? They exist to protect the secular left regime from criticism. That’s it.

And just to be clear, half my family is Muslim, I have very dark skin, and I am a legal immigrant (by employer sponsor, in the highest category of merit) to the United States. No problem with any of that. But I think I’ll decline from ever setting foot in the UK, and so should you. It’s not any different than any other corrupt country running the communist fascist playbook. I wouldn’t visit a garbage country like Venezuela, just as I wouldn’t visit the UK.

# Two chapters from Megan Basham's new book "Shepherds for Sale"

**Wintery Knight** · 12 August 2024 · Archived copy · Original

Megan's new book is popular that it's up to #11 on Amazon as of Sunday night, when I am writing this post. The book talks about how some popular evangelical pastors and teachers have aligned themselves with the secular left on issues like abortion, LGBT, immigration, global warming, health care, etc. I got the audio version, read by the author, and I'm enjoying it immensely.

So what's in the book? Here is one article in First Things containing a sample chapter about how some evangelical pastors and leaders align themselves with the secular left on LGBT policy.

It says:

> In 2000, Jon Stryker, gay heir to a one-hundred-billion-dollar surgical supply conglomerate, launched the Arcus Foundation, a grant-making institution that soon became the largest funder of LGBTQ initiatives in the United States. But after legislative defeats like the passage of a 2008 California law banning gay marriage, Stryker's foundation began devoting tens of millions of dollars to, in its words, "challenging the promotion of narrow or hateful interpretations of religious doctrine" within every major Christian denomination.
>
> […]Between 2014 and 2018, the Reformation Project, a brand-new organization led by twenty-three-year-old Harvard dropout Matthew Vines, received $550,000 in grants. The purpose of the funding, according to Arcus, was to "reform church teaching on sexual orientation and gender identity among conservative and evangelical communities."
>
> […]Enter Greg and Lynn McDonald. In 2015, they founded Embracing the Journey, an organization for Christian parents of LGBTQ children, at the urging of North Point's executive director, Bill Willits. They had recently relocated to the Atlanta area and had begun attending services at the church. Over a breakfast meeting with Willits early in the year, Greg happened to share that his son had come out as gay in 2001, and he described how his and Lynn's process of acceptance eventually led them to become informal counselors to other parents of gay and transgender kids. Willits was "captivated" by their story and revealed that North Point had already begun exploring new ministries in that vein. He urged them to film a video for Stanley's Drive Conference that May.
>
> As Stanley introduced the McDonalds' video to approximately two thousand church leaders from all over the country, he urged those leaders not to view homosexuality through a "political" lens. Instead of suggesting that ministers use the Bible as their foremost frame of reference, he urged the audience to approach the issue through a "relational lens." His example for relational was the McDonalds' story.

And this part was interesting. As someone who has tried and tried and tried to get evidential apologetics into churches, I was astonished to see how churches approached Vines' teaching material on LGBT:

> As might be expected, given how seriously he takes his mission, Vines's courses are far more rigorous than the kind of light, Wednesday night discussions the typical evangelical church offers on such subjects, if it offers them at all. Over a period of three months, the Reformation Project requires participants of one program to complete the equivalent of an advanced college course, all for the purpose of preparing to subvert the faithful churches Vines has called "the last stronghold of homophobia."

When I was reading this article, I could not help but think of the episodes of Knight and Rose Show that Rose and I did about the definition of marriage, and then our interview with Dr. Frank Turek about LGBT as a whole. Naturally, our conversations were about *evidence*. We wanted to follow the advice of 1 Peter 3:15, and give an

evidential defense of Jesus' views on these issues, that would be convincing to non-Christians. But Andy Stanley doesn't like evidence, he wants to be "relational". You know, "don't judge".

Here's another article in The Federalist with a sample chapter about evangelical pastors and immigration.

It says:

> In January 2020, Baptist Press, the house organ of the Southern Baptist Convention, published a lie. The question is whether the outlet knew at the time that it was a lie.
>
> The article was not attributed to any specific author and was labeled an "explainer." It claimed to debunk reporting from the conservative news outlet Breitbart, which revealed that the Evangelical Immigration Table, a group that lobbies for various amnesty policies in the name of Jesus, was funded by left-wing, atheist billionaire George Soros. This was not a small matter because, largely under the direction of, first, Richard Land, and then Russell Moore, the SBC's Ethics and Religious Liberty Commission had become a key leader in the EIT. Nor were Land and Moore alone. Leadership for a host of trusted evangelical organizations, including the Council for Christian Colleges and Universities, the NAE, World Relief, InterVarsity Christian Fellowship, Focus on the Family, Prison Fellowship Ministries, and the Wesleyan Church, had joined hands with the EIT. If it was being bankrolled by Soros, they would all have a lot of explaining to do.
>
> […]From the outset, the group focused not on encouraging Christians to meet the material and spiritual needs of immigrants in their own communities, something few would object to, but on pushing them to lobby lawmakers for specific legislation.
>
> […]By late 2013, the group was soliciting proposals for "mobilizers" to "activate" pastors and congregations, explaining that "81 Republicans in the House who may vote for immigration reform represent districts whose population is at least 20% evangelical Christian. Over the last year, the [EIT] has worked to engage pastors and congregants in 16 of the 20 states that are home to these districts."
>
> […]The EIT's efforts to see the bill passed began in earnest in January 2013, as the group pushed churches to join a 40-day study of cherry-picked Bible verses, titled "I Was a Stranger," that they insisted applied to U.S. immigration law. Instead of studying the Bible, churches involved with the EIT began recruiting their congregants for political activism.

The first thing that popped into my head reading these chapters was "why haven't evangelical churches been teaching their congregants evidence to confirm Biblical positions on issues like atheism, feminism, socialism, sexuality, Darwinian evolution, abortion, marriage and divorce, etc." These evangelical churches seem to be fine with persuading Christians to accept the politics of the secular left. Where is the effort from these shepherds to get Christians to defend the truth claims of the Bible with evidence?

By the way, there is a good conversation on the book here with Dr. Frank Turek and Alisa Childers, and another good conversation here with Krista Bontrager and Monique Duson.

# Poll: few Millennials describe belief in God as “very important”

**Wintery Knight** · 13 August 2024 · Archived copy · Original

Beliefs of millennials and boomers

I saw a very interesting article that compared the attitudes of young people about things like patriotism, religion, freedom, etc. The numbers are very discouraging.

So, here’s the article from the Washington Examiner:

> The importance of patriotism, faith in God, and having children is significantly lower among millennials and Generation Z, compared to previous generations.
>
> In a new poll conducted by the *Wall Street Journal* and NBC News, nearly 80% of people aged 55-91 said being patriotic is important to them, while only 42% of millennials and Generation Z, or those aged 18-38, said the same. Thirty percent of millennials and Generation Z said religion was important, compared to the over 75% of baby boomers, with just over 30% of millennials and Generation Z saying it was important to have children.
>
> Areas where the younger generations had placed higher importance compared to boomers were tolerance for others and self-fulfillment, with financial security being almost tied between the two age groups.

I’m sure that everyone has seen other polls showing the decline of Christianity, especially in mainline and Catholic churches. Evangelicals are declining less, but they are still declining.

The reason I linked to this post is because I’ve noticed that some Christians don’t really think that there is anything to be concerned about. Everything is working fine, they say. Whatever we’re doing right now must be working, because there is no decline. We’re winning, and if you think otherwise, then you’re just complaining.

Well, I don’t really know why there is this decline, all I can do is speak from my experiences. I’ve met people through my blog who did lose their faith in college, and I’ve met ex-Christians in my office, too. I asked them what the problem was, and it seems to be that when they were growing up, they often bullied into behaving like a Christian without being able to ask any questions about whether it was true. And then as soon as they got to college away from their parents and pastors, they just dumped the whole thing.

I remember listening to an amazing lecture a while back by Dr. Scott Waller. I think it was a lecture he gave for the

Stand to Reason “Masters Series in Christian Thought” in 2003. The lecture was about Postmodernism in the University. Postmodernism is the view that there are no true or false views, especially with “soft” issues like religion and morality. In the lecture, he talked about how a father had sent his devout Christian son to university, and the son had returned an atheist after one semester. I remember Dr. Waller quoting the son telling his parents “I have come to think of my time growing up in this house as the dark period of my life”. The father was very upset. So Dr. Waller told him what to do. He said, you’re going to need to read a few books on the most common questions that your son has, and then work through the answers with him. And he made a little pile of books about common questions that college students ask, and pushed the pile across the table to the father. And the father pushed the books back across the table to Dr. Waller, and said “well, I don’t have time for reading so many books… but could you just talk to him instead?”

Another thing that seems to cause a lot of young people to  leave the faith in college is sex. Now if I were trying to convince someone to be responsible about sex, I’d try to show them studies and statistics to explain why there really are best practices to relationships and marriage. For example, I’d might show them that the number of premarital sex partners increases marital instability, or that sliding into cohabitation early tends to make marriages less stable. But this takes a bit of work, and you have to work through it with the young people. I just don’t know if parents really reason with their kids like this. But in churches, I’ve noticed that trying to make an argument using evidence isn’t very popular. To me, if I were trying to be convincing to someone about something, I would use evidence. It’s just natural to me to make a case if I’m trying to be persuasive. But making a case just hasn’t been a really big priority in the churches I’ve attended.

So, I guess if I had to give any advice to parents of children, or pastors in churches, it would be that Christianity is in decline, and we need to do more than just order people to memorize Bible verses and creeds, go to church, etc. It’s hard for me to know what’s really going on in everyone’s home, and in everyone’s church. But I don’t think that whatever we’re doing in our homes and churches is working to convince young people that belief in God is very important.

# Progressive white women report high levels of mental illness in 2020 Pew survey

**Wintery Knight** · 13 August 2024 · Archived copy · Original

I have the most amazing video for you to see. It's a crazy left-wing activist doxing a libertarian lesbian woman wearing a breathe-through mask. First, let's take a look at the video. Then, we'll look at a recent survey reported by Pew Research in 2020, which assesses how mentally stable far-left feminist women are (self-reported). Then, I'll make some comments for unmarried men.

OK, so here is the video, which was shared by the woman who was doxed. So it's OK for me to share it, since the doxed woman didn't care about it.

So, is this crazy woman rare? Or is she common?

## Progressive white women and mental illness

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

Here's the part of the data I thought was most interesting:

## Who would marry a crazy person?

So, the point about this that I want to make is… who is going to marry these mentally ill progressive white women? Being a good wife and mother takes a certain amount of connection to reality. It takes a certain amount of empathy, compassion, and rationality. These progressive white women don't have any of that. So, who is going to marry them? I know that there are thirsty progressive men (and thirsty conservative men who fake being progressive), who will go ahead and hit it and quit it. Pump it and dump it. But how many men would commit to someone who's mentally ill?

And in fact, that's exactly what we're seeing with the marriage rates:

That's for America, but things are even worse in countries that have slid further toward the secular left edge of the political spectrum.

When you look at marriage rates in Canada and Europe, you understand that men are even LESS likely to choose marriage when they have to pay over 50% of what they earn in taxes. And so the marriage rate is declining. I think young, unmarried women in Canada and Europe want to raise taxes in order to get free stuff from government. Single mother welfare, food stamps, abortions, contraceptives, IVF, breast enlargements, etc. Some feminists are even asking for free cosmetic surgery. With a big enough government, they don't have to marry at all. Big government leaves them free to play the field, without having to care about finding a good man. But what if taxes get so high that the few good men those women passed over for 40 years simply can't afford to take on a wife and support multiple children he didn't father? Paying for things like a stay-at-home wife and homeschooling, etc. is expensive. Men can't afford a wife, and also pay for goodies for all the single progressive women with mental illnesses.

Conservative men want nothing to do with daycare and public schools – we know that those facilities are *dominated* by progressive women. And we don't want trouble from feminist lawyers and feminist judges in the divorce courts. Divorce is very expensive for men. And we may never see our children again. Then there are the progressive white women in the workplace, who get very bitter with men as a result of getting wrecked by bad boys. Even if we find a good wife, we still have to deal with all these progressive white women with mental illnesses in positions of power. Is it worth it to take risks like this? It depends on the reward, I guess. There comes a point where the juice isn't worth the squeeze.

# Christians need to know what happens to our rights in secular left nations

**Wintery Knight** · 14 August 2024 · Archived copy · Original

This week, I had a conversation with a Christian leader who explained to me that Christians need to avoid getting involved in "culture wars" and "politics", and just focus on being nice and loving everyone. "Just love everybody" he assured me. "What's the point of being divisive?" So, I thought it might be a good idea to review what happens to Christians in countries that follow his advice.

Read this article from The Public Discourse. The article just came out this week, and it's written by Dr. Päivi Räsänen, a member of the Finnish parliament.

She writes:

> I have been a member of the Finnish Parliament for twenty-nine years. During that time, I have witnessed a dramatic change in the value system undergirding our modern society. From the protection of life to the defense of marriage, the changes we are living through are undeniable, with far-reaching implications for us all. And it's evident that the general atmosphere toward Christianity grows increasingly hostile every day. Only ten years ago, I could not have imagined that I would soon be summoned to my country's Supreme Court to defend my religious convictions.
>
> "Has somebody occupied Finland?" My six-year-old grandson asked me this in June 2019 when he saw a giant rainbow flag, the biggest we had seen to date, flying over our home city of Riihimäki, Finland. At that same time, the majority church of our country, the Finnish Evangelical Lutheran Church, officially published its support of a Helsinki "pride" event, which disappointed and shocked many (including me).
>
> Before our very eyes, the church was assuming a position contrary to its own confession that God designed marriage for one man and one woman. If the authority of God's Word is undermined, the question becomes not only about marriage or gender, but also about the path to salvation and eternal life. Every person, including the LGBT community, has the right to hear the whole truth of God's Word. While I briefly considered leaving my church, I was convinced that it was better to stay aboard and try to wake up those who had fallen asleep, not jump out of a sinking boat.
>
> This was why I wrote a tweet, in which I directed a question to my church leadership. I wanted to exercise my basic right to free speech to publicly ask how they reconciled their activities with biblical teaching. The main content of my post was a photo of verses 24–27 of Romans Chapter 1, where the Apostle Paul teaches that homosexual relations are sinful. A citizen filed a criminal complaint in response to my tweet, and more complaints quickly followed.
>
> These complaints resulted in eighteen months of police investigation and thirteen hours of interrogations. As a former government minister, sitting parliamentarian, and grandmother, I found the situation unreal. Just a few years before, I had been in charge of the police as Minister of Interior, and now I was sitting in the police station being interrogated, with the Bible on the table in front of me.

And it goes on.

I can't possibly quote enough of her post to tell you all you need to know. All I want to say is that I've been watching how people are responding to Megan Basham's book. On Twitter, a lot of Megan's attention recently has been focused on J. D. Greear – a pious pastor who is always trying to be nuanced, sounding good to Democrats, and watering down the Bible's teachings so he can be popular and well-liked. For pastors like this, Christianity is primarily a vehicle for signaling virtue. They talk about the parts that make people like them, they affirm non-Christians in their rebellion against God. To them, Christianity is not about being faithful, or being an ambassador. It's not about self-sacrificial obedience at all.

Since Christianity is so easy for these “don’t judge” and “just love everyone” pastors, they have no idea what happens to people who tell the truth (with evidence) about things like abortion, socialism, atheism, feminism, Darwinism, LGBT, etc. They can’t understand it. How could God allow anything unhappy to happen to people who “just love everyone” they wonder.

I brought up the case of Bill Dembski to one of these people recently. Dembski advocated for intelligent design, and was thrown out of Baylor University, because they were committed to naturalistic Darwinism. He said “Dembski got what was coming to him. He wasn’t collegial enough with his Darwinian colleagues”. They don’t think of people who take a hit to their reputations or careers to stay faithful as heroes. They don’t understand them. “Why would you even talk about origins?” they wonder. “Why not just say happy things, instead of knowledge things?”

Anyway, I don’t want any of my readers to be this naive about what happens if we listen to these virtue-signaling pastors at election time. If you let the secular left become the government, then you will lose your liberty to even make a case against the secular left on controversial issues. How do you stop the secular left from becoming the government? You learn how to make an evidential case for the truth claims of the Bible that will be convincing to people who won’t believe the Bible, but will believe the evidence. Even Jesus told people who didn’t believe his words to believe his works. That’s our model.

Whatever it is that the secular left is talking about: global warming socialism, radical feminist misandry, abortion and infanticide, LGBT, etc. you have to be ready with convincing evidence from outside the Bible to convince them that Christian position on these issues is reasonable. Otherwise, they will think we are irrational idiots and trample over our rights. We have to get to work, and step one is to stop listening to people like J. D. Greear, Russell Moore, David French, and the like. They are not interested in providing evidence to non-Christians, and advocating for free speech and religious liberty. They are out for their own happiness and popularity.

# The psychological motivation of those who embrace postmodernism

**Wintery Knight** · 15 August 2024 · Archived copy · Original

Can a person be postmodern and a Christian? Not for long

Famous analytical philosopher John Searle has written a book "Mind, Language And Society: Philosophy In The Real World", explaining what's factually wrong with postmodernism. In the introduction, he explains what postmodernism is, and what motivates people to accept postmodernism.

He writes:

> […][W]hen we act or think or talk in the following sorts of ways we take a lot for granted: when we hammer a nail, or order a takeout meal from a restaurant, or conduct a lab experiment, or wonder where to go on vacation, we take the following for granted: there exists a real world that is totally independent of human beings and of what they think or say about it, and statements about objects and states of affairs in that world are true or false depending on whether things in the world really are the way we say they are. So, for example, if in pondering my vacation plans I wonder whether Greece is hotter in the summer than Italy, I simply take it for granted that there exists a real world containing places like Greece and Italy and that they have various temperatures. **Furthermore, if I read in a travel book that the average summer temperature in Greece is hotter than in Italy, I know that what the book says will be true if and only if it really is hotter on average in the summer in Greece than in Italy. This is because I take it for granted that such statements are true only if there is something independent of the statement in virtue of which, or because of which, it is true.**
>
> […]These two Background presuppositions have long histories and various famous names. The first, that there is a real world existing independently of us, I like to call "external realism." "Realism," because it asserts the existence of the real world, and "external" to distinguish it from other sorts of realism-for example, realism about mathematical objects (mathematical realism) or realism about ethical facts (ethical realism). The second view, that a statement is true if things in the world are the way the statement says they are, and false otherwise, is called "the correspondence theory of truth." This theory comes in a lot of different versions, but the basic idea is that statements are true if they correspond to, or describe, or fit, how things really are in the world, and

> false if they do not.

The “correspondence theory of truth” is the view of truth assumed in books of the Bible whose genre is such that that they were intended by the authors to be taken *literally*, (with allowances for symbolism, figures of speech, metaphors, hyperbole, etc.).

But what about the postmodernists, who seek to deny the objectivity of external reality?

More Searle:

> Thinkers who wish to deny the correspondence theory of truth or the referential theory of thought and language typically find it embarrassing to have to concede external realism. Often they would rather not talk about it at all, or they have some more or less subtle reason for rejecting it. In fact, very few thinkers come right out and say that there is no such thing as a real world existing absolutely, objectively, and totally independently of us. Some do. Some come right out and say that the so-called real world is a “social construct.”

What is behind the denial of objective reality, and statements about external reality that are warranted by evidence?

> It is not easy to get a fix on what drives contemporary antirealism, but if we had to pick out a thread that runs through the wide variety of arguments, it would be what is sometimes called “perspectivism.” Perspectivism is the idea that our knowledge of reality is never “unmediated,” that it is always mediated by a point of view, by a particular set of predilections, or, worse yet by sinister political motives, such as an allegiance to a political group or ideology. And because we can never have unmediated knowledge of the world, then perhaps there is no real world, or perhaps it is useless to even talk about it, or perhaps it is not even interesting.

Searle is going to refute anti-realism in the rest of the book, but here is his guess at what is motivating the anti-realists:

> > **I have to confess, however, that I think there is a much deeper reason for the persistent appeal of all forms of antirealism, and this has become obvious in the twentieth century: it satisfies a basic urge to power. It just seems too disgusting, somehow, that we should have to be at the mercy of the “real world.” It seems too awful that our representations should have to be answerable to anything but us. This is why people who hold contemporary versions of antirealism and reject the correspondence theory of truth typically sneer at the opposing view.**
>
> […]I don’t think it is the argument that is actually driving the impulse to deny realism. I think that as a matter of contemporary cultural and intellectual history, the attacks on realism are not driven by arguments, because the arguments are more or less obviously feeble, for reasons I will explain in detail in a moment. **Rather, as I suggested earlier, the motivation for denying realism is a kind of will to power, and it manifests itself in a number of ways. In universities, most notably in various humanities disciplines, it is assumed that, if there is no real world, then science is on the same footing as the humanities. They both deal with social constructs, not with independent realities. From this assumption, forms of postmodernism, deconstruction, and so on, are easily developed, having been completely turned loose from the tiresome moorings and constraints of having to confront the real world. If the real world is just an invention-a social construct designed to oppress the marginalized elements of society-then let’s get rid of the real world and construct the world we want. That, I think, is the real driving psychological force behind antirealism at the end of the twentieth century.**

Now, I’ll go one step further than Searle.

People, from the Fall, have had the desire to step into the place of God. It's true that we creatures exist in a universe created and designed by God. But, there is a way to work around the fact that God made the universe and the laws that the universe runs on, including logic, mathematics and natural laws. And that way is to *deny logic, mathematics and natural laws.* Postmodernists simply deny that there is any way to construct rational arguments and support the premises with evidence from the real world. That way, they imagine, they are free to escape a God-designed world, including a God-designed specification for how they ought to live. The postmoderns deny *the reliable methods of knowing about the God-created reality because logic and evidence can be used to point to God's existence, God's character, and God's actions in history.*

And that's why there is this effort to make reality "optional" and perspectival. Everyone can be their own God, and escape any accountability to the real God – the God who is easily discovered through the use of logic and evidence. I believe that this is also behind the rise of atheists, who feign allegiance to logic and science, but then express "skepticism" about the origin of the universe, the fine-tuning of the universe, objective morality, the minimal facts concerning the historical Jesus, and other undeniables.

# Christian father imprisoned in Egypt for discussing theology in a Facebook group

**Wintery Knight** · 16 August 2024 · Archived copy · Original

I have a few “Big Eva” friends who cannot understand why I would need an alias. They never take stands on controversial topics, so they have no experience getting pushback from non-Christians. Well, two of the most threatening groups that hunt Christians are Muslims and governments. And worst of all is a government run by Muslims.  There’s no such thing as free speech and religious liberty in Islam.

Here’s the story from ADF International:

> A father, imprisoned for over two-and-a-half years for discussing theology with Christian converts in a private Facebook group following his conversion from Islam to Christianity, has declared a hunger strike in a heartbreaking letter to his wife and family.
>
> Religious freedom advocates are calling for the urgent and safe release of Abdulbaqi Saeed Abdo following a devastating letter to his family, in which he vows to strike in stages until he makes the strike “complete,” including turning away healthcare treatment and, eventually, food.
>
> Abdo was arrested by Egyptian authorities in 2021 for his involvement with a Facebook page that is dedicated to supporting people who have converted from Islam to Christianity. He was living as a UNHCR registered asylum seeker in Egypt following the death threats he received in his home country of Yemen after he converted to Christianity.

And here is his current status:

> The United Nations Working Group on Arbitrary Detention and the United Nations Special Rapporteur on Freedom of Religion or Belief have received information on behalf of Girgis and Abdo, citing that both men have been deprived of their right to religious freedom and a fair trial under international law. ADF International is directly involved in international efforts to secure their release.

So, what to say about this?

Well, I think we should be concerned about opening our borders to let in unskilled workers from predominantly Muslim countries. And I also think that Christian leaders should stop advocating for open borders, and start equipping their flocks to disagree with Islam using evidence. I don’t mean “share your faith”. I mean make an argument using evidence for why Christianity is true, and make an argument using evidence for why Islam is false. Because if we Christians ever find ourselves living in a country that is majority Muslim, it will not be easy for us to act like Christians.

In case you want to see our Knight and Rose Show episodes where we take on Islam with evidence, look on our podcast page. If you haven’t taken the time to inform yourself about Islam, and equipped yourself to debate it with evidence, you should check out those episodes. And just in general, if you are relying on Christian leaders who don’t know anything about the dangers of Islam, and can’t show their work about why they disagree with Islam, like we’ve done, then maybe you should look elsewhere for leadership.

# Peter Williams lectures on the historical reliability of the gospels

**Wintery Knight** · 17 August 2024 · Archived copy · Original

This is a lecture I found from British historian Dr. Peter J. Williams.

Here's the main lecture: (54 minutes)

And here's the Q&A: (9 minutes)

About Peter Williams:

> **Peter J. Williams** is the Warden (CEO) of Tyndale House and a member of the Faculty of Divinity in the University of Cambridge. He received his MA, MPhil and PhD, in the study of ancient languages related to the Bible from Cambridge University. After his PhD, he was on staff in the Faculty of Divinity, Cambridge University (1997–1998), and thereafter taught Hebrew and Old Testament there as Affiliated Lecturer in Hebrew and Aramaic and as Research Fellow in Old Testament at Tyndale House, Cambridge (1998–2003). From 2003 to 2007 he was on the faculty of the University of Aberdeen, Scotland, where he became a Senior Lecturer in New Testament and Deputy Head of the School of Divinity, History and Philosophy. In July 2007 he became the youngest Warden in the history of Tyndale House. He also retains his position as an honorary Senior Lecturer in Biblical Studies at the University of Aberdeen.

Summary of the lecture:

- What if the stories about Jesus are legendary?
- were the gospels transmitted accurately?
- were the gospels written in the same place as where the events happened?
- do the gospel authors know the customs and locations where the events happened?
- do the gospels use the right names for the time and place where the events took place?
- do the gospels disambiguate people's names depending on how common those names were?
- how do the New Testament gospels compare to the later gnostic gospels?
- how do the gospels refer to the main character? How non-Biblical sources refer to Jesus?
- how does Jesus refer to himself in the gospels? do the later Christians refer to him that way?
- how does Jesus teach? do later Christians teach the same way?
- why didn't Jesus say anything about early conflicts in the church (the Gentiles, church services)?
- did the writers of the gospels know the places where the events took place?
- how many places are named in the gospels? how about in the later gnostic gospels?
- are the botanical details mentioned in the gospels accurate? how about the later gnostic gospels?

And here are the questions from the audience:

- how what about the discrepancies in the resurrection narratives that Bart Ehrman is obsessed with?
- what do you think of the new 2011 NIV translation (Peter is on the ESV translation committee)?
- how did untrained, ordinary men produce complex, sophisticated documents like the gospels?
- is oral tradition a strong enough bridge between the events and the writers who interviewed the eyewitnesses?
- what does the name John mean?
- why did the gospel writers wait so long before writing their gospels?
- do you think that Matthew and Luke used a hypothetical source which historians call "Q"?
- which gospel do critical historians trust the least and why?

I really enjoyed watching this lecture. He's getting some of this material from Richard Bauckham's awesome book "Jesus and the Eyewitnesses", so if you aren't familiar with it, you can get an idea of what's in it. Peter Williams is a lot of fun to listen to – an excellent speaker.

And you can listen to the Peter Williams vs Bart Ehrman debate. That link contains a link to the audio of the debate as well as my snarky summary. It's very snarky.

# How Australia censored online disagreement with transing of children

**Wintery Knight** · 18 August 2024 · Archived copy · Original

One of the women I admire the most today is Kristen Waggoner, an attorney who is president, CEO and general at Alliance Defending Freedom. Kristen takes cases where she has to defend basic human rights, including all the way up to the Supreme Court. She doesn't often write articles, but she has a new one in World Magazine, where she talks about how Australia censors free speech.

Here is the article.

It says:

> "Billboard Chris" defends kids from gender ideology like it's his full-time job—because it is.
>
> In 2020, Chris Elston, a father of two from Vancouver, British Columbia, decided he could no longer stand idly by as he saw child after child fall prey to gender ideology. So, leaving behind a successful job in finance, he launched a new "career," engaging people in street conversations while wearing a sandwich board with pithy messages. One reads, "Children cannot consent to puberty blockers." Another says, "dad [noun]: a human male who protects his kids from gender ideology."

This is the part that was interesting, especially if you are ever thinking of traveling to Australia for a vacation:

> In February, Elston shared a Daily Mail article criticizing the appointment of gender ideology activist Teddy Cook to a panel of the World Health Organization. The article explained that Cook promotes deviant sexual practices, including bestiality and bondage. Elston took to X to state the obvious: that such a person has no business making global policy on mental health.
>
> That's when Australia's "eSafety commissioner" demanded that X take down Elston's post. With Elon Musk at the helm, X refused. The authorities then forced X to block the post in Australia, and X is now suing. Elston is challenging this censorship in court as well, with ADF International backing his legal defense.

I'm sure I'm going to surprise no one when I tell you that Australia's "eSafety commissioner" is a progressive woman. More often than not, progressive women are always at the bottom of these censorship efforts. They just resort to force in order to silence words that they disagree with. Never marry one of these women. Don't even date them. It's not safe.

The reason I linked to this article is because of the interesting evidence that she musters against the most common arguments for transing kids.

Here's some of her evidence:

> One of the most common assertions we hear from activists is that "transition" is necessary to prevent people from committing suicide. That claim is flatly contradicted by the science. In 2011, an expansive Swedish study found that mortality rates among study participants became much worse after "transition" surgeries, with a lifetime suicide rate 19 times higher than the control group. In addition, last year, studies out of Denmark and Finland each reviewed more than 3,000 patients who had undergone transition procedures, both as children and adults, and more than 20 years of records revealed no meaningful improvement in mental health outcomes.
>
> Most recently, a high-profile review commissioned by the English National Health Service found that "the evidence does not support the claim that gender-affirming treatment reduces suicide risk." The same review echoed warnings that puberty blockers pose "potential risks to neurocognitive development, psychosexual development, and longer-term bone health" among children. These findings were published in the full Cass

> Review.

As she notes in the article, many countries who were ahead of America on transing children have now put the brakes on it. Sadly, America is lagging behind these other nations. There are a lot of people who are desperate to virtue-signal about their great tolerance: public school teachers, social workers, lawyers, judges, and medical professionals. And of course, transing kids is a big money maker for hospitals, since the kids will be hooked on drugs and treatments long after the surgeries are done.

But there was also this interesting case from Switzerland, too, reported in Daily Signal:

> In Switzerland, gender transitions for minors are regulated by the Swiss Pediatric Endocrinology and Diabetes Society (SPED), The European Conservative reports, and under SPED's regulations, the state can supersede a parent's refusal to allow their 16- and 17-year-old children to transition if the parents are stripped of their legal authority.
>
> The Swiss child protection agency, or the Service de Protection des Mineurs (SPMi), has full authority over where their daughter is treated, John said. And it has mandated that she receive the "gender-affirming" treatment that her parents believe will harm her.
>
> In late July, the highest court in Geneva (the Court of Justice) ruled against the parents and ordered that they hand over documents necessary for their daughter's legal "sex change." If they do not turn over those documents, they face the threat of criminal charges, according to the Christian legal advocacy group Alliance Defending Freedom International.

Check out these articles, and think about what's at stake in the next election. Would you want people like the Australian chief fascist censoring your speech? Would you like the hospital and the courts to overrule your rights as parents? If not, it would be a good idea to get some of this evidence out in front of your friends and family. That way, they would understand what would happen here if the secular lefts had more political power.

And I also hope this helps you to know how to think about evangelical leaders, who are passionate about Democrat priorities like opening the borders, but silent on issues like this that affect you and your family.

# UK gay activist facing more than 30 sex abuse against children charges

**Wintery Knight** · 19 August 2024 · Archived copy · Original

I'm monitoring laws, policies and trials of interest to Christians in outside the USA, so that I can get an idea of what will happen here, if the secular leftists win the elections in November. One country that is particularly troubling on several fronts is the UK. They have problems from their weak immigration policies, their green energy policies, their weak crime policies, and their censorship of speech.

Here's the latest from Christian Concern, about one of the major gay activists in the UK.

It says:

> A patron of Educate and Celebrate, the now defunct government-funded gender identity group allowed into thousands of schools across the UK, has this week been charged with multiple accounts of sex abuse against children.
>
> Stephen Ireland, who is also the founder of gay pride in Surrey, is facing more than 30 charges, including rape of a child under 13, sexual assault, six counts of conspiracy to sexually assault a child, conspiracy to kidnap a child, voyeurism, making indecent photographs of children, arranging the commission of a child sex offence, and possession of an extreme pornographic image.

What's interesting about this is how differently gay activists are treated compared to Christian teachers and chaplains. Christianity is viewed as the source of all intolerance and bigotry. Far from being seen as moral people, Christians are viewed as predators, because of the official UK religions of "don't judge" and "follow your heart". Meanwhile, actual predators are given complete access to children.

Look:

> The development raises alarm over how Educate and Celebrate have, for example, been given access to nursery age children across the country, while a Christian chaplain, Rev. Dr Bernard Randall, has been reported to counter-terrorism, sacked and blacklisted as a safeguarding risk to children by the Church of England (CofE), after raising concern about the group.
>
> In 2019, Rev. Dr Bernard Randall… gave a sermon on the Church of England's (CofE) teaching on marriage and human sexuality in a CofE chapel in a school with a CofE ethos.
>
> Dr Randall gave the sermon, which encouraged debate and critical thinking, after Educate and Celebrate had been allowed into Trent College in Derbyshire, to promote queer theory into the morale fabric of the school.
>
> At a staff training day, the group's leader, Elly Barnes, got staff to stand up and chant *'smash heteronormativity.'*
>
> Dr Randall's career has been torn apart since he gave the sermon, despite having been vindicated by a string of secular agencies. Yet still the CofE refuse to give him his permission to officiate licence back.
>
> In contrast, Educate and Celebrate have been plagued by scandal culminating with the group quietly folding in January following a low-key announcement by the Charity Commission.

If you look at a few of the photos of Kamala Harris with LGBT activists and drag queens, then you will understand that for her, her LGBT allies are good people – moral people. But Christians on the other hand – we are the devils.

She used the power of law enforcement to go after Christian pro-lifers when they offended abortion providers who were accused of selling baby body parts for profit. So, I expect that Christians would get the same treatment as Dr. Randall, while gay activists would enjoy the same "soft on crime" treatment that Muslim sex-traffickers in the UK get from their secular leftists.

Remember, as I blogged about before, California is a sanctuary for people who want to trans kids. I blogged about how California rips the kids away from their fathers, and force the dissenting fathers to pay the medical bills, while denying them access to their kids. Is that what you want to live under? I sure don't. And it's probably causing a lot of good men to think twice about getting married and having children, since the secular leftists seem to be very enthusiastic about handing over the children of good men to child abusers and child mutilators. If you think that good men aren't counting the cost of paying their taxes to secular leftists and being ruled by them, then you had better think again. We are watching.

# UCLA research psychiatrist makes the case for mind-body dualism

**Wintery Knight** · 20 August 2024 · Archived copy · Original

I was talking about substance dualism with Rose, and showing her new academic books (one, two) about it. So, I decided to blog something related to that. Today's post is about Jeffrey Schwartz – a research psychiatrist at UCLA. His research shows that mental effort can change your brain chemistry. Would you like a scientific argument for non-physical minds? Read on, and I'll show you one.

First, let's see something completely secular, from UCLA Health, just to explain who Jeffrey is, and what he does:

> Thanks to neuroplasticity — the brain's ability to create and reorganize neural connections — people can find relief from anxiety, depression, substance abuse, obsessive-compulsive disorder and everyday mental health challenges, says Jeffrey Schwartz, MD, a research psychiatrist with the UCLA Department of Psychiatry.
>
> Dr. Schwartz outlined his four-step method for dealing with mental health challenges at the Emerging Themes in Behavioral Health conference, April 28, at the UCLA Luskin Conference Center(Link is external).
>
> The four steps combine mindfulness with cognitive behavioral therapy, which results in what he calls "self-directed neuroplasticity."

Why is this argument for substance dualism? Well, his research shows that when humans exert "mental effort" in certain structured ways, they can actually change their brains. This contradicts the materialist / physicalist view which is that your experience of consciousness is an illusion that is entirely controlled by deterministic chemical processes in your brain.

Here's a video about his research:

And here's a summary of the research, published in First Things, and authored by William Dembski.

Excerpt:

> Schwartz provides a nonmaterialist interpretation of neuroscience and argues that this interpretation is more compelling than the standard materialist interpretation. He arrived at this position as a psychiatrist specializing in the treatment of obsessive-compulsive disorder (OCD).
>
> […]From brain scans, Schwartz found that certain regions in the brain of OCD patients (the caudate nucleus in particular) exhibited abnormal patterns of activity. By itself this finding is consistent with a materialist view of mind (if, as materialism requires, the brain enables the mind, then abnormal patterns of brain activity are likely to be correlated with dysfunctional mental states). Nonetheless, having found abnormal patterns of brain activity, Schwartz then had OCD patients engage in intensive mental effort through what he called relabeling, reattributing, refocusing, and revaluing (the 4 Rs).
>
> **[…]Schwartz documents not only that patients who undertook this therapy experienced considerable relief from OCD symptoms, but also that their brain scans indicated a lasting realignment of brain-activity patterns.** Thus, without any intervention directly affecting their brains, OCD patients were able to reorganize their brains by intentionally modifying their thoughts and behaviors. The important point for Schwartz here is not simply that modified thoughts and behaviors permanently altered patterns of brain activity, but that such modifications resulted from, as he calls it, "mindful attention"-conscious and purposive thoughts or actions in which the agent adopts the stance of a detached observer.

So mind-brain interaction is not a one-way street. Everyone knows that you can alter your consciousness, beliefs, moods, sensations, etc. by changing your brain, e.g. – with drugs. But it turns out that you can also will to focus your thoughts on certain things in order to change your brain chemistry. So the causation is not just bottom-up, but

also top-down.

Mindfulness therapies – which are documented in the research papers published by Schwartz (like this one and this one and this one)- assume the existence of *free will*. Naturalists don't like this research because naturalists don't believe in free will. So what do you find more trustworthy? The evidence? Or the philosophy? Me, I trust the evidence more than the philosophy.

# How Biden and Harris raised oil and gas prices, and caused inflation

**Wintery Knight** · 21 August 2024 · Archived copy · Original

Before we look at the Biden-Harris administration's actions on oil and gas, let's review how prices are set in a free market economy. When supply goes down and demand stays the same, then prices rise, because more people want to buy a resource that has become more scare, so sellers can raise the price. Now, has the Biden-Harris administration taken action to reduce the supply of oil and gas?

Well, consider what he did right after taking office in January 2021.

CNBC explains:

> President Joe Biden on Wednesday signed a series of executive orders that prioritize climate change across all levels of government and put the U.S. on track to curb planet-warming carbon emissions.
>
> Biden's orders direct the secretary of the Interior Department to halt new oil and natural gas leases on public lands and waters, and begin a thorough review of existing permits for fossil fuel development.
>
> […]On his first day in office last week, Biden had the United States re-enter the Paris accord. He also cancelled the permit for the construction of the Keystone XL pipeline.

The Keystone XL pipeline would have allowed us to purchase oil and gas from Canada, which is much better than buying it from Russia, the Middle East, etc. Biden loves Russia. One might even say that he colludes with Russia to help them invade Ukraine – by helping them build their military. Biden gave approval for Russia to construct the Nord Stream 2 pipeline from Russia to Germany, so that they could sell all their oil and gas to European countries.

Nord Stream 2

That's what Democrat voters voted for in 2020: a pipeline for Russia, so they could sell oil and gas and invade Ukraine.

European countries are desperate for oil and gas, after having exchanged their conventional energy sources for green energy sources. Green energy sources produce low amounts of energy, and are inconsistent, while costing more than conventional energy sources. Since the green plan didn't work out, the Europeans have to enrich Russia now. They make a show of being made at Russia, but they (like Biden) aren't willing to develop their own energy.

How did American energy producers respond to having their lease applications denied, and their existing leases and pipelines canceled?

> Biden's moratorium on oil and gas leases won't end fossil fuel extraction since industry leaders currently hold undeveloped leases. Drilling on public lands generates billions of dollars in revenue but comprises roughly a quarter of the country's greenhouse gas emissions.
>
> Oil and gas producers have strongly opposed Biden's move and are expected to challenge the order in court.
>
> "Penalizing the oil and gas industry kills good-paying American jobs, hurts our already struggling economy, makes our country more reliant on foreign energy sources, and impacts those who rely on affordable and reliable energy," Anne Bradbury, president of the American Exploration and Production Council, said in a statement.
>
> Environmental groups, who have long pushed for the changes sought by Biden, praised the orders.

Has Biden learned his lesson from the huge spike in gas prices? Is he concerned about the widespread inflation that is caused by the spike in energy prices?

Nope!

The Federalist notes:

> CBS News revealed the Biden administration canceled more oil and gas leases across the country this week as soaring gas prices reached new heights Wednesday.
>
> The Department of Interior canceled plans to drill in more than 1 million acres in Alaska's Cook Inlet, arguing "lack of industry interest," on top of canceling a pair of leases in the Gulf of Mexico over "conflicting court rulings."
>
> […]The administration's relentless animosity towards fossil fuels, showcased in its repeated cancelation of oil and gas projects, has chilled investment in the capital- and labor-intensive industry. This keeps production down despite rising demand at home and turmoil in markets abroad.
>
> […]In Alaska, upon inauguration Biden canceled leases in the Arctic National Wildlife Refuge, which is forecast to hold between 4 to 12 billion barrels of recoverable oil. He closed another 7 million acres from the state's National Petroleum Reserve off from development last month.

What happens when investors see that the Biden administration is taxing, regulating and blocking oil and gas development? They say "we would do better investing our money elsewhere". Oil and gas producers get the message very quickly, and they stop creating new energy sources. That's how supply dries up. And when supply is reduced, prices go up.

Biden tried to fix the rising prices by getting Russia and the Middle East to drill more, and by stealing the strategic oil reserve, which is primarily designed for use during a crisis. But Biden considers his falling poll numbers a crisis. And begging our enemies to produce the oil that we should be producing seems right to him.

> The president has turned to the nation's emergency petroleum reserves for desperate political capital ahead of the November midterms… With no plans announced to restock the emergency supplies, Biden ordered the self-proclaimed "unprecedented" release of 1 million barrels of oil a day onto the market for the next six months beginning Sunday.

The new Democrat strategy is actually the old Democrat strategy used by Democrat President Jimmy Carter in the 1970s: to impose price controls on oil and gas:

**Javier Blas**
@JavierBlas

US House Speaker Nancy Pelosi says Democrats will next week present a bill on gasoline price gouging.

The bill will enable the president to issue emergency declaration making it illegal to increase the price of gasoline. "Price gouging needs to be stopped."

#OOTT #NoJoke

10:39 AM · May 12, 2022 · Twitter Web App

Gas Lines

That led to massive gas lines in the 1970s, because suppliers shut down when they realized they couldn't make enough money to stay in business. There was no money to be made in producing energy, so energy companies just slowed down or stopped producing. Would you go to work if the government took 80% of what you earned?

People in America would line up around the block for gas, and they could only get a certain limited amount. Gas was only sold during certain hours of the day.

Gas Lines

I'm sure that the young people won't have heard about the results of setting price controls, but it's in the first few chapters of Thomas Sowell's "Basic Economics". But if their teachers have no ability in economics, then how would the student learn it? They can't.

# If unborn babies don't have consciousness or don't feel pain, may we kill them?

**Wintery Knight** · 22 August 2024 · Archived copy · Original

Was having a conversation by e-mail yesterday with a pro-abortion atheist, and he gave two reasons why he supported abortion in the first and second trimester. First, he said that unborn babies can't feel pain, so it's OK to kill them. Second, he said that unborn babies don't have consciousness, so it's OK to kill them. I thought it might be useful to link to something that answers both of these objections.

Frank Beckwith is the author of "Defending Life: A Moral and Legal Case Against Abortion Choice", which was published by Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote four easy-to-understand essays for the Christian Research Journal. Part IV is the one that has the response to the two questions raised by my atheist friend.

Part I. The Appeal to Pity

Part II. Arguments from Pity, Tolerance, and Ad Hominem

Part III. Is The Unborn Human Less Than Human?

Part IV. When Does a Human Become a Person?

Excerpt:

> Some ethicists argue that the unborn becomes fully human sometime after brain development has begun, when it becomes sentient: capable of experiencing sensations such as pain. The reason for choosing sentience as the criterion is that a being that cannot experience anything (i.e., a presentient unborn entity) cannot be harmed. Of course, if this position is correct, then the unborn becomes fully human probably during the second trimester and at least by the third trimester. Therefore, one does not violate anyone's rights when one aborts a nonsentient unborn entity. [13]
>
> There are several problems with this argument. First, it confuses harm with hurt and the experience of harm with the reality of harm. [14] One can be harmed without experiencing the hurt that sometimes follows from that harm, and which we often mistake for the harm itself. For example, a temporarily comatose person who is suffocated to death "experiences no harm," but he is nevertheless harmed. Hence, one does not have to experience harm, which is sometimes manifested in hurt, in order to be truly harmed.
>
> Second, if sentience is the criterion of full humanness, then the reversibly comatose, the momentarily unconscious, and the sleeping would all have to be declared nonpersons. Like the presentient unborn, these individuals are all at the moment nonsentient though they have the natural inherent capacity to be sentient. Yet to countenance their executions would be morally reprehensible. Therefore, one cannot countenance the execution of some unborn entities simply because they are not currently sentient.
>
> Someone may reply that while these objections make important points, there is a problem of false analogy in the second objection: the reversibly comatose, the momentarily unconscious, and the sleeping once functioned as sentient beings, though they are now in a temporary state of nonsentience. The presentient unborn, on the other hand, were never sentient. Hence, one is fully human if one was sentient "in the past" and will probably become sentient again in the future, but this cannot be said of the presentient unborn.
>
> There are at least three problems with this response. First, to claim that a person can be sentient, become nonsentient, and then return to sentience is to assume there is some underlying personal unity to this individual that enables us to say that the person who has returned to sentience is the same person who was sentient prior to becoming nonsentient. But this would mean that sentience is not a necessary condition for personhood. (Neither is it a sufficient condition, for that matter, since nonhuman animals are sentient.) Consequently, it

> does not make sense to say that a person comes into existence when sentience arises, but it does make sense to say that a fully human entity is a person who has the natural inherent capacity to give rise to sentience. A presentient unborn human entity does have this capacity. Therefore, an ordinary unborn human entity is a person, and hence, fully human.
>
> Second, Ray points out that this attempt to exclude many of the unborn from the class of the fully human is "ad hoc and counterintuitive." He asks us to "consider the treatment of comatose patients. We would not discriminate against one merely for rarely or never having been sentient in the past while another otherwise comparable patient had been sentient….In such cases, potential counts for everything." [15]
>
> Third, why should sentience "in the past" be the decisive factor in deciding whether an entity is fully human when the presentient human being "is one with a natural, inherent capacity for performing personal acts?" [16] Since we have already seen that one does not have to experience harm in order to be harmed, it seems more consistent with our moral sensibilities to assert that what makes it wrong to kill the reversibly comatose, the sleeping, the momentarily unconscious, and the presentient unborn is that they all possess the natural inherent capacity to perform personal acts. And what makes it morally right to kill plants and to pull the plug on the respirator-dependent brain dead, who were sentient "in the past," is that their deaths cannot deprive them of their natural inherent capacity to function as persons, since they do not possess such a capacity.

These four essays are a very good introduction to common responses to pro-abortion arguments. I recommend that people get familiar with this, as once you look into it, you will see that the abortion issue can be debated with as much confidence as William Lane Craig defends Christian theism. You will have the same access to scientific evidence and rational arguments on this topic, and so you will have the upper hand. And that's fun.

The best introductory book on the abortion / right to life issue is "The Case for Life" by pro-life debater Scott Klusendorf. The best comprehensive book is a tie between "The Ethics of Abortion" by Christopher Kaczor, and Frank Beckwith's "Defending Life: A Moral and Legal Case Against Abortion Choice".

# Michael Behe and Keith Fox debate theistic evolution vs intelligent design

**Wintery Knight** · 23 August 2024 · Archived copy · Original

Michael Behe and Keith Fox debate evolution and intelligent design. (See below for link to video)

Details:

> Michael Behe is professor of biochemistry at Lehigh University, Pennsylvania and the founder of the modern Intelligent Design movement. His book "Darwin's Black Box" ignited the controversy 14 years ago when it claimed that certain molecular machines and biological processes are "irreducibly complex" and cannot be explained by Darwinian evolution.
>
> Keith Fox is Professor of biochemistry at the University of Southampton and chairman of Christians in Science. As a theistic evolutionist he believes that Evolution is the best explanation going for the complexity we see and that ID is a blind scientific alley and theologically unappealing to boot.
>
> They debate whether micromachines in the cell such as the "bacterial flagellum" could have evolved by a Darwinian process of evolution. When inference to design is and isn't acceptable in science. Whether random mutation can mathematically stack up to complex life, and whether God is reduced to a divine "tinkerer" by ID.

Here's the debate:

**Summary**

Note: the following debate summary is rated "S" for Snarky. Reader discretion is advised.

Michael Behe:

- ID is not Biblical creationism
- ID is not religion
- ID is a scientific research program
- People refuse to discuss ID because of personal philosophical assumptions
- ID is like the Big Bang – it is based on evidence, but it has broad religious implications

Keith Fox:

- ID is not Biblical creationism, but it isn't science

Michael Behe:

- ID is compatible with common descent
- ID is only opposed to unplanned, unguided evolution (Darwinism)
- ID is not necessarily opposed to long periods of time

**Behe's first book – the bacterial flagellum**

Keith Fox:

- Here are a couple of papers that show how parts of the flagellum evolved
- They are possible pathways

Michael Behe

- No, those are studies that show that there are similarities between bacterial flagella in multiple organisms
- Similarities of proteins between different organisms do not necessarily imply a developmental pathway
- The problem of having the instructions to BUILD the flagellum still remains

Keith Fox:

- Maybe parts of the flagellum had other functions before they were used in the flagellum
- Maybe you can use the parts of the flagellum for other purposes
- Maybe, one can imagine, it's possible that!

Michael Behe:

- No, parts have to be modified and re-purposed in order to be used for other functions

Keith Fox:

- But maybe the proteins can be used in other systems for other things
- I re-purpose parts from of designed things to other purposes in my house when I do maintenance

Michael Behe

- Uh, yeah – but aren't you an intelligent designer? What does your home maintenance have to do with Darwinian evolution?

**Is ID another God-of-the-gaps argument?**

Michael Behe:

- Well consider the Big Bang… there was a build-up of scientific evidence for that theory
- Just because a theory has religious implications, doesn't mean that it isn't true
- You really have to look at the specific evidence for a theory, and not decide in advance

Keith Fox: (I'm paraphrasing/inventing/mocking from now on)

- But the Big Bang is based on discoveries, and intelligent design is based on gaps in our scientific knowledge
- What if I did have evidence of a step by step pathway (which I don't right now)? Then I would win the argument – what would you do then?

Michael Behe:

- Well, if tomorrow you do manage to find expiremental evidence of a pathway, which you don't have today, then I would be wrong
- ID is falsifiable by experimental evidence
- But what about your your view? Is that falsifiable by experimental evidence?
- What if someone goes into a lab (someone like Scott Minnich?) and performs gene knockout experiments, and publishes the results
- You knock out a gene from the bacterial flagellum, you wait for a large number of generations, and it never develops the missing gene
- You repeat this with every one of the 50 genes in the bacterial flagellum and it never recovers for any of the 50 genes
- There is no pathway to build up even one of the 50 genes – according to actual experiments
- What do Darwinists do with experimental evidence that falsifies Darwinism?

Keith Fox:

- No, I would not accept that experimental evidence could falsify Darwinism
- Just because known published experimental evidence that we have today falsifies Darwinism, it doesn't mean Darwinism is false because it's not falsifiable
- We don't know how Darwinism even works – it happened so long ago, and it's not repeatable or testable, so how could lab ,experiments falsify it?
- Darwinism is science and intelligent design is faith, though

**Which side has the experimental evidence?**

Michael Behe:

- Consider the largest longest-running lab experiment of evolution, Richard Lenski's experiments on e. coli
- Lenski has presided over 50,000 generations, (millions of years of evolution)
- The bacterium *did evolve* and they *did get better* but not by *evolving* features, but by *disabling* features

Keith Fox:

- But those are just LAB EXPERIMENTS! What do lab experiments prove?
- What if? What if? What if? You don't know, it happened so long ago, and you weren't there! You weren't there!
- (clutches Flying Spaghetti Monster idol tighter and sobs pitifully)

Michael Behe:

- See, the thing is that I have actual experiements, and here's some more evidence that just got published last week
- So I've got evidence and then some more evidence and them some other evidence – experimental evidence
- And all the evidence shows that adaptation is done *losing traits* not by *gaining traits*
- And the published observations are what we see in nature as well

Keith Fox:

- But doesn't Darwinism explain some things that we observe?

Michael Behe:

- Well, I am not saying that micro-evolution doesn't explain *some things* – it explains bacterial resistance, and other micro-evolution
- it just doesn't explain macro-evolution, and that's what the experiments show

Keith Fox:

- But ID is a science stopper! It stops science! You can't produce *experimental evidence* to falsify Darwinism – that would stop science!

Michael Behe:

- Well, you have to understand that the Big Bang postulated a non-material cause to the entire physical universe and yet the experimental evidence was allowed to stand because it was testable and verifiable evidence, even if the theory does have religious implications
- All explanations in science are design to settle a question and it stops rival explanations that are not as good at explaining the observations
- Finding the best explanation stops further study because it is better than rival explanations

Keith Fox:

- Well you have to come up with a materialist explanation because that's the only kind that a functional atheist like me will allow

Michael Behe:

- Well, what if the best explanation for an observed effect in nature is non-material, as with the Big Bang?

Keith Fox:

- But I have to have a material explanation because I am a functional atheist! (i.e. – a theistic evolutionist = functional atheist)

Michael Behe:

- Well what about the cosmic fine-tuning argument? Do you accept that?
- That's an inference to design based on the latest scientific discoveries

Keith Fox:

- Well I do accept that argument, but I don't accept design in biology
- When you apply it to biology, somehow it's bad and you can't do that or you losing research money and get fired
- Anyway, your argument is based on a gap in our current knowledge

Michael Behe:

- No, back in Darwin's time we had a gap in our knowledge – we didn't know what the cell was – we thought it was jello
- Now, we know what the cell is *really* like, it's irreducibly complex, and you can't build up those molecular machines in a step-wise manner
- The inference to design is based on the progress of science revealing the increasing levels of complexity
- In experiments, Darwinian mechanisms cannot build anything useful, instead genes are disabled or dropped
- You guys don't have the evidence to prove your view that naturalistic mechanisms can do the creating
- You keep issuing promissory notes

Keith Fox:

- Well, you're just seeing design subjectively, because you are a non-scientist
- I'm being objective when I tell you that we will discover a materialist explanation later on – really really soon now, maybe even tomorrow, yeah
- You won't accept my speculations and you insist on these published experiments
- You're subjective and I'm objective
- Just give me more research money so I can hide the decline better

Michael Behe:

- Uh, you're the one who is subjective – I cited evidence, and you are the one who is speculating
- You have arguments from credulity, and I've got the lab experiments
- You refuse to be skeptical, I am the one who is being skeptical

Keith Fox:

- Maybe, maybe, maybe! Maybe tomorrow! Maybe in a parallel universe! Maybe aliens from Planet 9 from Outer

Space!

- Who knows! I certainly don't know! And that somehow means you don't know either! See?

Michael Behe:

- Well, to prove me wrong, go into the lab, and run experiments and evolve some new genes (using Darwinian mechanisms) that have new useful functionality

**Are there limits to what evolution can do?**

Michael Behe:

- You need multiple changes in the genome to get a new helpful feature (let's say two specific mutations)
- One specific change is possible
- the odds are against getting multiple beneficial changes are really really small – you need two SPECIFIC changes to occur in order

Keith Fox:

- Well, lots of things are really unlikely – any permutation of dice rolls is as unlikely as any other

Michael Behe:

- Well, we are talking about TWO SPECIFIC mutations that are needed to get a beneficial function – lots of other mutations are possible, but we are looking for a specific outcome that requires two SPECIFIC mutations out of the whole genome
- You aren't going to get useful outcomes unless you direct the mutations

Keith Fox:

- *But then why does God allow evil!!!!1!1!!one!!!*

# Knight and Rose Show #52: Alternative Explanations for the Resurrection Data

**Wintery Knight** · 24 August 2024 · Archived copy · Original

Welcome to episode 52 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss alternative explanations for the widely-accepted elements of the resurrection narratives. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose review elements of the historical Jesus narratives that are accepted as reliable by the majority of historians. We evaluate several naturalistic explanations for these “minimal facts”. Did Jesus die on the cross, or did he just faint? Was Jesus crucified or was it someone else? Were the appearances only hallucinations? Is the resurrection a late legend? Did the disciples make it all up?

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 52:**

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Stephen C. Meyer answers objections to arguments for a Designer

**Wintery Knight** · 25 August 2024 · Archived copy · Original

If I had to pick the strongest defender of Christianity operating today, I would pick Dr. Stephen C. Meyer. His recent book "Return of the God Hypothesis" defends three arguments for a Creator / Designer of the universe. But there have been some criticisms of those arguments. In this conversation, Justin Brierley asks Dr. Meyer to respond to those criticisms.

Here is the video:

Here is the description:

> Justin Brierley interviews controversial philosopher of science Dr Stephen Meyer, about his recent book "Return of the God Hypothesis". Stephen shares the latest advances in the field of "Intelligent Design", ranging from design inferences that can be drawn from the origin of the universe, the fine-tuning of the universe, the information content of the living cell, and even from attempts of atheist materialists to try to avoid the God Hypothesis!

And here are the topics, with timestamps:

00:00:00 Coming up…
00:00:40 Introduction
00:01:08 Darwinism is in trouble
00:05:42 Isn't I.D. God of the gaps?
00:09:03 What about the Dover School trial?
00:13:21 Has the I.D. stigma changed?
00:15:57 Big Bang points to design?
00:23:44 Objections to beginning & cause of the universe
00:30:04 Is there a bias against God?
00:32:31 Fine-tuning points to design?
00:37:14 Puddle objection to design
00:42:38 "C.R.A.P." objection to design

# How open borders immigration causes housing prices to rise

**Wintery Knight** · 26 August 2024 · Archived copy · Original

On Twitter, many people who support Kamala Harris are raving about her smile, her happy words, and how she makes them feel. They don't seem to really understand that a candidate's appearance and talk doesn't mean that they can get results or solve problems. One problem is expensive housing. In this post, I'll explain how the Biden-Harris policies have caused housing prices to rise.

First, let's see how the housing industry is going in America, with a Daily Signal article by a Heritage Foundation economist:

> Home affordability just hit a 17-year low, which means the dream of homeownership remains unattainable for the average person. Amid a cost-of-living crisis, saving enough for a downpayment and then affording a monthly mortgage payment has become a Sisyphean task—and radical leftist policies are to blame.
>
> Adding up the monthly cost of principal and interest on a mortgage, property taxes, and insurance amounts to half the average wage earner's monthly take-home pay. That would be a stretch even in good economic times, but it is downright impossible when the prices of necessities such as food and energy have exploded over 20% and 50%, respectively, in less than four years.
>
> When people are already borrowing on credit cards just to pay for groceries, spending half your income on housing just is not doable.

Government spending is to blame for the inflation that is crowding out people's budgets:

> Forty-year-high inflation was created by a profligate Congress and White House spending trillions of dollars that the nation did not have. In 2020, the year before the radical Left took control of the federal government, prices rose just 1.4%. Just 18 months later, prices were rising almost that fast in a single month.

And when inflation rises, interest rates have to rise, too. This isn't going to affect people like me – I bought my new construction home for cash years ago. But young people who are buying today will have to borrow for their homes, and they'll pay more in interest:

> Just as the predictable result of government overspending was inflation, so, too, was the rise in interest rates that followed. The sheer size of the multitrillion-dollar deficits of the last several years caused prices and interest rates to jump significantly.

But there's more. The open borders policies of the Democrat party are an independent cause of higher home prices.

Here is an article from the Washington Times, written by that same Heritage Foundation economist:

> Many Americans rightly blame the current housing affordability crisis on government for overspending and manipulating interest rates, which drove up prices and made borrowing prohibitively expensive.
>
> But few understand the role the radical left's open-border policies have played in raising home prices.
>
> As millions of aliens entered the United States illegally over the last 3½ years, they significantly increased housing demand. That was especially true in places where state and local governments gave handouts — in addition to federal funds — to illegal aliens for monthly housing payments.
>
> This dynamic in the housing market has even been recognized by Neel Kashkari, president of the Federal Reserve Bank of Minneapolis. But you don't need to be a Fed bank president to know that increasing the demand for housing will raise prices; it's basic economics.

The same thing happened in Canada, after 9 years of Justin Trudeau. He let in MILLIONS of illegal immigrants and refugees – people who pay less in taxes than they collect in benefits. And you can bet they need somewhere to live. Unfortunately, Trudeau's anti-business policies have killed the home construction industry. Demand went up, supply went down. Now the average price of a single-family home in Canada is up to $801,600 CAD. ($593,406.75 USD) And if that were not bad enough, the massive influx of unskilled immigrants has caused health care costs to skyrocket – up to $17, 713 CAD for a two-parent family with two children. Demand is going up, but supply is going down, as many Canadian doctors leave to work in countries that pay more, and tax less.

I can't believe that in America, there are people out there who do not know how prices are set in a free market economy. In a free market economy, when demand goes up, and supply goes down, then there is a shortage, and prices rise. You would think that the public school teachers would understand basic economics, and teach it to children. That's what they are paid to do. But not only do the young people not understand basic economics, the teachers in the public schools don't understand it either. It's the blind leading the blind.

# Facebook CEO Mark Zuckerberg: Biden-Harris regime pressured us to censor

**Wintery Knight** · 27 August 2024 · Archived copy · Original

Rose told me about this article from Daily Wire on Monday night, and I thought it was important enough for me to share here. Many Big Tech companies are allied with the Democrat party. The question is, how much does that affect their goods and services? I think if you read this story, you might feel the need to do more of your online sharing on Twitter, rather than on Facebook.

Here's the article from Daily Wire:

> Meta CEO Mark Zuckerberg said in a letter on Monday that the Biden-Harris administration repeatedly pressured his company — which includes Facebook, Instagram, Messenger, WhatsApp, and more — to censor content that is protected free speech.
>
> Zuckerberg made the admission in a letter to House Judiciary Committee Chairman Jim Jordan (R-OH) this week…
>
> "In 2021, senior officials from the Biden Administration, including the White House, repeatedly pressured our teams for months to censor certain COVID-19 content, including humor and satire, and expressed a lot of frustration with our teams when we didn't agree," he said in the letter.

Here's an example of Facebook censoring content in order to help the Democrat party:

> He said that the company made a mistake by temporarily demoting a New York Post story during the 2020 election about Hunter Biden's laptop after officials falsely suggested that it was part of a "Russian disinformation operation."
>
> "It's since been made clear that the reporting was not Russian disinformation, and in retrospect, we shouldn't have demoted the story," he said. "We've changed our policies and processes to make sure this doesn't happen again – for instance, we no longer temporarily demote things in the U.S while waiting for fact-checkers."

How much did censoring that story interfere with our elections? In my opinion, Facebook handed the election to Biden by censoring this story. But there were never any consequences. They're just too powerful, so long as millions of people keep going onto their site. I prefer to spend my time on Twitter, and rarely go on Facebook. I can't take the chance of having my account shut down for posting true news – just because some loser with an arts degree decided that she didn't want to see anything that made her feel bad.

It's important for people to understand that you only have as much free speech on these Big Tech platforms as they allow you to have. When it's election time, many Big Tech companies use "fact checkers" to censor true news stories that make the Democrat party look bad. They want the Democrat party to win.

I've collected some of my previous posts about Facebook helping the Democrat party and interfering in our elections.

- Facebook censored posts at the request of the Democrat party / Biden administration
- Twitter and Facebook suspend LibsOfTikTok after she reported on sex-change surgery on kids
- Facebook and Twitter spread disinformation about Hunter Biden's laptop to help Biden win in 2020
- Facebook / Meta CEO Mark Zuckerberg's election meddling violated bribery laws
- Peer-reviewed medical journal blasts Facebook "fact checkers" for censorship
- Facebook has a long record of censoring speech critical of Democrats

- Facebook fact-checker caught plagiarizing 54 articles
- Facebook bans Christian professor for disagreeing with Biden's executive actions
- Facebook "non-partisan" fact-checker revealed to be a far-left Trump-hating Democrat
- Facebook "fact-checker" Politifact forced to retract "false" rating against Candace Owens
- When Facebook fact-checkers conflict with peer-reviewed studies, who is right?
- Potential violation of election law: Facebook and Twitter censor Biden scandal
- Facebook and Google removing content that harms Democrat party
- Facebook censors admit that they suppress Republican content to help Democrat Party
- Facebook censors interview with abortion survivor to help Democrats win 2020 election
- Facebook uses pro-abortion "fact checkers" to label pro-life pages "fake news"
- Facebook bans Christian apologist David Wood for posting the death threats he received
- Facebook censors criticism of Democrat Party, especially before "important elections"

# How the presence and quality of fathers affects belief in God

**Wintery Knight** · 28 August 2024 · Archived copy · Original

Here's an article by Paul Copan which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.* It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own* rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of François-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]

> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an more difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others. If you want your child to be religious and moral, you have to pick a man who is religious and moral. And it can't just be a faith commitment that he makes, he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading.

My advice to Christian women is this. When you are picking a man, be sure and choose one who is already invested

in Christian things and producing results. It's very unlikely that he's going to start from nothing after you marry him. If you value your kids, make a man's interest in developing and acting on a Christian worldview the main thing you are looking for.

# New study: Google's bias in favor of Democrat Party affects search engine results

**Wintery Knight** · 29 August 2024 · Archived copy · Original

It's election time, and a lot of Big Tech companies are using their products and services to tip the scales in favor of the Democrat party. Is Google one of those companies? A new study by the Media Research Center analyzes Google search results about Kamala Harris' past actions and stances on political issues. Are those search results balancing conservative and leftist sources? Let's see.

Here's the latest report on the study from MRC:

> Google is actively assisting Vice President Kamala Harris in maintaining her media honeymoon by keeping users in the dark about her radical policy views, including her support for abolishing ICE and threatening to end private health insurance, a new MRC Free Speech America study found.
>
> The study revealed a staggering bias in Google's favoring of left-leaning media by a nearly 10:1 margin in both Google Search and the Google News tab. MRC conducted the searches on Aug. 21, covering four search prompts across both Google Search and the Google News tab. These findings raise serious concerns about Google's influence on the outcome of the 2024 election, echoing its interference in the 2022 midterm elections.
>
> MRC completed the searches using a clean environment, discovering that Google has promoted left-leaning media sites at a shocking 17:2 ratio in Google Search results. The bias was equally pronounced in the Google News tab for search results, where left-leaning outlets appeared at a 19:2 ratio. This is a nearly 10:1 biased ratio on each tab.
>
> MRC used the media bias chart by AllSides to determine the ideological leaning of the outlets featured in Google's search results. Among the 19 media outlets that received favorable placements in the Google News tab results were The New York Times, The Washington Post, CNN, MSNBC, Politico, Slate, Vox and The Guardian. In contrast, only three right-leaning media outlets — The Federalist, New York Post and The Washington Times — were scarcely featured.

MRC also did a previous poll to see whether Democrat voters new about Kamala's previous positions and past actions.

Here's what they found:

> A significant new Media Research Center poll finds that large majorities of registered Democrats and Independents who voted for Joe Biden in 2020 — exactly those who would be expected to support Vice President Kamala Harris in this year's contest — are mostly in the dark about many of the controversial and radical positions Harris has taken.
>
> When asked about ten different aspects of Harris's public record — on issues as varied as her sponsorship of the Green New Deal, abolishing ICE, and eliminating private health insurance — between 71% and 86% of these Democrats and Independents said they either had not heard of Harris's position or were unsure.

Where do you get your news? I read sources like Daily Signal, The Federalist, Washington Stand, and other center right sources. But I rarely see those sources in the first page of Google results, or the second page, or the third page.

The article notes:

> When these voters were asked about where they got most of their news about political elections and candidates, by far the top answers were broadcast television (ABC, CBS and NBC) or cable news (such as CNN and MSNBC). This suggests that the knowledge gaps found by our poll reveal a failure of these outlets to

> report on radical positions once (and perhaps currently) supported by the now-Democratic nominee for President.
>
> In fact, a detailed Media Research Center examination of ABC, CBS and NBC evening news coverage in the three weeks since Harris became the leading Democratic candidate (July 21 to August 10) shows eight of these ten issues received ZERO attention from these newscasts, while two others received only minor coverage.

In case you're wondering what the previous positions of Harris are, they have a list:

1. Harris supported cutting funding for the police
2. Harris co-sponsored the Green New Deal
3. Harris supported the elimination of private health insurance
4. Harris supported reparations payments to atone for slavery
5. As "Border Czar," Harris never visited a conflict zone on the border
6. Harris said it should not be considered a crime to enter the U.S. illegally.
7. Harris supported abolishing ICE
8. Harris promoted a fund to bail out violent protesters during 2020 riots
9. Harris would consider allowing death row inmates to vote
10. Harris was named the most liberal U.S. Senator in 2019

I had blogged about a few of those in the past, but the one that shocked me was #9. I knew that Harris was ultra-leftist on law-and-order and border security, but I didn't know she was that far to the left. No wonder Google, which has been caught many, many times supporting the secular left, is trying to hide those positions. And their allies in the corporate news media are helping.

# Is Politifact trustworthy? Is Politifact unbiased? A review of past rulings

**Wintery Knight** · 30 August 2024 · Archived copy · Original

Politifact is in the news again for labeling a true claim by J.D. Vance, the Republican candidate for vice president, as "false". Let's take a look at this claim, then we'll see whether Politifact is a fact-checker, or just a wholly-owned subsidiary of the Democrat Party.

The Media Research Center reports.

Here is Vance's claim:

> **"I think it's pretty weird to try to take children away from their parents if the parents don't want to consent to sex changes,"** Vance said Aug. 7 at a campaign event in Eau Claire, Wisconsin. "That's something that Tim Walz did."

As usually, Politifact concedes that the claim is correct – the courts can temporarily remove children from the custody of their parents. But, it's got to be labeled "false" because this is an election year, and people who have failed at life need a bailout from the taxpayers:

> Abels, the LGBTQ-issues "fact checker," is funded by the Gill Foundation, a radical LGBTQ philanthropy. Last October, she worried out loud about "incarcerated trans people" being denied the "gender-affirming" stuff.
>
> Last May, Tuquero defended Minnesota Democrats when they took expressly anti-pedophile language out of an "anti-discrimination" bill.

Grace Abels is a loser:

> Grace Abels joined PolitiFact as a staff writer focused on LGBTQ issues in February 2023. She graduated from Duke University where she studied history and journalism.

Loreben Tuquero is a loser:

> Loreben Tuquero is a reporter covering misinformation for PolitiFact. She graduated from Ateneo de Manila University with a degree in communication.

These people are losers at life, who have no marketable skills, and just vote Democrat because they want dentists, veterinarians and petroleum engineers to pay off their tens of thousands of dollars in student loans.

This isn't the first time that Politifact, which is used by all the big social media companies to "fact check" speech, has been caught protecting their favored political party.

Let's see some examples of past bias.

**Arizona Senate Race**

Politifact screwed up their fact-check for the Arizona Senate race.

The Daily Caller explains:

> PolitiFact incorrectly labeled it "mostly false" that Democratic Senate candidate Kyrsten Sinema "protested troops in a pink tutu" during its live fact-check of the Arizona Senate debate Monday night.
>
> It's an established fact that Sinema, a former Green Party activist who co-founded an anti-war group, wore a

> pink tutu at one of the multiple anti-war protests she attended in 2003.
>
> "While we were in harm's way, she was protesting our troops in a pink tutu," Republican candidate Martha McSally, a former Air Force fighter pilot, said during Monday night's debate.

Here's their Politifact's evaluation of McSally's claim:

Who are you going to believe? Politifact, or your own eyes?
And here's the photo of Kyrsten Sinema, protesting the troops, in a pink tutu:

Anti-war Democrat Senate candidate Kyrsten Sinema in a pink tutu
The Daily Caller notes:

> A 2003 Arizona State University news article at the time described Sinema wearing "something resembling a pink tutu" at one of the protests.

> […]Sinema openly associated with fringe elements of the far-left during her anti-war activism.
>
> She promoted an appearance by Lynne Stewart, a lawyer who was convicted of aiding an Islamic terrorist organization, in 2003.
>
> Sinema also reportedly partnered with anarchists and witches in her anti-war activism and said she did "not care" if Americans wanted to join the Taliban.

And now for the big one: Politifact's fact-checking of Obamacare.

**Obama's claims about Obamacare**

Avik Roy, health care policy expert at Forbes magazine, wrote about Politifact's assessment of Obama's promise to Americans about keeping their health plans after Obamacare.

**In 2008, before the presidential election, PolitiFact rated Obama's claims about Obamacare "True":**

Roy writes: (links removed)

> On October 9, 2008, Angie Drobnic Holan of PolitiFact published an article using the site's "Truth-O-Meter" to evaluate this claim: "Under Barack Obama's health care proposal, 'if you've got a health care plan that you like, you can keep it.'"

And she concluded:

> […]…people who want to keep their current insurance should be able to do that under Obama's plan. His description of his plan is accurate, and we rate his statement True."

Roy notes:

> PolitiFact's pronouncements about Obamacare were widely repeated by pro-Obama reporters and pundits, and had a meaningful impact on the outcome of the election. Indeed, in 2009, PolitiFact won the Pulitzer Prize for its coverage of the 2008 campaign.

Here's the screen capture from 2008:

Politifact says that everyone who likes their health care plan can keep it

Before the election, it's true! And Obama got re-elected, because people believed that. But what happened after the election?

**In 2013, after the 2012 election, PolitiFact rated Obama's claims about Obamacare "Pants On Fire":**

Roy writes: (links removed)

> On December 12, [2013] the self-appointed guardians of truth and justice at PolitiFact named President Obama's infamous promise—that "if you like your health care plan, you can keep it"—its 2013 "Lie of the Year."
>
> […][N]one of the key facts that made that promise "impossible" in 2008 had changed by 2013. The President's plan had always required major disruption of the health insurance market; the Obamacare bill contained the key elements of that plan; the Obamacare law did as well. The only thing that had changed was the actual first-hand accounts of millions of Americans who were losing their plans now that Obamacare was live.

And the screen capture from 2013:

The article:

**Lie of the Year: 'If you like your health care plan, you can keep it'**

By Angie Drobnic Holan
Published on Thursday, December 12th, 2013 at 4:44 p.m.

It was a catchy political pitch and a chance to calm nerves about his dramatic and complicated plan to bring historic change to America's health insurance system.

"If you like your health care plan, you can keep it," President Barack Obama said -- many times -- of his landmark new law.

But the promise was impossible to keep.

So this fall, as cancellation letters were going out to approximately 4 million Americans, the public realized Obama's breezy assurances were wrong.

Related rulings:

"What we said was, you can keep (your plan) if it hasn't changed since the law passed."
Barack Obama, Monday, November 4th, 2013.
Ruling: Pants on Fire! | Details

"FACT: Nothing in #Obamacare forces people out of their health plans."
Valerie Jarrett, Monday, October 28th, 2013.

Politifact said one thing before the election, and the opposite afterwards

So when Politifact rates a statement by a Democrat as true, what they really mean is that it's pants-on-fire-false, but it's election time so they don't say that. It's not like the critical assessments of Obamacare from health policy experts were not out there between 2007-2012. I know, because I blogged on every study and report on the predicted effects of the law that I could find. But the intellectually lazy journalism-major clowns at Politifact couldn't be bothered to read those studies and reports.

Secular left journalists are the stupidest people on the planet. Stick with reading The Federalist and Daily Wire if you want to know what's really going on in the world.

# Is Christianity Today a Christian publication?

**Wintery Knight** · 31 August 2024 · Archived copy · Original

I like to follow the work of Megan Basham on Twitter and Daily Wire, because she takes the Bible seriously on moral and spiritual issues. So I was very interested to read her latest article evaluating Christianity Today. On the surface, Christianity Today presents itself as a Christian publication. But are their beliefs really consistent with what the Bible teaches? Let's see.

Here's the article from Daily Wire:

> The media has long framed Christianity Today, founded by Billy Graham in 1956, as America's most influential Christian news outlet. The Washington Post, for instance, regularly describes it as evangelicalism's "flagship" magazine," as does The New York Times. A review of federal election records, however, indicates that the views of the magazine's leadership and staff may be far out of step with ordinary evangelicals.
>
> Between 2015 and 2022, nine Christianity Today employees made 73 political donations. All of them went to Democrats. This tally includes President and CEO Timothy Dalrymple, who gave $300 in two separate payments to failed Georgia Senate candidate Sarah Riggs Amico.
>
> Amico's platform, which includes protecting abortion "without exception" and repealing the Hyde Amendment to allow federal tax dollars to fund abortions, contrasts sharply with the views of evangelicals who overwhelmingly say abortion should be illegal in all or most cases. She is also at odds with traditional Christian beliefs when it comes to gender, sexuality, and religious liberty.
>
> Along with declaring herself a "staunch LGBTQ ally," Amico promised to support the Equality Act, a bill that The Heritage Foundation warns would threaten parental rights over children who believe they're transgender. The conservative think tank has also said the bill would decimate conscience rights for medical workers and "cancel[s] religious freedom." Southern Baptist Theological Seminary president Albert Mohler put the Equality Act in even starker terms, saying it "represents the greatest threat to religious liberty in the United States in our lifetimes" and would "totally transform the United States as we know it."
>
> Dalrymple was not the only member of the magazine's executive ranks to donate to Democrats. Natalie Lederhouse, Vice President of Advertising and Partnerships, contributed $50 to the 2020 Biden Victory Fund. The Federal Election Commission has no records of any Christianity Today executive giving to the GOP since 1991.

You might remember the Equality Act discussed in previous posts on this blog. Basically, the legislation would have made it impossible for Christians to advocate for Biblical positions on sexual issues. Not only individual Christians, but Christian businesses and charities. They would all have had to comply with the secular left's views on sexual issues.

Megan also found this about a former NEWS EDITOR at Christianity Today:

> Between October 2019 and November 2020, news editor Daniel Silliman made eight donations to five different pro-abortion, pro-LGBTQ candidates, among them, Massachusetts Senator Elizabeth Warren's presidential campaign. In addition to possessing a perfect voting score from Planned Parenthood and NARAL, Warren supported shutting down crisis pregnancy centers across the country, and her platform included requiring schools to admit biological men into women's sports and single-sex spaces. She also pledged to allow a gender dysphoric nine-year-old to approve anyone she appointed as education secretary.
>
> Silliman also donated to Renee Hoyos, Tennessee Democrats' nominee to the U.S. House; Moe Davis, House candidate from North Carolina; Blair Walsingham, House candidate from Tennessee; and former Senator Doug Jones (D-AL).

As news editor, he would have been in charge of all of Christianity Today's coverage of political stories.

More:

> In another article in the run-up to the 2020 election, Silliman spotlighted President Biden's Catholicism and quoted progressive theologian Richard Mouw opining that "[Biden] is viewed as having an authentic faith… when he talks about his faith, it rings true." Silliman then tied Mouw to conservative Christian icons, Chuck Colson and J.I. Packer.
>
> […][Silliman] also covered the Fairness for All Act, a proposal that would have granted special privileges to people who identify as LGBTQ. It was opposed by conservative legal groups like Alliance Defending Freedom for "undermin[ing] human dignity by threatening the fundamental freedoms of speech, religion, and conscience." Approximately three-quarters of Silliman's report on the bill was devoted to those who favored the legislation.

You might remember that Mouw is one of these "evangelicals for Biden". Now that we know the truth about Biden's business dealings and connections to foreign governments, it's easier to understand what sort of morality Mouw supports.

The new editor-in-chief of Christianity Today is Russell Moore, who seems more focused on promoting the Democrat party platform than with defending policies consistent with the Bible.

The root cause of the problem with these "evangelicals for Biden" is that they have never adopted Christianity on the basis of studying the evidence, and forming their own views. Progressive Christians form their views *socially* not *intellectually.* When they are young, they put on the cloak of Christianity as a way of seeming virtuous to their parents and those around them. They didn't choose Christianity because it was the best description of reality. They were born into it. It's not a worldview to them, it's an act.

Progressive Christians don't make a case for core Christian beliefs using evidence to non-Christians. They simply don't know how to do it, because they didn't do it in order to "become" a Christian in the first place. They don't have any work to show, because they never did the work. And their policy views are the same. They don't form their views based on reason and evidence. They don't read scholars like Thomas Sowell, or John Lott, or Ryan Anderson, or Scott Atlas, or Robert George. They just believe whatever will make people like them – just like they did when they were children.

# New study: most children suffering from gender confusion grow out of it

**Wintery Knight** · 1 September 2024 · Archived copy · Original

Are you having any conversations about transgenderism these days? It seems like there is a big push for transing kids, mostly coming from pharmaceutical companies and their allies in the public schools. They believe that children should be able to request drugs and surgeries based on their feelings. Even if parents disagree. But what if children's discomfort with their biological sex is temporary?

Take a look at this study, which appeared in the peer-reviewed scientific journal Archives of Sexual Behavior.

There's a nice article about this study over at the left-leaning UK Daily Mail:

> The majority of gender-confused children grow out of that feeling by the time they are fully grown adults, according to a long-term study.
>
> Researchers in the Netherlands tracked more than 2,700 children from age 11 to their mid-twenties, asking them every three years of feelings about their gender.
>
> Results showed at the start of the research, around one-in-10 children (11 percent) expressed 'gender non-contentedness' to varying degrees.
>
> But by age 25, just one-in-25 (4 percent) said they 'often' or 'sometimes' were discontent with their gender.
>
> The researchers concluded: 'The results of the current study might help adolescents to realize that it is normal to have some doubts about one's identity and one's gender identity during this age period and that this is also relatively common.'

This paragraph was interesting:

> According to the findings, females were more likely to report being unhappy with their gender and both increasing and decreasing 'non-contentedness' were associated with lower self-reported self worth, more behavioral problems and an increase in emotional struggles.

If you are raising daughters, you might want to have a plan to counter this. I think the best way to build up a girl's self-esteem is to give her interesting things to do, and help her to excel at them. And I mean things like writing code, reading Thomas Sowell, learning self-defense, shooting guns, fixing machines, understanding classical literature, etc. Useful stuff. Girls need to do useful things together with their Dads, that way, when they have bad feelings, they can think of all the things that they know how to do, and all the people that ask them for help. It's hard to feel bad when you know how to achieve results. And you know that you are good at achieving results. I'm not an expert in women, but it seems to me that they have trouble when they dwell too much on their own feelings, and too much on what other people think about them, or what other people are doing. Girls should just not care about all that. Girls should just be good at doing things that matter. Girls should know how the world works.

The conclusion of the Daily Mail article features Christian scholar Dr. Jay Richards, was also interesting:

> Dr Jay Richards, director of the Richard and Helen DeVos Center for Life, Religion, and Family, told DailyMail.com: 'We've known for over a decade that most kids who experience distress with their sexed bodies resolve those feelings after they pass through natural puberty.
>
> 'Indeed, we can infer from the DSM 5 [2013] and other sources that as many as 88 percent of gender-dysphoric girls and as many as 98 percent of gender-dysphoric boys in previous generations desisted if allowed to go through natural puberty.

> ‘These two facts make it clear why “gender-affirming care” on minors is such an outrage. It leads, in the end, to sterilization and in many cases to a complete loss of natural sexual function.
>
> ‘There is no good evidence that this helps minors long term. Moreover, it medicalizes what could very well be temporary psychological symptoms.
>
> ‘History will judge this medicalized “gender-affirming care” on minors as we now judge eugenics and lobotomies.’

I was pretty impressed with Jay. Of all the people they could have quoted, they went to Jay Richards, who has put a lot of effort into understanding these issues.

Do you know what would be wonderful? If children who take these drugs and submit to these surgeries could then sue all the people who told them to do it. They’re being told one thing, but getting something else entirely. If a child gets hit with sterilization or loss of sexual function, then they should be able to clean out the bank accounts of the people who did this to them. Public school teachers, nurses, doctors, drug manufacturers, etc. Just bankrupt them. Because children shouldn’t be lied to by adults, who know better.

# I went to see the new Reagan movie, and I found a good review of it

**Wintery Knight** · 2 September 2024 · Archived copy · Original

I saw it this past weekend, and I really liked it. A lot of people hate Ronald Reagan. The secular left has this crazy idea that religion, free market economics and patriotism will start World War 3. Well, Reagan had a degree in economics, used to teach Sunday school, and he definitely thought that America was better than communism. And he beat the communists, without firing a shot.

Let's see a movie review, from Focus on the Family:

> But whether you're young or old, whether you lived through the tumultuous latter days of the 20th century or not, Reagan, the movie, reminds us why courage and vision, tenacity and faith remain vitally important character qualities in our leaders.
>
> And even though I did live through a portion of that era, Dennis Quaid's portrayal of Ronald Reagan here shines a light on chapters of this actor-turned-politician's life that I had little knowledge of myself.
>
> Along the way, we see how the faith of a mother and the love of a devoted wife played huge roles in shaping the heart and soul of a failed actor into a president whose tenacity arguably bent the course of history.

When I walked out of the theater, my head was spinning from the way that Reagan's mother Nellie and his second wife Nancy had treated him in the movie. I don't have any personal experience with mothers looking after their children like this. Taking them to church. Giving them Christian books to read. Having a plan for them. Teaching them right from wrong. My mom didn't do any of those things. And I am always surprised when I see a wife investing in her husband and supporting him, and getting upset when he cannot achieve everything he was mean to achieve.

Here's a bit about his mother Nellie:

> During Reagan's youth, we see that his mother, Nelle, takes him to the First Christian Church in Dixon, Illinois. In one service there, we hear 2 Chronicles 7:14: "If my people, which are called by my name, shall humble themselves, and pray, and seek my face, and turn from their wicked ways; then will I hear from heaven, and will forgive their sin, and will heal their land" (KJV).
>
> Nelle drills into her young son a sense of divine purpose and calling on his life—lessons that form the bedrock of Reagan's sense of identity in some tough moments. "God has a purpose for your life," Nelle instills into her impressionable boy. "Something only you can do." Elsewhere she reminds him, "Remember to listen to that small, soft voice" when he's alone and quiet, and to give it his "full attention." She offers this exhortation as well: "Remember who you are and Whose you are."

My mother never treated me like that, so I was really just lost taking in all this good mothering. I wondered what I could have been, if I had a mother, too. My mother's god was money, and she certainly didn't see me the way that Nellie say her son Ronald. I think a lot of women today want to have children, but if all they want to do is throw them into daycare and public schools, what's the point of a man signing up to have other people raise his kids? Conversely, it might be worth it to have kids, if the man got to see a very good woman his children about God, and train them to achieve something in the world that respects God.

The review also talks about his second wife Nancy:

> [H]is first wife, Jane Wyman, finds Reagan's flirtation with politics disdainful. "Is there anything worse than an actor with a cause" she quips. And then she adds, scornfully, "You are an *actor*. That is your job. Not politics."

> Given that discrepancy of values, it's no surprise that Reagan's first union doesn't last. His marriage skids toward the rocks about the same time his career does, prompting Reagan to tell his mother, "I lost a child, I lost my marriage, I lost my career." That's one of the points at which she encourages him with strong spiritual counsel (which we'll unpack in the next section).

Here's a bit more about his second wife, Nancy:

> Near the end of his acting career, when he's more involved with SAG than actually making movies, Reagan meets Nancy Davis. As their connection deepens, he says of himself, "I'm what you call damaged goods," noting that he's divorced, broke and has children from a previous marriage. Nancy gently counters, "We're all damaged goods, Ronnie." That prompts him to say, "I just want to do something good in this world, to make a difference."
>
> In the years that follow, of course, Reagan seeks to make good on that desire, with Nancy constantly encouraging him at his side—first in his run for the governor of California, then his first failed presidential campaign in 1976 (where he lost the Republican nomination to Gerald Ford) and finally in his sunset years as the specter of Alzheimer's disease looms.

I've never had the feeling from any woman that my dreams were important, and that it was important to help me to achieve them. So again, I was just looking at all this excellent wife-ing, and thinking "wow, so that's what it must be like to have a good wife". Today, I see a lot of non-traditional women demanding that traditional men give them things, but they don't want to be traditional wives. They don't want to help men at all.

Honestly, I think this movie will make self-centered feminists very uncomfortable. It shows women treating boys and men well.

The movie also has some policy, diplomacy and history in it. But it's at a high level. They talk a lot about religious liberty and about the need to deter aggression with strength. So, it's a good introduction to conservative ideas. I think you'll really like the movie. If you go see it, be sure to leave a comment telling me what you thought of it.

# Understanding socialism: tariffs, price controls and nationalization of industry

**Wintery Knight** · 3 September 2024 · Archived copy · Original

What is socialism? In a free market system, prices are set by buyers and sellers without input from the government. Private property is guaranteed by law. And thegovernment does not have a state-run monopoly in any area of the economy. Socialism is different: massive government spending on welfare, prices set by government, tariffs on imports, nationalizing industries.

Let's take a look at a case of socialism: Venezuela. Venezuela adopted socialism, and implemented import tariffs, nationalized industry, and imposed price controls. Let's take a look.

The American Institute for Economic Research explains:

> In 1998 [Hugo Chavez] was elected to the Presidency. He immediately worked to deepen and expand the "Bolivarian Revolution," focused on social welfare programs, nationalizing key industries, and "democratizing" the market system.
>
> […]The situation eroded quickly, reaching an early head in the summer of 2015. Prices were skyrocketing because of inflation, caused by the government using newly printed money to pay off debts and make payroll. But the government had accused corporations that ran large grocery chains of "price-gouging."

So, we have inflation in the United States right now. And that inflation was caused by the Biden-Harris regime, which has been in power for nearly 4 years. They caused prices to skyrocket in two ways. First, by raising the price of electricity and gas. They did this because of their climate change alarmism, which caused them to cancel pipelines and deny drilling leases, etc. Second, by spending reckless government spending. And now they, like Hugo Chavez, are trying to blame the inflation they caused on "price-gouging". Will they adopt the same solutions as Venezuela did? And how will that work out for us?

Here is how the Harris of the Biden-Harris regime intends to respond to the inflation caused by the Biden-Harris regime:

> Vice President Harris announced on August 16 that she would place controls on grocery prices.
>
> As attorney general in California, I went after companies that illegally increased prices, including wholesalers that inflated the price of prescription medication and companies that conspired with competitors to keep prices of electronics high. I won more than $1 billion for consumers. (Applause.)
>
> So, believe me, as president, I will go after the bad actors. (Applause.) And I will work to pass the first-ever federal ban on price gouging on food.

So, she's going to go with price controls. Is this the same thing as what communists did in Venezuela? How did it work out there?

Well, here is a report from the Institute for Free Trade:

> In 2003, Hugo Chávez declared war on "speculators" and imposed price controls not only on Venezuelan milk, but also on sugar, coffee, beef, chicken, pork, grain, and pasta (he also severely restricted access to foreign currency). According to very unreliable official figures, price controls caused shortages of basic goods to increase from 5% at the outset to over 22.2% in ten years.
>
> Chávez, however, refused to learn the lesson about the price mechanism even as he was unleashing mass scarcity. In 2011, he extended price controls to soap, detergent, shampoo, toilet paper, mouthwash, fruit juice

> and other products. To take one example, toilet paper was already scarce in Venezuela when Chávez died in 2013, as the government imported 50 million rolls and citizens, downtrodden but not without a sense of humour, shared videos on social media with theories on how to get by without it.
>
> In 2016, scarcity of basic goods reached 82.6% in Caracas according to Luis Vicente León, the head of polling firm Datanalisis. Caracas, León added, was Venezuela's best-supplied city. Scarcity has only worsened since.
>
> Initially, the Venezuelan regime made up for shortages in national food production with imports paid with oil revenue. However, price controls and expropriations (see point # 2) had already destroyed the country's productive sector once oil prices began to fall sharply in 2014. Last year, 93% of Venezuelans could not afford food. According to a recent survey, 60% of Venezuelans shed at least 11 kilograms in weight during the last year due to malnutrition.

Right now, supermarkets in America have a profit margin of around 1-2%. If Kamala comes in and artificially lowers their prices, then their suppliers will also have to have price controls. Food producers (especially smaller ones) will stop making products that are price controlled. Grocery stores (especially smaller ones) will stop selling products that are price controlled. Shortages of grocery store products will lead to lines outside of these stores, just like when Jimmy Carter put price controls on gas, and there were gas lines in America. Why think that price controls in America will work any differently than they do in Venezuela? Where is the evidence?

# Frank Turek lectures on the case against same-sex marriage

**Wintery Knight** · 4 September 2024 · Archived copy · Original

About the speaker Frank Turek:

Frank Turek is one of my favorite speakers, and I admire him for being willing to take a public stand on controversial issues like gay marriage. He's actually had to pay a price for that in his professional life, and I blogged about that before.

Here's the lecture on gay marriage, featuring Christian apologist Frank Turek.

Outline:

Outline of Frank Turek's lecture on same sex marriage

Introduction:

- how to present your case against marriage safely
- Christians are required to go beyond tolerance
- loving another person can mean opposing the person when they want to do something wrong, even if they hate you
- what did Jesus say about marriage? (see Matt 19:4-6)
- what did Jesus say about sexual morality? (Matt 15, Matt 19)

Summary:

- the same-sex marriage debate is about whether to compel people who disagree with the gay lifestyle to validate and normalize it
- P1: the government has an interest in marriage because it perpetuates and stabilizes society – this is the purpose of marriage
- P2-4: government can take 3 kinds of stances towards behaviors: promote, permit or prohibit
- government promotes behaviors when it has an interest in them
- same-sex relationships should be permitted, but not promoted
- Q1: if same-sex marriage had serious negative consequences, would you reconsider their position?

- Q2: are heterosexual relationships the same as homosexual relationships?
- Q3: what would society be like if everyone married according to the natural marriage definition: one woman, one man, for life?
- Q4: what would society be like if everyone married according to the same-sex marriage definition: man/man and woman/woman?
- Should Christians care about law and politics? or should they just preach the gospel?
- They should care because people often get their cues about what is moral and immoral based on what is legal and illegal
- Many of the social problems we see today can be traced back to problems with marriage and family
- Children do much better when they have a relationship with their mother and their father
- Same-sex marriage necessarily destroys the relationship between a child and its mother or its father
- When a country embraces same-sex marriage, it reinforces the idea that marriage is not about making and raising children
- same-sex marriage shifts the focus away from the needs of the children to the feelings of desires of the selfish adults
- does homosexuality impose any health and mental health risks?
- what has the impact of legalizing same-sex marriage been in Massachusetts to individuals, schools, businesses and charities?
- how same-sex marriage poses a threat to religious liberty
- how should you respond to the view that homosexuality is genetic?

And at the very end, he shows this short video, which is only 5 minutes and explains the logic of opposing the redefinition of marriage:

My biggest concern is religious liberty, and we are seeing how same-sex marriage has proven to be incompatible with religious liberty. But I also care about children… I want them to have mothers and fathers who put their needs first. Marriage is about a commitment – it is the subjugation of feelings and desires to responsibilities and obligations. It is a promise. A promise to commit to love your spouse and children regardless of feelings and desires. It requires more self-denial, self-control and self-sacrifice. Not less.

# Jay Richards: eight common myths about wealth, poverty and the free market

**Wintery Knight** · 5 September 2024 · Archived copy · Original

Have you read Jay Richards' book "Money, Greed and God?" Because if you haven't, he's written a series of articles that summarize the main points of the book.

The index post is here.

Here are the posts in the series:

- Part 1: The Eight Most Common Myths about Wealth, Poverty, and Free Enterprise
- Part 2: Can't We Build A Just Society?
- Part 3: The Piety Myth
- Part 4: The Myth of the Zero Sum Game
- Part 5: Is Wealth Created or Transferred?
- Part 6: Is Free Enterprise Based on Greed?
- Part 7: Hasn't Christianity Always Opposed Free Enterprise?
- Part 8: Does Free Enterprise Lead to An Ugly Consumerist Culture?
- Part 9: Will We Use Up All Our Resources?
- Part 10: Are Markets An Example of Providence?

Parts 4 and 5 are my favorites. It's so hard to choose one to excerpt, but I must. I will choose… Part 4.

Here's the problem:

> **Myth #3: The Zero Sum Game Myth – believing that trade requires a winner and a loser.**
>
> One reason people believe this myth is because they misunderstand how economic value is determined. Economic thinkers with views as diverse as Adam Smith and Karl Marx believed economic value was determined by the labor theory of value. This theory stipulates that the cost to produce an object determines its economic value.
>
> According to this theory, if you build a house that costs you $500,000 to build, that house is worth $500,000. But what if no one can or wants to buy the house? Then what is it worth?
>
> Medieval church scholars put forth a very different theory, one derived from human nature: economic value is in the eye of the beholder. The economic value of an object is determined by how much someone is willing to give up to get that object. This is the subjective theory of value.

And here's an example of how to avoid the problem:

> How you determine economic value affects whether you view free enterprise as a zero-sum game, or a win-win game in which both participants benefit.
>
> Let's return to the example of the $500,000 house. As the developer of the house, you hire workers to build the house. You then sell it for more than $500,000. According to the labor theory of value, you have taken more than the good is actually worth. You've exploited the buyer and your workers by taking this surplus value. You win, they lose.
>
> Yet this situation looks different according to the subjective theory of value. Here, everybody wins. You market and sell the house for more than it cost to produce, but not more than customers will freely pay. The buyer is not forced to pay a cost he doesn't agree to. You are rewarded for your entrepreneurial effort. Your

> workers benefit, because you paid them the wages they agreed to when you hired them.
>
> This illustration brings up a couple important points about free enterprise that are often overlooked:
>
> **1. Free exchange is a win-win game**.
>
> In win-win games, some players may end up better off than others, but everyone ends up better off than they were at the beginning. As the developer, you might make more than your workers. Yet the workers determined they would be better off by freely exchanging their labor for wages, than if they didn't have the job at all.
>
> A free market doesn't guarantee that everyone wins in every competition. Rather, it allows many more win-win encounters than any other alternative.
>
> **2. The game is win-win because of rules set-up beforehand.**
>
> A free market is *not* a free-for-all in which everybody can do what they want. Any exchange must be free on both sides. Rule of law, contracts, and property rights are needed to ensure exchanges are conducted rightly. As the developer of the house, you'd be held accountable if you broke your contract and failed to pay workers what you promised.
>
> An exchange that is free on both sides, in which no one is forced or tricked into participating, is a win-win game.

On this view, what you really need to fear as a consumer is government intervention that restricts your choices in the marketplace, or makes some choices more expensive than they need to be (tariffs).

If you care about poverty, it's often tempting to think that it can only be solved one way – by transferring wealth from the rich to the poor. But that is a very mistaken view, as any economist will tell you. The right way to create prosperity is by creating laws and policies that unleash individual creativity. Letting individuals create innovative products and services, letting them keep what they earn, making sure that the law doesn't punish entrepreneurs – that incentivizes wealth creation. Fixing poverty does not mean transferring wealth, it means giving people more freedom to create wealth on their own. Free trade between nations is an important way that we encourage people to create better products and services that what they have available in their own countries.

**Economists agree on the benefits of free trade**

Who could possibly disagree with free trade? Well, many people on the left do. But economists across the spectrum of ideology (university and private sector and public sector) agree on the benefits of free trade.

Harvard economist Greg Mankiw explains what most professional economists agree on.

Excerpt:

> Here is the list, together with the percentage of economists who agree:
>
> 1. **A ceiling on rents reduces the quantity and quality of housing available. (93%)**
> 2. **Tariffs and import quotas usually reduce general economic welfare. (93%)**
> 3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
> 4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
> 5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
> 6. The United States should eliminate agricultural subsidies. (85%)
> 7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
> 8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
> 9. The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)

10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
11. A large federal budget deficit has an adverse effect on the economy. (83%)
12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
13. The government should restructure the welfare system along the lines of a “negative income tax.” (79%)
14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

Socialist economic policies don’t work because they are making policies that are based on economic myths. We know that these myths are myths because of economics is a mathematical science, and because we have tried good and bad policies in different times and places. We have calculations and we have experience to know what works and what doesn’t work. If you want to help the poor, you have to respect what economists know about how wealth is created. The solution is not to “spread the wealth around”, it’s to encourage people to create more wealth by inventing things that people freely choose to buy.

# Economist Thomas Sowell explains the result of legislating price controls

**Wintery Knight** · 6 September 2024 · Archived copy · Original

My favorite economist is Thomas Sowell, who is famous for making the findings of academic economists accessible to ordinary people. I always joke to my friends that Thomas Sowell books are like Lay's potato chips – you can't read just one. Well, if you've read Dr. Sowell's flagship book "Basic Economics", you know that the early chapters are about how prices work in the economy.

So, I thought I would link to a VERY good article on price controls by Thomas Sowell. If you've never read him, I think you'll really enjoy how me makes sense of the world for you. Learning how the world works is fun – now you see how to make good decisions.

This is "An Ancient Fallacy: Price Controls" from Capitalism Magazine.

He writes:

> Those old enough to remember the gasoline crisis of 1979 may recall sitting in long lines of cars at filling stations, waiting — sometimes for hours — to reach the pump. This was one of the most common consequences of price control throughout history — a shortage. Yet how many Americans ever made the connection between the price controls of the 1970s and the gasoline shortages of the 1970s? How many have noticed that they haven't been waiting in gasoline lines since Ronald Reagan got rid of the price controls on oil?
>
> Why do price controls cause shortages? There are basically two reasons: supply and demand.
>
> People will not supply as much at a lower price as they will at a higher price. Some oil wells that will repay their costs and earn a profit when the price of oil is $25 a barrel will not cover their costs when the price is $15 a barrel. Some people who will rent out a bungalow in their backyard when rents are high will not bother when rents are low. Some farmers will give up farming when food prices are kept below the point where they can earn a living.
>
> On the demand side, people will demand more when the price is kept artificially low by price controls. Before rent control laws were passed in Sweden, less than one-fourth of unmarried adults there had their own separate housing units, but afterwards more than half did. People buy more of anything that is cheaper. With more being demanded and less being supplied, shortages are inevitable, whether with housing, food, medical care or whatever.
>
> It is not just the quantity supplied that declines under price controls. Quality also declines.
>
> When there are more people trying to rent apartments than there are apartments for rent, landlords no longer have to maintain the appearance of their buildings. They do not need to pay for painting, repairs or maintenance as often as they did when there was no housing shortage and they needed to attract tenants.
>
> Sometimes quality deterioration takes the form of waiting — not just cars waiting in line at filling stations, but also sick people remaining on waiting lists for months to get surgery or other medical treatment they need. Cheap medical care is one of the most expensive things there is.

So, if you force producers to charge less for what they are making, you might see a shortage, you might see a decline in quality, or you might see waiting lists.

Now, one of the examples that Sowell uses in his books is the example of rent control. This is when the government responds to people complaining that "the rent is too damn high" by forcing landlords to charge less. If you're paying attention, then you can predict what will happen next. There will be a shortage of housing, because people with capital invest it in other places, rather than building and renting out places to live. Why? Because there is no money

to be made by investing in renting properties when the government is pushing prices down.

So, let's look at a reverse case, where price controls are removed. What would you expect to see when a country that has had rent control laws for a long time repeals it?

Well, Argentina just elected a new free market capitalist government, and they repealed their rent control laws.

Newsweek reports on what happened next:

> Argentina's recent repeal of rent control by libertarian President Javier Milei has led to a surge in housing supply, with the freedom to negotiate contracts, previously restricted, directly causing a drop in rental prices.
>
> Milei, a self-described "anarcho-capitalist" known for his free-market approach, repealed the 2020 Rental Law, enacted by former leftist President Alberto Fernández, which had imposed restrictions on landlords and led to a significant decline in rental availability.
>
> […]For many locals, finding a new apartment had become "mission impossible." But after the repeal, Buenos Aires saw a doubling of available rental units, and rental prices have stabilized. Under the new rules, landlords and tenants have more freedom to agree on lease terms. If the duration isn't specified, it defaults to two years.
>
> "We've seen a significant increase in rental apartments, and in some cases, we had to lower prices in pesos because of fewer viewings," Soledad Balayan, head of the real-estate agency Maure Inmobiliaria, told Argentine newspaper La Nación.
>
> Since Millei's repeal of rent control laws took effect on December 29, the supply of rental housing in Buenos Aires has jumped by 195.23%, according to the Statistical Observatory of the Real Estate Market of the Real Estate College (CI).

If you guessed that repealing price controls on rental properties would reverse the shortage and cause an abundance of high quality properties, then you guessed right. This is how the world works! Naturally, as supply increases, consumers have a lot more choice, and they get the benefit of better quality at a lower price, because of increased competition among suppliers of rental properties.

The article notes that Joe Biden has proposed rent control at the federal level, which is exactly the kind of policy that you would epect his successor, Kamala Harris, to push if she is elected President. If you know someone who rents, maybe you should tell them about the consequences of rent control laws?

# Video, audio and summary of William Lane Craig vs Peter Millican debate

**Wintery Knight** · 7 September 2024 · Archived copy · Original

Here's a debate with a well-qualified atheist and Dr. William Lane Craig, the most effective defender of Christianity operating today.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

**Dr. Craig's opening speech:**

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects

cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

**Dr. Millican's opening speech:**

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a

beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

**Dr. Craig's first rebuttal:**

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a

material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

**Dr. Millican's first rebuttal:**

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

**Dr. Craig's second rebuttal:**

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the

absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

**Dr. Millican's second rebuttal:**

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

**Dr. Craig's final rebuttal:**

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

**Dr. Millican's final rebuttal:**

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3  minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

# Robin Collins and atheist Peter Millican discuss the fine-tuning of the universe for life

**Wintery Knight** · 8 September 2024 · Archived copy · Original

You might remember Peter Millican from the debate he had with William Lane Craig. I ranked that debate as one of the 3 best I have ever seen, along with the first Craig vs Dacey debate and the second Craig vs Sinnott-Armstrong debate.

Details:

> Science has revealed that the fundamental constants and forces of the cosmos appear to be exquisitely fine-tuned to allow a universe in which life can develop. Is God the best explanation of the incredibly improbable odds of the universe we live in being a life-permitting one?
>
> Robin Collins is a Christian philosopher and a leading advocate of the argument for God from cosmic design. Peter Millican is an atheist philosopher at Oxford University. They debate the issues.
>
> From 'Unbelievable?' on 'Premier Christian Radio', Saturday 19th March 2016.

The debate:

As usual when the atheist is an expert, there is no snark or paraphrasing in the summary.

**Summary**

Brierley: What is the fine-tuning argument?

Collins: the fine-tuning is structure of the universe is extremely precisely set to allow the existing of conscious, embodied agents who are capable of moral behavior. There are 3 kinds of fine-tuning: 1) the laws of nature (mathematical formulas), 2) the constants of physics (numbers that are plugged into the equations), 3) the initial conditions of the universe. The fine-tuning exists not just because there are lots of possibilities, but there is something special about the actual state of affairs that we see. Every set of laws, parameters and initial conditions is equally improbable, but the vast majority of permutations do not permit life. The possible explanations: theism or the multiverse.

Brierley: How improbable are the numbers?

Collins: Once case is the cosmological constant (dark energy density), with is 1 part in (10 raised to 120th power). If larger, the universe expands too rapidly for galaxies and stars to form after the Big Bang. If smaller, the universe collapses in on itself before life could form. Another case is the initial distribution of mass energy to give us the low entropy we have that is necessary for life. The fine-tuning there is 1 part in (10 raised to the 10th power raised to the 123rd power).

Brierley: What do you think of the argument?

Millican: The argument is worth taking very seriously. I am a fan of the argument. The other arguments for God's existence such as the ontological and cosmological arguments are very weak. But the fine-tuning argument has the right structure to deliver the conclusion that theists want. And it is different from the traditional design argument tended to focus on biological nature, which is not a strong argument. But the fine-tuning argument is strong because it precedes any sort of biological evolution. Although the design is present at the beginning of the universe, it is not visible until much later. The argument points to at least deism, and possibly theism. The argument is not based on ignorance, it is rooted in "the latest results from the frontiers of science" (his phrase).

Brierley: Is this the best argument from natural theology?

Collins: The cosmological argument makes theism viable intuitively, but there are some things that are puzzling,

like the concept of the necessary being. But the fine-tuning argument is decisive.

Brierley: What's are some objections to the fine-tuning argument?

Millican: The argument is based on recent physics, so we should be cautious because we **maybe** we will discover a natural explanation.

Brierley: Respond to that.

Collins: The cosmological constant has been around since 1980. But the direction that physics is moving in is that there are more constants and quantities being discovered that need to be fine-tuned, not less. Even if you had a grand unified theory, that would have to be have the fine-tuning pushed into it.

(BREAK)

Millican: Since we have no experience of other laws and values from other universes, **we don't know** whether these values can be other than they are. Psychologically, humans are prone to seeing purpose and patterns where there is none, so **maybe** that's happening here.

Brierley: Respond to that.

Collins: It is possible to determine probabilities on a single universe case, for example using multiple ways of calculating Avogadro's number all converging on the same number makes it more probable.

Millican: Yes, I willing to accept that these constants can take on other values, ("principle of indifference"). But **maybe** this principle be applied if the improbability were pushed up into the theory?

Collins: Even if you had a grand theory, selecting the grand theory from others would retain the improbability.

Brierley: What about the multiverse?

Millican: **What if** there are many, many different universes, and we happen to be in the one that is finely-tuned, then we should not be surprised to observe fine-tuning. **Maybe** a multiverse theory will be discovered in the future that would allow us to have these many universes with randomized constants and quantities. "I do think that it is a little bit of a promissary note". I don't think physics is pointing to this right now.

Brierley: Respond to that.

Collins: I agree it's a promissary note. This is the strongest objection to the fine-tuning argument. But there are objections to the multiverse: 1) the fine-tuning is kicked back up to the multiverse generator has to be set just right to produce universes with different constants, 2) the multiverse is more likely to produce a small universe with Boltzmann brains that pop into existence and then out again, rather than a universe that contains conscious, embodied intelligent agents. I am working on a third response now that would show that the same constants that allow complex, embodied life ALSO allow the universe to be discoverable. This would negate the observer-selection effect required by the multiverse objection.

Brierley: Respond to that.

Millican: I don't see why the multiverse generator has to be fine-tuned, since **we don't know** what the multiverse generator is. I'm not impressed by the Boltzmann brains, but won't discuss. We should be cautious about inferring design because **maybe** this is a case where we are seeing purpose and design where there is none.

Brierley: Can you negate the discoverability of the universe by saying that it might be psychological?

Collins: These things are not psychological. The selected value for the cosmic microwave background radiation is fine-tuned for life and for discoverability. It's not merely a discoverability selection effect, it's optimal for discoverability. If baryon-photon value were much smaller, we would have known that it was not optimal. So that judgment cannot be explained by

Millican: That's a very interesting new twist.

Brierley: Give us your best objection.

Millican: I have two. 1) Even if you admit to the fine-tuning, this doesn't show a being who is omnipotent and omnisicient. What the fine-tuning shows is that the designer is doing the best it can given the constraints from nature. **If I were God,** I would not have made the universe so big, and I wouldn't have made it last 14 billion years, just to make one small area that supports life. An all-powerful God would have made the universe much smaller, and much younger. 2) The fine-tuning allows life to exist in other solar systems in other galaxies. What does this alien life elsewhere mean for traditional Christian theology? The existence of other alien civilizations argues against the truth of any one religion.

Brierley: Respond to those.

Collins: First objection: with a finite Creator, you run into the problem of having to push the design of that creature up one level, so you don't really solve the fine-tuning problem. An unlimited being (non-material, not composed of parts) does not require fine-tuning. The fine-tuning is more compatible with theism than atheism. Second objection: I actually do think that it is likely that are other universes, and life in other galaxies and stars, and the doctrine of the Incarnation is easily adaptable to that, because God can take on multiple natures to appear to different alien civilizations.

**Other resources (from WK)**

If you liked this discussion, be sure and check out a full length lecture by Robin Collins on the fine-tuning, and a shorter lecture on his very latest work. And also this the Common Sense Atheism podcast, featuring cosmologist Luke Barnes, who answers about a dozen objections to the fine-tuning argument.

# How is the Democrat party economic plan working out in European countries?

**Wintery Knight** · 9 September 2024 · Archived copy · Original

We just recorded a two episodes of Dr. Frank Turek's "I Don't Have Enough Faith to be an Atheist" podcast, over at CrossExamined.org and we talked about some of the policies of the Democrat party. Not just the ethical issues like abortion and LGBT, but also their economic policies. Whenever I could, I tried to point out where Democrat party policies had already been tried.

And here is a very good article from the Daily Signal, about how the economies of European countries are doing under similar policies as are being proposed by the Harris-Walz ticket.

It says:

> New numbers say the European Union has joined Japan in the "lost decades" brigade, with per-person gross domestic product in dollar terms nearly flat since 2008.
>
> According to the Organization for Economic Cooperation and Development, while disposable household income in the U.S. is $51,000, it's just $39,000 in Germany, $34,000 in France, $29,000 in Italy, and $21,000 in Greece. For perspective, Mexico is about $16,000.

A very good way to measure poverty in a country is to look at GDP per capita. This is the median amount produced by individuals in that country. A high GDP per capita means high individual productivity, which typically corelates with high individual earnings.

So why do people in Europe have such low productivity, and low earnings?

> Simple: Government took over. Government spending is nearly half of Europe's GDP, which hogs physical resources—steel, workers, etc.—while predatory tax rates punish production and welfare tempts workers away. Nobody produces, everybody takes.
>
> Add in mandates from environment to social policy that hike prices and slap straitjackets on companies, and the smart ones leave, the rest grimly soldier on, staying in business till their factories wear out, then it's lights out.
>
> In short, it doesn't pay to produce in Europe.

Notice the countries that he lists: France, Germany, Greece, and Italy. These are European countries that have government control of their economies. According to the Index of Economic Freedom, which measures how socialist an economy is, Germany is ranked #18 best out of 184 countries. But France is ranked 62, Italy is ranked 81, and Greece is ranked 113. A significant cause of Germany's poverty is the massive inflation caused by their green energy policies, bu their economy is largely free, as well as their open border immigration policy.

Many Americans on the secular left say that those countries are not doing "real" socialism. They want us to look at countries like Denmark, Sweden, and Norway. and they call what's happening in those countries "socialism". But those are not socialist countries. Again, according to the Index of Economic Freedom, the economies of those countries are more free than the United States. Denmark is ranked #7 for most capitalist economy. Sweden is ranked #9 and Norway is ranked #10. The difference is that those economies have very high tax rates and very high government spending.

What makes an economy "free"?

The Heritage Foundation explains in this article:

> We measure economic freedom based on 12 quantitative and qualitative factors, grouped into four broad categories, or pillars, of economic freedom:
>
> - Rule of Law (property rights, government integrity, judicial effectiveness);
> - Government Size (government spending, tax burden, fiscal health);
> - Regulatory Efficiency (business freedom, labor freedom, monetary freedom); and
> - Open Markets (trade freedom, investment freedom, financial freedom).
>
> Each of the twelve economic freedoms within these categories is graded on a scale of 0 to 100. A country's overall score is derived by averaging these twelve economic freedoms, with equal weight being given to each.

Sadly, the Harris-Walz plans for the United States are NOT to turn us into Denmark or Sweden or Norway. They aren't going for a free market economy that is isolated from government, with higher taxes and more social spending. They are going for the model of France, Italy and Greece, with higher taxes, but also reducing property rights, fiscal health, business freedom, labor freedom, monetary freedom, trade freedom, investment freedom and financial freedom. But they also want to increase activist courts, government spending, and the tax burden on businesses and individuals.

I think the articles I linked to above are worth reading, because if you are a Christian, you will find it much harder to achieve the goals you have as a Christian in an economic system that is unfree. It's hard to think about apologetics and evangelism when you can't afford electricy or food. That's happening right now in secular left countries like Cuba, Venezuela and North Korea.

# What kinds of Christians should we look up to?

**Wintery Knight** · 10 September 2024 · Archived copy · Original

Many Christians admire celebrities, athletes, entertainers, and other famous people. But the Christians who impress me are the ones who use their minds to explain Christianity to non-Christians, get into trouble for it, and stand by their beliefs. Three of the ones who come to mind for me are William Dembski, Guillermo Gonzalez and Richard Sternberg. And the first two have posted new stuff.

Frank Turek posted a new podcast about this Substack from William Dembski, where he talks about his thoughts after reading Meg Basham's new book.

Here is his main point, illustrated with many Bible verses:

> My point in this post is not to name evangelical elites who have compromised themselves or the secular philanthropies who have tempted them into compromise. You can get the details in Basham's book. But here's an example that Basham gives that's emblematic of the temptations faced by elite evangelicals. It's the the case of an elite evangelical being invited to dinner at the Obama White House. I knew this individual 20 years ago early in his career. He has since had a meteoric rise in elite evangelical circles. In the introduction to a recent book that he wrote, he inserts a paragraph that seems out of place about his dinner at the Obama White House (confirming Basham's account). No doubt, it must be personally gratifying to be invited to the White House. But ego aside, is that really something for an evangelical to be proud of given that the Obama presidency was so opposed to core evangelical beliefs and practices?

I think he's talking about Russell Moore, who met with Obama. I have an extremely, extremely low opinion of Russell Moore. I don't think he's an authentic Christian at all. I think he pretended to be a Christian when he was young, to impress the Christians around him. And then when he fell in with a secular left crowd, he adapted his views so that they would praise him, too. He never put in the work to know whether Christianity is true. People who don't know whether Christianity is true tend to just USE Christian language to decorate what is essentially a narcissistic enterprise. And of course he doesn't work at showing non-Christians that it is true, with evidence. That would run counter to his real goal of feeling good, and getting people to like him.

More:

> Let me put this point more starkly. The Scriptures teach repeatedly that we should guard against recognition, accolades, and advancement from those hostile to the faith and that in fact we are on much safer ground when those hostile to the faith persecute rather than praise us. This is not to say that we should purposely make ourselves so annoying or distasteful that we receive the reproach of unbelievers (as when Christians act as hypocrites). But it is to say that by quietly and consistently living out our faith, we will naturally attract opposition (consider the ongoing saga of the Denver baker Jack Phillips).
>
> The New Testament makes this point so consistently, as illustrated in the following verses, that it is hard to dismiss it simply as proof texting:
>
> **Matthew 5:10–12**
> "Blessed are those who are persecuted because of righteousness, for theirs is the kingdom of heaven. Blessed are you when people insult you, persecute you and falsely say all kinds of evil against you because of me. Rejoice and be glad, because great is your reward in heaven, for in the same way they persecuted the prophets who were before you."
>
> **Matthew 10:22**
> "You will be hated by everyone because of me, but the one who stands firm to the end will be saved."
>
> **Luke 6:22–23**

> "Blessed are you when people hate you, when they exclude you and insult you and reject your name as evil, because of the Son of Man. Rejoice in that day and leap for joy, because great is your reward in heaven. For that is how their ancestors treated the prophets."
>
> **John 15:18–20**
> "If the world hates you, keep in mind that it hated me first. If you belonged to the world, it would love you as its own. As it is, you do not belong to the world, but I have chosen you out of the world. That is why the world hates you. Remember what I told you: 'A servant is not greater than his master.' If they persecuted me, they will persecute you also. If they obeyed my teaching, they will obey yours also."
>
> **Acts 5:40–41**
> "They called the apostles in and had them flogged. Then they ordered them not to speak in the name of Jesus, and let them go. The apostles left the Sanhedrin, rejoicing because they had been counted worthy of suffering disgrace for the Name."
>
> **2 Timothy 3:12**
> "In fact, everyone who wants to live a godly life in Christ Jesus will be persecuted."
>
> **1 Peter 2:20b–21**
> "If you suffer for doing good and you endure it, this is commendable before God. To this you were called, because Christ suffered for you, leaving you an example, that you should follow in his steps."
>
> **Luke 6:26**
> "Woe to you when everyone speaks well of you, for that is how their ancestors treated the false prophets."
>
> **John 5:44**
> "How can you believe since you accept glory from one another but do not seek the glory that comes from the only God?"
>
> **John 12:42b–43**
> "Because of the Pharisees, [many] would not openly acknowledge their faith for fear they would be put out of the synagogue; for they loved human praise more than praise from God."
>
> **Galatians 1:10**
> "Am I now trying to win the approval of human beings, or of God? Or am I trying to please people? If I were still trying to please people, I would not be a servant of Christ."
>
> **James 4:4**
> "You adulterous people, don't you know that friendship with the world means enmity against God? Therefore, anyone who chooses to be a friend of the world becomes an enemy of God."
>
> So the prime lesson I take from Basham's book, and one I would like readers of this post to take with them also, is that we do well not to sell our Christian birthright for a mess of liberal or progressive pottage. We should be better than that and our Christian faith demands better than that.

If you're not familiar with what the Baptists elites did to Dembski at Baylor University, he talks about it in that column.

He's not the only one who was persecuted. In a recent interview, Guillermo Gonzalez talked about what happened to him at Iowa State University:

And there is the story of Richard Sternberg, which is reported on here and here. I could go on, but there are 3 examples.

I believe that these men will have a much larger crowns in Heaven than famous "Christian" athletes, celebrities and entertainers. They had to pay a price for their faith. Do you know who they are? And what about you? Is there something that happened to you that hurt you, because you put Boss above your own reputation with non-

Christians? You think that what happened to you is a loss, but actually, sharing in the sufferings of Jesus for obedience to the Father is a sign that you are a real follower of Jesus. This is something that many elite Christian leaders do not know.

# New video series on intelligent design starts off discussing the Cambrian explosion

**Wintery Knight** · 11 September 2024 · Archived copy · Original

I am always on the lookout for good resources on science and Christianity. And I found some. Well, Uncommon Descent found them, and I read their blog, so I found them too. The first four episodes are out, and the topics are: 1) introducing the Cambrian explosion, 2) pre-Cambrian fossils, 3) punctuated equilibrium, and 4) Darwin's "tree of life". Each video is 12-20 minutes long.

So, before we see the videos, I feel I should explain the outline for arguing for a creator / designer of the universe from scratch. There are six main arguments. 1) the origin of the universe from nothing, 2) fine-tuning of the creation event, 3) fine-tuning for habitability in the galaxy, solar system, and planet, 4) the origin of the first living self-replicating organism, 5) irreducible / minimal complexity in molecular machines, 6) the sudden origin of basic body plans in the Cambrian explosion (a geological period a long time ago).

These four videos introduce you to the sixth argument in that list, the Cambrian explosion.

First video: Introducing the Cambrian explosion

Description:

> When Charles Darwin published "On the Origin of Species" in 1859, he was painstakingly aware of the fact that the fossil record diametrically opposed his theory. Ever since Darwin's time, paleontologists have put their finger on the Cambrian explosion, where most of the major animal phyla appear abruptly in the fossil record suddenly and without any evidence of intermediate forms preceding them in Precambrian strata.

Second video: evaluating precursors to the Cambrian explosion

Description:

> Are there transitional forms and Precambrian fossils which reveal the evolution of the diverse animal phyla that appear in the Cambrian explosion? The history of paleontology shows the answer is no! As paleontologists have learned more about the fossil and geological record, the challenge of the Cambrian explosion to Darwinian theory has only increased.

Third video: evaluating punctuated equilibrium

Description:

> In the 1970s, paleontologists Stephen Jay Gould and Niles Eldredge proposed a model of evolution called punctuated equilibrium, intended to resolve the lack of transitional forms in the fossil record. Can "Punk Eek," as it's often called, resolve the abrupt appearance of new animal phyla in the Cambrian explosion? This video explains why the answer is No—among many other problems, Punk Eek requires too much evolutionary change too quickly and lacks a biological mechanism to account for the rapid origin of anatomical novelty we see in the Cambrian period.

Fourth video: evaluating homology and phylogenetics

Description:

> As more scientists have realized that the fossil record poses serious challenges to Darwin's theory of evolution, many have turned to molecular homologies and phylogenetic trees to defend Darwin's tree of life. But do these approaches really support Darwin's tree? Nope.

If you like these videos, you can read a much longer, more detailed book about it by Dr. Stephen C. Meyer, called "Darwin's Doubt". Or, you can do what I'm doing and just read a chapter about it in the new book "The Comprehensive Guide to Science and Faith". That book covers all 6 of the arguments I mentioned before. You can see the table of contents on the Discovery Institute web site. The chapter by Dr. Gunter Bechly entitled "Does the Fossil Record Demonstrate Darwinian Evolution?" covers the fossil record, and the Cambrian explosion in particular. I like Gunter a LOT, because he had a recent debate on the Unbelievable show on this topic, and he really cleaned the clock of his opponent, a slippery theistic evolutionist named Joshua Swamidass. It was beautiful. He cut through all the theistic evolution garbage and got straight into the science.

I'm reading the book right now. Or rather, I'm having it read to me, because I got the audio book version. If you remember reading books like "Mere Creation" (1998) and "The Creation Hypothesis" (1994) as a young man like I do, then you will love this book.

I like to know a little about every interesting topic, and then watch lots of university lectures and formal debates about them, so I can debate these topics in the places where I live and work. The new book has a lot of different authors from a lot of different perspectives writing on a lot of different topics. You could find a way to talk about these topics in pretty much any environment.

So far, I like Dr. Fazale Rana's chapter on Adam and Eve the best, but I'm still in Section I. I'm just starting on Jay Richards chapter next.

# Study: white progressives are more racist against minorities than white conservatives

**Wintery Knight** · 12 September 2024 · Archived copy · Original

What's the definition of racism? Well, it seems to me that a person is racist if they treat people of a different skin color differently than they treat people of their own skin color. So, if a white person treats a black person differently than they do a white person, then the white person is a racist. Because they're discriminating on the basis of skin color. So, who are the real racists? Conservatives? Or Progressives?

The Yale School of Management reports on an academic study that provides the definitive answer to the question:

> According to new research by Cydney Dupree, assistant professor of organizational behavior at Yale SOM, white liberals tend to downplay their own verbal competence in exchanges with racial minorities, compared to how other white Americans act in such exchanges. The study is scheduled for publication in the Journal of Personality and Social Psychology.
>
> […]Dupree and her co-author, Susan Fiske of Princeton University, began by analyzing the words used in campaign speeches delivered by Democratic and Republican presidential candidates to different audiences over the years. They scanned 74 speeches delivered by white candidates over a 25-year period. Approximately half were addressed to mostly-minority audiences—at a Hispanic small business roundtable discussion or a black church, for example. They then paired each speech delivered to a mostly-minority audience with a comparable speech delivered at a mostly-white audience—at a mostly-white church or university, for example. The researchers analyzed the text of these speeches for two measures: words related to competence (that is, words about ability or status, such as "assertive" or "competitive") and words related to warmth (that is, words about friendliness, such as "supportive" and "compassionate").
>
> […]The team found that Democratic candidates used fewer competence-related words in speeches delivered to mostly minority audiences than they did in speeches delivered to mostly white audiences. The difference wasn't statistically significant in speeches by Republican candidates… There was no difference in Democrats' or Republicans' usage of words related to warmth.

More testing confirmed the patronizing white supremacist attitude of whites on the political left:

> They designed a series of experiments in which white participants were asked to respond to a hypothetical or presumed-real interaction partner. For half of these participants, their partner was given a stereotypically white name (such as "Emily"); for the other half, their partner was given a stereotypically black name (such as "Lakisha"). Participants were asked to select from a list of words for an email to their partner.
>
> […]The researchers found that liberal individuals were less likely to use words that would make them appear highly competent when the person they were addressing was presumed to be black rather than white. No significant differences were seen in the word selection of conservatives based on the presumed race of their partner.

Conservatives aren't racist at all – they're color blind.

One of the reasons why I get along so well with white conservatives is that they don't patronize me with low expectations, the way that white leftists patronize non-whites. The view of white progressives is similar to the view of white supremacist racists – they think that there is something defective about people like me because of our non-white skin color.

White supremacists and white progressives agree on this: that non-white people aren't competent enough to make our own decisions. We need help from big government in order to do what whites can do without help. We need to

be told what to think for our own good, and shamed if we step out of line. It's amazing to me that white racist progressives are seen as "compassionate", when they are the ones who actually believe in the racial inferiority of non-whites.

# Why do so many law-abiding Americans carry legally-owned firearms?

**Wintery Knight** · 13 September 2024 · Archived copy · Original

I'm not originally from the United States, and when I go back home to visit, one of the questions that I get asked a lot is "why do Americans own so many guns?" My favorite writer on the gun ownership and self-defense issues is Amy Swearer, who writes for the Daily Signal. Below, I'll link to two recent articles where she talks about recent examples of self-defense in America.

Here are some examples from August 2024:

> - **Aug. 5, Albuquerque, New Mexico:** A disabled Vietnam War veteran awoke to the sounds of someone using a knife to open his bedroom window, police said. The veteran grabbed a pistol from a nightstand and, as the intruder raised the window, fired a single shot that killed him.

> - **Aug. 15, Brookhaven, Georgia:** Police said that a woman called a neighbor for help after her home surveillance system detected four armed men had broken in. The neighbor confronted the men and, according to witnesses, exchanged 15 to 20 rounds until police arrived and the suspects fled in a car. After a chase and a second exchange of fire with officers, three of the four were taken into custody, police said.

> - **Aug. 21, Liberty Hills, Texas:** As a homeowner surveyed his backyard with a contractor, he saw a machete-wielding man climb a fence, enter his property, and try to get into his residence, police said. Afraid for his wife and two young children, the homeowner locked up before getting his gun and confronting the man on a deck of the residence. Seeing the gun, the intruder began to walk away and was arrested by police. He was charged with criminal trespass.

> - **Aug. 23, Falls Mills, Virginia:** Police said a would-be carjacker assaulted a female driver at a rural gas station, telling her child in the back seat: "I'm going to rape your mommy." Bystanders, one with a handgun, heard the woman's screams and came to her aid. The carjacker charged at the armed good Samaritan, who shot and wounded him. Police said that the assailant was wanted on outstanding criminal charges. The local sheriff publicly praised the bystanders who intervened, telling reporters, "This could have been a very different outcome."

> - **Aug. 24, Medford, Oregon:** An armed resident fatally shot an intruder who forced his way into an apartment and threatened another resident with a knife, police said.

And here are some examples from July 2024:

> - **July 2, Bullhead City, Arizona:** Police said Mayor Steve D'Amico heard someone banging on his front door and "messing with" the doorknob in the middle of the night, so he armed himself for a potential confrontation. While still in his underwear, the mayor opened the door, located the would-be intruder (who'd somehow gotten past a locked gate), and detained him at gunpoint until police arrived. The suspect faced charges for trespassing and disorderly conduct.

> - **July 8, California Valley Village, California:** Police said two intruders broke into what they believed was an unoccupied residence and came face-to-face with an armed homeowner. After a "scuffle" in which one intruder used pepper spray against him, the homeowner opened fire, hitting one intruder and sending the other fleeing with an accomplice waiting in a getaway car. The wounded suspect was identified as a repeat offender recently released on probation; his extensive criminal record included arrests for burglary, robbery, and illegal gun possession.

> - **July 18, Towns County, Georgia:** Police said an armed homeowner helped end a dayslong search for an escaped prisoner who walked away from an off-site work detail. The homeowner ordered him to the ground and held him at gunpoint until police arrived. The homeowner's dog had alerted him to an intruder on the property; when the homeowner investigated, he saw the man in an orange prison jumpsuit. The escapee had been at a county detention center awaiting a court appearance on charges including two counts of burglary, drug offenses, and violating his probation.

> - **July 22, Ogden, Utah:** Police said a pair of pit bulls attacked two neighbors, who shot the dogs to avoid being bitten. The growling dogs had hemmed in one neighbor, who shot and killed one dog when they went after him; the other neighbor shot and wounded the second dog when it charged. The dogs had a history of biting, police said.

> - **July 28, North Vernon, Indiana:** An intruder entered a house through an unlocked door, helped himself to food, went into the room of a female resident, and chased her around the property, police said. The homeowner armed himself and held the intruder at gunpoint until police arrived. The suspect faced charges of burglary and unlawful residential entry.

It's especially important for people living in blue cities or blue states to arm themselves, because the police forces in these areas have had their budgets slashed by Democrats. "Defund the police" sounds so good, but it just gets a lot of peaceful, law-abiding people killed.

It's very important to ask secular leftists who want to ban law-abiding people from owning firearms "what do you expect people to do when criminals want to hurt them?" The answer I get from my atheist Democrat friend is that he expects them to call the police, and wait for them to arrive. There is a real suspicion among secular leftists of law-abiding people defend themselves – especially men. A man defending his family? Why, that's "sexist". Better to call the police and wait for them to arrive.

**The peer-reviewed research**

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

The book by economist John Lott, linked above, compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, which shows that the 1997 UK gun ban caused violent crime rates to MORE THAN DOUBLE in the four years following the ban. But both studies affirm the same conclusion – more legal firearm ownership means less crime.

One of the common mistakes I see anti-gun advocates making is to use the metric of all “gun-related deaths”. First of all, this completely ignores the effects of hand gun ownership on violent crime, as we’ve seen. Take away the guns from law-abiding people and violent crime skyrockets. But using the “gun-related deaths” number is especially wrong, because it includes suicides committed with guns. This is the majority (about two thirds) of gun related deaths, even in a country like America that has a massive inner-city gun violence problem caused by the epidemic of single motherhood by choice. If you take out the gun-related SUICIDES, then the actual number of gun homicides has decreased as gun ownership has grown.

For a couple of useful graphs related to this point, check out this post over at the American Enterprise Institute.

# William Lane Craig's moral argument, and five objections to it

**Wintery Knight** · 14 September 2024 · Archived copy · Original

Which argument for God is the most accessible? To really sustain the cosmic beginning argument and the cosmic fine-tuning argument, you have to learn some scientific evidence. Same for the resurrection of Jesus – you have to learn some history. But what about the moral argument? All you need to make that argument is for your opponent to think that something is morally wrong.

First, let's review the moral argument, from William Lane Craig.

He writes:

> We are going to turn now to a discussion of the moral argument for the existence of God. So far we have been looking at philosophical and scientific arguments. This is an ethical argument. There are a wide variety of moral reasons for believing in God, but this is a particularly simple moral argument that I have used over and over again with university students and I find very effective. It really grabs people where they live. This is not just a matter of scientific evidence or philosophical issues that may not impact your life. This is an issue that is vitally important because everyday as you live you make moral choices. So everyday by your behavior you answer the question whether or not you believe that God exists. The argument consists basically of three simple steps:
>
> 1. If God does not exist, objective moral values do not exist.
>
> 2. Objective moral values do exist.
>
> 3. Therefore, God exist.
>
> That is a very simple argument for the existence of God and is easy to memorize. It is just three steps. It is logically valid. If those two premises are true then the conclusion follows necessarily and logically. The only question is: are the two premises true?

But there are some objections to the moral argument. CrossExamined.org has posted a list of five objections to the moral argument from philosopher Paul Rezkalla.

Here are the 5 points:

1. "But I'm a moral person and I don't believe in God. Are you saying that atheists can't be moral?"
2. "But what if you needed to lie in order to save someone's life? It seems that morality is not absolute as you say it is."
3. 'Where's your evidence for objective morality? I won't believe in anything unless I have evidence for it.'
4. 'If morality is objective, then why do some cultures practice female genital mutilation, cannibalism, infanticide, and other atrocities which we, in the West, deem unacceptable?'
5. 'But God carried out many atrocities in the Old Testament. He ordered the genocide of the Canaanites.'

That last one seems to be popular, so let's double-check the details:

> For starters, this isn't really an objection to the moral argument. It does not attack either premise of the argument. It is irrelevant, but let's entertain this objection for a second. By making a judgement on God's actions and deeming them immoral, the objector is appealing to a standard of morality that holds true outside of him/herself and transcends barriers of culture, context, time period, and social norms. By doing this, he/she affirms the existence of objective morality! But if the skeptic wants to affirm objective morality after throwing God out the window, then there needs to be an alternate explanation for its basis. If not God, then what is it? The burden is now on the skeptic to provide a naturalistic explanation for the objective moral framework.

If you have heard any of these objections before when discussing the moral argument, click through and take a look.

And if you have a non-Christian in your life who likes to make moral statements, it's a good conversation to have. Where does your standard come from? Is it from your own desires? Is it from cultural conventions, that vary by time and place? Is it from Darwinian evolution? Find out what the answer is, and then respond to it.

# Knight and Rose Show #53: A Christian Perspective on the 2024 Election

**Wintery Knight** · 15 September 2024 · Archived copy · Original

Welcome to episode 53 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss the upcoming 2024 American election, and how specific policies would impact Christians. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose discuss the upcoming 2024 election. How can you measure whether an economy is socialist or free enterprise? Are Scandinavian countries an example of socialism? Does the Bible teach that Christians should support socialism? Which economic system is better for individual prosperity? We also discuss inflation, price controls, moral issues, crime, immigration, energy and health care.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

# Mark D. Linville: does Darwinian evolution make morality rational?

**Wintery Knight** · 16 September 2024 · Archived copy · Original

Have you ever heard an atheist tell you that naturalistic evolution is an answer to the moral argument? I have. And I found a good reply to this challenge in the book "Contending With Christianity's Critics". The chapter that responds to the challenge is authored by Dr. Mark D. Linville. It is only 13 pages long. I have a link to the PDF at the bottom of this post.

First, a bit about the author:

> Blog: The Tavern at the End of the World
> Current positions:
>
> - PhD Research Fellow
> - Tutoring Fellow in Philosophy
>
> Education:
>
> - PhD in Philosophy with a minor in South Asian Studies and a specialization in Philosophy of Religion, University of Wisconsin-Madison
> - MA in Philosophy, University of Wisconsin-Madison
> - MA in Philosophy of Religion, Trinity Evangelical Divinity School
> - MA in Theology, Cincinnati Christian Seminary
> - BA in Biblical Studies, Florida Christian College

Here is his thesis of the essay:

> Darwin's account of the origins of human morality is at once elegant, ingenious, and, I shall argue, woefully inadequate. In particular, that account, on its standard interpretation, does not explain morality, but, rather, explains it away . We learn from Darwin not how there could be objective moral facts, but how we could have come to believe—perhaps erroneously—that there are.
>
> Further, the naturalist, who does not believe that there is such a personal being as God, is in principle committed to Darwinism, including a Darwinian account of the basic contours of human moral psychology. I'll use the term evolutionary naturalism to refer to this combination of naturalism and Darwinism. And so the naturalist is saddled with a view that explains morality away. Whatever reason we have for believing in moral facts is also a reason for thinking naturalism is false. I conclude the essay with a brief account of a theistic conception of morality, and argue that the theist is in a better position to affirm the objectivity of morality.

And here's a sample to get your attention:

> But even if we are assured that a "normal" person will be prompted by the social instincts and that those instincts are typically flanked and reinforced by a set of moral emotions, we still do not have a truly normative account of moral obligation. There is nothing in Darwin's own account to indicate that the ensuing sense of guilt—a guilty feeling—is indicative of actual moral guilt resulting from the violation of an objective moral law. The revenge taken by one's own conscience amounts to a sort of second-order propensity to feel a certain way given one's past relation to conflicting first-order propensities (e.g., the father's impulse to save his child versus his impulse to save himself). Unless we import normative considerations from some other source, it seems that, whether it is a first or second-order inclination,one's being prompted by it is more readily understood as a descriptive feature of one's own psychology than material for a normative assessment of one's

> behavior or character. And, assuming that there is anything to this observation, an ascent into even higher levels of propensities ("I feel guilty for not having felt guilty for not being remorseful over not obeying my social instincts…") introduces nothing of normative import. Suppose you encounter a man who neither feels the pull of social, paternal or familial instincts nor is in the least bit concerned over his apparent lack of conscience. What, from a strictly Darwinian perspective, can one say to him that is of any serious moral import? "You are not moved to action by the impulses that move most of us." Right. So?
>
> The problem afflicts contemporary construals of an evolutionary account of human morality. Consider Michael Shermer's explanation for the evolution of a moral sense—the "science of good and evil." He explains,
>
> By a moral sense, I mean a moral feeling or emotion generated by actions. For example, positive emotions such as righteousness and pride are experienced as the psychological feeling of doing "good." These moral emotions likely evolved out of behaviors that were reinforced as being good either for the individual or for the group.2
>
> Shermer goes on to compare such moral emotions to other emotions and sensations that are universally experienced, such as hunger and the sexual urge. He then addresses the question of moral motivation.
>
> In this evolutionary theory of morality, asking "Why should we be moral?" is like asking "Why should we be hungry?" or "Why should we be horny?" For that matter, we could ask, "Why should we be jealous?" or "Why should we fall in love?" The answer is that it is as much a part of human nature to be moral as it is to be hungry, horny, jealous, and in love.3
>
> Thus, according to Shermer, given an evolutionary account, such a question is simply a non-starter. Moral motivation is a given as it is wired in as one of our basic drives. Of course, one might point out that Shermer's "moral emotions" often do need encouragement in a way that, say, "horniness," does not. More importantly, Shermer apparently fails to notice that if asking "Why should I be moral?" is like asking, "Why should I be horny?" then asserting, "You ought to be moral" is like asserting, "You ought to be horny." As goes the interrogative, so goes the imperative. But if the latter seems out of place, then, on Shermer's view, so is the former.
>
> One might thus observe that if morality is anything at all, it is irreducibly normative in nature. But the Darwinian account winds up reducing morality to descriptive features of human psychology. Like the libido, either the moral sense is present and active or it is not. If it is, then we might expect one to behave accordingly. If not, why, then, as a famous blues man once put it, "the boogie woogie just ain't in me." And so the resulting "morality" is that in name only.
>
> **In light of such considerations, it is tempting to conclude with C. S. Lewis that, if the naturalist remembered his philosophy out of school, he would recognize that any claim to the effect that "I ought" is on a par with "I itch," in that it is nothing more than a descriptive piece of autobiography with no essential reference to any actual obligations.**

When it comes to morality, we are not interested in mere descriptions of behavior. We want to know about prescriptions of behavior, and whether why we should care about following those prescriptions. We are interested in what grounds our sense of moral obligation in reality. What underwrites our sense of moral obligation? If it is just rooted in feelings, then why should we obey our moral sense when obeying it goes against out self-interest? Feelings are subjective things, and doing the right thing in a real objective state of affairs requires more than just feelings. There has to be a real objective state of affairs that makes it rational for us to do the right thing, even when the right thing is against our own self-interest. That's what morality is – objective moral obligations *overriding* subjective feelings. I wouldn't trust someone to be moral if it were just based on their feelings.

# William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

**Wintery Knight** · 17 September 2024 · Archived copy · Original

Here is the video of the debate:

Here is my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

**The debaters**

- William Lane Craig
- Alex Rosenberg

Below is the summary.

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological

spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# Can we rely on the secular left to protect us from school shooters?

**Wintery Knight** · 18 September 2024 · Archived copy · Original

A while back, a transgender person committed a mass shooting at a Christian school in Nashville, TN. People were waiting to see if the killer's writings would reveal that the motive was to kill Christians. Many people in secular left governments share the killer's convictions that transgenderism is good, and Christianity is bad. Can we trust them to prevent such attacks?

First, you might not have heard, but the Tennessee Star obtained the writings of the Nashville shooter.

The article (September 4, 2024) explained about the killer's mental health:

> In various entries that referenced her mental health, Hale confirmed her desire to transition genders, revealed a purported autism diagnosis, claimed she was not "bi-polar," and wrote that she once called a phone number associated with a Suicide Prevention Helpline five times in one day.

You might remember how the Biden-Harris regime sought to suppress her manifesto:

> Since it first obtained Hale's journal and a portion of police documents related to the Covenant case, The Star has published more than 100 articles that analyze the killer's own words or provide new details about the police investigation, including the existence of an FBI memo which "strongly" advised MNPD against releasing "legacy tokens" from killers like Hale. The term would appear to include her writings.

Now there are new articles that reminded me of this story.

Here's a new article from Daily Wire, dated 9/17/24.

It says:

> A federal judge released an alleged cyberstalker in Tennessee who identifies as transgender and made threatening statements aimed at a Christian school.
>
> McKenzie McClure, a woman who identifies as a man and goes by Kalvin McClure, made a concerning call to Nashville, Tennessee's, Christ Presbyterian Academy (CPA) in March of this year just days before the anniversary of the Covenant School shooting, when a transgender-identifying woman killed six victims, including three nine-year olds.
>
> McClure, a former student of CPA, left a voicemail for the school where she referenced a Marvel movie in which a character returns to an orphanage where he was raised and kills a headmaster who was abusive. The message caused CPA and nearby Currey Ingram Academy to close the following day and resulted in McClure being arrested by federal agents a month later for alleged cyberstalking.
>
> Security cameras at the school also appeared to show McClure walking across campus making obscene gestures in the days before her arrest.

Maybe we'll see this McKenzie McClure person in the news soon, and then there will be excuses from the people who encouraged her down the transgender path.

Here's another article from Daily Wire, also dated 9/17/24, and also related to public safety and mental illness.

It says:

> Iowa police arrested a trans-identifying 19-year-old on Monday and charged her with a "threat of terrorism" after she revealed in therapy that she wanted to shoot up an elementary school, The Daily Wire has learned.

> The Norwalk Police Department announced Monday that it had arrested Margaret Anderson after being made aware last week of a “potential threat” to Oviatt Elementary School, located in Norwalk, Iowa. In a release, the department said that Anderson has been charged with a “Threat of Terrorism” under Iowa Code 708A.5, and had been processed into the Warren County Jail.
>
> Anderson is a 19-year-old female who identifies as a transgender man, Warren County Attorney Doug Eichholz confirmed to The Daily Wire on Tuesday.
>
> […]According to Eichholz, the complaint about Anderson says: “The defendant stated that she had thoughts that she wanted to take a gun to Oviatt Elementary School in Norwalk, at 11 am through the cafeteria, and shoot children.”

And she was also released to house arrest:

> She was then arrested on Monday, Eichholz said, released Tuesday morning to house arrest with restrictions including a GPS bracelet, and is currently on pretrial release.

Now, if I asked the “don’t judge” people why they want to encourage young people towards transgenderism rather than helping them, they would say that nothing bad can ever result from their actions, because they just love everyone, and they don’t judge. “My motives are pure, I feel good about myself, other people like me, and so anything bad that happens next isn’t my fault”, they say. “The world is such a complicated place. I can’t predict the consequences of my actions”, they cry. I don’t see why we should celebrate people who want to lead children down the path of Audrey Hale, McKenzie McClure, and Margaret Anderson. How does that help them? And how does that help us to have a more peaceful society?

So what to do? Well, I think that it’s wise to choose to live far away from these “don’t judge” people. We need to stop dating them. We need to stop marrying them, too. We need to stop having children with them. We need to stop giving our kids to these “don’t judge” people in daycares and public schools. We need to stop letting our kids be influenced by them through entertainment and social media. And most of all, we need to stop living in places where “don’t judge” people run the government, the schools, the hospitals, law enforcement and the courts.

# What did the earliest Christians think about Hell?

**Wintery Knight** · 19 September 2024 · Archived copy · Original

I thought it might be a good idea for us to take a look at the doctrine of Hell, and see how far back it goes. These days, people seem to have lost sight of the idea that there will be eternal separation from God for people who reject him. But this idea is a core part of Christianity, and it goes right back to the early church fathers. Not to mention how much Jesus has to say about it.

Here's an article from Cold Case Christianity, by J. Warner Wallace, that talks about what early Christians thought of Hell.

Introduction:

> As we seek to understand what the Bible teaches about Hell, it may be helpful to understand what the earliest believers believed and taught. The teachings of the early believers have been preserved for us in the writings of the earliest church leaders (known as the Early Church Fathers). While their writings are not canonical (they are not on par with the words of the Bible), they do help us to see what those closest to the apostles first understood as Biblical Truth.
>
> As we assemble the teachings of these first church leaders, several patterns emerge related to the nature of Hell. The Early Church Fathers, with very few exceptions, agree with the teaching of the Bible in the way they describe Hell:

> 1. Hell is a place of judgment for those who have rejected God and denied Jesus as their Savior
> 2. Hell is a place of separation from God
> 3. Hell is a place of torment in which the rebellious are in anguish and pain
> 4. Hell is a place where the rebellious are tormented forever and are CONSCIOUS of this torment for all eternity (In fact, the eternal duration of their torment is often compared to the eternal duration of the reward of the saved)

> At the same time, the earliest Church Fathers are ambiguous on those areas where the Bible is ALSO ambiguous.
>
> 1. The exact nature of the torment of the rebellious is unknown
> 2. The manner in which the rebellious are kept alive in spite of 'deathly' anguish is also un-described
>
> The Early Church Fathers simply reflected the clearest teachings of the Bible related to the nature of Hell. They believed that Hell was a place of eternal conscious torment, reflecting the clearest teaching of the scriptures.

Excerpt:

> From Ignatius of Antioch (110AD)
>
> Ignatius was a student of the Apostle John, and succeeded the Apostle Peter as the Bishop of Antioch. He wrote a number of important letters to believers in churches in the area:
>
> Corrupters of families will not inherit the kingdom of God. And if they who do these things according to the flesh suffer death. how much more if a man corrupt by evil reaching the faith of God. for the sake of which Jesus Christ was crucified? A man become so foul will depart into unquenchable fire: and so will anyone who listens to him. (Letter to the Ephesians 16:1-2)
>
> From Clement of Rome (150AD)

Clement was Bishop of Rome from 88 to 98AD, and his teaching reflects the early traditions of the Church. “Second Clement” reportedly a recorded sermon, and Clement discusses the nature of Hell:

If we do the will of Christ, we shall obtain rest; but if not, if we neglect his commandments, nothing will rescue us from eternal punishment (“Second Clement” 5:5)

But when they see how those who have sinned and who have denied Jesus by their words or by their deeds are punished with terrible torture in unquenchable fire, the righteous, who have done good, and who have endured tortures and have hated the luxuries of life, will give glory to their God saying, ‘There shall be hope for him that has served God with all his heart!’ (“Second Clement” 17:7)

From Irenaeus (189AD)

Irenaeus was bishop of Lugdunum in Gaul (now Lyon, France) at the end of the second century. He was a disciple of Polycarp and a notable early apologist for the faith. He wrote several volumes defending the faith against Gnosticism and other early heresies of the Church, and he often compared eternal punishment to eternal reward, drawing the conclusion that one endured as long as the other:

…Christ Jesus, our Lord, and God, and Saviour, and King, according to the will of the invisible Father, ‘every knee should bow, of things in heaven,, and things in earth, and things under the earth, and that every tongue should confess’ to Him, and that He should execute just judgment towards all; that He may send ‘spiritual wickednesses,’ and the angels who transgressed and became apostates, together with the ungodly, and unrighteous, and wicked, and profane among men, into everlasting fire; but may, in the exercise of His grace, confer immortality on the righteous, and holy, and those who have kept His commandments, and have persevered in His love, some from the beginning of their Christian course, and others from the date of their repentance, and may surround them with everlasting glory. (“Against Heresies” 1:10:10)

The penalty increases for those who do not believe the Word of God and despise his coming. . . . [I]t is not merely temporal, but eternal. To whomsoever the Lord shall say, ‘Depart from me, accursed ones, into the everlasting fire,’ they will be damned forever (“Against Heresies” 4:28:2)

From Clement of Alexandria (195AD)

Titus Flavius Clemens was the first significant and recorded Christian from the church of Alexandria, Egypt. His parents were Greek and he was raised with a solid, formal Greek education. While he had a tendency to blend Greek and Christian philosophies, his view on the issue of Hell was derived from the scriptures:

All souls are immortal, even those of the wicked. Yet, it would be better for them if they were not deathless. For they are punished with the endless vengeance of quenchless fire. Since they do not die, it is impossible for them to have an end put to their misery. (from a post-Nicene manuscript fragment)

From Tertullian (197AD)

Quintus Septimius Florens Tertullianus was a Romanized African citizen who was born in Carthage (now Tunisia). He became a Christian and was a powerful and influential apologist for the faith, writing prolifically in defense of the doctrines of orthodoxy:

These have further set before us the proofs He has given of His majesty in judgments by floods and fires, the rules appointed by Him for securing His favor, as well as the retribution in store for the ignoring, forsaking and keeping them, as being about at the end of all to adjudge His worshippers to everlasting life, and the wicked to the doom of fire at once without ending and without break, raising up again all the dead from the beginning, reforming and renewing them with the object of awarding either recompense. (“Apology” 18:3)

Then will the entire race of men be restored to receive its just deserts according to what it has merited in this period of good and evil, and thereafter to have these paid out in an immeasurable and unending eternity. Then there will be neither death again nor resurrection again, but we shall be always the same as we are now, without changing. The worshipers of God shall always be with God, clothed in the proper substance of eternity. But the godless and those who have not turned wholly to God will be punished in fire equally unending, and they shall

> have from the very nature of this fire, divine as it were, a supply of incorruptibility (“Apology” 44:12–13)
>
> Therefore after this there is neither death nor repeated resurrections, but we shall be the same that we are now, and still unchanged–the servants of God, ever with God, clothed upon with the proper substance of eternity; but the profane, and all who are not true worshippers of God, in like manner shall be consigned to the punishment of everlasting fire–that fire which, from its very nature indeed, directly ministers to their incorruptibility. (“Apology” 48:12)

Just to be clear, I am one of those Christians who holds to the traditional doctrine of hell. Eternal, conscious punishment for eternity. I think most, if not all, people who object to the traditional doctrine of hell do it for one reason only – because they don’t want to appear to be mean, so that non-Christians will like them. Well, I don’t think there is any wiggle room here – conscious, eternal torment is what the Bible teaches, and what the earliest Christians believed.

Having said that, if someone has a *historical* case to make, then I’d like to see how they interpret the Bible and where the line of tradition is for their view. There is always room for scholars to make a case against the traditional view, but that case has to be on the merits. But I think for the vast majority of people who reject the traditional notion of hell, they are just asserting their emotions and intuitions over the Bible and the traditional interpretations of the early church. I don’t think that wanting to feel “nicer” than others, or wanting to be liked by others, is a good rationale for overruling the text and the traditional interpretations.

# How will Kamala-Walz open-borders immigration affect you and your family?

**Wintery Knight** · 20 September 2024 · Archived copy · Original

Many Christians have been trained to think that the only relevant issue in elections is abortion. And many of those like to argue for the pro-life view by citing Bible verses only. But what would those people do if they were discussing policy with a non-Christian who didn't accept the Bible as an authority? Could you still win them over on other grounds, so that the result is that the pro-life party wins?

So, in our recent Knight and Rose Show episode, we discussed a bunch of different areas where conservative policies perform better than leftist policies. And one of those was immigration policy.

Rose talked about this article from Daily Wire:

> Illegal immigration could cost Mississippi more than $100 million every year, a new report from the state's auditor reveals.
>
> […]"Just last week, an illegal immigrant was arrested in North Mississippi for allegedly raping a 10-year-old boy twice," State Auditor Shad White told The Daily Wire. "Every state is a border state now, and our new report shows how much state taxpayers are spending thanks to the open border."
>
> […]Mississippi's healthcare system is hit particularly hard by illegal immigration, with the report estimating that the state spends a whopping $77 million on healthcare for illegal immigrants and their children every year. The report estimates the figure with data on the number of illegal immigrants in the state, their rate of health insurance, and their use of emergency medical services. It also found that Mississippi spends $4 million every year to pay for births to illegal immigrants, whose children are then designated as American citizens.

And now there's a new article about Springfield, Ohio, from Daily Signal:

> Reports of shoplifting and vehicle theft increased considerably in Springfield, Ohio, following the arrival of thousands of Haitian refugees, according to data obtained by the Daily Caller News Foundation through a records request.
>
> The town, which had a population of 58,622 in 2020, has taken in between 12,000 and 20,000 Haitian refugees over the past three years, marking a population increase of between 20.4% and 34.1%. From 2021 to 2023, Springfield also saw a 51.5% jump in motor vehicle theft reports and a 112.8% spike in reports of shoplifting, data provided by the Springfield Police Division shows.
>
> Springfield residents previously told the Daily Caller News Foundation that the influx of Haitians has resulted in an uptick in car accidents, increased housing prices, and strained public services.
>
> […]The issue of poor driving among refugees became a flashpoint in the community after a Haitian national driving a minivan without a license swerved in front of a school bus in August 2023, killing an 11-year-old boy and injuring roughly a dozen other students.

Please don't talk about pet stealings and pet eatings, though – there is just no evidence for that:

> Police recorded just two reported cases of animal cruelty in 2021 and none in 2022 or 2023, failing to provide evidence for rumors of Haitians stealing and eating residents' pets.

In other posts on this blog, I've talked about how unskilled immigrants are a burden on productive taxpayers, because they pay less in taxes, but use more social programs, like education, health care, etc. And they drive up the costs of things like housing and cars, because there is more demand for the same supply.

As a brown person, and legal immigrant, I'm in favor of legal immigration by employer sponsor for highly-skilled immigrants who speak English, follow the law, and pay more in taxes than they take in benefits. We need more doctors and researchers. But what we don't need is people with no skills, no money and no jobs.

# Does the Miller-Urey experiment explain how life originated on Earth?

**Wintery Knight** · 21 September 2024 · Archived copy · Original

There are two problems related to the origin of the first living cell, on atheism:

1. The problem of getting the building blocks needed to create life – i.e. the amino acids
2. The problem of creating the functional sequences of amino acids and proteins that can support the minimal operations of a simple living cell

Normally, I concede the first problem and grant the atheist all the building blocks he needs. This is because step 2 is impossible. There is no way, on atheism, to form the sequences of amino acids that will fold up into proteins, and then to form the sequences of proteins that can be used to form everything else in the cell, including the DNA itself.

Today, let's take a look at the problems with step 1.

The Miller-Urey experiments

**The problem of getting the building blocks of life**

Now you may have heard that some scientists managed to spark some gasses to generate most of the 20 amino acids found in living systems. These experiments are called the "Miller-Urey" experiments.

The IDEA center has a nice summary of origin-of-life research that explains a few of the main problems with step 1.

Miler and Urey used the wrong gasses:

> Miller's experiment requires a reducing methane and ammonia atmosphere,[11, 12] however geochemical evidence says the atmosphere was hydrogen, water, and carbon dioxide (non-reducing).[15, 16] The only amino acid produced in a such an atmosphere is glycine (and only when the hydrogen content is unreasonably high), and could not form the necessary building blocks of life.[11]

Miller and Urey didn't account for UV of molecular instability:

> Not only would UV radiation destroy any molecules that were made, but their own short lifespans would also

> greatly limit their numbers. For example, at 100ºC (boiling point of water), the half lives of the nucleic acids Adenine and Guanine are 1 year, uracil is 12 years, and cytozine is 19 days[20] (nucleic acids and other important proteins such as chlorophyll and hemoglobin have never been synthesized in origin-of-life type experiments[19]).

Miller and Urey didn't account for molecular oxygen:

> We all have know ozone in the upper atmosphere protects life from harmful UV radiation. However, ozone is composed of oxygen which is the very gas that Stanley Miller-type experiments avoided, for it prevents the synthesis of organic molecules like the ones obtained from the experiments! Pre-biotic synthesis is in a "damned if you do, damned if you don't" scenario. The chemistry does not work if there is oxygen because the atmosphere would be non-reducing, but if there is no UV-light-blocking oxygen (i.e. ozone – $O_3$) in the atmosphere, the amino acids would be quickly destroyed by extremely high amounts of UV light (which would have been 100 times stronger than today on the early earth).[20, 21, 22] This radiation could destroy methane within a few tens of years,[23] and atmospheric ammonia within 30,000 years.[15]

And there were three other problems too:

> At best the processes would likely create a dilute "thin soup,"[24] destroyed by meteorite impacts every 10 million years.[20, 25] This severely limits the time available to create pre-biotic chemicals and allow for the OOL.

> Chemically speaking, life uses only "left-handed" ("L") amino acids and "right-handed" ("R)" genetic molecules. This is called "chirality," and any account of the origin of life must somehow explain the origin of chirality. Nearly all chemical reactions produce "racemic" mixtures–mixtures with products that are 50% L and 50% R.

Two more problems are not mentioned in the article. A non-peptide bond anywhere in the chain will ruin the chain. You need around 200 amino acids to make a protein. If any of the bonds is not a peptide bond, the chain will not work in a living system. Additionally, the article does not mention the need for the experimenter to *intervene* in order to prevent interfering cross-reactions that would prevent the amino acids from forming.

Now keep in mind that even if you get the building blocks, you are left with the sequencing problem. Like the letters of the words in this blog post, the building blocks of life also need to be put in a meaningful sequence in order to do work in a living system – but that's another topic for another day.

# William Lane Craig debates James Crossley on the resurrection of Jesus

**Wintery Knight** · 22 September 2024 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
  - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
  - the response was that the disciples stole the body

  - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
  - this material is extremely early, withing 1-3 years after the cross
  - James, the brother of Jesus, was not a believer when he got his appearance
  - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
  - Peter: attested by Luke and Paul
  - The twelve: attested by Luke, John and Paul
  - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections

- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection,

and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was

- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# Did Amber Thurman die from pro-life laws or from abortion pill complications?

**Wintery Knight** · 23 September 2024 · Archived copy · Original

A lot of people are arguing against pro-life laws in red states. Basically, they are saying that laws that protect unborn children must all be repealed, because here is one woman who stopped being alive while un-aliving her unborn children. In particular, people are citing an article in Pro Publica, written by Kavitha Surana. She has degrees in European History and European Studies. Is she right?

Here is what The Federalist article, which is written by an OB/GYN says:

> The latest is ProPublica's story of a Georgia woman who died after a North Carolina abortionist gave her chemical abortion pills — which, contrary to Democrat narratives, are unsafe. The article, however, pretends the death was caused by Georgia's pro-life laws. The author of the story repeatedly attempts to conflate a procedure used to treat miscarriages, dilation and curettage (D&C), with elective abortion.
>
> In ProPublica's telling, 28-year-old Amber Nicole Thurman had ingested the chemical abortion pill regimen, which consists of the drugs mifepristone and misoprostol. Mifepristone ends the life of the developing human being; misoprostol helps achieve complete expulsion of the embryo.
>
> It's worth noting that the FDA's 2000 approval of mifepristone acknowledged its risks and enacted safety requirements, including a seven-week gestational limit, requiring women to see a physician in person, and a mandatory one-time post-abortion appointment to confirm that the uterus was empty and that bleeding had subsided.
>
> […]But thanks to Democrat efforts to relax safety requirements for abortion pills, important safeguards no longer apply. When Thurman experienced "complications" from the abortion, which ProPublica wrongly asserts are "rare," she went to the hospital for a D&C.
>
> […]Here Kavitha Surana, the story's author, fails to note the difference between elective abortion and non-abortive D&Cs. She writes: "But just that summer, [Thurman's state of Georgia] had made performing [D&Cs] a felony, with few exceptions. Any doctor who violated the new Georgia law could be prosecuted and face up to a decade in prison."

So, are D&Cs a felony, like Kavitha says? Nope.

> This is a gross mischaracterization of the Georgia law. Performing a D&C is not a felony in Georgia (or anywhere else in the nation), nor has it been criminalized. It remains a standard medical procedure — and an indispensable one in cases like Thurman's. It is always legal in every state because, unlike abortion, it is not intentional feticide.

So that article is by an OB/GYN. Here's an article from the Daily Signal which is written by a lawyer. The author says that Amber Thurman was also supposed to get an ultrasound, but that requirement was also removed by the Democrats:

> Amber Nicole Thurman died after she took the abortion pill, deregulated by the FDA (with multiple safety restrictions eliminated), which caused complications and left parts of her twin unborn babies inside her.

And note – Amber died *before* she could get the perfectly legal D&C procedure. It's not illegal, and it's not a felony because of pro-life laws:

> Doctors monitored her condition and hospitalized her, but Thurman died before they could do a D&C (dilation

> and curettage) to remove the remaining parts of her unborn twins after the incomplete abortion.

Now, Pro Publica's version of the events was picked up by lots of left-wing news outlets, despite the fact that the AUTHOR of that article has no earned degrees (medicine / law) in the topics that she is writing about, and no private sector work experience in the topics that she is writing about. I chose the articles from The Federalist and Daily Signal because the authors had the right degrees, and the right experience.

Map of States with Pro-Life Laws 2024

I think people need to be a lot more skeptical about articles on medical topics that are written by people with degrees in "European Studies". This is a question to be decided by doctors and lawyers.

# Why are teachers and other talkers paid less than engineers and other doers?

**Wintery Knight** · 24 September 2024 · Archived copy · Original

The meme below makes fun of unionized public school teachers, who feel entitled to the same salary and benefits as doctors, software engineers, etc. in the private sector. So, the point of this meme is simple, it's to point out that the teachers who belong to teacher unions are ignorant of basic economics, specifically, the law of supply and demand.

Basic Economics: In a free market, prices are set by supply and demand
When there is more demand for a product or service than there is a supply for it, then prices go up. When there is more supply for a product or service than there is a demand for it, prices go down.

A good place to see this explained is in a book by famous black economist Thomas Sowell. Thomas Sowell has written many books, but he wrote one book in particular for people who have no knowledge of basic economics. It's called "Basic Economics: A Citizen's Guide to the Economy". And the first few chapters explain how prices are set by supply and demand:

1. What is Economics?
2. The Role of Prices
3. Price Controls
4. An Overview of Prices

It turns out that there are two views of how wages are set in an economy:

> The labor theory of value (LTV) is a theory of value that argues that the economic value of a good or service is determined by the total amount of "socially necessary labor" required to produce it.
>
> LTV is usually associated with Marxian economics… The LTV is central to Marxist theory, which holds that the working class is exploited under capitalism, and dissociates price and value. Marx did not refer to his own theory of value as a "labour theory of value".
>
> Mainstream neoclassical economics tends to reject the need for a LTV, concentrating instead on a theory of price determined by supply and demand.

Marxists economists believe that the value of a good or service is determined by the "social utility" of the work produced. But classical ("free market") economists believe that value is determined by the scarcity of the good or service relative to the demand from consumers.

So, a Marxist economist might say "teaching English to 5 year olds is valuable because it is relevant and meaningful". But, a classical economist would say "conducting a security audit on distributed point-of-sale system is valuable, because very few people can do it, but many people want it".

I've noticed that school teachers and non-STEM university students and professors are very likely to hold to the labor theory of prices and wages. Robert Nozick wrote a paper about why this happens. It turns out that "wordsmiths" (his word) are conditioned by their performance in the classroom to expect success in the free market economy. But when they find that their "brilliance" in English poetry, Medieval history, or lesbian dance theory has no value to anyone else, they complain that the economy is being manipulated by powerful people. Marxism is a coping mechanism for people who value academic acclaim more than doing something useful for their neighbors. The Marxists study easy things that no one cares about, and then they can't get paid because millions of people can do them. The free market people focus on the customer, so they study hard things like computer science and petroleum engineering that are in demand from customers. And they get paid more.

**Majors by Salary Potential – Full List**

| RANK | MAJOR | STARTING SALARY | MID-CAREER SALARY |
|---|---|---|---|
| 1 | Petroleum Engineering | $98,000 | $163,000 |
| 2 | Aerospace Engineering | $62,500 | $118,000 |
| 3 | Actuarial Mathematics | $56,100 | $112,000 |

Consider this article from College Pulse about a survey of 10,590 undergraduate students:

> Students with certain majors are far more likely than their peers to approve of socialism. Philosophy majors, in particular, have a positive view of socialism. Nearly 8 in 10 (78%) say they view the economic system favorably, followed by 64% of anthropology majors, and 58% of both English and international relations majors. Accounting and finance majors are least likely to view socialism positively (20% and 22% respectively).

Do you know what accounting and finance students have to study? *Basic economics.*

As soon as I got my first job as a software engineer, and finished my study of Christian apologetics, the very next thing I studied was economics. It was Dr. Jay Richards who got me interested in it, when I heard him speaking about economics in an apologetics lecture for Stand to Reason. I contacted him, and he recommended the works of two famous economists, F. A. Hayek and Thomas Sowell. And that's what I want to recommend to you, too. Our

continued liberty and prosperity depends on ordinary Americans taking the time to educate themselves about basic economics.

# For the first time, young men are more religious than young women

**Wintery Knight** · 25 September 2024 · Archived copy · Original

I noticed an article in the Financial Times about a growing divide between young women and young men. Young women are increasingly leftist, and young men are increasingly conservative. Surveys of young men and young women have found that young men are more conservative on abortion and LGBT than young women. And now young men are more religious than young women.

Now, I want to be clear in this post that I am not criticizing all women. I am criticizing the majority of YOUNG WOMEN. Older women don't usually have these problems, especially married older women.

First, let's take a look at the previous article, from the far-left UK Independent:

> An analysis of survey data from across the developing world had found that "a new global gender divide" is emerging. The analysis, conducted by the Financial Times' John Burn-Murdoch, showed that the developed world's young women have rapidly become more liberal. Young men, however, have either become more conservative (as in the US) or been much slower to become more progressive (as in the UK). Gen Z, Burn-Murdoch concluded, is "two generations, not one."
>
> […]Quoting similar figures to those in the FT, and noting that political views have become more tightly bound to personal identity, a Washington Post editorial warned that members of Gen Z will struggle to pair off romantically.

Young men, statistically speaking, are more likely to side with the weak against the strong. Since abortion harms unborn children, and divorce and same-sex marriage harm born children, men typically oppose these behaviors. But statistically speaking, young women more often side with the selfish adults against the children.

Naturally there are exceptions, but the statistics show that young men are more conservative on moral issues than young women. And nowhere is this more apparent than in the issue of abortion, which is really just about whether selfish adults can resort to murdering their own children in order to escape the consequences of no-commitment sex.

In September 2024, Gallup explained how young men and young women view abortion:

> For this, Gallup reviewed 24 questions from its trends archive that measure Americans' beliefs or positions on widely debated policy-related issues, and that Gallup has asked frequently enough to produce sufficient sample sizes of young men and women across the three periods… On five of these, the percentage of young women holding the liberal position has increased by more than 15 points. These have to do with the environment, abortion and gun laws.

> - Young women have become 18 points more likely to support **broad abortion rights**, saying abortion should be legal under any or most circumstances (rather than in only a few or no circumstances). Their preference for this position rose from 42% to 60% between 2008-2016 and 2017-2024.

The number for young men is much lower than 60% at only 48%!

So, what happens to young men when they take these traditional MALE positions on issues, and society disapproves of them? Well, they turn to God for vindication of their good moral views. If society won't approve of young men for protecting the unborn from abortion, and protecting children from divorce and same-sex marriage, then young men will have to find their vindication somewhere else. And that somewhere else is *God*.

Here's the latest from the far-left New York Times: (archived)

> For the first time in modern American history, young men are now more religious than their female peers. They attend services more often and are more likely to identify as religious.
>
> […]Among Generation Z Christians, this dynamic is playing out in a stark way: The men are staying in church, while the women are leaving at a remarkable clip.
>
> Church membership has been dropping in the United States for years. But within Gen Z, almost 40 percent of women now describe themselves as religiously unaffiliated, compared with 34 percent of men, according to a survey last year of more than 5,000 Americans by the Survey Center on American Life at the American Enterprise Institute.

To be accurate, I don't think that young women have been more religious than men. If you look at the kinds of books that young women tend to read, it's more about comfort and life enhancement. They are not looking to get their orders from God. They are looking to get their desires met by God. And you can see that coming out in the new trends of "manifesting" that is so popular with young women.

By contrast, young men are more likely to turn to apologetics, science, history and theology. Young women were only "spiritual", they were not looking to sacrifice themselves in order to serve God. You can see this by looking at what books young women and men read. Young women tend to read people like Rachel Hollis, Rachel Held Evans, and Sarah Young. Young men see religion as being about their duties to others. They read people like J. Warner Wallace, Frank Turek and Sean McDowell. They want to learn how to tell people the truth, and tell people right and wrong. They want to lead in moral and spiritual areas. They want to make the world a better place for the weakest people.

How did this happen? Well, we have had generation after generation of pietistic Christian parents and pietistic Christian pastors who thought that it was the height of chivalry to only apply the Bible to young men, and never to young women. Young men need to be "challenged", but never young women. People acted as if women had some sort of hotline to God through their emotions, and could never be judged for any of their questionable policy preferences and choices.

My question for you is this: do you think that these pietistic parents and pietistic pastors will finally stop asking the question "Where are all the good men?" and start asking a much better question "Where are all the good women?" Because I can tell you right now, conservative religious men are not going to be interested in dating or marrying these secular leftist young women.

Marriage is a huge risk for young men, in a world of no-fault divorce, biased divorce courts and feminized public schools. Good young men are not going to take those risks just to give secular leftist young women their "happily ever after" once they tire of "having fun" with hot bad boys, and want to settle down. And no amount of shaming and blaming is going to force good men to take those risks.

By the way, I've noticed that a lot of good young men are now seeking out friendships with more traditional older women. They are looking for sanity, and validation for their good moral and religious views. That's not surprising. They'll go where they are respected.

# Do moral dilemmas undermine objective moral absolutes?

**Wintery Knight** · 26 September 2024 · Archived copy · Original

One reason why some people reject the existence of objective morality is because moral absolutes can conflict.

Canadian philosopher Michael Horner to explains the problem.

He writes:

> You may have been confronted with the story of the Nazi soldier coming to the door of the family who are hiding some Jewish people in their home and asking them point blankly, "Are there any Jews here?" The person telling the story then asks you, "What would you say?" or more precisely, "What should you say?"
>
> […]I think for many people the term moral absolutes connotes ideas like inflexibility and rigidity, and that there can never be exemptions. I have also found that many people believe that holding to moral absolutes means that circumstances are not relevant in a moral evaluation and that moral absolutism cannot handle moral dilemmas. But in fact it is possible to believe in moral absolutes, or as I prefer to call them objective moral values, without adhering to these connotations I have mentioned.
>
> For many people to believe in moral absolutes is to believe in rules that no other rules can ever trump. It follows from this that moral absolutes are all equal and there can never be any exemptions. But what if moral absolutes exist in a hierarchy?
>
> We know from experience that very often more than one moral rule applies to a situation. This often leads to moral dilemmas. So in the 'hiding the Jews example' the moral rule of telling the truth seems to apply to the situation, but it would seem that the moral rule to protect innocent human life from torture and murder applies also.
>
> If absolutes are all equal there is no way out of the dilemma. You can't choose one absolute over another because in doing so you would be violating at least one absolute which, in their view, is supposed to be inviolable.

So, in this case, it seems as if the moral absolutist is stuck in a dilemma. If you lie to save the innocent life, then that would be wrong. But if you tell the truth and hand the innocent person over to murderers, then that would be wrong. Does this really disprove objective moral absolutes?

This problem annoys me, because I know this is the kind of objection to objective morality that annoying philosophy lecturers like to push onto freshmen in order to convince them that morality is nonsense.  But does the moral dilemma objection really work?

More Horner:

> […][I]f moral absolutes exist in a hierarchy and the circumstances or the situation were relevant in determining which absolute takes precedent, then there may be a solution to the moral dilemma. That is exactly what I think is the case in the example. I for one have no difficulty knowing that the morally right thing to do in that situation is to protect the life of innocent people from torture and murder rather than tell the truth to a person who has torture and murder in their plans. My moral intuitions are very clear about this.
>
> If someone objects and says, "No, you must always tell the truth. After all it is an absolute, and absolutes by definition can never be violated," I would point out that they are just using a different hierarchy, putting truth telling above protecting the life of innocent people from torture and murder. There is no way to avoid making a judgment like that since more than one absolute does apply to the situation. I would just ask them to think it through again, and once they see that they have to make a judgment based on some sort of hierarchy in that situation, then I think most people's moral intuitions will affirm that protecting the lives of innocent people

> from torture and murder, in that situation, trumps truth telling. There is no way to avoid choosing one over the other.

But isn't this moral relativism? After all, we are deciding what to do based on the situation! It's relativism, isn't it?

No, it isn't, because there is always one right thing to do in every situation. In every situation, you always follow the weightiest moral rule. The right thing to do does not depend on your subjective state of mind. It is an objective moral duty, and it is the same for everyone, across all times and in all places. That's what objective morality means -what is right and wrong is not determined by personal preferences or cultural conventions, which vary by time and place.

And of course, God is the ground of this hierarchy of objective moral absolutes. They existed through him before human beings even appeared, as part of his design for us, his creatures. How we ought to behave is grounded ontologically in God's design for us.

# Is the text of the Bible we have today different from the originals?

**Wintery Knight** · 26 September 2024 · Archived copy · Original

I thought it might be a good idea to write something about whether the Bible is generally reliable as a historical document. Lots of people like to nitpick about things that are difficult to verify, but the strange thing is that even skeptical historians accept many of the core narratives found in the Bible. Let's start with a Christian historian, then go to a non-Christian one.

First, let's introduce New Testament scholar Daniel B. Wallace:

> Daniel B. Wallace
> Senior Research Professor of New Testament Studies
>
> BA, Biola University, 1975; ThM, Dallas Theological Seminary, 1979; PhD, 1995.
>
> Dr. Wallace… is a member of the Society of New Testament Studies, the Institute for Biblical Research, the Society of Biblical Literature, the American Society of Papyrologists, and the Evangelical Theological Society (of which he was president in 2016). He has been a consultant for several Bible translations. He has written, edited, or contributed to more than three dozen books, and has published articles in New Testament Studies, Novum Testamentum, Biblica, Westminster Theological Journal, Bulletin of Biblical Review, the Journal of the Evangelical Theological Society, and several other peer-reviewed journals. His Exegetical Syntax of the New Testament is the standard intermediate Greek grammar and has been translated into more than a half-dozen languages.

Here is an article by Dr. Wallace that corrects misconceptions about the transmission and translation of the Testament.

He lists five in particular:

- *Myth 1: The Bible has been translated so many times we can't possibly get back to the original.*
- *Myth 2: Words in red indicate the exact words spoken by Jesus of Nazareth.*
- *Myth 3: Heretics have severely corrupted the text.*
- *Myth 4: Orthodox scribes have severely corrupted the text.*
- *Myth 5: The deity of Christ was invented by emperor Constantine.*

Let's look at #4 in particular, where the argument is that the text of the New Testament is so riddled with errors that we can't get back to the original text.

It says:

> Myth 4: Orthodox scribes have severely corrupted the text.
>
> This is the opposite of myth #3. It finds its most scholarly affirmation in the writings of Dr. Bart Ehrman, chiefly The Orthodox Corruption of Scripture and Misquoting Jesus. Others have followed in his train, but they have gone far beyond what even he claims. For example, a very popular book among British Muslims (The History of the Qur'anic Text from Revelation to Compilation: a Comparative Study with the Old and New Testaments by M. M. Al-Azami) makes this claim:
>
> The Orthodox Church, being the sect which eventually established supremacy over all the others, stood in fervent opposition to various ideas ([a.k.a.] 'heresies') which were in circulation. These included Adoptionism (the notion that Jesus was not God, but a man); Docetism (the opposite view, that he was God and not man); and Separationism (that the divine and human elements of Jesus Christ were two separate beings). In each case this sect, the one that would rise to become the Orthodox Church, deliberately corrupted the Scriptures so as to

> reflect its own theological visions of Christ, while demolishing that of all rival sects."
>
> This is a gross misrepresentation of the facts. Even Ehrman admitted in the appendix to Misquoting Jesus, "Essential Christian beliefs are not affected by textual variants in the manuscript tradition of the New Testament." The extent to which, the reasons for which, and the nature of which the orthodox scribes corrupted the New Testament has been overblown. And the fact that such readings can be detected by comparison with the readings of other ancient manuscripts indicates that the fingerprints of the original text are still to be seen in the extant manuscripts.

Here is the full quote from the appendix of Misquoting Jesus:

> "Bruce Metzger is one of the great scholars of modern times, and I dedicated the book to him because he was both my inspiration for going into textual criticism and the person who trained me in the field. I have nothing but respect and admiration for him. And even though we may disagree on important religious questions – he is a firmly committed Christian and I am not – we are in complete agreement on a number of very important historical and textual questions. If he and I were put in a room and asked to hammer out a consensus statement on what we think the original text of the New Testament probably looked like, there would be very few points of disagreement – maybe one or two dozen places out of many thousands. The position I argue for in 'Misquoting Jesus' does not actually stand at odds with Prof. Metzger's position that the essential Christian beliefs are not affected by textual variants in the manuscript tradition of the New Testament."

Finally, I think that the discovery of the Dead Sea Scrolls shows us that religious texts don't change as much as we think they do over time.

Look:

> The Dead Sea Scrolls play a crucial role in assessing the accurate preservation of the Old Testament. With its hundreds of manuscripts from every book except Esther, detailed comparisons can be made with more recent texts.
>
> The Old Testament that we use today is translated from what is called the Masoretic Text. The Masoretes were Jewish scholars who between A.D. 500 and 950 gave the Old Testament the form that we use today. Until the Dead Sea Scrolls were found in 1947, the oldest Hebrew text of the Old Testament was the Masoretic Aleppo Codex which dates to A.D. 935.{5}
>
> With the discovery of the Dead Sea Scrolls, we now had manuscripts that predated the Masoretic Text by about one thousand years. Scholars were anxious to see how the Dead Sea documents would match up with the Masoretic Text. If a significant amount of differences were found, we could conclude that our Old Testament Text had not been well preserved. Critics, along with religious groups such as Muslims and Mormons, often make the claim that the present day Old Testament has been corrupted and is not well preserved. According to these religious groups, this would explain the contradictions between the Old Testament and their religious teachings.
>
> After years of careful study, it has been concluded that the Dead Sea Scrolls give substantial confirmation that our Old Testament has been accurately preserved. The scrolls were found to be almost identical with the Masoretic text. Hebrew Scholar Millar Burrows writes, "It is a matter of wonder that through something like one thousand years the text underwent so little alteration. As I said in my first article on the scroll, 'Herein lies its chief importance, supporting the fidelity of the Masoretic tradition.'"{6}
>
> A significant comparison study was conducted with the Isaiah Scroll written around 100 B.C. that was found among the Dead Sea documents and the book of Isaiah found in the Masoretic text. After much research, scholars found that the two texts were practically identical. Most variants were minor spelling differences, and none affected the meaning of the text.

> One of the most respected Old Testament scholars, the late Gleason Archer, examined the two Isaiah scrolls found in Cave 1 and wrote, “Even though the two copies of
> Isaiah discovered in Qumran Cave 1 near the Dead Sea in 1947 were a thousand years earlier than the oldest dated manuscript previously known (A.D. 980), they proved to be word for word identical with our standard Hebrew Bible in more than 95 percent of the text. The five percent of variation consisted chiefly of obvious slips of the pen and variations in spelling.”{7}
>
> **Despite the thousand year gap, scholars found the Masoretic Text and Dead Sea Scrolls to be nearly identical. The Dead Sea Scrolls provide valuable evidence that the Old Testament had been accurately and carefully preserved.**

I hope that this post will help those who think that we can’t get back to the text of the original New Testament documents.

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 27 September 2024 · Archived copy · Original

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses? God said, See that staff? Throw it down. Moses threw it down and it turned into a serpent. God said, See that serpent? Pick it up. And he picked it up and it turned back into a staff. God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention. And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone? Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home? Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened. But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful. Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you. Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for

example, is a necessary information base that Christians must have.

2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory

- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds
- William Lane Craig's case for the resurrection of Jesus

# Making monergism make sense: reconciling divine sovereignty and free will

**Wintery Knight** · 28 September 2024 · Archived copy · Original

This article at Free Thinking Ministries was written by my friend Dr. Tim Stratton. In it, he presents a view of God's sovereignty over the universe, but one that doesn't fall into the errors of determinism or double-predestination.

Excerpt: (links removed)

> Many reformed folks *(freely?)* choose to reject Molinism because they contend that this theological view "smells of synergism." What is this stench that reportedly makes John Calvin turn over in his grave? Simply put, synergism is the view that man plays at least a small part in his own salvation process. Monergism, on the other hand, is the view that God is the author of salvation from beginning to end.
>
> Since Molinism affirms that man is free to choose to reject God's saving grace or not, many Calvinists jump to the conclusion and assume that Molinism must be synergistic. This does not necessarily follow.[1] Consider one possible model:
>
> 1- God, by nature, is a volitional unmoved mover who is free to choose between options in accord with His nature. (This is supported via the *Kalam* and the *Argument from Time*).
>
> 2- By God's grace, humans are created in the "image of God." By nature, then, we are free to choose between options in accord with our nature. (This is supported via the *Freethinking Argument*).
>
> 3- Adam & Eve freely chose to disobey God and this sin completely separates humanity from God. This is what it means to have a "totally depraved sin nature." (Every aspect of man is separated from God).
>
> 4- In this state of depraved separation from God (sin nature), humans do not even know God exists if merely left to our own devices.
>
> 5- If humans do not even know God exists, then, left to our own devices and **apart from God's grace**, it would be impossible to choose to love and follow God (thus, Pelagianism is impossible on this view).
>
> 6- God, in His love for all people, provides amazing prevenient grace to all people (Romans 1:20), writing the law on the human heart (Romans 2:15), conviction of the Holy Spirit (John 16:8-9), and draws all men (John 12:32). This is commonly referred to as "common grace."
>
> 7- Therefore, by God's grace, human nature has changed from a "totally separated from God nature" to a nature that has now experienced enough divine revelation (influences) allowing all mankind to start making some free and volitional choices in accord with our new nature; namely, to choose to resist God's grace and revelation, or not.[2] Mankind is without excuse because we do not have to resist what God has made clear (Romans 1:18-20).[3]
>
> *[Note: According to Calvinist, Matt Slick (albeit inadvertently), Mark 4:10-12 implies that if an unregenerate person gets access to clear and accurate information, then they possess the ability to become Christians!]*
>
> 8- If one does not reject or continually resist the grace and revelation God provides them, then God will continually provide more and more until the person reaches the point of "no return" and will become saved.
>
> Thus, God does *ALL* the work in salvation from beginning to end on this Molinistic model; all the human can do is freely resist God's grace and revelation, but he or she does not have to! The human does nothing to gain salvation apart from God's grace on this Monergistic Model of Molinism.

I think that Stratton's formulation above does indeed keep God as the sole initiator of salvation. And that's good. But it also makes sure that human who resist God's leading are responsible for their choice to resist God, and that's

good. We want salvation to be 100% by faith alone in Christ alone. But we don't want God to be the cause of people not being saved. On Stratton's view, God wants everyone to be saved. If anyone is saved, it's because God did ALL THE WORK to lead them and secure their salvation with the death of Jesus on the cross. But, on Stratton's view, humans do get a choice – the choice to trust God or not. And so, if a person is not saved, then it's their fault – not God's. This works.

Read his whole post, and see what you think about it.

# Tens of thousands of illegal immigrants with criminal convictions released into USA

**Wintery Knight** · 29 September 2024 · Archived copy · Original

A simple way to understand the secular left is that they want to be very generous with other people's money, and very compassionate at the expense of other people's safety. The Biden-Harris regime, for example, wants to let in millions of illegal immigrants. Many of those have serious criminal convictions, and many of them are facing serious criminal charges. And these criminals threaten YOU.

This story is from Fox News:

> Tens of thousands of illegal immigrants with sex offenses and homicide convictions could be loose on the streets, according to Immigration and Customs Enforcement (ICE) data provided to lawmakers this week.
>
> The agency provided data to Rep. Tony Gonzales, R-Texas, about national data for illegal immigrants with criminal charges or convictions. The data, as of July 2024, is broken down by those in detention, and those who are not in detention — known as the non-detained docket. The non-detained docket includes illegal immigrants who have final orders of removal or are going through removal proceedings but are not detained in ICE custody. There are currently more than 7 million people on that docket.

Pay attention to these numbers:

> The data says that, among those not in detention, there are 425,431 convicted criminals and 222,141 with pending criminal charges.
>
> Those include 62,231 convicted of assault, 14,301 convicted of burglary, 56,533 with drug convictions and 13,099 convicted of homicide. An additional 2,521 have kidnapping convictions and 15,811 have sexual assault convictions.
>
> There are an additional 1,845 with pending homicide charges, 42,915 with assault charges, 3,266 with burglary charges and 4,250 with assault charges.
>
> "As of July 21, 2024, there were 662,566 noncitizens with criminal histories on ICE's national docket—13,099 criminally convicted MURDERS!" Gonzales said in a statement. "Americans deserve to be SAFE in our own communities."

And this – a sharp drop in deportations compared to the Trump administration's policies:

> The Biden administration came under fire for releasing many migrants who came to the U.S. border into the interior, which coincided with a sharp drop in deportations as it focused on prioritizing public safety and national security threats. There were 142,580 removals in FY 23, up considerably from 72,177 in FY 22 and 59,011 in FY 21, but still down from the highs of 267,258 under the Trump administration in FY 19.

Should we expect Harris-Walz to protect taxpayers from criminals? Or does their virtue-signaling take precedence over their responsibilities to protect taxpayers?

Let's look at Tim Walz's record. Do you remember how Tim Walz handled rioting and arson and violence in his state, when he was governor?

Daily Wire reports:

> Minneapolis officials estimated the rioting and looting in 2020 cost the city around $55 million in damages. Rioters set fire to at least 220 buildings following George Floyd's death in police custody. Estimates in 2021, a

> year after the riots, put the total cost of damage to both Minneapolis and St. Paul at $500 million, according to the Star Tribune. Many of the businesses damaged in the riots remained closed a year after the unrest.

And what about Kamala Harris? She put out a call on Twitter for people to donate money to bail criminals out – including ones who had previous convictions for violent crimes.

Kamala Harris wants donations to bail out violent criminals

Even if you put aside concerns about crime, there's also the matter of costs. Illegal immigration costs money, and taxpayers have to foot the bill.

Daily Wire reports about the costs of illegal immigration for just one state – Mississippi:

> Illegal immigration could cost Mississippi more than $100 million every year, a new report from the state's auditor reveals.
>
> […]Mississippi's healthcare system is hit particularly hard by illegal immigration, with the report estimating that the state spends a whopping $77 million on healthcare for illegal immigrants and their children every year. The report estimates the figure with data on the number of illegal immigrants in the state, their rate of health insurance, and their use of emergency medical services. It also found that Mississippi spends $4 million every year to pay for births to illegal immigrants, whose children are then designated as American citizens.
>
> […]The state auditor's report indicates that illegal immigration poses a massive financial burden on the Mississippi education system as well.
>
> "In K-12 spending alone, in total, Mississippi taxpayers likely pay $25 million to educate illegal immigrants each year," it reads, also noting that an estimated 2,500 illegal immigrants are currently enrolled in the state's K-12 education system. "This estimate does not include the cost to educate the US-citizen children born to illegal immigrants, which is difficult to estimate given the state's inability to collect citizenship data for students and their families."

So, just be careful what you vote for in November.

# Meet conservative rockstar Jonathan Skrmetti, Tennessee's attorney general

**Wintery Knight** · 30 September 2024 · Archived copy · Original

I'm always on the lookout for the best conservative fighters. Regular readers will know that Florida Governor Ron DeSantis was my choice for the GOP presidential candidate in 2024. But there are other conservatives who are amassing a long, long list of conservative achievements. And I'm interested in telling you about them, so you know who to vote for in GOP primaries.

Here's an article from the Daily Signal about Tennessee's conservative attorney general:

> As Tennessee's attorney general for only two years, Republican Jonathan Skrmetti is racking up wins for conservatives in policy and law against the Biden-Harris administration and private sector actors.
>
> […]Skrmetti, now 47, was sworn in as attorney general on Sept. 1, 2022. Married and the father of four, the Franklin resident previously was chief deputy attorney general under his predecessor, Herbert H. Slatery III, for three years.
>
> […]Skrmetti also was chief counsel to Tennessee Gov. Bill Lee, a fellow Republican.
>
> […]Skrmetti received degrees from George Washington University, the University of Oxford, and Harvard Law School.
>
> […]Aides and other admirers say that as attorney general, Skrmetti has spearheaded successful lawsuits against the federal government, especially leading the charge against gender ideology mandates and government overreach.

And the article has a list of 5 of his major accomplishments:

- Protecting Consumers
- Countering Gender Ideology
- Combating Illegal Immigration
- Fighting for Life
- Opposing Racial Discrimination and DEI Policies

Let's look at one of these:

> 1. Protecting Consumers
> Skrmetti's duties as attorney general include protecting the state's consumers, and supporters say he has risen to that task.
>
> Skrmetti filed a lawsuit against one of the world's largest asset managers, BlackRock Inc., in a "first-of-its-kind" consumer protection case.
>
> Tennessee successfully sued BlackRock over misleading statements about its use of ESG standards (for environmental, social, and governance considerations) in investments.
>
> Ordinary shareholders argue that ESG standards elevate over "social justice" and other progressive causes over profitability and good business practices.

He's also sued the Department of Health and Human Services, the Department of Homeland Security, and the Equal Employment Opportunity Commission. And put Fortune 100 corporations on notice about their DEI policies being unwelcome in Tennessee.

When I speak to some Republican voters who claim to be “very conservative”, I often hear from them lines like this:

- elections are rigged
- the parties are the same
- the government is run by federal agencies who have dirt on all the politicians
- Republicans never go after big leftists like Blackrock and Soros
- I’m the real pro-lifer because I don’t support incremental measures

When I ask these people how are the parties the same, how are the elections rigged, and what is the dirt that the federal agencies have, they have no evidence for any of these assertions. The real cause of their lack of knowledge and lack of effort seems to be “convenience”. They want to assert that they are better conservatives than people like Ron DeSantis and Jonathan Skrmetti and Chip Roy, etc. But they want to do it without reading anything, advocating for anything, convincing anyone, etc. They don’t want to put *any effort* into achieving conservative outcomes. And they especially don’t want to give any respect to the people who do achieve conservative outcomes. The conspiracy theories about how everyone is compromised except them are convenient, because it allows them to sound conservative without to achieve any conservative results. And you’d better believe that conspiracy theories don’t equip them to convince anyone else to vote conservative.

I’m the opposite of that. I want to read a lot of books about economics, health care, immigration, education, foreign policy, military history, etc. and then evaluate the candidates using voter guides and performance metrics. And I would like you to be a high-information, high-persuasion voter, too.

# Knight and Rose discuss policy and the election with Freethinking Ministries

**Wintery Knight** · 1 October 2024 · Archived copy · Original

As the election gets closer, Rose and I are getting into more discussions about the election, and the specific policies of the candidates. We had a GREAT discussion with two Christian apologists who follow these issues closely. Please give the video a like (you can see Rose and I) and give Freethinking Ministries a subscribe. We hope you enjoy it!

Here's the episode:

And here are the topics:

- abortion
- LGBT and the Equality Act
- socialism vs free markets
- socialism in the Bible?
- inflation and energy policy
- crime
- illegal immigration
- gun rights and self-defense
- health care

Even with such a long discussion, we were still not able to get to everything! And lots of interesting data came out during the discussion and after the discussion.

For example, Josh Klein raised this tweet from former Democrat environmentalist Michael Schellenberger:

> No matter your politics, these new numbers are shocking. Of the 7 million migrants that ICE released while their cases are being processed, 663,000 have criminal histories, 13,000 were convicted of homicide, 16,000 of sexual assault, and 1,845 face homicide charges. ⍰ pic.twitter.com/R20ShfPpFq
>
> — Michael Shellenberger (@shellenberger) September 27, 2024

And Tim Stratton pointed out this article he wrote, where he discusses whether carrying a concealed weapon for self-defense is consistent with the Bible.

He writes:

> From this verse we can infer that Jesus not only commanded the carrying of weapons for self-defense purposes (as Luke 22:36 reads), but he was also aware that Peter was "packing heat." It seems quite ad hoc to suggest that Jesus was being figurative about carrying swords, but his disciples mistakenly took him literally. Modern readers do this quite often by reading ancient texts through modern lenses, but Peter and company would have been in a position to know if Jesus was speaking figuratively or not. Moreover, are we really to believe that Jesus was not aware of the swords his disciples were carrying (and intentionally hiding) until the moment Peter drew his weapon? I find that hard to take seriously!
>
> Also, note that Jesus does not tell Peter to drop his sword and never touch it again. No, Jesus tells Peter to put his sword "back into its sheath." If a Sheriff tells his deputy to holster his firearm, he means put it away but keep it on your person. The Sheriff is not implying that the deputy ought to get rid of his weapon forever. We

> can infer from this that Jesus condoned Peter's further carrying of the sword.

Please comment on the video if you have a YouTube account, as this will help more people to see the video, and might help people to get excited about the election and make a plan to vote. We hope you enjoy the episode.

By the way, we have a couple of guests scheduled already for Knight and Rose Show episodes, and two episodes of our own. So subscribe to our podcast if you haven't already. Rose had to speak at a conference in September, and she has another one in October, and another one in November, but we will try to get out two episodes of Knight and Rose Show in each month, anyway!

# Are Mormon doctrines supported by philosophy, science and history?

**Wintery Knight** · 2 October 2024 · Archived copy · Original

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

**The scientific evidence**

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end."
> ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo*."
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

**Philosophical problems**

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

**The historical evidence**

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years

> too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

# How should Christians redeem their regrets over past decisions?

**Wintery Knight** · 3 October 2024 · Archived copy · Original

Recently, I posted a dating ad from a 39-year-old never-married single mother. She explained that she was now a Christian and was looking for a man to marry her, so that she could have a second child "the right way". Some people thought we should take her conversion at face value. Others thought she was desperate and looking for a financial bailout. How can we tell if she is really sincere?

Well, I was still thinking about the comments on that post when I saw another great post from Laura, who writes at An Affair With Reason. Her post is about the feelings of regret that people have because of their past mistakes, and how Christians should deal with those regrets.

She writes:

> As I thought about what to write I became distressed, sorrowful, angry, and even despondent over some of my own decisions. As I sobbed inconsolably, I noticed that every caustic thought began with, "If only…." That's when I realized I was still carrying the burden of regret and I didn't know how to let go. It wasn't that I still needed God's forgiveness or that I had any doubts about my standing with him; I knew I was forgiven. It was the lifelong consequences that I experience to this day which embittered my soul and squelched my joy.
>
> The "if onlys" are a heavy burden to carry. They represent shattered dreams that will never be recovered in this life. They invoke feelings of discontentment, grief, and doubt. They cause us to sob with regret for what could have been, to pray for second chances that we know will not be granted.
>
> So what do we do with the regrets that we must live with for the rest of our lives? Lately, as I've reflected on conversations I've had with many women who have made regretful decisions over the years and on the direction of our culture, I've noticed two very distinct paths:
>
> 1. Attempt to assuage our own guilt and regret by convincing others to make the same foolish, and even sinful, decisions we made.
>
> OR
>
> 2. Humble ourselves, grieve our losses, and commit to teaching the younger generations to choose a better way.
>
> The first path is the wide and well-traveled one. Tragically and despicably, most people today seek to justify themselves and ease their consciences by getting others on board with their own ignorance, foolishness, and sinfulness.

She's got quite a few examples of the kinds of regrets that men and women have, and different ways of dealing with those regrets. Some ways self-serving, others God-serving. Her examples are really interesting. It reminds me of "The Great Divorce" by C.S. Lewis, where he explains why some people don't resist God, and others do. Some people want to justify the past, and keep making decisions to benefit themselves. Others want to serve God. They want to take on the difficult work of opening up to others, and loving them by telling them the truth.

When I hear someone with a past say that they have now become a Christian, I normally ask "is this conversion just convenient for you or is it the result of some process where your mind was changed through study?" You can ask the person to show their work – how did they get to the right answer? And what has becoming a Christian cost them? How does it affect their relationships with non-Christians?

People "convert to Christianity" all the time based on need. Sometimes they're trying to get something for themselves, e.g. – wanting to not be judged for their past, so they can attract a partner to financially support them. But other people spend years reading books and changing their minds page by page, debate by debate. Then they put their knowledge into practice.

I have mentored women who did this. One girl who contacted me through the blog wasn't able to talk to her smart atheist brother about her faith. Then, she read a bunch of apologetics books about science and history, then called me and slipped the phone into her pocket and let me listen to her make a bold, informed stand for her Christian worldview for two hours. She won every point.

When people really become Christians, they don't do it in order to be happy and or to be liked. They take on work, and they take on shame, because they have a Boss now. That's how you can tell that real repentance has taken place. The letters of Paul in the New Testament are filled with advice for Christians who want to be bold, put themselves second, and advocate for their Boss. You should read them. When you read the Bible, try to put aside your feelings, your desires, and your concerns about what people will think. You'll find that putting work for the Boss ahead of what you want is worth the price of being "second". I would start with Philippians, then go on to 1 Peter.

By the way, this isn't the first time I've linked to Laura's posts. Here are some of the other times I've linked to her work on my blog: on voting, on Islam, on mentoring boys, on fighting with pastors, on learning what works when dealing with atheists. She had a 10 part series advising women how to choose a husband, which really made me feel good as a man. Today, most people see a husband as an accessory – like a handbag. He's there to provide, or to be a handyman, or to complain at if the wife is unhappy. Men should read that series, and find out what we can do in a marriage, if we are valued for our distinctive male nature.

# How Mark Zuckerberg's $400 million helped get out the vote for Biden-Harris

**Wintery Knight** · 4 October 2024 · Archived copy · Original

Since Mark Zuckerberg decided to BAN yesterday's post on Facebook, I decided to remind everyone about his $400 million of donations to "get out the vote" groups that had connections to the far-left. He was recently questioned about it in the House of Representatives by House Judiciary Committee Chairman Jim Jordan. How did he respond?

Here's the article from the New York Post.

It says:

> The Chan Zuckerberg Initiative, an organization led by Zuckerberg's wife, Priscilla Chan, gave more than $350 million to the Center for Technology and Civic Life (CTCL) and the Center for Election Innovation and Research (CEIR) on the pretense of getting out the vote to everyone.
>
> But the administrators of those groups had deep ties to the left, researchers told The Post, including CTCL founder Tiana Epps-Johnson, a former Obama Foundation fellow.

A study was done on how the money was spent, and here is Hayden Ludwig, director of research at Restoration News, to explain it.

> The people who founded CTCL come from a defunct group called the New Organizing Institute, Ludwig notes. And back in 2014, CNN quoted a GOP operative who called the New Organizing Institute "the Left's New Death Star."
>
> "These were people whose entire jobs were figuring out how to elect Democrats. Personally I think he went home and quietly congratulated himself on helping get Joe Biden elected. He found a big loophole and put $350 million into it," Ludwig says.

The Zuck Bucks were overwhelmingly spent in Democrat-leaning counties, to get out their votes. Especially the ones that were expecting close races.

> An analysis shows that Zuck Bucks were disproportionately spent getting out the vote in Democratic-leaning counties in Georgia, which Biden won by just 12,000 votes.
>
> The same thing happened in Arizona, where Biden won by 10,000.
>
> According to the Foundation for Government Accountability, Georgia received more than $31 million in Zuck Bucks for the general election alone, one of the highest amounts in the country.
>
> It worked out to nearly 9 percent of all Zuckerberg funding, even though Georgia has just over 3 percent of the country's population.
>
> A county-by-county analysis in Georgia by the Foundation for Government Accountability revealed a spend of between $7 and $15 in Zuck Bucks per voter in six of the largest counties in the state, which were all won by Biden.
>
> Meanwhile, there was a spend of $1 to $3 per voter in the top six counties won by Donald Trump.
>
> In Wisconsin, which had previously voted for Trump, the CTCL spent $47 per voter in Green Bay, when normally the legislature spent $7 per voter there and $4 in rural areas of the state.
>
> […]"We looked at 8 or 9 battleground states and in every state we looked at we found the same pattern. CTCL cut checks that per person were significantly larger in big blue Democrat cities compared with rural Republican

> counties.
>
> “Wisconsin CTCL grants averaged $3.75 per person in Biden counties versus 55 cents in Trump counties. The bottom line is that all this Zuckerberg money boosted turnout everywhere but it boosted turnout the highest in these big blue cities who got massive Zuck bucks from CTCL.”

Facebook has become a trash website, where stories that tell the truth about the Democrat party are marked as false news and disinformation. At the same time, stories that lie about the Republican party are marked as true and reliable.

When you look at Zuckerberg and his far-left wife’s donations, it becomes obvious what happened.

# Facebook / Meta CEO Mark Zuckerberg's election meddling violated bribery laws

**Wintery Knight** · 5 October 2024 · Archived copy · Original

*I'm re-posting this old post from 2022, to celebrate having my post about how to deal with your regrets censored by Facebook as "spam" this week. Just want to remind everyone how Zuck interferes with elections to help the Democrat party.*

We have an election this year, and now seems like a good time to remind everyone about Facebook's bias in favor of the Democrat party. Take a look at this article from The Federalist.

It says:

> Nearly $9 million in Zuckerberg grant funds directed solely to five Democratic strongholds in Wisconsin violated the state's election code's prohibition on bribery. That conclusion represents but one of the many troubling findings detailed in the report submitted today by a state-appointed special counsel to the Wisconsin Assembly.
>
> […]The first unlawful action, according to the report, concerned the payment of grant funds to five Wisconsin counties that were used to facilitate voting. That arrangement, Gableman wrote, violated Wis. Stat. § 12.11, which prohibits election bribery by providing it is illegal to offer anything of value to or for any person in order to induce any elector to go to the polls or vote.
>
> According to the report, Priscilla Chan and Mark Zuckerberg providing financing that allowed the Center for Tech and Civic Life to offer nearly $9 million in "Zuck Bucks" to Milwaukee, Madison, Racine, Kenosha and Green Bay counties. In exchange, the "Zuckerberg 5," as the report called the counties, in effect, operated Democratic get-out-the-vote efforts. Those grant funds then paid for illegal drop boxes to be placed in Democratic voting strongholds.

A week ago, Facebook was in trouble again for meddling in elections.

The Washington Examiner reported:

> Facebook blocked Texas GOP gubernatorial candidate Chad Prather from accessing his page on the site only eight days before the primary election.
>
> Prather told the Washington Examiner the ban resulted from a months-old comment discussing the events of Jan 6. A commentator, who Prather confirmed tends to "spam" his page and "comments nonstop," called the events of the day an "insurrection."
>
> Prather responded by pointing out that even the FBI didn't classify the event as an insurrection, further accusing the commentator of using "victimhood" in her favor.
>
> As a result, Facebook banned him for "bullying."
>
> Facebook notified Prather he was banned from his page for seven days starting Feb 21. The primary election is March 1.
>
> "They silenced my campaign on Facebook," Prather said. "This is illegal. This is interference. This is absolutely a travesty to the political process of free and fair elections."

Facebook / Meta uses partisan "fact-checkers" (censors) like Lead Stories, Politifact, etc. to suppress ideas that support the Republican party.

Here's the about Politifact, reported by The Blaze:

> Fact-checking website PolitiFact recently engaged in some head-scratching analysis in an attempt to discredit a claim made by Fox Business Network host Maria Bartiromo — but ended up doing the exact opposite.
>
> […]Bartiromo said this: "The United States is also reliant on Russian oil — we have doubled our imports from Russia in the last year. So, [there's] no question why President Biden is begging OPEC and others to pump more oil."
>
> […]In a Monday column, PolitiFact parachuted in to assess Bartiromo's claim that the U.S. doubled oil imports from Russia as "mostly false."
>
> Normally, oil imports and energy imports — which include refined products — are categorized separately. The U.S. Energy Information Administration, which PolitiFact cites multiple times, shows as much by breaking down crude oil imports in a separate chart.
>
> A spokesperson for Bartiromo evidently explained this to PolitiFact, resulting in the fact-checker admitting, "The U.S. more than doubled its crude oil imports from Russia, to about 208,000 barrels a day in the first 11 months of 2021, from 76,000 barrels a day in 2020."
>
> Amazingly, that wasn't enough for the fact-checker to change its assessment, even while it openly admitted that Bartiromo's specific claim was accurate.

The author of that "fact check" has a degree in English. ENGLISH. That's the kind of imbecile that Facebook / Meta uses to censor conservatives, especially before elections.

Although Donald Trump was President for four years, he didn't do much to rein in the power of Big Tech. But there are other Republicans running for President in 2024 who are taking action.

News Max reports:

> Gov. Ron DeSantis, R-Florida, has directed state officials to investigate Facebook for alleged election interference, it was announced Monday.
>
> The governor's action came after a report that Facebook possibly influenced numerous state and local races by exempting elite users from the social platform's own rules.
>
> "It's no secret that Big Tech censors have long enforced their own rules inconsistently," DeSantis said in a statement released by his office. "If this new report is true, Facebook has violated Florida law to put its thumb on the scale of numerous state and local races."
>
> […]"Floridians deserve to know how much this corporate titan has influenced our elections," he said. "That is why I am directing Secretary Lee to use all legal means to uncover violations of Florida's election laws.
>
> "The thought of Facebook clandestinely manipulating elections is an affront to the basic principles of our republic. We the people have the right to choose our representatives, whether or not Silicon Valley approves."

On this blog, I've documented a long line of disturbing anti-American behavior by Facebook / Meta. We have an election coming up, and I don't want to lose because of Big Tech interference. Make sure everyone knows what Facebook / Meta does.

# The Wintery Knight's favorite Bible verses

**Wintery Knight** · 6 October 2024 · Archived copy · Original

Here are 8 of my favorite Bible verses. Leave yours in the comments below.

Psalm 27:14:

> [11] Teach me Your way, O Lord,
> And lead me in a level path
> Because of my foes.
>
> [12] Do not deliver me over to the desire of my adversaries,
> For false witnesses have risen against me,
> And such as breathe out violence.
>
> [13] *I would have despaired* unless I had believed that I would see the goodness of the Lord
> In the land of the living.
>
> **[14] Wait for the Lord;**
> **Be strong and let your heart take courage;**
> **Yes, wait for the Lord.**

1 Corinthians 4:2:

> 1 This is how one should regard us, as servants of Christ and stewards of the mysteries of God.
>
> **2 Moreover, it is required of stewards that they be found faithful.**
>
> 3 But with me it is a very small thing that I should be judged by you or by any human court. In fact, I do not even judge myself.
>
> 4 For I am not aware of anything against myself, but I am not thereby acquitted. It is the Lord who judges me.
>
> [5] Therefore do not go on passing judgment before the time, *but wait* until the Lord comes who will both bring to light the things hidden in the darkness and disclose the motives of *men's* hearts; and then each man's praise will come to him from God.

Matthew 5:13:

> 10 "Blessed are those who have been persecuted for the sake of righteousness, for theirs is the kingdom of heaven.
>
> 11 "Blessed are you when people insult you and persecute you, and falsely say all kinds of evil against you because of Me.
>
> 12 Rejoice and be glad, for your reward in heaven is great; for in the same way they persecuted the prophets who were before you.
>
> **13 "You are the salt of the earth; but if the salt has become tasteless, how can it be made salty again? It is no longer good for anything, except to be thrown out and trampled under foot by men.**
>
> 14 "You are the light of the world. A city set on a hill cannot be hidden;
>
> 15 nor does anyone light a lamp and put it under a basket, but on the lampstand, and it gives light to all who are in the house.

2 Timothy 2:4:

> 1 You therefore, my son, be strong in the grace that is in Christ Jesus.
>
> [2] The things which you have heard from me in the presence of many witnesses,entrust these to faithful men who will be able to teach others also.
>
> [3] Suffer hardship with *me*, as a good soldier of Christ Jesus.
>
> **[4] No soldier in active service entangles himself in the affairs of everyday life, so that he may please the one who enlisted him as a soldier.**
>
> [5] Also if anyone competes as an athlete, he does not win the prize unless he competes according to the rules.

Daniel 3:18:

> [13] Then Nebuchadnezzar in rage and anger gave orders to bring Shadrach, Meshach and Abed-nego; then these men were brought before the king.
>
> [14] Nebuchadnezzar responded and said to them, "Is it true, Shadrach, Meshach and Abed-nego, that you do not serve my gods or worship the golden image that I have set up?
>
> [15] Now if you are ready, at the moment you hear the sound of the horn, flute, lyre, trigon, psaltery and bagpipe and all kinds of music, to fall down and worship the image that I have made, *very well*. But if you do not worship, you will immediately be cast into the midst of a furnace of blazing fire; and what god is there who can deliver you out of my hands?"
>
> [16] Shadrach, Meshach and Abed-nego replied to the king, "O Nebuchadnezzar, we do not need to give you an answer concerning this matter.
>
> [17] If it be *so*, our God whom we serve is able to deliver us from the furnace of blazing fire;and He will deliver us out of your hand, O king.
>
> **[18] But *even* if *He does* not,let it be known to you, O king, that we are not going to serve your gods or worship the golden image that you have set up."**

Esther 4:14:

> [10] Then Esther spoke to Hathach and ordered him *to reply* to Mordecai:
>
> [11] "All the king's servants and the people of the king's provinces know that for any man or woman who comes to the king to the inner court who is not summoned, he has but one law, that he be put to death, unless the king holds out to him the golden scepter so that he may live. And I have not been summoned to come to the king for these thirty days."
>
> [12] They related Esther's words to Mordecai.
>
> [13] Then Mordecai told *them* to reply to Esther, "Do not imagine that you in the king's palace can escape any more than all the Jews.
>
> **[14] For if you remain silent at this time, relief and deliverance will arise for the Jews from another place and you and your father's house will perish. And who knows whether you have not attained royalty for such a time as this?"**

Philippians 1:9:

> [3] I thank my God in all my remembrance of you,
>
> [4] always offering prayer with joy in my every prayer for you all,
>
> [5] in view of your participation in the gospel from the first day until now.

> [6] *For I am* confident of this very thing, that He who began a good work in you will perfect it until the day of Christ Jesus.
>
> [7] For it is only right for me to feel this way about you all, because I have you in my heart, since both in my imprisonment and in the defense and confirmation of the gospel, you all are partakers of grace with me.
>
> [8] For God is my witness, how I long for you all with the affection of Christ Jesus.
>
> **[9] And this I pray, that your love may abound still more and more in real knowledge and all discernment,**
>
> [10] so that you may approve the things that are excellent, in order to be sincere and blameless until the day of Christ;
>
> [11] having been filled with the fruit of righteousness which *comes* through Jesus Christ, to the glory and praise of God.

Numbers 13:30:

> [25] When they returned from spying out the land, at the end of forty days,
>
> [26] they proceeded to come to Moses and Aaron and to all the congregation of the sons of Israel in the wilderness of Paran, at Kadesh; and they brought back word to them and to all the congregation and showed them the fruit of the land.
>
> [27] Thus they told him, and said, "We went in to the land where you sent us; and it certainly does flow with milk and honey, and this is its fruit.
>
> [28] Nevertheless, the people who live in the land are strong, and the cities are fortified *and* very large; and moreover, we saw the descendants of Anak there.
>
> [29] Amalek is living in the land of the Negev and the Hittites and the Jebusites and the Amorites are living in the hill country, and the Canaanites are living by the sea and by the side of the Jordan."
>
> **[30] Then Caleb quieted the people before Moses and said, "We should by all means go up and take possession of it, for we will surely overcome it."**

If you have a favorite Bible verse or two, post them in the comments.

# Are Democrats blocking hurricane relief to interfere with the 2024 election?

**Wintery Knight** · 7 October 2024 · Archived copy · Original

On the weekend, I noticed a number of disturbing reports of aid to hurricane victims being blocked by FEMA. Also, FEMA claims that they don't have the money to help hurricane victims. Did they spend all the taxpayer's money on illegal immigrants? We'll see. And finally, I saw people floating theories about why the Democrats might want to block aid to rural voters in Tennessee and North Carolina.

The first article is from Fox Business:

> Elon Musk on Friday slammed the Federal Emergency Management Agency (FEMA), claiming that it is blocking shipments of Starlink satellite internet deliveries in hurricane-ravaged North Carolina.
>
> "FEMA is not merely failing to adequately help people in trouble, but is actively blocking citizens who try to help!" the billionaire claimed on X.
>
> Musk said he had just received a note from a SpaceX engineer, Starlink's parent company, in Asheville, North Carolina, who said the company has "powered up two large operating bases for choppers to deliver goods into hands. We've deployed 300+ starlinks and outpour is it has saved many lives."
>
> But Musk said the engineer claimed that FEMA is "actively blocking shipments and seizing goods and services locally and locking them away to state they are their own. It's very real and scary how much they have taken control to stop people helping. We are blocked now on the shipments of new starlinks coming in until we get an escort from the fire dept. but that may not be enough."

This second article is from New York Post:

> Homeland Security Secretary Alejandro Mayorkas set off outrage Wednesday when he told reporters that the Federal Emergency Management Agency (FEMA) "does not have the funds" to see Americans through the rest of this Atlantic hurricane season — after the agency spent more than $1.4 billion since the fall of 2022 to address the migrant crisis.
>
> […]Critics pointed out that the Department of Homeland Security (DHS) allocated $640.9 million this year in FEMA-administered funds to aid state and local governments coping with the influx of asylum seekers — though Mayorkas' office fired back late Thursday, insisting that those funds couldn't be used for hurricane relief because Congress authorized them specifically for the migrant crisis.

The third article is from Daily Signal:

> Hurricane Helene wreaked havoc on the deepest red areas of North Carolina. Hundreds are dead and missing in the region. Destroyed roads and bridges and lack of water and electricity will make voting a challenge in a region that contributed a net of 231,000 votes for Donald Trump's 2020 margin of 74,000 votes in the state.
>
> […]However, the concern is that measures designed to help voters in hurricane-affected areas might be applied across the state, particularly in densely populated regions that are less affected, creating the potential for partisan advantage. There is a high probability of a sue-and-settle lawsuit on 14th Amendment equal protection grounds brought by the likes of Marc Elias that would argue that loosened voting rules in the West must be applied evenly throughout North Carolina—even in urban areas untouched by the hurricane. This was the same tactic used successfully in 2020 with COVID-19 as the excuse to change election rules.
>
> […]If Vice President Kamala Harris flips North Carolina, she wins the White House.
>
> The GOP, recognizing these concerns, is mobilizing the state Legislature to push back against some of these

> changes. However, with early voting fast approaching, the Republican effort faces a race against time. There is also uncertainty about what additional changes may be implemented by Democratic Gov. Roy Cooper or the North Carolina State Board of Elections, potentially bypassing the Legislature entirely.

This reminds me of the words of Rahm Emanuel, former Chicago mayor and chief of staff to President Barack Obama: “You never want a serious crisis to go to waste. And what I mean by that is an opportunity to do things that you think you could not do before.”

Indeed. That’s how the Democrats in government often see their responsibilities to the people who pay their salaries.

# FEMA prioritizes DEI while veterans provide aid to NC hurricane victims

**Wintery Knight** · 8 October 2024 · Archived copy · Original

Following up on my post from yesterday, I found two more articles showing what poor service we get for our tax dollars from secular leftists. Yesterday, we saw how FEMA was getting in the way of Elon Musk giving aid to hurricane victims, and how FEMA had wasted all their money on illegal immigrant welfare, and how the Democrats would benefit from not helping the hurricane victims at all.

Today, let's look at a couple of articles from the New York Post. I have to give credit to Dr. Frank Turek for finding both of these articles and posting them on Twitter. If you are not following him, you really should. He tweets a nice mix of apologetics and policy.

Here is Frank's Twitter account.

First article: (Frank's tweet)

> In FEMA's alphabet, DEI comes first.
>
> A startling 2023 FEMA webinar features federal health and disaster personnel trumpeting the urgent need to move away from policies that benefit the greatest number of people and instead turn focus toward "disaster equity" where aid is distributed based on innate characteristics like sexual orientation and gender identity.
>
> […]The initiatives raised at the panel discussion echo many of those on FEMA's own website, which proudly proclaims instilling "equity as a foundation of emergency management" as goal 1.
>
> "Underserved communities, as well as specific identity groups, often suffer disproportionately from disasters. As a result, disasters worsen inequities already present in society," the declaration reads in part.

Maybe, as a taxpayer, you thought that the Federal Emergency Management Agency would occupy itself with… emergency management. But that's not the case. Secular leftists don't have a rational grounding for morality. When you put them in charge of anything, they don't see it as their job to serve others. They see their job as looking after themselves – their feelings, and their approval from peers. When you give them money, they don't solve problems with it. They just use it to virtue signal and buy the approval of their friends. This is why it's a waste of money to elect secular leftists. They can watch the Black Lives Matter and Antifa domestic terrorists run up 1-2 BILLION dollars in damages, and then turn around and focus on pre-dawn raiding the homes of peaceful pro-lifers with armored vehicles and fully-automatic assault rifles.

Here's the second article. (Frank's tweet)

> Hundreds of special operations personnel in North Carolina have formed their own homegrown rescue and supply operation in the aftermath of Hurricane Helene after they grew tired of waiting for the federal government to get its act together.
>
> The Post found an all-volunteer operation being run out of a Harley-Davidson dealership with ruthless efficiency and military precision.
>
> "Who's FEMA?" ex-Green Beret Adam Smith derisively responded when asked about the agency's presence on the ground since the deadly storm ravaged the rural western part of the state.
>
> "This disaster has definitively proven without a shadow of a doubt FEMA's incompetence and incapability," he said, noting that the agency didn't even show up until Thursday — almost a week after the storm that has killed at least 232, nearly half of them in the mountainous west of the Tar Heel State.
>
> […]They're using their own aircraft to fly doctors, medicine, generators, fuel and food to isolated residents cut

> off from the world by the unprecedented floods to washed out mountain roads and wiped entire towns off the map.
>
> […]Now that the effort has taken on a life of its own, Smith and others leading the operation have gone from cursing FEMA for its absence to hoping they never come back.
>
> Smith said he fears their carefully calibrated rescue mission will be bogged down with governmental red tape if the feds show up.
>
> "Nobody out here wants the federal agencies to come in. FEMA has walked into operations centers like this and has attempted to just take over and tell them what they're doing is illegal and they're not allowed to keep going. I've seen it firsthand in this area," Smith told The Post.
>
> "My biggest fear is they'll move into the area and in the process they'll reinvent the wheel and rebuild the entire process."
>
> Smith said he's even directly told agencies to stay away.
>
> "I've respectfully told FEMA individuals on a couple of different occasions, 'don't come to our location, we don't want your help.'"
>
> In just a few days, the "Redneck Air Force" has evolved from surveying road damage and going door-to-door on horseback to the military-scale operation that stands today.
>
> With the group's rescue operations now complete, they've turned their attention to flying supplies to communities cut off from communication and electricity.

By the way, if you are in the Charlotte / Rock Hill area, and would like to attend a really good apologetics conference, check out the Southern Evangelical Seminary National Apologetics conference this Friday and Saturday. It features a few of the recent guests we've had on the Knight and Rose Show: Fuz Rana, Casey Luskin and Frank Turek.

# New data: hospitals charged $120 million for sex-change procedures on 14,000 children

**Wintery Knight** · 9 October 2024 · Archived copy · Original

If I had to think about one trend that is really causing me to doubt the morality of the secular left, it's their continued support for transing children. I can understand why they think that unborn children are too small to care about. That's why they support abortion. But I just can't understand why they want to mislead children into a life of suffering just to make "a lot of money".

Take a look at this article from the Daily Caller:

> U.S. hospitals charged nearly $120 million over five years for sex-change procedures performed on around 14,000 children, according to new data compiled by medical watchdog Do No Harm.
>
> The first-of-its-kind database, which logs sex-change procedures given to children nationwide between 2019 and 2023, catalogs a total of 5,747 minors who underwent sex-change surgeries, along with 8,579 who obtained puberty blockers or cross sex hormones.
>
> Do No Harm believes the problem is likely even bigger than the data shows. The numbers, which are drawn from insurance claims data across all 50 states, do not include self-pay, charity payments, internal Veterans Affairs claims or patients covered by Kaiser Health Plans.
>
> To create its dataset, the watchdog group matched gender-related diagnosis codes with codes for procedures related to gender transitions, such as body modification surgeries, cross sex hormones and puberty blockers.
>
> Do No Harm Chairman Dr. Stanley Goldfarb said during a press call that the database should dispel myths that these procedures are a "rare" event or localized to a few places.

In case you missed my previous post about what secular leftists in the medical field think they are doing, their motivation is very simple.

This article from the Daily Wire explains it:

> "It's a lot of money," VUMC Clinic for Transgender Health's Dr. Shayne Sebold Taylor said at one Medicine Grand Rounds lecture, video reveals. "These surgeries make a lot of money."
>
> Taylor noted that a "chest reconstruction" can bring in $40,000 per patient, and someone "just on routine hormone treatment, who I'm only seeing a few times a year, can bring in several thousand dollars … and actually makes money for the hospital."
>
> Citing the Philadelphia Center for Transgender Surgery, Taylor said vaginoplasty surgeries can generate $20,000, gushing that it "has to be an underestimate," since hospital stay, anesthesia, post-op visits, and other add-ons are not included in the total.
>
> "And the female-to-male bottom surgeries, these are huge money makers," the doctor continued, adding that such surgeries could bring in "up to $100,000" for the hospital.
>
> Some clinics are "entirely" "supported" financially by such phalloplasty surgeries, Taylor boasted.
>
> "These surgeries are labor intensive, there are a lot of follow-ups, they require a lot of our time, and they make money," she emphasized. "They make money for the hospital."

They're saying "it's a lot of money" but can't we do something to help kids other than give them dangerous drugs and violent mutilation? Seriously. It's better to just talk things out with children who, for one reason or another, clearly have mental issues that need care and therapy. I don't know why our response to the problems of kids is always to do what's best for the (greedy) adults who want "money for the hospital".

How should we fix this? Well, Tennessee attorney general Jonathan Skrmetti seems to be doing a pretty good job of doing things the right way – by winning case after case.

The Daily Signal explains:

> Skrmetti has been at the forefront of battles with progressives over gender ideology, most notably foiling the Biden-Harris administration's proposed Title IX changes.
>
> The administration's adjustments would have mandated that biological boys be allowed to play girls sports at school and to use girls' restrooms and locker rooms, among other things.
>
> Despite facing several challenges from the Biden-Harris Justice Department, Skrmetti successfully defended Tennessee's ban on so-called gender-affirming care for children. This is the case pending at the U.S. Supreme Court.
>
> The attorney general also won a U.S. District Court case against the U.S. Department of Health and Human Services, which sought to mandate that medical providers perform, and insurers cover, some sex-change procedures.
>
> Skrmetti also went to the District Court as well as the U.S. Court of Appeals for the 6th Circuit to successfully defend Tennessee's policy forbidding a change in the biological sex listed on birth certificates.

Regarding that case pending at the Supreme Court, the Biden administration is going after Tennessee for banning irreversible, unproven medical procedures on children.

Skrmetti tweeted this out on Tuesday:

> "The people of Tennessee, through their elected representatives, took measured action with Senate Bill 1 to protect kids from irreversible, unproven medical procedures. Lawmakers recognized that there is little to no credible evidence to justify the serious risks these procedures present to youth and joined a growing number of European countries in restricting their use on minors with gender-identity issues. The federal government, in its arguments to the Supreme Court, puts its faith in a false and manufactured consensus that ignores the many doctors, States, and countries who have looked at the evidence and determined these treatments are too risky for kids. The Constitution does not prevent the States from regulating the practice of medicine where hot-button social issues are concerned. People who disagree with restrictions on irreversible pediatric procedures for gender transition are free to advocate for change through state elections."

Keep an eye on Tennessee's attorney general and this Supreme Court case. If anyone can save these poor kids from the greed of the secular left, it's him. And if you're still living and paying taxes in these blue states that support these procedures, then maybe it's time to think about moving to a better state.

# New study: Google search engine is biased in favor of Democrat party

**Wintery Knight** · 10 October 2024 · Archived copy · Original

A couple of weeks ago, I was doing some searches to try to find the policy positions of the candidates. I started using Google, in order to get the latest news. But I just got pages and pages of far-left corporate news propaganda. But is there any hard evidence that Google intentionally designs their products and services to benefit the Democrat party at election time?

Here's an interesting article from the New York Post:

> While Congressional Republicans were hammering Mark Zuckerberg and Jack Dorsey for censoring conservatives on their platforms, Google's executives sat back smugly, confident that their obscene censorship schemes went undetected.
>
> But our organization, the Media Research Center, and others have shown that Google is the most effective weapon in the left's arsenal — the one that gets its candidates across the finish line.
>
> In the last presidential election, Google swayed anywhere from six to eight million votes in favor of Joe Biden.
>
> MRC's studies over a 12-month period consistently showed that Google completely buried Republican campaign websites in favor of their Democrat opponents.

Here's what happened during the GOP primaries for this election:

> During the presidential primary contests, MRC conducted studies searching for the campaign websites for both Democrats and Republicans.
>
> Not surprisingly, when MRC searched for "democrat presidential campaign websites," Biden's campaign site was always the first or second search result.
>
> But the results were very different when searching for the Republican campaign websites.
>
> Shockingly, Google only produced a total of two sites: one for Democrat Marianne Williamson and another for Will Hurd, a little-known Congressman who never polled above 1%.
>
> Google would not produce the campaign websites for Donald Trump, Nikki Haley, Ron DeSantis, Vivek Ramaswamy or the other eleven candidates.

And here's what's going on right now:

> In our latest study, we show that Google is finally revealing Trump's website, albeit, still lower than Harris'.
>
> But a user is now required to wade through a flood of news articles, almost all hostile to Trump, before ever reaching either candidate's website.
>
> […]Congressional Republicans and several state Attorneys General understand that Google is weaponized against Republicans and uses its corporate resources to help Democrats.
>
> It is not illegal for a corporation to use its resources to influence the outcome of an election.
>
> But it is against the law when a corporation does not disclose its efforts with the Federal Election Commission.

And this is the conclusion, which should be shocking to you:

> Google is either illegally coordinating with the Harris campaign, or if its expenditures are independent, it is unlawfully failing to file its disclosure reports.

> Congress should find out which it is.

In another recent article, the Media Research Center tried using Google to search for JD Vance, after the VP candidate debate:

> The morning after the debate, MRC Free Speech America conducted a search in the Google News tab for "jd vance." MRC analysis revealed that 100 percent of the results came from outlets with a leftist political bias. Google News tab did not display a single article from an outlet that did not have a predominantly leftist political bias.

And what about the "fact checkers" that are used by big social media sites like Facebook and Instagram to censor content? Well, those fact checkers are just more journalists, like the ones who work for NPR, the New York Times, and the Washington Post.

The Media Research Center reports:

> Donald Trump was fact-checked 42 times from April to September, and none were on the True side, two were Half True, and 40 were Mostly False or worse. Forty to zero. Does that look nonpartisan to anyone? Add in the first quarter, and it's 57 to 0. Fully 15 of the 40 new False verdicts were the worst designation of "Pants On Fire," falling just short of the 17 False rulings.
>
> From April to September, President Biden was checked 19 times, and he was on the True side as often as the False side, seven and seven (with five Half Trues). For the year, it's nine on the True side and 11 on the False side (10 Half Trues).
>
> In that time frame, Kamala Harris was checked 17 times, and she was rated as True or Mostly True on six occasions, and as Mostly False or worse on eight occasions (six Mostly False, two False). She had three Half Trues. For the year, it's eight on the True side and nine on the False side (three Half Trues).
>
> Biden drew zero "Pants on Fire" warnings this year, and has only seven of those in the entire history of PolitiFact going back to 2007 (just one during his presidency). Kamala Harris has zero overall, and she was first elected statewide in California in 2010. Trump currently has 201. This is where you can see PolitiFact's editorial aggression, since Newt Gingrich has only twelve. Bernie Sanders has a perfect zero like Kamala.
>
> In the April to September time frame, Republicans were whacked as "Pants on Fire" 19 times, and the Democrats only once. Illinois Gov. J.B. Pritzker drew one — for saying on ABC's This Week that J.D. Vance is "getting known for his obsession with couches."

Please be careful about where you get your news. My choices for good news web sites are Daily Signal and Christian Post. I also look at Daily Caller, Washington Free Beacon and sometimes The Federalist.

By the way, I've start using StartPage as my search enginer, and it's so fun to see this blog appearing in the first page of results when I search for something that I specifically wrote about. I remember when Google used to work like that. But when Trump won in 2016, that all changed. I used to get over 1000 searches a day coming to this blog. Now it's about 1% of that per day.

And if you want to try an alternative to StartPage, try Qwant.

# FBI revises 2022 violent crime rates upward – up 6.6% from previous numbers

**Wintery Knight** · 11 October 2024 · Archived copy · Original

A strange thing about the secular left. You would expect them to want to be concerned about the safety of people who live in high crime areas. These people are often too poor to afford to move to safer neighborhoods. But if you look closely at the policies of secular left candidates like Harris and Walz, you see that they tend to take the side of criminals.

Here is an article from the New York Post about how crime rates have changed after nearly 4 years of Biden-Harris:

> Last month, new FBI data showed that reported serious violent crime (murder, rape, robbery, and aggravated assault) fell by 3.5% in 2023.
>
> But at the same time — and much more quietly — the FBI revised its earlier data for 2022, turning a reported decrease into a worrisome increase in violent crime.
>
> Last year, the media trumpeted the FBI's claim that reported violent crime had fallen in 2022 by 2.1%.
>
> But now the FBI admits that violent crime rose in 2022 instead, by 4.5% — off by 6.6 percentage points.

Although the Biden-Harris regime likes to quote FBI crime data, that data is based on crimes that are reported to the police. Many crimes are not reported to the police. There is another survey conducted by the Department of Justice's Bureau of Justice Statistics. It's called the 2023 National Crime Victimization Survey. They interviewed 240,000 to see if they were impacted by crime. And the latest report says this:

> Instead of the FBI's 3.5% drop in serious violent crime, the NCVS found a 4.1% increase in violent crime victimization from 2022 to 2023.
>
> While the FBI claims that serious violent crime has fallen by 5.8% since Biden took office, the NCVS numbers show that total violent crime has risen by an incredible 55.4%. Rapes were up by 42%, robbery by 63%, and aggravated assault by 55% during his term.
>
> The increases shown by the NCVS during the Biden-Harris administration are by far the largest percentage increases over any other three-year period, more than doubling the previous record.

Here's another article about crime from illegal immigration, reported in RealClear Politics:

> The new data on all the criminal noncitizens coming into the U.S. is shocking.
>
> The U.S. Immigration and Customs Enforcement (ICE) checks the background of illegal aliens they have in custody. But, the administration's letter to Rep. Tony Gonzales (R-TX) shows that as of July 21, 2024, ICE let 435,719 convicted criminals and 226,847 people with pending criminal charges in their home countries into the U.S.
>
> […]About 7.4 million noncitizens are in the "national docket data," so 662,776 is 9% of the total, and if one extrapolates the numbers to the homicide rate in this country, it strongly indicates that the government is letting migrants into this country who commit murder at a rate 50% higher than the rest of the U.S. population.
>
> And these numbers clearly underestimate the crime rate of these noncitizens. The noncitizens in the "national docket data" turned themselves in to border agents for processing or were caught. Those who don't turn themselves in are obviously far more likely to have something to hide from those doing the processing, so-called "gotaways," who are observed illegally entering the U.S. but not caught or turned back.

> These figures coincide with other data from the Arizona prison system and show illegal aliens commit crime at much higher rates than Americans or legal immigrants.

Now, you would expect elected representatives who are paid by taxpayers to allow those taxpayers to own legal firearms and to defend themselves from criminals without being persecuted. Sadly, there's no reason to think that a Harris-Walz regime would be supportive of law-abiding citizens owning weapons, or defending themselves from criminals.

This new article from the Daily Caller talks about how the Republican party is trying to appeal to gun owners to vote in the election, so they can avoid gun confiscation and facing criminal charges for self-defense against criminals:

> According to Vote4America, more than 10 million gun owners across the country are not registered to vote.
>
> […]For Republicans, these figures can be perplexing, but gun owners explained to the Caller that there is skepticism towards voting and politics as a whole in the community. Some believe that because they don't want the government in their business, then they shouldn't get involved by voting.

Personally, I know a lot of men like this. We have them in Christianity. These are the same people who try to do whatever involves the least amount of work, but they want to sound pious about it. They don't want to read apologetics books, but they instead cherry pick from the Bible in order to make their laziness and ignorance sound pious and holy. The same thing is happening with many male gun owners. They want to drink beer and watch football, but they also want to say words that make you think that they are patriotic. Their apathy will actually result in the end of the second amendment. Infuriating! But for now, let's just focus on getting them to vote, so we can save the Republic.

So how do Republican candidates intend to solve this apathy?

> To carry its message, Hunter Nation, alongside the NRA, has partnered with celebrities such as Ted Nugent, Donald Trump Jr. (a prominent hunting enthusiast) and the Duck Dynasty organization, Mark told the Caller. Similarly, Vote4America has teamed up with pro-gun personalities like Brooke Ence, Shawn Ryan, Andy Stumpf, Andy Frisella, Dan Hollaway, Shermichael Singleton, and Jason Alden to encourage gun owners to vote, senior adviser Baker Leavitt told the Caller.
>
> Mark expects these types of partnerships to pay off in a big way.
>
> In Wisconsin, according to Hunter Nation's data, 416,085 gun owners are low-propensity, at risk or newly-registered voters. Of that total, the organization expects to turn out 54,196, Mark said. Biden won the state in 2020 by 20,600 votes.
>
> In Michigan, the number of those potential voters is 452,471. The organization is estimating that it will turn out 70,142 in the 2024 election. Biden won the state in 2020 by 154,000 votes.
>
> The organization also expects to have a big impact in Georgia, where Biden won by about 11,000 votes in 2020. Hunter Nation hopes to turn out 122,913 of the state's more than 825,000 low-propensity or newly-registered gun owners, Mark said.
>
> In perhaps the election's most critical state, Pennsylvania, which Biden previously won by about 80,000 votes, the hunting group says their campaign projects to turn out at least 58,000 low-propensity gun owners.

I like this approach, because it's doing something to solve the problem. I hope that the Republicans can convince these second amendment non-voters to vote. If they can't, then the second amendment people are going to find out real quick what their apathy costs them.

# Christopher Hitchens debates William Lane Craig: Does God Exist?

**Wintery Knight** · 12 October 2024 · Archived copy · Original

Here is the video of the debate:

**TOPIC: DOES GOD EXIST?**

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

**WC opening speech:**

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws
– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)
– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument
– objective moral values are values that exist regardless of what humans think

– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

**CH opening speech:**

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus
– god wouldn't have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that's a bad design
– the universe is so vast, why would god need so much space, that's a bad design
– there is too much destruction in the universe, like exploding stars – that's a bad design
– the heat death of the universe is a bad design
– too many of the other planets don't support life, that's a bad design
– the sun is going to become a red giant and incinerate us, that's a bad design

3. hitchens' burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can't prove there is no god
– but they can prove there is no good argument for god

4. craig's scientific arguments don't go far enough, they only prove deism, not theism
– the scientific arguments don't prove prayer works
– the scientific arguments don't prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn't be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig's evidence was extraordinary

7. science can change, so craig can't use the progress of science
– it's too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god's existence should trump contradicting evidence
– but then he isn't forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don't believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

**WC first rebuttal:**

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you've got is agnosticism
– because CH did not claim to know there is no God
– and he gave no arguments that there is no God

CH's evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH's argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn't need to be efficient

CH's argument that god waits too long to send Jesus
– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH's argument that Craig's scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work

– all that deism denies is miraculous intervention

CH's argument that Craig has a burden of proof
– theism doesn't need to be proven with certainty
– must only prove best explanation of the evidence

CH's citation of Craig's book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH's rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH's rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for  minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH's argument about heat death of the universe
– duration of design is irrelevant to whether something was designed
– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

**CH first rebuttal:**

it's not agnosticism
– if there are no good arguments for theism
– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old

– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do
– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

**WC cross-examination of CH:**

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

**CH cross-examination of WC:**

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

**WC second rebuttal**

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing
– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

**CH second rebuttal:**

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon
– that is why there are so many religions

**WC concluding speech**

no arguments for atheism presented

What CH has said during the debate:

– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it's just a genetic predisposition to act in a certain way – that's not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

**CH concluding speech**

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

**Further study**

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

# Which side of the abortion rights debate is backed by scientific evidence?

**Wintery Knight** · 13 October 2024 · Archived copy · Original

Once upon a time I didn't know much about the case for abortion rights or the case for the right to life of unborn children. My reason for not reading much about it is that I thought that it was kind of a subjective issue. But, I started a project to read 1-2 books on every conceivable topic, including one on abortion. Lo and behold, it turned out that one side did have the backing of science.

This article from The Public Discourse explains: (links removed)

> The following are typical examples—only three of the many, many we could cite. These are from standard texts by embryologists, developmental biologists, and microbiologists:
>
> "Human life begins at fertilization, the process during which a male gamete or sperm unites with a female gamete or oocyte (ovum) to form a single cell called a zygote. This highly specialized, totipotent cell marked the beginning of each of us as a unique individual." "A zygote is the beginning of a new human being (i.e., an embryo)." Keith L. Moore, The Developing Human: Clinically Oriented Embryology, 7th edition.
>
> "Fertilization is the process by which male and female haploid gametes (sperm and egg) unite to produce a genetically distinct individual." Signorelli et al., Kinases, phosphatases and proteases during sperm capacitation, Cell Tissue Research.
>
> "Although life is a continuous process, fertilization (which, incidentally, is not a 'moment') is a critical landmark because, under ordinary circumstances, a new, genetically distinct human organism is formed when the chromosomes of the male and female pronuclei blend in the oocyte" (emphasis added; Ronan O'Rahilly and Fabiola Mueller, Human Embryology and Teratology, 3rd edition.

The genetically distinct part is key – this unborn child is has a different DNA signature (a human signature) than either the mother or the father. Nothing will be added or taken away from this new signature as the unborn child grows. It never changes.

More:

> These authorities all agree because the underlying science is clear. At fertilization—or, more precisely, when the sperm (a male sex cell) fuses with the oocyte (a female sex cell, more commonly referred to as an egg)—each of them ceases to be, and a new entity, one that is both genetically and functionally distinct from either parent, is generated. This new entity, initially a single totipotent cell, then divides into two cells, then (asynchronously) three, then four, eight, and so on, enclosed all the while by a membrane inherited from the oocyte (the zona pellucida), which then dissolves during implantation, allowing for continued growth in the direction of maturity as a member of the species. Even prior to implantation, however, these cells and membrane function as parts of a whole that regularly and predictably develops into the more mature stages of a complex human body.
>
> How do we know that the result of sperm-oocyte fusion is a new entity, rather than a continuation of the oocyte? We know that a new entity exists because, once the sperm penetrates the oocyte, a completely new trajectory of biological development commences. The biological activity of an oocyte is directed toward successful fertilization; the biological activity of sperm is directed toward penetration of an oocyte. The biological activity of the new entity that results when sperm and oocyte fuse, however, is directed toward nothing less than the development of a mature human organism, distinct from either parent. Further, this new entity's activities are directed not by instructions from the mother's body, as some people wrongly suppose, but by its own unique set of instructions, especially the blueprint for development contained in its unique genetic

> material. The mother's body recognizes the zygote and then the embryo as an entity distinct from itself. In fact, the embryo must send out chemical signals to prevent the mother's immune system from attacking it. The embryo also emits chemical signals that induce changes in the lining of the mother's uterus to enable successful implantation.
>
> If this embryo is provided a suitable environment, nutrition, and protection from deliberate attack, serious injury, or disease, it will develop to the mature stage of a human organism. Thus, from the zygote stage onward this distinct, new organism has all of the internal resources—in its genetic and epigenetic structure—needed to develop itself (or, rather, himself or herself, since in the human sex is determined from the very beginning) to the mature stage of a human organism. At no point after fertilization—implantation, gastrulation, birth, puberty, etc.—does a fundamental change in biological trajectory occur. These subsequent stages of development are simply the unfolding of the zygote's inherent dynamism toward human organismal maturity. This shows that the zygote already is a human organism—a member of the species Homo sapiens—albeit at an early stage of his or her development.

So, since I like to win arguments with science, I just took the side of the debate that was backed by science. I really hate to lose debates, you know. I really like to cite scientific evidence when I'm debating.

The crime of abortion, it seems to me, is that you are depriving a human being of his or her future, because of your convenience right now. Human beings don't have the right to take away the futures of other human beings because they want to be unburdened by the results of their own actions. We shouldn't resort to violence in order to escape responsibility for our own actions. In almost every case, (except to save the life of the mother), killing the unborn child isn't justified. It's actually very scary to me that anyone would think that hurting other people was a reasonable response to one's own diminished happiness. How did we ever get to a place in society when people don't think that taking responsibility to care for the unborn child is morally better than killing the unborn child? It's a baby for goodness sake. We ought to be serious about setting up our lives and controlling ourselves so that we never hurt an unborn child.

# Teacher wins case after being fired for not using student's pronouns

**Wintery Knight** · 14 October 2024 · Archived copy · Original

Good news! I saw an article in the Daily Signal about a teacher in Virginia who was fired for not using a student's preferred pronouns. Well, the teacher sued the school board, and it went all the way to the Virginia Supreme Court! Finally, after 5 years of litigation, the school board capitulated and agreed to settle the case for $575, 000. Let's have some happy news for a change!

Here's the article from Daily Signal:

> In 2018, one of Vlaming's female students at West Point High School began identifying as a transgender male. Although Vlaming consistently used the student's preferred name, the French teacher carefully avoided using third-person pronouns so as not to violate his own religious beliefs.
>
> That courtesy wasn't good enough for West Point's school board and school administrators. When Vlaming refused to use preferred pronouns, they fired the teacher for "creating a hostile learning environment."
>
> That's right. Vlaming wasn't fired for what he said. He was fired for what he didn't—and couldn't—say.
>
> Represented by Alliance Defending Freedom and a local attorney, Vlaming sued in state court in 2019, asserting claims under Virginia law and the Virginia Constitution.
>
> […]The majority decision, written by Justice D. Arthur Kelsey, was a landmark victory for religious freedom and free speech. The state Supreme Court held that the Virginia Constitution protects religious exercise—not just religious speech—unless it threatens the public's safety or order.

I thought this part was interesting:

> In so ruling, the state's highest court rejected U.S. Supreme Court Justice Antonin Scalia's highly criticized majority opinion in Employment Division v. Smith. That decision gutted religious freedom when a challenged law could be considered both neutral and generally applicable to everyone.

A lot of people name Antonin Scalia when asked who the most conservative SCOTUS Justice is, but I always say Clarence Thomas. He's the best, and I wish we had 9 of him on the Supreme Court. Scalia inconsistent, just like Barrett, Gorsuch and Kavanaugh.

More:

> The court also ruled for Vlaming on his claim of compelled speech. Merely "objectionable" or "hurtful" speech, it emphasized, poses no threat to public safety or order.
>
> Vlaming's refusal to use preferred personal pronouns based on his Christian religious beliefs thus was protected even if others subjectively took offense to his silence, Kelsey wrote in the opinion.
>
> […]"[I]f liberty means anything at all," Kelsey wrote, "it means the right to tell people what they do not want to hear. … All the more, it means the right to disagree without speaking at all."
>
> Seeing the writing on the wall, the West Point School Board finally relented. In a settlement finalized Monday, the board agreed to pay Vlaming $575,000 in damages and attorneys' fees. It also agreed to expunge Vlaming's firing from his employment record.

And this part I really liked – the school board changed their policy to match the law of Virginia:

> And for good measure, the school board took the initiative and changed its policies to conform to new educational policies from Virginia Gov. Glenn Youngkin, a Republican, which protect free speech and parental rights.

Can you imagine how much it must cost to fight a case like this for 5 years, though? This is why I am so careful about saving money for the case where I get sued. I have to do with a lot less goodies day by day. It's a real struggle to say yes to a board game here, or a Steam game there. Instead, I like to put money into savings, in the case where someone like this female student decides to sue me like this for not saying the things that she demands that I say.

It's shocking that I have to live like this in America, but leftists are dangerous people. They have no mercy on those that cause them to feel bad. It doesn't bother them at all to take someone's job if that person refuses to play along with their woke delusions. I guess that's better than using violence, but honestly, leftists are often using violence to get their way as well. It's quite a scary time to be alive.

What I've done, to mitigate the risk, is just avoided talking to people who are likely to be offended. And that's just people who are in the traditional Democrat voting groups, like the young unmarried female student in the story. They're just not safe to talk to. Their first instinct when confronted with normal, moral Christian men is to drag them to court, and have the court punish good men for their moral and spiritual convictions.

I don't like that I have to censor myself and stop doing the things that I want to do, just because leftists are offended. And since society seems to side with them over me – dragging Christians into court because we take the Bible seriously – I've learned just not give them the same friendliness and openness that I give to more moral and trustworthy people. I wouldn't tell Stalin what I really think, and I wouldn't want to be Stalin's friend. Stalin is not a good person. Stalin is not safe to make friends with.

I just want to make one general point about this social trend of letting young secular leftists attack Christian men because society is offended by moral leadership and spiritual leadership. Society is fine with Christian men paying taxes. They love when Christian men protect and provide for women. But they DO NOT want those same men to lead anyone morally and spiritually. And I'm going to tell you right now – Christian men are tired of being used by society as ATMs. We are not interested in dating and marriage unless our leadership is respected.

The more that good Christian men see society trashing us for our desire to lead on moral and spiritual issues, the less interested we are in getting married and raising children. We are not interested in just paying the bills, and letting the feelings-oriented people, and their allies in the courts, trample all over us. We will opt out of that.

# What would Kamala Harris do as president? Her record on policy issues

**Wintery Knight** · 15 October 2024 · Archived copy · Original

Kamala Harris has received over $200 million of donations, some from Democrat billionaires, and many more from first time donors. It's not going to be easy for Republicans to beat her in November with her huge advantage in fundraising. But, one thing we can do right now is to take a look at her record on issues, and then share these stories with our friends and family members.

Here's the first article from Daily Signal:

> The "Biden Accountability Tracker" presents a list of "disturbing and harmful actions," including "each significant policy decision made, executive action taken, or regulation promulgated by the administration that hurts the American people," the organization's letter to lawmakers explains.
>
> "Our organization has kept a rolling record of the failures of the Biden-Harris administration since 2021, from reversing Trump-Pence border policies, to pushing an expensive and burdensome climate agenda, failing to protect women's sports, and using the FDA to make the dangerous abortion drug mifepristone available by mail," Teller told The Daily Signal. "Kamala Harris owns each and every one of these failings, along with her own record from her time as California attorney general and as a senator."
>
> "It is clear her policies are left of Biden and that she has it out for conservatives and the freedom-loving community," Teller added.
>
> Teller's reference to Harris' having it out for conservatives touched on the vice president's record from her time as California attorney general. For example, Harris directed her office to search the home of pro-life investigative journalist David Daleiden, who had exposed Planned Parenthood officials' selling aborted baby body parts for profit. She prepared a legal case against Daleiden, which her successor as California attorney general—now Health and Human Services Secretary Xavier Becerra—brought against the pro-life journalist.
>
> Harris also demanded sensitive donor information from two conservative organizations, Americans for Prosperity and the American Freedom Law Center, after her office had leaked sensitive donor information and after some on the Left had launched a video game in which players acted out a shooting at Americans for Prosperity headquarters.

If you look through that issue tracker, you're bound to find something to convince an independent voter not to vote for Harris. Stuff like climate regulation (which caused our energy prices to skyrocket) and open borders (which caused housing prices to increase due to a shortage of housing) should be of interest to anyone.

Here are a few more of Kamala Harris' specific actions, reported by the Daily Signal:

> A newly resurfaced memo put out by Vice President Kamala Harris' 2020 presidential campaign outlines her plan to "fundamentally transform" the criminal justice system by reducing penalties for criminals.
>
> In 2019, Harris promised to end cash bail, get rid of court-ordered fines, expunge the records of some felons, discontinue federal mandatory minimum sentences, and to place greater federal scrutiny on local police departments, according to a memo resurfaced Thursday by the Washington Free Beacon.
>
> […]"It is long past time to re-envision public safety by strengthening and supporting our communities and drastically limiting the number of people we expose to our criminal justice system," the memo reads. "As president, Kamala will fundamentally transform how we approach public safety."

And ending cash bail, which has already been tried in many Democrat cities:

> “Excessive cash bail disproportionately harms people from low-income communities and communities of color,” Harris’ 2019 memo reads. She characterized cash bail systems as “criminalizing poverty” and vowed to end them.
>
> Ending cash bail has led to a backlash in some major cities, with New Yorkers in February 2022 overwhelmingly supporting tightening bail laws following an increase in crime, the New York Post reported. The Texas Organizing Project, a George Soros-backed nonprofit that opposes cash bail, bonded out a man who allegedly went on to murder six people and shoot three others in December 2023.

I remember that she’s a big supporter of “defunding the police” as well, but that’s not all:

> She also supported restoring voting rights to all those who have served criminal records, per the memo, and advocated for more federal oversight of local police departments, citing alleged “racial profiling” and “excessive force.”
>
> The now-vice president proposed a “National Police Systems Review Board” that “would collect data and review police shootings and other cases of severe misconduct,” according to the memo. She also promised to provide the Department of Justice with resources to provide grants to fund greater scrutiny of officers who shoot suspects and pledged to reinstate an executive order restricting the sale of certain military equipment to police departments.

So, it’s not enough for her that unvetted illegal immigrants are coming into the country in droves. She looks at the taxpayers who pay her salary, and she thinks “I side with the killers and the rapists against those taxpayers – my job is to help the killers and the rapists, and not the taxpayers who pay my salary”. Do you think that independents would care about that? I think they would.

# Will a Harris-Walz regime take gender-confused kids from “non-affirming” parents?

**Wintery Knight** · 16 October 2024 · Archived copy · Original

A very, very interesting article about the Biden-Harris regime came out on Monday in the Daily Caller. I think it’s really important for Christians to take a look at this article, and understand that voting in elections is not just voting for someone you like – someone who agrees with you. It’s really often about voting against policies that could really hurt you. And hurt your children.

Here’s the article from Daily Caller:

> While crafting its foster care rule finalized in April, HHS officials took inspiration from social workers in Cuyahoga County, Ohio, who spent years pioneering a program that strong-arms parents into affirming whatever confused beliefs children express about their gender. Parents who decline risk losing a voice in their child’s life.
>
> The program developed in Cuyahoga County using federal grant funds provided the HHS’ Administration for Children and Families (ACF) with an ideal model for infusing gender ideology into foster care and social services, the Daily Caller News Foundation discovered in reviewing hundreds of documents and emails obtained via public record requests.

Note that this is a federal rule – it will apply in all 50 states. So living in a red state will not protect you from having your children taken from you:

> The Biden-Harris administration’s new federal rule directs states to ensure foster children who identify as LGBTQ are placed in affirming homes. These “designated placements” must commit to creating an environment that supports a child’s “status or identity,” including through access to age-appropriate “resources, services, and activities.” To gender activists consulted by the Biden administration, being “affirming” means assuming the child knows best about his or her identity — even if what he or she claims to want is life-altering medical procedures like hormone blockers, cross-sex hormones and surgeries to appear more like the opposite sex.
>
> To Cuyahoga County child protective services, being affirming often means providing kids access to items like chest binders or prosthetic packers that mimic a penis, according to an information sheet for caregivers on the Cuyahoga County Division of Children & Family Services (DCFS) website.

So, parents are “good enough” to pay for transing their kids, but not good enough to parent their kids. The parenting of the kids should be done by secular leftists in government, who are also paid by the parents, through their taxes. So that’s all that parents are good for – to pay people to parent their kids, because they don’t know what’s best for their kids.

And parents are already facing the effects of these policies:

> When the rule was announced in September 2023, it quickly faced resistance. A coalition of 19 Republican states slammed the proposed rule, arguing it would infringe on religious liberty and free speech protections. Religious groups warned it would restrict faith-based providers.
>
> Those concerns were well-founded: In states like Washington and Vermont, Christian couples have lost their foster care licenses due to similar state regulations. But as the activists consulted in the development of the federal rule show, these objections only scratch the surface of problems with the rule.
>
> Parents in a handful of states have already sounded the alarm, claiming local authorities deemed them unfit

> guardians for refusing to allow their children to undergo a gender transition. In light of federally funded programs, like the one operating in Cuyahoga County, stories like these sound more like harbingers of an organized effort to undermine the family than one-off incidents.

The article talks about how non-parent adults will determine whether the child is transgender – by asking them questions about their feelings. The child will determine whether they are transgender or not.

This part was interesting – your Christian faith will have to go:

> The program is designed to help parents and caregivers of children already in the welfare system, or "at risk" of entering, become affirming, according to the AFFIRM.ME guide. The program also pushes families to "reconcile" their values, including their faith, to accept their child's identity.

Not that this program is already in effect in certain states, and if Harris-Walz wins, there is no reason to think this will not become the law in all 50 states:

> YAP is currently being implemented in California, New York, Pennsylvania and Missouri, along with Ohio, according to the SOGIE Center. Of the 34 Cuyahoga County families who started the program between 2018 and 2021, seven cases were successfully "closed" when parents stopped opposing their child's gender-bending desires, according to SOGIE Center data.

Christianity and conservatism are obstacles for the government to neutralize:

> "I mean, they don't say anything to my face anymore about it and they stopped being super religious around me because they used to," said one young person who was part of the program in Spring 2021, according to the data sheet. "I don't know what was their problem, but they used to try to push a lot of weird religion stuff on me."
>
> Another adolescent reported having a "very conservative" family approve of transitioning after going through YAP. "So I could start testosterone and things of that sort soon," the youth said. "And [mom is] helping me with the name change."

What was interesting about this article is how all the people who are trying to push transgenderism onto children were progressive women! And they were working in the Biden-Harris administration, with the goal of turning children against their parents.

**Christians sitting out the 2024 elections**

I've been reading a lot of comments on Twitter from pietistic Christians who are talking about not voting in this election, because they don't like either of the candidates. And it's really causing me some concern. They think they are saying something pious and intelligent when they talk about not voting because neither candidate reflects their values. They don't seem to grasp that one of the candidates will trample on their basic human rights, such as the right to free speech, religious liberty and parental authority.

I've talked to many of these pietistic people whose children left the faith. I ask them "did you study apologetics so you could answer their questions?" And I get these rationalizations about why learning apologetics would be a waste of time, like "Children are more liberal these days than we were" and "they'll come back to the church when they have children" and so on. Maybe you are tempted to take these rationalizations at face value. But I see it more clearly now – the pious language is just being used to excuse them from having to do anything that doesn't make them happy. And in the same way, this Pollyannish whistling-past-the-graveyard isn't really anything they know. It's just their desire to virtue signal, while still leaving their pursuit of comfort and ease unchallenged.

I have no doubt that when their rights are trampled by the secular left, they will find some pious way to shift blame and excuse themselves. They will be satisfied with their virtue signaling. The question though is what will God think about it? I don't think he will like it at all.

# The real Kamala Harris revealed in Fox News interview with Bret Baier

**Wintery Knight** · 17 October 2024 · Archived copy · Original

Kamala Harris did a 25-minute interview with Bret Baier on Fox News, and I have the clips. She dodged every single question, and accepted zero accountability for the policies of the Biden-Harris regime, during the past 3.5 years . She denied the existence of every problem facing American voters. America is in for disaster if this unqualified person is elected president.

Here is a 10-minute clip on the Biden-Harris open-borders immigration policy:

Here is the full video: (25 minutes)

And here's an article for those are just reading about it, from Daily Caller:

> Fox News host Bret Baier stopped Harris during an interview Wednesday evening as she struggled to explain how her presidency would move the country "forward" despite her already being in a position of power.
>
> The interview marks Harris' first appearance on the network during her campaign, following a busy week of media appearances on networks like CBS and ABC. On "Special Report with Bret Baier," the host pressed Harris on her campaign slogan "A New Way Forward" and her claim that "it's time to turn the page," to which she initially responded by explaining she was moving on from the "last decade" of former President Donald Trump's "rhetoric."
>
> "More than 70% of people tell the country is on the wrong track. They say the country is on the wrong track. If it's on the wrong track, that track follows three and a half years of you being vice president and President Biden being president. That is what they're saying, 79% of them. Why are they saying that? If you are turning the page, you've been in office for three and a half years," Baier said.
>
> "And Donald Trump has been running for office since — " Harris began.
>
> Baier pushed back and pointed out to the vice president how she's been "the person holding the office," with Harris then claiming that the host understood what she was talking about.
>
> "C'mon, you and I both know what I'm talking about. You and I both know what I'm talking about," Harris said.
>
> "I actually don't. What are you talking about?" Baier asked.

Breitbart News notes:

> Since 2021, the Biden-Harris administration reversed or undid many of the Trump-era border policies; they suspended the Remain in Mexico policy on the administration's first day in office, for example.

She caused this mess, and now she won't apologize for it, or accept responsibility for it. This is not someone that should be elected to the White House. She won't solve problems. We have no evidence that she knows how to define and resolve problems.

On this blog, and on podcasts, I've tried to point out the problems with the policies that Kamala Harris supports. But this interview really showed me the problem with the person. Kamala is not going to be able to solve any problems, because she won't admit that there are any problems. When she is told that she's been in charge for the last 3.5 years, she shifts the blame to other people who are not in charge. When she is asked for specific solutions to the problems caused by the Biden-Harris regime, she says that she has no policy differences with Joe Biden.

I almost wonder if she said this because she doesn't know what a policy is. When I watch this interview, I could really believe that Kamala Harris has no education or work experience of any kind. If this were a candidate for a job that I was interviewing for, I would say "this person cannot do any useful work, she just tries to paint a picture of herself with words". This might be OK for an actor or entertainer, but not for someone who will be setting policies for the next 4 years.

# What will life be like for Christians in a Harris-Walz secular left regime?

**Wintery Knight** · 18 October 2024 · Archived copy · Original

It's become fashionable in our time to claim that facism is an emergence of the right, as if somehow, you get authoritarianism from private property, the rule of law, unbiased courts and free trades. Actually, when you look at history, it's always the secular left that wants to force individuals to agree with their ideology. And they don't treat religious people who dissent very well.

Let's take a look at a couple of stories from this week from a country that is further down the road of secularism and leftism.

Here's the first story from Christian Post:

> A Christian pastor was arrested after he made comments about Islam and the binary nature of sex while street preaching outside Bristol University.
>
> In response to a question from a Muslim member of the public, Dia Moodley said he believed there were differences between the moral standards of the God of Islam and the Christian God.
>
> During his preaching he also expressed the belief that God made humans male and female and that this truth should not be denied.
>
> The Alliance Defending Freedom (ADF UK), which is supporting Moodley, said he was arrested and detained for 13 hours by Avon and Somerset Police in March.
>
> The organization said that Moodley was pushed off his short stepladder and had a sign snatched from his hands before being arrested by attending officers.
>
> Four of his signs were handed to staff at Bristol University, who disposed of them under the instruction of the officers.
>
> Reacting to the incident, Moodley said, "Two-tier policing is sadly not a fiction or some conspiracy theory, it's a reality that Christians in the U.K. have been experiencing for years.
>
> […]"The world is looking at the dismal state of free speech in the U.K. with shock. What happened to me reflects a wider trend of increasing state censorship in the U.K. and across the West."

Yes, so one of the known effects of importing millions and millions of unskilled immigrants is that the laws will change so that they get special treatment, whereas anyone who points out the effects of thesse immigration policies will be branded a racist. Recently, I talked about how the UK police advised armed Muslims to hide their weapons in mosques to avoid being arrested, but they brutally beat unarmed non-Muslim protesters who objected to violent crimes being committed in their neighborhoods. And whenever Christians speak publicly against the truth of Islam, they are arrested and imprisoned. Just ask Hatun Tash, who we interviewed on the Knight and Rose Show. Christians are always the losers in cases where the secular left wants to improve "diversity" by importing a bunch of unskilled immigrants – who tend to vote for more spending on welfare and for defunding the police.

Anyway, here is the second article, also from Christian Post:

> A British army veteran who served in Afghanistan was found guilty today of praying silently near an abortion clinic in England.
>
> Adam Smith-Connor breached a Public Spaces Protection Order by this action, according to the ruling at Poole Magistrates Court in the town of Poole near Bournemouth, Dorset, England.
>
> […]The court found Smith-Connor guilty for an act of a "disapproval of abortion," though he was only

> thinking about his son, who had been aborted many years before, according to Alliance Defending Freedom (ADF) International.
>
> Smith-Connor had slightly bowed his head and clasped his hands in prayer on a public green in a buffer zone near the abortion facility in Orphir Road, Bournemouth in November 2022. During a confrontation with police officers that he recorded, they asked him, "What is the nature of your prayer?"
>
> The buffer zone had been previously legalized under a Public Spaces Protection Order enforced on streets near the abortion clinic. The intent of the buffer zone had been to stop pro-life beliefs being expressed near the facility, including offering help or prayers to women in crisis pregnancies, according to a press statement by ADF International.
>
> Defense attorneys argued that Smith-Connor's prayerful thoughts, beliefs and opinions were not a crime, especially as he stood peacefully and silently on a public street. He stood behind a tree, spoke to no one and had his back to the facility.
>
> The court also ordered the father of two children to pay prosecution costs amounting to £9,000 ($11,700 USD).

How close is the UK government that does these things to Kamala Harris? They are sending over members of the ruling secular left party to help her in her election campaign in swing states!

Now, many Christians who have not too closely into the policy differences of the candidates will say "Oh, but Kamala would never do such things, after all, she laughs a lot and seems to have a lot of joy!" But those Christians are just uninformed. It was Kamala Harris, when she was the attorney general of California, who colluded with abortion providers to raid the homes of pro-life activists.

Here is the Tennessee Star to refresh your memory:

> In March 2016, top Planned Parenthood officials in California eagerly emailed one another about an upcoming meeting with the state's then-attorney general, Kamala Harris. The meeting carried so much import that the Planned Parenthood officials met with Harris' staff ahead of time "to discuss prep," emails reviewed by The Daily Signal show.
>
> About two weeks later, on April 5, 2016, California Department of Justice authorities raided the home of a pro-life journalist in his late 20s—David Daleiden, the head of the Center for Medical Progress, who had recently published videos allegedly showing Planned Parenthood officials gruesomely describing how they extract aborted-baby body parts. Daleiden says the videos prove that Planned Parenthood was selling the aborted baby body parts for profit.
>
> How had Daleiden done this? By studying up on fetal tissue and stem cells, posing as a fetal tissue procurer, infiltrating secretive abortion conferences so protected that they required background checks, schmoozing and sweet talking abortionists, nurses, and researchers over lunch, drinks, and dinner, and wearing hidden cameras to capture what no other journalists had.

This is what we can look forward to, in a Harris-Walz regime. Why think that our secular left fascists would be any different from the secular left fascists of the UK? And this isn't an insult, I'm literally describing the sort of person who uses government to trample of the basic human rights of people who disagree with their policies.

# New study: men experience domestic violence at the same rate as women

**Wintery Knight** · 19 October 2024 · Archived copy · Original

I've noticed that young women are quite frightened of men, because they are taught that men are dangerous. I'm concerned that these beliefs will deter women from choosing men wisely, and marrying them. One way to counter these fears about "domestic violence" is to take a look at the studies, and see who is really doing the violence. Is it always men, or is there a balance?

The study was published in the Journal of Aggression, Maltreatment & Trauma.

Here's the abstract:

> Recent debates surrounding intimate partner violence (IPV) have focused on its gender symmetry and gender-oriented nature. These debates center on findings from various data sources, like victimization or self-reported surveys and police-based reports. Data by Statistics Canada, from 1999 to 2014, has shown that the prevalence of IPV is similar for male and female victims, except for sexual assaults. However, there has been a paucity of studies on the severity and risk factors of IPV against men by female partners. Thus, this paper examines the severity of and risk factors for physical IPV against heterosexual men in Canada using the General Social Survey (Victimization) data of 2014. This study revealed that there is a symmetry in the experiences of physical violence between male and female victims. This study also revealed that male victims experience more severe violence than female victims. Using binary logistic regression analysis, years of dwelling together, the victim's age, childhood victimization, and marijuana use were found to predict physical IPV against heterosexual men. This paper concludes with suggestions about how these predicting factors can be used to identify male victims and the need for a more inclusive approach toward addressing IPV, which should include male victims.

The key points for us:

- scholars typically ignore violence against men committed by women: "However, there has been a paucity of studies on the severity and risk factors of IPV against men by female partners."
- men and women commit domestic violence at roughly equal rates: "This study revealed that there is a symmetry in the experiences of physical violence between male and female victims."
- Men are the victims of more severe violence than women: "This study also revealed that male victims experience more severe violence than female victims."

This confirms data from a blog post I wrote a long time ago (2011) about this issue.

I found that:

> Data from Home Office statistical bulletins and the British Crime Survey show that men made up about 40% of domestic violence victims each year between 2004-05 and 2008-09, the last year for which figures are available. In 2006-07 men made up 43.4% of all those who had suffered partner abuse in the previous year, which rose to 45.5% in 2007-08 but fell to 37.7% in 2008-09.

That's the UK.

And:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family

> violence.

That's Canada.

It's interesting to note that the police and the courts do not acknowledge that women commit domestic violence. Whenever there is a report of domestic violence, the man is ALWAYS assumed to be the attacker, and ALWAYS arrested and removed from his home. That is the way that domestic violence works, according to the famous "Duluth model". The Duluth model actually discourages men from getting into relationships that lead to marriage. Men don't want to be attacked by women, and then treated as the aggressors by police.

Another factor also deters men from relationships and marriage: courts that are biased against men. When there is domestic violence, women are treated far more leniently than men. I blogged about a study about this recently, and found:

> The estimated gender disparities are strikingly large, conditional on observables. Most notably, treatment as male is associated with a 63% average increase in sentence length, with substantial unexplained gaps throughout the sentence distribution.

I see stories all the time where women are violent, and get no jail time. Here is one story from January 2024 and here is another from March 2024.

Men do look at these studies, and they decide on their life goals accordingly. Don't blame men for aligning their goals and decisions with the way that the world really is. If women want men to engage the way that men used to, they should stop being so defensive and fix the problems that are deterring men from relationships.

# Biden-Harris regime sues states that want to remove non-citizens from voting lists

**Wintery Knight** · 20 October 2024 · Archived copy · Original

In this post, I have two articles that may surprise you. Democrats seem to have an obsession with demanding that everyone agree that they don't steal elections. Their words say that they want free and fair elections, where only citizens vote, and every vote is counted. That's a wonderful goal. But do their words match their actions? Let's take a look at some news stories, then you can decide.

Here's the first article from the Washington Times:

> The Biden administration sued Virginia on Friday over the state's effort to remove noncitizens from its voting lists, arguing the move violated a federal law that bars changes to the rolls so close to an election.
>
> Republican Gov. Glenn Youngkin in August ordered state officials to conduct "daily updates" to remove ineligible voters, including felons and those who are "unable to verify that they are citizens."
>
> The Justice Department said that amounts to a formalized cleansing of the voter rolls, which it said violates a 1993 law on voter registration.
>
> […]Mr. Youngkin, in a statement, blasted the case.
>
> "With less than 30 days until the election, the Biden-Harris Department of Justice is filing an unprecedented lawsuit against me and the Commonwealth of Virginia, for appropriately enforcing a 2006 law signed by Democrat Tim Kaine that requires Virginia to remove noncitizens from the voter rolls," he said.
>
> He said the noncitizens Virginia cleaned from its rolls had previously declared "themselves a non-citizen" and then registered to vote.

And it's not just Virginia, it's Alabama, too:

> The federal lawsuit against Virginia follows another one the Justice Department filed against Alabama, which flagged 3,251 names it moved to its inactive voter list on Aug. 13 — 84 days before the election.
>
> Alabama used state records where someone indicated on an unemployment form or an application for a driver's license or identity card that they weren't a citizen.

Let's see another story and make sure that I'm understanding their actions correctly.

Here's an article from Daily Signal:

> After requesting citizenship status information about registered voters in Florida, and not receiving it from federal agencies as required by law, Florida sued.
>
> In September, Florida requested information from the Department of Homeland Security and its subagencies about citizenship status of a subset of registered voters it identified and its request was denied.
>
> One month later, a coalition of attorneys general, including Florida Attorney General Ashley Moody, called on DHS Secretary Alejandro Mayorkas to provide the requested information, after multiple states, including Texas and Florida, also asked for similar information. They made the requests as multiple states also removed thousands of noncitizens from their voter rolls.
>
> On Oct. 16, Moody sued Mayorkas and DHS in U.S. District Court Northern District of Florida Pensacola Division "for refusing to verify immigration records for the State of Florida to ensure voter-roll integrity."
>
> Under the Biden-Harris administration, millions of illegal border crossers "have flooded into the country," Moody said. "Florida has an interest in ensuring that only American citizens are registered to vote. Recently,

> the state identified registered voters who may not be U.S. citizens, and DHS refuses to provide information necessary to determine their immigration status." Moody sued "to ensure noncitizens are not on the voter rolls."
>
> "Voting is a right granted to American citizens—not illegal immigrants or other noncitizens," she said.
>
> The 16-page lawsuit cites federal and state law related to maintaining accurate voter registration records, federal government agencies' legal requirement to ensure only citizens are voting in elections, among other provisions. "Because the federal government is refusing to comply with these obligations and frustrating Florida's ability to maintain the integrity of its elections, Florida files this suit," the lawsuit states.

So what do we learn from this?

Well, I think it's important for everyone who doesn't want communism to get out there and vote in November. Why? Because the best way to prevent one party from cheating in an election is to make sure that the election is not close. If it's not close, then they can't cheat. So, make sure that you have a plan to vote, and make sure that you're convincing the people around you to vote against communism, too. If it's not close, then they can't cheat.

# Comparing the records of Donald Trump and Kamala Harris on inflation

**Wintery Knight** · 21 October 2024 · Archived copy · Original

It's election time, so I thought it might be a good idea for everyone to get some data on one of the most pressing problems Americans are facing, and that's inflation. People keep saying that the rate of inflation is coming down, but the prices are still way higher than they used to be. So, who did a better job of controlling inflation? Trump, during his 4 years, or Kamala, during her 4 years?

This article is from the Wall Street Journal:

> Kamala Harris couldn't explain during her interview with Fox News's Bret Baier this week why she'd be better on the economy and inflation than Donald Trump. The Vice President instead invoked the expert wisdom of progressive economists. That wisdom is worth a closer look.
>
> […]A nearby chart shows the inflation trend during the Trump and Biden presidencies. Inflation averaged 2.1% annually between 2017 and 2019, compared to 5.1% under Mr. Biden. (Inflation declined to 1.2% in 2020 amid the Covid lockdowns.) Deficits totalled $2.4 trillion during Mr. Trump's first three years compared to $5.8 trillion during Mr. Biden's.
>
> […]In March 2021, Democrats stoked consumption… with their $1.9 trillion American Rescue Plan Act…
>
> The bill was largely composed of transfer payments, including $1,400 checks per person, $3,600 per child tax credits, an extra $300 a week in unemployment benefits, a 15% increase in food stamps, rental assistance and more. Such handouts discouraged unemployed Americans from returning to work since they could earn as much not working.
>
> President Biden further loosened the spending spigot with executive actions, sweetening food stamps and waiving monthly student loan payments. A Congressional Budget Office report this week noted that the 2021 food-stamp boost likely reduced the labor supply since people received fewer benefits the more income they earned.
>
> This unprecedented helicopter drop of money, aided by the Federal Reserve, kicked off the highest inflation in 40 years.

And the article concludes:

> Ms. Harris has adopted the Biden spending agenda and more. Mr. Trump is no fiscal conservative, but on deficits and inflation his first-term record is far superior to the four years of Biden-Harris.

Remember, Kamala was asked what she would do differently than Biden, and she said that she wouldn't do anything different than Biden. Now, some people might say that's because she doesn't know enough about policy to know how to answer that question, but let's just take her at her word, and expect 4 more years of Biden's record on inflation.

The nice thing about a Kamala victory is that the people who will have to pay the most are the people who spend a lot of money now. Especially people who just don't have the willpower to stop spending money on things they don't need. We have a $36 trillion debt. Interest on the debt will start to crowd out discretionary spending like spending on welfare programs. So, it's going to be harder for people who depend on collecting welfare to make ends meet. I'm looking forward to seeing people with high burn rates have to cut their spending, because of the consequences of their votes.

# Elderly Americans being evicted to make space for illegal immigrants

**Wintery Knight** · 22 October 2024 · Archived copy · Original

If I could get young people to accept one thing about the secular left, it's that all the "nice" things that they talk about are always at other people's expense. As soon as you ask them to solve a problem for someone with their own costs, efforts and risks, they say "I was thinking that we could have a systemic solution". They're always spending other people's money, risking other people's safety.

Here's an article from the Daily Wire:

> Dozens of seniors in New York, including a 94-year-old Army veteran named Frank Tammaro, were evicted from their senior center, which was then converted into a migrant shelter.
>
> City officials have estimated that tens of thousands of migrants have entered the city since last spring, which is costing around $5 million per day. Mayor Eric Adams, who previously boasted about NYC being a "sanctuary" for migrants, has more recently complained about the influx of migrants.
>
> Tammaro told Fox News that he had lived in the center for five years, and intended to spend the rest of his days there until he and the other members were notified that they were being kicked out. After he was evicted, Tammaro's family found out that the center was turned into a migrant shelter.
>
> "I do get upset when I see them handing out all this money and all these things, and I'm paying taxes and getting kicked out," Tammaro said. "I've never got anything from the city. Or the state."

Notice that this happened in New York state, which is denominated from top to bottom by Democrats. Democrats just feel better when they help illegal immigrants and refugees. They don't get the same "buzz" from helping American taxpayers – especially if they have to use their own money.

Here's another article from the UK Daily Mail:

> A 96-year-old woman is facing eviction from her home of 22 years where she says she's invested her entire savings – in a Democrat state where lawmakers want to give migrants $150,000 loans to buy homes.
>
> Jean Jacques was given a three-day eviction notice from the Pacific Grove Senior Living facility, located on the picturesque Monterey County coast in California, KSBW reported.
>
> The notice demands Jacques pays her outstanding balance of $110,000 or leave her unit, according to the outlet.

Meanwhile in California:

> On Wednesday, state lawmakers approved the California Dream For All Shared Appreciation Loan program, which would provide no-interest home loans of up to $150,000 to illegal migrants to use on down payments and fees.
>
> It now heads to California Governor Gavin Newsom's desk for final approval.
>
> The program was launched last year and has already provided thousands of first-time homebuyers with loans of up to 20 percent of a house's purchase price.

People who vote Democrat often don't think about the costs of being "generous" with taxpayer money to illegal immigrants. But it's hundreds of millions of dollars for each state. Here's one report about Mississippi:

> Illegal immigration could cost Mississippi more than $100 million every year, a new report from the state's auditor reveals.
>
> The report, from Mississippi State Auditor Shad White, addresses the costs of illegal immigration for the broader country before delving into the ways illegal immigration places a financial burden on Mississippi's education, healthcare, and public safety systems. The investigation comes as polling indicates that immigration is a top issue for voters heading into the presidential election.
>
> […]"Illegal immigration creates a financial burden for taxpayers across the country, but the cost of illegal immigration is not borne solely by the federal government," the report explains, also noting that an estimated 22,000 illegal immigrants reside in the state. "Taxpayers from each state—including Mississippi—must face the reality of increased spending as a result of crisis-level illegal immigration."

That's New York and California. If I had to pick another Democrat state, I'd pick Illinois. Specifically, Chicago.

Let's see what's happening there:

> Chicago has spent $299 million on the migrant crisis since 2022, including $215 million since Chicago Mayor Brandon Johnson took office in May 2023.
>
> Nearly 37,000 migrants have arrived in Chicago since August 2022. As of March 14, more than 11,200 migrants were living in shelters.

Right now, we are $36 trillion in debt, so we really have run out of money to be spending on illegal immigration. Who will pay for this debt? Future generations. People who aren't even born yet. Their quality of life is being diminished by these secular left big spenders who are desperate to virtue signal to you about their great generosity. Therefore, vote wisely.

# Kamala Harris wants to force Christian medical workers to perform abortions

**Wintery Knight** · 23 October 2024 · Archived copy · Original

I always laugh when I read a bio of a secular leftist, who claims to be an "anti-fascist". I think to myself, "has this person ever read any history?" History is filled with the stories of big-government atheists using political power to force others violate their consciences. In contrast, conservatives support marriage, unborn children, parent's rights, free markets, free trade, free speech and religious liberty.

Let's hear about the latest evidence that Kamala Harris would be a *terrible* president for Christians.

This is from The Federalist:

> On Tuesday, Kamala Harris voiced opposition to providing religious exemptions in any federal legislation legalizing abortion nationwide in the event that such legislation is brought to her desk as president.
>
> The moment came during the vice president's sit-down interview with NBC News' Hallie Jackson.
>
> […]The NBC host specifically queried if "religious exemptions" were "something [Harris] would consider."
>
> "I don't think we should be making concessions when we're talking about a fundamental freedom to make decisions about your own body," Harris said.

And it's not just her words against religious liberty that are a problem. It's her actions. Here's a reminder of some of her actions, from First Things:

> In February 2019, Harris introduced the Do No Harm Act in the U.S. Senate, the purpose of which was to dilute—if not neutralize—the federal 1993 Religious Freedom Restoration Act (RFRA) and similar legislation in about twenty states. The purpose of RFRA was to give legislative protection to religious practices that might incidentally be forbidden by otherwise generally applicable laws prohibiting (or compelling) certain behaviors. RFRA was a legislative response to a U.S. Supreme Court decision that allowed a state law to prohibit the use of sacramental peyote in a minority religious ritual. RFRA laws carve out exemptions from generally applicable laws for some religious practices that are fundamental to religious belief.
>
> For example, a RFRA law might protect a church from another law that prohibits consideration of sexual orientation for employment, promotion, or retention. Or it might protect a physician who participates in public health reimbursement programs from a law requiring such physicians to perform a broad scope of so-called healthcare services, such as abortion.

Now, I often run into people who claim to be Christians, but warn me that they don't want to get involved in "culture wars" and that Christianity is just about "loving everyone" and they also think Jesus would attend gay weddings. And for fake Christians like this, it's not going to be a problem that Kamala Harris stops Christians from acting like Christians. Because these people don't act like Christians already. They just attend church and sing songs and do nice things, but they would never dream of obeying God if they had to pay some kind of price for it.

For these people – and for Kamala Harris – Christianity is just about singing songs in church on Sunday. It's not any more important than going bowling on Tuesday nights with your friends.

More:

> Harris sponsored the Do No Harm Act for the express purpose of emasculating RFRA laws. As she explained on the website introducing the act, it would prevent RFRA laws from "being used to deny" such things as "Healthcare access, . . . coverage or services to which persons are otherwise legally entitled," or "Services that

> the government has contracted to be beneficiaries through a government . . . grant." In other words, the Do No Harm Act would compel a Catholic physician to prescribe contraceptives or perform abortions if she participates in federal or state reimbursement programs. And it would require a parochial school that receives state grants, for example, to employ persons in open same-sex relationships as teachers or even ministers.
>
> The full implications of Harris's philosophical understanding of the scope and limit of religious freedom, however, are found in her apologetic for the Do No Harm Act. In a statement on her website explaining the purpose of the act, Harris uses a very narrow definition of religious freedom. "The freedom to worship is one of our nation's most fundamental rights," she writes. "That First Amendment guarantee should never be used to undermine other Americans' civil rights." The problem, of course, is that "the freedom to worship" is not a "First Amendment guarantee." The First Amendment guarantees the "free exercise" of religion, which has a much more expansive scope than mere "worship."
>
> The free exercise clause of the First Amendment provides that "Congress shall make no law . . . prohibiting the free exercise of" religion. Harris misquotes the clause, changing "free exercise" to "freedom to worship," betraying a definition of religious practice that would remove it from any meaningful legislative or political protection. In doing so, she turns the free exercise clause on its head, driving religious faith to the margins of public life and religious exercise out of public life altogether.

Like I said, I don't expect this kind of warning to mean anything to the "Shepherds for Sale" Christians. Their real religion is being liked, and Christianity has value only if it helps them to be liked. For the rest of us, who take the Bible seriously, a Kamala Harris presidentcy would be a disaster to our plans. To our ability to work, to keep what we earn, and to champion what God says. She would use the force of government to force Christians to choose between working to feed their families, and their relationships with God in Christ. And for a secular left fascist, that's pretty exciting. They love that. They get a sick and twisted joy out of using power to force Christians to abandon their convictions.

Don't forget how she pre-dawn raided the homes of pro-lifers, and how many pro-lifers have been pre-dawn raided by the Biden-Harris federal law enforcement. Why think that American Stalinists are any different than the Stalin of the Soviet Union?

# How strong are naturalistic hypotheses about the origin of life?

**Wintery Knight** · 24 October 2024 · Archived copy · Original

The origin of life is easy to explain if it is the result of intelligent design, because intelligent agents know how to engineer the building blocks, and how to assemble them into the components of a living system: proteins and nucleic acids. But how can you do it when there are no intelligences allows in your worldview? There is a new article in Nature about that.

The authors write:

> To understand how life might have begun, researchers must stop cherry-picking the most beautiful bits of data or the most apparently convincing isolated steps, and explore the implications of these deep differences in context. Depending on the starting point, each hypothesis has different testable predictions. For example, if life started in a warm pond on land, the succession of steps leading from prebiotic chemistry to cells with genes is surprisingly different from those that must be posited if the first cells emerged in deep-sea hydrothermal vents.
>
> Building coherent frameworks — in which all the steps in the continuum fit together — is essential to making real progress. To see why, here we highlight two of the most prominent frameworks, which propose radically distinct environments for the origin of life.

Let's see what the authors say about the prebiotic soup:

> This framework posits that nucleotides are concentrated in a small pond. To form RNA, the simplest and most versatile genetic material, nucleotides must polymerize. That is most easily achieved by drying them out (polymerization is a type of dehydration reaction). Proponents imagine a succession of wet–dry cycles, in which the pond dries out to form polymers of RNA, then fills again with water containing more nucleotides and so on, cycle after cycle, making more and more RNA3.

This is the "RNA World" hypothesis, which I've blogged about before. The authors don't like it:

> But this concept raises some difficult questions. It places the onus on an 'RNA world', in which RNA acts both as a catalyst (in a similar way to enzymes) and as a genetic template that can be copied. The problems are that there is little evidence that RNA can catalyse many of the reactions attributed to it (such as those required for metabolism); and copying 'naked' RNA (that is not enclosed in compartments such as cells) favours the RNA strands that replicate the fastest. Far from building complexity, these tend to get smaller and simpler over time. Worse, by regularly drying everything out, wet–dry cycles keep forming random groupings of RNA (in effect, randomized genomes). The best combinations, which happen to encode multiple useful catalysts, are immediately lost again by re-randomization in the next generation, precluding the 'vertical inheritance' that is needed for evolution to build novelty.
>
> If selection on RNA in drying ponds could somehow be made to generate greater complexity, what must it achieve? To make cells that grow and reproduce, RNA must encode metabolism: the network of hundreds of reactions that keeps all cells alive. Modern-day metabolic reactions bear no resemblance to the cyanide chemistry that makes nucleotides in this model. Evolution would therefore need to replace each and every step in metabolism, and there is no evidence that such a wholesale replacement is possible.

The authors are saying that they need to build up complexity from simple to more complex, in order to get the bare minimum they need for simple life. Life basically requires four different capabilities: membrane, energy capture, metabolism, and information storage. And they all have to be there and working right from the start. It's a frightful amount of complexity to get right – unless you appeal to intelligence.

The authors also talk about life forming from non-living materials in hydrothermal vents:

> Our own favoured scenario is that the chemistry of life reflects the conditions under which life began, in deep-sea hydrothermal systems on the early Earth4. In broad brush strokes, this means that gases such as carbon dioxide (the near-universal source of carbon in cells today) and hydrogen feed a network of reactions with a topology resembling metabolism. Genes and proteins arise within this spontaneous protometabolism and promote the flux of materials through the network, leading to cell growth and reproduction. There are plenty of problems here, too, but they differ from those in the prebiotic soup framework.

The first problem is that they need enzymes in order go from simple gases to nucleotides, and they don't have them:

> The first problem is that H2 and CO2 are not particularly reactive — indeed, their chemistry was largely ignored for decades, although rising interest in green chemistry is changing that. But deep-sea vents are labyrinths of interconnected pores, which have a topology resembling cells — acidic outside and alkaline inside. The flow of protons from the outside to the inside of these pores can drive work in much the same way that the inward flow of protons can drive CO2 fixation in cells today5.
>
> […]But many chemists are troubled by the idea that, in the absence of enzymes to serve as catalysts, hydrothermal flow could drive scores of reactions through a network that prefigures metabolism, from CO2 right up to nucleotides. The chemist Leslie Orgel once dismissed this scenario as an "appeal to magic". Certainly, further data are required, supporting or otherwise.

They have problems sequencing nucleotides into functioning components:

> Polymerization is another stumbling block. Nucleotides have been polymerized in water on mineral surfaces9, but this raises similar questions to those noted for wet–dry cycles about how selection could act. If the problem is solved by polymerizing nucleotides inside growing protocells, mineral surfaces would not have been available. Polymerization would then have needed to happen in cell-like (aqueous gel) conditions, but without enzymes. If serious attempts to synthesize RNA under those conditions fail, the overall framework would need to be modified.

I'm not convinced that mineral surfaces can help with the nucleotide sequencing problem, but they don't even have those available in the hydrothermal vents.

I studied computer science in university, so biochemistry is all new to me. I am trying to learn it, but I also have to write code all day for work. But thankfully, there are experts who can sort this out for us.

Here is a podcast from the fellows over at the Discovery Institute, and they talked about this article. Podcasts are a great way to try to understand these complex problems.

# Pro-abortion woman shocked that pro-abortion man she chose slapped her

**Wintery Knight** · 25 October 2024 · Archived copy · Original

One of the funniest things about young, unmarried women is the way that they choose men who have no morals, and then they're shocked when those men treat them poorly. In today's post, we'll look at a secular leftist woman, who deliberately chooses to have a relationship with a famous secular leftist man. And you know this famous secular leftist man, it's Kamala Harris' husband.

Here's the story from the New York Post:

> A former girlfriend of second gentleman Doug Emhoff said she was left "embarrassed and humiliated" when he slapped her following a gala dinner at the 2012 Cannes Film Festival in the South of France — adding that the husband of Vice President Kamala Harris has maintained a "completely fabricated persona" as a public figure.
>
> The woman, a New York attorney identified only as "Jane," told the Daily Mail in an interview published Thursday she was trying to hand a valet the equivalent of $100 to get her and Emhoff to the head of a taxi line when her beau struck.
>
> "As I'm talking to him, Doug got out of the line, comes up, turns me around by my right shoulder. I'm completely caught off guard, I'm not bracing, I'm in four inch heels, wearing a full-length gown and it's between 2-3 a.m.," she told the outlet. "He slaps me so hard I spin around, and I'm in utter shock."
>
> "There had been no fight, no argument," she added. "In that moment, his mask had dropped and I saw his dark side."

What's funny about these secular left women is that they choose secular men who think that the best way to get out of an unwanted pregnancy is murder. Somehow, they expect that the murder-supporting man will treat them well.

Oh, and there is more slapping in the article:

> Jane claimed she already had reservations about Emhoff, now 60, after he admitted he had cheated on his first wife, Kerstin Mackin, with Najen Naylor, the nanny of Emhoff's daughter Ella — getting the woman pregnant in the process.
>
> "All I did was ask him one question, and he told me the whole story," she said, recalling the conversation in April 2012. "He's telling me this very casually like it's no big deal. He yelled at her. He never said he hit her, but he said he got really angry with her, and she subsequently claimed that whatever he did caused her to lose the pregnancy."

He may be a misogynist, but he's a *pro-abortion* misogynist, so he's a "good man":

> The Daily Mail previously reported on accusations from the future second gentleman's former colleagues at Venable that he was "inappropriate" and "misogynistic" toward his female colleagues.
>
> A 2019 lawsuit obtained by The Post charged that Emhoff hired an assistant named "Katya" who was widely considered unqualified but was "young, attractive and friendly with the powerful men in the office."

And if you show these secular left women a different man – one who is conservative and Christian, and who doesn't believe in sex before marriage – then they will say that that man is "bad". The best men, the secular leftist women will tell you, are the ones who don't have any morals at all.

This is actually a really big problem for young, unmarried women these days.

You might have heard by now that young, unmarried women are becoming more and more leftist in their policy views.

Here's the far-left UK Independent to explain:

> An analysis of survey data from across the developing world had found that "a new global gender divide" is emerging. The analysis, conducted by the Financial Times' John Burn-Murdoch, showed that the developed world's young women have rapidly become more liberal. Young men, however, have either become more conservative (as in the US) or been much slower to become more progressive (as in the UK).

And young, unmarried women are becoming less and less religious.

Here's the far-left New York Times to explain: (archived)

> For the first time in modern American history, young men are now more religious than their female peers. They attend services more often and are more likely to identify as religious.
>
> "We've never seen it before," Ryan Burge, an associate professor of political science at Eastern Illinois University, said of the flip.
>
> Among Generation Z Christians, this dynamic is playing out in a stark way: The men are staying in church, while the women are leaving at a remarkable clip.

What should we make of this trend of young, unmarried women becoming more secular and leftist, and then being shocked when the secular left men they deliberately choose treat them poorly? Will anyone tell them that the root cause of their problems with men is their own worldviews, and their own choices based on those worldviews? Who is brave enough to tell young women that they have to accept responsibility for the results of their own choices?

# Knight and Rose Show #54: Guillermo Gonzalez: The Privileged Planet

**Wintery Knight** · 26 October 2024 · Archived copy · Original

Welcome to episode 54 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview Dr. Guillermo Gonzalez, co-author of the new 20th Anniversary Edition of "The Privileged Planet". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Dr. Guillermo Gonzalez to discuss the new 20th anniversary edition of "The Privileged Planet". Guillermo explains the book's thesis, and gives examples of the link between habitability and measurability from our planet, solar system, and galaxy. Guillermo responds to arguments against design, and talks about getting into trouble with opponents of design on campus.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 54:**

**Speaker biographies**

Guillermo Gonzalez is a Senior Fellow at Discovery Institute's Center for Science and Culture. He received his Ph.D. in Astronomy in 1993 from the University of Washington. He has done post-doctoral work at the University of Texas, Austin and at the University of Washington. He has taught astronomy and physics courses at the University of Washington, Iowa State University, Grove City College, and Ball State University. He is a world-class expert on the astrophysical requirements for habitability and on habitable zones and a co-founder of the "Galactic Habitable Zone" concept, which captured the October 2001 cover story of Scientific American. Gonzalez has also published over 90 articles in refereed astronomy and astrophysical journals. He also is the co-author of the second edition of Observational Astronomy, an advanced college astronomy textbook.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# New study: Significant parallels found between anorexia and gender dysphoria

**Wintery Knight** · 27 October 2024 · Archived copy · Original

A common objection against transgenderism by biological realists is to make a parallel argument from anorexia. Conservatives say "we wouldn't want to help a skinny anorexic person lose weight because they thought they were too fat, would we?" Transgender activists reply that these two things are completely different. Who is right? Well, now we have a peer reviewed study to help us decide.

The new study was published in the peer-reviewed journal Sexuaologie, which is the journal of the *German Society for Sexual Medicine, Sexual Therapy and Sexual Science/DGSMTW*.

The Society for Evidence-Based Gender Medicine reported on it:

> A new publication* in Sexuologie (the journal of the German Society for Sexual Medicine, Sexual Therapy and Sexual Science/DGSMTW) takes on the issue of the sharp rise in transgender identification in adolescent females, which remains poorly understood. The authors, Korte and Gille, present an intriguing hypothesis for this novel phenomenon, comparing and contrasting gender dysphoria to anorexia nervosa, and finding a number of important similarities. The authors conclude that clinicians working with gender-dysphoric adolescents must familiarize themselves with the complex dynamics of female adolescent development, and that trans-affirmative medical interventions should not be considered until adolescent development is complete.

SEGM got permission to post the full English language translation of the study, but I didn't. So you have to click through to read it.

But here's the interesting part of SEGM's synopsis of the paper:

> Drawing on their clinical work with such patients, Korte and Gille observe that trans identification in adolescent girls may reflect the desire to circumvent the challenges of female adolescence rather than a deep identification with maleness. They note that "although there is pronounced rejection of the female body and/or the female gender role," there is frequently no pronounced desire for the primary or even secondary physical characteristics of the opposite sex.
>
> […]The authors note several similarities between anorexia and gender dysphoria. Both involve body image disorders where aggression is "turned against one's own self, inward, but also outward, against important others." The authors note:
>
> "*…in both anorexic eating disorders and gender identity disorders (gender dysphoria), relatives, especially parents, are exposed to strong feelings of helplessness and powerlessness in addition to the massive feelings of guilt and failure that often arise. In both disorders, this sometimes exacerbates the symptoms" of the … patient within a correspondingly pathological relationship dynamic*."
>
> Korte and Gille conclude by outlining concrete steps that pediatricians, child and adolescent psychiatrists, gynecologists, and other medical providers can take to help girls navigate puberty in a way that averts or mitigates these developmental crises. They caution clinicians that in the vast majority of cases of gender dysphoria arising around adolescence, it is likely temporary and represents a maturation crisis or insecurity of 'sexual, rather than gender identity."
>
> The authors criticize the "trans-affirmative" (gender-affirming) model of care for adolescents, which is focused on the provision of physical body modifications, as inconsistent with the principles of adolescent development. They highlight the importance of addressing adolescent gender dysphoria within a developmental framework, recognizing the complexity of adolescent experiences and the need for tailored interventions that address underlying conflicts and promote adaptive coping strategies.

I think this study is very helpful for understanding what's really going on in the mind of young people when they reject their own gender.

In the most recent episode of Knight and Rose, Rose and I were talking about how to be more bold when discussing controversial issues. Our advice was to be the smartest person in the room. I remember when homosexuality was becoming a big issue, I went out and read a whole bunch of books about it, from people like Jeffrey Satinover and Charles Socarides. It's similar to how I am handling transgenderism now.

Christians should always be the smartest people in the room when these topics come up. Nobody should be listening to the "compassionate" virtue signalers, who just want to jump to affirmation and approval. And the way you beat those people is by asking them a few simple questions about what they know, to show that they aren't operating from knowledge at all.

The doctors and the surgeons are often just trying to hook a young person onto constant surgeries, drugs and treatments. They want money, lots of money. All you have to do is to ask them what liability they have if their treatment results in regret and the desire to detransition. Is there a warranty? Of course not. Would they put their promises about "pauses" and "rollbacks" in writing? Of course they won't.

What about the emotion-based friends and relatives? All you have to do is ask them about technical issues. What are the long-term effects of these drugs? How much does it cost? How painful is it? Are there permanent effects? They are supporting the transition because they want to feel good. They want to be liked. When you ask them knowledge questions, the children can see that the feelings-based adults are only serving themselves.

It's much better to discuss these issues by pointing out the long-term consequences of decisions. Of course young people have feelings. Of course they want to act on those feelings. But young people also need to hear from people who understand what is further down the road. They don't know that, and they need to rely on adults who know for help. Not the greedy health care workers. And not the low-self-esteem feelings-based crowd.

# Poll: Kamala Harris supporters don't know her past political positions

**Wintery Knight** · 28 October 2024 · Archived copy · Original

How good of a job do people on the secular left do of understanding the positions of the candidate that they vote for? If you ask them, they'll say that they are super-intelligent, and highly informed. They don't form their views from impressions, intuitions and sound bites at all! But what would happen if someone did an actual poll, where the secular leftists were asked about facts? Would they pass?

Here's the story from the Media Research Center:

> A significant new Media Research Center poll finds that large majorities of registered Democrats and Independents who voted for Joe Biden in 2020 — exactly those who would be expected to support Vice President Kamala Harris in this year's contest — are mostly in the dark about many of the controversial and radical positions Harris has taken.
>
> When asked about ten different aspects of Harris's public record — on issues as varied as her sponsorship of the Green New Deal, abolishing ICE, and eliminating private health insurance — between 71% and 86% of these Democrats and Independents said they either had not heard of Harris's position or were unsure.

My favorite question to ask people to see if they are safe to talk to is "where do you get your news?". Because if people are relying on the corporate news media to tell them the truth, then they are likely to have tremendous confidence in their beliefs, but all those beliefs are likely to be false:

> When these voters were asked about where they got most of their news about political elections and candidates, by far the top answers were broadcast television (ABC, CBS and NBC) or cable news (such as CNN and MSNBC). This suggests that the knowledge gaps found by our poll reveal a failure of these outlets to report on radical positions once (and perhaps currently) supported by the now-Democratic nominee for President.
>
> In fact, a detailed Media Research Center examination of ABC, CBS and NBC evening news coverage in the three weeks since Harris became the leading Democratic candidate (July 21 to August 10) shows eight of these ten issues received ZERO attention from these newscasts, while two others received only minor coverage.

Here are the facts about Kamala Harris, along with the percentage of Democrat voters who were ignorant about each one (in parentheses):

- Harris supported cutting funding for the police (71%)
- Harris co-sponsored the Green New Deal (73%)
- Harris supported the elimination of private health insurance (81%)
- Harris supported reparations payments to atone for slavery (71%)
- As "Border Czar," Harris never visited a conflict zone on the border (72%)
- Harris said it should not be considered a crime to enter the U.S. illegally. (74%)
- Harris supported abolishing ICE (77%)
- Harris promoted a fund to bail out violent protesters during 2020 riots (78%)
- Harris would consider allowing death row inmates to vote (86%)
- Harris was named the most liberal U.S. Senator in 2019 (75%)

What's funny about these questions, is that they were asked as yes / no questions. So I'll bet some of the people

saying they knew the facts didn't really know the specifics at all!

The article has a paragraph about each of these questions, but this one about the reparations caught my eye:

> Harris supported reparations payments to atone for slavery: During her 2019 campaign, Harris joined with other far-left Democratic candidates to support massive payments as a form of "reparations" to the descendants of those enslaved prior to 1865. According to a PBS account, "Harris has proposed monthly payments to qualified citizens of any race in the form of a tax credit."
>
> While there are various proposals for possible reparations, a CNBC report in 2020 suggested an ultimate price tag of $10 to $12 trillion, or vastly more than the size of the current U.S. federal government budget (on track to surpass $6 trillion in 2024).
>
> Since July 21, the Big Three evening newscasts haven't said a word about Harris's past support for reparations. And according to our poll, 71% of the Democrats and Independents we polled were unsure or completely unaware of her position on the issue.

Keep in mind that Democrats DO believe in slavery – they just want the slaves to be the young people who will have to pay for all this government spending and welfare. They want children, born and unborn, to pay for their living high on the hog today. I don't know what you'd call this except "slavery".

It might be a good idea for those of your reading to send this MRC article to your friends, so they can know the answers in case these topics come up in discussions. It's not a good idea to choose the leader of the free world if you don't know what the candidates believe about things.

# Democrats want to block voting by citizens, allow voting by non-citizens

**Wintery Knight** · 29 October 2024 · Archived copy · Original

Here are a couple of stories from just the last few days that really show how desperate Democrats are to hang on to political power. In one state, they want to allow self-declared non-citizens to stay on the voter rolls. In a different state, they want to prevent citizens who just went through a natural disaster from having access to vote. I'm posting these stories to remind you that you really need to vote.

First story is from the The Center Square:

> A federal judge is ordering Virginia to return the names of more than 1,500 "noncitizens" to voter rolls following a lawsuit filed by the Department of Justice saying the commonwealth violated the National Voter Registration Act.

Here's the Republican Attorney General of Virginia:

> "It should never be illegal to remove an illegal voter," said [Virginia Attorney General Jason] Miyares. "Yet, today a Court – urged by the Biden-Harris Department of Justice – ordered Virginia to put the names of noncitizens back on the voter rolls, mere days before a presidential election. The Department of Justice pulled this shameful, politically motivated stunt 25 days before Election Day, challenging a Virginia process signed into law 18 years ago by a Democrat governor and approved by the Department of Justice in 2006."
>
> […]"More concerning is the open practice by the Biden administration to weaponize the legal system against the enemies of so-called progress," Miyares added.

And here's what the Repoublican governor of Virginia had to say:

> In a statement Youngkin said, "Let's be clear about what just happened: only 11 days before a presidential election, a federal judge ordered Virginia to reinstate over 1,500 individuals – who self-identified themselves as noncitizens – back onto the voter rolls. Almost all these individuals had previously presented immigration documents confirming their noncitizen status, a fact recently verified by federal authorities."

They self-identified as non-citizens, so they don't think they are eligible to vote. But the Biden-Harris administration says that they should be added back to the voter rolls.

That's awful. But wait, there's more. Not only does the Biden-Harris administration want non-citizens to vote, they also don't want citizens to vote – if those citizens are in very Republican areas.

Here's the story from The Federalist:

> The havoc wrought by Hurricane Helene in western North Carolina brought disaster to homes and families, but that has not stopped Democrats from blocking the approval of emergency early voting sites in the heavily Republican area. The refusal to act forced the GOP-led state legislature to intervene.
>
> Democrat-run local elections boards in McDowell and Henderson counties have failed to approve additional early voting sites in the disaster-stricken area, despite increasing calls for more access to voting. Both counties voted for Donald Trump in 2020.
>
> […]Meanwhile, Democrats in nearby deep-blue Buncombe County, home to Asheville, have already given the go-ahead for new voting locations to replace the ones damaged by Helene, bringing the county's total to 10.
>
> […]Stonewalling the approval of new voting locations in the disaster area seems inexplicable, as even the

> Democrat-run State Board of Elections and state legislature have made it easy for local boards to open them under emergency circumstances. The state board did not respond to a request for comment from The Federalist.
>
> Democrats playing games with peoples' access to vote this close to the election and in Republican-heavy districts devastated by a natural disaster lends even more credence to the belief that state and federal Democrats have slow-rolled relief efforts in order to suppress the vote.

I am noticing how sites like YouTube and Facebook are regularly censoring stories that are supportive of Republicans, and critical of Democrats. So, there is a lot going on to influence the election. So I really want to urge you to vote yourself, and make sure that your friends and family vote as well.

If you are trying to live out a Christian life plan, you are NOT going to like what Kamala Harris does with policy. This will affect you, and it will affect other Christians. Some of those Christians are going to be forced to choose between honoring their faith commitments, and just being able to work and live. Just like Christians have in other places and times when the secular left got into power.

# Democrat energy policies will raise electricity prices and cause inflation

**Wintery Knight** · 30 October 2024 · Archived copy · Original

There are two ways for a government to raise the price of goods and services for consumers. First, the government can increase spending. Second, the government can tax and regulate energy developers, so that they have to raise prices on gas and electricity. Do you remember when the Biden-Harris regime stopped the construction of pipelines? That made inflation worse.

Here's the first story from Daily Signal:

> High inflation could soon make a comeback across the American economy. That's because a combination of soaring demand for electricity and artificially constricted supply has laid the foundations for steadily increasing electricity prices.
>
> […]Electricity bills are rising because of the required adoption of renewable energy mandates, carbon emission-reduction goals, and cap-and-trade schemes, as can be seen in this table, primarily in states with Democratic leadership.
>
> States that have required renewables, particularly wind and solar energy, to be used in electricity production often experience higher electricity costs due to the regulatory burdens placed on traditional energy sources, such as natural gas and coal.
>
> For instance, several states have limited the construction of natural gas infrastructure or restricted access to abundant natural gas resources, exacerbating energy costs for their residents and their neighbors.
>
> At the same time, incentives for clean energy in the so-called Inflation Reduction Act discourage investment in power plants fired by natural gas or coal that provide affordable and reliable baseload power.
>
> People are all too familiar with rising residential electricity bills and their consequences for inflation rates. It's obvious that all businesses have to pay for electricity, too. What's not as obvious is that electricity is a crucial input into the production of virtually everything that is produced, bought, and sold.

Basically, everything that you buy – products and services – has to be produced in buildings that use electricity. This even applies to online services and commerce. Further, goods have to be transported by vehicles that use gas. So when you purchase goods and services in a "green" economy, you are going to pay a lot more for them. People think that this is a technological problem, and we will eventually solve it. That's a faith commitment, and we have no evidence to back that up. But we can look at "green" states like California, Massachussetts, Rhode Island and Connecticut and immediately see that these policies are causing higher prices for consumers.

The article has a very good example of what we can expect under the Harris-Walz regime:

> One example of the damage done by higher electricity prices is Germany, where companies are relocating due to higher energy prices caused by the closure of nuclear power plants and the cutoff from Russian natural gas.
>
> In an annual survey of 3,300 German companies, performed annually since 2012, the German Chamber of Commerce and Industry found that 40% of companies were considering relocating or reducing production due to high electricity prices.
>
> According to Association of German Chambers of Commerce and Industry Deputy Managing Director Achim Dercks, "The trust of the German economy in energy policy is severely damaged. So far, the government has failed to provide companies with a perspective for a reliable and affordable energy supply."
>
> A doubling of electricity prices could produce a rise in inflation well above 5% and drive jobs offshore. This would fall hardest on America's poor but would affect everyone.

Remember, Kamala Harris supports the Green New Deal, and Tim Walz signed legislation that would eliminate carbon emissions in Minnesota by 2040. So, if you like what Germany did, then you will be very happy with Harris-Walz energy policies.

Here's a second article from Daily Caller, talking about restrictions on energy inside your home:

> The Biden-Harris administration released data on Oct. 17 suggesting its push to electrify everything will ratchet up costs for American households, contradicting one of the White House's favorite selling points for its green agenda, experts told the Daily Caller News Foundation.
>
> The Biden-Harris administration has made a crackdown on residential fossil fuel consumption a key aspect of its environmental strategy, justifying the push in part on the grounds electrification will lower energy costs. Now, Oct. 17 residential energy price data from the Department of Energy (DOE) shows electricity was roughly four times as expensive as natural gas in 2024, with experts telling the DCNF the White House's electrification push is an example of extremist climate policy hurting everyday Americans.
>
> […]The Biden-Harris DOE has issued a slew of rules restricting the use of gas appliances, including issuing revised standards on furnaces in September 2023 that could prohibit 40-60% of gas furnaces in homes, and increased efficiency requirements for water heaters that the agency claimed would save U.S. consumers $11.4 billion on their energy and water bills every year.

Naturally, the poorest Americans would be hurt the most by these green energy policies. I hope that Christians and conservatives are doing a good job of communicating ALL the facts to undecided voters. Because there is a lot more to policy than abortion. It's our job to protect the poor and the weak in every way we can.

# Theologian Wayne Grudem: 20 reasons to vote for Republicans in the 2024 election

**Wintery Knight** · 31 October 2024 · Archived copy · Original

Everyone remembers that Ron DeSantis is my candidate in 2024, but for the rest of you in "battleground" states, you have to vote against Kamala Harris! And now we are going to get 20 good reasons why you should, from the King of systematic theology, Dr. Wayne Grudem. What is his superpower? His superpower is knowing all of the Bible teachings that apply to any policy.

Here's the article from Townhall.com, (H/T Dr. Owen Anderson)

It starts by explaining the difference between the Republican view of government, and the Democrat view of government.

**Republican views of government:**

> Most Republicans favor limited government control of our lives, lower taxes, greater individual freedom, and greater personal responsibility for one's actions. Republicans also believe that the best deterrent for crime is the punishment of criminals.
>
> On foreign policy, Republicans generally believe that superior American military power is the best deterrent against war.
>
> Republicans also believe that the best economic system is one that allows everyone to keep most of what they have honestly and legally earned, one that effectively cares for the poor, and one that does not seek to bring about more equality of income among people.

**Democratic views of government:**

> Most Democrats favor greater government control of our lives, higher taxes (especially for higher income brackets), less individual freedom, and less personal responsibility for one's actions. Democrats also believe that the best deterrent against crime is education.
>
> On foreign policy, Democrats generally believe that diplomacy and foreign aid are the best deterrent against war.
>
> Democrats also believe that an ideal economic system leads to greater equality between the rich and the poor. With respect to levels of taxation, the rich should pay their "fair share" (an amount that is never specified but always assumed to be more than what they currently pay).

Then he has a list of 20 reasons to vote for Republicans, which he has broken into categories:

**Economics:**

1. To stifle inflation
2. To preserve lower tax rates and promote greater national prosperity and economic freedom
3. To protect free-market capitalism and prevent creeping socialism
4. To preserve our ability to choose our own doctors and healthcare plans

**Foreign policy:**

1. To secure the border
2. To help Israel win its war
3. To obtain a lasting peace in the Middle East

4. To make our military once again the strongest on earth

**Crime and law forcement:**

1. To make our cities safe again
2. To appoint 3,000 conservative Republicans to powerful federal offices instead of 3000 liberal Democrats
3. To appoint hundreds of additional judges who interpret and apply the laws but do not create new laws
4. To stop powerful government agencies from interfering in American politics

**Other reasons:**

1. To give unborn children some degree of legal protection
2. To protect religious freedom
3. To protect freedom of speech
4. To keep men from competing in women's sports.
5. To respond to climate change/global warming with realistic solutions
6. To begin to pay down our national debt
7. To see a rebirth of patriotism
8. To stop Kamala Harris from becoming president

We can't look at all of these, but I will choose one that caught my eye. I chose #1, because I have been really feeling bad about wanting to retire early to focus on ministry, but now after four years of Democrat rule, my monthly expenses are up 50%, so now I have to work for a few more years in order to be able to replace enough of my income with interest and dividend income. I will be fine when I hit 60 because then I can use my retirement funds. But during the years of 50-60, I have to have enough money to live from my non-retirement savings. And with this inflation, it's barely enough.

He writes:

> Inflation happens when governments print or borrow too much money and inject it into the economy, as I explained in more detail in an earlier article. For example, if I have ten apples to sell and you have $10 to spend on apples, I will charge you $1 per apple. But if you have $20 to spend on apples, I will charge you $2 per apple. You spend more money, but you don't get any more apples. That has happened to the cost of groceries, gas, and everything else.
>
> Inflation hit our economy under Biden's administration because our government injected far too much money into our economy while the amount of things for sale stayed about the same. It was all Democrats and no Republicans who did this.
>
> Joe Biden became president on January 20, 2021, and Democrats controlled both the House and the Senate to pass whatever tax or spending legislation they wanted (because the budget reconciliation process is not subject to the filibuster, it only requires 51 votes in the Senate). Just six weeks after Biden took office, on March 6, 2021, the Senate passed the American Rescue Plan Act by a vote of 50-49 with all Democrats voting for it and all Republicans voting against it (one was absent). It passed the House on March 10 with a vote of 220-211, with all Republicans and one Democrat voting against it. President Biden signed it into law on the next day, March 11.
>
> Republicans warned that this would cause harmful inflation because the bill authorized a whopping $1.9 trillion in additional government spending. (By way of comparison, the entire federal budget for the previous year was $6.55 trillion.)
>
> But that was not the end of the Democrats' spending. In 2022, they passed the Inflation Reduction Act by 220-207 in the House (all Democrats for it, all Republicans against it) and by 51-50 in the Senate (all

> Democrats for it, all Republicans against it, and Vice President Kamala Harris cast the tie-breaking vote). President Biden signed it on August 16, 2022.
>
> The bill would more accurately be described as the Inflation Multiplying and Green Energy Act because a large portion of the $891 billion was designated for climate change and green energy projects. Together, these two bills added an astounding $2.8 trillion in government spending. By way of comparison, $2.8 trillion is equal to 11% of the total economic output of the entire nation for 2022 (GDP for 2022 was $25.4 trillion).
>
> Why did Democrats authorize such gigantic additional spending? Probably because they thought that when they gave free money to millions of people, many of those people would vote for Democrats.
>
> On top of all that spending, President Biden issued two executive orders that drove up gas prices. One executive order restricted future oil and natural gas extraction, which immediately drove up energy prices, and the other shut down the Keystone XL Pipeline project, which would have safely brought much more US and Canadian oil to our best refineries. These executive orders were inflationary because the price of energy affects the price of everything else.
>
> The result was predictable. According to Forbes magazine, the Consumer Price Index rose by 19% during the first 3 ½ years of Biden's presidency. But it only rose by 6% during President Trump's entire four years. (Trump's average increase was just under 2% per year, and 2% is the Federal Reserve's target amount.)
>
> For example, think of a family that brought a certain basket of groceries for $100 on the day Biden became president. To buy that same basket of groceries today would cost $119, so they would need to find the additional $19 somewhere – in savings if they have any savings, or perhaps put it on a credit card. In terms of our apples example above, they will be paying more dollars but will just get the same number of apples. We could even say that inflation has "stolen" $19 from that family because that is how much extra money they need to buy the same amount of goods. And if a husband and wife together earned $80,000 last year, they would need to earn an extra 19% (or $15,200) just to stay even with their purchasing power compared to Biden's first day in office, because that is the amount that inflation has "stolen" from their earnings this year.
>
> I would also note that, in words of wisdom written over 3000 years ago, the Bible has something very clear to say about stealing: "You shall not steal" (Exodus 20:15). This is commandment 8 of the Ten Commandments, and it serves as the moral foundation for all protection of any individual's property.
>
> After looking at the voting and spending patterns of the past eight years, I conclude that Republicans are much more likely than Democrats to keep inflation under control.

If you see anything in that list that is important to you, you will get a similarly clear and concise explanation about how the parties differ on that issue in the rest of the article. Read it, and share it!

# What's the best example of election interference from the 2020 election?

**Wintery Knight** · 1 November 2024 · Archived copy · Original

I thought it might be a good idea, in preparation for any last minute "surprises" from the secular left, to remember a major example of election interference from the 2020 election. Who really interferes with elections? Is it even happening? Why can't we post about election interference on social media without getting "de-boosted" or banned outright? Let's take a look at it.

Here is the best example of election interference from the 2020 election, reported in the New York Post:

> They are the supposed nonpartisan group of top spies looking out for the best interest of the nation.
>
> But the 51 former "intelligence" officials who cast doubt on The Post's Hunter Biden laptop stories in a public letter really were just desperate to get Joe Biden elected president. And more than a year later, even after their Deep State sabotage has been shown again and again to be a lie, they refuse to own up to how they undermined an election.
>
> The officials, including CNN pundit and professional fabricator James Clapper — a man who was nearly charged for perjury for lying to Congress — signed a letter saying that the laptop "has the classic earmarks of a Russian information operation."
>
> What proof did they have? By their own admission, none. "We do not know if the emails . . . are genuine or not," the letter said. They're just "suspicious." Why? Because they hurt Biden's campaign, that's evidence enough.
>
> Keep in mind this was written Oct. 19, 2020, five days after The Post published its first story. Neither Joe Biden nor Hunter Biden had denied the story, they simply deflected questions. Didn't these security experts think that if this was disinformation, the Biden campaign would have yelled to the heavens that the story was false?
>
> […]Politico picked up the letter and ran the false headline "Hunter Biden story is Russian disinfo, dozens of former intel officials say." That headline is still online today, even though the letter clearly says they don't know if it's Russian disinformation.
>
> That headline was tweeted out by legions of Democrats, including current White House spokeswoman Jen Psaki, as proof that it was all a con. That tweet also is still up despite being proven false.
>
> […]Only after the election was safely over did Hunter tacitly admit the laptop was his. Last year, a Politico reporter confirmed that the laptop's materials were real. And now, the coup de grace: The Times said it's "authenticated" material from the laptop.

The author of that article contacted the 51 "intelligence experts" to comment on how they were wrong about the laptop, and most of them didn't reply. Some insisted that they were right even after being proved wrong. What do you think would be a good punishment for their actions? Personally, I would try each of them for treason, and sentence them appropriately.

That first article is from 2022, but there's more from this New York Post article from 2024:

> Four years later, none of the 51 have retracted the statement or apologized.
>
> Some have doubled down on their lie, even though they know that the FBI had possession of the laptop in December 2019, had determined that it belonged to Hunter, that it had not been tampered with in any way and was fit for use as evidence in court.
>
> Four months ago, that silver MacBook Pro was brought by prosecutors into a Delaware court, displayed to the

> jury that convicted Hunter of felony gun charges, and confirmed by an FBI forensic expert to be Hunter's laptop.
>
> It was also cited as evidence by prosecutors in his felony tax indictment in California, to which he pleaded guilty last month.

Just to be clear, there is no doubt about the evidence. The evidence shows that the laptop was genuine, and that means that the 51 experts, their allies in the corporate news media, and their allies in Big Tech, all colluded to spread misinformation that interfered with a federal election, handing the victory to the Democrat candidate.

And just to get the names and ranks out there, so everyone knows how to think about the CIA as a federal department:

> Among the Dirty 51 were five former CIA directors or acting directors, including John Brennan, Leon Panetta and Michael Hayden, as well as former Director of National Intelligence James Clapper. Brennan and Clapper, who were also knee-deep in the Russia collusion hoax against Donald Trump, were appointed by Mayorkas to his inaugural Homeland Security intelligence group before it was disbanded after public outcry and litigation.

Finally, it's important to remember that Big Tech companies like Facebook, also interfered in the election to help the Democrat party.

The New York Post explains:

> The FBI warned major US tech companies ahead of The Post's first reports on Hunter Biden's laptop in October 2020 that Russian agents were preparing a strikingly similar document dump — and once the scoop materialized, Facebook executives discussed calibrating censorship decisions to please what they assumed would be an incoming Biden-Harris administration, a congressional investigation found.
>
> The new details — contained in an interim report by the House Judiciary Committee's subcommittee on the weaponization of government — are emerging as former President Donald Trump leads in polls ahead of the Nov. 5 election and as his allies urge a house-cleaning at the FBI and possible new regulations or antitrust actions to punish and restrain platforms like Facebook.
>
> "FBI tipped us all off last week that this Burisma story was likely to emerge," an unidentified Microsoft employee wrote on Oct. 14, 2020, the day The Post published the first in a series of bombshell stories on the Biden family's foreign dealings, according to the congressional report.
>
> Internal Facebook communications, including a chat log, show that employees quickly discounted The Post's reporting because it was the "[e]xact content expected for hack and leak."
>
> "Right on schedule," another Facebook employee concurred.
>
> "Obviously, our calls on this could colour [sic] the way an incoming Biden administration views us more than almost anything else…," Facebook's then-vice president of global affairs Nick Clegg wrote on the same day to vice president of global public policy Joel Kaplan.

I wrote before about how Google uses their products and services to also interfere in elections to help the Democrat party. So, if you see a Trump administration taking power and arresting "intelligence experts" and "journalists" and "tech executives" in January 2025, don't be alarmed. It's just justice.

# Doctor refused to publish study showing puberty blockers don't improve mental health

**Wintery Knight** · 2 November 2024 · Archived copy · Original

I've been listening to a podcast from Daily Signal about media bias, and how censoring the news helped Biden to win in 2020. For example, the suppression of the Hunter Biden laptop story by the corporate news media swayed enough votes to deny Trump the presidency. People like to base their decisions on evidence, but what happens when evidence is suppressed by the secular left?

Well, I found a very shocking example of the secular left suppressing evidence that disagrees with their worldview. This story was reported in the far-left New York Times, of all places.

The New York Post reported on it:

> A prominent doctor and trans rights advocate admitted she deliberately withheld publication of a $10 million taxpayer-funded study on the effect of puberty blockers on American children — after finding no evidence that they improve patients' mental health.
>
> Dr. Johanna Olson-Kennedy told the New York Times that she believes the study would be "weaponized" by critics of transgender care for kids, and that the research could one day be used in court to argue "we shouldn't use blockers."
>
> Critics — including one of Olson-Kennedy's fellow researchers on the study — said the decision flies in the face of research standards and deprives the public of "really important" science in a field where Americans remain firmly divided.
>
> For the National Institutes of Health-funded study, researchers chose 95 kids — who had an average age of 11 — and gave them puberty-blocking drugs starting in 2015. The treatments are meant to delay the onset of bodily changes like the development of breasts or the deepening of the voice.
>
> After following up with the youths for two years, the treatments did not improve the state of their mental health…

I thought this was interesting, about the evidence-withholder lady:

> Olson-Kennedy, the outlet points out, is one of the country's leading advocates for providing gender-affirming care to adolescents, and regularly provides expert testimony in legal challenges to state bans on such procedures, which have taken root in more than 20 states.
>
> When asked by the Times why the results have not been made public after nine years, she said, "I do not want our work to be weaponized," adding, "It has to be exactly on point, clear and concise. And that takes time."
>
> She then flat-out admitted she was afraid the lack of mental health improvements borne out by the study could one day be used in court to argue "we shouldn't use blockers."

Secular leftists are always telling me how driven by "evidence" they are. Maybe that's because the only evidence they allow is evidence that confirms what they already want to believe! I bet they feel very superior to the people who disagree with them, though. They will just say "well, we are guided by evidence, and our opponents just believe whatever they see on social media". Uh huh.

Now, I know what the pro-trans people will say to this. They will say that "all the problems that result from a child trying to transform from his/her birth sex into the opposite sex with chemicals and surgeries are all caused by social disapproval". They really believe that IF ONLY people would celebrate the delusions of children, then everything would work out perfectly.

# Dr. Casey Luskin discusses evolution on the Cross Examined podcast

**Wintery Knight** · 3 November 2024 · Archived copy · Original

I try to keep an eye out for any podcasts that look really good, and when I saw one of our former Knight and Rose Show guests (Dr. Luskin) being interviewed by another former Knight and Rose Show guest (Dr. Frank Turek) on a very interesting topic: the shortcomings of the Darwinian theory of origins.  In this post, you'll find a YouTube video, a link to the MP3 file, and an outline of topics.

In the episode, they discuss the change of heart that some evolutionists are having as the evidence turns against their theory. We talked about the evidence from junk DNA with Dr. Luskin, but he talks about a bunch of different topics in this episode with Dr. Turek.

Here's the outline from the Cross Examined blog:

- What are some key differences between micro and macroevolution?
- What did later research reveal about the Galápagos Island finches and how does it compare to Darwin's findings?
- What is epigenetics and how does it relate to the case for Intelligent Design?
- Why are some biologists hesitant to openly share their doubts about Neo-Darwinism, while others are increasingly vocal?
- What's the difference between Darwinism and Neo-Darwinism?
- What are the strongest arguments for a common ancestor?
- Are non-coding regions of the human genome really "junk DNA"?
- What about the God of the Gaps argument?
- Are proponents of Intelligent Design religiously motivated?
- What are the 4 basic L.I.F.E. problems found within macroevolutionary theory?

You can download the MP3 file here.

Here's the YouTube video:

We're trying to interview good scholars on the origins debate for the Knight and Rose Show, and so far we've had:

- Guillermo Gonzalez: Earth is Designed for Discovery
- Casey Luskin: Debunking the Myth of Junk DNA
- Chemist Fazale Rana Investigates the Origin of Life

And here is the book where you can learn about all of these interesting topics!

The Comprehensive Guide to Science and Faith: Exploring the Ultimate Questions About Life and the Cosmos

I have the audio book and the paperback versions.

Stay tuned, because we have a guest scheduled to discuss another topic in the design vs evolution debate. That episode will probably be out in January, though. We got the best guest that you could possibly get on this topic! And we have a couple more topics and guests in mind for later.

# Kamala Harris used government power to force Christians to violate their consciences

**Wintery Knight** · 4 November 2024 · Archived copy · Original

The title of this blog post is a paraphrase from Kristen Waggoner. Kristen is the CEO, president and lead lawyer for the Alliance Defending Freedom, a law firm that champions First Amendment rights up to the Supreme Court. Kristen argues many of these cases herself. She has defended the rights of free speech and religious liberty of Christians against the secular left many times.

Here's her latest article in the Daily Signal:

> [Vice President Kamala] Harris has consistently undermined the freedoms guaranteed by the First Amendment. That should alarm every American.
>
> As I told Wall Street Journal columnist William McGurn: "Throughout her career as a public official, Kamala Harris has long used government power to try to coerce people of faith to violate their consciences, especially regarding abortion and gender ideology."
>
> […]The Biden-Harris Treasury Department conspired with major banks to flag transactions of ordinary citizens making purchases at Dick's Sporting Goods, Bass Pro Shops, and Cabela's, and buying "religious texts" like Bibles, under the guise of identifying potential "domestic terrorists."
>
> The Justice Department under the Biden-Harris administration similarly went after parents who spoke up at school board meetings in an infamous 2021 memo, equating their advocacy on behalf of their kids with "harassment, intimidation, and threats of violence."
>
> […]In a speech to the NAACP, she said that social media platforms "have a responsibility to help fight against this threat to our democracy."
>
> Who would Harris classify as a "threat to our democracy"? Presumably, the same people her administration labeled as potential "domestic terrorists"; namely, concerned parents, nonprofit charitable organizations, and guys who like to camp, among others.

What I like about Kristen's column is that she recalled all of the times that the Biden-Harris administration has gone after people's first amendment rights.

Here is another case, the "Twitter Files", which were internal documents released by Elon Musk that showed how the Biden-Harris administration pressured social media companies to censor factual news stories that made their regime look bad, such as the Hunter Biden laptop story.

Kristen writes:

> As the explosive "Twitter Files" documented, the Biden-Harris administration indeed colluded with social media companies to suppress ideas and voices that didn't conform to the "official" narrative around several issues of public interest that required free and open debate.

And the Biden-Harris response to getting caught was to try to destroy Elon Musk:

> An Oct. 22 investigative report by independent journalists Matt Taibbi and Paul D. Thacker uncovered a plot by a group of foreign advisers to the vice president to "Kill Musk's Twitter" and to solicit the help of Sen. Amy Klobuchar, D-Minn., one of the leading proponents of online speech suppression.

As I've reported on this blog, Harris does not want to grant conscience exemptions to Christian medical

professionals that would allow them to opt out of performing abortions. She wants pro-life Christians to be forced to perform abortions, in violation of their religious liberty. And she also colluded with abortion providers and raided the homes of pro-life whistleblowers.

More:

> During an interview with NBC, when asked whether she supported a "religious exemption" for medical professionals who choose not to participate in abortion, Harris responded, "I don't think we should be making concessions when we're talking about a fundamental freedom to make decisions about your own body."
>
> […]As a member of the Senate Judiciary Committee, Harris badgered at least three judicial nominees for having been members of the respected Catholic nonprofit Knights of Columbus, which has more than 2 million members. Harris may be unaware, but the Constitution expressly prohibits religious tests for holding public office.
>
> Legislatively, then-Sen. Harris sponsored the Do No Harm Act, a bill that would gut the Religious Freedom Restoration Act—one of the most important federal safeguards for religious freedom—primarily for the benefit of the abortion industry.
>
> She also cosponsored the Equality Act, which would wipe out freedom of conscience and free speech by giving the federal government the power to police and punish the beliefs of disfavored Americans who have not submitted to the new sexual orthodoxy.
>
> As attorney general of California, Harris celebrated the passage of the Reproductive FACT Act, which effectively required pro-life pregnancy resource centers to advertise for abortionists, and defended it in court on more than one occasion.
>
> In one case, A Woman's Friend Pregnancy Resource Clinic v. Harris, a federal court upheld the law, which would have forced pregnancy help centers to comply with a bizarre array of coerced-speech mandates.
>
> […]In 2015, journalist David Daleiden exposed Planned Parenthood's grisly practice of selling the body parts of aborted babies in a series of undercover videos. Did Harris, as attorney general, investigate Planned Parenthood for trafficking fetal organs?
>
> No. She went after Daleiden in 2016—instead of her abortion industry allies and donors—raiding his home and seizing his equipment. And eight years later, his legal troubles are far from over. Daleiden still faces eight felony charges in an unprecedented case.

Now, I know a lot of wealthy establishment "Christians" who are in favor of Kamala Harris. When I ask them about these stories, they have never heard of any of them. Not a single one of them. When I ask them to name one of the Christian business owners who have been sued by LGBT activists, they don't know about any of those cases, either. And that's not surprising, because many of these wealthy establishment "Christians" have no Christian life plan. So, they are not authentic enough about their faith that they feel threatened in any way by secular left fascism. But what about you? Are you a Bible-believing Christian? If you are, then I hope enough evidence has been presented here to cause you to vote, and to make sure that your friends and family vote, too. ESPECIALLY if you are in one of these battleground states, where the races are all tied, or nearly tied. Remember, if it's not close, they can't cheat.

# Eight voting controversies that could provoke ongoing legal battles

**Wintery Knight** · 5 November 2024 · Archived copy · Original

Will we even know who won on election day? Democrat-run states and counties are threatening to drag out their vote counting for days. But let's look at eight specific cases where there have been voting controversies that could drag out the election. Remember, there is only one way to guarantee that the election is decided quickly: IF IT'S NOT CLOSE, THEY CAN'T CHEAT.

Here's the article from Daily Signal:

> Election Day is accompanied by some major voting controversies in battleground states, with lawsuits and investigations looking into alleged voter registration fraud, overseas ballots, and complaints about how some jurisdictions follow election law.
>
> Both Democrats and Republicans brought lawsuits.
>
> Some matters already have been settled. For example, the U.S. Supreme Court sided last week with Virginia by allowing the state to remove the names of 1,600 noncitizens from the voter rolls. And in Pennsylvania, Republicans successfully sued to extend early voting hours.
>
> However, courts tossed other election cases on procedural grounds or cases remain unsettled and could prompt arguments in close elections.
>
> Here are eight issues to look out for, both on Election Day and after.

And here are the eight controversies:

1. Voter Registration in Pennsylvania
2. Undelivered, Duplicate Ballots
3. Overseas Mail Ballots
4. 218,000 Arizona Voters With No Proof of Citizenship
5. Georgia Ballot Centers
6. Nevada Postmarks
7. Iowa and Noncitizen Voting
8. Unsent Mail Ballots in Georgia

My read on the election is that whoever wins Pennsylvania will win the election. I don't see Trump winning either Wisconsin or Michigan, and especially Michigan. But Pennsylvania could go either way.

So let's take a look at the two Pennsylvania stories:

> At least four jurisdictions in Pennsylvania are investigating potential voter registration fraud.
>
> State prosecutors in Pennsylvania's Lancaster County are investigating two batches of about 2,500 voter registration forms that may include several hundred fraudulent forms.
>
> As of Monday afternoon, the Lancaster County District Attorney's Office had determined that 17% of the forms were fraudulent. Another 57% were determined to be legitimate, WPMT-TV (Fox 43) reported. The rest were still being investigated.
>
> York County officials also are investigating potential voter registration fraud. Of a batch of 3,087 forms, about 24% were declined after being found to be duplicate requests.
>
> York County also is reviewing challenges to 350 overseas mail-in ballots.
>
> And the Monroe County District Attorney's Office last week identified fraudulent voter registration forms. A

> specific number wasn't given and the investigation continues, the Pocono Record reported.
>
> Berks County also referred two potential voter registration violations for investigation.

And this one:

> Republicans lost three federal lawsuits regarding a law called the Uniformed and Overseas Citizens Absentee Voting Act, which governs how Americans living overseas can vote in federal elections.
>
> The GOP lawsuits over UOCAVA focused largely on nonmilitary overseas voters, many of whom indicated no intention to return to the United States.
>
> Six Republican members of the U.S. House sued Pennsylvania over the state's counting procedures. The GOP lawmakers' complaint says that about 15,000 nonmilitary American voters living abroad but casting ballots in Pennsylvania elections should have to provide the same personal identification as Pennsylvania residents.
>
> But U.S. District Judge Christopher Conner determined last Tuesday—one week before Election Day—that an injunction could "upend the commonwealth's carefully laid election administration procedures to the detriment of untold thousands of voters."
>
> Michigan Court of Appeals Judge Sima Patel ruled against the Republican National Committee's challenge to rules in the U.S. law. The RNC challenge was based on nonresidents' dependents who live abroad voting in state elections. Patel ruled that the GOP lawsuit was an attempt to "disenfranchise" voters.
>
> Similarly, North Carolina Superior Court Judge John Smith ruled that the RNC challenge "presented no substantial evidence" of fraudulent voting.

I think that the fact that Pennsylvania is run by Democrats who will be counting the votes gives Kamala Harris the edge.

Young women have been going out to vote for her in battleground states in droves:

> Historian Allan Lichtman has suggested that the apparent gender gap in swing state early voting could be a "huge advantage" for Vice President Kamala Harris.
>
> […]Lichtman broke down data from early voting in the all-important swing states from NBC News' early voting tracker.
>
> It showed that in Michigan 56 percent of early voters were women and 44 percent were men. "That's huge," the American University professor said.
>
> In Wisconsin the figure was 51 percent women and 43 percent men, while in Pennsylvania it was 56 to 43 percent.
>
> "So we're talking about anywhere between an eight- and 13-point gap between men and women," Lichtman said.
>
> "And, presuming the gender gap holds, that means a huge advantage in these states."

Young women are *passionate* about their right to end a pregnancy using violence. And sadly, older women have not taught them that it's wrong to do that. So, if young men don't balance out the election with Republican votes, then I think that the Democrats will win this election. They will win the battleground states, and that will do it.

I enjoyed watching Pearl interview these Democrat voters in Green Bay, Wisconsin, and you can really hear what their main concern is – it's abortion rights.

I'm just not seeing much passion from people on the right in general. I'm the only one in my subdivision with election signs out. It's strange because I have enough money saved that I can retire early, and I'll be OK. But the

people who have children – they are the ones who will be in real trouble. Their children will be stuck with the bill for all this government spending. They will be slaves, working so that their masters – the selfish adults of today – can live high on the hog. I just don't understand why people who will be the most impacted are doing less than I am to stop the socialism.

# New study: virgins have happiest marriages, more sex partners means more unhappiness

**Wintery Knight** · 6 November 2024 · Archived copy · Original

Although we live in a culture that is dominated by the thoughts and opinions of secular leftists, science provides useful information for those who want defend Biblical morality. Consider the issue of sexuality and marriage. Secular leftists claim that sex outside of marriage is natural, and produces happiness. Bible believing Christians and Jews say chastity is best. Who is right?

Here is the latest study authored by Dr. Nicholas Wolfinger, a sociologist at the University of Utah. His previous book on relationships was published by Oxford University Press. In his analysis of the data, Wolfinger controlled for divorce rates, religiosity, and socioeconomic status.

Here's the most important graph:

Study: virgins have the happiest marriages, more partners means less happiness

Other factors that increased marital happiness: having a 4-year college degree (5%), having a salary > 78K (5%), regular church attendance (6%). Notice that women are more dissatisfied with marriage (in general) than men are, and they tend to blame the spouse they freely chose for that unhappiness.

The Federalist also reported on previous research relevant to this study:

> Psychologists Galena K. Rhoades and Scott M. Stanley found that women who have had sex with someone other than their husband report statistically significant drops in marital quality over those who don't. A 2004 study by sociologist Jay Teachman showed that intimate premarital activities such as cohabitation and intercourse increased the rate of marital dissolution by anywhere between 28 and 109 percent, depending on the activity.

Wolfinger also noted in a previous study that only 5% of women were virgins when they married.

Wolfinger noted that a possible explanation for the link between promiscuity and unhappiness is that people look

back on their past partners and compare their spouse unfavorably to them. This is especially the case with women. My concern about this is that feminism has taught women to try to increase their social standing by having hook-up sex with attractive bad boys. If those women ever marry, they do it when they are older, less fertile, and less attractive. The husband they eventually "settle" for will (in their minds) always compare unfavorably to the hot bad boys they had sex with when they were younger and prettier. This, I believe, is what leads to their unhappiness with the man they chose to marry.

**More partners also means more marital instability**

In a previous post, I blogged about several studies linking virginity to marital stability. Couples who don't have sex before marriage, or even who delayed it, reported better communication, higher satisfaction, better quality sex, and a lower chance of divorce.

Men ought to be aware of this research when they are choosing a spouse. Women initiate 69% of divorces, and the most common reason given is "unhappiness". Well, now we know what's causing that unhappiness – a high number of sexual partners prior to marrying. Smart men should prefer a virgin, for the increased happiness and increased stability. A large number of past sexual partners teaches women that relationships are engines for them to be happy, not commitments that are permanent and exclusive. They'll have internalized the view that relationships are not commitments to invest in self-sacrificially. The pattern will be: "if it doesn't make me feel happy right now, then it should be ended". It will be seen as the man's fault that she is unhappy, even if the study I talked about above shows the real reason is her past promiscuity. Men who aren't serious about evaluating the character of the women for the marriage enterprise are running the risk of divorce, it's that simple.

The best way to make sure that you have a clear head when evaluating a woman is to stay sober, and keep her hands off of you. When a man refuses to let a woman cloud his judgment with sex, then she is forced to learn how to love him in marriage-oriented ways, e.g. – help him, support him, and submit to his leadership. Male chastity encourages women who have been influenced by feminism to abandon selfishness, fun-seeking, and thrill-seeking, so that they learn to care for others. Male chastity also helps a man to resist older women who chose bad boys in their teens and 20s and want to get married to a good provider in their 30s. The studies discussed above clearly show that such women are more likely to be unhappy, and their future marriages are more likely to be unstable. Avoid them. You don't want to be in a marriage to someone who isn't very good at it, because she never prepared herself for it.

# Pre-ban study: 53% of mothers with gender-confused boys have mental illness

**Wintery Knight** · 7 November 2024 · Archived copy · Original

Normally, on this blog, every other post is some "new study" that I can use in discussing the controversial issues of the day. A lot of the best new studies get unpublished if they go against the worldview of the secular left, for example, the famous ROGD study. (That one was later re-published). Or they don't get published at all. It's fun to see what was allowed to get published pre-ban.

Here's a study that's on PubMed, one of my favorite web sites for studies.

Abstract:

> This pilot study compared mothers of boys with gender identity disorder (GID) with mothers of normal boys to determine whether differences in psychopathology and child-rearing attitudes and practices could be identified. Results of the Diagnostic Interview for Borderlines and the Beck Depression Inventory revealed that mothers of boys with GID had more symptoms of depression and more often met the criteria for Borderline Personality Disorder than the controls. Fifty-three percent of the mothers of boys with GID compared with only 6% of controls met the diagnosis for Borderline Personality Disorder on the Diagnostic Interview for Borderlines or had symptoms of depression on the Beck Depression Inventory. Results of the Summers and Walsh Symbiosis Scale suggested that mothers of probands had child-rearing attitudes and practices that encouraged symbiosis and discouraged the development of autonomy.

Fifty-three percent of the mothers of boys with gender identity disorder were diagnosed with Borderline Personality Disorder or had symptoms of depression.

Now, there are concerns I have about this study. First, it's a small number of research subjects, which is understandable because back in 1991, there were not a lot of kids with gender identity disorder.

So what is Borderline Personality Disorder? Here is the description from the NIH:

> People with borderline personality disorder may experience intense mood swings and feel uncertainty about how they see themselves. Their feelings for others can change quickly, and swing from extreme closeness to extreme dislike. These changing feelings can lead to unstable relationships and emotional pain.
>
> People with borderline personality disorder also tend to view things in extremes, such as all good or all bad. Their interests and values can change quickly, and they may act impulsively or recklessly.

I don't know much about mental illness, but I've been told never to date (much less marry) someone with BPD, because it is the most serious mental illness.

This finding from the study is interesting to me, because it suggests a reason why we are seeing this enormous surge in LGBT identification among young people. Sure, there is peer pressure, that's what the study on ROGD was about. But now it suggests a chain between radical feminism, the Sexual Revolution, the decline of women's happiness, and their transgender children.

We know for certain that women are experiencing far greater unhappiness after radical feminism became widespread, because they don't like the goodies of radical feminism – promiscuity, abortion, careers, etc. – as much as they liked being married to a good man, and being a stay-at-home mother.

Daily Wire noted this in 2017:

> According to a recent study from Yale University researchers, liberated, college educated women are freezing

> their eggs because they can't find a man to marry and have children with before their natural childbearing years expire. In the U.K., for instance, one in five women is childless when their natural reproductive years expires, as opposed to one in ten women a mere generation prior.
>
> So what's to blame for this onslaught of college-educated yet terribly empty women?
>
> The short answer is feminism.

The short answer is feminism, because although women claim that it's men's fault for not marrying them, no man with a brain would ever marry a feminist. It's actually become too dangerous for men to even date feminists. I don't even talk to them. The character traits that go with the feminist worldview are not just anti-marriage, they're dangerous to men. Women who blame the bad results of their own choices on men are not safe to even speak to.

And as I've noted before, the decline of marriage is causing a massive spike in mental illness. Not in conservative women – just in progressive women.

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

Here's the part of the data I thought was most interesting:

It turns out that marriage accounts for a lot of women's happiness. But by allying themselves with radical feminism, women have made themselves totally unattractive to marriage-minded men. I think that the explosion of kids with gender identity disorder is just one of the ways that feminism is working itself out.

# Democrat donors gave $442.7 million to elect Kamala Harris, and she lost

**Wintery Knight** · 7 November 2024 · Archived copy · Original

One of my favorite things about Trump beating Kamala is how much more money the left spent trying to help her win. Democrats FAR outspent Republicans in their campaigns. And once a dollar is spent on this election, it isn't there to be spent on the next one. I was very skeptical about Trump's ability to win this election. He was not my choice. But not only did he win, but he really hurt the secular left.

Here's the story from Daily Caller:

> Outside groups spent $442.7 million on independent expenditures designed either to support Vice President Kamala Harris or to oppose Trump between Oct. 5 and Nov. 5, Federal Election Commission (FEC) records show. On the other side of the equation, PACs only spent about $160.7 million supporting Trump and opposing Harris over the same period. Despite the massive financial advantage, Harris lost the Electoral College and is on track to lose the popular vote as well, according to the New York Times' projections.

I thought this part below was interesting, because of another story I read recently about how a company that collects donations for Democrat campaigns was not verifying whether the donors were legally allowed to make those donations at all.

> Harris' allies largely relied on dark money — where the original donor is unknown — to fund their home-stretch spending spree, according to FEC records. Future Forward PAC, the primary super PAC that supported Harris, was responsible for about 70% of the pro-Harris and anti-Trump spending during the final month of the election.
>
> Trump's allies were considerably less reliant on dark money. Make America Great Again Inc., the primary super PAC behind the president-elect, took in about $286.2 million this election cycle, campaign finance records show. Of that sum, about $260 million came from named individuals.
>
> Harris' official campaign also had far more money than Trump's, raking in nearly $1 billion in funds while the president-elect took in just $388 million, Forbes reported.

So, here is the article from The Center Square, which reported the latest on Democrat donation collection.

It says:

> A nearly year-long investigation into ActBlue, a Democratic Party online donation platform, alleges a large number of suspicious donations have been made, resulting in Texas Attorney General Ken Paxton petitioning the Federal Election Commission to get involved.
>
> […]Since launching the investigation, Paxton said it's been publicly reported that potentially fraudulent transactions have occurred on political committee online platforms.
>
> "Certain platforms appear to facilitate straw donor transactions, where a contributor disguises his identity by attributing his contribution to another, unaware person," the petition states.
>
> Alleged straw donations are being made through the use of prepaid credit cards, which he says "are a favorite tool of fraudsters."
>
> Paxton's office launched an investigation into ActBlue in December to determine if the platform's operations were compliant with all applicable laws.
>
> […]The OAG's investigation says it found a large number of suspicious donations that were made "through

> obscured identities and untraceable means," necessitating FEC action.
>
> Through the use of prepaid cards it "appears that straw donations are systematically being made using false identities, through untraceable payment methods," Paxton said.

We are talking about a lot of money here:

> ActBlue says it's raised more than $15.8 billion online since 2004.
>
> In the third quarter of fiscal 2024, it says "6.9 million unique donors gave over 31 million contributions to 18,396 campaigns and organizations, totaling over $1.5 billion."

Could these donations be coming from donors who are not legally allowed to make these donations?

I know that China, for example, has a lot to lose if Trump imposes tariffs on their exports. So, if it were possible for them to get away with it, why wouldn't China collude with Democrats in order to interfere with the election? I would not expect the corrupt Biden-Harris regime to do anything to stop them. They're too busy faking Trump-Russia collusion stories, conducting surveillance on the Trump campaigns, pre-dawn raiding the homes of Christian pro-lifers, and labeling American parents as "domestic terrorists".

# Study: belief in free will linked to ability to behave morally and to help others

**Wintery Knight** · 8 November 2024 · Archived copy · Original

A while back I finished reading “God’s Crime Scene”, the new book by J. Warner Wallace. I wanted to post something about some studies he mentioned in Chapter 6, on free will. This is one of the places where he found evidence in a surprising area.

Wallace says that free will makes more sense if theism is true, because we have non-material souls that interact with our bodies, but are not causally determined by them. On atheism, only matter exists, and you can’t get free will (or consciousness) from matter. So atheists like Sam Harris and Alex Rosenberg, for example, deny free will, because they are materialists and atheists.

Anyway, here’s what he writes on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others.” Even determinist Michael Gazzaniga conceded: “It seems that not only do we believe we control our actions, but it is good for everyone to believe it.”” The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here’s the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons’ belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in

> free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you're alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

## Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

# Andy Bannister and Michael Ruse discuss how atheists find meaning in life

**Wintery Knight** · 9 November 2024 · Archived copy · Original

> An old post of mine appeared in a recent Mid-Week Apologetics Booster over at Christian Worldview Blog, so I decided to re-post it below. I am still trying to adjust to the fact that I am not going to be ruled by the secular left for the next 4 years. It's a happy surprise, but I need some time to adjust. This post was originally published in March 2016, but I added a new image.

I'm summarizing a recent episode of the Unbelievable show.

**Details:**

> Atheist philosopher Michael Ruse joins Justin as we spend a second week looking at Andy Bannister's new book 'The atheist who didn't exist'.
>
> Its amusingly titled chapters include 'The Peculiar Case of the Postmodern Penguin (or: Why Life without God is Meaningless). Michael and Andy debate whether it's a problem that atheists can't have meaning with a 'capital M'.

Here is a summary of the discussion between Ruse and Bannister, and my comments below the summary.

The MP3 file is here.

**Summary:**

- Ruse: ultimate questions are serious questions, and some religions are attempting to provide serious answers to those questions
- Ruse: there is a psychological element to belief in God but it's not a complete explanation, but it can apply to non-belief as well
- Bannister: there are psychological reasons why people would prefer unbelief (quotes Thomas Nagel and Aldous Huxley)
- Bannister: (to Ruse) what do you think would follow next if you got new information that caused you to believe in God?
- Ruse: I'd feel scared, I'd think of all the reasons that God would dislike me, rather than any reasons why God would save me
- Bannister: according to the Bible, God is not so much interested in mere belief, but in active trust in him
- Ruse: without being smug, I just completed 50 years as a college professor of philosophy, and I have a sense of worth from that
- Ruse: if God turns up, and says that 50 years of being a professor is not good enough, well, I don't know God, I'm sorry, I did my best
- Brierley: Andy, explain to us this story of how a penguin explained to you how he invented a subjective meaning in life for himself?
- Brierley: (reads the story)
- Bannister: when it comes to reading a book, the real meaning is the meaning the author intended the book to have
- Bannister: readers can inject their own meaning into the book that has nothing to do with it, but the author gives the real meaning

- Bannister: meaning in life is like reading a book – you can make up your own meaning, but the author's meaning is the real meaning
- Brierley: (to Ruse) on atheism, is there any objective meaning?
- Ruse: "obviously, someone like myself cannot have meaning with a capital M in that sense"
- Ruse: the real question is and atheist can find a sense of self-worth, "I find that I'm happier within myself, I can find meaning"
- Bannister: what would you say to someone who drinks away the family inheritance and gets the same sense of happiness you have?
- Bannister: what would you say to all the people who are unable to get "a sense of self-worth" from their career, because of where they are born, sickness, etc.
- Ruse: I have nothing to offer them, some people are born into such awful situations that they are bound to be bad people
- Ruse: these unfair accidents of birth, etc., fits with atheism better
- Ruse: what we should do is change society so that more people can build a sense of self-worth through achievements
- Ruse: that way, they can say to God "I used my talents" so they can create feelings of self-worth and happiness (apart from God)
- Bannister: meaning in life cannot be answered without answering questions related to identity, value, which are rooted in the overall worldview
- Bannister: on the Christian worldview, you have an infinite worth, your value isn't determined by circumstances, earnings, friends, etc.
- Bannister: your value comes from what Jesus was willing to pay to save you, namely, giving his own life for you
- Bannister: when I travel to meet other Christians in other parts of the world, they have a happiness that should not be there if they are getting happiness from wealth, fame, achievements, etc.
- Bannister: but when you come to the West, many people who have wealth, fame, achievement, etc. are unhappy
- Ruse: well maybe who look after a flock of sheep every day may get a sense of self-worth from that, or from other jobs
- Ruse: I do take Christianity very seriously, it is a grown-up proposal to answer grown-up questions – it works if it is *true*
- Ruse: we don't have to follow Nietzche's statement that if there is no God, there is no meaning in life – we can find a middle way, we can achieve meaning in life by using our talents to achieve things
- Bannister: I disagree with Michael, I don't think that the meaning you invent for yourself is authentic meaning
- Bannister: distracting yourself with amusing things and happiness is not an answer to the problem
- Brierley: (to Ruse) are you saying that you have searched for ultimate meaning, and you are settling for subjective meaning?
- Ruse: my subjective meaning is not second class to objective meaning, "I feel a real deep sense of achievement, of meaning, of self-worth, of having used my talents properly, and I don't feel in any sense a sense of regret" (what matters to him is how he feels)
- Bannister: notice how Michael keeps bringing in value judgments. e.g. – "use my talents well", that implies that there is a right way and a wrong to use your talents, which assumes an objective scale of right and wrong, which makes no sense in atheism
- Bannister: an atheist can sit in a sun room and enjoy the feelings of happiness generated by the light and heat of the Sun, without asking whether there is a Sun out there
- Bannister: ultimately, at the end of the day, my concern is not whether something makes me happy or makes me feel fulfilled

- Bannister: ultimately, at the end of the day, I think there is only one real reason to wrestle with these questions of meaning, and that is to find truth
- Ruse: sometimes we reach a point where we cannot get to true answers to some questions, sometimes we look for truth, but then give up and confess “I cannot find it” and then move on from there

Is it possible to dispense with God’s advice on your decision-making and achieve something that affects a lot of people, or makes people like you, or makes you famous, etc., and then have *that* please God? “Look, God, I did something I liked that affected a lot of people, and made them feel happy as they were on their way to Hell because they rejected you”. I think a lot of celebrities, athletes and musicians have feelings that they have achieved something, but having feelings of achievement because you entertain people doesn’t mean anything to God.

So what is the standard? How you imitate Jesus – *self-control, self-denial and self-sacrifice to honor God* – that is the standard. If I had to choose between giving up two hours of my life to summarize this discussion for my readers, and all the fame and fortune that people who make godless TV shows, movies and music have, I would choose to make this debate summary. My goal in life is not to have fun, thrills, travel and feel happy *in this world*. I have a Boss. Performing actions that respect the Boss is objectively meaningful. It’s may not seem like much compared to what James Bond does in million-dollar movies, but at least I am wearing the right uniform, and playing for the right team.

I’m starting to notice that a lot of younger Christians are more interested in feeling good, having fun, being liked by others than they are in being able to know what’s true or show what’s true. Christians are no exception to this problem of finding meaning in life. A lot of us are just taking in entertainment and trying hard not to think at all.

# Why I admire people in the armed forces more than famous entertainers

**Wintery Knight** · 10 November 2024 · Archived copy · Original

I've noticed that many Christians can tell me a lot about famous entertainers. It doesn't matter if it's singers, musicians, actors, athletes, etc., they seem to know details of their biographies, achievements, etc. And it doesn't really matter if those people are Christians, or whether they have performed actions consistent with a Christian worldview in their private lives.

Anyway, speaking for myself, I mostly admire two kinds of people. The first kind is the kind I blog about here all the time: Christian scholars engage non-Christians intellectually using logic and evidence. The second kind, as you can tell from my reading list, is people who distinguish themselves in conflict with those who oppose the principles and policies that allow me to live out my Christian life. And I am especially interested when people who are fighting evil (imperialists, Nazis, socialists, communists, leftists, etc.) exhibit Christ-like character in risking their lives to save others, or in giving their lives to save others.

Lt. Walt Chewning charges unto burning F-6F Hellcat to save trapped pilot

I have a war story to tell you that happened on November 10th, 1943.

> Lieutenant (later Lieutenant Commander) Walter Lewis Chewning of Cynwyd, Pennsylvania, steps on the burning fuel tank of an F6F-3 Hellcat flown by Ensign (later Lieutenant) Byron Milton Johnson of Potter, Nebraska to effect a successful rescue of the pilot on November 10, 1943. Johnson had flown out to USS Enterprise from Barbers Point, Hawaii, enroute to Makin Atoll in the Gilberts to support the United States Army invasion, which occurred on November 20, 1943. The afternoon of November 10, Johnson took off in F6F Hellcat Number 30 for a routine training exercise. He immediately developed engine trouble and requested an emergency landing. He was waved off three times as he struggled to maintain control, but his tail hook caught the third arresting gear wire, and Johnson's Hellcat was slammed into the deck, coming to rest in the port catwalk. The plane came to rest on its external belly fuel tank, which started to leak. As the engine vibrated horribly as the propeller bent itself on the deck, sparks ignited the fuel. The hard landing had jammed Johnson's canopy closed, shearing the retaining pin; he could not exit the plane. Chewning, who had joined the ship October 2, 1943 as Enterprise new catapult officer, scrambled out of the catwalk and came through the

> smoke. Stepping on the burning belly tank, he forced open the canopy and pulled Johnson to safety.

He received the two highest non-combat medals available:

> Chewning was awarded the Navy and Marine Corps Medal for his actions.

He was a well-educated and accomplished person before joining the Navy:

> Chewning played soccer and Lacrosse at Cornell while studying Mechanical Engineering, breaking his rib and left ankle in one game. He graduated in 1936 and studied at the Massachusetts Institute of Technology before joining the Navy in January 1941. He was the assistant to the Chief Engineer at the Naval Aircraft Factory in Philadelphia, Pennsylvania before joining USS Enterprise. He served as Enterprise's catapult officer until December 1944, when he transferred to Dutch Harbor Naval Air Station in Alaska as ordinance officer. Chewning served in the Navy until December 1949; he also was awarded the Bronze Star. After the war he assisted research and development for various aeronautical companies, the United States Air Force, and the fledgling National Aeronautics and Space Administration. Motion picture film of the crash, taken from Enterprise's bridge, was shown as part of the television program "Victory at Sea" on January 25, 1953. Chewning and Johnson gave interviews to several newspapers about the accident after the program aired.

I found a colorized version of the picture above here:

Lt. Walt Chewning charges unto burning F-6F Hellcat to save trapped pilot
This image was colourized from the original by Paul Reynolds.

What I thought was interesting about Chewning was how he had everything going for him in terms of his education and career, but he chose to join the Navy anyway, in order to defend his country from Japanese imperialism. Those who understand how the Japanese treated prisoners and conquered peoples will know which side of that conflict was good, and which side was evil. Chewning wasn't some sort of loser who took risks for fun and thrills. It had to be a risk where the prize was worth the risk. And he had the humility to consider others better than himself, so that their life was worth the risking of his own.

I just think that it's important for young Christians to have the right kind of heroes. The heroes who are promoted to young Christians by the cultural elites are not usually the right role models. And there is a reason for that. The secular leftists don't want young Christians to be emulating people who excel according to the standards of the Christian worldview. We are in a religion where self-sacrificial love is the centerpiece. Taking trouble on yourself

for someone else. Doing your job, when it goes against your own self-interest.

# Secular left fascism: FEMA workers directed to avoid homes with Trump signs

**Wintery Knight** · 11 November 2024 · Archived copy · Original

Atheists are the most politically active group in America. They are overwhelmingly for leftist policies. As I have shown before, atheists do not have a rational foundation for moral values and duties. When doing the right thing goes against their self-interest, they have no rational justification to do the right thing. So what happens when they go into government? Can they be trusted to do their jobs?

Here's an article from the New York Post:

> A Federal Emergency Management Agency (FEMA) supervisor told disaster relief workers in Florida to "avoid homes" with signs supporting President-elect Donald Trump, the agency confirmed Friday.
>
> The FEMA official — Marn'i Washington — conveyed her edict both verbally and in a Microsoft Teams chat used by relief workers canvassing Lake Placid homes ravaged by Hurricane Milton last month, according to the Daily Wire.
>
> "Avoid homes advertising Trump," Washington wrote in a "best practices" memo to employees.
>
> The order was the second bullet point in a list instructing workers to not go "anywhere alone," practice "de-escalation," stay hydrated and to "follow the rules."
>
> FEMA employees told the outlet that at least 20 homes displaying Trump signs or flags — a common sight during election season — were passed between the end of October and into November because of the order.
>
> "Trump sign no entry per leadership," read messages left by workers in FEMA's tracking system when homes were skipped because of the banners.
>
> By ignoring the homes, residents were denied the opportunity to sign up for federal FEMA disaster relief assistance in the wake of the Category 3 hurricane's landfall.

You might remember that we learned previously that FEMA was deliberately blocking relief efforts for people in North Carolina, specifically in areas with many Republican voters.

Remember this article from Fox Business?

> Elon Musk on Friday slammed the Federal Emergency Management Agency (FEMA), claiming that it is blocking shipments of Starlink satellite internet deliveries in hurricane-ravaged North Carolina.
>
> "FEMA is not merely failing to adequately help people in trouble, but is actively blocking citizens who try to help!" the billionaire claimed on X.
>
> Musk said he had just received a note from a SpaceX engineer, Starlink's parent company, in Asheville, North Carolina, who said the company has "powered up two large operating bases for choppers to deliver goods into hands. We've deployed 300+ starlinks and outpour is it has saved many lives."
>
> But Musk said the engineer claimed that FEMA is "actively blocking shipments and seizing goods and services locally and locking them away to state they are their own. It's very real and scary how much they have taken control to stop people helping. We are blocked now on the shipments of new starlinks coming in until we get an escort from the fire dept. but that may not be enough."

It's very important for taxpayers to reflect on the actions that we see from secular leftists who are in government.

We see:

- pre-dawn raids on the homes of enemies of the Democrat party

- false dossiers used to obtain warrants to spy on political opponents
- statements claiming that laptops are “Russian disinformation” when they are actually genuine
- slow-walking prosecutions of relatives of Democrat party members
- labeling concerned parents of students as “domestic terrorists”
- persecuting Christian business owners for their religious beliefs
- forcing Christian medical professionals to perform violent acts that go against their consciences
- seizing children from parents when disagree with secular leftist sexual ideologies
- launching criminal prosecutions of their political opponents before an election

And this is not to mention all the times that actual political violence has been committed by Democrats against Republicans, such as the attempted murder of Congressman Steve Scalise by a former Bernie Sanders campaign worker. There are many such cases.

When you find these cases happening, and you ask secular leftists what is an appropriate measure to take to deter it, they say they will suspend the person(s) who were caught, and launch an investigation. Is it enough, though? When secular leftists get angry with Christians who merely disagree with them, they drag them into court, and try to shut down their businesses and take their life savings. Maybe it’s time for Republicans to start thinking about how to deter the secular left from using government as a weapon against their fellow Americans who have every right to speak up and participate in the political process without being punished.

# Richard Dawkins: “the hypothesis of theism is a scientific hypothesis”

**Wintery Knight** · 12 November 2024 · Archived copy · Original

I’m not sure if you’ve been following Richard Dawkins lately, but he has been getting less and less beastly. First of all, he did several debates with Christian scholars. Second, he’s realized the difference that Christian values make for morality and civilization. And thirdly – and this is the new one – he thinks that the intelligent design hypothesis is a valid scientific hypothesis. Let’s take a look.

In this clip from the preview of a debate that Richard Dawkins had with John Lennox, he explains (at around the 3-minute mark) that a “reasonably respectable case” can be made for a deistic God. That means a God who creates and designs the universe, but does not intefere:

That happened back in 2008. And in their debate he said this: “A serious case could be made for a deistic God”.

So already, he was starting to sound more like Anthony Flew, who, atheist though he was, always showed that he would be willing to go wherever the evidence led. I remember in Flew’s debate with William Lane Craig, an atheist questioner asked him why he was accepting the case for a supernatural cause of the beginning of the universe, instead of trying to proposing a different model that would get out of the need for a Creator. And Flew said that he had to go with the scientific consensus, which requires a beginning of the universe. A few years later, Flew gave up atheism and accepted theism (although not Christianity). He was honest about what science shows. I can tell a smart atheist from a dumb atheist.

Anyway, round 2 of Dawkins is when he recently lamented the fact that the decline of Christianity (which he spent his life trying to achieve) had caused changes in British culture that he didn’t like.

Here it is from Christian Post:

> Atheist author Richard Dawkins described himself as a “cultural Christian” and lamented the faith’s waning cultural influence in Europe, though he still derided its key tenets as “nonsense,” during an interview on Easter Sunday.
>
> Speaking with British journalist Rachel Johnson, Dawkins noted that the United Kingdom is “fundamentally a Christian country,” and he still personally values the Christian ethos despite not believing the religion from which it emerged.
>
> “I call myself a cultural Christian,” said the evolutionary biologist and author of The God Delusion. “I’m not a believer, but there’s a distinction between being a believing Christian and being a cultural Christian. And so, I love hymns and Christmas carols, and I sort of feel at home in the Christian ethos. I feel that we are a Christian country in that sense.”

All right, here is the latest Richard Dawkins news, from Evolution News:

> Recently Dr. Dawkins had a moving dialogue with former New Atheist Ayaan Hirsi Ali, who is also a former Muslim. She has announced her conversion to Christianity for what she describes as “very subjective” reasons. It was in response to a “personal crisis”: “I lived for about a decade with intense depression and anxiety and self-loathing. I hit rock bottom. I went to a place where I actually didn’t want to live anymore, but wasn’t brave enough to take my own life.” Faith was her way out of the crisis.
>
> Dawkins answers kindly that belief in a creator or designer is more than a mere subjective response: “You appear to be a theist,” he tells her. “You appear to believe in some kind of higher power. Now, I think that the hypothesis of theism is the most exciting scientific hypothesis you could possibly hold” (emphasis added). Hold that thought in your mind.

> Obviously, Dawkins wasn't giving up his own atheism. He goes on: "And the idea that the universe was actually created by a supernatural intelligence is a dramatic, important idea. If it were true, it would completely change everything we know. We'd be living in a totally different, different universe. That's a big thing. It's bigger than personal comfort and nice stories and these things. The idea that the universe has lurking beneath it an intelligence or supernatural intelligence that invented the laws of physics, that invented mathematics, is a stupendous idea, if it's true." Minus the reference to "lurking," that is of course the thesis of intelligent design. He adds, "To me that simply dwarfs all talk of nobility and morality and comfort and that sort of thing."
>
> This is a remarkable response, granting the premise of arguments for intelligent design like those of Stephen Meyer in Return of the God Hypothesis: Three Scientific Discoveries Revealing the Mind Behind the Universe. The premise is that in discussions of ID, there really is a scientific question to consider. The design hypothesis could be wrong, or it could be right. But let's weigh it on its own terms as the scientific hypothesis that it is. Thank you to Richard Dawkins for using his authority to point that out.

And of course, anyone who has looked into these things knows the elements of the scientific case for theism:

1. origin of the universe
2. cosmic fine-tuning
3. galactic, stellar and planetary habitability
4. origin of life
5. Cambrian explosion
6. molecular machines / irreducible complexity

A lot of atheists don't go near enough to the evidence to be able to make a statement like what Dawkins said. I'm impressed with Dawkins, because he was even able to correct Ayann Hirsi Ali about what Christianity actually involves. Christianity is not primarily about subjective beliefs or communities or even a set of moral teachings. Christianity is a knowledge tradition. It's a set of claims about reality that are either true or false. And he knows that Christianity makes testable claims, and some of them can be verified or falsified by science. Dawkins has a more respectful view of what Christianity is than many Christians. Impressive.

# How many evidences do you know for the origin of the universe?

**Wintery Knight** · 13 November 2024 · Archived copy · Original

It's very, very important to get a conversation about spiritual things started off on the right foot. My favorite place to start is with the origin of the universe. I always use the same 3 evidences, but I found an article that has even MORE. First, let me talk about the ones I like, then I'll send you the link to the article with the bigger list. Once you get the beginning proved, the next question is: who caused it?

Here's the article from J. Warner Wallace.

He writes this:

> My career as a Cold Case Detective was built on being evidentially certain about the suspects I brought to trial. There are times when my certainty was established and confirmed by the cumulative and diverse nature of the evidence. Let me give you an example. It's great when a witness sees the crime and identifies the suspect, but it's even better if we have DNA evidence placing the suspect at the scene. If the behavior of the suspect (before and after the time of the crime) also betrays his involvement, and if his statements when interviewed are equally incriminating, the case is even better. Cases such as these become more and more reasonable as they grow both in depth and diversity. It's not just that we now have four different evidences pointing to the same conclusion, it's that these evidences are from four different categories. Eyewitness testimony, forensic DNA, behaviors and admissions all point to the same reasonable inference. When we have a cumulative, diverse case such as this, our inferences become more reasonable and harder to deny. Why did I take the time to describe this evidential approach to reasonable conclusions? Because a similar methodology can be used to determine whether everything in the universe (all space, time and matter) came from nothing. We have good reason to believe our universe had a beginning, and this inference is established by a cumulative, diverse evidential case.

Here is his list of evidences:

1. Philosophical Evidence
2. Theoretical Evidence
3. Observational Evidence
4. Thermal Evidence
5. Quantitative Evidence
6. Residual Evidence

Now, if you listened to our podcast with astronomer Guillermo Gonzalez, I mentioned the ones that I like, which are #3, #5 and #6. And I like these, because they are scientific, and because I have clever ways of explaining them using simple terms.

Here's what he says:

> **3. Observational Evidence (from Astronomical Data)**
>
> Vesto Slipher, an American astronomer working at the Lowell Observatory in Flagstaff, Arizona, spent nearly ten years perfecting his understanding of spectrograph readings. His observations revealed something remarkable. If a distant object was moving toward Earth, its observable spectrograph colors shifted toward the blue end of the spectrum. If a distant object was moving away from Earth, its colors shifted toward the red end of the spectrum. Slipher identified several "nebulae" and observed a "redshift" in their spectrographic colors. If these "nebulae" were moving away from our galaxy (and one another) as Slipher observed, they must have once been tightly clustered together. By 1929, Astronomer Edwin Hubble published findings of his own,

> verifying Slipher's observations and demonstrating the speed at which a star or galaxy moves away from us increases with its distance from the earth. This once again confirmed the expansion of the universe.
>
> **5. Quantitative Evidence (from the Abundance of Helium)**
>
> As Astronomer Sir Fred Hoyle studied the way elements are created within stars, he was able to calculate the amount of helium created if the universe came into being from nothing. Helium is the second most abundant element in the universe (Hydrogen is the first), but in order to form helium by nuclear fusion, temperatures must be incredibly high and conditions must be exceedingly dense. These would have been the conditions if the universe came into being from nothing. Hoyle's calculations related to the formation of helium happen to coincide with our measurements of helium in the universe today. This, of course, is consistent with the universe having a moment of beginning.
>
> **6. Residual Evidence (from the Cosmic Background Radiation)**
>
> In 1964, two American physicists and radio astronomers, Arno Penzias and Robert Wilson detected what is now referred to as "echo radiation", winning a Nobel Prize for their discovery in 1978. Numerous additional experiments and observations have since established the existence of cosmic background radiation, including data from the Cosmic Background Explorer satellite launched in 1989, and the Planck space observatory launched in 2009. For many scientists, this discovery alone solidified their belief the universe had a beginning. If the universe leapt into existence, expanding from a state of tremendous heat, density and expansion, we should expect find this kind of cosmic background radiation.

So, I've made simple analogies for these, so that I can explain them to people from every background.

For #5, for example, I use the story of leaving you in a room with beads and strings and then watching you make one necklace of beads, and timing you, and then leaving you for an hour, and coming back and estimating how many necklaces you will have made, and how many beads you have left. With respect to the beginning of the universe, at the very beginning, it's all hydrogen (beads). But there is nuclear fusion going on, and the beads are being fused into heavier elements like helium and carbon and oxygen (necklaces). Well, astronomers made predictions about HOW MUCH helium you could fuse during the very hot period, according to the standard cosmology, and the prediction was for 75% hydrogen (beads) and 24% helium (necklaces), and that's exactly what we see today.

And for #6, I talk about baking a cake. Suppose you heated up your oven and put a ban full of cake batter in there for an hour. You notice that the room is 68 Fahrenheit (20 Celsius) when the cake went in. Then you take the cake out to cool, but you leave the oven open. An hour later, you notice that the oven is cool, but the temperature of the room has gone up to 72 Fahrenheit (22 Celsius). When you have a source of heat in a small area, then you open it up in a bigger area, the smaller area cools down, and the bigger area warms up a bit. Astronomers made a prediction that the very hot creation event would leave a small 3 degrees Kelvin "cosmic microwave background radiation" everywhere in space, and when they were finally able to measure it, they found that the predicted 3 Kelvin temperature was found exactly as predicted.

So, if you don't know all of these evidences for a beginning, read the article, pick your favorites, and be ready to explain them.

# Why do so many atheist historians think that 1 Corinthians 15 is reliable history?

**Wintery Knight** · 14 November 2024 · Archived copy · Original

Which passage of the Bible is the favorite of Christians who like to defend the Christian worldview? I don't mean which one is most inspirational… I mean "which one is the most useful for winning arguments?" Well, when it comes to the historical Jesus, the most important passage has to be 1 Corinthians 15:3-7.

The tradition in 1 Corinthians 15 is an early creed that was received from the eyewitnesses Peter and John when Paul visited them several times in Jerusalem, as documented in Galatians 1 and 2, where Paul meets the eyewitnesses. And of course, Paul records his own eyewitness experience, documented in 1 Cor 15:8.

So, is this passage accepted as historically reliable by all ancient historians? Or only by the Bible-believing ones?

Here's something posted by Dr. William Lane Craig about the 1 Corinthians 15 passage:

> The evidence that Paul is not writing in his own hand in I Cor. 15.3-5 is so powerful that all New Testament scholars recognize that Paul is here passing on a prior tradition. In addition to the fact that Paul explicitly says as much, the passage is replete with non-Pauline characteristics, including, in order of appearance: (i) the phrase "for our sins" using the genitive case and plural noun is unusual for Paul; (ii) the phrase "according to the Scriptures" is unparalleled in Paul, who introduces Scriptural citations by "as it is written"; (iii) the perfect passive verb "has been raised" appears only in this chapter and in a pre-Pauline confessional formula in II Tim. 2.8; (iv) the phrase "on the third day" with its ordinal number following the noun in Greek is non-Pauline; (v) the word "appeared" is found only here and in the confessional formula in I Tim. 3.16; and (vi) "the Twelve" is not Paul's nomenclature, for he always speaks of the twelve disciples as "the apostles."
>
> Now the visit during which Paul may have received this tradition is the visit you mention three years after his conversion on the road to Damascus (Gal. 1.18). This puts the tradition back to within the first five years after Jesus' death in AD 30. So there's not even an apparent inconsistency with Paul's appropriating the language of the formula to encapsulate the Gospel he was already preaching during those first three years in Damascus.

Ancient historian Gary Habermas loves to read non-Christian scholars… and then he writes about what THEY think about Jesus in peer-reviewed articles, published in academic journals. Let's look at this one: *Dialog: A Journal of Theology, Vol. 45; No. 3 (Fall, 2006), pp. 288-297; published by Blackwell Publishing, UK.*

He writes:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: "However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul's."[3]
>
> (2) In addition to Paul's own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the

> proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all significant. Fuller attests to the unanimity of scholarship here: "It is almost universally agreed today that Paul is here citing tradition."[4] Critical scholars agree that Paul received the material well before this book was written.[5]

**This is important:**

> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul's use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus' resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).

He's an eyewitness (verse 8), and he met with the other eyewitnesses, James and Peter. 1 Corinthians is early. Galatians is early. The creed is extremely early – right after the events occurred. There was no time for legends to develop.

And atheistic / critical historians agree, the creed is reliable:

> Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it "indubitably goes back to the oldest phase of all in the history of primitive Christianity."[7] Joachim Jeremias agrees that it is, "the earliest tradition of all."[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even "in use by the end of 30 AD . . . ."[9]
>
> Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . ."[10] Similarly, Michael Goulder thinks that it "goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion."[11] Thomas Sheehan agrees that this tradition "probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion."[12] Others clearly consent.[13]
>
> Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul's reception of this report relatively soon after Jesus' death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.
>
> (3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, "Evidently the tradition of I Cor. 15.3 had been subjected to many tests" by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul's account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his

> firsthand, direct approval of their resurrection message.

Now, some of the people he lists are really biased against the supernatural, and they really hate the idea that the claims of Christianity exclude other religions. And yet they don't deny the historical reliability of 1 Corinthians 15, or that it is based on eyewitness testimony.

That's why when you watch debates about the historical Jesus, you see skeptical historians like Bart Ehrman, Gerd Ludemann, James Crossley, Michael Goulder, etc. accepting that the disciples thought they saw Jesus after his death. They're not just being nice to Dr. Craig when they give him that. They are forced to accept it, because it passes the historical tests. Every Christian ought to be aware of which passages of the New Testament are seen by the broad spectrum of ancient historians as "historical", regardless of their various biases. You can believe everything in the Bible. But when you debate non-Christians, you have to use the historical core of Christianity which successfully passes historical analysis.

You can see the creed used as evidence in the debate between James Crossley and William Lane Craig.

# Why can't the FBI identify the pipe bomber suspect from January 6th?

**Wintery Knight** · 15 November 2024 · Archived copy · Original

The FBI has been involved in many, many scandals that show how corrupt and politicized they've become. They failed to do their jobs when they investigated Hillary Clinton's private e-mail server, and they failed to do their jobs with the Trump-Russia collusion hoax. But more of their failures are just coming to light now.

Here's the story from Just The News:

> Cellular carriers have told Congress they possess intact phone usage data from the vicinity where two pipe bombs were planted during the Jan. 6 incident, directly disputing FBI testimony that agents couldn't identify a suspect because the phone data was corrupted, a key House chairman tells *Just the News*.
>
> The revelations from Rep. Barry Loudermilk, R-Ga., the chairman of the House Administration oversight subcommittee, adds new intrigue to a debate that has gripped Washington for nearly four years: Why can't the FBI with so much evidence and manpower identify the suspect who planted the explosive devices at the Democrat and Republican Party headquarters hours before the Capitol was breached.

Here's what the FBI said:

> "In June 2023, the former Assistant Director in Charge of the FBI's Washington Field Office, Steve D'Antuono, who oversaw the pipe bomb investigation, said that the FBI received corrupted data from one of the cell carriers and that it most likely contained the identity of the pipe bomber. Given the significance of this information, my Subcommittee sent letters to the three major cell carriers, asking them to respond to Mr. D'Antuono's claim of corrupted data," he said.

And here's what the non-partisan, private sector cell phone companies said:

> "Every major cell carrier responded and confirmed that they did not provide the FBI corrupted data," Loudermilk said.
>
> "Additionally every major cell carrier confirmed they were never notified that the FBI had any issues accessing the data. This contradictory testimony raises some serious questions about the status of the investigation into the pipe bomber and about why the case remains unsolved nearly four years later," he added.
>
> Last year, D'Antuono told the House Judiciary Committee that the FBI did not a receive complete phone data from telephone carriers because some of it had been corrupted.

And this wasn't the only problem with the FBI testimony:

> Additionally, D'Antuono gave testimony that the pipe bombs were deemed inoperable, despite the Quantico laboratory coming to a different conclusion.

And here's how the FBI responded to questions:

> […]The FBI declined to comment on the investigation.

Looks like two completely different stories, right? I believe the phone companies, and that means that the FBI is lying. Again.

Why do you think that the FBI would misrepresent what the cell phone companies did? Who are they trying to

protect? The pipe bomber? Why would they want to protect the pipe bomber?

**The FBI doesn't do good work for taxpayers**

Anyway, I thought it might be a good idea to remind everyone of what the FBI is really like.

Do you remember Peter Strozk?

> An FBI agent who worked on the special counsel's Russia probe texted another investigator in August 2016 that "We'll stop" Donald Trump from getting elected president, according to Thursday's watchdog report on the FBI's investigation of Hillary Clinton's private email server.

Do you remember James Comey?

> For most of the past three years, the FBI has tried to portray its top leadership as united behind ex-Director James Comey's decision not to pursue criminal charges against Hillary Clinton for transmitting classified information over her insecure, private email server.
>
> Although in the end that may have been the case, we now are learning that Comey's top lawyer, then-FBI General Counsel James Baker, initially believed Clinton deserved to face criminal charges, but was talked out of it "pretty late in the process."

Do you remember Andrew McCabe?

> It's official: McCabe lied.
>
> The new report from the Justice Department inspector general concludes that Andrew McCabe, the former FBI deputy director, lied to then-FBI Director James Comey, to other FBI agents, and to officials of the Office of the Inspector General. Some of those lies came when McCabe was under oath.

Do you remember Christopher Wray?

> FBI Director Christopher Wray has some major explaining to do.
>
> In recent Congressional testimony, he insisted that a January 2023 memo suggesting his agency's resources be used against American citizens for the crime of — gasp! — being devout Catholics was a "single product by a single field office," namely the Richmond field office.
>
> That claim's been given the lie by a newly surfaced version of the memo showing it to be the product of multiple offices, including Portland and Los Angeles.
>
> That was conveniently redacted from the version of the memo he presented to the Senate Intelligence Committee in July.

If it were up to me, I would dismantle the FBI and delegate their responsibilities to other agencies who understand the meaning of fidelity, bravery, integrity. People who don't use government as a weapon against enemies of the Democrat party. People who know how to provide their employers – the American taxpayers – with good, professional service.

# Knight and Rose Show #55: Krista Bontrager and Monique Duson

**Wintery Knight** · 16 November 2024 · Archived copy · Original

Welcome to episode 55 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview Krista Bontrager and Monique Duson about their new book "Walking in Unity". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Krista Bontrager and Monique Duson to discuss their new book "Walking in Unity: Biblical Answers to Questions on Race and Racism". They discuss how their friendship developed through difficult conversations about race and racism. They offer a Christ-centered perspective on the tough issues being discussed in our culture, such as historic racial injustices, system racism and the call for reparations.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 55:**

**Speaker biographies**

Krista Bontrager is a fourth-generation Bible teacher. She is an author, podcaster, former university professor and homeschool mom. Krista has a BA in Communications from Biola University, and a MA in Theology, and MA in Bible Exposition from Talbot School of Theology. She has worked for almost three decades in various capacities in theology and apologetics, and is the VP of Educational Programs and Biblical Integrity at the Center for Biblical Unity. She is working on a Doctor of Ministry in Apologetics at Birmingham Theological Seminary.

Monique Duson is the President at the Center for Biblical Unity. She has a background in social service and children's ministry. She has worked with a diverse array of under-served communities. She worked as a missionary to South Africa for over four years, serving children and teachers impacted by drugs, violence, and trauma. She spent two decades advocating for Critical Race Theory (CRT), but through a series of events, she began to clearly see the contradictions of CRT with the historic Christian worldview. Monique is now convinced that CRT is not the best way to achieve racial unity and actively speaks out against the use of CRT within the church. Monique has appeared on shows such as Relatable (with Allie Beth Stuckey), the Alisa Childers podcast, and Breakpoint (with John Stonestreet). Monique has a BA in Sociology from Biola University, and is pursuing an MA in Public Theology at Birmingham Theological Seminary

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist

organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# The authors of the gospels of Mark and Luke knew eyewitnesses to the life of Jesus

**Wintery Knight** · 17 November 2024 · Archived copy · Original

Were the authors of the gospels of Mark and Luke connected to eyewitnesses to the life of Jesus? Well, it turns out that there are good reasons to think that Mark was linked to the eyewitness Peter, and Luke was linked to Paul, who had a post-mortem appearance of Jesus in 1 Cor 15:8, and who met with Peter and James in Galatians 1 and again in Galatians 2.

There is a list of evidence for Peter's influence on Mark on the Cold Case Christianity blog.

Here's my favorite one from the list:

> **Peter's Embarrassments Have Been Omitted**
>
> There are many details in the Gospel of Mark consistent with Peter's special input and influence,including omissions related to events involving Peter. How can Mark be a memoir of Peter if, in fact, the book contains so many omissions of events involving Peter specifically? It's important to evaluate the entire catalogue of omissions pertaining to Peter to understand the answer here. The vast majority of these omissions involve incidents in which Peter did or said something rash or embarrassing. It's not surprising these details were omitted by the author who wanted to protect Peter's standing in the Christian community. Mark was quite discreet in his retelling of the narrative (other Gospel writers who were present at the time do, however, provide details of Peters 'indiscretions' in their own accounts. See *Cold-Case Christianity* for a more detailed explanation).

It makes me laugh to imagine Peter looking over Mark's shoulder and saying "no, don't put that in it" and "no, don't tell them I did that". Funny! But also very good evidence. The rest of Wallace's list makes it even more clear.

And what about the gospel of Luke? Well, did you know that the author of Luke's gospel knew Paul? If you read it carefully, you'll see that Luke switches from describing history from an "I" perspective to describing things from a "we" perspective in the book of Acts (which he also wrote). Who is the "we" he is talking about?

Here's famous Christian scholar William Lane Craig to explain:

> Now who was this author we call Luke? He was clearly not an eyewitness to Jesus's life. But we discover an important fact about him from the book of Acts. Beginning in the sixteenth chapter of Acts, when Paul reaches Troas in modern-day Turkey, the author suddenly starts using the first-person plural: "we set sail from Troas to Samothrace," "we remained in Philippi some days," "as we were going to the place of prayer," *etc.* The most obvious explanation is that the author had joined Paul on his evangelistic tour of the Mediterranean cities. In chapter 21 he accompanies Paul back to Palestine and finally to Jerusalem. What this means is that the author of Luke-Acts was in fact in first hand contact with the eyewitnesses of Jesus's life and ministry in Jerusalem.
>
> […]There is no avoiding the conclusion that Luke-Acts was written by a traveling companion of Paul who had the opportunity to interview eyewitnesses to Jesus's life while in Jerusalem. Who were some of these eyewitnesses? Perhaps we can get some clue by subtracting from the Gospel of Luke everything found in the other gospels and seeing what is peculiar to Luke. What you discover is that many of Luke's peculiar narratives are connected to women who followed Jesus: people like Joanna and Susanna, and significantly, Mary, Jesus's mother.
>
> Was the author reliable in getting the facts straight? The book of Acts enables us to answer that question decisively. The book of Acts overlaps significantly with secular history of the ancient world, and the historical accuracy of Acts is indisputable.

> This has recently been demonstrated anew by Colin Hemer, a classical scholar who turned to New Testament studies, in his book *The Book of Acts in the Setting of Hellenistic History.* [5] Hemer goes through the book of Acts with a fine-toothed comb, pulling out a wealth of historical knowledge, ranging from what would have been common knowledge down to details which only a local person would know. Again and again Luke's accuracy is demonstrated: from the sailings of the Alexandrian corn fleet to the coastal terrain of the Mediterranean islands to the peculiar titles of local officials, Luke gets it right.

I know a lot of people (like my Dad) read the Bible devotionally, looking for feelings or trying to "get right with God" so they get blessings. But I think it's helpful to look at things from an evidential point of view – how am I going to make a case for this? When you look at things from that perspective, the Bible gets a whole lot more interesting. And you can talk about it with non-Christians when you know about these interesting details.

# Secular leftists turn to violence after election loss

**Wintery Knight** · 18 November 2024 · Archived copy · Original

There are a lot of people in the Biden-Harris regime who think that Christians and conservatives are very, very dangerous people. “We need to watch those crazy Christian conservatives” the taxpayer-funded secular leftists say to each other. “They are dangerous domestic terrorists who believe in free speech and religious liberty”. But are they right? Is that where violent extremism comes from?

First, remember that when a person turns away from religion, they typically switch their focus and allegiance to politics. Atheists are the most politically-involved people in America. For them, it is critical that no one’s speech disapproves of their godless behaviors, and that no laws punish them for their godless behaviors. All their hearts, souls, minds, and strength are bent on these goals: using the force of government to control their Christian neighbor’s 1) free speech, 2) religious liberty and 3) political influence.

Let’s look at one story from the Christian Post and see:

> A Minnesota man at the center of a murder-suicide that left five people dead, including his two sons, expressed a hatred for Christianity on social media prior to the shootings.
>
> Anthony Nephew, 46, was found dead last week from a self-inflicted gunshot wound in his home in Duluth, Minnesota, after killing his wife and son, and his ex-partner and their son, authorities said.
>
> […]A CP review of Anthony Nephew’s Facebook profile revealed several anti-Christian views, including posts in which he expressed fear about Christian influence over a second Trump administration.

He wrote this: “I am terrified of religious zealots inflicting their misguided beliefs on me and my family”.

More:

> Nephew also claimed to have “intrusive thoughts of being burned at the stake as a witch, or crucified on a burning cross,” as well as “having people actually believe that I or my child are Satan or, the anti-Christ or whatever their favorite color of boogie man they are afraid are this week.”
>
> A few days later, he compared Christianity to the Ku Klux Klan, writing, “Christian is a dog whistle, for white sheets, and pointy hats.”
>
> […]“How’s that call for turning down the rhetoric going?” Nephew wrote. “Your freedom of religion, in no way implies you can force it on others. This is exactly why I left the church. You’re not interested in worshiping God, you’re just pushing religious extremism.”
>
> […]Nephew, who shared images in support of President Joe Biden, former President Barack Obama, Vice President Kamala Harris and others, also appeared to support Harris’ failed presidential bid.
>
> […]Nephew also appeared to support abortion rights: in a June 2022 post, shortly after the U.S. Supreme Court overturned Roe v. Wade, he offered his “home and resources” to anyone in an “anti-abortion state.”

Here’s another story from the Christian Post, describing events that happened in Seattle, the secular leftist capital of America:

> Police found the wife of a prominent trans-identified writer covered in blood and clapping her hands after she allegedly became “overwhelmed” by the results of the 2024 presidential election and murdered her father with an ice axe.
>
> Corey Burke is accused of murdering her father, 67-year-old Timothy Burke, on election night in their shared home in a Seattle neighborhood. The 33-year-old woman charged with first-degree murder is married to trans

> writer and journalist Samantha Leigh Allen, the author of Real Queer America: LGBT Stories from Red States, who also serves as an editor for the online LGBT magazine Them.
>
> […]According to the Seattle Times, Burke told police she believed there was "something important" about the presidential race between former President Donald Trump and Vice President Kamala Harris and that she felt overwhelmed with emotion.
>
> […]"Corey stated that she had to bite her father while choking him because he was too strong," the charging documents stated. "Corey stated that once her father 'went limp,' she felt better. Corey said that she then hit him with the ice pickaxe in the head several more times. Corey then sat next to her father and watched him until she saw that he was not breathing anymore."

Now, I know what the secular leftists in the Department of Homeland Security and the Department of Justice will say to this. They'll say "she was on our radar! She was on our radar!" But there just were not enough secular leftists in government to watch her, because all them were watching those nasty pro-life Presbyterian married couples who want to pull their kids out of public schools. Those are the real domestic terrorists, the secular leftists cry. They focus their attention on pre-dawn raiding those dangerous peaceful pro-life grandmothers, and real criminals are ignored or released.

# What should Christians think about abolishing the federal Department of Education?

**Wintery Knight** · 19 November 2024 · Archived copy · Original

One of my favorite questions to ask conservatives is "which federal departments would you abolish?" My favorite five are (in order): 1) the Department of Education, 2) the Environmental Protection Agency, 3) the Department of Energy, 4), the Internal Revenue Service, 5)  the Department of Commerce. And cut all funding for PBS, NPR, and the National Endowment for the Arts, of course.

Well, not everyone likes the idea of abolishing departments, but I have an article showing why Christians should at least support the elimination of the Department of Education.

Here's an article from the Christian Post:

> The U.S. 9th Circuit Court of Appeals has ruled that the U.S. Department of Education unlawfully denied nonprofit status to Grand Canyon University, one of the country's largest Christian higher education institutions.
>
> In a 3-0 decision, the panel instructed the department to revisit GCU's status using the correct legal standard under the Higher Education Act. The department overstepped its authority by using an incorrect standard, the court ruled.
>
> […]The nonprofit status grants the university access to federal funds and research grants, especially given its large Hispanic student population, Mueller told Fox News last year.
>
> Without nonprofit classification, GCU had been barred from accessing these resources.
>
> The university states that it has kept tuition frozen for 17 years, an uncommon achievement in higher education, even as it has increased enrollment, expanded academic programs and invested in infrastructure.

It's just another case of the weaponization of government by the secular left:

> GCU was also hit with a $37.7 million fine from the department last November, alleging that the university misled students about the costs of the doctoral program. The fine is significantly larger than other institutions' penalties, such as those issued to Penn State and Michigan State. GCU is appealing the fine.
>
