> In an interview with The Christian Post last year, Mueller called the fine "tyranny from federal government agencies" and vowed to stand up "to ensure this type of ideological government overreach and weaponization of federal agencies does not happen to others."
>
> Education Secretary Miguel Cardona threatened to shut down GCU during an April House Appropriations Committee hearing.

So, this is a very helpful story for explaining to people who did not vote for Trump why Trump-supporters voted for Trump.

What I've found is that people on the secular left tend to help themselves to the idea that they are pure and good and true, and everyone who opposes them is a "domestic terrorist". And because their opponents are "domestic terrorists", they have to use the government as a weapon against them. I think that Christians and conservatives got tired of paying taxes to people who think like that. Now what we need is to shut down as much government as possible, so that the people in government have to find ways to live that involve doing productive work for customers in the competitive private sector. No more virtue signaling during office hours.

# Can you trust the Department of Homeland Security to secure the homeland?

**Wintery Knight** · 20 November 2024 · Archived copy · Original

Anyone who has been following me on Twitter will know that I have been watching the new president of Argentina Javier Milei closely, and getting more and more excited by his actions to cut wasteful spending and slim down government. I've been especially excited to see that DONALD TRUMP has met with him at Mar-A-Lago. Maybe we'll see some of that awesome government waste cutting here?

Here's a story from Matt Walsh at the Daily Wire (full text) that talks about another big government department that doesn't do good work for taxpayers.

He has two cases that show the same problem with secular leftists in government putting virtue signaling above duty.

First one:

> Three years ago, a 25-year-old Honduran national named Medina Ulloa was stopped by border patrol agents in Texas. He gave them a fake name and lied about being a juvenile. But instead of kicking him out of the country, authorities gave him a "notice to appear" for a court date that everyone knew he'd never actually attend. Then Ulloa was flown to Jacksonville, Florida, where he was taken in by a 46-year-old father of four. Soon afterwards, the immigrant beat the man to death inside his own home.
>
> […]How did Medina Ulloa get to Jacksonville? Did he buy a ticket himself, even though he had no money?
>
> […]In this case, the victim's daughter claimed that Ulloa had indeed arrived on one of these [Biden-Harris administration] resettlement flights. And she would have reason to know that. Again, her father had allowed this guy into his home, and presumably they talked about how he had arrived in Jacksonville in the first place.

You might have heard about these "resettlement flights". This is where the Biden-Harris Department of Homeland Security uses taxpayer dollars – dollars that will be put on the $36 trillion debt and paid back by your children – to flying illegal immigrants around the country.

Now here's the second story from Matt Walsh's article:

> As you may have heard, the trial of 26-year-old Venezuelan illegal alien Jose Ibarra got underway this week in Athens, Georgia. Ibarra is accused of murdering Laken Riley, a 22-year-old nursing student, near a jogging trail at the University of Georgia back in February. Prosecutors say Ibarra put on a hoodie-style jacket, a black hat, and black disposable gloves, before going off to "hunt for females" on the university's campus.
>
> What we didn't know until yesterday is how exactly Ibarra got to Georgia in the first place. The government certainly didn't bother to tell us. But during the trial yesterday, we learned the answer to that question. According to Ibarra's roommate, just like Medina Ulloa, he received a taxpayer-funded resettlement flight. In the case of Ibarra, the flight took him from New York City to Georgia.
>
> In other words, the Biden-Harris administration didn't just enable the murder of Laken Riley with their lax border policies, they also facilitated the murder.

So, what should we do with the secular leftist activists in the Biden-Harris Department of Homeland Security? We pay their salaries. But are we getting good value for the money we pay them? Why do they think that it is OK to use the money we pay them to import more Democrat voters into the country, and even criminals who commit violence against the very people who PAY THEIR SALARIES with our taxes?

Remember – every government worker only gets money by taking that money from real workers in the productive

private sector. Many of these public sector workers have useless non-STEM degrees that they got by running up student loan debt. Many of them have no marketable skills, and no private sector work experience. They survive by being parasites on the productivity of real workers in the private sector. And then the government gives them massive salaries, benefits, and even student loan bailouts for their worthless non-STEM degrees.

We are $36 trillion in debt. We can't be paying a bunch of public sector trash to enjoy adult day care at taxpayer expense. We either need to reform the Department of Homeland Security with new employees who have real skills and real integrity, or we need to scrap it. We just don't have the money to pay Democrat party activists to do secular leftist activism all day, when they are supposed to be keeping us safe.

# Luke Barnes on the fine-tuning of the strong force and fine structure constant

**Wintery Knight** · 21 November 2024 · Archived copy · Original

By now, anyone who has had discussions about scientific evidence for the existence of God knows about the fine-tuning argument. In a nutshell, if the fundamental constants and quantities given in the Big Bang were even slightly other than they are, then the universe itself would not be hospitable for complex, embodied intelligent life.

Here is an article from The New Atlantis written by Australian cosmologist Luke Barnes.

Excerpt:

> Today, our deepest understanding of the laws of nature is summarized in a set of equations. Using these equations, we can make very precise calculations of the most elementary physical phenomena, calculations that are confirmed by experimental evidence. But to make these predictions, we have to plug in some numbers that cannot themselves be calculated but are derived from measurements of some of the most basic features of the physical universe. These numbers specify such crucial quantities as the masses of fundamental particles and the strengths of their mutual interactions. After extensive experiments under all manner of conditions, physicists have found that these numbers appear not to change in different times and places, so they are called the fundamental constants of nature.
>
> […]A universe that has just small tweaks in the fundamental constants might not have any of the chemical bonds that give us molecules, so say farewell to DNA, and also to rocks, water, and planets. Other tweaks could make the formation of stars or even atoms impossible. And with some values for the physical constants, the universe would have flickered out of existence in a fraction of a second. That the constants are all arranged in what is, mathematically speaking, the very improbable combination that makes our grand, complex, life-bearing universe possible is what physicists mean when they talk about the “fine-tuning” of the universe for life.

Let’s look at an example – the strong force. Not only must the strong force be fine-tuned so we have both hydrogen and helium, but the ratio of the strong force must also be fine-tuned with the fine structure constant.

Barnes writes:

> The strong nuclear force, for example, is the glue that holds protons and neutrons together in the nuclei of atoms. If, in a hypothetical universe, it is too weak, then nuclei are not stable and the periodic table disappears again. If it is too strong, then the intense heat of the early universe could convert all hydrogen into helium — meaning that there could be no water, and that 99.97 percent of the 24 million carbon compounds we have discovered would be impossible, too. And, as the chart to the right shows, the forces, like the masses, must be in the right balance. If the electromagnetic force, which is responsible for the attraction and repulsion of charged particles, is too strong or too weak compared to the strong nuclear force, anything from stars to chemical compounds would be impossible.

Here’s the chart he’s referencing:

Fine-tuning of the strong nuclear force and the fine structure constant

As you can see from the chart, most of the values that the constants could take would make complex, embodied intelligent life impossible.

We need carbon (carbon-based life) because they form the basis of the components of life chemistry, e.g. proteins, sugars, etc. We need hydrogen for water. We need chemical reactions for obvious reasons. We need the light from the stars to support plant and animal life on the surface of a planet. And so on. In almost every case where you change the values of these constants and quantities and ratios from what they are, you will end up with a universe that does not support life. Not just life as we know it, but life of any conceivable kind under these laws of physics. And we don't have any alternative laws of physics in this universe.

By the way, just to show you how mainstream these examples of fine-tuning are, I thought I would link to a source that you're all going to be familiar with: The New Scientist.

### The fine-tuning of the force of gravity

So here is an article from the New Scientist about a different constant that also has to be fine-tuned for life: the force of gravity.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by

> now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$ at 1 second after the big bang, allows life to form.**

Notice how the article also mentioned “the universe’s birth”, which is part of mainstream science.

When I’m writing to you about things like the origin of the universe, or the cosmic fine-tuning, I’m not talking to you about things that pastors found in the Bible. These discoveries are known and accepted by mainstream scientists. It’s amazing that people are constructing their worldviews without having to account for the birth of the universe and this cosmic fine-tuning. We all, as rational individuals, have to bound our view of the universe with the findings of science. Right now, those findings support the existence of a Creator and a Designer. So why am I seeing so many atheists who are just plain ignorant about these facts? Maybe we should tell them about this evidence. Maybe we should ask them why they don’t account for scientific evidence when forming their beliefs.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

# Evidence that Laken Riley was a pretty serious Christian

**Wintery Knight** · 22 November 2024 · Archived copy · Original

I remember having a debate at the SBC church I was attending, with someone from Russell Moore's ERLC. The ERLC is a group that pretends to be religious and conservative, but they frequently align with Democrats. The ERLC person was explaining to me why they are in favor of open borders. And I tried to explain to him how open borders costs ordinary Christians money and puts them at risk.

So, with that in mind, here is an interesting article from Christian Post, about the young woman who was recently murdered by an illegal immigrant when she resisted his attempts to rape her.

First, here is the news about the trial:

> The mother of Laken Riley, a Georgia nursing student murdered by an illegal immigrant earlier this year, wept as she begged the judge to sentence the killer to life in prison, asking that he not receive mercy when he showed none to her daughter or the family he destroyed.
>
> Jose Antonio Ibarra, 26, was found guilty on all counts and sentenced to life in prison without parole for Riley's murder Wednesday.
>
> Haggard sentenced Ibarra to the maximum possible punishments for multiple charges, including kidnapping, aggravated assault with intent to rape, obstruction of a 911 call, tampering with evidence and a peeping tom charge. The judge ordered that the defendant serve each sentence consecutively, according to CNN, condemning Ibarra to two life sentences and 27 years in prison.

Now, I already wrote about this crime, and about the role that the Department of Homeland Security had in allowing it to happen.

But I have to write about it again, because of the facts that came out about the victim, at the sentencing:

> In a victim statement read before the court Wednesday, Allyson Phillips called her daughter a "child of God" who demonstrated her love for the Lord through missionary work and caring for the elderly.

Missionary work and caring for the elderly?

This girl was not out doing risky things, like partying with drunk bad boys, she was just out for a JOG on a university campus:

> Riley, a student at Augusta University College of Nursing, never returned home after she left that morning to go jogging around the University of Georgia campus.

She wrote a letter to her future husband, which is a pretty good sign that she was thinking about an early marriage:

> John Phillips, Riley's stepfather, spoke before Ibarra's sentencing on Wednesday, referring to Riley as a "shining beacon of light in the life of everyone that knew her." The stepfather read one of Riley's last journal entries, in which the young woman wrote a letter to her future husband.
>
> "'I pray that you know that it is with my full faith and trust in God that I know this relationship has been handcrafted by Him,'" Phillips read. "I pray that we continue to glorify the Lord, prioritize Him in every aspect of our lives, and raise our future family to be God-fearing Christians as well.'"

I just thought that it was important to highlight this so that Christians understand how to process the political positions of people like David French, Russell Moore, Matt Chandler, etc. Frankly I think that even Christians who

are silent about border security are also to blame. I think that Christian leaders ought to speak up about the policies and past actions of the political candidates, so that everyone understands what is at stake.

We really need to have Christian leaders who understand policy. And I don't mean only abortion. I mean fiscal policy, social policy and foreign policy. During elections, it's not the time to lay low, and try to get along with everyone. It's the time to speak up for people who are going to be hurt by bad policy. Not just the unborn ones, the born ones, too.

# William Lane Craig debates Austin Dacey: Does God Exist?

**Wintery Knight** · 23 November 2024 · Archived copy · Original

Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

**The debaters:**

- William Lane Craig
- Austin Dacey

**The video:** (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

**Dr. Craig's opening statement:**

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

**Dr. Dacey's opening argument:**

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

**One final point:**

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

# Video, audio and summary of intelligent design discussion, with Ben Shapiro and Stephen C. Meyer

**Wintery Knight** · 24 November 2024 · Archived copy · Original

Stephen C. Meyer and Ben Shapiro discuss evolution and intelligent design
(Re-posting this for those who missed it the first time around)

This is a must-see / must-hear conversation. Famous conservative Ben Shapiro discusses evolution and intelligent design with Dr. Stephen C. Meyer, author of "Signature in the Cell" (origin of life) and "Darwin's Doubt" (fossil record). These are the two best books on intelligent design. Their conversation covers the most important issues in the origins debate.

So to start, here's the full video:

Someone actually put out an outline on Youtube, with a time-based index, so I'll just steal that as a base, and add to it:

- 1:34 What is your scientific background? Science undergraduate degree, professional geologist, later did a PhD in philosophy of science from Cambridge University.
- 2:39 What is the difference between intelligent design and creationism? Creationism starts from the Bible and posits a shorter history of the universe. ID starts from the data of the natural world and is neutral about the age of the Earth / universe. Meyer accepts the old-Earth.
- 3:36 How is Intelligent Design a scientific theory? The discovery of DNA reveals that code is central to living systems. Intelligent design uses the method of "inference to the best explanation" in order to argue that the best explanation for the code is an intelligent agent.
- 6:10 What evidence would have to arise to make Intelligent Design Falsifiable? If a naturalistic mechanism was discovered that could produce biological information using the probabilistic resources of the universe, and the time available, then intelligent design would be falsified.
- 7:26 Is religion separate from science or intertwined within it? There are three views: science is totally separate from religion, science is in total conflict with religion, science and religion agree on some issues, e.g. – the origin of the universe and Genesis 1:1. There are areas where science and religion overlap.
- 9:55 Why are the most prominent Darwinians also militant atheists? Evolution is a theory that tries to explain nature using naturalistic mechanisms, so it is compatible with atheism.
- 10:45 What does the theory of evolution say? The term evolution has multiple meanings, and should be defined before discussions. It can refer to change over time. It can refer to animals changing slightly to adapt to enviromental changes. It can refer to the idea that all animals evolved from simpler life forms, and that there is a tree of life showing how different types of organisms share common ancestors. And it can refer to the idea

that purely undirected processes can explain the history of life using purely materialistic forces. It's that final view that intelligent design challenges.

- 13:15 Where is the discontinuity in naturalistic processes in the development of life? The first discontinuity is the origin of simple life from non-living components. The second discontinuity is the sudden appearance of different body plans in a very narrow window of time in the Cambrian era.
- 15:42 Why does information theory suggest that code requires some sort of designer? DNA is a true information-bearing system identical to the software in computers, e.g. – operating system, applications.
- 19:45 Can information be created by random mutation, and favorable mutations preserved by natural selection? Just as in software code, instructions must be added in order to develop new functionality. Random additions of characters will almost always degrade biological function. The number of possible sequences that do nothing useful is vastly higher than the number of sequences that perform biological functions. Doug Axe did research on this at Cambridge University, and he found that the number of functional sequences of amino acids is 1 in 10 to the 77th power. Given the probabilistic resources (replicating organisms)and the time available, it is extremely unlikely to find sequences that have functional information by chance.
- 25:05 What about Stephen Jay Gould's model of punctuated equilibrium – doesn't it explain the sudden jumps in information? Gould's mechanism is accurate according to the fossil record, which shows a lot of jumps. But he did not have a naturalistic explanation for sudden jumps in biological function. Darwinian mechanisms work slowly and would (in theory) produce different body plans gradually. But this is not what the fossil record shows.
- 27:22 What is the mechanism for injecting information in the theory of intelligent design? The information comes in from an intelligence when new major body plans appear, and minor variations within types could be explained by evolution.
- 29:25 Does the Miller-Urey experiment provide a naturalistic explanation for the building blocks necessary for the origin of life? The MU experiment only produced a few types of amino acids, it doesn't say anything about how to sequence the amino acids in order to form protein folds that can perform biological functions. The MU experiment also pre-supposes conditions on the early Earth (reducing gases) that do not match what was there (oxidyzing or neutral gases).
- 32:00 Is the RNA world hypothesis is a good explanation for the origin of life? Evolution requires that replication already be in place, because evolution assumes that mutations appear during the replication. The RNA world hypothesis suggests that sequences contain information, but also catalyze origin of life chemistry. The problem with RNA world is that it starts with self-replicating systems. And those replicating systems require the scientist to inject information into the system to get even the simplest replication started.
- 34:56 How do scientists respond to the critiques of Darwinism proposed by intelligent design advocates? By and large, they accept them. They think that mutation and selection works once living systems are in place, but they realize it has no explanation for the origin of life or the sudden origin of body plans. (Tells about the conference of the Royal Society, where problems with Darwinian mechanisms were discussed, and the 2003 MIT Press book by Muller and Newman).
- 37:16 Why do people hold to Darwinian evolution in the face of these problems? Many scientists presuppose methodological naturalism, which requires that any explanation for the origin of life and the origin of major body plans involve materialist explanations only. No intelligent agents are allowed. The problems occur when assumption of naturalism causes scientists to propose incorrect explanations for what we observe in nature. It's also not clear how naturalistic mechanisms could produce organisms who are capable of reason and free will.
- 40:43 Does naturalistic evolution have an answer for conscious minds, reasoning, free will? No, consider the work of atheist scholar Thomas Nagel, who argues in his book "Mind and Cosmos" (Oxford University Press 2012) that the existence of mind is a disproof of the neo-Darwinian explanation for life. Darwinism stops us from accepting the reality of minds.
- 42:06 So do naturalistic evolutionists have to explain away the mind as an illusion? First, we humans have immediate experience of consciousness, reason and free will. Second, our whole legal system is based on the

idea free will, because you can't hold someone guilty unless they chose to do something they knew was wrong. Third, we have an epidemic of suicide among young people. This is caused by a crisis of meaning. Intelligent design opens up the possibility of their being a mind behind the universe, who we could have a relationships with.

- 44:53 Why aren't schools allowed to be honest about the problems with neo-Darwinian evolution? The intellignt design view is to that teachers should be allowed to teach all the vidence for Darwinian evolution, and also discuss some of the problems with the theory. Students learning science should not be told that everything is solved. Students learn science better when they are presented with peer-reviewed evidence for and against a theory, rather than being indoctrinated.
- 47:37 Is intelligent design theory connected to God? Intelligent design infers from the information content in nature that a mind with capabilities like ours injected information into living systems. Intelligent design is agnostic about the designer, because in principle, embodied or unembodied agents could inject information into living systems. Intelligent design is friendly to theism, because theists will immediately identify the mind as God. Furthermore, the fine-tuning in the initial conditions of the universe is another intelligent design argument. In that case, since the design occurs at the beginning of the universe, the intelligent agent acting prior to the creation of the universe would have to be supernatural, i.e. – God.
- 50:53 Can naturalists say that the imposition of "function" on a sequence is arbitrary, in the same way that the English language is arbitrary? This won't work, because *biological function* is not arbitrary in the same way as language. Biological function is not arbitrary, because sequences can be tested for function *objectively* by observing whether sequences can perform functions necessary for life, e.g. – replication.
- 52:43 Doesn't the multiverse explain away the improbabilities of the fine-tuning, the origin of life, and the development of life? No, because all models of the multiverse require fine-tuning in the mechanism that generates the different universes.
- 55:42 What about cosmological models that eliminate the beginning of the universe? The standard Big Bang model and the inflationary model both posit a beginning of the universe. There is also the Borde-Guth-Vilenkin theory which proves that any universe that is expanding requires a beginning. The only chance for naturalists is quantum cosmologies, but this doesn't work because 1) it requires an abstract reality of mathematics to actualize the physical universe, but this presupposes a mind. 2) The model requires an earlier input of information, which can only have come from a mind.

If you listen to this lecture, or watch the video, and you enjoyed it, then please share. If you have questions, I can try to answer them for you – just leave your question in the comments, or shoot me an e-mail, or message me from the blog's Facebook page, or direct message me on Twitter. I've invested a lot of time in this, and have been studying intelligent design since the late 1990s.

# New study: homeschool produces healthier, happier and more virtuous kids

**Wintery Knight** · 25 November 2024 · Archived copy · Original

So, I've noticed that lately, many Christian, conservatives express Christian and conservative convictions when they are in a Christian, conservative audience. But when they are in the company of secularists, feminists and socialists, they keep quiet. In this post, I'll explain why I think that using evidence from studies helps us to be bolder, then we'll see a study about homeschooling.

Well, I can only explain why I am so inclined to fight. Just because I have an alias online, that doesn't mean that I don't fight for what I believe in under my real name in person. I take every opportunity to push for authentic Christian (not woke) truth claims and values in person. It's especially important for Christians and conservatives *of color* to do this, in the current culture.

But how can you fight with people? I recently faced off against a bully in my company at a large company meeting. I had heard that this guy was a yeller, and had previously yelled at other employees. And that he was extremely progressive, and in a liberal echo chamber where he never heard any intellectual conservatives or Christians. I attacked him on two issues: socialized medicine and gun control. By using studies to explain how I changed my mind, I was able to escape his caricature of Christian conservatives as stupid fundamentalists who don't think critically.

With that said, here is a report from the Wall Street Journal about a new study that you might be able to use to be bold with people who oppose homeschooling. (Full text of the article here)

It says:

> Elizabeth Bartholet, a Harvard Law School professor, sparked debate in May 2020 by calling for a presumptive ban on home schooling. Home-schooled children, Ms. Bartholet asserted, are less likely than their school-attending peers to receive a "meaningful education" and more likely to be subject to physical abuse or indoctrination by "extreme religious ideologues."
>
> […]Ms. Bartholet criticized home schooling for both diminishing children's educational attainment and undermining their physical and mental health. One of us (Ms. Chen) recently examined how school type affected adolescents on a range of long-term outcomes into young adulthood, including educational attainment, mental health and social integration. Looking at data on more than 12,000 children of nurses (mostly white and mostly well-off) surveyed from 1999 to 2010, we estimated the effects of school type independently from other factors such as socioeconomic status, race and region.
>
> To the extent that college graduation is a fair proxy for having received a "meaningful education," Ms. Bartholet was right to point to a disadvantage for home schooling: The home-schoolers in our sample were 23% less likely to attend college than public-school students. This may reflect lower attainment in learning or less interest in attending college, but it may also be a result of admissions policies at some U.S. universities that disadvantage home-schooled students.
>
> Parents want their kids to be well-educated and professionally successful, but they also want them to be healthy, happy and virtuous. By this broader measure of success, home schooling has advantages. Among the students we examined, home-schoolers were 33% more likely to volunteer, 31% more forgiving and 51% more likely to attend religious services in young adulthood than those who attended public school. ("Levels of forgiveness" were measured on a self-reported four-point scale, which other research has shown predicts some subsequent health and well-being outcomes.) The difference in religious participation has public-health implications, since those who attend services regularly have substantially lower risks of alcohol and drug abuse, depression and suicide. They also have a lower risk of premature death for any reason than those who never

> attend.
>
> The picture of the home-schooled student that emerges from the data doesn't resemble the socially awkward and ignorant stereotype to which Ms. Bartholet and others appeal. Rather, home-schooled children generally develop into well-adjusted, responsible and socially engaged young adults.

The libertarians at the Foundation for Economic Education (FEE) reached out to the researchers, and they got more information about that concern about lower rates of university attendance:

> I reached out to Case and Chen for additional comments on their study's findings, including how they think the homeschooling data and outcomes might have changed since 2010, when their data set ended.
>
> "We are also glad to see that some colleges, including some top-tier colleges, have become more flexible in their admission policies for homeschoolers over the past years," Chen responded.
>
> Indeed, more colleges and universities have implemented clearer guidelines and policies for homeschooled students in recent years, and many are now eager to attract homeschooled applicants. In 2015, Business Insider noted that homeschooling is the "new path to Harvard," and in 2018 the university profiled several of its homeschooled students.
>
> The researchers also suspect that the well-being gap between homeschoolers and public school students has widened over the past decade, with homeschoolers faring even better.
>
> "For instance, social media apps have come to smartphones over the past few years, leading to their widespread adoption by teenagers and even younger children," Chen told me this week. "Some prior studies suggested that such increasing smartphone use may have contributed to the recent huge spikes in adolescent depression, anxiety, and school loneliness. Cyberbullying, sexting and 'phubbing' have also become more common in children's daily lives, especially in school settings. We might expect that these issues may be less common among homeschoolers than their public school peers."

I think if you are going to do homeschooling, it will have to be very practical. I think the world is too dangerous right now. We need to focus on learning practical skills that pay. So, don't focus on things classics and Latin early on. I love the classics, but only the classics that teach something practical should be relied on. Instead, math and computer science should be the most important subjects, along with economics. Or choose the hard sciences like biology, chemistry, physics, etc. Get your STEM degrees, get your private sector work experience, then homeschool your kids with a focus on STEM.

I do think that after you get a job, then you should go back and work on the classics, literature and philosophy. But the financial situation we are in – with so much government debt, so many people in debt, and so many people on welfare – suggests that we should make sure that we are independent of the government and debt-free as quickly as possible.

# What are undesigned coincidences, and how are they used in apologetics?

**Wintery Knight** · 26 November 2024 · Archived copy · Original

When you're reading the Bible, you may find passages in one book that are mysterious on their own, but then they make sense if you add missing details from a parallel account from a different source inside or even outside the Bible. I think these "undesigned coincidences" are helpful for answering the question of that skeptics often ask: "is the Bible history or myth?" Let's see some examples.

So, there are two kinds of undersigned coincidences. In the "internal" kind, the clearing up is done by another source in the same book. In the external kind, the clearing up is done by a source outside the same book.

Here's an article from Apologetics UK with some internal examples:

> In John 6:1-7, we are told:
>
> Some time after this, Jesus crossed to the far shore of the Sea of Galilee (that is, the Sea of Tiberias), and a great crowd of people followed him because they saw the signs he had performed by healing the sick. Then Jesus went up on a mountainside and sat down with his disciples. The Jewish Passover Festival was near.When Jesus looked up and saw a great crowd coming toward him, he said to Philip, "Where shall we buy bread for these people to eat?" He asked this only to test him, for he already had in mind what he was going to do.Philip answered him, "It would take more than half a year's wages to buy enough bread for each one to have a bite!"
>
> Now, Philip is a fairly minor character in the New Testament. And one might, naturally, be inclined to wonder why Jesus hasn't turned to someone a little higher in the pecking order (such as Peter or John). A partial clue is provided in John 1:44: "Philip, like Andrew and Peter, was from the town of Bethsaida." Likewise, John 12:21 refers to "Philip, who was from Bethsaida in Galilee"
>
> And what is so significant about Philip being from the town of Bethsaida? We don't learn this until we read the parallel account in Luke's gospel (9:10-17). At the opening of the account (verses 10-11) we are told, "When the apostles returned, they reported to Jesus what they had done. Then he took them with him and they withdrew by themselves to a town called Bethsaida, but the crowds learned about it and followed him. He welcomed them and spoke to them about the kingdom of God, and healed those who needed healing."
>
> And so, we are informed by Luke that the event was actually taking place in Bethsaida — the town from which Philip was from! Jesus thus turns to Philip, whom, he believed, would be familiar with the area. Notice too that Luke does not tell us that Jesus turned to Philip.
>
> But it gets even more interesting still. In Matthew 11, Jesus denounces the unrepentant cities, saying, "Woe to you, Chorazin! Woe to you, Bethsaida! For if the miracles that were performed in you had been performed in Tyre and Sidon, they would have repented long ago in sackcloth and ashes." The reader is left wondering what miracles were performed in these cities. We are not told in Matthew's gospel. It is only in light of Luke's account of the feeding of the five thousand (chapter 9), in which we are told of the event's occurrence in Bethsaida, that this statement begins to make sense!

This one is pretty clever:

> In Matthew 2 6:67-68, we read, "Then they spat in His face and beat Him; and others struck Him with the palms of their hands, saying, "Prophesy to us, Christ! Who is the one who struck You?"" This raises the natural question, why are they asking "Who hit you?" It is not until we read the parallel account in Luke's gospel (22:64) that we learn that they had blindfolded him, thereby making sense of their taunts "Who hit you?"

Another one:

> In Luke 23:1-4, w e read,
> Then the whole assembly rose and led him off to Pilate. And they began to accuse him, saying, “We have found this man subverting our nation. He opposes payment of taxes to Caesar and claims to be Messiah, a king.”
>
> So Pilate asked Jesus, “Are you the king of the Jews?”
>
> “You have said so,” Jesus replied.
>
> Then Pilate announced to the chief priests and the crowd, “I find no basis for a charge against this man.”
> On the surface, this seems to be a rather strange declaration to make. Jesus has just declared Himself to be a King, and has been charged with subverting the nation and opposing paying taxes to Caesar. Why has Pilate found no basis for a charge against him?
>
> The answer lies in the parallel account in John’s gospel (18:33-38):
>
> Pilate then went back inside the palace, summoned Jesus and asked him, “Are you the king of the Jews?”
>
> “Is that your own idea,” Jesus asked, “or did others talk to you about me?”
> “Am I a Jew?” Pilate replied. “Your own people and chief priests handed you over to me. What is it you have done?”
>
> Jesus said, “My kingdom is not of this world. If it were, my servants would fight to prevent my arrest by the Jewish leaders. But now my kingdom is from another place.”
>
> “You are a king, then!” said Pilate.
>
> Jesus answered, “You say that I am a king. In fact, the reason I was born and came into the world is to testify to the truth. Everyone on the side of truth listens to me.”
>
> “What is truth?” retorted Pilate. With this he went out again to the Jews gathered there and said, “I find no basis for a charge against him.
>
> It is only when you read John’s account that you learn that Jesus had told Pilate that “My kingdom is not of this world. If it were, my servants would fight to prevent my arrest by the Jewish leaders. But now my kingdom is from another place.”

And the same article has some external undesigned coincidences:

> In Matthew 2:22, we are told:
>
> But when [Joseph] heard that Archelaus was reigning in Judea in place of his father Herod, he was afraid to go there. Then after being waned by God in an dream, he left for the regions of Galilee…
>
> Josephus’ Antiquities 17.3.1 tells us that the domain of Herod the Great was divided among his sons, with Archelaus having authority in Judea but not in Galilee, which was governed by his younger brother, Herod Antipas.
>
> We also know that Archelaus had acquired quite a bloody reputation (e.g. Antiquities 17.13.1-2 and 17.9.3). The latter of these references describes how Archelaus slaughtered 3,000 Jews at Passover. Thus, Joseph decides not to return to Judea and, instead, goes further north to the regions of Galilee, governed by Herod Antipas.

And another one:

> In Matthew 2:22, Archeleaus is reigning as king in Judea; in Matthew 27:2, Pilate is governor of Judea; in Acts 12:1, Herod is king of Judea; and in Acts 23:33, Felix is governor of Judea. This becomes extremely confusing.

> But here's the thing: Josephus attests to the accuracy of every one of these titles. Herod the Great was made King of Judea by Mark Anthony. Archelaus was deposed in the year 6 A.D., after only a ten-year reign, and a series of procurators ruled over Judea (of whom Pilate was fifth). The Herod of Acts 12 is Agrippa I. He was made king by Claudius Caesar. After his death, Judea was, once again, placed under the government of procurators (one of them being Felix).

And another one:

> When Luke tells us of the riot in Ephesus, he reports that the city clerk tells the crowd that "There are proconsuls". A proconsul is a Roman authority to whom a complaint may be taken. Normally, there was only one proconsul. Just at that particular time, however, there seems to have been two as a result of the assassination of Silanus (the previous proconsul) by poisoning in the Fall of AD 54, by the two imperial stewards at the urging of Nero's mother. This event is independently documented by Tacitus in his Annals (13.1). Indeed, Luke's accuracy has allowed historians to date the event which Luke narrates with incredible precision since we know when Silanus was poisoned.

If you think that these are clever, then share this post, and encourage your non-Christian friends and family to consider one of the many reasons why so many scholars have considered the New Testament books to be so reliable.

I wish that Christian parents and pastors were more thoughtful about how they present the Bible to young people. Instead of just saying "the Bible says" and praising blind faith acceptance of the Bible, why don't we think a little harder, and look for some confirmation of the Bible from historical methods like undesigned coincidences, and from non-Biblical authors, and from archaeology, etc.? Surely adding more evidence for taking the Bible seriously is the right approach, if the goal is to be persuasive? It's not like we're see good results from the current "blind faith" approach to raising Christian children, right?

# Are illegal immigrants less likely to commit crimes?

**Wintery Knight** · 27 November 2024 · Archived copy · Original

I have discussed this topic of whether illegal immigrants have a lower crime rate than natural born Americans and legal immigrants (the latter are deported if they commit a crime) many times. Even many Christians like to say that illegal immigrants commit fewer crimes than legal residents and citizens. I thought it might be a good idea to link to some evidence from RealClearInvestigations.

It says:

> An analysis of the available statistics by RealClearInvestigations suggests that the crime rate of noncitizens is vastly understated. A separate RCI analysis based on estimates developed by the U.S. Department of Justice's National Institute of Justice (NIJ) suggests that crime by illegal aliens who entered the U.S. by July 21, 2024 cost the country some $166.5 billion. These criminals disproportionately entered the U.S. during the Biden administration.

Even if you are not the victim of a crime by an illegal immigrant, we all have to pay for law enforcement and property damage. We all have to pay for higher insurance rates. We all have to pay for criminal courts and prisons.

Here are two more ways that the numbers of offenses are not counted accurately.

Numbers of past offenses not being counted:

> The data on migrants who have been processed also understates the problem. Criminals rarely commit just one crime. For example, from 1990 to 2002, in the 75 most populous U.S. counties, 70% of those convicted of a violent felony had a prior arrest, and 56% had a prior criminal conviction. In 2023 in Washington, D.C., the average homicide suspect had been arrested 11 times before committing a homicide. Data for 30 states shows that 60.1% of criminals released from prison in 2005 had been arrested again within two years, and 73.5% had been arrested within four years. The ICE data set provides a single entry for each individual.

Numbers of people who are not arrested / convicted not being counted:

> Most violent crimes don't result in an arrest, so looking at arrests or convictions in these other countries will underestimate whether illegal aliens are criminals. Across all U.S. cities in 2022, only 35.2% of violent crimes resulted in an arrest. While 50.6% of murders resulted in an arrest, just 24.1% of rapes produced an arrest, 22.7% of robberies, and 39.9% of aggravated assaults.

On Tuesday night, I watched a video of a TikTok that had gone viral, in which a white leftist young woman was talking about the murder of Laken Riley. She was complaining about why the news had to report that the accused murderer was an illegal immigrant. And she went on to say that white males were the most dangerous people in America, because they committed the most crimes. I just thought it was interesting to think that many people are voting for lax border security, thinking that it will not make them less safe. This is even after we've seen young women like Laken Riley, Lizbeth Medina, Jocelyn Nungaray and Rachel Morin suffer violence and even death at the hands of illegal immigrants.

I can understand that saying things like what this young leftist woman was saying is a good way to virtue signal. But the real-world effect of open borders is that a lot of innocent people – people who pay taxes in order to fund law enforcement – will get hurt, raped and even killed. Young women who vote for leftist policies are actually causing harm to other young women, even as they drone on about the patriarchy and how much they fear toxic masculinity. You really have to wonder whether they learn anything at all about how the world really works in college.

# Good news from several states ahead of new Republican leadership

**Wintery Knight** · 28 November 2024 · Archived copy · Original

Now that we have a new Republican administration incoming, I'm getting ready for lots of good news. Some of that news will be at the federal level, but some will be at the state level, too. I have a couple of interesting stories to blog about that happened in two different states. If you have any more good news stories, you can leave them in the comments.

Here's the first one, reported in Life Site News:

> Missouri can continue to protect gender-confused children from damaging drugs and surgeries, a judge ruled recently.
>
> Cole County Judge Craig Carter upheld the Save Adolescents from Experimentation Act. It prohibits transgender drugs and surgeries intended to make minors look more like the opposite sex. The law also prohibits taxpayer funding of the procedures.
>
> These procedures are sometimes called "sex change operations," although it is not possible to change one's sex.
>
> Judge Carter ruled in favor of the state on several grounds. He cited a recent 7th Circuit Court of Appeals ruling in favor of Indiana's similar law. The Supreme Court of the United States will hear a case next week, on December 4, concerning Tennessee and Kentucky's prohibitions.

Now, I am hearing that some transgender activists are arguing that the science is not settled on this issue, so they should be allowed to prescribe puberty blockers and hormone replacement drugs to children, and maybe chop their bodies up a bit, too. However, it's not always prudent to go ahead with something if you don't know what the long-term effects will be. For example, suppose you are washing dishes in the kitchen, and your oldest child says "Parent, may I kill this?" It's probably fine to say yes if the child has caught a spider, but not if the child has his younger sibling around the neck. Similarly with firing a gun through a closed door when someone knocks at 3 AM. It could be a burglar, but it could be the police looking for the burglar. So you have to be sure before you take actions that can do irreversible harm, like making a child infertile. And besides, I think the science is setttled, and it's 100% against transing kids.

Here's the next story from Breitbart News:

> Haitian migrants are reportedly self-deporting from Springfield, Ohio, and fleeing to sanctuary jurisdictions such as Chicago, Illinois, and New York City, New York.
>
> Springfield, a city of 50,000 that lies between Columbus and Dayton, garnered national attention months ago when President-elect Donald Trump and Vice President-elect JD Vance noted that the community had been inundated with thousands of Haitian migrants as a result of President Joe Biden's immigration policies.
>
> Many of the 10,000 to 20,000 Haitian migrants who arrived in Springfield over the last few years are in the United States on Temporary Protected Status (TPS), a quasi-amnesty program. Others were awarded parole after being released into the United States at the southern border.
>
> As Breitbart News reported in September, the arrival of thousands of Haitians has driven up housing costs in Springfield, created more welfare dependency, and coincided with a surge in car crashes that police and firefighters must respond to.
>
> With Trump and Vance's election victory this month, Haitian migrants have told CBS News and The Guardian that they plan to flee to sanctuary jurisdictions like Chicago and New York City.

Although some mayors of sanctuary cities and governors of sanctuary states are vowing not to allow the Republicans to deport dangerous illegal immigrants, the incoming Republican administration doesn't seem likely to accept that.

Daily Wire says:

> We've heard a lot from Tom Homan lately, and for good reason. He's the incoming border czar for the second Trump administration. And he's vowed, unapologetically, to deport as many illegal aliens as possible — and to arrest any local officials who try to intervene.
>
> We talked about that promise yesterday, in the context of the mayor of Denver, who's suggesting that he will defy federal immigration authorities who try to carry out deportations in the second Trump term. Homan's response was the correct one — if the mayor of Denver wants to go to jail, then ICE will happily oblige.

If you're a Bible-believing Christian and a conservative, you should expect good news like this to happen more and more. I'll be tweeting about it on Twitter, so give me a follow there and I will find you some.

# CDC finds that abortions fell 2% the year SCOTUS overturned Roe

**Wintery Knight** · 29 November 2024 · Archived copy · Original

Recently, I debated on Twitter with Dr. Michael Austin, president of the Evangelical Philosophical Society. He supported Kamala Harris, because he thought that both parties are the same on abortion. I explained that Kamala supported legislation to end state-level pro-life laws, and Trump didn't. He claimed that the total number of abortions had gone up after Roe v. Wade was overturned.

If you get a challenge like this one, I would start by explaining that it's possible for the overall number of abortions to go up, even as the numbers declined in pro-life states because of restrictions on abortions passed in those pro-life states. In that case, the increase in abortions in states with no restrictions on abortion would be larger than decrease in abortions in states with pro-life legislation. Then I would explain how Kamala had previously supported legislation to end those state-level restrictions. That makes her position on abortion different from Trump, who would leave those restrictions in place.

Today's post counters the original claim that Michael Austin made that the total number of abortions went UP after Roe v. Wade was repealed.

This is from Daily Wire:

> Abortions of unborn babies fell 2% the year the Supreme Court overturned Roe v. Wade, according to the latest data from the Centers for Disease Control and Prevention.
>
> The CDC's annual abortion surveillance report, published on Wednesday, found that a total of 613,383 unborn babies were legally aborted within 48 reporting areas in the United States in 2022, the year the High Court ruled in Dobbs v. Jackson Women's Health Organization, overturning Roe.
>
> Out of the 47 areas that were consistently reporting data between 2021 and 2022, there was a 2% decrease from the 622,108 unborn babies who were legally aborted in 2021, to 609,360 in 2022.

By the way, I've noticed that a lot of Christian philosophers want to reduce policy debates down to abortion. They don't seem to have thought through how other policy areas affect a Christian's ability to live out a Christian life. For example, my ability to work and earn in the competitive private sector as a software engineer is affected by many, many different areas of policy. That's why I have to know a little about many different areas, like energy policy, education policy, guns and crime, basic economics, health care policy, etc. I am affected by the prices of gas and electricity. I am affected by the price of health care. I am affected by government regulations. I am affected by bans on firearms and bans on self-defense. I am affected by rising costs due to illegal immigration. If I lived in an ivory tower, and was mainly concerned with impressing my colleagues with words, then maybe these topics wouldn't matter to me. I get the impression that philosophers are not informed in these areas, because they have chosen a discipline that often insulates them from the need to solutions that work in the real world.

If I wanted to understand something about economics, I would read Thomas Sowell. If I wanted to understand something about guns and crime, I would read John Lott. If I wanted to understand something about health care, I would read Regina Hertzlinger or Avik Roy. And so on. In the real world, you can't arrive at correct beliefs with "thought experiments". You need to run real experiments – in the lab. You need to write real code – in the lab. It's so important for people to have private sector work experience, developing solutions for customer problems in the competitive private sector.

Philosophers are the people LEAST LIKELY to understand basic economics. They tend to support bigger government in order to get more bailouts and redistribution of wealth.

Here's an article from Newsweek:

> Overall, socialism isn't winning over the majority of college students. When broken down by major, though, its popularity doubled with philosophy students.
>
> […]Only 39 percent of the 10,590 undergraduates polled had a favorable view of socialism, and the same percentage responded that they had an unfavorable view. When respondents were broken out by major views of capitalism shifted considerably.
>
> Philosophy majors were most likely to view socialism positively, with 78 percent of those polled saying they had at least a somewhat favorable view of it. Anthropology majors were a close second at 64 percent, followed by English majors at 58 percent and international relations, sociology and music majors all at 57 percent.
>
> Least likely to view socialism favorably were accounting and finance majors at 20 percent and 22 percent respectively.

Why are most philosophers so wrong on areas that touch on reality, like finance and economics? Maybe, it's because they make their living with words. Libertarian philosopher Robert Nozick, who is one of the good philosophers, calls people like this "wordsmiths".

He explains the consequences of being a "wordsmith" here in this essay for the Cato Policy Report (Cato Institute):

> What factor produced feelings of superior value on the part of intellectuals? I want to focus on one institution in particular: schools. As book knowledge became increasingly important, schooling–the education together in classes of young people in reading and book knowledge–spread. Schools became the major institution outside of the family to shape the attitudes of young people, and almost all those who later became intellectuals went through schools. There they were successful. They were judged against others and deemed superior. They were praised and rewarded, the teacher's favorites. How could they fail to see themselves as superior? Daily, they experienced differences in facility with ideas, in quick-wittedness. The schools told them, and showed them, they were better.
>
> The schools, too, exhibited and thereby taught the principle of reward in accordance with (intellectual) merit. To the intellectually meritorious went the praise, the teacher's smiles, and the highest grades. In the currency the schools had to offer, the smartest constituted the upper class. Though not part of the official curricula, in the schools the intellectuals learned the lessons of their own greater value in comparison with the others, and of how this greater value entitled them to greater rewards.
>
> The wider market society, however, taught a different lesson. There the greatest rewards did not go to the verbally brightest. There the intellectual skills were not *most* highly valued. Schooled in the lesson that they were most valuable, the most deserving of reward, the most entitled to reward, how could the intellectuals, by and large, fail to resent the capitalist society which deprived them of the just deserts to which their superiority "entitled" them? Is it surprising that what the schooled intellectuals felt for capitalist society was a deep and sullen animus that, although clothed with various publicly appropriate reasons, continued even when those particular reasons were shown to be inadequate?

Now, it's important to be fair and acknowledge that some "wordsmiths" do understand finance and economics. But it's the minority. It's a sad thing when one of these wordsmiths manages to get to the top of an evangelical organization, though. Which is why you need to be careful what you let your children study, and where you send your donations. Giving money to evangelical wordsmiths who think that "Jesus didn't care about politics" and "both parties are the same on abortion" and "abortions went up after the repeal of legalized abortion" is a waste of money.

# Survey: young, unmarried women explain why they avoid having children

**Wintery Knight** · 30 November 2024 · Archived copy · Original

Why do so many women end up involuntarily childless? Is it because men are ruining their lives, with sexism and discrimination and refusal to commit? OR is it because women are deliberately making choices that lead them to involuntary childlessness? This interesting article answers that question. It comes from the far leftist Huffington Post.

They write:

> The Huffington Post and YouGov asked 124 women why they choose to be childfree. Their motivations ranged from preferring their current lifestyles (64 percent) to prioritizing their careers (9 percent) — a.k.a. fairly universal things that have motivated men not to have children for centuries. To give insight into the complex, layered decisions women make, HuffPost asked childfree readers to discuss the reasons they have chosen not to have kids and gathered 270 responses here.

They grouped the responses into 5 categories:

1. I want to prioritize my career
2. I don't like children
3. I had a bad relationship with my parents
4. I don't want the financial responsibility
5. I like my life as it is

And here are some interesting quotations:

Category 1:

> I am a first-generation college graduate in my family. My mother was a single mom my entire childhood, and I was there to see that struggle. Being a parent, for a woman, means for life. Being a parent, for men, seems to be something very different. I understand raising children is a big life change and I don't want to sell myself short on my potential to become something more and maybe even create change. **I am childfree because I want to travel, move, pursue my career wholly** and be able to push myself to be an inspiration to other women. If a child comes into my life, it won't be until I am happy and successful in my work life, and not until I am secure with my finances and a marriage. I don't want to one day wake up as an old woman wishing I had waited to have children so I could live my own life first, make mistakes, learn new things and find myself. Today kids are not for me.

Category 2:

> I'm nearly 47; my boyfriend (domestic partner) of 17 years is nearly 50. I've never been pregnant and have taken every precaution to remain childfree. I tolerate other people's children when I have to. I'm happiest when there are NO children around. I definitely don't want them in my home. I like my life as it is. My boyfriend and I are both scientists. We also raise snakes and spiders! **We like to travel. We travel to ride roller coasters (members of ACE — American Coaster Enthusiasts) and to attend rock concerts.** I am also a performer in a senior winter guard. My plate overfloweth! I see no reason to procreate. I would be unhappy. Why be unhappy?

Category 3:

> I have a great relationship with my husband. **We have the time and money to travel, and that gives us precious memories.** I had a bad relationship with my dad, and maybe I'm scared to treat my children like that. I'm very happy with my decision. I have a great relationship with myself too.

Category 4:

> My spouse and I have talked in depth about having children. However, **we both decided that our desire to travel the world is a financial burden in itself. If we have kids, we will never have the means to travel**, and at the end of our life, we would rather be 100 percent committed to fulfilling our own realistic dreams rather than only able to provide a subpar life for a child. Comes down to the fact we are selfish, but at least we recognize this and made the choice early enough to avoid damaging a kid

Category 5:

> The thought of having to do kiddie crap every weekend makes me want to shoot myself. I like having the extra money to save for retirement and not worry about braces, summer camp or college tuition. **I can travel on a moment's notice.** I can give my all to my job and not have to worry about daycare, sick days, or having to leave my co workers to pick up my slack. I'm the "cool aunt" to all my nieces and nephews. I have more time to do the things that make me happy and productive. My relationship with my guy is not strained due to the constant neediness of children. I don't want to put my body through pregnancy and childbirth. I can give my dog all the attention he needs and deserves.

If I had to choose one comment to represent the entire survey, it would be this one:

> The moment you have children, you're life ceases to be about yourself. Kids always take priority and I feel like I can do more for this world than just generate offspring.

These quotations are very troubling to me. I don't see that young women today are being serious about choosing men who are serious about marriage – especially men who are financially prepared to pay for things like houses and children.

Many women try to communicate maturity to others by saying that they want to get married "some day". But all the actions *right now* show that they really see marriage as "boring" and "demanding". Marriage and children "some day" is like planning for your retirement by winning the lottery. The every day actions of spending money aren't preparing you in any way to win the lottery. Talking about marriage "some day" is just a way for the woman to signal to her family and friends that she will *eventually* want the responsibility of a husband and kids, but not right now. The problem with that is that making selfish decisions over and over and over is not the way to prepare your character to be content with caring for the needs of a husband and children. Being unselfish is a skill that you have to build by repetition and practice. Just like any other virtue. And men know that. Good men won't marry women who won't care for them or care for their children.

# William Lane Craig on the unexpected applicability of mathematics to nature

**Wintery Knight** · 1 December 2024 · Archived copy · Original

You might remember that Dr. Craig used a new argument in his debate with Lawrence Krauss in Melbourne, Australia.

My notes on the debate record it thus:

> The unreasonable effectiveness of mathematics:
>
> - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
> - Mathematical objects can either be abstract objects or useful fiction
> - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
> - But a divine mind that wants humans to understand nature is a better explanation for what we see

And now Dr. Craig has expanded on it in the Q&A section of his Reasonable Faith web site.

The question:

> Dear Dr Craig
>
> Firstly can I thank you for all your work. My faith in Christ has been enormously strengthened through studying your work in apologetics in particular and I have grown in confidence in my Christian witness.
>
> My question relates to numbers and mathematics as a whole. On the Defenders podcast you state that as God is the only self-existent, necessary being, numbers and mathematical objects, whilst being useful, don't actually exist as these too would exist necessarily and independently of God. If this is the case, how can it be that mathematics is so easily applied to the natural world? Surely if mathematics only existed in our minds, we would expect to see no correlation between it and how the physical world actually is?
>
> Michael
>
> United Kingdom

Excerpt from the answer:

> As philosopher of mathematics Mary Leng points out, for the non-theistic realist, the fact that physical reality behaves in line with the dictates of acausal mathematical entities existing beyond space and time is "a happy coincidence" (*Mathematics and Reality* [Oxford: Oxford University Press, 2010], p. 239). Think about it: If, *per impossibile*, all the abstract objects in the mathematical realm were to disappear overnight, there would be no effect on the physical world. This is simply to reiterate that abstract objects are causally inert. The idea that realism somehow accounts for the applicability of mathematics "is actually very counterintuitive," muses Mark Balaguer, a philosopher of mathematics. "The idea here is that in order to believe that the physical world has the nature that empirical science assigns to it, I have to believe that there are causally inert mathematical objects, existing outside of spacetime," an idea which is inherently implausible (*Platonism and Anti-Platonism in Mathematics* [New York: Oxford University Press, 1998], p. 136).
>
> By contrast, the theistic realist can argue that God has fashioned the world on the structure of the mathematical objects. This is essentially what Plato believed. The world has mathematical structure as a result.

This argument was also made by mechanical engineering professor Walter Bradley in a lecture he gave on scientific evidence for an intelligent designer. You can read an essay that covers some of the material in that lecture at Leadership University.

Excerpt:

> The physical universe is surprising in the simple mathematical form it assumes. All the basic laws of physics and fundamental relationships can be described on one side of one sheet of paper because they are so few in number and so simple in form (see table 1.1).
>
> […]It has been widely recognized for some time that nature assumes a form that is elegantly described by a relatively small number of simple, mathematical relationships, as previously noted in table 1.1. None of the various proposals presented later in this chapter to explain the complexity of the universe address this issue. Albert Einstein in a letter to a friend expressed his amazement that the universe takes such a form (Einstein 1956), saying:
>
> You find it strange that I consider the comprehensibility of the world to the degree that we may speak of such comprehensibility as a miracle or an eternal mystery. Well, a priori one should expect a chaotic world which cannot be in any way grasped through thought. . . . The kind of order created, for example, by Newton's theory of gravity is of quite a different kind. Even if the axioms of the theory are posited by a human being, the success of such an enterprise presupposes an order in the objective world of a high degree which one has no a priori right to expect. That is the "miracle" which grows increasingly persuasive with the increasing development of knowledge.
>
> Alexander Polykov (1986), one of the top physicists in Russia, commenting on the mathematical character of the universe, said: "We know that nature is described by the best of all possible mathematics because God created it." Paul Davies, an astrophysicist from England, says, "The equations of physics have in them incredible simplicity, elegance and beauty. That in itself is sufficient to prove to me that there must be a God who is responsible for these laws and responsible for the universe" (Davies 1984). Successful development of a unified field theory in the future would only add to this remarkable situation, further reducing the number of equations required to describe nature, indicating even further unity and integration in the natural phenomena than have been observed to date.

The whole paper that started this off is called "The Unreasonable Effectiveness of Mathematics", and it is a must read for advanced Christian defenders. You can read the whole thing here.

# Trump hits home run by replacing corrupt FBI Director with competent reformer

**Wintery Knight** · 2 December 2024 · Archived copy · Original

There were actually two great picks that came out late last week. The FBI Director Kash Patel and the new NIH Director Jay Bhattacharya. Both of these men are sorely needed to investigate corruption and weaponization of government in the FBI and NIH. In this post, let's take a look at Kash Patel, and remember the corruption of his successor, Christopher Wray.

Here's an article from New York Post:

> President-elect Donald Trump has selected Kash Patel to lead the FBI, closing one of the last remaining presidentially appointed positions available two months before taking office — and putting current bureau boss Christopher Wray's tenure on the chopping block before his term expires.
>
> […]The New York native is known for his deep loyalty to Trump — which has made him a target of the left despite serving as a National Security Council official, senior adviser to the acting Director of National Intelligence, and later, chief of staff to the acting United States secretary of defense.
>
> Patel, who will have to earn Senate confirmation to become FBI director, was one of the leading Republicans who opposed the investigation into Trump and Russian interference in 2016, long opposing government overreach in how its federal agents surveil Republicans.
>
> He has written about the need to dismantle the Justice Department and do an overhaul of the intelligence agencies, including the FBI, by firing their "top ranks" and prosecuting "to the fullest extent of the law" anyone who "in any way abused their authority for political ends."
>
> "[T]he FBI has become so thoroughly compromised that it will remain a threat to the people unless drastic measures are taken," Patel wrote in his book, "Government Gangsters," which Trump lauded as a "blueprint" for his next term.

Former corrupt FBI Director Andrew McCabe doesn't like the pick:

> Former FBI Deputy Director Andrew McCabe cautioned against Patel, claiming on CNN Thursday that "no part of the FBI's mission is safe with Kash Patel in any position of leadership in the FBI."
>
> […]McCabe butted heads with the 45th president over the FBI's Trump-Russia collusion probe, pursued the debunked Steele dossier and was fired as acting director of the bureau for leaking sensitive case information to a journalist.

Patel will have a lot of work to do, as the FBI has basically become the equivalent of the East German Stasi under Biden-Harris. Using taxpayer money to suppress dissent from leftism and elect Democrat politicians.

My favorite source for conservative policy is Daily Signal, and here is what they said about his qualifications:

> During the first Trump administration, Patel was the chief of staff to Acting Secretary of Defense Christopher Miller.
>
> Before that, Patel was the deputy assistant to the president and the senior director for counterterrorism at the National Security Council.
>
> While at the NSC, he helped oversee Trump policies that included eliminating the Islamic State terrorist group, as well as Al Qaeda leadership such as al-Baghdadi and Qasem al-Rimi.
>
> Patel also was the principal deputy to the former Acting Director of National Intelligence Ric Grenell, who

> oversaw the operations of 17 intelligence community agencies.
>
> Before going to the White House, Patel was senior counsel for the House Permanent Select Committee on Intelligence, under then-Chairiman Devin Nunes, R-Calif., and oversaw the investigation into the Russian active measures campaign to influence the 2016 presidential–election.
>
> He also played a key role in the Nunes memo that showed the FBI relied on partisan "politically motivated or questionable sources" to obtain a Foreign Intelligence Surveillance Act warrant to spy on Trump campaign aide Carter Page.
>
> The two and a half year investigation into whether Trump conspired with the Russian government to win the 2016 election was prompted by information fed to the FBI from Hillary Clinton's presidential campaign, and Democrat operatives. The House panel and later special counsel Robert Mueller concluded there was no evidence that Trump conspired with Russians.

Now, let's have a quick review of why Trump needs Kash Patel to replace the current FBI Director, Christopher Wray.

Here's the story from the Daily Signal:

> FBI Director Christopher Wray may have lied under oath concerning the FBI Richmond office's Jan. 23 memo citing the Southern Poverty Law Center in urging investigation of "radical traditional Catholic hate groups," Rep. Jim Jordan suggested in a letter sent Wednesday.

The issue is that Wray tried to minimize the scope of the FBI's investigation into Catholics:

> On July 12, Wray testified to the House Judiciary Committee that the memo represented "a single product by a single field office, which, as soon as I found out about it, I was aghast and ordered it withdrawn and removed from FBI systems."

He says it was a "single field office", but the memo reveals collaboration between *multiple* field offices.

I think all Christians and conservatives would be thrilled if they were allowed to be pro-life without having their doors battered down in the early morning by SWAT teams.

Remember this story from Daily Wire?

> FBI agents reportedly raided the home of a pro-life activist in Pennsylvania on Friday and arrested him.
>
> A group of between 25 and 30 FBI agents raided the Bucks County, Pennsylvania, home of pro-life activist Mark Houck early Friday morning, his family told LifeSite News. Houck is the leader of a nonprofit group that provides sidewalk counseling at abortion clinics in Philadelphia.
>
> […]"The kids were all just screaming," Houck's wife, Ryan-Marie, told LifeSite. "It was all just very scary and traumatic."
>
> Ryan-Marie Houck told the outlet that the group of agents in SWAT gear arrived in 15 vehicles outside the family home at around 7:05 a.m. Friday morning. The agents quickly surrounded the house and began pounding on the door, demanding they open up. Houck reportedly tried to get the agents to calm down, noting that his seven children were scared, but the agents kept shouting. "[T]hey had big, huge rifles pointed at Mark and pointed at me and kind of pointed throughout the house," his wife said.

What did he do to get his house raided by 25-30 armed FBI agents in 15 vehicles?

This:

> According to his wife, Houck was providing sidewalk counseling at abortion centers in Philadelphia last year, and had taken his then 12-year-old son. On multiple occasions over weeks, a “pro-abortion protestor” allegedly shouted vulgarities and insults at the boy. Houck repeatedly told the protestor not to speak to his son, but the protestor continued to encroach on the boy’s personal space, still spewing vulgarities. Finally, Houck shoved the man away, causing him to fall down. The protestor was not injured, but tried to sue Houck. Though the case was thrown out this summer, it was somehow picked up by the DOJ, Ryan-Marie Houck said.

Many powerful secular leftists in this country are all terrified of Christiand and conservatives using government to coerce them. They are terrified, but they are the only ones who ever abuse power to punish their political enemies. We need to stop secular leftists from using government as a weapon against people they disagree with, to benefit the political party they favor.

# Hunter Biden pardon proves that secular left fascists think they are above the law

**Wintery Knight** · 3 December 2024 · Archived copy · Original

Recently, I had a conversation with a secular conservative, and he said something that really made me think. I listed off a number of abuses of power by the secular leftists in the Biden administration – pre-dawn raids, prosecuting political opponents, punishing religious speech and behavior, etc. And his reply was "what makes you think that Trump won't do these things if he is elected?"

And I thought about that, and I realized that this is how the fascists in the secular left Biden administration think. They have to fascist Christians and conservatives, because they are so convinced that Christians and conservatives would do it to them. In history, there's never been Christian or conservative weaponization of government. Throughout history, the big mass murders have only ever been done by the secular left – the German National Socialists, the Soviet Union, Communist China, North Korea, etc. Secular left regimes that persecuted and even outlawed Christianity. But somehow, the secular left believes that they should be allowed to break the law. Their fears about what their opponents have never done, but might do, justifies the fascist actions they are doing right now.

So here is the latest news from New York Post. And I chose this article, because it was the lies of the corporate news media and the Democrat party leaders about whether this would happen that bothered me the most.

> The fiction that Joe Biden is a selfless, honorable public servant — long undermined by his own deeds — collapsed in on itself Sunday night.
>
> As did the credibility of his longtime allies in the Fourth Estate who helped write it.
>
> For well over a year now, the president and his surrogates have indignantly insisted that he would not pardon his son, Hunter.
>
> And because Biden is a Democrat, he enjoyed not only the benefit of the doubt from America's journalists, but preemptive praise from them.
>
> S.E. Cupp marveled that "the contrast" between Biden and Donald Trump — who protested the politically-motivated zombie case brought against him by Alvin Bragg — was "profound."
>
> Andrew Weissmann declared that Biden was "living what it means to have rule of law in this country."
>
> Legal commentator Neal Katyal said he knew "no other word" for Biden's decision other than "presidential."
>
> Chris Whipple, the author of a book about the Biden White House, called his choice "extraordinary" and stood in awe of his "moral clarity."
>
> Biden biographer Evan Osnos expounded on his subject's "old-school" conception of his duty and agitation at "abuses of power."
>
> And when a Republican strategist had the gall — nay, the temerity — to suggest that Biden would go back on his word, CNN's Abby Phillip informed him, with no shortage of annoyance in her tone, that the president had "ruled out" a pardon for Hunter.
>
> So much for all that.
>
> On Sunday, Biden announced that he had pardoned his progeny not just for the gun and tax crimes he committed, but for any and all illegal conduct over the course of the last decade.
>
> Asked about the reversal on Monday, White House press secretary Karine Jean-Pierre said that Biden had determined that "war politics" had "infected the process."
>
> […]Joe Biden has destroyed not just his own legacy, but that of those who went to bat for him.

This is how the secular left works:

And the corporate news media promoted this lie, over and over, and contrasted the virtuous Joe Biden's devotion to the rule of law, with the lawless threat to democracy. They trumpeted those lies, they denounced the Hunter Biden laptop, they denied the the payments, and they denied 10% for the Big Guy. Now, when it all has been blown up and falsified, their news story is "Republicans pounce".

By the way, if you are upset by this story – not surprised, but upset by it – then you should by all means check out the Monday podcasts by Matt Walsh and Ben Shapiro. It helps to hear other people who have even more of the details talk about how horrible this pardon is.

Disgusting immorality. And this is the immorality that was trumpeted by "Evangelicals for Biden" and "Evangelicals for Harris". They supported these lies, and when the lie comes out, they attack the people they lied to. Disgusting people. Nothing should be off the table for the incoming Republican administration in punishing the secular left for their lies.

# Two examples of how the Biden-Harris administration persecutes Christians

**Wintery Knight** · 4 December 2024 · Archived copy · Original

I do have some churchy Christian friends who like to say that they don't want to get involved in a "culture war", and they don't see much difference between the political parties. I have an idea of why they say things like this, and I'll talk about that below. But first, let's see two examples of how the Biden-Harris administration went after Christians, and is even doubling down on the persecution.

First story is from the wonderful Virginia Allen, who writes for the Daily Signal and also does their podcast.

She wrote this article in Life News:

> The Biden-Harris administration finalized a rule in April requiring foster parents to affirm a child's gender ideology.
>
> "The provider must commit to establishing an environment that supports the child's LGBTQI+ status or identity," according to the rule issued by the Department of Health and Human Services.
>
> The policy, says Herbie Newell, president and executive director of Lifeline Children's Services, "made people of faith into a different category of foster and adoptive parent, saying that because they didn't give in to this pro-radical LGBTQ+ agenda, that they couldn't foster any child with gender dysphoria or any child that might be having any questions about their LGBTQ status."
>
> "Faith-based Christian people were put on the sidelines and not able to participate in our foster care and adoption system in the same way," Newell says.

I heard about this story on the Daily Signal podcast, so if you would rather listen to the interview with the Lifeline guy (I thought he was very good, although he did say "during Biden's pregnancy" when he meant "during Biden's presidency"). Virginia Allen sounds great.

Anyway, you would think that this would be a concern for the church Christians, who don't want to get involved in the "culture war". Usually when I tell them stories like this, they say "well, I think Jesus would attend a same-sex wedding, I certainly would". So, that's their attitude to sin, go and participate in it. And the Christians who don't deserve to be persecuted by the state.

Anyway, here's another one that I found in Daily Signal. It's written by Elizabeth Troutman Mitchell. This article is even more scary, because the DOJ is facing a house-cleaning right now, and you would think they would cool it with the secular leftist fascism. But no. More fascism. Fascism piled on top of fascism.

It says:

> The Justice Department filed a reply Tuesday supporting its motion for a gag order against Dr. Eithan Haim, a surgeon indicted by the Biden-Harris administration after he blew the whistle on sex-change procedures for minors.
>
> "The prosecutors in @eithanhaim's case are doubling down on their shameless effort to ask the court to censor us and our client on @X," the Burke Law Group, which is representing Haim, said on X. "We will continue to zealously represent @EithanHaim's liberty, and now his (and our) First Amendment right to Free Speech."
>
> Haim initially came forward as an anonymous whistleblower to expose gender treatments being performed on minors at Texas Children's Hospital in Houston. He is facing four felony counts of violating the Health Insurance Portability and Accountability Act, also known as HIPAA, according to journalist Chris Rufo, who first reported on Haim's story.

> The Justice Department's reply in support of its motion for a gag order against Haim and his legal team said the order would "prevent the defendant and his attorney from making inflammatory and unfairly prejudiced statements."
>
> […]Haim was a resident at the Baylor College of Medicine from June 2018 to June 2023. He worked at Texas Children's Hospital during part of his residency.
>
> The gag order would "completely prevent Dr. Haim or his counsel from criticizing the prosecution, no matter how correct the criticism," according to Burke Law Group.
>
> […]The DOJ particularly wants to prevent Haim from retweeting allies who have defended him on X, including Ethics and Public Policy Center legal expert Ed Whelan; Rep. Dan Crenshaw, R-Texas; psychologist and author Jordan Peterson; and Rufo, according to Burke Law Group.

So, this "gag order" procedure is very common. In fact, if you watched Matt Walsh's first movie "What is a Woman?", he spoke to a father who was having his child transed against his will. The court slapped a publication ban on the legal proceedings. The father was banned from speaking about the trial and from "misgendering" the child. Basically, they want to control people's lives, but they don't want anyone to publicize what they are doing, so that they might be shamed or disapproved of.

So, here is why many Christians say "I don't want to get involved in the culture war".

The reason is that they don't have a plan to serve God that would be affected by laws and policies. They read the Bible. They attend church. But if they have to choose between advocating for Jesus' vew of marriage, or going to a same-sex wedding in order to appease their leftist spouse, then they choose to appease the leftist spouse and go to the same-sex wedding. Why? Because they don't think that obedience to God should ever result in any bad consequences for them. No bad feelings. No social disapproval. No being cut off by family members, like in Matthew 10:34-38.

For me, I have an interest in laws and policies because I do have a Christian life plan. And I understand that the secular left does not want me to achieve that Christian life plan. They have all of their own ideologies, and they want me to give up on Jesus, and bow down to their ideologies. And they get a lot of "Christians" like David French and Russell Moore to swap out Jesus for their ideologies. Me, I would prefer to stick with Jesus. And I understand that if the laws and policies don't allow the secular left to force me to choose between Jesus and secular left ideologies, then I will have a much more productive life for my Boss. Instead of having to face false accusations, pay legal fees, go on trial, go to jail, etc. I can take more of my money and give it to FreeThinking Ministries (which has a matching grant right now!) or Eric Chabot or someone else worthy. So that's why I care about laws and policies.

# Supreme Court hears cases for and against ban on transing kids

**Wintery Knight** · 5 December 2024 · Archived copy · Original

I'm sure that my regular readers or Twitter followers will know about the Supreme Court case that started on Wednesday. The state of Tennessee, the best state in the Union, passed a law banning doctors from giving puberty blockers, hormone treatments and sex-mutilation surgeries to children. And the Biden-Harris Democrats, being secular leftists, decided to contest that law.

So, I am linking to a number of articles in this post.

First, this Daily Signal article explains the case from the secular leftists:

> In Wednesday's oral argument, lawyers for the U.S. government and the American Civil Liberties Union contended that the Tennessee law discriminates based on sex because it bans transgender medical procedures only "when inconsistent with the patient's birth sex."
>
> U.S. Solicitor General Elizabeth Prelagor, representing the Biden-Harris administration, argued that so-called puberty blockers are prescribed to boys and girls with early-onset puberty. It is thus sex discrimination to deny puberty blockers based on sex to children with gender dysphoria, she said.

So, that's their case.

And this Daily Signal article explains the argument from the Attorney General of Tennessee:

> As Tennessee persuasively argues, rather than classifying based on sex, the law classifies on based on purpose. In other words, it distinguishes based on minors seeking drugs for gender transition and minors seeking drugs for any other medical purposes. The Supreme Court has never recognized restrictions on the use of drugs for a particular medical purpose to demand heightened scrutiny review, so rational-basis review applies.

So, the lawyers presented their cases, and they were asked questions by the Supreme Court Justices.

Now here's an article from Daily Wire, which gives us the three big admissions made by the secular leftist advocates:

> Proponents of transgender procedures on children made three stunning admissions on Wednesday as they argued against a Tennessee law protecting children from the irreversible procedures before the Supreme Court.
>
> The admissions — that cross-sex hormones can cause infertility, that people regret the procedures, and that transgender procedures aren't associated with lower suicide rates — undercut leftist activists' core arguments that the procedures are necessary and lifesaving.
>
> These revelations were made as justices heard oral arguments in the case brought by the Biden administration and the ACLU against Tennessee for a law that shields children from transgender procedures like puberty blockers and cross-sex hormones.

The big hero of the day was Justice Alito, who knew more about what the evidence says about these issues than anyone else.

This Daily Signal article explains:

> Roberts and Kavanaugh also stressed the shaky scientific footing of gender "medicine," and cited various European reports, saying that "countries who have been at the forefront [are now] pumping the brakes on this," something that Kavanaugh noted gave the court "a yellow light, if not a red light" in moving forward into "constitutionalizing" a new area of law.

> But it was perhaps the line of questioning from Alito that was the most intense of the morning. Alito, too, cited specific studies from Sweden and England, including the bombshell Cass report, which indicated that gender medicine is largely unproven and presents significant health risks to children.
>
> He chided Prelogar, saying that she had "relegated [it] to a footnote."

And:

> When transgender lawyer Chase Strangio took the podium for the ACLU, Alito continued his grilling, asking pointedly "Is transgender status immutable?" When Strangio responded that it would indeed "satisfy an immutability test," Alito peppered the ACLU lawyer with various hypotheticals: What about people who are "gender-fluid," or who change gender identities over time, or who are "nonbinary"?
>
> When Strangio floundered, Alito retorted, "So, transgender status is not an immutable characteristic, is it?"

Desert Rose sent me two articles about the arguments of the affirmative action Supreme Court Justices (Sotomayor and Brown-Jackson) who were nominated by Obama and Biden.

Here's the first article from Daily Wire:

> Supreme Court Justice Ketanji Brown Jackson compared Tennessee's law against irreversible medical interventions that seek to change children's sex to laws against interracial marriage.

Here's the second article from Daily Wire:

> Supreme Court Justice Sonia Sotomayor drew a wave of backlash when she dismissed concerns about risks associated with gender transition surgeries — particularly among patients who are minors — by arguing that all medical treatments, even aspirin, can have side effects.

Again, you can double-check those articles to get the details, I'm trying to move through a list of notable events, though.

Daily Signal and Independent Women's Forum both had reporters on the scene, and they were tweeting out useful things all day. Every time I got up to get coffee or go to the bathroom, I was checking my phone to get the latest updates.

This was my favorite tweet of the day:

https://x.com/DailySignal/status/1864341828901740803

That doctor looks Indian – probably East Indian, maybe West Indian. I hope we have a million more conservative Indians like him soon, arguing against secular left lies with evidence.

And here's a good article about what the Daily Signal reporters saw outside the Supreme Court:

> A mother told The Daily Signal her family travelled to the rally from Arizona to support her child "Violet," a biological male identifying as a girl. Violet told his parents he was trans "when she one and a half," the mother claimed.
>
> "She knew since birth," the woman said.

And:

> A mom and transgender-identifying adolescent at the rally said they want the Supreme Court to rule the Tennessee law unconstitutional because their home state, Louisiana, bans transgender procedures for minors.

> “The wrong puberty can kill us,” the young person who identified as transgender told The Daily Signal. “There are people here who are alive because they got access to gender-affirming care, and restricting the right to that will kill people.”
>
> The mom added that the “most pro-life thing politicians can do” is allow “gender-affirming care” because transgender kids will commit suicide without it.

I know that in the men’s communities that I belong to, whenever we see children of single moms or children of lesbian couples behaving weirdly, we always like to say “The father could not be reached for comment”. That’s not throwing shade at men, that’s noting that the current family laws make it easy for mothers to eject biological fathers from their homes, often using false accusations that never go to trial. And then the children grow up without a male influence, which can sometimes lead to mental health issues.

# More ways the Biden-Harris administration targeted Christians and conservatives

**Wintery Knight** · 6 December 2024 · Archived copy · Original

Earlier this week, I posted about two ways that the Biden-Harris administration targeted Christians. First, by preventing Christians from taking in foster kids. And second, by punishing Christian medical workers who blew the whistle on the transgendering of children. I thought I was done, but Desert Rose sent me a couple more stories, which I will talk about below.

This story is from Christian Post:

> The United States Department of Education is being accused of unjustly targeting Christian colleges and universities, allegedly to advance a "woke agenda."
>
> The American Principles Project, a conservative think-tank, published a report earlier this month that cites the department's Office of Enforcement actions against Christian schools.
>
> According to the report, although Christian colleges and universities have fewer than 10% of students in the U.S., they make up around 70% of the penalties imposed by the Office of Enforcement.
>
> Additionally, over the past 10 years, while the average fine against public and private academic institutions that violated federal law on campus crime was around $228,571, the average fine against a Christian school was $815,000.
>
> The report also took issue with the record fines recently imposed on Grand Canyon University and Liberty University, two prominent Evangelical Christian academic institutions.

Secular universities that had REAL scandals were punished much less:

> According to the APP, when the department issued punitive fines on Michigan State University and Penn State University for high-profile abuse scandals, they were several million dollars less.
>
> APP Policy Director Jon Schweppe, author of the report, said in a statement released on Nov. 18 that he believed this was an example of the Biden administration "weaponizing every part of the federal government to target their opponents."
>
> "As our report details, the Biden-Harris Department of Education has been engaged in a long-running scheme to punish Christian colleges that are ideologically opposed to the left's agenda. The unfair targeting of these institutions has been egregious, and it needs to stop immediately," stated Schweppe.

As you can see above, I posted a picture of Russell Moore, who rose to the top of a secular leftist advocacy group known as the ERLC. You can see him meeting with Democrat president Barack Obama, in the photo. I show that, because Moore is what I would call an "Evangelical for Biden" and "Evangelical for Harris". Instead of advocating for Christian positions on fiscal policy, social policy and foreign policy, Moore used his platform to push for Democrat policies. Now that the news is coming out about what Obama did to Christian colleges, it sheds light on what Moore, and people like him, were really up to. There are a lot of fake Christians who advocate for secular left policies.

Here's another article with four more instances of targeting conservatives, from Daily Wire. (archived)

Here are the four:

- Targeting Political Opponents (parents, pro-lifers, etc.)
- FEMA Skipping Homes Of Trump Supporters

- Censoring Conservative Media (e.g. – Facebook)
- Spying On Financial Transactions

I've blogged before about the first 3 (see the links), so let's look at the last one:

> Earlier this year, Rep. Jordan revealed how federal officials were ordering banks to comb through customer data in search of terms like "TRUMP" or "MAGA" used in transactions.
>
> This came after the Financial Crimes Enforcement Network (FinCEN) asked banks to help federal law enforcement identify transactions of "persons of interest" using specific typologies and Merchant Category Codes after January 6, 2021.
>
> Other transaction keywords identified by the feds included "Cabela's" and "Dick's Sporting Goods," along with the purchase of "religious texts" as potentially problematic.
>
> "Despite these transactions having no apparent criminal nexus — and, in fact, relate to Americans exercising their Second Amendment rights — FinCEN seems to have adopted a characterization of these Americans as potential threat actors," Jordan wrote in January. "This kind of pervasive financial surveillance, carried out in coordination with and at the request of federal law enforcement, into Americans' private transactions is alarming and raises serious doubts about FinCEN's respect for fundamental civil liberties."

Why do you think that Evangelicals for Biden-Harris, many of whom are very pietistic pastors and church leaders, would support the secular left using government as a weapon against Bible-believing Christians and Constitutional conservatives? I think it's because many of these "evangelicals" were raised in a Christian bubble. For them, Christianity is about being liked and feeling good. They embraced it because it made the Christians around them like them. They never had to work through evidence, such as the origin of the universe, fine-tuning, origin of life, Cambrian explosion, habitability, molecular machines, gospel reliability, minimal facts case for the resurrection, etc. like Desert Rose and I do on the Knight and Rose Show. They simply don't know or care whether Christianity is true, they only care that they signal their virtue to other people.

So, when these pietistic pastors and charismatic church leaders grew older and went into the secular world, they just repeated what had worked for them in the Christian bubble. They said whatever they needed to say to impress the elites in the larger secular culture. There was no foundation for their faith based on truth, and based on experiences of self-sacrificial obedience. They never had the experience of using evidence to win a debate (like Jesus), and then suffering the shame and loss of being obedient to God (like Jesus).

# Science and Faith conference scheduled for February 8th, 2025 in Dallas, TX

**Wintery Knight** · 7 December 2024 · Archived copy · Original

I noticed that there is a new Dallas, TX Science and Faith conference scheduled for February 8th, 2025. This one is offering online viewing, if you can't make it to Dallas. Well, I thought it might be fun to review some lectures from the 2019 Dallas, TX Science and Faith conference, because they posted them online. It's a nice way to get an easy, popular-level introduction to science apologetics.

Here are a few of the sessions from the upcoming conference that I'm looking forward to:

- **The miracle of butterfly metamorphosis** (Paul Nelson)
- **The amazing honeybee** (Eric Hedin)
- **The scientific evidence of the human soul** (Michael Egnor)
- **The intelligent design of plants** (Emily & Daniel Reeves)
- **The theory of ID as fuel for scientific discovery** (Casey Luskin)
- **The origin of animal body plans** (Stephen Meyer)

When it comes to scientific arguments, I have 6 that I usually use:

- origin of the universe
- fine-tuning of the initial conditions of the universe
- origin of the life
- sudden origin of body plans in the Cambrian explosion
- habitability and discoverability
- molecular machines

If you want to get an idea of what these events are about, the ID folks did one of these conferences about 6 years ago in 2019, and they posted the videos. And they actually covered a few of these arguments.

Here is the YouTube playlist. And below are some of the lectures.

The origin of the universe:

The origin of life:

Habitability and Discoverability:

Cambrian explosion:

If you're wondering, "is this the lecture where James Tour got really, really excited with a church audience?" Yes, this is the one.

One of my heroes is speaking at the 2025 conference, Dr. Richard Sternberg. You might remember that Dr. Sternberg was thrown out of his job at the Smithsonian Institute, just for publishing a paper by Dr. Stephen Meyer that supported intelligent design in a peer-reviewed journal.

> For decades, opponents of intelligent design derided the theory as unscientific because it hadn't been published in peer-reviewed science journals. "What intelligent design advocates fail to realize is that the peer-review process could benefit them enormously," sneered one such opponent, computer scientist Jeffrey Shallit, in 2001. But when a peer-reviewed journal published an ID-friendly paper in 2004, the response from Darwinists

> was simply more derision. And for Dr. Richard Sternberg, it was worse. Sternberg endured sustained hostility from his colleagues at the Smithsonian, including conspiracy theories and wild accusations, that damaged his reputation and resulted in his premature departure.

These are the real heroes. The ones who have to pay a price for standing up for the truth.

Here is his biography:

> Richard Sternberg is an evolutionary biologist with interests in the relation between genes and morphological homologies, and the nature of genomic "information." He holds two Ph.D.'s: one in Biology (Molecular Evolution) from Florida International University and another in Systems Science (Theoretical Biology) from Binghamton University. From 2001-2007, he served as a staff scientist at the National Center for Biotechnology Information, and from 2001-2007 was a Research Associate at the Smithsonian's National Museum of Natural History. Dr. Sternberg is presently a research scientist at the Biologic Institute, supported by a research fellowship from the Center for Science and Culture at Discovery Institute. He is also a Research Collaborator at the National Museum of Natural History.
>
> From 2001-2004, Sternberg served as Managing Editor of the Proceedings of the Biological Society of Washington, and has also served on the Editorial Board of the International Journal of General Systems. In 1999, he was a Visiting Associate Professor of Biology at Northern Michigan University, and from 1999-2001 was a Postdoctoral Fellow in the Department of Invertebrate Zoology, National Museum of Natural History. He has received postdoctoral fellowships from both the NIH and the National Museum of Natural History, and has published refereed articles in such journals as Genetica, Evolutionary Theory, Journal of Comparative Biology, Crustacean Research, Journal of Natural History, Journal of Morphology, Journal of Biological Systems, and the Annals of the New York Academy of Sciences.

People sometimes try to talk to me about charismatic pastors, and Big Eva politicians, famous Christian athletes, famous Christian artists, etc. And I just have no regard for people who talk about things that they haven't investigated themselves. I'm even a little suspicious of analytic philosophers! The guys who I admire and look up to are the STEM guys. The mathematicians and the scientists. The guys who work in the labs. The guys who move the ball forwards by giving us evidence that we can talk about and use with people who don't even know where to begin looking for evidence.

# Does the fossil record match Darwinist predictions or Design predictions?

**Wintery Knight** · 8 December 2024 · Archived copy · Original

Recently, I wrote a post about how you can make a simple argument for intelligent design based on junk DNA. Step 1: find out what Darwinian naturalists claim about junk DNA. Step 2: find out what design proponents claim about junk DNA. Step 3: compare those predictions with scientific discoveries about junk DNA over the past decades. Today we'll do it with the fossil record.

I'm going to use an amazing article from Günter Bechly from over at Evolution News. Günter writes an article about fossils every Friday (he calls it "Fossil Friday").

Here's last Friday's article, where he gave a nice overview of why Christians should care about the fossil record.

He writes:

> This Fossil Friday I want to address the common request to provide an expanded written form of my lectures on discontinuities in the fossil record (e.g., on YouTube) together with references to mainstream scientific papers that back up these arguments against neo-Darwinism. Since the sudden appearance of trilobites in the Cambrian Explosion is one of the best known examples for discontinuities in the fossil record, I chose the early trilobite Wanneria sp. from the Lower Cambrian of Canada as today's featured fossil. So let's jump right in.

Then he talks about the predictions of Darwinists and design proponents:

> Every theory makes certain predictions and these predictions have to be tested with empirical evidence. Charles Darwin's theory of evolution necessarily predicts a gradual development of life. Therefore he insisted on gradualism, against the advice of his good friend Thomas Huxley. Darwin quoted in his magnum opus *The Origin of Species* (Darwin 1859) not less that six times the Latin dictum "*natura non facit saltus*", nature does not make jumps, because he wanted to present a fully naturalistic explanation for the history of life on our planet, knowing perfectly well that saltations would have tacitly implied miracle-like intelligent interventions. The prediction of gradualism is not accidental and not a dispensable side issue in Darwinism. This was made clear by Richard Dawkins, arguably the most ardent modern popularizer of Darwinism, in his bestselling book *The Greatest Show on Earth* (Dawkins 2009), where he explicitly clarified that "Evolution not only is a gradual process as a matter of fact; it has to be gradual if it is to do any explanatory work." In another book titled *Climbing Mount Improbable* (Dawkins 1996) he explained the reasons with a beautiful metaphor: Imagine the task to reach the top of a steep and tall cliff from the sea shore. It would be an improbable (or rather impossible) miracle to achieve this task with a single big jump. However, if there was a gentle slope on the backside of the cliff, you could easily and effortlessly climb the mountain with a lot of small successive steps. This is the way evolution must operate according to Darwin and Dawkins: not by sudden miraculous jumps, but many small steps, that are each not unlikely to happen accidentally without intelligent intervention, and which accumulate over long periods of time to add up to big biological differences.

Engineers don't check in code gradually, one letter at a time. We check in a bunch of related changes to different files that implement some feature. Some days, I have a lot of meetings. Some days, I spend time doing code reviews or making diagrams or writing documentation. And some days, I get to write code all day. So, if you look at my Github history, you'll see that some days I have 35 commits, and other days none. That's consistent with having a "designer". The complexity increases in "jumps", with each jump containing changes to several files, and the changes add some new feature. But that's not available to Dawkins and Darwin, they don't like engineers, or sudden jumps in complexity.

Günter lists out a bunch of biological “jumps”, where God pulled an all-nighter, with pizza and Mountain Dew, and checked in a whole bunch of new code all at once.

Here are a few from his list of about 15 of them:

- The Origin of Life (3.8 bya)
- The Origin of Photosynthesis (3.8 bya)
- The Cambrian Explosion (537-508 mya)
- The Carboniferous Insect Explosion (325-314/307 mya)
- The Early Triassic Marine Reptile Radiation (248-240 mya)
- The Mid Triassic Gliding / Flying Reptile Radiation (230-210 mya)
- Upper Triassic Dinosaur Explosion (234-232 mya)
- The Abominable Mystery of the Origin of Flowering Plants (130-115 mya)
- The Paleogene Big Bang of Modern Birds (65-55 mya)

Günter has the details of each of these, but if you have listened to our recent episode about the origin of life with Dr. Fazala Rana, then you already know about the first one. The point is that the fossil record has a whole bunch of “big bangs”, where God checked in a whole bunch of new code in a very short period of time. This is strictly forbidden in Darwinian theory, but the fossil record doesn’t care about theories.

Günter concludes:

> The gradualistic core predictions of any unguided evolutionary mechanisms such as neo-Darwinism are strongly contradicted by the empirical evidence. The cumulative conflicting evidence from molecular biology, genetics, population genetics, and the discontinuous fossil record can no longer be explained away as anomalies or as artifacts such as under-sampling of an incomplete fossil record. The total evidence is better explained with pulses of infusion of new information from outside of the system (top-down), rather than with a purely mechanistic stepwise bottom-up process. The only known cause in the universe that is able to produce significant amounts of new complex specified information is the activity of an intelligent conscious agent, so that intelligent design theory qualifies as superior alternative to unguided Darwinian evolution in an inference to the best explanation (abductive reasoning) among competing hypotheses. This is not an argument from ignorance (i.e., God of the gaps) as is often incorrectly claimed by critics, but is based on empirical data and our positive knowledge about the regular causal structure of the universe and the type of causes that exclusively are known to produce certain effects.

And I found a nice lecture that he gave on the topic:

The article was tough for me to understand, but I think I got the big picture of what he was saying. I blogged on it so that I can find it again if I get questions about what evidence there is for a designer. I sure hope that we are making more scientists like him for Team Design, because his post was quality work.

# New study: there is no gay gene that causes homosexuality

**Wintery Knight** · 9 December 2024 · Archived copy · Original

I heard one of the authors of this new study commenting on how he was a gay man, and the purpose of his research was to show a genetic basis for homosexuality, in order to make it equal to race. His goal was to make it impossible to disagree with homosexual behavior, because homosexual behavior would be seen as natural and normal. Let's see if his new study helps him out.

The blog of the peer-reviewed journal PLOS One reported on the new study, which was published in the prestigious journal Science.

Excerpt:

> The once-prevailing concept of a "gay gene" dictating sexual orientation has been put to rest in a powerhouse study published today in *Science*. The work brilliantly illustrates the very nature of science: evolving with the input of new data, especially the large-scale contributions of bioinformatics and crowd-sourcing.
>
> "We formed a large international consortium and collected data for more than 500,000 people, comparing DNA and self-reported sexual behavior. This is approximately 100 times bigger than any previous study on this topic," said lead author Andrea Ganna, of the Institute of Molecular Medicine in Finland and an instructor at Massachusetts General Hospital and Harvard Medical School, opening a news conference earlier this week.
>
> […]The investigation estimates a genetic contribution to same-sex sexual behavior as under 1 percent, thanks to analysis of a trove of data from the UK Biobank and the consumer genetic testing company 23andme.

So, there you have it, there is no gay gene. But this is of course something we've known for decades, as all the previous studies had found the same thing.

The normal way that people do these studies is to analyze identical twins, and see how often both identical twins are gay.

> Eight major studies of identical twins in Australia, the U.S., and Scandinavia during the last two decades all arrive at the same conclusion: gays were not born that way.
>
> "At best genetics is a minor factor," says Dr. Neil Whitehead, PhD. Whitehead worked for the New Zealand government as a scientific researcher for 24 years, then spent four years working for the United Nations and International Atomic Energy Agency. Most recently, he serves as a consultant to Japanese universities about the effects of radiation exposure. His PhD is in biochemistry and statistics.
>
> Identical twins have the same genes or DNA. They are nurtured in equal prenatal conditions. If homosexuality is caused by genetics or prenatal conditions and one twin is gay, the co-twin should also be gay.
>
> "Because they have identical DNA, it ought to be 100%," Dr. Whitehead notes. But the studies reveal something else. "If an identical twin has same-sex attraction the chances the co-twin has it are only about 11% for men and 14% for women."
>
> Because identical twins are always genetically identical, homosexuality cannot be genetically dictated. "No-one is born gay," he notes. "The predominant things that create homosexuality in one identical twin and not in the other have to be post-birth factors."
>
> Dr. Whitehead believes same-sex attraction (SSA) is caused by "non-shared factors," things happening to one twin but not the other, or a personal response to an event by one of the twins and not the other.

By the way, a previous study also found that transgender behavior was not genetic, but was clearly linked to environmental factors such as peer approval and social media.

Here is the report from Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE.*
>
> Littman surveyed more than 250 parents of children who suddenly developed gender dysphoria symptoms during or after puberty.
>
> […]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

A previous study also found that children are more likely to be gay if they are raised by gay adults. It was reported in AOL News.

Excerpt:

> Walter Schumm knows what he's about to do is unpopular: publish a study arguing that gay parents are more likely to raise gay children than straight parents. But the Kansas State University family studies professor has a detailed analysis that past almost aggressively ideological researchers never had.
>
> […]His study on sexual orientation, out next month, says that gay and lesbian parents are far more likely to have children who become gay. "I'm trying to prove that it's not 100 percent genetic," Schumm tells AOL News.
>
> His study is a meta-analysis of existing work. First, Schumm extrapolated data from 10 books on gay parenting… [and] skewed his data so that only self-identified gay and lesbian children would be labeled as such.
>
> […]Schumm concluded that children of lesbian parents identified themselves as gay 31 percent of the time; children of gay men had gay children 19 percent of the time, and children of a lesbian mother and gay father had at least one gay child 25 percent of the time.
>
> […]Finally, Schumm looked at the existing academic studies… In all there are 26 such studies. Schumm ran the numbers from them and concluded that, surprisingly, 20 percent of the kids of gay parents were gay themselves. When children only 17 or older were included in the analysis, 28 percent were gay.

It's very important for people to understand that there is a trend in society to make every behavior traditionally seen as sinful into something caused by genetics. The twin goals of this effort are to insulate the behaviors from criticism, and to minimize evaluation of the effects of these behaviors on society as a whole. The genetic argument was used extensively to normalize same-sex marriage and transgenderism. I have seen the genetic argument used to defend other behaviors like pedophilia and incest. But the scientific research does nothing to support any of these arguments. What's amazing is how a majority of people in the United States have such false beliefs about the scientific research. They vastly overestimate the number of gay people, and also the influence of genetics.

# Trump hits home run by replacing corrupt NIH Director with competent reformer

**Wintery Knight** · 10 December 2024 · Archived copy · Original

I know that at least some of my American readers had concerned about the leadership that we got during the Covid pandemic. Different people had concerns about mask mandates, vaccination mandates, pharmaceutical company liability, church closures, loss of employment for dissenters, etc. Let's take a look at what the House of Representatives found, then see Trump's nominee for NIH.

First, this article from Christian Post:

> Several allegations made during the early stages of the 2020 coronavirus pandemic that were dismissed as conspiracy theories might have been factually accurate, contends a new report from congressional Republicans.
>
> Released by the Republican-led U.S. House of Representatives Committee On Oversight and Accountability's Select Subcommittee on the Coronavirus Pandemic, the "After Action Review of the COVID-19 Pandemic: The Lessons Learned and a Path Forward" report covers the federal government's response to the COVID-19 pandemic, highlighting both successes and failures.
>
> The report presents several findings focusing on the origins of the virus, the management of public health measures and the long-term consequences of the pandemic response.

Here are the 5 points:

1. NIH funded gain-of-function research in Wuhan
2. Health officials falsely characterized lab leak theory as a 'conspiracy theory'
3. China, US agencies, scientists 'sought to cover up' pandemic facts
4. Pandemic-era school closures had long-term adverse impacts
5. Lockdowns in US cities were 'worse than the disease'

I think the ones that are the most important going forward are numbers 4 and 5.

School closure effects:

> The subcommittee emphasized that the long-term educational, social, and mental health impacts on students must be considered in any future response to public health crises.
>
> The report is also critical of the American Federation of Teachers' influence on the Biden administration and transition team in 2021.
>
> "AFT is not a scientific organization — it does not employ epidemiologists or immunologists. Instead, it is a political union — committed to activism on behalf of its 1.7 million members — that donated $2.4 million dollars to Democrat candidates during the 2020 election cycle," the report reads. "The extent of the AFT's political influence is reflected in the fact that the Biden administration reached out to AFT for advice on school reopening rather than the AFT reaching out to the Biden administration."
>
> "While AFT … [has] attempted to rewrite history by arguing that they were always trying to reopen the schools, this simply is not true," the report concludes. "AFT continually pushed for school closures throughout the pandemic. Restricting in-person schooling was always the default — not the alternative — mitigation measure underlying AFT's positions."

Lockdowns in US Cities:

> The report contends that the strict "stay-at-home" orders imposed by states and local governments to curb the spread of the virus often did more harm than good and points to the widespread economic, psychological and social consequences of these measures.
>
> The fallout from so-called "stay at home" health mandates in California and other states led to outcomes such as increased unemployment, mental health issues and educational disruption, and was disproportionately high compared to the health benefits, according to the panel.

You might recall that Sweden didn't look their schools down, and they suffered no learning loss during the pandemic.

OK, so with the election of Trump, we are going to get the best possible pick to lead the National Institutes of Health.

Christian Post had that story, as well:

> President-elect Donald Trump's nomination of Dr. Jay Bhattacharya to lead the National Institutes of Health has drawn strong reactions as he has advocated for overhauling the agency.
>
> Bhattacharya, the director of Stanford University's Center for Demography and Economics of Health and Aging and a research associate at the National Bureau of Economics Research, first emerged on the national stage as a prominent critic of lockdowns implemented to stop the spread of COVID-19.
>
> The president-elect expressed confidence in Bhattacharya's ability to lead the $50 billion agency and "restore the NIH to a Gold Standard of Medical Research" and "Make America Healthy Again."

They have 6 points in their article:

1. Emerged as a prominent critic of Dr. Anthony Fauci
2. Censored by Twitter
3. Would 'restructure' the NIH
4. Published by several reputable academic journals
5. Operates a Substack titled 'Science From The Fringe'
6. Founding fellow at Hillsdale College's Academy for Science and Freedom

Let's take a look at #1 and #3.

Criticism of Fauci:

> In 2020, Bhattacharya co-authored The Great Barrington Declaration. Signed by hundreds of thousands of concerned citizens, doctors and medical and public health scientists, the document warned that the lockdown policies implemented to stop the spread of the coronavirus were "producing devastating effects on short and long-term public health."
>
> Examples of the negative consequences of the COVID-19 lockdowns listed include "lower childhood vaccination rates, worsening cardiovascular disease outcomes, fewer cancer screenings and deteriorating mental health," predicting "greater excess mortality in years to come" as a result with "the working class and younger members of society carrying the heaviest burden." The document also condemned "keeping students out of school" during the pandemic as a "grave injustice."
>
> […]The declaration seemingly drew the ire of then-NIH Director Francis Collins, who privately called the document "fringe" and called for a published "take down."
>
> […]Bhattacharya's positions on lockdowns put him on a collision course with Dr. Anthony Fauci, the former head of the National Institute for Allergy and Infectious Diseases, an agency of NIH, who emerged as the

> strongest advocate for stringent COVID-19 lockdowns.
>
> In 2023, when Fauci proclaimed that he had such strong “personal ethics” that his Catholic faith was something he did not “really need to do,” Bhattacharya responded by saying, “Hard to say which is worse — his theology or his science.”

He has plans to restructure the corrupt NIH:

> Bhattacharya emerged as a top candidate to lead the NIH earlier this month after meeting with Robert F. Kennedy Jr., Trump’s nominee to head the U.S. Department of Health and Human Services, and discussed ideas on how to overhaul the NIH, sources close to the matter told The Washington Post.
>
> The professor has long called for changes at NIH and said in an interview earlier this year he lost “almost all confidence” in the American public health establishment.
>
> […]”I would restructure the NIH to allow there to be many more centers of power, so that you couldn’t have a small number of scientific bureaucrats, dominating a field for a very long time,” Bhattacharya told The Post in a January 2024 interview.

I say that the NIH is corrupt in part because of their past actions on DEI, which Desert Rose and I talked about in episode #44 of the Knight and Rose Show. And if you don’t recall why the current leader of the NIH is corrupt, you can read my previous post about it.

# Another perfect pick by Trump for civil rights division of DOJ

**Wintery Knight** · 11 December 2024 · Archived copy · Original

One of the biggest problems I had with the Biden-Harris administration was the weaponization of government against Christians and conservatives. A good example of this weaponization was the abuse of power by Kristen Clarke, who is Assistant Attorney General and leads the Civil Rights Division. She used her position to persecute peaceful Christian pro-lifers.

First, let's look at this article from Daily Signal:

> The Department of Justice has multiple divisions, with assistant attorneys general at their helms. Assistant Attorney General Kristen Clarke leads up the Civil Rights Division under Biden, and she has weaponized the division to target pro-lifers.
>
> In one case, the Civil Rights Division sent a SWAT team to the home of a Catholic father with seven children at 7 a.m. on charges that he had assaulted an abortion center worker. Not only had local authorities declined to charge Mark Houck for the brief altercation, but a federal jury ultimately acquitted him. He's now suing for malicious prosecution.

I would argue that the Obama and Biden rhetoric about abortion has inflamed secular leftists, inciting them to commit crimes like attacking pro-life pregnancy centers and burning down churches and shooting up Sunday services. These activities are ongoing. But the Biden-Harris focus isn't on actual crimes. They want to focus on punishing Christians for their Christian faith, and punishing conservatives for disagreeing with their policies.

And it's not just on issues like abortion.

> The Civil Rights Division has also taken up the cause of transgender orthodoxy.
>
> […]"As a result, in addition to our Title VII [employment law] cases involving sexual assault and misconduct, we are pursuing cases based on gender identity and sexual orientation across all of our statutes that prohibit sex discrimination," the department noted.
>
> The department highlighted "developments" that it claimed "reflect the increased visibility and urgency of issues related to gender-based violence and discrimination." In that list, it claimed that "nearly 240 anti-LGBTQ bills have been filed in state legislatures in 2022 alone, most of them targeting people for their gender identity."
>
> That suggests that the Civil Rights Division was gearing up to file lawsuits against states that pass laws aimed at protecting kids from experimental transgender medical interventions or preventing biological males from accessing women's private spaces.

Now, you might think that the Federal Department of Justice would be concerned with the epidemic of sex-trafficking of children that's been caused by the Biden-Harris open borders policies. But their focus is investigating conservatives who disagree with their transgender agenda. Remember how they labeled parents who disagreed with boys in girl's bathrooms as "domestic terrorists"? They're not worried about violent crimes committed by transgender people, which are frequent. No, they are concerned about prosecuting "domestic terrorists" – parents who disagree with their transgender activism.

Kristen Clarke looks like an unqualified DEI clown. She has a messed-up marriage, and lied about her past arrest during her confirmation hearings.

> Clarke served as president and executive director of the Lawyers' Committee for Civil Rights Under Law, a left-wing activist group. She also worked for five years at the NAACP Legal Defense Fund, a leftist group that

> links abortion to "racial justice." Both groups have frequently accessed the Biden White House and received large cash infusions from the Left's dark money network… She cited the far-left smear factory the Southern Poverty Law Center in condemning Alliance Defending Freedom, a nonprofit pro-life and religious freedom law firm, as a "hate group."

The Southern Poverty Law Center was linked to a REAL instance of domestic terrorism, when a gay-rights activist attempted a mass shooting at the conservative Family Research Council headquarters. So, this Kristen Clarke is a woman who goes after peaceful pro-lifers, but thinks that the SPLC – a real hate group – is just wonderful.

Did you disagree with Fauci about the lab-leak theory of COVID or cloth mask mandates? Well, Clarke thought you should be killed for that:

> She said that those protesting Dr. Anthony Fauci, the controversial COVID-19 czar and now-retired head of the National Institute for Allergy and Infectious Diseases, should be "publicly identified and named, barred from treatment at any public hospital if/when they fall ill and denied coverage under their insurance."

She lied about her arrest for her domestic violence in order to be confirmed:

> As my former colleague Mary Margaret Olohan exclusively reported for The Daily Signal, Clarke had been arrested for attacking her then-husband, Reginald Avery, with a knife, deeply slicing one of his fingers to the bone in 2006. The pair finalized their divorce in 2009. Clarke had the arrest expunged from her record, and during her Senate confirmation, she denied ever having been arrested or having been accused of committing a violent crime. Clarke admitted to her failure to disclose that arrest, and Sen. Mike Lee, R-Utah, called for her to resign.

OK, so who does Trump want to replace this affirmative-action psychopath?

> Dhillon, by contrast, has been a fearless advocate, not just for pro-lifers, but for the civil liberties of many who stand against the woke orthodoxies of the day.
>
> […]Dhillon has represented pro-life journalist David Daleiden, who exposed Planned Parenthood staff who sold aborted-baby body parts. Then-California Attorney General Kamala Harris launched an investigation into Daleiden that later led to criminal charges from her successor, Xavier Becerra (who now serves as Biden's secretary of health and human services). Planned Parenthood also sued him, and Daleiden responded with lawsuits of his own.
>
> Dhillon also represented former Google senior software engineer James Damore, who sued Google after it terminated him following his exposure of the Big Tech company's anti-conservative bias. She sued Rose City Antifa on behalf of journalist Andy Ngo, after Ngo suffered injuries in an assault in Portland, Oregon.
>
> Dhillon also represented Americans who lost their freedoms during the COVID-19 pandemic. She filed more than a dozen lawsuits against pandemic orders in California, representing pastors, businesses, and citizens.
>
> […]Dhillon has also championed the cause of detransitioners—men and women who identified as transgender, underwent medical experiments to alter their bodies, and then rejected their transgender identities, lamenting the damage done to their bodies. Detransitioners are often left out in the cold, as transgender people receive praise and recognition in public and LGBTQ activist groups often demonize or ignore those who are victimized by gender ideology.

Just achievement piled on top of achievement piled on top of achievement. Elections matter.

# The worst mistake you can make when defending the Christian worldview

**Wintery Knight** · 12 December 2024 · Archived copy · Original

So, this is just an advice post for doing apologetics.

Here are three situations I've run into while doing apologetics in the last month.

First situation. I was talking with a lady who is an atheist. I had a copy of "God's Crime Scene" in my hand, and she asked me about it. I told her that it was a book written by the guy who solved the homicide case that I asked her to watch on Dateline. She remembered – it was the two-hour special on the woman who was killed with a garrotte. She pointed at the book and said "what's in it?" I said, it has 8 pieces of evidence that fit better with a theistic worldview than with an atheistic one, and some of them scientific. Her reply to me was – literally – "which denomination do you want me to join?"

Second situation. I was talking with a friend of mine who teaches in a Catholic school. She was telling that she got the opportunity to talk to her students about God, and found out that some of them were not even theists, and many of them had questions. So she asked them for questions and got a list. The list included many hard cases, like "what about the Bible and slavery" and "why do Christians oppose gay marriage?" and so on.

Third situation. Talking to a grad student about God's existence. I'm laying out my scientific arguments for her, holding up the peer-reviewed papers for each discovery. I get to the Doug Axe paper on protein folding probabilities, and she holds up her hand. One question: "Am I going to Hell?"

So think about those three situations. In each case, the opponent is trying to reject Christianity by jumping way, way ahead to the very end of the process. When you do Christian apologetics, you do not take the bait and jump to the end of the process dealing with nitty gritty details until you have made your case for the core of the Christian worldview using your strongest evidence. Let me explain.

So, your strongest evidence as a Christian are the scientific arguments, along with the moral argument. Those would include (for starters) the following:

1. kalam cosmological argument
2. cosmic fine-tuning
3. galactic and stellar habitability
4. origin of life / DNA
5. molecular machines / irreducible complexity
6. the moral argument

The problem I am seeing today is that atheists are rejecting discussions about evidence because they think that all we are interested in is getting them to become Christians. Well, yes. I want you to become a Christian. But I know perfectly well what that entails – it entails a change of life priorities. Both of the women I spoke to are living with their boyfriends, and the kids in the Catholic school just want to have fun. None of them wants to believe in a God who will require self-denial, self-control, and self-sacrifice. Nobody wants God to be in that leader position in their lives. Christianity is 100% reversed from today's me-first, fun-seeking, thrill-seeking, fear-of-missing-out travel spirit of the age.

So, how to answer all these late-game questions? The answer is simple. You don't answer any late-game questions until the person you are talking with accounts for the widely-accepted data in your list. These are things that have got to be accepted before any discussion about minor issues like one angel vs two angels at the empty tomb can occur. When we discuss all the basic issues where the evidence is the strongest, then we can go on to discuss issues where the evidence is debatable, then finally, in the last bits before the end, we can discuss these other kinds of

questions.

How to explain why this process must be followed to the person who asks specific questions about minor issues? Simple. You explain that your goal is *not* to get them to become a Christian right now. That you want to let them believe *anything thing they want.* That's right. They can believe *anything they want to believe.* As long as what they believe is *consistent with the evidence.* And what I am going to do is give them the evidence, and then they can believe whatever they want – so long as it's consistent with the evidence.

So, for example, I'm going to tell them 3 pieces of evidence for a cosmic beginning of the universe: the expanding universe (redshift), the cosmic microwave background radiation, and the light element abundances. That's mainstream science that shows that the universe came into being out of nothing, a finite time in the past. And I will charge them not to believe in any religion that assumes that the universe has always been here. For example, Mormonism is ruled out, they believe in eternally existing matter. See how that works? Hey, Ms. Atheist. You can believe anything you want. *As long as what you believe is consistent with the evidence.*

I think this approach of not letting them rush you to the end at the beginning is important for two reasons. First, we can get our foot in the door to talk about things that are interesting to everyone, in a non-stressed environment. Everyone can talk about evidence comfortably. Second, we show that we hold our beliefs because we are simply letting evidence set boundaries for us on what we are allowed to believe. We can't believe not-Christianity, because not-Christianity is not consistent with the evidence. And you start with the most well-supported evidence, and eliminate worldviews that are falsified by the most well-supported evidence. Atheism actually gets falsified pretty quickly, because of the scientific evidence.

So, that's my advice. Had a friend of mine named William try this out about a week ago. It went down like this:

William to me:

> This guy I know messaged me and bragged for a while about how easy he can dismantle Christianity. He said: "present the gospel to me as you understand it. I'll simply ask questions to demonstrate it is not worth your belief."

WK to William:

> First of all, he isn't allowed to just sit there and poke holes in your case, he has to present a positive case for atheism. Second, don't discuss Christianity with him at all until you first discuss the evidence for theism – start with the good scientific evidence.

And William wrote this to his friend:

> The way I'm wired is that I process all competing theories and go with the best one. By doing a comparative analysis of worldviews I find that Christian theology easily explains the most about the world I find myself living in.
>
> I'm pretty sure that a God of some sort exists because of the scientific evidence for the origin of the universe and the fine tuning in physics. From there I find it quite intuitive that if a God went through the trouble of creating and tuning a universe for life that this God likely has some sort of interest in it and has revealed Himself to humanity in some way.
>
> From there I can look at the major world religions and compare them to see which one explains the past and the present the best. Christianity easily comes out on top.

And then a few days later, I got this from William:

> I finally got the agnostic to tell me what he thinks about origin and fine tuning. When I started pointing out that his views were unscientific, he blew a gasket, called me dishonest and told me he didn't want to discuss anything further.

And that's where you want to be. Cut off all discussions where the challenger tries to jump to the end and get you to debate the very last steps of your case. Present the strongest evidence for your core claims, and get him to account for this evidence within his own worldview. Lead the discussion with public, testable evidence. All warfare depends on picking the terrain, weapons and tactics that allow you to match your strength against your opponent's weakness.

# The simplest argument against Darwinian evolution is Junk DNA

**Wintery Knight** · 13 December 2024 · Archived copy · Original

The Discovery Institute has a new video out in their series on intelligent design, about so-called "junk DNA". Basically, there are two sides to the origins issue: the design-deniers and the design-recognizers. (And theistic evolutionists belong in the former group). These two groups make different predictions about the information in the human genome. And we can check their predictions.

First, here's the new video:

Here is description from Evolution News:

> The myth of junk DNA is much more than just an evolutionary idea that turned out to be mistaken. As the new episode of Long Story Short makes amusingly clear, it also reflects a "battle of predictions" with intelligent design. Going back to the 1970s, evolutionists predicted that, in line with their premise of a randomly generated genome, DNA would turn out to be full of Darwinian debris, playing no functional role but merely parasitic (atheist Richard Dawkins's term) on the small portion of functional DNA.
>
> Proponents of intelligent design said the opposite. William Dembski (1998) and Richard Sternberg (2002) predicted widespread function for the so-called "junk." After all, as a product of care and intention, the genome ought to be comparable in a way with products of human genius, with every detail there for a reason.
>
> On that, ID has since been massively vindicated. Scientific theories are tested by the predictions they make. If those fail, it's a bad sign for the theory. Mainstream science journals like Science are admitting the truth about the erstwhile "junk" — even as a few diehard Darwinists like Laurence Moran at the University of Toronto deny it.

And these predictions by the design side are not new. My young Earth creationist friend even sent me this today (today is Wednesday, I always write these posts the night before and schedule them for the next morning):

> While a Creation/Fall model could account for the accumulation of some random, mutationally defective "extra copies," evolutionists felt they had a strong point that 97% "junk" DNA pointed more to evolution than intelligent design. Creationists have long suspected that this "junk DNA" will turn out to have a function. In fact, junk DNA research is now a hot topic; not only are more and more functions being detected, but it is suspected that junk DNA is full of yet-to-be-discovered "intellectual riches.

That prediction is from 1994. My friend has a whole article about Junk DNA here, with all the predictions from each side.

He says "Carl Wieland founded CMI". CMI is Creation Ministries International, which is supposed to be the best YEC web site.

Anyway, if you missed the other videos in the series, there is a playlist, but all the videos are out of order! If you want a quick and snarky introduction to intelligent design, this is it.

# Is there an epidemic of violence against transgender people?

**Wintery Knight** · 14 December 2024 · Archived copy · Original

I'm busy today rushing around doing holiday errands, and then feeding the outdoor birds, and getting groceries. We have warm weather in my super red state, so it was a good time to go outside. But I saw this article a few days ago and wanted to say something about it. It seems like the kind of article I should add to my blog, because it will be useful to bring up in a debate.

Here is the article from The Federalist, and note that the article is by a conservative LGBT person.

> In 2024 there were no reported murders of a trans-identifying person due to anti-trans bias in the United States. This might be a surprise, based on the routine headlines declaring that violence against transgender Americans is only getting worse. The Human Rights Campaign, one of the more prominent LGBT advocacy organizations, provides a list each year of reported murders of trans-identifying people.

The HRC – a secular left hate group – wants people to think that these murders are all being committed by white Presbyterian married couples who attend church weekly. And they are doing it because they are filled with hate. But I know enough about debating this issue to know that most of these murders are going to be 1) drug or prostitution murders that are caused by the victim putting themselves in very very risky situations, for example drug use and / or prostitution, or 2) intimate partner violence.

And the author leads with an example of that:

> Discussing the death of Quanesha Shantel, Human Rights Campaign Director of Community Engagement for the Transgender Justice Initiative Tori Cooper argued, "It's time for communities across this country to reckon with the fact that their silence makes them complicit. Hateful stereotypes, rhetoric and legislation fuels violence against transgender people." This despite Shantel, whose legal name was Juquan Hamilton, being allegedly murdered by his former romantic partner, Jeremy Reynolds, who reportedly was furious over their recent breakup.

You might remember from our podcast episode on same-sex marriage that LGBT relationships, expecilally lesbian and trans relationships, then to have much higher rates of intimate partner violence. In fact, many famous murders that are labeled "hate crimes" by the secualr left are intimate partner violence. Consider the case of Matthew Sheppard, trying to claim that it was an anti-LGBT hate crime. Actually, according to LGBT activist publication The Advocate, "the perpetrator and victim not only knew each other but also had sex together, bought drugs from one another, and partied together".

But let's stay with The Federalist article, and see the details on these murders:

> Looking at each of 29 such reported cases in 2024, the three most common categories are domestic violence (6), altercations (6), and accidents (4). Of all cases, four did not have sufficient information reported by authorities to make a determination on what kind of violence occurred. The deaths also included a suicide, the highly publicized death of Dagny (Nex) Benedict, a victim of a mass shooting, and a random act of violence.
>
> Kita Bee and Honee Daniels were both killed in what HRC calls "hit-and-run" accidents — they involved negligent behavior and both drivers have been arrested. Jazlynn Johnson, 18, was allegedly accidentally shot and killed by his friend, 17-year-old Cesar Sandoval, while showing off a new gun, according to reports.
>
> Finally, Santonio Coleman, who identified as a gay man who sometimes dressed as a woman, was found dead on a park trail, but he may have fallen, and no suspects have been identified. The headline reporting Coleman's death states, "Family shocked after loved one brutally killed while walking on popular trail in Athens," despite no current indications from police investigating the incident that Coleman was attacked.

> The “altercation” category of reports indicates a fight occurred in which a trans-identifying person was killed. A transgender man, Righteous TK Hill, was allegedly shot by his cousin, Jaylen Hill, in an argument. Robert Clark Jr., named as Yella Clark, was killed in a prison fight. Clark was serving life in prison for the murder of another inmate while he was serving a 75-year sentence for armed robbery.
>
> A 20-year-old named Dylan Gurley was reportedly stabbed to death in a dispute over money while staying in an abandoned house with a fellow homeless person, Michael Tooley. Another trans-identifying person listed, known only as Redd or Barbie, was killed by an unknown assailant in a mass shooting on a street corner while talking with several other people. Another homeless person, Andrea Doria Dos Passos, was attacked while sleeping by another homeless person in what appears to be a random assault; police have not reported a motive. The suspect has been charged.

And the HRC also misleads about race. They talk about the race of the victims, but they don’t mention the race of the attackers, because they want you to think that this is white on black crime.

> Despite 82 percent of known suspects in the deaths of black trans-identifying individuals being black themselves, based on an evaluation of the reported cases, the HRC demands, “Young trans women of color — particularly Black trans women, continue to be disproportionately affected.”
>
> Year after year, these reports end up the same. Domestic violence, interpersonal fights, random violence, and, more frequently, complete accidents, make up the majority of reported deaths of trans-identified people. Hate crimes do occur — they are simply very rare, upon review of reported cases.
>
> Unfortunately, the constant repetition of this false narrative, always using alarming language and insisting on placing the blame politically, creates an environment of fear and hatred in the LGBT community. It sends a message that transgender identity is a privileged status that demands special protections from the government and the public. When every reported violent death of a trans-identifying person is elevated as a social failure requiring national mourning and outrage, the impact of real hate crimes is diminished.

This same deception that Black Lives Matter advocates do, when complaining about the handful of unarmed blacks who are killed by white police officers every year. BLM leaders don’t talk about the numbers for black-on-black crime, which are far, far greater. We did a whole episode of Knight and Rose Show on those numbers.

By the way, you might have noticed that there seems to be a higher rate of violence being committed BY the transgender community, like the attack on Congresswoman Nancy Mace from a few days ago. But you never hear the Biden-Harris regime talking about that.

# Latest developments in Canada's war on Christians and Christianity

**Wintery Knight** · 15 December 2024 · Archived copy · Original

I do like to keep an eye on how secular left countries are treating Christians, especially European countries and Canada. It's important to keep an eye on things so I can stay ahead of any threats. Well, Canada has been making continuous attacks on free speech and religious liberty since they elected Justin Trudeau, who leads the far-left Liberal Party of Canada. Let's take a look.

Here's the latest story from Christian Post:

> The mayor of a small town in Ontario, Canada, is facing a bank levy from his personal account following a legal battle with a pride group who compared their legal victory to sexual intercourse.
>
> Mayor Harold McQuaker of Emo, Ontario, had funds garnished from his personal bank account following his refusal to comply with a Human Rights Tribunal order after the governing body found that the town of Emo — with a population of just 1,400 — violated the Ontario Human Rights Code by not recognizing LGBT pride month.
>
> The decision stems from a legal case initiated by Borderland Pride, a local lesbian, gay, bisexual and transgender (LGBT) advocacy organization, which accused the township of discrimination for voting against an official pride month proclamation in 2020.
>
> The tribunal's ruling, delivered on Nov. 20, penalized McQuaker personally with a CA$5,000 fine (about $3533) and required him to undergo Diversity, Equity and Inclusion (DEI) training. Additionally, the township itself was fined CA$10,000 (about $7066), and the two other town councilors who voted against the proclamation were also mandated to complete the same training.
>
> […]Borderland Pride took to social media to announce that they had successfully garnished the mayor's bank account.
>
> "Sure, sex is great, but have you ever garnished your mayor's bank account after he publicly refused to comply with a Tribunal's order to pay damages?" the group asked in a post on Facebook.

You might remember that these Human Rights Commissions and Human Rights Tribunals are staffed by secular left activists, and they are able to punish people who disagree with secular left dogma. Canada does not have any authoritative statement of rights and freedoms like we do. They have something on paper, but that doesn't apply when they want to go after Christians and conservatives. As I've blogged on before, if you disagree with the government, you're likely to face gag orders, bank account freezes, and even being violently ridden down by a policeman on a horse. And in Canada, the judges and LGBT activists can trans your kid in a split second, and throw you in prison if you so much as voice dissent.

Here's another one from True North, which is my favorite source of news about Canada:

> A Canadian billboard company cancelled a contract with a Manitoba pro-life group, saying that the requested image "creates too much controversy" and that the company received "a lot of backlash" for similar designs in the past.
>
> […]The image featured a pregnant woman cradling her belly. The caption read, "Celebrate the gift of life!" and included Life Culture's website address. Penner told True North in an interview that the billboard was meant to remind people, in a time of widely accessible euthanasia and abortions, that "life and pregnancy is a gift."
>
> […]"Our government creates fear by pitting life and women's rights against each other. Businesses fear the

> legal and economic consequences if there's any indication they support life. Churches fear losing a charitable probation status…Individuals fear losing friends or acceptance," Penner said.

Now, you might think that Penner would be able to log a human rights complaint, but like I said, Christians and conservatives never, ever win those cases in Canada.

And here's an article from New York Post about the epidemic of church arsons in Canada:

> According to Olivia Torrone of the Catholic Civil Rights League (CCRL) who runs the Church Attacks Database, there have been at least 40 church arsons since the wave began in June 2021, and this is just Catholic churches.
>
> Non-Catholic churches are burning as well; in total nearly 120 churches in Canada have been vandalized, set ablaze, or burned to the ground, with a married couple living above one of them dying as a result. Yet, as of January 2024, only 12 people had been charged in relation to these — and just one person had been convicted.
>
> […]Prime Minister Justin Trudeau has given Canadians mixed messages on the fires, calling them "unacceptable and wrong" on the one hand, while on the other calling the motive for the attacks "real and fully understandable."

Church arson in Canada is "fully understandable" according to the Prime Minister of Canada. It's something Hitler might have said about Jewish synagogues, but that's just how Canada is now.

Right after clicking "Publish" a friend of the blog, David H. left a comment on Facebook with this story from the New York Post:

> Controversial psychologist Jordan Peterson has fled Canada as liberals push to pass legislation that he says will suppress free speech and turn the country into a "totalitarian hellhole."
>
> Speaking in a recent episode of his daughter's show, "The Mikhaila Peterson Podcast," Peterson said he opted to move to the US over the contentious bill, C-63, and ongoing feud with the College of Psychologists of Ontario.
>
> "The issue with the College of Psychologists is very annoying, to say the least, and the new legislation that the liberals are attempting to push through, Bill C-63, we'd all be living in a totalitarian hellhole if it passes," Peterson said.

Christians in America need to be vigilant about the secular left. They have a long history of using threats, coercion, and violence against their enemies. You can see it in the history of communist regimes, like Stalin, Mao, Pol Pot, Idi Amin, etc. And today in North Korea. Atheists have no rational foundation for behaving morally in his or her worldview. Anything is permissible.

Most atheists in America act better than their worldview allows, because we are still living in Christian culture. But once that Christian influence is dead, the real atheism will emerge, and we are already seeing the start of it in Canada.

# Bible study: the importance of truth in religion

**Wintery Knight** · 16 December 2024 · Archived copy · Original

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me the dream, and I will know that you can interpret it for me."

[10] The astrologers answered the king, "There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans."

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put them to death.

[14] When Arioch, the commander of the king's guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king's officer, "Why did the king issue such a harsh decree?" Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

"Praise be to the name of God for ever and ever;

wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king."

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, "Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him."

[25] Arioch took Daniel to the king at once and said, "I have found a man among the exiles from Judah who can tell the king what his dream means."

[26] The king asked Daniel (also called Belteshazzar), "Are you able to tell me what I saw in my dream and interpret it?"

[27] Daniel replied, "No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] "As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants desire to survive the King's wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: "The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.". The King replies: "Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery."

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God's miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people who do not even think he exists, and without assuming that they believe in the Bible. And we have to do it by focusing on *what is true.*

Early last week, I got a message from a friend who was interested in a girl that he met on an online dating service. She claimed to be a Christian. My friend explained why he was so interested in some of the evidences I outlined above. She was not impressed. She said “I prefer to show people Christianity is true by not judging them, by being compassionate, by introducing them to a fun and affirming community”. There was no emphasis on truth in her approach. In fact, any religious group could do those things and “establish” their religion as true, by appealing to feelings. But this is clearly not what the God of the Bible intends for people who seek him. He is a God of truth, and truth is established by logical reasoning and supporting evidence.

There are still people out there like the King who are looking for someone who can speak to them with authority. All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won’t always be the case, but it is the case for some people.

# Does neuroscience provide support for physicalism or dualism?

**Wintery Knight** · 17 December 2024 · Archived copy · Original

When it comes to the problem of mind, there are some people who maintain that the mind is just reducible to the physical brain. Those are physicalists, also known as materialists. And then there are those who defend dualism, which is the idea that you are a non-material soul, and you have a body (which includes your brain). Who is right? Well, let's take a look at the science and see.

This post is from Mind Matters, and it's written by Dr. Michael Egnor.

He says:

> Neurosurgeon Wilder Penfield (1891–1976), who pioneered epilepsy surgery at the Montreal Neurological Institute in the mid-20th century, asked this very question: What does the brain do? He explored the question during eleven hundred "awake" brain operations over four decades. He needed patients to be awake so that he could communicate with them, to be sure that he was not damaging vital tissue while removing the tissue that was prone to epileptic seizures.
>
> Penfield could do brain surgery while a patient is awake because the brain has no pain sensors. A local anesthetic (similar to the novocaine used in dentists' offices) ensures that there is no pain in the scalp either during the surgery. Neurosurgeons still do this type of surgery today.
>
> While epilepsy patients were awake and their responses to brain stimulation could be observed, he mapped their brains using electrical probes to find and remove seizure foci but also to determine which parts of the patients' brains did what. He could answer questions like "What part of the brain makes us move our muscles?", "What part of the brain enables us to see?" and "What part of the brain enables us to have memories and emotions?"
>
> What fascinated Penfield is not so much what he found—i.e., which parts of the brain caused movement, perception, memory and emotions—but what he didn't find.
>
> Penfield could find no part of the brain that, when stimulated, caused patients to think abstractly—to reason, think logically, do mathematics or philosophy or exercise free will.
>
> He noticed the same thing about epileptic seizures as about stimulation during surgery. Patients who were having seizures did all sorts of things—they jerked their muscles, they saw flashes of light or had unusual sensations on their skin. They even occasionally had specific memories and emotions. Then they fell unconscious.
>
> But patients never had intellectual seizures. That is, they never had seizures that caused them to reason, think logically, or do mathematics or philosophy. There are no "calculus seizures" that cause them to uncontrollably take first derivatives. There are no philosophical seizures that cause them to uncontrollably contemplate Plato's Republic.
>
> Penfield asked the obvious question: why did brain stimulation only cause certain mental operations, like movement, perception, memory and emotion to happen, but not other ones, like abstract thought and free will?

It sounds like the brain is responsible for low-level interactions with the body itself. It reminds me of "device driver" software, which allows higher software to interact with hardware devices, like graphics cards and hard drives. What the progress of neuroscience seems to show is that the brain is doing device driver work, but something else is doing higher operations. And that something else is what substance dualists like me would call a "mind".

There are lots of good philosophical arguments for minds, such as consciousness, direct first-person access to your thoughts, persistent identity over time that does not depend on your (changing) physical body, the intentionality

problem (thinking *about* something else is not something that a material system can do), as well as free will. And there are more of those, too.

But it's nice to see that there are scientific arguments as well. By doing the neuroscience, we can find out what the brain controls, and what it doesn't control.

I thought this part of the article was interesting:

> Penfield started out as a materialist, like most scientists do, but, as he learned more about the mind and the brain he became a dualist. He concluded in his book Mystery of the Mind (1975) that the mind is something separate from the brain, and that there are aspects of the mind that don't come from the brain but are spiritual in nature. As he put it, "The mind must be viewed as a basic element in itself . . . That is to say, it has a continuing existence." (p. xxi.)

The article mentions a new book coming out in June 2025, entitled "The Immortal Mind". And I've already contact one of the authors of the book to see if we can get them to come on the Knight and Rose Show to tell us about all of this scientific research. I hope that will help our listeners to be able to have good evidence-based conversations about this fascinating area of disagreement between theists and atheists.

# New study: the majority (69%) of divorces are initiated by women

**Wintery Knight** · 18 December 2024 · Archived copy · Original

This new report from Live Science gives us some numbers about who initiates divorces most frequently.

It says:

> Women are more likely than men to initiate divorce in the United States, but they are no more likely than men to initiate breakups in a dating relationship, a new study finds.
>
> "The breakups of nonmarital heterosexual relationships in the U.S. are quite gender-neutral and fairly egalitarian," study author Michael Rosenfeld, an associate professor of sociology at Stanford University, said in a statement. "This was a surprise because the only prior research that had been done on who wanted the breakup was research on marital divorces."
>
> Previous research had found that women are more likely to initiate divorce, at least in the United States, Europe and Australia. In the new study, Rosenfeld compared divorces to nonmarital breakups, in an effort to understand the driving forces behind each type of breakup.
>
> To investigate, he looked at data from the 2009 to 2015 waves of How Couples Meet and Stay Together, a nationally representative survey spearheaded by Rosenfeld and his colleagues. The new study includes 2,262 adults, ages 19 to 64, who reported having opposite-sex partners in 2009. By 2015, 371 of the participants had broken up or gotten divorced.
>
> Women initiated 69 percent of the 92 divorces, Rosenfeld found. But there was no statistically significant difference between women and men when it came to nonmarital breakups, regardless of whether they were living together, he said.

The Ruth Institute reports on a few studies:

> Female unions seem to have the highest divorce rates, followed by male unions, followed by opposite sex unions.
>
> "For Sweden, the divorce risk for partnerships of men is 50% higher than the risk for heterosexual marriages, and that **the divorce risk for female partnerships is nearly double that for men."**
>
> "For Norway, **divorce risks are 77% higher in lesbian partnerships than in those of gay men."** (The Norwegian data did not include a comparison with opposite sex couples.)
>
> In California, the data is collected a little differently. The study looks at couples who describe themselves as partners, whether same sex or opposite sex. The study asks the question, how likely is it that these couples live in the same household five years later. **Male couples were only 30% as likely, while female couples were less that 25% as likely, as heterosexual married couples, to be residing in the same household for five years.**

It really seems as if there is something about women in particular that causes them to be unable to keep to commitments *in their actions*, despite what they might say *with their words*.

So I am seeing a couple of problems in young, unmarried women that might explain this.

**Feminism is bad**

First, there is the feminism. Feminism was the driving force behind no-fault divorce. Today, young unmarried women are being taught to view marriage as stifling to their freedom. So if they do get married, they are often resolved that marriage should not affect their freedom in any way. That is just not the way marriage works, though – both spouses need to be equally ready to have their freedom infringed upon by things that HAVE TO GET

DONE. Lots of things that have to get done will not be fun, thrilling or amusing – and that's why it's good to be prepared to do them before you marry.

My friend Dina says that she only knows one happily married couple from among her friends. The most frequent case she sees is wife is working in order to pay for big house, two cars, etc. and wife is denying husband sex, which makes him disengage from the marriage. A working wife tends to not be as responsive to the needs of husband and kids as a non-working wife, probably in part due to work stress. There is an epidemic of sex-withholding by women, and it causes men to disengage from marriage because they feel unloved. Although women tend to rebel against the idea that the man's bad behavior is their fault, and that there is a "contractual" nature to marriage, that is how marriage works. You cannot stay married, women, by just doing whatever you feel like, and NOT doing whatever you DON'T feel like. Men will disengage when their needs are not supplied, and that's no fault of theirs. It's your fault. Denying relationship obligations causes men to underperform.

Feminism is often linked closely to "independence". There is a lot of confusion over what the word independence means among young, unmarried women. A man uses that word to mean "lack of financial dependence on parents, the state, etc. because of good decisions in education, career and finances". But a woman means "not having to care about the needs of a man and the leadership of a man, or the needs of children while still getting what I want from men and children". That attitude is not compatible with life-long married love.

**Emotions are bad**

Second, emotions. In my experience, young, unmarried women are less likely to have reasoned out their own life plan in a practical step-by-step manner. Instead, they tend to do whatever makes them feel good moment-by-moment without any realistic plan. One Christian woman was recently telling me how attracted she was to an atheist moral relativist who had been promiscuous from the age of 15. She explained that her emotions were kindled by his GQ looks, 6-pack abs, mysterious European accent, seductive manner and witty conversations. Although she is apparently a Christian, she doesn't take Christianity seriously in her decisions about relationships and marriage.

Peer-approval and culture play a large part in determining what women think is attractive in a man, as well as their life goals, and women are driven by these cultural standards more than men who focus on honoring their commitments *regardless* of their emotions. In my experience, women struggle to make their day-to-day actions match their socially-acceptable goal of getting married "some day". Marriage is for "some day" for today's busy women, but fun and thrills is for today. "Live in the moment", they often tell me. If you try to talk to them about roles and responsibilities in a marriage, they will withdraw and rebel. But marriage is about each spouse doing his or her job, and feeling content about what the couple is building together. You can't make life-long married love from emotional craziness and pursuing fun and thrills with seductive promiscuous moral relativist atheists.

**How to pick a woman who won't divorce you**

Young men, I advise you to choose wives who have had to do things that they did not feel like doing. That can involve things like getting a STEM degree, getting a job in STEM, moving out of her parents' house, getting a "boring" job that helps her pay off her debts, keeping commitments when she doesn't feel like it, and caring for other people and even animals.

Basically, the more the woman has ground down any narcissism and hedonism she may have, by having to do nasty calculus and horrid lab work, the better. The more accustomed she is to constraints, responsibilities, expectations and obligations, the less likely it is that she'll divorce you for unhappiness. And all of this goes for men, as well. STEM degree, STEM job, save money, serve others, give to charity.

Marriage is not the time for people to be carried away by their emotions. It's an enterprise, and it works when both people are rational, practical, hard-working and self-controlled.

# Casey Luskin and Fuz Rana: Nobel Prize supports intelligent design

**Wintery Knight** · 19 December 2024 · Archived copy · Original

Exciting news! The Nobel Prize in Physiology or Medicine has been announced, and the winning discovery supports intelligent design. Do you remember a while back when we had Dr. Casey Luskin and Dr. Fazale Rana on the Knight and Rose Show to discuss junk DNA and the origin of life? Well, they discussed the Nobel Prize discovery with Lenny Esposito on a new Come Reason podcast episode.

Here's the description from Evolution News, written by Casey Luskin:

> What's the biggest science story of the year? My vote goes to the 2024 Nobel Prize in Physiology or Medicine, awarded for the discovery of function for a type of "junk DNA" that produces microRNA (miRNA), a crucial molecule involved in gene regulation. That so-called genetic junk would turn out to be functional was a prediction of intelligent design going back to the 1990s. On that, ID has been vindicated over and over again, now by the Nobel Committee. Our colleagues Richard Sternberg and Bill Dembski were early predictors, as critics of what Jonathan Wells called in a 2011 book, The Myth of Junk DNA.
>
> […]Not only was this 2024 Nobel Prize awarded for the discovery that a type of junk DNA is actually extremely important (it produces microRNAs that regulate gene expression), but we see that the evolutionary "junk DNA" paradigm probably hindered acceptance of this groundbreaking discovery.

Here's the video of the podcast:

Here are the topics:

- Introduction
- The Mystery of Protein Creation in the Cell
- Replication, Transcription, and Translation
- The Central Dogma and its Oversimplification
- Junk DNA Isn't Junk After All
- The Human Genome Project and The Revolution In Understanding DNA
- Ambrose and Ruvkin's Discovery – Micro RNA
- Micro RNA and protein regulation
- The Complex Interactions That Shows Design in the Cell
- Pseudo Genes and Their Importance For the Cell
- ID-Based Biology Finds Answers That Evolutionary Biology Misses
- Does the Discovery of Micro RNAs show it Isn't Mutations That Provide New information In DNA?
- The Evolutionary Paradigm Is Getting Harder to Explain
- We See In the Cell Just What Designers Do
- Predictions From an ID Paradigm
- What The Nobel Means to ID as "Real Science"
- Are There Any implications for the RNA World Hypothesis?

# Knight and Rose Show #56: Making the Most of Your Youth

**Wintery Knight** · 20 December 2024 · Archived copy · Original

Welcome to episode 56 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose offer advice to children, teenagers and young adults on getting the most out of your youth. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose offer advice to children, teenagers and young adults about how to get the most out of their youth. They talk about their own experiences, positive and negative, and what they learned from those experiences that may prove useful to others. They also discuss best practices in the areas of education, work, finances, character formation, spiritual formation, sports, and relationships.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 56:**

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# The seven fatal flaws of moral relativism

**Wintery Knight** · 21 December 2024 · Archived copy · Original

Moral relativism is the view that moral values and moral duties do not exist in reality, but only exist as opinions in people's minds. When you ask a moral relativist where the belief that stealing is wrong comes from, he may tell you that it is his opinion, or that it is the opinion of most people in his society. But he cannot tell you that stealing is wrong independent of what people think, because morality (on moral relativism) is just personal preference.

So what's wrong with it?

I found this list of the seven flaws of moral relativism at the Salvo magazine web site.

Here's the summary:

1. *Moral relativists can't accuse others of wrongdoing.*
2. *Relativists can't complain about the problem of evil.*
3. *Relativists can't place blame or accept praise.*
4. *Relativists can't make charges of unfairness or injustice.*
5. *Relativists can't improve their morality.*
6. *Relativists can't hold meaningful moral discussions.*
7. *Relativists can't promote the obligation of tolerance.*

Here's my favorite flaw of relativism (#6):

> *Relativists can't hold meaningful moral discussions.* What's there to talk about? If morals are entirely relative and all views are equal, then no way of thinking is better than another. No moral position can be judged as adequate or deficient, unreasonable, acceptable, or even barbaric. If ethical disputes make sense only when morals are objective, then relativism can only be consistently lived out in silence. For this reason, it is rare to meet a rational and consistent relativist, as most are quick to impose their own moral rules like "It's wrong to push your own morality on others". This puts relativists in an untenable position – if they speak up about moral issues, they surrender their relativism; if they do not speak up, they surrender their humanity. If the notion of moral discourse makes sense intuitively, then moral relativism is false.

I sometimes get a lot of flack from atheists who complain that I don't let them make any moral statements without asking them first to ground morality on their worldview. And that's because on atheism morality IS NOT rationally grounded, so they can't answer. In an accidental universe, you can only describe people's personal preferences or social customs, that vary by time and place. It's all arbitrary – like having discussions about what food is best or what clothing is best. The answer is always going to be "it depends". It depends on the person who is speaking because it's a subjective claim, not an objective claim. There is no objective way we ought to behave.

So, practically speaking, everyone has to decide whether right and wrong are real – objectively real. If they are objectively real, that means that there is a right way for human beings to behave, and a wrong way for human beings to behave. It means that things that are really objectively wrong like rape are wrong for all times and all places, regardless of what individuals and societies might think of it. In order to rationally ground that kind of morality, you have to have a foundation for it – a cosmic Designer who decides for all times and places what the conduct of his creatures ought to be. And then our moral duties are duties that are owed to this Designer. It is like playing football or playing a boardgame – the person who invents the game decides the rules. But if there is no designer of the game, then there are no rules.

Without a designer of the universe, the question of how we ought to act is decided by people in different times and different places. It's arbitrary and variable, and therefore it doesn't do the job of prescribing behavior

authoritatively. It's very important not to get involved in any serious endeavor with another person or persons if they don't have a sense of right and wrong being absolute and fixed. A belief in objective moral values is a necessary pre-requisite for integrity.

# Dr. Tim Stratton on the Apologetics 315 podcast to discuss free will and divine sovereignty

**Wintery Knight** · 22 December 2024 · Archived copy · Original

I really enjoyed this interview of Dr. Stratton from the Apologetics 315 podcast. I've had non-Christians in previous workplaces raise the problem of free will vs divine sovereignty. After all, they say, how can humans be responsible for their choices if God is all-powerful? If God is all-powerful, then surely he must control everything, and there's no space for free will. Right?

The episode can be heard here.

Here is the show description:

> In this episode, Brian Auten and Chad Gross interview Tim Stratton of Free Thinking Ministries. They discuss the topic of Molinism as it relates to God's sovereignty, human free will, and why it matters. Tim's book on the subject is Human Freedom, Divine Knowledge, and Mere Molinism: A Biblical, Historical, Theological, and Philosophical Analysis.
>
> 1:03 – Intro to Tim Stratton
> 1:41 – Why Molinism on the podcast?
> 3:20 – Welcome to Tim Stratton
> 3:54 – How Tim became a Christian
> 9:37 – God as a maximally great being
> 10:43 – Tim's dissertation
> 11:18 – What does Tim find compelling about Molinism?
> 12:42 – The Mere Molinism Facebook group
> 16:14 – What is the problem that Molinism is trying to solve?
> 22:47 – How to briefly summarize Molinism?
> 23:41 – Defining terms: Middle knowledge and counterfactuals
> 31:39 – Scriptures that affirm counterfactuals / middle knowledge
> 41:53 – Why us the term "mere" Molinism?
> 46:22 – Can Molinism be applied to salvation?
> 48:21 – Does this chess analogy work?
> 52:10 – Objection: Molinism is not derived from scripture
> 58:23 – Objection: Who cares? That's just for scholars and theologians
> 1:02:45 – How Molinism saved Tim's marriage
> 1:06:20 – Where to find Tim's resources

Tim Stratton's reconciliation of divine sovereignty and free will is interesting to me. He keeps God as the sole initiator of salvation. And that's good. But it also makes sure that human who resist God's leading are responsible for their choice to resist God, and that's also good. We want salvation to be 100% by faith alone in Christ alone. But we don't want God to be the cause of people not being saved. On Stratton's view, God wants everyone to be saved. If anyone is saved, it's because God did ALL THE WORK to lead them and secure their salvation with the death of Jesus on the cross. But, on Stratton's view, humans do get a choice – the choice to trust God or not. And so, if a person is not saved, then it's their fault – not God's.

If you hear this challenge from non-Christians, be sure to listen to the podcast. You can find a written version of his argument on his web site, Free Thinking Ministries.

# William Lane Craig lectures on the historical Jesus at Columbia University

**Wintery Knight** · 23 December 2024 · Archived copy · Original

One of the other software engineers at work is always finding interesting sermons and lectures to listen to. On Friday afternoon, things were a bit slow, so she messaged me a lecture featuring Dr. William Lane Craig, talking on "Who Was Jesus?" at Columbia University. I wanted to encourage her, so I put it on to listen as well. I liked it so much, I wrote out a summary below to go with it.

**Here is the lecture:**

**Description:**

Dr. William Lane Craig unpacks questions surrounding Jesus' resurrection and the historical accuracy of the biblical claims.  Columbia University, 2009.

**And my outline:**

Different views of Jesus:

- Jewish view of Jesus
- Muslim view of Jesus
- skeptical historian view of Jesus
- what did Jesus think about himself?
- Jesus didn't write anything of his own
- best sources are the records of Jesus followers
- problem: how do we know these records are accurate
- maybe stories of Jesus' divinity emerged over time

New tools from the Renaissance:

- historiography
- textual criticism
- investigate Jesus as a historical figure
- same tools are used for other historical figures

Sources:

- Christian
- Jewish
- Roman
- Many more sources than other figures of antiquity

External sources:

- confirm what the gospels say, but don't say anything new

Treating the Bible as a collection of ancient documents

- not using the Bible to prove the Bible is divine
- just treating the books as historical documents

New Testament

- a collection of the earliest documents
- much later documents about Jesus not included
- later documents not written by eyewitnesses

Skeptical scholars:

- ignore the earliest sources
- focus on the later sources
- result is a more radical left-friendly Jesus

Burden of proof

- are the gospels assumed reliable until proven unreliable?
- are the gospels assumed unreliable until proven reliable?

Five reasons to assume the New Testament is reliable

1. Insufficient time for legendary influences to erase the historical core

- the gap between the events and the sources is much shorter than other comparable sources
- Greek and Roman sources are at least 1-2 generations from the events they record
- Gospels written down and circulated within first generation after the events they record
- the eyewitnesses were alive at the time they were written down

2. Gospels are not the same genre as folk tales or urban legends

- Gospels talk about real people who actually lived
- Gospels talk about real places excavated by archaeologists

3. Oral tradition in first century Jewish society

- Jewish culture valued reliable transmission of religious tradition
- Memorization of long passages and entire books

4. Restraints on the embellishment of traditions about Jesus

- The apostles and other eyewitnesses could correct embellishments

5. Gospel writers make testable statements that are found to be true

- Luke is the author of the Gospel of Luke and the Book of Acts
- In Acts, Luke accompanies with the eyewitnesses to the life of Jesus
- Acts contains many historical details accurate to the times and places he writes about
- Luke's gospel is in accord with archaeological discoveries made since

It's reasonable to accept the general reliability of the Gospels, unless they are found unreliable

Historical basis for facets of Jesus

1. Unique Son of God

- historical critics claim that the divinity of Jesus developed over time
- why would monotheistic Jews contradict their monotheism by inventing a divine Jesus?
- the only reasonsable answer is that Jesus claimed divinity for himself

- His followers accepted it because Jesus provided reasons to believe
- Mark 12:1-8
  Earliest gospel reveals Jesus' self-understanding as God's "only beloved son"
- Matthew 11:27
  "No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him." This story is also in Luke. Source is "Q", an early set of traditions common to Matthew and Luke
- Mark 13:32
  Jesus sees himself as above humans and angels, but subordinate to God the Father

Why would anyone take Jesus seriously, unless he was able to provide evidence?

2. Jesus' miracles

- Jesus' miracle stories are in all four sources
- The only reason to reject them is because of a philosophical bias against the supernatural

3. Trial and crucifixion

- Crucifixion narrative is in the Gospels, Paul's letters, Acts
- Also confirmed by Josephus and Roman historians
- Historians across the ideological spectrum affirm the crucifixion

Why was Jesus crucified?

- Doesn't fit with the skeptical view that Jesus was uncontroversial and had few followers

4. Jesus' resurrection

- Jesus resurrection is the best explanation for historical facts accepted by diverse majority of historians

1. Burial location known to friends and enemies, and corpse would refute the resurrection
2. Tomb was found empty by a group of Jesus' women followers
3. Post-mortem appearances to individuals and groups, friends, skeptics and enemies
4. Original disciples became convinced that Jesus rose from dead counter to their own interests

- The facts are accepted by a majority of scholars across the ideological spectrum
- Dr. Craig's debate with a scholar who invented an unknown, identical twin brother who was separated from Jesus at birth
- Jewish historian Pinchas Lapide affirms the resurrection of Jesus as a historical event

Then there is a period of question and answer, which I did not find useful, because the questions seemed to be more about the needs and feelings of Christians, rather than about the facts presented by Dr. Craig, or about how these facts survive in debates on university campuses. Facts don't care about your feelings.

It never hurts to listen to William Lane Craig. If you listen enough, you can remember his points when you get the opportunity. In college, all of my friends at Crusade could do his opening speech from his debates on God's existence from memory.

# New study: gender-affirming surgery associated with suicide attempts

**Wintery Knight** · 24 December 2024 · Archived copy · Original

My understanding of how the secular left pushing transitioning kids onto parents is that the teacher, the guidance counselor, the health care workers, etc. tell the parents "would you rather have a dead girl than a live boy?" This approach is in keeping with the compassionate "don't judge" worldview, which emphasizes emotions over moral standards and truth. But does it work?

Here is the latest study that I found on Pubmed, entitled "Risk of Suicide and Self-Harm Following Gender-Affirmation Surgery". (archived)

The Abstract says:

> **Introduction**
>
> With the growing acceptance of transgender individuals, the number of gender affirmation surgeries has increased. Transgender individuals face elevated depression rates, leading to an increase in suicide ideation and attempts. This study evaluates the risk of suicide or self-harm associated with gender affirmation procedures.
>
> **Methods**
>
> This retrospective study utilized de-identified patient data from the TriNetX (TriNetX, LLC, Cambridge, MA) database, involving 56 United States healthcare organizations and over 90 million patients. The study involved four cohorts: cohort A, adults aged 18-60 who had gender-affirming surgery and an emergency visit (N = 1,501); cohort B, control group of adults with emergency visits but no gender-affirming surgery (N = 15,608,363); and cohort C, control group of adults with emergency visits, tubal ligation or vasectomy, but no gender-affirming surgery (N = 142,093). Propensity matching was applied to cohorts A and C. Data from February 4, 2003, to February 4, 2023, were analyzed to examine suicide attempts, death, self-harm, and post-traumatic stress disorder (PTSD) within five years of the index event. A secondary analysis involving a control group with pharyngitis, referred to as cohort D, was conducted to validate the results from cohort C.
>
> **Results**
>
> Individuals who underwent gender-affirming surgery had a 12.12-fold higher suicide attempt risk than those who did not (3.47% vs. 0.29%, RR 95% CI 9.20-15.96, $p < 0.0001$). Compared to the tubal ligation/vasectomy controls, the risk was 5.03-fold higher before propensity matching and remained significant at 4.71-fold after matching (3.50% vs. 0.74%, RR 95% CI 2.46-9.024, $p < 0.0001$) for the gender affirmation patients with similar results with the pharyngitis controls.
>
> **Conclusion**
>
> Gender-affirming surgery is significantly associated with elevated suicide attempt risks, underlining the necessity for comprehensive post-procedure psychiatric support.

This reminds me of how doctors in gender-bender clinics see their work. Are they helping children? Or are they virtue-signaling to parents about how much more moral they are than parents?

Here is a story from Daily Wire about that:

> "It's a lot of money," VUMC Clinic for Transgender Health's Dr. Shayne Sebold Taylor said at one Medicine Grand Rounds lecture, video reveals. "These surgeries make a lot of money."
>
> Taylor noted that a "chest reconstruction" can bring in $40,000 per patient, and someone "just on routine hormone treatment, who I'm only seeing a few times a year, can bring in several thousand dollars … and actually makes money for the hospital."

> Citing the Philadelphia Center for Transgender Surgery, Taylor said vaginoplasty surgeries can generate $20,000, gushing that it “has to be an underestimate,” since hospital stay, anesthesia, post-op visits, and other add-ons are not included in the total.
>
> “And the female-to-male bottom surgeries, these are huge money makers,” the doctor continued, adding that such surgeries could bring in “up to $100,000” for the hospital.
>
> Some clinics are “entirely” “supported” financially by such phalloplasty surgeries, Taylor boasted.
>
> “These surgeries are labor intensive, there are a lot of follow-ups, they require a lot of our time, and they make money,” she emphasized. “They make money for the hospital.”

The interesting thing about these stories is how often it’s white progressive women doing the virtue-signaling, and collecting the money for their new cars, traveling and cosmetic surgeries.

I recently spoke to my doctor about my concerns that medicine was becoming too politicized, and that their motivations seemed to be to follow the priorities of politicians and special interest groups. He actually lost his temper, and insisted that doctors are guided by “evidence” in every respect, and that people who oppose doctors are guided by “social media”. He was quite upset.

That might be the case for him, but I don’t think it’s unreasonable for patients to ask their doctors what’s guiding their decisions.

# Did the early church invent the divinity of Jesus over a long period of time?

**Wintery Knight** · 25 December 2024 · Archived copy · Original

How early is the doctrine of the divinity of Jesus? When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography. The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

**1 Corinthians**

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

**Philippians**

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

**Mark's gospel**

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

**The "Q" source for Matthew and Luke**

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

# For Christmas Day, let's remember George Washington and the Battle of Trenton

**Wintery Knight** · 25 December 2024 · Archived copy · Original

My favorite book about the American Revolutionary war by far is called "1776". It's written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington's line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington's retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington's army at White Plains, New York, British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan.  Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was

> surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

**Washington crosses the Delaware**

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their

> crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

**The Battle of Trenton**

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall

> decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.
>
> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

# My gameplay videos of The Troop, a turn-based tactical wargame

**Wintery Knight** · 25 December 2024 · Archived copy · Original

Since it's Christmas Day, I decided to play a new turn-based tactical wargame that was gifted to me by Desert Rose, who co-hosts the Knight and Rose Show podcast with me. I really enjoy reading military history, and learning about strategy and tactics. And in order to learn from a different angle, I enjoy playing realistic (but not gory) military simulations. So today I'll show you what it looks like.

First, here's the description of the game itself, which was developed by Giant Flame, and published by PLA Studios, based in London, England:

*On the morning of the 6th June 1944 the Western Allies began the largest seaborne invasion in the history of warfare. D-Day would mark the start of a vicious campaign to wrestle North West Europe from German control. The following months would see the ancient fields, farms and villages serve as a battleground for new, lethal weapons that would become legendary.*

*The Troop follows the campaign of British and Canadian forces as they face the German Heer and SS in Normandy. Take command of infantry, motorised and armoured units in desperate tactical turn-based combat against an AI opponent that is challenging and unpredictable, but fair and fallible. Play as British/Canadian or German forces across over 30 maps and 4 play modes.*

*Simple, complete control – The Troop embraces the best traditions of classic tabletop war gaming combined with the interactivity and excitement the digital format affords. You have complete control over your units' actions; tanks will not expose their weak side armour with unexpected pathing, hidden guns will not reveal their positions by firing prematurely, infantry will not flee inexplicably when victory is a few heroic paces away. You are free to take your time… but any mistakes are yours and yours alone.*

*The Troop contains stylised depictions of casualties being sustained in combat including representations of injury and death. The Troop does NOT contain any depictions of gore, blood or wounds.*

I am a huge fan of games like Combat Mission, Steel Panthers, and Close Combat, and I have been delighted to see that The Troop is an even better game than all of my previous favorites. It's the perfect game for me to put the lessons I learned from reading military history into practice.

Regarding the game mechanics, it is an I-go, you-go turn-based system on a hex map. Infantry units can move up to 4 hexes, but if they move 2 only, then they can remain prone. If they move 4 then they cannot fire. The more they move, the less accurate their fire. Also, if they were shot at and suppressed by enemy fire in a previous turn, then they will be less accurate. If an armored unit fires it's main gun, then it ends its turn and cannot move further. This game models terrain effects, line of sight, smoke, armor penetration, morale, opportunity fire, and other features of realistic warfare.

So, in the two gameplay videos below, I am playing as the British armed forces, just after the June 1944 D-Day landings in Normandy, France. The first map is a beach landing, and the second map is a bocage / urban setting. In each case, my forces were pre-selected, but in other scenarios, you can purchase forces with points.

Here is the first scenario I recorded, "Per Mare, Per Terram":

And here is the second scenario I recorded, "Crossroads":

I posted these videos on my personal channel, to keep them separate from the Knight and Rose Show uploads. I want to thank Desert Rose again for gifting me this game. I hope that you all had a happy Christmas, got a great gift, and had as much fun as I did playing The Troop. If you have a Steam account, and want to get the game, it's on sale for a few more days.

If you like these videos, let me know in the comments on YouTube, so I know to make more of them. It's fun to play these scenarios, but it's also fun to look at the maps and read them and think about them. It's fun to be able to read terrain and make plans, and then make decisions, and see those decisions produce a result. I think it's a very masculine behavior. It certainly appeals to my male nature to make plans, carry them out, and see the good result. I love it when a plan comes together.

By the way, I got myself a solitaire wargame for Christmas, as well: Carrier Battles: Philippine Sea, which you can read about on Boardgame Geek. It's highly rated, and I am looking forward to doing the tutorial missions over the holidays, and then playing a real game.

# A scientist's path from hard atheism to Christianity

**Wintery Knight** · 26 December 2024 · Archived copy · Original

***UPDATE: We just posted our interview with Dr. Günter Bechly on the Knight and Rose Show podcast. Subscribe to the Knight and Rose Show wherever you listen to podcasts, and we also upload them to YouTube, Rumble and Odysee.***

Lately, when I ask parents and church leaders how a person comes to Christ, the responses I get most often is that people need to be invited into a welcoming community first and foremost. To me, this is a very strange answer. When I think about Jesus working miracles so that people who didn't believe in him would have reasons to trust him, I don't see this emphasis on welcoming community.

Along those lines, I found a very interesting faith story at Salvo magazine, written by a prominent paleontologist named Dr. Günter Bechly.

First, let's see his biography, though:

*Günter Bechly, PhD, is a German paleontologist, senior fellow with Discovery Institute's Center for Science and Culture, and senior research scientist at Biologic Institute in Washington state. He has written about 160 scientific publications, described over 180 new species, and been advisor for 3 BBC nature documentaries.*

Here is the captivating introduction to his faith story:

> When atheists hear conversion stories that begin with, "I was a staunch atheist and then . . . ", they tend to roll their eyes and doubt the claim. However, this is exactly what happened to me. I had been a 150-percent atheist and materialist for almost forty years before I embarked on a spiritual journey that ultimately, after many twists and turns, led me to belief in God and Christianity. I had no life crisis, no epiphany, and no spiritual experiences at all. It was the result of purely rational, scientific, philosophical, and historical arguments that gradually changed my mind as a scientist. Here is my story.
>
> I grew up in a medium-sized town in southwestern Germany, where the Mercedes-Benz factory is located. My parents were both irreligious. My mother was simply not interested in religion, and my father was agnostic. We never talked about religion or God, and we never prayed or visited any church service. My parents pushed to opt me out of religion class in school, which was then still compulsory, resulting in my being ridiculed as the village atheist.
>
> I first saw churches from the inside as a young adult, but it was only as a tourist taking photos.

He had a fabulous career and a dream job in paleontology, but he started looking for answers when he realized the problems with naturalism:

> It all started in my late thirties when I became interested in modern physics. I read popular books by Stephen Hawking, Richard Feynman, Michio Kaku, John Barrow, David Deutsch, Brian Greene, and others. I was fascinated by the weirdness of quantum mechanics and relativity theory, as well as the mind-blowing implications of modern cosmology.
>
> While I had started from a materialist, clockwork-universe perspective, I soon discovered certain implications of modern physics that did not fit well with such an obsolete, 19th-century worldview. I stumbled upon further problems, such as the questions of causality, the ontology of time and space, the status of mathematics, and the laws of nature. This brought me even deeper into metaphysics with issues like the problem of universals, the one and the many, the persistence of diachronic (personal) identity, free will, and the hard problem of consciousness.
>
> I soon realized that materialism is untenable, and I searched for a new worldview that could explain these

> problems and make sense of the world we experience.

The first step in Dr. Bechly's journey was investigating evidence for design in the universe, and finding it compelling:

> Around this time, I also came into contact with intelligent design theory, though for totally different reasons. I was the project leader for a large special exhibition on evolution at our museum for Darwin Year 2009, which celebrated the double event of Darwin's 200th birthday and the 150th anniversary of the first publication of his magnum opus On the Origin of Species. In preparing for this exhibit, I read some books by Darwin critics, because we wanted to refute and mock them.
>
> This did not go as intended. I was surprised that the arguments of the ID theorists were nothing like the distorted picture painted by their opponents. The more I studied ID arguments, the more I became a critic of Neo-Darwinism and an ID proponent myself.
>
> I was still into process philosophy when I embraced intelligent design theory, so my support for ID had nothing to do with religion, but only with scientific arguments. I had come to see that Neo-Darwinism simply fails to explain the diversity and complexity of life and that these are better explained by an infusion of information from outside the system. The information does not have to come from a divine, miraculous intervention, but of course that would be compatible with such a view.

So, he accepts design in the universe at this point, but still doesn't accept theism, and even further away from Christianity.

But he's not done exploring:

> So I finally decided to check out the belief system that was the last thing I wanted to be true: Classical theism. I had previously read all the New Atheists' books, but even then, as a non-theist and fan of the authors, I had found them quite shallow and unsatisfying.

He goes on to explain how he explored the arguments for classical theism, and then the specific evidences for Christianity, such as prophecy and the historicity of the resurrection of Jesus. Eventually, he just went for the worldview that answered the questions raised by the progress of science, that also solved the metaphysical problems he had encountered.

You can read the whole thing, if you're looking for a wonderful testimony filled with lots of apologetics. I wish that this testimony was seen as the "normal" testimony by Christian parents and pastors. Then we would be taking a completely different approach to parenting and church. We would put the emphasis on evidence.

# Gay couple gets 100-year prison sentence for r@ping adopted boys

**Wintery Knight** · 27 December 2024 · Archived copy · Original

Many people today would never think to post anything critical of LGBT. That includes many "conservative" Christians and even many popular Christian apologists. But, I have to speak about these things, because I have to defend the Bible on every point where it disagrees with the culture. It doesn't make me feel good. It doesn't make me popular. But it has to be done.

Here is the latest news story from Christian Post:

> A same-sex Georgia couple who pleaded guilty to aggravated sodomy against their two adopted sons were recently sentenced to 100 years in prison without the possibility of parole.
>
> Zachary and William Zulock, a wealthy couple who adopted two boys with the help of a now-defunct Christian adoption agency, faced sentences for multiple other charges, including child molestation, sexual exploitation of children and incest, according to a press release from the Alcovy Judicial Circuit District Attorney Randy McGinley.
>
> "These two defendants truly created a house of horrors and put their extremely dark desires above everything and everyone else," McGinley said.
>
> […]Judge Jeffrey L. Foster sentenced both men on Dec. 19 to a century in prison, followed by life on probation.

I remember prior to the legalization of same-sex marriage, many people on the secular left put yellow equal signs on their cars, to signal their support for same-sex marriage. And not just famous atheists from Seattle, Washington who like to talk about "objective morality". Even many "compassionate" Christians put these yellow equal signs on their cars. Big corporations slapped the yellow equal signs on their web sites, too. They signaled support for homosexual behaviors and lifestyles. The people who endorsed same-sex marriage were saying that gay relationships are the exact same thing as opposite sex married couples. And that gay couples should be allowed to adopt children not biologically related to them, just like heterosexual married couples.

Now, if you look in the Bible, you'll find that God doesn't see things the same way as "don't judge" atheists or as "just love everyone" Christians or as big "celebrate diversity" corporations.

Here's what Jesus says about marriage.

Matthew 19:1-11:

> 1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.
>
> 2 And large crowds followed him, and he healed them there.
>
> 3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"
>
> 4 He answered, "Have you not read that he who created them from the beginning made them male and female,
>
> 5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?
>
> 6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."

To be a Christian, minimally, is to be a follower of Jesus Christ. That means that we accept what Jesus teaches, on whatever he teaches about. We don't overturn the teachings of Jesus in order to make people who are rebelling

against God feel better about their rebellion. It is central to the Christian worldview that Christians care more about what God thinks of them than what non-Christians think of them. In fact, Christians are supposed to be willing to endure shaming, blaming, and even suffering, rather than side with non-Christians against God's authority.

By the way, it's not the first time that we've had stories like this about gay men adopting boys.

**Not the first time:**

This story reminds me of the Two Gay Dads story that I wrote about previously, where a white female progressive journalist did a fawning story about two gay dads and their new boy adopted from Russia. She titled her article, "Two Dads are Better than One". She was so proud of herself for being all affirming, tolerant and compassionate. Same-sex marriage is something to be proud of, she said, because children do better with two gay dads.

But then, the Sydney Morning Herald reported how this example of gay adoption went awry.

Excerpt:

> Standing before an American court convicted of the most heinous of child sex crimes, the double lives of Australian citizen Mark J. Newt0n and his long-term boyfriend Peter Tru0ng were laid bare.
>
> […]Moments later Newt0n was sentenced to 40 years in prison for sexually abusing the boy he and Truong, 36 from Queensland, had "adopted" after paying a Russian woman $8000 to be their surrogate in 2005.
>
> Police believe the pair had adopted the boy "for the sole purpose of exploitation". The abuse began just days after his birth and over six years the couple travelled the world, offering him up for sex with at least eight men, recording the abuse and uploading the footage to an international syndicate known as the Boy Lovers Network.
>
> […]Evidence before the court revealed the abuse began before the couple returned to Australia. One video is said to show Newt0n performing a sex act on the boy when he was less than two weeks old.
>
> Judge Barker said the pair brainwashed the child to believe the sexual abuse was normal. Newt0n was also said to have trained the boy to deny any inappropriate behaviour if he was ever questioned by authorities.
>
> Newt0n and Truong came to the attention of police in August 2011 after their connections to three men arrested over the possession of child exploitation material came to light. The couple had visited the three men in the US, New Zealand and Germany with their son.
>
> […]Newt0n and Truong claimed they were being targeted because they were homosexual.

I could show you a dozen examples like that without even trying. Democrat judge in Wisconsin. Duke University administrator. Penn State University coach. USC professor. Head of a Scottish youth organization. San Francisco Human Rights Commission staffer. Same-sex marriage activists. Seattle mayor. Co-founder of g4y advocacy organizations. Designers of education curriculums designed to sexualize children. It's everywhere and it happens all the time. Children don't have any rights, only selfish adults have rights. This is the core belief of the secular left. They want to get rid of Christianity from the culture, because Christians side with the children against the adults. They don't want Christian rules slowing down their pursuit of pleasure. They don't want Christians to offend them by disagreeing with their actions.

# What is the earliest statement of the authoritative books of the Bible?

**Wintery Knight** · 28 December 2024 · Archived copy · Original

I know that in the land of secular leftism, there are many myths, and those myths survive because they circulate in an echo chamber. But this is the Wintery Knight blog, and on this blog, we go back to the evidence. So what's the myth? "The list of authoritative books of the Bible was determined hundreds of years after they were written". Is that true? Let's take a look at the data and see.

So, the allegation is that before 325 AD, people were using the canonical gospels equally with the forgery gospels like Judas, Peter, Mary, Thomas, etc. Then there was a church council that whittled down that list of equally valid sources to just the 4 gospels we recognize today. But did it really happen like that?

So, before we look to a scholar, I want to take a stab at this, and say what I would say if someone asked me this question. So, the first thing that came into my mind is that you don't need a church council to tell you which books of the Bible are authoritative, you just have to look at which books the earliest church fathers are quoting. And they are quoting the gospels.

Here is a snip from a conversation between Frank Turek and J. Warner Wallace, and here's what Wallace says:

> So, I write in this new book, Person of Interest, I reached out to David now that Norm has passed, and he had some great people who he was working with on this, and I cited them in the case notes of this book. And you can see it in the book. It's illustrated. Every church father who precedes the Council of Nicaea, and how many books, how many gospels, and how many letters are quoted by that particular church father. There's a graphic for this, and you can see them all standing with the numbers of gospels they quote, and the numbers of letters they quote. And then I went through, I did the research, and he has compiled numbers. David and his associates have compiled numbers on how many…so this is a much more accurate. So, here's what we know. And this is what I talked about in the book. It turns out that about 87% of the Gospel of Matthew is quoted by the early church fathers prior to the Council of Nicaea. About 935 verses. 66% of Mark, about 435 verses are quoted by these same church leaders. But 86% of the Gospel of Luke, 990 verses quoted by these church leaders. And 97% of the Gospel of John, about 859 verses that are quoted by these early church fathers.

So, if you go by that standard of who are the early church fathers quoting, it's the 4 canonical gospels. And by the way, if you are looking for specific reasons why some "gospels" were not included, I would look at the Michael Licona chapters of Lee Strobel's "The Case for the Real Jesus". And there is an audio book!

But I also found this article over at Canon Fodder (Michael Kruger's blog), that had more.

He writes:

> First, we don't measure the existence of the New Testament just by the existence of lists. When we examine the way certain books were *used* by the early church fathers, it is evident that there was a functioning canon long before the fourth century. Indeed, by the second century, there is already a "core" collection of New Testament books functioning as Scripture.
>
> Second, there are reasons to think that Athanasius' list is not the earliest complete list we possess. In the festschrift for Larry Hurtado, Mark Manuscripts and Monotheism (edited by Chris Keith and Dieter Roth; T&T Clark, 2015), I wrote an article entitled, "Origen's List of New Testament Books in Homiliae on Josuam 7.1: A Fresh Look."
>
> In that article, I argue that around 250 A.D., Origen likely produced a complete list of all 27 New Testament books–more than a hundred years before Athanasius. In his typical allegorical fashion, Origen used the story of

> Joshua to describe the New Testament canon:
>
> But when our Lord Jesus Christ comes, whose arrival that prior son of Nun designated, he sends priests, his apostles, bearing “trumpets hammered thin,” the magnificent and heavenly instruction of proclamation. Matthew first sounded the priestly trumpet in his Gospel; Mark also; Luke and John each played their own priestly trumpets. Even Peter cries out with trumpets in two of his epistles; also James and Jude. In addition, John also sounds the trumpet through his epistles [and Revelation], and Luke, as he describes the Acts of the Apostles. And now that last one comes, the one who said, “I think God displays us apostles last,” and in fourteen of his epistles, thundering with trumpets, he casts down the walls of Jericho and all the devices of idolatry and dogmas of philosophers, all the way to the foundations (Hom. Jos. 7.1).
>
> As one can see from the list above, all 27 books of the New Testament are accounted for (Origen clearly counts Hebrews as part of Paul’s letters). The only ambiguity is a text-critical issue with Revelation, but we have good evidence from other sources that Origen accepted Revelation as Scripture (Eusebius, Hist. eccl. 6.25.10).

So, if you ever hear someone saying that the authoritative books of the Bible were not decided until the 4th century, then there are a couple of ideas of how to respond to that.

# Atheist Jerry Coyne explains why morality is impossible for atheists

**Wintery Knight** · 29 December 2024 · Archived copy · Original

Let's review what you need in your worldview in order to have a rationally grounded system of morality.

You need 5 things:

1) Objective moral values

There needs to be a way to distinguish what is good from what is bad. For example, the moral standard might specify that being kind to children is good, but torturing them for fun is bad. If the standard is purely subjective, then people could believe anything and each person would be justified in doing right in their own eyes. Even a "social contract" is just based on people's opinions. So we need a standard that applies regardless of what people's individual and collective opinions are.

2) Objective moral duties

Moral duties (moral obligations) refer to the actions that are obligatory based on the moral values defined in 1). Suppose we spot you 1) as an atheist. Why are you obligated to do the good thing, rather than the bad thing? To whom is this obligation owed? Why is rational for you to limit your actions based upon this obligation when it is against your self-interest? Why let other people's expectations decide what is good for you, especially if you can avoid the consequences of their disapproval?

3) Moral accountability

Suppose we spot you 1) and 2) as an atheist. What difference does it make to you if you just go ahead and disregard your moral obligations to whomever? Is there any reward or punishment for your choice to do right or do wrong? What's in it for you?

4) Free will

In order for agents to make free moral choices, they must be able to act or abstain from acting by exercising their free will. If there is no free will, then moral choices are impossible. If there are no moral choices, then no one can be held responsible for anything they do. If there is no moral responsibility, then there can be no praise and blame. But then it becomes impossible to praise any action as good or evil.

5) Ultimate significance

Finally, beyond the concept of reward and punishment in 3), we can also ask the question "what does it matter?". Suppose you do live a good life and you get a reward: 1000 chocolate sundaes. And when you've finished eating them, you die for real and that's the end. In other words, the reward is satisfying, but not really meaningful, ultimately. It's hard to see how moral actions can be meaningful, ultimately, unless their consequences last on into the future.

Theism rationally grounds all 5 of these. Atheism cannot ground *any of them.*

Let's take a look at #4: free will and see how atheism deals with that.

**Atheism and free will?**

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent

> experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality.

Here are some more atheists to explain how atheists view morality.

William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

When village atheists talk about how they can be moral without God, it's important to ask them to justify the minimum requirements for rational morality. Atheists may act inconsistently with their worldview, believing in free will, expecting praise and blame for complying with the arbitrary standards of their peer group, etc. But there is nothing more to morality on atheism that imitating the herd – at least when the herd is around to watch them. And when the herd loses its Judeo-Christian foundation – watch out. That's when the real atheism comes out – the atheism that we've seen before in countries that turned their backs on God, and the moral law. When God disappears from a society, anything is permissible.

# Atheist gets her PhD in astronomy and astrophysics and finds evidence for God

**Wintery Knight** · 30 December 2024 · Archived copy · Original

Christian apologist Terrell Clemmons tweeted this testimony by Sarah Salviander, a research scientist in astronomy and astrophysics at the prestigious University of Texas at Austin.

Dr. Salviander writes:

> I was born in the U.S., but grew up in Canada. My parents were socialists and political activists who thought British Columbia would be a better place for us to live, since it had the only socialist government in North America at the time. My parents were also atheists, though they eschewed that label in favor of "agnostic." They were kind, loving, and moral, but religion played no part in my life. Instead, my childhood revolved around education, particularly science. I remember how important it was to my parents that my brother and I did well in school.

I just want to point out that I hope that all you Christian parents are taking seriously the obligation to make your kids do well in school, because even if they start out as atheists when they are young, they can still find their way back to God through study, as Sarah did.

She had a bad start, that's for sure:

> I grew up in the 1970s and 1980s, a time when science fiction was enjoying a renaissance, thanks largely to the popularity of *Star Wars*. I remember how fascinated I was by the original *Star Wars* trilogy. It had almost nothing to do with science—it's more properly characterized as space opera—but it got me thinking about space in a big way. I also loved the original *Star Trek*, which was more science fiction. The stoic and logical character of Mr. Spock was particularly appealing to me. Popular science was also experiencing a renaissance at that time, which had a lot to do with Carl Sagan's television show, *Cosmos*, which I adored. The combination of these influences led to such an intense wonder about outer space and the universe, that by the time I was nine years old I knew I would be a space scientist someday.
>
> Canada was already post-Christian by the 1970s, so I grew up with no religion. In retrospect, it's amazing that for the first 25 years of my life, I met only three people who identified as Christian. My view of Christianity was negative from an early age, and by the time I was in my twenties, I was actively hostile toward Christianity. Looking back, I realized a lot of this was the unconscious absorption of the general hostility toward Christianity that is common in places like Canada and Europe; my hostility certainly wasn't based on actually knowing anything about Christianity. I had come to believe that Christianity made people weak and foolish; I thought it was philosophically trivial. I was ignorant not only of the Bible, but also of the deep philosophy of Christianity and the scientific discoveries that shed new light on the origins of the universe and life on Earth.

She documents a phase of following Ayn Rand and embracing "Objectivism", but eventually she rejects it for failing to answer the big questions of life.

More:

> I began to focus all of my energy on my studies, and became very dedicated to my physics and math courses. I joined campus clubs, started to make friends, and, for the first time in my life, I was meeting Christians. They weren't like Objectivists—they were joyous and content. And, they were smart, too. I **was astonished to find that my physics professors, whom I admired, were Christian. Their personal example began to have an influence on me, and I found myself growing less hostile to Christianity.**

This is why I think it is so important for Christian parents to raise their children to get advanced degrees… either to become professors themselves, or to finance others (e.g. – our own children) to do advanced degrees. It is so important for university students to see Christian professors on campus. And failing that, it's important that we bring Christian speakers in to debate non-Christian speakers on the important issues. This will not happen unless we recognize how important it is, and then make a plan to achieve it.

More:

> **I had joined a group in the Center for Astrophysics and Space Sciences (CASS) that was researching evidence for the big bang. The cosmic background radiation—the leftover radiation from the big bang—provides the strongest evidence for the theory, but cosmologists need other, independent lines of evidence to confirm it. My group was studying deuterium abundances in the early universe. Deuterium is an isotope of hydrogen, and its abundance in the early universe is sensitive to the amount of ordinary mass contained in the entire universe. Believe it or not, this one measurement tells us whether the big bang model is correct.**
>
> **If anyone is interested in how this works, I'll describe it, but for now I'll spare you the gruesome details. Suffice it to say that an amazing convergence of physical properties is necessary in order to study deuterium abundances in the early universe, and yet this convergence is exactly what we get. I remember being astounded by this, blown away, completely and utterly awed. It seemed incredible to me that there was a way to find the answer to this question we had about the universe. In fact, it seems that every question we have about the universe is answerable. There's no reason it has to be this way, and it made me think of Einstein's observation that the most incomprehensible thing about the world is that it's comprehensible. I started to sense an underlying order to the universe. Without knowing it, I was awakening to what Psalm 19 tells us so clearly, "The heavens declare the glory of God; the skies proclaim the work of his hands."**
>
> That summer, I'd picked up a copy of T*he Count of Monte Cristo* by Alexandre Dumas and was reading it in my off hours. Previous to this, I'd only known it as an exciting story of revenge, since that's what the countless movie and TV adaptations always focused on. But it's more than just a revenge story, it's a philosophically deep examination of forgiveness and God's role in giving justice. I was surprised by this, and was starting to realize that the concept of God and religion was not as philosophically trivial as I had thought.
>
> All of this culminated one day, as I was walking across that beautiful La Jolla campus. I stopped in my tracks when it hit me—I believed in God! I was so happy; it was like a weight had been lifted from my heart. I realized that most of the pain I'd experienced in my life was of my own making, but that God had used it to make me wiser and more compassionate. It was a great relief to discover that there was a reason for suffering, and that it was because God was loving and just. God could not be perfectly just unless I—just like everyone else—was made to suffer for the bad things I'd done.

The Count of Monte Cristo is one of my favorite, favorite books as well, and had the same impact on me as it did on her.

OK, that's enough for this post. Go read the rest, and please share it.

I spoke to her recently and she told me that she is working on several projects that are designed to get people more familiar with science and Bible issues. This woman is an expert Christian apologist and her life will have an influence. Are you going to be like her? Will you mentor others to be like her? Will you marry someone like her? Will you raise children who are like her? I think we should all have a plan to study the areas that are important and have an influence for God with what we learn.

# Is it time for the Trump administration to punish Google for leftist bias?

**Wintery Knight** · 31 December 2024 · Archived copy · Original

I supported Ron DeSantis in the GOP primary because he has a record of going up against woke corporations like Disney. I just don't see the same seriousness about the threat posed by leftist corporations from Trump, who strikes me as a bit too moderate. In Trump's first term, he did nothing about the leftist bias of Big Tech corporations. Will that change in his second term?

Here's an article from the Media Research Center showing how badly Google needs to be reined in by the Trump administration:

> Google stacked search results for Trump nominees with legacy and leftist media sources for the fourth straight week. In fact, the search giant went above and beyond to push outlets that encourage hatred of several of President-elect Donald Trump's choices.
>
> […]For the news tab search results, Google provided 176 left-leaning articles compared to only 31 U.S.-based "lean right" or "right" articles. The general search results included a paltry 12 "lean right" or "right" articles, badly outnumbered by the 96 leftist articles in the results. Furthermore, Google failed to show a single U.S.-based "lean right" or "right" article for over 65 percent of nominees that the search giant provided articles for in general search.

And they have specific searches. One of my favorite nominees is Kash Patel, so I looked up what they did to him first:

> Google truly distinguished itself by pushing outlets that stoke hatred against nominees like Kash Patel, Trump's FBI director nominee. Google filled Patel's general search results with attacks and elevated a fearmongering Slate article with the headline "We've Seen Kash Patel's Enemies List. It's Terrifying" at the top of the page. Other articles by leftist outlets such as NPR, CNN, The Guardian, The Daily Mail and NBC News spread fear about Patel.
>
> In the news tab search result for "Kash Patel," Google included the Slate article second from the top, while also elevating a Mother Jones article calling Patel a "useful idiot for Putin," a CNN article implying Patel was paranoid and an NPR article accusing him of feeding "conspiracy theories" to children.

Another area where Trump might like to act more like DeSantis could be in how he handles the corporate news media. In Trump's first term, the corporate news media got a pass. They were not targeted by the Trump administration at all, and in fact Trump continues to participate in interviews and debates with members of the far-left coporate news media.

Another article from the Media Research Center explains how far left the corporate news media really are:

> MRC analysts examined all coverage of Trump's cabinet appointees on ABC, CBS, and NBC's evening newscasts from December 1 through December 14.
>
> […]Across all three networks, the coverage of Gabbard, Patel, and the handful of other nominees mentioned was entirely negative. Only Pete Hegseth, who received the lion's share of the airtime, enjoyed a scant four positive evaluative statements, all of which cited his mother describing him as "redeemed" and "a changed man."
>
> To reiterate: the only positive commentary any Trump nominee received on the broadcast networks was from his own mother.

What could Trump do to address this situation? Well, one thing he could is just shut the corporate news media out of White House Press briefings completely. Or, at least seat them at the back of the room, and prioritize taking questions from large-audience podcasts and conservative news sources like the Washington Times, the Washington Examiner, the Washington Free Beacon, Daily Caller, Daily Signal, Daily Wire, The Federalist, Just The News, Breitbart, Epoch Times, American Spectator, The Blaze, etc.

# Why I am not Roman Catholic

**Wintery Knight** · 1 January 2025 · Archived copy · Original

In this post, I explain why I'm not Roman Catholic. And I also explain how Protestant Christians arrive at their beliefs. I'll go first with my reason, and then I'll let J. Warner Wallace add another reason.

The Roman Catholic church teaches that Mary was "bodily assumed" into Heaven. Let's see if that is recorded anywhere in the Bible, or in the early Church fathers, or in early Christian history.

Here's what I found:

1. To be a Roman Catholic, you need to believe in Papal infallibility in matters of dogma.
2. In 1950, the Pope pronounced the assumption of Mary to be infallible dogma.
3. This pronouncement was solicited by a petition featuring over 8 million signatures.
4. There is no historical record of this doctrine in the Bible.
5. No early church father mentions the assumption until 590 AD.
6. Documents dated 377 AD state that no one knows how Mary died.
7. The assumption appears for the first time in an apocryphal gospel dated about 495 AD.

**Data**

I only cite Roman Catholic sources for my facts.

6. "But if some think us mistaken, let them search the Scriptures. They will not find Mary's death; they will not find whether she died or did not die; they will not find whether she was buried or was not buried … Scripture is absolutely silent [on the end of Mary] … For my own part, I do not dare to speak, but I keep my own thoughts and I practice silence … The fact is, Scripture has outstripped the human mind and left [this matter] uncertain … Did she die, we do not know … Either the holy Virgin died and was buried … Or she was killed … Or she remained alive, since nothing is impossible with God and He can do whatever He desires; for her end no-one knows." (Epiphanius, Panarion, Haer. 78.10-11, 23. Cited by Juniper Carol, O.F.M. ed.,*Mariology*, Vol. II (Milwaukee: Bruce, 1957), pp. 139-40).

7. "The idea of the bodily assumption of Mary is first expressed in certain transitus–narratives of the fifth and sixth centuries. Even though these are apocryphal they bear witness to the faith of the generation in which they were written despite their legendary clothing. The first Church author to speak of the bodily ascension of Mary, in association with an apocryphal transitus B.M.V., is St. Gregory of Tours." (Ludwig Ott, *Fundamentals of Catholic Dogma*(Rockford: Tan, 1974), pp. 209–210).

It should be noted that the apocryphal gospel in which the doctrine of the assumption of Mary first appeared was condemned as heretical by two Popes in the 5th and 6th centuries. However, I was not able to find a CATHOLIC source for this fact, so I deliberately chose not to use it in my case.

**Purgatory**

Second, here's an article from Cold Case Christianity, by the Master of the Evidence J. Warner Wallace. He writes about the Roman Catholic doctrine of purgatory, and his experience with studying and then rejecting it.

Here is his introduction:

> The notion of purgatory assumes many of us die with unforgiven sins that need to be purged from our account; some of us are not good enough to go to heaven, but not bad enough to go to hell. Purgatory, therefore, is a temporary, intermediate place (or state of being) where good deeds and works can be performed in order to purge our impurity prior to our final destiny with God. Although millions of Catholics believe purgatory to be a

> reality, the idea needs to be tested in light of the Scripture. Is purgatory something we, as Bible believing Christians, should accept as true?

He's got a stack of Bible verses to make two points against Purgatory: first, that Jesus' death on the cross is sufficient to atone for *all* our rebellion against God, and we don't need to endure any suffering or punishment to supplement it. And second, the teaching about the afterlife in the Bible says that believers are immediately ushered into the presence of God after they die (without resurrection bodies, yet), while unbelievers are separated away from God.

Here's what he says about the first point:

> **Our Salvation Isn't Based On Our Good Works**
> According to the Biblical doctrine of Salvation, forgiveness is not based on the good works of the believer. For this reason, deeds or works performed for those in purgatory are both unnecessary and ineffectual:
>
> **Romans 3:21-24, 27-28**
> But now a righteousness from God, apart from law, has been made known, to which the Law and the Prophets testify. This righteousness from God comes through faith in Jesus Christ to all who believe. There is no difference, for all have sinned and fall short of the glory of God, and are justified freely by his grace through the redemption that came by Christ Jesus… Where, then, is boasting? It is excluded. On what principle? On that of observing the law? No, but on that of faith. For we maintain that a man is justified by faith apart from observing the law.
>
> **Romans 8:1**
> Therefore, there is now no condemnation for those who are in Christ Jesus, because through Christ Jesus the law of the Spirit of life set me free from the law of sin and death. For what the law was powerless to do in that it was weakened by the sinful nature, God did by sending his own Son in the likeness of sinful man to be a sin offering.
>
> **Our Salvation Is Based On Jesus' Work on the Cross**
> According to the Biblical doctrine of Salvation, Jesus' work on the cross (His blood) purifies us from allsin. For this reason, there isn't a lingering sin problem requiring the existence of a place like purgatory:
>
> **Titus 2:13-14**
> …we wait for the blessed hope—the glorious appearing of our great God and Savior, Jesus Christ, who gave himself for us to redeem us from all wickedness and to purify for himself a people that are his very own, eager to do what is good.
>
> **1John 1:7b**
> …the blood of Jesus, his Son, purifies us from all sin.
>
> **1John 1:9b**
> …he is faithful and just and will forgive us our sins and purify us from all unrighteousness.
>
> **1John 2:2**
> He is the atoning sacrifice for our sins, and not only for ours but also for the sins of the whole world.
>
> **Hebrews 10:14**
> …because by one sacrifice he has made perfect forever those who are being made holy.
>
> **Our Salvation Has, Therefore, Already Been Guaranteed**
> According to the Biblical doctrine of Salvation, Jesus has already purified and purged believers of sin based on our faith in Him. For this reason, there is no need for a place like Purgatory where additional purging must be performed…
>
> […]The Biblical doctrine of Salvation clearly eliminates the need for purgatory.

I was never able to find anything in the Bible to support purgatory. It's a very very late doctrine that was unknown to

the early church until the late 2nd / early 3rd century, where it is spoken about by a handful of people. But lots of weird doctrines were creeping up on the fringe around that time, so we shouldn't be surprised… the point is that they have no support from the Bible, and not in the community of believers for the first 150 years after the death of Jesus.

**Conclusion**

The first thing I want to say is that the Bible is not the only place you look to decide these issues. You also look in church history, and you are looking for a clear chain of custody of the doctrine as far back as it can go. Purgatory and the perpetual virginity of Mary have some track record, but the bodily assumption of Mary is just nowhere – not in the Bible, not in the Early Church fathers. So that's the silver bullet against Roman Catholicism, since they made it "infallible".

This post is more directed to non-Christians to sort of show you how we do our homework. I am the first Protestant in my family. We have half the family who is Muslim, and the other half mostly Hindu, with some Catholic. I had to debate all these people growing up, and I wiped the floor with them. It was not even close. I simply settled on the beliefs that allowed me to win every argument, every time. That's how you do religion. If you have to go against your whole family in order to be right, you do it. It's not good to be wrong about things just because that's what your family believes. These things were not pushed hard on me by my parents, I studied them on my own in order to win arguments. After a while of winning, I found myself acting consistently with what I was arguing for. Although that might sound really weird to you, that's probably the right way to do this. Don't listen to parents and church, find your own way forward by winning arguments, and believing only what the evidence supports.

Although most people think that if I had kids, I'd bully them into my beliefs, I actually would not. Because that's not what worked on me. What really works is fighting about evidence, welcoming questions, and allowing differences of opinion. Being free to pursue truth is more important in the long run than coercing your kids to act nicely.

# Why are some Muslims peaceful, while others are not?

**Wintery Knight** · 2 January 2025 · Archived copy · Original

There was a recent terrorist attack committed by a Muslim carrying an Isis flag. Sadly, the Biden-Harris administration law enforcement was not able to prevent it. Perhaps they were too busy prosecuting Christians and pro-lifers? Let's take a look at the details of the attack and then see what David Wood has to say about why some Muslims are so peaceful, while other Muslims are not peaceful at all.

First the story from Daily Signal:

> The FBI has identified the driver of a truck that plowed into a crowd of people celebrating New Year's on Bourbon Street early Wednesday, killing at least 15 people and injuring 35.
>
> Shamsud-Din Jabbar, 42, a U.S. citizen and U.S. Army veteran from Houston, rented the F-150 Lightning truck, the FBI said. Alethea Duncan, an assistant special agent in charge of the FBI's New Orleans field office, said the agency doesn't believe he acted alone.
>
> The law enforcement agency said in a news release that he had improvised explosive devices that were found in both the truck and two in different locations in the French Quarter, body armor and an ISIS flag hanging from the tailgate.
>
> […]Jabbar drove into a group of revelers at 3:17 a.m. and got out of the truck, exchanging gunfire with New Orleans Police Department officers, injuring two of them, before Jabbar succumbed from his wounds, lawmen say.

This video featuring David Wood is very helpful for explaining why some Muslims are peaceful, while others are violent:

(archive)

Until then, I think it's a good idea to keep Democrats away from control of law enforcement. As long as they are focused on punishing Christians and conservatives, they will never be serious about preventing terrorist attacks like this.

# Judge rules that man must pay $50,000 a month to ex-girlfriend for 10 years

**Wintery Knight** · 3 January 2025 · Archived copy · Original

When I was younger, I got the impression from young women that men with strong views on theology and morality made them uncomfortable. I had my share of rejections by Christian women who didn't like my strong Biblical views. At the time, I was worried that I might not be able to get married at all. But looking at how the family courts operate, that turned out to be a good thing.

The news story is from one of Canada's national newspapers, the National Post:

> A wealthy businessman will have to pay more than $50,000 a month in spousal support for 10 years to a woman with whom he had a long-term romantic relationship even though they kept separate homes and had no children together, Ontario's top court has ruled.
>
> Under Ontario law, an unmarried couple are considered common-law spouses if they have cohabited — lived together in a conjugal relationship — continuously for at least three years. But that doesn't necessarily mean living in the same home, the court found.
>
> […]When their 14-year relationship finally broke down in May 2015, Climans asked the courts to recognize her as Latner's spouse and order him to pay her support. He argued she had been a travel companion and girlfriend, nothing more. As such, he said, they were never legally spouses and he owed no support. An eight-day trial ensued.
>
> In her decision in February 2019, Superior Court Justice Sharon Shore sided with Climans. She ruled they were in fact long-time spouses, finding that despite their separate home, they lived under one roof at Latner's cottage for part of the summer, and during winter vacations in Florida. Shore ordered him to pay her $53,077 monthly indefinitely.

Superior Court Justice Sharon Shore didn't care that the man never married this woman, or lived with her, or had children with her. He had money, and she wanted it, so the judge gave it to her.

Elsewhere in the article, we learn that he had asked her to sign a pre-nuptial agreement many times, and each time she refused. (Those are not even enforced in divorce courts) It's like her plan all along was to demand that a judge awarded her all of this man's money.

Some people will say "well, these are Ontario family courts, this is normal. Haven't you heard about what happened to Dave Foley?" I think every man knows the story of what the Ontario divorce courts did to Dave Foley.

Here is a story about it from the far-left Toronto Star, otherwise known as the Toronto Red Star.

It says:

> Dave Foley of beloved Toronto sketch troupe the Kids in the Hall is starting a new career in standup comedy, but not in Toronto — he suspects he'll be arrested if he returns to Canada.
>
> The 48-year-old faces a back child-support bill in Ontario of more than half a million dollars: the accumulation of a debt that accrues steadily at more than $17,000 per month. On the set of *Servitude,* a film shot in Toronto last year, "I told the production guys, I have a court appearance on Monday and there's a good chance I'll be in jail on Monday afternoon,'" Foley said in an interview with the *Star*.
>
> During an appearance on comic Marc Maron's *WTF* podcast last month, Foley explained that his marriage to Toronto writer Tabatha Southey ended during his run on NBC's five-year hit comedy *NewsRadio,* and he has failed in his efforts to adjust his child support downward to reflect his new life after sitcom stardom.

> "My income has dropped in the last 10 years, as anyone can tell from the number of s—ty movies I've been in," says Foley. "I'm not exactly picking and choosing my projects." However, four years ago, Superior Justice Nancy Backhouse denied his motion to vary his support payments.
>
> […]Foley says that Ontario's Family Responsibility Office now has an enforcement order and last year sought a six-month jail sentence for him, which was to extend indefinitely, until the overdue support was paid.

Ontario family courts are notoriously anti-male, and men know this. Unfortunately, the female judges who make these rulings don't seem to understand that men know what they are doing, and then opt out of marriage. It must be so wonderful for these judges to punish the men who appear before them. But they can't punish the men who respond to what they are doing by declining to marry women, and then declining to date women, and then declining to even speak to women.

I looked up Superior Justice Nancy Backhouse, and found another article about her decisions, entitled "Judge rejects pre-nup, awards ex-wife $5.3-million". So, pre-nuptial agreements are also thrown out in Ontario divorce courts.

But it's not just Ontario. I have two Christian friends here in America who married their Christian wives as virgins, and then their wives divorced them. I heard what happened to them in divorce court. They lost custody of their kids, and they are forced to pay alimony and child support even though their ex-wives poison the children against them, and deny them communication rights and visitation rights. And men know that this is happening to other men. How can women expect men to marry when the financial risks are so high?

Forbes magazine explains:

> Of the 400,000 people in the United States receiving post-divorce spousal maintenance, just 3 percent were men, according to Census figures. Yet 40 percent of households are headed by female breadwinners — suggesting that hundreds of thousands of men are eligible for alimony, yet don't receive it.

The divorced courts are biased against men, and men are getting the message. They look at these cases, and they understand that marriage is not worth the financial risks. They don't want to have their possessions stolen by radical feminist judges.

**Further reading**

An excellent book to read about this issue is Dr. Stephen Baskerville's book "Taken Into Custody: The War Against Fathers, Marriage, and the Family". You can read what the book is about here. Dr. Baskerville is a Christian and a conservative. He has a PhD from London School of Economics and does a good job of explaining the negative view that society has about men, and male leadership. And sadly, these negative man-blaming views are often shared by Christians, too.

# Militant atheist Richard Dawkins resigns from atheist group over transgenderism

**Wintery Knight** · 4 January 2025 · Archived copy · Original

Lately, I've noticed that some of the most famous atheists are regretting their long war against Christianity. People like Richard Dawkins spent their lives warring against Christianity. And now that they've achieved their goal of diminishing Christian influence, they don't like the results. They don't like the Islam. They don't like the wokeness. They don't like the transgenderism. But they caused it.

Here's a story from Breitbart News: (H/T My Dad)

> Celebrated atheist and evolutionary biologist Richard Dawkins stepped down from the board of the Freedom From Religion Foundation (FFRF) on Saturday after the atheist group made clear its allegiance to transgenderism over biological reality.
>
> Dawkins resigned after the foundation censored an article from a fellow scientist who pointed out that sex is, in fact, immutable and biological, and rejected the pseudo-spiritual claim that one can choose their "gender," The Telegraph reported.
>
> Dawkins accused the organization of caving to the "hysterical squeals" of cancel culture after FFRF pulled the article and called its publishing of it a "mistake." Dawkins resigned after two other scientists, Jerry Coyne and Steven Pinker, left the organization over the ordeal. The pair accused the foundation of pushing an ideology with the "dogma, blasphemy, and heretics" of a religion, according to the report.
>
> The resignations can be traced back to a piece published to FFRF's Freethought Now! website and written by Kat Grant called "What is a Woman?" The piece argues against the biological reality of womanhood and instead claims that "a woman is whoever she says she is."

After they pilled the article by the atheist scientist arguing for biological reality, we got this from the FFRF leaders:

> "Despite our best efforts to champion reason and equality, mistakes can happen, and this incident is a reminder of the importance of constant reflection and growth," co-presidents Dan Barker and Annie Laurie Gaylor wrote.
>
> "Publishing this post was an error of judgment, and we have decided to remove it as it does not reflect our values and principles. We regret any distress caused by this post and are committed to ensuring it doesn't happen again," they added.

No one would say that people like Michael Shermer, Richard Dawkins, Jerry Coyne, Steve Pinker were stupid people. What they are is *foolish*. These are the most foolish people on the planet. They spend their entire lives embracing the lie of atheism. They denied all of the scientific evidence for theism, such as the origin of the universe, the cosmic fine-tuning, the origin of life, explosions of biological complexity in the fossil record, irreducible complexity, habitability, etc.

And what did this advocacy against scientific evidence *and reason itself* get them? It gets them the Islamic dominance, wokeness, and transgenderism that they now claim to dislike. It would be like someone talking and talking about how much they believe in early retirement, but they way they prepare for retirement is by spending all their money on lottery tickets. And then they act surprised when they get the failure that their actions virtually guaranteed.

# Wayne Grudem explains what the Bible says about capital punishment

**Wintery Knight** · 5 January 2025 · Archived copy · Original

Why would anyone support the idea of ending the life of a convicted criminal? What are the reasons for governments to support the death penalty for certain crimes? What does the Bible have to say about capital punishment? Reformed Baptist theologian Wayne Grudem did a Sunday school presentation on the Bible and capital punishment. Let's take a look.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.
>
> Grudem served on the committee overseeing the English Standard Version translation of the Bible, and in 1999 he was the president of the Evangelical Theological Society. He is a co-founder and past president of the Council on Biblical Manhood and Womanhood. He is the author of, among other books, Systematic Theology: An Introduction to Biblical Doctrine, which advocates a Calvinistic soteriology, the verbal plenary inspiration and inerrancy of the Bible, the body-soul dichotomy in the nature of man, and the complementarian (rather than egalitarian) view of gender equality.

The MP3 file is here.

The PDF outline is here.

Topics:

- what kinds of crimes might require CP?
- what did God say to Noah about CP?
- what does it mean that man is made in the image of God?
- is CP just about taking revenge?
- what does CP say about the value of human life?
- does CP apply to animals, too?
- could the statements supporting CP be understood as symbolic?
- one purpose of CP is to protecting the public
- another purpose of CP is to deter further wrongdoing
- but the Biblical purpose of CP is to achieve justice by retribution
- does the Pope make a good argument against CP?
- what is the role of civil government in achieving retribution?
- do people in Heaven who are sinless desire God to judge sinners?
- should crimes involving property alone be subject to CP?
- is the Mosaic law relevant for deciding which crimes are capital today?
- should violent crimes where no one dies be subject to CP?
- is CP widespread in the world? why or why not?
- what are some objections to CP from the Bible?
- how do you respond to those objections to CP?

- should civil government also turn the other cheek for all crimes?
- what is the “whole life ethic” and is it Biblical?
- what do academic studies show about the deterrence effect of CP?
- how often have innocent people been executed in the USA?
- should there be a higher burden of proof for CP convictions?

The Bible is awesome because it gives us knowledge about God’s character. How are we supposed to act in a way that is pleasing to God if we don’t know what he thinks of the issues of the day? We won’t know how we are supposed to act unless we know who God is first. And that’s why when we read the Bible we should be looking to find out the truth about who God is.

# Can we trust the secular left DEI FBI to protect us from real terrorism?

**Wintery Knight** · 6 January 2025 · Archived copy · Original

America suffered a couple of terrorist attacks recently. And it caused me to wonder whether the Biden administration FBI can be trusted to protect the people who pay their salaries from real threats. The FBI has been focusing on dangerous church-attending Presbyterians and dangerous parents of school children. But are these groups the real threats to liberty and peace?

Here's an article from Jordan Boyd up at The Federalist entitled "An FBI That Targets Political Opponents Instead Of Terrorists Doesn't Deserve To Lead New Orleans Investigation" and it says:

> The FBI claims protecting the nation from terrorist attacks is its "number one priority." Yet the agency spent recent years redirecting its attention and resources from top issues like violent criminal acts that lead to mass casualties and child sex abuse cases to arresting meemaws for walking around the U.S. Capitol grounds on January 6, 2021 and praying at abortion facilities.
>
> The FBI's laundry list of corruption extends far beyond smearing Catholics, concerned parents, and Trump voters as domestic terrorists, manufacturing scandals like the Russia collusion hoax, killing the Hunter Biden laptop bombshell, raiding the home of a former and future president even if it required "deadly force," and interfering in elections. Yet, the DEI-plagued agency, despite its discrediting track record, is routinely accepted as the lead on investigations into real terrorism.
>
> The FBI wholly disqualified itself from being the lead on the New Orleans investigation when it deemed anyone questioning the regime guilty of wrongthink at the same time it allowed, entrapped, and even groomed true threats. How can an entity that openly hyper-fixated its best efforts on "white supremacy" accurately and adequately evaluate a threat as serious and as widespread as Islamic terrorism? It can't.

Here's an article from Brianna Lyman up at The Federalist entitled "Here's Who Biden's FBI Decided To Persecute Rather Than Hunt Down Real Terrorists", and it says:

> Early Wednesday morning, a radical Islamic terrorist drove his truck through a crowd of people celebrating the start of the New Year in New Orleans. Fifteen people were murdered and more than 35 injured. But maybe this tragedy could have been avoided if the FBI spent less time targeting parents, Catholics, and countless other dissidents and instead focused its resources on catching actual terrorists.

The list of weaponizations from Jordan's article was pretty long, but Brianna found a new one:

> Unfortunately under the leadership of then FBI Director Christopher Wray, the FBI was too busy doing things like helping to orchestrate a kidnapping plot targeting Democrat Michigan Gov. Gretchen Whitmer to catch a terrorist.

And it might be worth expanding on the "concerned parents" one – here's what the FBI really thinks about the people who ar taxed to pay their salaries, and the children who will be taxed to pay for their benefits when they retire:

> […]The Department of Justice (DOJ) issued a memo in October of 2021 instructing the FBI to label activist parents at school board meetings with "threat tags." The guidance came just days after the Biden White House approved a recommendation from the National School Board Association that called for counterterrorism measures to be used against parents who spoke up at school board meetings.

> Attorney General Merrick Garland "encouraged the use of an FBI tip line for individuals to flag parents for surveillance," as my colleague Tristan Justice reported.
>
> Tiffany Justice, co-founder of Moms for Liberty, told The Federalist of a mother who was reported to the FBI for simply being "quite upset" at a school board meeting when speaking about the adverse effects of quarantines and school closures.

Maybe expanding a little more on the FBI's leading bogeyman – people who reject the Democrat party position on abortion:

> During the Biden administration, the FBI targeted 55 pro-lifers for "praying, singing, and evangelizing at abortion facilities across the U.S.," as Boyd reported. Under the Freedom of Access to Clinic Entrances (FACE) Act, the Biden administration targeted pro-lifers instead of targeting terrorists or the at least 90 instances of "abortion-fueled firebombing, vandalism, and other attacks on lifesaving pregnancy centers, pro-life organizations, and churches …"
>
> In fact, 75-year-old Paulette Harlow was charged and found guilty for violating the FACE Act after she prayed at a Washington, D.C., abortion facility. Harlow was sentenced to two years in jail.
>
> The FBI has long smeared pro-lifers as threats, with former FBI-special-agent-turned-whistleblower Steve Friend revealing in an interview with the Tennessee Informer that the FBI showed agents a video produced by the far-left Southern Poverty Law Center that, according to Friend, "ranked people who oppose abortion, pro-life activists, as a greater threat than Islamists."

That last paragraph is key: the FBI ranks people who oppose abortion as a GREATER threat than Islamic terrorists. That's why we are in the situation they are in. The pro-lifers pay their salaries, not the Islamic terrorists, but the FBI is more concerned about the threat posed by their customers. This is an important point.

So, what should we do with the taxpayer-funded FBI?

Maybe we should fire them all, and let them sink or swim in the competitive private sector? Without their pensions and benefits, of course. Then they might learn something about professionalism, and finally be able to demonstrate "fidelity" to their job descriptions (and oaths). Not the leaders of the FBI of course, they need to be criminally prosecuted for what they've done.

# How the UK's secular left government covered up sex-trafficking of children

**Wintery Knight** · 7 January 2025 · Archived copy · Original

I have written many times about the sex-trafficking of mainly white girls by gangs of mainly Muslim men in the UK. My main concern in writing these posts is to emphasize what secular leftists do when their policies don't work. The secular left parties in Europe opened up their borders to unskilled men from the Middle East. And when it failed, they covered it up and blamed the innocent victims.

Here's a story from the UK Telegraph (archived), entitled "How the grooming gangs scandal was covered up" and the subtitle is "The child victims of rape were denied justice and protection from the state to preserve the image of a successful multicultural society".

It says:

> Across the country, in towns and in cities, on our streets and in the state institutions designed to protect the most vulnerable members of our society, authorities deliberately turned a blind eye to horrific abuse of largely white children by gangs of men predominantly of Pakistani heritage.
>
> Over time, details have come to light about abuse in Rotherham, in Telford, in Rochdale and in dozens of other places. But with the stories released in dribs and drabs, and the details so horrific as to be almost unreadable, the full scale of the scandal has still to reach the public.

I would be very careful about reading the details of these crimes, they are horrific and disgusting.

But these crimes are the direct consequences of the immigration policies of the secular left Labour Party of the UK. The Labour Party wanted more diversity. But they didn't achieve that diversity with skilled immigrants who could speak English and respect Western culture. They imported large numbers of unskilled Middle Eastern men, who often could not even speak English. And when their decisions had bad consequences, they covered it up, and blamed the victims for being racists.

> In Manchester, a 2019 report concluded gangs were left to roam the streets in part because officers were told to look elsewhere. One detective constable was quoted by a report as saying "the offending target group were predominantly Asian males and we were told to try and get other ethnicities".
>
> Central government took a similar view. In 2020, the Home Office refused to release its research into grooming gangs, claiming that it would not be in the "public interest" to do so.

The secular left talks about "objective morality", but here is what their "objective morality" looks like:

> In Telford, Lucy Lowe died at 16 alongside her mother and sister when her abuser set fire to her home in 2000. She had given birth to Azhar Ali Mahmood's child when she was just 14, and was pregnant when she was killed.
>
> Her death was subsequently used to threaten other children. The Telford Inquiry found particularly brutal threats. When one victim aged 12 told her mother, and the mother called the police, "there was about six or seven Asian men who came to my house. They threatened my mum saying they'll petrol bomb my house if we don't drop the charges."
>
> Yet in a pattern that would repeat itself, Telford's authorities looked the other way. When an independent review was finally published in 2022, it found police officers described parts of the town as a "no-go area", while witnesses set out multiple allegations of police corruption and favouritism towards the Pakistani community. Regardless of the reason, the inquiry found that "there was a nervousness about race… bordering

> on a reluctance to investigate crimes committed by what was described as the 'Asian' community".
>
> Similar concerns applied at the council, where anxieties over appearing racist saw safeguarding officers waving away concerns simply because the perpetrators were Asian. It was felt that some suspects were not investigated because it would have been "politically incorrect".
>
> This is not to say that the council did nothing. Aware that taxi drivers were offering children rides for sex, in 2006 it suspended licensing enforcement for drivers, allowing high risk drivers to continue practicing. As the Telford Inquiry found, this was "borne entirely out of fear of accusations of racism; it was craven".
>
> […]The result was stasis, despite officials acknowledging in at least one case that abuse by Asian men had gone on for "years and years".
>
> It had: at least 1,000 girls were abused in the town between 1980 and 2009. Yet even this conservative estimate was disputed by authority figures, with West Mercia police superintendent Tom Harding insisting in 2018 the figure was "sensationalised". The independent review later found it entirely plausible.

Notice the response of the UK police. The UK is notorious for two-tier policing, which is the idea that people are treated differently based on their race and religion. They arrest Christian pastors. But Muslims breaking the law are ignored.

The UK Telegraph article goes on quite a bit more, discussing many more cases.

For example, the Rotherham cases:

> As the 2014 Jay Inquiry into Rotherham found, children were "doused in petrol and threatened with being set alight", "threatened with guns", "witnessed brutally violent rapes and were threatened that they would be the next victim if they told anyone. Girls as young as 11 were raped by large numbers of male perpetrators, one after the other".
>
> In the same town, a senior police officer allegedly said the abuse had been "going on" for 30 years, adding "with it being Asians, we can't afford for this to be coming out.
>
> As Louise Casey's 2015 report on Rotherham Council found, this attitude was widespread. The Pakistani community accounted for around 3 per cent of the town's population, and the story emerging was clear: Pakistani men were grooming white girls. As a result, one witness said, the council was "terrified of [the impact on] community cohesion".

So, when you hear the secular left talking about immigration in America, it's important to understand what can result from their decision-making. Yesterday, I wrote about how the FBI views pro-lifers as a greater threat than Islamic terrorists. Why do you think that is? It's because their worldview – secular leftism – doesn't provide a rational foundation for morality. When the moral law goes against their self-interest, the secular leftist invariably ignores the moral law, and follows self-interest.

By the way, the current Prime Minister of the UK, a secular leftist, played a direct role in enabling the sex-trafficking of underage girls. This UK Telegraph story explains. So this isn't some fringe minority of secular leftists who put law-abiding people at risk. It's the secularleftist elites who are doing these things.

# Knight and Rose Show #57: Günter Bechly: The Fossil Record

**Wintery Knight** · 7 January 2025 · Archived copy · Original

Welcome to episode 57 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview Dr. Günter Bechly about whether the fossil record supports Darwinian evolution or intelligent design. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Note:** We are releasing this episode a few days early, because of the tragic death of Dr. Bechly in an auto accident. You can read more about it here at Evolution News. Rose and I are devastated. This episode is Rose's favorite episode of our entire podcast. We just liked talking to him so much. You can find his full testimony, which we thought was really, really valuable. We think that this would be a wonderful thing for you to share on social media to remember him.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome paleontologist Dr. Günter Bechly to discuss the fossil record. Günter explains why the fossil evidence is more consistent with intelligent design than Darwinian evolution. He explains why mutation and selection are inadequate mechanisms for generating the biological information needed for new body plans. Finally, he explains his journey from atheism to Christianity.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 57:**

**Speaker biographies**

Günter Bechly, PhD, is a German paleontologist, senior fellow with Discovery Institute's Center for Science and Culture, and senior research scientist at Biologic Institute in Washington state. He has written about 160 scientific publications, described over 180 new species, and been advisor for 3 BBC nature documentaries.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Pro-ID paleontologist Dr. Günter Bechly has gone home to his Lord and Savior

**Wintery Knight** · 8 January 2025 · Archived copy · Original

I don't know what to say about this event. Yesterday, Rose and I found out about Dr. Bechly's passing. He was the guest on our most recent episode of Knight and Rose Show. We knew that we wanted to do an episode on the fossil record and intelligent design, and we wanted to get the best person we could. Dr. Bechly was our first choice. Let's find out about what he was really like.

So, previously, I blogged about his testimony, and on Tuesday night, I posted our episode of Knight and Rose Show with him.

What really impressed us about Dr. Bechly is how rigorous he was about forming his views of what was true. And how much integrity he had to pay the consequences of coming out in favor of intelligent design and eventually Christianity, in a very secular environment.

This article by David Klinghoffer at Evolution News told me a lot more about the man.

Excerpt:

> We are shocked and grieved to report the death of our friend and colleague Günter Bechly, on January 6 in an auto accident in Austria. He was 61. "There is no easy way to say this," said Center for Science and Culture Managing Director John West yesterday morning when we all found out. I could feel my scalp tighten from the grim tone of his voice before I even knew what was coming. Now try in vain to imagine how Bechly's wife, Luise, and his two young sons are feeling. It seems beyond inadequate to wish them comfort.
>
> Dr. Bechly, a paleontologist who was pushed out of his position as a curator at the State Museum of Natural History in Stuttgart, Germany, after becoming persuaded by the evidence for intelligent design, was not just a gifted and prolific scientist. He was a hero. Changing your view about a controversial matter when it costs you nothing is one thing. When it costs you, in the professional context, everything — that is quite another.

I've said before on this blog how weird it is for me to see how so many Christians in America think that Christianity will make you happy, successful, and popular. Christians in places like Africa do not usually hold these views. How Christians in America can get ideas like that from a suffering Savior is a mystery to me. But what we loved about Dr. Bechly was that he just loved to puzzle about what was really true. And when he decided that something was true, he lived by it, and no one else could shake him off it.

More from the article:

> As an academic field, evolutionary biology is a bully's playground where the use of intimidation to silence doubters is just the way things are done. Bechly refused to be bullied and thus gave courage to many in the science world, including friends of ID that you will be hearing more about in years to come. It could be called (not my formulation) the Bechly Effect. One person gives courage to others, and it builds from there.
>
> He wanted to know what was true. In Germany, in organizing an exhibit at his museum celebrating the 200th anniversary of Darwin's birth, he almost on a whim decided that if he was going to mock intelligent design, as he intended, he really ought to read a few books by those ID rascals. The experience changed him profoundly. That story is memorably told in the documentary Revolutionary. The switch to ID cost him his job but it won him many friends in the ID world. He will be terribly missed.

The rest of the article goes on to talk about what projects he had in the works, his most recent lecture at Cambridge University, his personal character, his spiritual journey. I recommend that you read it, because I think that

Christians need to recapture what it is like for someone not raised in the church to work through the evidence, and decide that Christianity is the correct worldview.

Everywhere I look today, I see elite Christian leaders whose first priority, it seems, is to be liked by non-Christians. In every area, we ask non-Christians what their problems are, and what they would like us to do to solve their problems. We're falling over ourselves trying to appease non-Christians because we want them to like us so badly. We have lost confidence in the Bible as an authority that tells people what their real problems are, and what their real solutions are, and what their real priorities should be, and how to be wise about making plans to achieve what really matters. On issues of race, climate change, sexuality, etc. elite Christian leaders just don't believe that the Christianity can be recommended to a non-Christian *based on the evidence*. They don't know what that evidence is. They never did the work themselves. And we – the rank and file – keep choosing them to lead. We disregard their laziness and ignorance, and choose them for their appearance and charisma.

But Dr. Bechly knew what that evidence was. He investigated. He found it. And he followed the evidence to a true worldview. If only we could convince our Christian leaders that this is the right way to go, the normal way of evangelizing others. Jesus used evidence.

# Who is responsible for wildfires burning down cities in Democrat-run California?

**Wintery Knight** · 9 January 2025 · Archived copy · Original

I have many Christian friends living in California, and I often ask them why they would choose to remain in a state that is controlled, from top to bottom, by secular leftists. And their answer is usually, “I like the weather in California”. But now the weather in California is fire and brimstone! Who is responsible for these fires? Is it the greedy Republicans? Is it the intolerant Christians? Let’s see.

This is from Daily Wire:

> California State Representative Bill Essayli (R) explained how the mismanagement of the state’s fire policies made it vulnerable as a wildfire rages through Los Angeles County’s Pacific Palisades.
>
> Essayli, a Republican who represents California’s 63rd State Assembly district southeast of Los Angeles, detailed different policies that he says have exacerbated the risk and severity of wildfires. Essayli’s comments come as a wildfire in the Pacific Palisades and the Eaton Fire just south of Los Angeles have taken at least two lives and destroyed an estimated 1,000 structures.

I had a quick look, and Pacific Palisades is the #1 wealthiest suburb in Los Angeles. All those limousine liberals are having their houses burned down. Who is to blame?

Back to Daily Wire:

> “In the 1950s, the average timber harvest in California was around 6.0 billion board feet per year. Today, that number has dropped to ~1.5 billion board feet per year,” he went on to say. “California’s forests, which cover a third of the state, are now choked with nearly 163 million dead trees.”
>
> “California Environmental Quality Act (CEQA) and other regulatory policies limit the ability of local government and fire management services to clear dead trees and vegetation. (This is a big deal and prevents much of the controlled burns we desperately need.)”
>
> Essayli also explained that various pieces of legislation that could have helped prevent wildfires or limit their severity were rejected or failed to reach the desk of Democrat Governor Gavin Newsom or were vetoed by him.
>
> Senate Bill 1003, for example, would have allowed local governments and fire management services to build more underground power lines, a measure that could prevent exposed power lines from lighting forest debris on fire.
>
> Other pieces of legislation would have exempted wildlife prevention efforts from regulations imposed by the California Environmental Quality Act, he added.
>
> “Many of the wild fires CA experienced could have been prevented or significantly mitigated with better management, policies, and funding. This is a time for accountability and, more importantly, change in how we approach fire policy,” Essayli added. “Many of the rejected proposals were brought by Republicans, and I suspect they were rejected for that reason. There is only one political party to blame for CA’s failures.”

I found another related story on Daily Wire:

> Los Angeles Mayor Karen Bass faced backlash on Wednesday over policy decisions she made that left her city ill prepared for combatting the deadly fires that erupted this week, causing billions of dollars worth of damage.
>
> Patrick Soon-Shiong, the owner of The Los Angeles Times, called out Bass’ failings in a post on X.

> “Fires in LA are sadly no surprise, yet the Mayor cut LA Fire Department’s budget by $23M,” he wrote. “And reports of empty fire hydrants raise serious questions. Competence matters.”
>
> […]The New York Post reported that the cut was the second largest cut that Bass made in her 2024-25 fiscal year budget.

According to Wise Voter, California is the 5th most Democrat state in the Union, behind Vermont, Massachusetts, Maryland, and Hawaii.

I would really recommend that Christians and conservatives consider moving out of California, to a red state. In my rankings, Tennessee is number 1 for Christians, followed by Florida.

Just look at the Daily Wire company. They moved out of California to Nashville, TN, and Ben Shapiro moved to Florida. Seth Dillon is running the Babylon Bee out of Florida. A lot of the cultural change is coming from Tennessee and Florida.

Personally, weather isn’t as important as liberty, prosperity and security.

# If we seriously want men to marry and become fathers, let's repeal no-fault divorce

**Wintery Knight** · 10 January 2025 · Archived copy · Original

I saw a very good article at the Heritage Foundation web site about the importance of fathers for children. The author Virginia Allen listed out some of the benefits that fathers provide to children:

> Studies have found that children raised without a father are:
>
> - At a higher risk of having behavioral problems.
> - Four times more likely to live in poverty.
> - More likely to be incarcerated in their lifetime.
> - Twice as likely to never graduate high school.
> - At a seven times higher risk of teen pregnancy.
> - More vulnerable to abuse and neglect.
> - More likely to abuse drugs and alcohol.
> - Twice as likely to be obese.
>
> From education to personal health to career success, children who lack a father find themselves at a disadvantage to their peers raised in a two-parent household.

I was looking for a good analysis of why there's been a decline of marriage and fatherhood, and I found an article by Joe Carter on far-left The Gospel Coalition, of all places. By looking at marriage rates and historical events that changed the marriage rate, he was able to identify the cause of the decline of marriage – and fatherhood.

Marriage and divorce rates per capita

I'll spare you the statistical analysis, which is excellent, and give you the conclusion – although you can guess it from the graph above:

> Now that we've explored the data, what year should we use as the marker for the beginning of the decline of marriage in the United States? I would argue for 1985, the last year that the marriage rate topped 10 percent.
>
> […]What changed in 1985 that could have led to the decline in marriage? There are likely numerous factors—which we'll examine in future articles—but one stands out in particular: By 1985, all states (except

> for New York) had enacted no-fault divorce legislation.

The most helpful book I know of about no-fault divorce is "Taken Into Custody", by Dr. Stephen Baskerville. He wrote a column for Crisis magazine that summarizes some of his ideas.

Excerpt:

> Feminists were drafting no-fault divorce laws in the 1940s, which the National Association of Women Lawyers now describes as "the greatest project NAWL has ever undertaken."
>
> The result effectively abolished marriage as a legal contract. Today it is not possible to form a binding agreement to create a family.
>
> The new laws did not stop at removing the requirement of citing grounds for a divorce, to allow divorce by mutual consent, as deceptively advertised at the time. Instead they created unilateral and involuntary divorce, so that one spouse may dissolve a marriage without any agreement or fault by the other.

Here's what divorce does to the spouse who is the victim of the unilateral "no-fault" divorce:

> Though marriage is a civil matter, the logic quickly extended into the criminal, including a presumption of guilt against the involuntarily divorced spouse ("defendant"). Yet formal due process protections of criminal proceedings did not apply, so forcibly divorced spouses became quasi-criminals not for recognized criminal acts but for failing or refusing to cooperate with the divorce by continuing to claim the protections and prerogatives of family life: living in the common home, possessing the common property, or—most vexing of all—parenting the common children.
>
> Following from this are the horrendous civil liberties violations and flagrant invasions of family and individual privacy that are now routine in family courts. A personalized criminal code is legislated by the judge around the forcibly divorced spouse, controlling their association with their children, movements, and finances. Unauthorized contact with their children can be punished with arrest. Involuntarily divorced parents are arrested for running into their children in public, making unauthorized telephone calls, and sending unauthorized birthday cards.

In my conversations with men, no-fault divorce laws, and anti-male divorce courts are the main reasons given for why they do not pursue marriage and fatherhood. Men do not want to be coerced in a marriage with the threat of divorce by an unhappy wife. Men do not want to be subject to the government in so many areas of their lives if the wife does carry out the threat. They especially don't want to be separated from their children. One my secular male friends told me that he would not marry unless the woman had evidence in her past of hating radical feminism and no-fault divorce. This was the main criteria. He actually was able to find a woman who was a men's rights activist who hated divorce. But that was the only way he would marry.

Statistically speaking, the wife is more likely to initiate divorce than the husband. Women initiate 70% of divorces, the majority of those just because she is "unhappy". I think this is because women get into marriage based on their feelings, and they think that it is the husband's job to make them feel good. They see their happiness as the primary goal of the marriage, and see a marriage that does not make them happy as a marriage that needs to be ended. They're not interested in helping a man to succeed in his mission, which, for Christian men, is to have a marriage and family that serve GOD first and foremost, not the woman's feelings.

**Are we going to repeal no-fault divorce, then?**

No-fault divorce was seen as a boon to women who had married the wrong men by following their hearts. It's an interesting question to ask whether women really would want no-fault repealed. It would mean that they would have to get serious about who they marry, instead of just getting into marriage based on feelings. They would have to

evaluate men according to expectations of what a man does in a marriage, instead of on feelings. They would have to think about what men want out of a marriage, and prepare themselves to provide for his needs. They would have to say no to their feelings, when choosing a man, and in keeping a man after the wedding.

If women aren't willing to demand the repeal of no-fault divorce laws and get serious about men and marriage, then what's the point of complaining that men don't want to marry and become fathers? If you're not willing to fix the root cause of the problem, then don't complain about the problem.

# If you accept Jesus and become a Christian, will God make you happy?

**Wintery Knight** · 11 January 2025 · Archived copy · Original

This is a wonderful, wonderful post from Amy Hall, who writes for the Stand to Reason blog.

She writes:

> I had a brief interaction with an atheist on Twitter a couple of weeks ago that unexpectedly turned to the issue of suffering when she said:
>
> You clearly never had a time you were hurt. I don't mean sick. I don't mean heart broken. I mean literally a near death experience or rape or abusive relationship…. You can keep floating on a [expletive] cloud thinking Jesus will do everything for you but it's a lie. What makes you so special?
>
> That surprised me at first because it didn't seem to have anything to do with the tweet she was responding to, and I was confused as to why she would assume I'd never been through anything traumatic. But then in subsequent tweets, when she revealed she had been raped, it became clear that her trauma had played a central role in her becoming an outspoken, obviously angry "antitheist." She's a self-described antitheist now because she thinks Christianity teaches Jesus "will do everything for you" to give you a perfect life, and now she knows that's a lie. The rape proved her understanding of Christianity false.
>
> So it made sense for her to reason that since I believe Christianity is true, I must still be under the delusion that Jesus is making my life special, which means I obviously never encountered any evil or suffering to shake that delusion.

All right, readers. I don't want any of you to be thinking that if you become a Christian that these things should be expected to happen:

- you will feel happy all the time
- you will be able to sense God's secret plan for your life through your feelings
- God's secret plan for your life will automatically work, even though it's crazy
- God will give you a perfect spouse and lots of money without you having to study anything hard, or do any hard work
- you get permission to do things that that make you happy, even if they are expressly forbidden by the Bible
- you don't have to do anything that makes you feel bad (e.g. – talk to non-Christians about Christian truth claims), because God wants you to be happy

No! Where do people get this idea that if they convert to Christianity, then God will become their cosmic butler?

Amy has the answer: (emphasis mine)

> Hear me, everyone: **This is a failure of the church.**
>
> A friend of mine who was deeply suffering once said to me that many Christians are in for "an epic letdown" when they realize their preconceived notions about what God is expected to do for us are false. Pastors who preach a life-improvement Jesus are leading people down this precarious path to disillusionment.
>
> If suffering disproves your Christianity, you've missed Christianity. The Bible is filled with the suffering of those whom God loves. The central event of the Bible is one of suffering. Love involves suffering. "We know love by this, that He laid down His life for us; and we ought to lay down our lives for the brethren." That means suffering.

It's the church. It's the focus on happy things and having of happy feelings and happy songs and preaching designed to make us feel good. I would say the comforting devotional reading doesn't help to make us any tougher or more practical, either. That happy-clappy stuff just gives you a false sense of safety about your precarious situation. God's job is not to prevent you from suffering. In fact, even if you make really smart, practical decisions, you can expect to get creamed *anyway*.

Please take 15 minutes and read the book of 1 Peter in the New Testament.

Here's a summary from GotQuestions.org:

> **Purpose of Writing:** 1 Peter is a letter from Peter to the believers who had been dispersed throughout the ancient world and were under intense persecution. If anyone understood persecution, it was Peter. He was beaten, threatened, punished and jailed for preaching the Word of God. He knew what it took to endure without bitterness, without losing hope and in great faith living an obedient, victorious life. This knowledge of living hope in Jesus was the message and Christ's example was the one to follow.
>
> **Brief Summary:** Though this time of persecution was desperate, Peter reveals that it was actually a time to rejoice. He says to count it a privilege to suffer for the sake of Christ, as their Savior suffered for them. This letter makes reference to Peter's personal experiences with Jesus and his sermons from the book of Acts. Peter confirms Satan as the great enemy of every Christian but the assurance of Christ's future return gives the incentive of hope.
>
> **Practical Application:** The assurance of eternal life is given to all Christians. One way to identify with Christ is to share in His suffering. To us that would be to endure insults and slurs from those who call us "goodie two shoes" or "holier than thou." This is so minor compared to what Christ suffered for us on the Cross. Stand up for what you know and believe is right and rejoice when the world and Satan aim to hurt you.

Recently, I blogged about how suffering is compatible with an all-powerful God, so you might want to read that too if you missed it.

# How to explain the gospel in less than 1000 words

**Wintery Knight** · 12 January 2025 · Archived copy · Original

A friend sent me a draft e-mail, that he wrote to a family member, who has rejected historic Christianity for progressive Christianity. He was asked to give the basics of salvation, and his attempt to explain the gospel to her is below. My advice included taking out the Christianese terms. Do you think he did a good job? I think his emphasis on what is not the gospel (what needs to be rejected) makes this a first-class explanation of the gospel.

---

So, you've asked the 10,000 talent question (alluding to Matthew 18:23-35). You are basically asking me what I think the Gospel is. I'll try to answer that in a minimalistic way, using my own characterization of it rather than just making doctrinal statements.

One must accept that there is a God, who is a higher authority than themselves. How much one must first believe about that God is debatable, but candidate beliefs would be that He is personal (having a mind like, but greater than, ours), powerful, and the creator of this cosmos and everything in it — He owns it all. Our natural intuition is to see beauty, order, complexity, and "design" in nature. There is a difference in belief vs unbelief in that some think it is just the appearance of design and some acknowledge their intuition that it actually is designed.

One must acknowledge their moral intuitions, and recognize that there are actually right and wrong things in this world. It's not just whatever you want to do, or whatever society decides in a given time or culture.

Given that morality is then understood to be a transcendent thing (universal and independent of time and culture), the connection is made to God as the author of this moral law.

One must then recognize that he/she regularly fails to live up to this law, even according to just their meager understanding of it, and even by the standards of morality that they make up for other people.

One must not try to suppress this, or therapize it away. One must recognize there is a problem and real moral culpability. One must recognize that they feel guilty and have self-esteem issues because they actually do have guilt and issues.

One must make the connection between guilt and their standing before God. Being good sometimes and in some ways does not erase the bad you do, past, present, or future. One must be willing to bend the knee to God's will regarding morality.

One must also come to see the moral failure (sin) in their lives as a bad thing that they'd like to be rid of, rather than excusing it as the fault of others, or revelling in it as part of the pleasure of life, or shrugging it off as just "who I am."

One must appeal to God in these matters for both forgiveness and help in living as they should.

Given that God has provided a champion for the problem that humanity faces (the backstory of which not all will fully know), one whose heart is truly yielded to all these things will naturally and eagerly receive Word of this as Good News. God has solved the seemingly irreconcilable demands of both justice and forgiveness in that champion.

Those with ears to hear will receive this solution — Jesus — and believe what He has done in life and on the cross for their sake — the resurrection being both confirmation of His divine authority and also the sign of the defeat of death which awaits us all, and is the only barrier between us and facing this God whom we fail at every turn. They will believe on (or upon) Jesus as Lord and their means of salvation, surrendering dependence upon their own ideas of self-righteousness and earning the favor of God.

The outward expression that we have understood and accepted these things is that we have made Jesus Lord and

committed ourselves to following Him, conform our character to His, resist our sinful inclinations, and are interested in learning all about Who God is and what has been done for us in Christ.

This commitment to the Lordship of Christ naturally leads to the acceptance of subsequent beliefs. If Jesus is indeed Lord, then He holds all authority, and what He said and taught to His followers is our guide — the New Testament. And if this is the divine story, as intended by God for men, then we have reason to believe that it is comprehensible to us, and He will insure (in spite of the fallibility of men and demonic plots) that its essential message will not be lost or corrupted until all things are completed. Given that Jesus affirmed every categorical section of the Old Testament, and claimed to be its promised Messiah, then that, too, is a source of truth and understanding.

Those doctrines that are sometimes characterized as “essential” for salvation, are merely the highlights of this redemption narrative, which are those things being clear and consistent, and which indicate that someone has yielded themselves to the authority of Christ and the scriptures, and understands these things. It is not that believing them is what saves, but they are what the saved naturally come to believe. Confessing them is the tangible, verbal act of affirming the Gospel, but is not necessarily identical to a life committed to putting it into practice, which is saving faith.

# Should Facebook Democrats be punished for censorship and election interference?

**Wintery Knight** · 13 January 2025 · Archived copy · Original

I've written many times about Facebook's continuous efforts to alter their products and services to censor Christians and conservatives. And I've written about how they have spread misinformation and censored true stories in order to help their allies in the Democrat party. But now Facebook is claiming that they will change their old ways. Should we believe them?

This article from The Federalist collects together many stories of their past actions.

> Meta has repeatedly displayed anti-conservative prejudice. For example, it directly censored The Federalist at least 11 times, suspended the Facebook account of the America First Policy Institute, and restricted the account of conservative Hillsdale College.
>
> When asked why users should vote for Vice President Kamala Harris or former President Donald Trump, Meta AI told users positive things about the Democrat but negative things about the Republican. Research has shown that media bias can shift elections.
>
> Zuckerberg, Meta's founder and CEO, also directly poured $350 million through nonprofits into local election offices in 2020. The funding helped boost turnout in mostly Democrat areas, and enabled left-wing groups like the Center for Tech and Civic Life to meddle in local election processes.
>
> That same year, the company engaged in government collusion to exert draconian control over public discussions online about a prudent Covid-19 response. It also caved to pressure from the FBI to censor the New York Post's Hunter Biden laptop story as "Russian misinformation" — even though the story proved true.

So, should we think that Zuckerberg and his secular left lackeys have turned over a new leaf? Or, are they just trying to avoid jail time by sucking up to Trump (who is prone to sycophant behavior). Time will tell. I don't have any faith in Big Tech. You can tell what they think from their political donations, which is disproportionately delivered to Democrat party candidate. And their political convictions definitely do affect their products and services. If it were up to me, they would be charged, tried, fined and imprisoned. For years.

# The Trump Cabinet pick who can crush the Deep State

**Wintery Knight** · 14 January 2025 · Archived copy · Original

I blogged previously about Kash Patel (FBI) and Jay Bhattacharya (NIH) but when I saw an article (below) on Daily Signal about Russ Vought (OMB) by the politics editor, I thought I'd better read it. And after I read it, I though I'd better share it. First of all, Vought is an excellent conservative. Second, he has a lot of experience. And third, he is an outspoken evangelical Christian.

Daily Signal:

> The Office of Management and Budget is a less well-known entity within the executive branch, but few are as critical for ensuring the implementation of the president's agenda. President-elect Donald Trump has once again placed that awesome responsibility in Russ Vought's hands.
>
> […]Trump released a statement announcing Vought's nomination as OMB director on Friday evening. "I am very pleased to nominate Russell Thurlow Vought, from the Great State of Virginia, as the Director of the United States Office of Management and Budget. He did an excellent job serving in this role in my First Term – We cut four Regulations for every new Regulation, and it was a Great Success! Russ graduated with a B.A. from Wheaton College, and received his J.D. from the Washington University School of Law," Trump's statement read.
>
> "Russ has spent many years working in Public Policy in Washington, D.C., and is an aggressive cost cutter and deregulator who will help us implement our America First Agenda across all Agencies. Russ knows exactly how to dismantle the Deep State and end Weaponized Government, and he will help us return Self Governance to the People. We will restore fiscal sanity to our Nation, and unleash the American People to new levels of Prosperity and Ingenuity. I look forward to working with you again, Russ. Congratulations. Together, we will Make America Great Again!"

So, this is the guy who did the cut four regulations for ever one new regulation. And he graduated from Wheaton College, back when Wheaton was still a conservative Christian school.

More:

> In a recent interview with Tucker Carlson, Vought explained how OMB can… kill the deep state—a death by a thousand cuts.
>
> "OMB is the nerve center of the federal government, particularly the executive branch," Vought told Carlson. "Office of Management and Budget has the ability to turn off the spending that's going on at the agencies. It has all the regulations coming through it to assess whether it's good, or bad, or too expensive, or could be done a different way, or 'What does the president think?'"
>
> In short, "presidents use OMB to tame the bureaucracy," Vought said.
>
> "It is the President's most important tool for dealing with the bureaucracy, the administrative state," he reiterated. "And you know, the nice thing about President Trump is he knows that, and he knows how to use it effectively."

And he's experienced:

> Vought was previously atop the OMB, first in an acting capacity and then confirmed by the Senate, for the second half of Trump's first term.
>
> As Trump and Vought prepared to depart the White House in 2021, Vought told the president of his intention to start the Center for Renewing America, a Washington, D.C.-based think tank that sought to keep Trump's

> policy vision alive in the nation's capital. Trump was supportive of Vought's endeavor, and the pair remained in close contact while Trump was out of power.
>
> Vought's fingerprints have been all over Republican politics and the conservative movement for the past four years. He wrote the Project 2025 chapter on how to reform the Executive Office of the President of the United States. In the media, he was an outspoken proponent for "draining the swamp" by making the federal agencies once again accountable to the president and the American people. And, over the summer, Vought lead the Republican National Convention's policy platform committee.
>
> Now, his fingerprints will be all over bringing the bureaucracy to heel.

I was snooping around in far-left communist atheist publications, and found this hand-wringing about Vought's Christian convictions:

> In 2021 he founded the Centre for Renewing America, an organisation whose mission is to "renew a consensus of America as a nation under God".
>
> His religious views have provoked controversy. In Mr Vought's confirmation hearing in 2017—he squeaked through by a single vote—Senator Bernie Sanders pointed to an article by Mr Vought in which he described Muslims as "condemned" for having rejected Jesus Christ. Mr Vought replied that he respected the right of every person to express their religious beliefs. In the secretly recorded meeting last year he said that elected leaders should discuss whether to prioritise Christian immigrants over those of other faiths. And he has called for a total abolition of abortion—a position that is too extreme for even most American conservatives.
>
> But Mr Vought's religiosity gives a scorching fervour to his criticism of politics and society, and that appeals to the Republican base. He regularly describes the federal government as "woke and weaponised" and has warned that the Democratic Party is "increasingly evil" because it forces secularism on families. He also was an early combatant in the pushback against diversity policies, which became a potent campaign theme for Mr Trump: in 2020 he wrote an official memo saying that anti-racism training in the federal government was divisive and anti-American.

So, let's conclude with this. The best Trump pick, the one you've probably never heard of, is the most conservative one, and he's in a great position to smash the secular left Deep State.

# Why you should read “Up From Slavery” by Booker T. Washington

**Wintery Knight** · 15 January 2025 · Archived copy · Original

Lately, my friends have been very excited that I’m a non-white conservative. They want me to answer the grievances of BLM people, and explain from my own experiences what Christianity and conservative policies have to say about making the lives of non-whites better. My friend Wes recommended “Up From Slavery” by Booker T. Washington to help me focus my thoughts.

Here’s a summary of the book:

> ## Dignity through Labor
>
> Over the course of *Up From Slavery,* Washington develops the idea and ideal of dignity through labor. For Washington, the gravest aspect of the institution of slavery is the denigration of labor for both blacks and whites. Because the enslaved had no personal investment or return on their labor, they did not complete their work with an attitude toward improvement. Likewise, whites, largely deprived of meaningful labor, were robbed of the ability to achieve self-sufficiency. In both races, this produced personalities and characters that seek to escape labor. Washington emphasizes labor as the only way to make oneself useful in an interdependent, modern society. Throughout the whole of *Up From Slavery*, Washington searches for and obtains work. Further, once he obtains it, Washington completes all labor to best of his ability, no matter how lowly the task. At the Tuskegee Institute, Washington makes this idea and ideal a foundational ethos. All students who study at the Tuskegee Institute must learn a trade or industry alongside their more traditional academic pursuits. In addition, many of the buildings, most of the furniture, the wagons, and the materials used at the school are produced by students. This level of practical skill and diligence also acts as the foundation of Washington’s theory and program for racial uplift.
>
> ## Selflessness, Desire to Be Useful to One’s Community
>
> The people that Washington most admires and models himself after are those he labels selfless. Washington defines this as the willingness to work on the behalf of others. For Washington, this is not only about duty or labor, but also about the willingness to do one’s best for the benefit of the collective good. Washington believes that racial prejudice can be overcome if black people make themselves indispensable to their communities and their nation. The brick-making episode provides an example. Though the brick-making enterprise at Tuskegee felled three kilns before successfully producing bricks, the venture eventually proved successful and the school began to sell its bricks on the open market. Washington describes how whites who were unsympathetic or apathetic to the education of blacks and the overall project of the Tuskegee Institute were willing to purchase Tuskegee bricks due to their quality and convenience. Washington suggests that if black race can find their niche in society by fulfilling a need, then they can co-exist peacefully and productively with whites.
>
> ## Impracticality of Political Agitation
>
> Throughout *Up From Slavery*, Washington defends his ideas about racial advancement and uplift by subtly undermining the proposals of his critics. Though Washington does not explicitly state his objection to the strategies of specific thinkers like W.E.B. Dubois or even his predecessor, Frederick Douglass, he nevertheless highlights the wastefulness of political agitation for equal rights at every chance he gets. To do this, Washington shows that political agitation results in worse relations and outcomes than those that existed before. For example, when he goes home to Malden after his second year at the Hampton Institute, Washington finds that both the salt-furnace and the coal-mine are not in operation due to worker’s strikes. In Chapter IV, Washington describes how strikers usually spent all their savings during the strikes and returned to work in debt, but at the same wages. He raises the impracticality of political agitation again after his

> controversial Atlanta Exposition speech. After the success of his speech, he hypothetically asks if a black man would have been invited to give a speech had people agitated to put a black person on the program. He answers in the negative, saying that such opportunities can only arise through merit.

And here's a summary of his most famous speech:

> On September 18, 1895, Booker T. Washington was selected to give a speech that would open the Cotton States and International Exposition in Atlanta, Georgia. The speech, which is often referred to as the "Atlanta Compromise," was the first speech given by an African American to a racially-mixed audience in the South. In it, Washington suggested that African Americans should not agitate for political and social equality, but should instead work hard, earn respect and acquire vocational training in order to participate in the economic development of the South. By doing so, eventually, he stated, African Americans would gain the respect of white society and be granted the rights of full citizenship.

There's a free full audio version of the book, and the full text is online. I recommend this book to people of all races, because as the sexual anarchy brought on by feminism becomes widespread, the majority of the children of tomorrow will face the same kinds of challenges.

I see Washington's ideas as consistent with a Christian worldview, where we don't expect to be treated fairly. We expect sinful people to treat us badly. What Christianity says is to be patient, and focus on your relationship with God and loving your neighbor. And one way to love your neighbor is to sell them something valuable that you made through your labor. Another way is to work and save, and give to charity.

Government solutions to problems like racism and poverty aren't a top priority for Christians. Most of all, we need the freedom to be good, and to do good. That's priority one. You may not make your life better by being moral and diligent, but it's rare that doing so causes you to harm yourself. It's very important that you not harm yourself.

So, this dovetails nicely with my own story. My married non-white parents were not smart enough or willing enough to monitor my education, but they were clear that they wanted me to do well in order to find good-paying work. So I completed my BS and MS in a STEM field, and went to work right away, and I've been at it continuously for 22 years now. I save most of what I earn for charity and early retirement.

I've never experienced any of the racism or police brutality that American blacks complain about. And that's because I follow what Washington is teaching. I dress in a clean way that doesn't communicate danger to others. I'm careful to spend my time reading apologetics, economics and military history. I don't listen to popular music or watch popular TV or movies. I don't hang out with people who blame other people for their lack of success.

I got my first job by volunteering to do it for free on Saturdays for 7 months. My first full-time job salary after college was $50,000. Then I got a raise of $6,000 and then a raise of $9,000. I used to work 70 hour weeks in my 20s. I graduated college with $9,000 dollars in the black, because I went to a small local college and lived at home, and never spent any money on alcohol. My net worth is now about $1.35 million. By the way, the secret to becoming wealthy is to not spend money on showing off. You can be very generous to your friends and still get rich. Just never buy anything that is designed to communicate "status" to anyone. And never spend money on alcohol or chasing sex outside of marriage.

At no time did I accept that the problems defined by the secular left were my real problems. And at no time did I accept their "solutions" as real solutions to anything. As black economist Thomas Sowell writes, the "solutions" of the left are not effective at helping people like me. The "solutions" of the left are designed to make leftists feel better, and look more virtuous to others. You are much better off reading the Bible, Christian apologetics, free market economics, American military history, etc., and then respecting what you learn from that in your decision-making. I think that reading the right stuff is even more important than having good parents or attending church.

# What is healthcare like in a universal coverage single-payer system?

**Wintery Knight** · 16 January 2025 · Archived copy · Original

I want to make sure that America does not adopt single-payer healthcare, and one way to do that is to always be ready to debate healthcare policy with people who ask me. Another way to prevent single-payer is to collect evidence for you, so you can be ready, too. One country that has single-payer healthcare is Canada, and we can learn a lot from them about how well it works.

Here's an article from The Federalist, about healthcare in Canada.

It says:

> When a Canadian child was rushed to the hospital after nearly drowning, his parents say doctors threatened to take the child off life support and suggested harvesting his organs.
>
> "We had 14 days to prepare his funeral and say goodbye to him," Nicolas Tétrault, the boy's father and a former Montreal politician, told The Federalist in English, his second language. "They were promoting to harvest the organs and give them away."
>
> Tétrault said his two-year-old son, Arthur, drowned in October. An ambulance took Arthur to a hospital where doctors resuscitated him, and he was later transferred to Montreal Children's Hospital, where he was stabilized. But doctors told his parents Arthur had brain damage and an abnormal breathing pattern. According to Tétrault, after approximately five weeks doctors gave an ultimatum — they would "unplug" the boy from life support on Nov. 29.
>
> So Tétrault and his wife fled with Arthur to New Orleans, where he is being treated at Ochsner Medical Center and is off a ventilator.

Canadian healthcare is run by socialists. It has taxpayer-funded infanticide, taxpayer-funded child mutilation, and taxpayer-funded euthanasia. When you have an entire society that is majority secular and leftist, that's what you get in the healthcare system. It's not run by Christians. It's not pro-life. It doesn't respect conscience rights. And it doesn't respect parental rights. Canada is run by atheistic communists, and their healthcare system reflects that.

More from the article:

> Doctors were "constantly talking about" harvesting Arthur's organs, according to Tétrault.
>
> "They were killing him with all these drugs, and they were justifying the fact that they were promoting to harvest the organs and give them away," he said. "They were talking about it all the time."
>
> Tétrault said Sam Shemie (of the pediatric ICU and advanced care unit), Samara Zavalkoff (of the pediatric and advanced ICU), and Stephen Liben (of palliative care and pediatric advanced care) — along with several nurses — suggested harvesting Arthur's organs.
>
> "They don't force you, but the way it's done, it's kind of a strong marketing from the head of the pediatric unit," he said. "Everybody talks about it over there."
>
> […]Tétrault said the difference in Arthur's treatment stems from the difference between American and Canadian hospital systems.
>
> "In Quebec, it's a socialist hospital system where the patients are seen as an expense. In the U.S., a patient is seen as an income, as a client," he said. "It makes the entire difference in the world."

And this is important:

> Canadian doctors harvest organs from euthanasia victims, and some medical professionals say they should do so while the patient is alive for best organ quality, as The Federalist previously reported.

It's the same kind of thing that goes on in China. And Canada's prime minister Trudeau is a great admirer of Chinese communism.

Well, that's enough about that. But I do think that it's important for Americans to be familiar with these horror stories. When you go in the hospital in America, you take it for granted that the doctors are there to help you. But in Canada, the doctors are there to kill you – to stop you from draining money from their government-controlled system. And they want to harvest your organs. Their system is already at the breaking point. They are charging $17, 713 per family just so that people can get on a waiting list with a median wait time of 30 weeks. You're not paying for healthcare – you're paying for a spot on a waiting list. So, of course they are desperate to kill any patients they can, to get people off the waiting lists. Because they know that we are laughing at their third-world healthcare system.

# Ron DeSantis names conservative successor to moderate Marco Rubio

**Wintery Knight** · 17 January 2025 · Archived copy · Original

Trump has selected Marco Rubio to be Secretary of State. I'm not a fan of Marco Rubio – he has a trashy 69% rating from Heritage Action, while Mike Lee has 91% and Ted Cruz has 90%. DeSantis gets to pick someone to replace Rubio in the Senate, and he's chosen Florida Attorney General Ashley Moody. Moody has a LONG track record of conservative battling, so let's get into it.

First, the news from Daily Wire:

> Governor Ron DeSantis (R-FL) announced on Thursday that he has chosen Florida Republican Attorney General Ashley Moody to replace Sen. Marco Rubio, the likely incoming Secretary of State, in the U.S. Senate.
>
> Moody, 49, has served as Florida's AG under DeSantis since 2019 and has been at the forefront of multiple issues recently. In November, she sued FEMA over its alleged discrimination against Trump supporters during the disaster relief efforts after Hurricane Milton. She also took on special prosecutor Jack Smith "for his politically motivated persecution of the former president," DeSantis said at a press conference in Orlando.

Lots of achievements:

> "I wanted somebody with a demonstrated record of delivering results on those important issues," DeSantis said. "Talk is cheap. We need people that have demonstrated fidelity to these principles with their actions."
>
> Moody won two statewide attorney general elections by large margins. Before she became attorney general, Moody served as a federal prosecutor and was the youngest judge in Florida when she was elected to the Circuit Court in Hillsborough County in 2006.

I did a search on Christian Post, to see what adventures she's been having that would interest Christians.

Christian Post says that she loves to defund abortion providers:

> A federal court has reinstated a 2016 Florida law that allows the state to strip taxpayer funding from Planned Parenthood, citing the overturning of Roe v. Wade as justification.
>
> […]Last month, AG Moody announced that she was going to vacate the 2016 injunction, citing the overturning of Roe last year as a justification.
>
> "Now that the case at the center of the court's reasoning has been overturned, we are petitioning the court to vacate the court's injunction and allow the will of our state's legislative body and the people who elected them to take effect," stated Moody in February.

Christian Post says that she doesn't like pro-abortion domestic terrorism:

> The law firm First Liberty Institute announced in a post on X Thursday that Heartbeat of Miami, a pro-life pregnancy center in Hialeah, Florida, had finally secured "justice" after it was vandalized by pro-abortion activists in the wake of the U.S. Supreme Court's Dobbs v. Jackson Women's Health Organization decision which ruled the U.S. Constitution does not contain a right to abortion.
>
> The post elaborated on what it meant by "justice," specifically highlighting that "vandals who spray-painted threatening messages on Heartbeat's property last year will pay for their crimes." Expressing gratitude for the assistance of Florida's Republican Attorney General Ashley Moody for "holding these violent protesters

> accountable," First Liberty described the development as a "big win for Florida's pro-life community."

And Christian Post also says that she thinks that biological men should stay out of women's sports:

> A lawsuit filed by Florida's attorney general and three other states warns that the Biden administration's Title IX rule change will force female athletes to compete against men despite the U.S. Department of Education's claims that the rule does not apply to participation on athletic teams.
>
> […]"Biden's new Title IX rules shred protections for women — that so many fought for over decades," Florida Attorney General Ashley Moody said in a Monday statement.
>
> "The idea that young girls can now legally be forced to undress in the same room with males in what is supposed to be a safe space like a locker room, that a young woman could be randomly assigned a roommate that is a biological male with little to no say over the matter, or that biological men would be eligible for women's scholarships is ludicrous," the attorney general continued. "To ensure safety and fairness, Florida will aggressively fight Biden who refuses to think through the real-world consequences before overhauling regulations."

By the way, if you're paying attention to the federal Attorney General nominee, Pam Bondi, she is also really conservative. I like about half of Trump's picks, and dislike the other half, but Bondi is definitely one of the better picks. Great record, solid conservative, lots of evidence of being able to fight through adversity to victory.

# CNN found liable for defaming Navy veteran, has to pay $5 million

**Wintery Knight** · 18 January 2025 · Archived copy · Original

Corporate news media is losing viewers, and no wonder – they are very biased in how they cover the news. But sometimes, they go beyond bias, and actually defame other people. Recently, CNN, a former news network, ran a story about a Navy veteran. And they got in big trouble for it. And now they have to pay millions and millions of dollars.

I have to link to the Media Research Center's Newsbusters blog, because nobody does a better job of covering media bias than Newsbusters.

They write:

> On Friday, a jury of six in Florida's 14th Circuit Court in Bay County has found CNN liable for the defamation of Navy veteran Zachary Young and that he was entitled economic and emotional damages, a ruling that proved CNN was not worthy of their moniker "the most trusted name in news." They also found that CNN's reporters had demonstrated expressed malice, actual malice, and outrageous behavior, which opened the door for a massive punitive damages judgement.
>
> The jury also found Young was entitled to $4 million in economic damages and $1 million in emotional damages. They also ruled that CNN should be subject to punitive damages, but the two sides settled Friday afternoon following nearly 90 minutes of discussions.

In another story from the New York Post, they talked about how much the punitive damages might be:

> Louis G. Adolfsen, a defamation lawyer and founding member of the Melito & Adolfsen PC law firm in Manhattan, speculated that the settlement could be for as high as $25 million considering Panama City is a "rural or semi-rural" area where the jury pool is likely hostile to CNN.

Back to Newsbusters – this part is interesting. The material was false, and false to the level of defamation:

> A ruling of liable meant the jury had determined CNN published the defamatory material, the material was "of and concerning" Young, the materials that was published was false, said false material rose to the level of defamation, CNN was negligent in their news reporting about Young, and that Young had sustained damages as a result of the material.

"False material rose to the level of defamation". And these are the kinds of people who fact check what you say on social media.

Internal CNN e-mails show what they are really like:

> Young's lead counsel Vel Freedman said in his closing that the Marquardt segment ran on 11 different CNN shows both domestically and on CNN International. And, in addition to Marquardt's defamatory report, it was accompanied by anchors making their own defamatory statements about Young.
>
> The jury also found CNN had operated with expressed and actual malice. The evidence presented to the jury was clear; Marquardt had messaged colleagues that he was going to "nail this Zachary Young Mfucker" while calling the report was going to be "your funeral bucko." CNN editors called him a "shit" and "a shitbag" who had a "punchable face."

They say that journalism is one of the easiest majors to get. And when you read their internal e-mails, you really can see that they've never really moved beyond high school. What do people learn in journalism school? Nothing.

Anyway, it's Saturday, so enjoy some good news.

# Joe Biden commuted the sentences of 37 brutal murderers: is that justice?

**Wintery Knight** · 19 January 2025 · Archived copy · Original

On this blog, I've previously blogged about how the death penalty deters criminals from committing violent crimes. And in another post, I reported on the findings of famous systematic theologian Wayne Grudem about whether the Bible supports or opposes the death penalty. Well, the actions of Joe Biden, a secular leftist, have provided an occasion for us to look at the death penalty again.

Here's a very interesting article at the The Federalist written by famous conservative theologian Dr. Robert Gagnon.

He writes:

> Two days before Christmas, in the waning days of his presidency, Joe Biden commuted the death sentences of 37 out of 40 federal prisoners to a life sentence. Only by hearing what they had done can we begin to grapple with their offense. Many of them were responsible for gruesome murders of multiple persons.

In the rest of the article, he looks at some of the murderers that Joe Biden pardoned.

Here are some:

> Jorge Avila-Torrez "sexually assaulted and stabbed to death two girls — Laura Hobbs, 8, and Krystal Tobias, 9 — who had been riding their bicycles in their neighborhood in a suburb north of Chicago in 2005. Four years later, he strangled naval officer Amanda Snell, 20, inside her barrack in Arlington, Virginia." He subsequently admitted to these crimes. A year after that, he kidnapped, raped, and strangled a woman in a secluded area of northern Virginia, leaving her for dead by the side of a road. She survived and reported the crime to police, finally leading to his arrest and conviction.
>
> […]Marvin Gabrion murdered 19-year-old Rachel Timmerman before she could testify in a 1997 rape case against him. He handcuffed her, covered her eyes and mouth with duct tape, wrapped her in chains, weighted her down with concrete blocks, and threw her into a lake alive. He also murdered Rachel's 11-month-old daughter.
>
> […]Richard Jackson in 1994 kidnapped, raped, and murdered 22-year-old Karen Styles when she was going for a jog in Asheville, North Carolina. A hunter found her partially naked body duct-taped to a tree, with a gunshot wound to the head. Jackson later confessed to the crime.

This one is interesting because it shows the difference that the death penalty makes – it deters people who have life sentences from killing anyone else:

> Anthony Battle "murdered an Atlanta prison guard with a hammer in 1994 while serving a life sentence for murdering his wife, a US Marine, in 1987." Battle confessed that he killed the guard because he was "tired of being bossed around" and wanted to kill the first guard he saw. He showed no remorse. At Battle's trial, three prison guards from the facility testified that Battle's actions emboldened other prisoners to threaten staff because "without the death penalty, all prisoners … believe there is nothing that can happen to them."

Dr. Gagnon says that it's an injustice when someone who murders escapes the approriate punishment:

> Biden's action in commuting nearly all federal death sentences to life sentences for heinous murderers should generate a sense of moral outrage. This moral outrage emanates not from a bloodthirsty desire for vengeance but from a sense of justice regarding the value and dignity of innocent life. Taking the innocent life of one

> made in God's image, especially in particularly heinous murders such as the above, requires the forfeiture of the murderer's life (see Genesis 9:6).

One question I find myself asking is why should taxpayers get the bill for letting these people live to the end of their natural lives? They should either have to pay for their own upkeep, or family members should pay. Why do taxpayers have to get the bill? If Joe Biden wants to be so generous, then why doesn't he get the bill for it? It seems like the secular left is always being generous with other people's money, and being non-judgmental by risking other people's safety.

# Study: 1 in 8 divorces is caused by student loan debt

**Wintery Knight** · 20 January 2025 · Archived copy · Original

I like to make plans in advance and calculate everything out before I try to do anything. This is the curse of being a software engineer. We're taught to take a test-first approach to design. So, when I think about marriage, I naturally think about what tests marriage is supposed to pass, and work backwards from there to requirements for each of the spouses.

Here's some research from CNBC that might help young people to avoid a divorce, if they respect the research in their choices.

Excerpt:

> When it comes to student loan debt, "for richer, for poorer" doesn't quite cut it.
>
> In general, finances are the leading cause of stress in a relationship, according to a study by SunTrust Bank, but student debt takes a particularly hard toll on a marriage.
>
> More than a third of borrowers said college loans and other money factors contributed to their divorce, according to a recent report from Student Loan Hero, a website for managing education debt.
>
> In fact, 13 percent of divorcees blame student loans specifically for ending their relationship, the report found. Student Loan Hero surveyed more than 800 divorced adults in June.

Here is a link to the full study from Student Loan Hero.

I think in general, you can't just do whatever you want before marrying and jump into it unprepared. Marriage involves specific requirements in order to work, such as being faithful to your spouse, and buying things that you need for the marriage enterprise, like a home, and baby stuff. It doesn't make any sense to say "I want to get married" and then not prepare for marriage by being careful about preparing for the behaviors marriage that requires of you. Being debt-free is one of those behaviors that marriage requires of you.

So how can we be debt-free, so that the marriage will be stable? Well, one way to be debt-free is to find a way to learn skills that will allow you to get a job without going to college, like being a self-taught software engineer. One of my friends actually did that, and now he's with a very good software company as a remote worker. But if you're going to go to college, you can avoid debt by studying something that will get you a high-paying job when you graduate.

This 2017 article from Harvard Business Review is interesting.

It says:

> Examining 46,934 resumes shared on Glassdoor by people who graduated between 2010 and 2017, the researchers looked at each person's college major and their post-college jobs in the five years after graduation. They then estimated the median pay for each of those jobs (also using Glassdoor data) for employees with five years of experience or less. Their key finding: "Many college majors that lead to high-paying roles in tech and engineering are male dominated, while majors that lead to lower-paying roles in social sciences and liberal arts tend to be female dominated, placing men in higher-paying career pathways, on average."

Here's the plot, and you can click it to expand it:

Median salaries by major, broken out by gender – don't study things at the bottom!

As you can see from the graph, it's especially important to share the message about choosing a major, salaries and student loan debt with WOMEN, because as the graph shows, they tend to choose the wrong majors, if the goal is to pay off student loans and avoid divorce. Everyone who wants marriage to go smoothly needs to choose majors that are near the top of the graph, like nursing, chemical engineering, computer science, or mechanical engineering. It doesn't make sense to go to college if you aren't going to graduate in one of these high-paying fields.

As you might expect from the graph, women hold the majority of student loan debt, according to the Boston Globe, and that's because women tend to choose majors that don't result in good-paying jobs. And we already saw how this becomes a risk factor for divorce.

**Student loans delay marriage and children**

Another interesting piece of data, reported by The Consumerist, is that people with student loans tend to delay marriage, which means the couple has fewer children:

> As consumers navigate life's financial journey, they are faced with major financial milestones, like buying a home. But student loans are also delaying consumers from reaching these goals.
>
> Survey respondents report delaying homeownership (23 percent), buying or leasing a car (23 percent), having children (10 percent) and getting married (9 percent) because of their student loan burdens.

So, it's not just that there is an increased risk of divorce from student loans, but there's also fewer children, which means a diminished legacy. I can't speak for how others would see this, but for myself, I want to pass on my beliefs to as many effective, influential Christian children as I can.

When I was in high school, I was far more interested in becoming an English teacher than I was in becoming a software engineer. It was my Dad who overruled my choice of college major when I was still in high school. He had me take a first-year English course at a local university. When I saw how politicized and useless it was (they were studying all sorts of politically correct postmodern relativist stuff, instead of the classics, and they weren't trying to learn any wisdom from any of it), I chose computer science. I did what was likely to avoid divorce, and likely to support having many children.

# What should we think about the Democrat party, based on Biden's presidency?

**Wintery Knight** · 21 January 2025 · Archived copy · Original

I saw two interesting articles over at The Federalist, listing out 12 corrupt actions that Joe Biden committed, and 7 reasons why Biden was one of our worse presidents. I read through these, and the first thing I though of was all of the "Christians" who cheered him on in his presidency: people like David French, Russell Moore, etc. How could "Christian" leaders support such an immoral man?

Here's the first article about the 12 corrupt actions.

Releasing Gantanamo Bay prisoners:

> The Biden administration has been busy its last few weeks in office repatriating terrorists and other bad actors imprisoned at Gitmo back to foreign countries throughout the world. The decision appears to be an attempt to fulfill Biden's pledge to close the high-security detention facility by the end of his presidency.
>
> Unsurprisingly, relocating Gitmo detainees to foreign countries has produced horrendous consequences. According to the New York Post, "Twenty-three years after the 9/11 attacks on NYC, new US intelligence documents reveal 234 'rehabbed' former Gitmo detainees have returned to terrorism and killing Americans — an alarming 32% recidivism rate. Most of them have not been recaptured and are still at large."

Pardoning Hunter Biden to protect himself:

> For Americans who have followed the Biden family's corruption, it came as no surprise when Sleepy Joe doled out a blanket pardon for his son Hunter last month. Rather than only wiping Hunter's slate clean of his tax and gun charges, Biden's pardon covered all "offenses against the United States which [Hunter] has committed or may have committed or taken part in" dating back to January 2014.
>
> The move marked a clear attempt by the outgoing president to protect his son (and himself) from criminal investigation into the Biden family's foreign business dealings.

Raising the price of oil and gas:

> The Biden administration's war on American energy is nothing new. But his latest action to stymie incoming President Donald Trump's plans to unleash the country's oil and gas industries takes on a whole new level of despicable.
>
> As The Federalist's Tristan Justice reported, Biden issued an executive order earlier this month "banning new oil and gas projects across 625 million acres of ocean across the East and West Coasts, the Gulf of Mexico, and the Bering Sea." While Trump has vowed to undo the "ridiculous" edict, the law weaponized by the outgoing administration to shut down the planned projects will seemingly make such an action much more difficult.

Bailing out people who refuse to pay back the money they borrowed for useless university degrees – with your children's money:

> After being denied by the U.S. Supreme Court twice, Biden is spending his final days in office attempting to circumvent the nation's high court by unilaterally bailing out student loan borrowers. The administration announced Monday it used taxpayer money to "cancel" the debts of more than 150,000 individuals who chose to take on such loans.

In the second article, we hear about 7 reasons why Biden was one of our worse presidents.

Runaway inflation, caused by blocking energy production, and runaway government spending:

> According to the latest figures from the Bureau of Labor Statistics, $100 when Biden took office is now worth just $82.88. Relatedly, Americans' credit card debt has risen 51 percent under Biden (through last September), to $1.166 trillion, the highest tally on record.
>
> What's more, the federal government racked up more deficit spending during just the first half of Biden's presidency than it did during the four years of World War II — even after adjusting for inflation (see "Chart"). With such massive quantities of borrowed money sloshing around in the economy, inflation predictably ensued, with everyday Americans paying higher prices for items ranging from groceries… to Big Macs, to airline tickets, to cars, to homes. Speaking of homes, 30-year mortgage interest rates rose from 2.8 percent to 7.0 percent on Biden's watch.

Supporting racial divisiveness and misogyny:

> On his very first day in office, Biden issued an executive order on "equity." Asserting that America is a land of "unbearable … systemic racism" — a claim unsupported by the evidence — Biden launched "an ambitious whole-of-government equity agenda." This radical agenda informed Biden's entire presidency — from his refusal to enforce federal immigration laws (which are said to disadvantage non-citizen "people of color and others who have been historically underserved, marginalized, and adversely affected by persistent poverty and inequality"), to his rejection of the colorblind ideal in favor of race-consciousness and favoritism, to his insistence that boys and men should be allowed to play girls' and women's sports and use ladies' locker rooms, and that anyone who says otherwise is a "bigot" whose views should be suppressed by the federal government and/or its social media allies. This radical leftist social agenda, which defies both basic notions of equal treatment for all and basic recognition of biological truths, became a hallmark of Biden's presidency.

Lawlessness and abuse of power:

> The federal courts routinely had to rebuke Biden for issuing kingly mandates that usurped legislative power. Examples include his vaccine/mask decree at the expense of private workers; his transportation edict requiring Americans to wear masks on planes, trains, and buses; his proclamation that federal employees had to get one of the experimental Covid vaccines or else be fired; and his ploy, via executive fiat, to transfer some $400 billion in student-loan debt from borrowers to taxpayers as a whole. (After being rebuked by the Supreme Court in the latter instance, Biden declared that "that didn't stop me," as he went around the verdict and transferred much of that student loan debt anyway.) Each of these monarchical decrees was struck down by the federal courts on the grounds that Biden exceeded his lawful authority.
>
> Not content merely with usurping legislative power, Biden also took it upon himself to try to rewrite the Constitution. On literally the last official federal workday of his presidency (the Friday before Inauguration Day), Biden — in opposition to a recent statement from Colleen Shogan, his own appointee as the Archivist of the United States — declared that the Equal Rights Amendment, a proposed amendment whose ratification window expired more than 40 years ago, somehow is now "the law of the land" and "has become part of our Constitution" — per his decree.

Since evangelicals for Biden – people like Russell Moore, David French, the ERLC, etc. – supported these actions and policies, you really have to wonder whether "Christian" leaders are capable of understanding morality. Did they just get compromised by their desperate desire to get the approval of non-Christians?

# Biden issues last-minute pardons, confirming the guilt of his Democrat party allies

**Wintery Knight** · 22 January 2025 · Archived copy · Original

Just hours before President-elect Donald Trump's inauguration, Joe Biden gave sweeping pardons to Dr. Anthony Fauci, Army General Mark Milley, and members of the Democrat-run January 6 committee. These pardons offer convincing evindence that these individuals engaged in wrongdoing, and their acceptance of these pardons are evidence that they admit that they are guilty.

This article from The Federalist is by Beth Brelje, and she has a very direct headline: "Mentally Incompetent Biden Confirms Guilt Of J6 Committee, Fauci, Milley With Last-Minute Pardons".

It says:

> To be pardoned for a crime, there must be a crime. None of the people on this list have been charged for the awful ways they harmed people in their official capacities.
>
> […]As The Federalist's Tristan Justice recently reported, during the hearings, "Cheney started coordinating with ex-White House aide Cassidy Hutchinson using the encrypted Signal app to circumvent Hutchinson's attorney, Stefan Passantino. Hutchinson suddenly went from a benign fact-witness without much to offer Jan. 6 investigators to the committee's breakout star, offering outlandish testimony about then-President Trump attempting to violently hijack a vehicle from his Secret Service detail so he could personally riot at the Capitol."
>
> So which is it? Award-winning behavior, or a crime? She tampered with a witness and tainted the facts presented to the American people.
>
> Sounds like a crime, and with this preemptive pardon, Biden proves he thinks so too — a crime vulnerable to investigation that would lead to charges. It could be no other reason.

What about Milley? What crime did he commit?

> Milley was chairman of the Joint Chiefs of Staff and was the top dog during the disastrous Afghanistan withdrawal, which saw 13 soldiers die, hundreds of Americans stranded, and millions of dollars' worth of military equipment abandoned.
>
> Heads did not roll. Instead, the White House characterized the withdrawal as a success.
>
> Under Milley's leadership, the military went woke, embracing LGBTQ issues and placed racial equity above military readiness. Federalist writer Jordan Boyd reported in 2021 how, the day before the withdrawal, Milley was in a Senate a hearing explaining that he wanted to understand "white rage."
>
> The book, "Peril," claimed that after Jan. 6, Milley called his Chinese counterpart, Gen. Li Zuocheng, and allegedly told him the "American government is stable" and promised the U.S. would not attack and that the Chinese would be warned first.
>
> With the last-minute pardon, Biden finally admits the withdrawal was a crime. But he robs the U.S. of the justice that comes from accountability. It is not surprising; Biden is good at bad exits, a BBC report said.

Another article from The Federalist, by Jordan Boyd, goes into the details on why Fauci needs a pardon:

> The evidence overwhelming indicates Fauci played a large role in funding the Wuhan lab where the deadly virus originated and also worked overtime to subvert information about the viral leak that killed millions of people worldwide.

> Biden's pardon for Facui notably extends back to Jan. 1, 2014. It was around that same time that NIAID's parent agency, the National Institutes of Health, claimed it ceased funding for the gain-of-function research (GOF) "involving influenza, SARS, and MERS viruses." GOF involves extracting viruses from the wild and engineering them to infect humans to study potential therapeutics. Just three years later, GOF was eligible for taxpayer funding again.
>
> Fauci not only supported GOF research of coronaviruses like Covid-19, but he also devoted taxpayer funding to it — specifically in the form of a $600,000 five-year annual grant through the EcoHealth Alliance for work at the Wuhan Institute of Virology. Then he lied about the research's existence to Congress.
>
> As early as February 2020, Fauci knew the signs of Covid-19's creation and origin pointed to the Wuhan lab. He also knew from a 2020 Federalist article that masking was ineffective, flip-flopped on the importance of in-person schooling, nuked the herd immunity strategies in favor of deadly lockdowns, and pushed for a forced jab proven not to prevent infection.
>
> Instead of informing Americans of these facts, Fauci colluded with federal government players like the CIA, the Department of State, and the Biden White House to downplay the truth about the virus. He also turned a blind eye when corporate media and Big Tech censors used their power in the public square to defame and deplatform those who dissented from the regime's Covid response.
>
> Fauci opted for ineffective and even harmful Covid-19 policies that made him and his agency millions. Shortly before the pandemic he became the highest-paid federal employee.
>
> Biden's pardon of Fauci may look like an obstacle to the justice he deserves, but it's actually a gift in the form of an admission.
>
> For one, Biden's pardon does not protect Fauci from a reckoning in the form of state prosecutions. Nor does it prevent Congress from compelling Fauci to explain in detail his role in one of the biggest scandals in U.S. history.
>
> Sen. Rand Paul, chairman of the Senate Homeland Security and Governmental Affairs Committee, already vowed on Monday to continue Congress's pursuit to "pierce the veil of deception."
>
> "If there was ever any doubt as to who bears responsibility for the COVID pandemic, Biden's pardon of Fauci forever seals the deal," he wrote on X.

What should we make of these pardons? These pardons make me think about the evangelicals for Biden, like David French and Russell Moore. These two clowns present themselves to others as pious and moral Christians. And they claim to care about morality. But now we know that they don't care about morality at all. Or the rule of law. They just care about saying whatever they have to say to get the approval of secular left elites.

# Knight and Rose grade Trump's Cabinet picks on the Freethinking podcast

**Wintery Knight** · 23 January 2025 · Archived copy · Original

Desert Rose and I went on the Freethinking Ministries podcast to talk about Trump's Cabinet picks. We talked about around a dozen of Trump's Cabinet picks with host Josh Klein. Which ones will be confirmed? Which ones were home runs? Which ones were stinkers? Tune in to find out. And along the way, we  talked about why Christians should care about policy. See below for my notes.

Here's the YouTube episode:

And if you like audio-only podcasts, you will find the episode here on Apple, here on Spotify, and anywhere else you listen to podcasts. These guys are a regular listen for me, because they are great on apologetics, and on policy. Which is uncommon.

Here are my notes with links to the articles that I read, to prepare to go on the show:

- This Trump Pick Can Silently Strangle the Deep State (Daily Signal)
- Trump taps longtime ally Kash Patel to lead FBI (New York Post)
- 5 biggest FBI scandals during Christopher Wray's tenure as director (Fox News)
- Trump taps COVID-censored Stanford professor Jay Bhattacharya to lead NIH (New York Post)
- 5 revelations from the House COVID-19 report (Christian Post)
- Trump names his picks for FDA, CDC and surgeon general (New York Post)
- Trump Taps Champion of Free Speech, Biological Reality to Replace Woman at DOJ Who Jailed Pro-Lifers (Daily Signal)
- Putting RFK Jr. in charge of health breaks the first rule of medicine (New York Post)
- 'Disgusting': Nikki Haley Condemns Two Trump Cabinet Picks (Daily Caller)
- Dr. Oz, Running For U.S. Senate As A Republican, Has A History Of Donating To Democrats (Daily Wire)
- Trump Cabinet pick Dr. Janette Nesheiwat faces MAGA fury after COVID videos resurface (UK Daily Mail)
- President Trump needs the full story on Penny Schwinn's education history in TN (Robby Starbuck)

We talked about several other picks not discussed in these links, as well.

# Stephen C. Meyer debates Charles Marshall on the Cambrian explosion

**Wintery Knight** · 24 January 2025 · Archived copy · Original

Here is a summary of recent podcast of Unbelievable between intelligent design proponent Stephen C. Meyer and UC Berkeley evolutionary biologist Charles Marshall. Dr. Marshall had previously reviewed Dr. Meyer's new book "Darwin's Doubt" in the prestigious peer-reviewed journal "Science".

Details:

> Stephen C Meyer is the world's leading Intelligent Design proponent. His new book Darwin's Doubt claims that the Cambrian fossil record, which saw an "explosion" of new life forms in a short space of time, is evidence for ID.
>
> Evolutionary biologist Charles Marshall of the University of California, Berkeley has written a critical review of the book. He debates Meyer on whether Darwinian evolution can explain the diversity of life in the Cambrian rocks.
>
> For Meyer & Darwin's Doubt:
> http://www.darwinsdoubt.com/
>
> For Charles Marshall's review:
> http://www.sciencemag.org/content/341/6152/1344.1.full

Here's the debate on YouTube:

The brief summary this time is not provided by me, it's from Evolution News.

Excerpt:

> This past weekend Britain's Premier radio network broadcast a debate between Stephen Meyer and UC Berkeley paleontologist Charles Marshall, recorded at the beginning of November. As David Klinghoffer noted yesterday, the subject of the debate was Meyer's book *Darwin's Doubt*. Yes, that's the same Charles Marshall who reviewed *Darwin's Doubt* in *Science* back in September. See here for our multiple responses.
>
> It was an excellent debate, with both participants offering important insights and good arguments, though in my opinion Meyer unquestionably had the better of it, especially concerning the key scientific question of the origin of the information necessary to build the Cambrian animals. Nevertheless, both parties came to the table ready to engage in serious, thoughtful, and civil discussion about the core issues raised in *Darwin's Doubt*, and we commend Marshall not only for participating, but for focusing his critique of the book on the central scientific issues, something other critics have conspicuously failed to do.
>
> The debate was consequently both constructive and civil. Both parties complimented, as well as critiqued, the work of the other. Marshall, for example, described the first third of *Darwin's Doubt* — the section that discusses the Cambrian and Precambrian fossil record, Marshall's own area of principle expertise — as "good scholarship." He also said it "looks like good science" and that Meyer "writes well," and that he (Marshall) "really enjoyed reading"*Darwin's Doubt*. Meyer, for his, part expressed his admiration for Marshall's many scientific papers in paleontology and noted that he had been looking forward to the conversation because he and Marshall clearly "shared a passion for the same subject," despite their different perspectives. Of course, Marshall is not pro-ID and both men expressed spirited disagreements, but they did so in a mostly respectful way that made the debate all the more interesting and engaging to listen to.

I was very impressed with Dr. Marshall's performance during the debate, although he did try to poison the well a bit

against ID at the beginning, and he got nasty at the end. It's amazing how Dr. Meyer was able to get him to stop it with the politics and get serious, just by sticking to the science. Even when Marshall got insulting at the end, it was still valuable to see how the other side has to abandon rational argument and scientific evidence once they see that they can't win on the merits. It's "Inherit the Wind" in reverse.

Evolution News also posted a more complete guide to the debate in this post, and I recommend that you read that post before listening to the debate if you are not familiar with the science.

This is a great debate, and you definitely ought to listen to it. I hope I've posted enough here to convince you. If you haven't yet bought "Signature in the Cell" and "Darwin's Doubt", then I urge you to get them, although they are intermediate/advanced level books. The two books are the state of the art in intelligent design research, good enough to be debated with a University of California, Berkeley professor of biology.

# Fascist atheist group loses lawsuit against Ratio Christi student ministry

**Wintery Knight** · 25 January 2025 · Archived copy · Original

Consider the case of “Secular Student Alliance v. U.S. Department of Education”, in which an atheist group called Americans United for Separation of Church and State filed suit to challenge a Trump-era rule that guaranteed first amendment protections to religious student groups on college campuses. Why would atheists want to use government to coerce religious people against their will?

Are there such things as human rights in atheism? Of course not. The universe is an accident. Human beings are just accidental arrangements of atoms that evolved by chance. Their behaviors are determined by chemicals in their brains. And there is no reward or punishment waiting for us when we die. So, of course atheists look at American documents like the Constitution as a pack of nonsense. And of course they have no rational foundation for basic human rights, such as freedom of speech.

Well, lucky for these religious student groups, Alliance Defending Freedom – a Christian legal firm – decided to step in and oppose the fascist atheists. And they won! The U.S. District Court for the District of Columbia ruled that the Trump-era regulation defending freedom of speech is valid.

Here is what the ADF said about their win:

> Universities are meant to be a marketplace of ideas where students can learn to respect diverse opinions and beliefs and not have to fear punishment or harassment because of their own values. The Department of Education under President Trump rightfully updated its regulations to ensure that institutions of higher education have policies that align with the First Amendment. Christian student group Ratio Christi has at least twice gone to court over discriminatory policies targeted at their beliefs, and the Department of Education updated its regulations to prevent these types of violations. We’re pleased the court upheld First Amendment freedoms for college students everywhere.

I learned about this story from the Sound Faith Consulting blog, and the leader of Sound Faith actually did an interview about these issues with the head of Ratio Christi, Corey Miller:

I still have a passion for what goes on at university campuses, and listening to that video reminded me of how much Christianity is attacked on campuses. It’s definitely something to pray about, and something to think about for people who enroll in universities hoping to get an education.

You know what I always say: whether trades or degrees, make sure that you are learning something that lets you solve problems for customers in the private sector. Don’t go for a non-STEM degree that just leaves you with student loans and no job and no money. If you are going to go non-STEM, at least be aware of the risks. The rewards can be great (you could work for the ADF as a lawyer) but the risks are much higher. So count the cost.

# What's the strongest argument in favor of Darwinian evolution?

**Wintery Knight** · 26 January 2025 · Archived copy · Original

As you can see from the right column of the blog, I am currently reading a review copy of Dr. John West's new book "Stockholm Syndrom Christianity", which is coming out early next month. The book provides a lot of interesting details on what causes Christian institutions to abandon historical Christian convictions. And I found an interesting article by Dr. West to give you a preview.

This article from Evolution News has the title "Do Scientists Have Freedom to Question Darwinism?" and it's adapted from one of the chapters of the amazing book "The Comprehensive Guide to Science and Faith: Exploring the Ultimate Questions About Life and the Cosmos."

Here's an excerpt from the article:

> The list of scientists, teachers, students, and others who have faced retaliation or discrimination for their public skepticism of Darwinism is long and growing.
>
> […]At San Francisco State University, tenured biology professor Dean Kenyon was removed from teaching introductory biology classes. Once an influential proponent of Darwinian evolution, Kenyon had come to doubt key parts of Darwin's theory and expressed those doubts to students in class, including his belief that some biological features exhibited evidence of intelligent design.
>
> […]Scientists outside of biology who express skepticism about Darwinism can also face discrimination and bullying. At Baylor University, mathematician William Dembski was fired as director of an academic center he had founded to explore the idea of intelligent design as an alternative to unguided Darwinian evolution. Eventually his faculty contract was not renewed as well, and he lost his job. Dembski, who holds doctorates from the University of Chicago and the University of Illinois at Chicago, had exemplary academic credentials and publications, but his research center had been strenuously opposed by Baylor's biology faculty.

This one is about a professor who identified as an evolutionist, but simply argued for giving every scientific theory a critical evaluation:

> Sometimes scientists can find themselves blacklisted if they merely express openness or sympathy to a critical examination of Darwinism. Astronomer Martin Gaskell was a top applicant to become the head of an observatory at the University of Kentucky. In the words of one university faculty member there, "his qualifications…stand far above those of any other applicant." But Gaskell was ultimately rejected for the job after the biology faculty waged an internal war against his hiring. Why did they want to prevent him from getting the job? First, Gaskell was perceived by other faculty to be "potentially evangelical." Worse, although he identified himself as a supporter of evolution, in online notes for a science and faith talk, Gaskell respectfully discussed the views of intelligent design proponents and acknowledged that modern evolutionary theory had unresolved problems — just like any scientific theory.

When it comes to intelligent design, the approach of critics is similar to the Inquisition. Don't just expel the heretic, but make sure that everyone else has been warned not to criticize the church:

> Eric Hedin was an assistant professor of physics at Ball State University. Like Gaskell, he had a long list of peer-reviewed science publications. For many years, he taught an interdisciplinary honors class at Ball State called "The Boundaries of Science,"which explored the limits of science.

Now they are going to talk about Jerry Coyne. You might remember that I recently blogged about his view that atheists cannot ground morality rationally in their atheistic worldview. So of course, here he is, behaving immorally

and trampling the human rights of anyone who disagrees with him:

> During one small part of the course, Hedin discussed the debate over intelligent design in physics and cosmology — not biology. Hedin's course received positive student reviews. However, atheist evolutionary biologist Jerry Coyne at the University of Chicago and the Freedom from Religion Foundation filed complaints. Ball State then violated its own procedures and appointed an ad hoc committee stacked with avowed critics of intelligent design, including two who spoke at a previous Darwin Day conference organized by the Ball State Freethought Alliance, a group whose "original goal," according to its president, was "belittling religion." Hedin's class was eventually cancelled by Ball State. In addition, the university president issued a campus speech code not only banning professors from covering intelligent design in science classes but also from expressing support for the concept in social science and humanities classes.

Isn't it interesting to see that the best argument for Darwinism is "if you don't make a faith commitment to Darwinism, I will destroy your career".

And the second best argument is like it, "if you claim to be a Christian and deny Darwinism, then I will let you lead the NIH, or publish books with a prestigious academic press. And you can be a professor at Wheaton College, Calvin College, Westmont College or Baylor University."

Sometimes, I think it's better to just get your STEM degrees, and then just go directly into the private sector. Then you can be paid well, do productive work that customers are willing to pay for, without having to compromise your faith to impress the secular leftist elites, and without having to beg for grant money from the secular leftists in government.

# New course by Shanda Fulbright on worldviews for students grades 7-9

**Wintery Knight** · 27 January 2025 · Archived copy · Original

I noticed that a new online course taught by Shanda Fulbright is going to run in February. It's for students in grades 7 to 9. The title is "Expedition to Reality: Exploring Worldviews and Major World Religions". There is a 20% off coupon if you register before this Wednesday, so I thought I'd better mention it. Shanda has a lot of experience in this area.

Here's what it is about:

> In today's culture, your child is constantly confronted with competing worldviews and tough questions about faith. Are they ready to respond with confidence and clarity?
>
> Now your 7th-9th grade student can join certified apologist Shanda Fulbright and Dr. Frank Turek in this BRAND NEW 8-WEEK PREMIUM COURSE, Expedition to Reality: Exploring Worldviews and Major World Religions, where they'll learn how to identify the core principles of Christianity, compare it to other world religions, AND HAVE FUN DOING IT!
>
> This course will equip your child to stand strong in a world full of false ideas. They'll explore ideas like:
>
> - What is a worldview, and why does it matter?
> - What sets Christianity apart from other belief systems?
> - How can I confidently respond to challenges to my faith?
> - What tools are available to think critically about competing ideas?
>
> Through interactive lessons, real-world applications, and a focus on building a strong Christian worldview, your child will grow in their faith and develop tools to engage thoughtfully with the world around them.

Shanda has a Christian apologetics and worldview podcast called "Her Faith Inspires" and she has a lot of teaching experience in her background:

> Shanda Fulbright is a former California Public School teacher. She is credentialed with a certification in multiple subjects for grades K-8. Along with her BA from California State University, Fresno, she has a certificate in Christian Apologetics from Biola University, a certificate from the CrossExamined Instructor's Academy as well as several certificates from Online Christian Courses.

You can learn more about the course and see if you think it's a match for you and your children here.

# Utilitarianism and the Moral Life by J. P. Moreland

**Wintery Knight** · 28 January 2025 · Archived copy · Original

I found this essay on After All, but it looks like their site is not working well, so I'm just going to steal it and post it here, in case it disappears completely. This is one of my favorite short essays on utilitarianism, and it's a wonder that the thing can't stay up somewhere. Well, it will have a home here now. I'd be surprised to see anyone else be this awesome in a measly 1000 words as Dr. Moreland is below.

—-

## Utilitarianism and the Moral Life

### What Is Utilitarianism?

Utilitarianism (also called consequentialism) is a moral theory developed and refined in the modern world by Jeremy Bentham (1748-1832) and John Stuart Mill (1806-1873). It can be defined as follows:

> *An action or moral rule is right if and only if it maximizes the amount of nonmoral good produced in the consequences that result from doing that act or following that rule compared with other acts or rules open to the agent.*

By focusing on three features of utilitarianism, we can clarify this definition.

### (1) Utilitarian theories of value.

What is a nonmoral good? Utilitarians deny that there are any moral actions or rules that are intrinsically right or wrong. But they do believe in objective values that are nonmoral.

*Hedonistic utilitarians* say that the only intrinsic good is pleasure and the avoidance of pain. Quantitative hedonists (Bentham) say that the amount of pleasure and pain is the only thing that matters in deciding between two courses of action, I should do the one that produces the greatest amount of pleasure and the least amount of pain (measured by factors like the duration and intensity of the pleasure). Qualitative hedonists (Mill) say that pleasure is the only intrinsic good, but the type of pleasure is what is important, not the amount. They would rank pleasures that come from reading, art, and friendship as more valuable than those that come from, say, a full stomach.

*Pluralistic utilitarians* say there are a number of things that have intrinsic, nonmoral value: pleasure, friendship, health, knowledge, freedom, peace, security, and so forth. For pluralists, it is not just the pleasure that comes from friendship that has value but also friendship itself.

Currently, the most popular utilitarian view of value is subjective preference utilitarianism. This position says it is presumptuous and impossible to specify things that have intrinsic nonmoral worth. So, they claim, intrinsic value ought to be defined as that which each individual subjectively desires or wants, provided these do not harm others. Unfortunately, this view collapses into moral relativism.

### (2) Utilitarians and maximizing utility.

Utilitarians use the term utility to stand for whatever good they are seeking to produce as consequences of a moral action (e.g., "pleasure" for the hedonist, "satisfaction of subjective preference" for others). They see morality in a means-to-ends way. The sole value of a moral action or rule is the utility of its consequences. Moral action should maximize utility. This can be interpreted in different ways, but many utilitarians embrace the following: the correct moral action or rule is the one that produces the greatest amount of utility for the greatest number of people.

### (3) Two forms of utilitarianism: act utilitarianism and rule utilitarianism.

According to act utilitarianism, an act is right if and only if no other act available maximizes utility more than the act in question. Here, each new moral situation is evaluated on its own, and moral rules like “don’t steal” or “don’t break promises” are secondary The moral agent must weigh available alternatives and choose the one that produces the best consequences. Rule utilitarianism says that correct moral actions are done in keeping with correct moral rules, However, no moral rule is intrinsically right or wrong. Rather, a correct moral rule is one that would maximize utility if most people followed it as opposed to following an alternative rule. Here, alternative rules (e.g., “don’t lie” vs. “don’t lie unless doing so would enhance friendship”) are compared for their consequences, not specific actions.

## What Is Wrong with Utilitarianism?

**Several objections** show the inadequacy of utilitarianism as a normative moral theory.

**First**, utilitarianism can be used to justify actions that are clearly immoral. Consider the case of a severely deformed fetus. The child is certain to live a brief, albeit painless life. He or she will make no contribution to society. Society, however, will bear great expense. Doctors and other caregivers will invest time, emotion, and effort in adding mere hours to the baby’s life. The parents will know and love the child only long enough to be heartbroken at the inevitable loss. An abortion negates all those “utility” losses. There is no positive utility lost. Many of the same costs are involved in the care of the terminally ill elderly. They too may suffer no pain, but they may offer no benefit to society. In balancing positives and negatives, and excluding from the equation the objective sacredness of all human life, we arrive at morally repugnant decisions. Here deontological and virtue ethics steer us clear of what is easier to what is right.

**Second**, in a similar way, utilitarianism denies the existence of supererogatory acts. These are acts of moral heroism that are not morally obligatory but are still praiseworthy. Examples would be giving 75 percent of your income to the poor or throwing yourself on a bomb to save a stranger. Consider the bomb example. You have two choices — throwing yourself on the bomb or not doing so. Each choice would have consequences and, according to utilitarianism, you are morally obligated to do one or the other depending on which option maximized utility. Thus, there is no room for acts that go beyond the call of morality.

**Third**, utilitarianism has an inadequate view of human rights and human dignity. If enslaving a minority of people, say by a lottery, would produce the greatest good for the greatest number, or if conceiving children only to harvest their parts would do the same, then these could he justified in a utilitarian scheme. But enslavement and abortion violate individual rights and treat people as a means to an end, not as creatures with intrinsic dignity as human beings. If acts of abortion, active euthanasia, physician-assisted suicide, and so forth maximize utility, then they are morally obligatory for the utilitarian. But any moral system that makes abortion and suicide morally obligatory is surely flawed.

**Finally**, utilitarianism has an inadequate view of motives and character. We should praise good motives and seek good character because such motives and character are intrinsically valuable. But utilitarianism implies that the only reason we should praise good motives instead of bad ones, or seek good character instead of bad character, is because such acts would maximize utility. But this has the cart before the horse. We should praise good motives and blame bad ones because they are good or bad, not because such acts of praising and blaming produce good consequences.

**In sum**, it should be clear that utilitarianism is an inadequate moral theory. Unfortunately, ours is a pragmatic culture and utilitarianism is on the rise. But for those of us who follow Christ, a combination of virtue and deontological ethics is a more adequate view of common sense morality found in natural law and of the moral vision contained in the Bible.

# NY Times claims Democrats don't support infanticide, as Democrats vote for infanticide

**Wintery Knight** · 29 January 2025 · Archived copy · Original

Why do so many Democrat voters believe in conspiracy theories that don't match reality? Well, if you look closely at the news sources they read, then you can understand why. Take this case of the New York Times, a former newspaper, fact-checking Trump about his claim that Democrats support infanticide. Trump is wrong, claims the NY Times. But what is the truth?

Consider this article from the Christian Post:

> In a Friday article, The New York Times highlighted the Republican leader's video address during the 2025 March for Life rally in Washington, D.C.
>
> The newspaper mentioned Trump's appearance at the annual pro-life demonstration in a piece analyzing some opposition within the movement to Robert F. Kennedy Jr.'s nomination for health secretary.
>
> "At the march on Friday, Mr. Trump repeated false claims about abortion rights, vowing to 'stop the radical Democrat push for a federal right to unlimited abortion on demand up to the moment of birth and even after birth,'" The New York Times reported. "Mr. Vance called Mr. Trump' the most pro-family, most pro-life American president of our lifetimes.' The crowd roared."

Oh my goodness, Democrats are pro-life? They don't vote against legislation that protects babies born alive during abortions?

The article continues:

> Every Democrat in the U.S. Senate voted this month against the Born-Alive Abortion Survivors Protection Act introduced by Sen. James Lankford, R-Okla. The bill would have guaranteed equal protection under the law for "any infant born alive after an abortion."
>
> Under the proposed legislation, all health care practitioners present during the birth of an infant who survives an abortion attempt must "exercise the same degree of professional skill, care, and diligence to preserve the life and health of the child as a … health care practitioner would render to any other child born alive at the same gestational age."

Oh, so they Democrats do support infanticide. And this position of Democrat legislators isn't new. In fact, Barack Obama also voted in favor of infanticide when he was a state senator in Illinois.

In fact, here is the New York Times (a former newspaper) reporting on it:

> Both Mr. Obama and his critics agree that, as chairman of the Health and Human Services Committee in the state legislature in 2003, he led efforts to defeat a bill called the Born Alive Infants Protection Act.

"He led efforts to defeat a bill called the Born Alive Infants Protection Act." in 2003. Oh! So this support for infanticide is not even new, it goes back over 20 years.

Back to the Christian Post article, you can see that these secular leftists really love infanticide:

> Other abortion-related legislation that recently made headlines includes a proposed constitutional amendment in Virginia that critics say could establish a right to abortion throughout all nine months of pregnancy.
>
> In a 21-19 vote this month, the Democrat-controlled Virginia Senate approved Senate Joint Resolution 247

> along party lines. The passage means that the Virginia General Assembly can weigh in on the proposal to amend the Virginia Constitution for a second time following the next general election.

They want to have the recreational sex with hot strangers, and then they don't want to be "punished with a baby", as old Obama used to say. Like children, they don't want any consequences for their own pleasure-seeking. And they've never grown out of that.

It's not just Obama. Many, many Democrat voters supported his rise to the presidency. Why? Because infanticide is actually totally normal for Democrat voters, and the only time they deny it is when Trump describes accurately what they have been supporting for years. Then suddenly they have to pretend like they haven't been supporting infanticide – and voting for pro-infanticide candidates – for years. And they expect you to believe them, because they hope you don't read anything except the New York Times.

In debates between Christianity and atheism, the Christian will often introduce a moral fact, such as "torturing little babies for fun is wrong", as an example of a moral fact that everyone agrees on. The problem is that Democrats like Barack Obama, and his allies at the New York Times, DO NOT agree on this fact. And when you point this out to them, that's when they have to start lying about it. And they just hope that you are dumb enough to believe them.

It's very important to understand that secular leftists use moral language in order to sound like moral people. But they have no understanding of morality, any more than a cat understands the titles of books while walking around in a library. Morality has no rational foundation in atheism. There's no such thing as objective moral values and moral duties on atheism. And no moral choices, because there's no free will. And no accountability when you die.

If you're still reading trash like the New York Times, just be aware that this is not real news. Its just Democrat party propaganda.

# Study: sentences are 63% more severe for men than for women

**Wintery Knight** · 30 January 2025 · Archived copy · Original

So, in response to yesterday's post, I have been asked what are some of the other reasons that cause men to become disinterested in dating and marriage. I have a list as long as my arm. But here's another one for today. Today's reason is that the legal is system is biased against men. There many examples of the bias, but I'll focus on sentencing.

The study I want to talk about today is called "Estimating Gender Disparities in Federal Criminal Cases", and it's published in the peer-reviewed journal "*American Law and Economics Review".*

The abstract says this:

> This paper assesses and decomposes gender disparities in federal criminal cases. It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables. Decompositions show that most of the unexplained disparity appears to emerge during charging, plea-bargaining, and sentencing fact-finding. The approach provides an important complement to prior disparity studies, which have focused on sentencing and have not incorporated disparities arising from those earlier stages. I also consider various plausible causal theories that could explain the estimated gender gap, using the rich dataset to test their implications.

The key sentence there is "It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables."

I also found this paragraph interesting:

> The estimated gender disparities are strikingly large, conditional on observables. Most notably, treatment as male is associated with a 63% average increase in sentence length, with substantial unexplained gaps throughout the sentence distribution.

This anti-male discrimination becomes apparent to men when they are going through the divorce process.

About 70% of divorces are initiated by women, and most of them for frivolous reasons (reasons that were not recognized as valid in the law prior to "no-fault-divorce" being enacted). The reasons are also not recognized in the Bible. Throughout the divorce process, men encounter anti-male bias. This begins with the common use of false accusations against the man, in order to get sole custody, which provides the woman with greater child support payments from the man. These false accusations are usually not based on any evidence, such as police reports. They just emerge during the divorce proceedings and are used to eject the man from the home, and get the woman sole custody of the kids. In 90% of cases, the woman gets sole custody of the kids. And this is despite the fact that single-father homes have similar outcomes for children as married two-parents homes. The results of single-mother homes are disastrous for children in many areas, including poverty, crime, mental health, sexual activity, etc. But the court system insists on doing what is worse for children by separating the father from the child. Even the meager visitation rights that fathers get are not enforced.

Failure to pay alimony and child support can land men in prison. And the laws are enforced very unfairly there, as well. Consider this case from Canada:

> A wealthy businessman will have to pay more than $50,000 a month in spousal support for 10 years to a woman with whom he had a long-term romantic relationship even though they kept separate homes and had no children together, Ontario's top court has ruled.

Seeing this, many men today have declined to participate in dating and marriage. And I could come up with *dozens* more reasons like this one. Based in peer-reviewed studies. It's not one reason deterring men from marrying, it's dozens of reasons. In every case, society has decided that men are expendable. And sadly, the church has largely ignored the root causes of men's retreat from dating and marriage. The church simply has nothing at all to say to men who are faced with these risks, costs and disincentives.

When I explain these problems to pro-marriage conservatives, they confess to never having heard about any of these issues. They say "I just like the idea of people falling in love and having lots of cute babies". They haven't really bothered to think about the calculations that men run before deciding what to do with women. Maybe it's time for Christian leaders to do a little more homework about these issues. Maybe there is something Christian churches can do to make marriage a bit more appealing to men.

We are already seeing this happening in conservative states like Florida and Tennessee. In Florida, there are new laws requiring that child custody be 50-50 in most circumstances. This acts as a deterrent against women who want to file frivolous divorces just to get child support from wealthy men. Florida also banned permanent alimony, which is another positive step to make marriage more fair for men. (Although many women in Florida were furious about it). In Tennessee, it is now a misdemeanor to claim child support payments from a man who is not the biological father of the child.

These are the kinds of policy solutions that will bring marriage back. But I've never heard Christians talking about these issues. All I ever hear from pious Christian leaders is that men need to "man up", as if manning up makes the threats from feminist laws and courts disappear. It doesn't work, but it does signal virtue, which seems to be the goal of many pious Christian leaders. We're going to have to do better than virtue-signaling if we want to reverse the decline of marriage. It's not going to be solved by shaming and blaming men.

# Abigail Shrier's thoughts on Trump's ban on taxpayer-funding of transing children

**Wintery Knight** · 31 January 2025 · Archived copy · Original

Abigail Shrier wrote a popular book called "Irreversible Damage" where she talked about the movement to change a child's appearance to the opposite sex with drugs and surgeries. Her goal was to convince voters that this caused "irreversible harm" to children. Now that president Trump has signed a ban on taxpayer-funding of transitioning children, she has excellent thoughts.

Here's the article in the Free Press.

She starts like this:

> When the history of 21st-century gender mania is written, it should include this signal entry: In 2020, a website called GoFundMe, usually a place to find disaster-relief appeals and charities for starving children, contained more than 30,000 urgent appeals from young women seeking to remove their perfectly healthy breasts.
>
> Another entry, from June 2020: The New England Journal of Medicine, America's platinum medical publication, published a piece explaining that biological sex is actually "assigned at birth" by a doctor—and not a verifiable fact, based on our gametes, stamped into every one of our cells. In fact, biological sex ought to be deleted from our birth certificates—the authors claimed—because a person's biological sex serves "no clinical utility."

How did it start? She has an answer:

> It began with Obamacare.
>
> Section 1557 of the Affordable Care Act, President Barack Obama's signature legislation incentivizing and coercing private insurers to offer their products on a government exchange, prohibited those companies from discriminating on the basis of sex. And in May 2016, six years after the bill's enactment, the Obama administration's Department of Health and Human Services added this fateful qualification: Discrimination on the basis of "sex" was to include discrimination on the basis of "gender identity."
>
> "Obama effectively wrote into law, through healthcare, that gender identity is a protected class," healthcare executive and gender-medicine researcher Zhenya Abbruzzese told me. And that opened a huge new source of funding for these treatments. "Because once these insurers feel like they have to cover it, that's it. You have just turned on the engine," Abbruzzese said.
>
> If an insurer covers testosterone to treat a man who was deficient, then, according to gender ideology's cracked logic, the insurer would also need to cover testosterone for a woman identifying as a man. If a procedure to remove a man's unwanted breast tissue was covered, then a similar procedure for a woman identifying as a man must also be covered. Denying those claims could subject insurers to federal enforcement action.

Do you ever wonder why healthcare got so expensive after Obamacare was passed? It's not just because Obama increased the number of mandatory coverages, and mandated coverage of more people. It's the types of treatments that were now covered by health insurance companies. That's why caused YOUR premiums to go up.

I like to get into fights with my doctor. He kept insisting that doctors who support pandemic mandates and transitioning children are driven by "evidence", whereas opposition to these fads were based on "social media".

But was he right? No, he's wrong:

> The World Professional Association for Transgender Health (WPATH), an activist organization styled as a

> medical one, issued guidelines used as the "standards of care" by all major insurers and Medicaid to justify the provision of, and reimbursement for, gender transition services. WPATH represented their guidelines as evidence-based. Court-ordered discovery in a 2022 lawsuit filed by the Department of Justice to overturn Alabama's ban on gender treatments for minors revealed that WPATH's guidelines lacked solid evidentiary basis, but also that WPATH leadership knew it.
>
> The organization suppressed publication of systematic reviews of puberty blockers, cross-sex hormones, and surgeries undertaken by Johns Hopkins University. That research would almost certainly have revealed, as so many systematic reviews have now done, that while the risk of sterility, cardiac event, osteoporosis, and bone fracture were high, any alleged mental health benefits of the WPATH-approved puberty blockers-to-cross sex hormones protocol remained unproven.
>
> But the Biden administration pressed onward, suing any state that enacted bans on medical transition for minors. Assistant Secretary for Health Rachel Levine, a transgender adult, successfully pressured WPATH to drop minimum age requirements for gender medical treatments and surgeries in its September 2022 standards of care.

I blogged about this. And I guess that one of the reasons why Trump won is because people realized that the doctors were NOT operating on the basis of evidence at all. The doctors were being driven by the "big money" they were getting for drugging and mutilating these children. I blogged about that, too.

Back to Abigail. She talks about how the Obama and Biden regimes funded pro-trans research with taxpayer dollars. But they didn't get the results they wanted:

> The Obama and Biden administrations worked in tandem with activist organizations. Federal funds poured into tainted research. Gender physician Johanna Olson-Kennedy received nearly $10 million from the National Institutes of Health to study the effects of puberty blockers and cross-sex hormones on gender-confused adolescents ages 11 and up. (She later lowered the age to 8.)
>
> […]As for her nine-year study on puberty blockers, Olson-Kennedy didn't like the results so, by her own admission, she shelved them. "She said the findings might fuel the kind of political attacks that have led to the bans of the youth gender treatments in more than 20 states," according to The New York Times. She told the Times she intends to publish the data, but that getting her work to a place where it wouldn't be "weaponized" required it to be "clear and concise. And that takes time."
>
> The public that had funded her research has never had the opportunity to review its results.

OK, that's enough. You should read the whole article, it's just first class. Evidence, evidence, evidence.

By the way, if you missed Matt Walsh's opening monologue on Trump's action, he shows why it's actually better than you think.

If you are not listening to the Matt Walsh podcast, you should subscribe to it. Every opening monologue is worth a listen. We really need to return men to their rightful place as moral and spiritual leaders. We are not "servant leaders", as Christian feminists like to argue. If we encouraged men to make moral judgments, and lead, then we would never have had transgenderism in the first place. And we need to train women to prefer men who judge and lead on moral and spiritual issues. It will be a 180-degree change from what we have now, but we need to do it.

# The link between single mother welfare, fatherlessness, poverty and crime

**Wintery Knight** · 1 February 2025 · Archived copy · Original

What is the root cause of criminal behavior? This article by feminist sociologist W. Bradford Wilcox, who points out the link between fatherlessness and crime in an article on the AEI web site.

Wilcox writes:

> From Adam Lanza, who killed 26 children and adults a year ago at Sandy Hook School in Newtown, Conn., to Karl Pierson, who shot a teenage girl and killed himself this past Friday at Arapahoe High in Centennial, Colo., one common and largely unremarked thread tying together most of the school shooters that have struck the nation in the last year is that they came from homes marked by divorce or an absent father. From shootings at MIT (i.e., theTsarnaev brothers) to the University of Central Florida to the Ronald E. McNair Discovery Learning Academy in Decatur, Ga., nearly every shooting over the last year in Wikipedia's "list of U.S. school attacks" involved a young man whose parents divorced or never married in the first place.
>
> […]The social scientific evidence about the connection between violence and broken homes could not be clearer. My own research suggests that boys living in single mother homes are almost twice as likely to end up delinquent compared to boys who enjoy good relationships with their father. Harvard sociologist Robert Sampson has written that "Family structure is one of the strongest, if not the strongest, predictor of variations in urban violence across cities in the United States." His views are echoed by the eminent criminologists Michael Gottfredson and Travis Hirschi, who have written that "such family measures as the percentage of the population divorced, the percentage of households headed by women, and the percentage of unattached individuals in the community are among the most powerful predictors of crime rates."
>
> Why is fatherlessness such a big deal for our boys (almost all of these incidents involve boys)? Putting the argument positively, sociologist David Popenoe notes that "fathers are important to their sons as role models. They are important for maintaining authority and discipline. And they are important in helping their sons to develop both self-control and feelings of empathy toward others, character traits that are found to be lacking in violent youth." Boys, then, who did not grow up with an engaged, attentive, and firm father are more vulnerable to getting swept up in the Sturm und Drang of adolescence and young adulthood, and in the worst possible way.

So where do fatherless children come from? It turns out that government programs incentivize women to make them.

Dr. Michael Tanner of the libertarian Cato Institute explains how welfare causes fatherlessness in his testimony to Congress:

> Welfare contributes to crime in several ways. First, children from single-parent families are more likely to become involved in criminal activity. According to one study, children raised in single-parent families are one-third more likely to exhibit anti-social behavior.(3) Moreover, O'Neill found that, holding other variables constant, black children from single- parent households are twice as likely to commit crimes as black children from a family where the father is present. Nearly 70 percent of juveniles in state reform institutions come from fatherless homes, as do 43 percent of prison inmates.(4) Research indicates a direct correlation between crime rates and the number of single-parent families in a neighborhood.(5)
>
> As Barbara Dafoe Whitehead noted in her seminal article for The Atlantic Monthly:
>
> The relationship [between single-parent families and crime] is so strong that controlling for family configuration erases the relationship between race and crime and between low income and crime. This conclusion shows up time and again in the literature. The nation's mayors, as well as police officers, social

> workers, probation officers, and court officials, consistently point to family break up as the most important source of rising rates of crime.(6)
>
> At the same time, the evidence of a link between the availability of welfare and out-of-wedlock births is overwhelming. There have been 13 major studies of the relationship between the availability of welfare benefits and out-of-wedlock birth. Of these, 11 found a statistically significant correlation. Among the best of these studies is the work done by June O'Neill for the U.S. Department of Health and Human Services. Holding constant a wide range of variables, including income, education, and urban vs. suburban setting, the study found that a 50 percent increase in the value of AFDC and foodstamp payments led to a 43 percent increase in the number of out-of-wedlock births.(7) Likewise, research by Shelley Lundberg and Robert Plotnick of the University of Washington showed that an increase in welfare benefits of $200 per month per family increased the rate of out-of-wedlock births among teenagers by 150 percent.(8)
>
> The same results can be seen from welfare systems in other countries. For example, a recent study of the impact of Canada's social-welfare system on family structure concluded that "providing additional benefits to single parents encourages births of children to unwed women."(9)

The secular left in this country believes that fathers need to be separated away from their children, and that's why they support welfare programs that redirect money from husbands in intact families to single mothers. They believe that fathers are harmful because they set boundaries on children, and judge them and punish them when they act immorally. To the secular left, boundaries, judgments and punishments on children are bad, and must be stopped. So how can the secular left discourage men from marrying and teaching their own children morality? Well, they can tax married men, and they can give the money to single mothers.

Not only is crime caused by fatherlessness, but poverty is. as well.

Here is Dr. Robert Rector of the Heritage Foundation to explain:

> Census data and the Fragile Families survey show that marriage can be extremely effective in reducing child poverty. But the positive effects of married fathers are not limited to income alone. Children raised by married parents have substantially better life outcomes compared to similar children raised in single-parent homes.
>
> When compared to children in intact married homes, children raised by single parents are more likely to have emotional and behavioral problems; be physically abused; smoke, drink, and use drugs; be aggressive; engage in violent, delinquent, and criminal behavior; have poor school performance; be expelled from school; and drop out of high school.[19] Many of these negative outcomes are associated with the higher poverty rates of single mothers. In many cases, however, the improvements in child well-being that are associated with marriage persist even after adjusting for differences in family income. This indicates that the father brings more to his home than just a paycheck.
>
> The effect of married fathers on child outcomes can be quite pronounced. For example, examination of families with the same race and same parental education shows that, when compared to intact married families, children from single-parent homes are:
>
> - More than twice as likely to be arrested for a juvenile crime;[20]
> - Twice as likely to be treated for emotional and behavioral problems;[21]
> - Roughly twice as likely to be suspended or expelled from school;[22] and
> - A third more likely to drop out before completing high school.[23]
>
> The effects of being raised in a single-parent home continue into adulthood. Comparing families of the same race and similar incomes, children from broken and single-parent homes are three times more likely to end up in jail by the time they reach age 30 than are children raised in intact married families. [24] Compared to girls raised in similar married families, girls from single-parent homes are more than twice as likely to have a child

> without being married, thereby repeating the negative cycle for another generation.[25]
>
> Finally, the decline of marriage generates poverty in future generations. Children living in single-parent homes are 50 percent more likely to experience poverty as adults when compared to children from intact married homes. This intergenerational poverty effect persists even after adjusting for the original differences in family income and poverty during childhood.[26]

People on the left claim that poverty causes crime, but they don't look for the root cause of poverty. The root cause of poverty is the decline of marriage, which produces fatherless children.

# How is universal government-run healthcare working for Canada in 2024?

**Wintery Knight** · 2 February 2025 · Archived copy · Original

I always get excited when the annual report on Canadian healthcare comes out. A lot of people in my office love single payer healthcare. Except they don't know how it works in countries that have tried it. They imagine that it works well. They love the idea that healthcare will be free for them. But when I get my hands on a good study, it means a lot of fools are about to get a beat down.

Canada Universal Coverage Government Run Single Payer Healthcare Health Care Wait Times

Here's the latest from the Fraser Institute:

> - In 2024, physicians across Canada reported a median wait time of 30.0 weeks between a referral from a GP and receipt of treatment. Up from 27.7 in 2023.

> - This is 222% longer than the 9.3 week wait Canadian patients could expect in 1993.

> - The national 30 week total wait is comprised of two segments. Referral by a GP to consultation with a specialist: 15.0 weeks. Consultation with a specialist to receipt of treatment: 15.0 weeks.

> - After seeing a specialist, Canadian patients waited 6.3 weeks longer than what physicians consider to be clinically reasonable (8.6 weeks).

> - Across 10 provinces, the study estimated that patients in Canada were waiting for 1.5 million procedures in 2024.

> - Patients also suffered considerable delays for diagnostic technology: 8.1 weeks for CT scans, 16.2 weeks for MRI scans, and 5.2 weeks for Ultrasound.

Well, there's a saying in business. You can have a product or a service fast, or you can have it good, or you can have it cheap. Pick two out of 3. So, Maybe Canadian healthcare is not fast, but maybe it's good, and maybe it's cheap.

Canada Universal Coverage Government Run Single Payer Healthcare Health Care Cost Taxes

Let's turn to the Fraser Institute again:

> - Canadians often misunderstand the true cost of our public health care system. This occurs partly because Canadians do not incur direct expenses for their use of health care, and partly because Canadians cannot readily determine the value of their contribution to public health care insurance.

> - In 2024, preliminary estimates suggest the average payment for public health care insurance ranges from $4,908 to $17,713 for six common Canadian family types, depending on the type of family.

> - Between 1997 and 2024, the cost of public health care insurance for the average Canadian family increased 2.2 times as fast as the cost of food, 1.7 times as fast as the average income, and 1.6 times as fast as the cost of shelter. It also increased much more rapidly than the cost of clothing, which has been falling in recent years.

OK, so Canadians aren't getting healthcare fast, and they're not getting healthcare cheap. Maybe they're getting

really really good healthcare, though.

Here are the numbers from a recent study from Ipsos, a major Canadian pollster:

> An Ipsos survey for the Montreal Economic Institute is showing that Canadians' opinions about their provincial healthcare systems have not improved in 2024 compared to last year. As in 2023, we find that less than half (48%) of Canadians are satisfied with their provincial healthcare system, with only 8% saying they are very satisfied. This proportion is even lower among women (43%), as well as residents of the Atlantic (30%).

Well, they are getting garbage healthcare. And they are not actually paying for healthcare. They are paying massive amounts of taxes for *access to a waiting list for healthcare.* And they get in line behind refugees who cannot even speak English, and have paid nothing in taxes. That's what happens when you have universal-coverage government-run healthcare. That's how it actually works in real life.

And sometimes they even *die* while waiting for healthcare. Here is an article from the Toronto Sun from January 2025:

> Close to 15,500 people died waiting for health care in Canada between April 1, 2023 until March 31, 2024, according to data compiled by SecondStreet.org via Freedom to Information Act requests across the country.
>
> However, SecondStreet.org says the exact number of 15,474 is incomplete as Quebec, Alberta, Newfoundland and Labrador don't track the problem and Saskatchewan and Nova Scotia only provided data on patients who died while waiting for surgeries – not diagnostic scans.
>
> SecondStreet.org says if it extrapolates the unknown data, then an estimated 28,077 patients died last year on health care waiting lists covering everything from cancer treatment and heart operations to cataract surgery and MRI scans.

I know that a some Americans like to pick political leaders and policies based on their feelings. They want to feel good. They want to be liked. People who like government-run healthcare tend to be people with enormous student loan balances for worthless non-STEM degrees. They work in easy jobs in the public sector. They join labor unions because they're scared of competition and accountability. Many of them work in daycare or they teach little children, because they don't want to be challenged by adults. When you look at the numbers on healthcare in different countries, it's very clear what works and what doesn't work. Americans need to be smarter than Canadians. We have to vote based on reason and evidence.

# John West: 10 questions to ask when evaluating a Christian college

**Wintery Knight** · 3 February 2025 · Archived copy · Original

Well, Rose and I finished reading Dr. John West's new book "Stockholm Syndrome Christianity", and we recorded an interview with him about the topics he discusses in the book. One of the topics he is passionate about is how Christian colleges can maintain their Christian identity. He worked at a college that slid into secular leftism. It's hard on Christian students.

So, how can a Christian student avoid going to a college where they will face opposition from professors and administrators?

Here's a recent article from Dr. West, that offers some questions that the student can ask before making a bad choice.

It says:

> As a former professor at an evangelical Christian university, I am sometimes asked by concerned parents to recommend a good Christian college for them to consider for their children. Because the spiritual health of specific colleges and universities can change radically over time, and because there can be a wide diversity of views even among different academic departments on the same campus, it is not always possible to provide specific recommendations.
>
> What I can provide are questions you can ask if you or your teens are seeking to find a biblically-faithful college or university. Don't just rely on marketing materials produced by the college or university! Those materials will invariably stress how the institution integrates the Christian faith with learning in everything it does. These marketing materials may or may not reflect the actual situation on the campus. At the Christian university where I taught, the marketing materials became more and more explicitly Christian while the actual Christian faithfulness of the university was getting less and less.
>
> If you know the right questions to ask, you can cut through the PR and gain a more accurate perception of what is actually going on. The following questions are a good place to start.

Here are the ten questions:

1. What are the statements of faith and behavioral expectations that all faculty, staff, and board members must sign and agree to abide by?
2. How many members of the theology or Bible departments belong to the Evangelical Theological Society (ETS)?
3. How many members of the philosophy department belong to the Evangelical Philosophical Society (EPS)?
4. How many members of the science faculty (especially the biology faculty) are skeptical of Darwinian evolution or supportive of the idea that nature shows clear evidence of intelligent design?
5. Does the college offer chapel services, and is attendance by students required?
6. How many speakers at chapel or official university-sponsored events during the past academic year addressed each of the following topics: (a) the trustworthiness and/or historical accuracy of the Bible; (b) biblical standards against sex outside of marriage and for sexual chastity and faithfulness; (c) biblical standards against transgenderism and homosexuality; (d) Christian teaching on the sanctity of human life, including abortion, infanticide, and euthanasia; (e) the persecution of Christians both inside and outside of the United States, and the importance of defending religious liberty; (f) positive Christian teaching on racial equality and reconciliation as well as critiques of unbiblical ideas such as "Critical Race Theory" and calls for racial/ethnic separatism and superiority (from both left and right).
7. Does the campus health center provide (a) abortion referrals, (b) referrals to Planned Parenthood, (c) referrals to LGBTQ groups, or (d) contraceptives to unmarried students?

8. What student clubs has the college approved?
9. What books are assigned in courses?
10. What are the policies regulating student speech?

And this is the one that stood out to me:

> **6. How many speakers at chapel or official university-sponsored events during the past academic year addressed each of the following topics: (a) the trustworthiness and/or historical accuracy of the Bible; (b) biblical standards against sex outside of marriage and for sexual chastity and faithfulness; (c) biblical standards against transgenderism and homosexuality; (d) Christian teaching on the sanctity of human life, including abortion, infanticide, and euthanasia; (e) the persecution of Christians both inside and outside of the United States, and the importance of defending religious liberty; (f) positive Christian teaching on racial equality and reconciliation as well as critiques of unbiblical ideas such as "Critical Race Theory" and calls for racial/ethnic separatism and superiority (from both left and right).**
>
> Before actually attending a college, it can be hard to know what is taught in the classrooms there. But the topics addressed by speakers at official campus events will tell you a lot about the viewpoints dominant among the faculty and administration. If campus speakers are not regularly being brought in to explain and defend key Christian beliefs under attack in our culture, that is another huge warning sign. Also pay attention to the point of view of the speakers being brought in. Just because campus speakers are addressing one of the topics above does not mean they are doing so in a way consistent with biblical teaching. When it comes to other topics, especially political topics where Christians disagree (for example, the best way to fight poverty, or American foreign policy), pay attention to whether the university hosts Christian speakers with a range of views, including those on the politically conservative side of the spectrum.

This one is also important to me:

> **8. What student clubs has the college approved?**
>
> The student clubs allowed on a Christian college campus will reveal a lot. For example, does the college have a club that promotes the agenda of the LGTBQ movement? More positively, does the college have a club devoted to pro-life issues or apologetics (such as a chapter of the national apologetics ministry Ratio Christi)? You might also want to look at the student newspaper

These two questions matter to me, because I work with groups like Ratio Christi in order to bring in Christian speakers to address some of the topics that he talked about in Question 6. It's actually better to enforce orthodoxy through *persuasion and evidence* than it is to enforce it by writing rules on a page. If the apologetics speakers hold events, that will equip the students to think carefully about these topics, so that they don't roll over for feelings and peer approval.

If this kind of concern affects you, then check out the article, and go over it with your child. There's no sense sending your child into a difficult situation that will make it harder for them to get their education, without being indoctrinated.

# New study: Wikipedia blacklists right-leaning media, relies only on left-wing sources

**Wintery Knight** · 4 February 2025 · Archived copy · Original

I'm sure that I don't have to tell anyone this, but Wikipedia is not a reliable website, if you are looking up topics like religion, science or policy. If you need to prove this to anyone, then bookmark this post. Because we're going to take a look at a new study by the Media Research Center, that clearly shows how wikipedia is biased against Christians and conservatives.

Here's the article from the Media Research Center:

> A new study by Media Research Center Free Speech America found that Wikipedia, the encyclopedia behemoth, has effectively blacklisted all right-leaning media from being used as source material, exclusively relying on leftist, legacy media notoriously known to spread misinformation and attack opponents of the left.
>
> Among the effectively blackballed media sources are Breitbart, The Daily Caller, Daily Mail, Newsmax, OANN and the Media Research Center. Meanwhile, leftist media like The Atlantic, Jacobin, Mother Jones, Pro-Publica, The Guardian and National Public Radio (NPR) are given the green light. This blatant misinformation means that Wikipedia is purposely feeding Americans information exclusively through the lens of one side of the political spectrum—the left.
>
> Positioning themselves as arbiters of truth, Wikipedia and its editors have effectively institutionalized a blacklisting system utilizing a "Reliable sources/Perennial sources" page that forbids the use of some of the most popular media sources on the right when editing Wikipedia pages. Their claims? Right-leaning sources are not "reliable," and in some cases literally "blacklisted" — Wikipedia's actual word — from use on the platform altogether. The predictable effect? Conservatives, Republicans and Trump appointees are smeared, maligned and slandered by the most popular online source for information about people.

I still use Wikipedia for finding out about famous historical battles, or different kinds of animals, but not for anything else. It's just not a reliable web site. Plus, they are always begging for money. Never give them a cent!

# Trump's freezing of USAID might be the best thing he's done so far

**Wintery Knight** · 5 February 2025 · Archived copy · Original

It's hard to to make a ranking of which actions are the best for Christians and conservatives. There have been so many. But this one really draws a line between Trump 1.0 and Trump 2.0. The most common complaint I heard from Trump supporters after his first term was that he didn't do enough to drain the swamp. Well, this new Trump action is the most Swamp-Draining one yet.

This is from Daily Signal:

> The Trump administration is putting a stick of dynamite under the deep state, and Democrats are apoplectic.
>
> On Tuesday, President Donald Trump put nearly all District of Columbia-based employees of the U.S. Agency for International Development on leave. According to Politico, this amounts to about 1,400 people in addition to 600 employees who were put on leave starting Sunday.
>
> This comes after the Trump administration put a 90-day freeze on all foreign assistance.

New Secretary of State Marco Rubio "noted that embassies around the world complain that USAID is not only uncooperative but that it undermines the governments the U.S. wants to work with. Rubio said that the agency operates as if its master is the "globe" and not the U.S., which is a departure from the intent of the original statute that created it."

And this is just crazy:

> Rubio, who is putting the operation of USAID under his authority, said the goal has been to reform the agency, but right now, there is "rank insubordination." The attitude of the employees, Rubio said, is that they work for themselves, not the American people or their elected officials.
>
> This is why the administration had to take dramatic steps to temporarily freeze the agency, Rubio explained.
>
> […]Organizations like USAID became enlisted in what can be described as no less than the creation of a global leftist empire… a conduit to siphon U.S. taxpayer dollars to various leftist projects, many of which are deeply resented by other nations.
>
> It became, at minimum, a jobs program for hordes of American left-wing activists.

The Democrats are not going to take this one lying down, as this is their whole global secular leftist network. But, all that Trump has to do to beat them is to show the American public what USAID has been spending their money on.

Here are some examples:

> For instance, The Washington Free Beacon reported that in 2023 under President Joe Biden, USAID spent $1 million "on a project to help disabled people in the Central Asian country of Tajikistan become 'climate leaders.'"
>
> For instance, according to The Wall Street Journal, the State Department was funding "culture grants" to promote drag queen performances in Ecuador. Meanwhile, China was investing heavily in the country's copper mining production.
>
> The Free Beacon also reported that USAID spent millions of dollars on various diversity, equity, and inclusion projects, including a program created to "engage with indigenous-led institutions to implement an indigenous language technology program" in Guatemala where over 95% of people speak Spanish.
>
> […]"In November 2022, USAID sent $78,000 to the Community Development and Continuing Education

> Institute (CDCEI), a Palestinian activist group based in the West Bank. Its leaders praised a terrorist who murdered a U.S. military attaché as a 'hero fighter,'" the Free Beacon reported.
>
> Sen. Tom Cotton, R-Ark., sent a letter to USAID in October 2024 saying that some of the more than a billion dollars being used for humanitarian relief in Gaza was likely being funneled to terrorists.
>
> […]Under Biden, USAID even spent money funding abortions in Africa through programs billed as AIDS relief, Fox News reported.

This is what happens when you give secular leftists access to taxpayer money. They just go crazy with it, and that's why they shouldn't have any money at all.

And if that's not enough for you, check out this story from Breitbart, about how the Trump administration wants to tackle corruption in the FBI and DOJ:

> FBI officials acknowledged over 5,000 employees worked on investigations related to January 6, CNN reported Tuesday.
>
> The numbers reveal for the first time the scope of the federal government's resources devoted to the J6 investigations, which took place while violent crime in urban America soared 40 percent from 2019 to 2023 under the Biden administration, according to the federal government's own numbers.
>
> The Department of Justice asked the FBI Friday to provide by Tuesday at noon the details of all its employees who worked on January 6 investigations.

But of course these agents don't want to be held accountable for their actions under the previous (fascist) administration:

> FBI employees have fought to hide their roles in J6 investigations.

Just fire them all right now! Or ship them to prisons in El Salvador if they resist.

# Evaluating William Lane Craig's views on Genesis, Adam and Eve

**Wintery Knight** · 6 February 2025 · Archived copy · Original

I found a wonderful series of articles by someone I really trust on origins issues: Dr. Casey Luskin. He has a *long* history with the intelligent design movement, starting from when he was a college student. He has a BS and MS in Earth Sciences from the University of California, San Diego, a PhD in Geology from the University of Johannesburg, and a JD from the University of San Diego.

He has a series of articles up at Evolution News, about Dr. William Lane Craig's new book "In Quest of the Historical Adam". I'm not sure if he is done with the series, but I thought that it was a good time to look over what he's already written.

In the first article he notes that "Craig convincingly argues that mainstream science can be reconciled with a traditional view of Adam and Eve" and "argues that Adam and Eve were real people who could have been members of Homo heidelbergensis". Craig's conclusion is that "it's not scientifically problematic to take a truly "traditional" view of Adam and Eve".

But Luskin has criticisms of Craig's views on rival interpretations of Genesis, "As an old earther myself, I was concerned that Craig did not adequately engage with old earth interpretations" and "I believe that young earth creationists will feel that Craig badly misrepresents the scientific claims of their models".

Craig's handling of the science:

> Craig's book provides highly informed discussions of the paleoanthropological, archaeological, neurological, and genetic evidence regarding human origins, but his arguments often incorporate evolutionary assumptions which are doubtful. For example, Craig is too credulous towards evolutionary explanations of the origin of the human mind which amount to miracle mutations, as well as common evolutionary notions that pseudogenes are "junk DNA" that support common ancestry. He misses a key deficiency in evolutionary explanations: a conspicuous gap between the genus Homo and our supposed ape-like australopithecine ancestors in the hominid fossil record. Although Craig does not recognize it, key neurogenetic evidence raised in his book actually suggests a potent mathematical challenge to the Darwinian evolution of humans. I also believe he sells Homo erectus short as a potential candidate for Adam and Eve.
>
> […]Craig continues to rely upon BioLogos arguments that pseudogenes are "broken" and non-functional junk DNA that we share with apes, thereby demonstrating our common ancestry. Those arguments are increasingly contradicted by evidence presented in highly authoritative scientific papers which find that pseudogenes are commonly functional, and they ought not be assumed to be genetic "junk." In relying upon dubious evolutionary arguments that are increasingly refuted by the technical literature, Craig may be repeating the very mistake that led previous evangelicals to think Adam and Eve did not exist.

There are 6 parts to the review. Here are the links to parts 2 through 6:

- Is Genesis "Mytho-History"? As a Guide to Scripture, William Lane Craig's Book Falls Short
- Missed Opportunity: Passing over Scientific Problems with Human Evolution
- Traditional or Not? Assessing William Lane Craig's Model on Adam and Eve
- Lessons from the Evangelical Debate About Adam and Eve
- Lessons Not Learned from the Evangelical Debate over Adam and Eve

If you're interested in the topics of Christianity and science, this is a great series to read. I love when someone trustworthy reads through a lot of stuff I don't have time for (I have a day job as a software engineer!) and gives me an accurate summary of the strengths and weaknesses.

# Is the definition of atheism “a lack of belief in God”?

**Wintery Knight** · 7 February 2025 · Archived copy · Original

First, let’s see check with the Stanford University Encyclopedia of Philosophy:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they  are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God. What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God.  Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.”  If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars.  There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).”  Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this.  Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist.  Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.
>
> So understood, such an alleged presumption is clearly mistaken.  **For the assertion that “There is no God” is just as much a claim to knowledge as is the assertion that “There is a God.”  Therefore, the former assertion requires justification just as the latter does.  It is the agnostic who makes no knowledge claim at all with respect to God’s existence.  He confesses that he doesn’t know whether there is a God or whether there is no God.**
>
> But when you look more closely at how protagonists of the presumption of atheism used the term “atheist,” you discover that they were defining the word in a non-standard way, synonymous with “non-theist.”  So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists).  As Antony Flew confesses,

> the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)
>
> **Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know*. We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

**Dealing with subjective atheists**

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

# Knight and Rose Show #58: John West: Stockholm Syndrome Christianity

**Wintery Knight** · 8 February 2025 · Archived copy · Original

Welcome to episode 58 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview Dr. John West about his new book "Stockholm Syndrome Christianity". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Vice President of the Discovery Institute Dr. John West to discuss his new book "Stockholm Syndrome Christianity". He discusses how Christians are influenced by non-Christian ideas, key figures in the Stockholm Syndrome movement, how Christian institutions are captured by secular left, and strategies to combat the spread of Stockholm Syndrome Christianity.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 58:**

**Speaker biographies**

Dr. John West is Vice President of the Discovery Institute, and Managing Director of the Institute's Center for Science & Culture, which he co-founded with Dr. Stephen C. Meyer in 1996. Dr. West was previously an Associate Professor of Political Science at Seattle Pacific University where he chaired the Department of Political Science and Geography. He earned his PhD in Government from Claremont Graduate University and BA in Communications from the University of Washington. Dr. West has written or edited twelve books, including "Darwin Day in America: How Our Politics and Culture Have Been Dehumanized in the Name of Science". His newest book is "Stockholm Syndrome Christianity: Why America's Christian Leaders Are Failing — and What We Can Do About It".

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Is Darwinian evolution compatible with Christian theism?

**Wintery Knight** · 9 February 2025 · Archived copy · Original

The message of many Christian elites about evolution is that Christians should go ahead and believe it. After all, it doesn't make any difference. Science tells you how the heavens go, they say. And religion tells you how to go to Heaven, they say. But is it true? Or does Darwinism have implications that are are hostile to believe in Christian theism? Let's see.

First of all, it's important to understand that Darwinian evolution is *fully naturalistic evolution.* There is no room in Darwinian evolution for a Designer, or a design. Nature does it's own gradual creating, and there is no room for jumps in biological complexity.

And what is the implication of a "clockwork" universe? Let the Darwinists tell you themselves.

William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

Well, some people might point to prominent Christians like Howard Van Till and Karl Giberson as examples of people who believe in Darwinian evolution, but profess a belief in Christianity.

Here's Dr. John G. West to discuss Howard Van Till, over at Evolution News:

> In the early years of the intelligent design movement, one of the most significant critics of ID among evangelical Christian academics was Howard Van Till (1938-2024).
>
> A physics professor at Calvin College (the campus chapel is pictured above), Van Till was the pre-eminent example of an evangelical Christian scientist in the 1990s who defended Darwinian evolution. Van Till still ends up being cited by some as an example of how an orthodox Christian can embrace Darwin.
>
> The problem is that after retiring from Calvin, Van Till evolved well beyond Christianity. Indeed, he eventually evolved beyond theism.
>
> By 2006, Van Till was declaring himself a freethinker. By 2016, he was identifying with what he called "a comprehensively naturalistic worldview," which he described as a belief "that the physical universe is the only reality… and that it is not dependent on a non-corporeal, person-like Agent (the Abrahamic God, for example) to give it being or to guide its evolution."

And here's Karl Giberson:

> One of the Christian scientists who liked to cite Van Till as a model for integrating Christianity with evolution was Karl Giberson. Also a physicist, Giberson has been a longtime associate of geneticist Francis Collins, with

> whom he coauthored a book. For many years, Giberson was a professor at Eastern Nazarene University, an explicitly evangelical Christian institution. He helped Francis Collins start the BioLogos Foundation to promote theistic evolution.
>
> Giberson hasn't yet slid as far down the slope as Van Till. But, sadly, he appears to be on the same trajectory.
>
> In his book Saving Darwin (endorsed by Collins), Giberson denied the historic Christian teaching that humans were originally created good. In Giberson's view, that can't be true because it conflicts with Darwinian evolution. According to him, evolution is driven by selfishness, so humans must have been selfish and evil from the start. Giberson nevertheless maintained that he was a committed Christian.
>
> But reading between the lines, his reasons for staying a Christian were rather shaky. He acknowledged poignantly: "my belief in God is tinged with doubts and, in my more reflective moments, I sometimes wonder if I am perhaps simply continuing along the trajectory of a childhood faith that should be abandoned."

This part is scary. When you marry a theistic evolutionist, they might come to church with you. But they could just as easily be faking it to keep up appearances. Their commitment to Darwinian evolution is absolute, but the Christian theism is just acting:

> So why did he stay a Christian? "As a purely practical matter, I have compelling reasons to believe in God. My parents are deeply committed Christians and would be devastated were I to reject my faith. My wife and children believe in God, and we attend church together regularly. Most of my friends are believers. I have a job I love at a Christian college that would be forced to dismiss me if I were to reject the faith that underpins the mission of the college. Abandoning belief in God would be disruptive, sending my life completely off the rails." Note that Dr. Giberson's "compelling reasons" to believe in God were sociological. They weren't about whether Christianity is actually true.
>
> Within a few years of writing Saving Darwin, Giberson resigned his post at the Christian university where he taught. In a book following his departure, Saving the Original Sinner (2015), Giberson made fairly clear that he now regards the Bible as a mish-mash of divergent stories from one particular tribe rather than a divinely inspired text featuring God's authoritative message. He thinks if Christianity wants to survive it needs to evolve: "Christianity emerged in a different time and must be prepared to evolve like everything else."

So, if you meet a Christian who believes in Darwinian evolution, make sure they understand the implications of Darwinian evolution, and what it means for the Christian worldview. The conflicts between Darwinian evolution and Christian theism are much more severe than just disagreeing with Bible stories.

# Biden regime gave millions to left-wing news media that spread misformation

**Wintery Knight** · 10 February 2025 · Archived copy · Original

I worked with a secular Jewish guy named Tom for several years. I disagreed with him on topics like Darwinism and global warming alarmism. One day, Tom got very angry and he told me that I was living in a bubble, because I believed that the corporate news media was biased. So I showed him some peer-reviewed studies that proved that they were biased. Needless to say, he was not happy.

But what remained to be proved is WHY is the corporate news media so biased. Is it because smart people are naturally secular leftists? Or is there another reason.

Here's an article from The Federalist that explains the real reason that the corporate news media is biased to the left:

> Federal agencies have been funneling millions to leftist media outlets including The Associated Press, Politico, Reuters, The New York Times, The Washington Post, and CNN, according to public grant disclosures.
>
> These legacy corporations have fashioned themselves the gatekeepers of information to the American public. But ever since 2015, when now-President Donald Trump announced his first campaign — and even earlier — they have spewed lie after lie in an attempt to control the political narrative.

Associated Press:

> The Associated Press, an "independent news cooperative," has received $37.5 million from the federal government over the last 15-plus years, according to public spending data.

Politico:

> Politico has received $34.3 million from the federal government since 2015, according to government spending data published by Liz Wheeler.

Reuters:

> Reuters has received $10.6 million from federal agencies starting in 2020, according to government grant data.

New York Times:

> The New York Times has received $2.7 million total from federal agencies since 2008, according to government spending data.

Washington Post:

> The Washington Post has accepted $1.7 million from federal agencies starting in 2014, according to public data.

CNN:

> CNN has received nearly $220,000 from the federal government, according to government grant disclosures.

Did these “payments” cause the corporate news media to spread disinformation, misinformation and false news so that their Democrat paymasters could stay in power?

What about the Trump-Russia collusion story?

> Soon after Trump began his first term, outlets like The New York Times amplified and advanced the “Russiagate” collusion narrative, which turned out to be a hoax. Its website still features a section on “Trump and the Russians,” filled with hit pieces from 2017. In fact, all six outlets that have taken federal funding — The AP, Politico, Reuters, The New York Times, The Washington Post, and CNN — amplified this narrative.
>
> But it later turned out that the dossier of former British spy Christopher Steele — the impetus for many of these conspiracy theories, as well as the FBI’s spying on the Trump campaign — was fabricated, as The Federalist previously reported. And even more concerning, Hillary Clinton’s 2016 campaign paid for it.

What about deliberately misquoting Trump to help the Democrat party?

> Still, these outlets served as anti-Trump megaphones through his entire first term. CNN and Reuters repeated phony stories from anonymous sources, such as the smear that Trump supposedly called fallen U.S. soldiers “suckers” and “losers.” The New York Times amplified quotes taken out of context, such as when Trump referred to “very fine people on both sides” of the Charlottesville, Virginia, protests — omitting his comment that “I’m not talking about the neo-Nazis and the white nationalists, because they should be condemned totally.”

What about the Hunter Biden laptop is Russian disinformation story?

> In the crucial days before the 2020 election, CNN dismissed the New York Post’s story exposing the contents of Hunter Biden’s laptop, and Politico editors allegedly buried the story at the time, designating it “disinformation.” It turned out the Hunter Biden laptop story was true, and as revealed in the Twitter Files, Democrats and federal officials worked with Big Tech to suppress it. A poll found 80 percent of respondents thought the story would have changed the outcome of the 2020 election.

And the spreading of misinformation to help the Democrat party was amplified by far-left Big Tech corporations like Google, who intentionally steered users to left-wing news sources in the corporate news media.

Here’s a report from the New York Post:

> Google’s already left-leaning news aggregator platform Google News skewed even more off the charts in 2023, according to a recent analysis.
>
> Media company AllSides’ latest bias analysis found that 63% of articles that appeared on Google News over two weeks were from left-leaning media outlets — a 2% increase from 2022, when 61% of articles on the aggregator were from liberal outlets.
>
> By contrast, the number of right-leaning news sources picked up by Google News in 2023 was 6%, a relative improvement from the paltry 3% the previous year.

The article notes that the study authors did not consider Reuters to be a left-wing source. If you consider Reuters to be a left-wing source, as I do, then 67% of the articles on Google News were linking to left-wing sources. At what point does this become election interference? We should by all means cut off the taxpayer-funding for the corporate news media. And then cut off the taxpayer-funded for NPR and PBS. Then we can investigate how Big Tech companies like Facebook and Google used their products to favor the Democrat party, especially to interfere in our elections.

# Stephen C. Meyer answers objections to arguments for a Designer

**Wintery Knight** · 11 February 2025 · Archived copy · Original

If I had to pick the strongest defender of Christianity operating today, I would pick Dr. Stephen C. Meyer. His recent book “Return of the God Hypothesis” defends three arguments for a Creator / Designer of the universe. But there have been some criticisms of those arguments. In this conversation, Justin Brierley asks Dr. Meyer to respond to those criticisms.

Here is the video:

Here is the description:

> Justin Brierley interviews controversial philosopher of science Dr Stephen Meyer, about his recent book “Return of the God Hypothesis”. Stephen shares the latest advances in the field of “Intelligent Design”, ranging from design inferences that can be drawn from the origin of the universe, the fine-tuning of the universe, the information content of the living cell, and even from attempts of atheist materialists to try to avoid the God Hypothesis!

And here are the topics, with timestamps:

00:00:00 Coming up…
00:00:40 Introduction
00:01:08 Darwinism is in trouble
00:05:42 Isn’t I.D. God of the gaps?

# Wikipedia co-founder, who holds PhD in philosophy, returns to Christianity

**Wintery Knight** · 12 February 2025 · Archived copy · Original

Who is Larry Sanger? Larry Sanger is the co-founder of Wikipedia, and he holds a PhD in philosophy from the Ohio State University. Although he was raised in a Christian home, he did not get good answers to his many questions from Christian leaders. In fact, they foolishly made him feel badly for asking questions. He decided to take another look at the arguments for Christian theism.

Here's the story from Evolution News:

> As I found myself returning to the old arguments for the existence of God, I did not slap myself on the forehead and say, "Oh! It turns out that this is a great argument! I guess I believe in God after all!" Even today I deny that, individually, the traditional arguments for the existence of God are particularly persuasive. But I began to examine them in new versions.
>
> I was impressed by a lecture by philosopher of science and well-known apologist Stephen Meyer, who presented versions of the cosmological argument and the fine-tuning argument. Science says the Big Bang was the beginning of the universe. But whatever had a beginning has to have had an explanation. As this is the beginning of matter itself, it cannot have a material cause; thus it must have an immaterial cause (whatever that might be like).
>
> Similarly, certain features of the universe that are absolutely necessary to explaining how fundamental natural laws operate are physical constants. Physicists tell us that if the values of those constants were different, then various things could not have happened; for example, atoms could not have formed, or stars could not have ignited and given off light and heat. But scientists have never offered an explanation for these constants.

He mentions Stephen C. Meyer, so let's talk about that.

I want you, the reader, to consider that the arguments of Stephen C. Meyer, and the people like him, do work on non-Christians. If you are still batting around "arguments" from people like Aquinas and C.S. Lewis, then you are trying to build a wall with spaghetti, instead of with bricks. The new arguments are much better than what you learned in Sunday school. They are much better than what you heard from your parents and pastors. They are much better than what you read in popular Christian books. Much better than anything a seminary professor could teach you.

If you haven't put in the time on the new scientific arguments, then you better get moving, because there has been a huge revolution in the way that people think about the Big Questions of life. We covered some of them on the Knight and Rose Show, but you'll be better off getting yourself a book like "The Comprehensive Guide to Science and Faith". That book is one stop shopping.

More:

> This is a greatly condensed summary; I developed these ideas in much greater depth. But beyond such details, what I dwelled upon more than anything is the fact that the arguments taken together are far more persuasive than I had understood. Individually, the arguments might seem relatively weak. As I said, the Argument from Contingency only shows that a necessary being exists. The Argument from Causality shows only that the universe had a cause outside of itself. The Argument from Design shows only that the universe has some sort of designer or other. An Argument from Morality might add that the designer is benevolent, to some degree, in some way, but not even necessarily personal. But what happens when we combine all the arguments to make a unified case for the existence of God? I'm not sure the idea had ever dawned on me, certainly not with its present vividness. Taken together, the arguments point to a necessary being that exists apart from space, time,

> and matter. This is the very cause of the universe, which was designed according to orderly abstract laws. Ever more complex properties emerge, one from another, with great beauty and rationality—rationality that exhibits various mind-like features. This order can even be described as good, a cosmos indeed, because life and its preservation seem to be part of the plan, and life is the very standard of value.

And this is the exciting part – he's going to be a regular contributor at Evolution News:

> Editor's note: We are delighted to welcome Wikipedia co-founder Larry Sanger as a new contributor. The following is excerpted from his essay, "How a Skeptical Philosopher Becomes a Christian" at LarrySanger.org. See also, "Wikipedia Co-Founder Blasts 'Appallingly Biased' Wikipedia Entry on Intelligent Design."

I love stories like this. I've talked this over with Rose. Neither of us grew up in Christian homes, so we had complete freedom to puzzle these things out on our own, and only act according to what we discovered. In my case, I explained to a youth pastor early on that in my family, we liked to argue. So, he gave me apologetics books, and said that in Christianity, there was a long tradition of debating.

I puzzled through these books at my own pace, never having to be forced to go to church, never having to put on a show, and never having to get my Christianity secondhand from people who were terrible at it. I got it straight from the Bible, not from anybody's words or behaviors. And in the end, it stuck very well. In fact, it never even bothered me that Christianity lost me reputation with other people. After all, they couldn't defend their views in a debate. Sometimes I think it's better to do it this way.

# How is secular left socialism going in Germany?

**Wintery Knight** · 13 February 2025 · Archived copy · Original

Americans can learn which policies work and don't work by looking at policies that have been tried in other times and places. That way, we can avoid the mistakes that other people have already made. That's one of the reasons why people like Thomas Sowell so much – he is always talking about which policies work, and which ones don't. And in Germany, it's mostly policies that don't.

Here's a fun article from Victor Davis Hanson, writing for the Daily Signal. If you're like me, you already know Dr. Hanson from his writings on military history. But he likes policy, too.

He says:

> Today I'd like to talk about the crisis facing Europe, specifically its self-implosion across the spectrum—energy, population, fertility, defense. Germany, for example, has been systematically shutting down its nuclear plants and, for a while, its natural gas electrical generation plants.

If you know your energy policy, then you know that natural gas and nuclear power are the two power sources pushed by conservatives. They are safe and reliable, and they are also zero emission. Best of all for me, they don't kill bats, birds and other animals. Birds are my favorite animals, and that's a huge reason why I hate wind and solar power – they kill birds in large numbers.

More:

> the net result of all of this deliberate turn to wind and solar, at the expense of fossil fuels and nuclear, is that it costs about four times more to use electricity in Germany than it does on average throughout the United States. That's not the only problem.
>
> Germany is deindustrializing. And by that I mean it's losing about 200,000 jobs in its auto industry due to these high energy prices and regulations. Its green mandates, especially electric vehicle mandates, have revolutionized the car industry, in the sense that they're not selling abroad as they did in the past.

When you raise the prices of gas and electricity, it raises the price of all production of goods, and transportation of goods. The funny thing is that this has been going on for some time. I remember talking about Angela Merkel's failed policies with an international student from Germany with I was in grad school. And they never pulled out of their death spiral! It's still going now.

Anyway, the higher cost of gas and electricity is having big effects:

> In addition to that, Germany's disarmed. They only have about 125 attack aircraft. They have very few armored vehicles. Their active military is only about 180,000 soldiers.
>
> They have 84 million people in the country. The fertility rate is getting very close to 1.4. I know we have problems here in the United States at 1.6, but 1.4.
>
> And they don't have borders. They have had a million to 2 million illegal aliens just prance into Germany, especially during the last years of the Merkel chancellorship. In terms of percentage of foreign-born, Germany has more foreign-born than does the United States, which doesn't have a border in the south, at least until Donald Trump comes in. Twenty percent of the German population is foreign-born.

We have a new administration now, and if you look at the picks for Department of the Interior, and Secretary of Energy, then we should be getting some action on developing our own supply of clean energy. Let's hope that we don't make the same mistakes that the Germans made.

By the way, if people ask you “why are you a conservative?” it’s nothing to be ashamed of. You don’t have to bring up Bible verses, religious beliefs, or moral issues. Start with economic policies. Just tell them that conservative policies are policies that allow you to have a job, earn money, and spend it how you like. And when they ask you for an example, you can talk about energy policy, and how things are going in free countries that produce a lot of energy (like Norway) vs un-free countries that don’t develop a lot of energy (like Germany). Norway’s GDP per capita is $90,500 (great), but Germany’s is $61,900 (trash). That’s why we want to be like Norway, and we don’t want to be like Germany.

By arguing for conservative fiscal policies, you often will get an opportunity to argue for conservative social policies. Once people see that you have done your homework in one area, they will be more welcoming of your views in other areas. At the very least, you win whenever you can show your work.

Conservative policy is just “let’s do what works” and “let’s not do what does not work”. Secular leftist policy is “do what feels good” and “do what makes people like me”, but that often produces very bad results, especially for the next generation.

Image source: Clean Energy Wire (January 2023)

# New study: break-ups are harder for men than for women

**Wintery Knight** · 14 February 2025 · Archived copy · Original

For Valentine's Day, I found a new 2024 study that is related to male-female romantic relationships! A lot of people think that men are less committed than women, but if you look at the data, men initiate fewer divorces than women, and they take break-ups a lot harder than women. And lesbian couples have the highest rates of divorce! Let's take a look at the data.

Here's the report on the new study, from the New York Post:

> Breaking up is hard to do — for men, anyway.
>
> That's because males care more about being in a relationship than females, a new study set to be published in Behavioural and Brain Sciences found, according to PsyPost.
>
> Researchers at the Humboldt University of Berlin are pouring cold water on the popular belief that gals are more desperate for a partner — saying that guys are more likely to experience loneliness after calling it quits, and are less likely to see the silver lining to the situation.
>
> The team analyzed more than 50 scientific studies on gender differences in heterosexual relationships to come up with their findings.

Women are more likely to initiate divorces than men:

> The results could explain why men are less likely than women to initiate a break-up when in a steady relationship — 70% of divorces are initiated by women, the experts stated.
>
> Men are also more likely to search for a partner and to be focused on entering into a serious relationship — perhaps because they have more to gain.
>
> "We know from numerous studies that women typically receive more emotional support from their social environment than men. Therefore, heterosexual men are more dependent on their partners to fulfill their emotional needs than heterosexual women," Iris Wahring, lead author of the study, said in a statement.
>
> "In short, steady relationships are psychologically more important for men than for women."

If you look at the instability rates of lesbians, they have the highest rates of relationship instability of any relationship arrangement.

> During the five years of marriage, lesbian spouses have twice the risk of divorce compared to heterosexual marriages. Only after 25 years of marriage this difference seems to be gone, the study shows. Same-sex male couples only have an 8 percent higher chance of getting divorced than heterosexual couples in that same period. Senior researcher Ruhne Zahl Olsen is not surprised by the results. They have been the same in other countries, he says to Aftenposten.
>
> […]For the survey, 5,187 same-sex couples and marriages entered between 1993 and 2018 were examined.

This is important, because in lesbian relationships, it's two women. So, you can't blame the high rate of instability / divorce on any man. There isn't any man there to blame!

Anyway, I thought this new study would be good for men. Men are always getting beaten up and blamed for everything. But not everything about men is bad. I don't mean the top 20% most attractive men, who have so many options that they don't have to be nice to any particular woman. I mean the vast majority of ordinary men who just work and live quiet lives. They are the ones who are good at commitment.

Something to think about for those who are wondering “where are all the good men?”. Men are good, you just have to choose the good character ones.

# Jay Richards: what should Christians know about economics?

**Wintery Knight** · 15 February 2025 · Archived copy · Original

Here's a good basic introduction to the free enterprise system by Dr. Jay Richards:

Here is the description:

> In this edition of the Evangel Guest Lecture Series, Jay W. Richards discusses his book on the capitalist system within the context of the Christian faith and examine how enterprise based on hard work, honesty, and trust fosters creativity and growth.
>
> Jay W. Richards, PhD, is author of many books including the New York Times bestseller Infiltrated (2013). Richards is a senior fellow at the Discovery Institute, and executive editor of The Stream. In recent years he has been a distinguished fellow at the Institute for Faith, Work & Economics, contributing editor of The American at the American Enterprise Institute, a visiting fellow at the Heritage Foundation, and research fellow and director of Acton Media at the Acton Institute.

It turns out that the best system for lifting the poor out of poverty – by work or charity – is the economic system that creates wealth through human ingenuity and hard work. That system is the free enterprise system.

**Something to read?**

If you can't listen to the lecture and don't want to buy the whole book "Money, Greed and God?" Then I have a series of posts on each chapter for you.

The index post is here.

Here are the posts in the series:

- Part 1: The Eight Most Common Myths about Wealth, Poverty, and Free Enterprise
- Part 2: Can't We Build A Just Society?
- Part 3: The Piety Myth
- Part 4: The Myth of the Zero Sum Game
- Part 5: Is Wealth Created or Transferred?
- Part 6: Is Free Enterprise Based on Greed?
- Part 7: Hasn't Christianity Always Opposed Free Enterprise?
- Part 8: Does Free Enterprise Lead to An Ugly Consumerist Culture?
- Part 9: Will We Use Up All Our Resources?
- Part 10: Are Markets An Example of Providence?

Parts 4 and 5 are my favorites. It's so hard to choose one to excerpt, but I must. I will choose… Part 4.

Here's the problem:

> **Myth #3: The Zero Sum Game Myth – believing that trade requires a winner and a loser.**
>
> One reason people believe this myth is because they misunderstand how economic value is determined. Economic thinkers with views as diverse as Adam Smith and Karl Marx believed economic value was determined by the labor theory of value. This theory stipulates that the cost to produce an object determines its economic value.
>
> According to this theory, if you build a house that costs you $500,000 to build, that house is worth $500,000. But what if no one can or wants to buy the house? Then what is it worth?

> Medieval church scholars put forth a very different theory, one derived from human nature: economic value is in the eye of the beholder. The economic value of an object is determined by how much someone is willing to give up to get that object. This is the subjective theory of value.

And here's an example of how to avoid the problem:

> How you determine economic value affects whether you view free enterprise as a zero-sum game, or a win-win game in which both participants benefit.
>
> Let's return to the example of the $500,000 house. As the developer of the house, you hire workers to build the house. You then sell it for more than $500,000. According to the labor theory of value, you have taken more than the good is actually worth. You've exploited the buyer and your workers by taking this surplus value. You win, they lose.
>
> Yet this situation looks different according to the subjective theory of value. Here, everybody wins. You market and sell the house for more than it cost to produce, but not more than customers will freely pay. The buyer is not forced to pay a cost he doesn't agree to. You are rewarded for your entrepreneurial effort. Your workers benefit, because you paid them the wages they agreed to when you hired them.
>
> This illustration brings up a couple important points about free enterprise that are often overlooked:
>
> **1. Free exchange is a win-win game**.
>
> In win-win games, some players may end up better off than others, but everyone ends up better off than they were at the beginning. As the developer, you might make more than your workers. Yet the workers determined they would be better off by freely exchanging their labor for wages, than if they didn't have the job at all.
>
> A free market doesn't guarantee that everyone wins in every competition. Rather, it allows many more win-win encounters than any other alternative.
>
> **2. The game is win-win because of rules set-up beforehand.**
>
> A free market is *not* a free-for-all in which everybody can do what they want. Any exchange must be free on both sides. Rule of law, contracts, and property rights are needed to ensure exchanges are conducted rightly. As the developer of the house, you'd be held accountable if you broke your contract and failed to pay workers what you promised.
>
> An exchange that is free on both sides, in which no one is forced or tricked into participating, is a win-win game.

If you do get the book, be sure and skip the chapter on usury. It's just not as engaging as the others, in my opinion.

# Why are Republicans so interested in giving parents school choice?

**Wintery Knight** · 16 February 2025 · Archived copy · Original

I saw that Tennessee recently enacted a school choice problem, and on Facebook, there were a lot of negative comments. I was able to click on the profiles of some of the negative commenters – the majority of them were white, female public school teachers. Well, I thought it might be a good idea to explain to people why Republicans are so interested in letting parents choose.

First, here's the story from Focus on the Family:

> Tennessee Governor Bill Lee signed the Educational Freedom Act of 2025 earlier this week, creating 20,000 educational scholarships for students for the 2025-2026 school year. The bill also gives all public school teachers a one-time, $2,000 bonus for the current school year.
>
> This legislation is part of a growing movement toward giving families the freedom to choose the best type of education for their children, allowing them to thrive and succeed.
>
> […]The scholarships, amounting to a little over $7,000, can be used for tuition and fees at a private school of a family's choice, along with textbooks, instructional materials and uniforms at the private school. Money can also be used for transportation, tutoring and computer technology for educational needs.
>
> In addition, "There will be an automatic growth trigger of 5,000 additional scholarships for each year after 75% of total scholarships are taken in the prior year." The bill denies scholarships to students who cannot establish their "lawful presence in the United States."
>
> The Education Freedom Act was applauded by groups who want parents and families to have more freedom in choosing the education that best fits their children's needs.

So, why would the opponents of school choice want to prevent parents from having a choice? Well, they view parents – the very people who pay their salaries – as enemies. They report them to the federal government as "domestic terrorists". Why? Because those parents object to having their children indoctrinated with secular leftist ideologies.

Here's an example of school choice opponents dealing with parents who object to their indoctrination:

First Daily Wire post:

> On Tuesday evening, school board members representing Penfield Central School District in Rochester, New York, walked out on a packed house of parents who were upset about an inappropriate book on display at the elementary school library called "The Rainbow Parade," authored by Emily Neilson.
>
> The book in question is about a young girl attending a pride parade with her lesbian parents. The illustrations show men in sexual BDSM gear holding hands, drag queens, and naked people.
>
> Instead of taking on comments from concerned parents, the board's president called a motion to adjourn and ended the meeting abruptly. Kimberly DeRosa, who attended the meeting, told The Daily Wire that it ended after "more than an hour of presentations celebrating Black History Month and the superintendent detailing the process of submitting objections to books in the school."
>
> As noted by DeRosa, the board told parents that they should submit their complaints, which apparently negated their right to speak out at the meeting.
>
> "We are here at our board meeting, conducting our business," one board member told parents, who began booing. One parent responded, "It's our board meeting," and others yelled, "cowards!"

> DeRosa, who is a Penfield taxpayer, concerned mother, and on the executive board of the Monroe County Federated Republican Women, told The Daily Wire that it was "a slap in the face to everyone there when the board members walked out before any public comments could be made."

Second Daily Wire Post:

> After school board members walked out on parents who were upset over LGBT book "The Rainbow Parade," the board is doubling down and prohibiting public comments at meetings until at least the end of April, citing alleged racism.
>
> […]Now, the board representing Penfield Central School District has barred public comment at all meetings for the months ahead.
>
> […]The message also cited alleged racism, since one of the board meeting attendees showed up on Tuesday wearing a gorilla suit and a black "Make America Great Again" hat. Roberts suggested it was worn as an act of racism, since the district's superintendent and some of the board members are black.

Can you imagine being treated like this by companies in the private sector, like Amazon.com or Apple? Recently, I ordered some Indian simmer sauces from Wal-Mart. They didn't arrive for 2 weeks. So I asked for a refund. They gave me the refund immediately, no questions asked. But public school education isn't like the private sector. You pay your money up front – in taxes – and then they give you whatever they feel like. It's the complete opposite of the private sector, where they compete with rivals in order to earn your money.

And the Trump administration is aware of this, and they are already doing something about it.

Here's a story from The Federalist:

> The U.S. Department of Education has launched a Title IX investigation into five Virginia school districts that allow boys to use girls' facilities like restrooms and locker rooms, moving one step closer to revoking their federal funding.
>
> The Education Department's Office of Civil Rights (OCR) confirmed to America First Legal (AFL) that it is investigating Loudoun, Fairfax, Arlington, and Prince William Counties, as well as the City of Alexandria, for violating allegedly Title IX civil rights law meant to protect women and girls at school. AFL filed a formal complaint about the far-left Washington, D.C., suburb school districts in early February.
>
> […]The school districts in Northern Virginia, which serve some of the largest populations of students in the commonwealth, are notoriously defiant and completely consumed by gender theory, critical race theory, and a dedication to conducting far-left social and academic experimentation on children. If the Department of Education finds them violative of Title IX and they continue to be defiant, the districts are poised to lose federal funding.

You might remember that the Loudon County school board is the one responsible for working with the Biden administration to label concerned parents as "domestic terrorists". This is why elections are important. The Democrat party thinks that parents should be forced to pay, and if they object to what they get, then they are "domestic terrorists". The Republican party thinks that parents are more important than the school boards. I hope you voted Republican in the last elections, because they are looking out for your kids.

# Call your senators and ask them to vote against Lori Chavez-DeRemer

**Wintery Knight** · 17 February 2025 · Archived copy · Original

I like about a third of Trump's Cabinet picks. A third are OK. And a third are terrible. The worst pick of all is his pick for Secretary of Labor. He picked Lori Chavez-DeRemer, who is endorsed by a teacher union leader. Lori opposes right-to-work laws. She supports job-killing labor unions. And she is a former employee of Planned Parenthood. Democrats love this pick.

Here's an article from Christian Post:

> President Donald Trump's nominee to serve as secretary of labor, who is expected to face opposition from Senate Republicans, admitted to lawmakers that she once worked at a Planned Parenthood facility.
>
> A source close to the situation confirmed to The Christian Post Thursday that Lori Chavez-DeRemer worked for a Planned Parenthood in Fresno, California, from January 1989 through February 1991.
>
> Chavez-DeRemer, a Republican who represented Oregon's 5th Congressional District in the 118th United States Congress, took appointments at the abortion provider's front desk.

That's a problem with her on moral issues, but there are also problems with her economic views.

Daily Caller explains:

> Chavez-DeRemer, who represented Oregon's 5th congressional district from 2023 to 2025, supported several pieces of legislation favored by Democrats, including the PRO Act, a bill championed by former President Joe Biden that targeted the private sector. Notably, Chavez-DeRemer also supports the Public Service Freedom to Negotiate Act, which would "strengthen" the rights of public sector workers who want to join unions and or bargain collectively.

Rand Paul, author of "The Case Against Socialism" is opposed to her:

> "I'm not going to support her," Paul told NBC News in January. "I'm the national spokesman and lead author of the right-to-work bill. Her support for the PRO Act, which would not only oppose national right to work but would pre-empt state law on right to work — I think it's not a good thing."

And the far-left website The Atlantic has this to say about her:

> After Chavez-DeRemer's nomination was announced, two senior Democratic senators, Elizabeth Warren of Massachusetts and Patty Murray of Washington State, issued cautiously optimistic statements about her—a rare sentiment for Democrats to express about any Trump nominee.
>
> […]"It's a positive move for those of us who represent workers and who want workers to have a better life," Randi Weingarten, the president of the American Federation of Teachers and a close ally of Democratic Party leaders, told me. She noted that Chavez-DeRemer bucked her party not only by supporting the PRO Act but also by voting against private-school vouchers and cuts to public-education funding.
>
> […]An anti-union group, the National Right to Work Committee, wrote in a letter to Trump before he announced Chavez-DeRemer's nomination that she "should have no place" in his administration: "She would not be out of place in the Biden-Harris Department of Labor, which completely sold out to Big Labor from the start."

She should be withdrawn as a candidate, and someone who understands economics, and is pro-business, should be nominated in her place.

If I have time, and it's not too complicated, I'm going to call both of my senators this week and urge them not to vote for her.

# New poll: secular leftist women far more likely to feel lonely than conservative women

**Wintery Knight** · 18 February 2025 · Archived copy · Original

Our society is going through an age of feminism. Everyone agrees that feminism is a wonderful thing for women. Secular leftists and pro-marriage conservatives agree: women should follow their hearts, and never face judgment or accountability. Christian leaders tell us that modern women are entitled to protection, and provision from any man they choose. But is that a good deal for men?

Here's a fun new article from the New York Post about a recent survey showing how well things are working out for women.

It says:

> Liberal women are the least likely to report being fully satisfied with their lives and are far more likely to report feeling lonely often, according to analysis from a recently published poll.
>
> The 2024 American Family Survey reportedly found that 37% of conservative women and 28% of moderate women, between the ages of 18-40, reported being "completely satisfied" with their lives, but just 12% of liberal women in the same age group said the same.
>
> Liberal women were also nearly three times more likely than conservative women to say they experienced loneliness at least a few times a week.

And the survey author, feminist professor Brad Wilcox, has an idea about what's behind these findings:

> Brad Wilcox, a sociology professor at the University of Virginia and fellow at the Institute for Family Studies who analyzed the survey's data, said he believes there are a couple of reasons why conservative young women are more likely to be happier than their liberal counterparts.
>
> "We've seen in the research that conservative women tend to be more likely to embrace a sense of agency and to have the sense that they are not, in any way, the victim of larger structural realities or forces," he told Fox News Digital.
>
> "They're also less likely to catastrophize about public events and concerns," and "more likely to think of themselves as captains of their own fate," Wilcox added.

The victim mentality is a central feature of the feminist ideology that is promoted to young women. To me making yourself into a victim is a mental illness. Is anyone challenging women about it? It seems like good men would not marry a woman who blames her bad outcomes on other people instead of on her own choices.

Consider this article from Evie Magazine, a moderate feminist website:

> A 2020 survey showed that 56% of white liberal women between ages 18 and 29 were diagnosed with a mental health condition, compared to 27% of conservative women in the same age bracket. 40% of liberal women between 30 and 49 reported having a mental health condition, compared to 26% of conservative women of the same age.

Will good men bail out women who are diagnosed with a mental health condition? Is that safe? Is it a good deal for men?

It seems to me that good men don't want to deal with secular leftist women's student loan debts. They don't want to be punished with her STIs and mental illnesses. They don't want to be the man that women "settle" for when they

fail to land the hot bad boy they really wanted. Good men don’t want to lose half their assets and future income in a divorce. They don’t want to be servants to women who see male leadership as something to be avoided.

Good men want to retire at 50. And that means steering well clear of aging secular leftist women. Sorry, Brad Wilcox. No deal.

# Do moral dilemmas undermine objective moral absolutes?

**Wintery Knight** · 19 February 2025 · Archived copy · Original

One reason why some people reject the existence of objective morality is because moral absolutes can conflict.

Canadian philosopher Michael Horner to explains the problem.

He writes:

> You may have been confronted with the story of the Nazi soldier coming to the door of the family who are hiding some Jewish people in their home and asking them point blankly, "Are there any Jews here?" The person telling the story then asks you, "What would you say?" or more precisely, "What should you say?"
>
> […]I think for many people the term moral absolutes connotes ideas like inflexibility and rigidity, and that there can never be exemptions. I have also found that many people believe that holding to moral absolutes means that circumstances are not relevant in a moral evaluation and that moral absolutism cannot handle moral dilemmas. But in fact it is possible to believe in moral absolutes, or as I prefer to call them objective moral values, without adhering to these connotations I have mentioned.
>
> For many people to believe in moral absolutes is to believe in rules that no other rules can ever trump. It follows from this that moral absolutes are all equal and there can never be any exemptions. But what if moral absolutes exist in a hierarchy?
>
> We know from experience that very often more than one moral rule applies to a situation. This often leads to moral dilemmas. So in the 'hiding the Jews example' the moral rule of telling the truth seems to apply to the situation, but it would seem that the moral rule to protect innocent human life from torture and murder applies also.
>
> If absolutes are all equal there is no way out of the dilemma. You can't choose one absolute over another because in doing so you would be violating at least one absolute which, in their view, is supposed to be inviolable.

So, in this case, it seems as if the moral absolutist is stuck in a dilemma. If you lie to save the innocent life, then that would be wrong. But if you tell the truth and hand the innocent person over to murderers, then that would be wrong. Does this really disprove objective moral absolutes?

This problem annoys me, because I know this is the kind of objection to objective morality that annoying philosophy lecturers like to push onto freshmen in order to convince them that morality is nonsense. But does the moral dilemma objection really work?

More Horner:

> […][I]f moral absolutes exist in a hierarchy and the circumstances or the situation were relevant in determining which absolute takes precedent, then there may be a solution to the moral dilemma. That is exactly what I think is the case in the example. I for one have no difficulty knowing that the morally right thing to do in that situation is to protect the life of innocent people from torture and murder rather than tell the truth to a person who has torture and murder in their plans. My moral intuitions are very clear about this.
>
> If someone objects and says, "No, you must always tell the truth. After all it is an absolute, and absolutes by definition can never be violated," I would point out that they are just using a different hierarchy, putting truth telling above protecting the life of innocent people from torture and murder. There is no way to avoid making a judgment like that since more than one absolute does apply to the situation. I would just ask them to think it through again, and once they see that they have to make a judgment based on some sort of hierarchy in that situation, then I think most people's moral intuitions will affirm that protecting the lives of innocent people

> from torture and murder, in that situation, trumps truth telling. There is no way to avoid choosing one over the other.

But isn't this moral relativism? After all, we are deciding what to do based on the situation! It's relativism, isn't it?

No, it isn't, because there is always one right thing to do in every situation. In every situation, you always follow the weightiest moral rule. The right thing to do does not depend on your subjective state of mind. It is an objective moral duty, and it is the same for everyone, across all times and in all places. That's what objective morality means -what is right and wrong is not determined by personal preferences or cultural conventions, which vary by time and place.

And of course, God is the ground of this hierarchy of objective moral absolutes. They existed through him before human beings even appeared, as part of his design for us, his creatures. How we ought to behave is grounded ontologically in God's design for us.

# Found: $2 Billion in taxpayer money earmarked for Stacey Abrams-linked Group

**Wintery Knight** · 20 February 2025 · Archived copy · Original

I don't have TV and I have not been listening to news podcasts for a week, but I have the impression that the secular left is upset at the idea that our $37 trillion debt, and $2 trillion deficits will be cut. Somehow, they don't really think that this is a problem. They want the spending (which is being paid for by future generations) to continue. Even if the spending is just wasteful.

Here's a bombshell story from the Washington Free Beacon:

> DOGE discovered $2 billion in taxpayer funds set aside for a fledgling nonprofit linked to perennial Georgia Democratic candidate Stacey Abrams.
>
> The Environmental Protection Agency under the Biden administration awarded Power Forward Communities the grant in April 2024 as part of the agency's Greenhouse Gas Reduction Fund program. Power Forward Communities received the green energy grant despite the fact that it was founded months earlier in late 2023 and never managed anywhere near the grant's dollar figure—it reported just $100 in total revenue during its first three months in operation, according to its latest tax filings.

Two billion dollars for greenhouse gas reduction program? And they only reported $100 in revenue? That seems like a pretty poorly-run group. Let's see who is running it.

More:

> Power Forward Communities was established in October 2023 as a coalition of groups led by Rewiring America, a left-wing group that advocates for electrification policies and a transition away from fossil fuel dependence. Abrams, who serves as Rewiring America's senior counsel, said at the time that she was "thrilled" to be part of the Power Forward Communities coalition. "This is how we expand access to clean energy—by prioritizing housing, equity and resilience," she wrote in an X post.

Oh yes, Stacey Abrams! That well known nuclear physicist with the strong record of running companies that developed loads of clean nuclear energy, so that prices were lowered for consumers. Oh wait, no, that's not the one. This Stacey Abrams is the romance novel author, who has earned no STEM degrees, and no STEM work experience. A single mother of 3 children. She has no achievements in the field of science at all.

More:

> "For an organization that has no experience in this, that was literally just established, and had $100 in the bank to receive a $2 billion grant—it doesn't just fly in the face of common sense, it's out and out fraud," Daniel Turner, the executive director of energy advocacy group Power the Future, alleged in an interview with the *Free Beacon*.

This is not the only instance of waste from the Biden administration. Here's another from yesterday from Daily Caller:

> Nikola, an electric vehicle start-up that received federal funding during the Biden administration, said it filed for Chapter 11 bankruptcy Wednesday and will pursue a sale of most or all of its assets.
>
> The company, once a Wall Street darling valued at $30 billion, announced the bankruptcy after several quarters of rapid cash burn and waning investor interest. Nikola also suffered from chronic leadership changes after its

> founder and original CEO, Trevor Milton, was convicted of fraud in 2022. The long-haul electric truck manufacturer produced only 600 vehicles since its founding in 2014, according to CNBC News, despite receiving subsidies from the Biden administration's Department of Energy (DOE).

So, should you listen to the corporate news media's cries about DOGE cutting government waste and rooting out corruption? Of course not. This is the kind of thing they are finding, and stopping.

# New study: homeschooled adults are more religious and less anxious

**Wintery Knight** · 21 February 2025 · Archived copy · Original

I've been preparing an outline for a podcast about "Where Are All the Good Men?" and I only get to have like 7 questions. But one of the issues that gets a question is my obsession with homeschooling. I didn't always like homeschooling, but the more I studied it, the more important it became. In my opinion, good men will insist on homeschooling out of a candidate wife, because it's critical.

Here's a story about a new study that I found in The Federalist:

> A recent report from the Cardus Education Survey analyzed educational, economic, mental health, civic, family, and faith status for American adults who were homeschooled and found a range of outcomes within a diverse population.
>
> […]The most notable differences between homeschoolers and the survey respondents who were never homeschooled are seen in the mental health outcomes. The report states, "Compared to the other respondent groups, long-term homeschoolers exhibited the highest levels of optimism, gratitude, and life satisfaction. Long-term homeschoolers were also the least likely to 'feel helpless dealing with life's problems' and to report symptoms associated with depression and anxiety."
>
> In the area of spirituality and faith, the report found: "Homeschooled adults were much more likely to report that they believed in God and life after death and regularly engaged in religious practices. The prevalence of religious belief and practice increased with the number of years spent in the homeschool sector."

This is pretty good, but even better if you pair it with another recent study on homeschooling that was written up in the Wall Street Journal.

With that said, here is a report from the Wall Street Journal about a new study that you might be able to use to be bold with people who oppose homeschooling. (Full text of the article here)

> Parents want their kids to be well-educated and professionally successful, but they also want them to be healthy, happy and virtuous. By this broader measure of success, home schooling has advantages.
>
> Among the students we examined, home-schoolers were 33% more likely to volunteer, 31% more forgiving and 51% more likely to attend religious services in young adulthood than those who attended public school. ("Levels of forgiveness" were measured on a self-reported four-point scale, which other research has shown predicts some subsequent health and well-being outcomes.)
>
> The difference in religious participation has public-health implications, since those who attend services regularly have substantially lower risks of alcohol and drug abuse, depression and suicide. They also have a lower risk of premature death for any reason than those who never attend.

So, again, for a good man who is data-driven in his search for a wife, homeschooling emerges as the best option for educating the children. It's just not a good idea to give your children to unionized, government-run schools for 6 hours a day. Those schools are not neutral. And as we're seeing in the news, the people who work at those schools don't view the parents who pay their salaries as customers. They're more likely to see you as "domestic terrorists" just because you don't agree with them on politics.

# Is having a burning bosom a good test for truth in religion?

**Wintery Knight** · 22 February 2025 · Archived copy · Original

Here's a good post from Christian apologist Clay Jones. He's talking about how Mormons embrace Mormonism because of a burning in their bosom. (A subjective feeling) In the quote below, I reproduce the main thrust of the post – which he makes as part of his conversation with some Mormon missionaries. If you ever run into Mormons, this might help you.

Excerpt:

> I pointed out that the Mormons base the truth of their religion on a subjective personal experience—namely, they base the truth of Mormonism on praying a prayer to ask God whether the Book of Mormon is trustworthy and if they get a warm feeling, which is described in some of their works a "a burning in the bosom," then they conclude that Mormonism is true. They agreed.
>
> I said that we evangelicals base our faith in historic Christianity on the evidence of Jesus being raised from the dead.
>
> […]But then I pointed out that the Mormons base their beliefs on a subjective personal experience that has led them to believe that Joseph Smith was a prophet, that historic Christianity is mistaken, that there was a great falling away, that there are many gods, that Mormons one day believe that they are going to become gods (just the males, actually), and that the Aaronic and Melchizedek priesthoods still function today (they didn't disagree with even one word of this). I explained that you couldn't get any of these ideas from the New Testament.

He goes to explain why subjective experiences are unreliable for determining truth.

When facing Mormons, and other cults, I also argue against subjectivism. But I supplement that with evidence. For Mormons, I use scientific evidence for the creation of the universe out of nothing. Mormons think that the matter in the universe existed eternally. They don't accept the Big Bang theory! So you just roll through the scientific advances, show that the cause of the universe was non-physical, eternal, powerful and endowed with free will (to create an effect in time without antecedent conditions), and that's the end of that.

I think that people in cults like Jehovah's Witnesses and Christian Science have similar ways of forming their beliefs. They just filter out evidence falsifying their religion. JWs made all kinds of silly predictions about the end of the world that are not true – they're false prophets, in other words. And Christian Science thinks that Jesus didn't actually die, which no credentialed historian believes. (Just like Islam)

# The denial of female accountability is causing the decline of marriage

**Wintery Knight** · 24 February 2025 · Archived copy · Original

Let's look at a tweet from a conservative Christian pro-marriage activist named Katy Faust. Katy is a very conservative Christian who advocates for marriage and parenting. She recently tweeted her view that Elon Musk is a polygamist, because he is accused of having consensual recreational sex with a 26-year-old woman. Is Katy right to accuse Elon Musk of "polygamy"?

Here is her tweet.

And it says:

> Elon is a modern day #polygamist- a family structure characterized by jealousy & inequality.
>
> "Musk has never asked to see the baby, nor asked for photos of him"
>
> St. Clair [asked] to meet "Hmm ok," EM responds, "Well, I do have a legion of kids to make."

And she links to this article in the New York Post, which clearly explains why this is not "polygamy", it's just premarital sex between an adult female and a wealthy non-Christian man.

In general, pro-marriage conservatives tell women like Ashley St. Clair two things:

1. When a man and a woman have recreational premarital sex, only the man is to blame. The woman didn't do anything wrong.
2. A women should expect that premarital sex with a non-Christian man who has many babies with many other women will cause that man to convert to Christianity and marry her.

So, what happens when tall, hot, wealthy high-status bad boys like Elon Musk don't comply with the message that pro-marriage conservatives tell young women? Well, then they ignore the woman's own choices, and only shame and blame the man. "Why isn't this bad man behaving like a good man?!" they cry.

This attitude that women should be free to follow their hearts, and men must be forced to pay for her choices is EVERYWHERE in our society. It's in student loan bailouts, it's in single mother welfare, it's in the family courts. As I blogged previously, men receive much longer prison sentences than women for the same crimes. Men are just walking ATMs, and whenever women do something that doesn't work, it's ALWAYS a man's fault, and men must ALWAYS pay the costs.

And this view is very popular. When I say popular, I think this is the majority view among Christian women and Christian pastors. They think that the main teaching of Christianity is just that men ought to transfer all their money to women after having premarital sex. That's it. And they call this "servant leadership". Women lead the relationship, and men just give them money,. Just like an ATM. And the entire family court system reflects this view – if a man disappoints a woman in any way, then she should just take half his stuff, and he should have to pay her alimony and child support forever. In fact, you don't even have to get married. And you don't even have to cohabitate. The courts will transfer the money.

How will men respond to this? Well, here is how they respond. The top 20% of the most attractive, wealthy and high status men will continue to be pursued by hordes of women like this 26-year-old woman, and these men will continue to get free sex with no commitment from these women. These men have options. They don't need to commit to get sex. The line for them is around the block. The line is over the river and through the woods. 80% of women are chasing the top 20% of men. Far from finding non-Christian man-sluts repulsive, most women are attracted to their "dark triad" traits. And the pro-marriage conservatives just let these women follow their hearts.

Then they turn to the bad men and try to shame them for being exactly what they are: BAD. “You bad man! How could you be bad?” they cry. They make the shocked pikachu face. And women watching get the message: keep chasing the tall, hot bad boys, nobody is ever going to hold us accountable for our bad choices. This is where abortion, fatherlessness and frivolous divorce come from, by the way.

Meanwhile, the bottom 80% of ordinary men, will continue to be invisible to these women… until these women hit 35-40. Then the aging women will ask “where are all the good men?” And then the pro-marriage conservatives will be right there, to point at the formerly-invisible men and say “you boring, stable men! You have to marry this single mother, who thinks she is settling for someone far beneath her because she once has sex with Elon Musk!”. And those men are going to say – and they are saying it now – “I DECLINE TO PARTICIPATE”. And then the pro-marriage conservatives will write articles to shame those men, but those men aren’t going to be shamed into becoming slaves. Not when they are just coming into their highest-earning years, and without any help from women.

So, who is responsible for the decline of marriage? Contrary to popular belief, it is not men. It is the pro-marriage conservatives. They are the ones who are clearly communicating to young women that is fine to chase premarital sex with tall, hot, wealthy, high-status bad boys. And they tell them to keep expecting these non-Christian man-sluts to suddenly change into Christians and commit, after they get premarital sex. It’s the pro-marriage conservatives who are setting false expectations of what happens after sex.

And this view that women must be left free to “follow their hearts” is everywhere in society. Women live in New York City, travel to Europe, and run up student loans for worthless non-STEM degrees. Women must have recreational sex in their 20s and 30s, delay marriage for career, and throw their fatherless kids into daycare. Or abort them. Oh yes, the pro-life conservatives only blame the tall, hot, non-Christian bad boys for abortion. Abortion is never the woman’s fault, because it was totally reasonable for her to expect the non-Christian man would convert to Christianity, marry her, give her all his money, and then transform into Prince Charming – right after she gives him recreational sex.

This is why the invisible good men are declining to date and marry. It’s the lies that pro-marriage conservatives tell young women. Lies that are reflected in our schools, workplaces, police, and courts. Good men know never to be the man that a leftover woman “settles” for, after her fun with the bad boys who she is actually attracted to. They know that they will bear the costs, when she inevitably divorces him. And that’s why the marriage rate is dropping.

# Respectful dialog between Dr. Stephen C. Meyer and Saleem Ali

**Wintery Knight** · 25 February 2025 · Archived copy · Original

In the post below, please find the video and summary of a fairly recent dialog between my number one favorite Christian scholar, Dr. Stephen C. Meyer and Dr. Saleem Ali. The summary is not snarky, because this was a great respectful dialog!

Here is the video:

**Here is the short summary:**

Saleem Ali and Stephen Meyer debate the origins of order in nature on "Unbelievable." Ali, an environmental planner with a PhD from MIT, argues in Earthly Order that natural laws and human constructs shape sustainability, remaining agnostic about a designer. Meyer, a Cambridge PhD and Discovery Institute scholar, asserts in The Return of the God Hypothesis that life's specified complexity, cosmic fine-tuning, and the universe's beginning suggest an intelligent design. They explore self-organization versus top-down causation, the nature of physical laws, and agency's role, agreeing on order's reality and determinism's limits, but differing on its source—Ali favoring empirical humility, Meyer theistic inference.

**And here is the long summary:**

The conversation begins with Saleem Ali introducing his book, Earthly Order: How Natural Laws Define Human Life, published by Oxford University Press. Ali, chair of the Department of Geography and Spatial Sciences at the University of Delaware, frames his work as a quest to understand how order underpins a sustainable future. His intellectual journey traces back to his PhD at MIT, where he engaged with Stephen Jay Gould, whose concept of science and religion as "non-overlapping magisteria" sparked Ali's interest in order's functionality. Trained as an environmental planner, Ali seeks solutions-oriented insights, aiming to bridge natural laws with human constructs like economics and society. He spent nearly two decades refining this interdisciplinary approach, resulting in a book that spans physics, chemistry, biology, and social systems. Ali distinguishes between two Greek concepts of order: cosmos (natural order inherent in the universe) and taxis (constructed order imposed by humans). He illustrates this duality with examples—biomimicry in city planning reflects natural order beneficially, while stereotypes show constructed order gone awry. For Ali, order is both intrinsic to nature (e.g., physical laws) and a human projection, but he remains agnostic about whether it demands an explanation beyond material reality, emphasizing humility given empirical limits.

Stephen Meyer, from the Discovery Institute, counters with a perspective rooted in his book, The Return of the God Hypothesis. With a background in physics, earth science, and philosophy of science (PhD from Cambridge), Meyer argues that certain orders, particularly in biology, suggest a designing intelligence. He highlights three key evidences: the universe's beginning, its fine-tuning, and the informational complexity of life, which he believes point to theism over materialism or pantheism. Meyer differentiates between repetitive order—like the crystalline structure of salt (NaCl), reducible to simple physical laws—and specified complexity, such as the genetic code in DNA. The latter, he asserts, involves a precise arrangement of parts for function, akin to software or language, and is not derivable from physics or chemistry alone. Drawing on historical science, he cites Kepler's view that nature's intelligibility reflects a rational creator, a belief that fueled the scientific revolution's blend of confidence in discovery and rigorous testing against human fallibility. Meyer's first book, Signature in the Cell, took nearly two decades to complete, mirroring Ali's timeline, and argues that life's digital code implies agency—an intelligence behind its origin.

Their discussion pivots to the origin of life, revealing a central tension. Meyer critiques bottom-up, self-organizational models proposed by scientists like Stuart Kaufman and Manfred Eigen. He acknowledges these models explain simple patterns—like vortices or crystals—but argues they fall short of accounting for specified complexity. For instance, Kaufman's metabolic scenarios presuppose highly specific molecular arrangements,

begging the question of their origin, while Eigen's hypercycles assume pre-existing RNA and enzymes. Meyer bolsters this with experimental evidence: protein folds, essential for biological function, are rare and isolated in sequence space, as shown by Douglas Axe and Dan Toffik's research. Modifying a stable fold risks losing function, suggesting new folds require external information—evidence, he claims, of top-down design. Ali responds by noting the contested nature of origin-of-life research. He references evolving theories—e.g., the shift from primordial soup to RNA world, and emerging ideas about metals like aluminum, abundant yet rejected by life for bioenergetic reasons. Citing Frances Arnold's Nobel Prize-winning work on enzyme design, Ali argues that natural processes are "messier" than a neat top-down model implies, with redundancy and trial-and-error playing roles. He urges caution against over-interpreting patterns as deterministic causality, whether from intelligent design or speculative physics like string theory.

The nature of physical laws emerges as another focal point. Meyer views laws as descriptive rather than explanatory, critiquing the materialistic tendency to reify them as causes. He uses Newton's gravity—consistent with both an apple falling and a rocket flying—to illustrate that laws permit many configurations without specifying them. At the fundamental level (e.g., gravitation, electromagnetism), laws describe recurring phenomena with precision, but their cause remains mysterious absent a deeper principle. Meyer proposes a theistic view: laws reflect God's sustaining action, a medieval concept of potentia ordinata (ordinary power), offering a philosophical alternative to Hume's skepticism (laws as mental habits) or positivist causation. Ali agrees that cosmos-type order exists—evident in constants like the fine-structure constant or Martin Rees' "six numbers" defining a Goldilocks universe. However, his focus is practical: how do these laws, as constraints, inform environmental planning? In Earthly Order, he explores planetary boundaries and tipping points, noting humans can temporarily override natural limits (e.g., through technology), but long-term consequences enforce equilibrium. Ali donates his royalties to science literacy, underscoring his goal of fostering environmental awareness.

Consciousness and agency bridge their perspectives. Meyer sees life's informational order as hinting at mind's cosmic role, citing origin-of-life simulations where chemists impose constraints to achieve life-relevant outcomes—imparting information that mirrors top-down causation. He suggests these experiments reflect a need for intelligence in life's origin. Ali, while open to consciousness as an emergent property, prioritizes its utility for sustainability over metaphysical resolution. Both reject determinism—scientific or theological—for negating agency. Meyer ties this to intelligent design's push against methodological naturalism, which excludes agency as a scientific cause, advocating for intellectual pluralism rooted in early scientists like Newton. Ali concurs, noting determinism's pitfalls in theology (e.g., fatalistic asceticism) and science, valuing human agency to navigate complexity.

Religiously, Ali identifies as a cultural Muslim, favoring allegorical over literal interpretations of faith. He's agnostic about a divine mind, wary of exclusionary theism but open to benign frameworks that inspire hope, echoing Churchill's view against stripping people of meaning. Meyer, a theist, embraces pluralism as a civic virtue, citing James Madison's Christian-influenced advocacy for tolerance. He sees agency—human or divine—as a real ontological category, enriching reality beyond reductionism. Their shared disdain for rigid determinism and appreciation for order's mystery forge common ground, despite Meyer's evidence-driven theism and Ali's pragmatic agnosticism.

In sum, Ali's Earthly Order explores order's spectrum from cosmos to human constructs, aiming for sustainability, while Meyer's Return of the God Hypothesis infers a designing mind from life's complexity and cosmic fine-tuning. They converge on order's reality and agency's importance, diverging on its source—Ali with empirical humility, Meyer with theistic inference.

# Secular left fascism in the UK: 74-year-old pro-life woman arrested

**Wintery Knight** · 26 February 2025 · Archived copy · Original

Things are going very well for us in the United States in the new Trump administration. Pro-lifers are getting pardoned, government spending is being cut, the border is being secured. But what about in other countries that are ruled by the secular left? Are they like us, or are they different? I have a couple of stories in this post that will make you never want to set foot in the UK.

First story is new, and it's from Daily Signal (my favorite news web site):

> Police in Scotland arrested a 74-year-old grandmother for silently offering to speak to women outside an abortion facility, if they wished.
>
> Rose Docherty stood outside the abortion wing of Queen Elizabeth Hospital in Glasgow holding a sign that read, "Coercion is a crime, here to talk, only if you want." Two police officers insisted she desist, handcuffed the elderly woman, and charged her with violating the abortion facility's "buffer zone" barring free speech within a wide radius of any abortion facility.
>
> The pensioner's arrest last week is the first made under Scotland's Abortion Services (Safe Access Zones) Act. Those convicted face a fine of 10,000 pounds (approximately $12,600 U.S.) or an unlimited financial penalty if their expression is deemed serious.
>
> The member of Scottish Parliament who wrote her own nation's law, Gillian Mackay of the far-left Scottish Greens, denounced any and all peaceful pro-life advocacy outside abortion facilities as "utterly shameful and I am grateful to Police Scotland for acting so quickly."

Here's a photo of Gillian Mackay, so you know what secular left fascists look like:

And by the way, this bill was not passed by a narrow margin. It was passed 118 votes to 1. So that should tell you something about free speech in the UK.

More:

> Docherty's arrest mirrors an English city's charges last year's against Livia Tossici-Bolt, 63, who held a sign outside an abortion facility in Bournemouth, England. Her sign read, "Here to talk, if you want."
>
> […]"For several years now, I have been offering a helping hand to women who would like to consider other options to abortion, and pointing them to options where they can receive financial and practical support, if that's what they would like," said Tossici-Bolt. "There's nothing wrong with offering help. There's nothing wrong with two adults engaging in a consensual conversation on the street. I shouldn't be treated like a criminal just for this."

She would be fine in America, but not in the UK.

Here's another article from Fox News that I saw that is from August 9, 2024, but I never blogged on it, because I somehow missed it.

It says:

> London's Metropolitan Police chief warned that officials will not only be cracking down on British citizens for commentary on the riots in the U.K., but on American citizens as well.
>
> "We will throw the full force of the law at people. And whether you're in this country committing crimes on the streets or committing crimes from further afield online, we will come after you," Metropolitan Police Commissioner Sir Mark Rowley told Sky News.

So, the UK is not a very wealthy country. They have a health system that is bankrupt, and performing so poorly that the government actually pays hospitals to kill patients. So, it's very funny to listen to this man threatening American citizens with deportation.

It's not like the UK is doing a good job of enforcing the law against their many, many, many, many child sex-trafficking gangs. And that might be because certain people high up in the police are partakers in the child prostitution activities, and they want it covered up. Maybe they think that child sex-trafficking is OK for some cultures, and that it's wrong to criticize it. They don't arrest the child sex-traffickers very quickly in the UK. Complaints from the parents just get ignored and covered up by high-ranking policemen. So what do the high-ranking policemen focus on instead of child sex-trafficking? They're more likely to arrest people who complain about children being sex-trafficked. That's the big concern of police in the UK.

And remember, the UK does not want any inquiries about their child sex-trafficking:

> British lawmakers voted against launching a national inquiry into the U.K. grooming gang scandal on Wednesday, after objections to the way the vote was being put forward – and amid international scrutiny of the crisis spearheaded by Elon Musk.
>
> The House of Commons voted on an amendment to hold a statutory inquiry into the scandal – where it was revealed that men of predominantly Pakistani heritage had sexually abused girls for years in towns in northern England.

Again, not a country that Americans need to be visiting. Not a safe country. Not a country that respects basic human rights. Get out of there if you can, and never travel there. They are in decline.

# Economist Thomas Sowell explains the result of legislating price controls

**Wintery Knight** · 27 February 2025 · Archived copy · Original

My favorite economist is Thomas Sowell, who is famous for making the findings of academic economists accessible to ordinary people. I always joke to my friends that Thomas Sowell books are like Lay's potato chips – you can't read just one. Well, if you've read Dr. Sowell's flagship book "Basic Economics", you know that the early chapters are about how prices work in the economy.

So, I thought I would link to a VERY good article on price controls by Thomas Sowell. If you've never read him, I think you'll really enjoy how me makes sense of the world for you. Learning how the world works is fun – now you see how to make good decisions.

This is "An Ancient Fallacy: Price Controls" from Capitalism Magazine.

He writes:

> Those old enough to remember the gasoline crisis of 1979 may recall sitting in long lines of cars at filling stations, waiting — sometimes for hours — to reach the pump. This was one of the most common consequences of price control throughout history — a shortage. Yet how many Americans ever made the connection between the price controls of the 1970s and the gasoline shortages of the 1970s? How many have noticed that they haven't been waiting in gasoline lines since Ronald Reagan got rid of the price controls on oil?
>
> Why do price controls cause shortages? There are basically two reasons: supply and demand.
>
> People will not supply as much at a lower price as they will at a higher price. Some oil wells that will repay their costs and earn a profit when the price of oil is $25 a barrel will not cover their costs when the price is $15 a barrel. Some people who will rent out a bungalow in their backyard when rents are high will not bother when rents are low. Some farmers will give up farming when food prices are kept below the point where they can earn a living.
>
> On the demand side, people will demand more when the price is kept artificially low by price controls. Before rent control laws were passed in Sweden, less than one-fourth of unmarried adults there had their own separate housing units, but afterwards more than half did. People buy more of anything that is cheaper. With more being demanded and less being supplied, shortages are inevitable, whether with housing, food, medical care or whatever.
>
> It is not just the quantity supplied that declines under price controls. Quality also declines.
>
> When there are more people trying to rent apartments than there are apartments for rent, landlords no longer have to maintain the appearance of their buildings. They do not need to pay for painting, repairs or maintenance as often as they did when there was no housing shortage and they needed to attract tenants.
>
> Sometimes quality deterioration takes the form of waiting — not just cars waiting in line at filling stations, but also sick people remaining on waiting lists for months to get surgery or other medical treatment they need. Cheap medical care is one of the most expensive things there is.

So, if you force producers to charge less for what they are making, you might see a shortage, you might see a decline in quality, or you might see waiting lists.

Now, one of the examples that Sowell uses in his books is the example of rent control. This is when the government responds to people complaining that "the rent is too damn high" by forcing landlords to charge less. If you're paying attention, then you can predict what will happen next. There will be a shortage of housing, because people with capital invest it in other places, rather than building and renting out places to live. Why? Because there is no money

to be made by investing in renting properties when the government is pushing prices down.

So, let's look at a reverse case, where price controls are removed. What would you expect to see when a country that has had rent control laws for a long time repeals it?

Well, Argentina just elected a new free market capitalist government, and they repealed their rent control laws.

Newsweek reports on what happened next:

> Argentina's recent repeal of rent control by libertarian President Javier Milei has led to a surge in housing supply, with the freedom to negotiate contracts, previously restricted, directly causing a drop in rental prices.
>
> Milei, a self-described "anarcho-capitalist" known for his free-market approach, repealed the 2020 Rental Law, enacted by former leftist President Alberto Fernández, which had imposed restrictions on landlords and led to a significant decline in rental availability.
>
> […]For many locals, finding a new apartment had become "mission impossible." But after the repeal, Buenos Aires saw a doubling of available rental units, and rental prices have stabilized. Under the new rules, landlords and tenants have more freedom to agree on lease terms. If the duration isn't specified, it defaults to two years.
>
> "We've seen a significant increase in rental apartments, and in some cases, we had to lower prices in pesos because of fewer viewings," Soledad Balayan, head of the real-estate agency Maure Inmobiliaria, told Argentine newspaper La Nación.
>
> Since Millei's repeal of rent control laws took effect on December 29, the supply of rental housing in Buenos Aires has jumped by 195.23%, according to the Statistical Observatory of the Real Estate Market of the Real Estate College (CI).

If you guessed that repealing price controls on rental properties would reverse the shortage and cause an abundance of high quality properties, then you guessed right. This is how the world works! Naturally, as supply increases, consumers have a lot more choice, and they get the benefit of better quality at a lower price, because of increased competition among suppliers of rental properties.

The article notes that Joe Biden has proposed rent control at the federal level, which is exactly the kind of policy that you would epect his successor, Kamala Harris, to push if she is elected President. If you know someone who rents, maybe you should tell them about the consequences of rent control laws?

# Billionaire sex-trafficker Jeffrey Epstein donated money to Democrats

**Wintery Knight** · 28 February 2025 · Archived copy · Original

I'm expecting Jeffrey Epstein news today, so I thought I would help everyone remember who Epstein was. Epstein was a billionaire who donated to the Democrats. He had connections to Bill Clinton and other Democrat elites. And in this post, I want to look at those donations and ask why Epstein was so interested in donating to the Democrat party.

Here is an old article from Fox News about the Epstein flight logs:

> Former President Bill Clinton was a much more frequent flyer on a registered sex offender's infamous jet than previously reported, with flight logs showing the former president taking at least 26 trips aboard the "Lolita Express" — even apparently ditching his Secret Service detail for at least five of the flights, according to records obtained by FoxNews.com.
>
> Clinton's presence aboard Jeffrey Epstein's Boeing 727 on 11 occasions has been reported, but flight logs show the number is more than double that, and trips between 2001 and 2003 included extended junkets around the world with Epstein and fellow passengers identified on manifests by their initials or first names, including "Tatiana." The tricked-out jet earned its Nabakov-inspired nickname because it was reportedly outfitted with a bed where passengers had group sex with young girls.
>
> […][Epstein] allegedly had a team of traffickers who procured girls as young as 12 to service his friends on "Orgy Island," an estate on Epstein's 72-acre island, called Little St. James, in the U.S. Virgin Islands.
>
> […]Police in Palm Beach, Fla., launched a year-long investigation in 2005 into Epstein after parents of a 14-year-old girl said their daughter was sexually abused by him. Police interviewed dozens of witnesses, confiscated his trash, performed surveillance and searched his Palm Beach mansion, ultimately identifying 20 girls between the ages of 14 and 17 who they said were sexually abused by Epstein.
>
> […]One victim, in sworn deposition testimony, said Epstein began sexually assaulting her when she was 13 years old and molested her on more than 50 occasions over the next three years.

So the most important point to make is that Jeffrey Epstein made many, many donations to Democrat politicians and the Democrat party.

OpenSecrets.org, which tracks political donations, explains:

> From 1989 up until 2003, Epstein donated more than $139,000 to Democratic federal candidates and committees and over $18,000 to Republican candidates and groups, according to data from OpenSecrets. Notable recipients include former President Bill Clinton and former Senator Bob Packwood, a Republican. In 2003, a couple of years before a full-scale investigation into the allegations of sexual exploitation of underage girls, his political giving abruptly stopped.
>
> From 1999 to 2003, Epstein donated $77,000 to Democrats John Kerry, Richard Gephardt, Chris Dodd, and other high-profile politicians and committees. Dodd received a $1,000 contribution from Epstein during his reelection campaign in 2003, however, the contribution was returned in 2006.
>
> After a hiatus in political giving during the investigations into his sexual abuse, Epstein gave to independent Connecticut House candidate Gwendolyn Beck in 2014 and U.S. Virgin Islands Democratic Delegate Stacey Plaskett both in 2016 and the most recent midterms (Epstein owns a private island in the Virgin Islands called Little Saint James).
>
> Most recently, Epstein contributed $10,000 to the Democratic Congressional Campaign Committee in October

> 2018.

Keep in mind that this isn't the first Democrat mega-donor who has been accused of behavior like this. Remember Harvey Weinstein? But why are these perverts donating to the Democrat party?

## The key to the Democrat party

My view of the Democrat party is that their top priority is abortion. And this support for abortion is the key to all their other policies.

Think about what would have happened if Jeffrey Epstein or Bill Clinton got a young underage prostitute pregnant. They would want to escape the judgement of those nasty Christians, and they would want to avoid having their fun-seeking impacted by the need to provide for the child. And that's why the Democrats support abortion. Their number one goal is to destroy anything that interferes with their desire to have recreational sex.

Now you might say, well, their plan won't work, because we have the institution of marriage, so that girls are being raised by their biological fathers. And the churches will teach women to be chaste, and to prioritize marriage and children. But the Democrats have a plan to get the fathers out of the homes, and reduce the influence of Christianity on young women.

First, they push feminism, which results in women denouncing chastity, marriage and traditional male roles as "sexist". So, instead of women choosing men who are traditional, they choose what their eyes can see: tall hot bad boys. Second, they destroy marriage with no-fault divorce, single mother welfare, denial of father visittation, biased family courts, etc. This gets the biological fathers out of the homes, and away from the daughters, so that the Democrat elites can farm plenty of underage women for their sex-trafficking. Third, they normalize premarital sex in the schools, by having abortion providers come in to teach girls all about "sex education". Fourth, they make contraceptives and abortions taxpayer-funded healthcare, so that premarital sex is free. Fifth, they have Hollywood glamorize premarital sex and portray marriage as "boring".

Their policies allow them to farm fatherless women who can then be raped, assaulted and abused by powerful men. And then there is a cultural push to shame people with traditional values, so that no one can judge them as morally wrong. In Christianity, each woman is made in the image of God, to know God in a personal relationship. It's the job of Christian men to treat women as sisters, helping them to grow stronger, wiser and holier. But that's not the view of women held by secular leftist men. They believe that the strong have a right to exploit the weak, in order to satisfy their selfish desires. For them, it's survival of the fittest, and life ends at the grave – so have all the fun you can, and who cares who gets hurt?

And the powerful men have female allies. Epstein had women helping him to find his victims. And remember how Hillary Clinton defended her husband from credible accusations of rape and sexual assault, and the feminist left nearly elected her President. Some women willingly assist Democrat men, because they want the help of these powerful men in achieving their own ambitions.

That's the Democrat party in a nutshell. All the other policies that sound so nice, (e.g. – amnesty for millions of low-skilled illegal immigrants, raising the minimum wage, etc.), are just vote-buying schemes to get what they really want: sex-trafficking of underage girls, with abortion on demand (including infanticide) to get them out of trouble if there are any "issues". Issues = unborn babies.

# Knight and Rose Show #59: Natasha Crain: When Culture Hates You

**Wintery Knight** · 1 March 2025 · Archived copy · Original

Welcome to episode 59 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview Natasha Crain about her new book "When Culture Hates You". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Natasha Crain to discuss her new book "When Culture Hates You". We discuss the shift from a culturally accepted faith to one increasingly at odds with societal norms. What is driving the church's tendency to conform to cultural pressures? We explore how Christians can respond to societal hostility with grace and conviction.

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 59:**

**Speaker biographies**

Natasha Crain is a speaker, blogger, podcaster, and author of five books who equips Christians to think more clearly about holding to a biblical worldview in an increasingly challenging secular culture. Her podcast is "The Natasha Crain Podcast". Her articles have been featured in outlets such as Focus on the Family Magazine and the Christian Research Journal. She has been featured on radio and TV shows across the U.S. and Canada. She holds the MBA in Marketing and Statistics from UCLA, a BA in Economics from USC, and a certificate in Christian apologetics from Biola University. She was a marketing executive and adjunct marketing professor before transitioning to the ministry of writing and speaking.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Two black economists explain how to end poverty in America

**Wintery Knight** · 2 March 2025 · Archived copy · Original

These days, everyone seems to think that being good to the poor means looking around to see what people are saying is good to the poor, then loudly shouting your agreement with it. People want to look good to others more than they want to help others. Besides, looking good by loud virtue signaling is free. If we really wanted to help people, though, we should tell them to do what will work.

So let's talk about poverty in America, with help from famous black economist Walter Williams.

First, he says real poverty is not common in America:

> There is no material poverty in the U.S. Here are a few facts about people whom the Census Bureau labels as poor. Dr. Robert Rector and Rachel Sheffield, in their study "Understanding Poverty in the United States: Surprising Facts About America's Poor", report that 80 percent of poor households have air conditioning; nearly three-quarters have a car or truck, and 31 percent have two or more. Two-thirds have cable or satellite TV. Half have one or more computers. Forty-two percent own their homes. Poor Americans have more living space than the typical non-poor person in Sweden, France or the U.K. What we have in our nation are dependency and poverty of the spirit, with people making unwise choices and leading pathological lives aided and abetted by the welfare state.

Second, the "poverty" is not caused by racism, but by poor choices:

> The Census Bureau pegs the poverty rate among blacks at 35 percent and among whites at 13 percent. The illegitimacy rate among blacks is 72 percent, and among whites it's 30 percent. A statistic that one doesn't hear much about is that the poverty rate among black married families has been in the single digits for more than two decades, currently at 8 percent. For married white families, it's 5 percent. Now the politically incorrect questions: Whose fault is it to have children without the benefit of marriage and risk a life of dependency? Do people have free will, or are they governed by instincts?
>
> There may be some pinhead sociologists who blame the weak black family structure on racial discrimination. But why was the black illegitimacy rate only 14 percent in 1940, and why, as Dr. Thomas Sowell reports, do we find that census data "going back a hundred years, when blacks were just one generation out of slavery … showed that a slightly higher percentage of black adults had married than white adults. This fact remained true in every census from 1890 to 1940"? Is anyone willing to advance the argument that the reason the illegitimacy rate among blacks was lower and marriage rates higher in earlier periods was there was less racial discrimination and greater opportunity?

Third, avoiding poverty is the result of good choices:

> No one can blame a person if he starts out in life poor, because how one starts out is not his fault.
>
> If he stays poor, he is to blame because it is his fault. Avoiding long-term poverty is not rocket science. First, graduate from high school. Second, get married before you have children, and stay married. Third, work at any kind of job, even one that starts out paying the minimum wage. And finally, avoid engaging in criminal behavior. It turns out that a married couple, each earning the minimum wage, would earn an annual combined income of $30,000. The Census Bureau poverty line for a family of two is $15,500, and for a family of four, it's $23,000. By the way, no adult who starts out earning the minimum wage does so for very long.

Fourth, what stops people from making good choices is big government:

> Since President Lyndon Johnson declared war on poverty, the nation has spent about $18 trillion at the federal, state and local levels of government on programs justified by the "need" to deal with some aspect of poverty. In a column of mine in 1995, I pointed out that at that time, the nation had spent $5.4 trillion on the War on Poverty, and with that princely sum, "you could purchase every U.S. factory, all manufacturing equipment, and every office building. With what's left over, one could buy every airline, trucking company and our commercial maritime fleet. If you're still in the shopping mood, you could also buy every television, radio and power company, plus every retail and wholesale store in the entire nation". Today's total of $18 trillion spent on poverty means you could purchase everything produced in our country each year and then some.

Regarding those last two points, here is another famous black economist, Thomas Sowell:

Economist Thomas Sowell blames welfare for killing the black family
To illustrate this point, here's a graph with some helpful data taken from the U. S. Census.

In fact, there is a whole video featuring Thomas Sowell to go with this graph:

Black women were more likely to be married before welfare programs
And an article to go with it:

> If we wanted to be serious about evidence, we might compare where blacks stood a hundred years after the end of slavery with where they stood after 30 years of the liberal welfare state. In other words, we could compare hard evidence on "the legacy of slavery" with hard evidence on the legacy of liberals.

> Despite the grand myth that black economic progress began or accelerated with the passage of the civil rights laws and “war on poverty” programs of the 1960s, the cold fact is that the poverty rate among blacks fell from 87 percent in 1940 to 47 percent by 1960. This was before any of those programs began.
>
> Over the next 20 years, the poverty rate among blacks fell another 18 percentage points, compared to the 40-point drop in the previous 20 years. This was the continuation of a previous economic trend, at a slower rate of progress, not the economic grand deliverance proclaimed by liberals and self-serving black “leaders.”
>
> Ending the Jim Crow laws was a landmark achievement. But, despite the great proliferation of black political and other “leaders” that resulted from the laws and policies of the 1960s, nothing comparable happened economically. And there were serious retrogressions socially.
>
> Nearly a hundred years of the supposed “legacy of slavery” found most black children being raised in two-parent families in 1960. But thirty years after the liberal welfare state found the great majority of black children being raised by a single parent.

The rest of the article points out how even crime rates among blacks were caused by the implementation of soft law enforcement policies by progressives. Just look at the big cities if you want to know what it is like for blacks to be ruled by Democrats. It sucks!

If everybody started to read more Thomas Sowell books, we would be much better off as a country! Only good things happen when people stop watching TV and listening to music and watching movies, and instead settle down in a chair with a Thomas Sowell book. I recommended a bunch of them in a previous post.

# New study: Transgender surgeries linked to suicidal ideation, depression

**Wintery Knight** · 3 March 2025 · Archived copy · Original

I love to debate controversial issues, so I gather every study that can help me win on my little blog. If you like to fight and win, you can come here and steal them all! Today, I have a new peer-reviewed study published in the Oxford Academic Journal of Sexual Medicine. I checked and they really are linked to Oxford University. So read on and we give you a new arrow for your quiver.

Here is the new study on the Oxford Academic web site.

And I found a new article about the study, from The Post Millennnial.

And they write:

> A study of over 107,000 patients with gender dysphoria over the age of 18 has concluded that those who undergo transgender surgeries, are at greater risk for mental health problems, including depression, suicidal ideation, anxiety, and others.
>
> The paper, published in the Oxford Academic Journal of Sexual Medicine, stated in conclusion that bottom and top surgeries are "associated with increased risk of mental health issues." The results section stated that "from 107 583 patients, matched cohorts demonstrated that those undergoing surgery were at significantly higher risk for depression, anxiety, suicidal ideation, and substance use disorders than those without surgery."
>
> It said of those who got surgery, "Our analysis reveals a significantly elevated risk of mental health disorders-including depression, anxiety, suicidal ideation, and substance use disorder-post-surgery among individuals with a prior diagnosis of gender dysphoria."
>
> Males and females who underwent surgery had a higher risk of depression, according to the study.

Now, whenever I get into these discussions, one of the first things that people say is that all of these negative consequences would just disappear if the culture were 100% affirming of LGBT. That is, it's only social disapproval that makes these bad consequences.

On the weekend, I posted a new episode of Knight and Rose Show, in which Rose and I spoke to famous Christian author Natasha Crain. At one point, we were talking about how best to defend the Bible's teachings on gender from the secular left view. I brought up a previous blog post, where I collected several studies that show that even in LGBT-affirming countries like Sweden and Denmark, these same behavioral issues are found.

Here's is what I wrote last time:

First, I want to note that in this NBC News article, the following countries are listed in the "15 Best Countries for LGBTQ Expats":

- Denmark
- Iceland
- Sweden

I say this, because these are the countries measured in the studies below.

So, here is one study from November 2019, published in the Journal of Epidemiology & Community Health, entitled "Suicide among persons who entered same-sex and opposite-sex marriage in Denmark and Sweden, 1989–2016: a binational, register-based cohort study".

The abstract says:

> This large register-based study found higher suicide rates among individuals who entered an SSM, compared with those who entered an OSM. A lower suicide rate was noted for individuals in SSMs in recent years. More research is needed to identify the unique suicide risk and protective factors for sexual minority people.

SSM means same-sex "marriage" and OSM means opposite-sex marriage.

Here's another study from Sweden about same-sex "married" LGBT people, published May 2016, in the European Journal of Epidemiology. The title is the "Suicide in married couples in Sweden: Is the risk greater in same-sex couples?"

The abstract says:

> Even in a country with a comparatively tolerant climate regarding homosexuality such as Sweden, same-sex married individuals evidence a higher risk for suicide than other married individuals.

Here's another study from Sweden about LGBT individuals, published in March 2016 in the Journal of Epidemiology and Community Health, entitled "Self-reported suicide ideation and attempts, and medical care for intentional self-harm in lesbians, gays and bisexuals in Sweden".

The abstract says:

> Positive histories of suicidal ideation, attempts and medical care for intentional self-harm, including higher levels of recurrence, are more prevalent among LGB individuals in contrast to heterosexuals. Lesbian/bisexual women evidence an earlier age of onset of treatment.

Here's another study from Sweden about people who underwent sex-reassignment surgery, published in February 2011, PLoS One, entitled "Long-Term Follow-Up of Transsexual Persons Undergoing Sex Reassignment Surgery: Cohort Study in Sweden".

The abstract says:

> Persons with transsexualism, after sex reassignment, have considerably higher risks for mortality, suicidal behaviour, and psychiatric morbidity than the general population.

Here's a study from Iceland about LGBT adolescents, published in May 2015, and entitled "Suicidal risk and sexual orientation in adolescence: A population-based study in Iceland".

The abstract says:

> The LGB girls were six times more likely to have had frequent suicide attempts, whilst the LGB boys were 17 times more likely to have attempted suicide that often.

So, there are some studies I found, and if anyone asks me about this, I'll explain that although I am not a social science researcher, the studies of people in LGBT-friendly countries show that there is a higher risk of suicidal thoughts and attempted suicide for LGBT individuals and couples than there is for heterosexual individuals and couples. And if they ask which countries, I'll say Sweden, Iceland and Denmark. I'll say that these are countries where same-sex "marriage" is legal.

# The Biden-Harris regime used social media to overstate COVID vaccine effectiveness

**Wintery Knight** · 4 March 2025 · Archived copy · Original

I had a funny conversation with my doctor at my last annual check-up. He said that the Biden-Harris regime's COVID views came from "evidence", and opposition to the Biden-Harris regime's views came from "social media". Well, we are finding out a lot of new things now that the Republicans are in charge. Let's find out below which side was spreading their views with social media.

Here's the article from Daily Signal:

> Based on extensive investigations and sworn testimony, the House Energy and Commerce Subcommittee on Oversight exposed how the Biden-Harris administration used a $900 million public relations campaign to influence how Americans understood and responded to the administration's COVID-19 policies.
>
> The public relations campaign became a tool for flawed narratives. Despite the administration's promises to "follow the science," the evidence clearly showed that the administration prioritized managing people's perceptions over public transparency.

Big Tech social media and search engines were involved:

> The October 2024 subcommittee report also unveiled a textbook example of how federal officials used taxpayer dollars to engage platforms like Facebook, Twitter, Instagram, and Google to advance their policy agenda. The report proved that these public officials relied upon selective data to shape public opinion that was not, in fact, supported by the existing scientific evidence.

The key point is the assertion that the COVD vaccine prevents a person from being infected by another person. The FDA was not convinced that it could prevent transmission:

> The administration pursued this aggressive PR campaign despite the Food and Drug Administration's own determination on COVID-19 vaccine effectiveness. When the FDA issued an emergency use authorization for the Pfizer-BioNTech vaccine on Dec. 11, 2020, it explicitly stated that it could not affirm that the vaccine could prevent COVID-19 transmission: "At this time, data are not available to make a determination about how long the vaccine will provide protection, nor is there evidence that the vaccine prevents transmission of SARS-CoV-2 from person to person."
>
> The FDA repeated this message in issuing its emergency use authorizations for the Moderna vaccine on Dec. 18, 2020, and the Janssen vaccine on Feb. 27, 2021.

This information should have been given to people, but what we actually heard from the Biden-Harris was something else. But that's not the approach that the Biden-Harris regime took.

Instead, they said this:

> Nonetheless, in March 2021, Centers for Disease Control and Prevention Director Dr. Rochelle Walensky declared that vaccinated persons "do not carry" the virus. In September 2021, falsely insisting that the pandemic was a "pandemic of the unvaccinated," President Joe Biden announced a series of unprecedented federal vaccine mandates that would have affected an estimated 100 million Americans.
>
> Remarkably, in the teeth of mounting evidence, including the personal experiences of millions of Americans, the administration's continuous messaging overstated vaccine effectiveness. It was not until January 2022 that the United States Supreme Court halted most of the mandates.

And they spread this message of “overstating vaccine effectiveness” on social media, which was very convincing to many people who formed their opinions from social media, and not from evidence:

> Big Tech actively censored views critical of administration policy from private citizens and even other public officials. This became clear when, on July 4, 2023, in Missouri v. Biden, a federal court held that the Biden administration colluded with and coerced social media platforms to censor dissenting viewpoints on COVID-19—“a massive attack” in an apparent violation of the First Amendment.
>
> This was later confirmed when, on Aug. 26, 2024, Meta CEO Mark Zuckerberg wrote a letter to Congress in which he stated: “In 2021, senior officials from the Biden administration, including the White House, repeatedly pressured our teams for months to censor certain COVID-19 content, including humor and satire, and expressed a lot of frustration when we didn’t agree.”

I think there is a good lesson here about whether we should form our views based on what we see in the culture. It’s possible for powerful people to harness mainstream news media, social media, Big Tech search engines, etc. and give us claims that are not supported by scientific evidence. The problem with the government doing it is that they do it with our money. They don’t have any money of their own. And remember, secular leftists don’t have any rational grounding for human rights in their accidental universe. So don’t expect them to allow free speech that is critical of their views.

# What happens when we die? Is there a resurrection? Is there a Heaven and a Hell?

**Wintery Knight** · 5 March 2025 · Archived copy · Original

One of the questions that everyone should ask themselves is "what happens to me when I die?" Well, I'm an evangelical Protestant Christian, and I think that view of the world is correct according to logic and evidence. Well, I found an article on this that provides the philosophical theology perspective, from Dr. William Lane Craig. Let's see what he thinks about it.

He writes:

> The first and most fundamental truth that we must hold on to is that *the biblical hope of immortality is physical, bodily resurrection*. I repeat: The biblical hope for immortality is physical, bodily resurrection. The biblical hope is *not* that the soul will someday be separated from the body and fly off to heaven and be forever with God in heaven in this disembodied existence. That's actually a very Greek understanding of the afterlife, from the Greek philosophers like Plato, and it's very different from the Jewish-Hebrew way of thinking of the afterlife. For Jews and for the early Christians alike, the hope of immortality was not the immortality of the soul alone but rather the resurrection of the body. This physical body will be raised from the dead and transformed to immortal life.

He cites 1 Cor 15:20 and Phil 3:20-21 as support.

And do we get our resurrection bodies right away?

> Now that raises the next question: *When* do we receive our resurrection bodies? When do we get our resurrection body? Is it immediately upon death? When we die, do we immediately receive our resurrection body? Well, the answer to that is, no. That idea fails to take seriously the physical nature of the resurrection. The resurrection body is not some different body. It is *this* body transformed into a glorious, immortal, Spirit-filled, incorruptible form. So if we received our resurrection body immediately upon death, the graves of all the Christians would be empty! There would be no corpses left in the tombs because our resurrection bodies are the transformation of this earthly body. Therefore, the resurrection doesn't take place immediately upon death. Rather the Scriptures are fairly clear that this takes place at the second coming of Christ, when Christ returns to earth.

He cites 1 Cor 15:21-23, 51-52 for support, as well as 1 Thes 4:13-17.

And what about the time in between death and the second coming of Christ? After all, in Luke 23:39-43, Jesus tells the dying thief who believes in him that he'll be with Jesus in Paradise that very day:

[39] *One of the criminals who hung there hurled insults at him: "Aren't you the Messiah? Save yourself and us!"*

[40] *But the other criminal rebuked him. "Don't you fear God," he said, "since you are under the same sentence?*

[41] *We are punished justly, for we are getting what our deeds deserve. But this man has done nothing wrong."*

[42] *Then he said, "Jesus, remember me when you come into your kingdom."*

[43] *Jesus answered him, "Truly I tell you, today you will be with me in paradise."*

Dr. Craig says:

> [T]he Bible indicates is that the soul does survive the death of the body. Human death does not mean extinction. Human death is simply the separation of the soul from the body. While the body dies biologically

> and decays away, the soul continues to exist and continues to live in a disembodied state. In between your death and your resurrection you will exist as a disembodied soul, a soul without a body, in a conscious state.

And he cites Phil 1:21-24, where it talks about how life after death, but before the resurrection, is an improvement, because he will be with Christ, which is “far better”. Those who don’t accept Jesus as Lord and Savior will also have a life after death, but apart from Christ. And they’ll also have a resurrection, but not to eternal life with Christ:

> In John 5 there’s a very interesting passage where Jesus speaks about the resurrection, and He says that there will be a resurrection, not only of the righteous dead, but even also of the unrighteous dead. John 5:28-29. Look at this saying by Jesus: “Do not marvel at this. For the hour is coming in which all who are in the graves will hear His voice and come forth, those who have done good to the resurrection of life and those who have done evil to the resurrection of condemnation.” Jesus envisions that all people will be raised from the dead. Those who are believers, the righteous dead, will be raised to the resurrection of life; but the unrighteous dead, those who have rejected God’s grace and His love, will be raised to the resurrection of condemnation.

Dr. Craig also talks about the story of Lazarus, where the rich man, who is not saved, is in Hades, which is the Greek word for the Hebrew word “Sheol”, which you may recognize from the Psalms.

Dr. Craig writes:

> When people die, the righteous go to be with Christ, where they will await their resurrection from the dead. The damned go to Hades, where they are in a disembodied state where they await their resurrection to final judgment. Only then are people ushered in to their *final* state, which is heaven or hell.

I cannot wait until I get my resurrection body. I have a very good idea of what I’d like it to be, too. I think about the resurrection a lot, and really look forward to it. I had a difficult life in many ways. There are things that have not been resolved. But my hope is that in the end, I will share in his vindication, being clothed in a righteousness that I did not earn myself.

# For the first time, young men are more religious than young women

**Wintery Knight** · 6 March 2025 · Archived copy · Original

I noticed an article in the Financial Times about a growing divide between young women and young men. Young women are increasingly leftist, and young men are increasingly conservative. Surveys of young men and young women have found that young men are more conservative on abortion and LGBT than young women. And now young men are more religious than young women.

Now, I want to be clear in this post that I am not criticizing all women. I am criticizing the majority of YOUNG WOMEN. Older women don't usually have these problems, especially married older women.

First, let's take a look at the previous article, from the far-left UK Independent:

> An analysis of survey data from across the developing world had found that "a new global gender divide" is emerging. The analysis, conducted by the Financial Times' John Burn-Murdoch, showed that the developed world's young women have rapidly become more liberal. Young men, however, have either become more conservative (as in the US) or been much slower to become more progressive (as in the UK). Gen Z, Burn-Murdoch concluded, is "two generations, not one."
>
> […]Quoting similar figures to those in the FT, and noting that political views have become more tightly bound to personal identity, a Washington Post editorial warned that members of Gen Z will struggle to pair off romantically.

Young men, statistically speaking, are more likely to side with the weak against the strong. Since abortion harms unborn children, and divorce and same-sex marriage harm born children, men typically oppose these behaviors. But statistically speaking, young women more often side with the selfish adults against the children.

Naturally there are exceptions, but the statistics show that young men are more conservative on moral issues than young women. And nowhere is this more apparent than in the issue of abortion, which is really just about whether selfish adults can resort to murdering their own children in order to escape the consequences of no-commitment sex.

In September 2024, Gallup explained how young men and young women view abortion:

> For this, Gallup reviewed 24 questions from its trends archive that measure Americans' beliefs or positions on widely debated policy-related issues, and that Gallup has asked frequently enough to produce sufficient sample sizes of young men and women across the three periods… On five of these, the percentage of young women holding the liberal position has increased by more than 15 points. These have to do with the environment, abortion and gun laws.

> - Young women have become 18 points more likely to support **broad abortion rights**, saying abortion should be legal under any or most circumstances (rather than in only a few or no circumstances). Their preference for this position rose from 42% to 60% between 2008-2016 and 2017-2024.

The number for young men is much lower than 60% at only 48%!

So, what happens to young men when they take these traditional MALE positions on issues, and society disapproves of them? Well, they turn to God for vindication of their good moral views. If society won't approve of young men for protecting the unborn from abortion, and protecting children from divorce and same-sex marriage, then young men will have to find their vindication somewhere else. And that somewhere else is *God*.

Here's the latest from the far-left New York Times: (archived)

> For the first time in modern American history, young men are now more religious than their female peers. They attend services more often and are more likely to identify as religious.
>
> […]Among Generation Z Christians, this dynamic is playing out in a stark way: The men are staying in church, while the women are leaving at a remarkable clip.
>
> Church membership has been dropping in the United States for years. But within Gen Z, almost 40 percent of women now describe themselves as religiously unaffiliated, compared with 34 percent of men, according to a survey last year of more than 5,000 Americans by the Survey Center on American Life at the American Enterprise Institute.

To be accurate, I don't think that young women have been more religious than men. If you look at the kinds of books that young women tend to read, it's more about comfort and life enhancement. They are not looking to get their orders from God. They are looking to get their desires met by God. And you can see that coming out in the new trends of "manifesting" that is so popular with young women.

By contrast, young men are more likely to turn to apologetics, science, history and theology. Young women were only "spiritual", they were not looking to sacrifice themselves in order to serve God. You can see this by looking at what books young women and men read. Young women tend to read people like Rachel Hollis, Rachel Held Evans, and Sarah Young. Young men see religion as being about their duties to others. They read people like J. Warner Wallace, Frank Turek and Sean McDowell. They want to learn how to tell people the truth, and tell people right and wrong. They want to lead in moral and spiritual areas. They want to make the world a better place for the weakest people.

How did this happen? Well, we have had generation after generation of pietistic Christian parents and pietistic Christian pastors who thought that it was the height of chivalry to only apply the Bible to young men, and never to young women. Young men need to be "challenged", but never young women. People acted as if women had some sort of hotline to God through their emotions, and could never be judged for any of their questionable policy preferences and choices.

My question for you is this: do you think that these pietistic parents and pietistic pastors will finally stop asking the question "Where are all the good men?" and start asking a much better question "Where are all the good women?" Because I can tell you right now, conservative religious men are not going to be interested in dating or marrying these secular leftist young women.

Marriage is a huge risk for young men, in a world of no-fault divorce, biased divorce courts and feminized public schools. Good young men are not going to take those risks just to give secular leftist young women their "happily ever after" once they tire of "having fun" with hot bad boys, and want to settle down. And no amount of shaming and blaming is going to force good men to take those risks.

By the way, I've noticed that a lot of good young men are now seeking out friendships with more traditional older women. They are looking for sanity, and validation for their good moral and religious views. That's not surprising. They'll go where they are respected.

# Bible study: Was the resurrection body of Jesus spiritual or physical?

**Wintery Knight** · 7 March 2025 · Archived copy · Original

One of the leading naturalistic attempts to account for Jesus' death, empty tomb, post-mortem appearances, and the early proclamation of the resurrection is that the disciples had individual and group hallucinations. In this case, the New Testament authors would not have meant that the resurrected body of Jesus was physical. But is that what they recorded?

Here's a quotation from my friend Eric Chabot, from his blog Think Apologetics. He explains why Paul's use of the word "resurrection" to describe what the other witnesses saw means *bodily* resurrection.

He writes:

> The two words are used for resurrection in the New Testament "anastasis" (rising up) and "egersis" (waking up), both imply a physical body**.** Furthermore, the use of the word "opethe" (the Greek word for appeared) shows the Gospel writers did believe that Jesus appeared physically. "There you will see (opethe) him" (Matt. 28:7); "The Lord has risen and has appeared (opethe) to Simon" (Luke 24:24). When they used "opethe" here, it means that He appeared physically to them.

OK so all the words they used for resurrection imply a physical body.

But what about the word for body. Do they imply a physical body?

Yes:

> So when Paul gives his list of appearances in 1 Cor. 15, the issues becomes whether the appearance to him is the same as it was to the disciples. There is no doubt the post resurrection body of Jesus (after the ascension) had to be somewhat different than the body the disciples saw. Also, whenever the New Testament mentions the word body, in the context of referring to an individual human being, the Greek word "soma" always refers to a literal, physical body. Greek specialist Robert Gundry says "the consistent and exclusive use of soma for the physical body in anthropological contexts resists dematerialization of the resurrection, whether by idealism or by existentialism." [9] Furthermore, in N.T. Wright's The Resurrection of the Son of God shows that the Greek word for resurrection which is "anastasis" was used by ancient Jews, pagans, and Christians as bodily in nature.

What about the nature of Paul's appearance? Was that a hallucination, or seeing some objective reality? Did the people with Paul see or hear anything?

Eric Chabot writes this in another place:

> The Bible says, "they heard" the same voice Paul did " (Acts 9: 7). But they "did not see anyone " (Acts 9: 7). Notice Paul was physically blinded by the brightness of the light. One way or the other, the experience involved something that was external to Paul. It wasn't something that was the same thing as a vision that Paul talks about in 2 Cor. 12:1. Furthermore, the phrase "he let himself be seen"' (ōphthē , aorist passive, ), is the word Paul uses in 1 Cor. 15:7 to describe of his own resurrection appearance as the other ones in the creed.

Paul didn't get a bodily resurrection appearance, but he got an objective appearance that people nearby could see (as a bright light) and hear. His appearance, coming 5-8 years after the appearances to the disciples, should not be seen as overriding their appearances, which were appearances of the bodily resurrected Jesus.

If you want to read something a little more challenging, I found a paper from the Evangelical Theological Society (ETS) from their journal, where it talks more about soma and anastasis. If you want a bit of a challenge, download the PDF and read it. It's by Kirk R. MacGregor and the title is "1 Corinthians 15:3B–6A, 7 And The Bodily Resurrection Of Jesus".

# William Lane Craig debates Walter Sinnott-Armstrong: evil, suffering and God

**Wintery Knight** · 8 March 2025 · Archived copy · Original

This is one of the top 4 best debates that William Lane Craig has ever done in my opinion. (The other three are Craig-Millican debate and the first and second Craig-Dacey debates). If you've never seen Dr. Craig in a debate with a non-Christian, this one is probably the best introductory one out there. Dr. Craig is the foremost defender of Christian theism on the planet, and probably of all time.

Sinnott-Armstrong is very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics. So if you are looking for a good first debate to watch, this is it! Normally, Dr. Craig debates at major universities in front of students and faculty.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church, this is the one to start with.

**The debaters:**

- William Lane Craig
- Walter Sinnott-Armstrong

**The format:**

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

**SUMMARY:**

**WSA opening speech:**

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.

4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

**WLC opening speech:**

Summarizing Walter's argument

1. If God exists, gratuitous evil does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the

knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while still retaining the same amount of knowledge of God's existence and character.

- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

1. If God exists, gratuitous evil does not exist.
2. *God exists*
3. Therefore, gratuitous evil does not exist.

Four reasons to think that God exists (premise 2 from above):

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

# Why do Republicans want to shut down the Federal Department of Education?

**Wintery Knight** · 9 March 2025 · Archived copy · Original

In this article, I will start with an anecdote. After that, we'll see what kind of student performance we are getting for the taxpayer dollars we spend on education. Is the federal Department of Education doing a good job of producing high-performing students? And after that, we'll talk about what the Republicans can do to abolish the federal Department of Education.

Here's the funny anecdote, reported by Newsweek:

> Aleysha Ortiz, 19, alleges she cannot read or write yet says she graduated with honors from Hartford Public High School in 2024. She has since filed a lawsuit against the Hartford Board of Education and city officials, accusing them of negligence in failing to provide adequate special education services throughout her schooling, per reporting from Connecticut's News 8 WTNH.
>
> […]Ortiz told CNN she was promoted through school without acquiring fundamental literacy skills. In a May 2024 city council meeting, she testified that after 12 years in Hartford Public Schools, she was unable to read or write, despite being awarded an honors diploma.

She can't read or write, but she's now a university student at the University of Connecticut.

So, let's take a look at the federal Department of Education. Are they doing a good job of improving student test scores?

The Heritage Foundation has the answer:

> Nearly 45 years after its creation under former President Jimmy Carter, high school seniors' math and reading outcomes remain stagnant. Worse still, the academic achievement gap between the United States's poorest and wealthiest students, a gap of four grade levels, has not narrowed since the department's inception.
>
> These dismal results come at a staggering cost. Funding this vast federal agency, with its more than 4,000 employees, has cost parents and U.S. taxpayers billions of dollars. Since 1980, K-12 spending and college costs have doubled in real terms, while every additional dollar funneled through Washington has come at the expense of local schools, including public, charter, and private, that actually educate our children.
>
> As the American Enterprise Institute's Rick Hess recently pointed out, more than 1,000 Department of Education employees are paid more than $160,000 annually, with nearly 90 making upwards of $200,000—more than four times the average starting teacher salary.

The most common complaint from parents about federal control of education is not the inefficiency. It's the weaponization of government against parents – the same parents who pay the salaries of the education bureaucrats.

More:

> In just the past four years, the Biden administration has weaponized the federal government against parents and children in unprecedented ways. The FBI, under President Joe Biden's direction, created "threat tags" to monitor parents simply for exercising their First Amendment rights at school board meetings and speaking up about critical matters such as school safety, boys in female bathrooms and locker rooms, and sexualized content in classrooms.
>
> Meanwhile, the Department of Education rewrote Title IX rules to expand the definition of "sex" discrimination to include "gender identity" and then handed enforcement over to the Department of

> Agriculture, which threatened to withhold school meal funding from institutions that refused to embrace this radical ideology.

OK, excellent. We're spending a lot of money on these bureaucrats, and getting lousy results. That would be unacceptable in the competitive, consumer-focused private sector. But it's totally fine in a government monopoly that gives customers no opt-out.

Let's shut it down. How can we shut it down? This article from The Federalist explains how the process has already started.

> McMahon said that the review of the department was "long overdue," noting the over $1 trillion spent by taxpayers on a government agency that has overseen plummeting education outcomes for American students. She also noted massive student debt for obtaining degrees that are less and less valuable, anti-American indoctrination in schools, and teacher shortages due to bureaucratic "red tape."
>
> "Disruption leads to innovation and gets results. We must start thinking about our final mission at the department as an overhaul — a last chance to restore the culture of liberty and excellence that made American education great," she said. "Changing the status quo can be daunting. But every staff member of this Department should be enthusiastic about any change that will benefit students. "
>
> McMahon laid out three "convictions" that will guide the closure of the department: Parents should be "the primary decision makers in their children's education"; "taxpayer-funded education should refocus" on educational pillars like math, reading, science, and history as opposed to diversity, equity, and inclusion (DEI) and gender ideology; and education beyond high school should revive its value by aligning degrees "with workforce needs."
>
> States, school systems, teachers, and families alike would benefit from being able to tailor education funds to their individual needs, as opposed to having objectives dictated by federal control, McMahon said.

By the way, a lot of states aren't waiting for relief from federal mismanagement of education. The Federalist reports on which states already have school choice:

> On Tuesday, Wyoming became the 15th state to enact universal school choice into law with Gov. Mark Gordon's signature on the Steamboat Legacy Scholarship Act.
>
> The Cowboy State joins a rapidly growing group of states that have passed laws giving all (or nearly all) families statewide choice concerning their children's kindergarten through twelfth-grade education. Those states are Alabama, Arizona, Arkansas, Florida, Idaho, Indiana, Iowa, Louisiana, North Carolina, Ohio, Oklahoma, Tennessee, Utah, and West Virginia.
>
> The act grants families who choose to participate with an education savings account of $7,000 per student per year to allocate toward approved K-12 educational expenses. Education savings accounts with universal eligibility are the gold standard of school choice programs due to the flexibility they provide parents to select the best learning avenues for their children.

Do you live in a state without school choice? Why? Get out of there!

# Who is the (temporary) Prime Minister of Canada?

**Wintery Knight** · 10 March 2025 · Archived copy · Original

So, Justin Trudeau, a former part-time drama teacher and snowboarding instructor, resigned as leader of the Liberal Party of Canada. He was the Prime Minister. The Liberal Party has selected a new leader, Mark Carney. Mark Carney has a record that goes back to the United Kingdom, which is a fascist secular left country that bans free speech and prosecutes peaceful pro-lifers.

Let's find out more about Carney, from this excellent article on Breitbart News:

The Justin Trudeau era is coming to a close in Canada, with the governing Liberal Party selecting former central banker Mark Carney as its new leader and eventual prime minister on Sunday.

Conservative leader reacts:

> Critics, such as Conservative Party leader Pierre Poilievre, have accused the former Goldman Sachs investment banker of being "sneaky" and of representing a doubling down of the failed economic and environmentalist Trudeau-era agendas.

Never ran a campaign, never elected to office:

> While never elected to public office, likely the first prime minister to have never been voted for at any level, Carney has been deeply involved in politics in Canada and internationally for nearly two decades. He was first installed as the head of the Bank of Canada during the 2008 financial crisis.

Anti-Brexit, pro-EU:

> Carney later became the first non-British person to be selected to lead the Bank of England in 2013. During his tenure as governor of the UK's central bank, Carney frequently faced criticism for spreading "project fear" warnings of a potential financial crisis due to the Brexit withdrawal from the European Union.

Fascist views of opposition to COVID lockdowns:

> During the Chinese coronavirus crisis, Carney served as an advisor to Boris Johnson's government in Britain and later to Justin Trudeau's government in Canada, both of which instituted some of the strictest lockdown restrictions in the Western world.
>
> Carney publicly branded the Canadian "Freedom Convoy" uprising against the draconian measures, including vaccine mandates, as representing "sedition" against the government in Ottawa and advocated for the government to go after those who funded the protest movement.
>
> "By now, anyone sending money to the convoy should be in no doubt: You are funding sedition. Foreign funders of an insurrection interfered in our domestic affairs from the start. Canadian authorities should take every step within the law to identify and thoroughly punish them. The involvement of foreign governments and any officials connected to them should be identified, exposed and addressed," he wrote in 2022.

You might remember that Canada froze the bank accounts of peaceful protestors, leading to a flight of capital and investment for their little third-world Banana Republic.

He's also an eco-socialist – using global warming alarmism to push for higher taxes, more spending, more regulations, and larger government:

> Carney has also been at the forefront of the international green agenda, having served as the United Nations Special Envoy for Climate Action and Finance from 2019 until January when he stepped down to run for the Liberal Party leadership.
>
> Additionally, Carney led the Net Zero Banking Alliance (NZBA), an initiative to advance climate policies throughout financial institutions throughout the West. The institution has recently suffered significant blows, as top American banks, including J.P. Morgan, withdrew from the scheme in the wake of the re-election of President Donald Trump, who has vowed to combat so-called Environmental, Social, Governance (ESG) policies.

If he wins, I would expect some sort of Chinese social credit system, but along the lines of complying with green energy socialism. Expect the sort of economic contractions that we see in France and Germany, where you have leaders crowing about supporting Ukraine, as they purchase all their (dirty) energy from Russia, because they don't make any of their own. Carney is a huge supporter of carbon taxes, and will likely want Canadians to to pay more for "green" appliances, "green" vehicles and "green" homes. It's a convenient way to squeeze the last bit of self-sufficiency out of voters, so that they have to agree with the central government in order to be able to afford to live.

Right now, the Conservative Party candidate is in the lead, but Canada has about 66% secular leftist voters. Which means that any candidate from a secular left party is going to have a lot of votes from this majority. It's not a good country. Not a good place to live. Not even a good place to visit. And definitely not a good place to invest. They simply don't understand basic economics.

# Should people with unwanted sexual desires be allowed to seek therapy?

**Wintery Knight** · 11 March 2025 · Archived copy · Original

One of the things that happens when secular leftists get control of a country is that they make it illegal to criticize the beliefs of the government. For example, in some countries, you can't criticize global warming mythology. In other countries, you can't disagree with abortion rights. And in other countries, you can't disagree with LGBT lifestyles. Not even respectfully. Not even in private.

To give an example, Canada supports LGBT so much, that they've made it illegal for people to disagree with it.

Christian Post reported this:

> On Wednesday, Canada's House of Chambers unanimously passed Bill C-4, a bill that if — or when it passes in the Senate, will make conversion therapy an illegal offense punishable by up to five years in prison.
>
> The Canadian government believes the Bible is filled with harmful myths about homosexuality and transgenderism — therefore, it is necessary to strip freedom of expression and freedom of religion from Canadian Christians.
>
> When Bill C-4 becomes law, anyone who preaches what the Bible says about homosexuality and transgenderism could be sentenced to up to five years in prison.
>
> That includes pastors and Christian counselors who believe what the Bible says about homosexuality and transgenderism.
>
> Pastors and Biblical counselors who teach that homosexuality and transgenderism are unnatural and sinful thoughts and behaviors could be sentenced to prison. Christians who attempt to help homosexual and transgender people repent from their sins so they can have freedom in Christ might lose their freedom and be sentenced to prison.

The bill passed on December 9, 2021. This is why I keep telling you never to visit Canada. You don't have the same rights to free speech there, as you do here. It's a police state. During the freedom convoy protests against vaccine mandates, the RCMP was trampling old women using walkers with their horses. That's normal for Canada.

Look at this Bill C-4. That's where the secular left in America would like to go. They also want prison sentences of up to 5 years for Christians who disagree with them on LGBT issues. Even in a private conversation. Even if you do it respectfully. Even if you're just quoting the Bible. It doesn't matter to them – it's a criminal offense to be offensive to secular leftists.

So, how is the secular left doing in America?

Here's an article from The Federalist from this week:

> Kaley Chiles is a Christian counselor in Colorado. When the state passed a law forcing mental health professionals to advance radical gender ideology, she challenged it. Now, the Supreme Court has agreed to review the case — in what could bring a landmark ruling for free speech.
>
> Chiles challenged Colorado's law banning so-called "conversion therapy" in 2022, according to The Hill, saying it hindered her efforts to assist those with "same-sex attractions or gender identity confusion" who "prioritize their faith above their feelings." She "never promises that she can solve" these issues but works to help clients "accept the bodies that God has given them and find peace." Chiles sought an injunction, citing the law's violation of her First Amendment rights to freedom of speech and freedom of religion.

She lost her case at the 10th Circuit Court of Appeals, but it's not over:

> The 10th Circuit U.S. Court of Appeals ruled against Chiles, but in November, her attorneys petitioned the Supreme Court to consider the case, according to SCOTUSblog.
>
> ADF said the Colorado law violates Chiles' freedom of speech by banning counselors from "having any conversation with clients under age 18 that 'attempts or purports to change an individual's sexual orientation or gender identity.'"
>
> "Significantly, the law only prohibits counseling conversations in one direction," reads the ADF release. "For example, it allows counseling conversations that aim to steer young people toward a gender identity different than their sex but prohibits conversations that aim to help them return to comfort with their sex when they desire that."

I think it's really important for Christians to understand that secular leftists are the ideological heirs of Nazis and Stalinists and other totalitarians. Atheists don't have any rational grounding for human dignity and human rights. They think the universe is an accident, and human beings are just machines made out of meat. Just another animal. And morality? They believe in survival of the fittest.

Today's secular leftists are great admirers of police states. They think it is wonderful when the centralized government uses threats, imprisonment, torture and even murder in order to force their ideologies onto citizens. Why think that our secular leftists are any different than the secular leftists of North Korea, or the Soviet Union? They believe the same things. The only difference is that here, they haven't won. Yet.

# New study: concealed carriers better at stopping active shooters than police

**Wintery Knight** · 12 March 2025 · Archived copy · Original

Many people think that policy disagreements are like clothing style disagreements: there's no right answer, it's all personal preferences. Lazy people love this view, because it allows them to not have to read anything. I try to read 1 or 2 books on every policy topic, and that's because I want to be able to persuade people to cote for the policies that I support. One of those areas is gun rights.

And there's a new study from the Crime Prevention Research Center about gun policy, and it was written up in The Federalist.

It says:

> In non-gun-free zones, where civilians are legally able to carry guns, concealed carry permit holders stopped 51.5 percent of active shootings, compared to 44.6 percent stopped by police, CPRC found in a deep dive into active shooter scenarios between 2014 and 2023.
>
> Not only do permit holders succeed in stopping active shooters at a higher rate, but law enforcement officers face significantly greater risks when intervening. Our research found police were nearly six times more likely to be killed and 17 percent more likely to be wounded than armed civilians.

The article has a lot more interesting findings, for example, of the 180 total instances where an armed civilian stopped an active shooting, only one permit holders accidentally shot a bystander. But in the 156 cases stopped by law enforcement, police accidentally shot the wrong person in four cases, killing fellow officers twice and civilians twice.

And:

> 27 police were shot and killed while trying to stop an active shooter, a 7.7 percent rate, which is nearly six times higher than the rate for permit holders.
>
> One hundred police were wounded, a 28.6 percent rate, compared to 24.4 percent for permit holders.

You might find this surprising, but in many of these big city police forces, they have a DEI appointee in charge, and all the hiring is governed by DEI. So, a lot of the time, it's just people like the Secret Service agent who hid behind Trump when he was being shot at, or the one who couldn't even re-holster her weapon without looking.

Anyway, let's head over to the Daily Signal, and hear the latest defensive gun usages from Amy Swearer, who busies herself with these sorts of things.

She writes:

- Jan. 4, North Charleston, South Carolina: When a man saw his neighbor dragging a woman by her hair through the front yard of a nearby home, he called 911, then grabbed his handgun before successfully intervening to protect the woman without having to fire a shot. Police arrived and arrested the neighbor, who was "visibly intoxicated" and smelled of alcohol. He was charged with first-degree domestic violence.
- Jan. 9, Clarion, Pennsylvania: After a woman and her husband discovered a serial stalker had come to their home and parked in their driveway, one of the woman's employees responded to their call for help and detained the stalker at gunpoint until police arrived. Police arrested the stalker, who they described as engaging in "an escalating pattern of concerning behavior" over the last two years. He'd been released on bail just 17 days earlier after a different stalking incident involving the same victims.

- Jan. 11, Brooklyn, New York: A concealed carry permit holder fatally shot a man who tried to rob him at knifepoint in a park. The robber allegedly put the victim in a chokehold and held a knife to his neck while demanding all of his money, but the permit holder drew his gun and shot his assailant. Police said the permit holder is unlikely to face criminal charges.
- Jan. 15, San Antonio, Texas: When an apartment complex manager and two maintenance workers confronted a suspicious man who'd been peering into residents' vehicles, the man "became hostile" and physically assaulted them. A resident then tried to intervene, but the man pulled out a knife and a taser. The resident responded by drawing a handgun, causing the man to flee. The resident chased him in a "brief pursuit" before the man turned around and "postur[ed] like he was about to stab or attack the resident," at which point the resident shot and wounded him.
- Jan. 26, Kansas City, Missouri: A knife-wielding man entered a convenience store, jumped over the counter, and tried to stab the manager. The manager, however, drew a gun and shot the attacker, wounding him. A bystander in the store was also armed and "stood guard" over several customers (including an 8-year-old) who barricaded themselves in a back room during the assault. The injured suspect was charged with first-degree assault and armed criminal action. The 8-year-old's father, meanwhile, told reporters that he believed the armed intervention saved their lives.

I think it's important for every American to be able to explain both the studies AND the examples of defensive gun usage by concealed carry permit holders to people who don't understand why lab-abiding people should be allowed to own guns. It's not enough to have your one vote, you have the duty to convince other people to vote for the right policies.

# JP Morgan Chase changes policy for de-banking Christians and conservatives

**Wintery Knight** · 13 March 2025 · Archived copy · Original

I've written about JP Morgan Chase's far-left bias many times, going as far back as 2015. JP Morgan Chase along with Bank of America, Goldman Sachs, Citigroup, and Wells Fargo are the most radically leftist banks. Chase might be the worst of all. Whereas the others focus on giving money to left-wing causes, Chase actually forces their secular leftist views onto employees and customers.

Before we see the good news, here is something I blogged about WAY BACK in 2015:

> A document provided to Breitbart News shows the investment banking behemoth JP Morgan Chase has joined a long line of major corporations in putting pressure on employees to sign up for the cause of gay rights. And they have not-so-subtly let each employee know not signing up will be noted.
>
> Employees are being told "to help create an environment for open and honest dialogue." The document notes descriptors such as "wife" and "boyfriend" are frowned upon, and "partner" is preferred. Not referring to your wife as your wife "offers up the opportunity for more inclusive conversations."

Imagine me working for a company like that! As a Christian, and a conservative, I would never survive a month working for this corporation. Not even with an alias, because they are actively hunting down dissenters using loyalty tests. But JP Morgan Chase doesn't just target employees who dissent from secular leftist ideology. They are also known for de-banking Christians and conservatives.

Here's a report posted on the U.S. Securities and Exchange Commission (SEC) web site:

> JPMorgan Chase, America's largest bank, has proven to be one of the worst offenders. In 2022, JPMorgan Chase closed the bank account of the nonprofit, National Committee for Religious Freedom, founded by former U.S. Ambassador Sam Brownback. Chase refused to provide a clear explanation for why the account had been closed in the first place, and insisted that it would only consider re-opening the account if the nonprofit agreed to disclose confidential donor information and detailed information about its pollical activities. Over the course of the next year, Chase offered no fewer than five increasingly untenable and contradictory explanations for why it canceled the account—including a false claim from Chase's CEO, Jamie Dimon, at the annual shareholders meeting that NCRF's representatives had simply failed to "fill out all the forms."

And that's not all, there's more:

> Chase's payment processing subsidiary, WePay, has also denied service to religious and center-right nonprofits on multiple occasions. In 2021, WePay denied payment processing services to an organization called Defense of Liberty for an event featuring Donald Trump Jr. … That same year, WePay denied service to the Arkansas Family Council for being "high risk," presumably for their advocacy that focuses on family values.

There's more discrimination, but the important thing is that now you know how to receive the good news that came out on Wednesday, reported by Daily Wire: (archived)

> Luckily, some of the most influential names in both the conservative legal, financial, and government worlds stepped up to the plate. Pressure for increased transparency and commitments to ditch any policies that could lead to a client being debanked for political reasons has come from all directions, from legal giants like Alliance Defending Freedom to notable financial professionals to state financial officers and attorneys general.

> As that public pressure mounted, shareholder pressure has been growing from the inside for the past three years, spurred on by organizations like the firm I work for, Bowyer Research, with Chase investors like financial advisor David Bahnsen spending literal years urging the company to clarify its approach to debanking — and fix its spotty track record on political neutrality.
>
> And Chase listened.
>
> In 2023, JPMorgan made the decision to axe its “social risk” policy from its payment processing arm, no longer allowing vague terms like “intolerance” and “hate” to determine whether a customer was fit to continue doing business at Chase. But the biggest win so far came several days ago, when Chase agreed to a policy change explicitly protecting customers and employees from discrimination based on religious or political views.
>
> […]Shareholders like Bahnsen, and groups like ADF & Bowyer Research, have been engaging with Chase for years to get this change. Make no mistake: Chase’s willingness to protect against future political/religious debanking is the result of real shareholders using real influence to create real change.

This is very good news for me. I have some money invested with JP Morgan, and I was worried about what might happen if they found out that I don’t believe the same things they do, maybe from spying on my Chase account. I was already in good shape, because I live in a red state that opposes de-banking. But now I am really in good shape to leave the money there. So this is really good news for me personally. I hate moving things around!

By the way, I already switched out my Zelle and my credit card purchases out of Chase to smaller banks. Not willing to take any chances with big leftist banks that would label me bad names based on my donations and purchases.

# J. Warner Wallace: I am not a Christian because it works for me

**Wintery Knight** · 14 March 2025 · Archived copy · Original

Some of my favorite Christians are the ones that start out as atheists, and do very well at life, but just change direction because they investigate the evidence. One person who had a fabulous career in law enforcement switched sides because of the evidence: J. Warner Wallace. And in a must-read post from Cold-Case Christianity, he explains his motive.

Excerpt:

> Life on this side of my decision hasn't always been easy. It's been nearly seventeen years since I first trusted Jesus as Lord and Savior. I still struggle to submit my prideful will to what God would call me to do. Christianity is not easy. It doesn't always "work" for me. There are times when I think it would be easier to do it the old way; easier to cut a corner or take a short cut. There are many times when doing the right thing means doing the most difficult thing possible. There are also times when it seems like non-Christians have it easier, or seem to be "winning". It's in times like these that I have to remind myself that I'm not a Christian because it serves my own selfish purposes. I'm not a Christian because it "works" for me. I had a life prior to Christianity that seemed to be working just fine, and my life as a Christian hasn't always been easy.
>
> I'm a Christian because it is true. I'm a Christian because I want to live in a way that reflects the truth. I'm a Christian because my high regard for the truth leaves me no alternative.

I think this is important. There are people who I know who claim to be Christian, but they are clearly believing that God is a mystical force who arranges everything in their lives in order to make them happy. They are not Christians because it's true, but because of things like comfort and community. But people ought to become Christians because they think it's true.

Truth doesn't necessarily make you happy, though. Truth can impose intellectual obligations and moral obligations on you. Seeing God as he really is doesn't help us to "win" at life, as the culture defines winning. But it does offer the opportunity for us to walk a similar path to the one Jesus walked. And that is very appealing for real Christians.

The Bible doesn't promise that people who become Christians will be happier. Actually, it promises that Christians will suffer for doing the right things. Their autonomy will suffer, as they sacrifice their own interests and happiness in order to make God happy, by serving his interests.

Christianity isn't something you add on to your before-God life in order to achieve your before-God goals. When you become a Christian, you get a new set of goals, based on God's character and his design for you. And although you might be very successful in the world as part of serving God, there is no guarantee of that. Christianity is not life enhancement. I do think that Christians do well at not hurting themselves though, but because they eliminate selfish desires, not because God gives them stuff.

By the way, if you're looking for a great speaker to invite to your university campus, J. Warner Wallace is the best, then Frank Turek is my number two choice. Wallace has the homicide detective background, and Turek is a former naval aviator. Two tough guys who are tough-minded about the Christian faith.

# Video, audio and summary of William Lane Craig vs Peter Millican debate

**Wintery Knight** · 15 March 2025 · Archived copy · Original

Here's a debate with a well-qualified atheist and Dr. William Lane Craig, the most effective defender of Christianity operating today.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

**Dr. Craig's opening speech:**

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects

cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

**Dr. Millican's opening speech:**

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a

beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

**Dr. Craig's first rebuttal:**

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a

material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

**Dr. Millican's first rebuttal:**

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

**Dr. Craig's second rebuttal:**

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the

absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

**Dr. Millican's second rebuttal:**

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

**Dr. Craig's final rebuttal:**

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

**Dr. Millican's final rebuttal:**

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3  minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

# What's in an apologetics book? A review of "God's Crime Scene" by J. Warner Wallace

**Wintery Knight** · 16 March 2025 · Archived copy · Original

One of the best introductory books on the existence of God is Detective J. Warner Wallace's "God's Crime Scene". The book provides a good overview of all of the areas that suggest an intelligent agent at work in the natural world. I found a good review of the book over at Luke Nix's "Faithful Thinkers" blog.

The book begins with an introductory chapter explaining what's in the book, then an opening statement explaining (without taking sides) how we can investigate whether or not there is a Creator and Designer of the universe. The next 8 chapters talk about 8 areas where we can investigate:

1. the origin of the universe
2. evidence for design in the universe
3. the origin of life
4. the presence of information in the cell
5. our awareness of consciousness
6. our experience of free will
7. objective human value and objective moral duties
8. the reality of evil in the world

I'll just grab a couple of paragraphs on a couple of those points from Luke's review:

> ### Chapter 1: In the Beginning
>
> Wallace's first piece of evidence that appears to not have an explanation inside the universe is the universe's beginning. He presents a diverse set of arguments for the beginning of the universe. These include the philosophical evidence of the impossibility of infinite regresses, theoretical evidence of mathematics and physics, observational evidence from astronomy, thermal evidence provided by the second law of thermodynamics, quantitative evidence in the abundance of helium, and evidence of the cosmic background radiation. All these used together provide powerful evidence of the beginning of the universe, and since everything that begins to exist, must have a cause, the universe must have had a cause outside itself too.
>
> ### Chapter 2: Tampering with the Evidence
>
> The foundational conditions of the universe that allow for life's existence include the physical laws governing the atom, the matter of the universe, and the creation of chemicals. The next layer (regional) moves closer to home: our galaxy and solar system. The shape, position, and size of our galaxy make it habitable for life; while our sun's position, age, mass, and composition allow it to to host a planet fit for life. The third layer is the planet, itself. The earth's relationship to the sun, atmosphere, terrestrial nature, and moon all play a role in making a place that is fit for life.
>
> ### Chapter 5: Our Experience of Consciousness
>
> In naturalistic worldviews it is common to believe that the brain and the mind are the same thing. Wallace explains that the only way that two things are the same is if they share all their attributes with no differences. He describes six attributes of the brain that are not shared by the mind. All of these distinctions build a powerful case for the two being completely different. He concludes that the brain is physical while the mind is non-physical and that the mind's existence can only be explained "outside the room" of the universe being the product of another mind. He examines several attempts by naturalistic philosophers to explain the mind "inside

> the room" of the universe, but he shows how each of them fail to offer an adequate explanation.
>
> ### Chapter 6: Free Will or Full Wiring
>
> From a naturalistic perspective (one that holds there is no distinction between the mind and the brain) free will does not exist; it is an illusion much like the mind. If free will does actually exist, it points even more powerfully towards the existence of the mind, which must derive its origin from the supernatural, since it is supernatural itself. Wallace uses the concept of responsibility and the ability to choose other than we do to build his case for free will's actual existence. Without the ability to chose something other than what we do, we cannot be held responsible, thus no one would be worthy of punishment (in the case of wrong-doing) or praise (in the case of doing right).

A while back I finished reading "God's Crime Scene", and I found something interesting in Chapter 6, on free will on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others." Even determinist Michael Gazzaniga conceded: "It seems that not only do we believe we control our actions, but it is good for everyone to believe it."" The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here's the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons' belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in

> free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you're alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

## Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality.
> My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

# Mark D. Linville: does Darwinian evolution make morality rational?

**Wintery Knight** · 17 March 2025 · Archived copy · Original

Have you ever heard an atheist tell you that naturalistic evolution is an answer to the moral argument? I have. And I found a good reply to this challenge in the book "Contending With Christianity's Critics". The chapter that responds to the challenge is authored by Dr. Mark D. Linville.

First, a bit about the author:

> - MA in Theology, Cincinnati Christian Seminary
> - BA in Biblical Studies, Florida Christian College

Here is his thesis of the essay:

> Darwin's account of the origins of human morality is at once elegant, ingenious, and, I shall argue, woefully inadequate. In particular, that account, on its standard interpretation, does not explain morality, but, rather, explains it away . We learn from Darwin not how there could be objective moral facts, but how we could have come to believe—perhaps erroneously—that there are.
>
> Further, the naturalist, who does not believe that there is such a personal being as God, is in principle committed to Darwinism, including a Darwinian account of the basic contours of human moral psychology. I'll use the term evolutionary naturalism to refer to this combination of naturalism and Darwinism. And so the naturalist is saddled with a view that explains morality away. Whatever reason we have for believing in moral facts is also a reason for thinking naturalism is false. I conclude the essay with a brief account of a theistic conception of morality, and argue that the theist is in a better position to affirm the objectivity of morality.

And here's a sample to get your attention:

> But even if we are assured that a "normal" person will be prompted by the social instincts and that those instincts are typically flanked and reinforced by a set of moral emotions, we still do not have a truly normative account of moral obligation. There is nothing in Darwin's own account to indicate that the ensuing sense of guilt—a guilty feeling—is indicative of actual moral guilt resulting from the violation of an objective moral law. The revenge taken by one's own conscience amounts to a sort of second-order propensity to feel a certain way given one's past relation to conflicting first-order propensities (e.g., the father's impulse to save his child versus his impulse to save himself). Unless we import normative considerations from some other source, it seems that, whether it is a first or second-order inclination,one's being prompted by it is more readily understood as a descriptive feature of one's own psychology than material for a normative assessment of one's behavior or character. And, assuming that there is anything to this observation, an ascent into even higher

> levels of propensities ("I feel guilty for not having felt guilty for not being remorseful over not obeying my social instincts…") introduces nothing of normative import. Suppose you encounter a man who neither feels the pull of social, paternal or familial instincts nor is in the least bit concerned over his apparent lack of conscience. What, from a strictly Darwinian perspective, can one say to him that is of any serious moral import? "You are not moved to action by the impulses that move most of us." Right. So?
>
> The problem afflicts contemporary construals of an evolutionary account of human morality. Consider Michael Shermer's explanation for the evolution of a moral sense—the "science of good and evil." He explains,
>
> By a moral sense, I mean a moral feeling or emotion generated by actions. For example, positive emotions such as righteousness and pride are experienced as the psychological feeling of doing "good." These moral emotions likely evolved out of behaviors that were reinforced as being good either for the individual or for the group.2
>
> Shermer goes on to compare such moral emotions to other emotions and sensations that are universally experienced, such as hunger and the sexual urge. He then addresses the question of moral motivation.
>
> In this evolutionary theory of morality, asking "Why should we be moral?" is like asking "Why should we be hungry?" or "Why should we be horny?" For that matter, we could ask, "Why should we be jealous?" or "Why should we fall in love?" The answer is that it is as much a part of human nature to be moral as it is to be hungry, horny, jealous, and in love.3
>
> Thus, according to Shermer, given an evolutionary account, such a question is simply a non-starter. Moral motivation is a given as it is wired in as one of our basic drives. Of course, one might point out that Shermer's "moral emotions" often do need encouragement in a way that, say, "horniness," does not. More importantly, Shermer apparently fails to notice that if asking "Why should I be moral?" is like asking, "Why should I be horny?" then asserting, "You ought to be moral" is like asserting, "You ought to be horny." As goes the interrogative, so goes the imperative. But if the latter seems out of place, then, on Shermer's view, so is the former.
>
> One might thus observe that if morality is anything at all, it is irreducibly normative in nature. But the Darwinian account winds up reducing morality to descriptive features of human psychology. Like the libido, either the moral sense is present and active or it is not. If it is, then we might expect one to behave accordingly. If not, why, then, as a famous blues man once put it, "the boogie woogie just ain't in me." And so the resulting "morality" is that in name only.
>
> **In light of such considerations, it is tempting to conclude with C. S. Lewis that, if the naturalist remembered his philosophy out of school, he would recognize that any claim to the effect that "I ought" is on a par with "I itch," in that it is nothing more than a descriptive piece of autobiography with no essential reference to any actual obligations.**

When it comes to morality, we are not interested in mere descriptions of behavior. We want to know about prescriptions of behavior, and whether why we should care about following those prescriptions. We are interested in what grounds our sense of moral obligation in reality. What underwrites our sense of moral obligation? If it is just rooted in feelings, then why should we obey our moral sense when obeying it goes against out self-interest? Feelings are subjective things, and doing the right thing in a real objective state of affairs requires more than just feelings. There has to be a real objective state of affairs that makes it rational for us to do the right thing, even when the right thing is against our own self-interest. That's what morality is – objective moral obligations *overriding* subjective feelings. I wouldn't trust someone to be moral if it were just based on their feelings.

# Republicans push for election integrity to avoid repeat of 2020 election

**Wintery Knight** · 18 March 2025 · Archived copy · Original

Prior to the 2020 election, Democrats expanded mail-in voting and drop box vting in states like Nevada, Pennsylvania, Michigan, and Virginia. The election results showed that there were 65.6 million mail-in ballots in 2020, up from 33.5 million in 2016. Drop-box voting surged, too. When the votes were counted, Democrats got 15.4 million (23.4%) more votes in 2020 compared to 2016.

To prevent this from happening again, Republicans  are pushing hard to enhance election integrity.

Here's the story from Daily Caller:

> As President Donald Trump moves at breakneck speed to enact his agenda, the Republican National Committee is quietly racking up election integrity wins and gearing up for the next election cycle, the Daily Caller has learned.
>
> The RNC won three lengthy legal battles related to the prevention of election fraud in March across the key states of Arizona, Georgia and Washington.
>
> "These cases represent that a lot of times, things get started and resolved during an election year, but many times they don't, and the RNC doesn't walk away from them," an RNC official told the Caller. "We are here to see these things through."

Here is an interesting story about Arizona, which got a lot of press for failure to count their ballots in a timely way. It turns out that their Democrat Secretary of State (in charge of elections) wanted to weaken "safeguards against non-citizen voting":

> In March, Arizona's Court of Appeals announced that the secretary of state, Adrian Fontes, did not "substantially comply" with the state's proper rule making process when finalizing the 2023 Election Procedures Manual. The court's ruling was the result of a February 2024 lawsuit filed by the GOP, which argued that Fontes's Election Procedures Manual would weaken "safeguards against non-citizen voting," "unlawfully limited the ability to challenge early ballots," and "violate[d] numerous provisions of state law meant to protect election integrity," a party official shared with the Caller.

You might remember that this Democrat also lost a case where he tried to cover up which voters were improperly registered to vote.

More from the original Daily Caller article, this time about Georgia:

> Another significant win came in Georgia on March 7. The RNC intervened in a case in May 2024 after a local labor union sued trying to overturn the state's absentee ballot rules. The state's law sets the deadline to request absentee ballots at 11 days prior to election day, but the union wanted to extend the deadline.
>
> Nearly a year later, the U.S. District Court for the Northern District of Georgia threw out the union's lawsuit, ultimately ruling in the RNC's favor.

Why would Democrats and their union allies want to make it easier for people to vote absentee?

Here's another one, from the state of Washington:

> In Washington, the state's Supreme Court unanimously ruled in the RNC's favor that the state's signature verification law does not violate the state's constitution. The RNC first got involved in that legal battle in 2023.

Why would Washington Democrats want to attack a signature verification law? What could their motive be?

Anyway, it's good to see that Republicans are not floating blindly through their 4 years in power this time. Now is the time for them to strengthen election integrity, so that our elections are protected from mail-in ballot fraud and drop-box ballot fraud.

By the way, if you live in states like Nevada, Pennsylvania, Michigan, Virginia, Georgia, Washington and Arizona, it might be a good idea for you to make sure that you vote for Republicans for Secretary of State. Because the Secretaries of State in many of these states are Democrats, and they certainly have an agenda.

# Public school administrators force girls to undress in front of male student

**Wintery Knight** · 19 March 2025 · Archived copy · Original

If you missed the Matt Walsh shows from Monday and Tuesday, then you missed two really good shows. One of the stories that he covered on Tuesday is the inspiration for today's blog post. This story is from a public school in Deerfield, Illinois. Three female administrators at the school tried to force female students to get naked in front of a male student.

Here's the story from the Lake County Gazette.

> Deerfield School District 109 administrators forced teen girls at Shepard Middle School to change in front of a boy in the school locker room.
>
> That's according to parent testimony heard during public comment Thursday's District 109 School Board meeting.
>
> After receiving a complaint from girls in early February that a boy was in their locker room while they were changing for gym class, District 109 "Assistant Superintendent for Student Services" Joanna Ford, "Assistant Principal" Cathy Van Treese and "Director for Student Services" Ginger Logemann reprimanded the girls, then escorted them to the locker room and tried to force them to change in front of the boy.

That's all I needed for this blog post – to tell you that three administrators at the goverment-run school – who are all WOMEN – reprimanded the girls, and escorted them to the girl's locker room, and tried to force them to change (get naked) in front of a biological male. Now you see what the secular left means by "tolerant" and "open-minded".

I was able to do a quick check on the backgrounds of these three public school administrators, to see if they had any real (STEM) degrees or trades training, and private sector work experience.

Take the case of Joanna Ford, who seems to be the ring-leader:

> Joanna Ford holds a Bachelor's degree in Political Science and Spanish from the University of Michigan, and a Master's degree in Special Education and Teaching from both DePaul University and Hunter College.

These are not degrees that require a person to solve real-world problems and produce results. These are not degrees that allow you to work for customers in the competitive private sector. These are not degrees that require you to understand anything about how the real world really works. They're just pieces of paper that show a willingness to be indoctrinated.

But the article also talked about the LGBT activists who attacked the mother of the female student, for questioning the actions of the three white, female school administrators.

> Kerrick Goodman-Lucker of Northbrook, a female who dresses like a male and has grown a mustache and beard, said she had a male cross-dressing friend in college who "was pulled out of a woman's bathroom and attacked by a police officer for using a bathroom (he) thought was safe."
>
> Jesse Holzman of Chicago, a woman who describes herself as a "Queer, Non-binary, Consensually Non-monogamous, Intersectional Feminist, Anti-Racist, Activist, Educator and Scholar," said that "ensuring access to (girls') bathrooms and changing rooms is not controversial."
>
> Charlee Friedman of Berwyn, a female who describes herself as a "transmasc nonbinary human" and also has a beard, used much of her three minutes at the podium to praise Illinois Governor J.B. Pritzker for "protecting"

> the right of teen boys to watch teen girls undress.
>
> Tina Nelson of Deerfield, who informed the board she is a lesbian, said those opposed to letting boys watch teen girls undress in the locker room are “petty women” pushing “the white supremacist agenda of their ‘cis white’ husbands” and their “White God.”

That last one was interesting – she deliberately attacked the father’s leadership, and God, in her defense of transgenderism.

You can see several of these transgender activists in Matt Walsh’s show from Tuesday. I’ve got it cued up for you to 1:29, so watch until 23 minutes to get all of it:

So, now it’s time for me to comment.

We really need to give parents a choice to opt out of public schools. They shouldn’t be forced to pay for this. They should be able to keep their money and spend it on customer-focused private schools or homeschooling, instead. School administrators should have to compete for patents’ money in a free market. Compete against private schools and homeschooling.

# What does scientific evidence tell us about the effectiveness of same-sex parenting?

**Wintery Knight** · 20 March 2025 · Archived copy · Original

I saw that Katy Faust tweeted this article by Mark Regnerus, a sociologist who specializes in dating, marriage and parenting issues. In the article, Regnerus cites the conclusions from several recent research studies. Once we see what he has to say, I'll pull the data from a Canadian study that he didn't mention that also shows the effect of same-sex parenting on children.

The article appears in The Public Discourse:

> The story of "no differences" between same-sex and opposite-sex households with children hinges on a pair of repetitive themes in the published research: (1) hiding behind small and nonrepresentative samples, and (2) employing analytic strategies that all but guarantee motivated researchers can "explain away" those pesky baseline observable differences between children from same-sex and opposite-sex households.
>
> Baseline differences matter. What happens before control variables matters. Building statistical models to hide differences is called p-hacking, a common but problematic practice. A 2020 study of over 1.2 million children in the (gay-friendly) Netherlands, whose primary media message trumpeted how same-sex parents were better than opposite-sex parents, nevertheless revealed that 55 percent of children living with same-sex parents—the vast majority of which were female couples—experienced the separation of these parents, well above the 19 percent of children of opposite-sex parents who experienced the same. "Controlling" for such instability—in effect implying it doesn't matter—clears the way to proclaim the benefits of same-sex parents. It's a common statistical practice, but a deceptive one.
>
> Hence, alternative analyses are always a good idea. For example, a 2020 published reexamination of three nationally representative datasets from the United States and Canada revealed that the presence of children tended to stabilize opposite-sex couples but destabilize same-sex couples. Dissolution rates were 43 percent for same-sex couples, but only 8 percent for opposite-sex couples. Its authors agree, saying that "parental instability is an important factor through which parents' sexual orientation influences children's outcomes."

So, the problem of higher separation between partners in a lesbian relationship is well-known. Lesbian couples have the highest instability rates of any kind of couple, heterosexual or homosexual.

Family Research Council notes:

> In the past, same-sex couples who got a slice of the marriage pie immediately wanted their share of the divorce market. In South Africa, couples who were first to wed under a 2006 law also won the race to divorce court only a year later; two Toronto lesbians who wed in 2003 separated after only five days, petitioning successfully in 2004 for a judge to overturn Canadian law so they could divorce. Or take Los Angeles, where 2008's historic first same-sex couple divorced this summer although they had been together for 18 years! Lest we think these cases are exceptional, of the same-sex couples who did marry in Sweden, males were 35% more likely to divorce than heterosexual couples, while lesbians were up to 200% more likely.

Before same-sex marriage, the concept of marriage included the concepts of permanence and exclusivity. Natural marriage has the production and raising of children at the core. No-fault divorce damaged that core, saying that the happiness of the selfish adults was more important than the children. Then same-sex marriage damaged the core again, saying that producing children isn't even central to the concept of marriage. As the selfish adults pass more laws against natural marriage, the children suffer more from the decline of permanence and exclusivity.

I found another study related to same-sex parenting, this one out of Canada.

Here is the abstract of the study:

> Almost all studies of same-sex parenting have concluded there is “no difference” in a range of outcome measures for children who live in a household with same-sex parents compared to children living with married opposite-sex parents. Recently, some work based on the US census has suggested otherwise, but those studies have considerable drawbacks. Here, a 20% sample of the 2006 Canada census is used to identify self-reported children living with same-sex parents, and to examine the association of household type with children’s high school graduation rates. This large random sample allows for control of parental marital status, distinguishes between gay and lesbian families, and is large enough to evaluate differences in gender between parents and children. Children living with gay and lesbian families in 2006 were about 65 % as likely to graduate compared to children living in opposite sex marriage families. Daughters of same-sex parents do considerably worse than sons.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That’s not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That’s not good for children either. So we have three reasons to think that normalizing gay relationships as “marriage” would not be good for children.

# Stephen C. Meyer and Marcus Ross lecture on the Cambrian explosion

**Wintery Knight** · 21 March 2025 · Archived copy · Original

Cambrian Explosion

Access Research Network is a group that produces recordings of lectures and debates related to intelligent design. I noticed that on their Youtube channel they are releasing some of their older lectures and debates for FREE. So I decided to write a summary of one that I really like on the Cambrian explosion. This lecture features Dr. Stephen C. Meyer and Dr. Marcus Ross.

The lecture is about two hours. There are really nice slides with lots of illustrations to help you understand what the speakers are saying, even if you are not a scientist.

Here is a summary of the lecture from ARN:

> The Cambrian explosion is a term often heard in origins debates, but seldom completely understood by the non-specialist. This lecture by Meyer and Ross is one of the best overviews available on the topic and clearly presents in verbal and pictorial summary the latest fossil data (including the recent finds from Chengjiang China). This lecture is based on a paper recently published by Meyer, Ross, Nelson and Chien "The Cambrian Explosion: Biology's Big Bang" in *Darwinism, Design and Public Education*(2003, Michigan State University Press). This 80-page article includes 127 references and the book includes two additional appendices with 63 references documenting the current state of knowledge on the Cambrian explosion data.
>
> The term *Cambrian explosion* describes the geologically sudden appearance of animals in the fossil record during the Cambrian period of geologic time. During this event, at least nineteen, and perhaps as many as thirty-five (of forty total) phyla made their first appearance on earth. Phyla constitute the highest biological categories in the animal kingdom, with each phylum exhibiting a unique architecture, blueprint, or structural body plan. The word *explosion* is used to communicate that fact that these life forms appear in an exceedingly narrow window of geologic time (no more than 5 million years). If the standard earth's history is represented as a 100 yard football field, the Cambrian explosion would represent a four inch section of that field.
>
> For a majority of earth's life forms to appear so abruptly is completely contrary to the predictions of Neo-Darwinian and Punctuated Equilibrium evolutionary theory, including:
>
> - the gradual emergence of biological complexity and the existence of numerous transitional forms leading to new phylum-level body plans;
> - small-scale morphological diversity preceding the emergence of large-scale morphological disparity; and

> - a steady increase in the morphological distance between organic forms over time and, consequently, an overall steady increase in the number of phyla over time (taking into account factors such as extinction).
>
> After reviewing how the evidence is completely contrary to evolutionary predictions, Meyer and Ross address three common objections: 1) the artifact hypothesis: Is the Cambrian explosion real?; 2) The Vendian Radiation (a late pre-Cambrian multicellular organism); and 3) the deep divergence hypothesis.
>
> Finally Meyer and Ross argue why design is a better scientific explanation for the Cambrian explosion. They argue that this is not an argument from ignorance, but rather the best explanation of the evidence from our knowledge base of the world. We find in the fossil record distinctive features or hallmarks of designed systems, including:
>
> - a quantum or discontinuous increase in specified complexity or information
> - a top-down pattern of scale diversity
> - the persistence of structural (or "morphological") disparities between separate organizational systems; and
> - the discrete or novel organizational body plans
>
> When we encounter objects that manifest any of these several features and we know how they arose, we invariably find that a purposeful agent or intelligent designer played a causal role in their origin.
>
> *Recorded April 24, 2004. Approximately 2 hours including audience Q&A.*

I learned a lot by watching great lectures from Access Research Network. Their YouTube channel is here. I recommend their origin of life lectures – I have watched the ones with Dean Kenyon and Charles Thaxton probably a dozen times *each*. Speaking as an engineer, you never get tired of seeing engineering principles applied to questions like the origin of life.

If you'd like to see Dr. Meyer defend his views in a debate with someone who reviewed his book about the Cambrian explosion, you can find that in this previous post.

**Further study**

The Cambrian explosion lecture above is a great intermediate-level lecture and will prepare you to be able to understand Dr. Meyer's new book "Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design". The Michigan State University book that Dr. Meyer mentions is called "Darwin, Design and Public Education". That book is one of the two good collections on intelligent design published by academic university presses, the other one being from Cambridge University Press, and titled "Debating Design: From Darwin to DNA". If you think this lecture is above your level of understanding, then be sure and check out the shorter and more up-to-date DVD "Darwin's Dilemma".

# Knight and Rose Show #60: Doug Groothuis: The Moral Argument

**Wintery Knight** · 22 March 2025 · Archived copy · Original

Welcome to episode 60 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss the moral argument with philosopher Dr. Douglas Groothuis. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Douglas Groothuis to discuss morality. Is morality objective or subjective? Can atheists rationally ground human rights and moral duties? Can atheists appeal to Darwinian evolution to get out of relativism? Is it rational for atheists to do the right thing when it goes against their self-interest? Does the Bible teach Christians not to judge?

**Outline and transcript**

Here is a transcript of the show (with timestamps) provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 60:**

**Speaker biographies**

Dr. Douglas Groothuis is the Distinguished University Research Professor of Apologetics and Christian Worldview at the Cornerstone Theological Seminary.  Dr. Groothuis holds a Ph.D. in Philosophy (University of Oregon). He is the author of 20 books, including a popular textbook, Christian Apologetics, 2nd ed. (IVP Academic, 2022). He also co-authored an introductory textbook on apologetics, The Knowledge of God in the World and in the Word (Zondervan-Academic, 2022) with Andrew Shepardson. Dr. Groothuis has published over 30 academic articles in journals such as Academic Questions and Philosophia Christi, as well as dozens of pieces in publications such as The Chronicle of Higher Education and The Christian Research Journal.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

**Podcast RSS feed:**

# New example of convergence found, featuring parrots and humans

**Wintery Knight** · 23 March 2025 · Archived copy · Original

Regular readers will know that I love everything about birds, and I love every bird. Any my favorite birds of all are parrots! Every time I see a scientific discovery involving parrots, I blog about it. Well, there was just such a discovery, and published in the prestigious peer-reviewed journal Nature. In it, we find evidence for intelligent design, and evidence against Darwinian evolution.

Before we see the new discovery, let's review with the definition of convergence in biology.

> In evolutionary biology, convergent evolution is the process whereby organisms not closely related (not monophyletic), independently evolve similar traits as a result of having to adapt to similar environments or ecological niches.

So, for example, if we could find a feature that is common to parrots and humans, that would be an example of "convergence", because the same feature would be found in to kinds of creature, but these creatures don't have a recent common ancestry. The feature would have had to evolve TWICE, independently, and that is not the kind of evidence that Darwinists like.

So here is the discovery, in Science News:

> When it comes to speech, parrots have the gift of gab. And the way the brains of small parrots known as budgerigars bestow this gift is remarkably similar to human speech, researchers report March 19 in Nature.
>
> So far, budgerigars are the only animals known to have language-producing centers akin to those in humans, says Michael Long, a neuroscientist at New York University Langone Health. This "is really the first nonhuman animal in which that has been shown." Understanding how speech gets created in budgies' brains could help clarify what goes wrong in certain communication disorders in people.
>
> […]The similarities between human and parrot brains may reflect two species solving a problem in a similar way, neurally speaking. These parallels could be "a very tidy example of convergent evolution, where you have humans that have developed this kind of neural mechanism for speech, and these parrots have developed a kind of similar mechanism," Long says.

Here's an excellent, recent article from Evolution News to explain what convergence means for the two competing views of Darwinian evolution and intelligent design:

> Biology is replete with instances of convergence — repeated designs in distant species. Marsupials and placentals, for instance, are mammals with different reproductive designs (placentals have significant growth in the embryonic stage attached to the nutrient-rich placenta whereas marsupials have no placenta and experience significant development after birth) but otherwise with many similar species.
>
> The marsupial flying phalanger and placental flying squirrel, for example, have distinctive similarities, including their coats that extend from the wrist to the ankle giving them the ability to glide long distances. But evolutionists must believe that these distinctive similarities evolved separately and independently because one is a marsupial and the other is a placental, and those two groups must have divided much earlier in evolutionary history. Simply put, evolution's random mutations must have duplicated dozens of designs in these two groups.
>
> It is kind of like lightning striking twice, but for evolutionists — who already have accepted the idea that squirrels, and all other species for that matter, arose by chance mutations — it's not difficult to believe. It simply happened twice rather than once (or several times, in the cases of a great many convergences).
>
> What is often not understood, however, by evolutionists or their critics, is that convergence poses a completely

> different theoretical problem. Simply put, a fundamental evidence and motivation for evolution is the pattern of similarities and differences between the different species. According to this theory, the species fall into an evolutionary pattern with great precision. Species on the same branch in the evolutionary tree of life share a close relationship via common descent. Therefore, they share similarities with each other much more consistently than with species on other branches.
>
> This is a very specific pattern, and it can be used to predict differences and similarities between species given a knowledge of where they are in the evolutionary tree.
>
> Convergence violates this pattern. Convergence reveals striking similarities across different branches. This leaves evolutionists struggling to figure out how the proverbial lightning could strike twice…

And convergence is everywhere in the history of life. A common example is echo location in bats and dolphins, but my favorite example is octopus eyes and human eyes.

Here's an evolutionist explaining the problem:

> One of the most remarkable features of octopuses is their eyes, which are remarkably like our own. Like ours, their eyes consist of an iris, a circular lens, vitreous fluid, pigments, and photoreceptors. In fact, the octopus eye is superior to ours in one notable way: Because of the way they develop, the fibers of the optic nerves grow behind the retina rather than through it, meaning they lack the central blind spot common to all vertebrates. And this difference exists because the octopus eye evolved entirely separately from our own, starting from that blind flatworm 600 million years ago, along an entirely different branch of the evolutionary tree.

Got that? No common ancestry for 600 million years. The similar eyes appeared independently. And these are difficult things to make. You can't write eye code by dropping a bowling ball on a keyboard over and over. To get the design twice strains credulity.

When you look at software, which is my field, you will often see similar solutions to problems across different companies. These companies don't inherit the solutions from a parent company, they develop them on their own. And often, this process means pulling in "open source" components to solve problems that have already been solved, but not by "ancestors". The developers who pull in these open source components have no "ancestry" with the developers of these open source components. But they can pull them into a composition of their own, and make use of the component to solve the same problem.

# Christian nurse punished by NHS for misgendering transgender pedophile

**Wintery Knight** · 24 March 2025 · Archived copy · Original

Recently on Twitter / X, I have been seeing many tweets pop up showing how frequently transgender people commit sexual crimes with children. But what's even more interesting is what happens to people who try to argue against transgenderism with this data. The secular left is 100% committed to shutting down any dissent to their pro-transgender agenda. How committed? Let's find out.

Look at this story from Christian Concern:

> On the night of May 22, 2024, Jennifer began her shift at the hospital, where a Pride Progress Flag—symbolising support for transgender rights and gender identity affirmation—flew from the rooftop.
>
> Miss Melle, who came to the UK from Uganda as a child, and has worked her way up to become a senior nurse, had been told along with her colleagues that Mr X had been brought in for treatment from a Category C men's prison and was a sex offender.
>
> He entered the hospital chained to two guards and was clearly masculine in appearance, standing over six feet tall and of large build.
>
> At 10pm, a junior colleague approached Miss Melle in a distressed state saying that Mr X wanted to self-discharge. He was shouting and upsetting other elderly and vulnerable patients on the ward.
>
> The doctor had been called for guidance on the discharge but had not yet responded. As the senior nurse on the ward, Jennifer followed her colleague to take charge of the situation and to provide support.
>
> Looking at the patient's medical records, she saw that the patient was recorded as male, not female or transgender. On the name board next to the bed, it simply gave the feminine name.
>
> With her colleague finally getting through to the doctor on the phone, Jennifer requested to speak to him. She said to the doctor that: 'Mr X would like to self-discharge.'
>
> Overhearing the call, enraged Mr X screamed: "Do not call me Mr! I am a woman!"
>
> Still on the phone to the doctor, Jennifer called back to Mr X that she was speaking to the doctor and was working out what medication could be given before he was discharged.
>
> Finishing the call, she approached the patient's room.
>
> Stepping inside, Jennifer found Mr X pacing up and down in chains.
>
> Jennifer politely said: 'I am sorry I cannot refer to you as her or she, as it's against my faith and Christian values but I can call you by your name.'
>
> She then began to relay what the doctor had said, but then the abuse and vitriol escalated.
>
> 'Imagine if I called you n*****', Mr X yelled. 'How about I call you n*****? Yes, black n*****!'
>
> Jennifer said if he carried on, she would have to call security.
>
> Mr X then lunged threateningly towards Jennifer and pursued her out of the room until he was eventually held back by the guards.
>
> He then shouted: 'I want your name and NHS number and am going to report you to the police for homophobia and to Patient Advice and Liaison Service' (PALS).
>
> […]Shortly after arriving home, Jennifer received a call from a colleague who had taken over her shift. They said that Mr X had been shouting for her and repeating the threat that he was going to make a complaint to PALS.
>
> […]The next time Jennifer was on night shift, she was pulled aside by a ward manager and asked to make a

> statement about what had happened.
>
> After Jennifer relayed that she was still feeling impacted by the racial and potential physical attacks, she was told that despite that she still had to respect "equality and diversity" according to the Nursing and Midwifery Council code of conduct.
>
> […]Over the next few days Jennifer said she felt pressured to provide management with a statement.

Now, you may have heard that the UK has gone socialist, and that they have a lot of controls on speech, association, parental rights, etc. The central government is secular left, and they don't respect the rights of Christians to act like Christians.

It's so bad there, that the UK police virtually ignores the sex-trafficking of white British girls by men of Pakistani origin. Why? Because it would be "racist" to enforce the law against non-white people, based on complaints by the white parents of these girls.

The UK police actually punishes anyone who criticizes them. They monitor social media, to see who is disapproving of the sex-trafficking crimes, and they punish those people who speak out against it. London's Metropolitan Police chief  even threatened to have Americans extradited to be arrested and stand trial, if they disagreed with the police about their soft-on-crime policies.

So, what happened to the Christian nurse should be no surprise:

> She was then told that she must attend a meeting with HR and that if she refused to comply, she would be sent home until an investigation was completed.
>
> […]Summoned to a disciplinary hearing in October 2024, Jennifer was given a final written warning and has been referred to the Nursing and Midwifery Council (NMC).
>
> Since the incident, she has been moved to another ward and effectively demoted. Her name was wiped off the internal system, making it difficult to apply for extra shifts at the hospital.
>
> Her capacity to earn much needed extra money was therefore removed and she and her family have suffered as a result.

I think it's important for Christians in America to understand what happens when a society adopts secularism and leftism. Do not let this happen in America.

# Domestic terrorist attempts to murder Christian apologist using SWAT team

**Wintery Knight** · 25 March 2025 · Archived copy · Original

Recently, people on the political left have been engineering SWAT team raids on the homes of prominent Christians and conservatives. Below, we'll take a look at one of the Christian scholars who was raided – Larry Taunton. You might remember Larry from his public discussions with famous atheists like Richard Dawkins, Daniel Dennett and Christopher Hitchens.

Here's the story from Christian Post:

> A Christian author and apologist who was recently "swatted" at his rural Alabama home told The Christian Post he believes the recent spate of false police reports made against conservative commentators indicates the Left is getting desperate.
>
> Larry Alex Taunton told CP he grabbed his pistol and nearly shot a heavily armed police officer who attempted to enter his house shortly after 1 a.m. on March 17.
>
> The local sheriff's office in Talladega County responded in full force that morning upon fielding a call from a man who said he was trapped inside Taunton's blood-soaked home after having been shot in the leg amid three active shooters at his residence.
>
> As has been the case for approximately 15 other prominent conservative voices in recent weeks, the call was fake and made in an apparent attempt to instill fear and potentially instigate a lethal situation.

What's interesting about this SWAT attempted murder against Taunton is how the police came at 1 AM with nine police cars, body armor, and assault rifles. But when they got to Larry's house, they din't announce themselves.

If you watch the video, you'll see that the police do not knock, and they do not announce themselves to the homeowner. They just try to come directly into the house. In rural Alabama – a state with strong gun laws, and self-defense laws.

Larry was waiting inside with his own weapon, and he did NOT know who these people outside his house were. He says that if the attacker had opened the door, he would have opened fire:

> "So here's someone trying to breach my front door with a semi-automatic rifle without announcing himself," he said. "I'm armed. I can see him, he cannot see me. And I'm thinking, 'If this guy comes through my door, I will shoot him. I'm not asking questions. He's more heavily armed than I am, and if I'm to have any chance at all, I will have to shoot first.'"

There have been a LOT of SWAT team incidents in the last month. It looks like it is a coordinated effort.

Fox News reported this:

> FBI Director Kash Patel on Friday revealed that the agency is investigating a recent spike in swatting incidents after several conservative media figures said they were targeted.
>
> "I want to address the alarming rise in 'Swatting' incidents targeting media figures," Patel wrote Friday morning on his social media. "The FBI is aware of this dangerous trend, and my team and I are already taking action to investigate and hold those responsible accountable."
>
> […]Conservative podcaster Nick Sortor said Thursday on X that both his father and sister were swatted that same day.
>
> "A dozen cops attempted to kick my dad's door in at gunpoint," he wrote.

> […]Sortor said the person who called the police on his father claimed he was killing his “entire family, requiring them to intervene with deadly force.”
>
> “This is nothing short of attempted murder. They wanted the police to kill my father,” he added.

I notice that this is not the first time that leftist activists have engaged in domestic terrorism. And this is not something new. Republican politicians have been frequent victims of SWAT attacks, going back to 2023. In Wisconsin, Democrats ordered pre-dawn raids on the homes of Republicans. In 2022, the FBI raided the home of a pro-life activist. And don’t forget how Democrats just open fire on Republicans, like a Bernie Sanders supporter did with Steve Scalise. When will federal law enforcement stop these attacks?

# What do ancient non-Christian sources tell us about the historical Jesus?

**Wintery Knight** · 26 March 2025 · Archived copy · Original

This article from Biblical Archaeology covers all the non-Christian historical sources that discuss Jesus.

About the author:

> Lawrence Mykytiuk is associate professor of library science and the history librarian at Purdue University. He holds a Ph.D. in Hebrew and Semitic Studies and is the author of the book Identifying Biblical Persons in Northwest Semitic Inscriptions of 1200–539 B.C.E. (Atlanta: Society of Biblical Literature, 2004).

Here are the major sections:

- Roman historian Tacitus
- Jewish historian Josephus
- Greek satirist Lucian of Samosata
- Platonist philosopher Celsus
- Roman governor Pliny the Younger
- Roman historian Suetonius
- Roman prisoner Mara bar Serapion

And this useful excerpt captures the broad facts about Jesus that we get from just the first two sources:

> We can learn quite a bit about Jesus from Tacitus and Josephus, two famous historians who were not Christian. Almost all the following statements about Jesus, which are asserted in the New Testament, are corroborated or confirmed by the relevant passages in Tacitus and Josephus. These independent historical sources—one a non-Christian Roman and the other Jewish—confirm what we are told in the Gospels:31
>
> 1. He existed as a man. The historian Josephus grew up in a priestly family in first-century Palestine and wrote only decades after Jesus' death. Jesus' known associates, such as Jesus' brother James, were his contemporaries. The historical and cultural context was second nature to Josephus. "If any Jewish writer were ever in a position to know about the non-existence of Jesus, it would have been Josephus. His implicit affirmation of the existence of Jesus has been, and still is, the most significant obstacle for those who argue that the extra-Biblical evidence is not probative on this point," Robert Van Voorst observes.32 And Tacitus was careful enough not to report real executions of nonexistent people.
>
> 2. His personal name was Jesus, as Josephus informs us.
>
> 3. He was called Christos in Greek, which is a translation of the Hebrew word Messiah, both of which mean "anointed" or "(the) anointed one," as Josephus states and Tacitus implies, unaware, by reporting, as Romans thought, that his name was Christus.
>
> 4. He had a brother named James (Jacob), as Josephus reports.
>
> 5. He won over both Jews and "Greeks" (i.e., Gentiles of Hellenistic culture), according to Josephus, although it is anachronistic to say that they were "many" at the end of his life. Large growth in the number of Jesus' actual followers came only after his death.
>
> 6. Jewish leaders of the day expressed unfavorable opinions about him, at least according to some versions of the Testimonium Flavianum.
>
> 7. Pilate rendered the decision that he should be executed, as both Tacitus and Josephus state.

> 8. His execution was specifically by crucifixion, according to Josephus.
>
> 9. He was executed during Pontius Pilate's governorship over Judea (26–36 C.E.), as Josephus implies and Tacitus states, adding that it was during Tiberius's reign.
>
> Some of Jesus' followers did not abandon their personal loyalty to him even after his crucifixion but submitted to his teaching. They believed that Jesus later appeared to them alive in accordance with prophecies, most likely those found in the Hebrew Bible. A well-attested link between Jesus and Christians is that Christ, as a term used to identify Jesus, became the basis of the term used to identify his followers: Christians. The Christian movement began in Judea, according to Tacitus. Josephus observes that it continued during the first century. Tacitus deplores the fact that during the second century it had spread as far as Rome.

I remember reading the 1996 book by Gary Habermas entitled "The Historical Jesus: Ancient Evidence for the Life of Christ". This book is a little before the time of most of you young Christian apologists, but back before the time of Lee Strobel and J. Warner Wallace, this is the stuff we all read. Anyway, in the book he makes a list of all that can be known about Jesus from external sources. And fortunately for you, you don't have to buy the book because you can read chapter 9 of it right on his web site.

From Tacitus he gets this:

> From this report we can learn several facts, both explicit and implicit, concerning Christ and the Christians who lived in Rome in the 60s A.D. Chronologically, we may ascertain the following information.
>
> (1) Christians were named for their founder, Christus (from the Latin), (2) who was put to death by the Roman procurator Pontius Pilatus (also Latin), (3) during the reign of emperor Tiberius (14 37 A.D.). (4) His death ended the "superstition" for a short time, (5) but it broke out again, (6) especially in Judaea, where the teaching had its origin.
>
> (7) His followers carried his doctrine to Rome. (8) When the great fire destroyed a large part of the city during the reign of Nero (54 68 A.D.), the emperor placed the blame on the Christians who lived in Rome. (9) Tacitus reports that this group was hated for their abominations. (10) These Christians were arrested after pleading guilty, (11) and many were convicted for "hatred for mankind." (12) They were mocked and (13) then tortured, including being "nailed to crosses" or burnt to death. (14) Because of these actions, the people had compassion on the Christians. (15) Tacitus therefore concluded that such punishments were not for the public good but were simply "to glut one man's cruelty."

And from Josephus he gets this:

> (1) Jesus was known as a wise and virtuous man, one recognized for his good conduct. (2) He had many disciples, both Jews and Gentiles. (3) Pilate condemned him to die, (4) with crucifixion explicitly being mentioned as the mode. (5) The disciples reported that Jesus had risen from the dead and (6) that he had appeared to them on the third day after his crucifixion. (7) Consequently, the disciples continued to proclaim his teachings. (8) Perhaps Jesus was the Messiah concerning whom the Old Testament prophets spoke and predicted wonders. We would add here two facts from Josephus' earlier quotation as well. (9) Jesus was the brother of James and (10) was called the messiah by some.

So when you are reading the New Testament, these facts are the framework that you read within. It's a good starting point when dealing with people who have never looked into who Jesus was and what he taught and what his followers believed about him, right from the start.

# The cartel that is behind Americans' declining health and fitness

**Wintery Knight** · 27 March 2025 · Archived copy · Original

I've noticed that Dr. Jay Richards has been talking a lot about the role that government plays in guiding the health of American citizens. I am so far behind on this, so I have to catch up. Basically, there is concern that government agencies are guiding Americans poorly because they are too close to Big Pharma and Big Food. And it is causing us a lot of health problems.

Well, I noticed that Jay wrote an article for Daily Signal about MAHA, and I think it's a really good article to explain what the Trump administration is supposed to solve.

First, he explains how we got here:

> Although RFK, Jr. is famous—or infamous, depending on your view—for his criticisms of vaccines, that wasn't the theme of his lengthy speech. He spoke instead about an unholy alliance—a cartel—of industries, corporate media, government regulatory agencies, and even nonprofit "charities" that is making us fat and sick. This problem doesn't fit the simple taxonomy of "public" and "private" or "left" and "right" that served us well during the Cold War.
>
> Kennedy has been a voice in the wilderness warning about this cartel for years. Most Americans first became aware of it during the 2020 pandemic. Here's the basic story: COVID-19 itself was likely the product of dangerous gain-of-function research conducted by the Wuhan Institute of Virology in China. That's bad enough. But Communist China didn't act alone. This work was funded, at least in part, by the U.S. government's National Institutes of Health and laundered through the nonprofit EcoHealth Alliance.

One point is that critics of the cartel were suppressed:

> Once the virus was out, the absurd and counterproductive lockdowns and hygiene theater were pushed by global entities such as the World Health Organization. Domestically, Francis Collins, then-head of the NIH, and Anthony Fauci, then-head of the National Institute of Allergy and Infectious Diseases, worked to undermine independent experts who criticized the federal bureaucrats' favored policies.
>
> Collins and Fauci even orchestrated the publication of a deceptive article in Nature that claimed the virus had a natural origin. The Centers for Disease Control and Prevention and other federal entities, including the Biden White House, pressured social media platforms to censor even the best-credentialed dissenters.
>
> Attentive Americans soon learned that public health, as a field, focuses on nudging whole populations, rather than seeking the health of individual patients.

Another key point – the cartel companies cannot be sued for any damages they cause:

> Certain pharmaceutical companies—which pay royalties to many NIH staff, including Collins and Fauci—enjoyed a suspiciously fast and less than rigorous approval process for their mRNA "vaccines." Vaccine mandates then created a massive artificial market for the drugs. And drug companies' immunity from legal liability allowed them to enjoy the financial benefits of these policies without facing the downside risks from any long-term harm to those who took the vaccines.

Many Americans started to mistrust their doctors, because they were pushing drugs and surgeries on their children:

> Then, during the lockdowns, the growing awareness of the "gender-industrial complex"— media, medical professionals, pharmaceutical companies, politicians, and others who push ghoulish "gender-affirming" interventions on people distressed about their sexed bodies—further reinforced the lack of credibility of

> private and public health authorities.

Jay says that these symptoms – lockdowns, mandates, persecution of scientific dissent – are all the work of "the cartel", which is composed of actors from Big Government, Big Food, Big Pharma, and Big Media.

Jay then switches over to the specific problems that the cartel is alleged to have caused:

> In his speech, Kennedy devoted many paragraphs to the "chronic disease epidemic"—including ever higher rates, even among children, of Type II diabetes and obesity, and of Alzheimer's, which some now refer to as "Type III diabetes."
>
> […]He spoke of "an explosion of neurological illnesses that I never saw as a kid," including: "ADD, ADHD, speech delay, language delay, Tourette's Syndrome, narcolepsy, ASD, Asperger's, autism. In the year 2000, the Autism rate was one in 1500. Now, autism rates in kids are one in 36, according to CDC; nationally, nobody's talking about this."
>
> He also spoke of the massive spikes in the use of antidepressants and anti-anxiety drugs.

So, that's the problem that Kennedy and his allies in the Trump administration need to solve.

For me, two of the biggest red flags are 1) the persecution of qualified dissenting scientists, and 2) the threats of ending the employment of people who don't want to take medications where the manyfacture is immune to being sued. Those factors right there alerted me to the existence of "the cartel", and now I'm just hoping that Kennedy is the right person to do something about it. I'm not convinced that he is, but I think it's positive that Jay thinks he is.

# Does the ERLC advocate for Bible-based policies, or for secular leftist policies?

**Wintery Knight** · 28 March 2025 · Archived copy · Original

Well, Megan Basham has done it again. She's got a new article up in Christ Over All, where she takes a look at the ERLC, a policy advocacy group funded by the Southern Baptist denomination. She starts by talking about how good the ERLC used to be, when they focused on their original mission – protecting religious liberty, and promoting Christian values.

She talks about the role the ERLC played in getting the Religious Freedom Restoration Act passed and signed by BILL CLINTON, way back in 1993. The leader of the ERLC at that time was Mike Whitehead.

She writes:

> The reason the ERLC was in the room where RFRA happened was because Mike Whitehead, then the ERLC's general counsel, had deep relationships with DC insiders who had long worked on religious liberty legislation. After he signed the law, Clinton sent Whitehead a personal note, thanking him for his work crafting the measure and offering prayers for Whitehead's teenage son, who was battling leukemia at the time.
>
> "Our involvement in that litigation was probably the first major involvement by Southern Baptists in legislative drafting," Whitehead told me. And because he stopped representing the ERLC two years later, it was also one of their last.

In the rest of the article, Megan talks to a variety of conservatives on Capitol Hill, and she asks them why RFRA was one of the last good things that the ERLC was able to do:

> Today, Whitehead sits on the board of the Alliance Defending Freedom, the conservative legal advocacy group that continues to be heavily involved in drafting federal- and state-level legislation on religious liberty, the sanctity of life, and marriage and family. When he talks to friends in the Capitol about what role, if any, the ERLC is playing in supporting policies in these areas, he's told they're invisible. "They'll offer comments to the press, then they'll write that they are involved, and they'll take credit when an issue they're supporting prevails. But they really are not viewed as being actively helpful on advancing conservative politics on the Hill," he said.
>
> The 19 lawmakers and Hill staffers I contacted for this essay all echoed that assessment.

She talked to Mike Lee, who is one of the most conservative senators, according to the Heritage Foundation ratings:

> [W]hen I asked Lee about any support his office has received from the Southern Baptists' policy arm, he couldn't remember ever hearing from them. "That doesn't mean that they're not meeting with staff," he told me. "But the fact that I haven't heard anything memorable about them means they've been completely absent on the big fights over big issues. I don't recall them going against RFMA or Planned Parenthood funding or anything else."
>
> This would be the consistent refrain of my inquiry into how the ERLC is viewed on the Hill.

One of my favorite conservatives on Twitter is Rachel Bovard. She has a lot of connections in D.C. because she's worked with a whole bunch of different conservative organizations to get things done. She's currently the Vice President of Programs at the Conservative Partnership Institute.

Megan spoke to her as well:

> And what are her views on the effectiveness of the ERLC in advocating for policies that align with biblical

> principles? “In 12 years on the Hill I don’t ever remember hearing from the ERLC,” she said. This is particularly noteworthy because, during her time as executive director of the Senate Republican Steering Committee, Bovard ran weekly meetings of conservative movement groups and staff, where priority issues and positions on legislation were discussed. “Probably 175–200 people were on the invite list,” she told me, “and meetings regularly drew 80–100 people. [The] ERLC was never there as far as I recall.” In fact, Bovard said she never thought of the ERLC because she didn’t know they existed. “Which is odd,” she continued, “because the Steering Committee’s entire job is to be an access point for the conservative movement to the Senate.”

Megan goes on to quote a few prominent conservatives, but it’s the same story. The ERLC has as much influence pushing for Biblical principles as the SPLC, a far-left hate group. And they’re more effective at pushing for the positions the SPLC supports.

Megan spoke to Eric Teetsel, who he took over the leadership of the conservative *Center for Renewing America* after its founder, Russ Vought, was appointed by Donald Trump to run the Office of Management and Budget:

> “As a Southern Baptist who happens to be an expert in what they’re supposed to be doing, I can tell you, they’re completely and entirely worse than useless,” he told me. “They are actively counterproductive to the ends that Southern Baptists ought to expect from an entity that purports to be the public policy arm of their convention. When it comes to protecting life, family stuff—you know, the basic conservative things where all the movement groups in town would tend to align—they’ll sign coalition letters, but that’s nothing. It’s meaningless. Those agenda items are going to happen anyway, because other groups that are more influential and effective than the ERLC are driving them. The ERLC just hops on board and takes credit.”

In the rest of the article, Megan looks at how the ERLC has affected policy in their home state of Tennessee.

Here’s what she heard about the current leader of the ERLC, Brent Leatherwood:

> Though Leatherwood told *The Baptist Press* the ERLC supported a law to ban transgender treatments on children “as it made its way through the Tennessee legislature,” House Majority Leader William Lamberth, who was a principal architect and co-sponsor of the bill, couldn’t remember receiving that support. He did not recall any involvement from the ERLC.
>
> […]One issue that did not find the ERLC so motivated was protecting women’s private spaces. Lamberth’s colleague, Tennessee Representative Monty Fritts, told me the ERLC was similarly MIA on a bill he sponsored to keep men out of women’s bathrooms, locker rooms, and prisons. Again, this is an issue the ERLC regularly highlights in its appeals to Southern Baptists for support. Fritts also said that while many ministries and faith groups in Tennessee backed his proposal to officially name July a month of prayer and fasting, the ERLC was not one of them.

And this anecdote from a prominent conservative about Russell Moore was interesting:

> Tami Fitzgerald, executive director of the policy nonprofit, North Carolina Values Coalition, served on the ERLC’s board from 2012 to 2019 and had a front-row seat to the entity’s shift in focus under the leadership of Moore. “We had this meeting of the executive committee, which I was on, before the convention started,” she remembered, “and Russell Moore was going through his agenda, and he had made some statements that the SBC was going to change its tone and that the culture wars were over. Instead of stuff like abortion and gay marriage, we were going to focus on issues like immigration, sexual abuse, and racial injustice.”

And:

> The ERLC continues to be heavily involved with the George Soros-funded Evangelical Immigration Table,

> registering opposition to President Trump's border policies.

My impression after reading the article was that the ERLC does nothing to support Bible-based policy, and everything to support secular left policy. They just aren't very good at having a Biblical worldview. They don't know how to convince anyone else of what the Bible says, using evidence that those non-Christians would find convincing. They're just obsessed with agreeing with the secular left, because they love the praise from men more than the praise from God. Simple.

Have a read, and see what you think.

# William Lane Craig debates Daniel Came: Does God exist?

**Wintery Knight** · 29 March 2025 · Archived copy · Original

Dr. Craig's opening speech summary slide

The video of the debate was posted by ReasonableFaith.org – Dr. Craig's organization. This debate occurred in March 2017 at the University of Dublin, in Ireland.

The video: (91 minutes)

My non-snarky summary is below.

**Dr. Craig's opening speech**

Two claims:

1. There are good reasons to think that theism is true.
2. There are not comparably good reasons to think that atheism is true.

Five reasons for God's existence:

1. The beginning of the universe
– actual infinite past is mathematically impossible
– BGV theorem: any universe that is on balance expanding in its history (like ours) cannot be past eternal

2. Fine-tuning of cosmic quantities and constants
– slight changes to quantities and constants prevent a universe from supporting complex embodied life
– the multiverse response of atheists conflicts with observations, e.g. the Boltzmann Brains problem

3. Objective moral values
– God's existence is required to ground objective moral values and duties

4. Minimal facts case for the resurrection of Jesus
– there are good reasons to accept the most widely accepted facts about the historical Jesus (empty tomb, appearances, early widespread belief in the resurrection)
– the best explanation of these minimal facts is that God raised Jesus from the dead

5. Experience God directly
– in the absence of any defeaters to belief in God, a person can experience God directly

**Dr. Daniel Came's opening speech**

1. The hiddenness of God
– if God wants a personal relationship with us, and a relationship with God would be the greatest good for us
– God ought to reveal himself to us, but he does not reveal himself to many people, the "non-resistant non-believers"

2. The inductive problem of evil
– many evil events occur that are pointless – there is no morally sufficient reason why God would allow them to occur
– examples: animal suffering, children born with disease, tsunamis
– the theistic response to this is that humans are not in a position to know whether there are morally sufficient reasons, due to our limitations of knowing the consequences
– but this ripple effect defense has 4 possible outcomes, 3 of which don't do the job of justifying

**Dr. Craig's first rebuttal**

1. The hiddenness of God
– God's goal is not to make his existence known, but to draw them into a love relationship
– it's speculative that overt displays of God's existence would draw people to him in a love relationship, they might resent his bullying
– atheist would have to prove that God could draw more people into a love relationship with him by revealing himself more overtly

2. The inductive problem of evil
– as humans, we are not in a position to know for certain that any apparently pointless evil really is pointless
– William Alston article: 6 limitations of human knowing make it impossible to judge that an evil is actually "pointless"
– Dr. Came says that there are 4 possibilities for the ripple effects, and since 3 are bad, it's likely that there are not morally sufficient reasons for a apparently pointless evil
– it is logically fallacious to assert probability conclusions without knowing the probabilities of those 4 options
– there is actually an argument from evil: since the problem of evil requires an objective standard of good and evil by which to measure, and God is the only possible ground of objective morality, then pressing the problem of evil actually requires the atheist to assume God, in order to ground this objective moral standard

**Dr. Came's first rebuttal**

3. Objective moral values
– there are naturalistic theories of moral realism where objective moral duties and objective moral values exist in a naturalistic universe
– I'm not saying that any of them are correct, but there are many theories about object morality in a naturalistic universe

There are naturalistic theories for all of the 5 arguments that Dr. Craig presented. It is Dr. Craig's responsibility to present those naturalistic theories and prove that they are not as good as his explanations. I'm not going to defend (or even name!) a single naturalistic theory for any of these 5 arguments by Dr. Craig.

Dr. Craig's explanations for the 5 evidences he gave can't be admitted, because we have to know how God did something *in naturalistic terms* before we can know that God did it supernaturally. Explanations are only valid if they are naturalistic.

1. The beginning of the universe
– naturalism explains how the universe expands after it came into being, so that explains how it came into being
– the God explanation, that God created the universe out of nothing, is not admissible, because it is not naturalistic
– how does God, as an unembodied mind interact with the physical world?
– the only agency that we know about is human agents, and we have bodies, so how could God perform actions

without having a body?

The theistic hypothesis does not make any predictions, but naturalism makes lots of testable predictions. God could do anything, so he is not constrained and is therefore untestable. We can't infer God as an explanation in principle because we can't predict what is more probable if God exists than if he does not.

2. Fine-tuning of cosmic quantities and constants
– the university was not set up to make embodied intelligence plausible, because the vast majority of the universe is hostile to life
– there are models of the multiverse that escape the Boltzmann Brains problem that Dr. Craig raised

**Dr. Craig's second rebuttal**

Some of Dr. Craig's arguments are deductive (e.g. – the beginning of the universe, objective moral values), so that the conclusion follows from the premises if the premises are true. The resurrection passes the standard tests for historical explanations.

1. The beginning of the universe
– the whole point of the argument is that there is no naturalistic explanation for an ultimate beginning of the universe

2. Fine-tuning of cosmic quantities and constants
– the whole point of the argument is that there is no naturalistic explanation for a design of the universe to support life
– he has to prove that intelligences has to be attached to bodies
– human beings are non-physical minds united to physical bodies
– naturalistic attempts to explain mental operations fail
– the arguments *prove* that unembodied minds exist
– the vast expanse of the universe is required in order to form the galaxies, stars and heavy elements needed for complex life
– why expect that the entire universe should be small, or that life would be everywhere?
– a non-fine-tuned world is more likely in the multiverse, and in a multiverse, we are more likely to have a Boltzmann brain world than a world with complex, embodied life
– Dr. Came has not advanced any naturalistic explanation for the fine-tuning

3. Objective moral values
– non-theistic ethical theories cannot account for the ontological foundations of objective moral values and duties
– atheistic theories of moral realism simply assume objective moral values out of thin air
– it is especially hard to find any basis for objective moral duties in the absence of God

**Dr. Came's second rebuttal**

5. Religious experience
– Dr. Craig should not bring up religious experience in a debate where arguments and evidence are central
– people who have dreams, hallucinations and psychotic delusions could appeal to religious experience
– religious experience is by no means universal, and it is possible to doubt it

3. Objective moral values
– there are lots of atheists who hold to objective moral values
– Dr. Craig has to explain how God grounds objective moral values and duties
– Dr. Craig has to explain why atheist moral realist theories don't work to ground objective moral values and duties

1. The beginning of the universe
– Dr. Craig claims that something can't come from nothing, that's not an argument
– there are numerous models that don't require an absolute beginning of the universe

– Dr. Craig cites the BGV theorem, but Guth (one of the authors) says that only the inflation has a beginning, not the whole universe

**Dr. Craig's conclusion**

1. The beginning of the universe
– on theism, there is an efficient cause, but no material cause, for the origin of the universe
– on atheism, there is neither an efficient cause nor a material cause, for the origin of the universe: that's worse!
– if he thinks that there are models of the universe that don't require a beginning, then let him name a viable eternal model of the universe
– he never refuted the mathematical argues against an infinite past

2. Fine-tuning of cosmic quantities and constants
– nothing to refute

3. Objective moral values
– God is a better ground for morality than humans, because he is ultimate, and not contingent and arbitrary
– God is a being who is worthy of worship, and therefore command his creatures with moral duties

4. Minimal facts case for the resurrection of Jesus
– nothing to refute

5. Religious experience
– only justified because there are no defeaters to it

1. The hiddenness of God
– atheist has to show that if God's existence were more obvious, that it would result in more people being drawn to him

2. The inductive problem of evil
– Dr. Came's argument was logically fallacious, and makes errors in probability theory

**Dr. Came's conclusion**

Sometimes, people can't prove something, but lack of evidence is a justification for doubting it, e.g. – werewolves.

If none of Craig's arguments work, then it follows that it is not rational to believe that God exists, and it is rational to believe that God does not exist.

Atheists shouldn't have a burden of proof for what they know, only theists have a burden of proof for what they know.

**My thoughts**

One quick point. If life were common everywhere then atheists would infer that God wasn't involved in it. Period. "Life is everywhere, so it's common, why do we need a designer?" they'd say. I agree with Dr. Came about denouncing religious experience in a formal debate. I don't like when Dr. Craig brings this up, but I see why he does it – he's an evangelist, and that's a good thing, too. I just worry about how it looks to atheists, although it's good for sincere seekers. I'm not the one on the stage, though, Dr. Craig is.

I think the point about more overt revealing by God would annoy people and make them turn away. Think of how gay people respond to the suggestion that there is anything wrong with them, with rage, vandalism, threats, coercion, attempts to get you to lose your job and business, and using government as a weapon to fine and imprison you. It's really obvious to me that more God does not mean more *love* of God. For those who don't want God, the hiddenness is respect for their choice to put pleasure above the search for truth. (I mean the gay activists – I have great sympathy for people who struggle with same-sex unwanted attractions because they were impacted by a failed bond with their parent of the same sex as they are).

Whenever I meet people like Dr. Came, I always urge them to keep investigating and pursuing truth, because they will find it if they are sincerely seeking after God. Some atheists do sincerely seek God, but I don't know any who haven't found him. I'm not sure if that's because those atheists who claim to be non-resistant and rational are in fact resistant and non-rational, or what the real reason is. If you believe the Bible, *all* unbelief is non-rational and resistant (see Romans 1). Regarding the werewolves, we don't have any good arguments for werewolves, we do have good arguments for God. Dr. Came didn't refute the arguments that Craig raised, nor did his own arguments for atheism work. And there are many, many more arguments (origin of life, Cambrian explosion, habitability-discoverability, molecular machines) that Craig did not raise, too.

# Does the Bible say that you should forgive someone who does not repent?

**Wintery Knight** · 30 March 2025 · Archived copy · Original

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's "Jesus Through Middle Eastern Eyes" (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's some of his response copied with permission from his Facebook note:

> First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.
>
> Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, "unless you repent, you will all likewise perish." In Mark 1:15 John the Baptist commands that we must "repent and believe the Gospel." The connection between repentance and forgiveness of sins (i.e. "salvation") is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.
>
> So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other's sins. It does.
>
> Jesus stated in Luke 17:3, "If your brother sins, rebuke him; and if he repents, forgive him." Here, the meaning is clear. The word "if" (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same criteria that God requires before He forgives sin.
>
> This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word "reprove" is used rather than "rebuke" and the word "listen" is employed rather than "repent," but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. "listen"). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).
>
> […]Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.
>
> Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive

> when no reconciliation may be had with the sinner. We cannot "walk together" in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer's soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).
>
> Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.
>
> Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

I agree with Kevin, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they've done, and they refuse to explain why what they did is wrong, then they can't be forgiven, and you can't trust them again.

I think this is the key passage – Luke 17:3-4:

Luke 17:3-4:

3 Be on your guard! If your brother sins, rebuke him; and if he repents, forgive him.

4 And if he sins against you seven times a day, and returns to you seven times, saying, 'I repent,' forgive him."

That's Jesus speaking, there.

Also, I was having a debate with someone who disagrees with all this, and while debating with her, I thought of another example.

Luke 18:9-14:

9 And He also told this parable to some people who trusted in themselves that they were righteous, and viewed others with contempt:

10 "Two men went up into the temple to pray, one a Pharisee and the other a tax collector.

11 The Pharisee stood and was praying this to himself: 'God, I thank You that I am not like other people: swindlers, unjust, adulterers, or even like this tax collector.

12 I fast twice a week; I pay tithes of all that I get.'

13 But the tax collector,standing some distance away, was even unwilling to lift up his eyes to heaven, but was beating his breast, saying, 'God, be merciful to me, the sinner!'

14 I tell you, this man went to his house justified rather than the other; for everyone who exalts himself will be humbled, but he who humbles himself will be exalted."

So again, no forgiveness without repentance.

Forgiveness is what happens when someone who is sinned against treats the sinner as if he had never sinned. It is

not on the balance sheet. It is not brought to mind. It is not held against them in the future. The forgiver trusts the sinner again as if the previous sin had never happened.

In divine (vertical) forgiveness, there is no forgiveness without repentance. There are Bible verses above to show that.

My argument is twofold. First, there is a clear teaching of Jesus explaining the sequence of sin and forgiveness. Repentance precedes forgiveness, between humans (Luke 17:3). The verses cited by the forgive without repentance crowd don't show the mechanics of how to forgive, they are making the point that if you want God to forgive you, you should forgive others. The parable in Luke 18:9-14 affirms this again – repentance always precedes forgiveness.

Second, we have an obligation to imitate God, and that means imitating the way he forgives those who sin against him. When I raise that with the unconditional forgiveness crowd, they want to insist that there is a difference, that the word "forgive" means different things. I'm not convinced.

Finally, I do think that forgiving someone is obligatory if they sincerely repent, and even if they screw up again and again. So long as the repentance is sincere, (like if there is restitution and a genuine effort to show an understanding how the sin affected the wronged party in writing), *then forgiveness should be automatic*.

Alan E. Kurschner argues that there is serious textual doubt about the originality of Luke 23:34a, a text used by the pro-unconditional-forgiveness crowd. He has a journal article coming out on it, but a synopsis of his argument is here.

He also wrote this in a comment on this blog:

> Second, on Matt 6:15, this is what I have to say. Notice the then-clause: "neither will your Father forgive your sins." This would require universalism on the Father's part according to the unconditional interpretation given the first half: "But if you do not forgive others their sins." Since everyone has wronged the Father is the Father required to forgive everyone even if they are not seeking forgiveness?

So I think the case for the forgiveness being conditional on repentance is pretty strong, especially when serious harm has been caused.

# How NPR's CEO Katherine Maher responded to accusations of bias

**Wintery Knight** · 31 March 2025 · Archived copy · Original

The Trump administration has a difficult task ahead of them. The country is over $36 trillion in debt. The interest on the debt is now up to about 13% of the budget. If government spending is not cut, that will increase by about half a percent per year. Eventually, it will take up so much of the budget, that government won't be able to keep its promises for social programs.

First, for those who would rather watch than read, check out this clip of Matt Walsh:

If you cannot watch, then here's an editorial by famous law professor Jonathan Turley that was published in the far-left The Hill:

> In one of the most cringeworthy appearances in Congress, Katherine Maher imploded in a House hearing on the public funding of the liberal radio outlet.
>
> By the end of her series of contradictions and admissions, Maher had made the definitive case for ending public funding for NPR and state-subsidized media.

And here are the details:

> She was the personification of advocacy journalism, even declaring that the First Amendment is the "number one challenge" that makes it "tricky" to censor or "modify" content as she would like.
>
> Maher has supported "deplatforming" anyone she deems to be "facsists" and even suggested that she might support "punching Nazis." She also declared that "our reverence for the truth might be a distraction [in] getting things done."

A former NPR editor published an article about bias at NPR: "NPR's Washington headquarters has 87 registered Democrats among its editors and zero Republicans."

It's amazing how secular leftists change their views when they are about to lose access to taxpayer handouts:

> When asked about her past public statements that Trump is a "deranged, racist sociopath," she said that she would not post such views today. She similarly brushed off her statements that America is "addicted to White supremacy" and denounced the use of the words "boy and girl" as "erasing language" for non-binary people.
>
> When asked about her past assertion that the U.S. was founded on "black plunder and white democracy," Maher said she no longer believed what she had said. She also wrote that "America is addicted to white supremacy"
>
> When asked about her support for the book "The Case for Reparations," Maher denied any memory of ever having read the book. She was then read back her own public statements about how she took a day to read the book in a virtue-signaling post.
>
> She then denied calling for reparations, but was read back her own declaration: "Yes, the North, yes all of us, yes America. Yes, our original collective sin and unpaid debt. Yes, reparations. Yes, on this day."

Suddenly, the thought of losing access to taxpayer money made Katherine Maher forget everything that her company – NPR – had ever done or said:

> The one moment of clarity came when Maher was asked about NPR's refusal to cover the Hunter Biden laptop

> story. When first disclosed, with evidence of millions in alleged influence-peddling by the Biden family, NPR's then-managing editor Terence Samuels made a strident and even mocking statement: "We don't want to waste our time on stories that are not really stories, and we don't want to waste the listeners' and readers' time on stories that are just pure distractions."
>
> Now Maher wants Congress to know that "NPR acknowledges we were mistaken in failing to cover the Hunter Biden laptop story more aggressively and sooner."

All it took was the threat of a complete cutoff of federal funding.

It must be so confusing for her to be confronted with her own words and her own choices. I can imagine that she must be thinking something similar to Hillary Clinton, when she was confronted with evidence of her crimes: "what difference at this point does it make?" No apology. No taking responsibility. No accepting accountability. Just lie, evade, dodge, deflect, shift blame, project.

Listen. All of this government spending is going to have to be paid by your children, and your children's children. For Democrats – the party of slavery – this is not a problem. Democrats LOVE spending money now, and making other people pay for it later. Democrats LOVE the idea of forcing others to pay their bills. They believe in unlimited money, unlimited youth, unlimited beauty. They don't understand scarcity. They just want to have a good time now.

Now that the grown-ups are back in charge, we need to cut the spending while we still can. Let these welfare queens fend for themselves. Let them face the consequences of their actions.

# Christian teachers are being punished for declining to participate in LGBT

**Wintery Knight** · 1 April 2025 · Archived copy · Original

Normally, I find stories about Christians being persecuted in European countries, or Canada. But when I did a search for stories about Christians being persecuted for declining to participate in LGBT in America, I was able to find quite a few cases. I've previously covered all the Christian businesses who got sued for refusing to celebrate same-sex marriages. But there's more!

Consider the case of Peter Vlaming, who was fired for declining to use transgender pronouns.

The Washington Stand reports:

> The saga began in 2018, when a female student in Vlaming's class who identified as transgender demanded to be called by a male name and pronouns. Vlaming, who had taught in the district for almost seven years and was popular with students, agreed to call the student by her chosen name but declined to refer to her with male pronouns. In an attempt at compromise, he invited the whole class to use new names for French class and also avoided using any pronouns in class.
>
> But Vlaming's attempts to accommodate the student were not enough for West Point High School officials. They ordered him to start using the trans-identifying student's preferred pronouns or risk losing his job. After Vlaming declined to use male pronouns and attempted to explain his efforts to compromise, he was informed that he was being fired for "discrimination" on the basis of gender identity.

Now, you might be tempted to say "well, West Point is in New York state, so of course blue states are going to abuse the human rights of Christians". But here's a case from Kansas, which is a purple state.

Daily Signal reports:

> Fort Riley, Kansas, middle school math teacher Pamela Ricard wasn't looking to pick a fight. But when the Geary County School District suspended and disciplined the teacher with a 17-year history of teaching at the school, she sued.
>
> Her offense? She addressed two students who considered themselves transgender by their legal names rather than their preferred names and pronouns, and she refused to hide their social transition from the students' parents. Both actions were in contravention of the school district's new communications policy.

It's important to note that in both of these cases, the people who were punished argued that they had a right to do what they were doing, because of the Bible's teaching about male and female sexes. But that didn't save them, because people don't care about religious liberty as a defense to "making someone feel bad".

Here's another case, this time from California, where a gym teacher was fired for the crime of refusing to use a student's preferred pronouns.

The Washington Stand reports:

> The Jurupa school district fired Tapia in January 2023 after she said her religious beliefs made her "unable to comply" with the district's directives "to refrain from disclosing the gender identity of a student who is transgender to a parent who does not know the student's gender identity" and "to address students by their preferred name and preferred gender pronouns."
>
> "It was crazy to be in the position where I realized that I couldn't be a Christian and a teacher," said Tapia, a mother of three children herself. "I made sure to clarify, too, with [the] district personnel that were sitting

> across from me. I looked them in the eye, and I said, 'Are you asking me to lie to parents?' and they said, 'Yes. It's the law.'"

Now, to be honest, I think you'd have to be really naive to want to try to live an authentic Christian life in CALIFORNIA. I think you would have to tone down your advocacy for Biblical positions, in order to live there. But, some people like the weather, or something. Me, I'd rather live in a red state like Tennessee or Oklahoma, where I can say what I want and not care what people think.

Here's another case from a blue state, Virginia. In this case, a physical education teacher was suspended for opposing a preferred pronoun policy at a school board meeting.

Daily Signal reports:

> A prominent religious liberty organization is asking a Virginia school district to reverse a decision to suspend a gym teacher for not complying with pronoun rules for transgender students in his elementary school.
>
> The Loudoun County school district suspended Byron "Tanner" Cross, a physical education teacher at Leesburg Elementary School, after he said during a May 25 school board meeting that he would not abide by a proposed rule requiring teachers to call students who say they are transgender by their preferred personal pronouns.

You might remember the Loudoun county school district. This is the school district that allowed a male student to sexually assault a female student, and then when it was discovered, they tried to label the concerned parents "domestic terrorists". This is why the question "where will our children go to school?" ought to be a topic for Christians who are considering marriage. It's very important that Christian kids not go to government schools.

Here's a final story out of Indiana, a red state. This time, a music teacher was forced to resign for refusing to use the preferred pronouns of a student.

The Indy Star explains:

> A Brownsburg teacher is fighting for his job after he says the district forced him to resign over its transgender student policy.
>
> John Kluge, the former orchestra teacher at Brownsburg High School, said the school district's requirement that teachers call transgender students by their preferred names, rather than those given at birth, goes against his religious beliefs. The requirement, Kluge said, violates his First Amendment rights.

In every case, these were Christian people who refused to participate in LGBT indoctrination, because they believed in the Bible, not in the morality of the secular left. But it didn't save them from being persecuted. It's so strange to me to see so many Christian pastors and leaders ignoring the violation of the religious liberty of Bible-believing Christians. Make sure that you think about that when you go to the ballot box to vote.

# I'm not a Jehovah's Witness for the same reason I'm not a global warming alarmist

**Wintery Knight** · 2 April 2025 · Archived copy · Original

In the summer, a couple of Jehovah's Witness ladies were going door-to-door and they stopped by my house while I was out mowing. I decided to talk to them. They asked me why I was an evangelical Protestant rather than a JW. Rather than go into a lot of theology about the Trinity and the Watchtower translation, I decided to to just tell them about the false predictions their group has made.

So, let's just quickly review that using this article from Watchman fellowship, which quotes JW publications:

> Initially the organization taught the "battle of the Great Day of God Almighty" (Armageddon) would end in 1914. Every kingdom of the world would be overthrown in 1914 which was "God's date" not for the beginning but "for the *end"* of the time of trouble.
>
> "…we consider it an established truth that the final end of the kingdoms of this world, and the full establishment of the Kingdom of God, will be accomplished by the end of A.D. 1914" (Watchtower founder, Charles Taze Russell, *The Time is at Hand,* p. 99).
>
> "…the 'battle of the great day of God Almighty' (Rev. 16:14), which will end in A.D. 1914 with the complete overthrow of earth's present rulership, is already commenced" (*Ibid.,* p. 101).
>
> "CAN IT BE DELAYED UNTIL 1914?…our readers are writing to know if there may not be a mistake in the 1914 date. They say that they do not see how present conditions can last so long under the strain. We see no reason for changing the figures – nor could we change them if we would. They are, we believe, God's dates not ours. But bear in mind that the end of 1914 is not the date for the *beginning,* but for the *end* of the time of trouble" (*Watch Tower,* 15 July 1894, p. 226).

Clearly, the world did not end in 1914, and it did not end at subsequent JW predictions, either, e.g. 1925, 1975.

So, as the title of the post says that I can't be a global warming alarmist for the same reason I can't be a Jehovah's Witness: failed predictions.

Here's an excellent article from Daily Signal by famous black economist Walter Williams, who explains the connection:

> As reported in The New York Times (Aug. 1969) Stanford University biologist Paul Ehrlich warned: "The trouble with almost all environmental problems is that by the time we have enough evidence to convince people, you're dead. We must realize that unless we're extremely lucky, everybody will disappear in a cloud of blue steam in 20 years."
>
> In 2000, David Viner, a senior research scientist at University of East Anglia's climate research unit, predicted that in a few years winter snowfall would become "a very rare and exciting event. Children just aren't going to know what snow is."
>
> In 2004, the U.S. Pentagon warned President George W. Bush that major European cities would be beneath rising seas. Britain will be plunged into a Siberian climate by 2020. In 2008, Al Gore predicted that the polar ice cap would be gone in a mere 10 years. A U.S. Department of Energy study led by the U.S. Navy predicted the Arctic Ocean would experience an ice-free summer by 2016.
>
> In May 2014, French Foreign Minister Laurent Fabius declared during a joint appearance with Secretary of State John Kerry that "we have 500 days to avoid climate chaos."
>
> Peter Gunter, professor at North Texas State University, predicted in the spring 1970 issue of The Living Wilderness:

> Demographers agree almost unanimously on the following grim timetable: by 1975 widespread famines will begin in India; these will spread by 1990 to include all of India, Pakistan, China and the Near East, Africa. By the year 2000, or conceivably sooner, South and Central America will exist under famine conditions. … By the year 2000, thirty years from now, the entire world, with the exception of Western Europe, North America, and Australia, will be in famine.

> Ecologist Kenneth Watt's 1970 prediction was, "If present trends continue, the world will be about four degrees colder for the global mean temperature in 1990, but eleven degrees colder in the year 2000." He added, "This is about twice what it would take to put us into an ice age."

Williams concludes:

> Today's wild predictions about climate doom are likely to be just as true as yesteryear's. The major difference is today's Americans are far more gullible and more likely to spend trillions fighting global warming. And the only result is that we'll be much poorer and less free.

We have known for decades that the Earth's temperatures were much warmer during the "Medieval Warming Period", hundreds of years ago. But some people are just having irrational fears about overpopulation, resource shortages, etc. and so they will promote nonsense to try to scare people into doing what they want. World history is full of pious-sounding attention-seeking hoaxsters who try to scare the gullible masses into giving them money and/or power. It's not new.

# How the discovery of the cosmic microwave background radiation falsified atheism

**Wintery Knight** · 3 April 2025 · Archived copy · Original

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag ).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p. 20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of the cosmic microwave background radiation.

Here's the history of how that discovery happened, from the American Physical Society web site:

> Bell Labs radio astronomers Arno Penzias and Robert Wilson were using a large horn antenna in 1964 and 1965 to map signals from the Milky Way, when they serendipitously discovered the CMB. As written in the citation, "This unexpected discovery, offering strong evidence that the universe began with the Big Bang, ushered in experimental cosmology." Penzias and Wilson shared the Nobel Prize in Physics in 1978 in honor of their findings.
>
> The CMB is "noise" leftover from the creation of the Universe. The microwave radiation is only 3 degrees above Absolute Zero or -270 degrees C,1 and is uniformly perceptible from all directions. Its presence demonstrates that that our universe began in an extremely hot and violent explosion, called the Big Bang, 13.7 billion years ago.
>
> In 1960, Bell Labs built a 20-foot horn-shaped antenna in Holmdel, NJ to be used with an early satellite system called Echo. The intention was to collect and amplify radio signals to send them across long distances, but within a few years, another satellite was launched and Echo became obsolete.2
>
> With the antenna no longer tied to commercial applications, it was now free for research. Penzias and Wilson jumped at the chance to use it to analyze radio signals from the spaces between galaxies.3 But when they began to employ it, they encountered a persistent "noise" of microwaves that came from every direction. If they were to conduct experiments with the antenna, they would have to find a way to remove the static.
>
> Penzias and Wilson tested everything they could think of to rule out the source of the radiation racket. They knew it wasn't radiation from the Milky Way or extraterrestrial radio sources. They pointed the antenna

> towards New York City to rule out "urban interference", and did analysis to dismiss possible military testing from their list.4
>
> Then they found droppings of pigeons nesting in the antenna. They cleaned out the mess and tried removing the birds and discouraging them from roosting, but they kept flying back. "To get rid of them, we finally found the most humane thing was to get a shot gun…and at very close range [we] just killed them instantly. It's not something I'm happy about, but that seemed like the only way out of our dilemma," said Penzias.5 "And so the pigeons left with a smaller bang, but the noise remained, coming from every direction."6
>
> At the same time, the two astronomers learned that Princeton University physicist Robert Dicke had predicted that if the Big Bang had occurred, there would be low level radiation found throughout the universe. Dicke was about to design an experiment to test this hypothesis when he was contacted by Penzias. Upon hearing of Penzias' and Wilson's discovery, Dicke turned to his laboratory colleagues and said "well boys, we've been scooped."7
>
> Although both groups published their results in Astrophysical Journal Letters, only Penzias and Wilson received the Nobel Prize for the discovery of the CMB.
>
> The horn antenna was designated a National Historic Landmark in 1990. Its significance in fostering a new appreciation for the field of cosmology and a better understanding of our origins can be summed up by the following: **"Scientists have labeled the discovery [of the CMB] the greatest scientific discovery of the 20th century."**8

It's the greatest scientific discovery of the 20th century.

In the New York Times, Arno Penzias commented on his discovery – the greatest discovery of the 20th century – so:

> The best data we have [concerning the Big Bang] are exactly what I would have predicted, had I nothing to go on but the five books of Moses, the Psalms, the bible as a whole.

Just one problem with the greatest scientific discovery of the 20th century: atheists don't accept it. Why not?

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

# How the WMAP satellite confirmed nucleosynthesis predictions and falsified atheism

**Wintery Knight** · 4 April 2025 · Archived copy · Original

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag ).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p. 20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of how elements heavier than hydrogen were formed.

Nucleosynthesis: forming heavier elements by fusion

Here's the history of how that discovery happened, from the National Aeronautics and Space Administration (NASA) web site:

> The term nucleosynthesis refers to the formation of heavier elements, atomic nuclei with many protons and neutrons, from the fusion of lighter elements. The Big Bang theory predicts that the early universe was a very hot place. One second after the Big Bang, the temperature of the universe was roughly 10 billion degrees and

> was filled with a sea of neutrons, protons, electrons, anti-electrons (positrons), photons and neutrinos. As the universe cooled, the neutrons either decayed into protons and electrons or combined with protons to make deuterium (an isotope of hydrogen). During the first three minutes of the universe, most of the deuterium combined to make helium. Trace amounts of lithium were also produced at this time. This process of light element formation in the early universe is called “Big Bang nucleosynthesis” (BBN).

The creation hypothesis predicts that there will be specific amounts of these light elements formed as the universe cools down. Do the predictions match with observations?

Yes they do:

> The predicted abundance of deuterium, helium and lithium depends on the density of ordinary matter in the early universe, as shown in the figure at left. These results indicate that the yield of helium is relatively insensitive to the abundance of ordinary matter, above a certain threshold. We generically expect about 24% of the ordinary matter in the universe to be helium produced in the Big Bang. This is in very good agreement with observations and is another major triumph for the Big Bang theory.

Moreover, WMAP satellite measurements of mass density agree with our observations of these light element abundances.

Here are the observations from the WMAP satellite:

> > 
> Scientific observations match predictions

And here is how those WMAP measurements confirm the Big Bang creation event:

> However, the Big Bang model can be tested further. **Given a precise measurement of the abundance of ordinary matter, the predicted abundances of the other light elements becomes highly constrained. The WMAP satellite is able to directly measure the ordinary matter density and finds a value of 4.6% (±0.2%), indicated by the vertical red line in the graph. This leads to predicted abundances shown by**

> **the circles in the graph, which are in good agreement with observed abundances. This is an important and detailed test of nucleosynthesis and is further evidence in support of the Big Bang theory.**

"An important and detailed test".

For completeness, we should learn how elements heavier than these light elements are formed:

> Elements heavier than lithium are all synthesized in stars. During the late stages of stellar evolution, massive stars burn helium to carbon, oxygen, silicon, sulfur, and iron. Elements heavier than iron are produced in two ways: in the outer envelopes of super-giant stars and in the explosion of a supernovae. All carbon-based life on Earth is literally composed of stardust.

That's a wonderful thing to tell a young lady when you are on a date: "your body is made of stardust". In fact, as I have argued before, this star formation, which creates the elements necessary for intelligent life, can only be built if the fundamental constants and quantities in the universe are finely-tuned.

Now, you would think that atheists would be happy to find observations that confirm the origin of the universe out of nothing, but they are not. Actually, they are in denial.

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

# Knight and Rose Show #61: J. Warner Wallace: Case Files: Murder and Meaning

**Wintery Knight** · 5 April 2025 · Archived copy · Original

Welcome to episode 61 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss a new graphic novel co-authored by J. Warner Wallace and his son Jimmy. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome J. Warner Wallace to discuss his new graphic novel, co-authored with his son Jimmy, entitled "Case Files: Murder and Meaning". The book tells the story of police detectives trying to catch a dangerous serial killer. We discuss how the story raises questions about human value, morality, identity, and meaning – creating an opportunity for deeper conversations with a wider audience.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 61:**

**Speaker biographies**

J. Warner Wallace is a Dateline featured cold-case homicide detective, popular national speaker and best-selling author. He continues to consult on cold-case investigations while serving as a Senior Fellow at the Colson Center for Christian Worldview. He is also an adjunct professor of apologetics at Talbot School of Theology (Biola University), Gateway Seminary, and Southern Evangelical Seminary, and a faculty member at Summit Ministries. J. Warner became a Christ-follower at the age of thirty-five after investigating the claims of the New Testament gospels using his skill set as a detective.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Christian leaders ignore the real reasons why good men decline to marry

**Wintery Knight** · 6 April 2025 · Archived copy · Original

Before we start, here are two articles explaining why men are supposedly not marrying. First one from a pastor. Second one from a sociologist. And this is, I think, the majority view: men are to blame for the decline of marriage, because men are stupid, weak, lazy and lacking ambition. Feminist women are great. Marriage laws are fair. Family courts are impartial. But is that all true?

Now, if you ask an actual man whether these are his reasons for not marrying, he will have a different list:

- women initiate the majority of divorces
- young women are increasingly politically leftist
- men can easily be fired for false accusations at work
- men are sentenced far more severely than women are sentenced, for the same crimes
- the Sexual Revolution encourages women to be promiscuous with the men who they find the most physically attractive
- family courts are biased against men, punishing men with alimony, child support, loss of custody, loss of visitation
- majority of student loan debt is held by women
- concerns about the moral impact of the books, music, TV shows and movies that are popular with young women

And so on.

I think if good Christian men had to pick just one factor that is deterring them from marriage, it would be no-fault divorce.

On this blog, I've covered several cases of the "nightmare scenario" facing men in divorce. One of those cases is the case of Rob Hoogland, which occurred in Canada.

There's some new news about his case, reported in the London Daily:

> A Canadian man, involved in a legal battle over his right to object to hormone treatment for his teenage trans child, has reportedly been jailed and denied bail for violating a gag order banning him from discussing the story.
>
> Robert Hoogland was denied bail by the Vancouver Supreme Court on Friday and will remain in the North Fraser remand prison, according to news website the Post Millennial. He was arrested this week for contempt of court, due to his continued violation of an order restricting his speech regarding his transgender child.

I also reported on the case of an Apple senior software engineer named Ted Hudacko.

Here's a report about him from City Journal:

> Shortly after returning from a trip to New York with their two sons, Hudacko's wife, Christine, told him that she wanted a divorce—and that their oldest son identified as transgender. During divorce proceedings, the presiding judge, Joni Hiramoto… stripped him of all custody of his trans-identified son. Hudacko was concerned about administering experimental drugs and preferred to wait and see if his son's gender issues might resolve on their own, as usually happens in such cases. To the California judge, this confirmed his unfitness as a father.

I also reported on the case of a father from Texas named Jeff Younger, whose ex-wife wants to trans their kid.

And there a recent report about the status of his case in the New York Post:

> A California judge dealt a devastating blow to a Texas father in his years-long fight to stop his ex-wife from allowing their pre-teen son, who identifies as a girl named "Luna," to receive gender-affirming care.
>
> Father of two Jeff Younger, 59, announced on X that he "lost all parental rights" over his twin sons after Los Angeles Superior Court Judge Mark Juhas granted his estranged pediatrician ex-wife Anne Georgulas the authority to "castrate" his 12-year-old son James.

I blogged on all of these cases, but it's doubtful that pastors and pro-marriage sociologists have heard of any of them. They just want men to use their strength and finances to make women happy, and they don't care about the actual risks and costs that men are facing.

But there's been another case in the news just in the past week, reported in The Federalist:

> After raising concerns about his then-13-year-old son taking puberty blockers and starting on a path to irreversible, experimental, and life-long medical interventions to "transition" into a girl, the Colorado government stripped father Robert Cameron of all rights to protect his child.
>
> Colorado was able to do that because the child's mother and Cameron's ex-wife, Nancy Drake, used Colorado's "affirmation only" legal structure to wage a war against Cameron through the courts. Drake, who joined forces with an activist therapist, has been able to use government force to push the now-14-year-old boy into the transition interventions which, if pursued in full, have the power to sterilize, reduce brain development, and cause bone density issues, among a host of other gruesome effects.
>
> "My child is more important to me than whatever the court system may do to me. If my child needs to be saved, it's my job as a parent to save him, and he needs to be saved right now. He needs to be saved from predation and manipulation," Cameron told The Federalist. "I haven't slept well in forever because I'm afraid for my child. I also see the adults preying on this child's innocence. This all falls under the sexualization of children that we are engaging in as a society. That's absolutely appalling. And I'm not even talking about the medical experiments we're doing on children."
>
> […]Cameron's primary goal is to have his son be able to wait until he is 18 to make the decision, but Drake, who appears to have trigger-happy, extraordinarily litigious lawyers behind her, need the transition to start now, no questions asked — literally.
>
> Drake, an academic in a left-wing community in Colorado with whom Cameron shares joint custody, successfully got the state of Colorado to block Cameron's oversight over their son's medical treatment or even speak to him about transgenderism…
>
> […]Drake did not respond to The Federalist's request for comment, but within minutes of the request being sent, she threatened Cameron with calling Child Protective Services if he spoke to the media, claiming doing so means that he "intended [their son] to be harmed" and that it is "proof of child abuse."
>
> […]Some weeks ago, Drake also attempted to stop Cameron's ability to speak to pretty much anyone by requesting a gag order on top of the others already issued that would encompass "friends … anyone in our social circle … activists, and … the media," claiming it puts their children (their son is one of two twins, the other, a girl) in "physical, medical, and psychological danger," according to an email sent to the case arbitrator reviewed by The Federalist.
>
> Drake threatened Cameron's ability to have parenting time with their children at all.

Now, in every case I presented, I blame the MAN 100% for the problems he is facing. Why? Because people don't change after you marry them. These women were terrible secular leftists before marriage, and these foolish men all

chose to marry them anyway. Maybe because men tend to value youth and beauty above character. Men are responsible for marrying badly. And I have the same view when women marry badly. It's the women's fault.

My point is that good men who are not yet married look at these cases, and it causes them to want to decline to participate in dating and marriage. They don't like the fact that these social workers, therapists, lawyers, judges, etc. have this VERY LOW VIEW of fatherly authority and leadership. They don't want to be judged in a system run by man-haters. This is especially true for men who are well-educated and high earners. They don't want to be ruined.

So, what should we think about pastors, sociologists, and feminist Christians in general, when they try to blame the decline of marriage on men? Well, an excellent question to ask them is "what reasons do conservative men who are well-educated, and financially successful have for declining the offer of "feminist" marriage?" If their answer is to blame and shame men some more, just understand that you are dealing with someone who is not interested in solving the underlying problem.

When I ask questions like this to social conservatives, even the ones who claim to be against divorce, they cannot bring themselves to take seriously the dangers of marriage for men. Instead, they try to make it seem that a man taking these risks is "brave" and "strong". When I ask them if they shoe was on the other foot, and it was women who were facing these same risks, should she marry? And they say "Of course not. That's unfair!"

Why is there this double standard? Could it be because *even in the Christian church, there is a double standard that asserts that Christianity is really about making women happy, no matter what, and that men are expendable for this purpose?* I'm not saying that the Bible teaches this. But I've found this view of Christianity to be extremely popular, and not just among egalitarians, but among complementarians, too. Especially the ones who redefine "male headship" to mean "servant leadership". That really turns men off of marriage, because it makes them think that Christianity is being run by the ex-wives in these stories, and there is no support for male leadership at all.

# Pro-life scientist convicted for offering conversation counseling in UK

**Wintery Knight** · 7 April 2025 · Archived copy · Original

Recently, we've been hearing a lot from UK voices, including the Prime Minister, about how the secular leftist government of the UK allows free speech, just as much as in America. The UK doesn't have a first amendment, or anything equivalent. Let's take a look at a very recent case and see what you can expect from the secular left if you act like a Christian in public.

Here's the story from The Stream:

> A U.K. court earlier today convicted a pro-life clinical scientist of violating a "buffer zone" outside an abortion facility in a trial that has triggered threats of trade reprisals from the Trump administration over "freedom of expression" in Britain.
>
> Dr. Livia Tossici-Bolt, a devout Catholic, was found guilty on two counts of breaching a Public Spaces Protection Order (PSPO) or "buffer zone" outside the British Pregnancy Advisory Service (BPAS) abortion facility in Bournemouth in March 2023.
>
> The 64-year grandmother from Italy, who lives in Britain, was holding a sign that read: "Here to talk, if you want." The Alliance Defending Freedom (ADF), which is defending Tossici-Bolt, said that several women approached her to converse about issues they were dealing with.
>
> Tossici-Bolt was sentenced Friday to a conditional discharge and ordered to pay prosecution costs of £20,000 in full by May 31. According to the order, she will face prison time if she is convicted of any future offenses in the next two years.

You can see the sign that she was holding up in the image. Does that look scary or threatening to you? In Tennessee, you can hold up a sign like that, and you can have a conversation, and you won't be arrested by multiple armed policemen. But not so in the fascist UK. The secular left is very sensitive about speech that offends them. And they're willing to use force to stamp it out.

The bad thing about this case is that ADF argued for her, and they lost, which is unusual for the ADF. It shows you how far the UK has gone down the road of secular left fascism.

Here is her reaction to the verdict:

> In response to the verdict Friday, Tossici-Bolt said, "This is a dark day for Great Britain. I was not protesting and did not harass or obstruct anyone. All I did was offer consensual conversation in a public place, as is my basic right, and yet the court found me guilty.
>
> "Freedom of expression is in a state of crisis in the U.K. What has happened to this country? The U.S. State Department was right to be concerned by this case as it has serious implications for the entire Western world."

This sort of thing happens a lot in the UK:

> Pro-lifers were expecting Tossici-Bolt to be found guilty after they became aware that the judge in her case had already found pro-life advocate Adam Smith-Connor guilty last October for silently praying outside the same abortion clinic in November 2022.
>
> […]Judge Orla Austin found him guilty of breaching the buffer zone and sentenced him to a conditional discharge after ordering him to pay prosecution costs of £9,000 (about $11,700).
>
> In her decision, Austin reasoned that Smith-Connor's prayer amounted to "disapproval of abortion" because at

> one point his head was seen slightly bowed and his hands were clasped.
>
> […]In Tossici-Bolt's case, Austin said, "I conclude that she lacks insight into the fact that her presence could have a detrimental impact upon women attending the clinic, their associates, the staff, and members of the public."

I'm giving you all of these facts, so you can really understands what happens when people elect the secular left to run the government. A lot of people in the UK don't know the history of Stalin, Mao, and other secular leftists in history. But they are finding out now.

By the way, the Stream article notes that the leader of the Conservative Party of the UK had no problem with this verdict, and opposed the United States for disapproving of it.

You might remember a previous story that I blogged about, in which another pro-life Christian was arrested *just for praying* outside of an abortion clinic.

Here's that story, reported by the Daily Wire:

> Isabel Vaughan-Spruce, a 45-year-old charity volunteer, was arrested and charged on four counts after she told police she "might" be silently praying near the U.K.'s leading provider of NHS-funded abortion services BPAS Robert Clinic in Kings Norton, Birmingham, according to local media.
>
> […]Police arrested Vaughan-Spruce on December 6 and subsequently charged her on December 15 with four counts of failing to comply with a Public Space Protection Order in so-called censorship zones, which authorities introduced to criminalize individuals appearing to be "engaging in any act of approval or disapproval or attempted act of approval or disapproval."

Just a few days ago, there was an EXCELLENT article that appeared in the UK Telegraph, written by Allison Pearson. (archived here)

She wrote about another free speech case:

> If the name Lucy Connolly rings a bell it's because she was one of the 1,500-plus people arrested in connection with the social unrest which followed the July 29 Southport massacre of three little girls at a Taylor Swift-themed dance class. In fact, that's not strictly accurate. Mrs Connolly, then aged 41 – she turned 42 in prison in January – played no part in the rioting, but a tweet she posted on the day when Elsie Dot Stancombe, Bebe King and Alice da Silva Aguiar were murdered by Axel Rudakubana was enough to get her arrested eight days later, and charged under Section 19 of the Public Order Act 1986, with publishing material intending to stir up racial hatred.

The secular left in the UK has made a commitment to "multiculturalism". And they don't mean giving work permits to brown-skinned software engineers who speak perfect English, like America did with me. They mean letting in men of Middle Eastern origin, who have very different views of stabbing and raping than most Americans have. And if any UK citizen expresses disapproval of the stabbing or the raping, then the UK police is right there to put them in prison. In fact, that's what they think their job is.

It's very important for American tourists to understand that the UK is no longer a free, Western country. They've gone fascist. They have two-tier policing. You need to stay out of there.

# Does the fossil record match Darwinist predictions or Design predictions?

**Wintery Knight** · 8 April 2025 · Archived copy · Original

Recently, I wrote a post about how you can make a simple argument for intelligent design based on junk DNA. Step 1: find out what Darwinian naturalists claim about junk DNA. Step 2: find out what design proponents claim about junk DNA. Step 3: compare those predictions with scientific discoveries about junk DNA over the past decades. Today we'll do it with the fossil record.

I'm going to use an amazing article from Günter Bechly (who recently passed away) from over at Evolution News. Günter used to write an article about fossils every Friday (he called it "Fossil Friday").

Here's an article, where he gave a nice overview of why Christians should care about the fossil record.

He writes:

> This Fossil Friday I want to address the common request to provide an expanded written form of my lectures on discontinuities in the fossil record (e.g., on YouTube) together with references to mainstream scientific papers that back up these arguments against neo-Darwinism. Since the sudden appearance of trilobites in the Cambrian Explosion is one of the best known examples for discontinuities in the fossil record, I chose the early trilobite Wanneria sp. from the Lower Cambrian of Canada as today's featured fossil. So let's jump right in.

Then he talks about the predictions of Darwinists and design proponents:

> Every theory makes certain predictions and these predictions have to be tested with empirical evidence. Charles Darwin's theory of evolution necessarily predicts a gradual development of life. Therefore he insisted on gradualism, against the advice of his good friend Thomas Huxley. Darwin quoted in his magnum opus *The Origin of Species* (Darwin 1859) not less that six times the Latin dictum "*natura non facit saltus*", nature does not make jumps, because he wanted to present a fully naturalistic explanation for the history of life on our planet, knowing perfectly well that saltations would have tacitly implied miracle-like intelligent interventions. The prediction of gradualism is not accidental and not a dispensable side issue in Darwinism. This was made clear by Richard Dawkins, arguably the most ardent modern popularizer of Darwinism, in his bestselling book *The Greatest Show on Earth* (Dawkins 2009), where he explicitly clarified that "Evolution not only is a gradual process as a matter of fact; it has to be gradual if it is to do any explanatory work." In another book titled *Climbing Mount Improbable* (Dawkins 1996) he explained the reasons with a beautiful metaphor: Imagine the task to reach the top of a steep and tall cliff from the sea shore. It would be an improbable (or rather impossible) miracle to achieve this task with a single big jump. However, if there was a gentle slope on the backside of the cliff, you could easily and effortlessly climb the mountain with a lot of small successive steps. This is the way evolution must operate according to Darwin and Dawkins: not by sudden miraculous jumps, but many small steps, that are each not unlikely to happen accidentally without intelligent intervention, and which accumulate over long periods of time to add up to big biological differences.

Engineers don't check in code gradually, one letter at a time. We check in a bunch of related changes to different files that implement some feature. Some days, I have a lot of meetings. Some days, I spend time doing code reviews or making diagrams or writing documentation. And some days, I get to write code all day. So, if you look at my Github history, you'll see that some days I have 35 commits, and other days none. That's consistent with having a "designer". The complexity increases in "jumps", with each jump containing changes to several files, and the changes add some new feature. But that's not available to Dawkins and Darwin, they don't like engineers, or sudden jumps in complexity.

Günter lists out a bunch of biological “jumps”, where God pulled an all-nighter, with pizza and Mountain Dew, and checked in a whole bunch of new code all at once.

Here are a few from his list of about 15 of them:

- The Origin of Life (3.8 bya)
- The Origin of Photosynthesis (3.8 bya)
- The Cambrian Explosion (537-508 mya)
- The Carboniferous Insect Explosion (325-314/307 mya)
- The Early Triassic Marine Reptile Radiation (248-240 mya)
- The Mid Triassic Gliding / Flying Reptile Radiation (230-210 mya)
- Upper Triassic Dinosaur Explosion (234-232 mya)
- The Abominable Mystery of the Origin of Flowering Plants (130-115 mya)
- The Paleogene Big Bang of Modern Birds (65-55 mya)

Günter has the details of each of these, but if you have listened to our recent episode about the origin of life with Dr. Fazala Rana, then you already know about the first one. The point is that the fossil record has a whole bunch of “big bangs”, where God checked in a whole bunch of new code in a very short period of time. This is strictly forbidden in Darwinian theory, but the fossil record doesn’t care about theories.

Günter concludes:

> The gradualistic core predictions of any unguided evolutionary mechanisms such as neo-Darwinism are strongly contradicted by the empirical evidence. The cumulative conflicting evidence from molecular biology, genetics, population genetics, and the discontinuous fossil record can no longer be explained away as anomalies or as artifacts such as under-sampling of an incomplete fossil record. The total evidence is better explained with pulses of infusion of new information from outside of the system (top-down), rather than with a purely mechanistic stepwise bottom-up process. The only known cause in the universe that is able to produce significant amounts of new complex specified information is the activity of an intelligent conscious agent, so that intelligent design theory qualifies as superior alternative to unguided Darwinian evolution in an inference to the best explanation (abductive reasoning) among competing hypotheses. This is not an argument from ignorance (i.e., God of the gaps) as is often incorrectly claimed by critics, but is based on empirical data and our positive knowledge about the regular causal structure of the universe and the type of causes that exclusively are known to produce certain effects.

And I found a nice lecture that he gave on the topic:

The article was tough for me to understand, but I think I got the big picture of what he was saying. The video was much easier to understand. I blogged on this topic so that I can find it again if I get questions about what evidence there is for a designer. I sure hope that we are making more scientists like him for Team Design, because his post was quality work.

We did a podcast with Gunter recently, and it was popular on YouTube.

# Colorado Democrats push genital mutilation and taxpayer-funded abortion

**Wintery Knight** · 9 April 2025 · Archived copy · Original

I thought that states like Washington, California, New York, etc. were the worst blue states, but Colorado is really getting nasty. If you asked me what my nightmare is as a taxpayer, it would be having my tax money used for immoral things. I fled my home country in part because they were making me pay for abortions, IVF and sex-changes. If you're in Colorado, it might be time to leave.

Here's the story from The Federalist:

> Democrats in the Colorado General Assembly bulldozed their way forward to require health insurance to cover genital mutilation for children, kidnap children from parents who do not "affirm" a transgender claim, and make sure the state is the biggest taxpayer-funded abortion enterprise in the country.
>
> Left-wing lawmakers in the state House are advancing two bills related to "transgender" identity, one of which forces healthcare providers to cover everything from chemical castration to genital mutilation in their plans, while the other would codify "misgendering" as child abuse with the ability to strip custody rights from parents who do not "affirm."
>
> In the Senate, one bill codifies taxpayer-funded abortions, and the other one expands Colorado's ability to mail abortion pills out-of-state to kill even more babies.

They're also preventing Republicans from debating the legislation:

> Democrats in the House started the weekend by using parliamentary tools to restrict Republicans from being able to debate or object to the bill to only two hours.

One Republican legislator said "The most egregious moment was when they prevented any debate on HB25-1312. This bill enshrines that if you are having a custody dispute and your child is suffering from gender identity delusions, not affirming those delusions are considered child abuse and grounds for losing custody".

Remember that article I posted earlier in the week, about how white secular leftist women were choosing to trans their kids against their husbands wishes? Well, it turns out that this is being done intentionally in order to get custody of the kids. How? Well, the leftist parent pressures the child into gender dysphoria, and then uses that as an excuse to keep the moral parent from getting custody. Hello, big child support money.

The article explains:

> As The Federalist reported, HB25-1312 would allow Colorado to become a "transition" mill for parents who want to use the "transgender" claims of their children as a weapon in custody battles. As one parent advocate in the Colorado described it, the bill allows "state-enabled kidnapping."
>
> The bill would require that "a court shall consider deadnaming, misgendering, or threatening to publish material related to an individual's gender-affirming health-care services as types of coercive control," meaning that any parent who does not want to see their child mutilated.

And taxpayers will be paying for it – all of it:

> The tandem "transgender" bill in the House, HB25-1309, requires that all health insurance plans sold in the state cover medical gender transition interventions.
>
> […]SB25-183… repeals a constitutional amendment that prohibited the use of taxpayer dollars on abortions

> and adds one, recognizing the right to an abortion and prohibiting Colorado state and local governments from denying, impeding, or discriminating against the exercise of that right, including prohibiting health insurance companies from excluding coverage for abortion," a bill summary states.

Remember, transing a kid means a lifetime of drug use and surgeries to keep it going. So, if you're paying for health insurance, then you'll be paying for people to trans their kids and for abortions. Your health premiums will go up, because more stuff is being covered. Disgusting. The people who are living clean are subsidizing the people who are living recklessly. Can you say "moral hazard"?

And here's how opposition was characterized by the Democrats:

> The Democrats behind the bill are crazed, too, with state Rep. Yara Zokaie comparing parental rights groups opposed to the destructive bill to the Ku Klux Klan, saying, "A well-stakeholded bill does not need to be discussed with hate groups, and we don't ask someone passing civil rights legislation to go ask the KKK their opinion."

One of the divorce horror stories I blogged about recently was out of Colorado, and there, the secular leftist wife did seem to be using lack of support for transgenderism to wrestly custody (and those yummy child support dollars) away from her ex-husband. This legislation will definitely lead to more of that, which is why men need to take responsibility for choosing women who have demonstrated their morals and religion through a sustained pattern of action, over many years.

Daily Signal notes:

> Critics warn that a bill like this could make stories like that of California father Jeff Younger more likely in Colorado. Younger is battling in court to prevent his ex-wife from putting his son on experimental treatments to make him appear female.
>
> "It prejudices the court by saying any non-affirmation of gender, anything short of actual celebration of the genital mutilation and the hormone therapy, the conversion, is discriminatory and is coercive control," state Rep. Ken DeGraaf, a Republican, told The Daily Signal in an interview Friday. "It just prejudices the court in this civil arena."
>
> "This bill puts one parent waste-deep in a hole for the other one to start throwing stones at them," he added.
>
> Caldwell, the Republican who asked about stakeholders, told The Daily Signal that the bill creates a "legal imbalance that could lead to serious consequences for parents who do not affirm their child's gender dysphoria."
>
> "I believe the ultimate intention of this bill is to make it impossible for a parent to get their child help when the child is gender confused by declaring such help as child abuse," he added.

Personally, if you are a conservative man, you need to be in Tennessee, Oklahoma, Alabama and other states that are socially conservative. You do not want to be paying taxes and health insurance premiums to cover these sorts of behaviors. Part of being an intelligent man is to take action to achieve results. You don't choose to live in a blue state, and then cry victim when they smash your finances and your marriage and ruin your kids.

# Australian judge sides with father against mother wanting to trans child

**Wintery Knight** · 10 April 2025 · Archived copy · Original

I know, I know. And from Australia, of all places. I would classify Australia as a secular left police state, at this point. I'm not sure if this judge's ruling will stand up. But it sure is amazing to see a judge side with the father instead of the secular leftist mother. And even better, the judge sanctioned an "expert" in transgenderism – in fact, a transgender activist – for misleading the family court.

Here's the story (biased to the left, of course) from The Australian. (full text archived)

Here is a summary I found on Twitter.

> BREAKING: A Family Court Judge has prevented a 12-year-old boy from receiving 'gender-affirming' treatment and removed him from his mother's custody after determining he does not have gender dysphoria, finding the boy had been surrounded by 'gender-affirming and external influences'.
>
> The mother claimed her son was gender-dysphoric from the age of 6 and started taking him to a children's gender clinic.
>
> Despite no formal diagnoses or consultation with the treating doctor, his mother gave him a female name and socially affirmed her son, including making him wear 'gender-affirming' underwear described as 'small, tight, and padded underpants designed to pressure and flatten his penile area'.
>
> The mother then sought the son to be prescribed puberty blockers, which the father objected to, resulting in court action. There was no formal diagnosis of gender dysphoria from the gender clinic until the commencement of the court case.
>
> The Judge slammed one of the key witnesses in the case, a paediatric gender-medicine 'expert' who for failing to meet court requirements in giving an 'objective and unbiased opinion that is independent and impartial' after she was found to be an advocate for trans people who's preferred model of healthcare for transgender children is 'gender-affirming' care and supported the removal of court authorisation for trans and gender diverse adolescents to receive gender-affirming hormones.
>
> The Judge also found the RCH Australian Standards of Care and Treatment Guidelines 'do not have the approval or the imprimatur of the Commonwealth or any State or Territory Government, including any such minister or Department of Health'.
>
> This damning judgment further highlights the need for an urgent national inquiry into youth gender medicine in Australia and a pause on all medical gender transitions for children and young people until this inquiry is complete.

So, this is a shock ruling, to me. It goes against the other cases that I blogged about recently where women were claiming that their children had gender dysphoria in order to get full custody of the children, and the maximum child support from the father. Basically, they wanted the father's money, and to raise the child without any male influence, and the family courts were giving it to them. Then we saw a case out of Colorado about legislation designed to label any dissent from transgenderism as "abuse", which is typically used in divorces to cut the father out of his natural role.

What I expect from family courts is what I see in cases of divorce. I expect to see false accusations against the father, with no supporting evidence. I expect CPS to show up and take the child from the father. I expect the judge to award alimony and child support to the mother. So, this story out of Australia was a real shock. My view of Australia is that it's become a feminized police state, where men are viewed as dangerous and evil. So I really was not expecting any kind of recognition of the importance of male influences in bringing up children.

# Study: female same-sex marriages have the highest rates of divorce

**Wintery Knight** · 11 April 2025 · Archived copy · Original

Sometimes, when I raise the fact that women initiate 69% of divorces, I get the response that this number is men's fault. For example, pro-marriage Christian feminists and sociologists will say "it's because men are less emotionally intelligent, they don't meet the needs of women". If that's true, then we should expect that lesbian relationships will be the most committed. Are they?

Here's a study from August 2022, published in the Journal of Family History.

The abstract says:

> The trends in marriage and divorce among male and female same-sex couples in urban and rural Norway were compared to different-sex marriages. Norway legalized same-sex living in 1993 and marriage in 2009. Cohorts from 1993 to 2018 were included. The 2009 gender-neutral marriage law appears to have had minimal impact on the rate of same-sex unions and divorces. Moreover, divorce risks are highest in female same-sex marriages, whereas male same-sex marriages have the same divorce risk levels as different-sex marriages. The divorce risk is declining for same-sex marriages in urban areas, while the opposite is observed in rural areas.

And down in the results section, we have this:

> Female same-sex marriages had the highest total divorce rate throughout the period, followed by male same-sex marriages. The highest total divorce rate was observed among female same-sex marriages formed in 2003, with 59.1% divorced before 2018.

Now, some people will say, but this is just one country. Yes, but it's a same-sex marriage affirming country. They've had same-sex unions since 1993, and same-sex marriage since 2009. So critics can't blame disapproval of LGBT for these numbers. And this study agrees with previous studies.

Now, let's make a comment about this.

I think this data suggests a wonderful question for men to use in the course of vetting a candidate wife for marriage. Just casually mention the study, and then ask her "what do you think the explanation for this is?"

There will be one group of women who say "that's easy. women are very emotional, and that causes them to have more difficulty keeping to their commitments. It's something that men should test for. Men should choose women who have a habit of taking on tough tasks, and seeing them through to the end. And maintaining their relationship obligations with difficult or demanding family members, friends, elderly pets, etc." That's the right answer. I like women who do STEM degrees and work hard jobs in the competitive private sector, they tend to be good at sticking with tough situations and engineer solutions, instead of quitting.

But there's another group that will reply "these numbers are the result of external forces that are conspiring against women to make them fail. It's all the fault of insufficient resources, or social disapproval, or sexism, or the males in their lives." That's the wrong answer. I avoid women who do easy degrees like English, psychology, etc. They tend to go straight to a safe unionized job teaching children in the public school monopoly. That's not good training for commitment-keeping. It shows that they like to do easy things. Marriage is hard work. Don't pick a wife who likes fun and thrills. Pick a wife who engineers solutions to problems.

I do understand that women expect high quality communication and emotional intelligence in their relationships. To those women, I would just say, you need to choose better men. You need to know up front what marriage is about in the long-run, and you need to choose the things that you really need for the long run.

I wrote this post to try to help men avoid disasters when making their relationship choices. The best we can do as men is to take responsibility for our own choices. That means not letting ourselves be carried away by emotions. We have to test by asking questions. And even better than listening to an answer, is looking at the actions. Always look for women who keep their commitments when it goes against their self-interest. They are out there. Pick one.

# I went on a date with a Christian woman who couldn't defend the pro-life view

**Wintery Knight** · 12 April 2025 · Archived copy · Original

*Please note: this is a re-post, I have not been going on dates with anybody, recently.*

I've been thinking lately about how to measure how committed and capable a person is on issues of interest to conservatives. For example, on abortion, most conservatives will say, "I vote pro-life". But I think a higher level of conviction and commitment is shown when a person can show WHY they are pro-life. And I'm not looking for feelings, here. I'm looking for handling scientific evidence.

So, when it comes to the abortion issue, the first step is to answer the question "what is the unborn?" And again, I'm not looking for an opinion here. I'm not looking for feelings. I'm not looking for what your parents, or your pastor, or your church choir says. I'm interested in whether a person can cite some scientific evidence.

Fortunately, we have first class scientists who have collected the relevant information for us, like Dr. Maureen Condic, She's an Associate Professor of Neurobiology and Adjunct Associate Professor of Pediatrics at the University of Utah School of Medicine, and recently served on the National Science Board. She earned her Ph.D. from University of California, Berkeley, and has published papers in peer-reviewed journals.

One of her publications (PDF) explains what science tells us about the unborn. The title is "When Does Human Life Begin? The Scientific Evidence and Terminology Revisited". A good paper to have available, especially if your opponent has nothing but purple hair, tattoos and nose piercings. But if you want something easy, you can just use quotations from a variety of embryology textbooks (PDF).

Like this one:

> "Human development begins at fertilization, when a sperm fuses with an oocyte to form a single cell, the zygote. This highly specialized, totipotent cell (capable of giving rise to any cell type) marks the beginning of each of us as a unique individual."

Source: Keith L. Moore, The Developing Human: Clinically Oriented Embryology, 10th edition. Philadelphia, PA: Saunders, 2016. p. 11

Don't just use one quotation, use lots.

Also useful to know is what the unborn baby can do during the process of developing.

Here's an article from the famous Cleveland Clinic that explains:

> At the moment of fertilization, your baby's genetic make-up is complete, including its sex. The gender of your baby depends on what sperm fertilizes the egg at the moment of conception.

And a bit further along:

> **Month 1 (weeks 1 through 4)**
>
> In these first few weeks, a primitive face will take form with large dark circles for eyes. The mouth, lower jaw and throat are developing. Blood cells are taking shape, and circulation will begin. The tiny "heart" tube will beat 65 times a minute by the end of the fourth week.

And a bit further along:

> **Month 2 (weeks 5 through 8)**
>
> Facial features continue to develop. Each ear begins as a little fold of skin at the side of the head. Tiny buds that eventually grow into arms and legs are forming. Fingers, toes and eyes are also forming.
>
> The neural tube (brain, spinal cord and other neural tissue of the central nervous system) is well formed now. The digestive tract and sensory organs begin to develop too. Bone starts to replace cartilage.
>
> The head is large in proportion to the rest of the body at this point. At about 6 weeks, a heartbeat can usually be detected.

Most abortions happen in the first trimester, and that's why pro-lifers say "abortion stops a beating heart". It's definitely human, and it's definitely killed in an abortion.

So, what's the point of this post? I'm saying that if you are a conservative, then you have to be familiar with enough evidence to be persuasive to others who do not share your views. Not just on the issue you like, but on EVERY issue – social issues, foreign policy issues, fiscal issues.

It's not enough for you to be happy that you have the right opinion about one issue. It's not enough that the people around you like you because they agree with your "right answer". You have to be able to make a case that crushes your opponent with evidence. Being a conservative isn't about you or your feelings. It's about the world out there – can you make a difference by being convincing to other people?

Of course if doesn't feel good to have to learn how to talk about issues using scientific evidence. It's work. And of course it doesn't feel good to disagree with people about controversial issues. But you have to get used to not being ignorant and not being liked. I know a lot of feelings-based Christians who know a lot about sports, fiction, music, essential oils, and other nonsense. They want me to be satisfied that they have the right answer to questions like "Does God exist?", "does military preparedness deter aggression?" and "does the free market system make people more prosperous than socialism?" But if I am out on a date with you, and I ask you these questions, I'm looking for more than the right answer. I want you to show your work. I want to see you demonstrate your ability to persuade people on the other side, either in your writings or in your discussions.

Don't cry to me about how you can't find a husband when you can't do anything that a husband needs you to do. There is no path to impressing a conservative man that allows you to be lazy, ignorant and cowardly. I expect performance. If you are smart enough to get a college education and a job in the competitive private sector providing value to paying customers, (not a public school teacher or anything disconnected from reality, like that), then you are smart enough to be able to explain your views on moral issues and public policy.

# Archaeologists find evidence for Biblical account of ancient battle

**Wintery Knight** · 13 April 2025 · Archived copy · Original

These days, many people are raised to think that religion is not about describing reality as it is, especially in religions that are closely tied to race, region or nationality. But Christianity is different. People are expected to become Christians because Christianity makes claims that are testable, and can be investigated with science, logic and history. Let's see an example.

This is from Christian Post:

> Archaeologists have discovered new evidence backing up the biblical account of the Battle of Megiddo.
>
> The battle is recorded in both 2 Kings and 2 Chronicles and is given as the cause of death for King Josiah, who was noted for being a pious king and is also recorded in the New Testament as an ancestor of Jesus.
>
> Josiah is praised in the biblical text for his zeal in turning Israel away from idolatry and toward worship of the Lord. He is also noted for encouraging the people to observe the Passover, with 2 Kings 23:22 going so far as to say: "Surely there was not holden such a passover from the days of the judges that judged Israel, nor in all the days of the kings of Israel, nor of the kings of Judah."
>
> However, it was not to last. The Old Testament accounts say that Pharaoh Necho of Egypt came with an army "to fight against Charchemish by Euphrates: and Josiah went out against him."
>
> […]Now archaeologists have found pottery fragments in the area suggesting that there was indeed an Egyptian presence around the time of the battle in 609 BC.
>
> Israel Finkelstein, an archaeologist at the University of Haifa and Tel Aviv University and the lead author of a study describing the finds, told Live Science that as well as Egyptian pottery, the remains of Greek pottery were also found, likely due to the Egyptian practice of hiring Greek mercenaries at the time.

Let's review some of the other major archaeological confirmations of the Bible in the rest of this post.

Consider this article from Be Thinking by UK apologist Peter S. Williams. It has a lot of examples, so let's just se a few.

Here's a good one:

> ### Jerusalem and The Pool of Bethesda
>
> John 5:1-15 describes a pool in Jerusalem, near the Sheep Gate, called Bethesda, surrounded by five covered colonnades. Until the 19th century, there was no evidence outside of John for the existence of this pool and John's unusual description *"caused bible scholars to doubt the reliability of John's account, but the pool was duly uncovered in the 1930s – with four colonnades around its edges and one across its middle."*[38] Ian Wilson reports: *"Exhaustive excavations by Israeli archaeologist Professor Joachim Jeremias have brought to light precisely such a building, still including two huge, deep-cut cisterns, in the environs of Jerusalem's Crusader Church of St Anne."*[39]

And this one:

> ### Jerusalem and The Pool of Siloam
>
> In the 400s AD, a church was built above a pool attached to Hezekiah's water tunnel to commemorate the healing of a blind man reported in John 9:1-7. Until recently, this was considered to be the Pool of Siloam

> from the time of Christ. However, during sewerage works in June 2004 engineers stumbled upon a 1st century ritual pool when they uncovered some ancient steps during pipe maintenance near the mouth of Hezekiah's tunnel. By the summer of 2005, archaeologists had revealed what was *"without doubt the missing pool of Siloam."*[40] Mark D. Roberts reports that: *"In the plaster of this pool were found coins that establish the date of the pool to the years before and after Jesus. There is little question that this is in fact the pool of Siloam, to which Jesus sent the blind man in John 9."*[41]

I just read this one because I am working my way through John. In case you haven't read John, you really should it's my favorite gospel.

Here's another one:

> ### Herod the Great
>
> We have a bronze coin minted by Herod the Great. On the obverse side (i.e. the bottom) is a tripod and ceremonial bowl with the inscription 'Herod king' and the year the coin was struck, 'year 3' (of Herod's reign), or 37 BC.
>
> In 1996 Israeli Professor of Archaeology Ehud Netzer discovered in Masada a piece of broken pottery with an inscription, called an ostracon. This piece had Herod's name on it and was part of an amphora used for transportation (probably wine), dated to c. 19 BC. The inscription is in Latin and reads, *"Herod the Great King of the Jews (or Judea)"*, the first such that mentions the full title of King Herod.
>
> Herodium is a man-made mountain in the Judean wilderness rising over 2,475 feet above sea level. In 23 BC Herod the Great built a palace fortress here on top of a natural hill. Seven stories of living rooms, storage areas, cisterns, a bathhouse, and a courtyard filled with bushes and flowering plants were constructed. The whole complex was surrounded and partly buried by a sloping fill of earth and gravel. Herod's tomb and sarcophagus were discovered at the base of Herodium by archaeologist Ehud Netzer in 2007.

And one more:

> ### The 'James, son of Joseph, brother of Jesus' Ossuary
>
> James, the brother of Jesus, was martyred in AD 62. A mid-1st century AD chalk ossuary discovered in 2002 bears the inscription *"James, son of Joseph, brother of Jesus"* ( 'Ya'akov bar Yosef akhui di Yeshua'). Historian Paul L. Maier states that*"there is strong (though not absolutely conclusive) evidence that, yes, the ossuary and its inscription are not only authentic, but that the inscribed names are the New Testament personalities."*[68] New Testament scholar Ben Witherington states that:*"If, as seems probable, the ossuary found in the vicinity of Jerusalem and dated to about AD 63 is indeed the burial box of James, the brother of Jesus, this inscription is the most important extra-biblical evidence of its kind."*[69] According to Hershel Shanks, editor in chief of the *Biblical Archaeological Review*: *"this box is [more] likely the ossuary of James, the brother of Jesus of Nazareth, than not. In my opinion … it is likely that this inscription* does *mention the James and Joseph and Jesus of the New Testament."*

And finally one short one:

> **Tiberius Caesar**
>
> The Denarius coin, 14-37 AD, is commonly referred to as the 'Tribute Penny' from the Bible. The coin shows a portrait of Tiberius Caesar. Craig L. Blomberg comments: *"Jesus' famous saying about giving to Caesar what was his and to God what* his *(Mark 12:17 and parallels) makes even more sense when one discovers that most of*

> *the Roman coins in use at the time had images of Caesar on them.'*[48]

This is a good article to bookmark in case you are ever looking for a quick, searchable reference on archaeology and the Bible. There are many more examples in that post.

Now some people might be wondering why archaeology doesn't confirm *every detail* in the New Testament. And here's what J. Warner Wallace has to say about that:

> But what are we to say to those who argue the Biblical archeological record is incomplete? The answer is best delivered by another expert witness in the field, Dr. Edwin Yamauchi, historian and Professor Emeritus at Miami University. Yamauchi wrote a book entitled, *The Stones and the Scripture*, where he rightly noted that archaeological evidence is a matter of "fractions":
>
> *Only a fraction of the world's archaeological evidence still survives in the ground.*
>
> *Only a fraction of the possible archaeological sites have been discovered.*
>
> *Only a fraction have been excavated, and those only partially.*
>
> *Only a fraction of those partial excavations have been thoroughly examined and published.*
>
> *Only a fraction of what has been examined and published has anything to do with the claims of the Bible!*
>
> See the problem? In spite of these limits, we still have a robust collection of archaeological evidences confirming the narratives of the New Testament (both in the gospel accounts and in the Book of Acts). We shouldn't hesitate to use what we do know archaeologically in combination with other lines of evidence. Archaeology may not be able to tell us everything, but it can help us fill in the circumstantial case as we corroborate the gospel record.

I think you can form an opinion about the whole New Testament based on the record of confirmations. The verdict is in: the New Testament should be presumed trustworthy.

# What Christians should learn by watching how the secular left governs

**Wintery Knight** · 14 April 2025 · Archived copy · Original

I'm hoping that more and more Christians are seeing how big government can thwart our ability to carry out Christian life plans. Bad government does this in several ways. They mismanage foreign policy, which causes expensive wars and commerce disruptions. They mismanage fiscal policy, which makes us all poor. And they mismanage social policy, which disrupts marriage and family.

The UK has been under the control of the secular left for some time. They have an open borders policy, massive government spending on wasteful government monopolies and welfare programs, and massive attacks on the human rights of taxpayers. And the more they squeeze taxpayers, the less the taxpayers can afford to run their own life plans, including the choices to marry and have kids.

Here's an example of how the government discourages marriage and family, by attacking parents who try to raise their children right.

This is from LBC UK:

> History teacher Vanessa Brown, 50, spent seven-and-a-half hours in a custody cell on March 26 this year, following a claim she had stolen two iPads which were traced to her mother's house in Cobham, Surrey.
>
> Yet it transpired that the two devices belonged to her daughters, and Ms Brown had merely confiscated them to encourage them to focus on their schoolwork, a fact Surrey Police has now acknowledged.
>
> "I find it quite traumatic even talking about this now," Ms Brown recalled.
>
> "At no point did they [the officers] think to themselves, 'Oh, this is a little bit of an overreaction for a moment, confiscating temporarily her iPads and popping over to her mum's to have a coffee'. It was just a complete overreaction.

The UK nanny state doesn't like when parents make children "sad" by enforcing discipline.

In the United States, parents would be able to use the courts to deflect government overreach into how they parent their kids. Or they could move to a red state like Tennessee, Oklahoma or Florida. But in the UK, all the courts are opposed to parental rights, as well as free speech and freedom of religion. So, government just goes wild in trampling the rights of the taxpayers who pay their salaries:

> Ms Brown was taken to Staines station, where she was searched, and had fingerprints and custody shots taken before being placed in a police cell for several hours.
>
> Surrey Police also sent officers to her children's school, pulling her daughter out of class in the process.
>
> Her ordeal was compounded, however, when she learned of the conditions of her bail, which would have prevented her from seeing her children on Mother's Day.
>
> It wasn't until half-past midnight that Ms Brown was returned to her mother's house – nearly twelve hours after officers first arrived.
>
> She told LBC she suffered a sleepless night and was left in a "catatonic state" by the experience.

In the UK, they have opened up their borders to Middle Eastern men, and many of those Middle Eastern men get involved in sex-trafficking white girls. When British citizens – i.e. – the parents – complain to the police about this, the British police ignore them. That's because the British police are more aggressive against the taxpayers than the criminals:

> It comes amid increasing concern about how officers are using their time after a couple from Borehamwood were arrested by Hertfordshire Police following their criticism of a local school on a parents' Whatsapp chat.
>
> It's a concern that Ms Brown echoed following her arrest.
>
> "They were able to send a police car with police officers to my children's school, they were able to send another police car or two to arrest me… I know people are making reports of thefts, of assaults and very violent crimes in and around our neighbourhood – and they're not getting a response for days.

And if the parents take to social media to complain about the immigration policies, then the police will go straight to their homes to arrest them.

The UK Times reported on this:

> The police are making more than 30 arrests a day over offensive posts on social media and other platforms.
>
> Thousands of people are being detained and questioned for sending messages that cause "annoyance", "inconvenience" or "anxiety" to others via the internet, telephone or mail.
>
> Custody data obtained by The Times shows that officers are making about 12,000 arrests a year under section 127 of the Communications Act 2003 and section 1 of the Malicious Communications Act 1988.
>
> […]Officers from 37 police forces made 12,183 arrests in 2023, the equivalent of about 33 per day. This marks an almost 58 per cent rise in arrests since before the pandemic. In 2019, forces logged 7,734 detentions.
>
> The statistics have provoked criticism from civil liberties groups that the authorities are over-policing the internet and threatening free speech using "vague" communications laws.

You might remember that the London Chief of Police had actually threatened to extradite Americans to prosecute them if they commented on the state of affairs (rioting, arson, knife crime, sex-trafficking children, etc.) in the UK. That's how crazy secular left totalitarianism is in the UK. They don't even realize that there is anything wrong with running a police state against taxpayers, using the money they take from the taxpayers. Don't let it happen here! Vote smart. Vote against the secular left. Vote against Stalinism.

# Distinguished chemistry professor lectures on God's existence at Harvard

**Wintery Knight** · 15 April 2025 · Archived copy · Original

When I was just starting out my career in America, I ordered dozens of audio lectures featuring Christian scholars defending the Christian worldview on the university campus. These lectures were recorded on audio cassettes. And they came to my house in a box. I would put them into my tape player and listen to them, then rewind the tapes and listen again. And these lectures are still going on.

Today I wanted to blog about a recent lecture given by a famous chemistry professor named James Tour. You might have heard of Dr. Tour. He has a stellar career doing research in nano technology at Rice University.

Here's his biography. I can only excerpt a little, because it's very, very long:

> James M. Tour, a synthetic organic chemist, received his Bachelor of Science degree in chemistry from Syracuse University, his Ph.D. in synthetic organic and organometallic chemistry from Purdue University, and postdoctoral training in synthetic organic chemistry at the University of Wisconsin and Stanford University. After spending 11 years on the faculty of the Department of Chemistry and Biochemistry at the University of South Carolina, he joined the Center for Nanoscale Science and Technology at Rice University in 1999 where he is presently the T. T. and W. F. Chao Professor of Chemistry, Professor of Computer Science, and Professor of Materials Science and NanoEngineering. Tour has about 650 research publications and over 200 patents.

I figured that the average senior scientist doing research at a university has about 40 peer-reviewed publications, and Grok agreed with that, citing a survey from *Nature* from 2018, which found that senior scientists (15+ years post-PhD) average 20–50 peer-reviewed publications. So, 650 is a TON of publications! And what's exciting is that his research is actually solving problems in the private sector.

Anyway, here is an article from the Harvard Sentinel, about his recent lecture at Harvard University, on the topic of the existence of God:

> On April 1st, Rice University chemistry professor James Tour visited Harvard to deliver a guest lecture on the existence of God. During his lecture, which was hosted by Christian student group Harvard Undergraduate Faith and Action (HUFA), Tour presented what he called a scientific challenge to the current explanations for life's origin, and he discussed the myriad of unanswerable dilemmas within the presumed scientific consensus.
>
> Tour, who was raised in a secular Jewish home but converted to Christianity, began by introducing his religious background and his ongoing nanotechnology research. He then overviewed the current state of research on the origin of life.

Here is the very important point. He made sure to say that he is not arguing from a current gap in naturalistic scenarios for the origin of life. He is arguing that the more our knowledge increases, the less plausible naturalistic scenarios for the origin of life are. In other words, it's the progress of science that is making things harder for the naturalist / materialist. And Dr. Tour ought to know, since he's one of the scientists making the progress.

But wait, there's more – a minimal facts case for the resurrection:

> With this, Tour transitioned to the historical evidence for the Bible being true. According to Tour, there are three claims concerning the Bible upon which most academic religious scholars agree: first, Jesus died by crucifixion; second, the disciples of Jesus asserted that Jesus rose from the dead, and they were willing to die for that assertion; and third, there were individuals who previously did not follow Jesus but converted after

> asserting that Jesus rose from the dead and appeared to them. They, too, died for that assertion. None of the disciples, in any record—including in their recorded thoughts—recanted before being killed.
>
> “No man dies for what he knows to be a lie,” Tour stated.

It’s great to see a professional scientist arguing for an inference based on the facts that “most academic religious scholars” agree on. And why do they agree on them? They agree on them because these facts pass the standard historical criteria for ancient biographies. These facts are recorded early. They appear in multiple sources. Many of them are supported by enemies, or outside the Bible. Many of them are embarassing to the authors of these biographies.

Here’s the full lecture:

And I noticed that he’s speaking at another famous university on April 15th: Cornell University. And he’s apparently on a speaking tour, because his previous stops at Princeton and Dartmouth and Yale.

And I thought this 1 minute interaction with an agnostic professor at one of these talks was really a good window into what Christianity is really about. It’s about taking up God’s priorities in the little opportunities that you have.

He also has a weekly podcast! Find out all about him here.

# Does the New Testament book of James undermine salvation by faith alone?

**Wintery Knight** · 16 April 2025 · Archived copy · Original

Are people brought into a right relationship with God because God provides for their salvation, or must we do works in order to earn our place with God in the afterlife?

The Bible is pretty clear that God provides our salvation from our rebellion by himself, all we have to do is accept it.

Look at Romans 3:21-30:

> [21] But now apart from the Law *the* righteousness of God has been manifested, being witnessed by the Law and the Prophets,
>
> [22] even *the* righteousness of God through faith in Jesus Christ for all those who believe; for there is no distinction;
>
> [23] for all have sinned and fall short of the glory of God,
>
> [24] being justified as a gift by His grace through the redemption which is in Christ Jesus;
>
> [25] whom God displayed publicly as a propitiation in His blood through faith. *This was* to demonstrate His righteousness, because in the forbearance of God He passed over the sins previously committed;
>
> [26] for the demonstration, *I say*, of His righteousness at the present time, so that He would be just and the justifier of the one who has faith in Jesus.
>
> [27] Where then is boasting? It is excluded. By what kind of law? Of works? No, but by a law of faith.
>
> [28] For we maintain that a man is justified by faith apart from works of the Law.
>
> [29] Or is God *the God* of Jews only? Is He not *the God*of Gentiles also? Yes, of Gentiles also,
>
> [30] since indeed God who will justify the circumcised by faith and the uncircumcised through faith is one.

Here's theologian R.C. Sproul, to explain a passage from the Bible that seems to contradict the passages that teach that faith alone is sufficient for salvation.

Here's James 2:18-24:

> [18] But someone may *well* say, "You have faith and I have works; show me your faith without the works, and I will show you my faith by my works."
>
> [19] You believe that God is one. You do well; the demons also believe, and shudder.
>
> [20] But are you willing to recognize, you foolish fellow, that faith without works is useless?
>
> [21] Was not Abraham our father justified by works when he offered up Isaac his son on the altar?
>
> [22] You see that faith was working with his works, and as a result of the works, faith was perfected;
>
> [23] and the Scripture was fulfilled which says, "And Abraham believed God, and it was reckoned to him as righteousness," and he was called the friend of God.
>
> [24] You see that a man is justified by works and not by faith alone.

Sproul explains the apparent conflict:

> What James is saying is this: If a person says he has faith, but he gives no outward evidence of that faith

> through righteous works, his faith will not justify him. Martin Luther, John Calvin, or John Knox would absolutely agree with James. We are not saved by a profession of faith or by a claim to faith. That faith has to be genuine before the merit of Christ will be imputed to anybody. You can't just say you have faith. True faith will absolutely and necessarily yield the fruits of obedience and the works of righteousness. Luther was saying that those works don't add to that person's justification at the judgment seat of God. But they do justify his claim to faith before the eyes of man. James is saying, not that a man is justified before God by his works, but that his claim to faith is shown to be genuine as he demonstrates the evidence of that claim of faith through his works.

So yes, works are important as a sign to others that you believe what you say you believe, but not important for balancing your sins. Your sins are already paid for by Jesus, what you do in your life doesn't add or take away anything from that. But I will say that if you can see that a person is spending a great deal of their time performing actions that are consistent with a concern for God's purposes and reputation, then that's a good sign that his faith is in good shape. Yes, even if he doesn't do as much Bible study, devotions, singing and praying as he should. The important thing about actions (works) is that you can look at a person's life and see evidence that he is taking God seriously – that Jesus is his leader, and that Jesus' character is informing their decision-making and prioritizing.

# Does neuroscience provide support for physicalism or dualism?

**Wintery Knight** · 17 April 2025 · Archived copy · Original

When it comes to the problem of mind, there are some people who maintain that the mind is just reducible to the physical brain. Those are physicalists, also known as materialists. And then there are those who defend dualism, which is the idea that you are a non-material soul, and you have a body (which includes your brain). Who is right? Well, let's take a look at the science and see.

This post is from Mind Matters, and it's written by Dr. Michael Egnor.

He says:

> Neurosurgeon Wilder Penfield (1891–1976), who pioneered epilepsy surgery at the Montreal Neurological Institute in the mid-20th century, asked this very question: What does the brain do? He explored the question during eleven hundred "awake" brain operations over four decades. He needed patients to be awake so that he could communicate with them, to be sure that he was not damaging vital tissue while removing the tissue that was prone to epileptic seizures.
>
> Penfield could do brain surgery while a patient is awake because the brain has no pain sensors. A local anesthetic (similar to the novocaine used in dentists' offices) ensures that there is no pain in the scalp either during the surgery. Neurosurgeons still do this type of surgery today.
>
> While epilepsy patients were awake and their responses to brain stimulation could be observed, he mapped their brains using electrical probes to find and remove seizure foci but also to determine which parts of the patients' brains did what. He could answer questions like "What part of the brain makes us move our muscles?", "What part of the brain enables us to see?" and "What part of the brain enables us to have memories and emotions?"
>
> What fascinated Penfield is not so much what he found—i.e., which parts of the brain caused movement, perception, memory and emotions—but what he didn't find.
>
> Penfield could find no part of the brain that, when stimulated, caused patients to think abstractly—to reason, think logically, do mathematics or philosophy or exercise free will.
>
> He noticed the same thing about epileptic seizures as about stimulation during surgery. Patients who were having seizures did all sorts of things—they jerked their muscles, they saw flashes of light or had unusual sensations on their skin. They even occasionally had specific memories and emotions. Then they fell unconscious.
>
> But patients never had intellectual seizures. That is, they never had seizures that caused them to reason, think logically, or do mathematics or philosophy. There are no "calculus seizures" that cause them to uncontrollably take first derivatives. There are no philosophical seizures that cause them to uncontrollably contemplate Plato's Republic.
>
> Penfield asked the obvious question: why did brain stimulation only cause certain mental operations, like movement, perception, memory and emotion to happen, but not other ones, like abstract thought and free will?

It sounds like the brain is responsible for low-level interactions with the body itself. It reminds me of "device driver" software, which allows higher software to interact with hardware devices, like graphics cards and hard drives. What the progress of neuroscience seems to show is that the brain is doing device driver work, but something else is doing higher operations. And that something else is what substance dualists like me would call a "mind".

There are lots of good philosophical arguments for minds, such as consciousness, direct first-person access to your thoughts, persistent identity over time that does not depend on your (changing) physical body, the intentionality

problem (thinking *about* something else is not something that a material system can do), as well as free will. And there are more of those, too.

But it's nice to see that there are scientific arguments as well. By doing the neuroscience, we can find out what the brain controls, and what it doesn't control.

I thought this part of the article was interesting:

> Penfield started out as a materialist, like most scientists do, but, as he learned more about the mind and the brain he became a dualist. He concluded in his book Mystery of the Mind (1975) that the mind is something separate from the brain, and that there are aspects of the mind that don't come from the brain but are spiritual in nature. As he put it, "The mind must be viewed as a basic element in itself . . . That is to say, it has a continuing existence." (p. xxi.)

The article mentions a new book coming out in June 2025, entitled "The Immortal Mind". And I've already contact one of the authors of the book to see if we can get them to come on the Knight and Rose Show to tell us about all of this scientific research. I hope that will help our listeners to be able to have good evidence-based conversations about this fascinating area of disagreement between theists and atheists.

# Michael Behe: can Darwinian mechanisms account for the origin of new features?

**Wintery Knight** · 18 April 2025 · Archived copy · Original

I've found a new article on intelligent design, and I didn't find it in my regular online haunts for science news: Evolution News and Mind Matters. This time, it's an article by Dr. Michael Behe, writing in the American Spectator, of all places. His topic is this: how do Darwinists explain the origin of new body types and new organ types? Do they have the naturalistic mechanisms they need to do the work?

Here's the article from American Spectator.

Here's the thing to be explained:

> As one prominent evolutionary biologist wrote in a leading science journal just a few years ago, "Modern evolutionary theory … has little to say about the actual history of life, especially the emergence of new levels of biological complexity, and nothing at all about the origin of life." But those are exactly the most intriguing questions! Why, after more than a century and a half, does Darwin's theory still fail to account for the mysteries it had promised to explain?

I looked up that quote and it does indeed come from this article in a science journal. The problem is, how do you come up with a complicated design like a bat's ability to fly, or a whale's ability to live under water? Do the Darwinists have a mechanism?

He says it doesn't work for complicated designs, because small aimless steps don't create a design:

> The stumbling block is that the mechanism Darwin proposed to account for differences — "natural selection" sifting random mutations — is quite the feeble tool. It can only work, in Darwin's words, "by numerous, successive, slight modifications," that is, one single aimless step at a time. If that first mutation is helpful, then great, it can grope for another step. But when a long line of coordinated changes is required to build an intricate system, selection has no power to look ahead.
>
> This myopic mechanism seemed reasonably promising way back in Darwin's day, when comparatively little of life's complexity was known, and when the foundation of life, the cell, was thought to be a simple glob of jelly, dubbed "protoplasm." Maybe protoplasm could be expanded smoothly here, shrunk there, and molded a little at a time into whatever shape was needed, the way a potter might shape soft clay on a wheel.
>
> Yet modern biology has revealed that cells are preternaturally sophisticated assemblages — literally automated, miniaturized factories. In the case of reproductive cells, they contain the tremendous number of complex machines (yes, actual machines, made of molecules) and instructions needed to build whatever kind of plant or animal they generate. Just try to think up a realistic way to retool a computer-controlled factory that is making cars into one that makes helicopters or submarines — one nut or bolt, one line of computer code, one tiny, random alteration in the factory at a time. That's the magnitude of the problem facing Darwinian explanations for bats and whales and many other creatures.

This makes me think about what would happen if I had to write code one letter at a time by throwing a bowling ball at the keyboard. You could hope to get the letters in the right order for something to compile and run, but problem not something like bat flight.

His article is actually about what modern materialists / naturalists are doing to try to save the idea of no-designer from all this emerging complexity. He looks at several of their proposed extensions of Darwinian theory, and explains why they don't work.

This is the one that stood out to me:

> Another EES idea is “Natural Genetic Engineering.” Advocates of NGE point out that many of the tools molecular biologists use to manipulate DNA in a lab (to clone it, sequence it, and so on) are harvested from life, because cells are already endowed with a sophisticated box of tools to build and propagate life. If humans can use those cellular tools for their own purposes, the thinking goes, maybe cells can use them to direct their own evolution — to rearrange and improve their own DNA.
>
> But the elegant tools are already there — where did they come from? And exactly how is an apparently unconscious cell supposed to direct itself to evolve when intelligent humans can barely make simple changes to cells without unexpected, damaging side effects? Meanwhile, in lab experiments where cells are allowed to grow and evolve on their own, over many generations they invariably change by degrading genes they already had, not by building complex new ones. When biologists observe life closely rather than invent stories, they see evolution working mainly by de-volution.

The other ones he looked at were even more crazy. Well, if you’re interested in understanding how to critically evaluate scientific theories like Darwinism, then take a look at his article. But, if you are already working in a biology department, it might be a good idea to be careful who you discuss this with. It might negatively impact your career to question this ancient, evidence-resistant theory of origins.

# Knight and Rose Show #62: Jay Richards: Policy and Culture

**Wintery Knight** · 19 April 2025 · Archived copy · Original

Welcome to episode 62 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome policy expert Dr. Jay Richards to discuss policy and culture. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Heritage Foundation policy expert Dr. Jay Richards to discuss policy and culture. Jay explains how economic freedom supports religious liberty, and corrects popular myths about economics. He explains how gender ideology is a cultural Marxist attack on truth, and how the stories of detransitioners shape the debate. He also assesses the MAHA movement as a way to combat chronic diseases.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 62:**

**Speaker biographies**

Jay W. Richards, PhD, is Director of the Richard and Helen DeVos Center for Life, Religion, and Family and the William E. Simon Senior Research Fellow in American Principles and Public Policy at The Heritage Foundation. He is also a senior fellow at the Discovery Institute. Jay is author or editor of more than a dozen books, including the 10th Anniversary edition of “Money, Greed, and God”. His most recent book, with James Robison, is “Fight the Good Fight: How an Alliance of Faith and Reason Can Win the Culture War”. He has also debated atheist Christopher Hitchens at Stanford University, socialist Jim Wallis at Trinity International University, and socialist Bhaskar Sunkara at the University of Notre Dame.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# William Lane Craig debates James Crossley on the resurrection of Jesus

**Wintery Knight** · 20 April 2025 · Archived copy · Original

This is my favorite debate on the resurrection.

You can watch the debate here:

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

**William Lane Craig's opening speech**

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
  - the testimony of women of women was not normally allowed in courts of law
  - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
  - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
  - the response was that the disciples stole the body

  - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
  - this material is extremely early, withing 1-3 years after the cross
  - James, the brother of Jesus, was not a believer when he got his appearance
  - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
  - Peter: attested by Luke and Paul
  - The twelve: attested by Luke, John and Paul
  - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

**James Crossley's opening speech**

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

**William Lane Craig's first rebuttal**

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections

- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

**James Crossley's first rebuttal**

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

**William Lane Craig's second rebuttal**

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection,

and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

**James Crossley's second rebuttal**

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was

- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

**William Lane Craig's conclusion**

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

**James Crossley's conclusion**

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

# How the presence and quality of fathers affects belief in God

**Wintery Knight** · 21 April 2025 · Archived copy · Original

Here's an article by Paul Copan which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.* It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own* rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of François-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]

> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an more difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others. If you want your child to be religious and moral, you have to pick a man who is religious and moral. And it can't just be a faith commitment that he makes, he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading.

My advice to Christian women is this. When you are picking a man, be sure and choose one who is already invested

in Christian things and producing results. It's very unlikely that he's going to start from nothing after you marry him. If you value your kids, make a man's interest in developing and acting on a Christian worldview the main thing you are looking for.

# Cosmologist Luke Barnes answers 11 objections to the fine-tuning argument

**Wintery Knight** · 22 April 2025 · Archived copy · Original

This is from the blog Common Sense Atheism.

Atheist Luke Muehlhauser interviews well-respect cosmologist Luke Barnes about the fine-tuning argument, and the naturalistic response to it.

Luke M. did a good job explaining the outline of the podcast.

Details:

> In one of my *funniest* and *most useful* episodes yet, I interview astronomer Luke Barnes about the plausibility of 11 responses to the fine-tuning of the universe. Frankly, once you listen to this episode you will be better equipped to discuss fine-tuning than 90% of the people who discuss it on the internet. This episode will help clarify the thinking of anyone – including and perhaps *especially* professional philosophers – about the fine-tuning of the universe.
>
> The 11 responses to fine-tuning we discuss are:
>
> 1. "It's just a coincidence."
> 2. "We've only observed one universe, and it's got life. So as far as we know, the probability that a universe will support life is one out of one!"
> 3. "However the universe was configured, evolution would have eventually found a way."
> 4. "There could be other forms of life."
> 5. "It's impossible for life to observe a universe *not* fine-tuned for life."
> 6. "Maybe there are deeper laws; the universe *must* be this way, even though it *looks* like it could be other ways."
> 7. "Maybe there are bajillions of universes, and we happen to be in one of the few that supports life."
> 8. "Maybe a physics student in another universe created our universe in an attempt to design a universe that would evolve intelligent life."
> 9. "This universe with intelligent life is just as unlikely as any other universe, so what's the big deal?"
> 10. "The universe doesn't look like it was designed for life, but rather for empty space or maybe black holes."
> 11. "Fine-tuning shows there must be an intelligent designer beyond physical reality that tuned the universe so it would produce intelligent life."
>
> **Download** CPBD episode 040 with Luke Barnes. Total time is 1:16:31.

There is a very good explanation of some of the cases of fine-tuning that I talk about most on this blog – the force of gravity, the strong force, etc. as well as many other examples. Dr. Barnes is an expert, but he is also very very easy to listen to even when talking about difficult issues. Luke M. is very likeable as the interviewer.

# SCOTUS to hear case on whether schools can override religious freedom

**Wintery Knight** · 23 April 2025 · Archived copy · Original

I'm writing this post on Tuesday night, and I wanted to highlight a Supreme Court case that started on Tuesday. It's a case to decide whether parents in Maryland – a Democrat-run state – can opt their young children out of LGBT indoctrination, at the hands of the schools. As it stands, parents don't even have to be notified.

Here's an article in Daily Signal, written by Tiffany Justice, the Moms for Liberty co-founder. She writes about the "Mahnoud v. Taylor" SCOTUS case that started on Tuesday.

She writes:

> Since 2022, Montgomery County schools have used books like "Pride Puppy!" and "Born Ready" for children as young as 3. These aren't simple stories about kindness. They introduce complex ideas—gender transitions, Pride events, pronoun choices—that often conflict with the religious and cultural values of diverse families.
>
> Initially, the school board promised parental notification and opt-outs, but in March 2023, it eliminated these options, leaving parents like Tamer Mahmoud, a Muslim father, with an impossible choice: expose their kids to material they find inappropriate or leave public schools.
>
> Supporters of the policy argue it promotes inclusivity, but true inclusion respects differences, not silences them. These books don't just "teach tolerance"; they advocate a worldview that embraces "nonbinary" identities and gender fluidity, often ignoring whether young children can process such ideas.
>
> When these ideas are presented in the context of "being inclusive," it means children are inherently pressured not to examine or think critically about these notions but to embrace them.

What I find interesting about these cases, where goverment monopolies decide that they know more than the people who pay their salaries, is that there is no opt-out. So, the people who pay for public schools and school boards have real degrees and real jobs. They work hard to learn math, then they get their STEM degrees, then they go work in the competitive private sector.

But when they have to send their kids to school, they find the system is run by people who never learned math, never got STEM degrees, and never worked in the private sector. It's those people who want to indoctrinate children with their woke values.

So, do the STEM degree fathers get an opt-out of paying taxes for this system? No, they don't. They have to pay the taxes. And their children have to be indoctrinated. There is no opt-out.

In fact, asking for an opt-out will get you branded as a hater:

> Worse, school board members have suggested that allowing opt-outs encourages "hate," casting sincere beliefs as prejudice. This isn't a conversation—it's an accusation.

I don't think that I need to remind anyone about how the Loudon County school board in Virginia worked with the Biden government to label all parents who object to the mandatory sexualization of children as "domestic terrorists". And again, it's the parents who pay their salaries.

What's interesting about this case is that it is an appeal of a decision by the 4th Circuit Court of Appeals. That decision went against the parents. Do you see why it is so important for Christians to vote conservative at election time? There are so many of these fake ERLC / woke "Christians" out there telling people to worry about Democrat priorities, and vote for Democrats. What does it get you? It gets you school boards and schools that indoctrinate your children in sexual anarchy. Therefore, vote wisely.

# Report from first meeting of Task Force to Eradicate Anti-Christian Bias

**Wintery Knight** · 24 April 2025 · Archived copy · Original

I wrote a lot about the anti-Christian bias of the previous Democrat party administration. The Biden administration has a long record of anti-Christian prosecution: pre-dawn raiding the homes of pro-lifers, targeting Christian schools and organizations, labeling parents as "domestic terrorists", ignoring religious exemptions to medical mandates, etc. But now there is a new sheriff in town. Let's see.

Here's the story from Daily Wire, by Leif Le Mahieu.

Here's the brief overview:

> Attorney General Pam Bondi opened up the first meeting of the Task Force to Eradicate Anti-Christian Bias on Tuesday by hearing stories about how the Justice Department was weaponized by the Biden administration to go after Christians.
>
> […]Other admin officials who attended the meeting included FBI Director Kash Patel, Defense Secretary Pete Hegseth, HHS Secretary Robert F. Kennedy Jr., and Secretary of State Marco Rubio.

And here's an example of a couple of the stories:

> During the meeting, the task force heard from lawyer Michael Farris, who is represented the Cornerstone Church as it was under investigation by the Internal Revenue Service (IRS) for an alleged Johnson Amendment violation. The Johnson Amendment is a decades old provision in federal law that allows pastors to be prosecuted for making political statements from the pulpit.
>
> The panel also heard from Phil Mendes, a Navy Seal who was relieved of duty by the Department of Defense after it denied his request for a religious exemption to the COVID vaccine.

Now, you might think that groups like the ERLC would be very concerned about religious liberty, but actually, as I blogged about previously, they have other priorities. Ethics and religious liberty just aren't very important to "Christian" elites.

Meanwhile, there was more positive news from Dr. John Lott, writing over at Real Clear Politics:

> Director of National Intelligence Tulsi Gabbard has declassified a shocking plan by former President Joe Biden's administration for dealing with domestic terrorists. Last Wednesday, Gabbard released a June 2021 document titled "Strategic Implementation Plan for Countering Domestic Terrorism" (henceforth "the Plan"). But despite the release receiving over 6.3 million views on X by Monday morning, the major media has ignored the document.

Keep in mind that the Biden-Harris administration thought that parents who were concerned about girls being forced to shower and change clothes with boys were "domestic terrorists".

More:

> To combat this domestic threat, the Biden administration advocated censorship, closing people's accounts at banks or financial institutions (so-called "de-banking"), and gun control.

And who was going to be subject to these measures? Illegal immigrants who commit crimes? No. People with mental illnesses  who are taking powerful drugs, who commit violence? No. People from crime syndicates and drug

cartels? No. Actually, they wanted to use these measures on law-abiding Americans who disagreed with the Democrat party on policy:

> The Biden administration obliterated the line between lawful expression and criminal intent by encouraging federal agencies to monitor speech that involved no criminal activity. Once you read the declassified version of the Plan, it becomes clear that the Biden administration actions weren't necessarily by accident. Despite repeated public denials, it followed an explicit policy of identifying people based solely on their political views.
>
> In 2022, an FBI whistleblower exposed the rollout of a related document: the FBI's "Domestic Terrorism Symbols Guide" for identifying "Militia Violent Extremists" (MVEs). As Congressman Jim Jordan wrote in a letter to FBI Director Christopher Wray, the guide advised agents to be suspicious of symbols like "2A" and imagery referencing the Second Amendment. It also flagged historically significant emblems like the Betsy Ross Flag and Gadsden Flag as indicators of potential domestic terrorists.
>
> Of course, in December 2023, reports revealed that the FBI categorized "certain Catholic Americans as potential domestic terrorists." And FBI whistleblower Stephen Friend testified before Congress in May 2023 that he was tasked with recording the license plate numbers of parents who attended school board meetings and expressed concerns about topics such as critical race theory and gender ideology.
>
> While the Biden administration publicly stated their intent was limited to criminal activities, the declassified documents reveal the targeting of individuals based on their expressions of free speech or religious practices. The concerns and criticisms about overreach arose from the administration's explicit policy.

Interestingly, the report states that the Biden administration was supportive of actions taken by other countries who cracked down on their citizens for disagreeing with secular left policies:

> After a March 2019 massacre at a mosque in Christchurch, the New Zealand government pushed for Twitter accounts to be locked even for simply pointing out that the murderer was "a socialist, environmentalist, who hates capitalists & free trade." That went against the government and the media's line. Even linking to newspaper pieces making that point resulted in censorship.

The secular left likes socialism and environmentalism, so you can't criticize those things. Even by pointing to facts and evidence. The secular left wants you to love their *ideology*. They don't want you to *question* the results of their policies. You have to *approve* of their results. You have to *believe* anything they say, because they want what's best for you. You have to *admire* them, because they are smarter and more moral than you are. You have to *trust* them. You have to *love* them.

We got a reprieve in the last election, but it might be worth sharing stories like this with your Christian and conservative friends, so that they understand that there are many secular leftists in America who are exactly the same as secular leftists in the Soviet Union, or North Korea, or Cambodia, or anywhere else where communism has been tried. In America, there are still enough Christians and conservatives around to put the brakes on their plans. Thanks to the release of this report, we know exactly what they were planning to do to Christians and conservatives. Don't forget.

# Notes for episode(s) of Knight and Rose Show about the Book of James

**Wintery Knight** · 25 April 2025 · Archived copy · Original

Rose and I are recording episode(s) for a Bible study of the book of James. I asked Twitter's Grok AI what everyone needs to know about the author of the book, the book itself, as well as the apologetics significance of both. I've pasted what Grok had for us below, and you might recognize some of the scholars and authors. I thought it would be good prep for the podcast.

**The Book of James and Apologetics Connections**

**Author:**

- James, the brother of Jesus, known as James the Just (Eusebius, Church History).
- Leader in the Jerusalem church, not one of the Twelve Apostles (Josephus, Antiquities of the Jews).
- Authorship affirmed; polished Greek explained by education or scribal assistance (D.A. Carson).
- Apologetics Connection: James's transformation from skeptic to church leader (implied in early traditions) supports the resurrection's impact. A family member's conversion counters claims of Jesus as a mere teacher, as skeptics rarely die for a sibling's myth (Gary Habermas).

**Author's Fate:**

- Martyred around AD 62 in Jerusalem.
- Thrown from temple pinnacle and clubbed to death for refusing to deny Christ (Eusebius, quoting Hegesippus).
- Death corroborated by non-Christian historian Josephus (Antiquities 20.9.1).
- Apologetics Connection: Josephus's mention of James's execution by Jewish authorities provides external, non-Christian evidence for early Christian persecution, bolstering the historicity of the New Testament (Craig Blomberg). James's martyrdom underscores the sincerity of his faith, a key apologetic for the truth of Christianity.

**Audience:**

- Jewish Christians dispersed outside Judea due to early persecution.
- Addressed as "the twelve tribes scattered among the nations" (F.F. Bruce).
- Primarily for Jewish believers, with universal Christian application.
- Apologetics Connection: The Jewish context refutes claims of Christianity as a later Gentile invention. The epistle's focus on Jewish believers connects to Old Testament ethics, showing continuity between Judaism and Christianity, countering supersessionist critiques (Michael Brown).

**Date:**

- Written between AD 45-50, among the earliest New Testament books.
- Early date inferred from simple church structure and absence of Gentile controversy (Donald Guthrie).
- Precedes Jerusalem Council (AD 49-50), reflecting James's early influence.
- Apologetics Connection: The early date places James close to Jesus's ministry, minimizing legendary development. Its lack of later theological debates (e.g., Gnosticism) supports the reliability of early Christian documents, challenging late-dating theories (Daniel B. Wallace).

**Purpose:**

- Instructs Jewish Christians on authentic faith amidst trials.
- Stresses practical holiness: good works, controlled speech, wisdom, perseverance (John MacArthur).
- Complements Pauline theology, showing faith produces action.
- Apologetics Connection: James's emphasis on works as evidence of faith resolves apparent contradictions with Paul, strengthening the Bible's coherence (Norman Geisler). Its practical ethics align with Jesus's teachings, reinforcing the moral credibility of Christianity against secular critiques.

**Chain of Custody:**

- Part of the Jerusalem/Judean chain, centered in the Jerusalem church (Eusebius, Church History).
- James oversaw transmission of Jesus's teachings to Jewish Christian communities (F.F. Bruce).
- Distinct from Peter/John (Antioch/Asia Minor) and Paul (Gentile mission) chains; focused on Jewish believers.
- Preserved through Jerusalem networks, later canonized with attestation by Origen and Eusebius (D.A. Carson).
- Apologetics Connection: The Jerusalem chain ties James to the apostolic hub, ensuring reliable transmission of Jesus's teachings (Richard Bauckham). Early canonical acceptance in the Eastern church counters claims of late or forged texts, providing a traceable lineage for the epistle's authenticity.

**Cool Apologetics Highlights:**

- Non-Christian Corroboration: Josephus's reference to James's death (Antiquities 20.9.1) is one of the few non-Christian sources naming a New Testament figure, offering external validation (Josh McDowell).
- Skeptic-to-Saint Arc: James's shift from unbeliever to martyr mirrors other apostolic transformations, supporting the resurrection as a historical catalyst (Sean McDowell).
- Archaeological Tie: The early Jerusalem church's setting aligns with archaeological evidence of first-century Jewish Christian communities, like the Dominus Flevit ossuary, potentially linked to James's era (Craig Evans).

**Sources:** Eusebius (Church History), Josephus (Antiquities of the Jews), conservative scholars (D.A. Carson, F.F. Bruce, Donald Guthrie, John MacArthur), apologetics scholars (Gary Habermas, Craig Blomberg, Norman Geisler, Daniel B. Wallace, Richard Bauckham, Josh McDowell, Sean McDowell, Craig Evans, Michael Brown).

# Astrophysicist explains the problems with naturalistic origin of life

**Wintery Knight** · 26 April 2025 · Archived copy · Original

There's an interesting article posted at Universe Today by Dr. Paul M. Sutter. Although he does accept unguided evolution after the origin of life, he doesn't think that naturalism can account for the origin of life. On this blog, I've talked about three problem's with life's origin: 1) getting the right building blocks, 2) getting the right information, and 3) irreducible complexity. Let's take a look.

Here is a link to the article from Universe Today.

Here is a quick bio of the author:

> Paul M. Sutter is a theoretical cosmologist, award-winning science communicator, NASA advisor, U.S. Cultural Ambassador, and a globally recognized leader in the intersection of art and science. Paul is a research professor at the Institute for Advanced Computational Science at Stony Brook University and a visiting professor at Barnard College, Columbia University.
>
> […]Paul earned his PhD in physics in 2011 as a Department of Energy Computational Science Graduate Fellow at the University of Illinois. He then spent three years as a research fellow at the Paris Institute for Astrophysics followed by two years at the Trieste Observatory in Italy. Prior to his current appointment, he held a joint position as the chief scientist at the Center of Science and Industry in Columbus, Ohio and as a cosmological researcher at the Ohio State University.

Now let's turn to his article.

It's always good to remind people what is required for the simplest kind of life, and he does that:

> To succeed at evolution and separate itself from mere chemical reactions, life must do three things. First, it must somehow store information, such as the encoding for various processes, traits, and characteristics. This way the successful traits can pass from one generation to another.
>
> Second, life must self-replicate. It must be able to make reasonably accurate copies of its own molecular structure, so that the information contained within itself has the chance to become a new generation, changed and altered based on its survivability.
>
> Lastly, life must catalyze reactions. It must affect its own environment, whether for movement, or to acquire or store energy, or grow new structures, or all the many wonderful activities that life does on a daily basis.

I remember listening to lectures about the origin of life by Dean Kenyon, Charles Thaxton, and Walter Bradley in my younger years. If I remember correctly, the minimal functions of a living system are capture energy, store information, and replicate. Sutter does a nice job of describing an even longer list.

So what's the problem with appealing to chance and necessity to create all that? Well, in order to do all that, we need to have three components in place: DNA, RNA and molecular machines.

He writes:

> Put exceedingly simply (for I would hate for you to mistake me for a biologist), life accomplishes these tasks with a triad of molecular tools.
>
> One is the DNA, which through its genetic code stores information using combinations of just four molecules: adenine, guanine, cytosine, and thymine. The raw ability of DNA to store massive amounts of information is nothing short of a miracle; our own digital system of 1's and 0's (invented because it's much simpler to tell if a circuit is on or off than some stage in-between) is the closest comparison we can make to DNA's information

> density. Natural languages don't even earn a place on the chart.
>
> The second component is RNA, which is intriguingly similar to DNA but with two subtle, but significant, differences: RNA swaps out thymine for uracil in its codebase, and contains the sugar ribose, which is one oxygen atom short of the deoxyribose of DNA. RNA also stores information but, again speaking only in generalities, has the main job of reading the chemical instructions stored in the DNA and using that to manufacture the last member of the triad, proteins.
>
> "Proteins" is a generic catch-all term for the almost uncountable varieties of molecular machines that do stuff: they snip apart molecules, bind them back together, manufacture new ones, hold structures together, become structures themselves, move important molecules from one place to another, transform energy from one form to another, and so on.
>
> Proteins have one additional function: they perform the job of unraveling DNA and making copies of it. Thus the triad completes all the functions of life: DNA stores information, RNA uses that information to manufacture proteins, and the proteins interact with the environment and perform the self-replication of DNA.

What's the problem? The problem is that this all has to come together at the start, in order to have life. You can't build up gradually, from one component, to two components, to three components. All three are needed at the start. This is what Michael Behe calls irreducible complexity, but others have described it as minimal complexity.

Sutter says:

> The interconnected nature of DNA, RNA, and proteins means that it could not have sprung up *ab initio* from the primordial ooze, because if only one component is missing then the whole system falls apart – a three-legged table with one missing cannot stand.

And just to be clear, he would have to provide some evidence of "primordial ooze". As I've blogged about before, life appears almost instantaneously after the cooling of the Earth. He might like to appeal to "billions of years" to get that first replicator, but he doesn't have billions of years. Molecular oxygen, which is poisonous to origin of life chemistry, was present right after the Earth cooled. And that's not my opinion – that's right out of the prestigious peer-reviewed journal *Nature*.

Evolution News notes:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

I understand that naturalists want to believe that nature is self-contained, and can do it's own creating. That belief is practically *required* in order to have careers in academia. Scientists have to at least *claim* that "naturalism can do it" or they would draw the unwanted attention of the Darwin mob – the people who got people like William Dembski, Guillermo Gonzalez, Richard Sternberg, etc. fired. However, the scientific evidence doesn't support naturalism. I

wish more people would form their views based on scientific evidence, rather than on the religion of naturalism.

# Reason #736 why men are opting out of dating and marriage: paternity fraud

**Wintery Knight** · 27 April 2025 · Archived copy · Original

Statistics show that men are choosing to disengage from dating and marriage. There are many reasons for this. I can name a dozen. One of the reasons is "paternity fraud". Paternity claims occur when a woman has a child, and then tries to collect child support from a man by claiming that he is the father. Sometimes, the man she identifies as the father is not the actual father. This is "paternity fraud".

Before I get started on paternity fraud, let me explain how child support works today, from this article in USA Today:

> The most well-known case was of a Kansas boy who, at age 13, impregnated his 17-year-old baby-sitter. Under Kansas law, a child under the age of 15 is legally unable to consent to sex. The Kansas Supreme Court in 1993 ruled that he was liable for child support.
>
> California issued a similar state court ruling a few years later in the case of a 15-year-old boy who had sex with a 34-year-old neighbor. In that case, the woman had been convicted of statutory rape.
>
> In both cases, it was the state social-services agency that pursued the case after the mother sought public assistance.
>
> […]In Arizona, the Department of Economic Security oversees child–support enforcement. Its written policy is not to exempt situations like Olivas' from child-support responsibilities, unless the parent seeking child support has been found guilty of sexual assault with a minor or sexual assault.
>
> […]The state has more routes than the courts to acquire money from a parent. It can garnishee wages up to 50 percent of disposable income. It can take a tax refund. It can put a lien on a home or a vehicle. It can suspend driver's licenses or revoke passports. And it can seize money out of bank accounts.

And another one from Fox 2 Detroit:

> A Metro Detroit man cleared his name after Friend of the Court sent him a letter saying he had a baby with a woman he never met.
>
> […]Late last year, DeAngelo received a letter from Friend of the Court in Berrien County saying that he was the father of a baby girl.
>
> "Said she's a stripper from Detroit, we had a one-night stand at some hotel, and this is the story that was told to me," DeAngelo said.
>
> His wife first spotted the letter in the mail from Friend of the Court.
>
> "Let's just set the record, I trust my husband," Tyahvia Smith said. "I know his character, man of integrity."
>
> While waiting for the child's mother to take the baby for a DNA test, DeAngelo said the school where he teaches received an inquiry for possible garnishment in case the child was his.
>
> "It made it something that is not being alleged, but now it's something that's being taken into action and no paternity has been established," he said.
>
> Finally, the woman had the DNA test done, and DeAngelo has since gotten a letter confirming he was not the father.

The request for money comes to the man's employer first, the DNA test comes later, and only if the man fights the system to get it.

I show these cases, so that people will understand what men are facing from social services agencies and courts. Basically, in cases where a woman statutory rapes a man, she is still entitled to child support from the victim of the rape. One can imagine the uproar if the sexes were reversed. The laws are anti-male in many ways, this is just one example. Anti-male laws deter men from dating and marrying women.

Now let's look at paternity fraud, another example of anti-male bias in the legal system.

Here's a story about it from CBS News Detroit:

> A Detroit man has been ordered to pay $30,000 in back child support for his ex-girlfriend's child — even though he's not the father.
>
> Carnell Alexander brought his case to Wayne County Circuit Court with hopes for a fix. Instead, Judge Kathleen McCarthy told him Tuesday he waited too long to challenge the situation and "failed to take this matter seriously."
>
> Alexander said the paternity case started in the 1980s when the woman gave his name to a case worker so she could get assistance for her baby, who was born in 1987.
>
> The woman agrees that Alexander wasn't the father and a DNA test taken in 2013 backs that up. But that wasn't enough to sway McCarthy, who ruled that despite the case being decades old, Alexander still has to pay.

Here's another story of paternity fraud from NBC News Miami:

> A man in North Florida is fighting the state after he was told to pay child support despite DNA tests proving that he was not the father.
>
> Joseph Sinawa told NBC affiliate WTLV-TV that he signed the birth certificate because he did truly believe he was the father – adding that the mother of the child doesn't want him to have to pay, but the state is forcing the issue.
>
> "She told the judge she just wants this to be done and over with, and so do I," he said from his home in St. Augustine.
>
> Sinawa found out he was not the father after the DNA test was administered by a St. Johns County court following a custody question – but the state's Department of Revenue appealed the decision because they say Sinawa has not properly attempted to disestablish paternity.
>
> "At the time it had been taking $83 out of my paycheck, more than 1/3 of my pay," he says. "When I thought I was the father I didn't have a problem with it."
>
> Sinawa is currently representing himself in court cases due to financial issues and has filed the necessary paperwork, but no time table has been set and it is unknown if he will be refunded any of the money spent.

According to this study in the peer-reviewed journal Epidemiology & Community Health, the median rate of paternity fraud across various studies is 3.7%:

> Paternal discrepancy (PD) occurs when a child is identified as being biologically fathered by someone other than the man who believes he is the father. This paper examines published evidence on levels of PD and its public health consequences. Rates vary between studies from 0.8% to 30% (median 3.7%, n = 17).

Even men who are not at risk for paternity fraud understand the lesson of paternity fraud. The courts are anti-male, and men need to stay well clear of those courts. And that means minimizing exposure to those courts. And that means keeping to themselves, and tending to their own problems and pursuing their own goals.

Men are getting smarter now. Men understand that society does not have their interests at heart. Now men want to

be left alone.

# Big federal election today in Canada, so let's talk about them

**Wintery Knight** · 28 April 2025 · Archived copy · Original

Well, I like to follow the policies of other countries, like Canada, the UK, Australia and New Zealand. It's important for me to see what the secular left is doing in countries that are a little further along with their socialism. On Monday, Canada is going to go to the polls to vote on their federal government. Will they give the Trudeau Liberal party a fourth term in office?

Here's the latest poll reported in the Ottawa Sun:

> The Liberals were in the lead with all age cohorts except for 35 to 54 year olds, where the Conservatives led by a 44 to 38 margin.
>
> Eight in 10 respondents said their choice was final or they'd already voted at the advance polls.
>
> Forty per cent said that Carney would make the best prime minister of any party leader, giving him a nine-point edge over Poilievre.
>
> Carney beat Poilievre across all age groups, eclipsing him by 20 points among respondents 55 and older.

The current average home price in Canada is about $700,000 CAD, which is about $520,000 USD. Young people can't afford it, but old people largely don't care. They just want to keep the good times rolling for themselves, and pass the bill onto other people's children.
You might be wondering why this happened, and the answer is that Donald Trump had a lot to do with it. The tariffs and talk of "51st state" did a lot to take away the Conservative supermajority that was being predicted by polls prior to his comments.

Here's what the Liberal party did over the last 10 years, courtesy of the Fraser Institute:

> After first being elected in 2015, Trudeau promised to balance the budget by 2019—then ran nine consecutive deficits including an astonishing $61.9 billion deficit for the 2023/24 fiscal year, the largest deficit of any year outside of COVID.
>
> From 2020 to 2023, the government racked up the four highest years of total federal debt per person (inflation-adjusted) in Canadian history. Compared to 2014/15 (the last full year under Prime Minister Harper), federal debt per person had increased by $14,127 (as of 2023/24).

Mark Carney, the new Liberal party leader, will be worse than Trudeau – his own budget shows why:

> Today, Carney released the Liberal Party's "fiscal and costing plan." Carney's plan projects the debt to increase consistently.
> Here is the breakdown of Carney's annual budget deficits:
>
> - 2025-26: $62 billion
> - 2026-27: $60 billion
> - 2027-28: $55 billion
> - 2028-29: $48 billion
>
> Over the next four years, Carney plans to add an extra $225 billion to the debt. For comparison, the Trudeau government planned on increasing the debt by $131 billion over those years, according to the most recent Fall Economic Statement.

So how are things going up north?

Well, this article from the Toronto Sun, about the most populous province of Ontario, caught my eye. It mentions "OHIP", the Ontario Health Insurance Plan, which is responsible for Ontario's system of government-run health care.

It says:

> Behold your tax dollars at work. OHIP has been ordered, for the third time, to pay for an out-of-country surgery for an Ontario trans, nonbinary patient who wants to keep the P while she gets the V.
>
> […]Called penile-preserving vaginoplasty, the procedure creates a fully functional vagina without surgically removing the penis.
>
> According to the decision, K.S., who's sex assigned at birth was male, is female dominant and "suffered physical, mental, and economic hardships to transition her gender expression to align with her gender identity."
>
> In May 2022, her doctor submitted the required request for prior funding approval to OHIP for a vaginoplasty — but without the usually accompanying removal of her penis. "(K.S.) identifies as transfeminine but not completely on the 'feminine' end of the spectrum and for this reason it's important for her to have a vagina while maintaining her penis," the doctor explained.

> Since that wasn't offered anywhere in Ontario, K.S. was asking for OHIP to fund the novel "bottom surgery" at the Crane Center for Transgender Surgery in Austin, Texas.

So, Ontario taxpayers will be footing the bill for an out-of-country transgender surgery, paid for in U.S. Dollars.

The author of the article notes:

> "K.S. is pleased with the Court of Appeal's decision, which is now the third unanimous ruling confirming that her gender affirming surgery is covered under Ontario's *Health Insurance Act* and its regulations," her lawyer John McIntyre wrote in an email to the Toronto Sun.
>
> According to the Canadian Civil Liberties Association, an intervenor in the case, "the Court of Appeal for Ontario is a victory for equitable and non-discriminatory healthcare funding for trans, non-binary and gender diverse people in Ontario."
> OHIP was also ordered to pay K.S.'s legal costs of $23,500 — on top of the $20,000 in costs they had to pay for their appeal to the Divisional Court.
>
> But really, that's out of our pockets, of course, including the thousands of (American) dollars it will cost for this out-of-country niche and experimental surgery.

The Monday election was a chance to stop the runaway deficits and the DOUBLING of the national debt, under Trudeau. But as you see, as long as there is money to steal, and virtue to signal, Canada is going to continue down the road to serfdom. We should learn from their mistakes.

# New study: complication rate after baby-ending pill is 22X higher than FDA claims

**Wintery Knight** · 29 April 2025 · Archived copy · Original

Whenever the topic of baby-ending comes up, I try to put forward a logical argument. One of the premises will always be "the unborn are living and have human DNA". And for that, I turn to the science of embryology. Basically, I always want to support my case in discussions about social issues with scientific facts. So, in this post, we can add a new study to your quiver for discussing baby-ending.

Here's the article about the new study, from The Federalist:

> In the "largest known study of the abortion pill," Ethics and Public Policy Center President Ryan Anderson and Director of Data Analysis Jamie Bryan Hall used purchased Medicaid, TRICARE, Medicare, Department of Veterans Affairs, and private medical insurance claim data to determine that 865,727 mifepristone abortion prescriptions for 692,873 women were handed out between 2017 and 2023.
>
> Approximately 10.9 percent of those claims, or 94,605 chemical abortions, involved potentially life-threatening "serious adverse events" such as emergency room visits, hemorrhage, sepsis, infection, and/or follow-up surgeries for the women who had downed the abortion drug within the last 45 days.
>
> That rate, which researchers adjusted to reflect "that some women suffer from adverse events in multiple categories," is 22 times the FDA's <0.5 percent estimation printed on the Mifeprex label. The researchers also suggest that the 45-day timeframe they used is "conservative, as some adverse events may present later (and studies relied on by the FDA used a timeframe as long as 72 days)."

Notice how large the study is, this is not like those LGBT parenting studies of like 100 self-selected cases. Also, I like that they use insurance claims, which are hard facts. Some groups who support the pill use much smaller studies to reach opposite conclusions. But their controlled clinical trials are much smaller than this new study.

What's the point of bringing up this study? Well, people need to be able to calculate the risks of their actions using real numbers. It's fashionable today to tell young women "follow your heart" and then blame everyone else when that doesn't "work out" for them. But a much better approach is to let people decide based on facts. It might even cause more women to choose not to have reckless sex at all.

Some women are taking these extreme measures by using telehealth or mail ordering to get this drug. But given these findings, it seems like it would be better for them to see a real healthcare provider to get the facts. And certainly the FDA should be more accurate about the risks.

You might remember that there was a famous case of this in the news recently. Although the secular left tried to blame the death of Amber Nicole Thurman on pro-life laws, she actually died from complications after taking mifepristone and misoprostol to end her pregnancy. What she needed to fix those complications was a non-abortive D&C. The secular left claimed that was illegal in Georgia, but it actually is legal, because it's not an abortion. Still, these drugs really does affect some women negatively, which is the point.

The Federalist article suggests these fixes to make the situation better:

> Changes like reinstating multiple in-person office visits, physician-only prescription, ultrasounds to confirm the gestational stage and rule out ectopic pregnancy, and mandated reporting of complications, the study suggests, could spare suffering women severe and even fatal fallout from the pill.

If you know anyone who is considering this drug, it might be worth pointing them to this study. These days, I see a lot of women having reckless recreational sex with men who have no intention of commiting to them. In fact, many

of these women *don't want* commitment first. But there are risks to having sex like this. Sometimes, it can cause serious consequences. I think it would be much better if we coached women to choose better men, and to get married first. Then they wouldn't have to deal with unwanted pregnancies alone – there would be a husband there to help.

# Have pro-lifers got what they voted for, when they voted for Trump?

**Wintery Knight** · 30 April 2025 · Archived copy · Original

When people ask me how the Trump presidency is working out, I say that it's a mixed bag. There are definite positives, like border security and law enforcement. And definite negatives, like tariffs against our allies, and throwing the Canadian election for the leftist Liberal party. But many Trump supporters most important issue is the issue of life. How has Trump been doing on that issue?

Well, Life News is the source I trust for news about life issues, and they have a nice article about Trump's first 100 days.

It says:

> President Donald Trump has moved swiftly to advance a pro-life agenda in the first 100 days of his second term, enacting a series of executive actions and policy changes that have energized pro-life advocates.
>
> Since his inauguration on January 20, Trump has signed more than 139 executive orders, with several directly targeting pro-life policies and reinforcing protections for the sanctity of human life.
>
> These actions fulfill key campaign promises and align with the priorities of pro-life groups, who see the administration's early moves as a historic step toward curbing abortion and promoting a culture of life.

Sounds good, but I thought if I could get a few specifics, then I would be able to bring them up in discussions. I've been doing a lot of running around town for various tasks, and getting into good conversations with people. Auto repair, auto inspection, mower blade sharpening, Indian food, dentist and doctor check-ups, etc. So, I always want to have the latest facts ready to go in case anyone asks me. Of course, where I live, most people agree with me, but oh well.

Here's are two related ones that I can remember:

> The president followed that up with an executive order pardoning 23 pro-life Americans who Joe Bien unjustly convicted for exercising their free speech rights to protest at abortion businesses.
>
> [..]Furthermore, the administration announced plans to limit the enforcement of the Freedom of Access to Clinic Entrances (FACE) Act, arguing that it has been used to target pro-life activists unfairly. This decision reflects the administration's stance on protecting the rights of individuals engaging in peaceful protest outside abortion businesses. The end of lawfare against pro-life Americans is a significant free speech victory.

This one was important to me. I am always furious when I see the Democrat party using government power as a weapon against taxpayers who disagree with the Democrat party on policy. Sadly, we had a lot of abuse of power under the Biden-Harris regime, including unlawful detainment and pre-dawn-raiding of political opponents. Although these things do fit the definition of fascism, the corporate news media often had nothing to say about them. I'm glad that Trump had heard about them, and did something about them.

Here are another two related ones that I can remember:

> Trump signed an executive order reinstating the "Mexico City Policy," which prohibits taxpayer funding of groups like International Planned Parenthood that promote and perform abortions in other nations.
>
> […]President Trump issued an executive order enforcing the Hyde Amendment, which bars the use of federal funds for elective abortions domestically. This move underscores the administration's commitment to preventing taxpayer dollars from funding abortion services within the United States.

So, it's frustrating to me as a conservative Christian that my tax dollars go to support activists who disagree with me on all of my beliefs. You would think someone was weird if William Lane Craig was able to get taxpayer money to fun his debates on college campuses. But, that's exactly what's happening, when the Democrat party gets into power – except they hand out billions and billions of dollars to universities, companies and corporate news media. And that's not even to mention their other constituencies: criminals, single mothers, student loan defaulters, illegal immigrants, etc.

Now, before I even started blogging, I remember visiting home in 2008, and following my Obama-supporting mother around the house with a pack of printed out articles, complaining to her about how Obama voted against protections for babies born alive during abortions. So, Trump did something about that:

> President Trump also issued a statement endorsing a Congressional bill that would protect babies who survive abortions. And finally, President Trump signed the United States onto a document called the Geneva Declaration that confirms there is no right to kill babies in abortions.

Actually, the Democrat party supports not only killing babies born alive during abortions, but also sex-selection abortions (typically unborn girls) and race selection abortions (typically non-white unborn babies).

But there's more. Trump also stopped federal interference with pro-life laws at the state level:

> In other pro-life actions, Trump has dropped a lawsuit Joe Biden filed attempting to force Idaho to allow abortions.

I once had a debate with the President of the Evangelical Philosophical Society on Twitter. He was claiming that it was fine to vote for Biden-Harris, because Trump would be the same on abortion. I had to explain to him that Trump would not touch state-level restrictions on abortion. But not only did Trump not touch them, but he's reversing Biden's previous attacks on them!

I suppose that the President of the Evangelical Philosophical Society also opposed this action by Trump, since he didn't support Trump:

> He froze some Planned Parenthood funding, cutting of $27.5 million to the abortion giant and he defunded UNFPA, which promoted forced abortions in China.

Anyway, there's more in the article, so just read it, and then maybe tell a friend.

Trump has disappointed me in some ways, especially screwing the Canadian conservatives out of their supermajority with his tariffs and "51st state" clowning. But, we have to give him points when he scored.

# Are Democrat-run states “smarter” than Republican-run states?

**Wintery Knight** · 1 May 2025 · Archived copy · Original

I think that there is a view held by people living in blue states that they are smarter than people living in red states. If that were true, then we should be able to measure and see what this smartness has achieved. For example, I would expect the smart states to have better academic performance, lower crime rates, better roads, better health care, higher marriage rates, and so on. Let’s see.

Here’s an article from The Federalist by Helen Raleigh, who is very good on these kinds of issues.

She writes on education in blue states and red states:

> The National Center for Education Statistics (NCES) has released the results of the National Assessment of Educational Progress (NAEP) for the 2024 school year. Known as the “Nation’s Report Card,” NAEP assesses the reading and math skills of America’s fourth and eighth graders. The latest report reveals something surprising: after adjusting for demographics, the reading and math scores of students in Mississippi and Louisiana, two heavily Republican states and among the poorest in the nation, have surpassed those in deeply Democratic states such as California and New York.

As soon as I read that, I went straight to Grok to get a listening of per-pupil spending in the 50 states. (no point using Google for searching, it’s biased to the far left, and is just a search engine for corporate news media at this point).

Grok said this:

- Louisiana: $12,000
- Mississippi: $10,984
- California: $17,700
- New York: $30,282

So, you would expect the states that spend more on education to have higher test scores on basics like math, reading, science, history, etc. Right?

Let’s go back to the Federalist article, and see what Missiippi did:

> The secret of Mississippi and Louisiana’s educational success is not secret at all; it is about returning to the fundamentals and following the evidence. Mississippi’s Republican-led legislature has implemented effective education reforms in 2012 that prioritize phonics — teaching students to sound out words — and enforce a retention policy for third graders who do not meet essential reading benchmarks. Furthermore, the state invests $15 million each year, or approximately $32 per student, into training teachers on literacy and providing dedicated reading coaches in schools.
>
> The reform has produced remarkable results, with Mississippi’s fourth graders’ reading scores rising from 49th in the nation in 2013 to the top of the rankings (after adjusting for demographics) in 2024. The progress among black students is particularly impressive. According to Republican Gov. Tate Reeves, the reading scores of the state’s black fourth graders have improved from 45th to third place during the same period. This reflects the effectiveness of Mississippi’s literacy program, which has provided a learning gain equivalent to a full year of schooling. Moreover, the state’s graduation rate has seen a significant rise from 72 percent in 2013 to 89.9 percent in 2024.

And here’s what Louisiana did:

> Inspired by Mississippi's success, Louisiana implemented similar education reforms in 2019. The state focused on phonics instruction and providing "content-rich" literacy curriculums. Additionally, Louisiana has invested in extensive training programs for principals, teachers, and reading coaches on how students learn to read.
>
> Chad Aldeman, who tracks education-related news, noted, "While Mississippi might win the prize for ten-year gains, Louisiana might win for the most significant recent improvements. It was the closest state to recovering from COVID-related declines in eighth-grade reading and math, and it was the only state where fourth-grade reading scores were higher in 2024 than in 2019."

Now, you might be thinking "but isn't that what California and New York do, except with more money?" Well, no, they don't:

> According to California Policy Center, "less than half (47.1 percent) of all public school students in California met state grade-level English Language Arts (ELA) standards during the 2021-22 school year … The reading scores of Black and Hispanic students are even worse. Only 30.3 percent of Black students and 36.4 percent of Hispanic students in California met grade-level ELA standards."
>
> Yet legislation requiring schools to implement more phonics-based reading curricula failed to pass in California's legislature last year. This was primarily due to opposition from Democratic Party leadership, teachers unions, and advocacy groups.

If you're thinking "well, I don't think any state is stupid enough to do things that don't work", let me show you another article from Daily Wire about California:

> Democrats on the California Senate Public Safety Committee shot down a bill on Tuesday that would have kept male sex criminals out of female prisons.
>
> The committee, which includes far-Left Senator Scott Wiener, voted down a proposal from Republican Senator Shannon Grove to protect women from males who are registered sex offenders from being able to be housed in women's prisons. The bill also would have given women privacy in sleeping arrangements and showers, meaning that they would be protected from males who have taken advantage of California's lax laws that allow men to be placed in women's prisons.

Back to education. California and New York schools are run by Democrats. They want their schools to indoctrinate students in secular left ideology. They don't hire the best teachers, and they can't fire the worst ones. They don't want parents to tell them what to do, and they don't focus on basics like reading and math. They focus on putting condoms on cucumbers, and LGBT indoctrination. They hire tons of administrative staff to come in and make sure the schools are woke enough. That's what blue states do: spend more, get less. And when they fail to perform, they go to the government, and have the law enforcement label the concerned parents "domestic terrorists". Get out of those blue states, and get into a red state. Don't give them your money.

# I want men to stop giving money to Only Fans women

**Wintery Knight** · 2 May 2025 · Archived copy · Original

I have an ongoing disagreement with a female friend about how to restore marriage and family. We both agree on the harm that is done to children by the redefining marriage to remove the traditional marriage norms of exclusivity, permanence, heterosexual romance, etc. But she thinks that it's better to approach men and get them to change, whereas I think it's better to approach women and get them to change.

So, in a previous post, I argued that we should focus on telling women to stop choosing hot bad boys, and trying to get them to commit. I said this because I don't think you can change the hot bad boys and make them commit. They want s3x, and that's what they are getting when the normal women throw s3x at them. They don't have to commit if they get what they want before committing.

But is there anything constructive to say to the normal men, who are not getting s3x thrown at them from many different women? Well, yes. There is something to say to them. Although they are not smashing up families, they are doing something wrong. They are giving attention to the wrong sort of women, for the wrong reasons.

Consider this article about the web site Only Fans, from Business Insider:

> OnlyFans, the subscription-based adult-entertainment site, boomed during the pandemic.
>
> Revenue at the UK-based company grew by 553% in the year to November 2020, and users spent £1.7 billion ($2.36 billion) on the site, a seven-fold increase, the Financial Times reported.
>
> The site allows creators to sell video clips, photos, and messages directly to subscribers on a pay-per-view basis, with OnlyFans taking a 20% cut. Customers pay between $5 and $50 per month.
>
> User numbers grew from 20 million before the pandemic to more than 120 million over 12 months, as adult entertainers and their customers signed up during lockdowns to share X-rated content.

Only Fans is a web site where the most impulsive and reckless women make easy money by showing off their bodies and performing s3xual activities for subscribers. It's voluntary, not coerced. They want to get rich quick without having to care about doing well in school or getting a job. They aren't interested in marriage, because they know that good men don't marry women who make themselves available to millions of other men. They are not conservative. They don't want men to lead them. They don't read anything that makes them wiser or more noble. Men shouldn't be paying women like this any money, or even giving them attention.

I want normal guys to give better women their time and money – preferably in a relationship, but at least in a friendship. Even if the majority of women are using their young and pretty years to try to land hot bad boys, there are always a minority of women who are busy with better things, like doing computer science degrees. I think that the normal guys should be paying attention to them.

In fact, if I could just convince these normal guys to read more useful stuff, I'm sure they would realize that there is a lot more to a woman than youth and beauty. They would probably find the Only Fans girls pretty repulsive, once they realized how much different women can be if they are trained and prepared to commit to men and respect them. And by trained, I don't mean "I'm a Christian, you can't judge my past". I mean bookshelves of good books, read and highlighted. I mean a public record of conservative Christian achievements.

If normal guys can't find good young women to pay attention to, then they should try to make friends with older, wiser good women. That way, they won't be lonely, they will learn something from the older more conservative women , and they will avoid making the wrong sort of women richer. I used to have a half-dozen older women advisors who would fill my head with wisdom chirped out in their cute girly voices whenever I wanted. Getting wisdom from conservative older Christian women is a lot better for me than throwing dollar bills at online strippers, who take your money, but have no interest in getting ready for marriage.

And if a younger woman came along who read good books, was conservative, and wanted marriage and children, you can start the marriage evaluation process. The important thing is to have the money to close the deal on a marriage if you find a real marriage candidate, which is why you don't waste money on Only Fans women. Good women are the ones who trust you, respect your leadership, and achieve things when you lead and support them.

I don't really care much about the Only Fans women, but I don't think that getting attention and money for how you look is good for them in the long run. Women who get attention for stripping and doing s3x acts don't learn anything that's useful for them to be content in a stable marriage. They get used to seeing men at their worst, and they lose their ability to trust and bond with one guy. Giving them money to do something temporary that cannot be sustained as their looks fade isn't good for them either. I don't think it's good for society long-term to have a bunch of shallow, immature women voting for bigger government and less liberty when they reach age 32 and can't find good men to marry them.

Basically, what I would like is for men and women to get better at understanding moral character, religion and relationships, so they can choose quality relationship partners. And the best way to do that is what the Bible recommends – by renewing your mind. And how do you renew your mind? Well, you have to convince yourself that the world works a certain way. And how do you do that? By reading difficult challenging books that show you how to achieve the goals that are best for you, even if you have to sacrifice happiness in the short term. Men and women need to read better books.

I'm going to keep recommending to young people that they try to get out of the chaos of this generation by reading better books. Start with Philippians and John in the Bible. Then, I like "Is God Just a Human Invention?" by Sean McDowell and Jonathan Morrow. Read some Thomas Sowell economics, and some military history. There is no shortcut to valuing good things, and making good decisions. You have to change your mind by keep out the culture's junk, and putting in the good stuff.

# What can men do to save this 24-year-old woman from toxic masculinity?

**Wintery Knight** · 3 May 2025 · Archived copy · Original

I found an interesting set of articles from a young woman who graduated from Pennsylvania State University. In one, she explains how a man she "hooked up" with treated her poorly. I think I've been able to figure out what her approach to relationships is. In this post, I'll explain her approach, and then discuss how social conservatives should solve problems like abortion and single motherhood.

**NOTE: Please do not contact or harass this woman, just leave her alone.**

So, here's the first, most important article:

> As someone who considers themselves a feminist, and I always thought that being sexual and unashamed was liberating and empowering. And for that reason, I never stopped myself from doing what I wanted to do.

In the article, she explains what it feels like to be used for sex and then ghosted by a man. She says that he never got to know her, and that makes her feel bad. What did he know about her? She says that she appeared to him as "just some blonde blacked out drunk". In the article, she describes lying awake next to him after sex, then getting up to walk home at 5:30 in the morning. And this is not the only toxic man in her life.

She says:

> This applies to more than a few people from my past… I started to realize this lifestyle wasn't working after I hooked up with a guy who thought New England was a state. And yeah, I still hooked up with him after finding out this knowledge about him… And I don't know if that says more about him that he didn't know or more about me since I was willing to overlook that fact **just to feel desired for a night**.
>
> Because I do turn to other people for validation. When I think about it objectively, **90% of the reason I hook-up with anyone is to feel good about myself**.

She calls the search for validation an "addiction":

> I am addicted to validation I got from getting with people. I needed that rush of dopamine. I needed to know I am wanted. I got addicted to hooking up. Cause it was the only thing that made me feel good about myself for a while. When I was feeling down, I turned to boys… that didn't care about anything except what I look like. And I have been blessed/cursed with a pretty fast metabolism and a naturally larger than average chest. So I always have known I could default to my looks for validation. It's the easiest thing to get recognition for. And I got addicted to being told I was hot, or pretty, or whatever.

In other articles, she explains what kinds of men she's looking for.

She's a strong Democrat.

> There are two kinds of Republicans: the ignorant and the evil. Either they are uninformed and dumb or aware of the world and other cultures other than their own and just too corrupt or bigoted to care. It's just that being a Republican seems to now stand for religious nuts, rich, rednecks, and racists. This current election cycle has only increased my deep seeded hatred for the right-wingers even more.
>
> And I can't help myself, but whenever I find out someone who I have been talking to or have been friends with is a Republican, I let out an audible "ugh, really?" I can not hide my disgust.

In another article, she explains that she's an atheist:

> If singing songs, praying or going to confession makes you feel better, by all means, do what you have to do to feel better. As long as you aren't hurting anyone, do what you want to do. As an atheist, it doesn't offend me. I just choose not to do it.
>
> For example, at thanksgiving dinner this year my family wanted to say grace before eating, but they know where I stand when it comes to religion.

She came out of a Christian family.

In another post, she explains why she cheated on her boyfriend:

> I wish I could say I don't know why I did it, but that would be a blatant lie. I found myself in someone else's bed because… I didn't have feelings for you anymore. If you were enough for me, then you would have been. But you weren't. I stopped craving your company. I felt guilty, sure, but not enough to stop me from doing it multiple times. I didn't care about you or how you felt. And as my feelings started to fade, yours only seemed to get stronger. I know that stings, but it's true.
>
> So when I would go out in that extra-lowcut dress you loved when I wore it around you and a cute guy would ask me to dance or to go hangout on the porch, I wouldn't mention you. I guess I got tired of turning people down when I didn't feel like there was any "good" reason to. I missed my freedom. I missed the exciting feelings that come with flirting with someone new. The whole giddy honeymoon phase, getting butterflies whenever someone texts you, stalking them on Facebook and pretending you know nothing about them, finding yourself daydreaming about the next time you hang out in class. But I think I skipped a step before getting with someone new– breaking it off with you first.

She seems to be guided primarily by her feelings. If the feelings are gone, they're gone. She doesn't try to pick a good guy and invest in the relationship so that she builds something. I don't think this is going to work for her to avoid bad men.

So, what kind of man is she looking for? She writes about how interested she is in "hot" guys in many of her articles. Guys with height, looks, tattoos, piercings, displayed wealth validate her more than guys who want to protect, provide, and lead her in moral and spiritual areas. I don't think that the men she is choosing will treat her well – they just have too many options to focus on building something good with one woman.

She's looking for a man who agrees with her on abortion and same-sex marriage. So, men like that don't want to protect unborn children, and take responsibility for their choices. And a man who supports same-sex marriage is siding with selfish adults. Every same-sex relationship deprives a child of their bio-mom or bio-dad. That's not a good man to build a stable marriage with.

Regarding religion, she's uncomfortable with men who have definite exclusive views. Religion, for her, is not about truth at all. You shouldn't make any exclusive claims that make people feel bad. Instead, just have your private religion that makes you feel better. She's looking for men who will not lead her in moral and spiritual areas. That's not a good man to date, either.

**How is it working out for her?**

Her worldview – feminism, atheism, socialism – doesn't have the resources necessary for her to approach relationships in a way that will work for her, in the long run. She is not a Christian, pro-marriage, or conservative. The men she chooses are not Christians, pro-marriage, or conservative. This isn't going to lead to a relationship that is faithful, exclusive and permanent. If that's what she wants, then she is choosing the wrong people to get there. And even if she doesn't want commitment now, she will some day. It's better for her to focus on finding a good man now and building him up. Men make better husbands and fathers the sooner women get in there and support them

at those goals.

I always urge young women to get a STEM degree and work in the private sector until they marry and have their first child. To make them think logically, take responsibility for engineering results, and to feel validated by their achievements. I wanted to see what her college major was – because I suspected that she did not do STEM. While searching, I stumbled upon her dating profile (posted on 9Gag by her), two Instagram pages full of selfies, a Tumblr blog of sexy photos, and an Only Fans page. Her LinkedIn page showed no current or previous work experience. To me, these things are clear signs that she is head straight for evil men who will hurt her.

**Saving women from toxic masculinity**

I think what we have to do is focus on her disappointment with the results of her own choices, and challenge her to change her worldview and relationship choices. She needs to stop rewarding the hot bad boys with free sex. There are good men out there who want to protect, provide and lead on moral and spiritual issues. She needs to be taught to focus on those good men.

# Learn evidence for the beginning of the universe to show your work to atheists

**Wintery Knight** · 4 May 2025 · Archived copy · Original

Atheists are committed to an eternally existing, static universe. They cannot accept that the natural, material universe has a supernatural, spiritual cause. So it's very important for Christians to have a stack of evidence ready to show that the universe – matter, space, energy and time itself – all have a beginning. So in this post, we'll review a list of a half-dozen evidence, and look at one in detail.

First, let's review what atheists think about the universe.

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

So for today's post, I'll start with my fun conversation where I play a game with Grok, to see who has the best list of evidences for a beginning of the universe. Initially, Grok had a mix of assertions and evidence, instead of all evidence. But I kept pushing for specific observable evidences. Finally, I shared a 6th evidence, and challenged Grok to get a 6th of its own, and it did! Let's see what we each came up with.

**Here were my six evidences:**

1. Redshift of distant galaxies: Shows expansion, implying a starting point.
2. Cosmic microwave background radiation: Remnant of the early universe's hot origin.
3. Second law of thermodynamics: Increasing entropy requires a low-entropy beginning.
4. Abundance of light elements: Hydrogen/helium ratios match early nucleosynthesis.
5. Finite age of stars and galaxies: Stellar evolution points to a definite start.
6. Half-lives of radioactive elements (from Robert Jastrow's "God and the Astronomers"): Presence of uranium-238 etc. suggests a finite-age universe.

**Here are Grok's six – the first 5 from my list, and the 1 he came up with to try to tie my list:**

1. Redshift of distant galaxies: Observed expansion implies a singular start.
2. Cosmic microwave background radiation: Remnant of the early universe.
3. Second law of thermodynamics: Entropy indicates a low-entropy origin.
4. Abundance of light elements: Matches early universe nucleosynthesis.
5. Finite age of stars and galaxies: Stellar evolution shows a finite start.
6. Cosmic homogeneity and isotropy: The universe's large-scale uniformity suggests a single origin event.

And Grok had references for his 6th one, just like I did for my 6th one.

So, you should at least know the core 5 that we agree on. And these are normal and natural for Christians to talk about. I wish we learned about them in church, from the pulpit, when studying different accounts of Creation in the Bible. Why not? I'm so wild, that I also think that the church should be teaching embryology, natural marriage, and basic economics from the pulpit. Not politics, but evidence related to how we navigate the world.

**Cosmic Microwave Background Radiation**

Anyway, here's an article about one of the core 5 evidences from the J. Warner Wallace, writing at Cold Case

Christianity.

He says:

> In 1964, two American physicists and radio astronomers, Arno Penzias and Robert Wilson, made an important discovery. They were unable to eliminate the radio signal “noise” from their large antenna at the Bell Telephone Laboratories in New Jersey, regardless of where in the universe they tried to point their instrument. They consulted with colleagues to determine the cause of this noise. Another physicist suggested the noise might not be coming from the antenna at all. Instead they might be detecting the residual background radiation caused when the universe first came into being. Penzias and Wilson proved this to be correct, winning a Nobel Prize for their discovery in 1978.
>
> Numerous additional experiments and observations have since established the existence of cosmic background radiation, including data from the Cosmic Background Explorer satellite launched in 1989, and the Planck space observatory launched in 2009. For many scientists, this discovery solidified their belief the universe had a beginning.

And of course, Wallace knows all the evidences, and he even has more.

**When You’re Ahead, Get More Ahead**

Here’s an illustration from his book “God’s Crime Scene”. Have you read it?

Illustration from God’s Crime Scene by J. Warner Wallace (used with his permission)
So, I hope this is helpful for all of you.

When you are talking to an atheist like a Bart Ehrman or a Bill Nye about evidence for a Creator and Designer, then it’s important that the score be 5-0. You need to win 5-0.

- origin of the universe (list the 5 core evidences)
- fine-tuning (list several examples from different areas)
- habitability (list examples for sun, solar system, earth-moon)

- fossil record (list some of the biological Big Bangs)
- origin of life (explain the building block and information)
- molecular machines (explain machines in the cell)

I guess that's 6-0, but you get the idea. It needs to be a shut-out. Boys get along better after they have had a good fight, and you need to win that fight. You can be "gentle" and "reverent", but you need to win that fight, so everyone understands what the truth is. Don't make a big deal out of changing the person, just make sure that the scoreboard says what the scoreboard should say.

# Trump ends taxpayer funding of far-left propagandists NPR and PBS

**Wintery Knight** · 5 May 2025 · Archived copy · Original

Something very exciting happened last week, so I wanted to talk about it today instead of on the weekend. Trump signed an executive order to cut funding for National Public Radio and Public Broadcasting Service, two far-left organizations. In this post, we'll take a look at some reasons why NPR and PBS needed to be defunded. Are they really as far left as conservatives say?

First, let's see a news article from Daily Signal:

> President Donald Trump signed an executive order on Thursday night axing taxpayer funding for "biased" news outlets NPR and PBS.
>
> […]Trump ordered the Corporation for Public Broadcasting board of directors and all executive departments and agencies to cease federal funding for NPR and PBS.

Brianna Lyman had a really good article at The Federalist with more reasons why NPR and PBS are just too far to the left to receive funding from taxpayers – especially since taxpayers just voted for Republicans in the 2024 elections.

Here is the full list:

1. NPR Refused To Cover Hunter Biden's Laptop
2. 100% Of NPR's 'Editorial Positions' Are Held By Registered Democrats
3. NPR Spread Tear Gas Hoax
4. NPR Editor Promoted Defense Of Looting
5. NPR Pushed Skin Color Emoji Conundrums
6. PBS Promoted Reparations
7. PBS Claimed Trump Lied About America's Greatness
8. PBS Accused GOP Of Pushing 'White Supremacy'
9. PBS Ran Anti-Republican Hit Piece
10. NPR Claimed No Evidence For Biden Family Corruption
11. NPR Buried Biden's Declining Mental Acuity
12. NPR Accused GOP Of 'Voter Suppression' While Ignoring Democrat Schemes

Looking over that list, it just looks like NPR and PBS are propaganda outlets for the Democrat party. I don't know what else to think about such obviously biased (and often flat-out false) news reporting.

Let's look at a few. Here's #1:

> Perhaps the most egregious example of why NPR should be defunded — and should have been five years ago — is their refusal to cover the Hunter Biden laptop scandal in the lead up to the 2020 election.
>
> "We don't want to waste our time on stories that are not really stories, and we don't want to waste listeners' and readers' time on stories that are just pure distractions," NPR Managing Editor for News Terence Samuel said in a statement back in October 2020. A newsletter published by NPR Public Editor Kelly McBride claimed "there are many, many red flags in that New York Post investigation."

As we all know know, the laptop was genuine. Even left-wing sources agree. The FBI had laptop since December

2019. They confirmed its authenticity in November 2019 by matching its device number to Hunter Biden's iCloud ID. The Justice Department, in 2024, used laptop data as "self-authenticating" evidence in court, dismissing manipulation claims.

But NPR didn't think it was a true story. Or maybe they didn't want their political allies – the Democrat party – to look bad, before an election.

But are they really just Democrat party operatives? Look at #2:

> NPR editor Uri Berliner previously reported that voting records showed "87 registered Democrats working in editorial positions and zero Republicans."
>
> NPR's Katherine Maher admitted it was a "concern" during a March Congressional hearing that all 87 positions are held by registered Democrats.

The evidence shows a strong connection to the Democrat party, so why are they getting taxpayer money right after the majority of the country voted Republican?

When it comes to monitoring media bias, the best source is the Media Research Center. And #12 talks about them:

> According to NewsBusters' Clay Waters, "PBS treated the RNC to 72% negative and 28% positive commentary" while the "DNC received far friendlier reception: 12% negative, 88% positive."

So, if you look at the evidence, there's no reasons for taxpayer dollars to go to organizations that are clearly biased towards the Democrat party. Next, we should remove all grants for universities, which have similar numbers of Democrats. They can operate, but why do they need taxpayer funding? Let them sink or swim in the free market by pleasing customers, like the rest of us have to.

# Is the Bible's definition of faith opposed to logic and evidence?

**Wintery Knight** · 6 May 2025 · Archived copy · Original

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

**What is faith according to the Bible?**

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses? God said, See that staff? Throw it down. Moses threw it down and it turned into a serpent. God said, See that serpent? Pick it up. And he picked it up and it turned back into a staff. God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention. And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone? Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home? Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened. But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful. Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you. Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

**What is faith according to Bible-based theologians?**

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia –** This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for

example, is a necessary information base that Christians must have.

2. **assensus –** This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia –** This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

**How do beliefs form, according to Christian philosophers?**

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory

- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds
- William Lane Craig's case for the resurrection of Jesus

# It's the end of Anthony Fauci's horrifying experiments on captive dogs

**Wintery Knight** · 7 May 2025 · Archived copy · Original

I wrote an article back in 2021 about why elite Christians should not hold Anthony Fauci in high regard. So many Christian leaders sided with Anthony Fauci and Francis Collins, and tried to promote their positions to Christians. But strangely enough, there were many reasons to doubt the goodness of these two men. One of the reasons was the NIH's experiments on captured dogs.

In my previous article, I wrote about these experiments. Let's review that, and then see what the Trump admnistration thinks of it.

This is from the far-left The Hill.

Excerpt:

> The White Coat Waste Project, the nonprofit organization that first pointed out that U.S. taxpayers were being used to fund the controversial Wuhan Institute of Virology, have now turned its sights on Anthony Fauci on another animal-testing-related matter — infecting dozens of beagles with disease-causing parasites to test an experimental drug on them.
>
> […]White Coat Waste claims that 44 beagle puppies were used in a Tunisia, North Africa, laboratory, and some of the dogs had their vocal cords removed, allegedly so scientists could work without incessant barking.
>
> […]"Our investigators show that Fauci's NIH division shipped part of a $375,800 grant to a lab in Tunisia to drug beagles and lock their heads in mesh cages filled with hungry sand flies so that the insects could eat them alive," White Coat Waste told Changing America. "They also locked beagles alone in cages in the desert overnight for nine consecutive nights to use them as bait to attract infectious sand flies."

That's what I covered in my previous article, along with the NIH funding of gain of function research which likely led to the COVID lab leak. But now there is news from the Trump administration – what do they think of these experiments on dogs?

This is the latest from the Daily Caller:

> The National Institutes of Health has closed the last remaining intramural beagle lab conducting painful experiments — the federal government's largest dog lab — NIH Director Jay Bhattacharya said in a television interview Sunday.
>
> A project at the NIH Clinical Center on "stress-induced and sepsis-induced cardiomyopathy" represented the final in-house experiments that induced pain and distress in beagles, classified under U.S. Department of Agriculture pain categories D and E. The project has now been terminated.
>
> […]The NIH has killed 2,133 beagles in septic shock experiments since 1986, according to a nine-year investigation and advocacy campaign by White Coat Waste Project. Necroposy reports from 41 beagles and other veterinary records obtained by the group through the Freedom of Information Act show that the experiments involved infecting the beagles' lungs with pneumonia-causing bacteria to induce sepsis and sometimes bleeding them out to induce hemorrhagic shock. The dogs are then euthanized.

I think it's important for Christians to do their own thinking when it comes to how they vote. I don't want Christians to vote so that they feel smart, and can claim to be in the "smart" crowd. I don't think that Christians should get their ideas from the secular leftistswho work at NPR and PBS. One of the reasons I voted against Biden is because I remembered these experiments. I thought that a Republican administration would see someone like Jay

Bhattacharya, Vinay Prasad or Scott Atlas as leader of the NIH. We got Jay, and he's cleaning up the filth.

There are actually two dissentings scientists in the Trump administration:

- **Jay Bhattacharya**: He's now the Director of the National Institutes of Health (NIH). During the pandemic, Bhattacharya, a Stanford professor, co-authored the Great Barrington Declaration, which argued against widespread lockdowns and for focused protection of vulnerable groups while letting others resume normal life. He criticized mask mandates, social distancing, and vaccine policies, often clashing with the NIH and CDC's approaches. His views on letting the virus spread among low-risk groups to build immunity were controversial, with critics arguing it underestimated COVID's risks. Supporters, though, saw him as a voice of reason against overreach.

- **Marty Makary**: Appointed as the FDA Commissioner. Makary, a Johns Hopkins surgeon and health policy expert, was outspoken about the need to balance COVID restrictions with societal costs. He questioned the efficacy of prolonged school closures and blanket mask mandates, emphasizing the low risk to children and the economic fallout of lockdowns. He also pushed for recognizing natural immunity in policy decisions, which put him at odds with federal health officials.

So, next election, remember not to listen to "Evangelicals for Biden" and fake, Soros-funded "evangelical" groups.

# Trump pulls nomination of Janette Nesheiwat for Surgeon General

**Wintery Knight** · 8 May 2025 · Archived copy · Original

A while back, Rose and I went on the FreeThinking Podcast to discuss Trump's Cabinet picks. I was especially negative about the nominations for Secretary of Labor and Surgeon General. Well, the leftist Secretary of Labor got through her nomination, but enough was discovered on the Surgeon General nominee for her nomination to be pulled. So who is the replacement?

First, here is the previous nominee, Janette Nesheiwat, who is very attractive, just like many of Trump's other bad nominees:

> Donald Trump's nominee for Surgeon General is facing backlash from some of his fiercest MAGA supporters for backing some strict COVID restrictions and masking mandates.
>
> […]Nesheiwat, a medical director for CityMD in New York, frequently spoke about the coronavirus pandemic and offered hardline advice about how citizens should behave.
>
> […]'Dr. Janette Nesheiwat supported masking kids in school. Dealbreaker,' wrote podcast host Liz Wheeler on social media when the pick was announced.
>
> […]Another video making the rounds on social media featured Nesheiwat praising Meta CEO Mark Zuckerberg for censoring and banning so-called 'misinformation' about vaccines on Facebook and Instagram.
>
> […]Nesheiwat signaled her support for other social media platforms to follow Zuckerberg's example and also censor vaccine skeptics.
>
> […]Nesheiwat also promoted the idea of making sure children were getting their COVID-19 vaccines.

Below, I link to a Daily Signal article that talks about her replacement. That article adds that "Nesheiwat has also been criticized by conservatives for touting the idea that children can identity as a gender that differs from their biological sex." Just a total trash pick by Trump, not conservative at all. But she's hot.

Here is the story from Daily Signal:

> The Trump administration pulled the nomination of Dr. Janette Nesheiwat to be surgeon general following reports that she inflated her credentials, Bloomberg reported.
>
> President Donald Trump instead nominated Dr. Casey Means on Wednesday… Means attended Stanford Medical School, then she pursued a surgical residency at Oregon Health & Science University. Before completing the program, she dropped out to start her own functional medicine practice and founded the company Levels, which offers consumers continuous glucose monitors and an app to track their blood sugar.
>
> Means' brother, Calley Means, is a prominent advisor to Secretary Robert F. Kennedy Jr.

I'm not impressed with this new pick, but she does have a record of promoting individual autonomy and choice in health care. She also has a record of opposing woke content in medical school curriculums.

The better pick would have been Florida's Surgeon General, who has a record of opposing Big Government Health Care.

Florida Surgeon General Dr. Joseph Ladapo has taken several anti-establishment actions, including:

- Opposing Water Fluoridation: Advocated for removing fluoride from drinking water, citing health risks.
- Challenging Vaccine Mandates: Opposed COVID-19 vaccine mandates, questioned vaccine efficacy, and pushed for legislation against discrimination based on vaccination status.
- Contradicting Federal Health Guidance: Issued guidance against federal recommendations on COVID-19

vaccines and measles outbreak managemen.

Trump is definitely a mixed bag for conservatives. Mostly good, but a lot bad, too. I'm still seething with Trump for handing the Canadian socialist party a victory with his clowning about "51st state". Having a socialist country to the north is only going to hurt us in the future.

# Apologetics in the gospel of John

**Wintery Knight** · 9 May 2025 · Archived copy · Original

John is my favorite gospel, because the thing reads like a well-constructed essay. The author makes a number of claims about who Jesus was, and supplies evidence for each claim. There is nothing extraneous to John's thesis, the whole thing that he wrote is designed to make a case. Since I've been listening to it again on my daily walks, I thought I'd write something about it.

My friend Eric Chabot wrote a post on his blog on the use of apologetics in the gospel of John.

Here is his thesis:

> In this post, I will highlight some of the different ways John utilizes apologetics in his testimony of who Jesus is.

He talks about how God has his messengers use evidence:

> 3.Signs and Miracles
>
> While actions by other prophets such as Ezekiel and Jeremiah etc. show some significant parallels to Jesus, Jesus is closer to the actions of the Jewish sign prophetssuch as Moses. "Signs" have a specific apologetic function in that they are used to provide evidence for people to believe the message of God through a prophet of God. Hence, the signs Moses does proves he is truly sent from God. Moses had struggled with his prophetic call when he said " But they will not believe me or listen to my voice, for they will say 'The Lord did not appear to you.' (Exod. 4:1). God assures Moses that the "signs" will confirm his call:
>
> God says, "I will be with you. And this will be אות *"the sign"* to you that it is I who have sent you" (Exod. 3:12).
>
> "If they will not believe you," God said, "or listen to the first sign, they may believe the latter sign. If they will not believe even these two signs or listen to your voice, you shall take some water from the Nile and pour it on the dry ground, and the water that you shall take from the Nile will become blood on the dry ground." (Exod 4: 8-9).
>
> We see the signs are used to help people believe.
>
> Moses "performed *the "signs" before* the people, and they believed; … they bowed down and worshiped" (Exod. 4:30–31)

So what did Jesus do?

> "Works" are directly related to the miracles of Jesus (Jn. 5:20; 36;10:25; 32-28; 14:10-12; 15:24) and is synonymous with "signs." Interestingly enough, when Jesus speaks of miracles and he calls them "works" he doesn't refer to Exod. 4:1-9, but to Num. 16:28, "Hereby you shall know that the LORD has sent me to do all these works, and that it has not been of my own accord." For example:
>
> Jesus answered them, "I told you, and you do not believe. *The works* that I do in my Father's name bear witness about me" (John 10:25).
>
> If I am not doing *the works* of my Father, then do not believe me; but if I do them, even though you do not believe me, believe *the works,* that you may know and understand that the Father is in me and I am in the Father." (John 10:37-38).
>
> But the testimony that I have is greater than that of John. For the works that the Father has given me to accomplish, *the very works* that I am doing, bear witness about me that the Father has sent me (John 5: 36)

> **"Sign"(*sēmeion*) is used seventy-seven times (forty-eight times in the Gospels). As far as the "signs' Jesus does, 29:18-19; 35:5-6; 42:18; 61:1). In John's Gospel, Jesus performs three "signs," at the beginning of his ministry; the water turned into wine at Cana at Galilee (2:1-12), the healing of the son of the royal official at Capernaum (4:46-64), and catching of the fish in the sea of Galilee (21:1-14). The link between the first two signs in Jn 2:12 while the link between the last two are seen in Jn 7:1, 3-4, 6, 9. Jesus follows the pattern of Moses in that he reveals himself as the new Moses because Moses also had to perform three "signs" so that he could be recognized by his brothers as truly being sent by God (Exod 4: 1-9). In the exchange between Nicodemus said to Jesus, Nicodemus said, We know you are a teacher who has come from God. For no one could perform the miraculous *signs* you are doing if God were not with him" (John 3:2)**

A diligent reader wrote to me and mentioned that the references in this line "As far as the "signs' Jesus does, 29:18-19; 35:5-6; 42:18; 61:1)" are from Isaiah.

More:

> Also, regarding miracles, in some cases the miracle is a witness against those who reject this evidence. John grieved: "Even after Jesus had done all these miraculous signs in their presence, they still would not believe in him" (John 12:37). One result, though not the purpose, of miracles is condemnation of the unbeliever (cf. John 12:31, 37).

I first read John a long time ago, when I was about 10 or 11 years old. I can't remember what I thought of it, but it probably had a very good effect on me as far as making me think that Christianity was something that I ought to look into. The gospel of John is that good. Philippians is still my favorite book of the Bible (because it's practical, duh), but John is the best introduction. It's the first thing a non-Christian should read to at least understand what Christianity is all about. Everybody should at least know that!

By the way, if you don't have a dramatized audio Bible on your phone, you can download one for free here. The voices are sometimes funny. I got the English Standard Version Audio Drama with Music and Sound Effects. Start with Philippians and the Gospel of John, of course. I think people get bogged down in the Bible because they read it from front to back. But some parts are better to start with than others. That's what I think.

# Knight and Rose Show #63: Sean McDowell: Fate of the Apostles

**Wintery Knight** · 10 May 2025 · Archived copy · Original

Welcome to episode 63 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome Dr. Sean McDowell to discuss the fate of the Apostles (and Paul and James the brother of Jesus). If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Dr. Sean McDowell to discuss the fate of the twelve Apostles, as well as Paul and James the brother of Jesus. Many Christians incorporate the willingness of the earliest Christians to die for their beliefs in their case for the resurrection of Jesus. Sean takes a deep dive into history to find out what we know about these early Christians.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 63:**

**Speaker biographies**

Sean McDowell is a professor of Apologetics at Talbot School of Theology at Biola University. He has earned two Master's degrees, one in philosophy and one in theology, both from the Talbot school of Theology. And he has a Ph.D. in Apologetics and Worldview Studies from the Southern Baptist Theological Seminary.  He is the author, editor, or co-author of over 20 books, including my favorite introductory apologetics book "Is God Just a Human Invention?" which he co-authored with Jonathan Morrow. His most recent academic book is the 2nd edition of "The Fate of the Apostles", published by Routledge. He is the co-host of the Think Biblically podcast where he talks about the intersection of faith and culture. Sean has a popular YouTube channel and blog. He's also an experienced public speaker, including speaking on university campuses. Sean has also participated in debates, including with Matthew Vines, Michael Shermer and James Corbett.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# New study: Risks associated with pediatric “gender-affirming” care

**Wintery Knight** · 11 May 2025 · Archived copy · Original

I’m not so old that I have forgotten Joe Biden and the entire Democrat party talking about the need to give children access to “gender-affirming care”. This is the term used to describe steps to deny children’s gender by 1) social denial of gender, 2) injecting them with gender-denying drugs, and 3) performing gender-denying surgeries on children. Let’s see what the new study says.

Here is the new study about treatments for children (ages 10-18), published by Springer in Current Sex Health Reports.

> A key question at the center of the controversy regarding pediatric gender-affirming care is whether it is safe and effective. Therefore, analysis of the evidence base for PB/GAH use requires understanding of the potential risks and benefits. Thus, the relevant questions are: what are the goals of PB/GAH in the context of pediatric gender-affirming care? To this end, is treatment effective? What are the risks? Are these treatments safe?

Here is the list of risks that are identified in the study:

1. Decreased bone mineralization.
2. Negative impact on neuropsychological functioning.
3. Metabolic and cardiovascular risks.
4. Infertility.
5. Impaired sexual function.
6. Surgical complications.
7. Detransition and/or regret.

The study looks at studies about the supposed benefits of “gender-affirming” care, and whether those are proven, as well as the risks of “gender-affirming” care and whether those are proven. It uses previous research to reach conclusions, such as the famous Cass Review from the UK, as well as studies from Sweden and Finald.

The report concludes that the evidence supporting mental health improvements from hormone treatment in pediatric “gender-affirming” care is of low quality. Why? Because the studies often show no significant reduction in psychological distress, suicidality, or other mental health issues. In fact, there are indications of potential worsening of symptoms in certain cases. So, even in the best case, the benefits are not proven.

What about the 7 risks? The report discusses the seven risks I listed above, using clinical studies and reviews. Each risk is supported by evidence.

Here they are, in descending order, from most risky to least risky:

**Infertility**

The article shows strong proof that puberty blockers and hormones can make it hard or impossible for kids to have children later, especially if treatment starts young. Many studies agree on this risk, and there’s little evidence that fertility can be fully saved, making it the best-supported concern.

**Bone Health Deterioration**

Research in the article clearly links puberty blockers to weaker bones, which can lead to more fractures, and stopping treatment may not fully fix this. The evidence is solid but ranks second because we don’t know enough about how bones recover over time.

**Cardiovascular Complications**

The article points to studies showing hormones, especially estrogen, raise the chance of blood clots and heart problems, based on adult experiences. There's less information for kids, so it ranks third since the evidence partly relies on adults.

**Sexual Dysfunction**

Puberty blockers can affect sexual development, causing issues like low sex drive or trouble with orgasm, according to some studies in the article. The evidence isn't as strong as for infertility or bones because long-term effects in kids aren't well-studied.

**Regret/Detransition**

Some kids later regret treatment or want to detransition, with studies showing this happens in 1–10% of cases, but the numbers vary. This ranks lower because the evidence is mixed and depends on personal and social factors.

**Mental Health Concerns**

The article finds little proof that gender-affirming care improves mental health, and some studies suggest it might not help or could worsen things. The evidence is weaker because results differ across studies, making it less certain.

**Cancer Risk**

Hormones might increase the risk of cancers like breast or prostate cancer, but the article says there's no solid proof yet, just guesses. This has the least evidence since there are no long-term studies on kids to back it up.

**My thoughts:**

So, I hope this will help you to have conversations about this topic. I would especially remember the two at the top: infertility and bone health detioration, as the most well-supported by the evidence.

# What do split-brain experiments tell us about mind-body dualism?

**Wintery Knight** · 12 May 2025 · Archived copy · Original

On the weekend, I went for an hour walk, and listened to a 3-part series of discussions between Pat Flynn and neurosurgeon Michael Egnor. The first episode of the series was especially good, talking about the scientific evidence against materialist / physicalist views of our minds. I went hunting around on the Mind Matters web site, and was able to find a good article about two of those evidences.

Here's the first article from Mind Matters, which talks about the ways that neuroscience is disconfirming materialist views of mind, with scientific evidence.

First evidence:

> Dr. Egnor, Professor of Neurosurgery and Pediatrics at Stony Brook University in New York State, offers a number of specific examples, including the pioneering work of neurosurgeon Wilder Penfield (1891–1976) in treating epilepsy. Penfield, observed closely what happens in an epileptic seizure. But the most interesting element he found was what *didn't* happen.
>
> Seizure victims might collapse, feel tingles, see flashing lights, experience strange smells. They could have powerful emotions, a sense of doom, oir a sense that everything is hilarious. They can even remember things they thought were long forgotten, like an incident from school days:

> But Penfield said that's where it ends. That is that there's no other mental content that ever appears in a seizure. He said, for example, you never have a mathematics seizure. You never have a seizure where you can't stop doing calculus. You never have a logic seizure, you never have a philosophy seizure, you never have a music seizure, you never have a literature seizure. This whole range of abstract thought, things that kind of make us human are never a part of a seizure. And Penfield said, why not? If random electrical discharges in the brain will spark off a thought, why aren't the thoughts ever abstract? Why aren't they ever about math?

And Penfield did more experiments, which also raised problems for materialism:

> Penfield had started out as a materialist but he ended up thinking, as Egnor puts it, that "maybe the mind isn't entirely from the brain. Maybe there are aspects of the mind that are spiritual and not material."
>
> His conviction was strengthened by the more than 1100 "awake" brain operations he did. During surgery, he would stimulate an area of the brain of a patient with serious epilepsy in order to find out if that area did anything important. If not, he could simply remove it if it were damaged, lessening the chances of another serious seizure. Meanwhile, he mapped the areas of the brain he was working on.

> And Penfield found exactly the same thing that he had found in his review of epilepsy. That is that when he stimulated the brain, he could stimulate people to move their limbs. He could stimulate people to have perceptions like flashes of light or feelings on the skin. He could stimulate emotions by stimulating certain parts of the brain and he could stimulate memories, but he could never stimulate abstract thought. He could never stimulate mathematics. No matter where he touched in the brain, you didn't start saying one plus one is two.

That first podcast also contained a second evidence that falsifies materialist conceptions of mind – split-brain surgeries.

This second article from Mind Matters explains:

> Split-brain surgery, which gives even Dr. Egnor, who has done it, “the chills,” is a radical effort to control epileptic seizures that jump through the corpus callosum — the huge bundle of nerve fibres that connects the two halves of the brain. By the 1940s, surgeons realized that if they just cut the bundle, severing the connection, the seizure was confined to one side. That cut down on life-destroying seizures. But was the patient then living with two brains that mirror each other but can’t communicate?
>
> Neuroscience pioneer Roger Sperry (1913–1994) won a Nobel Prize for his clever experiments on split-brain subjects, showing what they could and couldn’t do. But, Egnor notes, the big story is the one that receives very little emphasis: “You could cut the brain in half and practically nothing happens.”
>
> […]McGill University neuroscience researcher Justine Sergent (1950–1994) picked up on this in the 1980s and decided to focus on it:
>
> *Egnor:* … there are ways that you could present a picture, like an image to the right hemisphere and a picture, an image to the left hemisphere. And if you’re a split brain patient, these hemispheres can’t talk to one another. They don’t communicate.
>
> So she would present, for example, an arrow pointing up to the right hemisphere, and an arrow pointing sideways to the left hemisphere. She would ask the person who had had the split brain surgery, are the arrows pointing in the same direction or different directions?
>
> And the split brain patients almost always got it right. They almost always could tell, they could compare something that the right hemisphere sees with something that the left hemisphere sees.
>
> *The problem is that there was no part of their brains that saw both things.* And so how did they know? How do you compare things when no part of your brain sees both things?

So, a couple of pieces of scientific evidence that contradict the materialist / physicalist view of mind. Do you think I should add this argument to my list of 6 scientific evidences for a Creator / Designer? It might be fun to have a discussion with Grok AI about this and see if it is good enough to add to my list of 6.

Anyway, here is the podcast. And there is also a transcript for it, if you prefer to listen. If you like that one, you can listen to all three in the series, but the first one was the best, and the second was good.

# What are the historical arguments for the post-mortem appearances of Jesus?

**Wintery Knight** · 13 May 2025 · Archived copy · Original

Eric Chabot of Ratio Christi Ohio State University has a *great* post up about the post-mortem appearances of Jesus.

The post contains:

- a list of the post-mortem resurrection appearances
- quotations by skeptical historians about those appearances
- alternative naturalistic explanations of the appearances
- responses to those naturalistic explanations

Although there is a lot of research that went into the post, it's not very long to read. The majority of scholars accept the appearances, because they appear in *so many different sources* and because some of those sources are very early, especially Paul's statement of the early Christian creed in 1 Corinthians 15:3-7, which is from about 1-3 years after Jesus was executed by the Romans. Eric's post lists out some of the skeptical scholars who the appearances, and you can see how they allude to the historical criteria that they are using. (If you want to sort of double-check the details, I blogged about how historians investigate ancient sources before)

Let's take a look at some of the names you might recognize:

> **E.P. Sanders:**
>
> That Jesus' followers (and later Paul) had resurrection experiences is, in my judgment, a fact. What the reality was that gave rise to the experiences I do not know. "I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: 'I saw him first!' 'No! I did.' Paul's tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus' followers suffered mass hysteria. But mass hysteria does not explain the other traditions." "Finally we know that after his death his followers experienced what they described as the 'resurrection': the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it."[1]
>
> **Bart Ehrman:**
>
> It is a historical fact that some of Jesus' followers came to believe that he had been raised from the dead soon after his execution. We know some of these believers by name; one of them, the apostle Paul, claims quite plainly to have seen Jesus alive after his death. Thus, for the historian, Christianity begins after the death of Jesus, not with the resurrection itself, but with the belief in the resurrection.[2]
>
> **Ehrman also says:**
>
> We can say with complete certainty that some of his disciples at some later time insisted that . . . he soon appeared to them, convincing them that he had been raised from the dead.[3]
>
> **Ehrman also goes onto say:**
>
> Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus' resurrection, since this is a matter of public record.[4]
>
> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don't doubt at all that some disciples claimed this. We don't have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don't think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19).[5]

> **Marcus Borg**
>
> The historical ground of Easter is very simple: the followers of Jesus, both then and now, continued to experience Jesus as a living reality after his death. In the early Christian community, these experiences included visions or apparitions of Jesus. [8]

The references to Paul are because of the early creed he records in 1 Corinthians 15:3-7, and his conversations with the other eyewitnesses in Galatians. Eric has another post where he goes over that early creed, and it is something that every Christian should know about. It's really kind of surprising that you never hear a sermon on that early creed in church, where they generally sort of assume that you believe everything in the Bible on faith. But skeptical historians don't believe in the post-mortem appearances by faith – they believe it (in part) because of 1 Corinthians 15:3-7.

If you want to see a Christian scholar make the case for the resurrection appearances in a debate, then here is a post I wrote with the video, audio and summary of the William Lane Craig vs James Crossley debate on the resurrection.

# Peter Williams lectures on the historical reliability of the gospels

**Wintery Knight** · 14 May 2025 · Archived copy · Original

This is a lecture I found from British historian Dr. Peter J. Williams.

Here's the main lecture: (54 minutes)

And here's the Q&A: (9 minutes)

About Peter Williams:

> **Peter J. Williams** is the Warden (CEO) of Tyndale House and a member of the Faculty of Divinity in the University of Cambridge. He received his MA, MPhil and PhD, in the study of ancient languages related to the Bible from Cambridge University. After his PhD, he was on staff in the Faculty of Divinity, Cambridge University (1997–1998), and thereafter taught Hebrew and Old Testament there as Affiliated Lecturer in Hebrew and Aramaic and as Research Fellow in Old Testament at Tyndale House, Cambridge (1998–2003). From 2003 to 2007 he was on the faculty of the University of Aberdeen, Scotland, where he became a Senior Lecturer in New Testament and Deputy Head of the School of Divinity, History and Philosophy. In July 2007 he became the youngest Warden in the history of Tyndale House. He also retains his position as an honorary Senior Lecturer in Biblical Studies at the University of Aberdeen.

Summary of the lecture:

- What if the stories about Jesus are legendary?
- were the gospels transmitted accurately?
- were the gospels written in the same place as where the events happened?
- do the gospel authors know the customs and locations where the events happened?
- do the gospels use the right names for the time and place where the events took place?
- do the gospels disambiguate people's names depending on how common those names were?
- how do the New Testament gospels compare to the later gnostic gospels?
- how do the gospels refer to the main character? How non-Biblical sources refer to Jesus?
- how does Jesus refer to himself in the gospels? do the later Christians refer to him that way?
- how does Jesus teach? do later Christians teach the same way?
- why didn't Jesus say anything about early conflicts in the church (the Gentiles, church services)?
- did the writers of the gospels know the places where the events took place?
- how many places are named in the gospels? how about in the later gnostic gospels?
- are the botanical details mentioned in the gospels accurate? how about the later gnostic gospels?

And here are the questions from the audience:

- how what about the discrepancies in the resurrection narratives that Bart Ehrman is obsessed with?
- what do you think of the new 2011 NIV translation (Peter is on the ESV translation committee)?
- how did untrained, ordinary men produce complex, sophisticated documents like the gospels?
- is oral tradition a strong enough bridge between the events and the writers who interviewed the eyewitnesses?
- what does the name John mean?
- why did the gospel writers wait so long before writing their gospels?
- do you think that Matthew and Luke used a hypothetical source which historians call "Q"?
- which gospel do critical historians trust the least and why?

I really enjoyed watching this lecture. He's getting some of this material from Richard Bauckham's awesome book "Jesus and the Eyewitnesses", so if you aren't familiar with it, you can get an idea of what's in it. Peter Williams is a lot of fun to listen to – an excellent speaker.

And you can listen to the Peter Williams vs Bart Ehrman debate. That link contains a link to the audio of the debate as well as my snarky summary. It's very snarky.

# Are Mormon doctrines supported by philosophy, science and history?

**Wintery Knight** · 15 May 2025 · Archived copy · Original

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

**The scientific evidence**

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end."
> ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo*."
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

**Philosophical problems**

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

**The historical evidence**

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years

> too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

# New survey: high school boys twice as likely to be conservative than girls

**Wintery Knight** · 16 May 2025 · Archived copy · Original

Did you know that women tend to be further to the left than men? According to surveys, women are more leftist than men on abortion, same-sex marriage, and a host of other policies. I'll show you a few surveys below. But even more interesting is that there is a link between support for leftist policies, and higher mental illness. Let's take a look at it.

First, here is an article from The Hill:

> Forty-four percent of young women counted themselves liberal in 2021, compared to 25 percent of young men, according to Gallup Poll data analyzed by the Survey Center on American Life. The gender gap is the largest recorded in 24 years of polling. The finding culminates years of rising liberalism among women ages 18 to 29, without any increase among their male peers.

That article is a bit old, here's a new one from this week in The Post Millennial:

> In annual surveys over the last few years, data pulled from Monitoring the Future has shown that about a quarter of high school seniors identify as conservative or very conservative. Only 13 percent of the 12th grade boys identify as liberal.
>
> […]The graph excludes moderate students, but of those high school seniors that do identify politically, around 65 percent of boys were conservative while only around 31 percent of girls identified that way.

According to surveys, young women are also more likely to support abortion under any circumstances (40 to 27) and more likely to support same-sex marriage than men.

I don't support abortion because I favor the rights of unborn babies over the happiness of adults. I don't support same-sex marriage because studies show children do better when they are raised by a mother and a father. And I think that's why most of these men are with me, they follow that same reasoning, and side with the children against the adults.

I thought this part of the article was interesting:

> As one Politico analyst put it, "Democrats have a masculinity problem." Citing trends among black and Latino voters, the analyst pointed out that even in minority communities that have voted majority Democrat, men have been turning to the Republican party at higher rates than women.
>
> Some conservative figures such as Jordan Peterson and Dennis Prager (through PragerU) have millions of followers on YouTube, a platform where the users are majority male.
>
> In addition, one of the more popular conservative political podcasts, The Ben Shapiro Show, has an audience that skews overwhelmingly male at 86 percent. The audience also skews younger, 18-44, in comparison to Fox's former show with Tucker Carlson, 25-54, which skews slightly female at 53 percent.

This is good news. Boys are finding themselves role models who they see as "strong". And those new role models are conservative. These stronger role models champion truth, and they make moral judgements. Even if it hurts other people's feelings.

Let's go on to the second point. These leftist policies are having a bad effect on young women's mental health.

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

I found an interesting article in the Wall Street Journal that talked about how one leftist policy concern (global warming alarmism) is tied to higher rates of mental illness.

It says:

> A study in 2021 of 16- to 25-year-olds in 10 countries including the U.S. reported that 59% were very or extremely worried about climate change, and 84% were at least moderately worried. Forty-five percent claimed they were so worried that they struggled to function on a daily basis, the definition of an anxiety disorder.

The study found that the mental illness was more common in younger people:

> Climate anxiety and dissatisfaction with government responses are widespread in children and young people in countries across the world and impact their daily functioning.

So now we are looking at a direct link between the policies of the left, and the lower mental health of the left. And we know that more women than men are on the left. And we see more mental illness among women.  Interesting, isn't it?

And this has consequences. Leftist women are noticing that men are more conservative than they are, and it's affecting their dating:

The marriage rate is also declining. Could this decline in marriage be related to the increase in leftist women, and all the related mental illnesses that leftist women have? Does it make sense for a conservative man to enter a relationship where he pays all the costs and bears all the risks, but all the decisions are being made by a leftist woman? It's dangerous for a man to do that.

Consider that the divorce rate is very high right now, and divorce takes away a man's money, his access to his kids, and his freedom. Women initiate 69% of divorces. College-educated women – who are especially leftist – initiate 90% of divorces. This high divorce rate cannot be blamed on men, because the divorce rate of lesbians is the highest of all. No man to blame in that situation.

Why would a man sign up to be controlled by feminist institutions, like the divorce courts? Men are not interested in projects where they have to pay for everything, but someone else is making the decisions. Especially if they get blamed when things go wrong.

Facing all of these risks, a man would have to be crazy to even talk to a leftist woman – much less date her. Unfortunately, we aren't making enough young conservative women for these conservative young men to marry. And so, the marriage rate is declining. Young women today are not as conservative as previous generations.

I know a lot of people today are worried about young men falling under the influence of bad role models. But the surveys show that boys tend to have the right role models, and the right political views. So, we need to work on making young women more conservative.

# William Lane Craig debates atheist Lawrence Krauss: Does God Exist?

**Wintery Knight** · 18 May 2025 · Archived copy · Original

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

**Summary**

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

**Dr. Craig's opening speech.** (4:50)

1. The kalam cosmological argument:
   - God is the best explanation of the origin of the universe
   - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
   - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning
   - Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
   - Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
   - Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
   - A mind is the best explanation for the origin of the universe
2. The unreasonable effectiveness of mathematics:
   - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
   - Mathematical objects can either be abstract objects or useful fiction
   - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
   - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
   - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
   - These constants and quantities have to be set within a narrow range in order to permit intelligent life
   - There are three explanations for this observation: law, chance or design
   - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter

- Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
- We do not observe what the world ensemble hypothesis predicts that we should observe
- Design is the best explanation for finely-tuned constants and quantities

4. The existence of objective moral values and duties
   - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
   - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
   - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
   - The best explanation for the existence of objective moral values and duties is that God exists
5. The historicity of the resurrection of Jesus
   - There are three widely-accepted facts that are best explained by the resurrection hypothesis
   - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
   - Naturalistic attempts to explain these 3 boilerplate facts fail
   - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
   - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

**Dr. Krauss' opening speech.** (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I
   - There have been lots of different gods created by people through history
   - We've gotten rid of all of them by understanding how the universe works by doing science
   - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
   - Newtonian physics refutes the idea that angels push planets around
   - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)
   - Biochemistry hasn't explained how life originated, but we will have the solution soon
   - Physics shows us that matter can be created and destroyed without need a God
   - Physics shows us that universes can be created and destroyed "no problem"
3. Religious pluralism II
   - Since we have been able to disprove all the gods we've invented, why hang on to the last one
   - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
   - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
   - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
   - Peasants had a very low level of knowledge about the world and they believed in God
   - But our level of knowledge has increased over time, so we shouldn't believe in God now
   - Peasants thought that the Earth orbited the Sun, but this is now known to be false

- The Scriptures said that the Earth orbited the Sun, but now we know that's false from science

7. Christianity plagiarizes from other religions I
   - There is nothing new or special about Jesus
   - He's just as unpleasant as all the other gods
   - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
   - I'll bet most Catholics don't really believe in transubstantiation
   - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
   - Dionysus, Osiris, etc.
10. There is no evidence for the resurrection
    - The stories about Jesus were written "decades or hundreds of years after the fact"
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That's like saying that all alien abductions experts agree that alien abductions happened
    - It's unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume's argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn't demand that we trust him, esteem him and consider his character when we make decisions
    - The atoning death of Jesus for the sins of the world also makes no sense
14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who "uses the exact same arguments" that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms "is that morally wrong? I can't say it is frankly" (37:24)
16. Dr. Craig is irrational
    - "I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan"
    - "Any argument that validates God is reasonable to him"
    - "And any argument against it is not only unreasonable but wrong and worth distorting"

    - “Because it must be wrong – he’s decided the answer in advance”
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - “So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK”
    - It’s not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn’t work in all cases
    - “Dr. Craig is so convinced that these arguments must be true that he won’t listen to the fact that they’re not”
20. Darwinian evolution explains the fine-tuning
    - “Life was fine tuned – we got rid of it with Darwin”
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - “We get back aches” therefore “This argument that [the universe] is fine-tuned for life is nonsense”
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments
    - Look, you can construct arguments that are clearly wrong
    - Premise 1: “All mammals exhibit homosexual behavior”
    - Premise 2: “William Lane Craig is a mammal”
    - Seems to be saying that logical arguments can prove false things “it’s nonsense”
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig’s faith is so strong that it causes him to distort what this group said

**Discussion:** (44:35)

I will not be summarizing everything that was said, just a few main points.
***The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see.*** Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can’t even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don’t work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don’t have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) “All the evidence suggests that the universe had a beginning but WE DON’T KNOW!!!!!!!” (raising his voice)

- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this: (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

**Audience Q and A:** (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: "I'm going to come to the defense of philosophy for the first time". Craig: "That's amazing!" Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

# Which side of the abortion rights debate is backed by scientific evidence?

**Wintery Knight** · 18 May 2025 · Archived copy · Original

Once upon a time I didn't know much about the case for abortion rights or the case for the right to life of unborn children. My reason for not reading much about it is that I thought that it was kind of a subjective issue. But, I started a project to read 1-2 books on every conceivable topic, including one on abortion. Lo and behold, it turned out that one side did have the backing of science.

This article from The Public Discourse explains: (links removed)

> The following are typical examples—only three of the many, many we could cite. These are from standard texts by embryologists, developmental biologists, and microbiologists:
>
> "Human life begins at fertilization, the process during which a male gamete or sperm unites with a female gamete or oocyte (ovum) to form a single cell called a zygote. This highly specialized, totipotent cell marked the beginning of each of us as a unique individual." "A zygote is the beginning of a new human being (i.e., an embryo)." Keith L. Moore, The Developing Human: Clinically Oriented Embryology, 7th edition.
>
> "Fertilization is the process by which male and female haploid gametes (sperm and egg) unite to produce a genetically distinct individual." Signorelli et al., Kinases, phosphatases and proteases during sperm capacitation, Cell Tissue Research.
>
> "Although life is a continuous process, fertilization (which, incidentally, is not a 'moment') is a critical landmark because, under ordinary circumstances, a new, genetically distinct human organism is formed when the chromosomes of the male and female pronuclei blend in the oocyte" (emphasis added; Ronan O'Rahilly and Fabiola Mueller, Human Embryology and Teratology, 3rd edition.

The genetically distinct part is key – this unborn child is has a different DNA signature (a human signature) than either the mother or the father. Nothing will be added or taken away from this new signature as the unborn child grows. It never changes.

More:

> These authorities all agree because the underlying science is clear. At fertilization—or, more precisely, when the sperm (a male sex cell) fuses with the oocyte (a female sex cell, more commonly referred to as an egg)—each of them ceases to be, and a new entity, one that is both genetically and functionally distinct from either parent, is generated. This new entity, initially a single totipotent cell, then divides into two cells, then (asynchronously) three, then four, eight, and so on, enclosed all the while by a membrane inherited from the oocyte (the zona pellucida), which then dissolves during implantation, allowing for continued growth in the direction of maturity as a member of the species. Even prior to implantation, however, these cells and membrane function as parts of a whole that regularly and predictably develops into the more mature stages of a complex human body.
>
> How do we know that the result of sperm-oocyte fusion is a new entity, rather than a continuation of the oocyte? We know that a new entity exists because, once the sperm penetrates the oocyte, a completely new trajectory of biological development commences. The biological activity of an oocyte is directed toward successful fertilization; the biological activity of sperm is directed toward penetration of an oocyte. The biological activity of the new entity that results when sperm and oocyte fuse, however, is directed toward nothing less than the development of a mature human organism, distinct from either parent. Further, this new entity's activities are directed not by instructions from the mother's body, as some people wrongly suppose, but by its own unique set of instructions, especially the blueprint for development contained in its unique genetic

> material. The mother's body recognizes the zygote and then the embryo as an entity distinct from itself. In fact, the embryo must send out chemical signals to prevent the mother's immune system from attacking it. The embryo also emits chemical signals that induce changes in the lining of the mother's uterus to enable successful implantation.
>
> If this embryo is provided a suitable environment, nutrition, and protection from deliberate attack, serious injury, or disease, it will develop to the mature stage of a human organism. Thus, from the zygote stage onward this distinct, new organism has all of the internal resources—in its genetic and epigenetic structure—needed to develop itself (or, rather, himself or herself, since in the human sex is determined from the very beginning) to the mature stage of a human organism. At no point after fertilization—implantation, gastrulation, birth, puberty, etc.—does a fundamental change in biological trajectory occur. These subsequent stages of development are simply the unfolding of the zygote's inherent dynamism toward human organismal maturity. This shows that the zygote already is a human organism—a member of the species Homo sapiens—albeit at an early stage of his or her development.

So, since I like to win arguments with science, I just took the side of the debate that was backed by science. I really hate to lose debates, you know. I really like to cite scientific evidence when I'm debating.

The crime of abortion, it seems to me, is that you are depriving a human being of his or her future, because of your convenience right now. Human beings don't have the right to take away the futures of other human beings because they want to be unburdened by the results of their own actions. We shouldn't resort to violence in order to escape responsibility for our own actions. In almost every case, (except to save the life of the mother), killing the unborn child isn't justified. It's actually very scary to me that anyone would think that hurting other people was a reasonable response to one's own diminished happiness. How did we ever get to a place in society when people don't think that taking responsibility to care for the unborn child is morally better than killing the unborn child? It's a baby for goodness sake. We ought to be serious about setting up our lives and controlling ourselves so that we never hurt an unborn child.

# Desert Rose is really enjoying her review copy of “The Immortal Mind”

**Wintery Knight** · 19 May 2025 · Archived copy · Original

Desert Rose got a review copy of “The Immortal Mind“, and she loves it. Her mom loves it. And two of her neightbors love it, too. It’s made a huge splash. Although the material is scientific evidence, it’s written in a way that non-scientists can understand. And these are interesting topics to talk about with skeptics, atheists, and non-Christians. Let’s take a look at what’s in the book.

The book is about what the best explanation is for our mental experiences: consciousness, abstract thought, and free will. Basically, what is the “mind”? One view is that your mind is just your physical brain. That’s called “materialism”. Then there is “dualism”, where you are your mind, and you interact with your physical body. Which way does the evidence point?

Here’s the description of the new book:

> Many scientists and doctors believe that there is no such thing as the soul. That there is no part of us that persists beyond death. We are not spiritual in any respect. We are made up of cells and tissue, and completely controlled by a material organ in our heads: the brain.
>
> In this groundbreaking book, Dr. Michael Egnor, practicing neurosurgeon, neuroscientist and Professor of Neurosurgery at Stony Brook University, makes the case—based on 40 years of practice and over 7,000 brain surgeries—that science has gotten it all wrong. The human brain is incredible, mysterious, and powerful. But it’s not what makes us who we are. The soul does that.
>
> Drawing on the most important research studies in neuroscience, Dr. Egnor presents evidence that the brain alone does not explain the mind. He explores, using modern neuroscience and his vast surgical experience, how inside every damaged brain there is a thinking, feeling person with a spiritual soul that transcends the brain. He argues that scientists can locate the parts of the brain that control the body or sensations or emotions, but they can’t find the seat of reason or free will. He uses fascinating case studies to show how cutting-edge brain surgery on patients who are awake, how research on conjoined twins who share parts of their brains, on patients in deep coma who are still able to communicate with people around them, on near-death experiences, and on artificial intelligence all make a scientific case for the existence of the spiritual human soul.
>
> Engaging, thought-provoking, and groundbreaking, The Immortal Mind shows here that some aspect of who we are is spiritual and immortal, transcending the physical body. Using science, he proves the existence of the human soul.

You can pre-order the book here.

I know that there are great arguments for the soul in philosophy, like persistent identity over time, or intentionality. But somehow, I just feel that it is more persuasive to talk about the scientific evidence, and that’s what this book does.

When it comes to Creator and Designer, I have 6 arguments that use scientific evidence:

1. origin of the universe
2. cosmic fine-tuning
3. origin of life
4. fossil record
5. habitability
6. molecular machines

What I'd really like is to get a seventh argument added to my list. Another argument for falsifying naturalism / materialism that is based on scientific evidence. Run up the score! 7-0. Sounds like a football game now.

There is a GREAT pre-order goody if you order the book before May 31st. You get a free digital copy of "Minding the Brain". It has articles by people you might recognize: Taliaferro, Menuge, Farris, Egnor, Marks, Gordon, Habermas! Lots of different topics by different authors, kind of like "The Comprehensive Guide to Science and Faith", which is one of my favorite books.

I already bought Minding the Brain on Kindle, but if you like making an argument for the the soul, then it's a great collection of chapters from some of the best scholars, and the digital version is free if you pre-order "The Immortal Mind". Let me know in the comments if you have ever done prep to make an argument for the soul.

# Republicans want to repeal law used to persecute pro-life Christians

**Wintery Knight** · 20 May 2025 · Archived copy · Original

One of the worst things about secular leftism is their denial of human rights. For a secular leftist, it's so tempting to want to collect money from taxpayers, then use that money to punish taxpayers who disagree with them. One of the ways that this happened during the Biden regime is when the government used heavily-armed police to pre-dawn raid the homes of Christians.

But the House Republicans are going to do something about it.

This Daily Wire article explains:

> The House of Representatives will take steps towards repealing the Freedom of Access to Clinic Entrances (FACE) Act this week, a law repeatedly weaponized against pro-life activists by President Joe Biden's administration.
>
> Lawmakers on Wednesday will mark up H.R. 589, the FACE Act Repeal Act of 2025, which Texas Congressman Chip Roy introduced in January. The bill "repeals provisions of federal criminal law that prohibit conduct intended to injure, intimidate, or interfere with persons who are seeking to (1) obtain or provide reproductive health services, or (2) exercise their right of religious freedom at a place of religious worship."
>
> Senator Mike Lee of Utah introduced the Senate version of the bill in January as well.

If you don't know the names "Chip Roy" and "Mike Lee", you should. Roy is one of the most conservative Congressman in the House, and an early backer of Ron DeSantis in 2024. DeSantis was the mst conservative candidate for president running in 2024. Lee is one of the most conservative Senators in the Senate. Roy and Lee were clearly not happy with the Biden administration using government to punish people who disagree with the Democrat party.

The article talks about that:

> The move comes after years of work from Roy and his team, who aggressively argued in favor of repealing the FACE Act while the Biden Justice Department used the law to imprison pro-life activist after pro-life activist from 2022 to 2024, often pairing FACE with a felony conspiracy charge to lock peaceful pro-life protesters. President Donald Trump pardoned these imprisoned activists earlier this year.

I blogged earlier about how well Trump has performed for the pro-lifers who voted for him. Pardoning the pro-lifers was one of the most significant actions he took on behalf of his pro-life voters.

It might be worth reviewing the kind of person that Biden appointed to persecute Christians for their not-Democrat views.

This article from Daily Signal tells us all about Kristen Clarke:

> Clarke served as president and executive director of the Lawyers' Committee for Civil Rights Under Law, a left-wing activist group. She also worked for five years at the NAACP Legal Defense Fund, a leftist group that links abortion to "racial justice." Both groups have frequently accessed the Biden White House and received large cash infusions from the Left's dark money network… She cited the far-left smear factory the Southern Poverty Law Center in condemning Alliance Defending Freedom, a nonprofit pro-life and religious freedom law firm, as a "hate group."
>
> […]She said that those protesting Dr. Anthony Fauci, the controversial COVID-19 czar and now-retired head

> of the National Institute for Allergy and Infectious Diseases, should be “publicly identified and named, barred from treatment at any public hospital if/when they fall ill and denied coverage under their insurance.”
>
> […]Clarke had been arrested for attacking her then-husband, Reginald Avery, with a knife, deeply slicing one of his fingers to the bone in 2006. The pair finalized their divorce in 2009. Clarke had the arrest expunged from her record, and during her Senate confirmation, she denied ever having been arrested or having been accused of committing a violent crime. Clarke admitted to her failure to disclose that arrest, and Sen. Mike Lee, R-Utah, called for her to resign.

That’s who Trump-supporters were really voting against, when they voted for Trump in 2024. Trump-supporters voters to stop the persecution of Christians by the government.

What about the people who dislike Trump, and can’t understand why Christians would vote for him? Well, they probably don’t know who Chip Roy, Mike Lee or Kristen Clarke are. They know about Trump, because their TVs told them to hate Trump. But Christians and conservatives don’t get their news from watching TV. We monitored stories like the persecution of pro-life Christians, and we voted to oppose the weaponization of Big Government against Christians. We voted for the results we wanted. We did not vote to have happy feelings or to virtue signal.

# Colorado parents can't raise their kids according to their own values

**Wintery Knight** · 21 May 2025 · Archived copy · Original

I waited to blog on Colorado's new bill that punishes parents who raise their their kids according to Christian values. Now that it's passed, and we have the final version, let's find out what's in it. Then I'm going to ask why Christians and / or conservatives are content to live their lives – and pay their taxes – in states that trample on their religion and values. And I think I know the answer.

First, here's the article from the Daily Caller, written by Mary Rooke, one of my favorite columnists:

> Under the guise of "anti-discrimination" and adding legal protection for so-called transgender individuals, Colorado lawmakers adopted into law House Bill 25-1312, "Legal Protections for Transgender Individuals," which may violate the First and Fourteenth Amendments.

Previously, I blogged on a new study that listed 7 different risks to children who undergo so-called "gender-affirming care". I asked everyone to remember the top two: infertility and damage to bones. I'm very pleased with myself that I was able to name those two risks again today, while writing this post! And without any help! That's why I write these blog posts. In case you need a refresher, here was the list in order of risk:

1. Infertility
2. Bone Health Deterioration
3. Cardiovascular Complications
4. Sexual Dysfunction
5. Regret/Detransition
6. Mental Health Concerns
7. Cancer Risk

But the Daily Caller article explains why it's apparently a crime for parents to tell their children about this study, and try to warn them about the need to make wise decisions.

It says:

> This bill puts the government and schools in charge of the welfare of children by requiring that the courts consider whether parents committed cardinal sins of transgender ideology like deadnaming or misgendering, which is now considered "coercive control" under the law. It also prevents the court from removing a child from a parent for allowing the child to receive so-called "gender-affirming care services."

And:

> HB 25-1312 also changes the state law to include deadnaming and misgendering as discriminatory acts. This makes using biological pronouns and birth names in a public place a discriminatory practice, which could mean fines starting at $5,000 per violation. It requires teachers to use "chosen" names and pronouns, and that school districts provide clothes and other amenities for these confused children, even if the parents disapprove.

It's important to note that it's not just disrespecting the will of the parents – who are the taxpayers that pay the salaries of the perverts. It's that they want to *punish* the parents for disagreeing with Democrats on this issue. So, parents are good enough to pay taxes to the secular leftists, but not good enough to raise their own kids. They're just slaves, in effect. And kings and queens don't care what their slaves think about morality. Slaves just work and pay

taxes.

One more quote from Mary, then I will give my opinion:

> The left wants you to believe that the government has the right to sever the parent-child relationship by ending the importance of parental authority. It also wants you to believe in a false reality that sex is not immutable by forcing even non-parents to use fake names and pronouns. Their ultimate goal is to get to children. They want them so badly, and you, as their parent, stand in the way.
>
> We have to fix this problem. Not only should this law be struck down as unconstitutional, but any state official who voted for or otherwise signed their name to it should face serious repercussions at the ballot box. We have to end the left's control of our state and local governments, or these laws will continue to pass.

These are good thoughts, but I don't think we need to reform any state or city laws. We just need to have the courage to leave blue cities and blue states. And I know why Christians don't do it, too.

Christians don't leave blue states for two reasons. Reason 1 is because they aren't living lives that are inconvenced by these laws. For one reason or another, it's not going to bother their plans at all if the secular left is taking their money and making decisions to limit their freedom. Probably because their plan isn't Christian at all. There's a lot of people who claim the label who have no plan.

The second reason is that too many Christians marry non-Christian spouses. These are spouses who think that Christianity is supposed to make them popular and happy. They don't like to think about news or laws or anything else that will make them feel bad. And this isn't a situation where the real Christian is the victim of a fake Christian spouse. People CHOOSE who they marry. If your "Christian" spouse likes to live in a blue state, then it's YOUR fault for marrying that person. There is no use complaining about the state transing your kid if you chose to marry a secular leftist. And don't complain about family courts in a blue state, when your property is plundered for the rest of your life because of an angry secular leftist judge.

Don't pay taxes in blue states. Move to a red state. That's the best way to change your blue state to a red state. When you leave, your tax money leaves with you, and that's the only thing that will stop the abuse of Christian parents by the secular left. They understand money – they understand when the money leaves their state.

# Education worker threatened for showing books critical of transgenderism

**Wintery Knight** · 22 May 2025 · Archived copy · Original

Many women today, including "Christian" feminists, complain about the decline of traditional male behaviors. They like the male behaviors that benefit women, like protecting and providing, but they strongly oppose other male behaviors: spiritual and moral leading. They only want "servant leadership" (non-judgmental ATM). They don't want leadership that fights lies and evil.

Here's an example of how society – under the influence of feminism – responds to traditional male spiritual and moral leadership, as reported in Daily Wire:

> An Oregon education worker is suing his district, claiming it threatened to fire him for displaying several "transphobic" books, including Daily Wire host Matt Walsh's children's book "Johnny the Walrus."
>
> Rod Theis has worked as an education specialist at the InterMountain Education Service District outside of Portland since 2008. In his office, Theis had displayed several children's books, including two titled "He is He" and "She is She" as well as "Johnny the Walrus," all books with messages rejecting transgender ideology.
>
> A school employee saw some of the books and complained that they were "transphobic," even filing a "bias incident" complaint with the district, the lawsuit says.
>
> In response, the district opened an investigation and ultimately "ordered him to remove them and threatened him with discipline simply because it disagreed with the books' content," Theis' lawsuit against the district, which he filed Wednesday, claims.
>
> The district said the books were a "hostile expression of animus toward another person relating to their actual or perceived gender identity" and warned him that "further conduct of this nature" may result in discipline, including termination, the suit says.
>
> Meanwhile, the district was allegedly allowing other employees to decorate in support of transgender ideology as well as "Black Lives Matter" and support for the teachers' union.

The plaintiff is being represented by the Alliance Defending Freedom, which is who I would pick if I were in his shoes.

And the ADF says this in their press release:

> The district has created and implemented a speech policy that forbids employees from expressing a biological view of sex but permits employees to express viewpoints that a person's subjective identity determines whether a person is male or female, not a person's sex. The district's censorship of Theis' message, and the speech policy on which that censorship was based, violate the First and Fourteenth Amendments.

According to the complaint, the plaintiff:

- is a Licensed Clinical Social Worker employed by IMESD as an Education Specialist
- is a professing Christian who bases his beliefs on the Bible and strives to live out his Christian faith at work and in the community
- has sincerely held religious beliefs govern his views about all aspects of life, including human nature, sex, and gender
- is motivated by his sincerely held religious beliefs to speak on many topics from a Christian worldview
- believes that all people should be treated with dignity and respect, that God created every person male or female, and that people should accept their God-given sex and not seek to reject or change it

So let me comment about this.

I have a very different view of Christianity and male leadership than virtually all Christians. Basically, I disagree with “servant leadership”, and that’s the dominant view of how men should lead today.

The standard cultural view of Christianity is “a set of rules that forces men to be nice so that people will like us so that we will feel good”. This is how most Christians understand Christianity today. For them, it’s not about making truth claims, especially ones that offend non-Christians. And it’s not about taking moral stands, because that is mean and judgmental, and makes people not like us. The standard view is that God wants people to like us, and he wants us to feel good. And that’s why it’s considered normal and natural to respond to a Christian man’s leadership on moral and spiritual issues with censorship and coercion. Everyone is so sure that Christianity is a tool for making men be “nice” that they are sure that Christian men who are not “nice” are wrong, and need to be punished.

My view of Christianity is not the standard cultural view. My view is the old view – namely, that men should be allowed to put up books in their offices to indicate that they oppose transing children, even if it is seen by feelings-based people as “mean” and “judgmental”.

Men have to be free to fight lies and evil. And if it is too difficult for a good man to do while married then men have to not marry. And if it is too difficult for a good man to do outside of a male-dominated profession, then men have to work in a male-dominated profession. And if it’s too difficult for a good man to do because he’s born in a feelings-dominated country, then the man has to immigrate to a better country. The point is that men should not put himself in an environment where the feelings-based people are going to rule over him.

C.S. Lewis wrote a wonderful essay a while back called “Men Without Chests”. It appears in the book “The Abolition of Man” which is one of his best works. In the essay, he explains how people expect men to behave honorably and self-sacrificially, even after they have removed the metaphysical underpinnings of those convictions. This case shows how they did it. They feelings-based people punish Christian men every time to speak out about things that God wants men to speak out about.

So, think about the tyranny of “nice”, and the toxicity of “empathy” when you wonder why men are not performing according to your expectations. “Why don’t men give us all their money and stop judging our bad behaviors?” It’s because good men don’t get involved in situations where they will be punished for leading on moral and spiritual issues. We are not here to be your servants. We are here to lead you.

When you emasculate good men out of their natural roles of moral and spiritual leadership, you don’t get the non-judgmental “servant leadership” ATM that you wanted. You get *nothing* – because good men decline to be reduced to people-pleasing slaves. Good men will find some other way to serve Boss that doesn’t put us under the control of feelings-based people. Every decision I made in my education, career and finances was to escape the coercion of the “be nice, be liked, feel good” crowd. I already HAVE a Boss.

# Study: virgins have happiest marriages, more sex partners means more unhappiness

**Wintery Knight** · 23 May 2025 · Archived copy · Original

Although we live in a culture that is dominated by the thoughts and opinions of secular leftists, science provides useful information for those who want defend Biblical morality. Consider the issue of sexuality and marriage. Secular leftists claim that sex outside of marriage is natural, and produces happiness. Bible believing Christians and Jews say chastity is best. Who is right?

Here is the latest study authored by Dr. Nicholas Wolfinger, a sociologist at the University of Utah. His previous book on relationships was published by Oxford University Press. In his analysis of the data, Wolfinger controlled for divorce rates, religiosity, and socioeconomic status.

Here's the most important graph:

Study: virgins have the happiest marriages, more partners means less happiness

Other factors that increased marital happiness: having a 4-year college degree (5%), having a salary > 78K (5%), regular church attendance (6%). Notice that women are more dissatisfied with marriage (in general) than men are, and they tend to blame the spouse they freely chose for that unhappiness.

The Federalist also reported on previous research relevant to this study:

> Psychologists Galena K. Rhoades and Scott M. Stanley found that women who have had sex with someone other than their husband report statistically significant drops in marital quality over those who don't. A 2004 study by sociologist Jay Teachman showed that intimate premarital activities such as cohabitation and intercourse increased the rate of marital dissolution by anywhere between 28 and 109 percent, depending on the activity.

Wolfinger also noted in a previous study that only 5% of women were virgins when they married.

Wolfinger noted that a possible explanation for the link between promiscuity and unhappiness is that people look

back on their past partners and compare their spouse unfavorably to them. This is especially the case with women. My concern about this is that feminism has taught women to try to increase their social standing by having hook-up sex with attractive bad boys. If those women ever marry, they do it when they are older, less fertile, and less attractive. The husband they eventually "settle" for will (in their minds) always compare unfavorably to the hot bad boys they had sex with when they were younger and prettier. This, I believe, is what leads to their unhappiness with the man they chose to marry.

**More partners also means more marital instability**

In a previous post, I blogged about several studies linking virginity to marital stability. Couples who don't have sex before marriage, or even who delayed it, reported better communication, higher satisfaction, better quality sex, and a lower chance of divorce.

Men ought to be aware of this research when they are choosing a spouse. Women initiate 69% of divorces, and the most common reason given is "unhappiness". Well, now we know what's causing that unhappiness – a high number of sexual partners prior to marrying. Smart men should prefer a virgin, for the increased happiness and increased stability. A large number of past sexual partners teaches women that relationships are engines for them to be happy, not commitments that are permanent and exclusive. They'll have internalized the view that relationships are not commitments to invest in self-sacrificially. The pattern will be: "if it doesn't make me feel happy right now, then it should be ended". It will be seen as the man's fault that she is unhappy, even if the study I talked about above shows the real reason is her past promiscuity. Men who aren't serious about evaluating the character of the women for the marriage enterprise are running the risk of divorce, it's that simple.

The best way to make sure that you have a clear head when evaluating a woman is to stay sober, and keep her hands off of you. When a man refuses to let a woman cloud his judgment with sex, then she is forced to learn how to love him in marriage-oriented ways, e.g. – help him, support him, and submit to his leadership. Male chastity encourages women who have been influenced by feminism to abandon selfishness, fun-seeking, and thrill-seeking, so that they learn to care for others. Male chastity also helps a man to resist older women who chose bad boys in their teens and 20s and want to get married to a good provider in their 30s. The studies discussed above clearly show that such women are more likely to be unhappy, and their future marriages are more likely to be unstable. Avoid them. You don't want to be in a marriage to someone who isn't very good at it, because she never prepared herself for it.

# Stephen C. Meyer lectures on intelligent design and the origin of life

**Wintery Knight** · 24 May 2025 · Archived copy · Original

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell". One of my favorite 6 arguments for a Creator and Designer is the origin of the simplest replicating living system. When you look into the cell, what you'll find is carefully sequenced components that for complex structures, like proteins. In this lecture, you'll learn all about this "biological information".

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of bases that code for proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator

- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive
- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

**Proteins are constructed from a sequence of amino acids:**

A sequence of amino acids forming a protein

**Proteins sticking onto the double helix structure of DNA:**

Some proteins sticking onto the sugar phosphate backbone
I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

There is a good breakdown of some of the slides with helpful flow charts here on Uncommon Descent.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

# New study: chimp genome is 14.9 percent different from human genome

**Wintery Knight** · 25 May 2025 · Archived copy · Original

How do people decide that all of life is the product of blind forces like mutation and selection? Many people encounter the blind forces narrative in government-run schools at an age where they are not qualified to investigate anything themselves, at must rely on adults. And what kinds of "evidence" do the adults use on them? Does that "evidence" stand up over time?

When I was in high school, we had the choice to study 2 or 3 of the hard sciences: physics, biology or chemistry. I chose physics and chemistry, because I didn't want my young Earth creation views being assaulted by adults who held the red marking pen. At the time, I was in a secular left country, and my non-Christian working parents only wanted to hear that I was getting the highest marks. Recognizing that the odds of overturning Darwinism in my public schools were against me (for now), I declined to participate in biology indoctrination, and threw myself into math and computer science instead. (I still scored near the top in physics and chemistry) Everything worked out fine for my career, and I eventually went back and got a biology education on my own, from the strong position of having a full time job that paid me more than the government school teachers.

But during high school, I heard about what my less careful friends were learning about in the biology classroom. One of my best friends, a Muslim named Shareef, told me about how he had learned that the chimp genome was only 1% different from the human genome. To him, this was proof of common ancestry, and showed that a naturalistic origin of the diversity of life was likely. He went on to get with a rowdy crowd, eventually dropping out of his engineering degree after 1 year where he performed poorly. Many people embrace evolution because it gives them moral license to drink a lot, and play the fool, which is bad for their grades. It was bad for his grades, and he got into more trouble later.

Well, at the time, I didn't have the evidence to contradict Shareef about the chimp genome. But now I do!

Here is the latest evidence in Evolution News from Casey Luskin, who you might remember because he was a guest on the Knight and Rose Show.

> [N]ew data reported in a recently published *Nature* paper by Yoo et al. has overturned this previous claim. The new findings reveal that human DNA is far more different from chimp DNA than previously thought.
>
> Many times over the years, I've discussed how this 1 percent claim about humans and chimps is likely wrong. It is also misleading. No matter how similar humans might be to chimps at the genetic level, anyone who has been to the zoo knows already that chimps and humans are vastly different. After all, we're the ones writing scientific papers about them—not the other way around. So common sense alone dictates that there is something misleading about that number and how it is used. But the new data show that the previous statistic isn't just misleading. It's flat-out false.
>
> As I will elaborate in a subsequent article, this team of researchers has published "complete" sequences of ape genomes that were created 'from scratch' rather than using the human genome as a template. As a result, for the first time we can attempt a much more accurate assessment of the true degree of difference between the human and chimp genomes.
>
> The results are groundbreaking:

> - At least 12.5 percent and possibly up to 13.3 percent of the chimp and human genomes represent a "gap difference" between the two genomes. **That means there's a "gap" in one genome compared to the other, often where they are so different, they cannot even be aligned.**

> - There are also significant alignable sections of the two genomes that show "short nucleotide variations" which differ by only about 1.5 percent. We can add this difference to the "gap difference," and calculate **a 14 percent to 14.9 percent total difference between human and chimp genomes. This means that the actual difference between human and chimp DNA is 14 times greater than the often-quoted 1 percent statistic.**

> It's true that large portions of the human genome are still only about 1.5 percent genetically different from the chimp genome. We'll explore what that means in a subsequent post. But the new data reveal just how little this one fact tells us about the overall picture. We now know that major portions of the two genomes — 12.5 percent to 13.3 percent of the human genome, in fact — are so different that arguably the sections are unalignable and/or not directly present in one genome or the other.

And he has subsequent articles dealing with the details:

- Fact Check: New "Complete" Chimp Genome Shows 14.9 Percent Difference from Human Genome
- Genetic Differences Between Humans and Chimps Represent Functional DNA
- What's the Best Explanation for Human-Chimp Genetic Differences?

So, if this is something you or your children have ever encountered, it might be worth familizarizing yourself with the response: that the original estimates were based on using the human genome as a "target" and ignored the new evidence of gap differences. You can always come back to Casey's articles if you need more evidence.

I hope you also see how you have to play the game as a Christian, in terms of strategy. When I was young, I didn't have the parents or the experts to help me deal with the government school teachers. I was alone! And in many ways, I'm still alone now. But even so, every Christian has to navigate the world as it is, guarding their beliefs until the time when they are strong enough to make their claims in public. Now, I have no problem butting heads with the atheists in my workplace – they're terrified of me. But that's the result of a long journey of reading books, listening to podcasts and watching debates, and keeping up with the data on all of these controversial questions.

So, I recommend to people to get a copy of Luskin's book "The Comprehensive Guide to Science and Faith". And if you haven't checked out the Discovery Institutes classes in biology and chemistry for students, you should do it. The default path for most young people in America is just to believe a lot of lies and half-truths served up to them by failure-to-launch teachers whose salaries based on whether their students can be tricked into voting for bigger government. They have an agenda.

I should mention that Shareef did eventually become a Christian, although he is still pretty liberal politically.

# Memorial Day: Medal of Honor recipients John Basilone and Hector Cafferata

**Wintery Knight** · 26 May 2025 · Archived copy · Original

I write military history posts every once in a while, to remind people to honor those who fought for our freedoms. If you check out my "What I am Reading" page on this blog, then you'll see that I've been reading a fair number of books about the Korean War west of Chosin, and Guadalcanal. These were both Marine actions, so for Memorial Day, let's talk about one Marine from each action.

Chronologically, the battle of Guadalcanal comes first. This engagement involves naval conflicts as well as land conflicts. I've read several books about it; "Neptune's Inferno: The U.S. Navy at Guadalcanal" (naval), "The Cactus Air Force: Air War over Guadalcanal" (air), and "Midnight in the Pacific: Guadalcanal — The World War II Battle That Turned the Tide of War" (land). I also play a simulation game called "War on the Sea" where I get to control the American navy and air force. And I have already pre-ordered a new wargame about it: "Guadalcanal: The Battle for Henderson Field".

The operation starts in August 1942, two months after the Americans scored a shocking victory against a superior Japanese force at the Battle of Midway, sinking 4 Japanese carriers in exchange for the loss of one, the USS Yorktown.

Map of Guadalcanal, August 1942, showing Henderson Field, key to Operation Watchtower (Image source credit for above Solomon Islands map)

In early August 1942, Operation Watchtower targeted the Japanese-held Solomon Islands, primarily Guadalcanal, where Japan had established a foothold and was building an airfield to threaten Allied supply lines to Australia. The Japanese, having expanded rapidly across the Pacific since Pearl Harbor, held the strategic initiative, with strong garrisons and naval dominance in the region. Their air forces, including the Mitsubishi Zero, outmatched early American aircraft like the Wildcat in maneuverability and range. Japan's navy, with formidable carriers and battleships, held a slight edge over the U.S. Pacific Fleet, depleted after Pearl Harbor but bolstered by carriers like the Enterprise and Hornet.

One figure who really stood out to me during the land campaign was an enlisted Marine named John Basilone.

Lunga Perimeter, Guadalcanal, 1942, showing the jungle terrain where John Basilone fought for three days against overwhelming odds

I saw a new New York Post article about Basilone authored by Rich Lowry, so let's see what he has to say:

> Born in Buffalo and raised in New Jersey by his Italian-American parents, he enlisted in the Army in the 1930s as a teenager. Then, after a stint as a civilian, he signed up for the Marines in 1940.
>
> During the Battle of Guadalcanal in 1942, he almost single-handedly held off a massive assault by a Japanese regiment against two machine gun sections he commanded.
>
> […]When the Japanese disabled one of the American gun crews, Basilone moved another machine gun into position and personally manned it, and also repaired another gun under heavy fire.
>
> When they needed more supplies, Basilone ran through Japanese lines to get the ammunition, defending himself with his Colt .45.
>
> He fought for days and, by the end, he and his comrades had basically annihilated the Japanese attackers.
>
> Basilone lost his asbestos gloves in the chaos and still handled the searing machine gun barrels, sustaining burns on his hands.
>
> […]Nash Phillips, a private who was wounded in the fight, recalled, "Basilone had a machine gun on the go for three days and nights without sleep, rest or food."

He was awarded the Medal of Honor for that action (citation), but he wasn't done serving his country:

> Basilone was awarded the Medal of Honor and afforded, appropriately, a hero's welcome back in the States. He participated in the campaign to sell war bonds.
>
> His conduct at Guadalcanal would be more than enough valor in one life for the rest of us, but Basilone wanted back in the fight.
>
> The Marines told him he was more valuable at home and denied his request. Basilone insisted, and the Marines

> eventually relented.
>
> He was a machine gun section leader again in February 1945, on the first day of the invasion of Iwo Jima, a godforsaken hunk of volcanic rock in the middle of the Pacific. The dug-in Japanese chewed up the Americans on the beaches.
>
> Basilone flanked a Japanese blockhouse, climbed atop it, and took it out on his own. He then led a Marine tank out of a minefield, before getting fatally hit.
>
> For this action, he posthumously received the Navy Cross. The citation refers to him as "stouthearted and indomitable," and praises "his intrepid initiative, outstanding skill, and valiant spirit of self-sacrifice."

The war against Japan was one of our most noble wars. Prior to our entry in the war, Japan was already invading neighboring countries, and committing atrocities against unarmed civilians. We had every right to fight back once they attacked us, and to use *every means necessary* to stop their brutal aggression.

Since there is still space in this blog post, let's fast forward a few years to the Korean War, and look at a famous battle in it, the Battle of the Chosin Reservoir. For this theater, I recommend several books from my reading list. The best one is "On Desperate Ground: The Marines at The Reservoir, the Korean War's Greatest Battle". And I also liked "Colder Than Hell: A Marine Rifle Company at Chosin Reservoir" and "The Last Stand of Fox Company: A True Story of U.S. Marines in Combat". There are actually two battles going on at the reservoir, one with the U.S. Marines on the west side of the reservoir, and one with the U.S. Army on the east side of the reservoir.

So, recall that the Korean War started with an invasion by North Korean communists against peaceful South Korea. America stepped in to defend South Korea from this aggression.

In late November 1950, the Battle of the Chosin Reservoir unfolded in North Korea's frozen mountains, where the U.S. 1st Marine Division, under Major General Oliver P. Smith, faced a dire situation. Following the successful Inchon landing, General Douglas MacArthur and Major General Edward "Ned" Almond, pursued an aggressive push to the Chinese border at the Yalu River. MacArthur ignored October 1950 intelligence of 120,000+ Chinese troops crossing the Yalu, while Almond's orders to advance disregarded the frozen, mountainous terrain.

Map of the Battle of the Chosin Reservoir, 27–29 November 1950, showing the Marines' retreat from Yudam-ni to

Hagaru-ri, with Toktong Pass held by Barber's Fox Company
Make sure you find Toktong Pass in the image! It's important!

By late November, 30,000 UN troops, including 20,000 Marines, were strung along a narrow 78-mile-long mountainous road from Hungnam to Yudam-ni, with key positions at Hagaru-ri and Toktong Pass. The Chinese held the initiative, outnumbering UN forces 10-to-1 in places. Bitter cold weather (-30°F) limited the U.S. air advantage, with Marine Corsairs from Hagaru-ri's airfield providing vital support. Smith's cautious advance, defying Almond's dismissal of the Chinese ("Don't let a bunch of Chinese laundrymen stop you!"), ensured supply stockpiles and an airfield at Hagaru-ri, critical for evacuations and reinforcements. His foresight preserved unit cohesion and saved 15,000 Marines from annihilation.

If you noticed that phrase "preserved unit cohesion", I'll just give you a hint that the U.S. Army forces east of Chosin were more beholden to the recklessness of MacArthur and Almond, and made no provisions for the Chinese ambush. Unit cohesion was lost and our forces were annihilated. You can read all about that in "East of Chosin: Entrapment and Breakout in Korea, 1950". It's a tough book, but shows the value of *planning* and *caution* when dealing with unknown enemies in mountainous terrain during the winter.

I previously blogged about William Barber and his Fox Company's heroic stand at Toktong Pass. Captain Barber's Fox Company held Toktong Pass for five days against 1,400 Chinese, allowing 8,000 trapped Marines in the north to move south down the road to escape defeat. Fox Company received only minimal support from light helicopters, because of the cold, snowy weather and roadblocks to the north and south.

Funchilin Pass, Chosin Reservoir, December 1950, showing the frozen terrain similar to Toktong Pass
So today let's take a look at one of the Fox Company Marines who held the Toktong Pass for 5 days, with this article from Task and Purpose:

> On Thanksgiving 74 years ago, at the height of the Korean War, the sound of gunfire abruptly woke Marine Pvt. Hector Albert Cafferata Jr. He and his squad held Fox Hill during the Battle of Chosin Reservoir, and a regimental-sized Chinese People's Volunteer Army — a force of approximately 1,400 soldiers — sprung an ambush two hours past midnight.
>
> Cafferata, then 23, was assigned to Company F, 2nd Battalion, 7th Marines, 1st Marine Division. He and over

> 200 Marines were tasked with protecting the Toktong Pass, an escape route through the Nangnim Mountains near the Chosin Reservoir in modern-day North Korea.
>
> An initial hail of gunfire, grenades, and mortars knocked out nearly everyone in Cafferata's squad, creating a weak spot in the defense perimeter, but Cafferata continued fighting, without a jacket in the pre-dawn winter cold. The Washington Post reported that fellow wounded Marine Kenneth Benson was initially blinded by a grenade blast during the attack but continued helping Cafferata by reloading his rifle.
>
> Cafferata also landed on a desperate but ingenious way to send enemy grenades back toward the enemy.
>
> "For the rest of the night, I was batting hand grenades away with my entrenching tool while firing my rifle," Cafferata said in a 2001 interview with Florida's Charlotte Sun newspaper. "I must have whacked a dozen grenades that night with my tool. And you know what? I was the world's worst baseball player."
>
> Described as "Stouthearted and indomitable" in his Medal of Honor award citation, Cafferata managed to repel the ambush single-handedly, though it was temporary. The Chinese soldiers launched a vicious second wave in the morning hours.
>
> During the fierce fighting, a grenade landed near a group of wounded Marines, and Cafferata threw it back under heavy fire. This time, it detonated after leaving his hand and severely wounded his right arm and hand with shrapnel. That didn't stop him, though.
>
> "Courageously ignoring the intense pain, he staunchly fought on until he was struck by a sniper's bullet and forced to submit to evacuation for medical treatment," reads the award citation.
>
> Before getting evacuated, Cafferata is credited with killing 15 enemy soldiers and wounding several others. In Peter Collier's 2003 book "Medal of Honor: Portraits of Valor Beyond the Call of Duty," Cafferata's Marine officers recalled how they counted about 100 dead Chinese soldiers where he had held the line. Still, they did not report that number because "they thought that no one would believe it."

His Medal of Honor citation is here.

So, it's Memorial Day, and it's a time for Americans to take time out to think about the respect and gratitude that we owe to people who risked their lives for their friends.

We owe our liberties in large part to the American heroes who fought against imperialism and communism. It's sad that we have so many people going through our schools and our universities, and coming out with ignorance of these heroes, and a lack of patriotism.

As a non-white legal immigrant to the United States, I've made it a major part of my life to go back in time and learn about the sacrifices of the people in our armed forces. You should make the effort, too. I don't watch television, I am not subscribed to any streaming services, and with RARE exceptions, I don't watch modern movies. My head is always in the past, learning about people who lived tougher lives than mine, and performed greater deeds fighting against evil than I ever will.

Reading this post and sharing it on social media would be a good start! Many Americans leave school unaware of the sacrifices of our heroes in the armed forces. Let's share their stories to inspire gratitude in the next generation.

# New Republican budget bill finishes the job of defunding Planned Parenthood

**Wintery Knight** · 27 May 2025 · Archived copy · Original

The Republican party has been taking away the funding of the nation's largest abortion provider piece by piece for some time. Pro-life voters understand that stopping abortion is an incremental process, and a big part of that process is taking the taxpayer money away from the abortion providers. And we are already seeing the effects of the legislation, before it's even been signed.

Here's the latest news from Daily Signal:

> House Republicans delivered on their promise to defund Big Abortion on Thursday by passing the budget reconciliation bill that has consumed Washington's attention for the past three months.
>
> In the bill, the House GOP removed Medicaid funding for Planned Parenthood, the largest provider of abortions in the country. The effort had been supported by dozens of pro-life legislators from around the country.
>
> The move is a monumental win for pro-lifers because Planned Parenthood receives more than one-third of its overall funding from the U.S. government through grants, contracts, and Medicaid reimbursements. That translates to about $2 million per day, which taxpayers are on the hook for. Furthermore, taxpayer funding for the organization has been on an upward trajectory for about the past dozen years, having increased by 50% since 2013.
>
> […]Planned Parenthood is also a major provider of hormones for so-called transgender transitions in the country, which means defunding it is also combating the organization's efforts in that regard as well.

The Federalist had a bit more about this story – how many abortions they perform, how much they profit from that, and weather they perform any other "health care" services:

> In the last two years, Planned Parenthood — an ostensibly "nonprofit organization" — earned a stunning $206 million in profit, its own numbers reveal. Much of that is thanks to hundreds of millions of taxpayer dollars flowing into its coffers.
>
> The number of abortions Planned Parenthood performs continues to increase, reaching a staggering 402,200 last year. Meanwhile, the organizations' cancer screening and prevention services have dropped by 54 percent since 2013, including declines of 61 percent for breast exams and 54 percent for pap tests.

The Post Millennial notes that even thought the bill has not been signed into law, it's already causing Planned Parenthood to quit:

> Eight abortion clinics run by Planned Parenthood's Northern Central States region are slated to shut down across Minnesota as well as Iowa as the Trump administration is targeting funds going to Planned Parenthood.

And finally, related to the issue of the pro-abortion secular left, here was a recent news story about them from Mind Matters. The article is by Wesley J. Smith, and he talks about how often the convictions of the secular left lead to violence.

This is a good review of the actions of the secular left:

> Back in 2010, a mentally disturbed anti-human terrorist was shot to death by snipers after he took hostages at the Discovery Channel, demanding that the television service stop "encouraging the birth of any more parasitic

> human infants," and instead air "programs encouraging human sterilization and infertility."
>
> Now, a similar disturbing scenario befell Palm Springs, Calif., where a young man named Guy Edward Bartkus killed himself, injured four people, and caused widespread property destruction when he detonated a huge car bomb in front of an in vitro fertilization clinic. The motive? According to Newsweek's reporting, Bartkus was a "'pro-mortalist' (believing death is preferable to living) or an 'anti-natalist' (believing no more human beings should be born)."

It's not just the crazies who believe these things:

> Anti-natalism is a form of anti-humanism, which isn't just believed by mentally disturbed people capable of violence. Indeed, various forms of anti-humanism have been promoted in professional journals, the media, and popular culture, as a consequence of which, nihilism has been slowly seeping through the culture like a stain.

So often, when you bring up the the issue of being responsible with sex, and being protective of tiny humans, the response is that it's "violence" to tell women to choose good men, and to get married to those good men before having sex. But if you look a bit more closely, the actual violence is all coming from the pro-abortion side.

# Supreme Court decision shows why good men are declining to protect and provide

**Wintery Knight** · 28 May 2025 · Archived copy · Original

What many people don't realize about men is that men are constantly making calculations about whether or not to impact the world for good. The average man disagrees with things like abortion, same-sex marriage, and transing kids. But the average man also understands that the world is currently being run by don't-judge people. And those don't-judge people have made it risky and costly for good men to make bold stands.

As I've said before, people used to expect Christian men to be generous and protective, but also bold about declaring and defending spiritual and moral truths. Well, the world has changed. The old masculine leadership has been replaced with "servant leadership" – men have to be servants of society's needs, while having no needs of their own. Men aren't allowed to make any decisions. Men aren't allowed to challenge evil with words and actions. Men are only allowed to protect and provide. Silently! Just like an ATM. And an ATM doesn't judge how the money is spent.

So, how does society encourage men to keep dispensing money and making muscles, while simultaneously making sure that they comply with the new feelings-based rules of empathy and don't judge?

Why, by punishing anyone who expresses a moral or spiritual truth, of course. In the case below, the feelings-dominated schools punished a boy for wearing a t-shirt that disagrees with transgenderism, and then the courts refused to fix the mess.

Here's the story from Fox News:

> The Supreme Court declined to hear a case involving a Massachusetts student who was banned from school for wearing a shirt criticizing the transgender movement on Tuesday.
>
> The student, Liam Morrison, brought the case through his father and stepmother, Christopher and Susan Morrison. The plaintiffs argue Nichols Middle School violated his free speech rights when it banned him from wearing two T-shirts to school with the words "There are only two genders" and "There are [censored] genders" on the front.
>
> Liam was sent home both times after he refused to change shirts. The school argued the shirts made his classmates feel unsafe, and a federal court agreed, saying the message was demeaning for transgender students.

So, if SCOTUS declines to hear the case, then the lower ruling stands. This is where American elites are right now. If a young man decides to try to reverse the decline of civilization by opposing lies and evil with his words and / or actions, then he needs to be punished.

Only two justices stood up for free speech:

> Justices Clarence Thomas and Samuel Alito both issued separate dissents, arguing the court should have taken up the case.
>
> The decision comes nearly a year after the First Circuit Court of Appeals ruled against Liam and his parents in June 2024, finding that the school was justified in asking him to remove the shirt and sending him home when he refused.
>
> Morrison, who was in seventh grade at the time, was sent home with his father in May 2023 after he refused to take off the shirt, according to court documents. He later wore the same shirt with the words "only two" covered with a piece of tape on which "censored" was written. The school also told him to take this shirt off.
>
> In a 2023 interview with Fox News Digital, Liam stressed that his T-shirt was not directed toward anyone, specifically people who are "lesbian or gay or transgender or anything like that."

> “I’m just voicing my opinion about a statement that I believe to be true,” he said at the time. “And I feel like some people may think that I’m imposing hate speech, even though it’s not directed towards anyone.”

So what is the general point to draw from this case?

The key point is this: if society insists on making men bow down to “empathy” and “don’t judge”, then society will find that good men decline to participate in the other male roles, too. Wearing a t-shirt that challenges the transgendering of kids is quintessential MALE behavior – it’s moral leadership. And the public schools, working together with the courts, have punished the boy for standing up for his convictions.

This sends a clear signal to the other men watching: “stop moral and spiritual leading, but keep on protecting and providing.” But society can’t have that. If the secular leftists take away a man’s moral and spiritual leading, then they won’t get the protecting and providing. Men don’t invest in and protect enterprises, unless they are allowed to speak up about their moral and spiritual convictions.

And you can see that this is already happening, with masculine behaviors like protection and provision being withheld from society. Society now cries “where are all the good men?” and “why don’t men make the first move” and “why don’t men pay for everything on dates?” and “why don’t men protect women from strangers on the subway?” But those things are declining, because of the anti-male attitudes of the schools and courts.

The root cause goes back to C.S. Lewis’ old essay “Men Without Chests” in his book “The Abolition of Man”. If you punish men for leading from their Christian convictions, then you don’t get to help yourself to the benefits provided by those same Christian convictions. This is what the “servant leadership” people don’t understand – men don’t want to be reduced to dispensing cash for your shopping and not judging your spending. Good men want to lead. They want to fight against lies and evil, and rally others to fight with them.

# How well is “atheist morality” working out in secular leftist Seattle?

**Wintery Knight** · 29 May 2025 · Archived copy · Original

Can atheists rationally ground objective morality? A lot of Americans who were raised in Christian homes give up the faith, and they like to tell Christians “I’m a good person. I believe in human rights. I believe in objective morality. Getting rid of God doesn’t change anything about me”. But, what really happens in cities like Seattle, where the majority of people vote for secular leftism?

Here’s an article from Daily Wire, written by Matt Walsh (archived).

It says:

> The pro-life group Mayday USA held an event in the park as part of their “Don’t Mess With Our Kids” campaign. This was a lawful gathering, by all accounts. They had all the required permits. And at this event, people held signs and sang songs that affirmed the sanctity of life, the reality of human biology, the importance of the nuclear family, and so on. It was basically a Christian concert. People of all ages, including young children, were present.

Matt then links to this video, showing that the Christians are having fun singing hymns and getting along with each other. I do think that waving arms during singing is a bit weird, but it’s just regular first amendment stuff, and they even have a permit from the city to assemble and wave their arms around weirdly.

But then things got violent in secular leftist Seattle:

> But as the event went on, Left-wing activists decided to shut down the event. They began violently assaulting police officers and stormed the stage.

And he has a video of the attack, too.

Well, maybe the Christians provoked this fascistic response somehow.

But Matt says:

> As far as contrasts go, this one is about as stark as you can get. And by the way, the Christians were minding their own business. They weren’t trying to disrupt any other event, or hassle anyone else. They reserved the park, using all of the appropriate legal channels. But the demons decided to charge in, and use violence to silence the Christians. And eventually they got what they wanted. The police arrested 22 adults and one juvenile — all of them on the side of the Left-wing activists — and shut down the event early.

The videos of the attack show black-clad violent extremists, some in tactical gear, surrounding, confronting and shouting at the rally attendees, including a woman holding a baby. I guess that’s secular left Seattle for you. Woooo! Awesome objective morality!

It’s actually surprising that the police did arrest anti-Christian violent extremists, because Seattle is well-known as a city populated by people who cannot rationally ground human rights, free will, or objective morality.

Look:

> [I]n every relevant respect, the government of Seattle has taken the side of the LGBT activists who attacked the Christians.
>
> First of all, everyone who was arrested was released without any bond whatsoever, and no charges were announced. There’s one exception — someone who was accused of attacking an officer and throwing an

> explosive device — who received a whopping $20,000 bail. But otherwise, none of these people have suffered any real consequences, and of course they never will. And there's zero chance that any of them will be prosecuted in Seattle. We all know that.
>
> Secondly, the mayor of Seattle — a wormy little man named Bruce Harrell… released a statement over the weekend that blames the Christians for being attacked. This is one of the most extraordinary statements ever released by a public official.

The major of Seattle called the Christian gathering a "far-right rally" – blaming the Christians and their blasted song-singing and baby-holding for the violence that actually was caused by the anti-Christian violent extremists.

Is this surprising? You might remember that the voters in Seattle previously voted for a mayor who resigned because of multiple allegations of child sex abuse. In red states, that would be bad, but in secular left Seattle, it's actually good! They're proud of it! They'll tell you that this is GREAT objective morality. So much "reason"!

And Matt notes that none of this fascism is surprising, in Seattle:

> At the same time, even if the mayor's office is hauled before a federal court, the truth is that there's a much deeper problem here. The mayor, after all, was elected by the people of Seattle. And unsurprisingly, in this case, most of Seattle, including the media, agrees with the mayor.

Now, you might remember that I blogged about Harmeet K. Dhillon a while back. She is the replacement for Kristen Clarke, the Biden official who persecuted pro-lifers for peaceful demonstrations. And she said this, on X:

So Harmeet, the Assistant Attorney General for Civil Rights at the Department of Justice, getting involved. But the Alliance Defending Freedom is also considering it.

And Daily Signal is reporting that there will be an FBI probe:

> The FBI is investigating possible "targeted violence against religious groups" in Seattle after leftists crashed two Christian events over the past week and dozens of people were arrested, FBI Deputy Director Dan Bongino said Wednesday.

> […]“We have asked our team to fully investigate allegations of targeted violence against religious groups at the Seattle concert,” Bongino said in a Tuesday X post. “Freedom of religion isn’t a suggestion.”

Anti-Christian violent extremists can’t seem to stop themselves from attacking Christians using violence and coercion, can they? At least now we have some real law enforcement to look into to the people who actually DO use violence to advance their beliefs.

By the way, I am having a bit of fun in this post at the expense of atheists who want to be taken seriously as “moral”, but for a serious refutation of atheist morality, check out this post. I have others, but it’s my bedtime.

# Why you should listen to the Matt Walsh Show podcast

**Wintery Knight** · 30 May 2025 · Archived copy · Original

I try to never miss an episode of Matt Walsh, and Desert Rose is the same. It's my favorite podcast, other than the Knight and Rose Show of course. In the post below, I'm going to list out a few recent segments that I think will convince you. And best of all, it's free! I really think this postcast is especially good for men, and for women who like good men.

OK, so here is a very mean and funny segment from Thursday's show. Here is the description "In their desperate quest to appeal to men, the Democrats have called in an expert: a self-professed plus sized, disabled, queer Latina feminist. Who could possibly understand men better than her?"

This one was my favorite this week – buckle yourself in before watching this masterpiece. The description is "We have another super viral entry in the ever-expanding genre of online videos where wives complain about their husbands.":

I've seen the bad wife that he is talking about before, on the Emily King podcast, which I really like.

And then lastly, this one about the South Africa refugees situation.

I know a lot of people watch shows like Joe Rogan, but I can't stand shows like this. I like shows where we are really going to tell the truth, and really take on moral evils. Matt does a great job. In fact, I wish that we could replace all the Christian feminists and feminized pastors with clones of Matt Walsh. I know that a LOT of pastors sound exactly like him, but I want more. I want all the pastors to sound exactly like him. Men should be so bold about truth and morality, that they make the "don't judge" Christian feminists cringe. That's good masculinity! That's what we want.

# Knight and Rose Show #64: Egnor and O'Leary: The Immortal Mind

**Wintery Knight** · 31 May 2025 · Archived copy · Original

Welcome to episode 64 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome Dr. Michael Egnor and Denyse O'Leary to discuss the scientific evidence for "The Immortal Mind". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

NOTE: You can pre-order the book here, and get the pre-order goodies, for example, a free digital copy of "Minding the Brain: Models of the Mind, Information, and Empirical Science".

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose interview Dr. Michael Egnor and Denyse O'Leary about their new book "The Immortal Mind". They discuss how scientific evidence such as split-brain surgeries, veridical near-death experiences, and terminal lucidity challenges materialist views of the mind. Egnor and O'Leary argue that an immaterial, immortal soul is the best explanation for human consciousness, free will, and abstract thought.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 64:**

**Speaker biographies**

Michael R. Egnor, MD, is a Professor of Neurosurgery and Pediatrics at State University of New York, Stony Brook, has served as the Director of Pediatric Neurosurgery, and is an award-winning brain surgeon. He was named one of New York's best doctors by the New York Magazine in 2005. He received his medical education at Columbia University College of Physicians and Surgeons and completed his residency at Jackson Memorial Hospital. His research on hydrocephalus has been published in journals including Journal of Neurosurgery, Pediatrics, and Cerebrospinal Fluid Research.

Denyse O'Leary is a freelance journalist based in Victoria, Canada. Specializing in faith and science issues, she is co-author, with neuroscientist Mario Beauregard, of "The Spiritual Brain: A Neuroscientist's Case for the Existence of the Soul", and author of "By Design or by Chance?: The Growing Controversy on the Origins of Life in the Universe". Her newest book, co-authored with neurosurgeon Michael Egnor, is the forthcoming "The Immortal Mind: A Neurosurgeon's Case for the Existence of the Soul". She received her degree in honors English language and literature.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian

apologetics as a speaker, author, and teacher.

# Study: there is no gay gene that causes homosexuality

**Wintery Knight** · 1 June 2025 · Archived copy · Original

I heard one of the authors of this new study commenting on how he was a gay man, and the purpose of his research was to show a genetic basis for homosexuality, in order to make it equal to race. His goal was to make it impossible to disagree with homosexual behavior, because homosexual behavior would be seen as natural and normal. Let's see if his new study helps him out.

The blog of the peer-reviewed journal PLOS One reported on the new study, which was published in the prestigious journal Science.

Excerpt:

> The once-prevailing concept of a "gay gene" dictating sexual orientation has been put to rest in a powerhouse study published today in *Science*. The work brilliantly illustrates the very nature of science: evolving with the input of new data, especially the large-scale contributions of bioinformatics and crowd-sourcing.
>
> "We formed a large international consortium and collected data for more than 500,000 people, comparing DNA and self-reported sexual behavior. This is approximately 100 times bigger than any previous study on this topic," said lead author Andrea Ganna, of the Institute of Molecular Medicine in Finland and an instructor at Massachusetts General Hospital and Harvard Medical School, opening a news conference earlier this week.
>
> […]The investigation estimates a genetic contribution to same-sex sexual behavior as under 1 percent, thanks to analysis of a trove of data from the UK Biobank and the consumer genetic testing company 23andme.

So, there you have it, there is no gay gene. But this is of course something we've known for decades, as all the previous studies had found the same thing.

The normal way that people do these studies is to analyze identical twins, and see how often both identical twins are gay.

> Eight major studies of identical twins in Australia, the U.S., and Scandinavia during the last two decades all arrive at the same conclusion: gays were not born that way.
>
> "At best genetics is a minor factor," says Dr. Neil Whitehead, PhD. Whitehead worked for the New Zealand government as a scientific researcher for 24 years, then spent four years working for the United Nations and International Atomic Energy Agency. Most recently, he serves as a consultant to Japanese universities about the effects of radiation exposure. His PhD is in biochemistry and statistics.
>
> Identical twins have the same genes or DNA. They are nurtured in equal prenatal conditions. If homosexuality is caused by genetics or prenatal conditions and one twin is gay, the co-twin should also be gay.
>
> "Because they have identical DNA, it ought to be 100%," Dr. Whitehead notes. But the studies reveal something else. "If an identical twin has same-sex attraction the chances the co-twin has it are only about 11% for men and 14% for women."
>
> Because identical twins are always genetically identical, homosexuality cannot be genetically dictated. "No-one is born gay," he notes. "The predominant things that create homosexuality in one identical twin and not in the other have to be post-birth factors."
>
> Dr. Whitehead believes same-sex attraction (SSA) is caused by "non-shared factors," things happening to one twin but not the other, or a personal response to an event by one of the twins and not the other.

By the way, a previous study also found that transgender behavior was not genetic, but was clearly linked to environmental factors such as peer approval and social media.

Here is the report from Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE.*
>
> Littman surveyed more than 250 parents of children who suddenly developed gender dysphoria symptoms during or after puberty.
>
> […]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

A previous study also found that children are more likely to be gay if they are raised by gay adults. It was reported in AOL News.

Excerpt:

> Walter Schumm knows what he's about to do is unpopular: publish a study arguing that gay parents are more likely to raise gay children than straight parents. But the Kansas State University family studies professor has a detailed analysis that past almost aggressively ideological researchers never had.
>
> […]His study on sexual orientation, out next month, says that gay and lesbian parents are far more likely to have children who become gay. "I'm trying to prove that it's not 100 percent genetic," Schumm tells AOL News.
>
> His study is a meta-analysis of existing work. First, Schumm extrapolated data from 10 books on gay parenting… [and] skewed his data so that only self-identified gay and lesbian children would be labeled as such.
>
> […]Schumm concluded that children of lesbian parents identified themselves as gay 31 percent of the time; children of gay men had gay children 19 percent of the time, and children of a lesbian mother and gay father had at least one gay child 25 percent of the time.
>
> […]Finally, Schumm looked at the existing academic studies… In all there are 26 such studies. Schumm ran the numbers from them and concluded that, surprisingly, 20 percent of the kids of gay parents were gay themselves. When children only 17 or older were included in the analysis, 28 percent were gay.

It's very important for people to understand that there is a trend in society to make every behavior traditionally seen as sinful into something caused by genetics. The twin goals of this effort are to insulate the behaviors from criticism, and to minimize evaluation of the effects of these behaviors on society as a whole. The genetic argument was used extensively to normalize same-sex marriage and transgenderism. I have seen the genetic argument used to defend other behaviors like pedophilia and incest. But the scientific research does nothing to support any of these arguments. What's amazing is how a majority of people in the United States have such false beliefs about the scientific research. They vastly overestimate the number of gay people, and also the influence of genetics.

# NYT: LGBT youth have greater approval, but mental health is “significantly worse”

**Wintery Knight** · 2 June 2025 · Archived copy · Original

It’s LGBT pride month, so everyone is going to tell me that I have to affirm LGBT doctrines and lifestyles, or else! So, instead of doing that, let’s look at some evidence about these topics. Did you know how the secular left looks at the poor mental health of LGBT youth, and asserts (without evidence) that more acceptance would make those outcomes better? Turns out the exact opposite is true.

Here’s the left-wing extremist New York Times, dated June 3rd, 2023:

> For L.G.B.T.Q. teenagers, high school is a much more accepting place than even a decade ago. They change their pronouns, go to school dances with people of the same gender, and are more likely than any previous generation to openly identify as gay, lesbian, bisexual, transgender or otherwise queer.
>
> […]Yet there is a darker side. Even as they are increasingly welcomed by peers, their mental health is significantly worse than that of heterosexual young people.
>
> […]Their experiences highlight a “paradoxical finding,” as researchers have described it: Even as social inclusion for young L.G.B.T.Q. people has grown, large health disparities between them and their non-L.G.B.T.Q. peers have not shrunk.

The article talks about the strongest reasons why young people embrace LGBT:

1. there are pro-LGBT TV shows, movies, music.
2. famous pro athletes identify as LGBT
3. the Supreme Court overturned legislation passed by elected legislators
4. “everyone knows someone who is LGBT”
5. social media supports LGBT
6. big corporations support LGBT

Growing up in the situation I was in – poverty, different skin color, two working parents, public schools run by secular leftists – I wasn’t much interested in feeling good in the moment. I wanted an accurate view of the battlefield so I could make good decisions, and get out of the mess I was born into. I read the Bible, Shakespeare and my parents’ textbooks from their night classes at the local universities.

My approach was very different from the secular left. They don’t care about truth, or making good decisions to get good results. They care about living in the moment. They want to give in to their desires now, and point fingers later. They want to borrow money and run up expenses now, and pass the bill to someone else later. They are reckless and irresponsible. And they feel entitled to the life outcomes of those detestable Christians later. But they can’t be bothered to behave like those detestable Christians right now.

People who are LGBT are facing little to no disagreement or disapproval:

> A recent survey by The New York Times and Morning Consult of 1,574 young adults found that people ages 18 to 28 — who mostly graduated from high school since 2013 — were significantly more likely to know L.G.B.T.Q. students in school than those a decade older, who were teenagers in the 2000s.
>
> The younger group was twice as likely to report knowing at least one transgender student, and three times as likely to have known three or more. Four in 10 said they knew numerous gay, lesbian or bisexual people in high school, compared with a quarter of the older group.
>
> And while both groups reported hearing the words “gay” and “queer” used negatively at similar rates — a data

> point reflected in interviews with teenagers, who say they still hear “that’s so gay” in school hallways — the younger graduates were significantly more likely to hear those words used in a positive light, too. They were also more likely to have a gay-straight alliance or similar club at their school.
>
> This reflects other data that has found that verbal harassment of L.G.B.T.Q. teenagers declined during the 2010s, while support for same-sex marriage became the norm among young people.

And finally:

> “You’re at the point among young adults where almost all these measures of acceptance are in the high 80s, low 90s,” said Jeff Jones, a senior editor who oversees research at Gallup. “It’s basically getting toward a consensus.”

Sounds wonderful for the secular left. They got the morality of the Bible removed from society. Young people today don’t even know what the Bible teaches are dating, relationships, marriage, sexuality, etc. All they know is TV shows, celebrities, entertainers, athletes, and what their public school teachers tell them.

Just one little problem. Secular leftists don’t get to determine what is objectively right and wrong. In a God-designed universe, God decides what works, and what doesn’t work. And no amount of community, peer-approval, propaganda, etc. is going to overrule God’s design for his creatures.

More:

> As acceptance has grown, though, the mental health of queer youth has continued to suffer. Reported rates of mental health problems among all young people have been rising for the last decade, but non-heterosexual students face far higher rates than straight students.
>
> About 70 percent of high school students who identify as gay, lesbian or bisexual reported persistent sadness, according to recent data from the Centers for Disease Control and Prevention, twice the rate of their heterosexual peers. One in five attempted suicide in the past year, nearly four times the rate of straight young people. (The C.D.C. does not track the mental health of transgender youth, but other data shows that roughly half had considered suicide in the past year.)

The New York Times tries to blame these numbers on being in a minority group. But Bible-believing Christians who embrace chastity, marriage, parenting and homeschooling are also a “minority group”. We don’t run the show any more. In fact, we’re the only minority that is still able to be targeted for ridicule and persecution, even by the police and government. But we also don’t have mental illnesses like the poor young people who believed the lies of the secular left, either. I wonder why that is. Could it be that chastity, marriage, parenting and homeschooling are morally right, whether anyone thinks it is or not? Could it be that these activities are self-evidently moral, and therefore just doing them makes the approval and celebration of other people completely unnecessary? For some behaviors, having an audience of One is enough.

# What's the best book for introducing all the basics of defending the faith?

**Wintery Knight** · 3 June 2025 · Archived copy · Original

Let's look at the table of contents of my favorite introduction to Christian apologetics, which is "Is God Just a Human Invention?" written by Sean McDowell and Jonathan Morrow.

In that book, you will find 18 topics.

1. Is Faith Irrational? (Commentary by: Gregory Koukl)
2. Are Science and Christianity at Odds? (Commentary by: John Warwick Montgomery)
3. Are Miracles Possible? (Commentary by: Gary R. Habermas)
4. Is Darwinian Evolution the Only Game in Town? (Commentary by: William A. Dembski)
5. How Did the Universe Begin? (Commentary by: R. Douglas Geivett)
6. How Did Life Begin? (Commentary by: Fazale R. Rana)
7. Why Is the Universe Just Right for Life? (Commentary by: Jay W. Richards)
8. Has Science Shown There Is No Soul? (Commentary by: Dale Fincher and Jonalyn Fincher)
9. Is God Just a Human Invention? (Commentary by: Garry DeWeese)
10. Is Religion Dangerous? (Commentary by: Douglas Groothuis)
11. Does God Intend for Us to Keep Slaves? (Commentary by: Paul Copan)
12. Is Hell a Divine Torture Chamber? (Commentary by: Frank Turek)
13. Is God a Genocidal Bully? (Commentary by: Clay Jones)
14. Is Christianity the Cause of Dangerous Sexual Repression? (Commentary by: Kerby Anderson)
15. Can People Be Good Without God? (Commentary by: Mark D. Linville)
16. Is Evil Only a Problem for Christians? (Commentary by: Randy Alcorn)
17. What Good Is Christianity? (Commentary by: Glenn S. Sunshine)
18. Why Jesus Instead of the Flying Spaghetti Monster? (Commentary by: Darrell L. Bock)

Prominent atheist scholars are quoted in each chapter to introduce the challenges, and then scholarly arguments and evidence are presented to defend the Christian worldview. The language is simple enough, but the material is solid enough to use in a real debate. I would say that introductory books like this one are more than enough to equip you for everyone who will challenge you.

Why are these 18 topics important? Because these are the questions that atheists ask. These are the questions that cause Christians to leave the faith. These are the questions that your children will face in high school and college, which might cause them to leave the faith.

Let's start with chapter one. One of the most prominent arguments by atheists is that faith is irrational. This chapter allows you to define faith using the Bible's definition of faith, which relies on logic and evidence.

Atheists also say that Christianity is at war with science. In chapter 2, they discuss the history of science and how Christianity provided the framework that allowed scientific method to take root and flourish.

Atheists like to claim that miracles are impossible. Chapter 3 defends the view that God, if he exists, is capable of interacting with his created world.

Atheists love to put forward Darwinism as means to deny that God is the designer of life. Chapter 4 explains the concept of intelligent design, and why intelligent design is a better explanation for the history of life.

Atheists love to talk about how the universe has always existed, and there's no need for a Creator. Chapter 5

contains a philosophical argument that is supported by mainstream science to argue that the universe had a beginning, just like the Bible says.

Atheists love to argue that life can emerge from non-life, and the process is simple. Chapter 6 is written by a biochemist, and it takes a look at the real complexity of the simplest living cell.

Atheists like to argue that the universe itself is just an accident, and there is no need for a Designer. Chapter 7 introduces the scientific evidence for fine-tuning and habitability.

Atheists like to say that there is no soul and no afterlife. Chapter 8 gives some arguments for the existence of the soul.

Atheists like to argue that Christians invent God because God makes them feel good. But chapter 9 explains that having an all-powerful God who can hold humans accountable is the last thing any human would want to invent.

Atheists like to talk about how religion, with it's habit of teaching to believe in things that can't be tested, causes religious people to do a lot of harm. Chapter 10 takes a look at the real record of Christianity as a force for good in the world.

Atheists like to talk about slavery in the Bible. Chapter 11 talks about what the Bible really says, and provides some rational responses to the accusation.

Atheists like to talk about eternal punishment in Hell isn't a just punishment for just getting a few questions wrong on a theology exam. Chapter 12 provides an explanation and defense of the concept of Hell.

Atheists love to talk about how God commanded the Israelites to attack their enemies in the Bible. Chapter 13 explains who their enemies really were, and what was really happening in those wars.

Atheists feel that unrestricted sexual activity is very healthy and normal, and that the Biblical prohibitions outside of male-female marriage are repressive and unhealthy. Chapter 14 explains why God has these rules in place, and supports his rules with evidence.

Atheists love to assert that they don't need God, because they can behave morally on their own. Chapter 15 explains how to answer this claim by talking about how well atheism grounds objective moral values, objective moral duties, free will and moral accountability: the minimum requirements for objective morality.

Atheists think that the mere existence of natural disasters and human immorality are incompatible with the God of the Bible. Chapter 16 explains why this argument doesn't work, and why even the concept of evil requires God to exist.

I have an atheist friend in my office who can't defeat my scientific arguments for the origin of the universe, the fine-tuning and the origin of life. But still, he says to me, even if God exists, why would that matter to my life? Chapter 17 explains what difference Christianity makes in a person's life.

Atheists think that the life of Jesus has no relevance to their life, and that he has nothing to offer them anyway. Chapter 18 explains the uniqueness of Jesus and explains why his resurrection is relevant to our lives today.

It's important to understand that this book is not on the level of A. W. Tozer, G.K. Chesterton, Francis Chan, John Piper, etc. Those authors write for a Christian audience and therefore they do not equip you to answer realistic challenges from non-Christians. But the apologetics book we looked at actually equips you to answer challenges from non-Christians using logical arguments and evidence from mainstream history and science. You can use the material in that book in discussions outside the confines of your home and your church.

# What can Christians learn from the bravest naval aviator at the Battle of Midway?

**Wintery Knight** · 4 June 2025 · Archived copy · Original

I have been reading lots of books about the World War II battles in the Pacific theater lately, and I wanted to write a post about one of the heroes I found who was the most compelling to me. You may have seen him in the old 1976 Midway movie or the new 2019 Midway movie. But neither movie tells the full story. The man I am talking about is Lt. Commander John C. Waldron.

John Waldron was the leader of the torpedo bomber squadron on the Hornet. This squadron was composed of outdated and slow Devastator torpedo bombers, armed with the Mark 13 Mod 1 torpedoes, which malfunctioned about 90% of the time.

I found an article on the Federalist that tells the story of John Waldron:

> Now there are countless men and woman who deserve to be singled out for their valor, but with the 75th anniversary of the Battle of Midway just around the corner, I thought it would be appropriate to call your attention to one of the bravest men who ever lived. A man who, knowing he was facing certain death, led the first attack against the Japanese aircraft carriers and played a direct role in what would be a decisive victory for the United States, and a defeat from which Japan would never recover. That man was Lt. Commander John C. Waldron.
>
> Now for those who don't know, the Battle of Midway was the turning point in the Pacific theater. The Japanese had an elaborate plan that involved attacking the U.S. base on Midway Island in order to lure the Americans into a battle which the Japanese High command felt their experience and tactics would overwhelm and annihilate the American fleet. With no significant U.S. naval presence, Hawaii and the entire West Coast would be at risk of invasion. But the Americans broke the Japanese code and set a trap of their own – hoping to destroy their enemy's carriers and thereby establish U.S. dominance in the Pacific. And that was exactly what happened : The U.S. fleet surprised the Japanese, sank their four carriers, and took the first real step to winning the Second World War.
>
> John Waldron was 42 years old when the *USS Hornet* steamed towards Midway on June 1st, 1942. Born and raised on a reservation in South Dakota, he had never seen the ocean until he attended the Naval Academy. It wasn't long after he graduated that he moved into naval aviation. He had been assigned to be the squadron leader of the *Hornet's* torpedo bombers in late 1941 and had been drilling his men tirelessly ever since. Waldron had the reputation of a tough as nails, no-nonsense commander. Not surprising, since Waldron was a direct descendant of the warriors from the Oglala Lakota tribe – part of the Great Sioux Nation. The tough skin he developed came from decades of derision from his peers over his meager beginnings, and from the racism directed at his Native American heritage. Waldron didn't care what anyone thought of him – all he wanted to do was fight for his country. He was a natural leader and his men would follow him into the gates of Hell, which, as fate would have it, is exactly what they would do in the upcoming battle.
>
> On the morning of June 4th, the Americans were ready to spring their trap, but in the preflight briefing aboard the *Hornet* there was a problem. Stanhope Ring, who was in command of the carrier's air group, directed his pilots to head northwest of the last reported position of the Japanese fleet. Waldron disagreed with this decision, feeling that they should head in the exact direction of that last sighting. He wasn't shy about expressing this opinion, much the displeasure of Ring. Waldron continued to lobby his superior officer several times after the briefing ended, but to no avail.

The Federalist article doesn't talk much about Stanhope Ring, but the book I just finished called "The Battle of Midway" by Craig L. Symonds did. Ring was a very tall, good-looking, and white officer who had breezed up the

chain of command thanks to his good looks and confident manner. He loved to show off for cameras, and pull rank on subordinates. He was too proud to admit that Waldron was right in front of the other pilots.

More:

> The air strike force took off from the deck of the *Hornet* – fighters, dive bombers, and the 15 planes in Waldron's torpedo squadron. This force would be joined in the air by similar strike forces from the other U.S. carriers – the *Yorktown* and the *Enterprise*. Shortly after the Hornet's air group was airborne, Waldron couldn't contain his anger anymore. He broke radio silence to tell Ring that they were headed in the wrong direction. He repeated that comment and Ring issued a terse reply that he was in charge of this group and to stay the hell off the radio. Waldron waited a couple of minutes before replying "The hell with you" and peeled his squadron off and headed due west, where he felt the Japanese fleet was.
>
> Less than an hour later, Waldron was proved right. He had led his squadron on a direct line to the enemy. Waldron broke radio silence again to signal to Ring that he had found the fleet, but Ring and the rest of the *Hornet's* planes were too far away to hear. So now, Waldron was faced with a brutal decision. If he went in to attack, he would do so without any fighter protection, and they'd be totally at the mercy of the Japanese fighters. To make matters worse, the U.S. planes (Douglas Devastators) were hopelessly outdated aircraft – their top speed was about a third of what the Japanese fighters could do. They had hoped to get the newer Grumman Avengers, but the *Hornet* had left Pearl Harbor before they had arrived from the mainland. All of this meant that Waldron and Torpedo 8 were looking at a suicidal attack run. […]Waldron got on the radio again and told his men "We will go in. We won't turn back. Former strategy cannot be used. We will attack. Good luck!"
>
> And with that, the planes of Torpedo 8 closed up their formation and bore down on the Japanese fleet, some seven miles distant.
>
> The Japanese fighters quickly pounced on the Americans, who were going in low and slow – the only way torpedo bombers can attack. One by one the planes from Torpedo 8 were shot down. […]Every single plane in Torpedo 8 was destroyed and not one torpedo hit a Japanese ship.

Not only were the torpedo bombers of John Waldron's VT-8 (Hornet) shot down, but two more waves led by Eugene Lindsey VT-6 (Enterprise) and Edward Massey VT-3 (Yorktown) were also repulsed without a hit.

More:

> History might have viewed Waldron's attack as more insane than brave, and utterly pointless….except for what happened next. Shortly after his failed attack, the torpedo squadron from the *Enterprise* attacked the fleet – and right after that the torpedo squadron from the *Yorktown*. Both of those squadrons had devastating casualties as well (10 of 14 planes lost and 10 of 12 respectively) without inflicting any damage on any Japanese ship. But these three attacks in succession drew the Japanese fighter cover down so low, that it left their carriers exposed to dive bomber attacks. It also burned up a lot of fuel for the fighters, who now needed to land before they could continue their defense of the fleet. The attacks also forced the Japanese carriers into defensive maneuvers, so they were unable to land any planes or launch any for a strike on the American carriers.

In addition to using up their fuel and coming down to low altitude, the Japanese CAP (combat air patrol) fighters also used up most of their dangerous 20 mm ammunition. They mostly had much weaker 7.7 mm ammunition remaining when the dive bombers from the Enterprise and Yorktown arrived.

More:

> As the Japanese were trying to compose themselves after the three fierce but harmless attacks, the American dive bombers from the *Enterprise* and *Yorktown* arrived and quickly struck. Within minutes, three of the

> Japanese carriers were in flames – the heart of the Imperial Navy had been gutted.
>
> […]The other planes from the Hornet never found the Japanese ships. Ring kept his planes flying in that northwesterly direction until they were too low on fuel to keep going. They returned to the *Hornet* with their full payload of bombs.
>
> […]Now, there were a lot of heroes that day – some who lived and some who died, but the valor that John Waldron displayed in defying orders he knew were wrong and then attacking the enemy when he knew it meant certain death, place him on a special level. His actions directly helped the Americans win this crucial battle, which turned the tide of the war in the favor of the United States. He got the Navy Cross for his actions that day, but it seems astonishing to me that he wasn't awarded the Medal of Honor – he is definitely worthy of it.

You can learn more about the Battle of Midway in this helpful video:

So, here is what I wanted to say about this.

John Waldron was not properly equipped by his organization to make a difference at Midway. His planes were too old and slow, his torpedoes almost never worked. His leader was an arrogant, incompetent coward who prevented him from leading others to find and attack the actual targets. The only way he could do something to his enemy was to disobey orders and go off on his own. If he had lived, he probably would have been court-martialed for insubordination. After Waldron was shot down, every single one of the men in his squadron continued their attack until they too were all shot down. Everyone watching must have thought "what a waste of effort". It was only later that it became evident to all that what he did was necessary for the second wave to succeed.

This plaque at the United States Naval Academy Club honors the three commanders of the torpedo bomber squadrons:

Plaque honoring the Midway torpedo bomber squadron commanders

According to the Family Research Council, the plaque reads:

> The torpedo attacks of Waldron, Lindsey, and Massey had followed hard upon each other by luck. What was not luck, but the soul of the United States in action, was the willingness of the torpedo plane squadrons to go in against hopeless odds. This was the extra ounce of martial weight that in a few decisive minutes tipped the balance of history.

When I read this story, it immediately occurred to me that this is the problem that serious Christians are facing today. Parents and pastors are not equipping young people to actually make a difference. Instead of finding and

fighting the real targets: atheism, radical feminism, communism, etc., all our forces have been sent on wild goose chases, so that now “Christians” are actually trying to promote the priorities of the secular left, e.g. – global warming, wealth redistribution, affirming sexual immorality, open borders, critical race theory, etc.

The few of us who actually know how to do our jobs are poorly equipped. We are prevented from leading by organizations that are focused on feelings rather than results. We can only hope that our decision to attack against hopeless odds somehow paves the way for a second wave to succeed. It has happened before, and that’s why we should be brave and continue to engage our opponents using tools that work (philosophy of religion, evidential apologetics, scientific research, historical evidence, chastity, sobriety, self-control, good stewardship of our educations, careers and finances, effective charitable giving, self-sacrificial love, etc.).

# Southern Poverty Law Center labels Focus on the Family a “hate group”

**Wintery Knight** · 5 June 2025 · Archived copy · Original

I remember a few years ago that many, many big corporations, including Facebook, YouTube, and Amazon were using groups like the Southern Poverty Law Center to classify which people were motivated by “hate”. The SPLC had as much respect as other human rights groups. But then, the SPLC was linked to domestic terrorism, and internal scandals emerged.

First, let’s see the latest news from Christian Post:

> The far-left civil rights organization Southern Poverty Law Center has added the conservative Evangelical parachurch ministry Focus on the Family to its list of “anti-LGBTQ+ hate groups,” joining similar organizations that advocate for traditional beliefs on sexuality and family.

You might remember how the SPLC labeled the Alliance Defending Freedom – a law firm that regularly wins civil rights cases at the Supreme Court – as a “hate group”. But they are not the only ones who got that treatment – the Family Research Council, Moms for Liberty, and the American Family Association are on it, too. Even former Republican presidential candidate BEN CARSON was on the list. Probably for being a non-white conservative – left-wing racists hate us the most.

You might remember the link between the SPLC and the Family Research Council.

The Daily Caller reports.

Excerpt:

> The man accused of opening fire and shooting a security guard at the conservative Family Research Council headquarters last August plead guilty to three charges in a D.C. federal court Wednesday.
>
> Floyd Lee Corkins, II of Herndon, Virginia entered guilty pleas to a federal weapons charge as well as a local terrorism charge and a charge of assault with intent to kill, according to news reports.
>
> […]Following the guilty plea the FRC issued a statement placing a large portion of the blame for the shooting at the feet of the liberal Southern Poverty Law Center, which had listed FRC as a hate group. FRC noted that prosecutors discovered Corkins identified his targets on the SPLC’s website.

That’s not the only link between the SPLC and domestic terrorism.

Here’s the story from Daily Wire:

> An attorney with the far-left nonprofit Southern Poverty Law Center (SPLC) was arrested Sunday for allegedly committing domestic terrorism to stop a police facility from being built.
>
> The Atlanta police department said Sunday night that Thomas Webb Jurgens was among the 23 people charged after a “group of violent agitators used the cover of a peaceful protest of the proposed Atlanta Public Safety Training Center to conduct a coordinated attack on construction equipment and police officers. They changed into black clothing and entered the construction area and began to throw large rocks, bricks, Molotov cocktails, and fireworks at police officers.”

I could go on and on about the scandals, but since I want to be brief, let’s just see the kind of person who works for the SPLC.

Fox News has a good article about that:

> The SPLC fired [SPLC co-founder Morris] Dees in March 2019 following accusations of unchecked internal racism and sexism. His ouster came after the SPLC faced two dozen employee complaints saying its workplace fostered an intolerable workplace environment, including mistreatment, sexual harassment and a lack of diversity based on race and gender.
>
> The New York Times reported at the time that several employees were subject to “racially callous remarks” and that some on staff were sidelined because of their skin color – ultimately affecting their pay and advancement within the organization.

This part is funny:

> “As a civil rights organization, the SPLC is committed to ensuring that the conduct of our staff reflects the mission of the organization and the values we hope to instill in the world,” SPLC’s then-president Richard Cohen said at the time. “When one of our own fails to meet those standards, no matter his or her role in the organization, we take it seriously and must take appropriate action.”
>
> Cohen later stepped down from the organization amid the harassment and diversity allegations.

Big Tech has been judging you for years, using the opinions of the SPLC. It would be great if the Trump administration investigated them for it. Maybe we would get less domestic terrorism if they had to face a little legal scrutiny?

# Meet four heroes of the D-Day invasion of Normandy on June 6th, 1944

**Wintery Knight** · 6 June 2025 · Archived copy · Original

I thought it might be a good idea to write up something about D-Day in order to help people understand some of our military history, and to put the spotlight on some real heroes. I don't regard artists, athletes, dancers, singers, actors, or other celebrities as heroes. It really alarms me that so many people know more about these fake heroes than they do about real ones.

**Weakness emboldens aggressors**

For one thing, many people don't understand how British and American libertarian isolationism made World War 2 into a much bigger mess than it needed to be. As historian Victor Davis Hanson explains in the lecture I linked below, the Allied nations were much stronger and better equipped than the Axis nations before the war started. The Axis nations developed better weapons after the war started. But Germany and Japan didn't think that the Allied nations would do anything if they were aggressive. We know this from their writings and correspondence. They thought that British and Americans were just too scared of war to stop them.

Germany and Japan tested their hypothesis out by re-arming and annexing territory from their neighbors. Britain and America were led by libertarian isolationists, so they didn't fight back. The aggressors correctly understood that libertarian isolationists didn't have the will to oppose them, even if they were weaker than the Allies. But the more they re-armed and annexed territory, the stronger they became. The Allied nations waited too long to confront them. And that's why World War 2 was much harder to win than it needed to be.

Here's a very good lecture about the causes of World War 2 by an actual military historian, Victor Davis Hanson:

So, that's the first point I wanted to make: libertarian isolationism causes wars. Although libertarians claim to oppose war, they actually cause war, due to their weakness in the face of evil. So who stops wars? People who favor a strong defense, and show a willingness to fight back against aggression are the ones who REALLY oppose wars. This is called "peace through strength", and you can see it in action in the Cold War, where Ronald Reagan defeated the Soviet Union by making their aggression costly.

**Heroes of D-Day**

My second concern was to promote the real heroes of D-Day, over the fictional heroes of movies, fiction, music,

dancing, sports, and other entertainment nonsense.

Here are the four heroes I chose:

- Major John Howard
- Lieutenant Colonel Benjamin Vandervoort
- Brigadier General Norman Cota
- Major Richard Winters

Let's take a look at each of them.

**John Howard**

Major John Howard led elements of the British 6th Airborne Division to take two vital bridges southeast of Sword beach. He did this in order to prevent German socialist counterattacks coming from the east. After they took the bridges, they had to repulse German tanks with nothing more than their useless PIAT (Projector Infantry Anti-Tank) grenade launchers. The PIAT was nothing more than a grenade launcher powered by a coiled spring. It was very inaccurate, and only effective to 50 yards. But that's all the British paratroops had to stop tanks, and they made it work. You can read about him in this book by Stephen E. Ambrose, entitled: "Pegasus Bridge: June 6, 1944". This New York Times article tells the story in brief. He also is played by Richard Todd in the famous movie "The Longest Day".

**Benjamin Vandervoort**

Lt. Col. Ben Vandervoort served with the 82nd Airborne Division. I read about how he lead an infantry attack against German Tiger tanks (!) and infantry in Stephen E. Ambrose's book "Citizen Soldiers: The U.S. Army from the Normandy Beaches to the Bulge to the Surrender of Germany". Ben Vandervoort broke his ankle during the D-Day landing, but he insisted that the medic just "lace it up tight" so that he could supervise the attacking and holding of Ste. Mere Eglise, southwest of Utah beach, against a vastly superior enemy force. This article tells about how he defended against elite German SS infantry and heavy Tiger tanks at Trois-Ponts, during the Battle of the Bulge. He was outgunned and outnumbered 20 to 1, and had just a few lightly-armed soldiers, two weak 57mm anti-tank guns and some bazookas. He is portrayed by John Wayne in the famous movie "The Longest Day".

**Norman Cota**

Brig. General Norman Cota is my favorite person in World War 2. At 51 years old, he nevertheless landed at D-Day, and rallied terrified Army Rangers to follow him up the bluff, by telling them that Rangers ought to lead the way. "Rangers Lead The Way" later became the motto of the Army Rangers. He always led from the front, demonstrating how to attack a German machine gun position in a farmhouse to a group of American soldiers who were pinned down. He actually grabbed a bunch of grenades and led the assault team against a heavy machine gun! You can read about him in this short article and in Stephen E. Ambrose's "D-Day: June 6, 1944: The Climactic Battle of World War II". He is portrayed by Robert Mitchum in the famous movie "The Longest Day".

**Richard Winters**

Major Richard Winters served in the 101st Airborne Division. Winters led an assault against a superior force of heavy machine guns and 105mm field guns. His tactics were so brilliant that they are still studied at West Point today. You can see Richard Winters and Carwood Lipton in the HBO "Band of Brothers" series, or read this book by Stephen E. Ambrose entitled "Band of Brothers: E Company, 506th Regiment, 101st Airborne, from Normandy to Hitler's Eagle's Nest", which is the basis for that series.

I hope this convinces you that military heroes are far more important than the "heroes" of fiction and entertainment. It's alarming to me that people invest more and have more respect for characters in Hollywood science fiction movies, and other such make-believe nonsense. We need to be rooted in reality. In reality, men who fight and die fighting evil to protect your freedoms are the real heroes. People who take military history seriously are able to give

respect and gratitude where it is due – a very important part of being a mature, moral human being.

# William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

**Wintery Knight** · 7 June 2025 · Archived copy · Original

Here is the video of the debate:

Here is my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

**The debaters**

- William Lane Craig
- Alex Rosenberg

Below is the summary.

**Dr. Craig's opening speech:**

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

**Dr. Rosenberg's opening speech**

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see
- There are things we can't see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato's dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don't require God

Sixth argument: Mormonism undermines Dr. Craig's three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

**Dr. Craig's first rebuttal**

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological

spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

**Dr. Rosenberg's first rebuttal**

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

**Dr. Craig's second rebuttal**

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

**Dr. Rosenberg's second rebuttal**

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

**Dr. Craig's concluding speech**

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

**Dr. Rosenberg's concluding speech**

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

# National Guard soldiers deployed to stop violent leftist insurrection

**Wintery Knight** · 9 June 2025 · Archived copy · Original

During the Biden administration, we saw federal law enforcement used to punish opponents to the Democrat party. Concerned parents were labeled "domestic terrorists". Peaceful pro-lifers had their homes pre-dawn raided. Assault rifles were pointed at children in their homes. So now that we have a real left-wing insurrection in Los Angeles, what should the federal government do?

The Federalist reports:

> President Donald Trump on Saturday announced the deployment of 2,000 National Guard soldiers to Los Angeles County amid escalating violent protests against federal agents enforcing U.S. immigration laws. The protests have reportedly included explosives detonated against cars, federal buildings, and federal law enforcement personnel. The insurrectionists have also lobbed rocks, stones, and concrete at federal law enforcement, according to Fox News.
>
> Foreign criminals apprehended this week by now-beseiged U.S. Immigrations and Customs Enforcement (ICE) agents in Los Angeles included gang members and others with long rap sheets, including assault, domestic violence, robbery, cruelty to children, and drug and alien trafficking, Fox News reported, citing the Department of Homeland Security.
>
> […]Several people were arrested on charges of assaulting a federal agent, U.S. Border Patrol head Michael W. Banks said.
>
> The violence came on the heels of Friday's bedlam in which more than 1,000 rioters "surrounded a federal law enforcement building and assaulted ICE law enforcement officers, slashed tires, defaced buildings, and taxpayer funded property," according to the U.S. Department of Homeland Security.

Democrats run the state of California from top to bottom, so the slow-walking of local law enforcement is no surprise:

> DHS noted that it took the Los Angeles Police Department two hours to show up at the scene of the insanity.

TWO HOURS! I thought LAPD was supposed to be a highly-skilled police department. Maybe they are, or maybe the LAPD leaders are beholden to the Democrat city leaders.

Here's a video of leftist terrorist throwing cement blocks at government vehicles moving at high speed. That's what we are talking about when we say "violent insurrection".

I follow ICE accounts on Twitter, so I see the stories of some of the people they've been deporting. Convicted murderers, rapists, drug dealers, child molesters, child abusers, etc.

Daily Wire noted:

> "BREAKING: Federal sources ID some of the criminal illegal alien targets ICE arrested in their LA operation yesterday & today, which sparked violent protests," Melugin posted via X. "They include multiple gang members, convicted sex offenders, violent gun offenders, & drug offenders. One has already been deported."

What do Democrat leaders think about left-wing insurrections?

Daily Wire notes:

> Rep. Maxine Waters (D-CA) hit the streets alongside anti-ICE protesters in Los Angeles, taunting and harassing Immigration and Customs Enforcement (ICE) agents before she attempted to enter the Los Angeles

> Federal building to check on a union boss who had been arrested.

That's not an isolated opinion.

Daily Wire has another example of a Democrat leader, and this one is no surprise:

> Former Vice President Kamala Harris declared on Sunday that she is supporting the anti-ICE protests in and around Los Angeles, claiming the demonstrations have been "overwhelmingly peaceful" despite violent clashes with federal authorities.

You'll recall that Harris had previously supported rioters:

> As riots shook cities across the United States in 2020, then-Sen. Kamala Harris authored a little-known blog post urging the public to help demonstrators "on the front lines" by donating to a bail fund that freed violent criminals.
>
> The blog post, which Harris published on her Medium profile on May 31, 2020, came amid riots in Minneapolis and other major cities following the death of George Floyd. Harris… asked readers in the post to contribute to the Minnesota Freedom Fund, which bailed murderers and serial domestic abusers out of jail. Harris is still fundraising on behalf of the controversial charity, according to an ActBlue software page.

So, that's what Democrat party leaders think about the use of violence to further their left-wing agenda. And you get the bill for the damage and the law enforcement.

What's a proportional response by the Trump administration, given what the Biden administration did to their opponents?

Federal law enforcement needs to designate the left-wing groups responsible for the violence as terrorist organizations, and prosecute them until they are disbanded. Including the organizers and financiers of the violence. We need to use the full force of federal law enforcement to punish these left-wing anti-government groups for their insurrection activities. And not just the members of the groups, but the financiers of the groups.

After all, insurrections are so bad, remember? That's what the corporate news told us for 4 years under Biden/Harris.

# J. P. Moreland explains the meaning of happiness in the Christian worldview

**Wintery Knight** · 10 June 2025 · Archived copy · Original

From happiness expert and Christian philosopher J.P. Moreland.

Excerpt:

> According to ancient thought, happiness is a life well lived, a life that manifests wisdom, kindness and goodness. For the ancients, the happy life — the life we should dream about — is a life of virtue and character. Not only did Plato, Aristotle, the Church Fathers and medieval theologians embrace this definition, but Moses, Solomon and (most importantly) Jesus did, too. Sadly their understanding is widely displaced by the contemporary understanding of happiness defined as pleasure and satisfaction, a subjective emotional state associated with fleeting, egocentric feelings.
>
> Consider the differences:
>
> | **Contemporary Understanding** | **Classical Understanding** |
> |---|---|
> | Happiness is: | Happiness is: |
> | **1.** Pleasure and satisfaction | **1.** Virtue and character |
> | **2.** An intense feeling | **2.** A settled tone |
> | **3.** Dependent on external circumstances | **3.** Depends on internal state; springs from within |
> | **4.** Transitory and fleeting | **4.** Fixed and stable |

> | **7.** Achieved by self-absorbed narcissism; success produces a celebrity | **7.** Achieved by self-denying apprenticeship to Jesus; success produces a hero |
>
> How can we be certain Jesus is inviting us to a classical understanding of happiness in Matthew 16:24-26? He isn't talking about going to heaven rather than hell, nor is He telling his followers how to avoid premature death. Where Matthew writes, "what will a man be profited, if he gains the whole world, and forfeits *his soul*" (emphasis added), Luke clarifies Jesus' teaching by replacing "his soul" with the word "himself" (Luke 9:25). The issue is finding one's self vs. losing one's self. More specifically, to find one's self is to find out how life *ought* to look like and learn to live that way; it's to become like Jesus, with character that manifests the fruit of the Spirit and the radical nature of Kingdom living; it's to find out God's purposes for one's life and to fulfill those purposes in a Christ-honoring way.

I like that "success produces a hero". Who doesn't want to be a hero? I certainly do.

In one of his lectures, Dr. Moreland says, and I quote: "Happiness is the freedom to do what we ought to do". That's right. When a person is free to comply with God's design for human flourishing, then he/she is happy. My biggest source of unhappiness is the feeling that I cannot be who I want to be as a Christian. It's getting even worse when I think about how the government is now using force to prevent me from spending what I earn the way I want, and saying what I want about the issues of the day, regardless of who is offended. I am becoming increasingly thankful for the time I spend with other dedicated Christians. That's when I can be myself and not worry about what anyone is going to think of me. This is no small source of happiness.

# Woman gets light sentence for falsely accusing “creepy” man of rape and kidnapping

**Wintery Knight** · 11 June 2025 · Archived copy · Original

I was having a conversation with my friend Katy the other day, about whether men are not interested in marrying because they find older women unattractive. I told her that men find older women very attractive, if they are slim and athletic. I left it at that, but I wanted to go on and explain to her why men are declining to marry, even good Christian men who have good jobs and savings,

My thesis is that men have recognized that the legal system is very much against them, and it is unwise for them to expose themselves to that legal system.

What’s the evidence?

So, on this blog, I have written about how women overall initiate 69% of the divorces that they are involved in. In fact, college-educated women initiate 90% of the divorces they are involved in. And I’ve written about how the sentences for men are 63% more severe than for women, for the exact same crime and criminal record. And I’ve written about how a high number of the accusations of rape or sexual assault by women (20-40 percent) are hoaxes. And I’ve written about how men are often the victims of paternity fraud. Men don’t even have to cohabitate with a woman to be billed for thousands of dollars in alimony and child support. False accusations of child abuse are routinely used in order to eject husbands from their homes, and to get custody of the children (and the child support money that comes with having custody).

I could go on and on, but I hope enough has been said to show what the evidence supports the view that the legal system in America is biased against men.

But wait! There’s another reason. Men have also noticed that women can easily press false accusations, and they suffer virtually no consequences when those accusations are proven false and / or recanted.

Here is a recent example, reported by New York Post:

> A Pennsylvania woman who admitted to fabricating kidnapping and rape allegations against a stranger whom she “specifically targeted” because she thought he was “creepy” last year is paying for her lies.
>
> Anjela Borisova Urumova, 20, was sentenced to from 45 days to 23 months in Bucks County Correctional Facility on Tuesday by Judge Stephen A. Corr, according to the Bucks County District Attorney’s Office.

The article notes that she “pleaded guilty to seven misdemeanor counts, including tampering with or fabricating physical evidence and false reports.” As a result of her lies, the accused spent 31 days in prison.

Three things. First, he is married:

> Pierson, 41, was present with his wife in court Tuesday but did not wish to make a statement during the sentencing since the ordeal has been “too emotional” for him and his family, the DA’s office said.

Second, the false accuser recanted her accusation:

> She then went to the police and accused Pierson as her attacker before eventually fessing up to the tale.

Third, she judged him as evil based solely on her feelings (intuitions, first impressions) about his appearance:

> Urumova told investigators that she “specifically targeted” Pierson because she had seen him and his blue Ford F-150 pickup truck in the area before and thought he was “creepy.”

I asked Grok what the average sentence is for a false accusation of rape, compared to a real conviction of rape, and it said:

> Data on sentences for false accusations of rape or sexual assault by women in the USA is limited. Available studies and legal cases suggest most convictions result in light punishments, often suspended sentences, fines, or no jail time. Estimating based on available information, including cases with zero jail time, the average sentence is approximately 2 months (0.17 years).
>
> For men convicted of rape in the USA, the average prison sentence is 212 months (17.67 years), per 2019 USSC data.

So, women get "approximately 2 months" for a false accusation of rape, and men get "average prison sentence is 212 months" for a rape conviction.

**False accusations deter good men from marrying**

Even if a good man is very clever about choosing the right women to be his wife, he would still be vulnerable to false accusations from women in the workplace, and other places. It's not the Christian homeschooling future wife in the house who is the problem. It's the radical feminist single mother in the office who is the problem. The bitter, angry one with the 200+ body count, and the 200K of student loan debt for a degree in misandry.

And the worst part of this is that when you tell pro-marriage people about these false accusations, they dismiss it. I've been told "why would you make decisions off of evidence and calculations? One day you'll meet a nice girl and fall in love" It's terrifying to be dealing with people who approach major life decisions by feelings and wilful blindness. They try to goad you into bad decisions by shaming you.

Imagine if someone tried to sell you a lemon at the car dealership by attacking your masculinity. "I dare you to buy this used car without getting it checked out by a mechanic!" You would have to be really lacking in education and work experience to think that the "man up!" approach would work on a man. And yet, when I talk to pro-marriage people, this is *their only argument.* They scream "Get Married!" and then refuse to address any of the evidence of the threats posed by feminism, such as false accusations.

Who is going to support the good wife and good children if the man is in prison because of a false accusation? Not the pro-marriage advocates. And the younger generation of women are sliding further and further into secularism and leftism, making the risk of false accusation even higher. Why would a wise man expose himself to these risks? Especially when no one wants to fix the problem.

Here's the bottom line: It's an enormous deterrent to a good man's desire to be a husband and father that they are exposed to prison and / or financial ruin because of false accusations. You have to give men a good value proposition if you expect them to go the husband and father route. Good men have other things that they can do with their money and time. Just because you *really* want them to do your plan with their lives, it doesn't mean that they can't find something *else* to do with their time and money – like focus on serving God. If you want men to marry, then take men's concerns seriously.

# What is the earliest statement of the authoritative books of the Bible?

**Wintery Knight** · 12 June 2025 · Archived copy · Original

I know that in the land of secular leftism, there are many myths, and those myths survive because they circulate in an echo chamber. But this is the Wintery Knight blog, and on this blog, we go back to the evidence. So what's the myth? "The list of authoritative books of the Bible was determined hundreds of years after they were written". Is that true? Let's take a look at the data and see.

So, the allegation is that before 325 AD, people were using the canonical gospels equally with the forgery gospels like Judas, Peter, Mary, Thomas, etc. Then there was a church council that whittled down that list of equally valid sources to just the 4 gospels we recognize today. But did it really happen like that?

So, before we look to a scholar, I want to take a stab at this, and say what I would say if someone asked me this question. So, the first thing that came into my mind is that you don't need a church council to tell you which books of the Bible are authoritative, you just have to look at which books the earliest church fathers are quoting. And they are quoting the gospels.

Here is a snip from a conversation between Frank Turek and J. Warner Wallace, and here's what Wallace says:

> So, I write in this new book, Person of Interest, I reached out to David now that Norm has passed, and he had some great people who he was working with on this, and I cited them in the case notes of this book. And you can see it in the book. It's illustrated. Every church father who precedes the Council of Nicaea, and how many books, how many gospels, and how many letters are quoted by that particular church father. There's a graphic for this, and you can see them all standing with the numbers of gospels they quote, and the numbers of letters they quote. And then I went through, I did the research, and he has compiled numbers. David and his associates have compiled numbers on how many…so this is a much more accurate. So, here's what we know. And this is what I talked about in the book. It turns out that about 87% of the Gospel of Matthew is quoted by the early church fathers prior to the Council of Nicaea. About 935 verses. 66% of Mark, about 435 verses are quoted by these same church leaders. But 86% of the Gospel of Luke, 990 verses quoted by these church leaders. And 97% of the Gospel of John, about 859 verses that are quoted by these early church fathers.

So, if you go by that standard of who are the early church fathers quoting, it's the 4 canonical gospels. And by the way, if you are looking for specific reasons why some "gospels" were not included, I would look at the Michael Licona chapters of Lee Strobel's "The Case for the Real Jesus". And there is an audio book!

But I also found this article over at Canon Fodder (Michael Kruger's blog), that had more.

He writes:

> First, we don't measure the existence of the New Testament just by the existence of lists. When we examine the way certain books were *used* by the early church fathers, it is evident that there was a functioning canon long before the fourth century. Indeed, by the second century, there is already a "core" collection of New Testament books functioning as Scripture.
>
> Second, there are reasons to think that Athanasius' list is not the earliest complete list we possess. In the festschrift for Larry Hurtado, Mark Manuscripts and Monotheism (edited by Chris Keith and Dieter Roth; T&T Clark, 2015), I wrote an article entitled, "Origen's List of New Testament Books in Homiliae on Josuam 7.1: A Fresh Look."
>
> In that article, I argue that around 250 A.D., Origen likely produced a complete list of all 27 New Testament books–more than a hundred years before Athanasius. In his typical allegorical fashion, Origen used the story of

> Joshua to describe the New Testament canon:
>
> But when our Lord Jesus Christ comes, whose arrival that prior son of Nun designated, he sends priests, his apostles, bearing “trumpets hammered thin,” the magnificent and heavenly instruction of proclamation. Matthew first sounded the priestly trumpet in his Gospel; Mark also; Luke and John each played their own priestly trumpets. Even Peter cries out with trumpets in two of his epistles; also James and Jude. In addition, John also sounds the trumpet through his epistles [and Revelation], and Luke, as he describes the Acts of the Apostles. And now that last one comes, the one who said, “I think God displays us apostles last,” and in fourteen of his epistles, thundering with trumpets, he casts down the walls of Jericho and all the devices of idolatry and dogmas of philosophers, all the way to the foundations (Hom. Jos. 7.1).
>
> As one can see from the list above, all 27 books of the New Testament are accounted for (Origen clearly counts Hebrews as part of Paul’s letters). The only ambiguity is a text-critical issue with Revelation, but we have good evidence from other sources that Origen accepted Revelation as Scripture (Eusebius, Hist. eccl. 6.25.10).

So, if you ever hear someone saying that the authoritative books of the Bible were not decided until the 4th century, then there are a couple of ideas of how to respond to that.

# How do “conservative” women like Tomi Lahren explain the decline of marriage?

**Wintery Knight** · 13 June 2025 · Archived copy · Original

Recently, “conservative” Tomi Lahren has appeared on shows like Piers Morgan and Laura Ingraham, arguing that men are defective, weak, and lazy. She thinks that the deficiencies of men are the reason for the decline of marriage. Women want to get married, but the men are just so inferior that women cannot find any “real men”. And that’s why marriage is declining.

But are her views accurate? Is the decline of marriage really due to a shortage of high quality men?

First of all, it’s important to point out that women’s views of what a good man is have been changing. For one thing, a “good man” is now a man who embraces leftist policies like abortion, same-sex marriage, student loan bailouts, green new deal socialism, government-run healthcare, defund the police, open borders, transing the kids, etc.

The far-left UK Independent explains:

> An analysis of survey data from across the developing world had found that “a new global gender divide” is emerging. The analysis, conducted by the Financial Times’ John Burn-Murdoch, showed that the developed world’s young women have rapidly become more liberal. Young men, however, have either become more conservative (as in the US) or been much slower to become more progressive (as in the UK). Gen Z, Burn-Murdoch concluded, is “two generations, not one.”

Today, young, unmarried women are more likely to support abortion and same-sex marriage than young, unmarried men. And it’s not just moral issues, it’s fiscal issues as well. Young unmarried women generally vote against the policies that make a country prosperous, such as low taxes and small government.

This study from the Journal of Political Economy explains:

> This paper examines the growth of government during this century as a result of giving women the right to vote. Using cross-sectional time-series data for 1870–1940, we examine state government expenditures and revenue as well as voting by U.S. House and Senate state delegations and the passage of a wide range of different state laws. Suffrage coincided with immediate increases in state government expenditures and revenue and more liberal voting patterns for federal representatives, and these effects continued growing over time as more women took advantage of the franchise. Contrary to many recent suggestions, the gender gap is not something that has arisen since the 1970s, and it helps explain why American government started growing when it did.

Now, if you think that Christian leaders are opposed to this slide to the left among young women, then you are wrong. Christian leaders have embraced a view called “servant leadership”. And that view is simply that men are not supposed to lead on moral and spiritual issues, like telling the truth, making decisions, making plans, and achieving results. If men say anything that upsets non-Christians, then this is BAD, and the man has to be punished.

The new view of male leadership which is shared by Christian and non-Christian feminists is that men’s primary purpose is not to serve God, but women. Men are not there to confront lies and immorality in the culture, because “don’t judge”. Men are only there to “provide” (dispense money) and “protect” (be tall, and make muscles). Men should not expect their wives to stay home with their young children. Men must not expect their wives to homeschool the children. Men must drop off the kids at day care and public school, and pick them up. This allows men’s wives to be free to pursue their feminist goals – like buying expensive clothes, putting on make-up and going on TV, just like Tomi Lahren does.

So, how do traditional men respond to this assessment of the decline of marriage?

Here is a clip from Matt Walsh, where he explains what he thinks is wrong with Tomi Lahren's view:

And then here's another clip from Steven Crowder, where he explains why feminists (non-Christian and Christian) have failed to be convincing to young men:

Finally, a note. Tomi Lahren is not a conservative. Like most childless, career-oriented feminists, she's pro-abortion. In fact, if she is like most Christian leaders, she doesn't think that women sin by choosing abortion. It is somehow always a man's fault when women sin, because women were not affected by The Fall.

**Where are all the good men?**

What about Tomi's definition of "good men"? When modern women talk about "where are all the good men?", they don't mean men who are good at defeating lies and opposing moral evil. They don't mean Matt Walsh. Conservative, Christian men "give them the ick".

By "good men", they mean men who:

- are tall and have muscles
- display wealth, rather than save it
- dispense lots of cash to women on demand
- put their kids in daycare and public schools
- vote for Democrat policies, e.g. – abortion, green new deal socialism, defunding police, open borders, transing kids, etc.
- don't judge, especially don't judge the woman's past

Those are the "good men" that modern feminists are having so much trouble finding in their 30s and 40s, once they get tired of having "fun", and want to settle down with a stable, boring ATM who agrees with them on secular leftism, and NEVER imposes any responsibilities or obligations on them. "Servant leadership"!

So, should traditional men wife up non-traditional women like Tomi Lahren? No. Traditional men should only get married to traditional women. Non-traditional women have to get married to non-traditional men.

# Correcting four myths about the history of the Crusades

**Wintery Knight** · 14 June 2025 · Archived copy · Original

Here is an interesting article from Intercollegiate Studies Institute.

Intro:

> The verdict seems unanimous. From presidential speeches to role-playing games, the crusades are depicted as a deplorably violent episode in which thuggish Westerners trundled off, unprovoked, to murder and pillage peace-loving, sophisticated Muslims, laying down patterns of outrageous oppression that would be repeated throughout subsequent history. In many corners of the Western world today, this view is too commonplace and apparently obvious even to be challenged.
>
> But unanimity is not a guarantee of accuracy. What everyone "knows" about the crusades may not, in fact, be true. From the many popular notions about the crusades, let us pick four and see if they bear close examination.

The four myths:

- Myth #1: The crusades represented an unprovoked attack by Western Christians on the Muslim world.
- Myth #2: Western Christians went on crusade because their greed led them to plunder Muslims in order to get rich.
- Myth #3: Crusaders were a cynical lot who did not really believe their own religious propaganda; rather, they had ulterior, materialistic motives.
- Myth #4: The crusades taught Muslims to hate and attack Christians.

Here's the most obvious thing you should know. The Crusades were *defensive* actions*:*

> In a.d. 632, Egypt, Palestine, Syria, Asia Minor, North Africa, Spain, France, Italy, and the islands of Sicily, Sardinia, and Corsica were all Christian territories. Inside the boundaries of the Roman Empire, which was still fully functional in the eastern Mediterranean, orthodox Christianity was the official, and overwhelmingly majority, religion. Outside those boundaries were other large Christian communities—not necessarily orthodox and Catholic, but still Christian. Most of the Christian population of Persia, for example, was Nestorian. Certainly there were many Christian communities in Arabia.
>
> By a.d. 732, a century later, Christians had lost Egypt, Palestine, Syria, North Africa, Spain, most of Asia Minor, and southern France. Italy and her associated islands were under threat, and the islands would come under Muslim rule in the next century. The Christian communities of Arabia were entirely destroyed in or shortly after 633, when Jews and Christians alike were expelled from the peninsula.[6] Those in Persia were under severe pressure. Two-thirds of the formerly Roman Christian world was now ruled by Muslims.
>
> What had happened? Most people actually know the answer, if pressed—though for some reason they do not usually connect the answer with the crusades. The answer is the rise of Islam. Every one of the listed regions was taken, within the space of a hundred years, from Christian control by violence, in the course of military campaigns deliberately designed to expand Muslim territory at the expense of Islam's neighbors. Nor did this conclude Islam's program of conquest. The attacks continued, punctuated from time to time by Christian attempts to push back. Charlemagne blocked the Muslim advance in far western Europe in about a.d. 800, but Islamic forces simply shifted their focus and began to island-hop across from North Africa toward Italy and the French coast, attacking the Italian mainland by 837. A confused struggle for control of southern and central Italy continued for the rest of the ninth century and into the tenth. In the hundred years between 850 and 950, Benedictine monks were driven out of ancient monasteries, the Papal States were overrun, and Muslim pirate

> bases were established along the coast of northern Italy and southern France, from which attacks on the deep inland were launched. Desperate to protect victimized Christians, popes became involved in the tenth and early eleventh centuries in directing the defense of the territory around them.

If you asked me what are the two best books on the Crusades, I would answer God's Battalions: The Case for the Crusades by Baylor professor Rodney Stark and The Concise History of the Crusades by Professor Thomas F. Madden. If you get this question a lot from atheists, then I recommend you pick these up. Anything by Rodney Stark is useful for Christians, in fact.

# The importance of fathers for teaching children about Christian worldview

**Wintery Knight** · 15 June 2025 · Archived copy · Original

One thing I wish that Christian parents and pastors emphasized more with young, unmarried Christian women is the need to choose a man who keeps his commitments. It turns out that passing on Christian values and worldview works a lot better when there is a man around to teach the children himself.

Here is some statistical evidence showing the difference that Christian fathers make, from Touchstone magazine.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, a child who doesn't have a benevolent, involved father is going to have an more difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others.

If a woman wants her child to be religious and moral, then she has to pick a man who is religious and moral. And it can't just be a faith commitment that he claims with words, because he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading. It would be good to see how he puts those beliefs into practice, too.

My advice to Christian women is this. When you are picking a man, be sure and choose one who is already invested in Christian things and producing results. It's very unlikely that he's going to be interested in developing that capacity from scratch if he's not already doing it. If you want your kids to be taught Christianity by their father, then make spiritual leadership a priority when you're choosing a husband.

# Southern Baptists fail to shut down Ethics and Religious Liberty Commission

**Wintery Knight** · 16 June 2025 · Archived copy · Original

Regular readers will remember the ERLC, which is a branch of the Southern Baptist Convention that is often accused of advancing left-wing Democrat party policies. There was an opportunity to de-fund the ERLC at the most recent SBC convention, but the attempt failed. In this post, let's review a couple of articles that explain what the ERLC is, and why conservatives wanted to shut them down.

The first article is from Daily Signal:

> The Southern Baptist Convention held its annual conference this week, and delegates narrowly voted against eliminating the public policy arm, which has been accused of advancing left-wing ideology.
>
> […]ERLC has been accused of pushing social justice initiatives like critical race theory and gun control. ERLC President Brent Leatherwood has lobbied for gun control under a pro-life banner and led a group to block the release of the transgender Nashville shooter's writings.
>
> Former ERLC president, Russell Moore, repeatedly denounced President Donald Trump, even though the majority of Southern Baptists voted for him.

About that mention of critical race theory in the quote above… A resolution opposing critical race theory was blocked at a previous Southern Baptist conference. It makes sense to me that this refusal to condemn critical race theory would come from the ERLC, based on their other leftist positions on political issues. But let's review the refusal to condemn first.

Here's what Dr. Voddie Baucham had to say about it, as reported by Capstone Report:

> The Southern Baptist Convention messengers were cowards for not repudiating Critical Race Theory by name, said Dr. Voddie Baucham on the Todd Starnes Show.
>
> "I don't think it was so much buying in (to CRT) as much as white guilt and cowardice," Dr. Baucham said. "It was obvious building up to the Convention that the issue at hand was Resolution 9 on Critical Race Theory and Intersectionality from two years ago and how that was going to be responded to. And when you respond to it with a Resolution that refuses to even name Critical Race Theory and Intersectionality, that is an act of cowardice."

And another black conservative Carol Swain said this:

> I was most interested in the Critical Race Theory issue and a resolution that the Conservative Baptist Network crafted and put forward.
>
> And I am on the steering committee of that network. Our resolution was killed by the resolutions committee. And they put forth a substitute that was vaguely worded and did not mention intersexuality or Critical Race Theory itself.
>
> […]…then they shut down any debate about how the issue was handled.

Critics of the ERLC claim that the ERLC associates with and is influenced by secular left-wing groups. Critics also claim that the ERLC takes their marching orders from the secular left – not from Scripture or Baptist faith and convictions. And those critics may have a point, when you consider the previous leader of the ERLC, Russell Moore. You might remember him, because he met with Barack Obama. They got along really well! And now Moore is heading up Christianity Today. Check this out: "Between 2015 and 2022, nine Christianity Today

employees made 73 political donations. All of them went to Democrats".

Regarding the ERLC's links to the secular left, Daily Signal notes:

> Between 2018 and 2021, during Moore's presidency, ERLC received $150,000 from eBay founder and longtime Democrat donor Pierre Omidyar, Basham reported. The Fetzer Foundation, which gets money from Bill Gates, has given ERLC $220,000. Facebook's Mark Zuckerberg gave another $90,000.

And that's not even to mention their connections with the Evangelical Immigration Table, which receives funding from none other than George Soros.

The Center for Baptist Leadership explains in this May 2025 article:

> The National Immigration Forum launched the Evangelical Immigration Table with funds from George Soros. The 2013 Open Society Foundations board book notes explicitly that funding from Soros' organization was sent to the NIF action fund for the purpose of "muster[ing] evangelical support".
>
> […][T]he ERLC continues to actively participate in the Evangelical Immigration Table as one of the leadership organizations.
>
> […]Not only does the ERLC serve as one of the leadership organizations of the Evangelical Immigration Table, but the ties between the ERLC, the National Immigration Forum, and the other leadership organizations of the Evangelical Immigration Table seem unusually interconnected.
>
> Consider this: the ERLC's former Director of Public Policy was hired directly from the National Immigration Forum. This alone should raise alarms: an employee of a Soros-funded organization that explicitly targeted evangelicals for ideological reformation was hired by the ERLC to represent Southern Baptists on matters of public policy. When she left the ERLC, she moved on to another EIT leadership organization. And she's not alone.

Megan Basham authored a recent article with Christ Over All, where she talked about the current leader of the ERLC, Brent Leatherwood.

She wrote:

> Though Leatherwood told *The Baptist Press* the ERLC supported a law to ban transgender treatments on children "as it made its way through the Tennessee legislature," House Majority Leader William Lamberth, who was a principal architect and co-sponsor of the bill, couldn't remember receiving that support. He did not recall any involvement from the ERLC.
>
> […]One issue that did not find the ERLC so motivated was protecting women's private spaces. Lamberth's colleague, Tennessee Representative Monty Fritts, told me the ERLC was similarly MIA on a bill he sponsored to keep men out of women's bathrooms, locker rooms, and prisons. Again, this is an issue the ERLC regularly highlights in its appeals to Southern Baptists for support. Fritts also said that while many ministries and faith groups in Tennessee backed his proposal to officially name July a month of prayer and fasting, the ERLC was not one of them.

How should the ERLC respond to the charges of conservatives? Well, they can differentiate themselves from the Democrat party, and show the conservatives that they understand what the Bible teaches that affects policy and apologetics. Where is the evidence for their advocacy for socially conservative policies? Do any of them even know how to make a case from the Bible for conservative positions like pro-life or natural marriage? What about defending the existence of God, or the resurrection of Jesus? Does anyone at the ERLC know how to use reason and evidence to make a case to non-Christians about the reasonableness of basic Christian beliefs? Where's the evidence that this is a priority for them?

# The Biden-Harris regime engaged with left-wing activist group

**Wintery Knight** · 17 June 2025 · Archived copy · Original

How many concerning actions by the Biden-Harris regime can you remember? There was the labeling of parents and traditional Catholics as "domestic terrorists", pre-dawn raids on pro-lifers, weak prosecution of church burnings and attacks on pro-life centers, delayed the release of the Nashville shooter's manifesto, and ignoring the persecution of Christians abroad.

And now we are finally finding out to what extent they were weaponizing government to persecute their political (and religious!) rivals.

Here's the latest news from Daily Signal:

> A left-wing activist group known for putting its political opponents on a "hate map" with chapters of the Ku Klux Klan advised Justice Department prosecutors at a "hate crimes1 symposium," newly unveiled documents show.
>
> America First Legal obtained the documents via a Freedom of Information Act request and provided them first to The Daily Signal.
>
> "All Americans should be shocked, appalled, and terrified that the Biden Justice Department was taking advice from a hate-filled, morally bankrupt organization like the Southern Poverty Law Center," Ian Prior, senior counselor at America First Legal, told The Daily Signal in a statement Monday. "The SPLC's agenda is anti-American to its core, and we must ensure that the SPLC never regains the power that it was so wrongly granted by the woke bureaucrats who ran this country until this past January."

You might remember my blog post of a few days ago about how the SPLC labeled FOCUS ON THE FAMILY as a "hate group". That's not the only Christian group they've done that with, either. The Family Research Council was also on the SPLC hate map. The Family Research Council headquarters building was attacked by a gay activist in 2012, and the shooter cited SPLC's hate map as inspiration, per The Daily Caller. The Alliance Defending Freedom, a presitigous religious liberty law firm, even says "The Southern Poverty Law Center's labels have led to violence". By the way, the SPLC labels groups like the Alliance Defending Freedom and Moms for Liberty as "extremist" or "hate" groups.

And this SPLC – DOJ symposium was not a one off:

> The Justice Department repeatedly engaged with the SPLC during the Biden administration. DOJ staff seemed receptive to meeting with the SPLC shortly after the group put the parental rights group Moms for Liberty on the "hate map" in 2023. Clarke appears to have met with the SPLC in March 2023.
>
> The FBI's Richmond office cited the SPLC in its since-rescinded memo on "radical traditional Catholics."

The Daily Signal also talked about Kristen Clarke, who I've blogged about before. Fortunately for Christians, Trump appointed someone much better than her when he took office. (Clarke admitted to not disclosing an 2006 arrest for domestic violence, as reported by NY Post).

Harmeet was talked about in the Daily Signal recently:

> Harmeet Dhillon, who was selected by Trump in December to lead the Justice Department's Civil Rights Division, has been nearly the opposite of her Biden administration predecessor.
>
> Former Assistant Attorney General Kristen Clarke, who led the civil rights office before Dhillon, was one of the most aggressive in weaponizing the DOJ against political opponents, especially pro-lifers.

> Dhillon achieved some notoriety before being appointed to office. Her California law office took up a few high-profile cases in the last decade, including that of James Damore, the Google employee who said he was fired because he criticized the company's diversity policies.
>
> "While the Civil Rights Division prosecuted pro-lifers, Dhillon has represented pro-life journalist David Daleiden, who exposed Planned Parenthood staff who sold aborted-baby body parts," my colleague Tyler O'Neil wrote in December.
>
> Dhillon has not only stopped the persecution of pro-life activists but has initiated DOJ investigations into states that have endangered women while violating civil rights law, like California.
>
> She announced in May that her department was investigating whether California is violating Title IX by allowing males to compete in women's sports.
>
> "Title IX exists to protect women and girls in education. It is perverse to allow males to compete against girls, invade their private spaces, and take their trophies," Dhillon said in May. "This Division will aggressively defend women's hard-fought rights to equal educational opportunities."

She's doing a great job. Conservatives should keep an eye on her, she would make a nice Attorney General in the next Republican administration. That's who I would pick. I like her far more than Pam Bondi, the current Attorney General. She has more fighting spirit.

One thing for sure, it really shows the importance of Christians voting. And not just voting, but advocating for conservative policies with independent voters during the election campaign period.

# Frank Turek lectures on the case against same-sex marriage

**Wintery Knight** · 18 June 2025 · Archived copy · Original

About the speaker Frank Turek:

Dr. Frank Turek is the author or coauthor of five books, including I Don't Have Enough Faith to be an Atheist and Stealing from God:  Why Atheists Need God to make their Case. As the President of CrossExamined.org, Frank presents evidence for Christianity at churches, high schools, and secular college campuses. He has also debated several prominent atheists including Christopher Hitchens and Michael Shermer, Founding Publisher of Skeptic Magazine. Frank hosts an hour-long TV program each week called I Don't Have Enough Faith to Be an Atheist which is broadcast Wednesday nights on DirecTV Channel 378 (NRBTV). His radio program and podcast called I Don't Have Enough Faith to Be an Atheist with Frank Turek airs on 182 stations every Saturday morning at 10 a.m. eastern and is available continuously on the free CrossExamined App.

Frank Turek is one of my favorite speakers, and I admire him for being willing to take a public stand on controversial issues like gay marriage. He's actually had to pay a price for that in his professional life, and I blogged about that before.

Here's the lecture on gay marriage, featuring Christian apologist Frank Turek.

Outline:

Outline of Frank Turek's lecture on same sex marriage
Introduction:

- how to present your case against marriage safely
- Christians are required to go beyond tolerance
- loving another person can mean opposing the person when they want to do something wrong, even if they hate you
- what did Jesus say about marriage? (see Matt 19:4-6)
- what did Jesus say about sexual morality? (Matt 15, Matt 19)

Summary:

- the same-sex marriage debate is about whether to compel people who disagree with the gay lifestyle to validate

and normalize it

- P1: the government has an interest in marriage because it perpetuates and stabilizes society – this is the purpose of marriage
- P2-4: government can take 3 kinds of stances towards behaviors: promote, permit or prohibit
- government promotes behaviors when it has an interest in them
- same-sex relationships should be permitted, but not promoted
- Q1: if same-sex marriage had serious negative consequences, would you reconsider their position?
- Q2: are heterosexual relationships the same as homosexual relationships?
- Q3: what would society be like if everyone married according to the natural marriage definition: one woman, one man, for life?
- Q4: what would society be like if everyone married according to the same-sex marriage definition: man/man and woman/woman?
- Should Christians care about law and politics? or should they just preach the gospel?
- They should care because people often get their cues about what is moral and immoral based on what is legal and illegal
- Many of the social problems we see today can be traced back to problems with marriage and family
- Children do much better when they have a relationship with their mother and their father
- Same-sex marriage necessarily destroys the relationship between a child and its mother or its father
- When a country embraces same-sex marriage, it reinforces the idea that marriage is not about making and raising children
- same-sex marriage shifts the focus away from the needs of the children to the feelings of desires of the selfish adults
- does homosexuality impose any health and mental health risks?
- what has the impact of legalizing same-sex marriage been in Massachusetts to individuals, schools, businesses and charities?
- how same-sex marriage poses a threat to religious liberty
- how should you respond to the view that homosexuality is genetic?

And at the very end, he shows this short video, which is only 5 minutes and explains the logic of opposing the redefinition of marriage:

My biggest concern is religious liberty, and we are seeing how same-sex marriage has proven to be incompatible with religious liberty. But I also care about children… I want them to have mothers and fathers who put their needs first. Marriage is about a commitment – it is the subjugation of feelings and desires to responsibilities and obligations. It is a promise. A promise to commit to love your spouse and children regardless of feelings and desires. It requires more self-denial, self-control and self-sacrifice. Not less.

# Tennessee's SCOTUS win halts harmful transgender procedures for kids

**Wintery Knight** · 19 June 2025 · Archived copy · Original

I've blogged before about Tennessee's badass Attorney General, Jonathan Skrmetti. He defends the laws of the state of Tennessee from radical leftists. Tennessee's SB1 stopped doctors from giving kids puberty blockers, hormones and surgeries. The ACLU sued, but SCOTUS crushed them in *United States v. Skrmetti*. This post is a great tool to show the difference between the two parties, so please share.

First, let's see what was going on in Tennessee:

> The governor of Tennessee is calling for an investigation into Vanderbilt University Medical Center's Pediatric Transgender Clinic following viral tweets exposing alarming attitudes toward transgender surgeries and procedures for children.
>
> Daily Wire host Matt Walsh shared Tuesday afternoon that his team has been investigating the transgender clinic, claiming that "Vanderbilt drugs, chemically castrates, and performs double mastectomies on minors."
>
> In one video posted by Walsh, which has since gone viral, Vanderbilt University Medical Center's Clinic for Transgender Health physician Dr. Shayne Taylor describes how she persuaded the hospital to "get into the gender-transition game," as Walsh said. The doctor emphasizes that gender transition is a "big moneymaker."
>
> "The female-to-male bottom surgeries, these are huge moneymakers," Taylor says in the video.
>
> "They make money," she adds of the transgender surgeries. "They make money for the hospital."

So, the people in Tennessee are pretty conservative, and they are careful about who they elect. After all, Tennessee is home to big social conservative leaders like Matt Walsh and Robby Starbuck. So, voters in Tennessee elect real conservatives. In this case, House Majority Leader William Lamberth and Senate Majority Leader Jack Johnson authored a piece of legislation designed to stop health care providers from giving transgender drugs and surgeries to kids. That bill was called SB-1 and it took effect in September 2023.

Unfortunately, the American Civil Liberties Union, a far-left organization, sued the state of Tennessee, believing that they knew better than the voters of Tennessee. The case went all the way to the Supreme Court, and on Wednesday, we got the decision.

The Federalist explains:

> In a 6-3 ruling, SCOTUS deemed a Tennessee law prohibiting the surgical and chemical castration of minors does not violate the 14th Amendment's equal protection clause.

All 6 Republican appointees voted in favor of Tennessee, and all 3 Democrat appointees voted against Tennessee.

My favorite Justice is Clarence Thomas. If you ask any Republican voter what they would think about 9 clones of Clarence Thomas on the Supreme Court, they would kiss you on both cheeks and say "from your lips to God's ears".

Thomas had a separate concurrence, aimed specifically at the "healthcare experts" who like to push their leftist views onto the public under the cloak of science.

The article quote Thomas' concurring statement:

> "First, so-called experts have no license to countermand the 'wisdom, fairness, or logic of legislative choices.' … Second, contrary to the representations of the United States and the private plaintiffs, there is no medical

> consensus on how best to treat gender dysphoria in children," Thomas wrote. "Third, notwithstanding the alleged experts' view that young children can provide informed consent to irreversible sex-transition treatments, whether such consent is possible is a question of medical ethics that States must decide for themselves. Fourth, there are particularly good reasons to question the expert class here, as recent revelations suggest that leading voices in this area have relied on questionable evidence, and have allowed ideology to influence their medical guidance."
>
> "Taken together," the senior justice wrote, "this case serves as a useful reminder that the American people and their representatives are entitled to disagree with those who hold themselves out as experts, and that courts may not 'sit as a super-legislature to weigh the wisdom of legislation.'"
>
> […]"Thus, whether 'major medical organizations' agree with the result of Tennessee's democratic process is irrelevant."

Even moderate Justice John Roberts decided not to side with the leftists this time.

Daily Signal reports:

> In fact, Roberts pointed out, several European countries that jumped on the "gender-affirming" care bandwagon have reversed course, "rais[ing] significant concerns regarding the potential harms associated with using puberty blockers and hormones to treat transgender minors."

So, given all this, I want to make a point about a friend of mine who is a church-attending Christian, but no interested in politics. Let's call him "Libby", because he is a libertarian.

Libby loves to share memes on his meme page. He likes to read fiction. He watches TV comedies. He knows all the latest movies. Whenever the topic of politics comes up, Libby is sure that it's pointless to discuss politics because "both political parties are the same". He also thinks "it doesn't matter what state you live in, they're all the same". He also thinks that all countries are the same "Canada is just like the United States except colder".

Whenever I send Libby articles to convince him about something related to politics or policy, he always replies with "too many words".

Then he sends me a meme of Duke Nukem:

Then he reacts to my post with the yawn reaction, the Zzzzz reaction, and the bed reaction:

Personally, I think this is a more appropriate Duke Nukem meme for Libby:

So today, Libby is out there sharing memes about Batman and Disney, but he didn't mention anything about the big win for conservatives at SCOTUS. So I asked him, is this SCOTUS decision a good thing? And surprisingly, Libby agreed that not transing the kids WAS a good thing. So I asked him, are you going to share this good news with anyone? And he replied, no he wasn't. You see, Libby shares memes, and he doesn't want to lose any of his fans by sharing anything that would rock the boat.

So, don't be a Libby. The 2026 election cycle has already started. Now is the time to be sharing stories that show what Republicans do when they have power. The transgender issue is a winning issue with independents. It doesn't help us win elections to ignore all the good news on these issues while it's happening. Now is the time to convince independent voters that Republicans are VERY different than Democrats, and VERY different than Democrats for Christians in particular. Show people that you know why you vote for the Republican party. It's not just how you were raised. And it's not just your favorite football team. You have policy reasons.

So, share this blog post, or share the articles that I linked. Don't be a Libby. Now is the time to explain to people why they should vote Republican.

# Where are all the good women? New poll finds men vastly more pro-life than women

**Wintery Knight** · 20 June 2025 · Archived copy · Original

I've been blogging about the emerging ideological split between young women and young men. Young women, under the influence of feminism, have taken a hard left turn. They are now extremely likely to support abortion, gay rights, and other non-Christian views. Young men, now being influenced by the red pill and the manosphere, have becoming increasingly conservative.

First, let's review what the surveys say about the political views of young men and women.

The far-left UK Independent explains:

> An analysis of survey data from across the developing world had found that "a new global gender divide" is emerging. The analysis, conducted by the Financial Times' John Burn-Murdoch, showed that the developed world's young women have rapidly become more liberal. Young men, however, have either become more conservative (as in the US) or been much slower to become more progressive (as in the UK). Gen Z, Burn-Murdoch concluded, is "two generations, not one."

Who is influencing these young men? Well, it's not Christian feminists, who talk about "servant leadership" and twist the Bible to attack masculinity and eliminate male headship. Christian feminists think that men are supposed to be silent ATMs that dispense cash without judgement, and show off their muscles. "Protect and provide" they demand. But they never want men to fight against lies or make moral judgments – that's "mean".

Who are young men listening to that's causing them to become so conservative? Men are listening to leaders in the manosphere – the online community of people who are concerned about men's rights. And what are they hearing there? They are hearing that feminism is *terrible* for men. They are learning that that women on dating apps are chasing the top 20% of most attractive men. They are learning that women initiate most (69%) divorces, and that family courts are extremely unfair to men. They are learning that the more men that a woman has sex with before marriage, the greater the risk that she will initiate divorce. And they are learning that lesbians have the highest rates of marital instability AND domestic violence. Men are learning to be more careful with women.

And do you know what else young men are learning in the manosphere? Pro-life convictions.

Here are the numbers from National Right to Life:

> Lydia Saad handles much of Gallup's coverage of the abortion issue and does so in a comprehensive way. This morning, she authored "Gender Gaps on Abortion Reach Historic Highs" which is well worth reading.
>
> You would expect self-identified Democrats to support abortion—and the current survey bares that out. Likewise, you would anticipate Republicans to be more supportive of unborn children—also borne out by Gallup's latest poll.
>
> Currently, as of May 2025,
>
> * 32% of women and 54% of men identify as pro-life. 61% of women and 41% of men consider themselves pro-choice. The difference—the gap—was 13-points in 2022 "and no more than 10-point differences in any reading before Dobbs," according to Saad. "The gap has expanded since 2022 because pro-choice identity has dipped among men, from 48% to 41%, while it has held steady among women."
>
> In 2022, in the aftermath of the leak of the draft showing that Dobbs would overturn Roe, the "pro-choice" was ahead of the pro-life by 16 points, but by this year the margin had been halved–down to 8 points.

Basically, young men are learning that abortion empowers young women to choose recreational sex with the hot bad

boys that they find so desirable. Abortion provides feminists (and the hot bad boys) with a way to get out of the consequences of recreational sex. It enables feminists to delay "boring" marriage to the "unattractive" good man for as long as possible, and that's what feminists want.

The manosphere's reach extends all over the world. So, other countries are seeing this male pro-life trend.

Here is an article about young men in the UK, from the far-left UK Independent:

> Fewer than half of young men believe abortion should be legal, far less than the general population, a shocking new poll has found.
>
> Just 46 per cent of 16- to 34-year-old males believe abortion should be legal in all or most cases, compared with 71 per cent among the general population.

And it's not just abortion that the manosphere teaches young men to oppose. It's no-fault divorce. Feminists, including Christian feminists, LOVE no-fault divorce. It allows reckless feminists to choose a husband based on appearance, and then pretend to be surprised when the hot bad boy they chose turns out to be… a hot bad boy. Rather than having to take responsibility for their reckless choice, they can get out of it easily – and with cash and prizes. Young men understand that like abortion, no-fault divorce is a tool that feminists use in order to avoid "boring" marriage to an "unattractive" good man. Young men oppose frivolous divorce. They even have a funny phrase for it in the manosphere.

By the way, if you think that the manosphere is "Andrew Tate" or "Myron Gaines", that's just uninformed. Those are pick-up artists, which is only one segment of the manosphere. It's not those pick-up artists that are causing this massive swing back to conservatism. Pick-up artists are the bogeymen that the traditional "Get Married!" people try to scare you with, to get you to not care about the effects of feminism, e.g. – abortion and no-fault divorce.

If you want to listen to mainstream conservatives who take men's issues seriously, you can start with people like Matt Walsh and Steven Crowder. Ironically, some *women* actually do very well in the manosphere. Two of the more popular women influencers are Emily King and Courtney Ryan. I don't always agree with those people, but they certainly are more respectful of young men's conservative beliefs than Christian feminists.

So, now that men are being influenced by manosphere voices, instead of feminist voices, where will these good men find good women to marry? I don't think that church is producing anti-feminist women these days. Churches are still stuck in feminism, blaming good man bystanders for every poor choice that reckless women make with hot bad boys.

The hidden message of these impressive pro-life numbers among men is that traditional men will not be pursuing non-traditional women. Young men are becoming more conservative, and young women are becoming more leftist. Just because young women expect to claim a husband "when they are ready", that doesn't mean that the marriage-minded man they expect to comply will be there. Nothing against women in general. Just saying that non-traditional women will not be able to get traditional men to commit.

# Knight and Rose Show #65: Choices and Character in James, Part 1

**Wintery Knight** · 21 June 2025 · Archived copy · Original

Welcome to episode 65 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose begin a two-part series studying the book of James in the New Testament. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose explore chapters 1 and 2 of the Book of James. They discuss the book's author, James, the brother of Jesus, and his martyrdom. They examine themes such as endurance through trials, self-control, and faith vs. works. They also critique the prosperity gospel, warn against judging by appearances, and emphasize caring for orphans and widows, offering practical insights for living an authentic Christian life.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 65:**

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

**Podcast RSS feed:**

# How to respond to an atheist who complains about slavery in the Bible

**Wintery Knight** · 22 June 2025 · Archived copy · Original

I often hear atheists going on and on about how the Bible has this evil and that evil. Their favorite one seems to be slavery. Here are three things I say to atheists when they push this objection.

**The Bible and slavery**

First, you should explain to them what the Bible actually says about slavery. And then tell them about the person responsible for stopping slavery in the UK: a devout evangelical named William Wilberforce.

Here's an article that works.

Excerpt:

> We should compare Hebrew debt-servanthood (many translations render this "slavery") more fairly to apprentice-like positions to pay off debts — much like the indentured servitude during America's founding when people worked for approximately 7 years to pay off the debt for their passage to the New World. Then they became free.
>
> In most cases, servanthood was more like a live-in*employee*, temporarily embedded within the employer's household. Even today, teams trade sports players to another team that has an owner, and these players belong to a franchise. This language hardly suggests slavery, but rather a formal contractual agreement to be fulfilled — like in the Old Testament.3

**Atheism and moral judgments**

Second, inform them that moral values are not rationally grounded on atheism. In an accidental universe, there is no way we ought to be. There is no design for humans that we have to comply with. There are no objective human rights, like the right to liberty (that would block slavery) or the right to life (that would block abortion). Although you may find that most atheists act nicely, the ones who really understand what atheism means and live it out consistently are not so nice.

Famous atheist Richard Dawkins has previously written this:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

When atheists like Dawkins talk about morality, you have to understand that they are pretending. To them, morality is just about personal preferences and cultural conventions. They just think that questions of right and wrong are *arbitrary*. Things that are wrong in one time and place are right in another. Every view is as right as any other, depending on the time and place. That's atheist morality.

**What's worse than slavery? Abortion!**

Third, you should ask the atheist what he has done to oppose abortion. Abortion is worse than slavery, so if they are sincere in thinking that slavery is wrong, then they ought to think that abortion is wrong even more. So ask them what they've done to oppose the practice of abortion. That will tell you how sincere they are about slavery.

Here's atheist Richard Dawkins explaining what he's done to stop abortion:

That's right. The head atheist supports killing born children.

# When I was a child, I read J.R.R. Tolkien's "The Hobbit" and it changed my life

**Wintery Knight** · 23 June 2025 · Archived copy · Original

Since I mentioned "The Hobbit" in my biographical page at the top of the blog, I thought it might be worth explaining what I like about it. I still listen to my favorite chapter from it quite often before bed, to put me to sleep. If it doesn't work, I listen to other chapters. But why choose that book? Well, because The Hobbit had a huge impact on me when I was growing up.

So, the first thing to say is that I didn't grow up in a home with parents who had any plan for me. They were not involved in engineering me into anything. They just wanted good grades, and their method of getting that was yelling at me on report card day, then forgetting about school entirely, a few days later. As a result, I had to find my own morality and wisdom. The main things I read for that were the Bible, and later on, British literature, like Shakespeare and Spenser. But I'll always remember the first "big" book that I ever read, and that was the "The Hobbit".

**The Cover**

I noticed that there was a new printing of the book with the same cover design as the one that I read when I was small. I managed to get a gift copy of it from Desert Rose for my birthday. What I liked about the cover was the trees. If you look at the cover, there are multiple levels of trees, and you can see that the forest is deep, and you can't see very far into it. I really liked that as a child. Somehow, that picture on the cover made me think about adventure, and then when I read the book, that really inspired me with the idea of going far away to earn my fortune. I remember that I didn't read this book for school. I got it from the library.

**My favorite chapter**

My favorite chapter of "The Hobbit" is "Barrels Out of Bond". That's not the most popular chapter. But there is a phrase that appears in that chapter that's also in the cover blurb from the first edition:

> Bilbo Baggins was a hobbit who wanted to be left alone in quiet comfort. But the wizard Gandalf came along with a band of homeless dwarves. Soon Bilbo was drawn into their quest, facing evil orcs, savage wolves, giant spiders, and worse unknown dangers. Finally, it was Bilbo, alone and unaided, who had to confront the great dragon Smaug, the terror of an entire countryside

Did you notice that phrase, "alone and unaided"? I have it on my Twitter profile for my location. It comes from the "Barrels out of Bond" chapter.

So, let's talk about the overall plot of the book. The plot is that a famous wizard named Gandalf asks Bilbo the hobbit to accompany a group of dwarves on an adventure. His job is to be the burglar, because hobbits are small and sneaky. They travel along until they reach a dark forest called Mirkwood. The dwarves are captured by the inhabitants of the forest – a band of wood elves. Bilbo is able to avoid capture, by slipping on his ring of invisibility that he found earlier. He follows the dwarves into the cave of the wood elves, because he doesn't want to leave them behind. So, he gets stuck in the cave, wandering around, stealing food, and trying to keep from getting discovered and caught. All while trying to think about how to help the dwarves escape, and get on with their journey.

And then we find this passage:

> "I am like a burglar that can't get away, but must go on miserably burgling the same house day after day," he thought. "This is the dreariest and dullest part of all this wretched, tiresome, uncomfortable adventure! I wish I was back in my hobbithole by my own warm fireside with the lamp shining!" He often wished, too, that he could get a message for help sent to the wizard, but that of course was quite impossible; and he soon realized

> that if anything was to be done, it would have to be done by Mr. Baggins, alone and unaided.

You can listen to the whole chapter here.

Bilbo isn't your typical hero. He isn't tall. He doesn't have big muscles. He doesn't beat up monsters because of his martial training. He doesn't always know what to do. He sometimes makes mistakes. His strength is his character, especially his humility and selflessness. He isn't motivated by the same selfish desires as many people are these days. He's not motivated by greed. He's not trying to impress anyone.

When I was small, it was important for me to be able to not fall into the traps of my environment. Finding out how to be different was important for me, because I was stuck in a home filled with negative talk and neglect, going to government schools, trapped in an socialist country. So, by reading books like the Hobbit, I was able to find virtues that were nowhere else in my environment.

More than the character was the idea of going on an adventure. That was one of the reasons why I left the country where I was born – so that I could come to America on a work permit, and seek my fortune. And keep seeking it, despite a lot of mistakes and setbacks. And not because outside people were leading me or helping me or engineering me to succeed. No family, no friends, no donations.

So the big lesson from the book  is that an adventurous spirit isn't free – it has to be put into a boy by what he reads. You should make your children read "The Hobbit". Put into their minds at a young age the idea that life is an adventure, that dangers and hardships are normal, and that character counts. Put into their minds that all goodness requires sacrifice. And to not worry so much about appearing important to other people.

# New study: stunning example of sudden, rapid genetic change in worm fossils

**Wintery Knight** · 24 June 2025 · Archived copy · Original

Normally in a post with a title like that, I would be linking an intelligent design web site, like Evolution News. But in this case, I didn't even find this story at Evolution News, I found it at Science Daily. The author of the article definitely takes the side of Darwinian evolution. But remember, as we discussed with Dr. Günter Bechly, evolution has to work gradually, if it is going to work at all.

If you remember the episode of Knight and Rose Show with Dr. Bechly, he talked about how natural mechanisms could only introduce change very gradually, and that sudden leaps of complexity in the fossil record are better explained by intelligent design. Why? Well, consider the task of writing an essay on paper with a pen. You can understand how a human could come up with a 1000 word essay in an hour, but you wouldn't be able to get the same result by dropping a bowling ball on a keyboard over and over.

**A new study about worm genetics**

Check out this article (archived) from Science Daily entitled "Defying Darwin: Scientists discover worms rewrote their DNA to survive on land". The subtitle is "A comparative genome study of earthworms and their marine relatives could challenge Darwin's theory of evolution by showing that worms colonized land in evolutionary jumps."

Now for some excerpts, and please pay attention to the bias of the author. There's a lot of could have, would have, should have in there. And a lot of assuming a mechanism that there is no evidence for. Remember, only designers can dump out functioning words and code in a short time. Natural mechanisms can't do it.

The article says:

> […][A] research team led by the Institute of Evolutionary Biology (IBE), a mixed research centre belonging to the Spanish National Research Council (CSIC) and Pompeu Fabra University (UPF), points for the first time to a mechanism of rapid, massive genomic reorganisation which could have played a part in the transition of marine to land animals 200 million years ago. The team has shown that marine annelids (worms) reorganised their genome from top to bottom, leaving it unrecognisable, when they left the oceans.

I remember Dr. Bechly telling us in the podcast that naturalists cannot help themselves to jumps in complexity, because natural mechanisms can only work if there are no jumps at all. The latin phrase from philosopher Gottfried Wilhelm Leibniz is "natura non facit saltus" which means "nature makes no jumps". Naturalists sometimes like to help themselves to jumps, and call it "punctuated equilibrium", but punctuated equilibrium is not a *mechanism* for the rapid generation of genetic complexity. Rather, it merely *describes* what we find in the fossil record – long period of statis, and VERY short periods of huge jumps in complexity. Or "biological big bangs" as Dr. Bechly called them in his article about it.

The Science Daily article explains the findings of the study:

> The analysis of these genomes has revealed an unexpected result: the annelids' genomes were not transformed gradually, as Neo-Darwinian theory would predict, but in isolated explosions of deep genetic remodelling.

"Isolated explosions of genetic remodeling". I can do that at work, when I refactor the code. But I'm an intelligent designer. Evolution can't do refactoring like that.

**Evaluating the Science Daily article**

I asked Grok whether the article explained any specific naturalistic mechanism that explained the "isolated

explosions" in genetic complexity, and Grok said:

> In short, the article uses vivid phrasing to describe the fossil record and genetic findings but does not articulate a clear, plausible naturalistic mechanism for the sudden genetic changes beyond the general idea of genomic rearrangement.

About the supposed designing ability of "punctuated equilibrium", Grok said:

> Punctuated equilibrium is primarily descriptive. It characterizes the fossil record's pattern—long periods of little change punctuated by rapid bursts of morphological innovation. It does not, by itself, provide a detailed mechanistic explanation for how sudden jumps in genetic complexity occur.
>
> The theory posits that rapid evolutionary change happens in small, isolated populations over relatively short geological timescales (thousands to tens of thousands of years), which may not leave many transitional fossils. However, it relies on standard evolutionary mechanisms (mutation, selection, drift) operating faster in these contexts, without specifying unique genetic or molecular processes to account for dramatic increases in complexity.

Keep in mind that the best experiments on the speed of naturalistic mechanisms, such as the LTEE experiments by Richard Lenski, show that mutation and selection produce steady, incremental changes, not sudden explosions of complexity.

**The best explanation for biological big bangs**

In the article about biological big bangs, Dr. Bechly says:

> The gradualistic core predictions of any unguided evolutionary mechanisms such as neo-Darwinism are strongly contradicted by the empirical evidence. The cumulative conflicting evidence from molecular biology, genetics, population genetics, and the discontinuous fossil record can no longer be explained away as anomalies or as artifacts such as under-sampling of an incomplete fossil record.
>
> The total evidence is better explained with pulses of infusion of new information from outside of the system (top-down), rather than with a purely mechanistic stepwise bottom-up process. The only known cause in the universe that is able to produce significant amounts of new complex specified information is the activity of an intelligent conscious agent, so that intelligent design theory qualifies as superior alternative to unguided Darwinian evolution in an inference to the best explanation (abductive reasoning) among competing hypotheses.
>
> This is not an argument from ignorance (i.e., God of the gaps) as is often incorrectly claimed by critics, but is based on empirical data and our positive knowledge about the regular causal structure of the universe and the type of causes that exclusively are known to produce certain effects.

I do think it's important for everyone to be clear on what the science shows. Naturalists have to have the evidence that naturalistic mechanisms can do all the creating in the brief time available. We know that intelligent agents can make explosions of specific complexity (functional information) in brief periods of time. But we don't know that naturalistic mechanisms can do it.

If you would like to watch a nice lecture featuring Dr. Bechly explaining the fossil record, and the biological big bangs, then you can find that here:

If you want something to listen to, check out our podcast episode on the fossil record with Dr. Bechly.

# Did the early church invent the divinity of Jesus over a long period of time?

**Wintery Knight** · 25 June 2025 · Archived copy · Original

How early is the doctrine of the divinity of Jesus? When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography. The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

**1 Corinthians**

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

**Philippians**

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

**Mark's gospel**

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

**The "Q" source for Matthew and Luke**

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

# Zohran Mamdani: government-run grocery stores, minimum wage hikes, and rent control

**Wintery Knight** · 26 June 2025 · Archived copy · Original

If there is one difference between conservatives and leftists, it's that conservatives are much stronger on basic economics than leftists. That's why conservative states like Tennessee and Florida and Oklahoma are much more fiscally healthy than leftist states, like California, New York and Illinois. Conservative voters understand the problems with nationalization and price controls.

First, let's see the news from Daily Signal, where they explain what policies New York assemblyman Zohran Mamdani holds :

> A far-left socialist who has supported defunding the police and replacing them with social workers, abolishing prisons, abolishing private health insurance, banning guns, decriminalizing pretty much every drug, and creating government-run grocery stores won the Democratic Party mayoral primary in New York City on Tuesday.

Like many leftists, Mamdani comes from a very wealthy background:

> Mamdani came from a well-to-do background. His mother is a famous Bollywood producer. His father is a Columbia University professor who specializes in "postcolonialism."

And what's interesting is where the support for his Marxist economic policies come from.

Daily Wire explains:

> According to election results published by the New York Times, Mamdani won counties with a median income of more than $117,000 by an average of 13 points, while Cuomo won counties with a median income below $62,000 by 13 points.
>
> […]Mamdani's margin of victory in wealthier counties is likely to increase after several rounds of ranked-choice tabulation conclude throughout the week.

The Daily Wire article also says that Mamdani has expressed support for higher taxes, and $65 million for "gender-affirming" drug treatments and surgeries for adults and children. And that's not his parents' money, that's taxpayer money. According to the Daily Caller, he wants to raise minimum wage to $30 an hour.

So, what do economists say about policies like this? What happens when governments take over private industry, like grocery stores? What happens when governments raise the minimum wage? What happens when the government imposes price controls on rent?

Well, we know about all of these things – we know by studying what results these policies have had when they have been tried in other times and places. And the results are always the same.

**Nationalizing grocery stores**

Let's start with nationalizing grocery stores. It's been done in Venezuela and Cuba. In Venezuela, the Chavez government took over private supermarkets like Éxito in 2010, rebranding them as state-run Bicentenario stores.

By 2015, most basic goods were unavailable in stores due to price controls and mismanagement. Shoppers faced long lines. Food production plummeted, because food suppliers could not sell at a loss. Malnutrition surged, including for children. Investors got a clear signal – do not put your money into producing food, you will not get a

return on your investment.

**Raising minimum wage**

Seattle, Washington, a bastion of atheism and socialism, raised their minimum wage to $15 and hour in 2017 for large employers.

The results? It hurt the poorest most. Low-wage workers had their hours cut. Small businesses laid off staff to stay open. Prices for consumer goods increased. Businesses closed down. When you raise the price of labor for no gain in productivity, businesses cannot survive. They have to cut worker hours, or eliminate low-skill jobs entirely. For example, McDonald's installs self-serve kiosks to replace low-skill cashiers.

**Imposing rent controls**

San Francisco imposed rent control on pre-1994 buildings, including 45% of rentals.

Landlords responded by selling rental units, or converting them into owner-occupied residences. There was a drop in rental supply, leading to shortages of rentable properties. This affected the poorest people the most, because it's the poor who rent small residences when they are just starting out.

**Basic economics**

When you read a book on basic economics, such as "Basic Economics" by Thomas Sowell, or "Common Sense Economics" or "Economics for Dummies", all of the above cases are considered basic cases that virtually *no economist* disagrees on. So then, if almost every economist agrees on the bad results from such policies, how do they get made into law?

It's simple. Many of the wealthiest people champion these policies because they want to get elected by seeming "generous". They want voters to believe that their words, which sound so kind and compassionate, will automatically achieve good results. And many voters – and I mean especially the economically-illiterate leftist voters – believe this. Sadly for them, ignorance of economics does not give you immunity from the results of your voting.

# How is universal government-run healthcare working for Canada?

**Wintery Knight** · 27 June 2025 · Archived copy · Original

I always get excited when the annual report on Canadian healthcare comes out. A lot of people in my office love single payer healthcare. Except they don't know how it works in countries that have tried it. They imagine that it works well. They love the idea that healthcare will be free for them. But when I get my hands on a good study, it means a lot of fools are about to get a beat down.

Canada Universal Coverage Government Run Single Payer Healthcare Health Care Wait Times

Here's the latest from the Fraser Institute:

> - In 2024, physicians across Canada reported a median wait time of 30.0 weeks between a referral from a GP and receipt of treatment. Up from 27.7 in 2023.

> - This is 222% longer than the 9.3 week wait Canadian patients could expect in 1993.

> - The national 30 week total wait is comprised of two segments. Referral by a GP to consultation with a specialist: 15.0 weeks. Consultation with a specialist to receipt of treatment: 15.0 weeks.

> - After seeing a specialist, Canadian patients waited 6.3 weeks longer than what physicians consider to be clinically reasonable (8.6 weeks).

> - Across 10 provinces, the study estimated that patients in Canada were waiting for 1.5 million procedures in

> 2024.

> - Patients also suffered considerable delays for diagnostic technology: 8.1 weeks for CT scans, 16.2 weeks for MRI scans, and 5.2 weeks for Ultrasound.

Well, there's a saying in business. You can have a product or a service fast, or you can have it good, or you can have it cheap. Pick two out of 3. So, Maybe Canadian healthcare is not fast, but maybe it's good, and maybe it's cheap.

Canada Universal Coverage Government Run Single Payer Healthcare Health Care Cost Taxes

Let's turn to the Fraser Institute again:

> - Canadians often misunderstand the true cost of our public health care system. This occurs partly because Canadians do not incur direct expenses for their use of health care, and partly because Canadians cannot readily determine the value of their contribution to public health care insurance.

> - In 2024, preliminary estimates suggest the average payment for public health care insurance ranges from $4,908 to $17,713 for six common Canadian family types, depending on the type of family.

> - Between 1997 and 2024, the cost of public health care insurance for the average Canadian family increased 2.2 times as fast as the cost of food, 1.7 times as fast as the average income, and 1.6 times as fast as the cost of shelter. It also increased much more rapidly than the cost of clothing, which has been falling in recent years.

OK, so Canadians aren't getting healthcare fast, and they're not getting healthcare cheap. Maybe they're getting really really good healthcare, though.

Here are the numbers from a recent study from Ipsos, a major Canadian pollster:

> An Ipsos survey for the Montreal Economic Institute is showing that Canadians' opinions about their provincial healthcare systems have not improved in 2024 compared to last year. As in 2023, we find that less than half (48%) of Canadians are satisfied with their provincial healthcare system, with only 8% saying they are very satisfied. This proportion is even lower among women (43%), as well as residents of the Atlantic (30%).

Well, they are getting garbage healthcare. And they are not actually paying for healthcare. They are paying massive amounts of taxes for *access to a waiting list for healthcare.* And they get in line behind refugees who cannot even speak English, and have paid nothing in taxes. That's what happens when you have universal-coverage government-run healthcare. That's how it actually works in real life.

And sometimes they even *die* while waiting for healthcare. Here is an article from the Toronto Sun from January 2025:

> Close to 15,500 people died waiting for health care in Canada between April 1, 2023 until March 31, 2024, according to data compiled by SecondStreet.org via Freedom to Information Act requests across the country.
>
> However, SecondStreet.org says the exact number of 15,474 is incomplete as Quebec, Alberta, Newfoundland and Labrador don't track the problem and Saskatchewan and Nova Scotia only provided data on patients who died while waiting for surgeries – not diagnostic scans.
>
> SecondStreet.org says if it extrapolates the unknown data, then an estimated 28,077 patients died last year on health care waiting lists covering everything from cancer treatment and heart operations to cataract surgery and MRI scans.

I know that a some Americans like to pick political leaders and policies based on their feelings. They want to feel good. They want to be liked. People who like government-run healthcare tend to be people with enormous student loan balances for worthless non-STEM degrees. They work in easy jobs in the public sector. They join labor unions because they're scared of competition and accountability. Many of them work in daycare or they teach little children, because they don't want to be challenged by adults. When you look at the numbers on healthcare in different countries, it's very clear what works and what doesn't work. Americans need to be smarter than Canadians. We have to vote based on reason and evidence.

# Information Enigma: 21-minute video explains intelligent design

**Wintery Knight** · 28 June 2025 · Archived copy · Original

The video is here:

I have read and listened and watched a lot of material on intelligent design, but I have never seen so much value packed into such a short lecture. I really hope you'll watch this and that it's helpful to you.

Summary:

- the big question when discussing the origin of life: where did the information in living systems come from?
- Until 530 million years ago, the oceans were largely devoid of life
- In a 10 million year period, many new forms of animal life emerged
- New biological forms of life require new information
- the discovery of DNA shows that living systems work because cells have information that allows them to build the components of molecular machines: cell types, proteins, etc.
- can random mutation and natural selection create new functional information?
- normally, random mutations tend to degrade the functionality of information, e.g. – randomly changing symbols in an applications code does not usually introduce useful new functions, it usually renders what is there non-functional
- the majority of possible sequences will NOT have functions, so random mutations will more likely give you non-functional code, rather than functional code
- example: a bicycle lock  with 4 numbers has many possible sequences for the 4 numbers, and only one of them has unlock functionality, the rest have no functionality
- if you have lots of time, then you might be able to guess the combination, but if the lock as has 10 billion numbers, and only one combination that unlocks, you can spend your whole life trying to unlock it and won't succeed
- how likely is it to arrive at a functional protein or gene by chance? Is it more like the 4-dial lock (can be done with lots of time) or the 10 billion dial lock (amount of time required exceeds the time available)?
- the probability is LOW because there is only one sequence of numbers that has unlock function
- consider a short protein of 150 amino acids has 10 to the 195th power possible sequences
- if many of these sequences of amino acides had biological function, then it might be easier to get to one by random mutation and selection than it is with a lock that only unlocks for ONE sequence
- how many of the possible sequences have biological function?
- Thanks to research done by Douglas Axe, we now know that the number of functional amino acid sequences for even a short protein is incredibly small…
- Axe found that the odds of getting a functional sequence of amino acids that will fold and have biological function is 1 in 10 to the 77th power
- Is that number too improbable to reach by chance? well, there are 10 to 65th atoms in the entire Milky Way galaxy… so yes, this is a very improbable outcome
- can random genetic mutations search through all the sequences in order to find the one in 10 to the 77th power one that has biological function? It depends on how much guessers we have and how many guesses we get in the time available
- even with the entire 3.5 billion year history of life on Earth, only about 10 to the 40th organisms have ever lived, which far smaller fraction of the 10 to the 77th total sequences
- even with a very fast mutation rate, you would not be able to reach a functional protein even with all that time,

and even with all those organisms

I was once having a discussion with a woman about the research that Axe did at the Cambridge University lab. He published four articles in the Journal of Molecular Biology. I held out one of the papers to her and showed her the numbers. She said over and over “I hate the Discovery Institute! I hate the Discovery Institute!” Well, yeah, but you can’t make the Journal of Molecular Biology go away with hating the Discovery Institute. JMB is peer-reviewed, and this was experimental evidence – not a theory, not a hypothesis.

We have been blessed by the Creator and Designer of the universe in this time and place with *overwhelming evidence* – an abundance of riches. For those who have an open mind, this is what you’ve been waiting for to make your decision. For the naturalists who struggle so mightily to block out the progress of experimental science, they’ll need to shout louder and shut their eyes tighter and push harder to block their ears. Maybe if they keep screaming “Star Trek” and “Star Wars” over and over to themselves, they will be able to ignore the real science a little longer.

# Michael Behe and Keith Fox debate theistic evolution vs intelligent design

**Wintery Knight** · 29 June 2025 · Archived copy · Original

Michael Behe and Keith Fox debate evolution and intelligent design. (See below for link to video)

Details:

> Michael Behe is professor of biochemistry at Lehigh University, Pennsylvania and the founder of the modern Intelligent Design movement. His book "Darwin's Black Box" ignited the controversy 14 years ago when it claimed that certain molecular machines and biological processes are "irreducibly complex" and cannot be explained by Darwinian evolution.
>
> Keith Fox is Professor of biochemistry at the University of Southampton and chairman of Christians in Science. As a theistic evolutionist he believes that Evolution is the best explanation going for the complexity we see and that ID is a blind scientific alley and theologically unappealing to boot.
>
> They debate whether micromachines in the cell such as the "bacterial flagellum" could have evolved by a Darwinian process of evolution. When inference to design is and isn't acceptable in science. Whether random mutation can mathematically stack up to complex life, and whether God is reduced to a divine "tinkerer" by ID.

Here's the debate:

**Summary**

Note: the following debate summary is rated "S" for Snarky. Reader discretion is advised.

Michael Behe:

- ID is not Biblical creationism
- ID is not religion
- ID is a scientific research program
- People refuse to discuss ID because of personal philosophical assumptions
- ID is like the Big Bang – it is based on evidence, but it has broad religious implications

Keith Fox:

- ID is not Biblical creationism, but it isn't science

Michael Behe:

- ID is compatible with common descent
- ID is only opposed to unplanned, unguided evolution (Darwinism)
- ID is not necessarily opposed to long periods of time

**Behe's first book – the bacterial flagellum**

Keith Fox:

- Here are a couple of papers that show how parts of the flagellum evolved
- They are possible pathways

Michael Behe

- No, those are studies that show that there are similarities between bacterial flagella in multiple organisms
- Similarities of proteins between different organisms do not necessarily imply a developmental pathway
- The problem of having the instructions to BUILD the flagellum still remains

Keith Fox:

- Maybe parts of the flagellum had other functions before they were used in the flagellum
- Maybe you can use the parts of the flagellum for other purposes
- Maybe, one can imagine, it's possible that!

Michael Behe:

- No, parts have to be modified and re-purposed in order to be used for other functions

Keith Fox:

- But maybe the proteins can be used in other systems for other things
- I re-purpose parts from of designed things to other purposes in my house when I do maintenance

Michael Behe

- Uh, yeah – but aren't you an intelligent designer? What does your home maintenance have to do with Darwinian evolution?

**Is ID another God-of-the-gaps argument?**

Michael Behe:

- Well consider the Big Bang… there was a build-up of scientific evidence for that theory
- Just because a theory has religious implications, doesn't mean that it isn't true
- You really have to look at the specific evidence for a theory, and not decide in advance

Keith Fox: (I'm paraphrasing/inventing/mocking from now on)

- But the Big Bang is based on discoveries, and intelligent design is based on gaps in our scientific knowledge
- What if I did have evidence of a step by step pathway (which I don't right now)? Then I would win the argument – what would you do then?

Michael Behe:

- Well, if tomorrow you do manage to find expiremental evidence of a pathway, which you don't have today, then I would be wrong
- ID is falsifiable by experimental evidence
- But what about your your view? Is that falsifiable by experimental evidence?
- What if someone goes into a lab (someone like Scott Minnich?) and performs gene knockout experiments, and publishes the results
- You knock out a gene from the bacterial flagellum, you wait for a large number of generations, and it never develops the missing gene
- You repeat this with every one of the 50 genes in the bacterial flagellum and it never recovers for any of the 50 genes
- There is no pathway to build up even one of the 50 genes – according to actual experiments
- What do Darwinists do with experimental evidence that falsifies Darwinism?

Keith Fox:

- No, I would not accept that experimental evidence could falsify Darwinism
- Just because known published experimental evidence that we have today falsifies Darwinism, it doesn't mean Darwinism is false because it's not falsifiable
- We don't know how Darwinism even works – it happened so long ago, and it's not repeatable or testable, so how could lab ,experiments falsify it?
- Darwinism is science and intelligent design is faith, though

**Which side has the experimental evidence?**

Michael Behe:

- Consider the largest longest-running lab experiment of evolution, Richard Lenski's experiments on e. coli
- Lenski has presided over 50,000 generations, (millions of years of evolution)
- The bacterium *did evolve* and they *did get better* but not by *evolving* features, but by *disabling* features

Keith Fox:

- But those are just LAB EXPERIMENTS! What do lab experiments prove?
- What if? What if? What if? You don't know, it happened so long ago, and you weren't there! You weren't there!
- (clutches Flying Spaghetti Monster idol tighter and sobs pitifully)

Michael Behe:

- See, the thing is that I have actual experiements, and here's some more evidence that just got published last week
- So I've got evidence and then some more evidence and them some other evidence – experimental evidence
- And all the evidence shows that adaptation is done *losing traits* not by *gaining traits*
- And the published observations are what we see in nature as well

Keith Fox:

- But doesn't Darwinism explain some things that we observe?

Michael Behe:

- Well, I am not saying that micro-evolution doesn't explain *some things* – it explains bacterial resistance, and other micro-evolution
- it just doesn't explain macro-evolution, and that's what the experiments show

Keith Fox:

- But ID is a science stopper! It stops science! You can't produce *experimental evidence* to falsify Darwinism – that would stop science!

Michael Behe:

- Well, you have to understand that the Big Bang postulated a non-material cause to the entire physical universe and yet the experimental evidence was allowed to stand because it was testable and verifiable evidence, even if the theory does have religious implications
- All explanations in science are design to settle a question and it stops rival explanations that are not as good at explaining the observations
- Finding the best explanation stops further study because it is better than rival explanations

Keith Fox:

- Well you have to come up with a materialist explanation because that's the only kind that a functional atheist like me will allow

Michael Behe:

- Well, what if the best explanation for an observed effect in nature is non-material, as with the Big Bang?

Keith Fox:

- But I have to have a material explanation because I am a functional atheist! (i.e. – a theistic evolutionist = functional atheist)

Michael Behe:

- Well what about the cosmic fine-tuning argument? Do you accept that?
- That's an inference to design based on the latest scientific discoveries

Keith Fox:

- Well I do accept that argument, but I don't accept design in biology
- When you apply it to biology, somehow it's bad and you can't do that or you losing research money and get fired
- Anyway, your argument is based on a gap in our current knowledge

Michael Behe:

- No, back in Darwin's time we had a gap in our knowledge – we didn't know what the cell was – we thought it was jello
- Now, we know what the cell is *really* like, it's irreducibly complex, and you can't build up those molecular machines in a step-wise manner
- The inference to design is based on the progress of science revealing the increasing levels of complexity
- In experiments, Darwinian mechanisms cannot build anything useful, instead genes are disabled or dropped
- You guys don't have the evidence to prove your view that naturalistic mechanisms can do the creating
- You keep issuing promissory notes

Keith Fox:

- Well, you're just seeing design subjectively, because you are a non-scientist
- I'm being objective when I tell you that we will discover a materialist explanation later on – really really soon now, maybe even tomorrow, yeah
- You won't accept my speculations and you insist on these published experiments
- You're subjective and I'm objective
- Just give me more research money so I can hide the decline better

Michael Behe:

- Uh, you're the one who is subjective – I cited evidence, and you are the one who is speculating
- You have arguments from credulity, and I've got the lab experiments
- You refuse to be skeptical, I am the one who is being skeptical

Keith Fox:

- Maybe, maybe, maybe! Maybe tomorrow! Maybe in a parallel universe! Maybe aliens from Planet 9 from Outer

Space!

- Who knows! I certainly don't know! And that somehow means you don't know either! See?

Michael Behe:

- Well, to prove me wrong, go into the lab, and run experiments and evolve some new genes (using Darwinian mechanisms) that have new useful functionality

**Are there limits to what evolution can do?**

Michael Behe:

- You need multiple changes in the genome to get a new helpful feature (let's say two specific mutations)
- One specific change is possible
- the odds are against getting multiple beneficial changes are really really small – you need two SPECIFIC changes to occur in order

Keith Fox:

- Well, lots of things are really unlikely – any permutation of dice rolls is as unlikely as any other

Michael Behe:

- Well, we are talking about TWO SPECIFIC mutations that are needed to get a beneficial function – lots of other mutations are possible, but we are looking for a specific outcome that requires two SPECIFIC mutations out of the whole genome
- You aren't going to get useful outcomes unless you direct the mutations

Keith Fox:

- *But then why does God allow evil!!!!1!1!!one!!!*

# Why do Christians vote for the Republican party in the United States?

**Wintery Knight** · 30 June 2025 · Archived copy · Original

I sometimes get messages from people from Canada, the UK, Australia, etc. asking me why so many conservative American Christians vote for the Republican party. Well, the simple answer is that American Christians vote for policies that align with the Bible in many areas: social issues, fiscal issues, foreign policy. We don't vote for a person, we vote for the policies of the party.

So, one of the things that presidents get to do when they are elected is to appoint Supreme Court justices. So let's review Trump's Supreme Court picks, and then see what you get if you let a Democrat president choose the judges.

**Donald Trump's Supreme Court Appointments:**

- Neil Gorsuch: Nominated on January 31, 2017
- Brett Kavanaugh: Nominated on July 9, 2018
- Amy Coney Barrett: Nominated on September 26, 2020

**Current Supreme Court Justices Appointed by Democratic Presidents:**

- Sonia Sotomayor: Appointed by Barack Obama
- Elena Kagan: Appointed by Barack Obama
- Ketanji Brown Jackson: Appointed by Joe Biden

Christians care about the Supreme Court. The character of the president isn't what goes into the Supreme Court. What goes into the Supreme Court is the judges. We're voting for the judges. Not just the Supreme Court judges, but all the federal court judges.

Now consider what getting good Supreme Court judges gets us. Let's look at a couple of stories.

First story, from The Federalist:

> The U.S. Supreme Court in a 6-3 decision ruled Friday that parents are allowed to opt their children out of homosexual and "transgender" propaganda in school, noting that a school district forcing young children to be confronted with the perverse sexual program violates parents' religious liberty.
>
> […]The Supreme Court decided that the parents are entitled to a preliminary injunction — meaning they can pull their children out of the instruction — as their lawsuit proceeds.

And the Trump administration reacted so:

> Education Secretary Linda McMahon celebrated the opinion, stating, "The Supreme Court's ruling in Mahmoud v. Taylor is a major win for religious liberty and parental rights. The Court rightfully held that schools can't shut parents out or disregard their religious obligations to their children."

So, this wasn't an accident, the Republican leaders are celebrating this judgement. The Republicans appointed the judges, and then when they got the decision that their voters wanted, they were 100% behind it. They wanted to deliver this result for the voters. That's what the voters wanted. We wanted results.

It's a 6-3 ruling, and all 3 of Trump's appointees were on the side of parents' rights and children's rights. All 3 nominees by Democrat presidents opposed it. So, I hope that people in Canada, the UK, Australia, New Zealand etc. can understand this. If Christians vote Republican in America, they get 3 judges who support religious liberty and parents' rights. If Christians vote Democrat, then they get 3 judges who oppose religious liberty and parents'

rights. It's that simple. That's how we decided. We decide to get the results.

Second story, also from The Federalist:

> On the last day of its 2024 term, the U.S. Supreme Court ruled in a 6-3 decision along ideological lines to uphold a Texas age verification law aimed at protecting children from online obscenity.
>
> In his majority opinion affirming the Fifth Circuit decision, Justice Clarence Thomas declared that "First Amendment leaves undisturbed States' traditional power to prevent minors from accessing speech that is obscene from their perspective."
>
> "That power necessarily includes the power to require proof of age before an individual can access such speech. It follows that no person — adult or child — has a First Amendment right to access speech that is obscene to minors without first submitting proof of age," he wrote.

Again, the 3 Trump nominees voted to protect children, but the 3 dissenting votes are from the judges appointed by Democrat presidents. I don't know what people in other countries want. Do they want to protect the children? Or do they want to put the children at risk? American Christians voted to protect the children. We voted to get results, and we got the results we wanted.

American Christians vote for results that are good for religious liberty, parents' rights and children's safety. Maybe the people in these other countries who don't like those results have also heard that our Supreme Court reversed the decision that made abortion legal through all 9 months.  All the Republican judges voted against abortion, but all the Democrat judges voted for abortion. Americans Christians voted for the pro-life laws and policies, and we got the pro-life laws and policies. Maybe people in these other countries don't want that, but American Christians did. And we got it. That actually happened here.

UPDATE: I noticed that someone very very important shared this post on social media, so here are a few recent news stories to let you know what American Christians DO NOT want in America.

We do not want this in America:

- churches to be FINED for having worship events (Canada)
- pastor investigated for TERRORISM for sermon (UK)
- doctor found GUILTY of professional misconduct for opposing abortion and gender ideology (Australia)

# Should we expect to know what God's reason is for allowing evil and suffering?

**Wintery Knight** · 1 July 2025 · Archived copy · Original

Here is an article by Steven Cowan about the problems of evil and suffering.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude.

Now let's find out what a noseeum is, and how it relates to the existence of evil and suffering:

> However, perhaps God's existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God's existence is inconsistent with pointless or gratuitous evil. By "pointless evil," Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe's argument may be simply stated as follows:
>
> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that there is pointless evil, Rowe introduces what he calls the "noseeum inference." Like the pesty little bugs that some readers may be familiar with, a "noseeum" is something that you cannot see—it is a "no-see-um." And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I "no-see-um" a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in

> concluding that there was no such planet.

In that example, the planet is the noseeum. Just because you look really hard, you can't be confident that the planet is not there. And similarly with the problem of evil and suffering, looking really hard and finding no reason does not mean that there is no reason. It just means that you are not in a good position to see the reason. You don't know enough to to be sure that there is no reason, because of your limitations as a human being.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous.

According to the paper, human beings just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a noseeum. To know for sure that there is no reason, we would need to have more knowledge than we do.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very difficult thing for an atheist to show, given our human cognitive limitations.

# Testing drug decriminalization policies in Oregon and Portugal

**Wintery Knight** · 2 July 2025 · Archived copy · Original

Libertarians generally favor relaxing criminal laws. They want to eliminate capital punishment (which deters violent crime). They are pro-choice on abortion. They want to decriminalize sex work of all kinds. And they want to decriminalize highly-addictive hard drugs. Let's take a look at that last one and see if it's produced results.

Here's Reason magazine writing in August 2021. They are far left / libertarian on social issues:

> In 1973, Oregon became the first state to decriminalize marijuana use, setting in motion a movement that has unraveled much of the disastrous U.S. drug war—with far-reaching consequences.
>
> Today, Oregon is once again at the vanguard of reform: In February, it enacted Measure 110, a law ending prison and jail sentences for all types of drug use and possession, whether it be cocaine, meth, heroin, or psychedelics.
>
> […]Haven Wheelock, who runs a needle exchange in Portland called Outside In, says delaying decriminalization would have been morally unacceptable.
>
> […]Wheelock says that even if Oregon's decriminalization gets off to a bumpy start, in no small part because the pandemic has exacerbated substance abuse problems nationwide, that Oregon voters have made the right choice.
>
> "I think we're going to see systems improve. I think we're going to see people have access to care that they currently don't have access to. I think we're going to see less people getting saddled with convictions that harm them for the rest of their lives. And to me, all of that is a win," says Wheelock.

And, here is the Cato Institute, a libertarian advocacy group, crowing happily about legalizing hard drugs:

> In November 2020, Oregon voters passed Measure 110, which decriminalized the possession for personal use of small amounts of all drugs, including cocaine, heroin, LSD, methamphetamine, and oxycodone. Oregon is the only U.S. state to have implemented this policy.
>
> […]The problem, however, is that 110 did not go far enough.
>
> While 110 eliminated serious penalties for personal use, it did not legalize production and sale of drugs.

When you make something legal, more people use it. And that's exactly what happened.

Libertarians seem to think that when you legalize something addictive, then no one will commit any crimes to feed their addictions. Of course people will be able to keep their jobs with a cocaine addiction. And OF COURSE cocaine addicts will be able to make enough money legally from that job to support their habit. Libertarians think that crime will go down, because people with addictions can just work at their white collar jobs, and pay for their cocaine. No problem.

So, what happened next? Something that was a great surprise to libertarians.

The far-left The Atlantic noted:

> But three years later, with rising overdoses and delays in treatment funding, even some of the measure's supporters now believe that the policy needs to be changed. In a nonpartisan statewide poll earlier this year, more than 60 percent of respondents blamed Measure 110 for making drug addiction, homelessness, and crime worse. A majority, including a majority of Democrats, said they supported bringing back criminal penalties for drug possession.

Libertarians like to point to Portugal as a model for successful drug decriminalization, but again it's just wishing and hoping.

The far-left Washington Post explains:

> Portugal decriminalized all drug use, including marijuana, cocaine and heroin, in an experiment that inspired similar efforts elsewhere, but now police are blaming a spike in the number of people who use drugs for a rise in crime. In one neighborhood, state-issued paraphernalia — powder-blue syringe caps, packets of citric acid for diluting heroin — litters sidewalks outside an elementary school.
>
> […]A newly released national survey suggests the percent of adults who have used illicit drugs increased to 12.8 percent in 2022, up from 7.8 in 2001, though still below European averages. Portugal's prevalence of high-risk opioid use is higher than Germany's, but lower than that of France and Italy. But even proponents of decriminalization here admit that something is going wrong.
>
> Overdose rates have hit 12-year highs and almost doubled in Lisbon from 2019 to 2023. Sewage samples in Lisbon show cocaine and ketamine detection is now among the highest in Europe, with elevated weekend rates suggesting party-heavy usage. In Porto, the collection of drug-related debris from city streets surged 24 percent between 2021 and 2022, with this year on track to far outpace the last. Crime — including robbery in public spaces — spiked 14 percent from 2021 to 2022, a rise police blame partly on increased drug use.

Going back to Oregon, the article also notes that "overdoses this year in Portland, the state's largest city, have surged 46 percent."

I think that libertarians are great on fiscal policy. But I don't think we need to listen to them on social policy. Or on foreign policy, but that's for another post.

# Report: Biden FBI interfered with investigation into Chinese election meddling

**Wintery Knight** · 3 July 2025 · Archived copy · Original

I've been monitoring the progress of the new FBI leader Kash Patel, just waiting to see what he will do about some of the well-known scandals of the Biden-Harris regime. Things like the Trump-Russia collusion scandal, the Hunter Biden laptop, the targeting of Christians for persecution, etc. Well, there was some shocking news this week about the Biden-Harris regime FBI.

Here's the story from The Federalist:

> The Federal Bureau of Investigation (FBI) interfered with an investigation into Chinese meddling in the 2020 election to cover for former Director Christopher Wray, who had just testified to Congress that he had seen no evidence of a coordinated voter fraud effort, According to previously classified documents released Tuesday by Senate Judiciary Committee Chairman Chuck Grassley, R-Iowa.
>
> The FBI "suppressed intelligence" of alleged Chinese Communist Party (CCP) interference in the 2020 election, including the production of "'tens of thousands' of fraudulent drivers' licenses to manufacture mail-in votes for then-presidential candidate Joe Biden," according to a press release.

Grassley said:

> "These records smack of political decision-making and prove the Wray-led FBI to be a deeply broken institution. Ahead of a high-stakes election happening amid an unprecedented global pandemic, the FBI turned its back on its national security mission,.. Chris Wray's FBI wasn't looking out for the American people – it was looking to save its own image."

And:

> Grassley's office says that the evidence was never investigated further, despite signs of credibility, because of a "sudden and 'abnormal'" decision to stop further proceedings and "bury the IIR's existence," because, as the FBI put it, "the reporting will contradict Director Wray's testimony."
>
> […]The FBI recalled the report to "re-interview the source," but also told "recipients" to "destroy all copies of the original report and remove the original report from all computer holdings."

I checked Grassley's government web site to make sure this was a real story, and yes, the story is real.

A while back, I was asking Grok (the AI) about 2020 election, and it was very dismissive of election fraud, relying on reports from corporate news sources. These are the same corporate news sources that make statements like "the Hunter Biden laptop is Russian disinformation". And even after those corporate news sources exposed, search engines, Big Tech and AIs decline to update their views of these sources. In fact, Grok reverts back to using news sources like NPR, which dismissed the Hunter Biden laptop story.

Recently, I was asking Grok about the FBI's actions related to the Hunter Biden laptop and the release of the Nashville shooter's manifesto. Regarding the Nashville shooter, Grok said that the FBI had not intentionally suppressed the Nashville shooter's manifesto.

And then one FOIA request later, we find out this:

> The trans-centric Biden administration wanted to protect the trans agenda, and, as the Star News Network reported, the FBI advised against releasing information that it believed could put males pretending to be

> females and females identifying as males at risk.
>
> […]“And we knew that the FBI had this information. They did not want to release it to the public. They withheld it, requiring us to sue them,” the attorney added.

When I pointed out to Grok that the people who run many of these corporate news providers and fact checkers are Democrat donors, Grok just acts surprised. It’s not capable of taking into account the political contributions of these organizations to determine bias. It’s just programmed to see left-wing corporate news sites as reliable.

Prior to publishing this post, I asked Grok if there was any evidence of CCP election interference. Grok checked it’s favorite 3 web sites: the UK Guardian, The Washington Post, and The New York Times – and it claimed there was no evidence for it. Then I sprang the trap and linked to Grassley’s link above. Grok dismissed The Federalist, Daily Signal, National Review, Epoch Times and Grassley’s government web site despite having no evidence against their claims from its own preferred left-wing news sources.

Big Tech companies that run search engines and AI are biased to the left. Studies show that their products are affected by political bias. And leaked videos of executives show that. And political donations show that. What’s troubling to me is that even after left-wing news sources are caught lying about the Hunter Biden laptop, the Russia collusion hoax, the Jussie Smollett hoax, etc. it doesn’t seem to change the bias of the search engines or the AIs.

# For Independence Day, let's learn about George Washington and the Battle of Trenton

**Wintery Knight** · 4 July 2025 · Archived copy · Original

My favorite book about the American Revolutionary war by far is called "1776". It's written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington's line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington's retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington's army at White Plains, New York, British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan.  Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was

> surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

**Washington crosses the Delaware**

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their

> crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

**The Battle of Trenton**

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall

> decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.
>
> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

# William Lane Craig lectures on the historical Jesus at Columbia University

**Wintery Knight** · 5 July 2025 · Archived copy · Original

One of the other software engineers at work is always finding interesting sermons and lectures to listen to. On Friday afternoon, things were a bit slow, so she messaged me a lecture featuring Dr. William Lane Craig, talking on "Who Was Jesus?" at Columbia University. I wanted to encourage her, so I put it on to listen as well. I liked it so much, I wrote out a summary below to go with it.

**Here is the lecture:**

**Description:**

Dr. William Lane Craig unpacks questions surrounding Jesus' resurrection and the historical accuracy of the biblical claims.  Columbia University, 2009.

**And my outline:**

Different views of Jesus:

- Jewish view of Jesus
- Muslim view of Jesus
- skeptical historian view of Jesus
- what did Jesus think about himself?
- Jesus didn't write anything of his own
- best sources are the records of Jesus followers
- problem: how do we know these records are accurate
- maybe stories of Jesus' divinity emerged over time

New tools from the Renaissance:

- historiography
- textual criticism
- investigate Jesus as a historical figure
- same tools are used for other historical figures

Sources:

- Christian
- Jewish
- Roman
- Many more sources than other figures of antiquity

External sources:

- confirm what the gospels say, but don't say anything new

Treating the Bible as a collection of ancient documents

- not using the Bible to prove the Bible is divine
- just treating the books as historical documents

New Testament

- a collection of the earliest documents
- much later documents about Jesus not included
- later documents not written by eyewitnesses

Skeptical scholars:

- ignore the earliest sources
- focus on the later sources
- result is a more radical left-friendly Jesus

Burden of proof

- are the gospels assumed reliable until proven unreliable?
- are the gospels assumed unreliable until proven reliable?

Five reasons to assume the New Testament is reliable

1. Insufficient time for legendary influences to erase the historical core

- the gap between the events and the sources is much shorter than other comparable sources
- Greek and Roman sources are at least 1-2 generations from the events they record
- Gospels written down and circulated within first generation after the events they record
- the eyewitnesses were alive at the time they were written down

2. Gospels are not the same genre as folk tales or urban legends

- Gospels talk about real people who actually lived
- Gospels talk about real places excavated by archaeologists

3. Oral tradition in first century Jewish society

- Jewish culture valued reliable transmission of religious tradition
- Memorization of long passages and entire books

4. Restraints on the embellishment of traditions about Jesus

- The apostles and other eyewitnesses could correct embellishments

5. Gospel writers make testable statements that are found to be true

- Luke is the author of the Gospel of Luke and the Book of Acts
- In Acts, Luke accompanies with the eyewitnesses to the life of Jesus
- Acts contains many historical details accurate to the times and places he writes about
- Luke's gospel is in accord with archaeological discoveries made since

It's reasonable to accept the general reliability of the Gospels, unless they are found unreliable

Historical basis for facets of Jesus

1. Unique Son of God

- historical critics claim that the divinity of Jesus developed over time
- why would monotheistic Jews contradict their monotheism by inventing a divine Jesus?
- the only reasonsable answer is that Jesus claimed divinity for himself

- His followers accepted it because Jesus provided reasons to believe
- Mark 12:1-8
  Earliest gospel reveals Jesus' self-understanding as God's "only beloved son"
- Matthew 11:27
  "No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him." This story is also in Luke. Source is "Q", an early set of traditions common to Matthew and Luke
- Mark 13:32
  Jesus sees himself as above humans and angels, but subordinate to God the Father

Why would anyone take Jesus seriously, unless he was able to provide evidence?

2. Jesus' miracles

- Jesus' miracle stories are in all four sources
- The only reason to reject them is because of a philosophical bias against the supernatural

3. Trial and crucifixion

- Crucifixion narrative is in the Gospels, Paul's letters, Acts
- Also confirmed by Josephus and Roman historians
- Historians across the ideological spectrum affirm the crucifixion

Why was Jesus crucified?

- Doesn't fit with the skeptical view that Jesus was uncontroversial and had few followers

4. Jesus' resurrection

- Jesus resurrection is the best explanation for historical facts accepted by diverse majority of historians

1. Burial location known to friends and enemies, and corpse would refute the resurrection
2. Tomb was found empty by a group of Jesus' women followers
3. Post-mortem appearances to individuals and groups, friends, skeptics and enemies
4. Original disciples became convinced that Jesus rose from dead counter to their own interests

- The facts are accepted by a majority of scholars across the ideological spectrum
- Dr. Craig's debate with a scholar who invented an unknown, identical twin brother who was separated from Jesus at birth
- Jewish historian Pinchas Lapide affirms the resurrection of Jesus as a historical event

Then there is a period of question and answer, which I did not find useful, because the questions seemed to be more about the needs and feelings of Christians, rather than about the facts presented by Dr. Craig, or about how these facts survive in debates on university campuses. Facts don't care about your feelings.

It never hurts to listen to William Lane Craig. If you listen enough, you can remember his points when you get the opportunity. In college, all of my friends at Crusade could do his opening speech from his debates on God's existence from memory.

# Judge rules that man must pay $50,000 a month to ex-girlfriend for 10 years

**Wintery Knight** · 6 July 2025 · Archived copy · Original

When I was younger, I got the impression from young women that men with strong views on theology and morality made them uncomfortable. I had my share of rejections by Christian women who didn't like my strong Biblical views. At the time, I was worried that I might not be able to get married at all. But looking at how the family courts operate, that turned out to be a good thing.

The news story is from one of Canada's national newspapers, the National Post:

> A wealthy businessman will have to pay more than $50,000 a month in spousal support for 10 years to a woman with whom he had a long-term romantic relationship even though they kept separate homes and had no children together, Ontario's top court has ruled.
>
> Under Ontario law, an unmarried couple are considered common-law spouses if they have cohabited — lived together in a conjugal relationship — continuously for at least three years. But that doesn't necessarily mean living in the same home, the court found.
>
> […]When their 14-year relationship finally broke down in May 2015, Climans asked the courts to recognize her as Latner's spouse and order him to pay her support. He argued she had been a travel companion and girlfriend, nothing more. As such, he said, they were never legally spouses and he owed no support. An eight-day trial ensued.
>
> In her decision in February 2019, Superior Court Justice Sharon Shore sided with Climans. She ruled they were in fact long-time spouses, finding that despite their separate home, they lived under one roof at Latner's cottage for part of the summer, and during winter vacations in Florida. Shore ordered him to pay her $53,077 monthly indefinitely.

Superior Court Justice Sharon Shore didn't care that the man never married this woman, or lived with her, or had children with her. He had money, and she wanted it, so the judge gave it to her.

Elsewhere in the article, we learn that he had asked her to sign a pre-nuptial agreement many times, and each time she refused. (Those are not even enforced in divorce courts) It's like her plan all along was to demand that a judge awarded her all of this man's money.

Some people will say "well, these are Ontario family courts, this is normal. Haven't you heard about what happened to Dave Foley?" I think every man knows the story of what the Ontario divorce courts did to Dave Foley.

Here is a story about it from the far-left Toronto Star, otherwise known as the Toronto Red Star.

It says:

> Dave Foley of beloved Toronto sketch troupe the Kids in the Hall is starting a new career in standup comedy, but not in Toronto — he suspects he'll be arrested if he returns to Canada.
>
> The 48-year-old faces a back child-support bill in Ontario of more than half a million dollars: the accumulation of a debt that accrues steadily at more than $17,000 per month. On the set of *Servitude,* a film shot in Toronto last year, "I told the production guys, I have a court appearance on Monday and there's a good chance I'll be in jail on Monday afternoon,'" Foley said in an interview with the *Star*.
>
> During an appearance on comic Marc Maron's *WTF* podcast last month, Foley explained that his marriage to Toronto writer Tabatha Southey ended during his run on NBC's five-year hit comedy *NewsRadio,* and he has failed in his efforts to adjust his child support downward to reflect his new life after sitcom stardom.

> "My income has dropped in the last 10 years, as anyone can tell from the number of s—ty movies I've been in," says Foley. "I'm not exactly picking and choosing my projects." However, four years ago, Superior Justice Nancy Backhouse denied his motion to vary his support payments.
>
> […]Foley says that Ontario's Family Responsibility Office now has an enforcement order and last year sought a six-month jail sentence for him, which was to extend indefinitely, until the overdue support was paid.

Ontario family courts are notoriously anti-male, and men know this. Unfortunately, the female judges who make these rulings don't seem to understand that men know what they are doing, and then opt out of marriage. It must be so wonderful for these judges to punish the men who appear before them. But they can't punish the men who respond to what they are doing by declining to marry women, and then declining to date women, and then declining to even speak to women.

I looked up Superior Justice Nancy Backhouse, and found another article about her decisions, entitled "Judge rejects pre-nup, awards ex-wife $5.3-million". So, pre-nuptial agreements are also thrown out in Ontario divorce courts.

But it's not just Ontario. I have two Christian friends here in America who married their Christian wives as virgins, and then their wives divorced them. I heard what happened to them in divorce court. They lost custody of their kids, and they are forced to pay alimony and child support even though their ex-wives poison the children against them, and deny them communication rights and visitation rights. And men know that this is happening to other men. How can women expect men to marry when the financial risks are so high?

Forbes magazine explains:

> Of the 400,000 people in the United States receiving post-divorce spousal maintenance, just 3 percent were men, according to Census figures. Yet 40 percent of households are headed by female breadwinners — suggesting that hundreds of thousands of men are eligible for alimony, yet don't receive it.

The divorced courts are biased against men, and men are getting the message. They look at these cases, and they understand that marriage is not worth the financial risks. They don't want to have their possessions stolen by radical feminist judges.

**Further reading**

An excellent book to read about this issue is Dr. Stephen Baskerville's book "Taken Into Custody: The War Against Fathers, Marriage, and the Family". You can read what the book is about here. Dr. Baskerville is a Christian and a conservative. He has a PhD from London School of Economics and does a good job of explaining the negative view that society has about men, and male leadership. And sadly, these negative man-blaming views are often shared by Christians, too.

# Scottish senior lawyer says that men are not allowed to use evidence against accusers

**Wintery Knight** · 7 July 2025 · Archived copy · Original

One of the teachings about courts that we find in the Bible is that the courts are not supposed to be biased. The passage in question is Leviticus 19:15. Unfortunately, our current society doesn't really respect fairness in the courts, at least for men. Previously, I blogged a study that showed that sentences for men are 63% longer than for women. But there's more unfairness, so let's look at it.

First, let's review the Bible verse – Leviticus 19:15:

> You shall do no injustice in court. You shall not be partial to the poor or defer to the great, but in righteousness shall you judge your neighbor.

Now consider this article from the Scottish newspaper The Herald:

> A leading lawyer has warned that men accused of rape or serious sexual assault may not receive a fair trial because of long established rules over what evidence is admissible in court.
>
> […]"We have reached the stage where the victim has lied about things and the court has not allowed the defence to put that before the jury.
>
> "How can it be said that someone has had a fair trial when it's been proved that the complainer lied about something important in the course of the inquiry and that was not allowed to be introduced as evidence?" he told The Herald.
>
> "There are serious concerns that people are not getting a fair trial when they are not being given the opportunity to provide evidence which might support their innocence".
>
> […]"Every day you were hearing examples of people saying they thought a piece of evidence was relevant but the judge has ruled that it would not be allowed.
>
> "Defendants would be going around with messages, photographs, things they thought would prove them to be innocent and the judges would not allow them to tell the jury about those pieces of exculpatory evidence."

In one of the examples in the article, there was CCTV video showing that the woman had led the man into the sex, but that evidence could not be used in court as part of the man's defense.

Now, what lessons do men take away from cases of bias against men like this one? Well, men learn about three things.

First, men learn that society doesn't care whether men are innocent of guilty of charges made by women – they just want men punished. "Believe all women". And remember, false accusations can be made against men who have not even met the alleged victim. Second, men learn to keep well clear of the courts, because they've learned that the courts treat men much more harshly than women, as the sentencing study shows. And thirdly, Christian men have learned not to expect any sort of help from Christian counselors, Christian pastors, and even from *pro-marriage / pro-child advocates*. I have personally seen a married couple that runs a "pro-family" ministry urging a woman to divorce her husband because he did not make enough money to pay for her frivolous spending. And yes, the couple had young children who became fatherless as a result.

Whenever I tell social conservatives about the effect that this bias against men is having on men's willingness to engage with women (romantically, professionally, etc.), they go silent. Let me give you an example of this.

I was having a discussion with a woman who writes about marriage and family. I told her "did you know that

women initiate 70% of divorces, and almost all of those are not for reasons that the Bible would condone". Her reply was "that's because women have emotional needs, so the divorce is justified". I agree that women have emotional needs, and that husbands have a responsibility to care for their wives' needs. That's why I tell people that women are responsible for vetting men for this ability prior to marrying. But the woman I was talking to did not think that women should have to test men, because women are *entitled* to these behaviors *regardless of her own choice of man.* I also brought up the higher rate of divorce for lesbian women, and asked her which man was responsible for this. She just went silent.

So, this is the problem. The conviction that a woman is entitled to a man's protection and provision regardless of any risk to the man is so widespread that no evidence can cause them to question it. Marriage is not going to be seen as attractive to men if the response to their evidence-based concerns is silence.

# Are the Galapagos finch beaks evidence of Darwinian evolution?

**Wintery Knight** · 8 July 2025 · Archived copy · Original

Were you taught in biology class that the changing lengths of finch beaks was a good proof of Darwinian evolution? Many students were… but is it true?

Jonathan Wells has an article about it at Evolution News.

It says:

> When Charles Darwin visited the Galápagos Islands in 1835, he collected specimens of the local wildlife. These included some finches that he threw into bags, many of them mislabeled. Although the Galápagos finches had little impact on Darwin's thinking (he doesn't even mention them in *The Origin of Species*), biologists who studied them a century later called them "Darwin's finches" and invented the myth that Darwin had correlated differences in the finches' beaks with different food sources (he hadn't). According to the myth, Darwin was inspired by the finches to formulate his theory of evolution, thoughaccording to historian of science Frank Sulloway "nothing could be further from the truth."
>
> In the 1970s, biologists studied a population of medium ground finches on one of the islands in great detail. When a severe drought left only large, hard-to-crack seeds, 85 percent of the birds perished. The survivors had beaks that were about 5 percent larger than the average beak size in the original population. The biologists estimated that if similar droughts occurred once every ten years, the population could become a new species in only 200 years. In a 1999 booklet defending evolution, the U.S. National Academy of Sciences called the finches "a particularly compelling example" of the origin of species.
>
> **But after the drought, birds with smaller beaks flourished again, and the average beak size of the population returned to normal. No net evolution had occurred.** No matter; Darwin's finches became an icon of evolution that is still featured in most biology textbooks.
>
> In the 1980s, a population of large ground finches, with larger beaks than the medium ground finches, migrated to the island. When a drought in 2004-2005 again reduced the food supply, the medium and large ground finch populations both declined. But since even the largest beaks among the medium ground finches were no match for the beaks of the large ground finches, the latter pretty much monopolized the larger seeds and the former had to make do with smaller seeds. This time, the medium ground finches that survived the drought had beaks that were *smaller* than the average size in the original population. Biologists studying the finches argued that birds with smaller beaks were better able to eat the tiny seeds that were left after the large ground finches ate the big ones, and they concluded that this was again an example of "evolutionary change."
>
> **[…]Wait a minute. Average beak size increased slightly during one drought, only to return to normal after the rains return. Then average beak size decreased slightly during another drought. A region of DNA is correlated with beak size. And somehow that tells us how finches evolved in the first place?**

There is an important distinction to make between micro-evolution and macro-evolution. Changes within a type is micro-evolution. Evolving a new organ type or body plan is macro-evolution. There is plenty of evidence for micro-evolution, but no evidence for macro-evolution.

What needs to be proven by the Darwinists is that the same process that results in different average beak size in a population of finches after a drought can create the finches in the first place. I think that Darwinists are credulous – they believe what they want to believe because they want to believe it, even if the evidence is incredibly weak. Darwinists must demonstrate that *heritable variations can result in the generation of new organ types and body plans.* Changes in average beak size is not interesting. What is needed is to show how the beaks, much less the wings, evolved in the first place.

**Icons of Evolution**

Jonathan has actually written about a number of  misleading things that you may mind in Biology textbooks.

Here are the sections in his book "Icons of Evolution":

- The Miller-Urey Experiment
- Darwin's Tree of Life
- Homology in Vertebrate Limbs
- Haeckel's Embroys
- Archaeopteryx–The Missing Link
- Peppered Moths
- Darwin's Finches
- Four-Winged Fruit Flies
- Fossil Horses and Directed Evolution
- From Ape to Human: The Ultimate Icon

Dr. Wells holds a Ph.D in Molecular and Cell Biology from the University of California at Berkeley.

# Michael Egnor debates the nature of mind with Christof Koch and Michael Shermer

**Wintery Knight** · 9 July 2025 · Archived copy · Original

A little while ago, we welcomed Dr. Michael Egnor and Denyse O'Leary onto the Knight and Rose Show to discuss their new book "The Immortal Mind: A Neurosurgeon's Case for the Existence of the Soul". Desert Rose and I really had fun interviewing them, and their book has gotten rave reviews from our friends. But Dr. Egnor has also been going into hostile forums to defend his views.

Let's start with the first one. Michael Shermer is a well-known skeptic (I would say atheist) who occasionally interviews people who disagree with him, such as Dr. Stephen C. Meyer.

Well, he moderated a discussion with Dr. Egnor and an opponent, neuroscientist Christof Koch:

This was a cordial debate where Dr. Egnor answered specific cases from the field of neuroscience that challenged his views.

But a more recent debate on the Piers Morgan show featured Dr. Egnor facing off against Dr. Michael Shermer:

In this one, the main topic was near-death experiences and terminal lucidity, both of which were brought up in our episode of the Knight and Rose Show. Those are two good pieces of data that I think refute the materialist view of mind, which holds it to be identical to the brain.

Sadly, on a show like that, they tend to focus on a small number of topics, which is why I recommend our episode that was published on May 31st, 2025.

We covered those topics, and many more:

In our episode, we discussed:

- Dr. Egnor's experiences as a neurosurgeon, especially cases where there was significant brain loss, but no loss of mental capacities
- different views of mind: materialism (mind is brain), substance dualism (mind as separate substance), Thomistic dualism (mind and brain integrated but separable), and idealism (everything is mind)
- Wilder Penfield's research on epilepsy patients, which showed the limits of brain stimulation, and also supported free will
- how split-brain surgeries give support for a unified, immaterial mind
- Benjamin Libet's free will experiments that showed the existence of "free won't", giving more support to an immaterial mind
- cases of conjoined twins that share brain structures but have different personalities
- near-death experiences, especially the Pam Reynolds case, which strongly supports the idea of an immaterial mind that survives while the brain is inactive
- how computers cannot develop consciousness or free will by adding computational power
- how the human mind does not have an evolutionary pathway of gradual development
- cases of terminal lucidity, where a patient who had previously shown diminished mental processing due to brain damage suddenly regains their clarity

So, if you haven't been following this new argument against naturalism, it might be a good idea to either listen to our episode, or if you are a fan of one of the skeptics, then listen to one of the debates. The book "The Immortal Mind" has many, many more details than our podcast episode.

I am always happy to add to my list of arguments for theism, and against naturalism.

So far, I have:

- origin of the universe
- cosmic fine-tuning
- information in the origin of life
- irreducible complexity and molecular machines
- biological big bangs in the fossil record
- habitability – discoverability correlation
- first-person consciousness and free will
- moral realism and objective moral values

Does anyone know any others that I can add to this list? No philosophical arguments! Except the moral argument! Philosophy is just too squishy for engineers. I like hard evidence when I'm making a positive case! Run up the score!

# Has the case against same-sex marriage strengthened or weakened over time?

**Wintery Knight** · 10 July 2025 · Archived copy · Original

Just over 14 years ago I first wrote my first long essay against same-sex marriage. I was still new at making the case, but I did my best. Sadly, we lost. I think we lost because Christians were not being equipped to make a case for natural marriage that would be convincing to non-Christians. If we want to live in a society that protects children, we have to be able to do that.

Before we begin, it's worth reviewing why the government has an interesting in recognizing marriage as distinct from other relationships. The state recognizes natural marriage as valuable because the state has an interest in what marriage produces, namely, children who are raised in a stable environment.

Natural marriage is built on the norms of *gender complementarity, exclusivity* and *permanence*. It's the coming together of a man and a woman that creates children. And when the children are created, each biological parent has an allegiance to that child, because they contributed to that child's DNA. And who else but the biological parents will have a stronger interest in the well-being of their own child?

Stability is achieved because of the norms of exclusivity (fidelity) and permanence (commitment). In a properly functioning marriage, the adults give up some of their own freedoms in the short term in order to provide the children with long-term stability. And government used to give a special status to relationships that gave children that stabiliity.

In my original post, I talked about how the normalizing premarital sex and legalizing no-fault divorce would harm children. Same-sex marriage came after, and it also harms children. And some new articles pick up on that theme with new evidence.

Here's an article from Katy Faust, published in The Blaze. She writes about how parents are now assigned by the state:

> Since 2015, activists have been arguing state by state that equality requires making parenthood gender-neutral and elevating "social parents" (unrelated adults in the home who have not undergone background checks). Fathers have been legally erased from birth certificates to accommodate "two moms" and vice versa. Activists have insisted on requiring insurance or the government to fund the creation of fatherless and motherless children. Biology and adoption are bypassed in favor of "intent-based" parenthood. Giving same-sex couples equal access to the marital "constellation of benefits" denied children equal access to their own mother and father.

What happened to the idea of two people with two different natures coming together to commit for life, in order to have and raise children? It's gone. Now, children are lower than pets. No one is thinking about God's design for getting men and women to work together to care for their children. Now people are in it for themselves, and children are just expendable accessories.

Katy's article talks about the cataclysmic effects that undoing the complementary genders norm had on the schools. Schools don't talk about mothers and fathers. In fact, they indoctrinate kids to think that mothers and fathers are not even normal for marriage and family. Public libraries promote books to children to make them feel bad about needing to be loved by their father and mother. All in the name of "don't judge".

Katy also notes:

> The culture shift and the legal restructuring contributed to a booming fertility market. Surrogate pregnancies more than doubled from 2.2% in 2011 to 4.7% in 2020. Fertility clinics often direct gay couples to surrogacy

> grants in the name of "equitable access to parenthood."
>
> These children did not lose their mothers to tragedy. They lost their mothers to adult "equality."

Many children are not growing up with a mother and father in the home. By the way, Katy had a civil debate with a gay activist in Australia, and you might like to watch it if you want to debate this issue well.

The second article from First Things talks more about how children are affected:

> The overwhelming desire to be connected to one's biological parents is evident in the 70 percent of donor-conceived adults who believe they have been harmed by not knowing the identity of a biological parent. Seventy-seven percent agree that a sperm or egg donor is "half of who I am," and 86 percent believe that a biological parent's information belongs to the adult child.
>
> These are not abstract trends; they negatively impact children every day.

That article also notes how the same-sex marriage has caused all sorts of bad effects on society. Now that relationships are about adult selfishness, people just don't even bother marrying before they have kids.

Look at this:

> [A] historically low marriage rate: An all-time low of 46.8 percent of households were headed by a married couple in 2022.

And this:

> [A] historically low birth rate: Live births decreased nearly 9 percent from 2014, the year before *Obergefell* was decided, to 2019, the year before Covid-19 decreased live births even further.

And this:

> Third, young people are increasingly confused about their identity: Americans aged eighteen to twenty-four who identify as transgender increased 422 percent from 2014 to 2023.

It's not just kids that are affected, it's society as a whole. It will result in a drop in tax revenues, which are used to pay for social programs. And we will get a drop in workers in sectors like energy, health care, and other critical industries.

**My thoughts**

I don't have any experience raising children, but I do have experience with parrots. My family had several, back where I immigrated from. And I know that parrots need to have stability in order to be happy. They need to feel that if they call, their humans will come. They don't like to move to a different house. They don't like the furniture to move. They like routines and they like head scratches, but they have to trust you first. I remember being in grad school, and calling home from the computer lab to check on the parrot, because I didn't trust my lazy, selfish older brother to monitor the bird while I was gone. The TSA staff at my local airport in the US got so used to me bringing home balsa wood blocks and California Spray Millet that they would call me "The Parrot Guy". Parrots are so little. They need the bigger people to look after them!

I just cannot imagine how people could want children, and then not understand children need stable relationships with their real mother and father! We have so much evidence showing the effects of divorce on kids, and the effects of same-sex parenting on kids. We need marriage to be child-focused, not adult-focused.

If you want to hear Rose and I talk about it, we did an episode. Audio is here.

And we did an episode with Frank Turek. Audio is here.

# Yale University computer science professor takes a look at protein formation probabilities

**Wintery Knight** · 11 July 2025 · Archived copy · Original

When I was in graduate school, we studied a book called "Mirror Worlds", authored by famous computer science professor David Gelernter at Yale University. This week, I noticed that Dr. Gelernter had written an article in the prestigious Claremont Review of Books. In his article, he applies his knowledge of computer science to the problem of the origin of life.

Evolution, if it is going to work at all, has to explain the problem of how the basic building blocks of life – proteins – can emerge from non-living matter. It turns out that the problem of the origin of life is essentially a problem of information – of code. If the components of proteins are ordered properly, then the sequence folds up into a protein that has biological function. If the sequence is not good, then just like computer code, it won't run.

Here's Dr. Gelernter to explain:

> How to make proteins is our first question. Proteins are chains: linear sequences of atom-groups, each bonded to the next. A protein molecule is based on a chain of amino acids; 150 elements is a "modest-sized" chain; the average is 250. Each link is chosen, ordinarily, from one of 20 amino acids. A chain of amino acids is a polypeptide—"peptide" being the type of chemical bond that joins one amino acid to the next. But this chain is only the starting point: chemical forces among the links make parts of the chain twist themselves into helices; others straighten out, and then, sometimes, jackknife repeatedly, like a carpenter's rule, into flat sheets. Then the whole assemblage folds itself up like a complex sheet of origami paper. And the actual 3-D *shape* of the resulting molecule is (as I have said) important.
>
> Imagine a 150-element protein as a chain of 150 beads, each bead chosen from 20 varieties. But: only certain chains will work. Only certain bead combinations will form themselves into stable, useful, *well-shaped* proteins.
>
> So how hard *is* it to build a useful, well-shaped protein? Can you throw a bunch of amino acids together and assume that you will get something good? Or must you choose each element of the chain with painstaking care? It happens to be *very* hard to choose the right beads.

Gelernter decides to spot the Darwinist a random sequence of 150 elements. Now the task the Darwinist is to use random mutation to arrive at a sequence of 150 links that has biological function.

> [W]hat are the chances that a random 150-link sequence will create such a protein? Nonsense sequences are essentially random. Mutations are random. Make random changes to a random sequence and you get another random sequence. So, close your eyes, make 150 random choices from your 20 bead boxes and string up your beads in the order in which you chose them. What are the odds that you will come up with a useful new protein?
>
> […]The total count of *possible* 150-link chains, where each link is chosen separately from 20 amino acids, is $20^{150}$. In other words, *many*. $20^{150}$ roughly equals $10^{195}$, and there are only $10^{80}$ atoms in the universe.
>
> What proportion of these many polypeptides are useful proteins? Douglas Axe did a series of experiments to estimate how many 150-long chains are capable of stable folds—of reaching the final step in the protein-creation process (the folding) and of holding their shapes long enough to be useful. (Axe is a distinguished biologist with five-star breeding: he was a graduate student at Caltech, then joined the Centre for Protein Engineering at Cambridge. The biologists whose work Meyer discusses are mainly first-rate Establishment scientists.) He estimated that, of all 150-link amino acid sequences, 1 in $10^{74}$ will be capable of folding into a stable protein. To say that your chances are 1 in $10^{74}$ is no different, in practice, from saying that they are zero.

> It's not surprising that your chances of hitting a stable protein that performs some useful *function*, and might therefore play a part in evolution, are even smaller. Axe puts them at 1 in $10^{77}$.
>
> In other words: immense is so big, and tiny is so small, that neo-Darwinian evolution is—*so far*—a dead loss. Try to mutate your way from 150 links of gibberish to a working, useful protein and you are guaranteed to fail. Try it with ten mutations, a thousand, a million—you fail. The odds bury you. It can't be done.

Keep in mind that you need many, many proteins in order to have even a simple living cell. (And that's not even considering the problem of organizing the proteins into a system).

So, if you're a naturalist, then your only resources to explain the origin of life are chance and mutation. As Dr. Gelernter shows, naturalistic explanations won't work to solve even part of the problem. Not even with a long period of time.  Not even if you use the entire universe as one big primordial soup, and keep trying sequences for the history of the universe. It just isn't possible to arrive at sequences that have biological function in the time available, using the resources available. The only viable explanation is that there is a computer scientist who wrote the code without using trial and error. Something that ordinary software engineers like myself and Dr. Gelernter do all the time. We know what kind of cause is adequate to explain functioning code.

# Knight and Rose Show #66: Choices and Character in James, Part 2

**Wintery Knight** · 12 July 2025 · Archived copy · Original

Welcome to episode 66 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose complete a two-part series studying the book of James in the New Testament. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose study James chapters 3-5, emphasizing taming the tongue and pursuing godly wisdom. They discuss humility, patience, and responsible stewardship, critiquing worldly desires and reckless spending. Encouraging Christians to avoid slander and seek reconciliation, they offer practical guidance for living an authentic faith, blessing others through words and actions in a Christ-centered life.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 66:**

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Feminist explains how she chose to drink alcohol before recreational sex

**Wintery Knight** · 13 July 2025 · Archived copy · Original

Guess where I'm linking today? To a radical feminist web site named Jezebel, to an article written by a radical feminist who writes for the radically leftist Slate.

No, I'm not crazy. Just read it:

> Much of the conversation around alcohol and sex has focused on assault—the line at which intoxication becomes incapacitation, for instance—**but what we fail to mention is how haunted people can be by the sex they actually, technically consented to.**
>
> […]I wonder what my sex life would even look like if alcohol hadn't been there. Alcohol gave me comfort in my own body, and it allowed me to turn my erotic curiosity and hunger for experience into an action plan. I was tired of being the stuttering girl sucking in her stomach after the lights went out. I wanted to be the woman who roamed wild and free.
>
> Alcohol also helped me cut the girlish strings on my heart, an action my college years demanded. Three months into my freshman year, I split a six pack with a dashing sophomore, and we wound up partially clothed on his bed, my bare legs wrapped around his waist, my hands around his neck. I pulled back slightly and asked him the question, the naive question of a girl who does not yet understand her fate: "What does this mean?"
>
> He looked past me, into his studio apartment, and then back into my eyes. "It means that I'm a 19-year-old boy, and we're having fun."

What is interesting is that she didn't see this man's using her for fun after getting her drunk as any disqualification for a serious relationship. On the contrary, she believes that a serious relationship built on self-sacrificial love and commitment that lasts through difficulties can be found in a man who uses her for fun sex:

> I'm not saying I didn't enjoy that night with the dashing sophomore. I'm saying the fun part for me might have been turning our physical intimacy into a sustained attachment.

Amazing. She wasn't looking for men with good educations, good jobs, lots of savings, who were sober and chaste – they would have made her unhappy with their bossy leading, and strict plans about courting and marriage. She thought that she could get to live-long married love by choosing what was free, easy and fun in the moment.

She is 35 now, and still single. I'm sure if you ask her, she would like to be married "some day", but who would say that her past decisions were good preparation for the challenges of marriage? Marriage is about self-sacrificial love, and endurance. To prepare for marriage, you practice self-denial and self-control. You learn how to accept expectations, obligations and responsibilities. You grow up.

Anyway, back to the article. She *choose the alcohol* herself, and she did it for a very specific reason:

> I wanted to have fun, too. *And alcohol evened the score.* I cared less about everything when I was drinking: What you thought of me, what I looked like in this dress, whether that taco was warm or cold when I stuffed it in my mouth. I don't want to make it sound like I drank *in order to* have sex. I drank for a million reasons.
>
> […]Booze downshifted my intense body consciousness, and it revved up my bravado. Sex was scary—but alcohol made me feel safe.

She drank in order to have sex. Got it? *She chose to get drunk in order to feel safe about having sex.* Many young women think that recreational sex with hot guys is a pathway to marriage. They drink in order to make progress

towards the marriage they want – the marriage to the man who is fun. Not the man who is serious. They don't want the serious man who makes plans for marriage, and expects the woman to sober up, behave responsibly and honor obligations.

Why are millennials acting like children into adulthood?
This reminds me of the Institute for American Values study. Despite their name, it is not a conservative organization

Look at this citation from p. 15:

> A number of students noted that being drunk could later serve as your excuse for the hook up.
>
> **A Yale University student said, "Some people like hook up because they're drunk or use being drunk as an excuse to hook up."**
>
> **A New York University student observed, "[Alcohol is] just part of an excuse, so that you can say, oh, well, I was drinking."**
>
> **A Rutgers University student commented, "If you're drinking a lot it's easier to hook up with someone… [and] drugs, it's kind of like a bonding thing… and then if you hook up with them and you don't want to speak to them again, you can always blame it on the drinking or the drugs."**
>
> **[…]A University of Chicago junior observed, "One of my best friends… sometimes that's her goal when we go out. Like she wants to get drunk so I guess she doesn't have to feel guilty about [hooking up]."**

I hope that many of the men out there who refuse to hold women accountable for their own desires start to understand that not everything a woman wants is good, and not every plan a woman makes will work. Sometimes, you need to calmly and constructively challenge them about their priorities, plans and actions. It's for their own good.

# A scientist's path from hard atheism to Christianity

**Wintery Knight** · 14 July 2025 · Archived copy · Original

Lately, when I ask parents and church leaders how a person comes to Christ, the responses I get most often is that people need to be invited into a welcoming community first and foremost. To me, this is a very strange answer. When I think about Jesus working miracles so that people who didn't believe in him would have reasons to trust him, I don't see this emphasis on welcoming community.

Along those lines, I found a very interesting faith story at Salvo magazine, written by a prominent paleontologist named Dr. Günter Bechly.

First, let's see his biography, though:

*Günter Bechly, PhD, is a German paleontologist, senior fellow with Discovery Institute's Center for Science and Culture, and senior research scientist at Biologic Institute in Washington state. He has written about 160 scientific publications, described over 180 new species, and been advisor for 3 BBC nature documentaries.*

Here is the captivating introduction to his faith story:

> When atheists hear conversion stories that begin with, "I was a staunch atheist and then . . . ", they tend to roll their eyes and doubt the claim. However, this is exactly what happened to me. I had been a 150-percent atheist and materialist for almost forty years before I embarked on a spiritual journey that ultimately, after many twists and turns, led me to belief in God and Christianity. I had no life crisis, no epiphany, and no spiritual experiences at all. It was the result of purely rational, scientific, philosophical, and historical arguments that gradually changed my mind as a scientist. Here is my story.
>
> I grew up in a medium-sized town in southwestern Germany, where the Mercedes-Benz factory is located. My parents were both irreligious. My mother was simply not interested in religion, and my father was agnostic. We never talked about religion or God, and we never prayed or visited any church service. My parents pushed to opt me out of religion class in school, which was then still compulsory, resulting in my being ridiculed as the village atheist.
>
> I first saw churches from the inside as a young adult, but it was only as a tourist taking photos.

He had a fabulous career and a dream job in paleontology, but he started looking for answers when he realized the problems with naturalism:

> It all started in my late thirties when I became interested in modern physics. I read popular books by Stephen Hawking, Richard Feynman, Michio Kaku, John Barrow, David Deutsch, Brian Greene, and others. I was fascinated by the weirdness of quantum mechanics and relativity theory, as well as the mind-blowing implications of modern cosmology.
>
> While I had started from a materialist, clockwork-universe perspective, I soon discovered certain implications of modern physics that did not fit well with such an obsolete, 19th-century worldview. I stumbled upon further problems, such as the questions of causality, the ontology of time and space, the status of mathematics, and the laws of nature. This brought me even deeper into metaphysics with issues like the problem of universals, the one and the many, the persistence of diachronic (personal) identity, free will, and the hard problem of consciousness.
>
> I soon realized that materialism is untenable, and I searched for a new worldview that could explain these problems and make sense of the world we experience.

The first step in Dr. Bechly's journey was investigating evidence for design in the universe, and finding it

compelling:

> Around this time, I also came into contact with intelligent design theory, though for totally different reasons. I was the project leader for a large special exhibition on evolution at our museum for Darwin Year 2009, which celebrated the double event of Darwin's 200th birthday and the 150th anniversary of the first publication of his magnum opus On the Origin of Species. In preparing for this exhibit, I read some books by Darwin critics, because we wanted to refute and mock them.
>
> This did not go as intended. I was surprised that the arguments of the ID theorists were nothing like the distorted picture painted by their opponents. The more I studied ID arguments, the more I became a critic of Neo-Darwinism and an ID proponent myself.
>
> I was still into process philosophy when I embraced intelligent design theory, so my support for ID had nothing to do with religion, but only with scientific arguments. I had come to see that Neo-Darwinism simply fails to explain the diversity and complexity of life and that these are better explained by an infusion of information from outside the system. The information does not have to come from a divine, miraculous intervention, but of course that would be compatible with such a view.

So, he accepts design in the universe at this point, but still doesn't accept theism, and even further away from Christianity.

But he's not done exploring:

> So I finally decided to check out the belief system that was the last thing I wanted to be true: Classical theism. I had previously read all the New Atheists' books, but even then, as a non-theist and fan of the authors, I had found them quite shallow and unsatisfying.

He goes on to explain how he explored the arguments for classical theism, and then the specific evidences for Christianity, such as prophecy and the historicity of the resurrection of Jesus. Eventually, he just went for the worldview that answered the questions raised by the progress of science, that also solved the metaphysical problems he had encountered.

You can read the whole thing, if you're looking for a wonderful testimony filled with lots of apologetics. I wish that this testimony was seen as the "normal" testimony by Christian parents and pastors. Then we would be taking a completely different approach to parenting and church. We would put the emphasis on evidence.

# The psychological motivation of those who embrace postmodernism

**Wintery Knight** · 15 July 2025 · Archived copy · Original

Can a person be postmodern and a Christian? Not for long

Famous analytical philosopher John Searle has written a book "Mind, Language And Society: Philosophy In The Real World", explaining what's factually wrong with postmodernism. In the introduction, he explains what postmodernism is, and what motivates people to accept postmodernism.

He writes:

> […][W]hen we act or think or talk in the following sorts of ways we take a lot for granted: when we hammer a nail, or order a takeout meal from a restaurant, or conduct a lab experiment, or wonder where to go on vacation, we take the following for granted: there exists a real world that is totally independent of human beings and of what they think or say about it, and statements about objects and states of affairs in that world are true or false depending on whether things in the world really are the way we say they are. So, for example, if in pondering my vacation plans I wonder whether Greece is hotter in the summer than Italy, I simply take it for granted that there exists a real world containing places like Greece and Italy and that they have various temperatures. **Furthermore, if I read in a travel book that the average summer temperature in Greece is hotter than in Italy, I know that what the book says will be true if and only if it really is hotter on average in the summer in Greece than in Italy. This is because I take it for granted that such statements are true only if there is something independent of the statement in virtue of which, or because of which, it is true.**
>
> […]These two Background presuppositions have long histories and various famous names. The first, that there is a real world existing independently of us, I like to call "external realism." "Realism," because it asserts the existence of the real world, and "external" to distinguish it from other sorts of realism-for example, realism about mathematical objects (mathematical realism) or realism about ethical facts (ethical realism). The second view, that a statement is true if things in the world are the way the statement says they are, and false otherwise, is called "the correspondence theory of truth." This theory comes in a lot of different versions, but the basic idea is that statements are true if they correspond to, or describe, or fit, how things really are in the world, and

> false if they do not.

The “correspondence theory of truth” is the view of truth assumed in books of the Bible whose genre is such that that they were intended by the authors to be taken *literally*, (with allowances for symbolism, figures of speech, metaphors, hyperbole, etc.).

But what about the postmodernists, who seek to deny the objectivity of external reality?

More Searle:

> Thinkers who wish to deny the correspondence theory of truth or the referential theory of thought and language typically find it embarrassing to have to concede external realism. Often they would rather not talk about it at all, or they have some more or less subtle reason for rejecting it. In fact, very few thinkers come right out and say that there is no such thing as a real world existing absolutely, objectively, and totally independently of us. Some do. Some come right out and say that the so-called real world is a “social construct.”

What is behind the denial of objective reality, and statements about external reality that are warranted by evidence?

> It is not easy to get a fix on what drives contemporary antirealism, but if we had to pick out a thread that runs through the wide variety of arguments, it would be what is sometimes called “perspectivism.” Perspectivism is the idea that our knowledge of reality is never “unmediated,” that it is always mediated by a point of view, by a particular set of predilections, or, worse yet by sinister political motives, such as an allegiance to a political group or ideology. And because we can never have unmediated knowledge of the world, then perhaps there is no real world, or perhaps it is useless to even talk about it, or perhaps it is not even interesting.

Searle is going to refute anti-realism in the rest of the book, but here is his guess at what is motivating the anti-realists:

> > **I have to confess, however, that I think there is a much deeper reason for the persistent appeal of all forms of antirealism, and this has become obvious in the twentieth century: it satisfies a basic urge to power. It just seems too disgusting, somehow, that we should have to be at the mercy of the “real world.” It seems too awful that our representations should have to be answerable to anything but us. This is why people who hold contemporary versions of antirealism and reject the correspondence theory of truth typically sneer at the opposing view.**
>
> […]I don’t think it is the argument that is actually driving the impulse to deny realism. I think that as a matter of contemporary cultural and intellectual history, the attacks on realism are not driven by arguments, because the arguments are more or less obviously feeble, for reasons I will explain in detail in a moment. **Rather, as I suggested earlier, the motivation for denying realism is a kind of will to power, and it manifests itself in a number of ways. In universities, most notably in various humanities disciplines, it is assumed that, if there is no real world, then science is on the same footing as the humanities. They both deal with social constructs, not with independent realities. From this assumption, forms of postmodernism, deconstruction, and so on, are easily developed, having been completely turned loose from the tiresome moorings and constraints of having to confront the real world. If the real world is just an invention-a social construct designed to oppress the marginalized elements of society-then let’s get rid of the real world and construct the world we want. That, I think, is the real driving psychological force behind antirealism at the end of the twentieth century.**

Now, I’ll go one step further than Searle.

People, from the Fall, have had the desire to step into the place of God. It's true that we creatures exist in a universe created and designed by God. But, there is a way to work around the fact that God made the universe and the laws that the universe runs on, including logic, mathematics and natural laws. And that way is to *deny logic, mathematics and natural laws.* Postmodernists simply deny that there is any way to construct rational arguments and support the premises with evidence from the real world. That way, they imagine, they are free to escape a God-designed world, including a God-designed specification for how they ought to live. The postmoderns deny *the reliable methods of knowing about the God-created reality because logic and evidence can be used to point to God's existence, God's character, and God's actions in history.*

And that's why there is this effort to make reality "optional" and perspectival. Everyone can be their own God, and escape any accountability to the real God – the God who is easily discovered through the use of logic and evidence. I believe that this is also behind the rise of atheists, who feign allegiance to logic and science, but then express "skepticism" about the origin of the universe, the fine-tuning of the universe, objective morality, the minimal facts concerning the historical Jesus, and other undeniables.

# Re-assessing Mark Regnerus' 2012 study on the effects of same-sex parenting

**Wintery Knight** · 16 July 2025 · Archived copy · Original

In 2012, I blogged about a ground-breaking studying on the effects of same-sex parenting on children. At the time, Big LGBT went ballistic at this study, alleging all sorts of flaws in it. Well, here we are in 2025, and a new statistical analysis of the 2012 study has vindicated it. And that's putting it mildly.

Before we go too far, let's go back to my initial post and get the conclusion. I quoted the Washington Times so:

> Using a new, "gold standard" data set of nearly 3,000 randomly selected American young adults, Dr. Regnerus looked at their lives on 40 measures of social, emotional and relationship outcomes.
>
> He found that, when compared with adults raised in married, mother-father families, adults raised by lesbian mothers had negative outcomes in 24 of 40 categories, while adults raised by gay fathers had negative outcomes in 19 categories.
>
> Findings such as these do not support claims that there are "no differences" between gay parenting and heterosexual, married parents, said Dr. Regnerus, who helped develop the New Family Structures Study at the university.
>
> Instead, "children appear most apt to succeed well as adults when they spend their entire childhood with their married mother and father, and especially when the parents remain married to the present day," he wrote.

In that same year, his study did get early vindication from other scientists, and later by the University of Texas, Austin.

The new report vindicating his earlier study comes from The Public Discourse.

They start by describing the new statistical method of analysis:

> Recently a statistical critique by Cornell sociologists Cristobal Young and Erin Cumberworth examined how small, invisible methodological choices, such as how categories are classified or extreme cases are handled, yielded very different results in published studies. They did this by examining the results of every possible reasonable permutation of such choices—what they called, with a nod to Spiderman, the "multiverse of analyses"—to show where on the range of possible outcomes landed the outcome reported. This procedure shone a bright light on exaggeration or bias due to hidden analytical decisions.

And here is what this method found about the Regnerus study:

> As a kind of stress test, the authors devoted a chapter to reexamining the "now infamous" 2012 study by University of Texas (Austin) sociologist Mark Regnerus which "found that the children of lesbian, gay, bisexual, and transgender (LGBT) parents, compared to those raised in 'intact biological families' (IBFs), were worse off in many sociodevelopmental ways"—which they succinctly term the "LGBT effect" (though inaccurately: transgender persons (T) were not studied).
>
> The widespread critique of this highly disputed study resulted in a multiverse of more than two million alternative analyses that were statistically significant (meaning the results could not be the result of chance variation due to random sampling). Initially anticipating that "a comprehensive multiverse analysis would drive [the study's many critics'] point home in a powerfully conclusive way," Young and Cumberworth instead found something unexpected and remarkable: not one of the two million significant alternatives resulted in positive outcomes for LGBT-parented children.

> Although often with smaller effects, every analysis confirmed the Regnerus study's central finding that children turned out better with intact biological parents than with LGBT parents. Regnerus's thesis, it turns out, was not only true in the analytic model in which he presented it: it was true in every analytic model possible.

What was most interesting about the Public Discourse report is how the author went back and looked at the early criticism of the study. I really like when conservatives are mean about these things. Many, many people who are raised conservative get worn down in college to centrism or leftism, just because they perceive that there are social costs to being conservative. So, when we find out that we were right, we need to show some swagger a little bit. We need to make sure people watching know the score.

Here's a sample:

> In a pattern now familiar from other culture war issues, the social science journals became flooded with weak, misleading "studies," often written by politically motivated gay authors, purporting to show that children fared just as well with same-sex parents as with other-sex ones. A primary tactic was to ask obviously biased samples of gay parents recruited from gay bookstores, advertisements in gay-themed newspapers, pride events, and similar sources, how their children were doing, then treat this a representative of all gay-parented children. Rarely were the children themselves examined or even consulted.
>
> The "studies" also typically drew samples too small to show any differences between gay-parented and other children even if they existed, then misstated their failure to find differences as a strong conclusion that none existed. One review counted that of the forty-seven studies of gay parenting before 2010, only four used a random sample, and most sample sizes of gay-parented children were fewer than fifty.
>
> In study after study, absence of evidence was presented as evidence of absence, feeding a growing consensus, despite the lack of real evidence, that there were "no differences" that mattered for the wellbeing of children raised by same-sex parents and those raised by their own mother and father.

The use of "studies" by the secular left was all entertainment. It was basically no better than showing "Will and Grace" episodes, or other propaganda TV shows designed to make disagreement with the LGBT agenda look stupid and uninformed.

I say this because I've now spent 25 years working full-time in the competitive field of information technology. I had so many experiences of white Christian software engineers who were raised in married Christian homes, who attended private Christian schools, and went to church. The minute they hit college, they were walloped with LGBT propaganda. And they caved. It didn't matter that they were natural born Americans, tall, white, handsome, etc. They caved, because they didn't have the evidence to fight back.

In fact, in the workplace, supposed intolerance of LGBT is the first thing that they threw at me. Naturally, I was ready. But they had the impression that there were billions of studies of gay parenting that showed that they were equal to opposite sex biological married parents. Ridiculous. But I am so happy to see the Regnerus study get vindicated like this. This whole theme of "don't judge" that tears people away from the Bible needs to be defeated. And by secular evidence. Not by Bible verses.

If you liked this post, I would really recommend that you share the article from The Public Discourse. Same-sex marriage needs to be overturned. And data is how we do it.

# How Michael Medved's uncle mentored him to become an influential conservative

**Wintery Knight** · 17 July 2025 · Archived copy · Original

I wanted to share a story from the book "Right Turns", written by Jewish conservative talk show host Michael Medved. In the story, he explains how his uncle got him to accept one of the most important lessons of life.

He tells the story of having a special dinner with his Uncle Moish in chapter 7:

*He took special interest in me from the beginning because, he claimed, he saw a chance with me to redeem past mistakes and to do a better job in shaping a finished product than he had done in "raising" his kid brother, my father. I appreciated my uncle's solicitous attention… Nevertheless, I was only eleven and found it difficult to ignore my other pressing priorities, most notably, my obsession with tacky science fiction movies. I began to pester Uncle Moish to take me to see a heavily advertised shocker called The Brain from Planet Arous.*

*To my surprise, Moish at least kept the door open to the idea that he would escort me to The Brain from Planet Arous. But first he insisted on taking me out to dinner at a "fancy restaurant" for a very important and very serious conversation.*

*I dressed up in my one suit for this solemn occasion and remember the discomfort of a too-tight tie and the too-snug shoulders during our steak dinner. Moish allowed me to order absolutely anything I wanted from the menu—in contrast to my unfailingly cost-conscious mother on those rare occasions when I went out to eat with my parents. Looking around that shiny, busy dining room, with all the well-dressed and prosperous adults, I remember feeling conscious of my status as the only kid in the place. After dinner, feeling very important and grown up, I ordered dessert before my uncle leaned his long, serious face conspiratorially across the table.*

*"Now is the time, Mike, for the talk we need to have. Maybe your parents think you're too young, or they don't want you to hear. But I think you're ready. I think you need it. I think you are going to remember."*

*[…]"First of all, let me ask you. Have you ever heard of the Scarlet Plague?"*

*"I know about the Black Death, Uncle Moish. That was the disease that killed all those people in the Middle Ages."*

*'That's very good. but no, the Scarlet Plague is even worse. It's not about the Middle Ages. It's about right now, and fifty years ago. It kills more people, ruins more lives, than any other disease. And the worst part about it is the people who are most likely to get sick, and who are going to suffer the most, are the brightest minds, the biggest idealists, the natural leaders of this world. They are people just like you."*

*I warmed to his compliment, and tried to smile away my fear and discomfort.*

*"The Scarlet Plague is Communism. It's Scarlet because they call themselves Reds, and also that is the color of blood. And there's blood everywhere with the Communists, of the people they kill, that they torture and they cripple. I know because I saw it myself—I saw it starting in Russia before we got out in 1924. But not only Russia, you know. It's everywhere. It's in America. It's in Israel. Especially with intellectuals! If you're not ready for it, you may get infected—so you have to understand."*

*And he went on to lay out the most gripping, convincing, and altogether persuasive case against the Communists and their lies and their cruelty and they insatiable lust for power and destruction. More than a decade later, when I first read Solzhenitsyn's epochal (and then brand new) Gulag Archipelago, I thought of my Uncle Moish making the same sort of case, with equal passion, in that ritzy restaurant in Philadelphia. l tried to remember all the names and dates and stories he told me, but the underlying message emerged more clearly than any details. I knew something about "The Cold War" and the threat from the Soviet Union, but Moish made the danger feel far more immediate, insidious, almost supernatural.*

*"And when you tell your father that we had this talk—and you should tell him—he'll just laugh and make fun of me.*

*He'd tell you not to worry. He thinks because the Reds never infected him that there's nothing to worry about. He's too relaxed about everything! Because he doesn't know the way they're going to go after you— I know they will!—and they're going to go after millions and millions of other people in your generation. Your father doesn't take it seriously but I need you to take it seriously. I need you to be prepared. You're In the Boy Scouts, right? 'Be prepared' is the motto! Be ready to fight back against the Scarlet Plague!"*

*It all seemed impossibly heavy and melodramatic, as if Moish worried that my mostly Republican, middle-class San Diego world had already been infested with active cells of preteen Commie agents. Nevertheless, I promised to heed his lecture and to keep his pleas in mind in the years ahead.*

*And amazingly enough, I did. Less than six years after the diatribe, I was surrounded in college by honest-to-goodness leftist lunatics, and in trying to deal with the psychos from the SDS (Students for a Democratic Society), I thought repeatedly of my uncle's warnings about the Scarlet Plague… I'd like to believe that I would have rejected extremist temptations even without my uncle's warnings, but as I made progress in my political journey, his unforgettable harangue seemed more and more prescient, even profound.*

I read the book about 20 years ago and the story stuck with me.

Michael Medved is a very successful talk show host. He reaches a wide audience, including a lot of religious and secular Jews with his conservative message. And he promotes  scholars who work on intelligent design in science, like Dr. Stephen C. Meyer. What a huge difference his Uncle made. He knew the importance of winning a person using ALL the tools that you have available. You can't rely on daycare, public schools, celebrities, athletes and artists to communicate important truths to young people. You must do it. And if you have something important to say, then spend your time and money and effort making sure you are heard.

# Life’s fragile towers: why proteins and RNA need a Designer’s hand

**Wintery Knight** · 18 July 2025 · Archived copy · Original

Non-theists are committed to the idea that the building blocks of life emerged spontaneously from chemicals on the early Earth. Well, Dr. James Tour and a couple of colleagues have written a new article that argues that proteins and RNA both break down faster than they can be formed in a realistic early Earth environment. To get them formed, you would need an intelligent designer.

Before we get to the paper, I should say what a protein is. A protein is a chain of amino acids. If you imagine a chain of kid’s blocks that can chain together, then the amino acids are the blocks, and the chain of blocks is the protein. Once the chain of amino acids is long enough, it can fold up into a shape to do things in the body. BUT the chain only folds into a useful shape if the sequence of blocks is in the right order. It’s similar to how Scrabble letters can form words and sentences. If the amino acids make meaningful words and sentences, then they will fold up, and be useful. Otherwise, they are junk.

RNA is like a messenger that reads recipes out of a book of recipes (DNA) and carries them to the kitchen (cells) where the recipes can be followed to make dishes. The recipe tells the kitchen how to put the blocks (amino acids) together to make a protein chain (a meal). Without RNA, the body wouldn’t know how to build the right proteins to perform biological functions. Again, the RNA itself is another chain, but this time it’s a chain of nucleotides. Nucleotides are also like letters, but more complex than amino acids.

So, the paper is asking the question: could these chains of components arise in the early Earth, without an intelligent designer to arrange them?

The paper was published in the journal BioCosmos, and it’s posted on Sciendo. You can read the full text and even download the PDF.

Anyway, Evolution News reported on the article, and here is what they said:

> Rice University chemist James Tour, along with co-authors M. C. Parker and C. Jeynes, recently published an article in BioCosmos titled “Thermodynamic Limitations on the Natural Emergence of Long Chain Molecules: Implications for Origin of Life.” The study demonstrates that proteins and RNA degrade at rates that render their spontaneous formation under natural, undirected conditions highly implausible. To date, no origin-of-life researcher has provided a substantive response to the thermodynamic challenges outlined in the paper.

The early Earth environment is a much more messy place than a university lab, and as a result, chains tend to break

down. It would be like trying to chain together blocks while running or swimming.

The authors calculate the decay time of proteins and RNA, to see how quickly they break down. And it turns out that the longer the chain is, the faster it breaks down.

Here's how Evolution News explains it:

> More specifically, the half-life of a dipeptide — two amino acids linked by a peptide bond, as found in proteins — is approximately 7 years. Therefore, a polypeptide chain of 200 amino acids, which is typical for many functional proteins, has a half-life of only 13 days. The situation is even more severe for RNA. A chain of two nucleotides has a half-life of about 100 days, meaning that an RNA strand of 200 nucleotides would degrade in roughly 12 hours. Both classes of molecules decay far more rapidly than they could plausibly form under natural conditions, making their spontaneous emergence highly unlikely in any undirected origin-of-life scenario.

The key point again is that the longer the chain gets, the faster it breaks down. But how fast is the building up rate?

> In comparison to a protein's half-life, the rate of polypeptide chain elongation under prebiotic conditions is very long. Yang et al. (2025) identify numerous barriers to sustained polypeptide growth, including the formation of non-peptide linkages and cyclic structures, stringent environmental requirements, and unfavorable thermodynamics. Their analysis establishes that the rate of growth must be far smaller than one added amino acid per chain per day.
>
> Even assuming one addition each day, synthesizing a protein of 200 amino acids would require over six months. However, the growing chain would almost certainly degrade in a much shorter time span. The challenge is even greater for RNA, which has a significantly shorter half-life and encounters additional chemical and structural hurdles during formation.

So the building up rate for proteins and RNA is much slower than the breaking down rate.

I'm not a biochemist, I'm a software engineer. So my job is to try to come up with a good analogy for you so that you remember this well enough to use it in a conversation, later. After all, we must help the evolutionists to come to their senses!

Imagine building a tall tower of toy blocks on a windy beach. You carefully stack each block (amino acids or nucleotides) to make a protein or RNA chain, but it's slow work—maybe one block a day. Meanwhile, big waves (the harsh early Earth environment) keep crashing in, knocking your tower down faster than you can build it. For a 200-block tower (a functional protein), it'd take months to stack, but waves destroy it in days (protein half-life: 13 days). For RNA, it's even worse—your tower collapses in hours (half-life: 12 hours)! Without a skilled builder (an intelligent designer) shielding and guiding the process, the tower will never get built.

Well, I think this is a very interesting piece of work these gentlemen have put together, so we shall see how good of a job the other side does at finding an answer. If you have ever seen Dr. Tour debate, he likes to draw a formula on the chalkboard, and then hand the chalk to his opponent and ask them to solve it. Will they be able to solve this problem? If not, then they should quit being so bold about their naturalistic view of life!

# J. P. Moreland on the Pat Flynn podcast to discuss theories of mind

**Wintery Knight** · 19 July 2025 · Archived copy · Original

After Rose and I managed invted Michael Egnor and Denyse O'Leary onto the Knight and Rose Show to discuss their new book about mind, we made lists of podcasts and articles to review in order to refresh ourselves on metaphysics and theories of mind. My favorite two podcasts (first, second) were from a three part series that Pat Flynn did with Michael Egnor.

And now there is a new episode of Pat Flynn, but this time with J. P. Moreland. When I was just still doing my undergraduate degree, I read two books by J. P. Moreland: "Scaling the Secular City" and "Christianity and the Nature of Science". I actually taught the first one chapter-by-chapter, in my basement, to other students. I also listened to many of his Veritas Forum and Stand to Reason lectures, including the famous Wonmug lecture. He also has a STEM undergraduate degree (chemistry).

There are 3 parts:

- Part 1
- Part 2
- Part 3

Here is the description from Mind Matters:

> Moreland turns to an older philosophical idea: the concept of a substance. Unlike an aggregate (a pile of wood, for example), a substance is a unified whole. It exists as a single thing. A deeper unity allows it to stay the same even as it changes in minor ways.
>
> A human being, in this view, is a substance. Your soul is the organizing principle that gives you identity and holds everything together — even when your body changes. Moreland explains that the parts of a substance are inseparable; they only exist as part of the whole. For example, a hand that's been cut off is no longer a real hand because it has lost its role and function.
>
> This idea goes all the way back to Aristotle (384–322 BC). He said that substances are more basic than their parts. Your identity doesn't come from the combination of your parts — it's your identity as a substance that gives your parts their meaning and function.

Naturally, I like the scientific evidence from Egnor and O'Leary better than philosophical arguments. But I do think it's worth it for even sensible people to know a little squishy nonsense about metaphysics and mind. There are good arguments against naturalism from philosophy, and we should all know about them. I find that it's always better, in a discussion, to say "I have 10 reasons for what I believe, and you haven't got any reasons for what you believe".

By the way, here are the different views of mind that I learned about when I was younger, by listening to all these old on-campus lectures with Christian scholars:

- substance dualism
- thomistic dualism
- idealism
- physicalism

I asked Grok to list out the useful arguments for dualism. So, if you've never heard of any of this before, then you can check that out. If I were going to defend dualism using philosophy, I would argue from first-person knowledge of my own thoughts, intentionality, and persistent identity over time. Grok has two more in the list that I don't use.

# Are atheists unbiased about the question of God's existence?

**Wintery Knight** · 20 July 2025 · Archived copy · Original

Brian Auten has a book review posted up at Apologetics 315.

The book is "If There's A God, Why Are There Atheists?", by theologian R.C. Sproul. R.C. Sproul is one of my favorite theologians. The book in question has a very, very special place in my heart, because I think that it is one of the major reasons why I was able to resist pernicious ideas like religious pluralism and postmodernism for so long. Once you put on the glasses of Romans 1 and see for the first time what man is really doing with respect to God, you can never see things the same again. I'll say more about this at the end, but let's see what Brian wrote first.

**The review**

So often, you hear atheists complaining about religion is nothing but wish-fulfillment or some sort of crutch for people who are frightened by a variety of things. They think that God is invented to solve several problems. 1) how does the world work?, 2) is there meaning to suffering and evil?, 3) why should I be moral?, and 4) what will happen to me and my loved ones when I die?. On the atheistic view, God is just a crutch that people cling to out of weakness and ignorance. But is this really the case?

Sproul starts the book by investigating three atheists who sought to explain religious belief as a result of psychological factors.

Brian writes:

> Before tackling the psychology of atheism, Sproul spends a chapter on the psychology of theism, from the perspective of Freud's question "If there is no God, why is there religion?"11 What follows is an overview of various psychological explanations of theistic belief: Feuerbach's "religion is a dream of the human mind."12 Marx's belief that religion is "due to the devious imagination of particular segment of mankind."13 And Nietzche's idea that "religion endures because weak men need it."14 The author properly reiterates: "We must be careful to note that the above arguments can never be used as proof for the nonexistence of God. They can be useful for atheists who hear theists state that the only possible explanation for religion is the existence of God."15 That being said, Sproul also reveals what these arguments presume:

> Their arguments already presupposed the nonexistence of God. They were not dealing with the question, Is there a God? They were dealing with the question, Since there is no God, why is there religion?16

> Sproul points out the weaknesses of each of these approaches and says "there are just as many arguments showing that unbelief has its roots in the psychological needs of man."

Wow, could that really be true? What are the real reasons why people reject God? Does the Bible have anything to say about what those reasons are?

Brian cites Sproul's contention:

> The New Testament maintains that unbelief is generated not so much by intellectual causes as by moral and psychological ones. The problem is not that there is insufficient evidence to convince rational beings that there is a God, but that rational beings have a natural hostility to the being of God.
>
> […]Man's desire is not that the omnipotent, personal Judeo-Christian God exist, but that He not exist.

In Romans 1:18-23, the apostle Paul explains what is really going on:

> [18]The wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness,
>
> [19]since what may be known about God is plain to them, because God has made it plain to them.
>
> [20]For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse.
>
> [21]For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened.
>
> [22]Although they claimed to be wise, they became fools
>
> [23]and exchanged the glory of the immortal God for images made to look like mortal man and birds and animals and reptiles.

Do you believe that? I believe that. I have never in my life met an atheist who varied from what Paul is saying here.

On this blog, I have presented many, many arguments for theism in general, and Christian theism in particular:

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

Sproul explains why atheists cannot allow themselves to live according to the evidence that is presented to them:

> The cumulative effect of this knowledge that is clearly seen is to leave men 'without excuse.' Herein lies the basis of the universal guilt of man. No one can claim ignorance of the knowledge of God. No one can cite insufficient evidence for not believing in God. Though people are not persuaded by the evidence, this does not indicate an insufficiency in the evidence, but rather an insufficiency in man.
>
> […]The basic stages of man's reaction to God can be formulated by means of the categories of trauma, repression, and substitution.
>
> […]If God exists, man cannot be a law unto himself. If God exists, man's will-to-power is destined to run head-on into the will of God.

So, it's pretty clear that there are huge implications to the question of God's existence, and that the atheist will be affected by these implications when weighing evidence.

Here's something Thomas Nagel, an excellent atheist philosopher, said:

> “In speaking of the fear of religion, I don’t mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers.
>
> I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn’t just that I don’t believe in God and, naturally, hope that I’m right in my belief. It’s that I hope there is no God! I don’t want there to be a God; I don’t want the universe to be like that.”
>
> (”The Last Word” by Thomas Nagel, Oxford University Press: 1997)”

The rest of the book review, and the book, deals with explaining in detail how atheists respond to an all-good, all-powerful, all-knowing Creator/Designer. I encourage you to click through and read the whole book review. You can read the review, and the book, and then investigate for yourself whether the atheists are effected by this bias against moral accountability.

# Utilitarianism and the Moral Life by J. P. Moreland

**Wintery Knight** · 21 July 2025 · Archived copy · Original

I found this essay on After All, but it looks like their site is not working well, so I'm just going to steal it and post it here, in case it disappears completely. This is one of my favorite short essays on utilitarianism, and it's a wonder that the thing can't stay up somewhere. Well, it will have a home here now. I'd be surprised to see anyone else be this awesome in a measly 1000 words as Dr. Moreland is below.

—-

## Utilitarianism and the Moral Life

### What Is Utilitarianism?

Utilitarianism (also called consequentialism) is a moral theory developed and refined in the modern world by Jeremy Bentham (1748-1832) and John Stuart Mill (1806-1873). It can be defined as follows:

> *An action or moral rule is right if and only if it maximizes the amount of nonmoral good produced in the consequences that result from doing that act or following that rule compared with other acts or rules open to the agent.*

By focusing on three features of utilitarianism, we can clarify this definition.

### (1) Utilitarian theories of value.

What is a nonmoral good? Utilitarians deny that there are any moral actions or rules that are intrinsically right or wrong. But they do believe in objective values that are nonmoral.

*Hedonistic utilitarians* say that the only intrinsic good is pleasure and the avoidance of pain. Quantitative hedonists (Bentham) say that the amount of pleasure and pain is the only thing that matters in deciding between two courses of action, I should do the one that produces the greatest amount of pleasure and the least amount of pain (measured by factors like the duration and intensity of the pleasure). Qualitative hedonists (Mill) say that pleasure is the only intrinsic good, but the type of pleasure is what is important, not the amount. They would rank pleasures that come from reading, art, and friendship as more valuable than those that come from, say, a full stomach.

*Pluralistic utilitarians* say there are a number of things that have intrinsic, nonmoral value: pleasure, friendship, health, knowledge, freedom, peace, security, and so forth. For pluralists, it is not just the pleasure that comes from friendship that has value but also friendship itself.

Currently, the most popular utilitarian view of value is subjective preference utilitarianism. This position says it is presumptuous and impossible to specify things that have intrinsic nonmoral worth. So, they claim, intrinsic value ought to be defined as that which each individual subjectively desires or wants, provided these do not harm others. Unfortunately, this view collapses into moral relativism.

### (2) Utilitarians and maximizing utility.

Utilitarians use the term utility to stand for whatever good they are seeking to produce as consequences of a moral action (e.g., "pleasure" for the hedonist, "satisfaction of subjective preference" for others). They see morality in a means-to-ends way. The sole value of a moral action or rule is the utility of its consequences. Moral action should maximize utility. This can be interpreted in different ways, but many utilitarians embrace the following: the correct moral action or rule is the one that produces the greatest amount of utility for the greatest number of people.

### (3) Two forms of utilitarianism: act utilitarianism and rule utilitarianism.

According to act utilitarianism, an act is right if and only if no other act available maximizes utility more than the act in question. Here, each new moral situation is evaluated on its own, and moral rules like “don’t steal” or “don’t break promises” are secondary The moral agent must weigh available alternatives and choose the one that produces the best consequences. Rule utilitarianism says that correct moral actions are done in keeping with correct moral rules, However, no moral rule is intrinsically right or wrong. Rather, a correct moral rule is one that would maximize utility if most people followed it as opposed to following an alternative rule. Here, alternative rules (e.g., “don’t lie” vs. “don’t lie unless doing so would enhance friendship”) are compared for their consequences, not specific actions.

## What Is Wrong with Utilitarianism?

**Several objections** show the inadequacy of utilitarianism as a normative moral theory.

**First**, utilitarianism can be used to justify actions that are clearly immoral. Consider the case of a severely deformed fetus. The child is certain to live a brief, albeit painless life. He or she will make no contribution to society. Society, however, will bear great expense. Doctors and other caregivers will invest time, emotion, and effort in adding mere hours to the baby’s life. The parents will know and love the child only long enough to be heartbroken at the inevitable loss. An abortion negates all those “utility” losses. There is no positive utility lost. Many of the same costs are involved in the care of the terminally ill elderly. They too may suffer no pain, but they may offer no benefit to society. In balancing positives and negatives, and excluding from the equation the objective sacredness of all human life, we arrive at morally repugnant decisions. Here deontological and virtue ethics steer us clear of what is easier to what is right.

**Second**, in a similar way, utilitarianism denies the existence of supererogatory acts. These are acts of moral heroism that are not morally obligatory but are still praiseworthy. Examples would be giving 75 percent of your income to the poor or throwing yourself on a bomb to save a stranger. Consider the bomb example. You have two choices — throwing yourself on the bomb or not doing so. Each choice would have consequences and, according to utilitarianism, you are morally obligated to do one or the other depending on which option maximized utility. Thus, there is no room for acts that go beyond the call of morality.

**Third**, utilitarianism has an inadequate view of human rights and human dignity. If enslaving a minority of people, say by a lottery, would produce the greatest good for the greatest number, or if conceiving children only to harvest their parts would do the same, then these could he justified in a utilitarian scheme. But enslavement and abortion violate individual rights and treat people as a means to an end, not as creatures with intrinsic dignity as human beings. If acts of abortion, active euthanasia, physician-assisted suicide, and so forth maximize utility, then they are morally obligatory for the utilitarian. But any moral system that makes abortion and suicide morally obligatory is surely flawed.

**Finally**, utilitarianism has an inadequate view of motives and character. We should praise good motives and seek good character because such motives and character are intrinsically valuable. But utilitarianism implies that the only reason we should praise good motives instead of bad ones, or seek good character instead of bad character, is because such acts would maximize utility. But this has the cart before the horse. We should praise good motives and blame bad ones because they are good or bad, not because such acts of praising and blaming produce good consequences.

**In sum**, it should be clear that utilitarianism is an inadequate moral theory. Unfortunately, ours is a pragmatic culture and utilitarianism is on the rise. But for those of us who follow Christ, a combination of virtue and deontological ethics is a more adequate view of common sense morality found in natural law and of the moral vision contained in the Bible.

# New study: more sexual experience does not make you a better relationship partner

**Wintery Knight** · 23 July 2025 · Archived copy · Original

Today, most young people think that they are building up their relationship resumes by having casual sex. They think that they are elevating their value proposition to a marriage partner by having casual sex, and all that comes with it – the lack of emotional bond, the lack of commitment, the lack of partnership, the painful break-ups, the decline of trust, etc. But what does the research say?

Here's the report from Institute for Family Studies about the new study.

Methodology:

> Our findings are based on a new study using data from The National Couples and Pornography Study. The data sample was collected independently by Qualtrics from their existing data panel during 2020. It consists of 3,750 individuals in committed couple relationships, including 1,942 married adults, on whom we focused in this study. The demographically diverse sample was recruited from across the U.S. based on quotas for age, race, education level, and geographic region.
>
> We examined the effects of sexual experience on marriage across four married groups:

- ***Group 1: Inexperienced*** – These are individuals who were sexually inexperienced prior to marriage and who have only had sex with their spouse (19.5% of the sample).

- ***Group 2: Less Experienced*** – These were individuals with between 2 to 4 lifetime sexual partners before marriage, which is less sexual experience than the average adult in the sample (33.4% of the sample).

- ***Group 3: More Experienced*** – These are individuals who reported a total number of 5 to 9 lifetime sexual partners. This is the group that captures the average person in the sample (24.4% of the sample).

- ***Group 4: Highly Experienced*** – The final group includes those who reported 10 or more total lifetime sexual partners. This group made up 22.7% of the sample.

Now let's look at the findings, starting with relationship satisfaction:

> **Sexually inexperienced couples have the highest levels of relationship satisfaction.**
>
> While over 1 in 5 spouses in the Inexperienced group were likely to report a very high level of relationship satisfaction, only 1 in 7 of those in the More Experienced group were likely to report the same level of satisfaction. This dropped even further for those in the Highly Experienced group, with less than 1 in 10 of spouses reporting that they are very satisfied with their marriage. Thus, sexually inexperienced spouses are more than twice as likely to report that they are highly satisfied with their marriages than are spouses with high levels of sexual experience (*see Figure 1*).

And the findings about marital stability:

> **Having multiple sexual partners before marriage is strongly associated with lower marital stability.**
>
> Similar to other studies, we found that sexual experience prior to marriage is correlated with lower stability in marriage and a greater likelihood of divorce. Specifically, we found that inexperienced men and women who have only had sex with their spouse have a nearly 45% chance of reporting a very high level of relationship stability in their marriage, whereas only 25% of married individuals with 5 to 9 lifetime sex partners, and only 14% of married individuals with 10 or more lifetime sex partners report a similarly high level of relationship stability.

And the findings about sexual satisfaction and emotional connection:

> **Spouses who have only had sex with their current spouse have the highest levels of sexual satisfaction and emotional connection in their marriage.**
>
> Nearly 1 in 5 married men and women who have only had sex with their spouse report that they are "very satisfied" with multiple aspects of their sexual relationship. In comparison, only 1 in 10 married men and women who are "highly sexually experienced" (meaning they had 10 or more sexual partners before marriage) report similar levels of sexual satisfaction (*see Figure 3*). Also, nearly 80% of married individuals who were sexually inexperienced before marriage report the highest level of emotional closeness in their marriage, which is more than 20% higher than individuals who have had multiple sexual partners.

Now let me give my comments about this.

I follow a lot of content that features young people talking about sex in relationships. The dominant view among young people is that they are becoming better relationship partners when they engage in casual sex. They say that they are learning about their own needs, and about what to look in other people so that their needs will be met. They think that more casual sex is like more work experience on a resume, and that this is what marriage-minded people of the opposite sex will be impressed with. They think that their Sexual Revolution approach to sex is going to lead to more stability, more relationship satisfaction, more emotional connection, and more sexual satisfaction.

So the first thing is that the research falsifies this. And you can see how this works by just thinking about the break-ups. Break-ups have the effect of making people look for the exits in relationships. Instead of committing first, and then taking responsibility to build and maintain the relationship, they are looking to get out of it to avoid being hurt. And they are always trying to make sure that their needs are met, and avoiding committing too much to the other person. They neither know nor care what the other person is trying to achieve, and they aren't engaged in helping them to do that.

Also, consider that most young people are not forming their beliefs with knowledge that is likely to make them a better person. Concepts that are familiar to experienced Christians such as forgiveness and self-sacrificial love are nowhere in their worldviews. Biblical Christianity provides a rational basis for loving a spouse well, even when you don't feel like it. Which is very useful in a marriage. They have a pretty self-serving view Christianity, something like "don't judge" and "listen for the voice of God telling you his plan to make you happy".

Instead their views are being formed by radical feminism, popular culture, celebrity worship, materialism, an almost fanatical focus on judging people by appearances, being led by feelings and peer-approval, etc. They expect to have stability and quality in a relationship where skills like forgiveness, self-denial, delayed gratification, planning, achieving goals together, etc. are critical. Imagine wanting to retire early. Is someone on the path to early retirement if they are guided entirely by their feelings? If they do only what feels good "in the moment"? If none of the peers who influence them have achieved this goal? Today, relationships are just a case of the blind leading the blind. It doesn't work.

# IKEA fires Christian employee for refusing to use transgender pronouns

**Wintery Knight** · 23 July 2025 · Archived copy · Original

Things are getting much better in corporate America these days. DEI hiring standards are declining, LGBT support during "pride month" declined. It's much easier for Christian employees to be who they are, without being shamed, coerced and even fired for taking Jesus seriously. But not every company sees it that way. And it's happening in Indiana, of all places.

Here's the story from The Federalist:

> An Indiana IKEA employee was fired after refusing to call his co-worker "they/them" and filed an official complaint due to "unlawful termination," the Indiana Family Institute said in a Wednesday press release.
>
> Steven Ressler, a "devout Christian who believes there are only two genders" and who's worked at IKEA since 2019, was under investigation in December for "misgendering" his co-worker. Soon after, Ressler filed for a "religious accommodation request" to "inform my employer of my religious beliefs and engage in the interactive process in good faith," the press release said.
>
> Three days after filing the religious exemption, Ressler was fired on the basis of "misgendering," the press release said.

The article notes that Ressler has filed a complaint with both the U.S. Equal Employment Opportunity Commission (EEOC) and the Indiana Civil Rights Commission.

On the face of it, I would expect his complain to easily succeed. First amendment rights protect you from compelled speech. Now, I expect that if the Biden-Harris regime was still in control, that the government would side with the corporation against the individual. But now there's a new sheriff in town.

The article notes that this isn't the first time that IKEA has trampled the rights of Christian employees:

> IKEA, the Swedish furniture and home goods store, has a page on their website on how to be "an everyday ally" and "mak[e] space" for the "LGBTQIA+ community."
>
> In 2019, a former Catholic IKEA employee in Poland sued IKEA after being fired for not taking down Bible verses rebuking homosexuality he posted on IKEA's article for "International Day Against Homophobia and Transphobia."

Now, I'm not sure if you knew about this, but IKEA furniture has actually sold people dangerous furniture. Their products have actually killed people in the past.

Check out this article from Home Furnishings Association:

> IKEA recalled millions of chests and dressers in June 2016 because of tip-over hazards. It repeated the recall announcement in November 2017.
>
> In between, on May 24, 2017, an IKEA dresser toppled over on 2-year-old Jozef Dudek in his Buena Park, Calif., bedroom. The blow injured the child's neck, causing him to suffocate.
>
> Monday, a law firm representing Jozef's parents reported that IKEA agreed to pay $46 million in damages, "believed to be the largest child wrongful death recovery in American history," the firm stated. The settlement "includes non-monetary terms intended to protect other children from IKEA furniture tip-over incidents."
>
> A lawsuit filed in 2018 alleged that IKEA knew of many injuries and deaths associated with tip-overs of the

> MALM line of dressers prior to Jozef's death but failed to take adequate measures to improve the safety and stability of its products.

I'm trying to be very wise these days about where I buy things. So, I'll remember what IKEA did to Christians when I'm shopping for whatever it is they sell. I'll also remember their past sales of dangerous products when I'm choosing where to shop. I'm sure I can find something more respectful of free speech and religious liberty from a smaller store in my red state.

# How Dr. Walter Bradley helped me keep my faith at university and in the workplace

**Wintery Knight** · 24 July 2025 · Archived copy · Original

My close friends know that Walter Bradley is the Christian scholar I admire the most. I've mentioned Dr. Bradley on the Knight and Rose Show several times, and plugged the book about his life "For a Greater Purpose: The Life and Legacy of Walter Bradley". Recently, Dr. Bradley passed away. Many prominent Christian scholars have been writing about his life and how he impacted them.

My good friend Kevin, who is an amazing Christian man and a real hero to me, mentioned an article about Dr. Bradley by Dr. William Dembski. Kevin asked me to write something of my own. Work has just been draining all my fuel lately, so this is the best I can do. I am not a perfectionist, and I try to write these posts in under 1-2 hours each day, so there is a lot more to say than what you will find here.

I first encountered Dr. Bradley shortly after I arrived in America by ordering some of his campus lectures from Veritas Forum. These lectures had a huge impact on me, even causing me to have a plan to do a PhD in computer science and go into teaching. I figured out by listening to all of Dr. Bradley's lectures that this is what he was always urging Christian graduate students to do. Well, my plans got derailed because it took me 16 years to get a permanent residency, and another 5 years to get my citizenship. Even if I got the PhD then, I would have much less time for research and teaching.

Still, I thought it might be fun to list out the lectures that I ordered from Veritas Forum that featured Walter Bradley:

- Dr. Walter Bradley – Giants In The Land – Georgia – 1997
- Dr. Walter Bradley – Scientific Evidence for an Intelligent Designer – Georgia – 1997
- Dr. Walter Bradley – Scientific Evidence for an Intelligent Designer – Penn State – 1997
- Dr. Walter Bradley – A Scientist's Quest For Success – Penn State – 1997
- Dr. Walter Bradley – Truth In Religion – Georgia – 1997
- Dr. Walter Bradley – Truth In Religion – Penn State – 1997

If you want to listen to some of these lectures, I uploaded them as MP3s here, from the original audio cassettes, which are unavailable now, and not online anywhere. The key ones are the "Testimony", and the 3 versions of "Giants in the Land". The sound quality is not the best, and there is a pause in the recording from when I flipped the cassettes. If you listen to those, and read "Cyrano de Bergerac" in the original French, then you'll know a lot about me.

The Walter Bradley lectures I remember the most were Testimony, Quest for Success and different versions of Giants in the Land. He talked about how he grew up. His Dad committed suicide when he was young, and he was always poor. He worked a lot of jobs to make ends meet, and was excellent in his academic studies and sports. He wanted so badly to be a success, but found achieving success very empty and unfulfilling. What was fulfilling for him was his relationship with God, and serving God. It's lessons like this that allowed me to persist all this time, even without the traditional home and church community that most Christians have. I was trained by these two lectures to operate alone in a harsh environment, like a secular university or workplace.

One part that stood out to me was his explanation of how he stopped viewing Christianity as a set of rules, instead of as a relationship. He explained this by telling how his affection for his girlfriend and eventual wife Ann caused him to finally understand that Christianity was not about stopping the things that you most liked doing, and starting the things that you least liked doing. Even though he didn't have a lot of money for dating, he liked to take Ann on dates, because he loved her. And that's how Christians ought to feel about the how the Boss wants them to act. Prioritizing Boss in your conduct and life-planning is easy when you are in a relationship with a Boss who leads

from the front. For me, a valuable lesson was that you don't have to care about your reputation if you are excellent in things like education, career, marriage and finances.

He also talked a lot about how to be a Christian in academia, and the importance of professors being a resource for their students. He was very familiar with the law, frequently had to "butt heads" over religious liberty with the Dean. But he also had a lot of amazing adventures by being willing to be identified as a Christian. He explains in "Giants in the Land" how he would feel about identifying as a Christian to his secular colleagues. If only every Christian son and daughter could have heard this lecture before going to college, we would never have lost any of them. Listening to Dr. Bradley talk about the struggles of being a Christian on a secular university campus was just magical. I think a lot of them just feel ashamed of moral rules and truth claims that they were never prepared to defend at the university or in the workplace. They were never taught to see the life of an evidence-wielding secret agent as more fun than getting drunk and having hook-up sex.

Walter Bradley's thoughts about being a Christian in a hostile environment formed my character and prepared me for the secular workplace. Unlike many Christian leaders who started out conservative and then caved to the secular left for prestige, I never expected non-Christians co-workers to like me. Walter Bradley had already warned me not to expect that. I built my castle with scientific evidence, up on the hill of analytical philosophy from William Lane Craig. Later on, I added a moat around the castle, with the economics of Hayek and Sowell.

His lectures made me want to become a Christian professor. But sadly, I never did get to be a Christian professor like Dr. Bradley. I used to cry about how long it was taking for me to make progress on my "become a Christian professor" plan. Maybe some day… I have had offers to teach introductory computer science courses at Christian universities.

I wish more of our Christian leaders were evidence-based like Dr. Bradley – then then we'd avoid the issues plaguing many denominations. Whenever you look at someone like Russell Moore, David French, Brent Leatherwood, Ed Stetzer, David Platt, etc., you are looking at someone who expected that Christianity would make them feel good and be liked in non-Christian environments. Walter Bradley killed that expectation dead for me. I think that's why people who knew him, like William Dembski and Robert Marks, have been so faithful to the Boss with their research and writing. By the way, I have met Dembski, Marks and Bradley in real life! I've also met Kelly Monroe Kullberg, founder of the Veritas Forum. Those are the type of Christian that I look up to. Who are your role models?

Finally, I have to mention the website "Leadership University", which was my lifeblood during my undergraduate years. Not only did they have all the transcripts of William Lane Craig's debates, but they also had many articles by Walter Bradley, and other scholars I loved: J. P. Moreland, Henry Schaefer, Phillip E. Johnson, etc. There were tons of articles there, including articles on controversial topics, like homosexuality. You could find anything that you were being challenged about. And then I also got a lot out of Access Research Network, which had amazing videos that I would watch dozens and dozens of times until I could remember every word.

Many of the same videos I used to watch over and over are now available free, including one with Dr. Walter Bradley.

- On the Origin of Life – An Interview with Dr. Dean Kenyon
- Focus on the Origin of Life – An Interview with Dr. Charles Thaxton
- Darwinism on Trial – Phillip E. Johnson
- Blind Watchmaker? A Skeptical Look at Darwinism – Phillip E. Johnson
- Can Science Know the Mind of God? – Phillip E. Johnson
- A Critique of Darwinist Icons – Dr. Johnathan Wells
- Doubting Darwin: An Interview with Dr. Scott Minnich
- Intelligent Design: From the Big Bang to Irreducible Complexity – Dr. Michael Behe

- Creation of the Cosmos – Dr. Walter Bradley
- Scientifically Testable Consequences of Fine-tuning Related Arguments & Hypotheses – Dr. Robin Collins
- On the Origin of the Cosmos – An Interview with Dr. Michael Strauss

Anyway, if you haven't checked out the book about Bradley's life, get it. And if you want to know what makes me tick, check out the lectures I mentioned. There are other things that had a huge effect on me, but those lectures are my heart and soul. I would say that my resilience over my time at the university and in the secular workplace comes from people like Walter Bradley.

I am also grateful for Art Battson of ARN, who worked on those videos so that I could buy them and watch to them when I was still young. I never met a single non-Christian in the workplace who could defeat these arguments.

By the way, these campus lectures are still going on today – if you want to donate to a great cause, check out my friend Eric Chabot who organizes campus events at THE Ohio State University. He blogs here. I support his work. The lectures that he organizes may be bullet-proofing the worldviews of the next Wintery Knights!

# Canada's descent into secular left fascism: terrifying recent news stories

**Wintery Knight** · 25 July 2025 · Archived copy · Original

Most of my friends from Canada are economically-literate and good at evidential apologetics. So when I make fun of Canada, I'm not making fun of them. However, Canada as a whole is just a trash country. And what I mean by that is that no one there understands economics. They don't believe in religious liberty. In fact, it's pretty much a third world country with a few conservatives in it.

Let's take a look at the data, starting with this recent article from Toronto Sun – which shows what kind of prison sentence you can get for organizing a peaceful protest against medical mandates:

> Crown prosecutor Siobhain Wetscher said Wednesday she is seeking stiff sentences for convoy leaders Tamara Lich and Chris Barber because of the broad community harm caused by the three-week 2022 protest in Ottawa's downtown core.
>
> […]Lich and Barber were both found guilty of mischief in April for their key roles in the convoy protest, which filled downtown Ottawa for three weeks beginning in late January 2022 to protest vaccine mandates and other pandemic measures.
>
> The Crown is seeking a prison sentence of seven years for Lich and eight years for Barber, who was also found guilty of counselling others to disobey a court order.

The article notes that Barber has no previous criminal record.

Keep in mind that Canada gives extremely light sentences to real criminals, provide they are members of certain groups favored by the secular left.

Here is an example from July 15th, reported in Juno News:

> An Indian foreign national, Akashkumar Narendrakumar Khant, who admitted to trying to buy sex from what

> he thought was a 15-year-old girl, was given a conditional discharge by an Ontario judge to help him and his wife with their immigration statuses.
>
> In a decision released on June 25, Ontario Court Justice Paul Thomas O'Marra provided Khant with a conditional discharge on the basis that "a conviction would lead to severe collateral consequences, such as jeopardizing his immigration status, delaying his citizenship, and preventing him from sponsoring his wife, which would likely result in their separation."

That's what the entire justice system of Canada is like. 8 years in prison for organizing a protest to disagree with the government, and conditional discharge for trying to have s*x with a 15-year-old girl. And Canadians vote for this, they like this, they approve of this.

Soldiers with guns. In Canadian Cities. In Canada.

Corporations in Canada are allied with the government, because the country is essentially communist. And these corporations are not afraid to enforce the policies of the secular left fascist regime. For example, banks in Canada regularly freeze or close accounts of people who disagree with the government – and not just for peaceful protests, but for disagreeing with the government's policies.

First article from Western Standard talks about what happened with the bank accounts of people protested against the governments medical mandates:

> Lawyers for Evan Blackman are demanding that the RCMP and Toronto Dominion Bank hand over records detailing why his personal bank accounts were frozen following the 2022 Freedom Convoy protest.
>
> The Justice Centre for Constitutional Freedoms announced Thursday it would argue that the freezing violated Mr. Blackman's constitutional rights.
>
> Blackman was arrested on February 18, 2022, during police action after the federal government invoked the Emergencies Act. Although he was released the same day, he later discovered that three of his bank accounts had been frozen without warning.

You might remember that Toronto Dominion bank was in the news recently for criminal activities. That link goes

to the Department of Justice web site, by the way.

Automatic weapons and armored vehicles to break up peaceful protests in Canada

Next article, very recent, from Western Standard. Canadian corporations freeze and terminate bank accounts willy-nilly. All it takes is that you disagree with the government, then corporations stomp all over you:

> Eva Chipiuk, a lawyer known for her involvement in the Freedom Convoy and vocal criticism of Canadian institutions, has been blindsided after the Royal Bank of Canada (RBC) terminated its banking relationship with her, citing risk-related concerns.
>
> According to an official letter the banking institution sent to Chipiuk, her "recent activity was outside of RBC's client risk appetite," and it would "no longer be in a position to continue serving her."

So what do we learn from this? Well, we learn that Americans should never, ever set foot in a secular left fascist bleephole like Canada. Most Canadians don't believe in basic freedoms, like freedom of speech, freedom of association, and peaceful protest. If you try to exercise those rights in Canada, then it's very likely that you will be arrested and imprisoned. Unless you belong to one of the government's favored groups, e.g. – child abusers. There are many safer countries to visit, countries that respect human rights. Go spend your money there. You wouldn't vacation in North Korea, so don't vacation in Canada. They're the same thing.

# William Lane Craig and James White debate Calvinism vs Molinism

**Wintery Knight** · 26 July 2025 · Archived copy · Original

In a recent episode of the Unbelievable show, Calvinist pastor / theologian James White discussed middle knowledge (a.k.a. Molinism) with philosopher / theologian William Lane Craig. In this post, you'll find a link to the audio, the YouTube video, and my comments on the debate. My comments were quoted in an episode of William Lane Craig's Reasonable Faith podcast.

Here is a link to the details from Unbelievable: (with MP3 download link)

> Calvinism and Molinism are two very different ways of understanding God's sovereignty. But which one best addresses the problem of evil?
>
> James White argues that Calvinism – God foreordaining all human behaviour both good and evil – is the more Biblical and coherent view. William (Bill) Lane Craig argues that Molinism – a view which reconciles human freedom and divine sovereignty – is Biblically consistent without making God the author of evil.

And the video:

**Summary:**

**JB:** Why is there evil?

**JW:** Natural and moral evil are the results of God's divine decree to create the world.

**WLC:** God has knowledge of what individual humans would do in different circumstances prior to his divine decree to create the world. God's decree takes into account the free decisions of people in different situations. With regard to natural evil, Calvinists and Molinists do not differ much – they are permitted to achieve a greater good. But for moral evil, there is a difference. Moral evil is the result of free decisions by individual humans. They are not God's will. God permits people to perform evil actions, because those free actions will lead to him achieving his ultimate purposes. God does not override human free will. He achieves his ultimate purposes through the actions of his free creatures. On the Calvinist view, God moves the will of creatures to do evil. God is the cause of their evil acts.

**JB:** God sees all of the possible worlds and instantiates a world where he is able to achieve his ultimate purposes while respecting the free decisions of his creatures.

**WLC:** God does not see what humans WILL do, and decree based on that. He sees what they WOULD do in different circumstances, and articulates a world where the free decisions they make in the circumstances he decrees lead to his ultimate purposes being fulfilled.

**JB:** And this view achieves God's sovereignty (God gets the result he wants) with human freedom (God is not responsible for moral evil)

**JB:** James, isn't it better for God to get what he wants while respecting free will, rather than micromanaging every thought and action of the people?

**JW:** There's micromanaging on both sides. On Molinism, God micromanages the circumstances. On Calvinism, God micromanages everything. But how could God have that knowledge of what people would do, prior to actually creating those people? The Bible teaches Calvinism, and so we should go with that. Calvinists are concerned when Craig says that God does not determine the truth value of these subjunctive conditionals (i.e. – what free individuals would do in different circumstances) The individuals determine what they will do in different circumstances. And Calvinists would prefer that God determine (i.e. – exhaustive determinism) what individuals do in different circumstances. WLC, would you agree that the knowledge of these subjunctive conditionals are the

essence of what middle knowledge is? (WK note: micromanaging circumstances doesn't violate free will, micromanaging everything does violate free will)

**WLC:** No, but it is an essential aspect of it. According to Molinism, God does not determine what free individuals would do in different situations in which they find themselves. The Calvinist view is that in any situation, God actually moves the will of the creature, so God is the author of moral evil. On the Molinist view, creatures are responsible for moral evil, not God.

**JW:** So you're saying that these subjunctive conditionals are not under God's control. How can they be under the control of the creatures, since prior to God's creative decree, the creatures do not exist yet? Where do these truth values come from.

**WLC:** This objection to Molinism is called the "grounding objection". The counterfactuals of creaturely freedom are true without having to be grounded by the created individuals. This objection presupposes a view of truth called "truth-maker" theory. This theory says that in addition to propositions that are true, there are things that make propositions true. There are many counterexamples to this view. For example, if you deny the existence of something that does not exist, then there is no truth maker that makes that claim true. (WK note: E.g. – a unicorn does not exist) Another example is "If WLC were rich, WLC would buy a Mercedes" but there is no truth-maker situation that makes that true, except maybe if he were rich. (WK note: I think that the created individual WLC would be the truth-maker in that case?)

**JW:** The decisions that I make are caused by God's decree of what gifts I have or don't have. He has freedom to decree those gifts, and then that has an effect of what I am free to do. E.g. – I am not 6'11" so I am not free to be a center in the NBA. So on the Molinist view, what is the basis for these subjunctive counterfactuals that limit what God can do?

**WLC:** The grounding objection presupposes the truth-maker theory, and a particular strain of that theory called truth-maker maximalism, and counterfactuals of creaturely of creaturely freedom would be prime candidates to be exceptions to the truth-maker theory.

**WLC:** Regarding the point about how people don't exist in a vacuum but have a whole history, background, characteristics, etc. to shape their decisions. That's right. But the counterfactuals of creaturely freedom factor all that in. The key point that divides us is that God doesn't determine what creatures decide, he decides the circumstances. And so the creature is responsible for moral evil, not God. And so God doesn't cause people to commit moral evils, then punish them for it.

**WLC:** We should guide our views based on what is in the Bible. But even Calvinist theologians affirm things about God that are not taught explicitly in the Bible, such as God's spacelessness and timelessness. And Molinism makes the best sense of divine sovereignty and human freedom. On the Calvinist view, God determines how anyone would act in any situation God might place him in, so God is responsible for the moral evil committed by his creatures.

**JW:** (repeats) If God is limited in what he can do by counterfactuals of creaturely freedom, then we have to know where these counterfactuals come from. (WK note: the counterfactuals of creaturely freedom come from… creaturely freedom.)

**JW:** Genesis 50:20 says that God used the moral evil committed by some creatures to achieve the good purposes he intended. (WK note: that's exactly what the Molinist view is, God permits moral evil by his creatures, as long as it achieves his ultimate good purposes)

**JW:** Molinism is unknown in the church for 1500 years. (WK note: Molinism is in Acts 17:24-27, and also, Calvin and Luther were unknown in the church for 1500 years)

**JB:** Is Genesis 50:20 a good example of Calvinism?

**WLC:** (very excited) NO!!!!!! It's a great example of Molinism!!!! The text says that God didn't move the bad actors to perform sinful actions – that would make God the author of evil. But God knew that if they were in this

situation, they would behave in these evil ways, but ultimately it would lead to good results that God wanted. There is a chain of people partially articulating the middle knowledge view prior to Molina.

**JW:** You shouldn't believe Molinism, because it comes from Jesuits. (WK Note: this is the genetic fallacy)

**JW:** The Bible has examples where God "hardens hearts", e.g. Pharaoh.

**WLC:** It's not that the Bible authors had Molinism in mind. It's that this theory is consistent with what the Bible teaches.

**JW:** Ephesians 1 teaches that God unilaterally determines who the elect are. Calvinism emerges from the text. But in Genesis 50:20, Molinism doesn't emerge from it.

**WLC:** We're both trying to make sense of the data of Scripture. Scripture doesn't teach the universal divine determinism of every human act, especially evil acts. The Bible says thate God is not evil, and cannot even be tempted with evil, but on the Calvinist view, God is causing the evil actions of his creatures, and then he punishes them for it. If it's evil to cause someone to do evil, it makes God himself evil.

**JW:** In Isaiah 10, God uses the Assyrians to punish Israel, then he punishes the Assyrians for the haughty attitude of their heart.

**WLC:** The Molinist view of Ephesians 1 is that part of God's good pleasure is to respect human freedom, and not to unilaterally divinely determine them to sin. Regarding Isaiah 10, you're asking how God can punish the Assyrians for something he causes them to do? No, God knows that the Assyrians are going to do this moral evil and he uses that for his purposes, and he is free to punish their immoral act, because they did it of their own free will.

**JW:** But if you need Molinism to understand these texts, then what did the authors intend for people to think before Molinism.

**WLC:** People understand from Genesis 50:20 that people do evil things, but God gets a good outcome out of it.

**JW:** As a Calvinist, I do not believe that God respects human freedom.

**JW:** I don't think that individuals have control of the circumstances in which they are born or where they live that limits God's sovereignty. (WK note: he doesn't understand Molinism or Acts 17:24-27. Individuals control their own decisions. But God controls the circumstances – i.e. – everything else). There is no essence of James White that determines where I am born, my physical characteristics, my siblings, etc. God decrees everything about who I am.

**WLC:** "That's because you're a determinist, James, and I'm not"

**JW:** "Yes. Yes. OK."

**WLC:** There are number of possible worlds where James White could exist. Different country, different education, different language, different family. God decides the circumstances for James White. James White makes the decisions. God doesn't cause James White's moral evil. James White does. The counterfactuals of creaturely freedom must exist prior to the divine decree in order for humans to be responsible for their evil actions.

**JW:** You're using philosophy. But your view should come from the Bible. (WK note: look at Acts 17:24-27)

**WLC:** Universal divine determinism isn't taught in the Bible.

**JW:** Yes, in Ephesians 1.

**WLC:** The Molinist affirms Ephesians 1.

**JW:** It doesn't mention respecting free will there, it's teaching universal divine determinism.

**WLC:** The Bible teaches that God does have knowledge of counterfactuals of creaturely freedom, e.g. 2 Cor 2:8. So the question is whether God has this knowledge logically prior the decree (Molinism requires this), or is it

logically after. If it is logically after, then it makes God the cause of human moral evil.

**JW:** The verses raised by Craig can be subsumed under God's natural knowledge and free knowledge.

**JW:** Some Molinists believe that the only people who are lost in this world are people who cannot freely respond to God's saving initiative in any circumstances (WK note: this is called trans-world damnation (TD), and I hold this view). Does anyone in the Bible know about this idea? That changes God's expression from universal divine determinism to accepting human free will and human responsibility for sin (which Calvinism denies).

**WLC:** Yes, there are two different views. The one view takes human free will, and human responsibility for sin, seriously. The other view makes God the cause of human sin, and therefore makes God evil for being the author of evil.

**JW:** On Molinism, God knew that if he actualized this world, then he knew the evil that would result, but he didn't do it for some purpose, like revealing his own character?

**WLC:** No, he didn't bring the evil into the world. He actualized a set of circumstances, and a set of free creatures. And he knew that in those circumstances, he knew that the creatures would choose to do evil. His absolute will is for all his creatures to always do the right thing. But he knows that often they will do evil. He permits that to happen, but in the end he achieves the good purposes. E.g. – achieving the redemption of mankind through Jesus through the evil decisions of the rulers at that time.

**WLC:** I love the Westminster Confession. But without middle knowledge, that Confession is incoherent. Middle knowledge explains how things work, so that the Westminster Confession's affirmations are logically coherent.

**JW:** What you're saying is that God respects human free will and human responsibility.

**WLC:** Molinism is extremely fruitful theologically. I have applied to the problem of exclusivity of salvation, to the perseverance of the saints, to the inspiration of Scripture… but the focus of the discussion today is on moral evil. Who is the cause of human evil?

**JW:** Only universal divine determinism and the denial of human free will and human responsibility are consistent with Scripture.

**WLC:** Scripture alone is my authority, not church tradition. But Reformed theology is permeated with concepts that are not described in Scripture, but are consistent with Scripture, e.g. – timelessness, spacelessness, simplicity.

**JW:** I disagree, ALL the concepts in Calvinism emerge directly from the text. Isaiah 40-48 clearly teaches divine necessity, that God exists necessarily, in every possible world. (WK note: Calvinist thought emerges 1500 years after the Bible was written)

**JW:** Middle knowledge is a Catholic dogma, which is why even the Catholics rejected it.

**WLC:** (holds up 2 volumes of a 4 volume, 2144 page set of books on Reformed theology) Anyone who thinks that Reformed Dogmatics are simply read out of Scripture "doesn't know the history of Reformed theology". These volumes are permeated with theological constructs, philosophical models, philosophical principles. The necessity of God's existence, timelessness, spacelessness, etc. are all affirmed by Reformed theologians, and were inherited from medieval scholastics (Catholics).

**JW:** The central claim of middle knowledge, that counterfactuals of creaturely freedom are known by God, are not in the Bible. (WK note: Craig gave an example of counterfactuals of creaturely freedom in the Bible. There are lots of them.)

Four volume 2144-page book set on Reformed dogmatics

**My thoughts:**

I think that it was a good debate. Well worth watching. I don't promise that my summary is 100% accurate. Please leave room for a little snark, and watch the debate yourself. I like to take the spin off of people's words, when I feel that they are trying to weasel out of the conclusions of their own views. It's 2 AM on Monday morning now, and I don't want to proof-read. Please point out errors in the comments.

If I could boil down the mistake that James White makes to one sentence, it would be to say that he comes to the text with a *philosophical* presupposition (determinism), and this causes him to misinterpret the plain meaning of the text as a whole. And this misinterpretation isn't about peripheral teachings of the Bible. His embrace of God as the cause of moral evil means that he denies the goodness of God – a basic Christian doctrine. (This is compounded by his embrace of double-predestination, although that was not the topic of the debate). Christians shouldn't let a philosophy – determinism – override the plain meaning of Scripture. Determinism is *man's philosophy* – it's a Greek philosophy that existed centuries before Christ.

White also was clearly unfamiliar with the philosophy of religion of his own Reformed tradition, and especially with the history of the development of Reformed theology. Craig was able to correct him, by showing him the books on Reformed Dogmatics and explain the historical antecedents of Reformed thought.

James White is not a "hyper-Calvinist". He is a normal Calvinist. Calvinism teaches universal divine determinism. Calvinism teaches that where each individual goes after the judgment is decided unilaterally by God. Calvinism teaches that human moral evil is caused by God. Calvinism teaches that God punishes people for this moral evil. Calvinism teaches *intentional* double-predestination.

I wrote about the problems with Calvinism, citing Calvinist D.A. Carson and William Lane Craig, in a previous post. Determinism denies free will, and therefore undermines all meaning in life. That's not consistent with the Bible's clear teaching that God issues commands to his creatures, because he expects (free will) obedience. That is how we develop our relationship with God after becoming Christians (sanctification), and those relationships have ultimate significance.

Note: I link to James White's work on this blog. He does a great job of fighting cultural and political enemies. I really appreciate his conservative perspective on issues like abortion, and his sensitivity to the totalitarian impulses of the secular left. His work on KJV-only and and debating Catholics is excellent. I don't always agree with Craig. I recently posted disagreement with Craig on his latest work on the historical Adam and evolution. I have other minor disagreements with him as well, in substance and method. The only theology books in my house are by R. C. Sproul, Wayne Grudem, D.A. Carson, Millard Erickson, John MacArthur, etc. – all Calvinists.

If you missed Craig's debate with Paul Helm, which is mentioned in the debate, I blogged about that previously, as well.

# Can a person believe in both God and Darwinian evolution?

**Wintery Knight** · 27 July 2025 · Archived copy · Original

The term for a person who believes in fully naturalistic evolution but who also believes in God is "theistic evolutionist".

Terrell Clemmons takes a look at one organization of theistic evolutionists "Biologos", and makes a distinction between their public statements and the real implications of their public statements.

Here is the PR / spin definition of theistic evolution:

> Evolutionary creation is "the view that all life on earth came about by the God-ordained process of evolution with common descent. Evolution is a means by which God providentially achieves his purposes in creation." This view, also called *theistic evolution*, has been around since the late nineteenth century, and BioLogos promotes it today in a variety of religious and educational settings.

And here is the no-spin definition of theistic evolution:

> As Dr. Stephen Meyer explains it, the central issue dividing Bio-Logos writers from intelligent design theorists is BioLogos's commitment to methodological naturalism (MN), which is not a scientific theory or empirical finding, but an arbitrary rule excluding non-material causation from the outset. "Unfortunately," Meyer writes,
>
> methodological naturalism is a demanding doctrine. The rule does not say "try finding a materialistic cause but keep intelligent design in the mix of live possibilities, in light of what the evidence might show." Rather, MN tells you that you simply must posit a material or physical cause, whatever the evidence.
>
> **What this means, according to BioLogos's own epistemology, is that God is objectively undiscoverable and unknowable—a tenet that sits squarely at odds with Christian orthodoxy, which has for centuries held that God is clearly discernible in the natural world (e.g., Romans 1:20).** Obviously, this is theologically problematic, but Meyer also points out that theistic evolution faces problems from a scientific standpoint as well, as the technical literature among evolutionary biologists is moving *away* from the Darwinian mechanism.

Whenever I talk to theistic evolutionists, I try to stop them from talking about the Bible or their faith, because that's not what is interesting to me. I don't really care about their history as a religious person, or where they go to church, or who their pastor is. When I talk about origins and evolution, I only care about the science. What the ordinary process of scientific inquiry tells us about nature? Does nature have the capacity to create all of the varieties of life without any intelligent agency playing a role? Or, are there parts of nature that are similar to computer programs, blog posts, and term papers, where the best explanation of the effect is an intelligent agent choosing how to arrange the parts to achieve functionality?

I don't accept molecules-to-man unguided evolution. This is not because I start with faith and let faith override the findings of science. It's because I think that if you look at specific areas of natural history, there is clear evidence of intelligent agency, such as in the origin of life, or the Cambrian explosion. These effects in nature are well-studied and well-understood, and they look much more like the code that a computer scientist (like me) writes than the simplistic "order" created by wind erosion or crystalline patterns or anything the blind forces of nature could produce. Blind forces are observed to make small changes – short or long finch beaks, fruit flies with 4 wings and no balancers, bacterial resistances.

What's also interesting is how often theistic evolutionists drop the theism but keep the evolution.

Consider this article about Stephen Matheson from Evolution News:

> Biologist Stephen Matheson is a longtime critic of the theory of intelligent design. His extensive attacks on Stephen Meyer's *Signature in the Cell*, for one, ranged from the substantive to the trivial and personal. The tone was frequently…abrasive, and we responded at the time. With Arthur Hunt, Dr. Matheson has debated Dr. Meyer in a forum at Biola University. Formerly a professor at an Evangelical Christian school, Calvin College, Matheson is still listed as a Blog Author at the theistic evolutionary website *BioLogos*, where it notes that he enjoys "explor[ing] issues of science and Christian faith."
>
> Well, his theistic evolutionary explorations have now terminated. As he reports on his personal blog page, where he took a hiatus of more than five years along with a break from his teaching, he is "happily" no longer a Christian.

OK. Now that's just one case, but what about Howard Van Till, also of Calvin College?

Salvo magazine takes a look at what he wrote in a recent book:

> In what follows I shall use the term "naturalism," when unqualified, to represent neither more nor less than *the rejection of supernaturalism.* Stated positively, naturalism is committed to the belief that all events that occur within this Universe are consistent with and adequately explained by the system of natural causes. This commitment necessarily entails the additional belief that the system of natural causes is fully adequate to account for all events that transpire. Focusing on the issue of the Universe's formational economy, we can say that naturalism—as here defined -entails the RFEP.

He now gives presentations for atheist groups entitled "From Calvinism to Freethought". Freethought is a euphemism for atheism.

Now, for the big three Western monotheistic religions: Christianity, Judaism and Islam. To deny supernaturalism IS to deny the robust theism present in the world's big three monotheistic religions. Van Till denies theism as commonly understood now. And again, this isn't because of the science. His heavy handed naturalistic assumption squashed out any kind of serious inquiry into areas like the origin of the universe, the cosmic fine tuning, the origin or life, the Cambrian explosion, biological convergence, so-called junk DNA, deleterious mutations, and so on. Places where you can see that naturalistic forces cannot do the creating that Van Till has faith that they can.

I don't accept any kind of macro-evolution – evolution of body plans or organ types. My problem with evolution is not Bible-based, it's science-based. If the science shows the need for intelligent causes, and I think it does, then I think that the naturalists need to adjust their assumptions and pre-suppositions to match the evidence. On the Internet have ball sorts of programs written in different computer languages. They are evidence for programmers. In nature, we have DNA and proteins and sudden origin of body plans, that's evidence for a programmer, too.

# On the Beatitudes, John MacArthur is wrong, Sinclair Ferguson is right

**Wintery Knight** · 28 July 2025 · Archived copy · Original

I stayed home from church on Sunday and decided to watch sermons (and birds, through the window) while doing weights and then cardio on my recumbent bike. I wanted to hear a good sermon on the Beatitudes, so I started with John MacArthur and moved on to Sinclair Ferguson. I thought it might be worth making a post about it, because it's an important point.

So, to start with, I will say that I don't have an ordinary living room like most hoomans, with, like, "furniture". I have a chin-up / dip station, a flat/incline/decline bench, two adjustable dumbbells, a folding floor mat, a recumbent bike, and a TV hooked up to a laptop for streaming. My living room is just for working out, and watching streaming videos. Usually, it's about men's issues like Chisha Zed and Emily King, wargame gameplay like Example of Play and Taff in Exile, or sermons.

So, I started out with coffee and a fiber smoothie (e-mail me for recipe), and then this sermon from John MacArthur:

MacArthur says:

> The third reason we ought to study the Sermon on the Mount is that it's the only path to true happiness for Christians. If you want to be truly happy and filled with the Spirit, you don't chase mystical experiences, pursue elusive dreams, or hop from meeting to meeting trying to catch something in the air. Instead, to know happiness, blessedness, bliss, joy, and gladness, you simply study the Sermon on the Mount and put it into practice. Additionally, I believe we should study it because it's the most powerful tool for evangelism. Living out the Sermon on the Mount will astonish the world—it's the greatest evangelistic tool there is, as this kind of life transforms and draws others to Christ.

I disagree with John MacArthur here. Christians should use the method of evangelism that Jesus used, which is to present evidence to non-believers.

Here is a great article by Greg Koukl of Stand to Reason, and he looks through the Bible to see how people in the Bible evangelize.

Koukl starts with the actions of Moses in the Exodus:

> Note the pattern: a powerful *evidence* (miracles, in this case), giving the people *knowledge* of God, in Whom they then placed their *faith*. Knowledge—some level of certainty—went before belief in each of these cases.

Then Koukl goes on to the New Testament:

> Jesus gives us the same lesson we find in Exodus. He proves something that can't be seen—the forgiveness of sins—with evidence that can be seen—a dramatic healing. Jesus heals "in order that you may know." Once again, the concrete *evidence* allows the doubters to *know* the truth so they can then *trust* in the forgiveness Christ could give.

It's easier for a pastor to say to people in the pews that they don't have to study any evidence to evangelize. Then there's no work for them to do, and people like to hear that message. People love testimonies and changed lives, because it's easy.

One problem with this approach is that people in all different religions have testimonies and changed lives.

Mormons have that. Even atheists can tell you that atheism improved their happiness. So that's not going to work. But the bigger problem is what Greg said: the testimony / changed life approach is not Biblical. The use of evidence is Biblical. And we have loads of evidence available.

Here is a list of evidences that a mature Christian should be able to say SOMETHING about:

- origin of the universe
- fine-tuning of the initial conditions for permitting life
- origin of life (building blocks AND information)
- molecular machines
- sudden infusions of information in the fossil record
- habitability
- scientific evidence that the mind is not the brain
- the moral argument
- a good argument from prophecy, like Psalm 22
- a case for the reliability of the gospels
- a case for the resurrection based on evidence accepted by a wide range of Christian and non-Christian scholars
- a case for the archaeological accuracy of the Bible

And so on! There's more, but I want to get to Scottish pastor Sinclair Ferguson.

I feel I should say that my dear departed best friend and wise advisor Murdina would love that I am listening to her beloved Scottish pastors. I even know how to translate Scottish rubbish to real English. "Warrum" means "warm". "Girrul" means "girl". "Worruld" means "world". "Churruch" is "church". Etc. Etc.

Anyway, here's Sinclair Ferguson's sermon:

At 8:28, Sinclair Ferguson says:

> The Beatitudes describe a countercultural transformation that reflects the beauty of Jesus in our lives, but this transformation often leads to conflict and persecution in a world that opposes such values. Jesus emphasizes this in a postscript to the Beatitudes, warning that this new way of life will bring believers into opposition with the world, resulting in suffering.
>
> This reality deeply impacted the Apostle Peter, who initially struggled with the idea of a Christian life marked by persecution, longing for a Christ without a cross. Yet, by the end of his life, in his first letter, Peter encourages Christians facing trials, saying, "Do not be surprised by the fiery trial that is coming upon you, as though something strange were happening to you." He came to understand that belonging to Jesus Christ and His kingdom naturally invites the same opposition Jesus faced, marking a defining characteristic of the citizens of God's kingdom.

This is a much more accurate and realistic statement of what will happen to you if you start taking discipleship to the Lord Jesus seriously.

An authentic Christian life is not going to be marked by "happiness" as the world understands it. On the contrary, Christians are not only vulnerable to ordinary suffering, but they also will face social disapproval and even persecution for following Jesus. That's the normal Christian life. This should NOT be surprising for *followers of Jesus.* We should expect to experience the same loss and persecution that Jesus experienced.

In fact, *staying faithful through suffering or privation* is more likely to impress non-Christians.

The only way that the normal Christian life is ever going to make you happy is if you rejoice at experiencing the

same sort of sadness that your Boss did. Like if your reputation at work suffers because you disagree with same-sex marriage. The only happy thing about it is that you can look back on your loss with Boss, and give him a fist-bump. You were faithful, and it cost you something to do it.

# The authors of the gospels of Mark and Luke knew eyewitnesses to the life of Jesus

**Wintery Knight** · 29 July 2025 · Archived copy · Original

Were the authors of the gospels of Mark and Luke connected to eyewitnesses to the life of Jesus? Well, it turns out that there are good reasons to think that Mark was linked to the eyewitness Peter, and Luke was linked to Paul, who had a post-mortem appearance of Jesus in 1 Cor 15:8, and who met with Peter and James in Galatians 1 and again in Galatians 2.

There is a list of evidence for Peter's influence on Mark on the Cold Case Christianity blog.

Here's my favorite one from the list:

> **Peter's Embarrassments Have Been Omitted**
>
> There are many details in the Gospel of Mark consistent with Peter's special input and influence,including omissions related to events involving Peter. How can Mark be a memoir of Peter if, in fact, the book contains so many omissions of events involving Peter specifically? It's important to evaluate the entire catalogue of omissions pertaining to Peter to understand the answer here. The vast majority of these omissions involve incidents in which Peter did or said something rash or embarrassing. It's not surprising these details were omitted by the author who wanted to protect Peter's standing in the Christian community. Mark was quite discreet in his retelling of the narrative (other Gospel writers who were present at the time do, however, provide details of Peters 'indiscretions' in their own accounts. See *Cold-Case Christianity* for a more detailed explanation).

It makes me laugh to imagine Peter looking over Mark's shoulder and saying "no, don't put that in it" and "no, don't tell them I did that". Funny! But also very good evidence. The rest of Wallace's list makes it even more clear.

And what about the gospel of Luke? Well, did you know that the author of Luke's gospel knew Paul? If you read it carefully, you'll see that Luke switches from describing history from an "I" perspective to describing things from a "we" perspective in the book of Acts (which he also wrote). Who is the "we" he is talking about?

Here's famous Christian scholar William Lane Craig to explain:

> Now who was this author we call Luke? He was clearly not an eyewitness to Jesus's life. But we discover an important fact about him from the book of Acts. Beginning in the sixteenth chapter of Acts, when Paul reaches Troas in modern-day Turkey, the author suddenly starts using the first-person plural: "we set sail from Troas to Samothrace," "we remained in Philippi some days," "as we were going to the place of prayer," *etc.* The most obvious explanation is that the author had joined Paul on his evangelistic tour of the Mediterranean cities. In chapter 21 he accompanies Paul back to Palestine and finally to Jerusalem. What this means is that the author of Luke-Acts was in fact in first hand contact with the eyewitnesses of Jesus's life and ministry in Jerusalem.
>
> […]There is no avoiding the conclusion that Luke-Acts was written by a traveling companion of Paul who had the opportunity to interview eyewitnesses to Jesus's life while in Jerusalem. Who were some of these eyewitnesses? Perhaps we can get some clue by subtracting from the Gospel of Luke everything found in the other gospels and seeing what is peculiar to Luke. What you discover is that many of Luke's peculiar narratives are connected to women who followed Jesus: people like Joanna and Susanna, and significantly, Mary, Jesus's mother.
>
> Was the author reliable in getting the facts straight? The book of Acts enables us to answer that question decisively. The book of Acts overlaps significantly with secular history of the ancient world, and the historical accuracy of Acts is indisputable.

> This has recently been demonstrated anew by Colin Hemer, a classical scholar who turned to New Testament studies, in his book *The Book of Acts in the Setting of Hellenistic History.* [5] Hemer goes through the book of Acts with a fine-toothed comb, pulling out a wealth of historical knowledge, ranging from what would have been common knowledge down to details which only a local person would know. Again and again Luke's accuracy is demonstrated: from the sailings of the Alexandrian corn fleet to the coastal terrain of the Mediterranean islands to the peculiar titles of local officials, Luke gets it right.

I know a lot of people (like my Dad) read the Bible devotionally, looking for feelings or trying to "get right with God" so they get blessings. But I think it's helpful to look at things from an evidential point of view – how am I going to make a case for this? When you look at things from that perspective, the Bible gets a whole lot more interesting. And you can talk about it with non-Christians when you know about these interesting details.

# The seven fatal flaws of moral relativism

**Wintery Knight** · 30 July 2025 · Archived copy · Original

Moral relativism is the view that moral values and moral duties do not exist in reality, but only exist as opinions in people's minds. When you ask a moral relativist where the belief that stealing is wrong comes from, he may tell you that it is his opinion, or that it is the opinion of most people in his society. But he cannot tell you that stealing is wrong independent of what people think, because morality (on moral relativism) is just personal preference.

So what's wrong with it?

I found this list of the seven flaws of moral relativism at the Salvo magazine web site.

Here's the summary:

1. *Moral relativists can't accuse others of wrongdoing.*
2. *Relativists can't complain about the problem of evil.*
3. *Relativists can't place blame or accept praise.*
4. *Relativists can't make charges of unfairness or injustice.*
5. *Relativists can't improve their morality.*
6. *Relativists can't hold meaningful moral discussions.*
7. *Relativists can't promote the obligation of tolerance.*

Here's my favorite flaw of relativism (#6):

> *Relativists can't hold meaningful moral discussions.* What's there to talk about? If morals are entirely relative and all views are equal, then no way of thinking is better than another. No moral position can be judged as adequate or deficient, unreasonable, acceptable, or even barbaric. If ethical disputes make sense only when morals are objective, then relativism can only be consistently lived out in silence. For this reason, it is rare to meet a rational and consistent relativist, as most are quick to impose their own moral rules like "It's wrong to push your own morality on others". This puts relativists in an untenable position – if they speak up about moral issues, they surrender their relativism; if they do not speak up, they surrender their humanity. If the notion of moral discourse makes sense intuitively, then moral relativism is false.

I sometimes get a lot of flack from atheists who complain that I don't let them make any moral statements without asking them first to ground morality on their worldview. And that's because on atheism morality IS NOT rationally grounded, so they can't answer. In an accidental universe, you can only describe people's personal preferences or social customs, that vary by time and place. It's all arbitrary – like having discussions about what food is best or what clothing is best. The answer is always going to be "it depends". It depends on the person who is speaking because it's a subjective claim, not an objective claim. There is no objective way we ought to behave.

So, practically speaking, everyone has to decide whether right and wrong are real – objectively real. If they are objectively real, that means that there is a right way for human beings to behave, and a wrong way for human beings to behave. It means that things that are really objectively wrong like rape are wrong for all times and all places, regardless of what individuals and societies might think of it. In order to rationally ground that kind of morality, you have to have a foundation for it – a cosmic Designer who decides for all times and places what the conduct of his creatures ought to be. And then our moral duties are duties that are owed to this Designer. It is like playing football or playing a boardgame – the person who invents the game decides the rules. But if there is no designer of the game, then there are no rules.

Without a designer of the universe, the question of how we ought to act is decided by people in different times and different places. It's arbitrary and variable, and therefore it doesn't do the job of prescribing behavior

authoritatively. It's very important not to get involved in any serious endeavor with another person or persons if they don't have a sense of right and wrong being absolute and fixed. A belief in objective moral values is a necessary pre-requisite for integrity.

# Alexander Vilenkin: “All the evidence we have says that the universe had a beginning”

**Wintery Knight** · 31 July 2025 · Archived copy · Original

I’ve decided to explain why physicists believe that there was a creation event in this post. That is to say, I’ve decided to let famous cosmologist Alexander Vilenkin do it.

From Uncommon Descent.

Excerpt:

> Did the cosmos have a beginning? The Big Bang theory seems to suggest it did, but in recent decades, cosmologists have concocted elaborate theories – for example, an eternally inflating universe or a cyclic universe – which claim to avoid the need for a beginning of the cosmos. Now it appears that the universe really had a beginning after all, even if it wasn’t necessarily the Big Bang.
>
> At a meeting of scientists – titled “State of the Universe” – convened last week at Cambridge University to honor Stephen Hawking’s 70th birthday, cosmologist Alexander Vilenkin of Tufts University in Boston presented evidence that the universe is not eternal after all, leaving scientists at a loss to explain how the cosmos got started without a supernatural creator. The meeting was reported in *New Scientist* magazine (Why physicists can’t avoid a creation event, 11 January 2012).
>
> […]In his presentation, Professor Vilenkin discussed three theories which claim to avoid the need for a beginning of the cosmos.

The three theories are chaotic inflationary model, the oscillating model and quantum gravity model. Regular readers will know that those have all been addressed in William Lane Craig’s peer-reviewed paper that evaluates alternatives to the standard Big Bang cosmology.

But let’s see what Vilenkin said.

More:

> One popular theory is eternal inflation. Most readers will be familiar with the theory of *inflation*, which says that the universe increased in volume by a factor of at least 10^78 in its very early stages (from 10^−36 seconds after the Big Bang to sometime between 10^−33 and 10^−32 seconds), before settling into the slower rate of expansion that we see today. The theory of *eternal inflation* goes further, and holds that the universe is constantly giving birth to smaller “bubble” universes within an ever-expanding multiverse. Each bubble universe undergoes its own initial period of inflation. In some versions of the theory, the bubbles go both backwards and forwards in time, allowing the possibility of an infinite past. Trouble is, the value of one particular cosmic parameter rules out that possibility:
>
> > But in 2003, a team including Vilenkin and Guth considered what eternal inflation would mean for the Hubble constant, which describes mathematically the expansion of the universe. They found that the equations didn’t work (Physical Review Letters, DOI: 10.1103/physrevlett.90.151301). “You can’t construct a space-time with this property,” says Vilenkin. It turns out that the constant has a lower limit that prevents inflation in both time directions. “It can’t possibly be eternal in the past,” says Vilenkin. “There must be some kind of boundary.”
>
> A second option explored by Vilenkin was that of a cyclic universe, where the universe goes through an infinite series of big bangs and crunches, with no specific beginning. It was even claimed that a cyclic universe could explain the low observed value of the cosmological constant. But as Vilenkin found, there’s a problem if you

> look at the *disorder* in the universe:
>
> > Disorder increases with time. So following each cycle, the universe must get more and more disordered. But if there has already been an infinite number of cycles, the universe we inhabit now should be in a state of maximum disorder. Such a universe would be uniformly lukewarm and featureless, and definitely lacking such complicated beings as stars, planets and physicists – nothing like the one we see around us.
> >
> > One way around that is to propose that the universe just gets bigger with every cycle. Then the amount of disorder per volume doesn't increase, so needn't reach the maximum. But Vilenkin found that this scenario falls prey to the same mathematical argument as eternal inflation: if your universe keeps getting bigger, it must have started somewhere.
>
> However, Vilenkin's options were not exhausted yet. There was another possibility: that the universe had sprung from an eternal cosmic egg:
>
> > Vilenkin's final strike is an attack on a third, lesser-known proposal that the cosmos existed eternally in a static state called the cosmic egg. This finally "cracked" to create the big bang, leading to the expanding universe we see today. Late last year Vilenkin and graduate student Audrey Mithani showed that the egg could not have existed forever after all, as quantum instabilities would force it to collapse after a finite amount of time (arxiv.org/abs/1110.4096). If it cracked instead, leading to the big bang, then this must have happened before it collapsed – and therefore also after a finite amount of time.
> >
> > "This is also not a good candidate for a beginningless universe," Vilenkin concludes.
>
> So at the end of the day, what is Vilenkin's verdict?
>
> > "All the evidence we have says that the universe had a beginning."

This is consistent with the Borde-Guth-Vilenkin Theorem, which I blogged about before, and which William Lane Craig leveraged to his advantage in his debate with Peter Millican.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, can be eternal into the past. *No one* denies the expansion of space in our universe, and so we are left with a cosmic beginning. Even speculative alternative cosmologies do not escape the need for a beginning.

**Conclusion**

If the universe came into being out of nothing, which seems to be the case from science, then the universe has a cause. Things do not pop into being, uncaused, out of nothing. The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

Now, let's have a discussion about this science in our churches, and see if we can't train Christians to engage with non-Christians about the evidence so that everyone accepts what science tells us about the origin of the universe.

# The worst mistake you can make when defending the Christian worldview

**Wintery Knight** · 1 August 2025 · Archived copy · Original

So, this is just an advice post for doing apologetics.

Here are three situations I've run into while doing apologetics in the last month.

First situation. I was talking with a lady who is an atheist. I had a copy of "God's Crime Scene" in my hand, and she asked me about it. I told her that it was a book written by the guy who solved the homicide case that I asked her to watch on Dateline. She remembered – it was the two-hour special on the woman who was killed with a garrotte. She pointed at the book and said "what's in it?" I said, it has 8 pieces of evidence that fit better with a theistic worldview than with an atheistic one, and some of them scientific. Her reply to me was – literally – "which denomination do you want me to join?"

Second situation. I was talking with a friend of mine who teaches in a Catholic school. She was telling that she got the opportunity to talk to her students about God, and found out that some of them were not even theists, and many of them had questions. So she asked them for questions and got a list. The list included many hard cases, like "what about the Bible and slavery" and "why do Christians oppose gay marriage?" and so on.

Third situation. Talking to a grad student about God's existence. I'm laying out my scientific arguments for her, holding up the peer-reviewed papers for each discovery. I get to the Doug Axe paper on protein folding probabilities, and she holds up her hand. One question: "Am I going to Hell?"

So think about those three situations. In each case, the opponent is trying to reject Christianity by jumping way, way ahead to the very end of the process. When you do Christian apologetics, you do not take the bait and jump to the end of the process dealing with nitty gritty details until you have made your case for the core of the Christian worldview using your strongest evidence. Let me explain.

So, your strongest evidence as a Christian are the scientific arguments, along with the moral argument. Those would include (for starters) the following:

1. kalam cosmological argument
2. cosmic fine-tuning
3. galactic and stellar habitability
4. origin of life / DNA
5. molecular machines / irreducible complexity
6. the moral argument

The problem I am seeing today is that atheists are rejecting discussions about evidence because they think that all we are interested in is getting them to become Christians. Well, yes. I want you to become a Christian. But I know perfectly well what that entails – it entails a change of life priorities. Both of the women I spoke to are living with their boyfriends, and the kids in the Catholic school just want to have fun. None of them wants to believe in a God who will require self-denial, self-control, and self-sacrifice. Nobody wants God to be in that leader position in their lives. Christianity is 100% reversed from today's me-first, fun-seeking, thrill-seeking, fear-of-missing-out travel spirit of the age.

So, how to answer all these late-game questions? The answer is simple. You don't answer any late-game questions until the person you are talking with accounts for the widely-accepted data in your list. These are things that have got to be accepted before any discussion about minor issues like one angel vs two angels at the empty tomb can occur. When we discuss all the basic issues where the evidence is the strongest, then we can go on to discuss issues where the evidence is debatable, then finally, in the last bits before the end, we can discuss these other kinds of

questions.

How to explain why this process must be followed to the person who asks specific questions about minor issues? Simple. You explain that your goal is *not* to get them to become a Christian right now. That you want to let them believe *anything thing they want.* That's right. They can believe *anything they want to believe.* As long as what they believe is *consistent with the evidence.* And what I am going to do is give them the evidence, and then they can believe whatever they want – so long as it's consistent with the evidence.

So, for example, I'm going to tell them 3 pieces of evidence for a cosmic beginning of the universe: the expanding universe (redshift), the cosmic microwave background radiation, and the light element abundances. That's mainstream science that shows that the universe came into being out of nothing, a finite time in the past. And I will charge them not to believe in any religion that assumes that the universe has always been here. For example, Mormonism is ruled out, they believe in eternally existing matter. See how that works? Hey, Ms. Atheist. You can believe anything you want. *As long as what you believe is consistent with the evidence.*

I think this approach of not letting them rush you to the end at the beginning is important for two reasons. First, we can get our foot in the door to talk about things that are interesting to everyone, in a non-stressed environment. Everyone can talk about evidence comfortably. Second, we show that we hold our beliefs because we are simply letting evidence set boundaries for us on what we are allowed to believe. We can't believe not-Christianity, because not-Christianity is not consistent with the evidence. And you start with the most well-supported evidence, and eliminate worldviews that are falsified by the most well-supported evidence. Atheism actually gets falsified pretty quickly, because of the scientific evidence.

So, that's my advice. Had a friend of mine named William try this out about a week ago. It went down like this:

William to me:

> This guy I know messaged me and bragged for a while about how easy he can dismantle Christianity. He said: "present the gospel to me as you understand it. I'll simply ask questions to demonstrate it is not worth your belief."

WK to William:

> First of all, he isn't allowed to just sit there and poke holes in your case, he has to present a positive case for atheism. Second, don't discuss Christianity with him at all until you first discuss the evidence for theism – start with the good scientific evidence.

And William wrote this to his friend:

> The way I'm wired is that I process all competing theories and go with the best one. By doing a comparative analysis of worldviews I find that Christian theology easily explains the most about the world I find myself living in.
>
> I'm pretty sure that a God of some sort exists because of the scientific evidence for the origin of the universe and the fine tuning in physics. From there I find it quite intuitive that if a God went through the trouble of creating and tuning a universe for life that this God likely has some sort of interest in it and has revealed Himself to humanity in some way.
>
> From there I can look at the major world religions and compare them to see which one explains the past and the present the best. Christianity easily comes out on top.

And then a few days later, I got this from William:

> I finally got the agnostic to tell me what he thinks about origin and fine tuning. When I started pointing out that his views were unscientific, he blew a gasket, called me dishonest and told me he didn't want to discuss anything further.

And that's where you want to be. Cut off all discussions where the challenger tries to jump to the end and get you to debate the very last steps of your case. Present the strongest evidence for your core claims, and get him to account for this evidence within his own worldview. Lead the discussion with public, testable evidence. All warfare depends on picking the terrain, weapons and tactics that allow you to match your strength against your opponent's weakness.

# How many evidences do you know for the origin of the universe?

**Wintery Knight** · 2 August 2025 · Archived copy · Original

It's very, very important to get a conversation about spiritual things started off on the right foot. My favorite place to start is with the origin of the universe. I always use the same 3 evidences, but I found an article that has even MORE. First, let me talk about the ones I like, then I'll send you the link to the article with the bigger list. Once you get the beginning proved, the next question is: who caused it?

Here's the article from J. Warner Wallace.

He writes this:

> My career as a Cold Case Detective was built on being evidentially certain about the suspects I brought to trial. There are times when my certainty was established and confirmed by the cumulative and diverse nature of the evidence. Let me give you an example. It's great when a witness sees the crime and identifies the suspect, but it's even better if we have DNA evidence placing the suspect at the scene. If the behavior of the suspect (before and after the time of the crime) also betrays his involvement, and if his statements when interviewed are equally incriminating, the case is even better. Cases such as these become more and more reasonable as they grow both in depth and diversity. It's not just that we now have four different evidences pointing to the same conclusion, it's that these evidences are from four different categories. Eyewitness testimony, forensic DNA, behaviors and admissions all point to the same reasonable inference. When we have a cumulative, diverse case such as this, our inferences become more reasonable and harder to deny. Why did I take the time to describe this evidential approach to reasonable conclusions? Because a similar methodology can be used to determine whether everything in the universe (all space, time and matter) came from nothing. We have good reason to believe our universe had a beginning, and this inference is established by a cumulative, diverse evidential case.

Here is his list of evidences:

1. Philosophical Evidence
2. Theoretical Evidence
3. Observational Evidence
4. Thermal Evidence
5. Quantitative Evidence
6. Residual Evidence

Now, if you listened to our podcast with astronomer Guillermo Gonzalez, I mentioned the ones that I like, which are #3, #5 and #6. And I like these, because they are scientific, and because I have clever ways of explaining them using simple terms.

Here's what he says:

> **3. Observational Evidence (from Astronomical Data)**
>
> Vesto Slipher, an American astronomer working at the Lowell Observatory in Flagstaff, Arizona, spent nearly ten years perfecting his understanding of spectrograph readings. His observations revealed something remarkable. If a distant object was moving toward Earth, its observable spectrograph colors shifted toward the blue end of the spectrum. If a distant object was moving away from Earth, its colors shifted toward the red end of the spectrum. Slipher identified several "nebulae" and observed a "redshift" in their spectrographic colors. If these "nebulae" were moving away from our galaxy (and one another) as Slipher observed, they must have once been tightly clustered together. By 1929, Astronomer Edwin Hubble published findings of his own,

> verifying Slipher's observations and demonstrating the speed at which a star or galaxy moves away from us increases with its distance from the earth. This once again confirmed the expansion of the universe.
>
> **5. Quantitative Evidence (from the Abundance of Helium)**
>
> As Astronomer Sir Fred Hoyle studied the way elements are created within stars, he was able to calculate the amount of helium created if the universe came into being from nothing. Helium is the second most abundant element in the universe (Hydrogen is the first), but in order to form helium by nuclear fusion, temperatures must be incredibly high and conditions must be exceedingly dense. These would have been the conditions if the universe came into being from nothing. Hoyle's calculations related to the formation of helium happen to coincide with our measurements of helium in the universe today. This, of course, is consistent with the universe having a moment of beginning.
>
> **6. Residual Evidence (from the Cosmic Background Radiation)**
>
> In 1964, two American physicists and radio astronomers, Arno Penzias and Robert Wilson detected what is now referred to as "echo radiation", winning a Nobel Prize for their discovery in 1978. Numerous additional experiments and observations have since established the existence of cosmic background radiation, including data from the Cosmic Background Explorer satellite launched in 1989, and the Planck space observatory launched in 2009. For many scientists, this discovery alone solidified their belief the universe had a beginning. If the universe leapt into existence, expanding from a state of tremendous heat, density and expansion, we should expect find this kind of cosmic background radiation.

So, I've made simple analogies for these, so that I can explain them to people from every background.

For #5, for example, I use the story of leaving you in a room with beads and strings and then watching you make one necklace of beads, and timing you, and then leaving you for an hour, and coming back and estimating how many necklaces you will have made, and how many beads you have left. With respect to the beginning of the universe, at the very beginning, it's all hydrogen (beads). But there is nuclear fusion going on, and the beads are being fused into heavier elements like helium and carbon and oxygen (necklaces). Well, astronomers made predictions about HOW MUCH helium you could fuse during the very hot period, according to the standard cosmology, and the prediction was for 75% hydrogen (beads) and 24% helium (necklaces), and that's exactly what we see today.

And for #6, I talk about baking a cake. Suppose you heated up your oven and put a ban full of cake batter in there for an hour. You notice that the room is 68 Fahrenheit (20 Celsius) when the cake went in. Then you take the cake out to cool, but you leave the oven open. An hour later, you notice that the oven is cool, but the temperature of the room has gone up to 72 Fahrenheit (22 Celsius). When you have a source of heat in a small area, then you open it up in a bigger area, the smaller area cools down, and the bigger area warms up a bit. Astronomers made a prediction that the very hot creation event would leave a small 3 degrees Kelvin "cosmic microwave background radiation" everywhere in space, and when they were finally able to measure it, they found that the predicted 3 Kelvin temperature was found exactly as predicted.

So, if you don't know all of these evidences for a beginning, read the article, pick your favorites, and be ready to explain them.

# Things are getting worse for conservatives and Christians in the UK

**Wintery Knight** · 3 August 2025 · Archived copy · Original

In the past, I've written about how the UK is a dangerous secular left fascist country that suppresses the basic human rights of its citizens. In the UK, free speech that disagrees with government policies is illegal. You can't defend yourself from the criminals that the government imports from third-world countries. And they have two-tier policing – one justice system for allies, and one for enemies.

So, here is how I formed my opinion of the UK. According to Douglas Murray's "The Strange Death of Europe", the UK let in unskilled immigrants from Middle Eastern countries. Some of those went on to run child sex-trafficking rings. This has happened in many cities in the UK. And when the parents of the sex-trafficked girls complained to the police, the police refused to do anything, because they said that it's "racist" to investigate those crimes. This is secular left woke police in action. And then if UK taxpayers say something about the failures of the taxpayer-funded politicians and police to protect their kids, then the police will charge them with hate crimes and hate speech. That's what's going on in the UK right now, and has been for some time.

So, let's see some news stories to learn how things are going.

Here's the UK Daily Mail, explaining what you have to do in order to be flagged by the UK government as a threat to their policies.

It says:

> Record numbers of over-60s are being referred to the Government's troubled anti-terrorism scheme, the Daily Mail can reveal today. Home Office figures show 127 adults in their 60s or beyond were put on Prevent's radar in 2023/24 – the most since records began in 2016. Of them, 43 had sparked alarm for expressing 'extreme right wing' views.

"Extreme right wing" views are basically things like disagreeing with the child sex-trafficking rings. If you disagree with child sex-trafficking, then the UK government thinks that you are "extreme right wing" and a potential terrorist.

I'm not kidding:

> Last month, it was revealed how Prevent training documents listed sharing the view that Western culture was 'under threat from mass migration and a lack of integration' was a 'terrorist ideology'.

Are you wondering how they determine who is a potential terrorist? Well, if you watch certain comedy shows like "Yes, Minister" and "The Thick of It", then you might be a terrorist. Or if you like old war movies. Or if you own any Shakespeare plays.

Look:

> Even the 1955 epic war film The Dam Busters and The Complete Works Of William Shakespeare were flagged as possible red flags of extremism by Prevent's Research Information and Communications Unit.

Just FYI, I am probably on their list. I just recently read a book about the Dam Busters mission ("Operation Chastise") called "Enemy Coast Ahead (Uncensored)" by the lead pilot of that mission, Guy Gibson. And I even want to buy a boardgame version of it, if GMT ever gets around to printing it with a mounted map board.

And of course I own *two* Complete Shakespeares – The Illustrated Globe edition from my high school days, and an

audio book version. Not only that, but I was recently bugging Grok to tell me the best classical commentaries on Shakespeare, because that's what I want to read when I'm retired (at 50, not 60). I never wanted to be a software engineer – I wanted to teach people the wisdom that you can get out of the British classics and Shakespeare.

And the UK goverment is finding a lot of people who are potential terrorists:

> Across all age groups, more than 1,300 people were referred to Prevent last year for 'extreme right wing' behaviour, including 27 kids under the age of ten.

But Islam is no big deal:

> Over the same period, the overall number of referrals under the Islamist umbrella has plunged by 75 per cent, from 3,706 to 913 – or 13 per cent of the total.

Now, you might think that a failed nation like the UK would be more concerned about their failing healthcare system. Or their violent crime epidemic. Or their third-world economy. Or their diminished role in keeping peace in the world. Or their criminalization of free speech. Or… their child sex-trafficking rings. But no.

Now, let's look at a different article, one that shows what happens to Christians who try to speak about what the Bible says in the UK.

Here is a recent article from the UK Telegraph:

> A school chaplain who was sacked after telling children they were free to question LGBT policies has told how he is still living in "shame and spiritual exile" six years later.
>
> The Rev Bernard Randall, 52, lost his job at Trent College in Derbyshire and was referred to the Government's Prevent counter-terrorism programme after delivering a sermon to pupils.
>
> During the 2019 sermon, Dr Randall discussed identity politics and said pupils did not have to agree with LGBT teaching.

This obviously affected his finances:

> Dr Randall, who is married and has a daughter, said: "I got part-time work with an adult education provider. So we're OK, but we've definitely had to tighten our belts."

Let me quickly say that many narcissistic people these days are asking "why don't men lead?" and "why don't men protect?" and "why don't men provide?". And the answer is because it has become costly – finances and freedom – to do so. People find male leadership offensive, and men lose their jobs for leading.

The article also notes that his punishment is ongoing, because of the first female Bishop in the Church of England:

> Despite being cleared of wrongdoing over the 2019 sermon, Dr Randall was barred from preaching after a decision by the Rt Rev Libby Lane, the Bishop of Derby, over concerns that he could pose a risk of harm to children.

It's a common view among feminists that men's moral and spiritual leadership is "harmful to children", because feminists interpret their own sad feelings about demonstrated male competence at decision-making as evidence that demonstrated male competence at decision-making will be harmful to children. Single mothers are doing so well raising kids, they think.

Here are more recent stories about life in the UK:

# Christian doctor guilty of “professional misconduct” in fascist Australia

**Wintery Knight** · 4 August 2025 · Archived copy · Original

If I had to pick which Western countries are the most hostile to Christians, Australia would be near the top of the list. Now there’s a new story about a Christian doctor named Jereth Kok. He posted some pretty standard stuff on social media under his own name. Tame stuff like Katy Faust, Babylon Bee, etc. Stuff we’ve all done. But that was too much for the fascists of Australia.

An article I found from The Daily Declaration, a Christian news site based in Australia explains the facts:

> A landmark free speech case has found that Dr Jereth Kok’s Christian and conservative views disqualify him from medical practice, even though his social media posts weren’t directed at patients and most were shared with limited visibility.
>
> Dr Jereth Kok, a Melbourne-based GP suspended for posting memes, satire and Christian commentary on social media, has been found guilty of professional misconduct, in a landmark case with far-reaching implications for free speech in Australia.
>
> In a 186-page ruling handed down last Tuesday, the Victorian Civil and Administrative Tribunal (VCAT) found that Dr Kok’s deeply held religious views, expressed on social media between 2008 and 2022, were sufficient grounds to indefinitely suspend him from the medical profession.
>
> Dr Kok — who had no prior history of patient complaints or professional misconduct before his suspension — now faces a separate sanctions hearing in early 2026 that could result in the full cancellation of his medical license.
>
> In *Medical Board of Australia v Dr Jereth Kok,* VCAT assessed 85 social media posts made by Dr Kok on topics ranging from abortion to same-sex marriage, Islam, sex change surgery for children, COVID-19 mandates and “conversion therapy” bans.
>
> The Tribunal concluded that two-thirds of the posts “denigrated, demeaned and slurred” members of protected identity groups and other medical practitioners, and also contributed to vaccine hesitancy.

Focus in on this:

> Around 80 per cent of Dr Kok’s implicated posts were made on Facebook, with only 13 of those visible to the general public — indicating that complainants and regulators either actively sought them out or were tipped off by people in his wider network.

This is why it is important for Christians to not only have an alias, but be careful about who you let see your posts. As the article indicates, many of the social media posts used to condemn Dr. Kok were posted with the limited audience settings enabled. It didn’t save him from surveillance and persecution by the Australian fascist government.

Another article from The Daily Declaration added more details:

> What began as anonymous complaints triggered a years-long, taxpayer-funded witch hunt to comb through over a decade of his online religious and political commentary, ultimately branding him “unfit to practise” for holding and sharing Christian beliefs.
>
> The Victorian Civil and Administrative Tribunal may have only just handed down its ruling against Dr Jereth Kok, but behind the scenes, the witch hunt began years ago. And now, following eight items of correspondence to and from AHPRA to other parties (that have been secured by Nation First), we can see the full scale of the

> ideological operation to break a Christian GP for the crime of expressing his beliefs online.

And this should be SHOCKING to you:

> On 5 August 2019, the Australian Health Practitioner Regulation Agency (AHPRA) sent a formal demand to Facebook's Sydney office. The letter, marked Private and Confidential, required Facebook to produce:
>
> - Every post and comment ever made by Dr Kok
> - Comments made under his posts by other users
> - Deleted and archived content
> - Evidence of any community standards violations
> - Details of any warnings or bans
> - The dates, times, and content of every interaction
>
> This wasn't a narrow review. It was a blanket data trawl from 2014 to 2019, a five-year dragnet to scrutinise his private thoughts, satire, and Christian commentary.
>
> And this was all done without a single complaint from a patient. Not one.

And more:

> AHPRA hired Ferrier Hodgson, a private forensic firm, and commissioned them to scour not only Facebook, but also websites and blogs, where Dr Kok had posted comments over the years. The result:
>
> - 239 web pages crawled
> - 122 pages identified with Kok's name
> - Sophisticated "scrolling" software deployed to uncover hidden and de-ranked comments
> - Facebook's own privacy settings bypassed using test accounts
> - A full quote for this particular item of work: one email dated 5 June 2019 cites an estimate $4,800 to $6,000 in taxpayer funds.
>
> […]This was not standard medical oversight but, rather, a government-ordered deep-dive into a man's personal and political life.
>
> They didn't just want to know what Dr Kok had said. They wanted to know everywhere he'd said it, everyone he'd said it to, and everything anyone said in response.

I really recommend that you read both of these articles IN FULL, as they were excellent, and help us to understand how the secular left is operating in countries where they have political power.

**My thoughts**

If you want to be a Christian, it is wise to have to have an alias, and keep that alias a secret from all but close friends and family. One of the advantages of doing this is that you don't get FIRED and find yourself unable to work in your field for SIX YEARS, when you have a wife and 4 kids to provide for. Don't listen to advice from people who mock aliases. They aren't going to pay your bills.

Second, pro-abortion and pro-LGBT "Christian conservatives" like Tomi Lahren are always complaining about "why aren't men more masculine?" Well, many feminized Christians and feminized conservatives don't define masculinity as "leading on moral and spiritual issues". They understand masculinity when "a man pays a woman's bills and fixes her appliances". They look at what this doctor did, and they say "that's wrong, he used his speech to make non-Christians feel bad!" They think that Christianity means "being nice so that I feel good, and non-

Christians like me” These people do not see masculinity as correcting lies and protecting the weak from evil. Men are learning from cases like Daniel Penny’s case to be more careful about how they confront lies and protect the weak. It’s straight out of C.S. Lewis’ “Men Without Chests” essay.

Finally, Christians should not be ashamed to vote for lower taxes and smaller government. As we can see in this case, the bigger the government is, the more power they have to ruin your life. So vote for politicians who want to cut taxes and shrink government so that they are only doing the jobs that are outlined in the Constitution.

# What criteria do historians use to get to the minimal facts about the historical Jesus?

**Wintery Knight** · 5 August 2025 · Archived copy · Original

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus in a debate by saying that the resurrection is the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates. Minimal facts are the parts of the New Testament that meet a set of strict historical criteria. These are the facts that skeptical historians agree with, totally apart from any religious beliefs.

So what are the criteria that skeptical historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.
>
> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel*

> *Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book. You want to look at it as a historical book, and use historical criteria to get to some facts that critical historians would accept. From that, it's possible to make a case for the resurrection, which is the guarantee that the words of Jesus are authoritative. Including the words of Jesus where he describes the Bible as a whole as God's revelation of Himself to his creatures.

Here is the approach I use when talking to non-Christian co-workers:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)

6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And remember that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8. That passages is universally accepted as early, eyewitness testimony from Paul, and represents the core of early Christian beliefs about the death and resurrection of Jesus. Everyone who takes evidence seriously has to account for that early creed, which passes the historical tests I outlined above.

The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

# 11 Reasons Most Biologists Accept Evolutionary Theory in Spite of the Evidence

**Wintery Knight** · 6 August 2025 · Archived copy · Original

Below is a guest post from my friend Eric, who has an interest in origins science.

---

1. Many immediately reject creation or ID from the many embarrassingly bad "why are there still monkeys" arguments used by laymen. They assume there's nothing beyond that.

2. It's what they were taught in school and they never questioned it. "I didn't give it much thought; It wasn't my area of concern", as Michael Behe reflected of his postdoc research days as an evolutionist. "college students have not been shown the weakness of Darwinian evolution" as Joseph Kuhn wrote in 2012.

3. A lot of biologists aren't exposed to problems outside their own field. For example paleontologist and ID critic Don Prothero wrote that "Nearly all metazoans [meaning animals] show stasis, with almost no good examples of gradual evolution… the prevalence of stasis is a puzzle that has no simple answer" but lamented, "by and large the neontological [non-paleontologist] community still 'doesn't get it'… The journal Evolution continues to publish almost no contributions by paleontologists".

4. Others just don't talk about the problems. Renowned chemist James Tour (inventor of nanocars) describes his own experience: "Let me tell you what goes on in the back rooms of science – with National Academy members, with Nobel Prize winners. I have sat with them, and when I get them alone… I say, "Do you understand all of this, where all of this came from, and how this happens?" Every time that I have sat with people who are synthetic chemists, who understand this, they go 'Uh-uh. Nope.' These people are just so far off, on how to believe this stuff came together. I've sat with National Academy members, with Nobel Prize winners. Sometimes I will say, 'Do you understand this?' And if they're afraid to say 'Yes,' they say nothing. They just stare at me, because they can't sincerely do it."

5. Some see anything other than materialistic naturalism is seen as a violation of scientific professionalism. At one conference, "Chinese scientists encouraged the investigation of a variety of new hypotheses to explain the Cambrian explosion: hydrothermal eruptions, sudden seafloor changes, even intelligent design. This last was too much for one American paleontologist who stood up and shouted, 'This is not a scientific conference!'" Likewise the famed Lynn Margulis (proposed symbiogenesis theory) said, "The critics, including the creationist critics, are right about their criticism. It's just that they've got nothing to offer but intelligent design or 'God did it.'"

6. Many biologists don't have much training in engineering. Many of the patterns claimed to only arise by common descent are the same I see in the code I write or among other objects designed by humans.

7. Some recognize insufficiencies in evolutionary theory, but hope new theories will arise to resolve them. Evolutionists Depew & Weber published in 2012: "Darwinism in its current scientific incarnation has pretty much reached the end of its rope… however, we are confident that a new and more general theory of evolution is evolving."

8. A bias toward sensationalism in the media–which is true everywhere and not just with evolutionary biology.

9. It's taboo to publish anything from the ID movement. As one example, Springer (a large scientific publisher) was going to publish 20-so-papers from ID proponents. They had already passed Springer's internal peer review and Springer agreed to publish them. But a public campaign threatened to boycott Springer if they published, even though none any of the critics had even read the papers. Springer complied, but the papers were still published in World Scientific after also passing peer review there.

10. A small number of rather popular evolution "evangelists" shame anyone who dissents from the Party line. For

example see Jerry Coyne's response to Lynn Margulis claiming evolution doesn't work (cited above). Coyne says she's "dogmatic, willfully ignorant, and intellectually dishonest," "wrong in the worst way a scientist can be wrong," and "embarrasses both herself and the field."

11. Rigged debates. Sean B. Carroll (well known biologist) wrote a critique of Michael Behe's work in the journal Science: He cited "the tuning of color vision in animals" as a response to Michael Behe as an example of observed evolution creating through a long process of gradual steps. To support this, Carroll cites his own book where he describes (based on phylogeny) lineages would have had to evolve color vision multiple times, lose it, and then evolve it again. This would have happened among the presumed ancestors of reptiles, fish, and mammals so none of it is even observed to begin with. Behe correctly noted that Carroll's papers show "different species have different protein binding sites" but "they demonstrate nothing about how the sites arose." Behe submitted a brief response, only to have Science to trim the last 100 words. Science gave Carroll a far longer response chastising Behe for not addressing this very point he addressed in the 100 words that were trimmed.

# Older career woman calls Dennis Prager show to warn young women about marriage

**Wintery Knight** · 7 August 2025 · Archived copy · Original

I used to listen to the Dennis Prager show all the time, and my favorite hour was the male-female hour, which is the second hour every Wednesday. In that hour, you will hear some of the most frank discussion of male and female issues. I was surprised to see Better Bachelor, a men's rights activist, talk about an article about the male-female hour in his show. I'll link to the article below.

Prager explains in The Stream:

> Every Wednesday, the second hour of my national radio show is the "Male/Female Hour." A few weeks ago, a woman named Jennifer called in. For reasons of space, I have somewhat shortened her comments. Every young woman should read them. This is precisely what she said:
>
> Dennis, I want to get right to it. I'm 50 years old with four college degrees. I was raised by a feminist mother with no father in the home. My mother told me get an education to the maximum level so that you can get out in the world, make a lot of money. And that's the path I followed. I make adequate money. I don't make a ton of money. But I do make enough to support my own household.
>
> I want to tell women in their 20s: Do not follow the path that I followed. You are leading yourself to a life of loneliness. All of your friends will be getting married and having children, and you're working to compete in the world, and what you're doing is competing with men. Men don't like competitors. Men want a partner. It took me until my late 40s to realize this.
>
> And by the time you have your own household with all your own bills, you can't get off that track, because now you've got to make the money to pay your bills. It's hard to find a partner in your late 40s to date because you also start losing self-confidence about your looks, your body. It's not the same as it was in your 20s. You try to do what you can to make your life fulfilling. I have cats and dogs. But it's lonely when you see your friends having children, going on vacations, planning the lives of their children, and you don't do anything at night but come home to your cats and dogs. I don't want other women to do what I have done.

How did this happen to her?

> Somebody asked me the other day, "Why did you stay single and never have kids?" There's answers: Because I was brainwashed by my mother into this. But it's hard and it's shameful to tell people, "I don't know. I ran out of time."
>
> There's not a good answer for it except "I was programmed to get into the workforce, compete with men and make money." Supposedly, that would be a fulfilling life. But I was told that by a feminist mother who was divorced, who hated her husband — my father.
>
> She tried to steer me on what she thought was the right path, but feminism is a lie. That's what I want women to know.
>
> I didn't realize this until late in life. I want to tell women: Find someone in your 20s. That's when you're still very cute. That's when you're still amiable to working out problems with someone. It's harder in your 50s, when you've lived alone, to compromise with someone, to have someone in your home and every little thing about them annoys you because you're so used to being alone. It's hard to undo that, so don't do what I did. Find someone in your 20s.

I don't want young women to be wasting their teens and 20s like this woman is, choosing men for relationships using criteria that have nothing at all to do with marriage, or what a man does in a marriage.

Look at this weird list of criteria from a dating ad – is any of this related to the actual work that a man does as a husband and father?

She's looking for drama, domestic violence and instability – not for a husband

I see young women going for "bad boy" qualities a lot, but for some reason, they think that the bad boy will turn into a good man. What could cause this? Is it that easy to change a man? I don't think that men change that easily, which is why you should pick the man you marry based on his ability to do the work.

I think young women should focus their energy on relationships with men who are sober and chaste, and looking to commit and start a family. These men are easy for women to find when the women are in their teens and early 20s, but much harder for women to find if they delay marriage into their 30s and 40s. Although these marriage-minded men may not be "attractive" according to "bad boy" criteria, they should be selected because they are good at marriage, and want to marry sooner, rather than later. Feelings are not the best way to judge a man. Sometimes, you have to look at his academic transcripts, his resume, his bank account, his library.

On the other hand, I would advise successful man to choose a woman who is attracted to his abilities as a husband and father. Choose a woman who respects your ability to be serious, to be self-controlled, to be focused on serving others, and to achieve what you set out to achieve. Men need respect more than they need oxygen. In order to get that respect, a man *has to* choose a woman who has, from earliest times, preferred men who have good moral character, demonstrated leadership ability, and a proven record of achieving what he set out to achieve by wise decision-making.

# Men on strike: the social changes that caused men to opt out of marriage

**Wintery Knight** · 8 August 2025 · Archived copy · Original

Painting: "Courtship", by Edmund Blair Leighton (1888)

I read and enjoyed Dr. Helen Smith's book "Men on Strike" a few years back. The book explains a few of the developments that have led to men underperforming in school and in the workplace, and opting out of marriage and fatherhood.

Dr. Helen comes to this problem as a secular libertarian, not as a Christian conservative.

A review of Dr. Helen's book appeared in Salvo magazine. The review is written by Terrell Clemmons, who has the best Christian worldview of any woman I know – I frequently rely on her advice.

Terrell writes:

> While the feminist movement may originally have been about equal respect for both sexes, what it has morphed into, she argues, is female privilege. From rape laws that empower women but not the men they may falsely accuse, to divorce laws tilted in favor of the wife, to the feminization of the U.S. education system, men have become the sex under the gun, while women enjoy the status of a protected class.
>
> But unlike their mothers or grandmothers, men today are not taking to the streets burning their undergarments and shrieking demands (thank God). They're doing just the opposite, which is far worse. They're going on strike. The strike zones are manifold:
>
> **Higher Education.**In addition to the enrollment imbalance, which is approaching a 60/40 ratio of women to men, college has become, in the words of one professor, "a hostile working environment [in which] males increasingly feel emasculated." Smith quotes a student named John, who had this to say about his college experience: "I had already been cautious around women, having grown up with Tawana Brawley in my backyard and daily stories of sexual harassment; I played it safe and passive every time. But it doesn't matter. The only way not to lose is to not play. So I'm out."

> **Work,**including community involvement. With higher female graduation rates and salaries, men today are falling behind their fathers economically and professionally. Consequently, their efforts to prove themselves worthy mates through hard work and higher earnings don't win female attention the way they used to. Discouraged, too many retreat to a man cave, and inertia sets in from there.
>
> **Marriage.**Marriage rates are down, and honest men opting out will tell you why. Smith cites a Rutgers University study of single heterosexual men which turned up the top reasons they hadn't married. They can get sex and the companionship of cohabitation without marriage more easily than in times past, and they don't want to open themselves up to the risk of divorce and financial loss. It really isn't that complicated a decision. In fact, it's often not an actual decision at all. It just happens.

The simplest explanation for the difficulties that boys face in an education system that is dominated by women (teachers and administrators) is discrimination. And in the workplace, the government requires employers to report on male and female head counts, and promote women who are not qualified. I have seen receptionists with tattoos and no college degrees promoted to six-figure manager jobs in companies where I worked.

There is one more which to me was the most surprising one in the book – paternity fraud, and the laws that support paternity fraud:

> Take the following cases of nonconsensual insemination: Nathaniel from California, age 15, had sex with 34-year-old Ricci, which, due to his age, was legally considered nonconsensual. Emile from Louisiana was visiting his parents in the hospital when a nurse offered him oral sex, *if* he wore a condom, which she conveniently offered to dispose of for him afterward. S. F. from Alabama passed out drunk at the home of a female friend and awoke undressed the following morning. In all three cases, including the one involving the minor, a woman got sperm and, nine months later, a child, and the man got ordered by a court of law to pay support for eighteen years.
>
> Less devious, but similarly amiss, are those cases in which a man, having been betrayed by his wife or girlfriend, was nevertheless held financially responsible for a child genetically proven to be another man's offspring. While not as sensational as sperm-jacking, it is another form of paternity extortion.

In each of those cases, the man was found liable to pay child support – including the case of the 15-year-old boy, who was forced to pay child support to his statutory rapist when he turned 18. This is how the court system works, and more and more men are understanding the risks.

I often encounter "pro-marriage" people while gathering stories for the blog. These pro-marriage people come in two varieties.

On the one end of the spectrum are people like Terrell Clemmons and Jennifer Roback Morse, who understand marriage, but who also understand the social changes that have made marriage unattractive for men. Both Clemmons and Morse have a background in STEM fields, so they are able to understand incentives and tradeoffs. They understand that society has to rollback the changes to education, divorce laws, etc. if they expect men to be interested in marriage again. They understand that men are not just accessories of women, but instead have their own desires, feelings and reasons for marrying.

On the other end of the spectrum are feminist men, who are not able to understand the changing incentives that face men in a world that has evolved under the influence of radical feminism. It is just simpler (less thinking) for these men to accept the radical feminism as a given, and then urge men to "man up". I think a much better idea would be for the "man up" crowd to realize how marriage has changed, and how the schools and the workplace have changed, then make all of these things more attractive to men. It doesn't do any good to try to "dare" men into jumping off a cliff. Men aren't stupid, and they do what is in their own best interests. If the man-up crowd wants younger men to marry, then they need to change the incentives offered to men. And that means changing women

first.

# Christopher Hitchens debates William Lane Craig: Does God Exist?

**Wintery Knight** · 9 August 2025 · Archived copy · Original

Here is the video of the debate:

**TOPIC: DOES GOD EXIST?**

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

**WC opening speech:**

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws
– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)
– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument
– objective moral values are values that exist regardless of what humans think

– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

**CH opening speech:**

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus
– god wouldn't have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that's a bad design
– the universe is so vast, why would god need so much space, that's a bad design
– there is too much destruction in the universe, like exploding stars – that's a bad design
– the heat death of the universe is a bad design
– too many of the other planets don't support life, that's a bad design
– the sun is going to become a red giant and incinerate us, that's a bad design

3. hitchens' burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can't prove there is no god
– but they can prove there is no good argument for god

4. craig's scientific arguments don't go far enough, they only prove deism, not theism
– the scientific arguments don't prove prayer works
– the scientific arguments don't prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn't be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig's evidence was extraordinary

7. science can change, so craig can't use the progress of science
– it's too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god's existence should trump contradicting evidence
– but then he isn't forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don't believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

**WC first rebuttal:**

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you've got is agnosticism
– because CH did not claim to know there is no God
– and he gave no arguments that there is no God

CH's evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH's argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn't need to be efficient

CH's argument that god waits too long to send Jesus
– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH's argument that Craig's scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work

– all that deism denies is miraculous intervention

CH's argument that Craig has a burden of proof
– theism doesn't need to be proven with certainty
– must only prove best explanation of the evidence

CH's citation of Craig's book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH's rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH's rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for  minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH's argument about heat death of the universe
– duration of design is irrelevant to whether something was designed
– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

**CH first rebuttal:**

it's not agnosticism
– if there are no good arguments for theism
– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old

– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do
– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

**WC cross-examination of CH:**

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

**CH cross-examination of WC:**

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

**WC second rebuttal**

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing
– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

**CH second rebuttal:**

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon
– that is why there are so many religions

**WC concluding speech**

no arguments for atheism presented

What CH has said during the debate:

– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it's just a genetic predisposition to act in a certain way – that's not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

**CH concluding speech**

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

**Further study**

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

Details:

> Dr. Robin Collins is a Professor of Philosophy and Chair of the Department of Philosophy at Messiah College. Collins is the foremost defender of what is known as the teleological argument for the existence of God. He has a background in both physics and philosophy and will be discussing how the specific physical constants and conditions in the universe are finely-tuned for intelligent life and how this “fine-tuning” gives us reason to believe in a Creator.

Here is the video:

Topics:

- the constants and quantities set at the origin of the universe is fine-tuned for conscious, embodied intelligences like us
- three kinds of fine-tuning: 1) laws of nature, 2) constants, 3) quantities
- examples of 1): gravity, electromagnetism, strong force, quantization, Pauli exclusion principle
- examples of 2): **gravitational constant**, **cosmological constant**,
- examples of 3): initial distribution of mass-energy
- in addition to fine-tuning for life, there is also fine-tuning for discoverability
- Naturalistic response to the evidence: the multiverse hypothesis
- problems with the multiverse hypothesis
- additional topics

I put the ones I am ready to speak on in bold. I recommend you learn those as well in order to illustrate the fine-tuning with evidence when you present it. It’s important to understand that if the constants and quantities change, it’s not that you still have life, but just with pointy ears and/or green skin. It’s that you don’t have stars or planets or heavy elements or chemical reactions. Things that are necessary for complex, intelligent life forms of any conceivable kind.

# New example of convergence found, featuring parrots and humans

**Wintery Knight** · 11 August 2025 · Archived copy · Original

Regular readers will know that I love everything about birds, and I love every bird. And my favorite birds of all are parrots! Every time I see a scientific discovery involving parrots, I blog about it. Well, there was just such a discovery, and published in the prestigious peer-reviewed journal Nature. In it, we find evidence for intelligent design, and evidence against Darwinian evolution.

Before we see the new discovery, let's review with the definition of convergence in biology.

> In evolutionary biology, convergent evolution is the process whereby organisms not closely related (not monophyletic), independently evolve similar traits as a result of having to adapt to similar environments or ecological niches.

So, for example, if we could find a feature that is common to parrots and humans, that would be an example of "convergence", because the same feature would be found in to kinds of creature, but these creatures don't have a recent common ancestry. The feature would have had to evolve TWICE, independently, and that is not the kind of evidence that Darwinists like.

So here is the discovery, in Science News:

> When it comes to speech, parrots have the gift of gab. And the way the brains of small parrots known as budgerigars bestow this gift is remarkably similar to human speech, researchers report March 19 in Nature.
>
> So far, budgerigars are the only animals known to have language-producing centers akin to those in humans, says Michael Long, a neuroscientist at New York University Langone Health. This "is really the first nonhuman animal in which that has been shown." Understanding how speech gets created in budgies' brains could help clarify what goes wrong in certain communication disorders in people.
>
> […]The similarities between human and parrot brains may reflect two species solving a problem in a similar way, neurally speaking. These parallels could be "a very tidy example of convergent evolution, where you have humans that have developed this kind of neural mechanism for speech, and these parrots have developed a kind of similar mechanism," Long says.

Here's an excellent, recent article from Evolution News to explain what convergence means for the two competing views of Darwinian evolution and intelligent design:

> Biology is replete with instances of convergence — repeated designs in distant species. Marsupials and placentals, for instance, are mammals with different reproductive designs (placentals have significant growth in the embryonic stage attached to the nutrient-rich placenta whereas marsupials have no placenta and experience significant development after birth) but otherwise with many similar species.
>
> The marsupial flying phalanger and placental flying squirrel, for example, have distinctive similarities, including their coats that extend from the wrist to the ankle giving them the ability to glide long distances. But evolutionists must believe that these distinctive similarities evolved separately and independently because one is a marsupial and the other is a placental, and those two groups must have divided much earlier in evolutionary history. Simply put, evolution's random mutations must have duplicated dozens of designs in these two groups.
>
> It is kind of like lightning striking twice, but for evolutionists — who already have accepted the idea that squirrels, and all other species for that matter, arose by chance mutations — it's not difficult to believe. It simply happened twice rather than once (or several times, in the cases of a great many convergences).
>
> What is often not understood, however, by evolutionists or their critics, is that convergence poses a completely

> different theoretical problem. Simply put, a fundamental evidence and motivation for evolution is the pattern of similarities and differences between the different species. According to this theory, the species fall into an evolutionary pattern with great precision. Species on the same branch in the evolutionary tree of life share a close relationship via common descent. Therefore, they share similarities with each other much more consistently than with species on other branches.
>
> This is a very specific pattern, and it can be used to predict differences and similarities between species given a knowledge of where they are in the evolutionary tree.
>
> Convergence violates this pattern. Convergence reveals striking similarities across different branches. This leaves evolutionists struggling to figure out how the proverbial lightning could strike twice…

And convergence is everywhere in the history of life. A common example is echo location in bats and dolphins, but my favorite example is octopus eyes and human eyes.

Here's an evolutionist explaining the problem:

> One of the most remarkable features of octopuses is their eyes, which are remarkably like our own. Like ours, their eyes consist of an iris, a circular lens, vitreous fluid, pigments, and photoreceptors. In fact, the octopus eye is superior to ours in one notable way: Because of the way they develop, the fibers of the optic nerves grow behind the retina rather than through it, meaning they lack the central blind spot common to all vertebrates. And this difference exists because the octopus eye evolved entirely separately from our own, starting from that blind flatworm 600 million years ago, along an entirely different branch of the evolutionary tree.

Got that? No common ancestry for 600 million years. The similar eyes appeared independently. And these are difficult things to make. You can't write eye code by dropping a bowling ball on a keyboard over and over. To get the design twice strains credulity.

When you look at software, which is my field, you will often see similar solutions to problems across different companies. These companies don't inherit the solutions from a parent company, they develop them on their own. And often, this process means pulling in "open source" components to solve problems that have already been solved, but not by "ancestors". The developers who pull in these open source components have no "ancestry" with the developers of these open source components. But they can pull them into a composition of their own, and make use of the component to solve the same problem.

# Why do so many atheist historians think that 1 Corinthians 15 is reliable history?

**Wintery Knight** · 12 August 2025 · Archived copy · Original

Which passage of the Bible is the favorite of Christians who like to defend the Christian worldview? I don't mean which one is most inspirational… I mean "which one is the most useful for winning arguments?" Well, when it comes to the historical Jesus, the most important passage has to be 1 Corinthians 15:3-7.

The tradition in 1 Corinthians 15 is an early creed that was received from the eyewitnesses Peter and John when Paul visited them several times in Jerusalem, as documented in Galatians 1 and 2, where Paul meets the eyewitnesses. And of course, Paul records his own eyewitness experience, documented in 1 Cor 15:8.

So, is this passage accepted as historically reliable by all ancient historians? Or only by the Bible-believing ones?

Here's something posted by Dr. William Lane Craig about the 1 Corinthians 15 passage:

> The evidence that Paul is not writing in his own hand in I Cor. 15.3-5 is so powerful that all New Testament scholars recognize that Paul is here passing on a prior tradition. In addition to the fact that Paul explicitly says as much, the passage is replete with non-Pauline characteristics, including, in order of appearance: (i) the phrase "for our sins" using the genitive case and plural noun is unusual for Paul; (ii) the phrase "according to the Scriptures" is unparalleled in Paul, who introduces Scriptural citations by "as it is written"; (iii) the perfect passive verb "has been raised" appears only in this chapter and in a pre-Pauline confessional formula in II Tim. 2.8; (iv) the phrase "on the third day" with its ordinal number following the noun in Greek is non-Pauline; (v) the word "appeared" is found only here and in the confessional formula in I Tim. 3.16; and (vi) "the Twelve" is not Paul's nomenclature, for he always speaks of the twelve disciples as "the apostles."
>
> Now the visit during which Paul may have received this tradition is the visit you mention three years after his conversion on the road to Damascus (Gal. 1.18). This puts the tradition back to within the first five years after Jesus' death in AD 30. So there's not even an apparent inconsistency with Paul's appropriating the language of the formula to encapsulate the Gospel he was already preaching during those first three years in Damascus.

Ancient historian Gary Habermas loves to read non-Christian scholars… and then he writes about what THEY think about Jesus in peer-reviewed articles, published in academic journals. Let's look at this one: *Dialog: A Journal of Theology, Vol. 45; No. 3 (Fall, 2006), pp. 288-297; published by Blackwell Publishing, UK.*

He writes:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: "However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul's."[3]
>
> (2) In addition to Paul's own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the

> proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all significant. Fuller attests to the unanimity of scholarship here: "It is almost universally agreed today that Paul is here citing tradition."[4] Critical scholars agree that Paul received the material well before this book was written.[5]

**This is important:**

> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul's use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus' resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).

He's an eyewitness (verse 8), and he met with the other eyewitnesses, James and Peter. 1 Corinthians is early. Galatians is early. The creed is extremely early – right after the events occurred. There was no time for legends to develop.

And atheistic / critical historians agree, the creed is reliable:

> Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it "indubitably goes back to the oldest phase of all in the history of primitive Christianity."[7] Joachim Jeremias agrees that it is, "the earliest tradition of all."[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even "in use by the end of 30 AD . . . ."[9]
>
> Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . ."[10] Similarly, Michael Goulder thinks that it "goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion."[11] Thomas Sheehan agrees that this tradition "probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion."[12] Others clearly consent.[13]
>
> Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul's reception of this report relatively soon after Jesus' death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.
>
> (3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, "Evidently the tradition of I Cor. 15.3 had been subjected to many tests" by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul's account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his

> firsthand, direct approval of their resurrection message.

Now, some of the people he lists are really biased against the supernatural, and they really hate the idea that the claims of Christianity exclude other religions. And yet they don't deny the historical reliability of 1 Corinthians 15, or that it is based on eyewitness testimony.

That's why when you watch debates about the historical Jesus, you see skeptical historians like Bart Ehrman, Gerd Ludemann, James Crossley, Michael Goulder, etc. accepting that the disciples thought they saw Jesus after his death. They're not just being nice to Dr. Craig when they give him that. They are forced to accept it, because it passes the historical tests. Every Christian ought to be aware of which passages of the New Testament are seen by the broad spectrum of ancient historians as "historical", regardless of their various biases. You can believe everything in the Bible. But when you debate non-Christians, you have to use the historical core of Christianity which successfully passes historical analysis.

You can see the creed used as evidence in the debate between James Crossley and William Lane Craig.

# Even 100 years ago, opposition to evolution was never about the Bible

**Wintery Knight** · 13 August 2025 · Archived copy · Original

If you're a fan of Knight and Rose Show, then you'll have noticed that we have skipped a few weeks without publishing a show. And this is not our fault! Rose and I have recorded a couple of shows, and sent them off to our sound guy. But the sound guy is busy gallivanting all over the world, climbing mountains and running marathons! So, let me try to keep you entertained with a new post.

So, there was a recent issue of Salvo magazine that was mainly concerned with the 100th Anniversary of the Scopes Monkey Trial, which occurred in Dayton, TN. Because Rose and I are huge fans of Salvo magazine, we decided to ask the Executive Editor of Salvo to come on and tell us about it. Her name is Terrell Clemmons. I've met her in real life and blogged about her a few times before, too. So I hope you will get that episode, soon.

Anyway, the issue #73 of Salvo is filled with interesting articles, but one of them stood out to me: this article by Richard Townsend. He's done a bunch of research about the Scopes Trial and about William Jennings Bryan. In the movie, "Inherit the Wind", Bryan is portrayed as an idiotic Biblical literalist. But, just like Darwinism, the facts are very different from the myths.

Here's the article from Salvo #73.

It says:

> Bryan was one of the most famous Americans of the early 20th century. He ran for president as the Democratic Party nominee in 1896, 1900, and 1908, losing all three elections, but gaining a large, loyal constituency that never lost its devotion to him. He was influential in national politics from 1890 until his death in 1925. It is hard for people living in the 21st century to grasp how influential he was and how effectively he advocated for his beliefs.

And here was his reason for wanting to be the prosecutor at the Scopes Trial:

> For Bryan, [World War 1] displayed a danger associated with the prevalence of materialistic thinking associated with Darwin's theory. The beliefs that everything happened by chance and that death determined the most-fit species' survival had led, at least in part, to grotesque violence. Those factors changed Bryan's ambivalence into action. He saw Darwin's theory to be the causal force driving societal decay; it had to be opposed.

Actually, the theory of evolution was very significant for many of the aggressive tyrants of the 21st century. They seemed to latch on to the ideas of different "races" of people struggling against each other for survival. Definitely, the German and Japanese leaders were influenced by Darwinian evolution, and embraced Social Darwinism. Both regimes took the concept of "survival of the fittest" and applied it directly to their militaristic aggression.

When you watch propaganda movies like "Inherit the Wind", you don't get the facts. These movies are shown in public schools, by unionized public school teachers. They have an agenda, and their agenda isn't to tell the truth to children. Far from being a young-Earth literalist, William Jennings Bryan had 4 scientific reasons for doubting evolution. Read below, and ask yourself, have these been resolved by the scientific progress of the last 100 years? Or are they even bigger problems now (for the naturalist / materialist) than they were before?

**1. Origin of life:**

> Bryan saw this as a major hurdle, one Darwin brushed aside with a rhetorical flourish as he theorized a "warm little pond." Bryan was not convinced.

> Those who reject the idea of creation are divided into two schools, some believing that the first germ of life came from another planet and others holding that it was the result of spontaneous generation. Each school answers the arguments advanced by the other, and as they cannot agree with each other, I am not compelled to agree with either.6
>
> Bryan clearly did not agree that the case was closed on the origin of first life.

We did an episode on the origin of life with Dr. Fuz Rana, President of Reasons to Believe.

**2. Genetics and Morphology:**

> Little was known about how genetics worked in Bryan's lifetime, but Mendelian genetics had morphed into the neo-Darwinian synthesis incorporating genetic mutation with natural selection. The "neo-Darwinian synthesis" terminology became standard usage after Bryan's passing, but the concepts were being circulated in his lifetime. Bryan didn't buy it and used a watermelon illustration to explain his doubts.
>
> I was eating a piece of watermelon some months ago and was struck with its beauty.… One [seed], put into the ground, when warmed by the sun and moistened by the rain, takes off its coat and goes to work; it gathers from somewhere two hundred thousand times its own weight, and forcing this raw material through a tiny stem, constructs a watermelon. It ornaments the outside with a covering of green; inside the green it puts a layer of white, and within the white a core of red, and all through the red it scatters seeds, each one capable of continuing the work of reproduction. Where does that little seed get its tremendous power? Where does it find its coloring matter? How does it collect its flavouring extract? How does it build a watermelon?
>
> Until you can explain a watermelon, do not be too sure that you can set limits to the power of the Almighty and say just what He would do or how He would do it. I cannot explain the watermelon, but I eat it and enjoy it.9
>
> Bryan's argument was that a watermelon seed contains "power" (which we now know to reside in the genetic code) to build a specific fruit, another watermelon. The structure of the plant and its fruit are the morphology (shape and structure) of the vine that produces the watermelon. And Bryan knew that the process was unexplained.

We did an episode about biological information with Dr. Casey Luskin, from the Discovery Institute.

**3. Chemistry and Evolution:**

> One early idea about nature's ability to generate new complex features was that the chemistry of life naturally tended toward such complex coding. Bryan doubted that was the case. He wrote this comment in his planned closing argument, later published after his death:
>
> Chemistry is an insurmountable obstacle in the path of evolution. It is one of the greatest of the sciences; it separates the atoms, isolates them and walks about them, so to speak. If there were in nature a progressive force, an eternal urge, chemistry would find it. But it is not there. All of the ninety-two original elements are separate and distinct; they combine in fixed and permanent proportions. Water is H2O, as it has been from the beginning. It was here before life appeared and has never changed; neither can it be shown that anything else has materially changed.12
>
> In short, Bryan said that there was no chemical imperative to life.

We talked about chemical evolution in our episode with Dr. Fuz Rana.

**4. No Definitive Proof of Origin of Any New Species:**

> Bryan discussed the problem of an organism's deviating from the tendency toward stasis—the continuity of features and body plans found in previous generations of a species. He suggested that no evidence had been

> presented to validate the claim of new species arising naturally. He cited a letter in which an acquaintance had claimed that “nearly all scientists seemed to accept Darwinism.”14 Bryan countered that “many evolutionists adhere to Darwin’s conclusions while discarding his explanations.… [They] accept the line of descent which [Darwin] suggested without any explanation whatever to support it.”15 To paraphrase, Bryan said there was no convincing evidence to support Darwin’s theory of species arising through materialistic, undirected means.

We did an episode on the fossil record with Dr. Gunter Bechly, also of Discovery Institute.

In our podcast, we’ve met with guests to talk about each of these problems with the Darwinian naturalistic / materialistic origins theory, and what we found was that in each case, the progress of science *made the problems worse for naturalism / materialism*. So, far from the progress *helping* the naturalist / materialist, it’s actually made it worse for them. The simplest self-replicator got MORE complex. We found MORE stasis and MORE biological big bangs in the fossil record. Things got worse… for the Darwinists.

Anyway, read the article, maybe check out the rest of the issue, and if our sound guy ever comes back from vacation, then you can finally get the episode that we did on this topic! Like, share, comment and subscribe, in the meantime. We talked a lot more about the Social Darwinism angle in the podcast.

# In the secular leftist UK, police persecute taxpayers, not criminals

**Wintery Knight** · 14 August 2025 · Archived copy · Original

I'm monitoring what is happening in countries that have elected secular left fascists, such as Canada, Australia and the UK. In these countries, the leaders are focused on governing from their emotions. They feel a desperate need to signal their virtue to others. This typically results in throwing open the borders to unskilled refugees and illegal immigrants. And taxpayers get the bill for it.

This time, we'll turn to the UK. The most important thing to understand about the UK is that they don't like Christianity or conservatism. In order to cancel out the votes of Christians and conservatives, the secular left political parties that have been running the UK for decades opened their borders to unskilled migrants from Middle Eastern countries, like Pakistan and Afghanistan. The story is told in Douglas Murray's book "The Strange Death of Europe". Basically, Labour Minister Barbara Roche crafted permissive immigration policies in order to make Britain "truly multicultural" and to "rub the Right's nose in diversity." Here is an article from the UK Telegraph about it.

As a result of these policies, massive child sex-trafficking rings were started up in many, many major British cities. When the British taxpayers complained that their daughters were being raped, the British police refused to investigate, because they didn't want to appear "racist". Today in the UK, much like in Nazi Germany, there is one permissive legal system for allies of the secular leftist fascists, and one tyrannical legal system for enemies of the secular leftist fascists. Now let's see how it's working out for them.

Consider this article from Free Speech Union:

> Local officials have raised concerns about a lack of transparency after it emerged that Warwickshire Police advised councillors not to disclose the immigration status of two men remanded in custody over the alleged rape of a 12-year-old girl in Nuneaton, citing fears of inflaming community tensions.
>
> The guidance, reportedly issued to avoid inflaming community tensions, has prompted renewed warnings about the impact on democratic accountability when the full range of consequences of immigration policy are obscured from public view.
>
> Ahmad Mulakhil, 23, was arrested on Saturday 26 July and charged the following day with two counts of rape. He appeared before Coventry Magistrates' Court on Monday 28 July and was remanded into custody.
>
> Four days later, Mohammad Kabir, also 23, was arrested in Nuneaton and charged with kidnap, strangulation, and aiding and abetting the rape of a girl under 13. He appeared before magistrates on Saturday 2 August and was also remanded into custody. Both men are due to appear at Warwick Crown Court on 26 August.

Just to be clear, the article states that the police advised city councillors not to reveal to the public the suspects' asylum background because "it might inflame community tensions". So, in case you thought that the police had learned their lesson from the child sex-trafficking scandals, you would be wrong. It continues on, because the need for secular leftists to virtue signal continues on. You can deduce what secular leftists believe about protecting women and girls from these actions. They're *misogynists*.

First, note the effects of bad policing: crime has skyrocketed in the UK:

> Crime rates are soaring in the UK. In the year to March 2025, shoplifting hit its highest level since records began, up 20 per cent to more than 530,000 offences. And theft from a person rose 15 per cent to over 151,000 cases.

The UK Telegraph explains how police advise law-abiding taxpayers about crime:

> Dame Diana Johnson, the policing minister, said products such as bottles of alcohol should not be displayed at the front of stores because people will steal them.
>
> It comes amid growing pressure on the police to tackle a shoplifting epidemic, with a record high of nearly three thefts carried out every minute in the year to March. …
>
> Speaking on the BBC Radio 4 Today programme, Dame Diana said: "I think we need to have that neighbourhood police presence. I think stores need to play their part in making sure that items that are high value are not at the front of the store because that is an issue in some stores, that they put bottles of alcohol at the front of the store which obviously people will nick.
>
> "If they are going to steal to resell they will nick items like that. So I think it is not just one thing here, it has to be an approach with the retailers, with the Government and with the police to work together." …
>
> Dame Diana also warned against members of the public stepping in to confront and tackle shop thieves as she said it was not "appropriate". …

Yes, in the UK, you cannot purchase and carry a firearm to defend yourself, like you can in the United States. And that's why the violent crime rates have skyrocketed in the UK. Only the criminals have weapons. The law-abiding victims of criminals don't. We would never put up with this in the United States, but in the UK, they actually elect secular left fascists to make their laws.

But my post today is about the UK police themselves. What do they do about crime?

> The issue of shoplifting has risen to prominence in recent days after the Telegraph disclosed that Rob Davies, a North Wales shopkeeper, after repeated thefts had put up a handwritten note in his store that read: "Due to scumbags shoplifting, please ask for assistance to open cabinets."
>
> But officers from North Wales Police attended his retro shop in Wrexham and told him to consider changing the wording because it was offensive.
>
> It has also emerged that the Information Commissioner's Office (ICO) has advised retailers that putting up images of thieves in a local area "may not be appropriate" because it could violate suspects' data rights. …

This is the priority of the UK police – how to make the world more comfortable for criminals. They spend your money, and they risk your life, because they have such a strong need to virtue signal.

So, let this be a lesson to us as Americans. We don't want to elect people who govern with their feelings. That would be a mistake. Instead, you should move yourself and your family to the most conservative parts of the country. Conservative states, like Florida, Tennessee, Oklahoma, etc. The police are laser-focused on protecting you. The conservative states have the best police forces. Taxpayers get good value for their money there. As for the UK, it's a third world country run by idiots. Never travel there.

# New study: the majority (69%) of divorces are initiated by women

**Wintery Knight** · 15 August 2025 · Archived copy · Original

This new report from Live Science gives us some numbers about who initiates divorces most frequently.

It says:

> Women are more likely than men to initiate divorce in the United States, but they are no more likely than men to initiate breakups in a dating relationship, a new study finds.
>
> "The breakups of nonmarital heterosexual relationships in the U.S. are quite gender-neutral and fairly egalitarian," study author Michael Rosenfeld, an associate professor of sociology at Stanford University, said in a statement. "This was a surprise because the only prior research that had been done on who wanted the breakup was research on marital divorces."
>
> Previous research had found that women are more likely to initiate divorce, at least in the United States, Europe and Australia. In the new study, Rosenfeld compared divorces to nonmarital breakups, in an effort to understand the driving forces behind each type of breakup.
>
> To investigate, he looked at data from the 2009 to 2015 waves of How Couples Meet and Stay Together, a nationally representative survey spearheaded by Rosenfeld and his colleagues. The new study includes 2,262 adults, ages 19 to 64, who reported having opposite-sex partners in 2009. By 2015, 371 of the participants had broken up or gotten divorced.
>
> Women initiated 69 percent of the 92 divorces, Rosenfeld found. But there was no statistically significant difference between women and men when it came to nonmarital breakups, regardless of whether they were living together, he said.

The Ruth Institute reports on a few studies:

> Female unions seem to have the highest divorce rates, followed by male unions, followed by opposite sex unions.
>
> "For Sweden, the divorce risk for partnerships of men is 50% higher than the risk for heterosexual marriages, and that **the divorce risk for female partnerships is nearly double that for men."**
>
> "For Norway, **divorce risks are 77% higher in lesbian partnerships than in those of gay men."** (The Norwegian data did not include a comparison with opposite sex couples.)
>
> In California, the data is collected a little differently. The study looks at couples who describe themselves as partners, whether same sex or opposite sex. The study asks the question, how likely is it that these couples live in the same household five years later. **Male couples were only 30% as likely, while female couples were less that 25% as likely, as heterosexual married couples, to be residing in the same household for five years.**

It really seems as if there is something about women in particular that causes them to be unable to keep to commitments *in their actions*, despite what they might say *with their words*.

So I am seeing a couple of problems in young, unmarried women that might explain this.

**Feminism is bad**

First, there is the feminism. Feminism was the driving force behind no-fault divorce. Today, young unmarried women are being taught to view marriage as stifling to their freedom. So if they do get married, they are often resolved that marriage should not affect their freedom in any way. That is just not the way marriage works, though – both spouses need to be equally ready to have their freedom infringed upon by things that HAVE TO GET

DONE. Lots of things that have to get done will not be fun, thrilling or amusing – and that's why it's good to be prepared to do them before you marry.

My friend Dina says that she only knows one happily married couple from among her friends. The most frequent case she sees is wife is working in order to pay for big house, two cars, etc. and wife is denying husband sex, which makes him disengage from the marriage. A working wife tends to not be as responsive to the needs of husband and kids as a non-working wife, probably in part due to work stress. There is an epidemic of sex-withholding by women, and it causes men to disengage from marriage because they feel unloved. Although women tend to rebel against the idea that the man's bad behavior is their fault, and that there is a "contractual" nature to marriage, that is how marriage works. You cannot stay married, women, by just doing whatever you feel like, and NOT doing whatever you DON'T feel like. Men will disengage when their needs are not supplied, and that's no fault of theirs. It's your fault. Denying relationship obligations causes men to underperform.

Feminism is often linked closely to "independence". There is a lot of confusion over what the word independence means among young, unmarried women. A man uses that word to mean "lack of financial dependence on parents, the state, etc. because of good decisions in education, career and finances". But a woman means "not having to care about the needs of a man and the leadership of a man, or the needs of children while still getting what I want from men and children". That attitude is not compatible with life-long married love.

**Emotions are bad**

Second, emotions. In my experience, young, unmarried women are less likely to have reasoned out their own life plan in a practical step-by-step manner. Instead, they tend to do whatever makes them feel good moment-by-moment without any realistic plan. One Christian woman was recently telling me how attracted she was to an atheist moral relativist who had been promiscuous from the age of 15. She explained that her emotions were kindled by his GQ looks, 6-pack abs, mysterious European accent, seductive manner and witty conversations. Although she is apparently a Christian, she doesn't take Christianity seriously in her decisions about relationships and marriage.

Peer-approval and culture play a large part in determining what women think is attractive in a man, as well as their life goals, and women are driven by these cultural standards more than men who focus on honoring their commitments *regardless* of their emotions. In my experience, women struggle to make their day-to-day actions match their socially-acceptable goal of getting married "some day". Marriage is for "some day" for today's busy women, but fun and thrills is for today. "Live in the moment", they often tell me. If you try to talk to them about roles and responsibilities in a marriage, they will withdraw and rebel. But marriage is about each spouse doing his or her job, and feeling content about what the couple is building together. You can't make life-long married love from emotional craziness and pursuing fun and thrills with seductive promiscuous moral relativist atheists.

**How to pick a woman who won't divorce you**

Young men, I advise you to choose wives who have had to do things that they did not feel like doing. That can involve things like getting a STEM degree, getting a job in STEM, moving out of her parents' house, getting a "boring" job that helps her pay off her debts, keeping commitments when she doesn't feel like it, and caring for other people and even animals.

Basically, the more the woman has ground down any narcissism and hedonism she may have, by having to do nasty calculus and horrid lab work, the better. The more accustomed she is to constraints, responsibilities, expectations and obligations, the less likely it is that she'll divorce you for unhappiness. And all of this goes for men, as well. STEM degree, STEM job, save money, serve others, give to charity.

Marriage is not the time for people to be carried away by their emotions. It's an enterprise, and it works when both people are rational, practical, hard-working and self-controlled.

# Knight and Rose Show #67: Terrell Clemmons: Scopes Monkey Trial

**Wintery Knight** · 16 August 2025 · Archived copy · Original

Welcome to episode 67 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss the legacy of the famous Scopes "Monkey" Trial, now 100 years old. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Terrell Clemmons to discuss the 100th anniversary of the Scopes Monkey Trial. We discuss Charles Darwin's theory of evolution, its impact on morality, and its ties to racism and eugenics. Clemmons challenges the popular "religion-versus-science" framing of the debate over origins, and offers practical guidance for Christians to challenge materialist narratives with scientific evidence.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 67:**

**Speaker biographies**

Terrell Clemmons earned a BS in Computer Science from Clemson University and worked in software development until she hopped off the career track to be a full-time mom. Raised in a church-going home, she lived complacently toward the faith until she became a parent. Newly motivated at that point to find truth about the bigger issues of life, she researched the worldview claims of Christianity and became convinced that they were actually true. She began writing on Christian living and apologetics in 2004 and joined Salvo in 2007. She has also worked with Ratio Christi and Anchorsaway apologetics ministries for youth. With her kids now grown and her husband deceased, she lives in Indianapolis, Indiana, with her dog, the only family member still at home, and writes on apologetics and matters of faith.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

**Further reading:**

If you want to know more about this topic, I encourage you to check out Issue #73 of Salvo magazine, which is edited by Terrell Clemmons. One of the easiest ways to get conversations started in your home or workplace is to have something eye-catching that will provoke discussions. One of our podcast helpers (Bonnie) already subscribes

to Salvo, and another of our podcast helpers (Vitoria) subscribed to it after looking at the issue online.

The graphics for Salvo magazine are done by Jerry Janquart and the print version works well as a conversation starter. The trouble you might have is that you will need two copies. One for you, and one to lend out. If you subscribe, they give you the PDF immediately, so you can read that one on your tablet, while you wait for the lending out copy to arrive. It looks great on a tablet or a coffee table. You can have a lot of adventures with a print copy of Salvo.

**Podcast RSS feed:**

https://feed.podbean.com/knightandrose/feed.xml

You can use this to subscribe to the podcast from your phone or tablet. I use the open-source AntennaPod app on my Android phone.

# Study: belief in free will linked to ability to behave morally and to help others

**Wintery Knight** · 17 August 2025 · Archived copy · Original

A while back I finished reading "God's Crime Scene", the new book by J. Warner Wallace. I wanted to post something about some studies he mentioned in Chapter 6, on free will. This is one of the places where he found evidence in a surprising area.

Wallace says that free will makes more sense if theism is true, because we have non-material souls that interact with our bodies, but are not causally determined by them. On atheism, only matter exists, and you can't get free will (or consciousness) from matter. So atheists like Sam Harris and Alex Rosenberg, for example, deny free will, because they are materialists and atheists.

Anyway, here's what he writes on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others." Even determinist Michael Gazzaniga conceded: "It seems that not only do we believe we control our actions, but it is good for everyone to believe it."" The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here's the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons' belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in

> free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you're alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

## Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

# What should Christians bring up when discussing truth with Muslims?

**Wintery Knight** · 18 August 2025 · Archived copy · Original

I have some experience dicussing Islam because my mother's side of the family is all Muslim. My go-to argument has always been to confront them about the Qur'an's claim that Jesus did not die of crucifixion. But I noticed a different argument from Laura Powell, who knows far more about this topic than I do. Do you think her approach is the best one?

She writes about it over at her blog, An Affair with Reason:

> The crux of the argument is this: The Qur'an affirms the inspiration, authority, and preservation of the New Testament Gospels;[2] yet the Qur'an also contradicts the Gospels on major theological and historical points. Therefore, the Qur'an cannot be reliable.
>
> According to the Qur'an, the Gospel is the trustworthy, reliable revelation of God given as a guidance for mankind (Qur'an 3:3-4). These Scriptures from God were available and trustworthy when the Qur'an was revealed in the 7th century A.D., and those who had access to them were repeatedly told to obey them, judge by them, submit to their teaching, and stand fast upon them. In other words, according to the Qur'an, the Gospels are the inspired and authoritative words of God.
>
> Qur'an 5:47 says, "And let the People of the Gospel judge by what Allah has revealed therein. And whoever does not judge by what Allah has revealed—then it is those who are the defiantly disobedient."
>
> Furthermore, Qur'an 5:68 states, "Say, 'O People of the Scripture, you are [standing] on nothing until you uphold [the law of] the Torah, the Gospel, and what has been revealed to you from your Lord'" (see also 6:114; 3:3-4).

What I like about her argument is that she's just taking the words of the Qur'an seriously, and asking the Muslims who claim to believe it what's going on here. Why say that the gospels are unreliable today, when the Qur'an said that the gospels were reliable, yesterday.

My argument about the death of Jesus requires us to ask Muslims "where is the non-Muslim historian who thinks that Jesus did not die?" There isn't one.

But my argument requires that the Muslim know something about historical scholarship, to know what non-Muslim historians think.Laura's argument has wider appeal, because it doesn't require that the Muslim have *any* knowledge about history – only knowledge about what their own holy book says.

She concludes with this:

> What we see here is that the Qur'an teaches the inspiration, authority, and preservation of the Gospels. The Qur'an was intended as an Arabic version of the message of truth found in the Jewish and Christian Scriptures, but this presents a huge problem for Muslims because the Qur'an contradicts the Christian Scriptures on essential doctrines. Most notably, the Qur'an teaches that Jesus was not God incarnate, he did not die on a cross, and he was not raised from the dead (Qur'an 4:157; 5:116).
>
> Here's the dilemma for Muslims: If the Gospels *are not* trustworthy, then the Qur'an is false because it teaches that the Gospels are the inspired, perfectly preserved, authoritative words of God. But if the Gospels *are* trustworthy, then the Qur'an is false because it teaches contradictory, mutually exclusive facts about key issues. Either way, the Qur'an is false.
>
> This, of course, is a huge problem for Muslims. The validity of Islam rests upon the reliability of the Qur'an, just as Christianity rests upon the truth of the divinity, death, and resurrection of Jesus. If the Qur'an is

> unreliable, then Islam is a false religion.

I like that she's comfortable having disagreements with people. That's not very common in the church today, in my experience.

By the way, this is the same Laura who wrote that really good article about how she found a better way to discuss her Christian worldview when she moved on from sharing her testimony. I blogged about it here.

# Do “social conservative” Christians really hate divorce and lies?

**Wintery Knight** · 19 August 2025 · Archived copy · Original

There were a couple of interesting articles in The Federalist about marriage and divorce, so I wanted to blog about them. The first one is about the no-fault divorce law in Texas. The second one is about temporary restraining orders. And then finally I wanted to talk about whether Christian social conservatives really are as socially conservative as they claim.

So there is the first article from The Federalist, and it’s about the Texas Christian man who has had a divorce initiated against him, and he is fighting it, because he doesn’t think it’s Biblical.

The article says:

> Jeff Morgan was blindsided when his wife of 11 years recently filed for divorce in Dallas County, Texas. On Aug. 8, he filed a 31-page motion to dismiss the lawsuit, claiming the Texas no-fault divorce law is unconstitutional for 11 distinct reasons. Although Morgan isn’t an attorney and represents himself, his papers are packed with case law.

In a no-fault divorce, one party can dissolve the marriage – even if there are young children! They just say that the marriage is over because of “discord or conflict of personalities”. They don’t need to prove abuse or adultery or abandonment or addiction. Divorces are automatic just because one spouse is *not getting along with the other*.

Remember, 69% of the time divorces are initiated by women. Before you blame the husband for that, remember that lesbian couples have the highest rates of divorce. So it’s not men who are responsible for the majority of these cases. When men make a commitment, they really mean to keep it. Feeling “conflict of personalities” doesn’t make them break the marriage covenant.

So what happens in the divorce court? There’s no judge who listens to two sides in a divorce case – the person who files is heard, and the divorce is automatic. Morgan doesn’t get to make a case for why the marriage should stay intact, and how it will harm the children. No one listens and no one cares. Even in red states, supposedly conservative Christian lawmakers don’t want marriage laws to be conservative or Christian.

Why do people want no-fault divorce? Well, they want to make the decision about who to marry *recklessly*. They don’t want to feel any kind of constraint or responsibility to vet the other person for marriage abilities. Many of them get into marriages based on Disney stories about “soul mates”. And then when they find out how much work marriage really is – responsibilities, expectations, obligations – they want to get out of it. Doesn’t matter if it hurts the kids.

Here’s another article from The Federalist, this one is about “temporary restraining orders”. These orders are routinely used in divorce hearings in order to get men separated from their children and kicked out of their own houses. All the woman has to do is say “I’m scared” and the judge grants it immediately. No police report, no investigation of facts, no jury trial.

Note that Protection from Abuse Order (PFA) is the same as Temporary Restraining Order (TRO). It’s called different things in different states.

The article says:

> In family court, PFAs are colloquially known as “silver bullets.” They instantly shift custody, restrict communication, and tilt the playing field in favor of the accuser. Even if dropped, the damage lingers.
>
> […]Take the case of Harry Stewart, a lay minister from Weymouth, Massachusetts. Stewart was arrested and jailed simply for walking to the door of his ex-wife’s apartment building and opening it. Why? He had violated a restraining order “that prohibited him from exiting his car near his ex-wife’s home.” The system treated this

> routine act of fatherhood as a criminal offense. Writing about the case in Salon, Cathy Young observed, "While his former wife told reporters that Stewart was dangerously unstable, her examples — that he had watched 'prison movies' with his 8- and 6-year-old sons and promised to send them some live caterpillars to grow into butterflies — seem shocking only in their innocuousness."
>
> As Stephen Baskerville noted in Taken Into Custody, "Stewart had already been jailed for six months not for committing any crime but because he refused to confess to one." The real offense was not violence, but noncompliance with a legal fiction.
>
> The consequences didn't end with jail time. As Young wrote, "The client could have only supervised visitation for the next two years, until the social worker who monitored the visits finally gave him a clean bill of health."

A lot of socially conservative Christians today are complaining about men. They are asking "why don't men approach women?" and "why don't men take women out on dates?". They don't know that men are very much aware of laws and policies like no-fault divorce, false accusations PFAs / TROs, paternity fraud, and biased policing of domestic violence. Men know, and men count the cost.

Have you ever heard a sermon that was critical of divorce or false accusations? Is there any popular music, like from Taylor Swift, that condemns such things? Are there movies, like The Notebook and Titanic, that argue against these things? We are not a culture that really values marriage. And Christians today are not battling against these threats to marriage and family, either.

Here is what I would do in order to make marriage more attractive to men, and better for children (stability):

- person who initiates divorce leaves with clothes on back, no access to kids except by permission of remaining spouse
- abolish single mother welfare, and all other welfare that rewards bad decisions about divorce and reckless sex
- no special category for domestic violence, just have regular criminal law apply to violence in the home
- false accusations to be punished by giving the accuser the sentence that the accused would have gotten
- mandatory paternity tests for all children after birth
- ban IVF in all cases
- remove abortion coverage from all medical insurance policies, and have them be a separate policy, like life insurance or home insurance
- abolish all government-provided, government-guaranteed student loans. (Only banks give loans, based on the likelihood of being paid back)

I mention student loans, because men see a woman's student loans as a deterrent to marriage, and a predictor of financial irresponsibility that can lead to divorce.

Have you ever heard a Christian social conservative advocate for solutions like this? They would certainly solve the problem. So why don't we hear anything about these solutions?

# Canadian arrested and charged for self-defense against armed home intruder

**Wintery Knight** · 20 August 2025 · Archived copy · Original

Why should Christians vote? To live out a faithful life plan, you need freedom, safety, and the ability to prosper. This means being able to work without facing discrimination, keeping (most of) what you earn, and educating your children according to your values. But at the most basic level, you need to stay alive. And there are laws that affect whether you are going to be able to stay alive or not.

Now, most of us Americans feel secure from crime. At the local level, we count on the police. We don't have two-tier policing, like in the UK. American police forces are responsive to taxpayers, not to criminals. Not only do we have great police, but we can also own and train with weapons (if we pass a background check). And even more, now the federal government under Trump is deporting criminals who belong in other countries. For Christians, this means the fundamental need to avoid being killed by criminals is largely met, at least in conservative states with strong self-defense laws.

But now let's consider Canada.

Here's the latest story from the Toronto Sun:

> This all happened early Monday on Kent St. in downtown Lindsay.
>
> "Officers arrived on scene and learned that the resident of the apartment had woke up to find another male intruder inside his apartment," said a news release from Kawartha Lakes Police. "There was an altercation inside the apartment and the intruder received serious life-threatening injuries as a result of that altercation."
>
> […]"The (alleged) intruder was transported to Ross Memorial Hospital and later air lifted to a Toronto hospital," say police.
>
> […]Kawartha Lakes Police Service added: "When released from hospital, he will be held in custody pending a bail hearing."

So they took the intruder to the hospital, but they arrested the homeowner:

> Ezra Levant of Rebel News has spoken with the man who is named Jeremy McDonald.
>
> "A 44-year-old Lindsay man (homeowner) was charged with: aggravated assault and assault with a weapon" but was "released with a future court date," said that release.
>
> Perhaps in court there will be presented a fuller picture of why police decided to lay the charge on both the alleged intruder and on the break-in victim. Until then, people see it as just another example of letting criminals off easy while victims have to take it — even when they are in a dream state.

Now, those charges – aggravated assault and assault with a weapon – those are *very serious charges.*

Grok says:

> In Canada, the maximum sentence for one charge of aggravated assault under section 268 of the Criminal Code is 14 years imprisonment, as it is a straight indictable offence. For one charge of assault with a weapon under section 267, the maximum sentence depends on the prosecution method: if prosecuted by indictment, it carries a maximum of 10 years imprisonment; if by summary conviction, the maximum is 18 months incarceration.

Imagine that you were an elderly Christian scholar like Wayne Grudem or William Lane Craig, and you got

sentenced to 10 years of hard time in a federal prison for defending your home and family from an armed intruder. That's what happens in Canada! And the feminized majority up there vote for that – it's "compassion". I know there are some great conservative Christians in Canada, but that's not who is making the laws and the policies.

I asked Grok what would happen for a similar case in a conservative American state with Castle Doctrine and Stand Your Ground laws:

> Consider the same scenario in Florida. If a homeowner wakes to an armed intruder wielding a knife, grabs a baseball bat, and injures the intruder, Florida's Castle Doctrine (Fla. Stat. § 776.013) presumes the homeowner acted lawfully. As long as the response was proportionate and the threat imminent, the homeowner is unlikely to face charges and may be immune from civil lawsuits. Excessive force, like attacking a surrendering intruder, could lead to charges, but the law strongly favors the homeowner's right to self-defense.

Here's an actual case from Tennessee, reported by The Blaze, that shows how diferently self-defense is handled in conservative Americans states:

> A Tennessee grand jury will not bring charges against a Lenoir City homeowner who fatally shot an intruder through a front door in May, saying the shooting was a "stand your ground" self-defense case, according to a Wednesday press release from Russell Johnson, the 9th Judicial District Attorney General.

> […]The grand jury reviewed a presentation by Lenoir City Police Department detectives Lynnette Ladd and Jon Yates and agreed with the District Attorney General Johnson's decision not to bring criminal charges against the homeowner who fatally shot Owen based on the "stand your ground" statute and that it was a case of self-defense.

Everyone – the police and the District Attorney and the grand jury (fellow Tennessee taxpayers) – sided with the law-abiding homeowner and not the violent criminal.

In strong self-defense states like Tennessee and Florida, the law protects law-abiding citizens. When voting, Christians must consider this. Supporting policies like those of the Democrat Party risks two-tier policing, as seen in the UK, or the criminalization of self-defense, as seen in Canada. To live out your faith, stay safe, and remain free, vote for leaders who prioritize your right to protect yourself and your family from armed criminals.

Vote like your life depends on it, because one day, it might.

# Six reasons why you should believe in non-physical souls

**Wintery Knight** · 21 August 2025 · Archived copy · Original

The first argument for theism that most people learn is the moral argument. Why the moral argument? Because it's the most accessible – everyone you talk to expects to be treated a certain way. But there's another argument that's intuitive for humans: the argument from mind. Everyone has the experience of consciousness and free will. You can make a good argument for God from that.

Here's the podcast:

Details:

> In this podcast, J. Warner examines the evidence for the existence of the mind (and inferentially, the soul) as he looks at six classic philosophical arguments. Jim also briefly discusses Thomas Nagel's book, Mind and Cosmos and discusses the limitations of physicalism.

The MP3 file is here. (67 MB, 72 minutes)

Topics:

- Atheist Thomas Nagel's latest book "Mind and Cosmos" makes the case that materialism cannot account for the evidence of mental phenomena
- Nagel writes in this recent New York Times article that materialism cannot account for the reality of consciousness, meaning, intention and purpose
- Quote from the Nagel article:

> Even though the theistic outlook, in some versions, is consistent with the available scientific evidence, I don't believe it, and am drawn instead to a naturalistic, though non-materialist, alternative. Mind, I suspect, is not an inexplicable accident or a divine and anomalous gift but a basic aspect of nature that we will not understand until we transcend the built-in limits of contemporary scientific orthodoxy.

- When looking at this question, it's important to not have our conclusions pre-determined by presupposing materialism or atheism
- If your mind/soul doesn't exist and you are a purely physical being then that is a defeater for Christianity, so we need to respond
- Traditionally, Christians have been committed to a view of human nature called "dualism" – human beings are souls who *have* bodies
- The best way* to argue for the existence of the soul is using philosophical arguments

The case:

- The law of identity says that if A = B' if A and B have the exact same properties
- If A = the mind and B = the brain, then is A identical to B?
- Wallace will present 6 arguments to show that A is not identical to B because they have different properties

Not everyone of the arguments below might make sense to you, but you will probably find one or two that strike you as correct. Some of the points are more illustrative than persuasive, like #2. However, I do find #3, #5 and #6 persuasive.

1) First-person access to mental properties

- Thought experiment: Imagine your dream car, and picture it clearly in your mind
- If we invited an artist to come and sketch out your dream car, then we could see your dream car's shape on paper
- This concept of your dream car is not something that people can see by looking at your brain structure
- Physical properties can be physically accessed, but the properties of your dream care and privately accessed

2) Our experience of consciousness implies that we are not our bodies

- Common sense notion of personhood is that we own our bodies, but we are not our bodies

3) Persistent self-identity through time

- Thought experiment: replacing a new car with an old car one piece at a time
- When you change even the smallest part of a physical object, it changes the identity of that object
- Similarly, your body is undergoing changes constantly over time
- Every cell in your body is different from the body you had 10 years ago
- Even your brain cells undergo changes (see this from New Scientist – WK)
- If you are the same person you were 10 years ago, then you are not your physical body

4) Mental properties cannot be measured like physical objects

- Physical objects can be measured (e.g. – use physical measurements to measure weight, size, etc.)
- Mental properties cannot be measured

5) Intentionality or About-ness

- Mental entities can refer to realities that are physical, something outside of themselves
- A tree is not about anything, it just is a physical object
- But you can have thoughts about the tree out there in the garden that needs water

6) Free will and personal responsibility

- If humans are purely physical, then all our actions are determined by sensory inputs and genetic programming
- Biological determinism is not compatible with free will, and free will is required for personal responsibility
- Our experience of moral choices and moral responsibility requires free will, and free will requires minds/souls

He spends the last 10 minutes of the podcast responding to naturalistic objections to the mind/soul hypothesis.

*Now in the podcast, Wallace does say that scientific evidence is not the best kind of evidence to use when discussing this issue of body/soul and mind/brain. But I did blog before about two pieces of evidence that I think are relevant to this discussion: corroborated near-death experiences and mental effort.

You might remember that Dr. Craig brought up the issue of substance dualism, and the argument from intentionality ("aboutness"), in his debate with the naturalist philosopher Alex Rosenberg, so this argument about dualism is battle-ready. You can add it to your list of arguments for Christian theism along with all the other arguments like the Big Bang, the fine-tuning, the origin of life, stellar habitability, galactic habitability, irreducible complexity, molecular machines, the Cambrian explosion, the moral argument, the resurrection, biological convergence, and so on.

# Women want to complain to Human Resources because man is reserved at work

**Wintery Knight** · 22 August 2025 · Archived copy · Original

I have spent over 25 years in information technology, and most of the companies were large IT companies. Large IT companies tend to emphasize diversity, equity, and inclusion more than smaller companies, which have to perform in order to stay afloat. And that means making sure there is an equal balance of genders, ethnicities, etc. in every different area.

Here is a very interesting post on the relationship advice forum of Reddit:

> Hi all I'm posting this on an alt because I know a few of my friends are following me on here and I don't want this spilling out until I have some clear thoughts on what I want to do.

The author – who uses Commonwealth spelling – has a short summary of her post at the top:

> A colleague (27M) joined our firm last year and since then he has had zero issues socialising with the guys we work with but always finds an excuse or says no to hanging out with the girls after work, even if we go out together as a whole he rarely talks to us and its making some of my friends uncomfortable.

And then here is the long version:

> So early last year our firm hired Dan (27M). In the first few weeks he was really quiet and didn't talk much and that's just how we thought he was. Every conversation with him was short and to the point and never deviated from work, asides from pleasantries (Have a nice weekend etc). About 2 months in he started becoming a bit more friendly with the guys in our office and they would hang out every so often and have normal conversations. However, whenever any of the girls in the office tried to do so he would quickly change the conversation back to work or just not reply. Even now after a year of Dan working with us he straight up refuses to socialise with the girls in the office and it is making them feel uncomfortable. He avoids any discussion of himself outside of work related events and future plans and doesn't ask any of the girls either. Where as he is, what I can only assume, pretty good friends with the guys in the office.
>
> Even on work meals out to celebrate events he is only doing the bare minimum when it comes to conversation with the girls where again with the guys he talks to them like there is no problem whatsoever. I don't know if I'm overreacting but one of the girls is considering go to HR about this because she is saying its creating a hostile work environment. Dan treats us like he treats clients we work with; cordial and strictly about business and its wearing thin now.
>
> Any advice is appreciated.

Many young people today don't see the workplace as being about work. They see it as a time of socializing. And they get angry when people don't socialize with them. They want to be allowed into a man's personal space, even though they are the kind of people who go straight to HR whenever anyone disagrees with them, or refuses to make them happy. Many of these women are single mothers who divorced the father of their kids.

I actually left my last job and took a lower salary job, because I was being harassed by a woman who had *no college degree*. Her official title was "Software Engineer", but she didn't write code. She just supervised deployments to production. She was very attractive, and had had cosmetic surgery done – her chest was super-sized. (I heard her explaining why she did it to one of the Indian workers one day). She was also about 6-8 years older than me. She started to get very angry with me for not giving her attention at work. She would come to my desk and talk about how politically conservative she was (she must have heard that I was conservative). But I didn't want to have

anything to do with her.

I blogged previously about a woman who accused a man of grooming her because he didn't want to get more serious with her. Men are getting tired of this. If you know any young women who are wondering why men don't talk to them, maybe it's because many young women are not pleasant or safe to talk to. Even if a particular young unmarried woman is safe to talk to, men will judge her based on the majority of single, unmarried women. It's just not safe for men to have non-business conversations in the workplace with young, unmarried women.

The juice isn't worth the squeeze.

# TikTok single mom has two flaws: entitlement and lack of accountability

**Wintery Knight** · 24 August 2025 · Archived copy · Original

I have been working on an article that explains some of the reasons why Christian men are declining to approach, date and marry women. My list started off with 16 reasons, and now it's over 30! There are policy reasons, feminist culture reasons, and feminization-of-the-church reasons. So, in this post, let me talk about two reasons, which came up in a recent TikTok video that went viral.

So, two of the "feminist culture" reasons why Christian men are declining to pursue women for marriage are:

1. entitlement
2. lack of accountability

Now it's important to say that I am not talking about ALL WOMEN when I say these things. In fact, if you go back to the 1940s, these flaws were rare. But somehow, they have become dominant today. You can see them in the movies and books that are popular with female audiences.

The TikTok below has over 100,000 comments, and over 1.5 million likes. It's resonating with young women, and we need to see why.

The TikTok is from Shylee Allen. Her channel is @wildly_shy. It's 5 minutes long:

> @wildly_shy
> For the women. #singlemom
>
> ♬ original sound – Shy

Please don't message the TikTok lady, but please do pray for Boss to help her to make excellent decisions going forward. We get the most amazing results from women who have made mistakes exactly like hers. There are many Christian women who teach other women not to make the same mistakes that they made, and that's great.

So, there are two flaws in this video, and I want to recommend that Christian men pay attention, because you want to learn these flaws, and make sure that you do not choose to approach, date, and marry women with these flaws. There are lots of women who are anxious to serve the Lord, and they want to help a man who will lead them well. You need to focus your attention on THOSE women.

So, the first flaw in this view is *entitlement*.

**Entitlement**

An entitled person feels that they deserve to get a particular outcome, without having to merit it, because of their special privileges or victimhood. One good illustration of entitlement was Tomi Lahren on the Piers Morgan Show, insisting that "real men" give women protecting and providing, without asking for anything in return. Think of going into a store with a gift card, and not having to pay any of your own money for anything under $100. The Tomi Lahren view, and I think her view is shared my other famous women like Laura Ingraham and Megyn Kelly, is that women have a gift card with unlimited dollars for use in the man store.

So, when men ask modern women "what do you bring to the table," women today reply "I am the table". Today, "strong, independent boss babes" demand that men pay for everything on dates, despite decrying sex differences as "sexist". The common motto of modern women in relationships is "my money is my money, and your money is our money". That's what men are seeing as "entitlement".

So, in the TikTok video, the woman felt entitled to a husband who meets all her emotional needs. Since she ended two relationships, clearly she did not get her emotional needs met. So how to succeed on the third attempt? Well, rather than feeling that getting your emotional needs met should be automatic, regardless of which man you choose, women need to test men, and choose one who can actually do the work. And not one who says he can do the work. Not one who she feels can do the work, based on his appearance and words. But one who has a worldview that rationally grounds doing the work. And one who has a record of demonstrated ability at doing the work. And the way to do that of course is just to disregard what the man says, and what he looks like, and observe for 2-3 years whether he is able to do actions that meet her emotional needs. And most importantly what is the worldview that caused him to do it. How stable is that worldview? What evidence grounds him in it?

One specific thing she mentioned was that the man lied about not being able to get her pregnant, and it's not her fault for believing him. Anyone who has ever participated in a private sector candidate interview knows how to evaluate a candidate's knowledge and ability. We don't rely on "first impressions". We don't have intuitions about clothes or confidence. We are looking for competence. We hand you a marker, and we make you write code on the white board. We want to see your hobby coding and your Github repository of open source projects. We sit next to you and we pair program with you. We change the requirements, and we ask you how you would adapt your design.

We need to help women take the job interview approach to dating, instead of the hedonistic approach. Having fun on dates doesn't prove that a man can meet emotional needs.

Another problem with entitlement is that women have to accept responsibility for engineering relationship outcomes. Have you ever noticed that lesbians have the highest rates of instability and domestic violence? They have high expectations from their partners, but low ability to meet their partners needs. Women seem to be more likely to accept the "soul mate" view of relationships. They think that "the universe" will "manifest" the perfect mate for them. The perfect mate, of course, gives them everything they want, and asks for nothing in return. Soul mates don't impose any obligations on you to fuel them or help them, you just "follow your heart". But that's not how anything works in the real world.

In the real world, you have to find out what counts as fuel to another person. You have to accept responsibility to fuel the other person. You have to solve problems that are roadblocks to success. In short, you have to run towards obligations, instead of away from them. We need to encourage young people to accept what Dr. Laura Schlesinger calls "loving obligation" in relationships. We need to teach women not to end relationships where their needs aren't met, but to choose men wisely, and accept the obligation to fuel men so that the men want to meet their emotional needs.

The woman in our TikTok clearly felt entitled to certain outcomes from her marriage and motherhood choices. But what preparation did she make? She should have prepared herself to choose a good man by learning about religion and morality, so that she could choose a man who had a good reason to be moral when it went against his self-interest. She could have prepared herself to supply the typical kinds of fuel that men respond to, like food, sex, conservative politics, watching sports and playing co-operative video games. But if you watch that video, you can pretty clearly see that she just sees herself as a victim of "the patriarchy". She talks about what she wanted as if it was a guaranteed outcome, but she has nothing to say about her process for choosing a good man, testing him, or meeting his needs.

The second flaw is *lack of accountability.*

**Lack of accountability**

A person who lacks accountability makes foolish decisions that are unlikely to produce the desired outcome, and then complains to others as if the predictable outcome of her choices was completely unexpected. You would think that after having TWO children with TWO men who she dumped, she would see that the problem is her own choosing. But she doesn't see herself as responsible at all. And she's screaming and crying about her innocence very energetically! she telling other women "I made no mistakes at choosing men, so if you choose a man, you won't be able to do any better than me. So don't date or marry men!" That's like saying "I took a course in math, and I failed!

So don't you take a course in math, or you'll fail too!" She refuses to accept that her failure was related to her own choices, and that someone who makes better choices might get better results.

There seems to be an epidemic of women going on social media and complaining about the shortcomings of their boyfriends and / or husbands. But what they don't understand is that thoughtful men see these complaints about husbands and boyfriends as huge red flags. All it means to men is that if a man approaches a woman who complains about the men she chooses, then he will be the next man that she complains about on social media. If good men see a woman complaining about her ex, we know right away that she either 1) failed to choose a good man, or 2) failed to keep a good man. And then we don't get into a relationship with someone with either of those problems.

The lack of accountability problem is a widespread problem. It's not this one TikTok and the 1.5 million likes. Look at the voting trends of single women over the past decades. While married women are about 50-50 conservative vs leftist, unmarried women vote about 70-80 percent leftist. That's a lot of women. They see government as a substitute husband. When they make mistakes, like bad marriages and student loans for useless degrees, they want the government to swoop in and give them no-fault divorce cash and prizes, single mother welfare and student loan bailouts. So, this problem is very widespread – and we should all care about it.

When I talk to conservative Christians who are "pro-child" and "pro-marriage", they inevitably agree with women that the bad outcomes of a woman's choices are never the woman's fault. It's always a man's fault. For example, one pro-marriage advocate I know thinks that women should just be able to choose a man who is attractive to her, and then expect him to change after marriage. I will never forget one Christian woman who commented on my blog. She claimed to be a Christian and went on and on about how her ex-husband had mistreated her. I asked her "how did you test him to see if he really believed in Christianity, and had acted on it?" She said "he was not a Christian". So I said "why would you marry a non-Christian man, and then think that he would act like a Christian?" And she replied "the Bible applies even to non-Christian men". So that is the level of lack of accountability that men sometimes see. And I would really like to invite "pro-child" and "pro-marriage" Christians to start talking to women who have this problem about it. Women aren't going to be empowered to choose better men unless we ask them to.

**Advice for Good Men**

Sometimes, men (because we are impressed with looks) will chase after women who are attractive, even if they

have these two flaws. I want Christian men to stop choosing bad women. Don't look at youth and beauty. Instead, choose good women who want to help you to achieve results for the Boss, women who follow your lead. It should be seen as a huge betrayal of God to give your time and money to women who aren't interested in serving God. Choose good women. Choose women who choose good men, and choose women who accept the obligation to treat good men in the right way to fuel those good men to do good things.

What's the best way to avoid women like the one in the TikTok? Avoid women who have red flags. Easy degrees are a red flag. Debt is a red flag. Tattoos are red flags. Piercings (especially nose and tongue) are a red flag. Spending a lot of money on make-up and cosmetics and cosmetic surgeries is a red flag. Excessive spending on displayed wealth is a red flag. Leftist politics is a red flag. Liking fiction like "50 Shades of Grey" is a red flag. Liking movies like "Titanic" and "The Notebook" etc. is a red flag. Seeing Christianity as life enhancement rather than self-sacrificial service to God is a red flag. Astrology and manifesting are red flags. Posting selfies of travel / entertainment are all red flags. Seeking attention with immodest photos is a red flag. Screaming and crying on camera for sympathy and money is a huge red flag. Men, we need to choose better women! Women who work for the Boss. Women who respect and value good leadership from good men.

By the way, if you're a good man, and you want to learn how to choose better women, check out the YouTube channels of Emily King and Jedediah Bila. If you're a woman who wants to avoid making the mistakes of the TikTok lady, you'll like them, too.

# Casey Luskin and Sean McDowell discuss human and chimpanzee DNA

**Wintery Knight** · 25 August 2025 · Archived copy · Original

I listened to a lot of different apologetics-related shows last week, and the very best one was Dr. Casey Luskin appearing on Dr. Sean McDowell's podcast to discuss new findings about chimpanzee and human DNA. Have you ever heard the argument for common descent that says "human and chimpanzee DNA only differ by 1% so of course they have a common ancestry"? I had a friend in high school who believed that. Let's see what the evidence says.

This is the YouTube episode from Sean's popular YouTube channel:

This is 64 minutes long.

Here are the questions from the interview:

- How did you first get interested in the topic of origins, and human origins in particular?
- What interested you in the topic of human-chimp genetic similarity?
- Can you give us some examples of people who've claimed that we're 99% genetically similar to chimps or apes or kind of 1% different from them as they use that to make an argument for common descent slash evolution?
- How do museums present the data to visitors?
- When did that data that questions the 1% chimp-human DNA difference first emerge?
- What is an "icon of evolution"?
- Does human-chimp genetic similarity falls into that category of "icons of evolution"?
- Do you have a sense of how significant this piece of evidence is for supporting Darwinian evolution?
- How was the original 1% genetic difference calculation made?
- So now we have new evidence that the 1% number was wrong. A new paper suggests that there is a 15%. How did they calculate that?
- Are these numbers being challenged? Are critics accepting them, saying this is the new data?
- Now, one response that I've heard is that our genome is full of what's called junk DNA. So, the differences are like repetitive DNA and thus junk. Thus, we can ignore them and get a much smaller number getting closer to that 1% if we assess the genome that way. Is that fair or reasonable?
- Humans can vary by as much as 10% difference in DNA, so is 15% between humans and chimps really a big difference?
- Does a small genenetic difference automatically imply common ancestry or it could be because of a common creator?
- Is this new 15% difference evidence against common descent?
- You've written a piece in the New York Post about how this is presented in museums. Did the museums respond at all? And if so, what did they say?
- Are there other areas of scientific misinformation at the Smithsonian that either you saw when you were there in person or you've just seen in your research?
- Where does this go next as far as you can see?
- If a follow-up comes in a journal article as prestigious as Nature and they go, you know what, we got it wrong, it's 0.5% genetic difference and we blew it, whether two years, five years, 10 years, will you come back and say, you know what, I'll own it.

If you don't have time to watch the whole video, Casey did write a nice recent article in the New York Post about it.

He writes:

> The National Museum of Natural History's Hall of Human Origins vastly distorts the scientific evidence on human evolution, seeking to convince visitors that there's nothing special about us as human beings.
>
> "There is only about a 1.2% genetic difference between modern humans and chimpanzees," the exhibit starts, with large photos of a human and apes. "You and chimpanzees [are] 98.8% genetically similar."
>
> No doubt you've heard this statistic before because many science popularizers say the same thing.
>
> Yet it's been known for years that these numbers are inaccurate. Thanks to a groundbreaking April paper in the journal Nature, we know just how wrong they are.
>
> For the first time, the paper reports "complete" sequences of the genomes of chimpanzees and other apes done from scratch. When we compare them to humans, we find our genomes are more like 15% genetically different from chimpanzees'. That means the true genetic differences between humans and chimps are more than 10 times greater than what the Smithsonian tells us.

It's very good for him to point this out, because we a lot of people go to these taxpayer-funded museums and believe things that we now know have been discredited by the progress of science. I had a friend in high school who saw this in some History Channel or Discovery Channel documentary, and he believed it. So I think it's important for Christians to know that there is evidence available now, to push back against the claim. Even if you don't know how to discuss it as well as Sean and Casey, you should know how to pull up this discussion, or maybe the New York Post article, and respond.

# Most Americans think cohabitation leads to a stable marriage, but what does the data say?

**Wintery Knight** · 26 August 2025 · Archived copy · Original

Men who cohabitate are not certain that the relationship is permanent

If there's one thing that ought to lead people to Christianity, it's the proven ability of the Christian moral rules to guide believers away from the sins that destroy them. A lot of modern "Christians" have reduced Christianity to being about their feelings and their community, while allowing the culture to determine their goals and moral boundaries. But that won't protect them from danger.

Cohabitation describes the situation of a couple moving into the same home and being sexually active, but without any legally-recognized commitment. It's extremely popular among young people today, and even Christians.

Consider this article from The Federalist about cohabitation:

> A new Pew Research Center study shows Americans both cohabitate ("live with an unmarried partner") and find cohabitation acceptable more than before.
>
> […]More young adults have cohabited than have married. Pew's analysis in the summer of 2019 of the National Survey of Family Growth found that, for the first time ever, the percentage of American adults aged 18-44 who have ever cohabited with a partner (59 percent) exceeded the percentage of those who have ever married (50 percent).

I thought this was very interesting, especially for the Christian parents and pastors who imagine that their lovely pious daughters all have a Christian worldview just because they sing in the church choir:

> Just 14 percent hold a view consistent with a biblical sexual ethic, that cohabitation with an unmarried romantic partner outside of marriage is "never acceptable."

Just to be clear, in my life I've met about 6 non-Christian men who cohabitated with women, and every single one

of them cohabitated with a Christian-raised woman. That should tell you what young women are being told about relationships in their homes and churches about sex and marriage. “Do whatever you want”.

So what purpose does cohabitation serve?

> A majority of Americans (69 percent) say that “it is acceptable for an unmarried couple to live together even if they don’t plan to get married.” They may assume that they can decrease their chances of a bad marriage and increase their chances of a good one by giving the relationship a cohabitation “test run.”
>
> […]A plurality of Americans believe cohabitating before marriage yields more successful unions. Nearly half of Americans (48 percent) believe that couples who live together before marriage “have a better chance of having a successful marriage.” This view is even more prevalent among young adults aged 18-29 (63 percent).
>
> Another 38 percent of all Americans say cohabitation “doesn’t make much difference” on marital success. Only 13 percent of Americans believe cohabiting couples have “a worse chance” of having a successful marriage.
>
> […]Most Americans believe cohabitating couples raise children just as well as married couples. Pew also surveyed people’s opinions about cohabiting couples raising children, and 59 percent of Americans declared that cohabiting couples “can raise children just as well as married couples.” Again, the younger respondents were most likely to have a favorable view of cohabitation: among adults aged 18 to 49, 67 percent agreed cohabiting couples do just as well, while 32 percent said: “Married couples do a better job raising children.”

Yes, cohabitation is seen as a test run, and it’s supposed to make stable marriage more likely and not be harmful to children at all.

But why think that a test run should be part of getting married? After all, when I buy a parrot from the pet store, I don’t expect to later return that parrot. Why not? Because I am not buying the parrot to enhance MY life. I am buying the parrot to make a commitment to care for the parrot. Whether the parrot fulfills any of my needs is irrelevant to me. I want the bird in my house so that I can decide what it eats, what it drinks, and invest myself into making it happy, according to its birdish nature. This is because I think that parrots have value in and of themselves, and they deserve a certain quality of life. When I buy the parrot, I am guaranteeing a permanent commitment to the bird to provide for its needs, physical and emotional. And that commitment carries forward to the time (now) when the bird is elderly, and can’t even fly up to his cage or down to the floor. He calls for me, and I go over and pick him up and move him. That’s commitment.

Cohabitation, on the other hand, is the practice of saying to another *human being*: “I am going to try you out as an entertaining commodity in my home, but if you don’t fulfill *my needs* then I’m going to send you right back.” That’s not a commitment. That’s self indulgence. It’s defining a relationship as *entertainment* that is designed to meet *my needs* and *make me happy*. And that’s because the concept of commitment in relationships is not presented to young people at any time in their lives. Not from parents. Not in churches. Not in the secular left culture as a whole. Everything is a consumer good designed for the purpose of entertainment – including people. It was only the Christian worldview that had a view of people as creatures made by God for eternal life, so that marriage was about guarding the other person’s faith, and building them up to achieve all the things that God wanted them to achieve for his purposes.

But does cohabitation really work to create stable relationships? After all, anyone can find a partner when they’re young and pretty. The real question is whether that partner will stick around when you’re old and ugly and can’t be as “fun” as you used to be.

Here’s a recent (2018) study on cohabitation and stability:

> A new study published in the *Journal of Marriage and Famil*y finds that the “premarital cohabitation effect” lives on, despite what you’ve likely heard. The premarital cohabitation effect is the finding that those who live

> together prior to marriage are more likely, not less, to struggle in marriage.
>
> […]Michael Rosenfeld and Katharina Roesler's new findings suggest that there remains an increased risk for divorce for those living together prior to marriage, and that prior studies suggesting the effect has gone away had a bias toward short versus longer-term effects. **They find that living together before marriage is associated with lower odds of divorce in the first year of marriage, but increases the odds of divorce in all other years tested, and this finding holds across decades of data.**

Strategy advice to those who debate this issue: just be aware that Team Secular Leftist is using papers that have short-range samples, which don't show the instability problem, because they deliberately cherry-pick recently married couples.

And what about children raised in cohabitating relationships?

> While Americans are optimistic about the ability of cohabiting couples to raise children, a study published by the American College of Pediatricians in 2014 reported that children whose parents cohabit face a higher risk of: "premature birth, school failure, lower education, more poverty during childhood and lower incomes as adults, more incarceration and behavior problems, single parenthood, medical neglect and chronic health problems both medical and psychiatric, more substance, alcohol and tobacco abuse, and child abuse," and that "a child conceived by a cohabiting woman is at 10 times higher risk of abortion compared to one conceived in marriage."

I'm just going to be blunt here. The majority of young people are progressives, and they vote for candidates who believe in abortion through all nine months of pregnancy, and even after birth. Why? Because they don't want to have their right to seek happiness impacted by the needs of other people. Progressives believe that children, if they exist at all, should enhance the lives of their adult owners. No one should be surprised that people who think that killing inconvenient children is moral are willing to inflict other bad outcomes on them by raising them in an unstable cohabitation environment.

# Creature design videos from the 2025 Dallas Conference on Science and Faith

**Wintery Knight** · 27 August 2025 · Archived copy · Original

I have been trying so hard to get in a weights session and a cardio session on BOTH days of the weekend. On Saturdays, I get to watch sports and funny men's videos. On Sundays, I'm watching sermons or videos on apologetics. This past Sunday, I watched two videos on animal design from the 2025 Dallas Conference on Science and Faith, and Tuesday night I watched two more.

First, I should say that Denton Bible Church is the best church in the United States for Christian apologetics. They have been doing apologetics events featuring people like William Lane Craig as far back as I can remember. The do apologetics conferences. And they do science and faith conferences. If you live near Denton, you should by all means attend this church. And if you like sermons, they have sermons, too. I'd be more inclined to trust these guys for sermons, because of their long, long, long record of apologetics.

So, on the past Sunday, I first watched this lecture with Eric Hedin on the design of the honeybee:

This lecture is only 35 minutes, but it talks about a lot of the strange behaviors of the honeybee, including their weird message-conveying dancing.

I found an article about it at Science and Culture (formerly Evolution News):

> The famous "waggle dance" that a scout bee performs back at the hive after discovering a food source communicates to other bees (by touching, since the inside of the hive is dark) both the distance and the direction of the food in relation to the current position of the sun. Bee keepers have found that if they reorient the honeycomb on which the bee is dancing, the undaunted bee will adapt its dance so that it still correctly communicates the proper direction to the food source. Sometimes the dancing scout bee will continue its dance for more than an hour, and over this time, the position of the sun has changed. In response, the bee will compensate for the sun's movement across the sky by gradually adjusting the angle of its dance.

So, the next one I watched was by Paul Nelson, and he was talking about the Monarch butterfly:

This one is only 30 minutes. Once, when I was at an intelligent design conference in the early 2000s, Paul Nelson came up to ask a question at one of the microphones. My foot was pushing out into the aisle, and he pinched it and said hello, and he knew my real name, because it was on my name tag. I have remembered it all these years. He is one of my favorite intelligent design people.

Finally, here is the one with Ray Bohlin, talking about the design of woodpeckers:

This one is only 15 minutes long!

I have a couple of red-headed woodpeckers in my backyard, and they had been pecking on my guttering very early in the morning. I got so mad at them, that I started bringing the bird feeders in at night, and putting them out in the late morning. That worked. I'm having a lot of fun watching these amazing little creatures, the older I get. I am putting out water, seeds, nuts, fruits, and nectar (if the hummingbirds are around) every morning, and taking it all back in at night. Next I have to build nesting boxes.

The last animal design video from this conference that has to do with design in nature is the one on plants, which is done by Emily and Daniel Reeves. It's called "Plants are Creatures, Too!"

Daniel is the biologist, and Emily is the biochemist.

I remember in the old days, I would have order videos like this on VHS tapes through a web site, or by mailing in an order form and a check! And then, because I watched them over and over, I would have to rewind them over and over. Things are so much easier now. I would really like it if more young people knew how to make a case for design in nature by watching these videos over and over. What I would like is for Christians to be thinking about their faith. Not just having feelings, not just having community, but really thinking “could this really be true?” and “how would I explain what I believe to someone who doesn’t accept the Bible as inspired by God?”

Do you all have something to watch during your workouts? I stopped going to pay gyms, and made a home gym in my living room (I have no furniture), and that allows me to watch wholesome constructive videos while I work out and cook meals. It encourages me to work out and cook my own meals, because I can learn something and keep my skills up.

# Is the hate speech of the secular left inciting violence against Christians?

**Wintery Knight** · 28 August 2025 · Archived copy · Original

Transgenderism is promoted by many groups: WPATH, GLAAD, hospitals like the Boston Children's Hospital, big tech companies like Google and Facebook, left-wing groups like the Human Rights Campaign, corporations like Pfizer and Johnson & Johnson, etc. Is all this advocacy for transgenderism causing violence against people who disagree with it, such as Bible-believing Christians?

The concern that Christians have is that when powerful groups promote gender dysphoria as natural and normal, then anyone who tells the truth about that can become a target. And it's not a stretch to see someone who is having mental issues turning to violence to get the approval and celebration that *they feel* will make their lifestyle choices work out for them – in the sense that compelled affirmation makes them feel good about their own choices.

By now, everyone has heard about Audrey Hale's attack on the Christian school in Nashville.

> Newly released pages purportedly from the Nashville Covenant School shooter's manifesto indicate that the shooter was strongly fixated on gender ideology and deeply held anger against Christianity.
>
> In the pages, released Wednesday by The Daily Wire, trans-identifying shooter Audrey Hale condemns her parents, harshly criticizes Christians, and fantasizes about her "imaginary penis." The pages come after months of stonewalling from authorities, who refused to confirm or deny a previous set of manifesto pages commentator Steven Crowder released in November.

On Wednesday, there was a new shooting by a new transgender shooter, this time targeting a Catholic school.

Daily Signal reports:

> The man who opened fire at a Minneapolis Catholic school Wednesday identified himself by two names, and those names match a court record for a name change in 2019.
>
> Two children, ages 8 and 10, died in the shooting, and the shooter injured 17 others. Authorities found the gunman dead at the scene. The FBI is investigating the shooting as an act of domestic terrorism and a hate crime targeting Catholics, FBI Director Kash Patel posted on X.
>
> "The shooter has been identified as Robin Westman, a male born as Robert Westman," Patel wrote. "The FBI will continue to provide updates on our ongoing investigation with the public as we are able."
>
> Law enforcement sources confirmed the suspect's identity as Robert Westman or Robin Westman in speaking with Fox News. The New York Post also reported that police identified Westman in a news conference and said Westman "has been identified as a transgender woman."

Just regarding the motive, the shooter did not like Jesus, and presumably followers of Jesus.

The Post Millennial explains:

> The alleged shooter in Wednesday's deadly attack at Annunciation Catholic Church and School in Minneapolis… appears to have posted a chilling video on YouTube before the massacre that makes several pop culture references as well as references to other shooters. In the footage, Westman can be seen displaying multiple firearms and ammunition magazines, as well as a target board with an image of Jesus Christ taped to it.

Now, you might remember that Minnesota is famous for their seculalism and leftism. These people aim to be "good

without God", so let's see some "objective morality" from the secular left.

Here's an article from The Post Millennial:

> In the wake of a devastating mass shooting at Annunciation Catholic School that left two children dead and 17 others injured, Minneapolis Mayor Jacob Frey preached about transgender rights during a press conference after it was revealed that the trans male killer identified as a woman.
>
> "I have heard about a whole lot of hate that's being directed at our trans community," Frey told reporters at a press briefing Wednesday afternoon.

The mayor of Minneapolis, MN is – of course – a Democrat. He has nothing good to say about Christians, but lots of good to say about transgenders. Does he think that the shooting was justified, because of disagreement with transgenderism? It's almost like he is telling Christians (the victims) not to cause more shootings by disagreeing with his transgender agenda. This certainly is an escalation from the traditional response of "don't disagree with me, or I'll end myself". Now it sounds like "don't disagree with me, or I'll end you". There were some voices saying similar things about the Nashville shooting, that it was provoked by those hateful Christians.

And in another article from The Post Millennial, the mayor says:

> "Don't just say this is about thoughts and prayers right now, these kids were literally praying."
>
> Minneapolis Mayor Jacob Frey delivered a statement on Wednesday after a deadly shooting at Annunciation Catholic School, rejecting "thoughts and prayers."

Andy Ngo, who follows the violence of "Trantifa" and other leftists pretty closely, tweeted this:

We don't know the shooter's motive yet. A full investigation is needed to find out whether the motives are anti-Christian. But, there are several anti-Christian quotes from the shooter, such as the saying "Where's your God now?"

More from that article: no mention of a father in the home, but:

> Fox News reported that his mother, who worked at the school before retiring in 2021, signed off on his gender transition as a minor.

Many leftist women today are transing their children, divorcing fathers in order to get a free hand from the family courts to do it. I've blogged several examples: this one and this one and this one. I have a friend whose ex-wife is transing his kid against his will. She is making him pay for it, too. I am left to wonder if the ejection of the father from the home (69% of the time the woman initiates divorce), and then the use false accusations to get full custody, causes the child's mental issues. Children need their fathers.

By the way, be careful what corporate news sources you rely on, because they can distort the truth for their own leftist agenda.

Daily Caller explains: (archived)

> CNN senior justice correspondent Evan Perez inaccurately claimed Wednesday that semiautomatic firearms could fire "dozens of bullets" with a single pull of the trigger while covering a Minneapolis shooting.
>
> […]"What has incorrectly been termed an 'assault weapon' is a semi-automatic firearm that fires just one bullet with each pull of the trigger (versus a fully automatic firearm — machine gun — which continues to shoot until the trigger is released)," the National Shooting Sports Foundation (NSSF) said in a fact sheet.

And another one from The Federalist about ABC News:

> Few moments best capture ABC News' reputation as "propaganda press" better than anchor Aaron Katersky's misleading coverage of the alleged anti-Christian, anti-Trump Minneapolis school shooter — who Katersky effectively portrayed as a Trump supporter on Wednesday.
>
> […]"We've also been going through [the video manifesto] and can tell you there are crude diagrams of the church. There are also photos of the weapons, and they include all sorts of writings, the names of past mass shooters, criticism of Israel, the name of President Trump written on the guns," Katersky said Wednesday.
>
> […]Katersky omitted the actual full inscription related to Trump revealed in the videos, which was: "Kill D*****d T***p." Casual listeners who didn't see the footage of the weapons themselves or read the manifesto could easily walk away thinking Trump's name on the weapon meant allegiance to him, not homicidal rage against him.

The Federalist also has a post entitled "CNN, NYT, USA Today All Publish Stories About Shooter Without Mentioning His Trans Identity".

Would you like to see federal law enforcement do something about hate speech from the secular left that incites violence against Christians and conservatives?

# Two reasons why Christians and conservatives should not donate to United Way

**Wintery Knight** · 29 August 2025 · Archived copy · Original

Well, it's that time of year again, when corporations bully their employees into donating to the United Way. I thought it might be a good idea to urge all Bible-believing Christians to avoid donating to the United Way. *Please share this post if you agree with it!*

Let's start with abortion. The United Way gives TONS of money to fund abortion providers.

In 2008, United Way affiliates send $1.9 million to Planned Parenthood:

> The national United Way does fund Planned Parenthood; their website states:
>
> United Way funded programs through Planned Parenthood include community health maintenance, e.g. communicable disease prevention; medical care service; family planning; health education; public awareness services; and family preservation and strengthening services, e.g. counseling and family life education.
>
> Nationally in 2008, local United Ways distributed an estimated $1.9 million to Planned Parenthood agencies.
>
> Any finances being donated to Planned Parenthood (even if not specifically for abortion services) will free up more of their money to be used toward abortion services.

In 2015, United Way sent $3 million to Planned Parenthood:

> Last year, on the heels of shocking videos showing the Planned Parenthood abortion business selling the body parts of aborted babies, a new expose' from a group that monitors corporations that finance the abortion giant reveals the United Way is a major donor. That expose found United Way agencies giving $2 million to the abortion giant.
>
> A new expose' released this week shows that figure has increased to $3 million.

In 2016, United Way sent $3 million to Planned Parenthood:

> Analysis of the most recent IRS Form 990 filings and other documentation found 62 United Way affiliates sent $2,756,799 to Planned Parenthood abortion organizations in tax year 2016. 2ndVote's latest findings indicate an increase of $168,806 from the $2,590,994 United Way funneled to Planned Parenthood in 2015.

We're living in a time when abortion rights involves such issues as sex-selection abortions, race-selection abortions, covering up statutory rapists, Democrat support for infanticide, attacking Supreme Court nominee Brett Kavanaugh, selling the body parts of unborn babies, etc. I don't think we can count on United Way to come down on the right side of these issues. We're already being forced to fund abortions with our tax dollars, thanks to Democrats. I don't think we should give any more money to abortion providers and their secular leftist allies.

That's abortion. What about gay rights? We've seen a lot of pressure on traditional values coming from the secular left lately. They redefined marriage AGAIN to deprive children of their biological mothers or fathers. They're pushing for the Equality Act, which would have huge religious liberty repercussions for Christians.

Texas attorney Maria Martinez explains on the American Thinker:

> The Equality Act is more draconian that any state or city conversion therapy ban to date because it takes away the traditional constitutional exemption for religious freedom. The act specifically states that the Religious Freedom Restoration Act (RFRA) may not be invoked as a defense, marking the *first time in history that*

> *Congress has limited the reach of RFRA*. This means that it could become illegal for Christian pastors, churches, schools, and ministries to communicate a message that sexual orientation or gender identity can change. The Equality Act is unprecedented in its overreach, impacting even adults who are *willingly seeking counseling*.
>
> By contrast, therapy of any kind that pushes a person *toward* same-sex attraction or gender transition is not impacted by the law at all.
>
> Banning counseling isn't the only thing the Equality Act will do:

> - Parents could lose custody of their children if they decline to assist in their gender transition. Parents in Ohio recently lost custody of their female child because they would not give her testosterone supplements to help her "transition" to look like a male.

> - Doctors and hospitals could be subject to lawsuits for refusing to perform so-called "sex change" surgeries. In California and New Jersey, Catholic hospitals are already being sued for discrimination for refusing to perform these surgeries.

> - Battered women's shelters could be required to admit members of the opposite sex. In Anchorage, Alaska, a male who was refused access to a shelter for abused and trafficked women sued the shelter for "gender identity discrimination."

> - Faith-based adoption and foster care agencies that believe that children do best with both a mother and a father could be forced to shut down. This has already occurred in at least six states in this country.

I wonder what United Way thinks about attacks on Bible-believing Christians by LGBT activists? I posted what they shared on Facebook at the top of this post, and this is what I found on their Twitter:

United Way Twitter Gay Rights Pride Month LGBT

I don't find that very encouraging, do you?

As a Bible-believing Christian, maybe I would be better off giving money to an organization that protects religious liberty, like Alliance Defending Freedom. I understand that many people who call themselves Christians think that the United Way's positions are compatible with the Bible. But not everyone who calls herself a Christian actually takes the Bible seriously. Especially when it interferes with their career advancement and peer approval. This is especially true of people who work in Human Resources.

## Please, don't give money to the United Way

You don't HAVE to give money to the United Way, just because the godless progressives in your office try to bully you into it. Instead, why not send the money to the Life Training Institute, or Ratio Christi, or Alliance Defending Freedom? These are groups do operate on Bible-based principles. I do think that Christians need to be careful about who they donate their money to. It doesn't make sense for Christians to get up and go to work and earn money, and then give it away to anti-Christian groups who want Christianity to disappear from American life. Paul talks about how God rewards those who give gifts to partner for the gospel in Philippians. Make sure that you are not wasting your money on anything less.

# William Lane Craig debates Austin Dacey: Does God Exist?

**Wintery Knight** · 30 August 2025 · Archived copy · Original

Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

**The debaters:**

- William Lane Craig
- Austin Dacey

**The video:** (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

**Dr. Craig's opening statement:**

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument)  God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

**Dr. Dacey's opening argument:**

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

**One final point:**

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

# Why is Jen Hatmaker popular with evangelical women?

**Wintery Knight** · 31 August 2025 · Archived copy · Original

I noticed from the latest round-up of Truthbomb Apologetics that Chad had found some interesting news about Jen Hatmaker. I remember that Jen Hatmaker, like Beth Moore, used to be a Southern Baptist and then left the denomination. I never pay much attention to these popular women. I prefer Walter Bradley, Stephen C. Meyer, Jay Richards, etc. Let's see why they are different.

First, let's see the latest news about Jen Hatmaker, in the far-left New York Times: (archived)

> Jen Hatmaker went through a drastic middle-age crisis like that. Twice. Hatmaker, who is 51, had built a career as a Christian women's influencer, best-selling author and TV personality — all along modeling a lighthearted, relatable yet enviable family lifestyle for evangelical women. Then, about a decade ago, she went through a public shift away from some of her most conservative stances on things like gay marriage.

The thing is, I want to know why she was a Christian influencer in the first place. When I am picking a Christian influencer, I am picking people who allow me to defend the Boss and disciple Christians in areas that are being challenged. So, I care about what James Tour says about the origin of life. I care about what Jay Richards says about economics. I care about what Sean McDowell says about the gospels. Why would I care about someone who makes me feel things about my own life? There is a war on, and I want to know how to train, fight, lead and win about what's actually true. I don't have a me-centered view of Christianity. I am on a truth quest, not a happiness quest.

More from the article:

> **On your website, you say, "I used to be a darling of the evangelical women's subculture, but now I am a bit of a problem child." How did you become a darling?** I grew up in a really traditional, regimented Christian environment, the Southern Baptist world. I had always been good at being good, so that was a great environment for me to succeed in because it's rules based: This is what we do, this is what we don't do, this is what we believe, this what we don't believe. I went to a Baptist college, and I married a ministry major. We immediately went into full-time ministry. But the way that it works in church is a two-for-one approach: His job was my second job. I was a teacher, but I was at every single church thing that existed. Then when I was 29, I wrote my first book. Miraculously it got published, it became a five-book contract, and thus began my ascent into evangelical lady subculture.

Notice what she says here, that the Southern Baptist world is a "rules based" world. And that's what I've seen as well, and I would extend it to every conservative denomination. What's emphasized there is behaviors and community. What is not emphasized is truth. That's why they produce people like Russell Moore and Brent Leatherwood. Those people are great at feeling good and being liked by non-Christians. But they have literally no knowledge or skills when it comes to defending the Bible's truth claims and commandments. They don't speak or write about evidential apologetics, and they have no evidence-based defense for any of the Bible's moral teachings that would work on a non-Christian.

My view of Christianity is totally different from their "I'll follow the parent and church rules, and that entitles me to happiness, community and success". My view is "the Bible is full of truth claims and moral commands. Jesus gave arguments and evidence for those truth claims and commands. I have access to the Holy Spirit to help me do the same. How can I manage the resources that God has entrusted to me well, so that I can promote his truth and commands most powerfully and persuasively?"

I just don't have the expectation that "following the rules" will lead to a happy life of social acceptance. When I read military history, what I see is a lot of people sacrificing their happiness and even safety in order to serve their

commanding officer. (2 Tim 2:3-4) Not sure how anyone can read the Bible and not get the idea that with respect to God's purposes in the world, our happiness and popularity are *expendable*. Also, people who suffer while following the Boss are the most honorable and blessed. I'm really wondering whether people like Jen Hatmaker, Rachel Hollis, Glennon Doyle Melton, etc. have ever read and understood the Bible at all.

Gay Rights Women Pride Feminism

Apparently, getting soft on Jesus' definition of marriage is a big winner with evangelical women:

> Maybe 10 days before the 2016 election, I gave an interview to the Religious News Service in which I said, I've changed my mind on this, and I'm in full affirmation of the L.G.B.T.Q.I.A. community. That was it. My books were pulled off shelves the next day. My most successful book was put out of print. All my speaking engagements were canceled. My publisher put out a press release the next day against me. I thought my career was over, but then to my surprise, my community began backfilling with hundreds of thousands of primarily women who were in a similar seat as me going, This is what we were raised in, this is what we were taught, but this is no longer holding. That began a whole new period of my life.

So, I am pretty strong on defending marriage. I've written secular cases against no-fault divorce, the sexual revolution, cohabitation, premarital sex, same-sex marriage, etc. Rose and I have done podcast episodes about it. And in every case, I'm making logical arguments, I'm quoting secular data, like studies on how children do best with their biological mother and father. But, I guess knowing how to fight to defend the Bible is not a really big priority in conservative denominations. Instead, they prefer feminized priorities: making people feel good, making people be liked. It's like it doesn't matter to anyone what Jesus says about sexual issues, because Jesus has a higher goal: making his followers feel good and be liked by non-Christians. And that's what makes women like Hatmaker and Moore famous in evangelical circles.

Well, I don't know anything about Christian women. I don't read books by the authors that are popular with women. I don't listen to the music that is popular with women. I don't watch the movies that are popular with women. I just don't understand how women can go through a Christian upbringing and then come out like Jen Hatmaker, raging against chastity and natural marriage, and not bothering to do a stitch of actual research about either. When I go to a car mechanic, I want an expert to fix the car. Why do so many Christian women choose someone who is not an expert at anything related to Christian truth and ethics?

Women Protesting

**My thoughts**

I asked Grok why Hatmaker and Moore are so popular with evangelical women when they can't advocate for the Bible's truth claims and moral teachings with reason and evidence, the way that Jesus and Paul, etc. did in the Bible when dealing with skeptics and enemies.

And here is what Grok said:

> Jen Hatmaker and Beth Moore's popularity among evangelical women stems from their relatable personas, emotional authenticity, and ability to connect through storytelling, social media, and accessible teachings. Hatmaker's humor and transparency about family life, combined with Moore's passionate Bible studies, resonate with women seeking inspiration and community, often filling gaps left by male-dominated church structures. Their platforms, amplified by books, podcasts, and events, create a sense of intimacy and empowerment, appealing to women navigating faith in modern contexts.
>
> Critically, their appeal lacks the intellectual rigor of apologists like Jay Richards or William Lane Craig, focusing instead on emotional engagement over evidential apologetics. Their shift toward progressive stances—Hatmaker's support for gay marriage and abortion rights, Moore's critiques of evangelical Trumpism—diverges from traditional evangelical values, yet retains followers due to their emphasis on compassion and inclusion. This may reflect some women's preference for affirming, less confrontational messages, possibly tied to cultural trends toward entitlement or people-pleasing, though it risks diluting doctrinal accountability. Their limited engagement against feminism, socialism, or atheism, and alignment with leftist politics, suggests their influence lies more in emotional resonance than theological or ideological consistency, which may not deter women prioritizing relatability over orthodoxy.

I would never rely on someone like this do achieve anything that had to work in the real world.

I always wanted to partner with Christian women who advocate for God with non-Christians using reason and evidence. If you look at my podcast with Desert Rose, that's what I think women should be like. In that podcast, I promote women's voices who I admire and respect like Natasha Crain, Shanda Fulbright, Terrell Clemmons, etc. But it sure does seem like the bulk of Christian women have a totally different way of approaching Christianity than I do.

# Are unions good for American workers?

**Wintery Knight** · 1 September 2025 · Archived copy · Original

I wanted to write a post about unions for Labor day. I have to be nice, because my conservative neighbor to the north really likes unions, and there are conservative people who work in unions. In fact, many people who work in unions don't like that they are forced to pay union dues in order to work, because they know those union dues go straight to the secular left, to push for leftist policies.

Let's start with this article from John Stossel, that appeared in Daily Signal, because it explains how unions like the Teamsters work:

> Another was Yellow Corp—once one of the largest freight carriers in America.
>
> Then the Teamsters threatened to strike, demanding faster payments of healthcare and pension benefits.
>
> The company warned that a strike could bankrupt it.
>
> But O'Brien kept pushing, saying, "The company has two more days to fulfill its obligations, or we will strike. Teamsters at Yellow are furious and ready to act!"
>
> Yellow gave in. The strike was averted.
>
> Days later … the trucking company shut down for good.
>
> Thirty thousand people lost their jobs.
>
> Asked if he felt responsible for the lost jobs, O'Brien said, "No, not at all … they were so mismanaged."

I think a case can be made for private sector unions, but not public sector unions. Public sector unions are unions composed of government workers.

Here is an article written by my favorite economist Thomas Sowell. As usual, Sowell is able to dig around in the past to show you how policies that sounds so good to the ears have worked out so badly when tried.

He writes:

> The old-time, legendary labor leader John L. Lewis called so many strikes in the coal mines that many people switched to using oil instead, because they couldn't depend on coal deliveries. A professor of labor economics at the University of Chicago called John L. Lewis "the world's greatest oil salesman."
>
> There is no question that Lewis' United Mine Workers Union raised the pay and other benefits for coal miners. But the higher costs of producing coal not only led many consumers to switch to oil, these costs also led coal companies to substitute machinery for labor, reducing the number of miners.
>
> By the 1960s, many coal-mining towns were almost ghost towns. But few people connected the dots back to the glory years of John L. Lewis. The United Mine Workers Union did not kill the goose that laid the golden eggs, but it created a situation where fewer of those golden eggs reached the miners.
>
> It was much the same story in the automobile industry and the steel industry, where large pensions and costly work rules drove up the prices of finished products and drove down the number of jobs. There is a reason why there was a major decline in the proportion of private sector employees who joined unions. It was not just the number of union workers who ended up losing their jobs. Other workers saw the handwriting on the wall and refused to join unions.

So, just think about how unions work on Labor Day, and ask yourself whether they are good for anyone except the union bosses. I do think that a case can be made for private sector labor unions, as long as they let workers who want to join opt-in voluntarily. But I don't think any case can be made for public sector unions. They end up costing

taxpayers a lot of money, and they can't be stopped by a company going out of business. That's why we have a $37 trillion national debt, and our children (and children's children) will be the ones who have to pay it off.

# Why do so many ordinary Americans distrust the medical industry?

**Wintery Knight** · 2 September 2025 · Archived copy · Original

I was having a conversation about trust in the medical industry with my doctor, and he told me that his patients were just being tricked by "social media", whereas doctors like him are "evidence-based". First of all, the people I follow on social media are now running the NIH, FDA and CDC. So now I am the science. Second of all, the public's distrust of doctors is based on evidence.

Let's take a look at an article from the Manhattan Institute's City Journal by Leon Sapir about the American Medical Association:

> The American Medical Association (AMA) is the largest and most powerful doctors' organization in the United States. It has also consistently supported pediatric medical transition, or "gender-affirming care," which includes puberty blockers, cross-sex hormones, and surgeries administered to minors. The AMA has passed a resolution promising to protect these procedures, joined an amicus brief in a lawsuit challenging a state age-restriction law, and written a letter urging state governors to veto similar legislation.

So, I think what consumers of medical services are seeing what the professional body of doctors says about transing kids, and they are thinking "gender dysphoria is a mental illness, and you cannot treat it with hormone replacement, and sex mutilation surgeries". We are not just thinking about long-term consequences like infertility and continuous expensive treatments. Many of these doctors aren't citing the studies at all, just asking parents "would you rather have a dead girl or a live boy?" That not evidence-based.

More:

> The AMA has done all this despite the findings from systematic reviews—the gold standard of evidence-based medicine (EBM)—of weak evidence for these treatments' mental health benefits, and despite the corresponding health risks.
>
> […]Skeptics of the AMA's position have wondered how a professional medical organization could have ignored systematic reviews. New videos published by the Daily Wire provide a possible answer. The videos reveal the AMA's president, the Michigan-based otolaryngologist Bobby Mukkamala, making false claims about pediatric gender medicine and demonstrating ignorance of basic concepts in EBM.
>
> […]In accordance with his belief about expertise, Mukkamala recommended that a legislator consult with one gender doctor in particular, fellow Michigander Jesse Krikorian. The Daily Wire videos also reveal that Krikorian, like Mukkamala, is unfamiliar with basic principles of EBM and with existing research on pediatric gender medicine.

Now, my doctor would probably have a very negative view of parents ability to form opinions about health care policy. But actually, ordinary people like me are following the studies closely, and ordinary people like you are reading about the studies, too.

The AMA's stance contradicts years of research I've covered, including:

- New study: Risks associated with pediatric "gender-affirming" care
- New study: Transgender surgeries linked to suicidal ideation, depression
- New study: gender-affirming surgery associated with suicide attempts
- Pre-ban study: 53% of mothers with gender-confused boys have mental illness
- New study: Significant parallels found between anorexia and gender dysphoria
- New study: most children suffering from gender confusion grow out of it

- New study: Mental health issues persist after receiving “gender-affirming” treatment
- Study: “social contagion” is a major factor in teen and young adult gender dysphoria
- New study: psychotherapy improves mental health of autistic teens with gender dysphoria
- Controversial study on Rapid Onset Gender Dysphoria and transgenderism re-published

The UK’s Cass Review, which I discussed in my May 2025 post linked above, is a gold-standard analysis. It found no consistent mental health benefits from puberty blockers or hormones, yet the AMA pushes these treatments regardless. I’m blogging about the gold standard studies, but AMA people think that ordinary people are not following the science. We are. Christians and conservatives bound our worldviews off of what science tells us. We are not being swayed by Big Medicine and Big LGBT to suppress the science. The AMA argues gender-affirming care reduces distress, but the Cass Review and other studies show no consistent mental health benefits.

The rest of that City Journal article talks about some of the myths that are believed by senior people at the AMA. (Either they are deliberately lying because transing kids is “a big money-maker“, or they are just ignorant of the research)

Here’s one example:

> The AMA president… asserted that the suicide rate— not suicidal ideation or attempts, but deaths by suicide—among people who identify as transgender is between “50 and 70 percent.” He was clearly implying that gender-transition procedures for minors are necessary to prevent these tragic outcomes.
>
> This claim is baseless. Indeed, even the most outspoken advocates of pediatric transition refrain from saying that suicide—as opposed to suicidal ideation or attempts—is this high among trans-identifying youth… Last December, ACLU lawyer and LGBTQ & HIV Project co-director Chase Strangio admitted in a Supreme Court hearing that “suicide, thankfully and admittedly, is rare” among trans-identifying youth.
>
> […]No credible evidence shows that medical transition resolves or lowers the rate of suicidal behavior, and some evidence suggests that suicide risk remains significantly elevated—though still nowhere near the figures cited by Mukkamala—following medical transition.

I think my doctor is probably thinking that rank-and-file Americans are not following these issues closely. We interviewed Dr. Jay Richards on our podcast, who is one of the experts on this issue at the Heritage Foundation think tank. I follow Jay Richards on Twitter, and he tweets out all the studies that he expects ordinary Americans to read them – at least the abstracts!

Heritage is a think tank that influences legislation and policy in the federal government. I read everything that Jay tweets, and that’s how I find all these studies. So, maybe social media is not such a bad thing, if it leads to the studies. It’s certainly a lot better than listening to NPR and reading the New York Times and the Washington Post and expecting to have accurate views about these topics.

# I'm adding the waiting time problem to my list of scientific evidences for God

**Wintery Knight** · 3 September 2025 · Archived copy · Original

I keep a list of all of the scientific evidences that are incompatible with naturalism / materialism / atheism. After our podcast episode with Gunter Bechly, I learned a new argument that he called "the waiting time problem". I've been asking around to see how respected this argument is from all sides, and I found out that even naturalists agree that the problem is a real problem for naturalism.

So, let me tell you what it is first, with this article from Science and Culture.

Let me explain what the waiting time problem is first. The waiting time problem is a challenge to Darwinian evolution based on paleontology and population genetics. Population genetics explains microevolution, like germs building up resistance to drugs. But the same calculations that support microevolution reveal that geological timeframes from paleontology are too short for the genetic changes needed for major evolutionary transitions.

How many mutations are needed for an advantageous adaptation that natural selection can select for? Complex adaptations require "coordinated mutations". Coordinated mutations are when two or more genetic changes happen together, each harmless on its own, but together they create a useful trait that natural selection can pass on to future generations. Many adaptations need these mutations, as shown by research and the fact that many traits are controlled by multiple genes.

So the article, which is written by Bechly explains the argument:

> So here is how the waiting time problem is derived:

- Evolution is supposed to proceed by random mutation and natural/sexual selection.
- Selection can only work on mutations with a positive or negative adaptive value.
- At least some adaptive advantages require two or more coordinated mutations.
- Any evolutionary adaptation requires mutations that have to arise and spread in a population. Thus, all mutations have two time constraints that mainly depend on mutation rate, population size, and generation time: the waiting time for a mutation to occur and the waiting time for the fixation of this mutation.
- Question: Does the history of life provide sufficient resources for evolution to accommodate these waiting times? The answer can be shown to be negative!
- Conclusion: Neo-Darwinism is mathematically refuted as a viable theory of macroevolution.

Now, what I care about is this. First, what does paleontology say is the window of time available for a complex adaptation? And second, what does population genetics say is a reasonable time to get a coordinate mutation that

can get you a complex adaptation?

Now, putting on my Darwinist hat, the first thing I thought of is that the time might be short, but the coordinated mutations would be easier to get with a very very large population. But, since I'm not a biologist, I was wrong – a large population has its own problem. Larger populations have a longer "fixation time". The fixation time is the time it takes for a new mutation to spread and become permanent in an entire population, so every individual has it.

Bechly explains:

> Indeed the waiting time problem is not just a simple problem but rather an inextricable dilemma, because however you change the crucial parameter of population size, it will always increase one of the two waiting times. With large population sizes the waiting time for a mutation to occur decreases, but fixation time increases (the same is true for neutral evolution). With small population sizes the waiting time for a mutation to occur increases, but fixation time decreases. Thus, there is no easy way for evolution to work around the waiting time problem, e.g. by means of genetic drift and the founder effect.

Why is this argument so wonderful? Because unlike many arguments that philosophers make, we can actually do math to prove this argument. This is the equivalent of me writing a unit test with the given, when, then structure. Given a known window of time from the fossil record, when evolving a coordinated mutation, then the time taken must be less than the window of time available.

Bechly says:

> The amazing power of the argument from the waiting time problem is that it does not rely on fuzzy concepts but actually allows you to do the math, based on the well-established mathematical apparatus of mainstream population genetics. All required parameters are either known empirically or their range can be reasonably estimated by comparisons with recent relatives (e.g., mutation rates, effective population sizes, generation turnover times, length of binding sites, etc). The fossil record and radiometric dating provide the data for the available windows of time.

So that's everything in the argument. Now we have to decide whether to add it to my awesome list of atheist-defeating evidence. How to decide? Well, we have to get people on the other side to agree with us that the window of time is too small, and the waiting time for coordinated mutations is too large. And they do! Let's take a look at the domain of human evolution, to see an example of a change that requires many, many coordinated mutations (if not done directly by an intelligent designer).

Bechly explains:

> Michael Behe (2007) in his book The Edge of Evolution made the argument that the waiting time for two coordinated mutations is prohibitive for the Neo-Darwinian mechanism of evolution to work. Behe used empirical data about an actual waiting time for a coordinated mutation that conveyed chloroquine drug resistance in malaria. Applying these empirical data on human evolution, by simply correcting for the much lower population size and much longer generation time, predicted a waiting time of 10^15 years, which is many orders of magnitude longer than the existence of our universe! The mainstream population geneticists Durrett & Schmidt (2008) criticized Behe's argument with a mathematical model and claimed that his calculated waiting time of 1015 years is unrealistic. However, their own calculations also resulted in a prohibitive waiting time of 216 million years for a single coordinated mutation in human evolution, which vastly exceeds the available window of time of only about 6 million years since the split of the human lineage and the chimp lineage from a common ancestor.
>
> Of course, when results from a theoretical model differ so greatly from experimental real world data, we should rather trust the real world data, because every model necessarily has to make certain simplifications that

> can introduce errors. Consequently, Behe's numbers are certainly closer to the true limits of the Darwinian mechanism than those of Durrett and Schmidt. Anyway, both numbers are prohibitive and refute the feasibility of a Darwinian mechanism of macroevolution.

So, even the naturalists agree that evolution doesn't work, because the 216 million years they calculated is still bigger than the 6 million years that are available for the macroevolution they want to explain.

But, and this is interesting, there is an application here to the recent post I wrote about the chimp – human DNA difference. Often thought to be 1%, the new evidence shows that it is closer to 15%. But the main thing is, Bechly says that you need MILLIONS of coordinated mutations to make all the changes to go from chimp to human:

> Using a different model, Sanford et al. (2015) applied a computer simulation to calculate the waiting times in human evolution based on reasonable estimates for an ancestral hominin population of 10,000 individuals and a generation turnover time of 20 years. They arrived at fixation times of 85 million years for a single codependent mutation, and 1.5-15.9 million years for a single specific point mutation. This is very remarkable and prohibitive, considering the fact that the assumed 5% difference in the human vs chimp genome translates to millions of mutations that had to arise and become fixed within 6 million years since the assumed separation of their respective lineages. This comes [in addition to] the waiting time problem for coordinated mutations but is a separate argument (see below).

Sanford, by the way is a brilliant scientist who also happens to be a young Earth creationist. But his paper appears in a mainstream scientific journal.

So, I think it's reasonable for me to add this argument to my list of scientific arguments against naturalism, and for a Creator / Designer.

Here is the updated list:

1. origin of the universe
2. cosmic fine-tuning
3. origin of life (specified complexity)
4. Cambrian explosion (and other explosions)
5. galactic, stellar and planetary habitability
6. molecular machines
7. non-material mind, e.g. – split brain surgery
8. the waiting time problem

Of course, there are philosophical arguments like "the moral argument" and "St. Thomas Augustine says" and "do you want fries with that?", but who cares about philosophy, when you can have SCIENCE! Scientific arguments are the best kind of arguments!

Do you know any more evidences that are solid enough to go on my list of evidences?

# The pipeline from divorce to school shootings

**Wintery Knight** · 4 September 2025 · Archived copy · Original

There was a recent school shooting in Minneapolis, MN, so in this post, I'll reflect on how to prevent more school shootings. People on the left say that we need to confiscate the weapons owned by law-abiding people, so that only the criminals and police will have guns. People on the right want to allow adults at the schools to train and carry weapons. But I have a different idea: let's ban divorce.

First, how many of the shooters are from divorced homes? This new article from The Federalist is very popular, and it has a lot of data. It starts off by mentioning that the Minneapolis school shooter's parents were divorced. But he's not the only one!

It says:

> A 2018 international academic study found a strong link between childhood separation from parents and an "elevated risk for later violent criminality." (The study specifically excluded children with deceased parents.) A subsequent nationwide analysis bolstered these results, finding a strong association between two-parent households and cities with markedly less crime. Indeed, nearly every school shooting in 2013 involved young men with divorced or never married parents.
>
> "The social scientific evidence about the connection between violence and broken homes could not be clearer," says Brad Wilcox, Distinguished University Professor of Sociology at the University of Virginia and considered a leading authority on marriage and family.
>
> Westman's parents divorced in 2013. Westman would have been about 12, on the cusp of adolescence. After the split, Westman, a biological male who later identified as a woman, bounced from school to school. And dad remarried — the shooter's manifesto mentions the step-mom.

So, when arguing social issues, it's not good to argue from one case here and one case there. We need a study that covers all the cases. If you don't use a study, then people will always say "well, I am special, I won't end up like that one person".

More data from the article:

> Decades of research also demonstrate solid connections between divorce and single-parent households, on the one hand, and other serious child outcomes, on the other. For example, boys in single mother households have twice the rate of juvenile delinquency. Divorce increases the risk for depression, anxiety, substance abuse, and suicide, which can be particularly acute during adolescence. The evidence Westman left behind exhibited deep levels of stress, self-loathing, and hate. Westman alluded to school suspensions and smoked marijuana. Then, after killing two children, Westman committed suicide, just like the Sandy Hook and Colorado school shooters.

If you've ever spoken to a police officer or read a book by J. Warner Wallace, then you'll know that a huge majority of men in prisons were raised fatherless.

The article says:

> According to a central finding from a 2024 marriage report, "young men from non-intact families are more likely to land in prison or jail than they are to graduate from college." Westman appears not to have even graduated from high school. Still, divorce rates remain high, marriage rates plummet, and innocent children die.

One of the things that people on the left like to do with studies is to say “well, this study is not applicable because it doesn’t look at a large enough sample size” or “this study is not applicable because it doesn’t look at a long enough time period”. That’s what they love to do with studies of fatherless kids. But some of the studies cited in that article are about over a million children, and over decades of time. So, you can’t dismiss these studies.

So, the next time that you get into a discussion about school shootings, ask the people on the secular left if they are willing to ban no-fault divorce. Typically, they will say no. Most divorces are initiated by women, and people want women to have divorce as an option. We don’t expect women to have to do the work to measure the man and then take responsibility for their choices. Society wants women to have a “get out of accountability free” card, just like they do with abortion. But as you can see, making divorce easy causes a lot of problems for children.

Now, some feminists will say “do you expect women to stay in unhappy marriages?” And the answer to that is, of course not. I think that the person who initiates the divorce should leave the marital home with the clothes on their back. Not one penny of family money, and no more access to kids, except if the remaining parent agrees to it. The parent who remains should keep everything. That would end divorce pretty quickly, and all the problems that arise from the fatherlessness that divorce causes. What do you think?

# New study: break-ups are harder for men than for women

**Wintery Knight** · 5 September 2025 · Archived copy · Original

I found a new 2024 study that is related to male-female romantic relationships! A lot of people think that men are less committed than women, but if you look at the data, men initiate fewer divorces than women, and they take break-ups a lot harder than women. And lesbian couples have the highest rates of divorce! Let's take a look at the data.

Here's the report on the new study, from the New York Post:

> Breaking up is hard to do — for men, anyway.
>
> That's because males care more about being in a relationship than females, a new study set to be published in Behavioural and Brain Sciences found, according to PsyPost.
>
> Researchers at the Humboldt University of Berlin are pouring cold water on the popular belief that gals are more desperate for a partner — saying that guys are more likely to experience loneliness after calling it quits, and are less likely to see the silver lining to the situation.
>
> The team analyzed more than 50 scientific studies on gender differences in heterosexual relationships to come up with their findings.

Women are more likely to initiate divorces than men:

> The results could explain why men are less likely than women to initiate a break-up when in a steady relationship — 70% of divorces are initiated by women, the experts stated.
>
> Men are also more likely to search for a partner and to be focused on entering into a serious relationship — perhaps because they have more to gain.
>
> "We know from numerous studies that women typically receive more emotional support from their social environment than men. Therefore, heterosexual men are more dependent on their partners to fulfill their emotional needs than heterosexual women," Iris Wahring, lead author of the study, said in a statement.
>
> "In short, steady relationships are psychologically more important for men than for women."

If you look at the instability rates of lesbians, they have the highest rates of relationship instability of any relationship arrangement.

> During the five years of marriage, lesbian spouses have twice the risk of divorce compared to heterosexual marriages. Only after 25 years of marriage this difference seems to be gone, the study shows. Same-sex male couples only have an 8 percent higher chance of getting divorced than heterosexual couples in that same period. Senior researcher Ruhne Zahl Olsen is not surprised by the results. They have been the same in other countries, he says to Aftenposten.
>
> […]For the survey, 5,187 same-sex couples and marriages entered between 1993 and 2018 were examined.

This is important, because in lesbian relationships, it's two women. So, you can't blame the high rate of instability / divorce on any man. There isn't any man there to blame!

Anyway, I thought this new study would be good for men. Men are always getting beaten up and blamed for everything. But not everything about men is bad. I don't mean the top 20% most attractive men, who have so many options that they don't have to be nice to any particular woman. I mean the vast majority of ordinary men who just work and live quiet lives. They are the ones who are good at commitment.

Something to think about for those who are wondering “where are all the good men?”. Men are good, you just have to choose the good character ones.

# William Lane Craig on the unexpected applicability of mathematics to nature

**Wintery Knight** · 6 September 2025 · Archived copy · Original

You might remember that Dr. Craig used a new argument in his debate with Lawrence Krauss in Melbourne, Australia.

My notes on the debate record it thus:

> The unreasonable effectiveness of mathematics:
>
> - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
> - Mathematical objects can either be abstract objects or useful fiction
> - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
> - But a divine mind that wants humans to understand nature is a better explanation for what we see

And now Dr. Craig has expanded on it in the Q&A section of his Reasonable Faith web site.

The question:

> Dear Dr Craig
>
> Firstly can I thank you for all your work. My faith in Christ has been enormously strengthened through studying your work in apologetics in particular and I have grown in confidence in my Christian witness.
>
> My question relates to numbers and mathematics as a whole. On the Defenders podcast you state that as God is the only self-existent, necessary being, numbers and mathematical objects, whilst being useful, don't actually exist as these too would exist necessarily and independently of God. If this is the case, how can it be that mathematics is so easily applied to the natural world? Surely if mathematics only existed in our minds, we would expect to see no correlation between it and how the physical world actually is?
>
> Michael
>
> United Kingdom

Excerpt from the answer:

> As philosopher of mathematics Mary Leng points out, for the non-theistic realist, the fact that physical reality behaves in line with the dictates of acausal mathematical entities existing beyond space and time is "a happy coincidence" (*Mathematics and Reality* [Oxford: Oxford University Press, 2010], p. 239). Think about it: If, *per impossibile*, all the abstract objects in the mathematical realm were to disappear overnight, there would be no effect on the physical world. This is simply to reiterate that abstract objects are causally inert. The idea that realism somehow accounts for the applicability of mathematics "is actually very counterintuitive," muses Mark Balaguer, a philosopher of mathematics. "The idea here is that in order to believe that the physical world has the nature that empirical science assigns to it, I have to believe that there are causally inert mathematical objects, existing outside of spacetime," an idea which is inherently implausible (*Platonism and Anti-Platonism in Mathematics* [New York: Oxford University Press, 1998], p. 136).
>
> By contrast, the theistic realist can argue that God has fashioned the world on the structure of the mathematical objects. This is essentially what Plato believed. The world has mathematical structure as a result.

This argument was also made by mechanical engineering professor Walter Bradley in a lecture he gave on scientific evidence for an intelligent designer. You can read an essay that covers some of the material in that lecture at Leadership University.

Excerpt:

> The physical universe is surprising in the simple mathematical form it assumes. All the basic laws of physics and fundamental relationships can be described on one side of one sheet of paper because they are so few in number and so simple in form (see table 1.1).
>
> […]It has been widely recognized for some time that nature assumes a form that is elegantly described by a relatively small number of simple, mathematical relationships, as previously noted in table 1.1. None of the various proposals presented later in this chapter to explain the complexity of the universe address this issue. Albert Einstein in a letter to a friend expressed his amazement that the universe takes such a form (Einstein 1956), saying:
>
> You find it strange that I consider the comprehensibility of the world to the degree that we may speak of such comprehensibility as a miracle or an eternal mystery. Well, a priori one should expect a chaotic world which cannot be in any way grasped through thought. . . . The kind of order created, for example, by Newton's theory of gravity is of quite a different kind. Even if the axioms of the theory are posited by a human being, the success of such an enterprise presupposes an order in the objective world of a high degree which one has no a priori right to expect. That is the "miracle" which grows increasingly persuasive with the increasing development of knowledge.
>
> Alexander Polykov (1986), one of the top physicists in Russia, commenting on the mathematical character of the universe, said: "We know that nature is described by the best of all possible mathematics because God created it." Paul Davies, an astrophysicist from England, says, "The equations of physics have in them incredible simplicity, elegance and beauty. That in itself is sufficient to prove to me that there must be a God who is responsible for these laws and responsible for the universe" (Davies 1984). Successful development of a unified field theory in the future would only add to this remarkable situation, further reducing the number of equations required to describe nature, indicating even further unity and integration in the natural phenomena than have been observed to date.

The whole paper that started this off is called "The Unreasonable Effectiveness of Mathematics", and it is a must read for advanced Christian defenders. You can read the whole thing here.

# How does church appear to someone raised in a non-Christian home?

**Wintery Knight** · 7 September 2025 · Archived copy · Original

My friend Wes posted an article about how communication is set up in the church, and why it's not effective at equipping Christians to defend their worldview in hostile environments. The article describes what I encountered in church, after I was raised in a non-Christian home and become a Christian on my own by reading the New Testament. The view presented in the essay is how I viewed the church, and is probably how most outsiders view church. I think it explains why young people leave the church in droves once they move out of their parents' houses.

The author writes:

> On the Internet, one soon discovers that many respected church leaders are quite unable to deal directly with opposing viewpoints. In fact, many of them can't even manage meaningful engagement with *other voices*. Their tweets may be entirely one-way conversations. They talk *at* their audiences. They can talk *about* other voices, but fail to talk *to* them, let alone *with* them. Their representations of opposing viewpoints reveal little direct exposure to the viewpoints in question.
>
> […]Around this point, it can start to dawn on one that many church leaders have only been trained in forms of discourse such as the sermon and, to a much lesser extent, the essay. Both forms privilege a single voice—their voice—and don't provide a natural space for response, questioning, and challenge. Their opinions have been assumed to be superior to opposing viewpoints, but have never been demonstrated to be so. While they may have spoken or written about opposing voices, they are quite unaccustomed to speaking or writing to them (not to mention listening to or being cross-examined by them). There are benefits to the fact that the sermon is a form of discourse that doesn't invite interruption or talking back, but not when this is the *only* form of discourse its practitioners are adept in.
>
> Many church leaders have been raised and trained in ideologically homogenous cultures or contexts that discouraged oppositional discourse. Many have been protected from hostile perspectives that might unsettle their faith. Throughout, their theological opinions and voices have been given a privileged status, immune from challenge. Nominal challenges could be brushed off by a reassertion of the monologue. They were safe to speak about and habitually misrepresent other voices to their hearers and readers, without needing to worry about those voices ever enjoying the power to answer them back. Many of the more widely read members of their congregations may have had an inkling of the weakness of their positions in the past: the Internet just makes it more apparent.

One of my friends who comments here as "Wintery's Friend" actually did his M. Div, and I think it was he who told me that his seminary had dropped the lone course in apologetics that had been part of the curriculum. Now seminary grads don't learn any opposing views. They just pre-suppose that the Bible is true in the same way that Mormons pre-suppose their Bible is true, or Muslims pre-suppose their Bible is true, etc.

More:

> If one's opinion has never been subjected to and tried by rigorous cross-examination, it probably isn't worth much. If one lacks the capacity to keep a level head when one's views are challenged, one's voice will be of limited use in most real world situations, where dialogue and dispute is the norm and where we have to think in conversation with people who disagree with us.
>
> The teachers of the Church provide the members of the Church with a model for their own thinking. The teacher of the Church does not just teach others *what* to believe, but also *how* to believe, and the process by which one arrives at a theological position. This is one reason why it is crucial that teachers 'show their

> working' on a regular basis. When teaching from a biblical text, for instance, the teacher isn't just teaching the meaning of that particular text, but how Scripture should be approached and interpreted more generally. An essential part of the teaching that the members of any church need is that of dealing with opposing viewpoints. One way or another, every church provides such teaching. However, the lesson conveyed in all too many churches is that opposing voices are to be dismissed, ignored, or 'answered' with a reactive reassertion of the dogmatic line, rather than a reasoned response.

You can imagine that the first questions that you'll be asked by a non-Christian co-worker would be things like "why think God exists?" and "why think the Bible is history rather than legend?". In order to answer those questions, you would have to know how to counter what a non-Christian believes. You would have to show them the reasons for your view.

Unfortunately, many of the conservative Christian leaders we trust think that the best way to be convincing is not to show your work, but just to speak Bible verses at people who don't accept the Bible as an authority. Some people attend church for 20 years, and they never meet a single person who didn't just assume that the Bible is trustworthy without doing an investigation first.

What's most surprising is that this fideistic view of Christianity is not even Biblical. The Biblical view of faith is that faith is trust in God, based on evidence. This is why Jesus offered his own resurrection as evidence to a generation of unbelievers. His miracles were also evidence offered to unbelievers. And the Old Testament is filled with examples of people like Isaiah presenting evidence to unbelievers. The fideist view sounds more like the Mormon "burning of the bosom" view. We can do better than that!

Look:

That debate has over 6 million views on YouTube. That's a debate with Christopher Hitchens, one of the most famous atheists of the last 100 years. In the post-debate comments, the atheist admitted he lost. Watch it. You won't find it in most churches, so you're going to have to learn it on your own. Without anyone's help. Don't be a spectator. Don't settle for youth pastor Christianity.

# The author of the books of Luke and Acts was an eyewitness to the life of Paul

**Wintery Knight** · 8 September 2025 · Archived copy · Original

I was listening to a friend give a talk on the book of Acts on the weekend. He had a number of interesting points, but the most interesting was from chapter 16. His point will help everyone who likes to answer questions about the historical basis for Christian faith. It has to do with the author of Acts, and why historians think that he was in contact with eyewitnesses to the life of Jesus.

Let's take a look at the passage from Acts 16:1-10 (NASB), and notice how Luke is talking about what Paul and his helper Timothy are doing:

> [1] Now *Paul* also came to Derbe and to Lystra. And a disciple was there, named Timothy, the son of a Jewish woman who was a believer, but his father was a Greek,
>
> [2] and he was well spoken of by the brothers *and sisters* who were in Lystra and Iconium.
>
> [3] Paul wanted this man to leave with him; and he took him and circumcised him because of the Jews who were in those parts, for they all knew that his father was a Greek.
>
> [4] Now while they were passing through the cities, they were delivering the ordinances for them to follow which had been determined by the apostles and elders in Jerusalem.
>
> [5] So the churches were being strengthened in the faith, and were increasing in number daily.
>
> [6] They passed through the Phrygian and Galatian region, after being forbidden by the Holy Spirit to speak the word in Asia;
>
> [7] and after they came to Mysia, they were trying to go into Bithynia, and the Spirit of Jesus did not allow them;
>
> [8] and passing by Mysia, they went down to Troas.
>
> [9] And a vision appeared to Paul in the night: a man of Macedonia was standing and pleading with him, and saying, "Come over to Macedonia and help us."
>
> [10] When he had seen the vision, we immediately sought to leave for Macedonia, concluding that God had called us to preach the gospel to them.

Now something interesting happens in the next few verses. Read them closely and see if you catch it:

> [11] So after setting sail from Troas, we ran a straight course to Samothrace, and on the following *day* to Neapolis;
>
> [12] and from there to Philippi, which is a leading city of the district of Macedonia, a *Roman* colony; and we were spending some days in this city.
>
> [13] And on the Sabbath day we went outside the gate to a riverside, where we were thinking that there was a place of prayer; and we sat down and began speaking to the women who had assembled.

Did you catch it? The narrator switches from the third-person ("they") to the first-person ("we"). And there are several more "we" passages in the book:

- Acts 16:10-17: The first "we passage" occurs during Paul's second missionary journey, starting with the departure for Macedonia and ending after the events in Philippi.
- Acts 20:5-15: The "we" perspective resumes during Paul's journey from Philippi to Miletus.
- Acts 21:1-18: The "we" narrative continues as Paul travels to Jerusalem.

- Acts 27:1-28:16: The final “we passage” covers Paul’s sea voyage to Rome.

Now, for the apologetic significance of this, let’s turn to William Lane Craig:

> The most obvious explanation is that the author had joined Paul on his evangelistic tour of the Mediterranean cities. In chapter 21 he accompanies Paul back to Palestine and finally to Jerusalem. What this means is that the author of Luke-Acts was in fact in first hand contact with the eyewitnesses of Jesus’s life and ministry in Jerusalem.
>
> […]There is no avoiding the conclusion that Luke-Acts was written by a traveling companion of Paul who had the opportunity to interview eyewitnesses to Jesus’s life while in Jerusalem. Who were some of these eyewitnesses? Perhaps we can get some clue by subtracting from the Gospel of Luke everything found in the other gospels and seeing what is peculiar to Luke. What you discover is that many of Luke’s peculiar narratives are connected to women who followed Jesus: people like Joanna and Susanna, and significantly, Mary, Jesus’s mother.

So, the author of Acts was an eyewitness to the life of Paul, and he was able to interview eyewitnesses to the life of Jesus.

But the best part of all is testability. My friend who gave the talk on Acts mentioned that many details that Luke recorded can be tested by archaeologists. And what do the archaeologists find?

Dr. Craig says:

> Was the author reliable in getting the facts straight? The book of Acts enables us to answer that question decisively. The book of Acts overlaps significantly with secular history of the ancient world, and the historical accuracy of Acts is indisputable. This has recently been demonstrated anew by Colin Hemer, a classical scholar who turned to New Testament studies, in his book The Book of Acts in the Setting of Hellenistic History. Hemer goes through the book of Acts with a fine-toothed comb, pulling out a wealth of historical knowledge, ranging from what would have been common knowledge down to details which only a local person would know. Again and again Luke’s accuracy is demonstrated: from the sailings of the Alexandrian corn fleet to the coastal terrain of the Mediterranean islands to the peculiar titles of local officials, Luke gets it right.
>
> According to Professor Sherwin-White, “For Acts the confirmation of historicity is overwhelming. Any attempt to reject its basic historicity even in matters of detail must now appear absurd.” The judgement of Sir William Ramsay, the world-famous archaeologist, still stands: “Luke is a historian of the first rank. This author should be placed along with the very greatest of historians.” Given Luke’s care and demonstrated reliability as well as his contact with eyewitnesses within the first generation after the events, this author is trustworthy.

I asked Grok about the accuracy of Luke, and Grok listed out the confirmed details, and concluded:

> While archaeology cannot confirm every detail in Luke and Acts, numerous findings—such as inscriptions, structures, and artifacts—corroborate the historical, geographical, and cultural settings described in these texts. The accuracy of Luke’s references to officials, places, and events lends credibility to his accounts, though some specifics remain debated.

It’s important to understand that the gospels are not trying to make people feel good and have community. They’re trying to tell you who God is and what God really did in history. It’s a bit scary to think “oh my, all this really happened”, but it really did, and we have to come to terms with it and adjust our goals and priorities.

# Study: galactic habitable zone depends on fine-tuning of cosmological constant

**Wintery Knight** · 9 September 2025 · Archived copy · Original

This is going to be old news to readers of this blog who are familiar with the Michael Strauss, Walter Bradley and Guillermo Gonzalez lectures on habitability and fine-tuning. But, it's nice to see these ideas show up in one of the most prestigious peer-reviewed science journals in the world (if not the most prestigious).

Here's the article from Science.

It says:

> Scientists have known for several years now that stars, galaxies, and almost everything in the universe is moving away from us (and from everything else) at a faster and faster pace. Now, it turns out that the unknown forces behind the rate of this accelerating expansion—a mathematical value called the cosmological constant—may play a previously unexplored role in creating the right conditions for life.
>
> That's the conclusion of a group of physicists who studied the effects of massive cosmic explosions, called gamma ray bursts, on planets. They found that when it comes to growing life, it's better to be far away from your neighbors—and the cosmological constant helps thin out the neighborhood.
>
> "In dense environments, you have many explosions, and you're too close to them," says cosmologist and theoretical physicist Raul Jimenez of the University of Barcelona in Spain and an author on the new study. "It's best to be in the outskirts, or in regions that have not been highly populated by small galaxies—and that's exactly where the Milky Way is."
>
> Jimenez and his team had previously shown that gamma ray bursts could cause mass extinctions or make planets inhospitable to life by zapping them with radiation and destroying their ozone layer. The bursts channel the radiation into tight beams so powerful that one of them sweeping through a star system could wipe out planets in another galaxy. For their latest work, published this month in *Physical Review Letters*, they wanted to apply those findings on a broader scale and determine what type of universe would be most likely to support life.
>
> The research is the latest investigation to touch on the so-called anthropic principle: the idea that in some sense the universe is tuned for the emergence of intelligent life. If the forces of nature were much stronger or weaker than physicists observe, proponents note, crucial building blocks of life—such fundamental particles, atoms, or the long-chain molecules needed for the chemistry of life—might not have formed, resulting in a sterile or even completely chaotic universe.

Basically, the best place for a galaxy that permits complex, embodied life to exist is one where you can pick up enough heavy elements from dying stars nearby, but not be in an area that is so crowded by stars that you will be wiped out by intense gamma radiation when they die. So, you want to be between the "arms" of a spiral galaxy, close enough to the areas with a lot of stars, and not too far away. But you can only get that pattern of stars if the universe is expanding at the right rate.

More:

> **As it turns out, our universe seems to get it just about right. The existing cosmological constant means the rate of expansion is large enough that it minimizes planets' exposure to gamma ray bursts, but small enough to form lots of hydrogen-burning stars around which life can exist. (A faster expansion rate would make it hard for gas clouds to collapse into stars.)**
>
> Jimenez says the expansion of the universe played a bigger role in creating habitable worlds than he expected.

> "It was surprising to me that you do need the cosmological constant to clear out the region and make it more suburbanlike," he says.

Remember, this is only one of many characteristics that must obtain in order for a have a location in the universe that can support complex, embodied life of any conceivable kind.

The galactic habitable zone (GHZ) is shown in green against a spiral galaxy

**Let's review the big picture**

Time for me to list out some of the things that are required for a galaxy, solar system and planet to support complex embodied life. Not just life as we know it, but life of any conceivable kind given these laws of physics.

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

And remember, these requirements for a habitable planet are downstream from the cosmic fine-tuning of constants and quantities that occurs at the Big Bang. No point in talking about the need for plate tectonics if you only have hydrogen in your universe. The habitability requirements are a further problem that comes after the fine-tuning problem.

# Leftist news media furious that conservatives noticed murder by 14-time repeat offender

**Wintery Knight** · 10 September 2025 · Archived copy · Original

By now, everyone has heard about the murder of the 23-year-old lady by a 14-time repeat offender. The lady was just riding a light train in Charlotte, NC, and the criminal attacked her from behind and stabbed her many times with a knife. Two things are interesting about the story. First, the judiciary workers who released the criminal. Second, the reaction from corporate news media.

So, first, the facts of the case from Meg Basham at Daily Wire:

> The victim, Iryna Zarutska, came to the United States in 2022. She was returning from her job at a local pizzeria when Decarlos Brown stabbed her repeatedly in the neck.

And this is the key part – in a Democrat-run city, the criminal was released FOURTEEN TIMES.

> Brown had a lengthy criminal history, including at least 14 prior arrests for offenses such as armed robbery and assault with a deadly weapon. Despite serving five years for the robbery, most of his other cases resulted in time served, probation, or community service.
>
> His most recent arrest in January was for misusing 911, yet Judge Teresa Stokes granted him pretrial release despite his violent record. In 2024 alone, Brown had three encounters with the Charlotte-Mecklenburg Police Department's (CMPD) community policing team, each time receiving referrals to resources and fines rather than jail time.

According to Grok, here are the qualifications for her position:

Under North Carolina law (N.C.G.S. § 7A-171), magistrates are appointed judicial officials, not judges, and do not require a law degree or bar admission.

Requirements include:

- A four-year college degree, or a two-year associate degree with at least four years of experience in a related field (e.g., court administration, social services).
- Completion of a 40-hour basic training course within six months of appointment, covering civil and criminal duties.
- Annual continuing education through the North Carolina Administrative Office of the Courts (NCAOC) and UNC School of Government.

Grok also mentioned to me that she is married to a woman, Ayanna Ballard. Can you imagine choosing to live in a place like Charlotte, seeing the violent crime rates go higher and higher because of the failures of the district attorney and the others to deal with criminals and protect taxpayers? Why do people do it?

Anyway, the corporate news media was very upset… not with the murder, but with people noticing the murder.

Here's Daily Signal:

> Instead of focusing on the terrible and enraging crime that took place, it became one of their "conservatives pounce" spin jobs.
>
> Axios put up a post on X, saying, "The gruesome video of the fatal knife attack on Iryna Zarutska on a light-rail car in Charlotte is drawing attention from MAGA influencers seeking to elevate the issue of violent urban crime—and accuse mainstream media of under-covering shocking cases."

That wasn't the only one, Politico was also concerned by the "political messaging war", not by the actual murder of an innocent girl. Did you know that Democrats are the party of women's rights? Yes, here is more of the Democrat party's women's-rightsing.

Here's a gruesome story from September 9th, 2025, reported in the Daily Caller:

> A Louisiana man reportedly may face chemical castration or the death penalty after he allegedly raped a four-year-girl on Aug. 1 and gave her Chlamydia.
>
> Anthony James Jelks, 25, allegedly suggested that he raped the child on Aug. 1 at a Baton Rouge, Louisiana, residence, according to arrest documents obtained by WAFB.
>
> […]"Mr. Jelks, we have arrested six times over the past six years," Baton Rouge Police Chief TJ Morse said. "He has everything from firearm charges to domestic violence battery, violation of protective orders, and is currently on probation."

From May 2025, reported in New York Post:

> College coed Logan Federico, 22, of Waxhaw, NC, was visiting friends in Columbia, SC, on May 3 when a prowler broke into a rental house, swiped her credit cards and gunned her down, the Columbia Police Department said in a press conference.

> […]Alexander Dickey, 30, a career criminal with 40 prior charges, allegedly broke into the rental home where Federico was staying and opened fire with a stolen gun after stealing from the house.

And here's another one from December 2023, also reported in New York Post:

> A troubled vagrant randomly stabbed two teenage girls enjoying a Christmas morning meal with their parents at a Grand Central Terminal restaurant — after ranting that he wanted "all white people dead," authorities said.
>
> […]Hutcherson has 17 prior arrests on his rap sheet, sources said.

It's hard for me to write about this. I am so upset by the attacks that are going on in Europe against young women, and then even now, here in the United States. And why? Because people vote for the secular left politicians. Secular leftists are dominated by irrational emotions. They have a real problem with moral judgments and punishments. For them, the important thing is to show great compassion with their non-judgement. They want to make a world in which no one can judge them for their evil.

In Europe, women's groups are so concerned with prioritizing feeling good and looking good with virtue signaling, that they won't even condemn crimes committed by unskilled immigrants from misogynistic countries against women.

The UK Daily Mirror explains:

> More than 100 women's rights groups have warned "racist" attempts to link sexual violence with immigration are putting victims at increased risk.
>
> Rape Crisis England and Wales, the End Violence Against Women Coalition and Refuge are among the organisations warning anti-migrant groups and politicans are "hijacking" survivors' trauma. They have signed a letter to Keir Starmer and Home Secretary Yvette Cooper warning that sexual abuse must not be used for political gain – and those who spread misinformation must be held to account.

Who pays the price for the "don't judge" atttitude of the secular leftists? The victims of the criminals that they don't punish pay the price. The real misogyny comes from the secular left. That's why you should never vote for a secular leftist. They don't have the ability to ground moral judgments and that's why they need to be kept out of political power by wise voters.

# William Lane Craig's moral argument, and five objections to it

**Wintery Knight** · 11 September 2025 · Archived copy · Original

Which argument for God is the most accessible? To really sustain the cosmic beginning argument and the cosmic fine-tuning argument, you have to learn some scientific evidence. Same for the resurrection of Jesus – you have to learn some history. But what about the moral argument? All you need to make that argument is for your opponent to think that something is morally wrong.

First, let's review the moral argument, from William Lane Craig.

He writes:

> We are going to turn now to a discussion of the moral argument for the existence of God. So far we have been looking at philosophical and scientific arguments. This is an ethical argument. There are a wide variety of moral reasons for believing in God, but this is a particularly simple moral argument that I have used over and over again with university students and I find very effective. It really grabs people where they live. This is not just a matter of scientific evidence or philosophical issues that may not impact your life. This is an issue that is vitally important because everyday as you live you make moral choices. So everyday by your behavior you answer the question whether or not you believe that God exists. The argument consists basically of three simple steps:
>
> 1. If God does not exist, objective moral values do not exist.
>
> 2. Objective moral values do exist.
>
> 3. Therefore, God exist.
>
> That is a very simple argument for the existence of God and is easy to memorize. It is just three steps. It is logically valid. If those two premises are true then the conclusion follows necessarily and logically. The only question is: are the two premises true?

But there are some objections to the moral argument. CrossExamined.org has posted a list of five objections to the moral argument from philosopher Paul Rezkalla.

Here are the 5 points:

1. "But I'm a moral person and I don't believe in God. Are you saying that atheists can't be moral?"
2. "But what if you needed to lie in order to save someone's life? It seems that morality is not absolute as you say it is."
3. 'Where's your evidence for objective morality? I won't believe in anything unless I have evidence for it.'
4. 'If morality is objective, then why do some cultures practice female genital mutilation, cannibalism, infanticide, and other atrocities which we, in the West, deem unacceptable?'
5. 'But God carried out many atrocities in the Old Testament. He ordered the genocide of the Canaanites.'

That last one seems to be popular, so let's double-check the details:

> For starters, this isn't really an objection to the moral argument. It does not attack either premise of the argument. It is irrelevant, but let's entertain this objection for a second. By making a judgement on God's actions and deeming them immoral, the objector is appealing to a standard of morality that holds true outside of him/herself and transcends barriers of culture, context, time period, and social norms. By doing this, he/she affirms the existence of objective morality! But if the skeptic wants to affirm objective morality after throwing God out the window, then there needs to be an alternate explanation for its basis. If not God, then what is it? The burden is now on the skeptic to provide a naturalistic explanation for the objective moral framework.

If you have heard any of these objections before when discussing the moral argument, click through and take a look.

And if you have a non-Christian in your life who likes to make moral statements, it's a good conversation to have. Where does your standard come from? Is it from your own desires? Is it from cultural conventions, that vary by time and place? Is it from Darwinian evolution? Find out what the answer is, and then respond to it.

# Pro-abortion feminist professor justifies divorce from the man she loved

**Wintery Knight** · 12 September 2025 · Archived copy · Original

In the past, I've written about how we need to get rid of no-fault divorce laws, if we expect men to feel comfortable about getting married. I've explained that men have seen what divorce does to other men, and to children. Some of us, like me, have read books and studies about it. And it's a major reason why men don't marry.

In today's post, we're going to look at an article in the far-left New York Times, written by a pro-abortion progressive feminist professor, who divorced her husband, making her two children fatherless.

What did he do wrong? Nothing.

Behold:

> There was no emotional or physical abuse in our home. There was no absence of love. I was in love with my husband when we got divorced. Part of me is in love with him still. I suspect that will always be the case. Even now, after everything, when he walks into the room my stomach drops the same way it does before the roller coaster comes down. I divorced my husband not because I didn't love him. I divorced him because I loved myself more.
>
> […]I made choice after choice to prioritize my career because I believed fervently in the importance of the work I was doing… [children of divorce] benefit because happier mothers are better parents.
>
> […] I knew that trying to force myself to subordinate my ambitions and always put our children first would have been impossible without lopping off a vital part of myself.

At the time of her decision, the children were aged 5 and 3! If she chose her career, that means that she was not raising them, during that critical first five years. Daycare is proven to be a poor substitute for the mother during those early years.

CafeMom notes:

> No one is more acutely aware than Bazelon is of the many things she's missed as a mother — things that have stuck with her through the years so strongly, she can mentally list them off one by one. They include, in her words: "My daughter's seventh birthday, my son's 10th birthday party, two family vacations, three Halloweens, [and] every school camping trip," she writes. "I have never chaperoned, coached or organized a school event."
>
> My daughter's seventh birthday was the worst. She cried… But I had a trial starting the next day, six hours away."

Now, what about her statement about divorce being good for children, because if she is happy, then they will be happy? Many women believe this, and most communities for women affirm this. But is it true? What does the peer-reviewed data say?

Here's a famous study (PDF) that says: (H/T Philip Greenspun)

> This follow-up study of 131 children, who were 3–18 years old when their parents divorced in the early 1970s, marks the culmination of 25 years of research. The use of extensive clinical interviews allowed for exploration in great depth of their thoughts, feelings, and behaviors as they negotiated childhood, adolescence, young adulthood, and adulthood. At the 25-year follow-up, a comparison group of their peers from the same community was added. Described in rich clinical detail, the findings highlight the unexpected gulf between growing up in intact versus divorced families, and the difficulties children of divorce encounter in achieving

> love, sexual intimacy, and commitment to marriage and parenthood. These findings have significant implications for new clinical and educational interventions.

Specifically: (I stole this from Philip)

> Hardly any of our subjects described a happy childhood; in fact a number of children told us that "the day they divorced was the day my childhood ended." … By the 25-year mark, the majority had decided not to have children.
>
> No child of divorce in our study was invited by both parents, either separately or together, to discuss college plans. … Only 57% of the divorce group achieved their bachelor's degree as compared with 90% in the comparison group. … Unhappy, [those who did attend college] settled for fields of study that were not their first choice, at lower ranked institutions than their parents had attended. It was at this time that one young person, echoing the emotions of many others, commented bitterly, "I paid for my parents' divorce."
>
> The central finding of this study is that parental divorce impacts detrimentally the capacity to love and be loved within a lasting, committed relationship.

This study was actually made into a book, and I read it. That's partly how I formed my views of divorce. In her column, the feminist refutes data like this with an anecdote. She "knows a person" whose experience refutes the peer-reviewed evidence. I don't find that kind of self-serving rationalization very convincing. But it's common.

By the way, I also read books about daycare when I was thinking about marriage, and I hate daycare, too. You would think that a smart feminist academic would read books about marriage, divorce and parenting like I did, and respect the evidence in her decision-making, rather than being led by her feelings. I'm just a senior software engineer with 22 years of private sector experience. But I sure wouldn't make decisions about marriage and children without reading books and studies first. What's that old familiar saying in Information Technology? RTFM. Read The Freaking Manual. Engineers read the manual. Emotion-based people don't.

Women may say to all this, "well, what do you expect me to do? Be unhappy with a bad man?" And the answer is – if you have children, then yes. The time to avoid getting married to a bad man is before you marry him. And we should teach women to disregard feelings, feminism, and peer approval. They should instead prepare themselves for marriage with chastity and sobriety, and choose men who are sober, chaste and have demonstrated commitment ability.

So here's my conclusion. I don't recommend that any man marry a feminist. If they are willing to kill their own children, then they are willing to abuse their own children with divorce. If they believe in same-sex marriage, then they don't think that children deserve a mother AND a father. Don't marry a secular leftist woman. You'll pay, and your children will suffer.

Homeschooling moms who influence their neighbors, their local church, and the local university, for Christ, have the better end of the marriage deal. If I were married, I would trade places with my wife in a minute, if I could. It's far more interesting to homeschool kids in great literature, science, economics, and computer programming, than it is to keep your mouth shut all day in an environment that is hostile to Christian convictions.

# Video, audio and summary of William Lane Craig vs Peter Millican debate

**Wintery Knight** · 13 September 2025 · Archived copy · Original

Here's a debate with a well-qualified atheist and Dr. William Lane Craig, the most effective defender of Christianity operating today.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

**Dr. Craig's opening speech:**

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects

cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

**Dr. Millican's opening speech:**

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a

beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

**Dr. Craig's first rebuttal:**

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a

material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

**Dr. Millican's first rebuttal:**

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

**Dr. Craig's second rebuttal:**

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the

absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

**Dr. Millican's second rebuttal:**

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

**Dr. Craig's final rebuttal:**

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

**Dr. Millican's final rebuttal:**

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3  minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

# Christian woman finds a way to discuss her faith with non-Christians

**Wintery Knight** · 14 September 2025 · Archived copy · Original

I found an interesting article where a Christian woman explains how she used to share her testimony with non-Christians. But that wasn't working. So she decided to try something different.

She writes:

> I'll never forget the first time I shared my personal testimony with a non-Christian.
>
> When the opportunity arose and I shared my story with an unbelieving friend, she replied, "That's so cool. I'm so happy you found something that works for you."
>
> *For me?*
>
> "It's not about what works *for me*," I said, trying to hide my discouragement. "It's about what's true for everyone."
>
> "That doesn't make sense," she responded. "That's *your experience*, not mine. I had a similar revelation when I realized I could leave the church, and I've become a better person for *my* decision. Just as you were freed from your heaviest burdens by finding God, I was freed from mine by leaving God behind."
>
> I was devastated but I chalked it up to my friend's hardheartedness. I decided to shake the dust off my feet and look forward to the next opportunity.
>
> But time after time of sharing my testimony resulted in similar responses. People expressed enthusiasm that I was happy, that Christianity worked for me, and that I had "found my niche." Yet no one considered my experience as anything more than just that—my own personal experience.
>
> […]I had been taught that sharing what God had done in my life was the ideal way to witness to non-Christians. A personal testimony was interesting yet non-confrontational, compelling but inoffensive. And yet, despite having shared my testimony with dozens of unbelievers, not a single person felt challenged to consider the truth claims of Christianity.

She noticed that her approach wasn't actually in the Bible. There was a different approach being demonstrated by Jesus, and later by his disciples.

She writes:

> When Jesus called his first disciples, he taught truth and provided evidence (miracles) to support his claims, then he asked people to follow him (Luke 5:1–11). In fact, this was his method whenever he went into new regions (see Luke 4:14–44; John 4:7–26). People decided to follow Jesus not on blind faith or a subjective feeling, but based on the evidence they had seen and heard.[i]
>
> Jesus also used evidence to assuage the doubts of even those who had been with him a long time. John the Baptist was Jesus' cousin, who leapt in the womb during Mary's visit (Luke 1:39–45), baptized Jesus in the Jordan River, heard God's voice from heaven, and saw the Holy Spirit descend on Jesus in bodily form like a dove (Luke 3:21–22). Yet when John experienced unexpected suffering, he began to doubt.
>
> Jesus didn't respond as many do today, by insisting that John "just believe" or "have faith" or "prayer harder." Rather, he responded with more evidence, saying, "Go and tell John what you hear and see: the blind receive their sight and the lame walk, lepers are cleansed and the deaf hear, and the dead are raised up, and the poor have good news preached to them. And blessed is the one who is not offended by me." (Matt. 11:2–6).
>
> […]At Pentecost, the apostle Peter offered signs and wonders, fulfilled prophecy, and relayed eyewitness

> testimony to persuade people from all over the Roman Empire that the most reasonable explanation for what they were seeing was not morning drunkenness, but a risen Messiah (Acts 2:1–41).
>
> On his missionary journeys, the apostle Paul reasoned with the Jews from the Scriptures, explaining and proving that Jesus was the Messiah who needed to suffer and rise from the dead (Acts 17:1–3, 17). And he reasoned with the Gentiles from outside the Scriptures, making a case with their own accepted beliefs to convince them (Acts 17:17–34).
>
> In fact, in describing his mission, Paul told the Philippians, "I am put here for the defense of the gospel" (1:7, 16). This word translated defense is the same word from which we get our English word "apologetics," meaning to make reasoned arguments or to provide evidence as justification. Using this same word, Peter commanded believers to "always [be] prepared to make a defense to anyone who asks you for a reason for the hope that is in you"(1 Pet. 3:15).

So, she decided to dump the testimony approach, and try the Biblical approach. But she had to change it a little bit, since she couldn't perform miracles herself:

> We are not eyewitnesses to Jesus's life and resurrection, but we have the accounts of those who were. We don't typically see miracles, but we have millennia of biblical scholarship and archaeology that provide reasons to believe the accounts are trustworthy. We don't often hear God speaking audibly or see him parting seas, but we have significant scientific evidence that shows the universe had a beginning, and millennia of observation to confirm the scientific principle that everything that begins to exist has a cause.

I think a lot of Christians never move on from approach she described that wasn't getting results. And there's a reason for that – studying evidence is hard work. But I can tell you from my experience as a software engineer, there is no better way to convince other people to adopt your view than to show them working code that produces results. If they have a prototype, they will adopt your design. Similarly with Christianity. If you have evidence, then you will be persuasive.

When talking about spiritual things with non-Christians, always remember the joke about the two men walking in the woods who meet a bear. One man starts to put on his running shoes. The other man says "what are you doing? you can't outrun a bear!" And the first man says "I don't have to. I only have to outrun you". It's the same with apologetics. You don't have to be William Lane Craig to talk about your faith to non-Christians. You just have to know more than your non-Christian opponent knows about evidence.

The way things are going these days with the public schools and the mainstream news media, this is actually pretty easy to do. One or two introductory books on the origin of the universe, the fine-tuning for intelligent life, the origin of biological information, the origin of body plans, the historical reliability of the New Testament, the minimal facts case for the resurrection, etc. will do the job. You might need another one on philosophical challenges like evil, suffering, divine hiddenness, etc. But we're talking no more than 5 books, and you'll be effective in the vast majority of your conversations. If you can only get one book, I like Sean McDowell and Jonathan Morrow's "Is God Just a Human Invention?" best.

# Man-blaming vs incentive-changing: what really works to restore marriage

**Wintery Knight** · 15 September 2025 · Archived copy · Original

What approach should social conservatives take to solve the problem of the declining marriage rate? A naive approach would be to just order young people to "Get Married!" without analyzing and defusing the reasons why young people are declining to approach, date and marry like they used to. Most social conservatives go for the naive approach. But which approach really works?

So, let's focus on men. Why are men staying single? Why aren't men approaching women, paying for dates, and proposing marriage?

Here's a short list of some disincentives that men are facing:

- no-fault divorce (alimony, child support, father alienation)
- domestic violence laws assume the man is at at fault
- false accusations to gain child custody
- paternity fraud
- massive student loan debt by women
- national debt / deficit
- lack of accountability for false accusations made by women
- women's focus on working full-time after having kids means that kids have go to daycare and public schools
- women's much higher rates of spending on non-essentials
- unrealistic expectations of men caused by social media
- commitment instability caused by past sexual history
- women's hard swing to the political left

So, again, the response of naive social conservatives is to say "let men fix it". I was having a conversation with a social conservative who researches marriage, and I asked him how many of these factors he's considered. He hadn't considered any, because women good, and men bad. Why would you ask bad men why they are not doing what the good women want? Just tell the bad men what the good women want them to do. And if it doesn't work, try again. And if it doesn't work, try again. That's been the dominant approach by social conservatives since the start of the Sexual Revolution. They just keep trying to make men fix it.

But what if social conservatives decided to try an intelligent, problem-solving solution? Something that a software engineer might think up, that actually *engineers* a solution over the long-term, by changing the incentives that men face?

Here's the story from the Daily Caller:

> In a pioneering move in 2018, Kentucky passed the first law making joint custody the default in divorce and separation cases.
>
> The common-sense approach to divorce and child custody cases has had a major effect, with the state's divorce rate dropping by 25% from 2016 to 2023, surpassing the nationwide decrease of 18%, the National Center for Family & Marriage Research at Bowling Green State University found.
>
> Following Kentucky's lead, Arkansas, West Virginia, Florida, and Missouri enacted similar bills, with about 20 other states considering such legislation, according to the National Parents Organization (NPO).
>
> "There is no law that affects more people other than taxes or traffic. Giving kids equal access to both their

> parents is just common sense," Matt Hale, vice chair of NPO, told The Wall Street Journal in its feature on Kentucky's law.
>
> Hale attributes the decline in divorce rates to the custody law, saying that parents are now more inclined to remain together since shared custody requires couples to work things out and communicate. Hale also shared accounts of couples who chose not to divorce due to the shared custody presumption and later valued that decision.
>
> This is a common-sense solution, as Kentucky's law does not state that 50/50 custody be blindly granted in every case. Rather, it sets the baseline presumption that, upon divorce, the mom and dad will split custody.

When you make it less attractive for women to initiate divorce, then women divorce less. When women divorce less, men marry more. It's very simple. Men today do not want to be financially ruined in divorce courts by child support, to pay for children that they don't even get to see. I think if you added mandatory paternity testing, and removed the ability to make up false accusations that were never investigated by the police, that would be two more good reasons for men to come back to marriage. And that's how these problems need to be solved. Not by telling men what to do, but by giving men a good deal.

# Scott Klusendorf discusses right to life, assisted reproduction, and end of life

**Wintery Knight** · 16 September 2025 · Archived copy · Original

Here's the video, featuring my favorite pro-life speakers Scott Klusendorf. Scott is the founder and President of the Life Training Institute. LTI's mission is to make a rigorous, rational defense for pro-life positions with respect to a variety of ethical issues. If you listen to Scott, you will learn a lot, and learn it from someone who has been tested on the battlefield of ideas.

Three topics:

- right to life of the unborn
- reproductive technologies
- end of life questions

40 minutes of guided discussion, 20 minutes of Q&A. This video was apparently recorded in the summer of 2016.

Abortion:

- the 1-minute case for the pro-life position (excellent)
- dealing with those who dismiss the pro-life case as religious
- how and when do people win arguments?
- how does one get better at discussing moral issues?
- who are some of the best books to get informed about life issues?
- what are some of the best books from the other side?
- what is the SLED test? do pro-abortion scholars accept it?
- if abortion were illegal, who should be punished and how much?
- is it inflammatory and dangerous to say that abortion is killing?

Assisted reproductive technologies:

- how should we speak to people considering ARTs?
- what is the underlying issue in ART discussions?
- should pro-lifers be opposed to all use of ARTs?
- what should pro-lifers think about surrogacy?
- which books provide an introduction to ART ethics?

End of life issues:

- what is the central issue in end of life discussions?
- should treatment always be continued or are there situations where treatment can be withdrawn?

Final issues:

- if a student wants to take courses in bioethics, where should they go to take courses or do a degree?
- what is the policy situation for pro-lifers in terms of legislation and SCOTUS decision-making?
- what are some policies that pro-lifers can support as incremental measures that move the issue in the right direction?

I liked this discussion. I tried to listen as someone new to the issue and he did a good job of not assuming any prior knowledge of the debate. My favorite part was his survey of books and arguments on the other side, and what they

say. I don't think that most people realize what the implications of the pro-abortion worldview really are for things like infanticide, and so on. The discussion about who should be punished for abortion and how much was new to me – and that actually came up during the last election, during the GOP primary. Personally, I would let the woman get off, and just prosecute the doctor.

It's very very good to listen to crystal clear thinking on these controversial issues from someone who has encountered the other side in their writings, and in public debates with them. Not to mention having to interact with people making decisions in these areas.

# How is secular left socialism going in Germany?

**Wintery Knight** · 17 September 2025 · Archived copy · Original

Americans can learn which policies work and don't work by looking at policies that have been tried in other times and places. That way, we can avoid the mistakes that other people have already made. That's one of the reasons why people like Thomas Sowell so much – he is always talking about which policies work, and which ones don't. And in Germany, it's mostly policies that don't.

Here's a fun article from Victor Davis Hanson, writing for the Daily Signal. If you're like me, you already know Dr. Hanson from his writings on military history. But he likes policy, too.

He says:

> Today I'd like to talk about the crisis facing Europe, specifically its self-implosion across the spectrum—energy, population, fertility, defense. Germany, for example, has been systematically shutting down its nuclear plants and, for a while, its natural gas electrical generation plants.

If you know your energy policy, then you know that natural gas and nuclear power are the two power sources pushed by conservatives. They are safe and reliable, and they are also zero emission. Best of all for me, they don't kill bats, birds and other animals. Birds are my favorite animals, and that's a huge reason why I hate wind and solar power – they kill birds in large numbers.

More:

> the net result of all of this deliberate turn to wind and solar, at the expense of fossil fuels and nuclear, is that it costs about four times more to use electricity in Germany than it does on average throughout the United States. That's not the only problem.
>
> Germany is deindustrializing. And by that I mean it's losing about 200,000 jobs in its auto industry due to these high energy prices and regulations. Its green mandates, especially electric vehicle mandates, have revolutionized the car industry, in the sense that they're not selling abroad as they did in the past.

When you raise the prices of gas and electricity, it raises the price of all production of goods, and transportation of goods. The funny thing is that this has been going on for some time. I remember talking about Angela Merkel's failed policies with an international student from Germany with I was in grad school. And they never pulled out of their death spiral! It's still going now.

Anyway, the higher cost of gas and electricity is having big effects:

> In addition to that, Germany's disarmed. They only have about 125 attack aircraft. They have very few armored vehicles. Their active military is only about 180,000 soldiers.
>
> They have 84 million people in the country. The fertility rate is getting very close to 1.4. I know we have problems here in the United States at 1.6, but 1.4.
>
> And they don't have borders. They have had a million to 2 million illegal aliens just prance into Germany, especially during the last years of the Merkel chancellorship. In terms of percentage of foreign-born, Germany has more foreign-born than does the United States, which doesn't have a border in the south, at least until Donald Trump comes in. Twenty percent of the German population is foreign-born.

We have a new administration now, and if you look at the picks for Department of the Interior, and Secretary of Energy, then we should be getting some action on developing our own supply of clean energy. Let's hope that we don't make the same mistakes that the Germans made.

By the way, if people ask you “why are you a conservative?” it’s nothing to be ashamed of. You don’t have to bring up Bible verses, religious beliefs, or moral issues. Start with economic policies. Just tell them that conservative policies are policies that allow you to have a job, earn money, and spend it how you like. And when they ask you for an example, you can talk about energy policy, and how things are going in free countries that produce a lot of energy (like Norway) vs un-free countries that don’t develop a lot of energy (like Germany). Norway’s GDP per capita is $90,500 (great), but Germany’s is $61,900 (trash). That’s why we want to be like Norway, and we don’t want to be like Germany.

By arguing for conservative fiscal policies, you often will get an opportunity to argue for conservative social policies. Once people see that you have done your homework in one area, they will be more welcoming of your views in other areas. At the very least, you win whenever you can show your work.

Conservative policy is just “let’s do what works” and “let’s not do what does not work”. Secular leftist policy is “do what feels good” and “do what makes people like me”, but that often produces very bad results, especially for the next generation.

# Famous pastor discovers the real reason for the decline in marriage rate

**Wintery Knight** · 18 September 2025 · Archived copy · Original

In this post, I want to look at a series of tweets from an ordinary pro-marriage pastor. He is concerned about declining marriage rates. He observed young people in his church, and he did some social science research. And he's come up with a theory about why young Christians are delaying marriage, or not getting married at all.

First, here's the marriage rate, accurate to 2020:

Marriage Rate in America through to 2020

This pastor is just talking about ordinary Christian men in his tweets below, not the ones who do a ton of research on apologetics, etc.

Here is what the pastor said:

> I saw this chart a while back and scratched out some rough thoughts…
>
> Around 2010 or 2011, I noticed a significant shift in "the relationship marketplace." I can sum up this shift with two trends I saw in my church circles.

> First, I noticed that many (not all) average to above average Christian men in overall quality (e.g. health, looks, ambition, etc.) were struggling to get a girlfriend. At first, I thought these guys were just being too picky or had some other major deficiency. After all, there are a lot of lazy foolish men out there. This wasn't the case with these men. They weren't the top 1%. But they were quality and had very reasonable (perhaps too low) standards for a girlfriend.
>
> Second, I noticed that many (not all) average to below average Christian women (I know me suggesting that such a thing exists is upsets a lot you) in overall quality (e.g. beauty, personality, temperament, etc.) had a fear of a committed relationship and were extremely picky. They would often complain that there weren't any good men. But there were good men. They just thought those men were below them. They weren't. The arrogance and pride of these women was shocking to me at the time. Not anymore.
>
> I ran my concerns past a boomer pastor. He dismissed it. He thought all the women were just great and men needed to step up to win them. Man up and all that. That really was the moment I realized that there was some form of generational blindness related to what is happening. And that's why I started tracking trends in sexuality not just generally but specifically as they related to dating (aka the relationship marketplace).
>
> Now let me point out 2 particularly concerning trends that overturn older assumptions about the relationship marketplace.
>
> First more and more women today are delaying marriage into their 30s. They, however, aren't delaying sex. Very few of these unmarried women are virgins when they turn 30. Stats vary but it's below 10% and perhaps closer to 5%. Moreover, these women have multiple sexual partners. It's difficult to calculate the number but a survey of the material points toward between 7-14 sexual partners prior to getting married right around 30. Others say that is a low number. Regardless, the consequences of this are hard to overstate. This sort sexual promiscuity has intense negative emotional, spiritual, and even physical consequences in the lives of these women. Also, it means that a large number of these women are using hormonal birth control and having abortions.
>
> […]Second, as you see in the chart above, male virginity between ages 18-30 has increased 20% since '89. That's good, right? No. It's doubtful that this increase in virginity is directly connected to an increase in morality among men.
>
> […]So who are these women having sex with?

> There appears to be men who are consider “top tier guys” by women who are having a lot casual sex with a lot of women. Supposedly, 20% of the men are having 80% of the sex.

The pastor mentions that 80% of the young women these days are chasing the “top” 20% of men. It’s important to understand that these are not the top 20% of men according to criteria like commitment ability, protecting, providing and moral / spiritual leading. These are the “top” 20% of men according to appearance. In fact, if a man has definite, defensible views on moral or spiritual issues, that is bad, because that means that he is strict, judgmental and boring. Not high status.

**What do young women consider “high status”?**

Look at this survey of women who use Bumble about where they set the minimum and maximum height of men they are seeking:

Women’s Height Preferences on Bumble Dating App
What this shows is that women have the height slider set to find men who are between 6 feet tall and 7 feet tall. The average height of a North American man is 5’9″. This is what they value in a man.

Have a look at this survey of OKCupid users:

OKCupid Male and Female Attractiveness Ratings

Again, the men with the highest status are judged by their appearances. And how do 80% of the women get the attention of these top 20% of men? Why, by giving them premarital sex, of course. Since these men are swimming in attention from 80% of the women, there is no need for them to commit first in order to get sex. Why buy the cow when you can get the milk for free? Although you might think that promiscuity makes men unstable, selfish and low status, you would be wrong. These are the men that women want.

As famous feminist Hanna Rosin explains:

> But this analysis downplays the unbelievable gains women have lately made, and, more important, it forgets how much those gains depend on sexual liberation. Single young women in their sexual prime—that is, their 20s and early 30s, the same age as the women at the business-school party—are for the first time in history more successful, on average, than the single young men around them. They are more likely to have a college degree and, in aggregate, they make more money. What makes this remarkable development possible is not just the pill or legal abortion but the whole new landscape of sexual freedom—the ability to delay marriage and have temporary relationships that don't derail education or career. To put it crudely, feminist progress right now largely depends on the existence of the hookup culture. **And to a surprising degree, it is women—not men—who are perpetuating the culture, especially in school, cannily manipulating it to make space for their success, always keeping their own ends in mind. For college girls these days, an overly serious suitor fills the same role an accidental pregnancy did in the 19th century: a danger to be avoided at all costs, lest it get in the way of a promising future.**

I've written about how feminists support the hook-up culture before.

They aren't looking for men who will commit until they reach their mid-30s or 40s, and feel peer pressure from their friends who are married and having kids. And many Christian women think that hooking up with hot bad boys is compatible with Christianity, because Christianity is just about God making women happy by letting them do whatever they feel like doing "in the moment".

Study: virgins have the happiest marriages, more partners means less happiness

Even one non-husband premarital sex partner raises risk of divorce

**What Christian women, their parents and pastors believe**

Here are some things I've heard over the years by Christian women, their parents, and their pastors:

- there's nothing wrong with women choosing men based on height, appearance, and bad boy character traits
- bad boy character can easily be fixed by nagging, sex-withholding, and threatening divorce
- marriage will magically happen when the woman feels like getting married, until then she should focus on casually "dating" attractive men, career, travel and fun
- a woman's ability to choose good men and be a good wife and mother isn't harmed by having premarital sex with hot bad boys
- men aren't discouraged by a woman's student loan debt or secular left indoctrination, or her desire to put the kids in daycare and public schools, so she can keep working after they are born
- it's wrong for men to have standards about what they want in a wife and mother, or to prefer early marriage
- if Christian men want to attract women, they should spend more money on expensive cars, clothes and watches

- women are just as likely to get pregnant at 35 as they are at 20, as long as they are in good shape and healthy
- studies that show that past promiscuity causes the woman to be unhappy, and the marriage to be unstable, are all false

There are costs and risks to men who decide to marry. There are external threats from policy, courts, the workplace, the schools, etc. It's become dangerous for men to advocate for Christian views, and having a family makes it even more risky. These risks make sense when the man gets early investment from a woman – support, investment and many well-raised children. These risks make NO sense when there is no early investment from a woman. A woman who chased "high status" men will never be attracted to a good man. She may eventually want to settle for one, but she will never respect him.

# Does the “legacy of slavery” explain black women’s 72% out-of-wedlock birth rate?

**Wintery Knight** · 19 September 2025 · Archived copy · Original

James White asks: does the Bible apply to black women?

I don’t like Calvinist theologian James White very much, but at least he’s willing to defend the moral teachings of the Bible against the woke identity politics that is taking over Christian churches. A few months ago he tweeted something very controversial (see above), and got into a lot of hot water with fake Christians. In this post, I’ll explain why he is right.

So, as you can see above, James is concerned that black women are having so many abortions, and he thinks that the solution to this is to encourage black women to take the Bible’s advice on sexual morality. Shocking, I know.

If you read the replies to his tweet on Twitter, you’ll see millions and millions of comments calling him a racist, and telling him that slavery is to blame for EVERYTHING that black women do wrong. Basically, the James haters say that black women can do anything they want, and should never be told that it’s wrong according to the Bible, because their bad choices are all the fault of slavery. So the Bible doesn’t even apply to them, or something.

Here is an example from a radical feminist progressive named Karen Swallow Prior:

Karen Swallow Prior says that unlike whites, blacks have no moral agency

According to the fake Christians, it's not that black women make poor choices with sex, it's that the ghosts of white slavers who raped their great-great-great grandmothers reach through time with magic and force them to have sex with hunky bad boys who won't commit to them before sex. It's not rap music calling black women hoes! It's the ghosts of slavery past. And even if this ghost theory isn't true, we shouldn't tell black women not to sin, because… it would hurt their feelings. After all, the Bible isn't a book that's designed to set boundaries to prevent self-destructive behaviors. It encourages us to listen to our hearts, be reckless, and sin as much as we can.

So when did black community problems with sex and abortion start? Did it start with slavery times? Actually, blacks were doing GREAT at marriage and sexual matters just 50 years ago.

This reply to James White explained:

Blacks married at rates comparable to whites before welfare

That's true. Black children weren't fatherless, so they weren't having early sex outside of marriage, and so they weren't getting abortions.

As the header graphic shows, black women were just as likely to be married as white women in the 1960s, FAR AFTER the days of slavery.

The reason that the graph is going upward is because daughters raised in fatherless homes tend to engage in sexual activity at younger ages, because they are seeking approval from a man which their (single) mother cannot give them. It's a tragic downwards spiral, and it affects all races. The only way to stop it is to tell women to choose marriage-minded men (not hot bad boys) and marry before having sex, like the Bible says. But woke fake Christians think the Bible is too mean, and better to allow sin by saying that sin is inevitable because slavery ghosts or something.

What's neat is that black men who take Christianity seriously are totally on board with the facts:

Black man here. Can confirm that the Bible applies to black women.
On this blog, I don't talk about my ethnicity myself, for confidentiality reasons, but I have said that my skin is darker than Barack Obama. I'm not white or Asian. And the reason that I don't fall into this trap of causing babies to be born out of wedlock is because I think that when the Bible says that sex outside of marriage is a sin, that this is true. I don't make excuses or shift blame. It's incumbent on me to obey, since I claim to be a follower of Jesus.I'm not interested in identity politics. I'm not interested in racial divisions. I'm not interested in blame-shifting. The rules are the rules. And my following of the rules caused me to not cause abortions, according to Christian specifications. Period.

When it comes to sex outside of marriage, the answer of every Bible believing Christian is simple: I'm against it. That is the correct answer, and anything more or less than this answer is demonic. If you are a Christian, sex outside of marriage is always morally wrong. And if you try to justify it, or blame someone else, in order to excuse it, then you're not a Christian at all. If you try to make excuses for why someone did it, you're not a Christian. Whether you have had it and been forgiven, or never had it, the answer is always the same: it's morally wrong. Don't do it. Never do it.

What I am seeing from people who are critical of James White's tweet is that they are basically trying to attack those who make moral judgments based on what the Bible says. They want to make room for sinners to sin. The root of abortion sin is sexual sin. Real Christians discourage sexual sin, and therefore protect unborn children. Fake Christians want to be liked by appearing compassionate, so they make excuses for sexual sin. If you take the Bible seriously on morality, you won't be liked. Those who try to excuse sin do so because their need to be liked is more important than their need to promote what the Bible teaches.

Some fake Christians will say "oh, but I do think the Bible is right about sex and marriage, but we have to care about slavery reparations and global warming and refugees and illegal immigrants and transgender rights, too". Baloney. An authentic Christian is concerned about the things that the Bible teaches are "major" things. Drunkenness is a major thing. Sexual immorality is a major thing. Divorce is a major thing. Homosexuality is a major thing. If you meet a Christian who treats those issues as minor issues, and instead majors in what the secular

left tells them are major issues, then you’re talking to a fake Christian.

Christianity isn’t a brain-dead faith. You get your priorities from the Bible, and you argue those priorities using facts. The facts about marriage rates are clear and they show that the problems in the black community aren’t caused by slavery. They’re caused by single mother welfare programs. Those welfare programs taught women of all races that they didn’t have to listen to their fathers when choosing men. Those welfare programs taught women that feelings were a better guide in relationships than the Bible. Those welfare programs taught women that their eyes were a better judge of character than performance of traditional marriage roles. Those welfare programs taught women that recreational sex was a way to get a man to commit and stop being a bad boy. We need to go back to the root cause of the problem. The root cause of the problem was making excuses for disobedience to the Bible, and transferring money from married homes to out-of-control women. Of all races.

# Paternity fraud case shows how pro-marriage conservatives see men as expendable

**Wintery Knight** · 20 September 2025 · Archived copy · Original

When terrible things happen to men in this society, you often get comments from people saying "well, it's his fault, he chose a bad woman". And I agree that men often make poor choices because they focus on attraction instead of on character. But what if a man is an innocent bystander, and is falsely accused by a woman he doesn't even know? Is it still his fault then?

Here is the news story from Fox 2 Detroit.

Excerpt:

> A Metro Detroit man cleared his name after Friend of the Court sent him a letter saying he had a baby with a woman he never met.
>
> "She don't know me, how do you just put my name down? How do you just put anybody's name down?" DeAngelo Smith said. "I don't know her. Never seen her. Still to this day, haven't talked to her, and it just proves the baby has no ties to my name."
>
> Late last year, DeAngelo received a letter from Friend of the Court in Berrien County saying that he was the father of a baby girl.

His wife was the first to see the accusation:

> His wife first spotted the letter in the mail from Friend of the Court.
>
> "Let's just set the record, I trust my husband," Tyahvia Smith said. "I know his character, man of integrity."

They contacted his employer:

> While waiting for the child's mother to take the baby for a DNA test, DeAngelo said the school where he teaches received an inquiry for possible garnishment in case the child was his.
>
> "It made it something that is not being alleged, but now it's something that's being taken into action and no paternity has been established," he said.
>
> Finally, the woman had the DNA test done, and DeAngelo has since gotten a letter confirming he was not the father.

Legislation introduced by Republican Jim Runestad to prevent this from happening has been tied up for eight years… in a Republican-led legislature:

> "It's very unfortunate, but paternity fraud is not a unique, unusual situation in Michigan," Sen. Jim Runestad (R-White Lake) said.
>
> Runestad said he has been pushing for new legislation on the matter for the past eight years. Currently, there is no penalty for lying and a DNA test is not required before a person is contacted about the paternity of the child.

The fact that there are no consequences for doing this means that women are going to keep doing it again and again.

**Does masculinity mean that a man should give a woman whatever she wants?**

I sent this story to a conservative pro-marriage friend, and she said "So what? How many times does something like

this happen?" Her only concern was that this story made women look bad. She had previously told me that "masculinity is when a man uses his strength to protect and provide for women". So, then it is just "masculine" for this innocent man to pay for a child who isn't his own. Why would he object to paying? Does he not like children?

Most people today like the changes that feminism has made for women. They like public schools run by women that discriminate against boys. They like women taking out huge student loans for useless non-STEM degrees, then demanding bailouts from taxpayers. They like women taking part in hook-up culture. They like women using no-commitment bad boys for validation. They like no-fault divorce laws. They like false accusations during divorce trials. They like biased domestic violence laws. They like paternity fraud. They like massive welfare spending designed to reward women who make reckless decisions. And they like feminist judges stripping fathers of parental rights for refusing to agree with the transing of their kids.

Men are expendable when it comes to creating greater happiness for women. So what's wrong with sending a man a bill for a woman who needs some money for a child that isn't his? It's horrible to tell a woman that she can't do what she feels like doing. It's horrible to tell a woman that she has to pay the costs of her own actions. Just make a man pay for it. Men are big and strong, they can handle it. And besides, women never tell lies. We have to believe all women. We have to force men to make women happy. That's "masculinity".

**Society pressures men to get married**

This "believe all women" attitude that is shared by many Christians and conservatives becomes a problem for men when men are pressured to get married. This society makes marriage a risky enterprise for men. And men have to understand that this pressure to get married is often coming from people who see men as expendable in the cause of increasing women's happiness. The person telling you to get married is often the same person who thinks that a DNA test shouldn't be performed in a paternity case.

Men have to understand that the command to "get married" is coming from pro-marriage activists who think that men exist solely to make women happy. Who cares about the risks and costs of marriage for men? Who cares about men's needs and desires? Who cares what reasons a man has for marrying? Who cares about a man's standards for his wife? Who cares about a man's plan for his marriage? He should just be pressured to get married. Just like the falsely accused paternity fraud victim should have to pay.

**It's not the purpose of men's lives to get married and have kids**

Always remember that according to the Bible, serving God is *more honorable* than getting married and having children. (Read 1 Cor 7:8-9 and 2 Tim 2:4) Many social conservatives try to guilt men into getting married and having children by denying the risks and costs of marriage for men. They think that Christianity's main purpose is to force men to make women happy, regardless of what women offer to men in exchange. That's the actual view of several of my social conservative Christian friends.

Men are designed to serve God first and foremost. And it's much easier to serve God if you are not encumbered by alimony, child support, false accusations, denial of due process, paternity fraud, feminist judges, etc. Only women who honor that obligation, and want to help a man to meet that obligation, should be taken seriously for marriage and child-rearing.

# Does the Miller-Urey experiment explain how life originated on Earth?

**Wintery Knight** · 21 September 2025 · Archived copy · Original

There are two problems related to the origin of the first living cell, on atheism:

1. The problem of getting the building blocks needed to create life – i.e. the amino acids
2. The problem of creating the functional sequences of amino acids and proteins that can support the minimal operations of a simple living cell

Normally, I concede the first problem and grant the atheist all the building blocks he needs. This is because step 2 is impossible. There is no way, on atheism, to form the sequences of amino acids that will fold up into proteins, and then to form the sequences of proteins that can be used to form everything else in the cell, including the DNA itself.

Today, let's take a look at the problems with step 1.

The Miller-Urey experiments

**The problem of getting the building blocks of life**

Now you may have heard that some scientists managed to spark some gasses to generate most of the 20 amino acids found in living systems. These experiments are called the "Miller-Urey" experiments.

The IDEA center has a nice summary of origin-of-life research that explains a few of the main problems with step 1.

Miler and Urey used the wrong gasses:

> Miller's experiment requires a reducing methane and ammonia atmosphere,[11, 12] however geochemical evidence says the atmosphere was hydrogen, water, and carbon dioxide (non-reducing).[15, 16] The only amino acid produced in a such an atmosphere is glycine (and only when the hydrogen content is unreasonably high), and could not form the necessary building blocks of life.[11]

Miller and Urey didn't account for UV of molecular instability:

> Not only would UV radiation destroy any molecules that were made, but their own short lifespans would also

> greatly limit their numbers. For example, at 100ºC (boiling point of water), the half lives of the nucleic acids Adenine and Guanine are 1 year, uracil is 12 years, and cytozine is 19 days[20] (nucleic acids and other important proteins such as chlorophyll and hemoglobin have never been synthesized in origin-of-life type experiments[19]).

Miller and Urey didn't account for molecular oxygen:

> We all have know ozone in the upper atmosphere protects life from harmful UV radiation. However, ozone is composed of oxygen which is the very gas that Stanley Miller-type experiments avoided, for it prevents the synthesis of organic molecules like the ones obtained from the experiments! Pre-biotic synthesis is in a "damned if you do, damned if you don't" scenario. The chemistry does not work if there is oxygen because the atmosphere would be non-reducing, but if there is no UV-light-blocking oxygen (i.e. ozone – $O_3$) in the atmosphere, the amino acids would be quickly destroyed by extremely high amounts of UV light (which would have been 100 times stronger than today on the early earth).[20, 21, 22] This radiation could destroy methane within a few tens of years,[23] and atmospheric ammonia within 30,000 years.[15]

And there were three other problems too:

> At best the processes would likely create a dilute "thin soup,"[24] destroyed by meteorite impacts every 10 million years.[20, 25] This severely limits the time available to create pre-biotic chemicals and allow for the OOL.

> Chemically speaking, life uses only "left-handed" ("L") amino acids and "right-handed" ("R)" genetic molecules. This is called "chirality," and any account of the origin of life must somehow explain the origin of chirality. Nearly all chemical reactions produce "racemic" mixtures–mixtures with products that are 50% L and 50% R.

Two more problems are not mentioned in the article. A non-peptide bond anywhere in the chain will ruin the chain. You need around 200 amino acids to make a protein. If any of the bonds is not a peptide bond, the chain will not work in a living system. Additionally, the article does not mention the need for the experimenter to *intervene* in order to prevent interfering cross-reactions that would prevent the amino acids from forming.

Now keep in mind that even if you get the building blocks, you are left with the sequencing problem. Like the letters of the words in this blog post, the building blocks of life also need to be put in a meaningful sequence in order to do work in a living system – but that's another topic for another day.

# Luke Barnes on the fine-tuning of the strong force and fine structure constant

**Wintery Knight** · 22 September 2025 · Archived copy · Original

By now, anyone who has had discussions about scientific evidence for the existence of God knows about the fine-tuning argument. In a nutshell, if the fundamental constants and quantities given in the Big Bang were even slightly other than they are, then the universe itself would not be hospitable for complex, embodied intelligent life.

Here is an article from The New Atlantis written by Australian cosmologist Luke Barnes.

Excerpt:

> Today, our deepest understanding of the laws of nature is summarized in a set of equations. Using these equations, we can make very precise calculations of the most elementary physical phenomena, calculations that are confirmed by experimental evidence. But to make these predictions, we have to plug in some numbers that cannot themselves be calculated but are derived from measurements of some of the most basic features of the physical universe. These numbers specify such crucial quantities as the masses of fundamental particles and the strengths of their mutual interactions. After extensive experiments under all manner of conditions, physicists have found that these numbers appear not to change in different times and places, so they are called the fundamental constants of nature.
>
> […]A universe that has just small tweaks in the fundamental constants might not have any of the chemical bonds that give us molecules, so say farewell to DNA, and also to rocks, water, and planets. Other tweaks could make the formation of stars or even atoms impossible. And with some values for the physical constants, the universe would have flickered out of existence in a fraction of a second. That the constants are all arranged in what is, mathematically speaking, the very improbable combination that makes our grand, complex, life-bearing universe possible is what physicists mean when they talk about the “fine-tuning” of the universe for life.

Let’s look at an example – the strong force. Not only must the strong force be fine-tuned so we have both hydrogen and helium, but the ratio of the strong force must also be fine-tuned with the fine structure constant.

Barnes writes:

> The strong nuclear force, for example, is the glue that holds protons and neutrons together in the nuclei of atoms. If, in a hypothetical universe, it is too weak, then nuclei are not stable and the periodic table disappears again. If it is too strong, then the intense heat of the early universe could convert all hydrogen into helium — meaning that there could be no water, and that 99.97 percent of the 24 million carbon compounds we have discovered would be impossible, too. And, as the chart to the right shows, the forces, like the masses, must be in the right balance. If the electromagnetic force, which is responsible for the attraction and repulsion of charged particles, is too strong or too weak compared to the strong nuclear force, anything from stars to chemical compounds would be impossible.

Here’s the chart he’s referencing:

Fine-tuning of the strong nuclear force and the fine structure constant

As you can see from the chart, most of the values that the constants could take would make complex, embodied intelligent life impossible.

We need carbon (carbon-based life) because they form the basis of the components of life chemistry, e.g. proteins, sugars, etc. We need hydrogen for water. We need chemical reactions for obvious reasons. We need the light from the stars to support plant and animal life on the surface of a planet. And so on. In almost every case where you change the values of these constants and quantities and ratios from what they are, you will end up with a universe that does not support life. Not just life as we know it, but life of any conceivable kind under these laws of physics. And we don't have any alternative laws of physics in this universe.

By the way, just to show you how mainstream these examples of fine-tuning are, I thought I would link to a source that you're all going to be familiar with: The New Scientist.

## The fine-tuning of the force of gravity

So here is an article from the New Scientist about a different constant that also has to be fine-tuned for life: the force of gravity.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by

> now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in $10^{15}$ at 1 second after the big bang, allows life to form.**

Notice how the article also mentioned “the universe’s birth”, which is part of mainstream science.

When I’m writing to you about things like the origin of the universe, or the cosmic fine-tuning, I’m not talking to you about things that pastors found in the Bible. These discoveries are known and accepted by mainstream scientists. It’s amazing that people are constructing their worldviews without having to account for the birth of the universe and this cosmic fine-tuning. We all, as rational individuals, have to bound our view of the universe with the findings of science. Right now, those findings support the existence of a Creator and a Designer. So why am I seeing so many atheists who are just plain ignorant about these facts? Maybe we should tell them about this evidence. Maybe we should ask them why they don’t account for scientific evidence when forming their beliefs.

**Positive arguments for Christian theism**

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

# Trump admin pushing election integrity measures ahead of 2026 elections

**Wintery Knight** · 23 September 2025 · Archived copy · Original

I was on vacation all last week and took Monday off as well, so most of the posts were repeats. But it's Monday night, and I have a fresh post set for Tuesday morning. If you asked me what the biggest mistake of the Trump 2016 administration was, it was neglecting the state level changes to election policy in blue states that made it easier for voter fraud to happen.

Here is the latest story from Daily Signal:

> The Republican National Committee is executing President Donald Trump's election-integrity agenda ahead of the 2026 midterm elections.
>
> […]Trump signed an executive order in March requiring states to use proof of U.S. citizenship for federal voter registration, setting Election Day as the uniform deadline for receiving ballots in federal elections, and conditioning federal election funding on compliance with those and other election-integrity rules.
>
> The RNC is working to defend Trump's executive order in states where practices prohibited by the directive continue. While the president is taking the national approach to election integrity, the RNC is coming alongside him with a state-by-state approach.
>
> "We are challenging these things on a state-by-state basis to make sure that they are compliant with the statutory schemes as constructed now, and that they provide the most balanced security as we can have in those states," the official said.

So what are the changes that the RNC is pushing for? They are going after states that have a universal mail-in ballot system, where election officials automatically send absentee ballots to all registered voters in the state, regardless of whether individuals have asked for one.

They are also going after states that don't update their voter rolls to remove ineligible voters—such as those who have died, moved away, or become inactive. If you don't remove ineligible voters, you make it easier to commit voter fraud by duplicate voting or fraudulent voting.

They are also going after states that have "ballot harvesting", such that third parties (e.g., campaign workers, family members, or organizations) can gather and submit completed ballots from multiple voters without limits, deadlines, or strict tracking requirements.

Now, when I read all this, I was thinking of the Secretaries of State in blue states like Michigan and Pennsylvania. Can you really improve election integrity scores in blue states? Well the article talks about some of their wins in blue states, so yes – they really are doing it.

Here is a ranking of states for election integrity:

| Rank | State | 2024 Vote |
|---|---|---|
| 1-t | Tennessee | R |
| 1-t | Arkansas | R |
| 3 | Alabama | R |
| 4 | Louisiana | R |
| 5-t | Florida | R |
| 5-t | Georgia | R |
| 7-t | Indiana | R |

| Rank | State | 2024 Vote |
|---|---|---|
| 7-t | Oklahoma | R |
| 9 | South Carolina | R |
| 10 | Missouri | R |
| 11-t | Mississippi | R |
| 11-t | Ohio | R |
| 11-t | Texas | R |
| 11-t | Wisconsin | R |
| 15 | Kentucky | R |
| 16 | Iowa | R |
| 17 | Kansas | R |
| 18 | North Carolina | R |
| 19 | Nebraska | R |
| 20-t | New Hampshire | D |
| 20-t | South Dakota | R |
| 22 | Montana | R |
| 23 | Virginia | D |
| 24-t | Arizona | R |
| 24-t | Idaho | R |
| 24-t | Pennsylvania | R |
| 24-t | Rhode Island | D |
| 28 | Utah | R |
| 29 | West Virginia | R |
| 30 | Wyoming | R |
| 31 | Michigan | R |
| 32 | Alaska | R |
| 34 | Maryland | D |
| 35-t | Delaware | D |
| 35-t | North Dakota | R |
| 37 | New Mexico | D |
| 38-t | Colorado | D |
| 38-t | Connecticut | D |
| 38-t | Maine | D |
| 41 | Illinois | D |
| 42-t | Minnesota | D |
| 42-t | New Jersey | D |
| 42-t | New York | D |
| 45 | Massachusetts | D |
| 46 | Washington | D |

| Rank | State | 2024 Vote |
|---|---|---|
| 47 | Nevada | R |
| 48-t | Oregon | D |
| 48-t | Vermont | D |
| 50 | California | D |
| 51 | Hawaii | D |

Notice how most of the red states have good election integrity, whereas most of the blue states have poor election integrity. That's because most people who live in blue states like Washington cannot rationally ground objective moral values and objective moral duties, and so they just behave immorally.

My advice to people in blue states is to move out to red states, where you are sure your vote will count.

# Atheist Jerry Coyne explains why morality is impossible for atheists

**Wintery Knight** · 24 September 2025 · Archived copy · Original

Let's review what you need in your worldview in order to have a rationally grounded system of morality.

You need 5 things:

1) Objective moral values

There needs to be a way to distinguish what is good from what is bad. For example, the moral standard might specify that being kind to children is good, but torturing them for fun is bad. If the standard is purely subjective, then people could believe anything and each person would be justified in doing right in their own eyes. Even a "social contract" is just based on people's opinions. So we need a standard that applies regardless of what people's individual and collective opinions are.

2) Objective moral duties

Moral duties (moral obligations) refer to the actions that are obligatory based on the moral values defined in 1). Suppose we spot you 1) as an atheist. Why are you obligated to do the good thing, rather than the bad thing? To whom is this obligation owed? Why is rational for you to limit your actions based upon this obligation when it is against your self-interest? Why let other people's expectations decide what is good for you, especially if you can avoid the consequences of their disapproval?

3) Moral accountability

Suppose we spot you 1) and 2) as an atheist. What difference does it make to you if you just go ahead and disregard your moral obligations to whomever? Is there any reward or punishment for your choice to do right or do wrong? What's in it for you?

4) Free will

In order for agents to make free moral choices, they must be able to act or abstain from acting by exercising their free will. If there is no free will, then moral choices are impossible. If there are no moral choices, then no one can be held responsible for anything they do. If there is no moral responsibility, then there can be no praise and blame. But then it becomes impossible to praise any action as good or evil.

5) Ultimate significance

Finally, beyond the concept of reward and punishment in 3), we can also ask the question "what does it matter?". Suppose you do live a good life and you get a reward: 1000 chocolate sundaes. And when you've finished eating them, you die for real and that's the end. In other words, the reward is satisfying, but not really meaningful, ultimately. It's hard to see how moral actions can be meaningful, ultimately, unless their consequences last on into the future.

Theism rationally grounds all 5 of these. Atheism cannot ground *any of them.*

Let's take a look at #4: free will and see how atheism deals with that.

**Atheism and free will?**

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent

> experiments involving brain scans show that when a subject “decides” to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) “Decisions” made like that aren’t conscious ones. And if our choices are unconscious, with some determined well before the moment we think we’ve made them, then we don’t have free will in any meaningful sense.

If you don’t have free will, then you can’t make moral choices, and you can’t be held morally responsible. No free will means no morality.

Here are some more atheists to explain how atheists view morality.

William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin’s views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That’s the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won’t find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

When village atheists talk about how they can be moral without God, it’s important to ask them to justify the minimum requirements for rational morality. Atheists may act inconsistently with their worldview, believing in free will, expecting praise and blame for complying with the arbitrary standards of their peer group, etc. But there is nothing more to morality on atheism that imitating the herd – at least when the herd is around to watch them. And when the herd loses its Judeo-Christian foundation – watch out. That’s when the real atheism comes out – the atheism that we’ve seen before in countries that turned their backs on God, and the moral law. When God disappears from a society, anything is permissible.

# Study: female same-sex marriages have the highest rates of divorce

**Wintery Knight** · 25 September 2025 · Archived copy · Original

Sometimes, when I raise the fact that women initiate 69% of divorces, I get the response that this number is men's fault. For example, pro-marriage Christian feminists and sociologists will say "it's because men are less emotionally intelligent, they don't meet the needs of women". If that's true, then we should expect that lesbian relationships will be the most committed. Are they?

Here's a study from August 2022, published in the Journal of Family History.

The abstract says:

> The trends in marriage and divorce among male and female same-sex couples in urban and rural Norway were compared to different-sex marriages. Norway legalized same-sex living in 1993 and marriage in 2009. Cohorts from 1993 to 2018 were included. The 2009 gender-neutral marriage law appears to have had minimal impact on the rate of same-sex unions and divorces. Moreover, divorce risks are highest in female same-sex marriages, whereas male same-sex marriages have the same divorce risk levels as different-sex marriages. The divorce risk is declining for same-sex marriages in urban areas, while the opposite is observed in rural areas.

And down in the results section, we have this:

> Female same-sex marriages had the highest total divorce rate throughout the period, followed by male same-sex marriages. The highest total divorce rate was observed among female same-sex marriages formed in 2003, with 59.1% divorced before 2018.

Now, some people will say, but this is just one country. Yes, but it's a same-sex marriage affirming country. They've had same-sex unions since 1993, and same-sex marriage since 2009. So critics can't blame disapproval of LGBT for these numbers. And this study agrees with previous studies.

Now, let's make a comment about this.

I think this data suggests a wonderful question for men to use in the course of vetting a candidate wife for marriage. Just casually mention the study, and then ask her "what do you think the explanation for this is?"

There will be one group of women who say "that's easy. women are very emotional, and that causes them to have more difficulty keeping to their commitments. It's something that men should test for. Men should choose women who have a habit of taking on tough tasks, and seeing them through to the end. And maintaining their relationship obligations with difficult or demanding family members, friends, elderly pets, etc." That's the right answer. I like women who do STEM degrees and work hard jobs in the competitive private sector, they tend to be good at sticking with tough situations and engineer solutions, instead of quitting.

But there's another group that will reply "these numbers are the result of external forces that are conspiring against women to make them fail. It's all the fault of insufficient resources, or social disapproval, or sexism, or the males in their lives." That's the wrong answer. I avoid women who do easy degrees like English, psychology, etc. They tend to go straight to a safe unionized job teaching children in the public school monopoly. That's not good training for commitment-keeping. It shows that they like to do easy things. Marriage is hard work. Don't pick a wife who likes fun and thrills. Pick a wife who engineers solutions to problems.

I do understand that women expect high quality communication and emotional intelligence in their relationships. To those women, I would just say, you need to choose better men. You need to know up front what marriage is about in the long-run, and you need to choose the things that you really need for the long run.

I wrote this post to try to help men avoid disasters when making their relationship choices. The best we can do as men is to take responsibility for our own choices. That means not letting ourselves be carried away by emotions. We have to test by asking questions. And even better than listening to an answer, is looking at the actions. Always look for women who keep their commitments when it goes against their self-interest. They are out there. Pick one.

# Google / YouTube admits to censoring conservatives for Democrat politicians

**Wintery Knight** · 26 September 2025 · Archived copy · Original

I remember when Apple, Google and Amazon banned the Parler app because it was being used by conservatives to share conservative views online. Today, we're seeing that leftist domestic terrorists are using social media apps to communicate, but these companies don't seem concerned about that. Why is there a double standard? Why are conservatives censored, but not leftists?

Well, here's an interesting story from Daily Wire:

> Google has committed to allowing all creators who were kicked off YouTube — over so-called political speech "violations" — the chance to return to the platform. And according to House Judiciary Committee Chairman Jim Jordan, "THAT'S NOT ALL."
>
> The tech giant sent a letter to Jordan and the Judiciary Committee on Tuesday, but the letter also included several statements from YouTube, admitting, among other things, to pressure from the former President Joe Biden's administration to censor certain political statements.

In the rest of the article, it notes that conservatives were censored for their conservative viewpoints – not because they had violated any specific policy.

Another article from Daily Wire notes:

> Creators banned under this regime include Dan Bongino and Sebastian Gorka, both of whom now serve in the Trump administration.

Now, back to that point I made about Big Tech companies censoring the Parler app, because it was for conservatives. What do you think would happen if leftist domestic terrorists were using an app to assist them in their domestic terrorism? Would Apple and Google censor that app?

The Federalist explains:

> In a chilling social media post, FBI Director Kash Patel described how Wednesday's sniper at a Dallas ICE facility gathered intelligence online for the ambush that left one ICE detainee dead and two seriously injured. Authorities say suspected killer Joshua Jahn, 29, committed suicide after the ambush.
>
> […]While retracing Jahn's movements and writings, the FBI found he reviewed a document that listed Dallas DHS locations, and he "searched apps that tracked the presence of ICE agents." Marcos Charles, the ICE executive associate director for enforcement and removal operations, confirmed the gunman utilized these apps to carry out the attack.

So, will the same big tech companies that banned Parler also ban these anti-government, anti-law-enforcement apps?

Of course not:

> The Federalist sent emails to the media relations teams at the Google and Apple app stores. These teams are made up of people who are paid full-time wages to answer questions from the media. And the question The Federalist asked seemed like a real softball: Will the app store remove apps that track ICE or law enforcement?
>
> […]But at the time of publication both companies had refused to commit to suspending ICE-tracking apps.

Do you think they will ban these apps, or do you think they will let their allies on the left continue to use them to commit violence against law enforcement? What would you do with Big Tech censors? I don't think they would be changing a thing if the Democrats had won in 2024. They're only sorry now, because they got caught. Not because they care about free speech.

# Christian leaders ignore the real reasons why good men decline to marry

**Wintery Knight** · 27 September 2025 · Archived copy · Original

Before we start, here are two articles explaining why men are supposedly not marrying. First one from a pastor. Second one from a sociologist. And this is, I think, the majority view: men are to blame for the decline of marriage, because men are stupid, weak, lazy and lacking ambition. Feminist women are great. Marriage laws are fair. Family courts are impartial. But is that all true?

Now, if you ask an actual man whether these are his reasons for not marrying, he will have a different list:

- women initiate the majority of divorces
- young women are increasingly politically leftist
- men can easily be fired for false accusations at work
- men are sentenced far more severely than women are sentenced, for the same crimes
- the Sexual Revolution encourages women to be promiscuous with the men who they find the most physically attractive
- family courts are biased against men, punishing men with alimony, child support, loss of custody, loss of visitation
- majority of student loan debt is held by women
- concerns about the moral impact of the books, music, TV shows and movies that are popular with young women

And so on.

I think if good Christian men had to pick just one factor that is deterring them from marriage, it would be no-fault divorce.

On this blog, I've covered several cases of the "nightmare scenario" facing men in divorce. One of those cases is the case of Rob Hoogland, which occurred in Canada.

There's some new news about his case, reported in the London Daily:

> A Canadian man, involved in a legal battle over his right to object to hormone treatment for his teenage trans child, has reportedly been jailed and denied bail for violating a gag order banning him from discussing the story.
>
> Robert Hoogland was denied bail by the Vancouver Supreme Court on Friday and will remain in the North Fraser remand prison, according to news website the Post Millennial. He was arrested this week for contempt of court, due to his continued violation of an order restricting his speech regarding his transgender child.

I also reported on the case of an Apple senior software engineer named Ted Hudacko.

Here's a report about him from City Journal:

> Shortly after returning from a trip to New York with their two sons, Hudacko's wife, Christine, told him that she wanted a divorce—and that their oldest son identified as transgender. During divorce proceedings, the presiding judge, Joni Hiramoto… stripped him of all custody of his trans-identified son. Hudacko was concerned about administering experimental drugs and preferred to wait and see if his son's gender issues might resolve on their own, as usually happens in such cases. To the California judge, this confirmed his unfitness as a father.

I also reported on the case of a father from Texas named Jeff Younger, whose ex-wife wants to trans their kid.

And there a recent report about the status of his case in the New York Post:

> A California judge dealt a devastating blow to a Texas father in his years-long fight to stop his ex-wife from allowing their pre-teen son, who identifies as a girl named "Luna," to receive gender-affirming care.
>
> Father of two Jeff Younger, 59, announced on X that he "lost all parental rights" over his twin sons after Los Angeles Superior Court Judge Mark Juhas granted his estranged pediatrician ex-wife Anne Georgulas the authority to "castrate" his 12-year-old son James.

I blogged on all of these cases, but it's doubtful that pastors and pro-marriage sociologists have heard of any of them. They just want men to use their strength and finances to make women happy, and they don't care about the actual risks and costs that men are facing.

But there's been another case in the news just in the past week, reported in The Federalist:

> After raising concerns about his then-13-year-old son taking puberty blockers and starting on a path to irreversible, experimental, and life-long medical interventions to "transition" into a girl, the Colorado government stripped father Robert Cameron of all rights to protect his child.
>
> Colorado was able to do that because the child's mother and Cameron's ex-wife, Nancy Drake, used Colorado's "affirmation only" legal structure to wage a war against Cameron through the courts. Drake, who joined forces with an activist therapist, has been able to use government force to push the now-14-year-old boy into the transition interventions which, if pursued in full, have the power to sterilize, reduce brain development, and cause bone density issues, among a host of other gruesome effects.
>
> "My child is more important to me than whatever the court system may do to me. If my child needs to be saved, it's my job as a parent to save him, and he needs to be saved right now. He needs to be saved from predation and manipulation," Cameron told The Federalist. "I haven't slept well in forever because I'm afraid for my child. I also see the adults preying on this child's innocence. This all falls under the sexualization of children that we are engaging in as a society. That's absolutely appalling. And I'm not even talking about the medical experiments we're doing on children."
>
> […]Cameron's primary goal is to have his son be able to wait until he is 18 to make the decision, but Drake, who appears to have trigger-happy, extraordinarily litigious lawyers behind her, need the transition to start now, no questions asked — literally.
>
> Drake, an academic in a left-wing community in Colorado with whom Cameron shares joint custody, successfully got the state of Colorado to block Cameron's oversight over their son's medical treatment or even speak to him about transgenderism…
>
> […]Drake did not respond to The Federalist's request for comment, but within minutes of the request being sent, she threatened Cameron with calling Child Protective Services if he spoke to the media, claiming doing so means that he "intended [their son] to be harmed" and that it is "proof of child abuse."
>
> […]Some weeks ago, Drake also attempted to stop Cameron's ability to speak to pretty much anyone by requesting a gag order on top of the others already issued that would encompass "friends … anyone in our social circle … activists, and … the media," claiming it puts their children (their son is one of two twins, the other, a girl) in "physical, medical, and psychological danger," according to an email sent to the case arbitrator reviewed by The Federalist.
>
> Drake threatened Cameron's ability to have parenting time with their children at all.

Now, in every case I presented, I blame the MAN 100% for the problems he is facing. Why? Because people don't change after you marry them. These women were terrible secular leftists before marriage, and these foolish men all

chose to marry them anyway. Maybe because men tend to value youth and beauty above character. Men are responsible for marrying badly. And I have the same view when women marry badly. It's the women's fault.

My point is that good men who are not yet married look at these cases, and it causes them to want to decline to participate in dating and marriage. They don't like the fact that these social workers, therapists, lawyers, judges, etc. have this VERY LOW VIEW of fatherly authority and leadership. They don't want to be judged in a system run by man-haters. This is especially true for men who are well-educated and high earners. They don't want to be ruined.

So, what should we think about pastors, sociologists, and feminist Christians in general, when they try to blame the decline of marriage on men? Well, an excellent question to ask them is "what reasons do conservative men who are well-educated, and financially successful have for declining the offer of "feminist" marriage?" If their answer is to blame and shame men some more, just understand that you are dealing with someone who is not interested in solving the underlying problem.

When I ask questions like this to social conservatives, even the ones who claim to be against divorce, they cannot bring themselves to take seriously the dangers of marriage for men. Instead, they try to make it seem that a man taking these risks is "brave" and "strong". When I ask them if they shoe was on the other foot, and it was women who were facing these same risks, should she marry? And they say "Of course not. That's unfair!"

Why is there this double standard? Could it be because *even in the Christian church, there is a double standard that asserts that Christianity is really about making women happy, no matter what, and that men are expendable for this purpose?* I'm not saying that the Bible teaches this. But I've found this view of Christianity to be extremely popular, and not just among egalitarians, but among complementarians, too. Especially the ones who redefine "male headship" to mean "servant leadership". That really turns men off of marriage, because it makes them think that Christianity is being run by the ex-wives in these stories, and there is no support for male leadership at all.

# Knight and Rose Show #68: Corey Miller: The Progressive Miseducation of America

**Wintery Knight** · 27 September 2025 · Archived copy · Original

Welcome to episode 68 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss the the progressive miseducation of America, with Dr. Corey Miller. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Dr. Corey Miller to discuss The Progressive Miseducation of America. They examine how universities promote scientism, cultural Marxism, and postmodernism, undermining morality and fueling issues like divorce and fatherlessness. Miller critiques the secular drift and offers practical guidance, highlighting Ratio Christi's tools to equip young people for the intellectual and moral challenges of high school and university.

You can find the details about his new book here, and if you sign up for the Ratio Christi newsletter on that site, you get the first two chapters FOR FREE!

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 68:**

**Speaker biographies**

Corey Miller grew up in Utah as a seventh generation Mormon. He came to Christ, and later became a pastor, philosophy professor, campus minister, and now serves as the president/CEO of Ratio Christi (RatioChristi.org). He has authored or edited five books and holds three master's degrees, along with a PhD from the University of Aberdeen, Scotland. His thought is centered on the intersection of faith, reason, and culture. His newest book is entitled "The Progressive Miseducation of America: Confronting the Cultural Revolution from the Classroom to Your Community ", published by Harvest House Publishers. It will be available on October 14, 2025.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# What does scientific evidence tell us about the effectiveness of same-sex parenting?

**Wintery Knight** · 28 September 2025 · Archived copy · Original

I saw that Katy Faust tweeted this article by Mark Regnerus, a sociologist who specializes in dating, marriage and parenting issues. In the article, Regnerus cites the conclusions from several recent research studies. Once we see what he has to say, I'll pull the data from a Canadian study that he didn't mention that also shows the effect of same-sex parenting on children.

The article appears in The Public Discourse:

> The story of "no differences" between same-sex and opposite-sex households with children hinges on a pair of repetitive themes in the published research: (1) hiding behind small and nonrepresentative samples, and (2) employing analytic strategies that all but guarantee motivated researchers can "explain away" those pesky baseline observable differences between children from same-sex and opposite-sex households.
>
> Baseline differences matter. What happens before control variables matters. Building statistical models to hide differences is called p-hacking, a common but problematic practice. A 2020 study of over 1.2 million children in the (gay-friendly) Netherlands, whose primary media message trumpeted how same-sex parents were better than opposite-sex parents, nevertheless revealed that 55 percent of children living with same-sex parents—the vast majority of which were female couples—experienced the separation of these parents, well above the 19 percent of children of opposite-sex parents who experienced the same. "Controlling" for such instability—in effect implying it doesn't matter—clears the way to proclaim the benefits of same-sex parents. It's a common statistical practice, but a deceptive one.
>
> Hence, alternative analyses are always a good idea. For example, a 2020 published reexamination of three nationally representative datasets from the United States and Canada revealed that the presence of children tended to stabilize opposite-sex couples but destabilize same-sex couples. Dissolution rates were 43 percent for same-sex couples, but only 8 percent for opposite-sex couples. Its authors agree, saying that "parental instability is an important factor through which parents' sexual orientation influences children's outcomes."

So, the problem of higher separation between partners in a lesbian relationship is well-known. Lesbian couples have the highest instability rates of any kind of couple, heterosexual or homosexual.

Family Research Council notes:

> In the past, same-sex couples who got a slice of the marriage pie immediately wanted their share of the divorce market. In South Africa, couples who were first to wed under a 2006 law also won the race to divorce court only a year later; two Toronto lesbians who wed in 2003 separated after only five days, petitioning successfully in 2004 for a judge to overturn Canadian law so they could divorce. Or take Los Angeles, where 2008's historic first same-sex couple divorced this summer although they had been together for 18 years! Lest we think these cases are exceptional, of the same-sex couples who did marry in Sweden, males were 35% more likely to divorce than heterosexual couples, while lesbians were up to 200% more likely.

Before same-sex marriage, the concept of marriage included the concepts of permanence and exclusivity. Natural marriage has the production and raising of children at the core. No-fault divorce damaged that core, saying that the happiness of the selfish adults was more important than the children. Then same-sex marriage damaged the core again, saying that producing children isn't even central to the concept of marriage. As the selfish adults pass more laws against natural marriage, the children suffer more from the decline of permanence and exclusivity.

I found another study related to same-sex parenting, this one out of Canada.

Here is the abstract of the study:

> Almost all studies of same-sex parenting have concluded there is “no difference” in a range of outcome measures for children who live in a household with same-sex parents compared to children living with married opposite-sex parents. Recently, some work based on the US census has suggested otherwise, but those studies have considerable drawbacks. Here, a 20% sample of the 2006 Canada census is used to identify self-reported children living with same-sex parents, and to examine the association of household type with children’s high school graduation rates. This large random sample allows for control of parental marital status, distinguishes between gay and lesbian families, and is large enough to evaluate differences in gender between parents and children. Children living with gay and lesbian families in 2006 were about 65 % as likely to graduate compared to children living in opposite sex marriage families. Daughters of same-sex parents do considerably worse than sons.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That’s not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That’s not good for children either. So we have three reasons to think that normalizing gay relationships as “marriage” would not be good for children.

# Does the Bible teach Christians to expect happiness or suffering?

**Wintery Knight** · 29 September 2025 · Archived copy · Original

Is God your cosmic butler? Do you just ring a bell to summon him so that he can give you whatever you want? Let's see what the Bible teaches in the book of 1 Peter. Peter is writing to all the Christians who are spread out all over the place, trying to survive in a world that doesn't care much about things that they think are meaningful.

Pay attention to these verses:

1 Peter 1: 3-7:

> [3] Praise be to the God and Father of our Lord Jesus Christ! In his great mercy he has given us new birth into a living hope through the resurrection of Jesus Christ from the dead,
>
> [4] and into an inheritance that can never perish, spoil or fade. This inheritance is kept in heaven for you,
>
> [5] who through faith are shielded by God's power until the coming of the salvation that is ready to be revealed in the last time.
>
> [6] In all this you greatly rejoice, though now for a little while you may have had to suffer grief in all kinds of trials.
>
> [7] These have come so that the proven genuineness of your faith—of greater worth than gold, which perishes even though refined by fire—may result in praise, glory and honor when Jesus Christ is revealed.

Suffering is normal and expected.

1 Peter 2:6-8:

> [6] For in Scripture it says:
>
> "See, I lay a stone in Zion,
> a chosen and precious cornerstone,
> and the one who trusts in him
> will never be put to shame."
>
> [7] Now to you who believe, this stone is precious. But to those who do not believe,
>
> "The stone the builders rejected
> has become the cornerstone,"
>
> [8] and,
>
> "A stone that causes people to stumble
> and a rock that makes them fall."
>
> They stumble because they disobey the message—which is also what they were destined for.

Rejection by "those who do not believe" is normal and expected.

1 Peter 2:18-24:

> [18] Slaves, in reverent fear of God submit yourselves to your masters, not only to those who are good and considerate, but also to those who are harsh.
>
> [19] For it is commendable if someone bears up under the pain of unjust suffering because they are conscious of God.
>
> [20] But how is it to your credit if you receive a beating for doing wrong and endure it? But if you suffer for

> doing good and you endure it, this is commendable before God.
>
> [21] To this you were called, because Christ suffered for you, leaving you an example, that you should follow in his steps.
>
> [22] "He committed no sin,
> and no deceit was found in his mouth."
>
> [23] When they hurled their insults at him, he did not retaliate; when he suffered, he made no threats. Instead, he entrusted himself to him who judges justly.
>
> [24] "He himself bore our sins" in his body on the cross, so that we might die to sins and live for righteousness; "by his wounds you have been healed."

When people attack you personally for being a Christian, you don't retaliate against them.

1 Peter 3:14-18:

> [14] But even if you should suffer for what is right, you are blessed. "Do not fear their threats; do not be frightened."
>
> [15] But in your hearts revere Christ as Lord. Always be prepared to give an answer to everyone who asks you to give the reason for the hope that you have. But do this with gentleness and respect,
>
> [16] keeping a clear conscience, so that those who speak maliciously against your good behavior in Christ may be ashamed of their slander.
>
> [17] For it is better, if it is God's will, to suffer for doing good than for doing evil.
>
> [18] For Christ also suffered once for sins, the righteous for the unrighteous, to bring you to God. He was put to death in the body but made alive in the Spirit.

Jesus sets the example for Christians of being willing to suffer for obedience to God.

1 Peter 4:1-5:

> [1]Therefore, since Christ suffered in his body, arm yourselves also with the same attitude, because whoever suffers in the body is done with sin.
>
> [2] As a result, they do not live the rest of their earthly lives for evil human desires, but rather for the will of God.
>
> [3] For you have spent enough time in the past doing what pagans choose to do—living in debauchery, lust, drunkenness, orgies, carousing and detestable idolatry.
>
> [4] They are surprised that you do not join them in their reckless, wild living, and they heap abuse on you.
>
> [5] But they will have to give account to him who is ready to judge the living and the dead.

The normal Christian life involves some non-Christians heaping abuse on you, *precisely because* you don't participate in their sins, or celebrate their sins. For example, attending or participating in a same-sex marriage ceremony.

1 Peter 4:12-19:

> [12] Dear friends, do not be surprised at the fiery ordeal that has come on you to test you, as though something strange were happening to you.
>
> [13] But rejoice inasmuch as you participate in the sufferings of Christ, so that you may be overjoyed when his

> glory is revealed.
>
> [14] If you are insulted because of the name of Christ, you are blessed, for the Spirit of glory and of God rests on you.
>
> [15] If you suffer, it should not be as a murderer or thief or any other kind of criminal, or even as a meddler.
>
> [16] However, if you suffer as a Christian, do not be ashamed, but praise God that you bear that name.
>
> [17] For it is time for judgment to begin with God's household; and if it begins with us, what will the outcome be for those who do not obey the gospel of God?
>
> [18] And,
>
> "If it is hard for the righteous to be saved,
> what will become of the ungodly and the sinner?"
>
> [19] So then, those who suffer according to God's will should commit themselves to their faithful Creator and continue to do good.

Christians who experience shame and/or suffering at the hands of some non-Christians for obeying God, are imitating Christ. They should expect to be vindicated, just as Christ was vindicated through his resurrection.

1 Peter 5:5-6:

> [5] In the same way, you who are younger, submit yourselves to your elders. All of you, clothe yourselves with humility toward one another, because,
>
> "God opposes the proud
> but shows favor to the humble."
>
> [6] Humble yourselves, therefore, under God's mighty hand, that he may lift you up in due time.

Authentic Christianity involves obeying God's commandments, and defending God's truth claims and moral values. It doesn't mean virtue signaling to Christians, (or non-Christians, which seems very popular these days among pious Christian leaders). Humility means thinking of yourself less, and comparing yourself to others less. Just do your job as a Christian, and don't think about what it says about you. To anyone. What people think of you doesn't matter.

Look at 1 Corinthians 4:1-5:

> [1] This, then, is how you ought to regard us: as servants of Christ and as those entrusted with the mysteries God has revealed.
>
> [2] Now it is required that those who have been given a trust must prove faithful.
>
> [3] I care very little if I am judged by you or by any human court; indeed, I do not even judge myself.
>
> [4] My conscience is clear, but that does not make me innocent. It is the Lord who judges me.
>
> [5] Therefore judge nothing before the appointed time; wait until the Lord comes. He will bring to light what is hidden in darkness and will expose the motives of the heart. At that time each will receive their praise from God.

Christianity isn't there for you to use to make yourself happier, or to make other people like you. You're not supposed to agree with non-Christians so that they like you. That's missing the entire point of Jesus' example. Jesus obeys God. Some non-Christians get mad at him. Some non-Christians shame Jesus, and make him suffer, for obeying God. God vindicates Jesus. That's the plan. You're supposed to follow that plan, not make up some other compromise and virtue signal plan!

By the way, in no way am I telling Christians to be impractical. You should be as smart as you can, work as hard as you can, and save as much money as you can, in order to make your shame and suffering bearable, without compromising your principles. For example, you could try to make a network of like-minded friends who can support one another when you become a target. You can donate to organizations like Alliance Defending Freedom, a legal group that defends Christians from persecution by the secular left.

But just understand that being rejected, and being mistreated, is part of the normal, authentic Christian life. You're not supposed to agree with non-Christians, or celebrate them, or affirm them, in order to escape feeling shame, and suffering persecution. I don't know how people can read the Bible and not understand what the life of Jesus means. We're supposed to follow Jesus.

# How can we get normal people to care about the effects of feminism?

**Wintery Knight** · 30 September 2025 · Archived copy · Original

On the weekend, I saw a really great 90-minute discussion about how feminism has affected relationships and marriage, featuring the famous Christian Zuby and Joker from Better Bachelor. Joker speaks for the standard, non-religious moderately conservative man (pro-life, opposed to LGBT activism). And Zuby is a traditional conservative who wants men to pursue women for marriage.

So, here is the video:

And Zuby even posted timestamps, so you can see what it is all about:

Timestamps:
(0:00) Trailer
(01:29) Introduction
(01:48) Joker's background and content creation journey
(03:00) Personal experiences with marriage and divorce
(05:04) Traveling and cultural observations
(06:39) Modern dating challenges and gender dynamics
(08:24) Men's issues and the Red Pill community
(27:13) Advice for young men and personal growth

(1:09:01) Societal breakdown and family dynamics
(1:11:20) The role of religion and tradition
(1:14:20) Concluding thoughts on society and relationships
(1:37:29) Outro

My Dad is currently visiting me in America, and we watched this on Saturday together and had a great discussion. I lean more towards Better Bachelor than Zuby, but Zuby did a good job of accepting the situation that men find themselves in. Most pro-marriage conservatives and Christians are extremely naive about how feminism has affected the dating market, and the value proposition of marriage for men. They can't even put the situation facing men into words, because they are so committed to tricking young men into marriage despite the risks and costs. But not Zuby. He has an accurate view of the situation facing men. He was making great points, but so was Better Bachelor. I think that people watching will find that it was a close contest, with both sides landing some pretty good points.

I was going to post this on Monday night for Tuesday, which a better day for blog traffic, but I found another (shorter) video from Sargon of Akkad, the British commentator. Sargon seems to be secular, but he definitely leans right. Anyway, he is happily married, with a stay-at-home wife. And he's noticed that something has gone wrong with modern women. They seem to think that going after higher education, careers, wealth, travel and fun makes

them *more attractive* to men. Actually, everything that leftist women think is good for men is actually *very, very, very bad for men.* Watch the video below (shorter) and see what you think. What's so funny is how many conservative Christian parents and pastors just let their daughters slide into feminism, and never warn them about how marriage-minded men *never marry feminists.*

Here's the video:

That lady in the thumbnail is "Lisa" and she is looking for a man to marry her, now that she has reached 42 years old. She lives in San Francisco, and she loves wine and cats. Also, she's a non-religious Democrat, and she expects her high value husband to share those values. Do non-religious Democrats have the character traits for lifelong married love?

New York Post has an article about her:

> The Bay Area singleton, 42, is spending cold, hard cash to rent a dozen digital billboards along California's famed Highway 101 — advertising her hand in marriage to any commuter that's ready for commitment.
>
> "I'm putting myself out there," Catalano, a vintage clothes retailer, from San Mateo, Calif., told the Post with a laugh. "People would be shocked if they knew how much this is costing me."
>
> Catalano, who launched her ad campaign on September 2, chose not to disclose how much the exploit has cost her over the past month.
>
> […]She's also taking out ad space atop taxicabs, further promoting herself to motorists around the region.

And her LinkedIn says that she hasn't worked since October 2024.

Do you think that a man who believes that two men can "marry" and adopt children would be good at marriage? Do you think that a man who believes that murder is a good way to resolve reckless, hedonistic sex would be good at marriage? Lisa does. Lisa thinks that immoral men make GREAT husbands. Feminism teaches women to oppose traditional male character and roles, and just go for tall, hot and *non-judgmental* men.

Anyway, I realize that the first video is pretty long, but just watch it over two 45 minute workouts. The last one is shorter, but you can just listen to it while sweeping, vacuuming or mowing. I really enjoyed them, and I'm glad that we are getting more controlled, moderate voices to make the case about why Christians should be more opposed to feminism. You can either have feminism, or you can have marriage. You can't have both.

# Grieving father of murdered girl attacks soft-on-crime Democrats

**Wintery Knight** · 1 October 2025 · Archived copy · Original

Previously, I blogged about the murder of Iryna Zarutska, the 23-year-old woman who was murdered by a criminal who was a 14-time repeat offender, in Democrat-dominated Charlotte, NC. What struck most people about the story is how Democrats didn't want to accept any responsibility for their soft-on-crime policies. And now we have a similar case in South Carolina.

Daily Caller has an exclusive story about it:

> Stephen Federico, the father of 22-year-old Logan Federico, told the Daily Caller no Democratic lawmakers have contacted him since her murder.
>
> Logan was shot and killed during a May 3 suspected home invasion while visiting friends in Columbia, South Carolina. Democrat South Carolina Rep. James Clyburn represents the district where Logan Federico was killed.
>
> When the Caller asked Federico if any Democratic lawmaker, including Clyburn, had reached out since his daughter's death, he said no.
>
> Referring to Democrat North Carolina Rep. Deborah Ross, he added, "One called my daughter the wrong name yesterday."

I do think that it is infuriating when someone takes a course of action for social reasons – virtue signaling – and then refuses to accept responsibility for the results of their actions. In this case, Democrats took an action – being soft on criminals, and deterring self-defense – and then when the result occurred – repeat offenders committing serious crimes after being released – the Democrats don't want to even accept that it happened. And they certainly don't accept that they are responsible. After all, they think, how could bad results come from actions taken by someone as morally superior as myself? The moral superiority means that they should never be held accountable for any results of their actions.

Just like the Iryna case, the accused in this case had been caught and released many times:

> Authorities charged Dickey with two counts of first-degree burglary in 2014, then served warrants for a third first-degree burglary charge in October, according to WIS10. The man pleaded guilty on a second-degree non-violent burglary charge and was sentenced to 10 years suspended amid probation.
>
> Dickey faced the other two burglary counts the following year, though one was dropped. He pleaded guilty to burglary to the third-degree. Dickey pleaded guilty for the third time to third-degree burglary in 2023 after originally facing a count of violent second-degree burglary. Eleventh Circuit Court Solicitor Rick Hubbard claimed his office did not know of Dickey's previous burglary charges and guilty pleas amid the 2023 case.
>
> […][Stephen Federico] noted that prison is meant to rehabilitate people but argued that Dickey never spent enough time behind bars to know if rehabilitation could have worked — noting he only served about 600 days over a decade. "I would say the odds are against career criminals ever being rehabilitated."

There's some must-see video of the father that has been making the rounds – a rare look at what crime is like for the victims:

In this case, the accused criminal was arrested 39 times, and had 25 felonies in his criminal record. What was he doing out on the streets? Well, you just have to consider that big problem that secular leftists have with accountability. They don't like the idea of anyone being "punished" for their actions. That's why they hate Christianity and the idea of a final judgment so much. And this hatred comes out in their coddling of criminals.

Dennis Prager had a memorable line that he used to say often on his radio show. He would say "If you are kind to the cruel, you will be cruel to the kind". But that's what the secular left believes, which is why people have to learn never to put them into power. You think you are electing people to protect you from evil, but the secular left sees it as an opportunity to deal with their own guilt by showing their great capacity for forgiveness and non-judgment. "I don't judge" they say, and they mean that as a boast. Well, they are making that boast while risking your life. Their boast, your life.

# How to explain the gospel in less than 1000 words

**Wintery Knight** · 2 October 2025 · Archived copy · Original

A friend sent me a draft e-mail, that he wrote to a family member, who has rejected historic Christianity for progressive Christianity. He was asked to give the basics of salvation, and his attempt to explain the gospel to her is below. My advice included taking out the Christianese terms. Do you think he did a good job? I think his emphasis on what is not the gospel (what needs to be rejected) makes this a first-class explanation of the gospel.

---

So, you've asked the 10,000 talent question (alluding to Matthew 18:23-35). You are basically asking me what I think the Gospel is. I'll try to answer that in a minimalistic way, using my own characterization of it rather than just making doctrinal statements.

One must accept that there is a God, who is a higher authority than themselves. How much one must first believe about that God is debatable, but candidate beliefs would be that He is personal (having a mind like, but greater than, ours), powerful, and the creator of this cosmos and everything in it — He owns it all. Our natural intuition is to see beauty, order, complexity, and "design" in nature. There is a difference in belief vs unbelief in that some think it is just the appearance of design and some acknowledge their intuition that it actually is designed.

One must acknowledge their moral intuitions, and recognize that there are actually right and wrong things in this world. It's not just whatever you want to do, or whatever society decides in a given time or culture.

Given that morality is then understood to be a transcendent thing (universal and independent of time and culture), the connection is made to God as the author of this moral law.

One must then recognize that he/she regularly fails to live up to this law, even according to just their meager understanding of it, and even by the standards of morality that they make up for other people.

One must not try to suppress this, or therapize it away. One must recognize there is a problem and real moral culpability. One must recognize that they feel guilty and have self-esteem issues because they actually do have guilt and issues.

One must make the connection between guilt and their standing before God. Being good sometimes and in some ways does not erase the bad you do, past, present, or future. One must be willing to bend the knee to God's will regarding morality.

One must also come to see the moral failure (sin) in their lives as a bad thing that they'd like to be rid of, rather than excusing it as the fault of others, or revelling in it as part of the pleasure of life, or shrugging it off as just "who I am."

One must appeal to God in these matters for both forgiveness and help in living as they should.

Given that God has provided a champion for the problem that humanity faces (the backstory of which not all will fully know), one whose heart is truly yielded to all these things will naturally and eagerly receive Word of this as Good News. God has solved the seemingly irreconcilable demands of both justice and forgiveness in that champion.

Those with ears to hear will receive this solution — Jesus — and believe what He has done in life and on the cross for their sake — the resurrection being both confirmation of His divine authority and also the sign of the defeat of death which awaits us all, and is the only barrier between us and facing this God whom we fail at every turn. They will believe on (or upon) Jesus as Lord and their means of salvation, surrendering dependence upon their own ideas of self-righteousness and earning the favor of God.

The outward expression that we have understood and accepted these things is that we have made Jesus Lord and

committed ourselves to following Him, conform our character to His, resist our sinful inclinations, and are interested in learning all about Who God is and what has been done for us in Christ.

This commitment to the Lordship of Christ naturally leads to the acceptance of subsequent beliefs. If Jesus is indeed Lord, then He holds all authority, and what He said and taught to His followers is our guide — the New Testament. And if this is the divine story, as intended by God for men, then we have reason to believe that it is comprehensible to us, and He will insure (in spite of the fallibility of men and demonic plots) that its essential message will not be lost or corrupted until all things are completed. Given that Jesus affirmed every categorical section of the Old Testament, and claimed to be its promised Messiah, then that, too, is a source of truth and understanding.

Those doctrines that are sometimes characterized as “essential” for salvation, are merely the highlights of this redemption narrative, which are those things being clear and consistent, and which indicate that someone has yielded themselves to the authority of Christ and the scriptures, and understands these things. It is not that believing them is what saves, but they are what the saved naturally come to believe. Confessing them is the tangible, verbal act of affirming the Gospel, but is not necessarily identical to a life committed to putting it into practice, which is saving faith.

# Study: sentences are 63% more severe for men than for women

**Wintery Knight** · 3 October 2025 · Archived copy · Original

So, in response to yesterday's post, I have been asked what are some of the other reasons that cause men to become disinterested in dating and marriage. I have a list as long as my arm. But here's another one for today. Today's reason is that the legal is system is biased against men. There many examples of the bias, but I'll focus on sentencing.

The study I want to talk about today is called "Estimating Gender Disparities in Federal Criminal Cases", and it's published in the peer-reviewed journal "*American Law and Economics Review".*

The abstract says this:

> This paper assesses and decomposes gender disparities in federal criminal cases. It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables. Decompositions show that most of the unexplained disparity appears to emerge during charging, plea-bargaining, and sentencing fact-finding. The approach provides an important complement to prior disparity studies, which have focused on sentencing and have not incorporated disparities arising from those earlier stages. I also consider various plausible causal theories that could explain the estimated gender gap, using the rich dataset to test their implications.

The key sentence there is "It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables."

I also found this paragraph interesting:

> The estimated gender disparities are strikingly large, conditional on observables. Most notably, treatment as male is associated with a 63% average increase in sentence length, with substantial unexplained gaps throughout the sentence distribution.

This anti-male discrimination becomes apparent to men when they are going through the divorce process.

About 70% of divorces are initiated by women, and most of them for frivolous reasons (reasons that were not recognized as valid in the law prior to "no-fault-divorce" being enacted). The reasons are also not recognized in the Bible. Throughout the divorce process, men encounter anti-male bias. This begins with the common use of false accusations against the man, in order to get sole custody, which provides the woman with greater child support payments from the man. These false accusations are usually not based on any evidence, such as police reports. They just emerge during the divorce proceedings and are used to eject the man from the home, and get the woman sole custody of the kids. In 90% of cases, the woman gets sole custody of the kids. And this is despite the fact that single-father homes have similar outcomes for children as married two-parents homes. The results of single-mother homes are disastrous for children in many areas, including poverty, crime, mental health, sexual activity, etc. But the court system insists on doing what is worse for children by separating the father from the child. Even the meager visitation rights that fathers get are not enforced.

Failure to pay alimony and child support can land men in prison. And the laws are enforced very unfairly there, as well. Consider this case from Canada:

> A wealthy businessman will have to pay more than $50,000 a month in spousal support for 10 years to a woman with whom he had a long-term romantic relationship even though they kept separate homes and had no children together, Ontario's top court has ruled.

Seeing this, many men today have declined to participate in dating and marriage. And I could come up with *dozens* more reasons like this one. Based in peer-reviewed studies. It's not one reason deterring men from marrying, it's dozens of reasons. In every case, society has decided that men are expendable. And sadly, the church has largely ignored the root causes of men's retreat from dating and marriage. The church simply has nothing at all to say to men who are faced with these risks, costs and disincentives.

When I explain these problems to pro-marriage conservatives, they confess to never having heard about any of these issues. They say "I just like the idea of people falling in love and having lots of cute babies". They haven't really bothered to think about the calculations that men run before deciding what to do with women. Maybe it's time for Christian leaders to do a little more homework about these issues. Maybe there is something Christian churches can do to make marriage a bit more appealing to men.

We are already seeing this happening in conservative states like Florida and Tennessee. In Florida, there are new laws requiring that child custody be 50-50 in most circumstances. This acts as a deterrent against women who want to file frivolous divorces just to get child support from wealthy men. Florida also banned permanent alimony, which is another positive step to make marriage more fair for men. (Although many women in Florida were furious about it). In Tennessee, it is now a misdemeanor to claim child support payments from a man who is not the biological father of the child.

These are the kinds of policy solutions that will bring marriage back. But I've never heard Christians talking about these issues. All I ever hear from pious Christian leaders is that men need to "man up", as if manning up makes the threats from feminist laws and courts disappear. It doesn't work, but it does signal virtue, which seems to be the goal of many pious Christian leaders. We're going to have to do better than virtue-signaling if we want to reverse the decline of marriage. It's not going to be solved by shaming and blaming men.

# Jeff Hester debates William Lane Craig on the topic “Is Belief in God Rational in a Scientific Age?”

**Wintery Knight** · 4 October 2025 · Archived copy · Original

This is an accurate protrayal of what went down in this debate

I was very excited to see a recent debate by Christian philosopher William Lane Craig against atheist astronomer Jeff Hester. When I summarize a debate, I do a fair, objective summary if the atheist is intelligent and informed, as with Peter Millican, Walter Sinnott-Armstrong or Austin Dacey. But the following summary is rated VS for Very Snarky, and you’ll soon see why.

The debate itself starts at 29 minutes:

Thanks to Enrique for the link to a version with better audio.

## Dr. Craig’s opening speech

Dr. Craig went first, and he presented 4 arguments, as well as the ontological argument which I won’t summarize or discuss. He later added another argument for theism from the existence of the universe that does not require an origin of the universe.

**A1. Counter-examples**

Theists who are elite scientists cannot be “irrational”, for example: Allan Sandage, Gustav Tammann, George Ellis, Don Page, Christopher Isham

**A2. Kalam cosmological argument**

1. Whatever begins to exist requires a cause.
2. The universe began to exist.
3. Therefore, the universe requires a cause.

**A3. Fine-tuning of the universe to permit complex intelligent life**

1. The fine-tuning of the universe is due either to physical necessity, chance or design.
2. It is not due to physical necessity or chance.
3. Therefore it is due to design.

**A4. Moral argument**

1. If God does not exist, objective moral values and duties do not exist.
2. Objective moral values and duties do exist.
3. Therefore, God exists.

## Dr. Hester's opening speech

Dr. Hester went second and presented two arguments which both committed the genetic fallacy, a logical fallacy that makes the arguments have no force.

Hester starts his opening speech by asserting that Albert Einstein was irrational, because he denied quantum mechanics.

Hester explains that he became an atheist at 15. This would have been before the evidence for the origin of the universe became widespread, before we had very many examples of fine-tuning, before the discovery that the origin of life problem is a problem of the origin of complex, specifed information, etc. What kind of reasons can a 15-year-old child have for becoming an atheist? It's hard to say, but I would suspect that they were psychological. Children often desire autonomy from moral authorities. They want to be free to pursue pleasure. They don't want to be thought of as superstitious and morally straight by their non-religious peers.

Later on in the debate, Hester volunteers that he hated his father because his father professed to be a Christian, but he was focused on his career and making money. In the absence of any arguments for atheism, it's reasonable to speculate that Hester became an atheist for psychological reasons. And as we'll see, just like the typical 15-year-old child, he has no rational basis for atheism. What's astonishing is how he continues to hold to the atheism of his teens when it has been falsified over and over by scientific discoveries in the years since.

He says that Dr. Craig's deductive arguments do not have premises that reach a conclusion through the laws of logic. On the contrary, he just asserts that God exists as his conclusion, and then says that this assertion is the best explanation of a gap in our scientific knowledge. Some of the gaps in our scientific knowledge he uses in his arguments are: 1) he doesn't understand why the Sun moves through the sky, so God exists, 2) he doesn't understand why the wind blows, so God exists.

What counts as "rational" are things that have not been disproved. The progress of science has shown that the universe did not need a casuse in order to begin to exist, and also there is no cosmic fine-tuning.

**A1. The success of evolution in the software industry proves that there is no God**

All hardware and software is developed using genetic algorithms that exactly match Darwinian processes. All the major computer companies like Google, Microsoft, Amazon, Apple, etc. are just generating products using mutation and selection to evolve products over long periods of time. If you look over a typical software engineering degree, it's all about Darwinian evolution, and nothing about design patterns, object-oriented design, etc.

This widespread use of evolution in the software industry undermines all of the arguments for God's existence. Evolution caused the origin of the universe. Evolution explains why the universe is fine-tuned for life. Evolution, which requires replication already be in place in order to work, explains the origin of the first self-replicating organism.

**A2. Theist's view of the world is just a result of peer pressure from their tribes**

All of Dr. Craig's logical arguments supported by scientific evidence don't matter, because he got them from a

primitive tribe of Christians that existed 2000 years ago. Everyone gets their view of origins, morality, meaning in life, death, etc. from their tribes. Except me, I'm getting my beliefs from reason and evidence because I'm a smart atheist. I don't have an atheist tribe in the university that would sanction me if I disagreed with nonsense like homosexuality is 100% genetic, transgenderism, man-made catastrophic global warming, fully naturalistic evolution, aliens seeded the Earth with life, infanticide is moral, socialism works, overpopulation will cause mass starvation, nuclear winter, etc. Also, my argument isn't the genetic fallacy at all, because smart atheists don't commit elementary logical fallacies that even a first-year philosophy student would know.

**A3. Our brains evolved so our rational faculties are unreliable, so God does not exist**

The logical reasoning that Dr. Craig uses to argue for theism are all nonsense, because human minds just have an illusion of consciousness, an illusion of rationality, and an illusion of free will. Everything Dr. Craig says is just deluded nonsense caused by chemicals in his brain. He has cognitive biases the undermine all his logical arguments and scientific evidence. He just invented an imaginary friend with super powers. Except me, I'm a smart atheist, so I actually have real consciousness, real reasoning powers, and no cognitive biases. Also, my argument isn't the genetic fallacy at all, because my arguments would not get an F in a first-year philosophy course.

## Discussion

I'm not going to summarize everything in the discussion, or the question and answer time. I'm just going to list out some of the more interesting points.

Dr. Craig asks him how it is that he has managed to escape these biases from tribalism, projection, etc. He talks about how brave and noble atheist rebels are. The moderator asks him the same question. He repeats how brave and noble atheist rebels are.

Dr. Hester is asked whether he affirms a causeless beginning of the universe or an eternal universe. He replies he states that the universe came into being without a cause, because causality doesn't apply to the beignning of the universe. He also asserts with explanation that Borde, Guth and Vilenkin have undermined the kalam cosmological argument, mentioning a web site.

Dr. Craig replied to this phantom argument after the debate on Facebook:

> Speaking of which, although I haven't had time to consult the website mentioned by Dr. Hester concerning Guth and Vilenkin on the kalam cosmological argument, I know the work of these two gentlemen well enough to predict what one will find there. Since neither one is yet a theist (so much, by the way, for the dreaded confirmation bias!), they have to reject at least one of the premises of the kalam cosmological argument.
>
> Guth wants to deny premiss (2) The universe began to exist–for which Vilenkin has rebuked him. Guth would avoid the implications of their theorem by holding our hope for the Carroll-Chen model, which denies the single condition of the BGV theorem. This gambit is, however, unsuccessful, since the Carroll-Chen model does so only by positing a reversal of the arrow of time at some point in the finite past. This is not only highly non-physical, but fails to avert the universe's beginning, since that time-reversed, mirror universe is no sense in our past. The model really postulates two different universes with a common beginning.
>
> So Vilenkin is forced to deny premiss (1) Whatever begins to exists has a cause. He says that if the positive energy associated with matter exactly counterbalances the negative energy associated with gravity, then the net sum of the energy is zero, and so the conservation of energy is not violated if the universe pops into being from nothing! But this is like saying that if your assets exactly balance your debts, then your net worth is zero, and so there does not need to be a cause of your financial situation! As Christopher Isham points out, there still needs to be "ontic seeding" in order to create the positive and negative energy in the first place, even if on balance their sum is zero.

Dr. Hester is asked how he explains the evidence for fine-tuning. He literally says that "Life is fine-tuned for the

Universe", i.e. – that evolution will create living beings regardless of the laws of physics, constants, etc. For example, he thinks that in a universe with a weaker stong force, which would have only hyrogen atoms, evolution would still evolve life. And in a universe that recollapses in a hot fireball, and never forms stars or planets, evolution would produce life. Physicist Luke Barnes, who was commenting on the YouTube chat for the video, said this:

> "Life is fine-tuned for the Universe" – complete ignorance of the field. Read a book.

Hester tries to cite Jeremy England to try to argue for life appearing regardless of what the laws of physics are. Barnes comments:

> Jeremy England's work supports no such claim.

Hester appealed to the multiverse, which faces numerous theoretical and observational difficulties. For example, the multiverse models have to have some mechanism to spawn different universes, but these mechanisms themselves require fine-tuning, as Robin Collins argues. And the multiverse is falsified observationally by the Boltzmann brains problem. It was so ironic that Hester claimed to be so committed to testing theories. The mutliverse theory cannot be tested experimentally, and must be accepted on faith.

Dr. Hester is asked how he grounds morality on atheism. He says there are no objective moral values and duties. He instead lists off a bunch of Christian beliefs which he thinks are objectively wrong. Even his statements about these moral issues are misinformed. For example, he asserts that homosexuality is causally determined by biology, but this is contradicted by identical twin studies that have a rate of 20-40% where both twins are gay.

Dr. Hester is asked about free will, which is required in order to make moral choices. He denies the existence of free will, which undermines his earlier statements about morality. Morality is only possible if humans can make free choices to act in accordance with a moral standard. So, he claims that Christians are immoral, then he claims that they have no freedom to act other than they do.

Dr. Hester also volunteered that his father believed in the prosperity gospel, and tithed in order to be rewarded with money by God. Dr. Craig immediately says "no wonder you're in rebellion against Christianity". Indeed.

Dr. Hester is asked about his view that human beings are unable to unable to perceive the world objectively. How is he able to perceive the world objectively, when all of the rest of us are unable to? His response is that he is just smarter than everyone else because his ideas have never been falsified by testing.

## Scoring the debate

Dr. Craig's 5 arguments went unrefuted. Hester's argument about genetic algorithms was ludicrous to anyone who understands software engineering. His arguments about tribalism and unreliable mental faculties were self-refuting, and committed the genetic fallcy. At several points, Hester denied mainstream science in favor of untested and untestable speculations. It was the worst defeat of atheism I have ever witnessed. He was uninformed and arrogant. He didn't know what he was talking about, and he tried to resort to speculative, mystical bullshit to cover up his failure to meet Dr. Craig's challenge.

# Virginia Democrats OK with candidate who wished death on political opponent

**Wintery Knight** · 6 October 2025 · Archived copy · Original

The big political news on the weekend was about the elections for statewide offices in Virginia. Right after the politically-motivated assassination of a leading Christian speaker, Charlie Kirk, we're hearing about text messages from the Democrat candidate for attorney general. What does he say? Oh, just that he thinks that a Republican he doesn't like should be shot in the head.

Here's an article from Daily Signal to explain:

> Less than a month after the assassination of Charlie Kirk, Virginia Democrats are carrying water for a candidate who wished death on his political opponent, hoped his opponent's wife would watch as her children died, and said he would urinate on his opponent's grave.
>
> Jay Jones, the Democrat nominee for attorney general in the Old Dominion, has not denied the report of these horrifying comments, though he said he regrets them and has apologized to Todd Gilbert, the Republican former speaker of the House of Delegates about whom he made the remarks.

Now, you would think that in a purple state like Virginia, Democrats would be anxious to withdraw this man as a candidate. But as of October 6, 2025, no prominent Democrats—including Abigail Spanberger, Ghazala Hashmi, Mark Warner, or the Virginia Democratic Party—have demanded Jones step down. It's just not a big enough deal that Jones should have to resign for saying these things. Maybe this is the mainstream Democrat view?

The article explains the context of the text messages, and the content as well:

> Jones texted the death wish to Republican House Delegate Carrie Coyner on Aug. 8, 2022, after Republicans had eulogized Joe Johnson Jr., a moderate Democrat. Gilbert had honored Johnson's memory, though he had disagreed with Johnson on many issues.
>
> Jones reportedly condemned Johnson's political centrism and attacked Republicans for paying him tribute. After suggesting the texts were meant for someone else, he continued to comment to Coyner. He reportedly joked about what "that POS" Gilbert "would say about me if I died."
>
> "If those guys die before me," Jones wrote, "I will go to their funerals to piss on their graves."
>
> He then suggested that, in a hypothetical situation in which he had two bullets and had the choice of shooting Gilbert, Nazi dictator Adolf Hitler, or Cambodian dictator Pol Pot, he would save the bullets for his Republican former colleague "every time."
>
> "Three people, two bullets," Jones wrote. "Gilbert, hitler, and pol pot."
>
> "Gilbert gets two bullets to the head," he added. "Spoiler: put Gilbert in the crew with the two worst people you know and he receives both bullets every time."

I'm not surprised by Jones leaving Hitler and Pol Pot alone, because Hitler and Pol Pot were leftists. They believed in banning guns, banning homeschooling, banning free enterprise, etc. Big government and high taxes all the way for left. So, of course Jones would let the two leftists live, and shoot the conservative. This shooting of conservatives actually happened a lot in history in countries that were run by people on the left. 100 million deaths in the 20th century alone. Of course, not all of that was shooting. There was some stabbing, some starving, some working people to death in cocentration camps.

And:

> Jones called Coyner to explain himself. On the call, he reportedly wished Gilbert's wife could watch her own child die in her arms so that Gilbert might reconsider his political views.

Look, all we have to do to find out what mainstream Democrats think about domestic terrorism against their political opponents is see what they do with Jones. If Jones represents their views, and they keep him as a candidate, then we know that they don't think that political violence against Republicans is wrong at all. You have to disregard the words, and look at the actions. The actions show you what they really believe about murdering their opponents.

It's very funny to me that young Democrat women are complaining that no one wants to approach them, date them or marry them. Do you think that marriage-minded men are anxious to get into a legal contract with someone who supports violence? Men don't want to get married to people who vote for violence. We don't want to get married to people who cheer for violence either. Men already know that Democrat women support violence against unborn babies. And lesbian relationships have the highest rates of domestic violence. Why would marriage-minded men want to share a home with someone who takes this lenient attitude towards violence?

# Australia's chief fascist Julie Inman Grant censors video of Iryna Zarutska murder

**Wintery Knight** · 7 October 2025 · Archived copy · Original

How desperate are open-borders secular leftists to conceal evidence of the harms caused by soft-on-crime policies? Well, in Australia, a country ruled by fascists, they are threatening fines of $825,000 (AUD) to anyone who posts the video of the murder of Ukrainian refugee Iryna Zarutska. They don't want voters to see the result of coddling criminals and banning self-defense.

Here's the story from Rebel News:

> Australia's controversial eSafety Commissioner has threatened social media giant X with daily fines of up to $825,000 for refusing to take down or block posts containing CCTV footage of the fatal attack on Ukrainian refugee Iryna Zarutska in the U.S.
>
> The footage shows Zarutska being killed by Decarlos Brown, a man with a long record of violent crime who had been released just weeks earlier under North Carolina's bail laws.

I blogged about the story previously, and noted that the accused killer was a 14-time repeat offender. Leftists like Julie Inman Grant don't believe in opposing real evil or punishing real evil. They get extremely upset when their "don't judge" policies are exposed as failed policy to voters. So what to do? Well, they just use political power to suppress anyone who shows the evidence of their failed "don't judge" policies. After all, if people complain about being murdered, then that spoils the virtue signaling of the leftists.

This isn't the first time they've tried to cover up crimes against law-abiding victims:

> Inman Grant's previous attempt to compel X to censor footage of a church stabbing in Sydney ended in failure after the platform argued Australia had no authority to impose global content restrictions. X later hailed that case as a victory for free speech.

Is Julie Inman Grant an exception, or does she represent the way that most white progressive women see the issues of crime and self-defense? Well, we know from recent surveys that leftism has surged among young women. Not just in America, but worldwide.

Young men are more conservative than young women, and more religious than young women, too.

And women's groups are opposed to people who point out the results of their "don't judge" policies.

Here's a recent article from the UK Daily Mirror:

> More than 100 women's rights groups have warned "racist" attempts to link sexual violence with immigration are putting victims at increased risk.
>
> Rape Crisis England and Wales, the End Violence Against Women Coalition and Refuge are among the organisations warning anti-migrant groups and politicans are "hijacking" survivors' trauma.
>
> […]In their statement, co-ordinated by End Violence Against Women Coalition, Women for Refugee Women, Hibiscus and Southall Black Sisters, the groups said linking sex offences with migration is a "racist diversion".

Lately, I have been seeing many posts from conservative Christian women demanding that men protect and provide for women. However, none of these conservative Christian women have said anything about the voting patterns of young women. How are men supposed to protect women, when women keep voting for more dangerous criminals, and against police and self-defense? We can't. And we know that if we try, we'll end up just like Kyle Rittenhouse

and Daniel Perry.

Conservative, Christian women  need to think more carefully about how to solve problems. They have an addiction to their knee-jerk reaction of “men, fix it!” and “men, serve us!” But that ship has sailed. Now, the best policy of conservative, Christian women is to turn to young women, and warn them that no one is coming to save them from the consequences of their own choices. Young women need to stop voting on feelings and the desire to virtue signal.

Finally, can you imagine being married to Julie Inman Grant? That’s what parents and pastors are producing for good men these days, but what good man would be stupid enough to marry a leftist fascist like her? Men are coming to their senses, and judging women correctly. The new “10” is the stay-at-home mother who will respect her husband and homeschool the kids. Nobody wants a Karen.

# William Lane Craig debates Walter Sinnott-Armstrong: evil, suffering and God

**Wintery Knight** · 8 October 2025 · Archived copy · Original

This is one of the top 4 best debates that William Lane Craig has ever done in my opinion. (The other three are Craig-Millican debate and the first and second Craig-Dacey debates). If you've never seen Dr. Craig in a debate with a non-Christian, this one is probably the best introductory one out there. Dr. Craig is the foremost defender of Christian theism on the planet, and probably of all time.

Sinnott-Armstrong is very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics. So if you are looking for a good first debate to watch, this is it! Normally, Dr. Craig debates at major universities in front of students and faculty.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church, this is the one to start with.

**The debaters:**

- William Lane Craig
- Walter Sinnott-Armstrong

**The format:**

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

**SUMMARY:**

**WSA opening speech:**

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.

4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

**WLC opening speech:**

Summarizing Walter's argument

1. If God exists, gratuitous evil does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the

knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while still retaining the same amount of knowledge of God's existence and character.

- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

1. If God exists, gratuitous evil does not exist.
2. *God exists*
3. Therefore, gratuitous evil does not exist.

Four reasons to think that God exists (premise 2 from above):

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

# Worse than Watergate: Biden FBI spied on eight Republican senators

**Wintery Knight** · 9 October 2025 · Archived copy · Original

I have a friend who calls himself a secular leftist, and he is always warning me not to get too excited about Trump because soon Trump will be using government to do terrible things. I ask "what sorts of terrible things?" And then he lists out the terrible things. Then I say "Oh, but those terrible things have already happened, except it was your side – Obama, Biden, etc. that did it". He is shocked.

Here is the latest news from The Federalist:

> The Biden FBI targeted eight Republican senators' personal cell phone information as part of an investigation that evolved into lawfare against Donald Trump, new records published Monday show.
>
> The agency document released by Senate Judiciary Committee Chair Chuck Grassley, R-Iowa, indicates that the FBI sought and obtained the cell phone "tolling data" of eight GOP senators and Rep. Mike Kelly, R-Penn., as part of its "Arctic Frost" inquiry in 2023. That investigation ultimately became Special Counsel Jack Smith's elector lawfare against Trump.
>
> According to a Senate Judiciary Committee press release, the FBI obtained the data "about the senators' phone use from January 4 through January 7, 2021." The information, the presser noted, "shows when and to whom a call is made, as well as the duration and general location data of the call," but "does not include the content of the call."
>
> The eight Senate Republicans targeted in the probe include Lindsey Graham of South Carolina, Bill Hagerty and Marsha Blackburn of Tennessee, Josh Hawley of Missouri, Dan Sullivan of Alaska, Tommy Tuberville of Alabama, Ron Johnson of Wisconsin, and Cynthia Lummis of Wyoming.
>
> "Based on the evidence to-date, Arctic Frost and related weaponization by federal law enforcement under Biden was arguably worse than Watergate," Grassley said in a statement. "What I've uncovered today is disturbing and outrageous political conduct by the Biden FBI. The FBI's actions were an unconstitutional breach, and Attorney General Bondi and Director Patel need to hold accountable those involved in this serious wrongdoing."

You thought I was kidding when I said "worse than Watergate", but this actually is. Unfortunately, the Democrats have a lot less integrity than Republicans, so none of them are resigning when they abuse their power and weaponize government against their political opponents.

When I told my friend on the secular left about this, he said "just you wait, Trump will do it to! Trump is just about to do the same thing that the Democrats have been doing!" I guess there is no helping him – when your blindness is caused by self-delusion, there's not much I or anyone can do to fix it. He just doesn't want to believe that his side is the evil side, and they've been evil for a long time.

So, you might go on and ask yourself "why hasn't Wintery's friend  heard of the actions of his own political party?" And there's a good answer for that. My friend only watches MSNBC, CNN, NBC, ABC, NPR and PBS. And late night leftist comedy shows. And if those are your only sources of news, then of course you'll never hear about stories that are harmful to the Democrat party.

Here's a recent example from Newsbusters:

> In resurfaced texts that were released on October 3, [Jay] Jones (who is running for Virginia attorney general) suggested he would shoot then-Virginia House Speaker Todd Gilbert over Adolf Hitler and declared that Gilbert's wife should be forced to watch his "fascist" children be killed.

> […]So how much time did the broadcast networks devote to the texts controversy?
>
> 63 seconds.
>
> MRC analysts looked at the ABC, CBS, NBC and PBS evening, morning and Sunday roundtable shows from October 3, the day the texts were first reported by National Review, through the morning of October 7 and found just ONE mention of the Jones text scandal. The only discussion of Jones on the broadcast networks arrived on NBC's Sunday roundtable show.

So, this is a good way to see why people on the secular left (and the religious left, too) are so ignorant. It's not that they are stupid. Many of them are highly educated and able to earn a lot of money. No, the problem is that they deliberately lie to themselves by only choosing news sources that make them feel better than their Republican neighbors. That's why they always think that Republicans are about to do all the evil things that the Democrats have already done.

# For the first time, young men are more religious than young women

**Wintery Knight** · 10 October 2025 · Archived copy · Original

I noticed an article in the Financial Times about a growing divide between young women and young men. Young women are increasingly leftist, and young men are increasingly conservative. Surveys of young men and young women have found that young men are more conservative on abortion and LGBT than young women. And now young men are more religious than young women.

Now, I want to be clear in this post that I am not criticizing all women. I am criticizing the majority of YOUNG WOMEN. Older women don't usually have these problems, especially married older women.

First, let's take a look at the previous article, from the far-left UK Independent:

> An analysis of survey data from across the developing world had found that "a new global gender divide" is emerging. The analysis, conducted by the Financial Times' John Burn-Murdoch, showed that the developed world's young women have rapidly become more liberal. Young men, however, have either become more conservative (as in the US) or been much slower to become more progressive (as in the UK). Gen Z, Burn-Murdoch concluded, is "two generations, not one."
>
> […]Quoting similar figures to those in the FT, and noting that political views have become more tightly bound to personal identity, a Washington Post editorial warned that members of Gen Z will struggle to pair off romantically.

Young men, statistically speaking, are more likely to side with the weak against the strong. Since abortion harms unborn children, and divorce and same-sex marriage harm born children, men typically oppose these behaviors. But statistically speaking, young women more often side with the selfish adults against the children.

Naturally there are exceptions, but the statistics show that young men are more conservative on moral issues than young women. And nowhere is this more apparent than in the issue of abortion, which is really just about whether selfish adults can resort to murdering their own children in order to escape the consequences of no-commitment sex.

In September 2024, Gallup explained how young men and young women view abortion:

> For this, Gallup reviewed 24 questions from its trends archive that measure Americans' beliefs or positions on widely debated policy-related issues, and that Gallup has asked frequently enough to produce sufficient sample sizes of young men and women across the three periods… On five of these, the percentage of young women holding the liberal position has increased by more than 15 points. These have to do with the environment, abortion and gun laws.

> - Young women have become 18 points more likely to support **broad abortion rights**, saying abortion should be legal under any or most circumstances (rather than in only a few or no circumstances). Their preference for this position rose from 42% to 60% between 2008-2016 and 2017-2024.

The number for young men is much lower than 60% at only 48%!

So, what happens to young men when they take these traditional MALE positions on issues, and society disapproves of them? Well, they turn to God for vindication of their good moral views. If society won't approve of young men for protecting the unborn from abortion, and protecting children from divorce and same-sex marriage, then young men will have to find their vindication somewhere else. And that somewhere else is *God*.

Here's the latest from the far-left New York Times: (archived)

> For the first time in modern American history, young men are now more religious than their female peers. They attend services more often and are more likely to identify as religious.
>
> […]Among Generation Z Christians, this dynamic is playing out in a stark way: The men are staying in church, while the women are leaving at a remarkable clip.
>
> Church membership has been dropping in the United States for years. But within Gen Z, almost 40 percent of women now describe themselves as religiously unaffiliated, compared with 34 percent of men, according to a survey last year of more than 5,000 Americans by the Survey Center on American Life at the American Enterprise Institute.

To be accurate, I don't think that young women have been more religious than men. If you look at the kinds of books that young women tend to read, it's more about comfort and life enhancement. They are not looking to get their orders from God. They are looking to get their desires met by God. And you can see that coming out in the new trends of "manifesting" that is so popular with young women.

By contrast, young men are more likely to turn to apologetics, science, history and theology. Young women were only "spiritual", they were not looking to sacrifice themselves in order to serve God. You can see this by looking at what books young women and men read. Young women tend to read people like Rachel Hollis, Rachel Held Evans, and Sarah Young. Young men see religion as being about their duties to others. They read people like J. Warner Wallace, Frank Turek and Sean McDowell. They want to learn how to tell people the truth, and tell people right and wrong. They want to lead in moral and spiritual areas. They want to make the world a better place for the weakest people.

How did this happen? Well, we have had generation after generation of pietistic Christian parents and pietistic Christian pastors who thought that it was the height of chivalry to only apply the Bible to young men, and never to young women. Young men need to be "challenged", but never young women. People acted as if women had some sort of hotline to God through their emotions, and could never be judged for any of their questionable policy preferences and choices.

My question for you is this: do you think that these pietistic parents and pietistic pastors will finally stop asking the question "Where are all the good men?" and start asking a much better question "Where are all the good women?" Because I can tell you right now, conservative religious men are not going to be interested in dating or marrying these secular leftist young women.

Marriage is a huge risk for young men, in a world of no-fault divorce, biased divorce courts and feminized public schools. Good young men are not going to take those risks just to give secular leftist young women their "happily ever after" once they tire of "having fun" with hot bad boys, and want to settle down. And no amount of shaming and blaming is going to force good men to take those risks.

By the way, I've noticed that a lot of good young men are now seeking out friendships with more traditional older women. They are looking for sanity, and validation for their good moral and religious views. That's not surprising. They'll go where they are respected.

# Is the text of the Bible we have today different from the originals?

**Wintery Knight** · 11 October 2025 · Archived copy · Original

I thought it might be a good idea to write something about whether the Bible is generally reliable as a historical document. Lots of people like to nitpick about things that are difficult to verify, but the strange thing is that even skeptical historians accept many of the core narratives found in the Bible. Let's start with a Christian historian, then go to a non-Christian one.

First, let's introduce New Testament scholar Daniel B. Wallace:

> Daniel B. Wallace
> Senior Research Professor of New Testament Studies
>
> BA, Biola University, 1975; ThM, Dallas Theological Seminary, 1979; PhD, 1995.
>
> Dr. Wallace… is a member of the Society of New Testament Studies, the Institute for Biblical Research, the Society of Biblical Literature, the American Society of Papyrologists, and the Evangelical Theological Society (of which he was president in 2016). He has been a consultant for several Bible translations. He has written, edited, or contributed to more than three dozen books, and has published articles in New Testament Studies, Novum Testamentum, Biblica, Westminster Theological Journal, Bulletin of Biblical Review, the Journal of the Evangelical Theological Society, and several other peer-reviewed journals. His Exegetical Syntax of the New Testament is the standard intermediate Greek grammar and has been translated into more than a half-dozen languages.

Here is an article by Dr. Wallace that corrects misconceptions about the transmission and translation of the Testament.

He lists five in particular:

- *Myth 1: The Bible has been translated so many times we can't possibly get back to the original.*
- *Myth 2: Words in red indicate the exact words spoken by Jesus of Nazareth.*
- *Myth 3: Heretics have severely corrupted the text.*
- *Myth 4: Orthodox scribes have severely corrupted the text.*
- *Myth 5: The deity of Christ was invented by emperor Constantine.*

Let's look at #4 in particular, where the argument is that the text of the New Testament is so riddled with errors that we can't get back to the original text.

It says:

> Myth 4: Orthodox scribes have severely corrupted the text.
>
> This is the opposite of myth #3. It finds its most scholarly affirmation in the writings of Dr. Bart Ehrman, chiefly The Orthodox Corruption of Scripture and Misquoting Jesus. Others have followed in his train, but they have gone far beyond what even he claims. For example, a very popular book among British Muslims (The History of the Qur'anic Text from Revelation to Compilation: a Comparative Study with the Old and New Testaments by M. M. Al-Azami) makes this claim:
>
> The Orthodox Church, being the sect which eventually established supremacy over all the others, stood in fervent opposition to various ideas ([a.k.a.] 'heresies') which were in circulation. These included Adoptionism (the notion that Jesus was not God, but a man); Docetism (the opposite view, that he was God and not man); and Separationism (that the divine and human elements of Jesus Christ were two separate beings). In each case this sect, the one that would rise to become the Orthodox Church, deliberately corrupted the Scriptures so as to

> reflect its own theological visions of Christ, while demolishing that of all rival sects."
>
> This is a gross misrepresentation of the facts. Even Ehrman admitted in the appendix to Misquoting Jesus, "Essential Christian beliefs are not affected by textual variants in the manuscript tradition of the New Testament." The extent to which, the reasons for which, and the nature of which the orthodox scribes corrupted the New Testament has been overblown. And the fact that such readings can be detected by comparison with the readings of other ancient manuscripts indicates that the fingerprints of the original text are still to be seen in the extant manuscripts.

Here is the full quote from the appendix of Misquoting Jesus:

> "Bruce Metzger is one of the great scholars of modern times, and I dedicated the book to him because he was both my inspiration for going into textual criticism and the person who trained me in the field. I have nothing but respect and admiration for him. And even though we may disagree on important religious questions – he is a firmly committed Christian and I am not – we are in complete agreement on a number of very important historical and textual questions. If he and I were put in a room and asked to hammer out a consensus statement on what we think the original text of the New Testament probably looked like, there would be very few points of disagreement – maybe one or two dozen places out of many thousands. The position I argue for in 'Misquoting Jesus' does not actually stand at odds with Prof. Metzger's position that the essential Christian beliefs are not affected by textual variants in the manuscript tradition of the New Testament."

Finally, I think that the discovery of the Dead Sea Scrolls shows us that religious texts don't change as much as we think they do over time.

Look:

> The Dead Sea Scrolls play a crucial role in assessing the accurate preservation of the Old Testament. With its hundreds of manuscripts from every book except Esther, detailed comparisons can be made with more recent texts.
>
> The Old Testament that we use today is translated from what is called the Masoretic Text. The Masoretes were Jewish scholars who between A.D. 500 and 950 gave the Old Testament the form that we use today. Until the Dead Sea Scrolls were found in 1947, the oldest Hebrew text of the Old Testament was the Masoretic Aleppo Codex which dates to A.D. 935.{5}
>
> With the discovery of the Dead Sea Scrolls, we now had manuscripts that predated the Masoretic Text by about one thousand years. Scholars were anxious to see how the Dead Sea documents would match up with the Masoretic Text. If a significant amount of differences were found, we could conclude that our Old Testament Text had not been well preserved. Critics, along with religious groups such as Muslims and Mormons, often make the claim that the present day Old Testament has been corrupted and is not well preserved. According to these religious groups, this would explain the contradictions between the Old Testament and their religious teachings.
>
> After years of careful study, it has been concluded that the Dead Sea Scrolls give substantial confirmation that our Old Testament has been accurately preserved. The scrolls were found to be almost identical with the Masoretic text. Hebrew Scholar Millar Burrows writes, "It is a matter of wonder that through something like one thousand years the text underwent so little alteration. As I said in my first article on the scroll, 'Herein lies its chief importance, supporting the fidelity of the Masoretic tradition.'"{6}
>
> A significant comparison study was conducted with the Isaiah Scroll written around 100 B.C. that was found among the Dead Sea documents and the book of Isaiah found in the Masoretic text. After much research, scholars found that the two texts were practically identical. Most variants were minor spelling differences, and none affected the meaning of the text.

> One of the most respected Old Testament scholars, the late Gleason Archer, examined the two Isaiah scrolls found in Cave 1 and wrote, “Even though the two copies of
> Isaiah discovered in Qumran Cave 1 near the Dead Sea in 1947 were a thousand years earlier than the oldest dated manuscript previously known (A.D. 980), they proved to be word for word identical with our standard Hebrew Bible in more than 95 percent of the text. The five percent of variation consisted chiefly of obvious slips of the pen and variations in spelling.”{7}
>
> **Despite the thousand year gap, scholars found the Masoretic Text and Dead Sea Scrolls to be nearly identical. The Dead Sea Scrolls provide valuable evidence that the Old Testament had been accurately and carefully preserved.**

I hope that this post will help those who think that we can’t get back to the text of the original New Testament documents.

# New study: oral contraceptives greatly increase the risk of depression

**Wintery Knight** · 12 October 2025 · Archived copy · Original

I like to collect studies on my blog so that I can always find them when I get into a debate. One of the things I like to argue against is recreational premarital sex. It's pretty hard to argue this with non-Christians if all you are going to do is quote the Bible. But you can make a pretty good case that will win you the argument from studies, and so I keep a nice collection of studies to use.

Here's the report from The Federalist:

> Oral contraceptives raise the risk of depression, according to a new international study that surveyed more than 264,000 women. Teenagers were at the highest risk, with a 130 percent higher risk of depression in women who started using birth control as adolescents, compared to a 92 percent higher risk among those who started as adults.
>
> The study provides conclusive results to a growing body of research linking oral birth control with the use of anti-depressants, depression diagnoses, and depressive symptoms.
>
> While adult users saw a decrease to more normal risk after using "the pill" for more than two years or getting off the pill, teenage users were still at increased risk even after stopping usage.

Very interesting. I clicked on the link to the study and made sure it was peer-reviewed. It was. So what do we learn from this?

Well, this is not the first time I am hearing about the emotional and mental problems with birth control pills. So, I think the lesson here is to definitely do your research first, so that you don't get involved with things that will cause you problems later. The woman who told me about had tried to go on them, but she immediately noticed how much it changed her moods, and she went off them. I think it caused her some problems in her life, because she ended up taking 5 years to complete her degree, instead of the normal for. So, using these things could really cost you.

Now you might be wondering about other birth control methods, and the team that did this study has a plan for future work:

> This study only examined combination birth control pills, but researchers plan to study other contraceptive options.
>
> "In a future study, we plan to examine different formulations and methods of administration. Our ambition in comparing different contraceptive methods is to give women even more information to help them [m]ake well-informed decisions about their contraceptive options," Johansson said.

The article also notes (with links, which I removed):

> In other studies, birth control methods have also been linked to increased risk of heart attack and stroke, blood clots, breast cancer, and cervical cancer.
>
> Despite significant evidence of risk, researchers still insist that birth control is safe to use…

Normally, I am pretty hard on women on this blog. I feel like they make way too many decisions by following the crowd, instead of thinking about what they want in the long-term, and then making decisions that are likely to get those results – whatever anyone else thinks. I think that women need to be smarter than that, and instead of forming their views by peer pressure, they need to form their views based on truth. And truth is not on the bottom shelf.

I see women getting taught all about sexual topics by public school teachers, entertainers, athletes, celebrities, etc. It makes no sense to me. These people are insulated from real life, for one reason or another. And then I see Planned Parenthood going into the schools and teaching children about birth control and sex. *They make money by getting these kids to become sexual active and then pay them to get abortions*. Young women cannot trust women their own age to know about studies. They can't trust teachers with degrees in English. They can't trust celebrities, entertainers and athletes – they probably cannot even read, much less read studies. Women have to do their own research and make their own plans that work for them.

Today women are being taught from preschool to college and beyond, that they need to use their "young years" to seek happiness by playing the field with tall, hot men who give them tingles. They are told to delay marriage (boring) and children (demanding) for as long as possible, in order to have no-commitment sex with the hottest men they can get. Somehow, having sex with a lot of hot men is thought to raise the value of the woman. It builds her self-esteem, or something. This is objectively stupid behavior. But this is why they jump all over birth control, because it helps them to do stupid things that they've been told to do. They don't even know the long-term effects of the behavior they're doing. It's monkey-see, monkey-do. The blind leading the blind.

So, I think it's good for us as grown-ups to point them towards the data that they should know about. They can certainly ignore it, and go with their feelings. But some of them will prefer to get the real truth about how the world works, and those are the ones we need to reach. They should at least have a choice to make.

By the way, I'm not saying that it's a bad idea to give someone a Bible. I got one when I was young, and that worked for me. But for people who ask questions, you need to have the studies ready. Always be ready for anyone who asks you questions about why you believe what you believe.

# Can atheists rationally ground objective moral values and duties?

**Wintery Knight** · 13 October 2025 · Archived copy · Original

Here's Dr. William Lane Craig explaining why atheists can't help themselves to objective morality, given a worldview of atheism:

He presents 3 reasons why in the video, all of which are also discussed in his Defenders class:

> The mention of Plato brings to mind another possible atheistic response to the first premise of the moral argument that *if God does not exist, then objective moral values and duties do not exist.* Plato thought that the Good just exists as a sort of self-subsistent idea, as an entity in and of itself. Indeed, it is the most real thing in reality. The Good simply exists. If you find this difficult to grasp, join the company! Nevertheless, that is what Plato believed. Later Christian thinkers, like Augustine, equated Plato's Good with the nature of God. God's nature is the Good, and so it was anchored in a concrete object, namely, God. But for Plato, at least, the Good just sort of existed on its own as a kind of self-existent idea.
>
> Some atheists might say that moral values, like Justice, Mercy, Love, and Forbearance, just exist all on their own as sort of abstract moral objects. They have no other foundation; they just exist. We can call this view Atheistic Moral Platonism. According to this view, moral values are not grounded in God. They just exist all on their own.
>
> Unintelligibility of Atheistic Moral Platonism
>
> What might we say by way of response to Atheistic Moral Platonism? Let me make three responses. First, it seems to me that this view is just unintelligible. I simply don't understand what it means. What does it mean, for example, to say that the moral value Justice just exists? I understand what it means to say that a *person* is just or that some *action* is just, but what does it even mean to say that in the absence of any persons or any objects at all, that Justice just exists? It is hard to understand even what this means. Moral values seem to be properties of persons, and so it is hard to understand how Justice can just exist as a sort of abstraction.
>
> Lack of Moral Obligation on Atheistic Moral Platonism
>
> Secondly, a major weakness of this view is that it provides no basis for objective moral duties. Let's suppose, for the sake of argument, that moral values like Justice, Love, Forbearance, and Tolerance just exist on their own. Why would that lay any sort of moral obligation upon me? Why would the existence of this realm of ideas make it my duty to be, say, merciful or loving? Who or what lays such an obligation upon me? Why would I have the moral duty to be merciful or loving? Notice that on this view moral vices like Greed, Hatred, and Selfishness presumably also exist as abstractions. In the absence of any moral law giver, what obligates me to align my life with one set of these abstract ideas rather than with some other set of abstract ideas? There just doesn't seem to be any basis at all for moral duty in this view. In the absence of a moral law giver, Atheistic Moral Platonism lacks any basis for moral obligation.
>
> Improbability of Atheistic Moral Platonism
>
> Finally, thirdly, it is fantastically improbable that the blind evolutionary process should spit forth exactly those kinds of creatures that align with the existence of this realm of abstract values.1 Remember that they have no relationship with each other at all. The natural realm and this abstract moral realm are completely separate. And yet, lo and behold, the natural realm has by chance alone evolved exactly those kind of creatures whose lives align with these moral duties and values. This seems to be an incredible coincidence when you think about it. It is almost as if the moral realm knew that we were coming! I think it is a far more plausible view to say that both the natural realm and the moral realm are under the sovereignty of a divine being, who is both the creator of natural laws that govern the physical universe and whose commands constitute the moral laws that govern our ethical duties. This is a more coherent view of reality. Theism is a more coherent view because these two realms of reality don't fall apart in this disjointed way. They are both under the sovereignty of a

> single natural and moral law giver.
>
> For those three reasons, Atheistic Moral Platonism is a less plausible view than theistic based ethics such as I have been defending.

And now, I must be mean to the atheists, because I think this me too nonsense is just ridiculous, desperate intellectual dishonesty.

I remember having a conversation with one of my IT project managers who was an atheist, and she asked me what I thought would happen to dogs when they died. I said "well on your view of atheism, they don't have an afterlife, so they just rot away when we bury them and they get eaten by worms". She was aghast and said "no they don't, they go to Heaven". That was just her wishful thinking, there. And that's what morality on atheism is: wishful thinking. It's just an appearance package that gets bolted onto absolute meaninglessness and hedonism. And even if the atheist tries to make traditional decisions in their own lives, they typically push for full-on dismantling of Judeo-Christian values, especially in the sexual realm. And that spills over into abortion, divorce, same-sex marriage and government restraints on free speech, conscience and religious liberty.

Dear atheists: you cannot duct tape morality onto nihilism and have it be rational. We know you're doing it to feel good about yourselves and to appear normal instead of wearing your nihilism openly. But your faked morality is not even close to the morality of theists, and especially not of Christian theists. Christians go against their self-interest because we imitate the self-sacrificial love of Christ, who gave himself as a ransom to save others. That makes no sense on an atheistic worldview, since this life is all you have, and there is no afterlife where your actions are in the context of a relationship with that self-sacrificial Son of God. In any case, free will doesn't exist on atheism, so that means no moral choices regardless. These are the common sense implications of atheist first principles, and in fact that's what you hear expressed from the finest atheist scholars: no free will, no right and wrong, no life after death.

If you want to see what atheists really think about morality, then take a look at this post featuring Matt Dillahunty, where he is asked to condemn the Holocaust as objectively wrong, and he refuses to do it. That's intellectually consistent atheist morality right there. If the universe is an accident, and human beings evolved by accident, then there is no way things ought to be, and no way we ought to act. And no one is there to be part of an ongoing two-way relationship where our conduct matters, anyway. On atheism, human beings will die out individually and collectively in the heat death of the universe. Once the heat death of the universe arrives, there will be no one left to care how we lived after we're dead – there is no one waiting for us who cares how we act towards him and towards others. Atheists can arbitrarily put any limits they want on their actions, based on what makes them feel good, and what makes people like them, perhaps taking account the arbitrary customs and conventions of the time and place they find themselves in. But it's delusional and irrational make-believe for atheists to claim that morality is rational on their worldview.

# How the discovery of the cosmic microwave background radiation falsified atheism

**Wintery Knight** · 14 October 2025 · Archived copy · Original

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag ).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p. 20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of the cosmic microwave background radiation.

Here's the history of how that discovery happened, from the American Physical Society web site:

> Bell Labs radio astronomers Arno Penzias and Robert Wilson were using a large horn antenna in 1964 and 1965 to map signals from the Milky Way, when they serendipitously discovered the CMB. As written in the citation, "This unexpected discovery, offering strong evidence that the universe began with the Big Bang, ushered in experimental cosmology." Penzias and Wilson shared the Nobel Prize in Physics in 1978 in honor of their findings.
>
> The CMB is "noise" leftover from the creation of the Universe. The microwave radiation is only 3 degrees above Absolute Zero or -270 degrees C,1 and is uniformly perceptible from all directions. Its presence demonstrates that that our universe began in an extremely hot and violent explosion, called the Big Bang, 13.7 billion years ago.
>
> In 1960, Bell Labs built a 20-foot horn-shaped antenna in Holmdel, NJ to be used with an early satellite system called Echo. The intention was to collect and amplify radio signals to send them across long distances, but within a few years, another satellite was launched and Echo became obsolete.2
>
> With the antenna no longer tied to commercial applications, it was now free for research. Penzias and Wilson jumped at the chance to use it to analyze radio signals from the spaces between galaxies.3 But when they began to employ it, they encountered a persistent "noise" of microwaves that came from every direction. If they were to conduct experiments with the antenna, they would have to find a way to remove the static.
>
> Penzias and Wilson tested everything they could think of to rule out the source of the radiation racket. They knew it wasn't radiation from the Milky Way or extraterrestrial radio sources. They pointed the antenna

> towards New York City to rule out "urban interference", and did analysis to dismiss possible military testing from their list.4
>
> Then they found droppings of pigeons nesting in the antenna. They cleaned out the mess and tried removing the birds and discouraging them from roosting, but they kept flying back. "To get rid of them, we finally found the most humane thing was to get a shot gun…and at very close range [we] just killed them instantly. It's not something I'm happy about, but that seemed like the only way out of our dilemma," said Penzias.5 "And so the pigeons left with a smaller bang, but the noise remained, coming from every direction."6
>
> At the same time, the two astronomers learned that Princeton University physicist Robert Dicke had predicted that if the Big Bang had occurred, there would be low level radiation found throughout the universe. Dicke was about to design an experiment to test this hypothesis when he was contacted by Penzias. Upon hearing of Penzias' and Wilson's discovery, Dicke turned to his laboratory colleagues and said "well boys, we've been scooped."7
>
> Although both groups published their results in Astrophysical Journal Letters, only Penzias and Wilson received the Nobel Prize for the discovery of the CMB.
>
> The horn antenna was designated a National Historic Landmark in 1990. Its significance in fostering a new appreciation for the field of cosmology and a better understanding of our origins can be summed up by the following: **"Scientists have labeled the discovery [of the CMB] the greatest scientific discovery of the 20th century."**8

It's the greatest scientific discovery of the 20th century.

In the New York Times, Arno Penzias commented on his discovery – the greatest discovery of the 20th century – so:

> The best data we have [concerning the Big Bang] are exactly what I would have predicted, had I nothing to go on but the five books of Moses, the Psalms, the bible as a whole.

Just one problem with the greatest scientific discovery of the 20th century: atheists don't accept it. Why not?

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

# How the WMAP satellite confirmed nucleosynthesis predictions and falsified atheism

**Wintery Knight** · 15 October 2025 · Archived copy · Original

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag ).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p. 20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of how elements heavier than hydrogen were formed.

Nucleosynthesis: forming heavier elements by fusion

Here's the history of how that discovery happened, from the National Aeronautics and Space Administration (NASA) web site:

> The term nucleosynthesis refers to the formation of heavier elements, atomic nuclei with many protons and neutrons, from the fusion of lighter elements. The Big Bang theory predicts that the early universe was a very hot place. One second after the Big Bang, the temperature of the universe was roughly 10 billion degrees and

> was filled with a sea of neutrons, protons, electrons, anti-electrons (positrons), photons and neutrinos. As the universe cooled, the neutrons either decayed into protons and electrons or combined with protons to make deuterium (an isotope of hydrogen). During the first three minutes of the universe, most of the deuterium combined to make helium. Trace amounts of lithium were also produced at this time. This process of light element formation in the early universe is called “Big Bang nucleosynthesis” (BBN).

The creation hypothesis predicts that there will be specific amounts of these light elements formed as the universe cools down. Do the predictions match with observations?

Yes they do:

> The predicted abundance of deuterium, helium and lithium depends on the density of ordinary matter in the early universe, as shown in the figure at left. These results indicate that the yield of helium is relatively insensitive to the abundance of ordinary matter, above a certain threshold. We generically expect about 24% of the ordinary matter in the universe to be helium produced in the Big Bang. This is in very good agreement with observations and is another major triumph for the Big Bang theory.

Moreover, WMAP satellite measurements of mass density agree with our observations of these light element abundances.

Here are the observations from the WMAP satellite:

> > 
> Scientific observations match predictions

And here is how those WMAP measurements confirm the Big Bang creation event:

> However, the Big Bang model can be tested further. **Given a precise measurement of the abundance of ordinary matter, the predicted abundances of the other light elements becomes highly constrained. The WMAP satellite is able to directly measure the ordinary matter density and finds a value of 4.6% (±0.2%), indicated by the vertical red line in the graph. This leads to predicted abundances shown by**

> **the circles in the graph, which are in good agreement with observed abundances. This is an important and detailed test of nucleosynthesis and is further evidence in support of the Big Bang theory.**

"An important and detailed test".

For completeness, we should learn how elements heavier than these light elements are formed:

> Elements heavier than lithium are all synthesized in stars. During the late stages of stellar evolution, massive stars burn helium to carbon, oxygen, silicon, sulfur, and iron. Elements heavier than iron are produced in two ways: in the outer envelopes of super-giant stars and in the explosion of a supernovae. All carbon-based life on Earth is literally composed of stardust.

That's a wonderful thing to tell a young lady when you are on a date: "your body is made of stardust". In fact, as I have argued before, this star formation, which creates the elements necessary for intelligent life, can only be built if the fundamental constants and quantities in the universe are finely-tuned.

Now, you would think that atheists would be happy to find observations that confirm the origin of the universe out of nothing, but they are not. Actually, they are in denial.

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

# Steven Crowder discusses Ayesha Curry's "Call Her Daddy" interview

**Wintery Knight** · 16 October 2025 · Archived copy · Original

Steph Curry is an NBA player who has earned over a billion dollars in salary. Unfortunately, he made a *terrible* choice of wife. His wife, Ayesha Curry, recently went on the far-left feminist "Call Her Daddy" podcast, and essentially complained about the life that he provides for her. I just thought it was the most interesting thing to see how modern young women think of men who provide.

Her bio is here, it seems like she has no earned degrees or private sectory work experience beyond being an entertainer. And I'm pretty sure that any success she has at that is going to be due to her husband's fame!

Here's the video:

So, I think Ayesha's interview shows a major reason why marriage to a modern young woman is a terrible deal for a successful Christian man. Why? Because everything that Christian men do that is awesome and difficult seems to be seen as an *entitlement* by modern young women. It doesn't get you any consideration as a man that you are good at these things especially when women are getting helped along in school and at work to earn the same as a man, sometimes with much less effort. Whereas the previous generation would give a man respect and gratitude for slogging through STEM degrees, waking up early, saving money, remaining chaste and sober, etc., modern young women tend to dismiss it all. In addition, modern women are overwhelmingly leftist, and see a man's moral and spiritual leadership as *liabilities*. So those skills actually count *against* a man.

And I know why, too. I once was dating a woman who had an unused degree in business administration. She graduated in 5 years, but she never ever used the degree for business administration. In fact, she turned down jobs that I found her in FT100 companies that were for business administration. She just wanted to do easy jobs, have huge gaps in her resume, and have fun. But the interesting part is that when I showed her the preparations that I had made to be a good provider – graduate degree, 6-figure portfolio, provisional patent, publications, etc. – she was dismissive and disrespectful. And I'll never forget what she said about my investment portfolio. She said "I hope that you'll consider my advice when you're buying and selling securities, because I learned a lot about that in school". She was 20K in debt and had been carrying that debt unpaid for 7 years after graduation. Never bought a stock or an option or a mutual fund in her life. Her money was being spent on fun, thrills and travel! That's what this Ayesha interview reminded me of.

So, I think it's just something for young men to think about. When you are deciding whether to date and get married, you have to think about whether the hard things that you have done are going to get you any respect and gratitude. Especially if you have some sort of plan for your family! Over the course of dating during my 20s and 30s, I had a non-stop line of Christian women with student loan debt and low-earning easy jobs telling me how they didn't know how to cook, didn't want to clean, didn't want to homeschool the kids, didn't want to have more than 2 kids, didn't want to do campus ministry, didn't want to learn science or economics, and so on. They just felt *entitled* to everything that I would provide, but they weren't willing to do *anything* that I wanted the marriage to achieve for the Boss. They were quite confident that marriage was about making the woman happy, not God. Men are just "servant leaders". Their achievements in the real world don't qualify them to lead.

And the worst part of this was the responses of pastors, parents, and Christian leaders. Instead of reining in the entitlement of young Christian women, they would instead say things like "you need to lower your standards" and "why don't you let your 30-year-old girlfriend go to EUROPE for a couple of years, and just wait for her to come back". I'm sure that these Christian parents, pastors and leaders *thought* that they were whipping men into shape, but the end result is that men just decline the bad deal that's being offered to them. We can do ministry and early retirement instead. And that's better for the Boss than a marriage that is just going to be led by a woman's feelings.

**Country breakfast**

Anyway, Crowder did mention something called “country breakfast” and I looked it up, and here’s what it is:

Now, Ayesha didn’t cook this. This Christian grandmother of 15 grandkids makes it. It looks *amazing!* American breakfast is one of my 3 favorite foods. (I also love Indian food and Thai food). But do you think that any modern young woman can cook something like that? That’s ground sausage in the top left, and STEAK STRIPS at 7 o’clock. Two kinds of potatoes and two kinds of eggs and two kinds of cheese and two kinds of pig!

It’s no wonder that men 100 years ago were chasing traditional women for marriage. But you can’t get anything like that today! Today, you’re more likely to have your pick of aging feminists who have nothing to offer. That’s not a good deal for a man. We have other things that we can do that will be better for the Boss.

# Secular left feminist Sarah Stankorb explains why women leave Christianity

**Wintery Knight** · 17 October 2025 · Archived copy · Original

I sometimes read articles from mainstream conservative pastors and theologians. One of these is the famous Doug Wilson who blogs at Blog and Mablog. Well, recently he was attacked by a secular left feminist named Sarah Stankorb. I looked over her recent articles, and a pattern emerged about what she – and the women she writes about – think that Christianity is about.

Here's an article entitled "These Evangelical Women Are Abandoning Trump and Their Churches".

She talks about a woman named Katie Loveland, who leaves her church for the following reasons:

1. If a church allows a man to act like a fool towards women, then Christianity is false.
2. If a church allows a man who has passed a background check and holds a concealed carry permit to be armed so he can protect church members from attacks like this one, then Christianity is false.
3. If Christians support a politician who has a pro-life record of demonstrated achievements over a politician who promises to remove all state and local restrictions on abortion from conception to birth, then Christianity is false.

And another woman named Elaina Ramsey, and her reasons for rejecting Christianity:

1. If Christianity requires you to disagree with your gay and queer friends, then Christianity is false.
2. If Christians refuse to marry you because you've been raped, then Christianity is false.
3. If the Bible records (and condemns) the rape of Bathsheba by David, then Christianity is false.
4. If Christianity teaches that murdering humans is wrong, and science says that the unborn are human, then Christianity is false.

And more about another woman named Deirdre Sugiuchi, and her reasons for rejecting Christianity:

1. If your father claims to be a Christian and spanks you, then Christianity is false.
2. If you are sent to an abusive Christian reform school for being rebellious, then Christianity is false.
3. If Christianity feels anti-gay, anti-black or anti-woman, then Christianity is false.
4. If the United States opposes Al Qaeda for carrying out the 9/11 attack, then Christianity is false.

Are you seeing a pattern here?

It turns out that a lot of emotion-based people claimed to be Christians and were accepted as "Christian", without any rational basis for believing it. And later on, when Christianity made them feel bad about being reckless and irresponsible, or when it loses them non-Christian friends, then they abandoned it. It's not that they discovered that Christianity is illogical. It's not that they discovered evidence to falsify Christian truth claims. Their stated reasons for leaving Christianity are entirely subjective. And none of the reasons do the work of falsifying core Christian truth claims, such as God's existence, the inspiration of the Bible, or the historicity of the resurrection of Jesus.

Just to review, here are some of the reasons why authentic Christians believe in Christian theism:

- scientific evidence for the origin of the universe
- scientific evidence for cosmic fine-tuning
- scientific evidence for the origin of life
- scientific evidence for habitability
- scientific evidence for sudden origin of body plans

- scientific evidence for molecular machines
- scientific evidence for irreducible complexity
- the argument from consciousness
- the argument from objective morality
- the historicity of the resurrection of Jesus

These arguments – and many more like them – are defended by scholars in books published by top academic presses. But I see no evidence that emotion-based ex-Christians *have ever read such books*. Why would they? They aren't interested in forming their worldview based on objective reality. They aren't interested in constructing a life plan where their desire for happiness comes second to following Jesus.

People who abandon Christianity because of feelings or experiences have not "left Christianity". They just stopped faking being Christians. They were never actually Christian in the first place. To be a Christian in the first place, you have to know that Christianity is true. People who accept the arguments for Christianity listed above have *just as many disappointments with God, bad experiences with Christians, and bad experiences with churches as people who were guided by their emotions and experiences.*

In fact, I personally know women who grew up fatherless, or had defective parents, or other setbacks. They got themselves into a lot of trouble with churches and immoral men, and yet today, not only are they solid Christians, but they actually take the lead in gospel enterprises, such as apologetics. Why? Because for them, the objective truth of Christianity was more important than their subjective feelings and experiences.

The differences between Christians and non-Christians is that Christians overlook bad feelings, shame and rejection, because we know facts don't care about our feelings. For real Christians, the normal Christian life *requires* bad feelings, disappointments, bad experiences and rejection by non-Christians. We actually read the Bible, and so we expect bad things to happen to us.

Note: if you are relying on someone to act in a Christian way – say, as a marriage partner – then you'd better find out what kind of "Christian" they are, by asking them how they arrived at their beliefs. Do not marry a fake Christian who just reads romance novels and fiction. A person can't determine the truth of Christianity by focusing on career, travel, entertainment, promiscuity, etc.

# William Lane Craig debates Daniel Came: Does God exist?

**Wintery Knight** · 18 October 2025 · Archived copy · Original

Dr. Craig's opening speech summary slide

The video of the debate was posted by ReasonableFaith.org – Dr. Craig's organization. This debate occurred in March 2017 at the University of Dublin, in Ireland.

The video: (91 minutes)

My non-snarky summary is below.

**Dr. Craig's opening speech**

Two claims:

1. There are good reasons to think that theism is true.
2. There are not comparably good reasons to think that atheism is true.

Five reasons for God's existence:

1. The beginning of the universe
– actual infinite past is mathematically impossible
– BGV theorem: any universe that is on balance expanding in its history (like ours) cannot be past eternal

2. Fine-tuning of cosmic quantities and constants
– slight changes to quantities and constants prevent a universe from supporting complex embodied life
– the multiverse response of atheists conflicts with observations, e.g. the Boltzmann Brains problem

3. Objective moral values
– God's existence is required to ground objective moral values and duties

4. Minimal facts case for the resurrection of Jesus
– there are good reasons to accept the most widely accepted facts about the historical Jesus (empty tomb, appearances, early widespread belief in the resurrection)
– the best explanation of these minimal facts is that God raised Jesus from the dead

5. Experience God directly
– in the absence of any defeaters to belief in God, a person can experience God directly

**Dr. Daniel Came's opening speech**

1. The hiddenness of God
– if God wants a personal relationship with us, and a relationship with God would be the greatest good for us
– God ought to reveal himself to us, but he does not reveal himself to many people, the "non-resistant non-believers"

2. The inductive problem of evil
– many evil events occur that are pointless – there is no morally sufficient reason why God would allow them to occur
– examples: animal suffering, children born with disease, tsunamis
– the theistic response to this is that humans are not in a position to know whether there are morally sufficient reasons, due to our limitations of knowing the consequences
– but this ripple effect defense has 4 possible outcomes, 3 of which don't do the job of justifying

**Dr. Craig's first rebuttal**

1. The hiddenness of God
– God's goal is not to make his existence known, but to draw them into a love relationship
– it's speculative that overt displays of God's existence would draw people to him in a love relationship, they might resent his bullying
– atheist would have to prove that God could draw more people into a love relationship with him by revealing himself more overtly

2. The inductive problem of evil
– as humans, we are not in a position to know for certain that any apparently pointless evil really is pointless
– William Alston article: 6 limitations of human knowing make it impossible to judge that an evil is actually "pointless"
– Dr. Came says that there are 4 possibilities for the ripple effects, and since 3 are bad, it's likely that there are not morally sufficient reasons for a apparently pointless evil
– it is logically fallacious to assert probability conclusions without knowing the probabilities of those 4 options
– there is actually an argument from evil: since the problem of evil requires an objective standard of good and evil by which to measure, and God is the only possible ground of objective morality, then pressing the problem of evil actually requires the atheist to assume God, in order to ground this objective moral standard

**Dr. Came's first rebuttal**

3. Objective moral values
– there are naturalistic theories of moral realism where objective moral duties and objective moral values exist in a naturalistic universe
– I'm not saying that any of them are correct, but there are many theories about object morality in a naturalistic universe

There are naturalistic theories for all of the 5 arguments that Dr. Craig presented. It is Dr. Craig's responsibility to present those naturalistic theories and prove that they are not as good as his explanations. I'm not going to defend (or even name!) a single naturalistic theory for any of these 5 arguments by Dr. Craig.

Dr. Craig's explanations for the 5 evidences he gave can't be admitted, because we have to know how God did something *in naturalistic terms* before we can know that God did it supernaturally. Explanations are only valid if they are naturalistic.

1. The beginning of the universe
– naturalism explains how the universe expands after it came into being, so that explains how it came into being
– the God explanation, that God created the universe out of nothing, is not admissible, because it is not naturalistic
– how does God, as an unembodied mind interact with the physical world?
– the only agency that we know about is human agents, and we have bodies, so how could God perform actions

without having a body?

The theistic hypothesis does not make any predictions, but naturalism makes lots of testable predictions. God could do anything, so he is not constrained and is therefore untestable. We can't infer God as an explanation in principle because we can't predict what is more probable if God exists than if he does not.

2. Fine-tuning of cosmic quantities and constants
– the university was not set up to make embodied intelligence plausible, because the vast majority of the universe is hostile to life
– there are models of the multiverse that escape the Boltzmann Brains problem that Dr. Craig raised

**Dr. Craig's second rebuttal**

Some of Dr. Craig's arguments are deductive (e.g. – the beginning of the universe, objective moral values), so that the conclusion follows from the premises if the premises are true. The resurrection passes the standard tests for historical explanations.

1. The beginning of the universe
– the whole point of the argument is that there is no naturalistic explanation for an ultimate beginning of the universe

2. Fine-tuning of cosmic quantities and constants
– the whole point of the argument is that there is no naturalistic explanation for a design of the universe to support life
– he has to prove that intelligences has to be attached to bodies
– human beings are non-physical minds united to physical bodies
– naturalistic attempts to explain mental operations fail
– the arguments *prove* that unembodied minds exist
– the vast expanse of the universe is required in order to form the galaxies, stars and heavy elements needed for complex life
– why expect that the entire universe should be small, or that life would be everywhere?
– a non-fine-tuned world is more likely in the multiverse, and in a multiverse, we are more likely to have a Boltzmann brain world than a world with complex, embodied life
– Dr. Came has not advanced any naturalistic explanation for the fine-tuning

3. Objective moral values
– non-theistic ethical theories cannot account for the ontological foundations of objective moral values and duties
– atheistic theories of moral realism simply assume objective moral values out of thin air
– it is especially hard to find any basis for objective moral duties in the absence of God

**Dr. Came's second rebuttal**

5. Religious experience
– Dr. Craig should not bring up religious experience in a debate where arguments and evidence are central
– people who have dreams, hallucinations and psychotic delusions could appeal to religious experience
– religious experience is by no means universal, and it is possible to doubt it

3. Objective moral values
– there are lots of atheists who hold to objective moral values
– Dr. Craig has to explain how God grounds objective moral values and duties
– Dr. Craig has to explain why atheist moral realist theories don't work to ground objective moral values and duties

1. The beginning of the universe
– Dr. Craig claims that something can't come from nothing, that's not an argument
– there are numerous models that don't require an absolute beginning of the universe

– Dr. Craig cites the BGV theorem, but Guth (one of the authors) says that only the inflation has a beginning, not the whole universe

**Dr. Craig's conclusion**

1. The beginning of the universe
– on theism, there is an efficient cause, but no material cause, for the origin of the universe
– on atheism, there is neither an efficient cause nor a material cause, for the origin of the universe: that's worse!
– if he thinks that there are models of the universe that don't require a beginning, then let him name a viable eternal model of the universe
– he never refuted the mathematical argues against an infinite past

2. Fine-tuning of cosmic quantities and constants
– nothing to refute

3. Objective moral values
– God is a better ground for morality than humans, because he is ultimate, and not contingent and arbitrary
– God is a being who is worthy of worship, and therefore command his creatures with moral duties

4. Minimal facts case for the resurrection of Jesus
– nothing to refute

5. Religious experience
– only justified because there are no defeaters to it

1. The hiddenness of God
– atheist has to show that if God's existence were more obvious, that it would result in more people being drawn to him

2. The inductive problem of evil
– Dr. Came's argument was logically fallacious, and makes errors in probability theory

**Dr. Came's conclusion**

Sometimes, people can't prove something, but lack of evidence is a justification for doubting it, e.g. – werewolves.

If none of Craig's arguments work, then it follows that it is not rational to believe that God exists, and it is rational to believe that God does not exist.

Atheists shouldn't have a burden of proof for what they know, only theists have a burden of proof for what they know.

**My thoughts**

One quick point. If life were common everywhere then atheists would infer that God wasn't involved in it. Period. "Life is everywhere, so it's common, why do we need a designer?" they'd say. I agree with Dr. Came about denouncing religious experience in a formal debate. I don't like when Dr. Craig brings this up, but I see why he does it – he's an evangelist, and that's a good thing, too. I just worry about how it looks to atheists, although it's good for sincere seekers. I'm not the one on the stage, though, Dr. Craig is.

I think the point about more overt revealing by God would annoy people and make them turn away. Think of how gay people respond to the suggestion that there is anything wrong with them, with rage, vandalism, threats, coercion, attempts to get you to lose your job and business, and using government as a weapon to fine and imprison you. It's really obvious to me that more God does not mean more *love* of God. For those who don't want God, the hiddenness is respect for their choice to put pleasure above the search for truth. (I mean the gay activists – I have great sympathy for people who struggle with same-sex unwanted attractions because they were impacted by a failed bond with their parent of the same sex as they are).

Whenever I meet people like Dr. Came, I always urge them to keep investigating and pursuing truth, because they will find it if they are sincerely seeking after God. Some atheists do sincerely seek God, but I don't know any who haven't found him. I'm not sure if that's because those atheists who claim to be non-resistant and rational are in fact resistant and non-rational, or what the real reason is. If you believe the Bible, *all* unbelief is non-rational and resistant (see Romans 1). Regarding the werewolves, we don't have any good arguments for werewolves, we do have good arguments for God. Dr. Came didn't refute the arguments that Craig raised, nor did his own arguments for atheism work. And there are many, many more arguments (origin of life, Cambrian explosion, habitability-discoverability, molecular machines) that Craig did not raise, too.

# 10,000,000 page view post: The Great Feminization and my trials in woke corporations

**Wintery Knight** · 19 October 2025 · Archived copy · Original

Announcement: The blog just reached 10,000,000 page views since I started it in January 2009. So, leave me a comment on Facebook, Twitter or below this post, if you want me to keep going! I'm thinking about scaling back the blog and the podcast and the YouTube channel, since I am ready for early retirement! Maybe I will just scale back the blogging to days when I really am bursting to speak out.

The article I want to comment on is written by Helen Andrews. It might be the best thing you read all year, it's certainly the best thing I've read this year. Better than anything you will hear from popular Christian authors and podcasters, who tend to shy away from policy and controversy. This article is about what is really going on in big woke corporations, outside of the happy Christian bubble.

Here is her article in Compact Magazine.

And here is the excerpt:

> Everything you think of as wokeness involves prioritizing the feminine over the masculine: empathy over rationality, safety over risk, cohesion over competition. Other writers who have proposed their own versions of the Great Feminization thesis, such as Noah Carl or Bo Winegard and Cory Clark, who looked at feminization's effects on academia, offer survey data showing sex differences in political values. One survey, for example, found that 71 percent of men said protecting free speech was more important than preserving a cohesive society, and 59 percent of women said the opposite.

This part was my favorite:

> The field that frightens me most is the law. All of us depend on a functioning legal system, and, to be blunt, the rule of law will not survive the legal profession becoming majority female. The rule of law is not just about writing rules down. It means following them even when they yield an outcome that tugs at your heartstrings or runs contrary to your gut sense of which party is more sympathetic.
>
> A feminized legal system might resemble the Title IX courts for sexual assault on college campuses established in 2011 under President Obama. These proceedings were governed by written rules and so technically could be said to operate under the rule of law. But they lacked many of the safeguards that our legal system holds sacred, such as the right to confront your accuser, the right to know what crime you are accused of, and the fundamental concept that guilt should depend on objective circumstances knowable by both parties, not in how one party feels about an act in retrospect. These protections were abolished because the people who made these rules sympathized with the accusers, who were mostly women, and not with the accused, who were mostly men.

She doesn't mention domestic violence laws and family courts, perhaps strategically, but these both are nothing like traditional legal processes. Many intelligent men are avoiding relationships out of caution about false accusations and divorce. It's called the "marriage strike", and it is just the rational response to the feminization of the police force and family courts. Especially for men of means who have more to lose.

> These two approaches to the law clashed vividly in the Brett Kavanaugh confirmation hearings. The masculine position was that, if Christine Blasey Ford can't provide any concrete evidence that she and Kavanaugh were ever in the same room together, her accusations of rape cannot be allowed to ruin his life. The feminine position was that her self-evident emotional response was itself a kind of credibility that the Senate committee must respect.

> If the legal profession becomes majority female, I expect to see the ethos of Title IX tribunals and the Kavanaugh hearings spread. Judges will bend the rules for favored groups and enforce them rigorously on disfavored groups, as already occurs to a worrying extent. It was possible to believe back in 1970 that introducing women into the legal profession in large numbers would have only a minor effect. That belief is no longer sustainable. The changes will be massive.

Her article is based on a speech that she gave at NatCon5: a national conference of conservative thought.

Please read her article, and watch the video if you like. Send it to all your friends. Post it on social media. Share the video with all of your friends. I found the article cathartic. It really moved me. I did cry for a bit because I have experienced what she is talking about, in corporate America. It really was not easy to get through.

It's great to see Helen Andrews take up this issue of institutional feminization, which I think is the core danger of our time. Except for a very small minority, nobody seems to have the balls to say that we need to roll back things like single mother welfare, no-fault divorce, student loans for worthless degrees, anti-discrimination laws for businesses, me-too false accusations at work, etc. Most social conservative Christians, for example, claim to be pro-life and pro-marriage, but they are terrified about confronting women about their role in causing those problems. Similarly, they don't want to confront women about their support for leftist policies.

Well, Helen Andrews has said something about one of the problems, and we all need to follow her lead. And the best part is, *she doesn't think that blaming and shaming men is the answer*. She thinks the answer is *changing laws and policies*. That's rare.

You can find more of her articles here.

**My time in woke corporations**

I wanted to add a few more words about my experience working in woke Big Tech corporations while fighting for my green card and early retirement.

The company that eventually sponsored me for my green card was a Platinum partner of the Human Rights Campaign. So, they are a far far far left woke company. They would push me hard to do many secular left actions that I disagreed with. When you are not a permanent resident, you can't go to Human Resources, or sue the company. You have to lay low and avoid threats and find another way to speak your mind. This is something that many Christian leaders who were *born in the USA* don't understand about aliases.

Here's a few things I encountered in the 16 years before I got my permanent residency (green card):

- was asked to wear a rainbow ribbon to support gay rights by my female manager
- was called into my female manager's office after a Muslim complained about my disagreement with Islam
- had my blog leaked to Human Resources by a Muslim who found out about it somehow, and was called in to explain it
- gay male co-workers would try to get me to disagree with LGBT in front of people so them could send me to HR
- had to use vacation days to avoid woke training, and then was asked why I did that
- was badgered incessantly to donate to the United Way, a woke non-profit
- was called into a meeting with a Director because I spoke to a CHRISTIAN woman about apologetics at work (she was offended because I made her feel bad about her fideism)
- was passed over for IT promotions for female candidates who did not even have STEM degrees, or in one case ANY degree or IT work experience
- hauled into Human Resources after a Hindu communist complained because I asked him why he didn't stay in India if he was so opposed to free market capitalism

- was called onto the carpet by my female manager for making the no-degree and no-experience lady feel bad when she declined to reply to my e-mails about requirements for an entire week
- was denied a letter of reference from the Human Resources lady at a previous employer that I needed for my application for Permanent Residency, (she knew I was a conservative and Christian because I slammed their woke policies in my exit interview)

And I could go on and on, but this is the kind of thing that I had to put up with, mainly from cry-baby feminists and LGBT activists, in corporate America.

**Not just in woke corporations**

I don't expect Christian leaders who have given me flack for my alias to understand this, since none are legal immigrants by employer sponsor and few have worked in a woke Fortune 100 IT shop. But even outside of woke IT corporations, I have seen many "conservative" Christians throw out the Bible and side with crying women against men who were in the right Biblically and morally. I have seen "pro-child" "Mama Bear" Christians urge women to initiate divorce *over money,* and lie about their husbands in family court in order to get custody of kids, even though the divorce was completely unBiblical and immoral.

Many very "manly" looking Christian leaders fold up like origami for women, too. Many years ago, a very famous masculine-looking Christian apologist told my 30-year-old girlfriend that she should feel free to go to Europe to do TWO NON-STEM DEGREES, and that I would be here waiting for her to marry her when she returned. She returned to America at age 34. She didn't work when she was in Europe, just lived off of donations and debt. And she never used those extra degrees for work. No one had the boldness to confront her about her crazy choices, not even that male "masculine" apologist. And in fact two other male apologists were so desperate to be liked by her, that they also told her that going to Europe at age 30 was a great idea. Do you ever wonder why so many aging Christian women are struggling to get married? Many of them wasted their 20s chasing worldly happiness, to the applause of weak Christian men who merely *appeared* masculine.

A famous woman apologist once told me that I should not reject women who had tens of thousands of dollars of debt as a wife candidate, because "if Jesus forgives her sins, then who are you to judge her? You need to lower your standards". We just don't have Christian leaders who are tough enough to confront women about the lies they believe, and their poor decision-making.

Last point from me. I've mentored several women who went through a wild phase as non-Christians. I teach them apologetics and economics, and build up their resume and finances. Once they get their lives on track, the most frequent phrase I hear from them is "everyone was lying to me when I was young". People tell young women what they want to hear, and it causes them problems in the long run. It is a mistake to think that men exist as ATM servants who will just dispense cash and fixes when women have gotten themselves into these problems. We need to do better at telling women the truth early, even if it hurts their feelings.

**Read and share Helen's article**

So, yes. It's just so encouraging to see an article that finally takes a step into saying "maybe it's not a good idea to have these laws that force businesses to place women into positions of authority". Read the article. Share the article. And just consider; should we confront the threat to civilization posed by the feminization of our institutions? Or should we cower in fear of displeasing women, and just keep telling them what they want to hear, so that they will like us?

# Jennifer Roback Morse and Hannah Spier discuss the pitfalls of feminism

**Wintery Knight** · 20 October 2025 · Archived copy · Original

So, I am still on Cloud 9 from the amazing essay and lecture by Helen Andrews that I posted on the weekend. My female friends were unanimous in their praise for the article. My male friend Blake and I talked about it for 2 hours on the phone. My other male friends have not had the chance to read it. But on the heels of that, here's *another* fantastic podcast about feminism. Terrell found it for me.

I don't need to introduce economist Dr. Jennifer Roback Morse (of the Ruth Institute) to regular readers of the blog, as she is well known for her opposition to feminism, and her policy-oriented approach to solving the problems of the Sexual Revolution. Whereas many social conservatives just moan and complain about the Sexual Revolution, and then expect men to "fix it" so that women are happy, Dr. Morse has all sorts of interesting ideas about what laws and policies to change to bring us back to normal.

Her guest Dr. Hannah Spier is someone I had never head of before. She's a former psychiatrist who is married and lives in Switzerland with her husband and children. She's a stay-at-home mother now. And you might not believe this but she describes herself as very supportive of "men's rights". Now, don't get me wrong, she's not a basher of women. What I heard in the podcast was a lot of discussion about what feminism is, and how women who believe in it order their lives. Does it work out for them?

Anyway, I have the video version and the audio version. So here's the uncensored video from Rumble:

And the audio-only version: (opens in new tab)

https://sites.libsyn.com/20124/psychiatrist-proves-feminism-is-even-worse-than-we-thought-hannah-spier-dr-j-show

Don't forget that our Knight and Rose Show is also posted on Rumble, if you don't like YouTube. I certainly don't.

I was supposed to be working on work-work (work related to my job) on Sunday, and doing the laundry. But I could not escape from this podcast. I kept re-winding it to play parts over.

Anyway, I was going to write a summary of this, but I fed Grok the transcript, and told it the parts that impressed me, and asked for a summary. I got this:

> Dr. Jennifer Roback Morse and Dr. Hannah Spier explore how feminist ideology influences women's choices, often leading to mental health challenges and unfulfilled desires. Dr. Spier, a psychiatrist, shares insights from her practice, highlighting how societal pressures and personal decisions rooted in feminism can create resentment and emotional distress across different life stages.
>
> For women in their 20s, Dr. Spier observes a pattern of pursuing demanding degrees while grappling with unmet emotional needs. Many focus on dating or social status, influenced by feminist ideals of career-driven success, only to face anxiety and panic attacks when academic and romantic goals clash. This mismatch stems from chasing a glamorous career image that doesn't satisfy deeper attachment needs.
>
> In their 30s, women often experience burnout from unfulfilling jobs, compounded by the pressure of declining fertility. Dr. Spier notes that some women invest years in relationships with partners hesitant to commit, partly because career-focused women initially seem less likely to prioritize marriage or children. When these women later seek commitment, the delay can lead to conflict.
>
> By their 40s, married women with children may face depression and marital strain, often feeling guilt over their children's struggles, like ADHD, which Dr. Spier links to attachment issues from balancing work and family. Resentment toward husbands for perceived unequal responsibilities can push some toward divorce,

> seeking relief but facing new challenges.
>
> Both critique feminism's narrative that pits men and women against each other, arguing it undervalues motherhood and fuels bitterness. They encourage women to make choices aligned with their biological and relational needs, fostering healthier emotional lives and stronger families, rather than adhering to societal pressures that may lead to regret.

What was most interesting to me about all this was how even though women were making these decisions all along, it was pretty clear that they had been sold a bill of goods by powerful people who wanted them to go in this direction for whatever reason.

In particular, I was pleased to hear Dr. Spier mention how women who are committed to full-time careers *deliberately choose* men who support that. I.e. – men who don't want to be burdened by commitment and children. So, to the woman who has her eventual demands for commitment and children rejected, it looks like "all men are bad" because the man she chose was bad. I know that many modern women, for example, consider support for abortion rights to be a *non-negotiable* when dating a man. If a feminist woman chooses a pro-abortion man, it gives her maximum autonomy for her career during her 20s. But how likely do you think it is that a pro-abortion man is going to suddenly sign up for marriage and children when she hits 32? It seems unlikely. After all, abortion is nothing but seeking reckless sexual pleasure, and then resorting to deadly violence to avoid the consequences of your actions. A man who believes in that is not going to sign up for marriage and kids. Marriage and kids are responsibilities, and pro-abortion men don't want that.

What we need to do is to tell women that good men are men who want to commit early, and raise kids early. And so, they need to choose those good men early. Men marry for a specific plan. Good men want a helper who can help them with their plans. It's wrong to pass up good men in the woman's 20s, and then hope that they will be there in the woman's 30s. That's not a good deal for the good men. They will not take that deal. The right solution is for older women to teach younger women to reject feminism when they are still young. So, please share the podcast with young women.

# Another exciting story of a famous scholar (Charles Murray) studying Christianity

**Wintery Knight** · 21 October 2025 · Archived copy · Original

You might remember how famous philosopher Larry Sanger, the co-founder of Wikipedia, recently investigated Christianity. He found the evidence good enough to make a commitment. I wrote about what arguments he found convincing in this post. A new famous scholar, Charles Murray, has investigated into Christianity. Let's see what arguments he looked at and where he came out.

Before we see what Charles Murray found, here is a good list of arguments for a Creator and Designer.

I have a list of 8 scientific arguments:

1. origin of the universe
2. cosmic fine-tuning
3. origin of life (building blocks and sequencing of information)
4. Cambrian explosion (and other surges of information in the fossil record)
5. galactic, stellar and planetary habitability, e.g. – habitable zones
6. molecular machines in the cell, e.g. – bacterial flagellum
7. evidence for a non-material mind, e.g. – split brain surgery
8. the waiting time problem

And then there are philosophical arguments, too:

1. the moral argument
2. the contingency argument
3. arguments for substance dualism, e.g. – intentionality
4. the argument from reason

And historical arguments:

1. reliability of the New Testament documents
2. minimal facts case for the resurrection, e.g. – Paul's conversion
3. prophecy, e.g. – Psalm 22

I excluded all "soft" arguments from my list, because emotion-based claims grate on my software engineer and military history soul.

So, what was Murray's starting point? He explains in a New York Post article:

> By the middle of the 20th century, academia's appraisal of religion amounted to "Smart people don't believe that stuff anymore."
>
> That's the message I got when I reached Harvard in the fall of 1961.
>
> None of my professors was religious (at least visibly). I didn't have any friends who were religious.
>
> When the topic of religion came up, professors and friends alike treated it dismissively or as a subject for humor.
>
> I didn't expend energy rejecting religion. It was irrelevant. I ignored it.

That's his starting point. And why investigate Christianity when you are already at the top of your field, getting a lot

of respect for the influential books that you are putting out?

So often, Christians are taught to think that Christianity is something that you investigate when you have a life crisis. Then you take this irrational leap into the dark, and turn over a new leaf, to get your life in order. Maybe to make people stop judging you. That's how Christianity is seen today. Most people think that Christianity is about feelings and community, but that's not the way Jesus saw it. Jesus said that everyone who is on the side of TRUTH listens to him. He used evidence in order to appeal to people who didn't believe in him already. We talked about Christianity as a "truth quest" in our podcast episode with Dr. Gunter Bechly, who went on a truth quest and arrived at Christianity. Intellectuals who are curious and open can find solid evidence for the Christian worldview.

Science and Culture has an article up about what evidence Charles Murray looked at in his new book:

> "Millions are like me when it comes to religion: well-educated and successful people for whom religion has been irrelevant," Charles Murray writes. "For them, I think I have a story worth telling."
>
> Taking Religion Seriously is Murray's autobiographical account of the decades-long evolution in his stance toward the idea of God in general and Christianity in particular. He argues that religion is something that can be approached as an intellectual exercise. His account moves from the improbable physics of the Big Bang to recent discoveries about the nature of consciousness, from evolutionary psychology to hypotheses about a universal Moral Law. His exploration of Christianity delves into the authorship of the Gospels, the reliability of biblical texts, and the scholarship surrounding the resurrection story.

These align with some of the arguments that I mentioned (origin of the universe, fine-tuning, consciousness, moral argument, gospel reliability, resurrection), showing you how these arguments really do work on non-Christian scholars.

A Wall Street Journal article (archived) has more about his process of changing his mind:

> Whatever else may be said about Mr. Murray, he can't be accused of dishonesty or cowardice. He has a penchant for saying what many other writers and scholars know but either can't say or can't say clearly and without a thousand qualifications. He has often been typecast in liberal organs as an ideologue, but that is exactly wrong: Reading Mr. Murray's work—this is most plainly true in "Losing Ground" and "Coming Apart"—you often sense that the writer would rather draw different conclusions but, in view of the evidence, can't.
>
> "Taking Religion Seriously" is, in that sense, typical of its author. Mr. Murray wasn't searching for religious belief.

He starts out with a book written by a famous atheist astronomer, Martin Rees, about the cosmic fine-tuning argument. This argument is generally viewed by atheists as the most compelling argument for a Creator and Designer of the universe:

> Mr. Murray's conversion, if that's what it is, began in the early 2000s, when he read a few theoretical accounts of the universe's origins, among them Martin Rees's "Just Six Numbers" (1999). So wildly improbable were the conditions necessary for the so-called Big Bang, it seems to Mr. Murray, that the whole business, whenever it happened, sounded very much like what Christians call creation. "I can't believe I'm thinking this," he recalls reflecting, "but it's the only plausible explanation"—"it" meaning the divine origin of everything.

He was also impressed by the case for the reliability of the gospels, including the relatively recent, ground-breaking work done by Dr. Richard Bauckham on the eyewitness backing of the gospels:

> One of those books on the Gospels' formation is perhaps the greatest of them all: Richard Bauckham's "Jesus

> and the Eyewitnesses" (2006), a densely researched and dispassionate argument that the synoptic Gospels (Matthew, Mark and Luke) are more or less what they present themselves to be: accounts of Jesus' life, death and resurrection, compiled from the testimonies of eyewitnesses. Mr. Murray also read prominent critical accounts of the Gospels—books by Bart Ehrman, among others, that reject all supernatural claims—and wasn't so impressed.
>
> These latter accounts, Mr. Murray concludes, falter under the weight of unanswered questions. Among those questions: If the idea of Jesus' divinity was so late an invention, as all critical biblical scholarship must assume, how is it that not a single New Testament book so much as alludes to the most cataclysmic event of ancient Judaism, the destruction of the Second Temple in A.D. 70? Jesus foretells its destruction in the Gospels, and this has been interpreted as a later insertion to make him sound prophetic, but are we to believe that any mention of the temple's actual destruction never found its way into any New Testament book?
>
> And why does the Acts of the Apostles end with the reader wondering what became of its two most important characters, when we know they were martyred? "If people kept augmenting and altering the books of the New Testament as the revisionists insist," Mr. Murray wonders, "why wouldn't someone have added a few lines at the ending of the Acts mentioning the deaths of Paul and Peter?" The most plausible answer, of course, is that Luke's account was finished before their deaths and no one in subsequent decades felt sufficiently bold to tamper with it. And most puzzling of all: Why did Jesus' disciples go to their deaths insisting he had been raised from the dead when they had neither hoped for nor expected such a thing in the first place, if they knew it never happened?

If you're a student of apologetics, then you'll have heard of these concerns before, maybe in the writings of William Lane Craig for one and two, and N.T. Wright for number three. That's why Christian apologists spend all this time reading this stuff, so that we can suggest these books to skeptics like Charles Murray! And these books do work on skeptics. It's a shame that so many Christians never learn about how to use these books in church.

Anyway, if you like stories about very, very famous non-Christians taking a look at the good evidence for God's existence, and Christianity in particular, then mark this one down on your list. It's good to not care too much about flashy celebrities, and people who draw crowds based on their entertainment ability. Life isn't about that. Life is about taking the time to puzzle about the evidence in nature and history that you can follow to get into a two-way relationship with the Boss. Many people seem to get so busy with other things. Some of these things are bad, and some of these things are good. But the purpose of life is surely to puzzle about the big questions, and to be reconciled with God.

Maybe you've been a Christian all your life, and you don't even know why. Maybe you'd like to find out how to show non-Christians your work? In that case, it's helpful to consider the stories of people like Gunter Bechly, Larry Sanger, Charles Murray, etc. and do a little study to see how good the evidence that they found really is. It's fun to talk to people about the clues that the Boss has left.

# Shareholders urge woke companies to stop relying on anti-Christian group

**Wintery Knight** · 22 October 2025 · Archived copy · Original

Tyler O'Neil over at the Daily Signal does a good job of keeping up with the news about the Southern Poverty Law Center. The SPLC web site has been used by domestic terrorists to target Christians and conservatives. Recently, the FBI decided to cut ties with the SPLC. But many big corporations are still using their resources. Which corporations? Tyler has done the research.

Here's his article from Daily Signal, and then after that, I have some other information that might help you to keep your dollars away from the secular left.

Tyler writes:

> Conservative shareholders at eight major corporations have filed resolutions urging those companies to stop using politicized tools like the Southern Poverty Law Center's "hate map," which added Turning Point USA a few months before the assassination of Charlie Kirk.
>
> […]"As someone who lives in Alabama, right in the SPLC's backyard, I've seen its nefariousness up close," Allen Mendenhall, senior advisor for Heritage's Capital Markets Initiative, told The Daily Signal. "The assassination of Charlie Kirk has made tragically clear what conservatives have warned for years: When groups like the SPLC equate mainstream conservative beliefs with hatred, they help create a culture of dehumanization with deadly consequences."

You might remember that SPLC's resources were used by a convicted domestic terrorist who attacked the Family Research Council headquarters, in an attempted mass shooting. It turns out that big American corporations are using these same resources.

Anyway, here are the companies:

> The Heritage Foundation filed resolutions with Alphabet (Google's parent company), Amazon, Mastercard, Meta (Facebook's parent company), PayPal, Salesforce, and Starbucks. Bahnsen filed a resolution with Texas Instruments.

I've written about the left-wing extremism of many of these companies before. I'm trying to avoid using their products and services. I closed my account with PayPal. One of my co-workers gave me a Starbucks gift card for Christmas, and I just threw it in the garbage. I'm trying to buy more and more from Publix, which doesn't get involved in secular leftism as much as Amazon. Even Wal-mart is better than Amazon. I buy my technical stuff from NewEgg or the local Best Buy instead of Amazon. I do my best to stay clear of these 8 corporations as much as I can. Not only are they opposed to my religion and values, but their bias also creeps into their products, making them unreliable. Have you tried search using the Google search engine lately? It just returns a bunch of data from left wing hate groups and far-left corporate news media. I just ask Grok when I need something. Google is useless as a search engine.

The Daily Signal article has details on how each of the 8 companies is linked to the SPLC. I will leave those for you to read.

Let's look at who the SPLC puts on their hate map:

> The Southern Poverty Law Center… publishes a "hate map" that plots mainstream conservative and Christian groups… A terrorist used the "hate map" to target the Family Research Council in Washington, D.C., for an attempted mass shooting in 2012…

> The SPLC added Turning Point USA to the “hate map” this summer, a few months before the assassination of Kirk, Turning Point’s founder. The SPLC condemned the assassination, but has yet to remove Turning Point from its map.
>
> In recent years, the SPLC has added parental rights groups like Moms for Liberty to the “hate map,” along with groups of doctors who oppose “gender-affirming care,” conservative Christian nonprofits including Focus on the Family, and even the nonprofit PragerU, best known for producing 5-minute educational videos.

Far-left extremism, if you ask me.

Now for something very new. As I mentioned in a previous post, I worked in several tech companies that pushed me to make mandatory donations to the far left United Way. It was so bad that the CEO of one company met with me, and at a different company, someone from the head office met with me. That’s how alarmed they were that I wanted no part of the United Way giving. I don’t give money to United Way, and neither should you.

Well, there’s another company called Benevity, which uses the SPLC “hate map” to discriminate against Christians and conservative charities.

This article from Do No Harm explains:

> Benevity is a software company that provides a platform to facilitate companies’ charitable giving efforts to nonprofit organizations.
>
> However, Benevity uses a so-called “Hate List” and “Hate Map” developed by the Southern Poverty Law Center (SPLC) to vet the nonprofits deemed eligible for corporate charitable giving and employee matching programs. The SPLC fully supports radical identity politics, branding efforts to fight back against discriminatory DEI practices and gender ideology as somehow hateful.
>
> And at some point, the SPLC designated Do No Harm as a “hate group.”
>
> Do No Harm, along with 11 other similarly-branded organizations, is signing onto a letter urging Benevity to immediately cease relying on this discredited and harmful list.
>
> “By relying on these partisan designations, Benevity legitimizes a severely biased blacklist that inspires violence, urges discrimination against mainstream organizations, and undermines the spirit of charitable giving,” the letter reads.
>
> The letter then cites examples of groups that have been falsely deemed hateful by the SPLC and subsequently subjected to violence.

I never had to deal with Benevity. But one thing for sure – if you work in one of these companies that wants you to give your money to any charity, say no. Take the money and give it to charities you trust. Me, I like Ratio Christi. Find a chapter, and partner with them. But don’t co-operate with these secular left companies, and don’t give them any of your money.

# Radical feminist Kate Mulvey is alone and childless at age 63

**Wintery Knight** · 24 October 2025 · Archived copy · Original

In 2018, I wrote about a 54-year-old feminist who spent her entire life savings on a dating agency to find a rich husband. Kate spent her entire life writing columns to tell young women to live feminist lifestyles: get easy degrees, work easy jobs, spend money on fun and travel, get cosmetic surgeries, disrespect male leadership, and have lots of casual sex. How is she doing at age 63? Let's find out.

Let's first review my post from 2018, in part, and see what this woman was all about.

> A couple of years ago, I too joined an expensive matchmaking agency. I had just come out of a seven year relationship, and was on the wrong side of 50.
>
> I soon tired of online dating and receiving messages from over weight baldies who peppered their emails with childish emojis. I hankered to find Mr Right-for-me, a man who was suitably educated and a successful professional.
>
> And so this is how I found myself, throwing money (my entire savings to be precise) to an upmarket matchmaking agency in central London. The agency claimed to filter out the undesirables, the mediocre and give clients the personal touch, so I handed over the hefty sum of £6,000.

So, just a few things about this lady Kate Mulvey. She has made some decisions that I find very unwise.

I documented my findings in my previous post:

- she has no useful degrees – she paid for useless degrees in Italian and French, instead of studying something useful, like computer science or nursing or petroleum engineering. Her "writing" is all about fashion, dating and "lifestyles"
- her opinion on children: "uppity children take your time, emotions and energy" – she sees children as a detriment to her highest priority (her career). She says "I, however, have lived a life of unfettered freedom to take on projects, write books and travel"
- she had loads of entertaining men "beating a path to [her] door" when she was younger
- she spend thousands of pounds on plastic surgery
- she blames her lack of marriage success on her being "brainier" than men
- she turned down men who wanted to marry her, as late as age 33
- her book is called "Accidental Singleton" because her approach to life – anti-marriage hedonism – has accidentally left her single and penniless at age 54

So, this woman, who scorns the leadership of men, made very bad decisions. Her columns are filled with constant bragging about how much smarter she is than men – men who have made far better decisions and achieved much greater prosperity than she has.

Here is the latest article, in which she explains what feminism told her to do with her life, and what that got her.

She writes:

> I'm convinced that the reason I'm still booking a table for one at the age of 63 instead of having settled with a significant other is because, like so many women of my generation, feminism has ruined my love life. Instead of empowering us, those ideals of the second-wave feminists made us believe marriage and domesticity were to be avoided like the plague and that men were competition rather than partners.
>
> […]I had always imagined I would end up married with two wonderful children and living in a house in the countryside. I have paid a hefty price for my so-called liberation.

Act like men – demonize housework and family:

> I was 17, and a pupil at Godolphin and Latymer – one of Britain's most academic institutions – when I was introduced to the Women's Liberation movement. It offered such hope and excitement, and we spent our lunch breaks soaking up the feminist mantras of Germaine Greer and Betty Friedan: "Act like men," they cried as they burnt their bras and demonised housework and the family.

Recreational sex with hot pro-abortion bad boys who don't judge:

> Another thing I regret deeply is my tally of one-night stands when I was younger.
>
> [..]My generation of women were encouraged to "have sex like a man" – in other words have casual sex…

The number of partners that a person (man or woman) has had before marriage is related to their likelihood of initiating divorce. So, someone like Kate Mulvey would be a high risk of divorce. Also, smart men don't sign up for marriage to women who tell them that "my money is my money, and your money is our money".

So, she spent her life telling young women to follow feminism, like she did. But are Christian leaders telling young women anything different? Many socially conservative Christian leaders believe in "servant leadership", which means that men serve, and women lead. Instead of confronting lies and evil, men have to take out the trash, and dispense cash on demand for his wife's handbags and travel.

Many social conservative Christians define masculinity as "men using their strength to benefit women". In contrast, my wise advisor Dina taught me that masculinity is demonstrated when a man opposes lies and evil, and doesn't let a woman distract him from those goals with her sex appeal. Dina would say that Christian men should only protect and provide for Christian women who are helpful to men, and led men take the lead to product results for the Boss. So, men should judge women. They should measure them, and choose good ones. And the job of Christian leaders is to produce women that good men want.

As I've blogged about before, there are many reasons why good men will be cautious about marrying feminists. Men are realizing that women today are not the same as their mothers and grandmothers. They don't offer the same value to a marriage-minded man. They don't respect men as much, and they don't want to help a man who leads as much. Not only is there the problem of young women being extremely leftist, but there is also the problems of feminized laws, policies and courts being hostile to men. We need Christian leaders who fight against young women's feminism while they are still young enough to have 4+ children. And we need leaders who fight against laws, policies and courts that are hostile to men.

# The three simplest examples of cosmic fine-tuning

**Wintery Knight** · 27 October 2025 · Archived copy · Original

On this blog, I have said repeatedly that I keep three examples of the fine-tuning in my back pocket, ready to go, because they are the ones that make the most sense to me, based on my memory of taking physics and chemistry courses. I thought it might make a good post to just write about them, and you can see if you want to memorize them, too. It's a good argument, and non-theists respect it.

So, first, let me just explain what the argument is. Basically, if you remember in your high school physics textbook, there were lots of numbers for well-known constants and quantities, such as the speed of light and the gravitational constant. What they never told you was that if you change most of those quantities and constants, then the universe would not be able to support life. Not just life as we know it, but any conceivable kind of complex life.

It's not as though you can change these constants, and you will just have Spock-ears, or green skin, or nose ridges. No. If you change these constants and quantities, terrible horrible things will happen to your universe. Maybe it recollapses into a hot fire ball. Maybe you have no galaxies. Maybe you have no stars. Maybe you have no elements heavier than hydrogen. Or maybe you have no hydrogen. All bad things! All the bad things that wreck the ability of your universe to support life.

So, without further ado, let me tell you THREE of the best evidences for fine-tuning that even a child can understand. Well, maybe not a child, but you can understand them, OK?

Here they are:

**Amount of Matter in the Universe:**

The universe's total stuff—stars, galaxies, gas clouds, dark matter—sets its expansion path. Too much stuff, and gravity would've crushed the universe into a hot dense fireball after the Big Bang. Too little, and matter in the universe would scatter, never forming galaxies or stars. The universe has the perfect weight to create galaxies and stars. This balance lets stars and planets form stable homes for life.

**Strong Nuclear Force:**

This force binds protons and neutrons in atomic nuclei, forming elements like hydrogen, helium, and carbon, vital for human bodies. If 2% stronger, protons would stick too tightly, depleting hydrogen, so stars couldn't burn properly, and water wouldn't form. If 5% weaker, only hydrogen would exist, like a chemistry class with one element on the chalkboard. The precise setting that we have ensures the a diverse variety of different elements, allowing stars to shine and life's chemistry to work.

**Cosmic Expansion Rate:**

The universe expands at a speed set by the cosmological constant's dark energy, like a balloon being carefully inflated. If slightly faster, matter would scatter too thinly, preventing stars or galaxies. If slower, gravity would clump everything into black holes. The universe grows at the ideal speed to allow galaxies, stars, and planets to form a cosmic stage where life can thrive.

By the way, the first and the third are distinct constants that work together, like ingredients in a recipe.

**Conclusion**

So, there are the three I have memorized. If you have time for discuss one, use the strong force. And by the way, if you are dealing with an atheist, you can give him the book "Just Six Numbers" by the famous atheist astronomer Martin Rees. Rees talks about several instances of fine-tuning, including the strong force. To escape the evidence for a Designer, he has to invent a multiverse (for which there is NO PHYSICAL EVIDENCE). There's actually evidence against the multiverse, and we talked about it in our podcast episode on the cosmic fine-tuning (transcript

here).

If you want a good introductory book about this topic, I like Dr. Mike Strauss' "The Creator Revealed". And he's a real experimental particle physicist, too. I've met him in person! Anyway, I hope you have fun with this list. According to the Bible, the Boss used evidence when appealing to skeptics, and so you must use evidence, too, if you want to follow the Leader.

# Canada's national ban on bolt-action hunting rifles and shotguns has started

**Wintery Knight** · 29 October 2025 · Archived copy · Original

A while back on this blog, I blogged about a case where a Canadian homeowner was awakened in the middle of the night by an armed intruder. The homeowner defended himself from the armed intruder. The intruder was air-lifted to a hospital, and the Canadian police arrested and charged the homeowner with aggravated assault and assault with a weapon.

Not content to have banned self-defense, but now they want to *ban possession of bolt-action rifles and shotguns.*

Here's the story from Daily Signal:

> Gun control in America's northern neighbor has moved into confiscation phase, as Nova Scotia, Canada's east coast province, kicked off a pilot program of "voluntary" gun buybacks in September, while the western provinces of Alberta and Saskatchewan say they will not comply.
>
> The national ban was originally decreed by then-Prime Minister Justin Trudeau's government in 2020, covering 1,500 models of rifles, but has since been expanded to include more than 2,500 models. And while the ban is purported to cover "semi-automatic firearms with sustained rapid-fire capability," the list of prohibited firearms also includes more traditional bolt-action rifles and shotguns commonly used in hunting.
>
> […]The program will go nationwide later this fall.
>
> […]Canadians gun owners have complied with strict regulations but accepted the government's pledges that it would respect the rights of hunters and sports shooters, he said. That compact has now been broken.

Naturally, the criminals aren't going to turn in their guns. It's just the law-abiding people who have to.

The article notes that failure to hand over your guns to the federal government is a *criminal offense*, punishable by up to *10 years in prison*. This applies to people who live in rural areas who might have to deal with dangerous wildlife, as well. So it's not just threats from violent rapists and murderers, it's threats from animals that could literally kill you. The government just tells people "call the police" and "comply with the criminal's orders". I am not joking.

Colion Noir has actual video of the Canadian police explaining:

The article also notes that this ban on bolt-action rifles and shotguns was actually enacted by executive order. It was not passed through the House and Senate and signed into law. It's just the command of the dictator who runs the poorly-named Liberal Party of Canada.

Look at what the criminal justice system is like in Canada:

> A British Columbia court sentenced a 24-year-old refugee to probation and a suspended sentence on Wednesday over a violent stabbing incident in Vancouver last November.
>
> Mohamed Abdalla Mohamed Elbahloul pleaded guilty to assault in connection with the stabbing and slashing of one man, and a minor charge related to the assault of another.
>
> […]Elbahloul was provided with a knife by one of his companions and used it to stab the victim's stomach and then proceeded to also cut his legs. The victim required medical attention as a result of the fight.
>
> Elbahloul also admitted to kicking another victim who was on the ground during the altercation.
>
> […]Judge Kathryn Denhoff acknowledged the seriousness of the crimes but noted that neither victim provided an impact statement.

> She also considered what she called the challenging circumstances of Elbahloul's background.
>
> Displaced by war in his home country of Libya at a young age, Elbahloul experienced significant violence and loss, Denhoff argued in her decision.

This story reminds me of my recent blog post that talked about the consequences of having a feminized legal system. Compassion for criminals, and too bad for their victims.

This happens all the time, actually:

> Recently, a Pakistani national narrowly avoided deportation due to a last-minute intervention by the Liberal government, despite participating in infrastructure blockades alongside climate extremist groups.

Do you think that it's safe to travel to a country like this? I would avoid traveling to Canada at all costs. It's not a safe country. And the police and criminal courts have zero liability for the results of their pro-criminal, anti-self-defense policies. You pay them, you are raped and murdered, and they don't face any consequences for it. And the majority of their voters are OK with that.

# What if they gave a Watergate but no one in the corporate news media came?

**Wintery Knight** · 31 October 2025 · Archived copy · Original

A little while ago, I blogged about how the Biden administration had spied on eight Republican senators. And I thought, “wow, this is 8 times worse than Watergate, will anyone go to jail for this?” Well, now we have 100 times worse than Watergate. This is a HUGE news story. Super journalist Catherine Herridge covered it. But no one in the corporate news media has covered it.

**Catherine Herridge**
@C_Herridge

ARCTIC FROST DRAGNET EXPANDS +400 @GOP TARGETS

According to new records provided through "legally protected whistleblower disclosures" @ChuckGrassley 197 subpoenas sought testimony, records and communications..

"...related to at least 430 named Republican individuals and entities. Some of the records (Special Counsel Jack) Smith subpoenaed from banks, individuals and businesses included:

•Communications with media companies such as CBS, Fox News, Fox Business, Newsmax, Sinclair and others.
•Communications with "any member, employee or agent of the Legislative Branch of the U.S. Government."
•Communications with White House advisors, such as Stephen Miller, Dan Scavino, Jared Kushner, Lara Trump and others.
•Statistical data and analysis relating to donors and fundraising efforts.
•Broad financial data relating to conservative individuals and entities."

So, here’s the article in The Federalist, written by Beth Brelje, my new favorite author there.

Beth writes:

> The Joe Biden-era FBI’s Arctic Frost operation — which targeted nearly every facet of the Republican Party and the conservative movement — was described Wednesday as “100 times worse than Watergate,” but the propaganda press *still* chose to ignore it. Larger new outlets turned a blind eye to the Senate Judiciary Committee’s press conference detailing how the FBI tried to tank President Donald Trump’s reelection campaign by using its authority to invasively gather data on some 430 Republican individuals and entities.

She notes that this bombshell story was not featured in the The New York Times, or Jeff Bezos’ Washington Post, or the CNN, ABC News, CBS News, and NBC News websites.

What do you think will happen to the people involved? If it were up to me, I would charge them with treason, and send them to Guantanomo Bay.

But Daily Signal has a more realistic prediction:

> As revelations about former special counsel Jack Smith’s investigation into the Jan. 6, 2021, U.S. Capitol protest come to light, an investigation of the investigator could go in several different directions.

> Those directions include criminal charges against certain Justice Department personnel, civil rights lawsuits against federal agencies, a judicial impeachment, and presidential pardons, legal experts say.
>
> […]On Wednesday, Sen. Ted Cruz, R-Texas, called for the impeachment of Chief Judge James Boasberg of the U.S. District Court for the District of Columbia.
>
> Boasberg signed off on a gag order in 2023 to prevent businesses that were subpoenaed from informing their clients. That included preventing AT&T from notifying Cruz that his cellphone records were being collected by investigators.
>
> […]There is the potential for criminally prosecuting Justice Department personnel who were part of Smith's investigative team, said Mike Howell, director of the Oversight Project, a watchdog group.
>
> The charge of conspiracy against rights would apply anytime two or more individuals plotted to threaten, injure, or intimidate another American to prevent him from exercising his constitutional rights—in this case, the right to free speech and freedom of assembly, as well as the right against unreasonable searches and seizures.

I think this would be a wonderful story to have floating around in the news right up until the 2026 mid-term elections. Help voters to understand which political party really does use government as a weapon against their political opponents… just like Hitler did.

Do you ever wonder why people on the left are so uninformed? It's not because they're stupid. It's because they choose to consume news sources that make them feel superior to Republicans. They don't know about these stories, because the brain is not in charge of how they are informed. The heart is in charge. And the heart says "you aren't allowed to read anything that makes me feel bad". And that's why they don't know about these stories.

So, if you want to make a difference before the next election, why not share that article from The Federalist on your social media pages? Might as well help people to understand the need to vote Republican. In every election. Fascism should not be allowed to happen again, like it did under the Obama and Biden regimes.

# Frank Turek's event at Ohio State University today at 7:30 PM

**Wintery Knight** · 3 November 2025 · Archived copy · Original

Ratio Christi is my favorite campus ministry. And the chapter that does the best job of tackling the toughest and most impactful topics is the Ohio State University chapter, which is run by my good friend Eric Chabot. Eric just finished teaching a series on intelligent design to the students. He also brings the best evidential apologists to speak on campus. This time it's Frank Turek.

Here are the details:

> Join Frank LIVE tonight (MON. 11/3) at THE Ohio State University (Columbus, OH) as he presents, 'If God, Why Evil? A Q&A in Honor of My Friend Charlie Kirk.' The event kicks off at 7:30 PM ET in the Ohio Union Archie Griffin Ballroom
>
> Please come, bring a friend, and be part of the conversation. Thanks to our generous donors, this event is FREE and open to the public. If you can't attend in person, you can join us LIVE on YouTube HERE or your favorite social media channel.

The live stream will be here at 7:30 PM Eastern TONIGHT:

I hope you can tune in. I certainly will. And please pray now for God to make use of this event to lead people to him, and maybe even some people who will go on to have an influence on the university campus, just like Eric and Frank are doing now.

The problem of evil is one of the most frequently occurring questions that non-Christians ask. Sadly, most Christians are not well equipped to answer this question. But Frank Turek has a long history of working on this issue, so you will hear good answers from him. Even more important, you can see the real questions that college students are asking.

There is not much time given to the task of evangelism in most churches. Pastors seem to want people to avoid preparation, and just bypass the real questions that non-Christians ask. So, they don't equip you to answer questions like "Does God Exist?" or "How Could a Good God Allow Evil?" You're just supposed to say that Jesus forgives your sins, and makes your life better (somehow). This is not good preparation for answering the questions of college students or the non-Christian co-workers you find in the workplace.

My current church has the same attitude about dismissing apologetics training. Two weeks ago, one of the co-pastors at my church told the flock "the best evangelists are often new Christians, because they just explain what Jesus did for them in their own lives". This past Sunday, the other co-pastor also praised the ability of people to evangelize without putting in any work. So, we are down to the level of the Mormons and Jehovah's Witnesses now, just trying to appeal to people with personal testimony, and hoping that their bosoms will catch fire with feelings.

When you watch an event like Frank Turek on a university campus, you get the real experience of evangelism. This is a case where someone has put in the time to study these issues deeply, and write about them, even in published works. Frank has also done debates with people like Michael Shermer, editor of Skeptic magazine. He has spoken and written about the most controversial issues, such as LGBT and pro-life. Most people in church tend to shy away from controversial issues or they just quote the Bible to people who don't believe the Bible. Frank does a better job.

Eric told me that they have booked a room to hold 1000 students, and the event has been well advertised. You should share the link to the live stream on your social media, as well. Make sure you take the opportunity to see what evangelism to non-Christians really looks like outside the church doors. It's not just sharing your testimony, or quoting the right Bible verse to people who don't even believe the Bible. It's about being ready with to answer anyone who asks you, and in the same way that Jesus answered his skeptics: with evidence. You might not be able to perform the miracles, but you can certainly learn how to make the case from God's creation and designing work

in nature, and make the historical case for the reliability of the New Testament and the resurrection of Jesus. And that does make you a better evangelist.

If you feel led to invest in what Eric is doing at Ohio State University, you can find his donate link here.

# Must men protect leftist women who vote for open borders and defunding the police?

**Wintery Knight** · 7 November 2025 · Archived copy · Original

In this post, I go over a recent example of a violent crime where a Good Samaritan was punished for protecting the intended victims of the criminal. Then I want to take a look at the voting patterns of young women. Then I want to evaluate the demands made by conservative Christians and social conservatives that good men "protect women" under the current incentives and laws.

So, first, an example of how good men are treated when they do try to protect people from criminals.

Here is a re-cap of an old but famous case from 2023, reported in The Federalist:

> U.S. Marine Corps veteran Daniel Penny was reportedly indicted by a Manhattan grand jury on Wednesday for defending New York City subway passengers from an erratic and threatening homeless man.
>
> The incident in question occurred on May 21, when Jordan Neely — who had been arrested 44 times for "criminal conduct" and, at the time, "had an outstanding warrant for felony assault" — began threatening and getting violent with NYC subway passengers. During the episode, Neely allegedly kept repeating the phrases, "I'm going to kill you," "I'm prepared to go to jail for life," and "I'm willing to die."
>
> In response, Penny and two of his fellow passengers attempted to restrain Neely, which involved the former placing the latter in a headlock. Neely ultimately died during the encounter, with NYC's medical examiner ruling the death a homicide.
>
> According to sources who spoke with Fox News, Penny is being indicted "on one count each of criminally negligent homicide and second-degree manslaughter." If convicted of the latter charge, Penny could face five to 15 years in prison.

Now, let's see how young women voters feel about violent crime. Are they opposed to it? Are they opposed to opening the borders to criminals? Are they opposed to defunding the police?

The UK Mirror explains:

> More than 100 women's rights groups have warned "racist" attempts to link sexual violence with immigration are putting victims at increased risk.
>
> Rape Crisis England and Wales, the End Violence Against Women Coalition and Refuge are among the organisations warning anti-migrant groups and politicans are "hijacking" survivors' trauma. They have signed a letter to Keir Starmer and Home Secretary Yvette Cooper warning that sexual abuse must not be used for political gain – and those who spread misinformation must be held to account.

There's an epidemic of sexual abuse in the UK right now, and immigrants are committing these offenses at rates far in excess of native citizens—foreign nationals (10.9% of pop) grabbed 28–34% of female sexual assault convictions and 25% of adult female rapes in 2024 alone. (Fact-checked AGAIN here by Sky News) But are women concerned about it? Do they want to stop it? Or are they more concerned about being seen by others as tolerant and compassionate?

What about in America? New York City had a Muslim communist who wants to replace the much of the police force with social workers on the ballot. So, did young women vote against Islam and against defunding the police?

CNN has the exit polls:

**Age by gender**

4,744 total respondents

| | Women 18-29 6% | Women 30-44 14% |
|---|---|---|
| Mamdani | 84% | 65% |
| Sliwa | 3% | 5% |
| Adams | 0% | 0% |
| Cuomo | 12% | 30% |

84% of women from the ages of 18-29 supported the Muslim communist.

And they support all his policies:

- Oppose Mass Deportations and ICE Raids: Mamdani vows to block federal immigration enforcement in New York, labeling ICE operations as “state terror” and pledging to shield undocumented immigrants from deportation, undermining national border security and encouraging illegal entry.
- Declare New York a Sanctuary Jurisdiction: He demands the city and state prohibit local law enforcement from cooperating with ICE, refusing to honor detainers for criminal aliens and turning New York into a magnet for unchecked migration that strains housing, schools, and public resources.
- Push Amnesty and Citizenship for Undocumented: Mamdani calls for a blanket pathway to citizenship for all 11 million+ undocumented immigrants, rewarding lawbreaking while sidelining legal immigrants and imposing massive costs on taxpayers for welfare, healthcare, and education.
- End Border Wall and Detention Funding: He explicitly opposes funding for border walls, detention centers, or any expansion of ICE, framing enforcement as “cruel” and pushing to defund agencies tasked with securing the southern border against drugs, trafficking, and illegal crossings.
- Support Open Refugee Resettlement: Mamdani advocates flooding New York with unchecked refugee intakes from high-risk regions, rejecting vetting reforms and ignoring the strain on local services already overwhelmed by migrant surges.

So, the question is this: should good men be expected to protect young women, when they 1) overwhelmingly vote to increase the risks of violent crime, and 2) overwhelmingly vote against self-defense (charge Daniel Penny and put him on trial for a year), and voting against gun ownership by law-abiding citizens?

Final point: what do pro-marriage Christians and pro-marriage conservatives have to say about all of this? Well, pro-marriage Christians and pro-marriage conservatives look at this situation and they have two responses.

First, they do not dare say anything to these young women about their choices, or the long-term consequences of those choices. Whatever women are choosing, they have to be allowed to "follow their hearts". Any bad consequences that follow should be pushed onto the good men who opposed their choices. The good men should be expected to "fix" the problems caused by these young women. And if the young women like, they can then arrest those good men, and put them on trial, maybe even send them to prison for a few years… or for many years. Remember, these are the same people who don't lift a finger to ban single mother welfare, mixed schools, Title IX violation of due process, false accusations in family courts to obtain custody illegitimately, etc. so they have no interest in engineering the production of good men to protect women. They create the conditions that cause men to be timid, then they complain that the timid men they created are timid.

Second, they demand that good men protect and provide for women who are overwhelmingly leftist. Good men have no agency of their own! They only exist to provide utility to young women, including the 84% of young women who vote for Sharia Law and communism. Good men can have no plans of their own, and they are not allowed to have any standards for women that might exclude women who voted for Mamdani. NO! Good men are just walking cash dispensers who must also risk their lives to fight the criminals that their Mamdani-supporting wives let in through the doors and windows of the home. And they must do it without using violence, and certainly not with firearms! Only the criminals can have guns.

Is it any wonder that good men are opting out of the demands of pro-marriage Christians and pro-marriage conservatives? They are like the people that C. S. Lewis describes in his essay "Men Without Chests" from his book "The Abolition of Man". They insist on the positive outcomes, while doing everything possible to engineer negative outcomes. They raise the price of good behavior, then insult good men who decline to pay the costs as being "weak". That's the Christian and conservative leadership we have. The irony is that it is the pious Christian leaders and the chivalrous social conservatives who are weak. They are the ones who are 1) refusing to confront young women about their choices and 2) refusing to listen to men who are telling them how to engineer conditions where it is rational for good men to act.

# Michael Licona debates Bart Ehrman on November 20th, 2025 in Boston, MA

**Wintery Knight** · 10 November 2025 · Archived copy · Original

At the last Sound Faith conference in 2024, I heard about a magnificent presentation by Michael Licona, that was based on his academic publications but presented with a slideshow to the layperson. In that presentation, he made a case that there was more flexibility for authors of biographies in ancient times than modern people understand.

My reaction to his presentation was that Christians who like normal inerrancy (and I do like my inerrancy that way) can keep it. But if you are fighting a skeptic like Bart Ehrman, then according to Licona, you can find enough flexibility in the style of ancient biographers to avoid contradictions in the Bible by understanding how ancient biographers worked.

So, I have been hoping that this presentation would become available, and now and here it is:

Share that with all your non-Christian friends.

This presentation draws on Mike's academic work, for example, his book "Why Are There Differences in the Gospels?: What We Can Learn from Ancient Biography" which was published in 2016 by Oxford University Press.

This book is not designed for evangelizing people who already accept the traditional view of inerrancy in the Bible. This is a book designed to allow skeptics to stop getting hung up on alleged contradictions. None of you reading this post needs to be convinced about inerrancy. But Bart Ehrman does, and so we need someone extra clever to make a special academic university press case designed for him.

Anyway, here is the news about the debate, which is their eighth debate! It happens on the first day of the Sound Faith 2025 conference, November 20-22, in Boston, Massachusetts:

> This November, join Sound Faith 2025 in Boston for a three-day conference to learn from and engage with the most influential voices defending the Christian faith today. Held at the beautiful Tremont Temple Baptist Church, this event will feature interactive sessions on topics such as God's existence, the resurrection of Jesus, faith and science, and more. One of the feature events will be a hard-hitting debate between Christian historian Michael Licona and agnostic textual critic Bart Ehrman – on a topic neither has ever publicly debated before! We'll also have an in-depth discussion on the resurrection between Licona and Dale Allison, whom William Lane Craig described as "a very prominent New Testament scholar of considerable repute." Our tremendous speaker lineup includes philosophers, historians, professional apologists, social media influencers, and more! The magic of these conferences happens when attendees are able to ask questions and have discussions with speakers and other attendees, so throughout the conference there will be tons of interactive opportunities, both inside and outside of the presentations. Our goal is this: to equip you with a SOUND FAITH ready to face the toughest challenges facing Christianity today!

The debate is on day 1 of the conference and then on day 2, Mike has to go up against another high-power historian, Dale Allison. Rose and I both have Dale Allison's book on the resurrection, because although he is skeptical, everyone thinks his work on this topic is top shelf quality.

Now, I want to say one more thing about Mike's arguments and who they are for. I had a friend Murdina ("Dina") who lived in Inverness, Scotland and she was my best friend for a long time until she passed away. Just the wisest person you could ever meet. She had multiple degrees in medicine and was extremely respected in health care management. She was also Young Earth, King James Bible only, and super, hyper Calvinist. She used to call the middle knowledge view that I hold to "Middle Earth Hobbitry". And she had lots of mocking nicknames for everything else that I liked, for example, calling my the Etrian Odyssey series of games that I love so much

“Estrogen Oddity”. (Best. Music. Ever. And here is my favorite remix!)

Anyway, Dina had an atheist younger brother, who had abandoned the faith of the family and become an atheist. Because I had been buying her all the best books about evidential apologetics (Stephen C. Meyer) and free market economics (Thomas Sowell), she had really learned a lot about how to make a case with evidence. One day, her brother came up from Glasgow for a fishing trip. And Dina called me on Skype and dropped her phone into her pocket, so that I could hear them talking. Then she let her brother have it with both apologetics fists for about 2 hours. She used the arguments of old-Earth intelligent design and the minimal facts case for the resurrection of Jesus to smash every single objection he made from his brittle atheistic fundamentalist view of Christianity. By the end, he was so flustered that he started to say the most incoherent things, and I laughed and laughed at how badly she had beaten him.

For weeks after, this atheist brother would text her constantly, trying over and over to wiggle out from the thrashing that she had given him. But there was no escape. Although he had mocked her constantly prior to this engagement, in private and in public, he never ever mocked her again.

I asked her why she used the mainstream science arguments and the minimal facts argument, instead of just quoting the Bible to him, or trying to argue young Earth or KJV only. And she said “first step is to get him into the church. After that, I will fix his wrong views about the young Earth, my beloved KJV, and Reformed theology”.

I tell you all this so that you will understand how I see Mike Licona’s work. It is a tool for the most hardened skeptics. The first step, as Phillip E. Johnson used to say, is to get the thin edge of the wedge into the log. After that comes the hammering.

I don’t think anyone has ever debated the reliability of the gospels with an academic skeptic like Bart Ehrman eight times. To me, that says that Mike is a special person who is able to make friends with his opponents, so that they keep coming back. He isn’t rude, insulting and abrasive. So you have a rare package of extraordinary ability as a historian, paired with extraordinary character. And that’s what allows him to make a difference.

# Wise women holding young feminist women accountable at The Federalist

**Wintery Knight** · 14 November 2025 · Archived copy · Original

My favorite news web site to read every day after I have a look at Twitter is The Federalist. Imagine my surprise when I found not one, not two, but three columns about how feminism harms young women. And all of them written by women! Normally, when I read these columns, the authors make it sound as though it is men who are to blame for bad outcomes. But none of these did that.

Here's the first one by Brooke Brandtjen, entitled "NYC Women Voted For Mamdani Because They Can't Bag a Man". That was the original title, she changed it to something almost as good.

Here is my favorite part – explaining how Democrats trick women into voting for big government:

> Left-wing politics are predatory. Democrats make emotional arguments — about "empathy," "equity," contrived "rights," and "safety" — which largely appeal to a notoriously emotional demographic. In fact, Democrat leaders want the government to fill a husband-like role, making their constituents dependents of the state — and they've been working toward it for years. Remember former President Barack Obama's "Life of Julia" campaign in 2012, for instance. Playing on female anxieties about college, health insurance, motherhood, and career, Democrats made women feel vulnerable and presented the government as a sort of benevolent husband for every point in "Julia's" life. Compared to Mamdani's radical communist agenda, Obama's vision feels tame, but it offered Democrats a playbook for targeting young women.
>
> Conservative logic often takes a backseat to left-wing talking points. Abortion advocates cry "my body, my choice" to make young women feel empowered, while simultaneously stripping them of agency and true femininity. Social justice warriors tell them "love is love," "diversity is strength," and "silence is violence." Corporate media post photos of crying illegal aliens facing deportation to show how cruel American border enforcement is. Democrats rely on emotional manipulation to get their base out to vote.
>
> Many of these young women are also crippled by student loan debt. Gen Z has the fastest annual student loan compound interest rate, a whopping 6.72 percent. Almost half of Gen Z has student loan debt. The good careers they were promised from their overpriced colleges aren't as readily available as they had hoped, either. With a staggering number of entry-level positions being outsourced to foreigners or AI, there is less chance they will earn a salary that chips away at their compounding interest.
>
> After being lied to about living in a fascist, intolerant, sexist society and crushing themselves under a mountain of debt, it's no surprise that young women are scrambling to alleviate the pain. The number of young women prescribed SSRIs has skyrocketed in recent years, and many of them are in therapy. Young women are conditioned to be sad, angry, and financially unstable.

Honestly, you have to read the whole thing, it is a masterpiece. The author attends a Bible-based church in Wisconsin, so if you are a young man out there, you might see if she is single, and if she is, ask her out on a date. Because I don't think she will be single for long.

Here is the second article, written by Jennifer Galardi, entitled "Most Women Are On Crazy Pills, And It's Bad For Everyone".

The title is already great, but here is an excerpt:

> The ease of self-diagnosis, combined with increased accessibility to SSRIs, has led a large number of young women to pursue medical intervention for their problems. Approximately one in four adult women in the United States reported taking at least one psychiatric medication (antidepressants, anxiolytics/sedatives, antipsychotics, mood stabilizers, or ADHD drugs) in the past year, according to recent CDC National Health

> Interview Survey (NHIS) data.
>
> Approximately 17 percent of college students (ages 18–25) use psychiatric meds, mirroring wider population trends — and the percentage of female college students taking these meds is likely much higher. Bottom line — adjusting for trends over the past few years — roughly 30-35 million American women are currently on at least one psychiatric medication, with the true number likely closer to 35 million because overall mental-health treatment (including medication) has risen every year since the pandemic (23.9 percent of all adults in 2023).

When I was 18-25, I remember spending my money on an occasional computer game. Maybe I would buy Harpoon, and go hunting for Soviet submarines with sonobuoys, SOSUS and sonars in the GIUK Gap. I learned a lot about modern warfare from playing that game. Or maybe I would buy a boxed wargame, and play that with my friends. Boy hobbies are certainly a lot more wholesome than the girl hobby of doing drugs. And less expensive!

Anyway, the third one is a bit sad. It's by Jordan Boyd, and it's entitled "Kelsea Ballerini's 'I Sit In Parks' Exposes The Heartbreak Of Buying Girl Boss Lies".

The whole thing is wonderful, showing how young women are being taught by celebrities to delay marriage for careers. In this case, the celebrity is Kelsea Ballerini (I've never heard of her).

It starts like this:

> Kelsea Ballerini is suffering from a broken heart. The 32-year-old's troubles do not necessarily stem from an off-again, on-again relationship with beau Chase Stokes, though that probably plays a role. Rather, Ballerini's obvious emotional ache comes from a deep longing to be a wife and mother.
>
> Ballerini's real-time struggle between the girl boss identity she bought into at just 19 years-old and the reality that it's left her "sitting in parks" coveting the love and memories made by families with kids is documented in her latest release "I Sit In Parks".

And this is the part I loved, it really shows you what is going on:

> Ballerini doesn't explicitly say it in her song, but she appears to have some regret about the end of her nearly five-year marriage in 2022. After all, her relationship with fellow country music star Morgan Evans was the closest she's gotten to the life she now desperately dreams of and desires in her latest song.
>
> At the time of the split, Ballerini claimed the two went their separate ways due to "irreconcilable differences." It wasn't until later that she admitted her devotion to her career and her unwillingness to have children at the time — if at all — played key roles in the divorce.

Women don't get a lot of wisdom from conservative men these days. Conservative men seem to be afraid to tell young women the truth about the likely outcomes of their decisions. Those men are weak men, because they put their desire to be liked by women above their obligation to protect women by telling them the truth. Some of them got married to feminists, and just don't want to get kicked out of the bedroom – or get served with divorce papers.

It's fashionable today to just let women chase their careers into their 30s. People want to blame men for not marrying career women when they are in their 30s. But men don't want to marry a woman who works full-time and who puts the kids in daycare and public schools. Besides, those men probably had their proposals rejected by the career women when those women were in their 20s.

It's better to warn young women about making bad decisions when they are still young enough to change course. That's what these three articles do. So, I'd like you to read them and share them.

# UK government is “withholding data that may link Covid jab to excess deaths”

**Wintery Knight** · 17 November 2025 · Archived copy · Original

There’s a new article the UK Telegraph, with the headline: “Government ‘withholding data that may link Covid jab to excess deaths’”. The subtitle is “UKHSA argued that releasing figures would lead to ‘distress or anger’ of bereaved relatives if connection were discovered”. The UK government, a leader in COVID hysteria, is refusing to release data that would show what they caused.

It says:

> The public health watchdog has been accused of a “cover-up” after refusing to publish data that could link the Covid vaccine to excess deaths.
>
> The UK Health Security Agency (UKHSA) argued that releasing the data would lead to the “distress or anger” of bereaved relatives if a link were to be discovered.
>
> Public health officials also argued that publishing the data risked damaging the well-being and mental health of the families and friends of people who died.
>
> Last year, a cross-party group expressed alarm about “growing public and professional concerns” over the UK’s rates of excess deaths since 2020.
>
> In a letter to UKHSA and Department for Health, the MPs and peers said that potentially critical data – which map the date of people’s Covid vaccine doses to the date of their deaths – had been released to pharmaceutical companies but not put into the public domain.
>
> […]UsForThem, a campaign group, requested that UKHSA release the data under freedom of information laws. But the agency refused, making a number of different arguments including that publishing the data “could lead to misinformation” that would “have an adverse impact on vaccine uptake” in the public.

It’s important to be skeptical of any dogmas embraced by the secular left. They are alarmed by human freedom and personal responsibility, so they tend to seize on anything that that attacks them. Their goal being to equalize outcomes for all, regardless of persona life choices. They don’t like that some people choose to buy big SUVs. They don’t like that some people live in big houses. They don’t like that some people have a lot of children. They don’t like that some people send their kids to better private schools. They REALLY don’t like when families homeschool their kids. They want everyone to agree with them, and they often use government to achieve that goal. That’s why they get so excited when everyone isn’t moving in the same direction that they want. Like with Darwinian evolution, man-made global warming, and pandemics.

Keep in mind that people were losing their jobs left, right and center because of their refusal to take these vaccines. And anything you said online was being scrutinized to shut down your free speech.

Now might be a good time to review my reason for not taking any COVID vaccines: manufacturer liability waivers. I simply do not use products made by companies who bear no consequences for causing me harm. That’s also my reason for disliking government monopolies by the way. I don’t like big government, because so often, they have get-out-of-jail-free cards for their crimes – just look at Hillary Clinton’s private, unsecure e-mail server as a good example.

This far-left CNBC article is from December 2020, and it says:

> If you experience severe side effects after getting a Covid vaccine, lawyers tell CNBC there is basically no one to blame in a U.S. court of law.
>
> The federal government has granted companies like Pfizer

> and Moderna
> immunity from liability if something unintentionally goes wrong with their vaccines.
>
> “It is very rare for a blanket immunity law to be passed,” said Rogge Dunn, a Dallas labor and employment attorney. “Pharmaceutical companies typically aren’t offered much liability protection under the law.“
>
> You also can’t sue the Food and Drug Administration for authorizing a vaccine for emergency use, nor can you hold your employer accountable if they mandate inoculation as a condition of employment.
>
> Congress created a fund specifically to help cover lost wages and out-of-pocket medical expenses for people who have been irreparably harmed by a “covered countermeasure,” such as a vaccine. But it is difficult to use and rarely pays. Attorneys say it has compensated less than 6% of the claims filed in the last decade.

And then there was a more recent article from the far-left Bloomberg News in December 2024, letting us know that these get-out-of-consequences-free cards had been extended:

> The US Department of Health and Human Services is extending through 2029 liability protections for those producing and administering Covid-19 vaccines, in a move to guard against future potential health emergencies.
>
> […]The announcement comes as people working in the vaccine injury space have called for Covid-19 vaccines to be covered under the HHS’ Vaccine Injury Compensation Program. Known as the VICP, the program pays people injured by standard childhood vaccines and shields drugmakers from litigation.
>
> Covid-19 vaccine injuries aren’t currently covered by the VICP.

Extending the protection from liability was one of the last things that Biden (or his autopen) did, on his way out.

People need to be wise when deciding who to believe about things. Most of the people in the commanding heights of this society think that the universe is eternal, that there’s a viable naturalistic explanation for things like the origin of life, the Cambrian explosion, cosmic fine-tuning, etc. People believe that abortion doesn’t take a human life and that human action has more effect on global temperatures than solar activity. So, that’s how some people arrive at their beliefs – whatever makes them feel good. Whatever makes them get approval from the elites. Whatever leads to more and bigger government making everyone “equal” – especially equal in their beliefs about things.

These people haven’t done any work to investigate anything themselves. It’s just convenient for them to believe it. In totalitarian regimes, lots of people committed atrocities because that’s what was easiest for them. The trick is spotting the trends and getting out before they can force you to go along with their schemes.

# A list of objections to the multiverse theory that you should know

**Wintery Knight** · 18 November 2025 · Archived copy · Original

I was doing some research on the multiverse theory to prepare myself for an episode of the Knight and Rose Show podcast. I thought it might be a good idea to put the list of objections to the multiverse theory into a blog post, explain them all as simply as I could, and then link to an expert for the details on one more that you can take with you on your apologetics adventures.

So, the first thing is to explain what caused the development of the multiverse theory: the fine-tuning argument. The fine-tuning argument has to do with the constants, quantities and ratios that are simply "given" as parameters to the universe, at the beginning of the universe. The parameters are fine-tuned to allow complex, embodied life to exist. Change the parameters slightly, and you have no life. It's an argument for design. And the multiverse is supposed to counter it.

Let's link to something by Dr. Stephen C. Meyer, for a quick version of what that argument is all about:

> Beginning in the 1960s, physicists unveiled a universe apparently fine-tuned for the possibility of human life. They discovered that the existence of life in the universe depends upon a highly improbable but precise balance of physical factors.[4] The constants of physics, the initial conditions of the universe, and many other of its features appear delicately balanced to allow for the possibility of life. Even very slight alterations in the values of many factors, such as the expansion rate of the universe, the strength of gravitational or electromagnetic attraction, or the value of Planck's constant, would render life impossible. Physicists now refer to these factors as "anthropic coincidences" (because they make life possible for man) and to the fortunate convergence of all these coincidences as the "fine tuning of the universe". Given the improbability of the precise ensemble of values represented by these constants, and their specificity relative to the requirements of a life-sustaining universe, many physicists have noted that the fine tuning strongly suggests design by a preexistent intelligence. As well-known British physicist Paul Davies has put it, "the impression of design is overwhelming."[5]
>
> To see why, consider the following illustration. Imagine that you are a cosmic explorer who has just stumbled into the control room of the whole universe. There you discover an elaborate "universe-creating machine", with rows and rows of dials, each with many possible settings. As you investigate, you learn that each dial represents some particular parameter that has to be calibrated with a precise value in order to create a universe in which life can exist. One dial represents the possible settings for the strong nuclear force, one for the gravitational constant, one for Planck's constant, one for the ratio of the neutron mass to the proton mass, one for the strength of electromagnetic attraction, and so on. As you, the cosmic explorer, examine the dials, you find that they could easily have been tuned to different settings. Moreover, you determine by careful calculation that if any of the dial settings were even slightly altered, life would cease to exist. Yet for some reason each dial is set at just the exact value necessary to keep the universe running. What do you infer about the origin of these finely tuned dial settings?

And in a previous post, I wrote about the three examples of fine-tuning that I personally have ready to go in a discussion, the ones that are the simplest for me.

Anyway, atheists were not very happy about what the progress of science had revealed, so decided to invent a new theory to get them out of the evidence. And that theory is the multiverse theory. The multiverse theory simply states that we shouldn't be surprised to find evidence for design in our universe, because there are billions and billions of other universes where there is no design, and so, we just got lucky.

So, here is my quick list of objections (and brief explanations) to this multiverse theory:

1. **Boltzmann Brains:** In an infinite multiverse, random chaos should create lone brains with fake memories way

more often than real people with bodies like us. So why do we see a universe with embodied intelligences?

2. **Inverse Gambler Fallacy:** The multiverse says, “Our universe is rare, so there must be tons of others.” But seeing one rare thing doesn’t prove that billions of hidden common things exist.
3. **Universe generating factory still needs fine-tuning:** Even if a “multiverse factory” spits out universes with different random quantities and constants, it still needs super-precise settings to make any life-friendly ones. The problem just moves up a level.
4. **No direct evidence for multiverse:** We can’t see, touch, or detect other universes. So far, it’s a story, not science.
5. **Infinite universes means anything can happen, making science impossible:** If there is an infinite number of actual universes, then anything can happen, and we can’t do science any more.
6. **Multiverse can’t explain independent local fine-tuning:** The multiverse might explain one dial being right, but not why we find fine-tuning for habitability (and fine-tuning that is correlated with discoverability) at lower levels.
7. **The measure problem:** Even if universes exist, physicists can’t agree on how to measure probability. Without that, the multiverse can’t explain anything.

So, people really find #4 to be the easiest to remember. By definition, we can’t ever get out of our universe to be able to observe these other universes that supposedly exist. So definitely remember that one. And then #3, because Stephen C. Meyer makes a big deal out of the universe generator needing fine-tuning itself, in his book “The Return of the God Hypothesis”. You can read an essay that mentions it here, written by Robin Collins. And #6 is good too, here is an article by Guillermo Gonzalez about the local fine-tuning (habitability – discoverability link).

But here are some details on #1 in this article from Science and Culture by physicist Dr. Brian C. Miller. Basically, the multiverse theory makes a prediction about what we should see if it were true, but sadly for the design-deniers, our experience contradicts the prediction.

> **Boltzmann Brains**
>
> Standard multiverse models, such as those based on eternal inflation and string theory, predict that the odds are far smaller for a brain emerging from a gradual process in an ancient universe than for a brain emerging from atoms suddenly coalescing in a young universe. In other words, we are far less likely to possess a brain with memories of a real life history than possess what is termed a Boltzmann brain that emerged from quantum fluctuations in the recent past with fictitious memories.
>
> Since no one desires to believe in such freaky observers as Boltzmann brains, physicists have grappled with our being such seemingly improbable normal observers. In addition, our universe is highly atypical in its old age and its high level of order. Mathematical physicist Roger Penrose calculated that the odds of a universe appearing as orderly as ours to be 1 chance in 10 to the power of 10 to the power of 123 — a number that includes more zeros than the number of atoms in the visible universe.

So, I hope that’s enough to equip you to discuss this theory. Now you have everything you need. Three easy examples of fine-tuning, and four easy refutations of the the counter to the fine-tuning. This is a solid argument, so have fun with it.

# Three reasons why Americans should never travel to the UK

**Wintery Knight** · 21 November 2025 · Archived copy · Original

It's helpful to look at countries where the secular left is more powerful, so you can see what they have done with their power. Germany is a good one. France, too. And Canada. And the UK. So, in this post, I have 3 terrifying stories from across the pond that will show you why you should never let the secular left take political power in America. If you do, you will not like the result.

First, here's an article from the UK Daily Mail:

> Figures obtained by the Daily Mail show that some forces are making arrests for 'offensive' social media posts at 'extremely concerning' rates.
>
> […]The crime of sending 'grossly offensive' messages or sharing content of an 'indecent, obscene or menacing character' on electronic communications networks is punishable by up to two years' imprisonment or an unlimited fine.
>
> […]Together, the 39 of 45 police forces that replied to the Mail's freedom of information (FOI) requests arrested around 9,700 people last year under section 127 of the Communications Act 2003 and section 1 of the Malicious Communications Act 1988.
>
> However, the total arrest figures are likely to be higher, as six forces failed to respond to FOI requests or provided inadequate data, including Police Scotland, the second-largest force in the UK.

Keep in mind that this is the same country that refused to investigate "grooming gangs" (child sex-trafficking rings), because of their fear of appearing "racist".

And of course, since they are busy intimidating taxpayers for sharing memes, they don't have time for more serious crimes:

> The outcry that the police are wasting their time has increased because official figures show that 90% of all crime went unsolved in 2023, up from 75% in 2015.

Here is an example:

> Another alarming example of free speech under threat involved Hertfordshire Police officers arresting parents Maxie Allen and Rosalind Levine in January.
>
> Officers held them in a cell for eleven hours, on suspicion of harassment and malicious communications, after their child's primary school objected to the volume of emails they sent and 'disparaging' comments made in a WhatsApp group.
>
> No fewer than six uniformed cops showed up to arrest them for messages which could be deemed sarcastic, but were clearly far from 'abusive or malicious'.

Under Winston Churchill, the UK won a war against German totalitarianism. Then, under Margaret Thatcher, the UK won a war against Russian totalitarianism. And now the UK is North Korea. You can't say anything bad about the bad effects of the government's policies, because the government doesn't like that.

Second article, also from the UK Daily Mail:

> The number of Britons emigrating has hit a new high, it was revealed on Tuesday – as the exodus under Labour gathers pace.
>
> Last year the number of UK citizens going to live abroad was 257,000 – far more than the 77,000 previously

> estimated by the Office for National Statistics (ONS).
>
> […]Net emigration has also peaked since last year's general election.
>
> In the 12 months to September 2024, a net 116,000 Britons left the country. This is far higher than previously thought. By December, the net figure for the previous 12 months was 114,000. Net British emigration was just 81,000 in 2022.
>
> Shadow home secretary Chris Philp said: 'Keir Starmer's punishing tax rises are causing Britons to flee in record numbers.
>
> 'The brightest and the best are leaving the UK for places like Dubai and Milan, leaving the rest of us to pay Labour's higher taxes.
>
> 'This is evidence that increasing tax too far makes people leave.'

So, every American understands that. We fought a far against the UK over taxation, because when the government taxes you, it diminishes your freedom to live your life how you want. If the government taxes you a lot, then your wife has to work. Then your one child goes into daycare and public schools. But if the government lets you keep what you earn, then your wife stays home and she homeschools your  four children. Taxes are a big deal to people who have a plan about how they want to live. Money is the fuel to run a plan.

Here's the third article, from ADF International:

> 75-year-old grandmother Rose Docherty has been arrested a second time and criminally charged for holding a sign within 200m of the Queen Elizabeth University Hospital, reading:
>
> "Coercion is a crime, here to talk, only if you want."
>
> In Scotland, "buffer zones" are enforced within 200m of every hospital, forbidding harassment, intimidation, and "influencing" of anyone seeking to access abortion services.
>
> Despite only having stood silently offering consensual conversation and not having approached any individual, Docherty has been charged with breaching the "buffer zone."

According to a recent article from Christian Today, it's not just abortion clinics that have a no-disagreement-with-murder-by-government buffer zone. Soon it wil be expanded to areas around assisted suicide clinics, called "safe access zones". The UK has found it more profitable to kill patients rather than treat them, so they don't want any criticism of that policy, either.

# Biochemist Michael Behe lectures on Darwinian evolution at Cornell University

**Wintery Knight** · 26 November 2025 · Archived copy · Original

I have exciting news. Do you remember a long time ago, when the famous atheist professor Will Provine invited Michael Behe to make the case for intelligent design at Cornell University? Well, 22 years later, Behe has returned to Cornell, to give a lecture to students and answer questions. Let's find out what Behe's arguments were and whether any biologists showed up to stump him.

So, it's always fun to start with the announcement of the event. I like to support these events because I am very passionate about events on campus where students are presented with evidence that will help them to form more accurate views about the big questions of life.

So, here is the link to the event announcement, and it says:

> Throughout history, most people, including most scientists, thought that the intricate mechanisms of life were purposefully designed. The design hypothesis fell out of favor in academia after 1859, the year Charles Darwin instead proposed that life evolved by utterly unguided random variation sifted by natural selection. In the past 75 years, however, much has been learned about the molecular basis of life that was completely unknown in Darwin's era. In my talk I will argue that the astonishing discoveries of modern biochemistry require a reversal of our evaluation of Darwin versus design: the conclusion that, in large part, life was purposely designed has once again become rationally compelling.

I would like to get my hands on the slides for this lecture. Roger Pielke just gave a talk at Cornell earlier this month, and he posted his slides. Maybe I can get Mike to do the same. If you have ever seen one of his lectures, he actually has fun slides – he puts Far Side cartoons into his lectures to keep people paying attention.

"That's why I never walk in front."

Anyway, here is the audio from the talk, and here are his main arguments: 1) irreducible complexity and 2) Darwinian mechanisms cannot create new forms over time.

But he actually made 5 points in the presentation:

1. Design is NOT mystical – it is a normal empirical conclusion from physical evidence
2. Everyone (even Richard Dawkins) admits biology appears to be designed.
3. The progress of science has revealed structural obstacles to Darwinian explanations (irreducible complexity "Darwin's Black Box" and the discovery that most observed beneficial mutations break genes "Darwin Devolves").
4. Darwinian claims still rest on imagination and "just-so stories".
5. We have strong evidence for real design but almost no evidence that Darwinism can build complex molecular machines.

What was interesting about this podcast? Well, like I said, I am really, really committed to helping students to hear two sides to the big questions of life. Most of the college students that I talk to in the workplace explain to me that their process of forming their worldviews was two-fold: 1) I wanted to have fun, and 2) I wanted the smart people (professors) to like me. It was just easier for them to accept certain beliefs in the college environment, and that's why they accepted them. A lot of things that are false are just easier to believe for social or professional reasons: the universe is eternal, the origin of life is a solved problem, the fossil record shows gradual increases in complexity, the genome is 90% junk DNA – just complete nonsense. And the best way for them to correct these false beliefs is to bring an honest scholar like Mike Behe or Mike Licona to speak about evidence at the local university campus.

The podcast is fun because they really explain all the details of what happened. Who invited Behe to speak? Where did Behe speak? Who did Behe speak to? Were biologists invited? Did any biologists show up to confront Behe? How long was the talk? How long was the Q&A? Was the tone of the Q&A calm or argumentative? Did the Q&A stop because no one had questions, or was there a long line of people waiting to ask more questions?

**Confronting naturalism on campus**

I have a friend named Stephanie who just loves all sorts of protests and gatherings and marches. But for me, this is much better. Instead of people yelling at each other over politics, we can actually have some evidence presented, and minds can change. Maybe not right in the moment, but afterwards. This worked well for me when I was in my 20s. I used to order dozens and dozens of lectures and debates from university campuses from places like Veritas Forum and Access Research Network. I would listen over and over, and then when I tried out the evidence on co-workers (and I mean people with graduate degrees from good schools like UIUC and Purdue and Northwestern) they always had to concede. There is just something about being able to listen to Christians speak about evidence to college students – it's just the right level of difficulty for software guys like me to understand it and learn how to speak like that. And this led to a lot of adventures.

**Secrets of the Cell with Mike Behe**

Well, if you listen to the podcast, and you like it, and you want to try to explain Michael Behe's arguments to college students yourself, he does have quite a good series of lectures posted on YouTube:

1. Someone Must Have the Answer! (Secrets of the Cell, Ep. 1)
2. The Complexity of Life (Secrets of the Cell, Ep. 2)
3. Bugs with Gears (Secrets of the Cell, Ep. 3)
4. The Effects of Mutation (Secrets of the Cell, Ep. 4)
5. The X Factor in Life (Secrets of the Cell, Ep. 5)
6. Bacteria: Superheroes of the Microbial World (Secrets of the Cell, Ep. 6)
7. Blood Clotting: The Body's Emergency Response System (Secrets of the Cell, Ep. 7)
8. Michael Behe Unravels the Mystery of Biological Information (Secrets of the Cell, Ep. 8)

9. The Robot Repairmen Inside You (Secrets of the Cell, Ep. 9)

Everything is so much easier now than it used to be for me in the old days. You guys don't have to rewind VHS tapes and audio cassettes like I used to have to do! And if you hear a word or phrase that you don't understand, just ask Grok to explain it to you like it would explain it to a high school student. Anyway, have fun.

# Brian Miller's thermodynamics argument for design in the origin of life

**Wintery Knight** · 3 December 2025 · Archived copy · Original

I'm doing prep work for a possible episode of the Knight and Rose Show. This time, I've been looking into Dr. Brian Miller's argument about thermodynamics and the origin of life. So, the first thing I did was read his chapter in "The Mystery of Life's Origin", which is available online for free. Then I listened to a recent episode that he did with Dr. James Tour, on The Science & Faith Podcast.

First, here is the podcast:

I actually made a transcript of the episode using TurboScribe AI, so I could read along while I listened. You can also grab just the audio from that transcript page, too.

Just keep in mind that the video is BETTER than just the audio, because Brian shows SLIDES in the video, with quotes and diagrams.

Here are the main points in their discussion:

1. Brian's personal testimony, going from atheism to Christianity
2. Brian's thermodynamic argument against a naturalistic origin of life
3. The minimum requirements of a simple living system
4. Can natural selection be invoked to explain the origin of life naturalistically?
5. The role of experimenter interference in origin of life experiments
6. Evidence for engineering in biological systems
7. The requirement for a minimum level of information just to maintain the basic functions of the cell
8. The problem of the origin of biological information present in the first living system
9. Implications for theories about life emerging on other planets
10. Additional evidence for biological big bangs in the fossil record

If you're looking for something to read, and send to your friends who also like to read, you can send them Brian's chapter – chapter #14 – from the new second edition of "The Mystery of Life's Origin".

Here is what it is about:

> The thermodynamic barriers to the origin of life have become decidedly more well defined since this book's first publication. The initial challenges described in the original edition still stand. Namely, spontaneous natural processes always tend toward states of greater entropy, lower energy, or both. The change of entropy and energy are often combined into the change of free energy, and all spontaneous processes move toward lower free energy. However, the generation of a minimally functional cell on the ancient Earth required a local system of molecules to transition into a state of both lower entropy and higher energy. Therefore, it must move toward dramatically higher free energy. The chance of a system accomplishing this feat near equilibrium is astronomically small.
>
> Many origin-of-life researchers have responded to this challenge by arguing that a system driven far from equilibrium could self-organize into a functional cell through processes that are connected to such monikers as complex systems, emergence, synergetics, or nonequilibrium dissipative systems. The basic hope is that some new physical principles could overcome the barriers to life's origin mandated by classical thermodynamics. However, advances in nonequilibrium thermodynamics have proven that the odds of a system driven far from equilibrium generating an autonomous cell are no greater than the odds for one near equilibrium.

> Others have proposed that “natural engines” on the early Earth converted one form of energy into another that could drive a local system to sufficiently high free energy. These approaches have proven equally disappointing. The only plausible explanation for the origin of life is intelligent agency.

He seems to be saying that a living system exhibits low entropy, and high free energy. And that there is no known naturalistic mechanism that can produce a result like that, without an intelligent agent to guide it. I wonder if I will have to add this to my list of arguments against naturalism.

Then it would grow to:

1. origin of the universe
2. cosmic fine-tuning
3. origin of life (specified complexity)
4. Cambrian explosion (and other explosions)
5. galactic, stellar and planetary habitability
6. molecular machines
7. non-material mind, e.g. – split brain surgery
8. the waiting time problem
9. origin of life (thermodynamics)

I wish we had one more to make it 10 arguments. We need the scholars to make MORE progress in science, so I can have an even 10 arguments in my list.

# Where are all the good women? New poll finds men vastly more pro-life than women

**Wintery Knight** · 6 December 2025 · Archived copy · Original

I've been blogging about the emerging ideological split between young women and young men. Young women, under the influence of feminism, have taken a hard left turn. They are now extremely likely to support abortion, gay rights, and other non-Christian views. Young men, now being influenced by the red pill and the manosphere, have becoming increasingly conservative.

First, let's review what the surveys say about the political views of young men and women.

The far-left UK Independent explains:

> An analysis of survey data from across the developing world had found that "a new global gender divide" is emerging. The analysis, conducted by the Financial Times' John Burn-Murdoch, showed that the developed world's young women have rapidly become more liberal. Young men, however, have either become more conservative (as in the US) or been much slower to become more progressive (as in the UK). Gen Z, Burn-Murdoch concluded, is "two generations, not one."

Who is influencing these young men? Well, it's not Christian feminists, who talk about "servant leadership" and twist the Bible to attack masculinity and eliminate male headship. Christian feminists think that men are supposed to be silent ATMs that dispense cash without judgement, and show off their muscles. "Protect and provide" they demand. But they never want men to fight against lies or make moral judgments – that's "mean".

Who are young men listening to that's causing them to become so conservative? Men are listening to leaders in the manosphere – the online community of people who are concerned about men's rights. And what are they hearing there? They are hearing that feminism is *terrible* for men. They are learning that that women on dating apps are chasing the top 20% of most attractive men. They are learning that women initiate most (69%) divorces, and that family courts are extremely unfair to men. They are learning that the more men that a woman has sex with before marriage, the greater the risk that she will initiate divorce. And they are learning that lesbians have the highest rates of marital instability AND domestic violence. Men are learning to be more careful with women.

And do you know what else young men are learning in the manosphere? Pro-life convictions.

Here are the numbers from National Right to Life:

> Lydia Saad handles much of Gallup's coverage of the abortion issue and does so in a comprehensive way. This morning, she authored "Gender Gaps on Abortion Reach Historic Highs" which is well worth reading.
>
> You would expect self-identified Democrats to support abortion—and the current survey bares that out. Likewise, you would anticipate Republicans to be more supportive of unborn children—also borne out by Gallup's latest poll.
>
> Currently, as of May 2025,
>
> * 32% of women and 54% of men identify as pro-life. 61% of women and 41% of men consider themselves pro-choice. The difference—the gap—was 13-points in 2022 "and no more than 10-point differences in any reading before Dobbs," according to Saad. "The gap has expanded since 2022 because pro-choice identity has dipped among men, from 48% to 41%, while it has held steady among women."
>
> In 2022, in the aftermath of the leak of the draft showing that Dobbs would overturn Roe, the "pro-choice" was ahead of the pro-life by 16 points, but by this year the margin had been halved–down to 8 points.

Basically, young men are learning that abortion empowers young women to choose recreational sex with the hot bad

boys that they find so desirable. Abortion provides feminists (and the hot bad boys) with a way to get out of the consequences of recreational sex. It enables feminists to delay "boring" marriage to the "unattractive" good man for as long as possible, and that's what feminists want.

The manosphere's reach extends all over the world. So, other countries are seeing this male pro-life trend.

Here is an article about young men in the UK, from the far-left UK Independent:

> Fewer than half of young men believe abortion should be legal, far less than the general population, a shocking new poll has found.
>
> Just 46 per cent of 16- to 34-year-old males believe abortion should be legal in all or most cases, compared with 71 per cent among the general population.

And it's not just abortion that the manosphere teaches young men to oppose. It's no-fault divorce. Feminists, including Christian feminists, LOVE no-fault divorce. It allows reckless feminists to choose a husband based on appearance, and then pretend to be surprised when the hot bad boy they chose turns out to be… a hot bad boy. Rather than having to take responsibility for their reckless choice, they can get out of it easily – and with cash and prizes. Young men understand that like abortion, no-fault divorce is a tool that feminists use in order to avoid "boring" marriage to an "unattractive" good man. Young men oppose frivolous divorce. They even have a funny phrase for it in the manosphere.

By the way, if you think that the manosphere is "Andrew Tate" or "Myron Gaines", that's just uninformed. Those are pick-up artists, which is only one segment of the manosphere. It's not those pick-up artists that are causing this massive swing back to conservatism. Pick-up artists are the bogeymen that the traditional "Get Married!" people try to scare you with, to get you to not care about the effects of feminism, e.g. – abortion and no-fault divorce.

Ironically, some *women* actually do very well in the manosphere. Three of the more popular women influencers are Emily King, Courtney Ryan and Jedediah Bila. I don't always agree with those people, but they certainly are more respectful of young men's conservative beliefs than Christian feminists.

So, now that men are being influenced by manosphere voices, instead of feminist voices, where will these good men find good women to marry? I don't think that church is producing anti-feminist women these days. Churches are still stuck in feminism, blaming good man bystanders for every poor choice that reckless women make with hot bad boys.

The hidden message of these impressive pro-life numbers among men is that traditional men will not be pursuing non-traditional women. Young men are becoming more conservative, and young women are becoming more leftist. Just because young women expect to claim a husband "when they are ready", that doesn't mean that the marriage-minded man they expect to comply will be there. Nothing against women in general. Just saying that non-traditional women will not be able to get traditional men to commit.

# Knight and Rose Show #69: Lora Ries: Border Security and Immigration Policy

**Wintery Knight** · 7 December 2025 · Archived copy · Original

Welcome to episode 69 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss the border security and immigration policy with Lora Ries from the Heritage Foundation. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Lora Ries to discuss border security and immigration policy. They explore Biden's policy changes, like ending Remain in Mexico, resuming catch and release, and creating mass parole programs. Ries critiques refugee expansions, NGO incentives, and "welcome the stranger" misuses. She discusses unaccompanied minors. Ries recommends merit-based reforms, assimilation, and enhanced vetting, drawing lessons from Europe's crime and balkanization issues.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 69:**

**Speaker biographies**

Lora Rees is the Director of the Border Security and Immigration Center at The Heritage Foundation, with nearly 30 years of experience in immigration and homeland security. She has worked in various roles, including at the Department of Homeland Security and the U.S. House of Representatives Judiciary Committee. She also worked in the private sector as a homeland security industry strategist and in government relations. Ries earned a law degree at Valparaiso University Law School in Indiana, and a BA in International Economics and Cultural Affairs; and Spanish from Valparaiso University.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Nearly half of Netflix's shows expose children to LGBT indoctrination

**Wintery Knight** · 10 December 2025 · Archived copy · Original

I found an interesting article by Beth Brelje in The Federalist. She writes about how Netflix shows indoctrinate children in pro-LGBT propaganda. Children often believe false ideas for all sorts of bad reasons. Just think of how many take out student loans for degrees that don't result in jobs with good salaries. After that, I have two studies about how TV influences our attitudes on LGBT.

First, the article from The Federalist:

> Some 41 percent of children's shows on Netflix are pushing the LGBT agenda, according to a recently released report by Concerned Women for America (CWA).
>
> CWA analyzed Netflix programming ratings for children and found 41 percent of both G-rated and TV-Y7-rated series on Netflix contain LGBT content.

Why is this happening?

> It is not an accident that more LGBT characters are being written into storylines across media. It is encouraged by the nonprofit Gay & Lesbian Alliance Against Defamation (GLAAD).
>
> Each year, GLAAD produces the "Where We Are on TV Report," tracking representation.
>
> "Between June 1, 2024 and May 31, 2025, GLAAD counted 489 LGBT regular or recurring characters in total. This is a 4% increase and 21 additional characters from 468 characters counted in the previous edition," the 2025 report said.
>
> What's shocking is how much representation is aimed at children. LGBT activists are well aware that parents feel it is not a topic for their children to explore without parental guidance. Sneaking it into children's programming is a blatant attempt to change the culture.

I ran into this problem when I was in my mid-20s. My co-workers were watching a television show called "Will & Grace" (which had nothing to do with soteriology). It was a portrayal of a gay character in positive ways, and this was having a huge effect on the attitudes of young people to LGBT.

It didn't make any sense to me, because around that time I was reading books about LGBT by scientists, therapists and medical doctors like Jeffrey Satinover and Charles Socarides. But while I was getting more accurate views of LGBT, everyone else was watching propaganda. And they were coming to opposite conclusions than I did. This was especially troubling because at that time I wanted to get married. And what I found was that young Christian women in particular seemed to be getting liberal on moral issues. And today, it's become a huge split between young men and young women. Even back then, parents and pastors didn't seem to think that it was a big deal that young women were becoming more liberal because of TV shows and movies.

Let's look at two studies about this topic and see if there is any data to support my thesis.

The first study is "Can One TV Show Make a Difference? Will & Grace and the Parasocial Contact Hypothesis". It was published in the Journal of Homosexuality (Volume 53, Issue 4, 2007). This study tested whether repeated exposure to positive gay characters in Will & Grace (which aired from 1998–2006 and reached 25 million weekly viewers at its peak) could foster similar attitude shifts among straight audiences who rarely knew gay people personally. And what they found was that showing episodes of the show to undergraduate students reduced their opposition to LGBT. The more episodes shown, the more positive their views of LGBT.

The second study is "Exposure to the Lives of Lesbians and Gays and the Origin of Young People's Greater

Support for Gay Rights". It was published in the International Journal of Public Opinion Research in November 2014. The study tested the impact of exposure to LGBT characters in popular media, focusing on the sitcom Grace Under Fire (1993–1998), which featured a recurring gay character. And what they found was that frequent viewing of the show produced more positive views of LGBT behaviors, as well as LGBT-friendly policies.

So, you can clearly see how watching TV shows and movies – which are *fiction* – can change your attitudes to be out of alignment with actual evidence. And I think that if those changes are related to areas where the Bible has spoken – like the definition of marriage, objective vs subjective truth, etc. – then it can cause people to turn away from the Bible and / or Christianity. The new feelings and attitudes that came from TV and movies clash with the Bible and Christian worldview, and the entertainment wins. For example, a young Christian might watch TV shows that paint divorce in a positive light, and then leave Christianity because it is too "restrictive" or "repressive" or "intolerant" or "bigoted".

Consider the following movies:

- Eat Pray Love
- Sex and the City
- The Bridges of Madison County
- Fifty Shades of Grey
- The Notebook
- Pretty Woman

These movies are VERY popular with young people, but they portray very, very negative views of sex, marriage, male headship, child-bearing, etc. The important thing is NOT that these movies disagree with the Bible, with church, or with Christianity. The problem is that the views presented in these movies are FALSE views that can result in tragic life outcomes. These popular movies are teaching people to proceed on life plans that do not lead to successful outcomes. It's as if people were learning from TV and movies to rely on the lottery for their retirement savings. This does not work in real life. And yet, because it is in the TV shows and the movies that have fancy clothes and big explosions and beautiful people, people chart the course of their lives based on their views.

This is very serious.

Lately, I have been spending a bit more time on cooking, weights and cardio. I was able to do this because I found good TV shows to watch while doing these things.

I watch shows like "The Rifleman":

Season 1 playlist:

https://www.youtube.com/watch?v=LRpEpIGpxrE&list=PLtbMv4lXX2mvPj1kMzYl1OFczol5AxMQE

Season 2 playlist:

https://www.youtube.com/watch?v=X4pnstPnvY4&list=PLtbMv4lXX2msIZiCC8z-bBwt2kkFWpguq

Season 3 playlist:

https://www.youtube.com/watch?v=KIsQ2lYSdSA&list=PLtbMv4lXX2mtW-zGH_G35XpbnoStlCmjA

Season 4 playlist:

https://www.youtube.com/watch?v=YZYTjys7_WA&list=PLtbMv4lXX2mtfjYYL74JqCoI5kZr0P-Pu

Season 5 playlist:

https://www.youtube.com/watch?v=_LPzIbzWRw4&list=PLtbMv4lXX2mtaEv2tcCFaYtCfQefGkkLl

I also listen to military history audio books. For moral and truth issues, stick to non-fiction. I don't recommend

reading fiction at all.

I think video games are better than TV and movies, because you actually get to make plans and decisions and execute and adapt. If you use Steam, there are curators who detect woke content in games. I play military simulation games like The Troop or Armored Brigade II. Next year, I want to play Sea Power and Task Force Admiral. (You can watch me play The Troop on my YouTube channel). And I love solo military board games, like Skies Above Britain, Atlantic Chase, and Carrier Battle: Philippine Sea. I don't want to have my views change because of the entertainment I choose.

# Woman gets light sentence for falsely accusing “creepy” man of rape and kidnapping

**Wintery Knight** · 15 December 2025 · Archived copy · Original

I was having a conversation with my friend Katy the other day, about whether men are not interested in marrying because they find older women unattractive. I told her that men find older women very attractive, if they are slim and athletic. I left it at that, but I wanted to go on and explain to her why men are declining to marry, even good Christian men who have good jobs and savings,

My thesis is that men have recognized that the legal system is very much against them, and it is unwise for them to expose themselves to that legal system.

What’s the evidence?

So, on this blog, I have written about how women overall initiate 69% of the divorces that they are involved in. In fact, college-educated women initiate 90% of the divorces they are involved in. And I’ve written about how the sentences for men are 63% more severe than for women, for the exact same crime and criminal record. And I’ve written about how a high number of the accusations of rape or sexual assault by women (20-40 percent) are hoaxes. And I’ve written about how men are often the victims of paternity fraud. Men don’t even have to cohabitate with a woman to be billed for thousands of dollars in alimony and child support. False accusations of child abuse are routinely used in order to eject husbands from their homes, and to get custody of the children (and the child support money that comes with having custody).

I could go on and on, but I hope enough has been said to show what the evidence supports the view that the legal system in America is biased against men.

But wait! There’s another reason. Men have also noticed that women can easily press false accusations, and they suffer virtually no consequences when those accusations are proven false and / or recanted.

Here is a recent example, reported by New York Post:

> A Pennsylvania woman who admitted to fabricating kidnapping and rape allegations against a stranger whom she “specifically targeted” because she thought he was “creepy” last year is paying for her lies.
>
> Anjela Borisova Urumova, 20, was sentenced to from 45 days to 23 months in Bucks County Correctional Facility on Tuesday by Judge Stephen A. Corr, according to the Bucks County District Attorney’s Office.

The article notes that she “pleaded guilty to seven misdemeanor counts, including tampering with or fabricating physical evidence and false reports.” As a result of her lies, the accused spent 31 days in prison.

Three things. First, he is married:

> Pierson, 41, was present with his wife in court Tuesday but did not wish to make a statement during the sentencing since the ordeal has been “too emotional” for him and his family, the DA’s office said.

Second, the false accuser recanted her accusation:

> She then went to the police and accused Pierson as her attacker before eventually fessing up to the tale.

Third, she judged him as evil based solely on her feelings (intuitions, first impressions) about his appearance:

> Urumova told investigators that she “specifically targeted” Pierson because she had seen him and his blue Ford F-150 pickup truck in the area before and thought he was “creepy.”

I asked Grok what the average sentence is for a false accusation of rape, compared to a real conviction of rape, and it said:

> Data on sentences for false accusations of rape or sexual assault by women in the USA is limited. Available studies and legal cases suggest most convictions result in light punishments, often suspended sentences, fines, or no jail time. Estimating based on available information, including cases with zero jail time, the average sentence is approximately 2 months (0.17 years).
>
> For men convicted of rape in the USA, the average prison sentence is 212 months (17.67 years), per 2019 USSC data.

So, women get "approximately 2 months" for a false accusation of rape, and men get "average prison sentence is 212 months" for a rape conviction.

**False accusations deter good men from marrying**

Even if a good man is very clever about choosing the right women to be his wife, he would still be vulnerable to false accusations from women in the workplace, and other places. It's not the Christian homeschooling future wife in the house who is the problem. It's the radical feminist single mother in the office who is the problem. The bitter, angry one with the 200+ body count, and the 200K of student loan debt for a degree in misandry.

And the worst part of this is that when you tell pro-marriage people about these false accusations, they dismiss it. I've been told "why would you make decisions off of evidence and calculations? One day you'll meet a nice girl and fall in love" It's terrifying to be dealing with people who approach major life decisions by feelings and wilful blindness. They try to goad you into bad decisions by shaming you.

Imagine if someone tried to sell you a lemon at the car dealership by attacking your masculinity. "I dare you to buy this used car without getting it checked out by a mechanic!" You would have to be really lacking in education and work experience to think that the "man up!" approach would work on a man. And yet, when I talk to pro-marriage people, this is *their only argument.* They scream "Get Married!" and then refuse to address any of the evidence of the threats posed by feminism, such as false accusations.

Who is going to support the good wife and good children if the man is in prison because of a false accusation? Not the pro-marriage advocates. And the younger generation of women are sliding further and further into secularism and leftism, making the risk of false accusation even higher. Why would a wise man expose himself to these risks? Especially when no one wants to fix the problem.

Here's the bottom line: It's an enormous deterrent to a good man's desire to be a husband and father that they are exposed to prison and / or financial ruin because of false accusations. You have to give men a good value proposition if you expect them to go the husband and father route. Good men have other things that they can do with their money and time. Just because you *really* want them to do your plan with their lives, it doesn't mean that they can't find something *else* to do with their time and money – like focus on serving God. If you want men to marry, then take men's concerns seriously.

# LGBT activists pressure venue to cancel an event featuring Christian speaker

**Wintery Knight** · 15 December 2025 · Archived copy · Original

One of the reasons why I have an alias for my speaking and writing is that I have seen people in the workplace go after Christians and conservatives who spoke out on controversial issues. It's not unusual for people to go after Christians and conservatives on issues like evolution, global warming, LGBT, BLM, etc. And by go after, I mean cancel them, fire them, make them pay money.

One of the people who tracks this sort of ideological pressuring of Christians and conservatives is Tyler O'Neil, who writes for the Daily Signal. He had a recent article posted where he talked about a case of cancel culture going on in Cleveland, Ohio. Now, you might think "Ohio is a red state" but cities like Cleveland, Toledo, Columbus and even Cincinnati are pretty blue. And Christians and conservatives living in these cities don't have the same freedom to speak as people in Nashville, TN or Birmingham, AL.

Anyway, here's the story, which concerns the attempted cancelling of Aaron Baer, president of the Center for Christian Virtue:

> [M]ore than 100 LGBTQ+ leaders and organizations across Ohio signed an open letter denouncing the City Club for hosting Baer and urging the venue to "cancel or modify this forum in a way that does not platform an organization that has been designated by the Southern Poverty Law Center as an anti-LGBTQIA2S+ hate group."
>
> The letter makes four demands: cancel the event or include an LGBTQ+ activist; replace Moulthrop with a likely pro-LGBTQ+ "external moderator"; "disavow platforming hate speech"; or "structure the event so that diverse and impacted perspectives are not only present but also meaningfully centered."
>
> More than 20 organizations—including HRC Cleveland, the LGBT Community Center of Greater Cleveland, Equality Ohio, GLAAD, and Plexus LGBT & Allied Chamber of Commerce—signed the letter, which aims to "prevent extremism from going unchallenged" and suggests a distinction between "facilitating dialogue and platforming organized hate."
>
> "Free speech is a cornerstone of our democracy," Dwayne Steward, CEO and executive director of Equality Ohio, told The Daily Signal. Yet he argued that Baer's message is "rooted in oppression and erasure."

That part always makes me laugh – the invocation of "tolerance", "inclusion", "diversity", "equality" and "free speech" by secular left fascists. I have seen this so many times with my own eyes at university, in the FT100 IT workplace, and these speeches by left-wing activists. They love to use these words, but then they follow it up with actions that show no respect for the human rights of the people they disagree with. Just look up the stories of the Christian bakers, florists or photographers. Or look up the story of Floyd Lee Corkins and his attempted domestic terrorism at the Family Research Council HQ.

And remember, this is coming just a little while after a high-profile assassination of a well-known conservative Christian by a left-wing assassin. And this combination of cancel culture and domestic terrorist actions is not uncommon among secular leftists.

I have noticed a very strange thing when I talk to regular non-apologetics-equipped Christians at church or at work about how much they advocate for Biblical views about controversial issues. On the one hand, Christians really want me to know that if they were threatened with death for their faith in Jesus, they would totally be ready to die for their faith in Jesus. But, when I look at their social media, it's filled with non-controversial things. Their travels, their athletic achievements, their sports teams, photos of their kids, etc. So, there is this weird thing going on where we POTENTIALLY have millions of bold martyrs for Christ, but ACTUALLY have a bunch of Christians in

hiding.

And listen, I don't blame these hiding Christians, because I'm careful myself about what I say under my own name, that's why I have an alias, and probably why I have no wife and no kids (because a wife and kids means you have responsibilities and obligations that keep you from losing your job due to speaking out). What I'm saying is that we need to have laws and policies that make it as easy for the hiding Christians to speak their minds. That's why we have to get noisy when we see the rights of Christians and conservatives curtailed by bullies from the secular left. There are a lot of people watching who want to know if it is safe, and we have to fight to make it safe for them.

I wish I didn't have to have an alias. But in order to survive in STEM programs at university, and then in corporate America, I had to have an alias. Some people have lives where they are strong enough financially and well-connected socially that they have what they need to speak out already, and that's good. But many Christians and conservatives are not safe to speak out without being punished. They are running the calculations, and choosing to stay silent. We need to make it as easy as possible *for them* to speak their minds, so they can have the impact that they are meant to have.

# Good news: 60% of young Britons planning to go to church for Christmas

**Wintery Knight** · 23 December 2025 · Archived copy · Original

Well, if there ever was a good time for good news, it's Christmas time. Now is the time for everyone to remember that our biggest problem – our separation from God problem – has already been solved, because God stepped into history. And if you live in a country that is going in the wrong direction – like the UK – then it can be a very good thing to remember. And that's exactly what 60% of young people in Britain are planning to do.

Here's the story from GB News.

It says:

> Young Britons are increasingly turning to Christianity as they are "crying out or cultural and moral confidence", Quentin Letts has told GB News.
>
> Reacting to staggering new data, the parliamentary sketchwriter said UK leaders are "shying away from the Church" and Britain "doesn't stand for anything anymore".
>
> New polling by Tearfund has shown that 60 per cent of Gen Z Britons (born between 1997 and 2012) are intending on attending a church service this Christmas.
>
> The data also found that 45 per cent of British adults are planning to attend church this Christmas, which is a sharp rise from recent years.

The article notes that that 60% number is DOUBLE the number of people going to church who are from older generations – boomers and up. As I blogged about previously, it's mostly young boys who are becoming more conservative and returning to church. Surveys show that young women are becoming more leftist, and less religious.

The article states that the youngsters are interested in two things: 1) formal church services with "smells and bells" and / or 2) conservative preaching with truth and condemnation, i.e. – "fire and brimstone". I think this is exactly what's lacking in the UK these days. But I don't want this to be a political post.

I've now hit the time that I was thinking about for early retirement, and it's caused me to make a few adjustments myself. And part of that is making sure that I get steady doses of conservative preaching and theology. Sometimes, when you are working full-time and fussing about investments and house repairs and chores, it is hard to find time to read the Bible and listen to sermons and Sunday school. So, I am trying to redeem my weights and cardio time with Bible teaching.

For this, I have turned to Mike Winger, and his wonderful YouTube channel. So far, I have been working my way through his playlist on Calvinism, and when he explains the meaning of all the texts, and makes a very strong case, I just get very excited to understand what the Bible is saying.

Here are the three parts that made me say "WOW!":

- Calvinism, Arminianism, Election & Predestination: Romans 8:29-30, 33
- Non-Calvinist Interpretation of Romans 9
- Why God Hardens Hearts: Romans 9:17-24

And today (Monday), I watched this one:

- Unbiblical stuff the Catholic Church teaches: Mary, Indulgences, Eucharist, Priests, 7 Sacraments

Now, my point in posting 3 lectures critical of Calvinism, and one 1 lecture critical of Catholicism is not to offend everyone. It's just because this is how I think boys like to approach religion, with lots of Bible teaching and thinking

about history and what the meaning of texts are. Boys aren't think about the social aspects of "religion" – the family gatherings and the getting along and the social aspects. Boys are thinking about truth and disagreements, and why people disagree. And that's why I picked these to watch myself! To understand why people disagree. To find out who is right.

I'll just say that I learned a lot of things that I just did not know before when I watched this 4 lectures, and it just made me think that the Bible is really clever, and well worth reading. It kind of re-captured the feelings I had when I was reading the Bible as a young man, and gathering up all the answers from the text, and trying to put them into practice.

If there is one thing that comes out of these Mike Winger lectures, it's that Christianity is not something that you should take passively, as a spectator sport. It's not something to accept uncritically from others. But it's also not something you should do without considering the study of others. I guess I would say that each person has to investigate for themselves, and part of being a good investigator is listening to the reasoning of other people.

I guess as Christians, we often want to make things simple for people, maybe because we don't want simple people to feel dumb. I think that's a mistake when we are dealing with young people. Young people want to know if these things are true, and they want to understand the meaning of the text. It can be tempting to brush aside their questions. But a much better idea is to enourage them to dig into the meaning of the text and have reasons for their beliefs.

Everyone is falling over themselves to say "everyone is equally right" these days – especially in the UK.  Feelings are seen by many as more important than truth. I think Christians need to study harder, debate and disagree instead.

# How Dr. Walter Bradley helped me keep my faith at university and in the workplace

**Wintery Knight** · 29 December 2025 · Archived copy · Original

My close friends know that Walter Bradley is the Christian scholar I admire the most. I've mentioned Dr. Bradley on the Knight and Rose Show several times, and plugged the book about his life "For a Greater Purpose: The Life and Legacy of Walter Bradley". Dr. Bradley passed away recently, and so people have been paying their respects.

My good friend Kevin, who is an amazing Christian man and a real hero to me, mentioned an article about Dr. Bradley by Dr. William Dembski. Kevin asked me to write something of my own. Work has just been draining all my fuel lately, so this is the best I can do. I am not a perfectionist, and I try to write these posts in under 1-2 hours each day, so there is a lot more to say than what you will find here.

I first encountered Dr. Bradley shortly after I arrived in America by ordering some of his campus lectures from Veritas Forum. These lectures had a huge impact on me, even causing me to have a plan to do a PhD in computer science and go into teaching. I figured out by listening to all of Dr. Bradley's lectures that this is what he was always urging Christian graduate students to do. Well, my plans got derailed because it took me 16 years to get a permanent residency, and another 5 years to get my citizenship. Even if I got the PhD then, I would have much less time for research and teaching.

Still, I thought it might be fun to list out the lectures that I ordered from Veritas Forum that featured Walter Bradley:

- Dr. Walter Bradley – Giants In The Land – Georgia – 1997
- Dr. Walter Bradley – Scientific Evidence for an Intelligent Designer – Georgia – 1997
- Dr. Walter Bradley – Scientific Evidence for an Intelligent Designer – Penn State – 1997
- Dr. Walter Bradley – A Scientist's Quest For Success – Penn State – 1997
- Dr. Walter Bradley – Truth In Religion – Georgia – 1997
- Dr. Walter Bradley – Truth In Religion – Penn State – 1997

If you want to listen to some of these lectures, I uploaded them as MP3s here, from the original audio cassettes, which are unavailable now, and not online anywhere. The key ones are the "Testimony", and the 3 versions of "Giants in the Land". The sound quality is not the best, and there is a pause in the recording from when I flipped the cassettes. If you listen to those, and read "Cyrano de Bergerac" in the original French, then you'll know a lot about me.

The Walter Bradley lectures I remember the most were Testimony and different versions of Giants in the Land. He talked about how he grew up. His Dad committed suicide when he was young, and he was always poor. He worked a lot of jobs to make ends meet, and was excellent in his academic studies and sports. He wanted so badly to be a success, but found achieving success very empty and unfulfilling. What was fulfilling for him was his relationship with God, and serving God. It's lessons like this that allowed me to persist all this time, even without the traditional home and church community that most Christians have. I was trained by these two lectures to operate alone in a harsh environment, like a secular university or workplace.

One part that stood out to me was his explanation of how he stopped viewing Christianity as a set of rules, instead of as a relationship. He explained this by telling how his affection for his girlfriend and eventual wife Ann caused him to finally understand that Christianity was not about stopping the things that you most liked doing, and starting the things that you least liked doing. Even though he didn't have a lot of money for dating, he liked to take Ann on dates, because he loved her. And that's how Christians ought to feel about the how the Boss wants them to act. Prioritizing Boss in your conduct and life-planning is easy when you are in a relationship with a Boss who leads from the front. For me, a valuable lesson was that you don't have to care about your reputation if you are excellent

in things like education, career, marriage and finances.

He also talked a lot about how to be a Christian in academia, and the importance of professors being a resource for their students. He was very familiar with the law, and threatened to sue whenever he had to "butt heads" with the Dean. But he also had a lot of amazing adventures by being willing to be identified as a Christian. He explains in "Giants in the Land" how he would feel about identifying as a Christian to his secular colleagues. If only every Christian son and daughter could have heard this lecture before going to college, we would never have lost any of them. Listening to Dr. Bradley talk about the struggles of being a Christian on a secular university campus was just magical. I think a lot of them just feel ashamed of moral rules and truth claims that they were never prepared to defend at the university or in the workplace. They were never taught to see the life of an evidence-wielding secret agent as more fun than getting drunk and having hook-up sex.

Walter Bradley's thoughts about being a Christian in a hostile environment formed my character and prepared me for the secular workplace. Unlike many Christian leaders who started out conservative and then caved to the secular left for prestige, I never expected non-Christians co-workers to like me. Walter Bradley had already warned me not to expect that. I built my castle with scientific evidence, up on the hill of analytical philosophy from William Lane Craig. Later on, I added a moat around the castle, with the economics of Hayek and Sowell.

His lectures made me want to become a Christian professor. But sadly, I never did get to be a Christian professor like Dr. Bradley. I used to cry about how long it was taking for me to make progress on my "become a Christian professor" plan. Maybe some day… I have had offers to teach introductory computer science courses at Christian universities.

I wish more of our Christian leaders were evidence-based like Dr. Bradley – then then we'd avoid the issues plaguing many denominations. Whenever you look at someone like Russell Moore, David French, Brent Leatherwood, Ed Stetzer, David Platt, etc., you are looking at someone who expected that Christianity would make them feel good and be liked in non-Christian environments. Walter Bradley killed that expectation dead for me. I think that's why people who knew him, like William Dembski and Robert Marks, have been so faithful to the Boss with their research and writing. By the way, I have met Dembski, Marks and Bradley in real life! I've also met Kelly Monroe Kullberg, founder of the Veritas Forum. Those are the type of Christian that I look up to. Who are your role models?

Finally, I have to mention the website "Leadership University", which was my lifeblood during my undergraduate years. Not only did they have all the transcripts of William Lane Craig's debates, but they also had many articles by Walter Bradley, and other scholars I loved: J. P. Moreland, Henry Schaefer, Phillip E. Johnson, etc. There were tons of articles there, including articles on controversial topics, like homosexuality. You could find anything that you were being challenged about. And then I also got a lot out of Access Research Network, which had amazing videos that I would watch dozens and dozens of times until I could remember every word.

Many of the same videos I used to watch over and over are now available free, including one with Dr. Walter Bradley.

- On the Origin of Life – An Interview with Dr. Dean Kenyon
- Focus on the Origin of Life – An Interview with Dr. Charles Thaxton
- Darwinism on Trial – Phillip E. Johnson
- Blind Watchmaker? A Skeptical Look at Darwinism – Phillip E. Johnson
- Can Science Know the Mind of God? – Phillip E. Johnson
- A Critique of Darwinist Icons – Dr. Johnathan Wells
- Doubting Darwin: An Interview with Dr. Scott Minnich
- Intelligent Design: From the Big Bang to Irreducible Complexity – Dr. Michael Behe
- Creation of the Cosmos – Dr. Walter Bradley

- Scientifically Testable Consequences of Fine-tuning Related Arguments & Hypotheses – Dr. Robin Collins
- On the Origin of the Cosmos – An Interview with Dr. Michael Strauss

Anyway, if you haven't checked out the book about Bradley's life, get it. And if you want to know what makes me tick, check out the lectures I mentioned. There are other things that had a huge effect on me, but those lectures are my heart and soul. I would say that my resilience over my time at the university and in the secular workplace comes from people like Walter Bradley.

I am also grateful for Art Battson of ARN, who worked on those videos so that I could buy them and watch to them when I was still young. I never met a single non-Christian in the workplace who could defeat these arguments.

By the way, these campus lectures are still going on today – if you want to donate to a great cause, check out my friend Eric Chabot who organizes campus events at THE Ohio State University. He blogs here. I support his work. The lectures that he organizes may be bullet-proofing the worldviews of the next Wintery Knights!

# Knight and Rose Show #70: E. Calvin Beisner: Climate and Energy

**Wintery Knight** · 4 January 2026 · Archived copy · Original

Welcome to episode 70 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss the climate and energy policy with Dr. E. Calvin Beisner of the Cornwall Alliance. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Dr. E. Calvin Beisner to discuss climate and energy policy. They explore Biblical dominion and stewardship, contrasting the Christian worldview with the pantheistic roots of environmental movements. Beisner explains Earth's natural resilience through Le Chatelier's principle and the Genesis perspective. He critiques climate alarmism, highlighting warming benefits like longer growing seasons. Beisner compares energy sources, advocating for abundant energy to aid human flourishing.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 70:**

**Speaker biographies**

Dr. E. Calvin Beisner is the founder and national spokesman of the Cornwall Alliance for the Stewardship of Creation, Dr. Beisner established The Cornwall Alliance in 2005, building on years of research and teaching in theology, economics, environmental ethics, and public policy. With a background in historical theology and social ethics, he has lectured worldwide, testified before government bodies, and authored numerous books and articles on environmental stewardship and economic development. His early experiences in Calcutta, India, witnessing both the beauty of creation and the tragedy of poverty, deeply shaped his vision for Cornwall Alliance. He is the author of Climate and Energy: The Case for Realism.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Dr. James Tour discusses the case for design in nature with Tucker Carlson

**Wintery Knight** · 6 January 2026 · Archived copy · Original

Every time an intelligent design scholar appears on a popular show, I like to write something about it. We've been blessed lately to hear the case for design presented on Joe Rogan and Piers Morgan and Ben Shapiro. So, people are starting to learn about the origin of life, the fossil record, the structures inside the cell, and other pieces of evidence that are terrible for naturalism. And now another big show (Tucker Carlson) has had Dr. James Tour on.

Here's the video: (1 hour and 40 minutes)

Topics:

- Tour's professional background: Professor at Rice University teaching organic chemistry and nanotechnology, with appointments in chemistry, materials science, nanoengineering, and computer science; conducts research, mentors PhD students, publishes papers, and has founded companies in pharmaceuticals, materials, electronics, including AI computing and memory chips.
- Active involvement in scientific research beyond teaching, spending most time on research rather than lecturing.
- No internal conflict between science and Christian faith; scientific understanding enhances belief in God.
- Molecular basis for wood's properties: polysaccharides strands held by hydrogen bonds providing impact strength, explaining why a tree withstands a car crash better than the car.
- Comparison of wood's durability (1,000-year-old structures) vs. plastics decomposing in 5-10 years, highlighting divine material design.
- Challenges in building robots from biological molecules (polysaccharides, polypeptides, lipids, nucleic acids) vs. using plastics, wires, silicon; humans mimic nature but can't replicate molecular construction.
- Photosynthesis in leaves: magnesium atom in porphyrin funnels light, ejects electron, processes CO2 into tree structure and releases O2.
- Vision mechanism: rhodopsin molecules change configuration upon photon impact, relax back to enable sight.
- Memory formation: electronic interactions lead to protein synthesis, which during sleep forms hardwired brain interconnects.
- Scientists sometimes worship creation (e.g., trees) instead of the creator, per G.K. Chesterton quote.
- Private admissions by scientists: no full understanding of life, origins, or mechanisms; some privately agree with Tour but stay silent.
- Community pressures: exclusion from societies and academies for admitting uncertainties or diverging from norms.
- Science requires honesty and admitting unknowns, but COVID revealed dishonesty, eroding credibility.
- Peer review biases: papers challenging established views often rejected, especially if contradicting reviewer's career work.
- Grant funding tied to aligning with certain narratives; hard to introduce field-shaking ideas.
- Evolutionary process lacks detailed chemical explanation; molecular interactions for changes not clarified.
- Two-day meeting in St. Louis with colleague to discuss evolutionary chemistry, but left unconvinced.
- Characteristics of life: responsive to environment, growth/change, metabolism, homeostasis, cellular composition, trait inheritance.
- Efforts to redefine life minimally to claim synthetic creation, but such claims lack full characteristics like homeostasis (e.g., maintaining internal temperature, pH, ATP production).
- Origin-of-life researchers use "proto-life" to hype lab results; media exaggerates to "scientists created life."

- Challenges to researchers: inability to link two amino acids or glucose molecules prebiotically without interference.
- Unfulfilled predictions: e.g., Jack Szostak (2014: life in 3-5 years), Dmitry Tarseslav (5 years), Steve Benner (paradoxes solved), Lee Cronin (2011: life in couple years)—none achieved.
- Creating life: turning inorganic to living meeting life criteria.
- Four compound classes for life: lipids (cell membranes), polysaccharides (energy/channels), nucleotides (RNA/DNA), polypeptides (proteins/enzymes).
- Inability to form these polymers or even monomers prebiotically.
- Miller-Urey experiment (1953): produced amino acids but unusable mixtures without handedness.
- Molecular chirality: right- and left-handed forms (mirror images like hands); biology needs one handedness, prebiotic methods yield mixtures.
- Modern techniques achieve chirality but not via early Earth mimicry; chiral surfaces fail to produce pure handedness.
- Inability to assemble cell even with all components, ions, and DNA code provided.
- Simplest cells: similar in modern and fossil records; biophysical calculations show minimal operable cell needs 15 unmade prebiotic components.
- Progress illusion: new discoveries (e.g., chiral induced spin selectivity, interactome) move target farther away.
- No scientific idea how life originated; Bible says God spoke it into existence, science seeks details.
- Projections of nearing life creation due to mob mentality, career inertia.
- Cop-out responses: e.g., Benner leaving assembly to younger researchers.
- Cloning: duplicates existing life, not creates; starts with cells, inserts genetics.
- Ethical concerns: cloning humans could create superhuman races or enhanced individuals (e.g., 10% faster, 20% smarter).
- Genetic engineering: potential to correct disorders (e.g., autism, breast cancer predisposition) vs. abuse like preemptive surgeries.
- Chinese embryo modification abuse: led to imprisonment, career ends, funding bans; community condemned.
- Evolution: from LUCA (last universal common ancestor) to diversity via adaptation to environment.
- Microevolution: observed small changes (e.g., bird bills, bacterial antibiotic resistance via mutations or population selection).
- Bacterial resistance: often surviving resistant individuals propagate; finish antibiotics to eliminate all.
- Bacteria share DNA via tubules; respond to stresses, suggesting cellular “consciousness” or adaptive behavior.
- Macroevolution: body plan changes (e.g., invertebrate to vertebrate) never observed.
- Fossil record: supports microevolution but not body plan transitions; hypotheses link fossils without direct evidence.
- Regulatory genetic networks: early wiring lethal if clipped; requires coordinated downstream changes (not single mutations).
- Lenski experiment (1988-present): bacterial evolution under stress equivalent to 2 million years; no body plan changes, only minor (e.g., citrate use via existing gene activation).
- Cambrian explosion (540M years ago): sudden burst of species over short period, no transitional forms.
- Punctuated equilibrium (Gould): stasis then sudden changes, no gradual ramp from single cell.
- No animal macroevolution to new species; some plant genome doubling.
- Unicellular to multicellular: not observed, requires regulatory network changes.
- Design language implies designer; some admit “looks designed” but deny it.
- Resistance to questioning evolution: funding cuts, grant denials, academy exclusion for Tour’s skeptical

statement.

- Unsolved: sleep consolidates memory via protein strengthening, hardwired interconnects.
- Cell anatomy: extraordinary, can't mimic.
- Mimicking materials (e.g., wood as nylon-carbon composite) but not structures.
- Phenomena: sensing stares (evolutionary prey detection?), maternal intuition.
- Dark matter/energy: 70-90% of universe, inferred by difference from Big Bang matter/energy.
- Electromagnetic spectrum: narrow visible range; tools detect beyond (e.g., radio waves).
- Fine-tuning: physical constants (e.g., water dipole moment) precise for life; slight changes preclude life.
- Unique Earth: atmosphere, breathable, viewable heavens; universal periodic table.
- Cell as factory with systems engineering.
- Synthetic molecular brain: voltage pulses for simple gates (AND/OR), vs. child's complex brain.
- Mosquitoes: coordinated flight via pheromone sensors from tiny brains.

Nice to see Dr. Tour bringing up additional evidence that is not related to his usual domain: the origin of life. Specifically, he brought up the fine-tuning, habitability, and sudden infusions of information in the fossil record, e.g. – the Cambrian explosion. I want everyone to know about these things.

I'm not keeping track of the controversies with Tucker Carlson, etc. I'm only posting this because I want you to share it, and pray for the people who watched it who are still not yet reconciled with God, through Christ.

# Religious liberty and freedom of association under fire in Washington state

**Wintery Knight** · 13 January 2026 · Archived copy · Original

Lately, I have noticed some Christians trying to attain an appearance of piety by claiming that it is more holy to not get involved in politics. These claims remind me of my early days as a Christian, when I would bring up C.S. Lewis and other easy apologetics, and people would act as if I were discussing the occult. “Only people with doubts care about evidence!” they’d cry. And today, the new heresy is Christians who care about what laws they live under.

Anyway, you regular readers will know all about this. On this blog, we talk about how different cities, states and countries make it difficult for serious Christians to do Kingdom business.

So, today, we have a new story about what happens in states where the majority of Christians think that “Jesus never cared about politics” or “Jesus was neither a Democrat nor a Republican” or “Jesus was a refugee”.

Here is an Alliance Defending Freedom article about case:

> The Washington Supreme Court recently reinterpreted state law to prohibit religious organizations, including Yakima Union Gospel Mission, from only hiring individuals who share and live out its religious beliefs. State officials are threatening the mission with significant penalties for using its constitutionally protected right to hire employees who share and live the ministry’s religious beliefs.

According to their timeline, the Washington Supreme Court “effectively gutted” the Washington Law Against Discrimination’s exemption for religious employers in March 2021. This prevented Yakima Union Gospel Mission from making sure that the people who work in their Christian ministry are actually Christians.

By the way, this is the same Washington Supreme Court that went after that nice Christian florist Barronelle Stutzman, who ended up having to pay $5000 to two gay activists according to the far left NBC News. Washington is a fascist state, I don’t recommend that Christians live there.

Anyway, there’s some good news about that Yakima Union Gospel Mission case reported in the Washington Stand:

> A blue state’s “anti-discrimination” law targeting Christian organizations has been struck by a federal appellate court as blatantly unconstitutional. In 2023, Union Gospel Mission of Yakima, Washington, filed a lawsuit to block enforcement of the state of Washington’s “Law Against Discrimination” (WLAD), arguing that the law’s prohibition against employment discrimination on the basis of certain protected characteristics violated the Christian group’s First Amendment rights to hire only fellow Christians who adhere to a biblical understanding of sex and marriage. The U.S. Court of Appeals agreed with Union Gospel Mission in a ruling this week.

The funny thing about this ruling is that this was from the 9th Circuit Court of Appeals. I used to listen to the Michael Medved Show when I first came to America, and he (a resident of Washington state) used to call this court the “9th Circus Court of Appeals”. Well, a funny thing happened to the 9th Circus Court of Appeals. They became centrist – the 9th Centrist Court of Appeals!

Here’s another 9th Circuit case, from December 2025, reported in The Federalist:

> The U.S. Court of Appeals for the 9th Circuit ruled Friday that the University of Washington is not allowed to punish a professor for making fun of the “land acknowledgments” they tried to force on their staff.
>
> The win at the circuit level comes after the district court sided with the school.
>
> “A public university investigated, reprimanded, and threatened to discipline a professor for contentious statements he made in a class syllabus. The statements, which mocked the university’s model syllabus

> statement on an issue of public concern, caused offense in the university community," Judge Danial Bress, an appointee of President Donald Trump, wrote in the majority opinion. "Yet debate and disagreement are hallmarks of higher education. Student discomfort with a professor's views can prompt discussion and disapproval. But this discomfort is not grounds for the university retaliating against the professor. We hold that the university's actions toward the professor violated his First Amendment rights."
>
> The court found that the school subjected computer science professor Stuart Reges to punitive employment actions and reprimand, based entirely on his speech disagreeing with their policy.

In conclusion, please be cautious about people who are urging Christians not to be involved in politics. These are either atheists or Christians who have no serious life plan consistent with Christianity. There are no exceptions. People who have Christian life plans understand that those plans cannot be carried out if their country turns into North Korea. Or Venezuela. You can't buy apologetics books to read in those countries. You either don't have the money or the books are banned. Owning a Bible is a capital offense in North Korea, which is officially atheist.

This is something that these "Jesus didn't care about politics" fools never think about. They're usually philosophers who dropped math in Grade 10 and never worked a day in the private sector. They just don't know enough about how the world works, and that's why they try to make a virtue out of their laziness. Either that or it's atheists wagging their fingers at Christians, telling them not to vote, because they don't want any restrictions on all the new atheist hobbies: sex-selection abortion, race-selection abortion, transing the kids for social media clout, etc.

Don't listen to these people. Read Thomas Sowell, Wayne Grudem and Jay Richards, and then go vote. Put up lawn signs and car magnets. And maybe switch your monthly donations to Alliance Defending Freedom.

# New poll: 61% of white leftist women ages 18-44 agree with obstructing law enforcement

**Wintery Knight** · 20 January 2026 · Archived copy · Original

I was asked by a friend to write something about what's going on with leftist white women aged 18-44 these days. Everyone has seen the videos of these women using violence against federal law enforcement as they go about their duties removing violent criminals who should not be inside the USA. In this post, I'll go over a few recent articles that talk about this problem, and identify the cause of it. I really hope this will help you.

First, a poll, reported by PJ Media:

> Earlier this week, Kevin Downey Jr. wrote about what he calls "affluent white liberal women," or AWFLs, pegging them as the biggest internal threat to America… well-off women with pronouns in their bios and too much time on their hands. He described them as attention-seeking harpies who push extreme gender ideology, drag their kids to medicalized gender clinics, and parade them at sexualized drag shows labeled as "family-friendly." These are the same people, he argued, who want to defund the police, defend criminals no matter how violent or foreign, and censor anyone who steps out of line with their diversity-and-inclusion gospel.
>
> In fact, recent polling from Cygnal supports his thesis in a significant way. According to the poll, around 24% of Americans overall think criminal action, including violence, is acceptable to stop federal immigration enforcement.
>
> […]But drill down to white liberal women ages 18 to 44, and that number explodes to 61%.

The poll helps to illustrate the general trend behind the specific videos of these women getting violent with the police. Far from being one or two cases, this is actually what 61% of white leftist women ages 18 to 44 agree with. Regular readers will know about the slide of young women into the radical, extremist left, because I've blogged about the surveys showing a *worldwide trend of young women becoming more leftist*. But it's useful to have the up to date numbers.

It's also significant that most of these women are extremely unhappy:

> Turns out they're miserable. The 2024 American Family Survey found that 37% of conservative women and 28% of moderate women between 18 and 40 reported being "completely satisfied" with their lives. For liberal women in the same age group, that figure collapses to just 12%. Liberal women are almost three times more likely than conservative women to experience loneliness multiple times a week, 29% compared to 11%.

I've blogged about that, and also about the majority of them are mentally ill and taking psychiatric medications for their mental illness.

This article from The Federalist by Joshua Slocum entitled "Why Leftist White Women Are Leading Domestic Terrorism In Minnesota" is exactly right in identifying the root cause:

> At least 60 years of mainstreamed feminism has put American culture under the stiletto heel of entitled and exploitative women.
>
> […]How did so many leftist American women decide that young foreign men who jump the border are innocent victims in need of their maternal protection, instead of the American girls and young women entitled to be shielded from these men?
>
> The answer appears to be Cluster B personality disorders. These are deep, ingrained characteristics. Those with such disorders are fundamentally narcissistic, emotionally unstable, and often disconnected from reality.

> […]This is what we're seeing in these female leftist "protestors." Cluster B personalities are all about dysregulated emotions (usually rage or suicidal despair) and twisting reality into its opposite.

If you don't follow me on Twitter, then you might not have heard of Hannah Spier, M.D. who is a psychiatrist whose videos on Cluster B personality disorders and dark tetrad personality patterns have been extremely helpful to me in understanding white leftist women.

And Joshua Slocum actually proposes a solution to this problem. What's the solution? We hold women accountable for their bad choices, instead of blaming the results of their bad choices on men.

He writes:

> First, we must enact swift and proportionate consequences. For too long, leftist agitators, especially women, have been given the hands-off treatment. Too many of these videos show cops wasting time issuing repeated orders to stop the car and get out while the harpies behind the wheel only escalate. Give the order clearly once. If she disobeys, cuff her and put her in the paddy wagon.
>
> […]Second, we have to reject the "women are wonderful" effect. This is a phenomenon that describes how both men and women have an in-built pro-female bias. We can look at a man and a woman both performing the same bad action, but we'll excuse the woman while condemning the man.
>
> Ill-tempered women in America have gotten away with disorderly and criminal behavior at high rates because of this bias. They know it, and they use it deliberately. This woman was tailing ICE and interfering with their operation, pulled the "I'm just a mom!" card when she was caught and forced to stop. Don't fall for it.

By the way, there's a great recent article from The Federalist about Christians firing a man and paying a woman just over $1 million dollars *for engaging in the exact same action*. The sentences given to men for crimes are 63% more severe compared to women, according to a recent study.

But let us continue with Joshua Slocum:

> Finally, men have to go back to telling women "no." This is the piece of advice most people have the hardest time with. Women hate hearing it. Many men do, too. We've been so hypnotized for so long by feminism that simply telling women "no," and suggesting that a man ever exercise authority over a woman, is read by otherwise reasonable people as "misogyny."
>
> Nonsense. If women are full adults with as much agency as men, then they must be treated that way. Men have become knock-kneed with fear, even contemplating telling women "no." It's not an unreasonable worry. In my counseling practice, male clients have told me that simply holding female underlings to the same standards as males has resulted in complaints to HR that the men are "aggressive" with women.
>
> Men, I'm afraid we're going to have to do it anyway. They're going to call us misogynists. They're going to tell us we have "an aggressive tone" with women. This is merely the same toddler distraction behavior that ends up exploding in these absurd and dangerous street performances.
>
> Men are not going to get through this without the accusations, and we have to accept that as the price we pay for helping put civil society back in order. The women will be fine. Sooner or later, the stroppy toddler cries it out and starts behaving sanely again.

If you want a *long-form explanation* for what the underlying cause of this mental illness is, you should check out this article from Aporia Magazine, entitled "Sterile Polygamy". In one line, white leftist women are going crazy because they have adopted a dating strategy that leaves them with no commitment, no children, and no long-term love relationships.

Here's the important part:

> At the 2018 peak, 28% of men under 30 reported no sex in the past year, compared to 18% of women.
>
> On dating apps, women's average match rate is 31%; men's is 2.6% — a 12-fold difference. The most desirable men receive overwhelming attention while the majority receive almost nothing.
>
> […]The data is stark. Analysis of dating app behavior shows that women like about 14% of male profiles, whereas men like 46% of female profiles. The result is that a small percentage of men receive the vast majority of female attention. The top 10% of men get over half of all likes. The bottom 50% of men get about 5%.
>
> […]High-status men benefit from polygyny. Women may even prefer to share a high-status man over exclusive access to a low-status one.
>
> […]If you designed a system to maximize sexual access for high-status men while maintaining the pretense of monogamy, you couldn't do better than the one we've built by accident.
>
> […]We've invented something different: effective polygamy without children. High-status men cycle through partners, but nobody reproduces. Why? Because reproduction requires the lock-in that marriage provides. Serial dating offers [high-status] men all the benefits of access with none of the costs of commitment. And women, waiting for commitment from [high-status] men who have no incentive to provide it, delay childbearing until it's too late.

So, will we get any leadership on this from within the Christian community or the conservative community? I don't see any reason why we should expect to. Our leaders are still harping about "Andrew Tate" and ignoring all of the real underlying problems caused by feminist laws, policies and indoctrination.

When I listen to Christian and conservative leaders, they seem to think that they can expect good men to date and marry 40-year-old single-mother feminists who have spent their 20s chasing the bad boys and becoming less and less attractive as wives. And these leaders have no interest in reforming injustices like no-fault divorce, false accusations, biased domestic violence laws, paternity fraud, single mother welfare, etc. They can't even name them! So, they're just going to keep on insisting on a woman's "right" to protection and provision from any man that she decides to settle for. When she is "ready".

That's not working. It will never work. We need a new strategy.

# New study: Can the introduction of oxygen explain the Cambrian explosion?

**Wintery Knight** · 22 January 2026 · Archived copy · Original

Do you remember the episode of Knight and Rose Show where we interviewed Dr. Günter Bechly about the Cambrian explosion? We were talking about naturalistic explanations for the explosions of new information at certain points in the fossil record. I mentioned that one paper had argued that the introduction of molecular oxygen into the early Earth's atmosphere might explain the origin of all these new body plans and organ types.

Well, before we see the new paper, let's start at the very beginning. What is the Cambrian explosion?

The Cambrian Explosion refers to an explosive event in Earth's history. Around 530 million years ago, over a geologically brief window of roughly 5–10 million years, nearly all major animal body plans (phyla) appeared suddenly in the fossil record. These are new, complete body plans with new designs for things like hard shells, jointed limbs, compound eyes, digestive systems, nervous tissue, etc. And they came in without clear transitional precursors from the simpler life forms found in earlier strata.

So, what could have caused this? Well, in my computer lab, when we see new code in the Github repository, we know that a software engineer committed those changes and then pushed them into the code repository. But some people don't like the idea of a Cosmic Software Engineer, so they try to come up with alternative explanations that are more comfortable for them.

In this case, one of the explanations that keeps coming up is that the introduction of a new gas into the atmosphere must have caused all this code to appear. Which gas? Oxygen!

Here's the story from Casey Luskin, over at Science and Culture:

> For many evolutionary biologists, that trigger is a sudden rise in atmospheric oxygen just before the Cambrian — and the claimed sudden rise of oxygen is enough to satisfy them that the Cambrian explosion is explained (or at least explained away).

Today's post is about a new paper that gives us reasons to doubt it, and Casey explains:

> The oxygen "trigger" theory for the Cambrian explosion has now taken another hit. A new paper in Proceedings of the National Academy of Sciences, "Breathing life into the boring billion: Direct constraints from 1.4 Ga fluid inclusions reveal a fair climate and oxygenated atmosphere," suggests that oxygen might have been quite high long before the Cambrian period, casting doubt on the idea that it played a role as a trigger.

Casey quotes an article about the new paper, which explains that the researchers got samples of air trapped in ancient crystals that are 1.4 BILLION years old – much, much older than the Cambrian explosion. And what is in the samples? Molecular oxygen! And yes, this does show that the planet had more oxygen than expected at this much earlier time. Casey notes that if oxygen were the trigger to all this code being written in the blink of an eye, then why didn't it happen when the oxygen was there 1.4 billion years ago?

Because oxygen doesn't write code, duh!

And since we're on the topic, in the episode with Dr. Bechly, I mentioned an article he wrote about an earlier (2023) paper that also disproved the oxygen explanation for massive amounts of new code. This was one of his famous "Fossil Friday" articles. Except here, he is talking about the Avalon explosion, not the Cambrian explosion. It turns out that there are tons of these explosions in the fossil record.

He wrote this:

> Now a new study (Ostrander et al. 2023) by group of researchers from Denmark has overturned decades of evolutionary dogma and claims the exact opposite: “oxygen didn’t trigger multicellular organisms” (Anonymous 2023, UCPH 2023). What this study found was instead clear evidence of a lower oxygen content correlated with the Avalon Explosion of the Ediacaran biota. The authors summarize their surprising findings as: “Contrary to a classical hypothesis, our interpretations place the Shuram excursion, and any coeval animal evolutionary events, in a predominantly anoxic global ocean.” Co-author Christian Bjerrum commented “Specifically, it means that we need to rethink a lot of the things that we believed to be true from our childhood learning. And textbooks need to be revised and rewritten.

And again, there are lots of these explosions. He calls them “biological big bangs”. If you want to read his big article about all the different biological big bangs, you can find it here.

And he also did a long presentation on it, which is even better than our podcast episode, because he had pictures and graphs:

Well, that’s something for people to know about. You don’t want to make your view of the world based on speculations.  We know what makes code appear. Software engineers make code appear. So people need to stop grasping at gasses and accept the way the world really is. Designs need a Designer.

If you watch his presentation twice, I’m pretty sure that you will remember it enough to make this case for design. And arguing from scientific evidence makes life more fun. Let the other team do the speculating, you stick with the scientific evidence.

Also, don’t forget about our episode on junk DNA with Casey Luskin.

# Knight and Rose Show #71: Keri Ingraham: Education Policy

**Wintery Knight** · 24 January 2026 · Archived copy · Original

Welcome to episode 71 of the Knight and Rose podcast! In this episode, Wintery Knight and his friend Bonnie discuss the school choice and education reform with Keri Ingraham from Discovery Institute. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and guest host Bonnie welcome Dr. Keri Ingraham to discuss school choice and education reform. They discuss the public school monopoly's resistance to innovation and undermining of parental values. Ingraham explains how education savings accounts restore parental authority. She critiques teacher unions and radical ideologies. Ingraham advocates for micro schools, hybrid learning, and vocational paths to align education with family values.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 71:**

**Speaker biographies**

Dr. Keri D. Ingraham is a Senior Fellow at Discovery Institute and Director of the Institute's American Center for Transforming Education. She is also a Senior Fellow at Independent Women's Forum. Prior to joining Discovery Institute, Dr. Ingraham spent nearly two decades leading within the field of education. Her areas of education expertise include innovation, thought leadership, research, online learning best practices, customized hybrid program development, business model creation, operations effectiveness, and strategic planning for sustainability and scaling. She holds a Doctor of Education degree and a Master of Education degree from Regent University, and a Bachelor of Arts degree from George Fox University.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Bonnie is a software engineer and a mother of 5 children, ages 4 to 18. She has a Bachelor of Arts in Theology from Prairie College and an Associate degree in Nursing from Jefferson State Community College. She is currently working on her M. Div at Birmingham Theological Seminary.

# My notes for my call-in to the Duane Lester Show this morning

**Wintery Knight** · 28 January 2026 · Archived copy · Original

I called in to the Duane Lester Show on KNIM Talk 95.9 Live to talk about my recent post analyzing the rise in left-wing advocacy among white women aged 18-44. I tried to explain what I think the root cause is, and what I think we can do as a society to address it. I was able to make all 6 of my points, but for people listening who are here to check out my blog, I thought I would just go ahead and post the notes I made, along with the sources.

### Point 1: Radical Views on Violence

**Data:** Recent Cygnal polling shows ~24% of Americans overall accept criminal action (including violence) to obstruct federal immigration enforcement (e.g., against ICE). But among white leftist women ages 18-44, it jumps to 61%.

**Source:** https://pjmedia.com/matt-margolis/2026/01/10/white-leftist-women-really-are-bat-poop-crazy-and-this-proves-it-n4948130

**Point:** ICE targets criminal aliens (murderers, rapists, etc.), so this majority view means these women are willing to use lawbreaking/violence to protect those criminals over enforcing laws that protect citizens.

To me, it feels like an application of the “don’t judge” slogan, a slogan that is used by people who are underperforming to stop others from judging them.

### Point 2: Global Leftward Shift

**Data:** A recent Financial Times analysis shows that in the 1990s, young men and women (18-29) were similarly mildly leftist. By 2024, men stayed roughly the same, but women shifted sharply further left. And this trend applies across multiple countries (US, France, Germany, Canada, Australia, New Zealand, South Korea).

**Source:** https://spectator.com/article/the-rise-of-toxic-femininity/?edition=us

**Point:** The women clashing with ICE or supporting obstruction fit this larger, international trend of younger women radicalizing leftward, while men hold steady. Many people think that what’s happening to women is the result of Trump being elected, but that doesn’t explain the hard slide to the left of young women in more leftist countries.

### Point 3: Antidepressant Use and Mental Health Decline

**Data:** A 2024 study published in the journal Pediatrics looked at national prescription data from 2016–2022. And it found that post-March 2020, rates of antidepressant dispensing accelerated sharply:

- 129.6% faster monthly increase for female adolescents (12–17)
- 56.5% faster for young women (18–25)
- No similar surge for young males

**Source:** https://pubmed.ncbi.nlm.nih.gov/38404197/

**Point:** We’re seeing a real, documented crisis in young women’s mental health—exploding use of antidepressants (SSRIs are the most common class here) and higher depression rates. This lines up with the leftward shift we just discussed in point 2. Something is fueling distress in this group.

### Point 4: Link Between Leftist Ideology and Mental Health Decline

**Data:** Multiple studies find that female leftists show the largest increases in depressive symptoms over the past decade, diverging from conservatives. Young leftist women report higher depression, anxiety, and lower life satisfaction (e.g., only 12% “completely satisfied” vs. 37% for conservative women in recent surveys).

**Source:**

- SSM Mental Health study: https://pmc.ncbi.nlm.nih.gov/articles/PMC8713953
- Institute for Family Studies study: https://ifstudies.org/blog/why-so-blue-liberal-women-are-less-happy-more-lonely-but-why

**Point:** Left-leaning views often lead to emotion-driven decision-making. These decisions lead to bad outcomes. And leftists deflect responsibility and place blame on others. For example, taking out huge student loans for a degree that does not lead to a good-paying job, or choosing a boyfriend based on appearance who then demonstrates poor character. If the leftist is always the victim of external forces, then the leftist has no reason to develop accurate beliefs to make better decisions. Leftists are not reading books about personal finance or Christian apologetics so that they can choose a major or choose a mate. The pattern of making bad decisions causes anxiety, stress, and anger.

The victimhood that young leftist women experience as they slide further to the left has caused a sharp increase in "Cluster B" disorders, which involve lack of respect, impulsiveness, attention-seeking and narcissism.

### Point 5: Young women are choosing non-traditional men

**Data:** Modern dating shows imbalances: Dating app usage shows that the vast majority of women are targeting the minority of most physically attractive men. This means that this minority of most-attractive men don't have to treat women well or commit to get sex, since there is always a long line of women interested in them. Addiction to social media makes this focus on the most attractive men even stronger.

**Source:** https://www.aporiamagazine.com/p/sterile-polygamy

**Point:** Young leftist women are being indoctrinated in feminist ideology. They see the traditional male roles of moral leader and spiritual leader as "sexist" and "oppressive". So, they tend to pick men by appearance. They look for permissive men who don't judge or lead. This minority of permissive, attractive men are not trying to shape the women for marriage roles like wife and mother. They are just there for the temporary sex.

In addition to the missing boyfriend problem, there is just a general lack of male leadership in women's lives. Fathers are ejected from homes by no-fault divorce. Male teachers are ejected from classrooms. And so on.

### Point 6: Men are facing major deterrents to dating and marriage

In addition to women choosing the most attractive men who match their leftist politics and moral relativism, there is also the problem of traditional men dealing with disincentives to marriage and fatherhood.

- feminist laws and policies deter men from marrying, e.g. – no-fault divorce, false accusations for custody, transing kids
- women get preferential treatment for degrees and jobs, making it harder for men to have leadership from provider role
- young women are being trained to reject accountability for bad choices, e.g. – abortion, single mother welfare, student loan bailouts, lighter sentences for crimes, etc.
- soulmate view of relationships: popular movies and books train women to have unrealistic views of relationships
- leftist political views, (e.g. – abortion, same-sex marriage), are unattractive to traditional men
- possibility of a workplace complaint getting a man fired and potentially blacklisted – can't support a family
- the male roles of protector and provider are seen as "entitlements" for which men get no respect, so women have no obligations to fuel their men with care

The disincentives faced by traditional men to pursue marriage are typically ignored by social conservatives, who just insist that men embrace husband and father roles regardless of these disincentives. But this isn't working.

A better way forward is the changes to laws and policies, such as the Kentucky 50-50 custody law: https://dailycaller.com/2025/09/08/mr-right-kentucky-divorce-rates-50-50-child-custody/

# Did Josephus know the men who sent Jesus to the Cross?

**Wintery Knight** · 3 February 2026 · Archived copy · Original

I recently found out about a new academic book published by T. C. Schmidt who is an associate professor of religious studies at Fairfield University, although he's currently a visiting fellow at Princeton University. He has a PhD in Religious Studies from Yale University. The new book is called "Josephus and Jesus: New Evidence for the One Called Christ" and the publisher is Oxford University Press. The book is available for free thanks to a generous donor. Let's find out what it's about.

Well, the first report of this book that I found was on Dr. Mike Licona's YouTube channel, where he has a 1 hour interview with the author, and he's quite impressed with what the author found.

Here's the video:

And the description says:

> Josephus is often cited as one of the strongest non Christian sources for the historical Jesus. But is that really the case?
>
> He mentions Jesus in two controversial passages… or does he? Scholars have debated this for decades, questioning what Josephus actually wrote, what may have been added later, and what it all means for the case of Jesus outside the Bible.
>
> In this fascinating interview, Dr. Tom Schmidt helps us dive deep into the facts behind one of the most discussed ancient references to Jesus.

Most Christian apologists know about the two passages about the historical Jesus found in the writings of Josephus. These passages are important because they are written by a Jewish historian with good credentials, and they confirm the gospels description of the historical Jesus. But there's always been some suspicion about one of them in particular. Anyway, let's start with  who Josephus is.

His full name is "Flavius Josephus" and he was born in 37 AD just a few years after Jesus died. Josephus was a Jewish priest, historian, and military leader whose writings provide some of the earliest references to Jesus from outside the New Testament.

Here are the passages:

This is the uncontroversial one:

> when, therefore, Ananus was of this disposition, he thought he had now a proper opportunity [to exercise his authority]. Festus was now dead, and Albinus was but upon the road; so he assembled the sanhedrim of judges, and brought before them the brother of Jesus, who was called Christ, whose name was James, and some others, [or, some of his companions]; and when he had formed an accusation against them as breakers of the law, he delivered them to be stoned

That's from Antiquities of the Jews, Book 20, Chapter 9, Section 1.

And this is the controversial one:

> Now there was about this time Jesus, a wise man, if it be lawful to call him a man; for he was a doer of wonderful works, a teacher of such men as receive the truth with pleasure. He drew over to him both many of the Jews and many of the Gentiles. He was [the] Christ. And when Pilate, at the suggestion of the principal men amongst us, had condemned him to the cross, [ 9 ] those that loved him at the first did not forsake him;

> for he appeared to them alive again the third day; [ 10 ] as the divine prophets had foretold these and ten thousand other wonderful things concerning him. And the tribe of Christians, so named from him, are not extinct at this day.

That's from Antiquities of the Jews, Book 18, Chapter 3, Section 3.

So people wonder, is Josephus just reporting what he's hearing from other people, or is he getting this from eyewitnesses, or what?

Well, the new news is that there is reason from Schmidt's book to believe that he had personal connections to the events surrounding Jesus' trial and execution. The book uses textual analysis to argue for the authenticity of the passages above, because the language itself indicates personal knowledge. But there's more.

Josephus repeatedly refers to knowing the "protoi" (the first or leading men) of Jerusalem. In his autobiography, he mentions that he started meeting with these elite figures—the chief priests and leaders—around 51 or 52 AD and these meetings were ongoing. Logically, many of these individuals would have been active two decades earlier during Jesus' trial in 30-33 AD. Josephus uses the phrase "first men among us" about 50 times across his writings, often to denote groups he personally knew or interacted with. This suggests that when he attributes Jesus' accusation to these "first men," he's drawing from firsthand accounts, not mere hearsay. But there's even more!

I mentioned earlier how Josephus was in the military. Well, he describes his commanding officer during the Jewish-Roman war as "oldest of the high priests" in 68-69 AD, which implies that he would have been an adult around the time of Jesus. Schmidt makes the case that this commander is the son of the high priest mentioned in the Gospel of John who is the first to interrogate Jesus after his arrest. And that the commander would have been a potential witness or participant in the events surrounding the arrest. But there's still more!

Schmidt says that Josephus' own father, Matthias, who was born around 5-10 AD was a prominent priest in Jerusalem, and about 25 years old at the time of the crucifixion.  Because the crucifixion happens at the festival of Passover, he would certainly have been nearby . It's a required pilgrimage for Jews, especially for priests. So Josephus would have had access to someone who was there at the time of these rather important events. And it's reasonable that he would have heard about them from his father or extended family.

So, this is pretty big stuff. Normally, I wouldn't be overly excited about this, because I liked to see these things debated by scholars, like Mike Licona does with Bart Ehrman. So the real test would be to see if Mike thinks it's good enough to raise in a debate, and how would someone like Ehrman respond to it. But because this was published by Oxford University Press by a professor with a PhD from Yale, I'm impressed. This is big news, and something for you to investigate, so you can make use of it yourself in your conversations. I think when you put discoveries like this together with ground-breaking research like Richard Bauckham's Jesus and the Eyewitnesses, you can see that there is a trend of increasing support for the Bible's reliability.

# Twenty military engagements that Christians and conservatives should know about

**Wintery Knight** · 5 February 2026 · Archived copy · Original

I was thinking hard on the weekend about whether to pre-order another solo wargame, because the deadline was approaching. The new game is about the attack on the Merville Battery, and it's designed by the same guy who made the new Guadalcanal game in the "Valiant Defense" series, which I did pre-order. I loved the Lanzerath Ridge game in that series. So I decided to see where Merville Battery fits on the list of most heroic actions by Western nations. In case you want to improve your character with a little humility and gratitude, you can find a good list of stories below. I also included a relevant book, movie or wargame where available.

1. **Battle off Samar (Taffy 3)**
   Outmatched US Navy escort carriers and destroyer escorts of Taffy 3 aggressively charged and fought a desperate delaying action against Admiral Kurita's vastly superior Center Force (including battleship Yamato) off Samar Island, Philippines, October 25, 1944.

   **Highlight:** Commander Ernest E. Evans (USS Johnston), Lieutenant Commander Robert Copeland (USS Samuel B. Roberts) and Admiral Clifton Sprague made the selfless choice to attack rather than flee, buying vital hours for the Leyte landings.

   **Book: The Last Stand of the Tin Can Sailors** by James D. Hornfischer (Goodreads: 4.36). Available on Audible.

   **Solo wargame: Carrier Battles: Philippine Sea** (Compass Games).

2. **Defense of Toktong Pass (Fox Company, 7th Marines)**
   Captain William Barber's Fox Company (~240 Marines) held a vital hilltop overlooking Toktong Pass during the Battle of Chosin Reservoir, Korea, November 27–December 2, 1950, against thousands of Chinese attackers in extreme cold.

   **Highlight:** Isolated and outnumbered, they endured five days of assaults with heavy casualties, refusing retreat to keep the escape route open for the 1st Marine Division—ultimate selfless stand that saved thousands; Barber earned the Medal of Honor.

   **Book: On Desperate Ground: The Marines at The Reservoir, the Korean War's Greatest Battle** by Hampton Sides (Goodreads: 4.59). Available on Audible.

3. **USS Tang's fifth patrol**
   Under Cmdr. Richard O'Kane, Tang sank 10 ships in one patrol (including a daring night surface attack on a convoy), totaling ~93,000 tons—making her the top-scoring U.S. sub by tonnage in a single war patrol.

   **Highlight:** O'Kane's aggressive maneuvering and precise torpedo work exemplified selfless risk for maximum damage in hostile waters; he earned the Medal of Honor for his overall command of Tang.

   **Book: Clear the Bridge! The War Patrols of the USS Tang** by Richard H. O'Kane (Goodreads: 4.43) – raw, firsthand memoir of the Silent Service's most successful skipper.

   **Solo wargame: Silent Victory: U.S. Submarines in the Pacific, 1941-45** (Consim Press, new edition by GMT).

4. **Guadalcanal Campaign (Henderson Field Defense)**
   US Marines and Army forces landed on Guadalcanal in August 1942, seizing and defending Henderson Field

against relentless Japanese assaults in jungle hell (disease, starvation, constant combat) until February 1943.

**Highlight:** Isolated troops held critical airfield against overwhelming odds for months—ultimate selfless endurance and resolve; Sgt. John Basilone's MoH stand on Bloody Ridge (manning guns alone, repulsing regiment-sized attack) exemplified genius under fire and sacrifice that turned the Pacific tide.

**Book: Midnight in the Pacific: Guadalcanal — The World War II Battle That Turned the Tide of War** by Joseph Wheelan (Goodreads: 4.45). Available on Audible.

**Solo wargame: Guadalcanal** (upcoming DVG solitaire game).

5. **Battle of Midway**
   US Navy carriers and land-based aircraft decisively defeated the Japanese Combined Fleet off Midway Atoll, June 4–7, 1942, sinking four Japanese fleet carriers.

   **Highlight:** Outnumbered US forces used genius intelligence/codebreaking and selfless sacrifice by torpedo squadrons (drawing defenders low) to enable devastating dive-bomber attacks—turning the Pacific War from Japanese offensive dominance to Allied initiative.

   **Book: The Battle of Midway (Pivotal Moments in American History)** by Craig L. Symonds (Goodreads: 4.39). Available on Audible.

   **Solo wargame: Pacific Chase** (upcoming DVG solitaire game).

6. **Lanzerath Ridge defense**
   18-man US I&R Platoon (plus 4 observers) ambushed and delayed a 500-man elite German paratrooper battalion on a key ridge in the Losheim Gap, Belgium, December 16, 1944.

   **Highlight:** Lt. Lyle Bouck's genius lay in perfect ambush discipline—holding fire until point-blank range—disrupting the entire German northern thrust timetable.

   **Book: The Longest Winter** by Alex Kershaw (Goodreads: 4.23) – intense, platoon-focused classic. Available on Audible.

   **Solo wargame: Lanzerath Ridge** (DVG).

7. **MACV-SOG Covert Operations (Vietnam)**
   Small MACV-SOG recon teams conducted high-risk cross-border missions into Laos, Cambodia, and North Vietnam throughout the war, 1964–1972.

   **Highlight:** Operators ran daring insertions and extractions against overwhelming odds, often deep behind enemy lines with minimal support, providing critical intelligence that shaped operations, suffering some of the highest casualty rates in U.S. units.

   **Books: Uncommon Valor: The Recon Company That Earned Five Medals of Honor and Included the Most Decorated Green Beret** by Stephen L. Moore (Goodreads: 4.42). Available on Audible. and **Beyond the Call of Duty: The Life of Colonel Robert Howard, America's Most Decorated Green Beret** by Stephen L. Moore (Goodreads: 4.28). Available on Audible.

   **Solo wargame: Warfighter: Vietnam Expansion – MACV-SOG #1** (DVG).

8. **St Nazaire Raid**
   British Commandos and Royal Navy rammed an explosive-packed destroyer into the gates and destroyed the only large Atlantic dry dock at St Nazaire, France, March 28, 1942.

**Highlight:** Commander Robert Ryder masterminded the precise ramming and commando assault, a selfless plan executed with foresight that denied the Tirpitz safe repair for the war's duration.

**Book: The Greatest Raid of All** by C.E. Lucas Phillips (Goodreads: 4.29) – the definitive account. Available on Audible.

**Solo wargame: Raid on St. Nazaire** (Avalon Hill).

9. **Bruneval Raid (Operation Biting)**
British paratroopers (C Company, 2nd Parachute Battalion) plus radar expert Flt Sgt C.W.H. Cox dropped into occupied France to steal key parts of a German Würzburg radar set near Bruneval, February 27–28, 1942.

**Highlight:** Maj. John Frost's precise planning and split-second execution (parachute drop, ground fight, beach rendezvous) under extreme risk delivered crucial radar intel that shaped Allied air superiority.

**Book: The Bruneval Raid: Operation Biting 1942** by Ken Ford (Goodreads: 3.92) – solid, detailed account.

10. **USS Wahoo under Mush Morton (1942–1943 patrols)**
Lt. Cmdr. Dudley "Mush" Morton transformed Wahoo into one of the most aggressive submarines, sinking 20+ ships (60,000+ tons) across patrols, including bold surface gun actions and ramming convoys in confined waters like the Sea of Japan.

**Highlight:** Morton's fearless tactics ("Run silent, run deep" but attack aggressively) set the standard for the Silent Service and crippled Japanese supply lines; Wahoo was lost on her final patrol.

**Book: Wahoo: The Patrols of America's Most Famous World War II Submarine** by Richard H. O'Kane (Goodreads: 4.40) – firsthand account from Morton's executive officer. Available on Audible.

**Solo wargame: Silent Victory: U.S. Submarines in the Pacific, 1941-45** (Consim Press, new edition by GMT).

11. **Merville Gun Battery assault**
150 men of the British 9th Parachute Battalion stormed and silenced a fortified German artillery battery near Merville, France, early hours of D-Day, June 6, 1944.

**Highlight:** Lt. Col. Terence Otway, reduced to 25% strength with no heavy weapons, made the courageous call to press the attack, saving thousands on Sword Beach.

**Book: The Day the Devils Dropped In** by Neil Barber (Goodreads: 4.43) – definitive 9th Para history.

**Solo wargame: Merville Battery** (upcoming DVG solitaire game).

12. **Arnhem Bridge Defense (Frost's Paratroopers)**
Lt. Col. John Frost's 2nd Parachute Battalion (~750 men) held the north end of Arnhem bridge for 4 days against SS Panzer forces during Operation Market Garden, September 17–20, 1944.

**Highlight:** Frost's decision to dig in and fight despite being cut off tied down German reserves and exemplified selfless airborne resolve.

**Book: A Bridge Too Far** by Cornelius Ryan (Goodreads: 4.28) – classic narrative of the operation.

**Solo wargame: The Devil's Cauldron: The Battles for Arnhem and Nijmegen** (Multi-Man Publishing).

13. **Norwegian Heavy Water Sabotage (Operation Gunnerside)**
Nine Norwegian commandos (SOE-trained) infiltrated and destroyed the heavy water production facility at

Vemork, Norway, February 27–28, 1943, critically delaying the Nazi atomic program.

**Highlight:** Joachim Rønneberg led a flawless, bloodless sabotage deep in occupied territory—pure tactical genius and restraint that likely prevented Hitler from acquiring nuclear capability.

**Book: The Winter Fortress** by Neal Bascomb (Goodreads: 4.19) – epic, gripping mission narrative. Available on Audible.

**Note:** Film: *The Heroes of Telemark* (1965); highly-rated miniseries *The Heavy Water War* (2015, IMDb 8.0).

14. **Pegasus Bridge capture**
    Glider-borne D Company, Ox & Bucks Light Infantry seized intact bridges over the Caen Canal and Orne River near Bénouville, France, minutes after midnight on D-Day, June 6, 1944.

    **Highlight:** Maj. John Howard's coup de main prevented immediate German counterattack.

    **Book: Pegasus Bridge** by Stephen E. Ambrose (Goodreads: 4.15) – concise and dramatic. Available on Audible.

    **Note:** Featured in *The Longest Day* (1962, IMDb 7.7).

15. **Los Baños Internment Camp Raid**
    US 11th Airborne paratroopers, Rangers, and Filipino guerrillas liberated 2,147 civilian and military internees from Los Baños camp, Philippines, February 23, 1945.

    **Highlight:** Perfect multi-axis timing arrived minutes before a planned Japanese massacre, showcasing selfless risk for non-combatants.

    **Book: Rescue at Los Baños** by Bruce Henderson (Goodreads: 4.28) – daring prison camp raid account. Available on Audible.

    **Note:** TV documentary/special: *Rescue at Dawn: The Los Baños Raid* (2004).

16. **Cabanatuan Raid**
    US 6th Ranger Battalion and Alamo Scouts rescued 513 Allied POWs near Cabanatuan City, Philippines, January 30, 1945.

    **Highlight:** Lt. Col. Henry Mucci coordinated the deep infiltration and lightning assault, saving lives just before a potential massacre.

    **Book: Ghost Soldiers** by Hampton Sides (Goodreads: 4.26) – gripping narrative. Available on Audible.

    **Note:** Film: *The Great Raid* (2005, IMDb 6.6).

17. **Operation Tidal Wave (Ploesti Raid)**
    177 USAAF B-24 Liberators (with B-17 elements) flew ultra-low-level to bomb Romanian oil refineries fueling the German war machine, August 1, 1943.

    **Highlight:** Crews pressed through hellish flak, fighters, and balloons at treetop height in a genius low-altitude plan; immense selflessness amid 30% losses delayed Nazi fuel supply critically; multiple Medals of Honor awarded.

    **Book: Ploesti: The Great Ground-Air Battle of 1 August 1943** by James Dugan & Carroll Stewart (Goodreads: 4.32).

    **Solo wargame: B-17 Flying Fortress Leader** (DVG).

18. **Imjin River stand**
    British 1st Battalion, Gloucestershire Regiment fought overwhelming Chinese forces on Hill 235 along the Imjin River, South Korea, April 22–25, 1951.

    **Highlight:** Lt. Col. James Carne's men held to near annihilation, covering the UN retreat.

    **Book: To the Last Round** by Andrew Salmon (Goodreads: ~4.3) – moving account.

    **Note:** Older film *A Hill in Korea* (1956) loosely inspired.

19. **Doolittle Raid**
    Sixteen US Army Air Forces B-25 bombers launched from USS Hornet to strike Tokyo and other Japanese cities, April 18, 1942.

    **Highlight:** Lt. Col. Jimmy Doolittle led the daring carrier launch and low-level bombing, boosting US morale and forcing Japan to divert resources homeward.

    **Book: Thirty Seconds Over Tokyo** by Capt. Ted W. Lawson (Goodreads: 4.20) – iconic firsthand account. Available on Audible.

    **Note:** Highly-rated classic film: *Thirty Seconds Over Tokyo* (1944, IMDb 7.2).

    **Solo wargame: Enemy Coast Ahead: The Doolittle Raid** (GMT).

20. **USS Laffey Stand (Okinawa)**
    The destroyer USS Laffey endured 22 kamikaze attacks in 80 minutes off Okinawa, April 16, 1945, taking 6 plane hits and bombs while fighting back.

    **Highlight:** Crew's selfless damage control and gunnery kept the ship afloat and fighting—immense resolve under fire saved the vessel ("The Ship That Would Not Die") and demonstrated US Navy tenacity in the final Pacific push.

    **Book: Hell from the Heavens: The Epic Story of the USS Laffey and World War II's Greatest Kamikaze Attack** by John Wukovits (Goodreads: 4.41). Available on Audible.

    **Solo wargame: Picket Duty: Kamikaze Attacks against U.S. Destroyers – Okinawa, 1945** (Legion Wargames LLC).

Many of the books are already done and dusted in my reading list, which might give you even more ideas!

Some of my favorite YouTube channels have excellent documentaries for these events, for example:

- Yarnhub: Battle off Samar
- The Operations Room: Battle off Samar Part 1
- The Operations Room: Battle off Samar Part 2
- The Operations Room: The Battle of Midway
- Yarnhub: Raid on St. Nazaire
- Yarnhub: Pegasus Bridge
- Yarnhub: Doolittle Raid
- The Operations Room: Operation Tidal Wave
- Yarnhub: The USS Laffey

I also just discovered House of History, which has very good videos as well, like this one, which reminded me of

the book “Air Apaches” by Jay Stout:

- Bismarck Sea, 1943: How Allied Pilots won the “most decisive aerial victory of World War 2”

And I just watched this one from The Operations Room, which reminded me of the book “The Convoy: HG-76” by Angus Kostam:

- Battle of the Atlantic – Convoy HG76 Fights the Wolfpacks – Animated

Let me know if I missed anything important in the comments!

# Detransitioner lawsuit win precedes declining support for transing kids

**Wintery Knight** · 11 February 2026 · Archived copy · Original

Exciting news last week for Christians and conservatives who are concerned about children being bullied into self-mutilation. A great victory has been achieved. The first ever lawsuit made by a detransitioner has succeeded. I've blogged before that the medical personnel who do these treatments and surgeries are only interested in one thing: MONEY. And when you take away their MONEY, a funny thing happens. They stop transing kids.

Here's the story from The Federalist:

> On Jan. 30, a New York State jury awarded a 22-year-old woman, Fox Varian, $2 million in damages for her 2019 "gender-affirming" double mastectomy, which she came to deeply regret. She was 16 years old at the time. This settlement against Varian's psychologist and plastic surgeon is the first legal judgment imposed upon those performing such mutilations.

According to this article in the New York Post, the people who lost the lawsuit pushed bullied the parents with threats that the child would self-end:

> Psychologist Kenneth Einhorn and surgeon Simon Chin were held responsible in Westchester County Supreme Court in White Plains for ignoring standards of care and procedural guardrails by pressuring the minor into addressing gender dysphoria with permanent surgery, the jury decided.
>
> Lawyers for Varian pointed the finger at Einhorn, saying he "drove the train" and was "putting the idea in Fox's head" that she needed to change her gender with surgery, according to the report.
>
> Varian's mother, Claire Deacon, testified that she was against the surgery, but consented to it out of fear her daughter would commit suicide, according to the outlet.
>
> "This man was just so emphatic, and pushing and pushing, that I felt like there was no good decision," Deacon told The Epoch Times.

That's the standard approach, because they have to get that insurance money somehow! According to the Federalist article, there are at least 5,200 teen girls who have had their breasts removed by adults who got paid to do it. And there are 27 other detransitioner lawsuits still waiting on a verdict. All it takes is one win, though and suddenly the medical associations that approved of these surgeries are changing their tunes.

The Society for Evidence-Based Gender Medicine (SEGM) reports:

> In a watershed moment, on February 3, 2026, the American Society of Plastic Surgeons (ASPS) issued an official position statement recommending that a key step of "gender-affirming" care—surgical intervention—be delayed until the patient is "at least 19 years old." The recommendation against performing gender-affirming procedures in minors extends to all types of gender-related surgeries, including breast/chest, genital, and facial surgeries. However, the ASPS statement goes much farther than merely advising surgeons to delay surgery. It raises serious evidentiary and ethical concerns about the entire gender-affirming treatment pathway for youth, including social transition, puberty blockers, and cross-sex hormones.

But that's not the only one, here's another, reported in the far-left Washington Post: (archived)

> The American Medical Association and the American Academy of Pediatrics recommend transition surgeries primarily for adults but say adolescents can receive them on a case-by-case basis.

> The AMA appears to now be taking a more cautious stance. A spokesperson for the AMA said Tuesday that "the evidence for gender-affirming surgical intervention in minors is insufficient for us to make a definitive statement" but that it agrees with ASPS that surgeries for minors should be generally deferred to adulthood in the absence of clear evidence.

Was the AMA's previous stance on transing the kids based in scientific evidence? Well, the AMA's previous stance contradicted years of research I've covered on this blog, including:

- New study: Risks associated with pediatric "gender-affirming" care
- New study: Transgender surgeries linked to suicidal ideation, depression
- New study: gender-affirming surgery associated with suicide attempts
- Pre-ban study: 53% of mothers with gender-confused boys have mental illness
- New study: Significant parallels found between anorexia and gender dysphoria
- New study: most children suffering from gender confusion grow out of it
- New study: Mental health issues persist after receiving "gender-affirming" treatment
- Study: "social contagion" is a major factor in teen and young adult gender dysphoria
- New study: psychotherapy improves mental health of autistic teens with gender dysphoria
- Controversial study on Rapid Onset Gender Dysphoria and transgenderism re-published

The UK's Cass Review, which I discussed in my May 2025 post linked above, is a gold-standard analysis. It found no consistent mental health benefits from puberty blockers or hormones, yet the AMA pushed these treatments regardless. I'm blogging about the gold standard studies, but AMA people thought that ordinary people were not following the science. We are. Christians and conservatives bound our worldviews off of what science tells us. We are not being swayed by Big Medicine and Big LGBT to suppress the science. The AMA argued gender-affirming care reduces distress, but the Cass Review and other studies show no consistent mental health benefits.

I just think it's amazing that these medical doctors who threaten parents with their child self-ending and bragged about how transing the kids was "a big money-maker" are now suddenly very cautious. All it took was a 2-million-dollar lawsuit and suddenly, scientific evidence matters after all. And that's what Christians had been saying all along – let the scientific evidence inform our decisions about moral issues. It shouldn't just be be a situation of wanting insurance money.

Many Christians think that people who reject Christianity can be trusted to make good moral decisions. "Of course my doctor would never mutilate my child for money" Christian think. "No need for me to study and make a case against abortion, same-sex marriage, and transgenderism". Well, not so fast.

When a person kicks God out of his or her worldview, it actually does have a big effect on how that person sees morality. It doesn't matter that the doctor looks nice, dresses nice, sounds nice, and has fancy degrees. When God is gone from a doctor's worldview, you cannot expect them to behave morally. And that should be a concern to all Christians and conservatives, because we all get old one day. We will all have to rely on health care providers.

We judge too much by appearances. We think a rich doctor must be morally good. It's just not the case. It's our job as Christians to challenge everyone to think more closely about moral issues like abortion, same-sex marriage, transgenderism, etc. We have to study to get the evidence and then we have to not care about the loss of reputation.

Rose and I did a couple of Knight and Rose Show episodes about this topic. One with Frank Turek and one with Jay Richards, so check them out. And check out my previous posts.

# Christians and conservatives need to be very skeptical of corporate news media

**Wintery Knight** · 12 February 2026 · Archived copy · Original

All the regular readers will know that I am often linking to news sites like The Federalist, Daily Signal, Breitbart, etc. And I also watch news shows like the Lotus Eaters (UK), Juno News (Canada), Steven Crowder (USA), Rita Panahi (Australia), and so on, to see what's going on in other countries. I wanted to write a short blog post with a couple of recent shows, to show you how important it is not to rely on mainstream news media.

So, the first story is about the mass shooting in Canada. For that, I follow the reporting of Juno News managing editor Cosmin Dzsurdsza on X. He was the first reporter in the world to confirm the shooter's identity and the fact that he was trans and identified as a trans woman. Here's an interview from Juno News:

The vast majority of the people who live in Canada are watching news sources who receive money from the Canadian government. And of course the Canadian government is very concerned about people being able to look at Twitter and find out the truth about the results of their policies. They don't want anyone finding out about the results of their immigration policies, their policing policies, their promotion of transgenderism to children, their adoption of euthanasia (MAID) as a substitute for health care, the traffic accidents committed by immigrants who can't even drive safely, the high costs of their green energy policies, etc. Outside of Canada, we know about all of these things. But inside Canada, most of them have no idea. Almost none of it is covered on the government-funded news. They think they are living in the best country in the world. They literally have no idea.

Remember how in Canada, the courts regularly arrest and imprison parents who try to stop their children from being transed. Everyone is in on this – the government, the judges, the courts, the lawyers, the doctors. And the parents are paying for all of it.

Let's go on to the UK. On this blog, I've covered the activities of Muslim immigrants related to the trafficking of underage girls for the purposes of prostitution. Again, outside of the UK, everyone knows about this – we can name the cities where this happened: Rotherham, Rochdale, Telford, Oldham, Oxford, etc. You can find these cities on this blog. But inside the UK, if you can't even tweet about these things because the UK police will come to your house and threaten you with prison. You can't own a firearm, and people who try to defend themselves from criminals are prosecuted. The government and their servants in the UK police don't want anyone questioning or resisting policies that harm them or their families. Most people in the UK think they are living in the best country in the world. They literally have no idea. The UK police and the Canadian police are nothing like honest law enforcement in red cities and red states in America.

How has the government responded to the surge in crime caused by their policies? Well, the government refused to have a hearing about it. In early 2025, the Labour government (under Keir Starmer) declined a national inquiry into grooming gangs. So, one of the conservative MPs in the UK (Rupert Lowe) did a crowd-funded effort to have his own hearings with the victims.

Here's a report on that from the Lotus Eaters show:

Again, you aren't going to see these grooming gangs investigated by the UK government. In January 2026 the Labour government (Starmer and ministers like Liz Kendall) threatened a potential nationwide ban on access to X. They don't want people finding out about the results of their bad policies – policies that harm the very taxpayers who pay their salaries.

Well, what about in America? It depends where you get your news. This story from the Media Research Center shows you that even relying on Big Tech companies like Apple and Google to find you the news is a big mistake:

> Editor's Note: This study was shared by President Donald Trump, White House Press Secretary Karoline

> Leavitt, X owner Elon Musk, the New York Post, Fox Business and more.
>
> Apple News continued its defiant stance against offering news from right-leaning outlets through the end of January 2026.
>
> Apple News stubbornly refrained from using any right-leaning outlets in the top 20 articles of its morning editions between Jan. 1 and Jan. 31, 2026. Of the 620 top stories featured by the news app in the first month of the year, not a single one was from a right-leaning media outlet.

So, I think this is important to say. You can't turn to the corporate news media or Big Tech news aggregators to get real news. You have to have some other way to find out what's going on in the world. For me, I read Just Facts, The Federalist and Daily Signal and sometimes Breitbart, and try to check out reporting from reliable independent journalists.

# Knight and Rose Show #72: Kingdom Priorities: Following the Teachings of Jesus

**Wintery Knight** · 14 February 2026 · Archived copy · Original

Welcome to episode 72 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose explore the teachings of Jesus in the Gospels, to equip you to follow the Leader. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose discuss Jesus' teachings from the Gospels, emphasizing truth, evidence, self-denial, and forgiveness. They explore passages on seeking the kingdom, loving enemies, and private prayer. They critique prosperity gospel and moral relativism, urging Christians to prioritize eternal matters over worldly approval. They offer practical insights for obedience to Jesus, focusing on reconciliation, service, and pursuing God's priorities.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 72:**

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# New book by professor of mechanical engineering on the design of the human body

**Wintery Knight** · 17 February 2026 · Archived copy · Original

I'm always on the alert for new books that will help me get into interesting conversations with people about the big questions of life. The trick is being good on every topic relevant to the big questions. I've had to learn the basics of cosmology, astrobiology, paleontology, historical methods, economics, policy, investing, etc. And there's a new book out on the human body that might help me to have even more interesting conversations.

Here's a description of the new book by physicist Dr. Brian Miller (who is actually our guest on the next episode on the Knight and Rose Show):

> I have written previously about the groundbreaking research of engineering professor Stuart Burgess that has demonstrated the exquisite design behind human anatomy… Dr. Burgess has compiled many of the best examples in his new book, out today for Darwin Day, the birthday of Charles Darwin: Ultimate Engineering: How Human Biomechanics Reveals Intelligent Design. This book not only dismantles claims that the human body often appears poorly designed, but it also demonstrates that human anatomy displays ingenuity and efficiencies far superior to the best creations of human engineers.

I know what most of you are used to making sophisticated arguments like the origin of the universe, the cosmic fine-tuning, habitability, explosions of biological complexity in the fossil record, etc. But think back to when you were in high school. Your friends were deciding what to think about origins then, and they did not know about the sophisticated arguments. At that time, I remember my friends accepting Darwinian evolution over things like supposedly poor designs in biology as well as the "icons of evolution" that Dr. Jonathan Wells writes about. So, you and I have to know how to respond to that low level of argument for Darwinian evolution.

Anyway, Dr. Miller continues:

> After contrasting the divergent expectations of the two frameworks, Burgess shows that claims of poor design consistently collapse under close inspection… Rather than arising from empirical evidence, evolutionary critiques largely reflect the projection of anti-teleological expectations onto the biology.
>
> Burgess goes much further by demonstrating that human anatomical structures appear was well designed as theoretically possible.

He mentions a few "poor designs" in the article, and I hadn't heard of any of them.

The argument against design from sub-optimal design is a fine argument to try, but I don't think it is going to work on engineers. I am a software engineer. When we do designs, we are always thinking in terms of tradeoffs. I used to work in the embedded space, so we wanted to have things run fast, but we couldn't put desktop CPUs and desktop amounts of memory in these little devices or they would cost too much! Designers understand that optimal design simply is not realistic. I buy my Dad a new laptop every 4 years, and sometimes his old one is still working fine. He keeps telling me that he wants his laptops to last more than 5 years, but if they did, he would have to accept that this might blow up the cost, the size, the power consumption, the noise level, etc. There's no free lunch when you're designing software or hardware.

And in the human body, the designs have clearly prioritized certain features at the expense of others. Just because God designs something, it doesn't mean that it has to match our expectations of "perfect" design. We want to live forever, but that's not what God wants most of all. He gives us a body that lasts a certain period of time so that we can either reconcile with him or not. People want to think that the design of biological systems should be for their comfort and ease. But that's not what God's goal is when he designs something. He has different goals.

I think some people who reject God just don't want to accept that they are not the center of the universe. They say "well, if my happiness isn't the goal of all this designing, then I'll just deny that there is a designer". I remember Christopher Hitchens saying things like that in his debate with William Lane Craig. "The universe is so big, I don't like it. That's not how I would have done it". And there are certain people that find an argument like that very convincing for some reason. To me, it sounds too narcissistic. Why does everything have to be perfect for me, or I throw a temper tantrum? Sometimes I think that a theist is just someone who doesn't insist on having their own way all the time, about every little thing.

I noticed that Dr. Miller has a new article up after this first one where he talks about two specific examples of design: the knee and the brain.

If this is something you think you might like to add to your quiver of discussion topics, check out the book.

# Colorado bill would take kids away from parents who refuse to trans them

**Wintery Knight** · 24 February 2026 · Archived copy · Original

On this blog, I've talked about how pushy the Transgender Industrial Complex is about pushing transgender drugs and surgeries onto kids. Usually, they will tell parents that if they don't agree with transing their kid, then the parents will be responsible for the self-ending of the child. "Would you rather have a dead daughter or a live son?" they ask parents of girls. And in at least one state, they want to put even more pressure on parents to consent.

Here's the latest story from The Federalist:

> Colorado's Democrat state legislators want to force transgenderism on parents, requiring them to affirm their child's "gender identity" or risk losing custody.
>
> Radical lawmakers introduced "Concerning Legal Protections for The Dignity of a Minor" (SB 26-018) on Jan. 14, and the Senate Judiciary Committee passed the bill, referring it to the full Senate on Feb. 18.
>
> In its intended form, the bill requires courts to consider whether parents embrace their child's "gender identity" when determining custody. Courts must favor parents who support their child's "preferred name and pronouns" and push their child to receive harmful and damaging "transgender" drugs, hormones, and surgeries.
>
> […]While the bill seeks to regulate custody disputes, it also opens the door for courts or child protective services to remove transgender-identified kids from the custody of parents who believe in biological reality and don't want to irreversibly harm their child with drugs and surgeries.
>
> […]Primary sponsors of the bill include Sens. Katie Wallace and Chris Kolker and Reps. Meg Froelich and Lorena García.

The article goes on to note that this has already happened in many states, including in red states like Indiana, Montana, Texas and Arizona. Who is doing this? Well, it's usually a joint effort by a group of teachers, social workers, school administrators, school nurses, therapists, and medical providers.

One of the things that makes the transgendering of kids so painful is how these courts silence the parents so they can't even tell anyone about what they are doing.

The Federalist article describes two of the cases – from Montana and Indiana:

> When Krista and Todd Kolstad's 14-year-old daughter landed in a Montana hospital for suicidal thoughts, her parents had no idea she would soon be taken from them. After the Kolstads' daughter revealed her desire to "change genders," Montana Child and Family Services removed her from their custody and relocated her to a treatment facility in Wyoming focused on "gender therapy."
>
> "They have a complete agenda. We have no voice, no voice in court," Todd said. "They just gag ordered us and threatened jail time."
>
> Likewise, Mary and Jeremy Cox lost custody of their 16-year-old son for refusing to affirm his sexual identity confusion.
>
> In courtroom proceedings, the Indiana Department of Child Services — while using biologically incorrect pronouns — argued the Coxes' son needed to be in a home "where she is accepted for who she is," not one that will "tell her how she should think and how she should feel."

I don't think socially conservative Christians realize the effect that this silencing parents has on the willingness of young people to get married. It's a huge deterrent – the idea that teachers, administrators, social workers, medical people, etc. can come in and trans your child, force you to pay the costs on your health insurance, and then silence

you from complaining about what they are doing to you.

This is very depressing, and if I were you, I would move to the reddest state you can find. Not Indiana, not Texas, not any of those. Tennessee is the best state in the union for social conservatives, and then other states like Oklahoma, Arkansas and Alabama. Make this move a priority if you have kids, because you do not want to have your kids taken from you, and then be slapped with a gag order that prevents you from telling anyone about it.

Anyway, here is a good news story from The Federalist:

> On Wednesday, the Texas Supreme Court heard opening arguments in the case of a woman seeking damages for medical malpractice in gender transition.
>
> Soren Aldaco, a detransitioned woman who suffered from gender dysphoria as a teen and underwent a double mastectomy at 19, is suing Barbara Wood and Three Oaks Counseling Group for recommending the senseless mutilation and allegedly falsifying information to secure it.

I thought this part of the article was interesting, so you can see how children are led along the transgender path:

> As a minor, a nurse practitioner she met at a transgender support group prescribed Aldaco hormones. He was essentially "recruiting" patients from the support group, Aldaco said, influencing children and their parents.
>
> At the time of her surgery, Aldaco said she was taking multiple mental health medications, had been hospitalized for a manic episode, and struggled with anxiety and depression.
>
> Although Aldaco had only received telehealth counseling from her therapist for "relationship issues," Wood signed a recommendation letter for a double mastectomy. Wood provided the letter in February 2021, and Aldaco underwent surgery in June.
>
> The aftermath of the surgery was brutal, physically and mentally scarring. Aldaco documented excessive bruising and swelling that would eventually require drains from the surgery sites. The clinic staff was less than receptive, evading responses to her concerns and repeatedly requesting that she sign a nondisparagement agreement, she said.

Basically, the teaching, therapy and health care professions are filled with people who are driven by emotions. Their motto is "don't judge". They aren't big on moral boundaries and spiritual truth claims. They just want people to do what feels good in the moment, and then escape all judgment and punishment. And they certainly don't care what the Bible has to say about what the rules are and what the purpose of life is. They just want to be happy. And they want you to "just love everybody". So, guys like me who tell young people not to take out student loans for English degrees are seen as terrible people.

Bible-believing Christian men are seen as the worst – always telling people to make better choices about relationships and sex and money. Blech! But what happens when the "don't judge" people mislead their victims into terrible mistakes, like transgenderism. Then, the don't judge people stop answering the phone, and they want you to sign a "nondisparagement agreement". They really don't like accountability. In fact, if they can, they'll use force to cover up their failure and the damage that they caused. In Canada, the transgender activists often force parents to keep silent about what they are doing to children with publication bans, for example.

In case you missed it, the first victory from a detransitioner case happened recently. I blogged before about how transgender doctors love to trans kids because the initial treatments and ongoing treatments are a "huge money maker" for these health care providers. That's why you need to be careful where you take your children for their educations and health care. A lot of these people on the secular left in the schools and hospitals are hoping to turn your kid into a pot of gold. And they don't care what permanent effects they cause when they're getting their bag of gold.

# The best argument against Islam is the historicity of Jesus' death

**Wintery Knight** · 25 February 2026 · Archived copy · Original

My favorite Ratio Christi person of all is Eric Chabot. He works at Ohio State University. He is the best, because can teach on many topics, he gets the best speakers to lecture, and mentors the most promising Christian students. I could tell you so many stories about his achievements as a Christian. Anyway, he has a new substack, and I decided to check it out to see what he's writing about. I was not disappointed.

Here is his latest article, where he talks about what works best in real conversations with Muslim students:

> Over the last several years, I have had many opportunities to engage in spiritual discussions with Muslims in our campus ministry in Columbus, Ohio. On several occasions, I have told Muslims that I will never become a Muslim because of their position on the death of Jesus. For Christians, the death and resurrection of Jesus are central to the Gospel message. After all, the *kerygma* in the Book of Acts is that the Messiah was crucified according to the plan of God (Acts 2:23), that He was raised from the dead, and that He appeared to His disciples (Acts 2:24, 31–32; 3:15–26; 10:40–41; 17:31; 26:23).
>
> Muslims, however, believe that Jesus did not die. Instead, they believe the early disciples were deceived and that Allah delivered Jesus. The Qur'an says in Sura 4:157:
>
> "And [for] their saying, 'Indeed, we have killed the Messiah, Jesus, the son of Mary, the messenger of Allah.' And they did not kill him, nor did they crucify him; but another was made to resemble him to them. And indeed, those who differ over it are in doubt about it. They have no knowledge of it except the following of assumption. And they did not kill him, for certain."
>
> From this passage, most Muslim scholars conclude the following:
>
> - Jesus was not actually killed on the cross.
> - Someone else may have been made to look like Him, or the event was made to appear that way.
> - God rescued Jesus and raised Him to heaven.
>
> Across both Sunni and Shia traditions, it is commonly believed that:

> - Jesus was taken alive into heaven.

> - He will return before the Day of Judgment.

> - He will defeat Al-Masih ad-Dajjal (the false messiah).

> - He will eventually die a normal human death.

Now, my podcast partner Rose is an expert in Islam, and she loves to use this argument with Muslims, along with the The Islamic Dilemma. Why is this argument so good? It's so good because you have a clear case of two historical sources asserting two mutually contradictory points. Christianity teaches that Jesus did die on the cross. Islam teaches that Jesus did not die on the cross. Only one can be right. It's the perfect point to bring up with Muslims, because it's a clear disagreement, and one that can be settled by the ordinary methods of historical analysis. The right answer depends on which sources come first – who is in contact with the eyewitnesses at the

time when history was recorded?

Eric writes:

> [T]he Qur'an was written roughly six hundred years after the life of Jesus, making it a much later source of information than the New Testament. The evidence suggests that the core historical content of the Gospel—the death and resurrection of Jesus—was circulating very early within the Christian community. As mentioned earlier, historians look for records that are closest in time to the events they describe. Given the early date of 1 Corinthians 15:3–8, along with other sources, it is evident that this material is historically earlier than the Qur'an.

If you don't know about the early creed from 1 Corinthians 15:3-8, you really should listen to episode 1 of the Knight and Rose Show. We quoted the writings of a famous atheist German New Testament scholar and atheist (formerly professor at the University of Göttingen). He dates the elements of the creed in 1 Corinthians 15:3-7 (or more broadly 15:3-8) very early. You can find his own statement in his book "The Resurrection of Jesus" (1994), where he states:

> "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus…not later than three years… the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE."

So, this is very, very early evidence for the crucifixion of Jesus. And the crucifixion is of course echoed by other non-Biblical sources, e.g. – Tacitus, Flavius Josephus, The Babylonian Talmud and Lucian of Samosata.

Eric notes that it's not just early sources that matter. The number of sources matters too. He has a list of dozens of sources going from the event itself right up to the late sixth century.

My podcast partner Rose talked about the implications of Allah allowing people to believe in mistakes for 6 centuries before Mohammed finally shows up to correct them in episode 11 of the Knight and Rose Show.

Eric makes the same point:

> Consider the implication of the Islamic claim. According to Islam, Allah allowed the first-century disciples to be deceived into believing that Jesus literally died on a cross. Not only that, but this supposed deception continued for roughly six centuries until Muhammad received a revelation through the angel Gabriel.

His article is great. It's something that everyone should know how to do. I think most Christians think of Christianity as "our tradition". It's what Westerners believe. It's our family tradition, our community tradition. Then, when they encounter Islam, they think of it as just "Middle East Christianity". That's just their tradition, on the same historical footing as our tradition.

Certainly, it's easy to think that all religions are the same, and many Christians do. And unfortunately, there's not much apologetics being taught in church. Pastors don't do much to teach their flocks how to test a religion for truth. Instead, pastors teach Christians to share their testimony. And when Muslims share their testimony, Christians aren't equipped to have a truth-focused discussion where evidence is weighed.

Well, I think that what Eric has written there is about the best you can do as a lay Christian. So, read his article closely. Notice how he quotes non-Christian scholars to make his points. Don't let yourself get tricked into discussions about which book is more holy. If you stick with the historical evidence, then the discussion doesn't get heated. On the contrary, you will be shedding light on the subject, when you explain your views and how you arrived at them. My mom's side of the family is all Muslim, and none of them ever got mad at me when I explained this argument to them. It just works.

# Trump's State of the Union speech explains Republican values to mid-term voters

**Wintery Knight** · 26 February 2026 · Archived copy · Original

I watched the State of the Union address to the nation by President Donald Trump on Tuesday night. I really enjoyed it, and thought it was an excellent showcase of Republican party priorities, as well as showing voters Trump's vision for the future, heading towards the mid-term elections. I was shocked to hear that polls show that Trump is under 50% popularity. Honestly, Trump was not my guy in the 2024 primary, but he has seriously outperformed.

Let's start with the video of the speech itself:

I have to say that I like a tight speech, and this speech could have been a double-episode of Knight and Rose Show. He didn't deliver it "scripted" but there was no rambling. For the first time since Trump became a high-profile Republican, I actually thought "this is a person who does a good job advocating for many of the things I care about – not just with words, but with achievements". So let's see some of Trump's demonstrated achievements.

This article from The Federalist by Brianna Lyman lists a few of the things that he highlighed in the speech:

- The Duty of American Government Is to Protect American Citizens
- Flow of Fentanyl Across Southern Border Plummets
- Decline in Murder Rate
- Inflation Coming Down
- Justice for Iryna Zarutska
- Washington D.C.'s Safer
- Protecting Children From Satanic Trans Cult

The speech was crafted in a way that it would appeal to 70-80 percent of voters, regardless of party. But even so, the Democrat legislators refused to stand up and applaud for all these good things.

Let's look at one of the things in Brianna's list:

> The president… spoke out about the satanic, left-wing efforts to mutilate children suffering from gender dysphoria.
>
> Trump spoke about Sage Blair, who was 14 years old in 2021 when "school officials in Virginia sought to socially transition her to a new gender, treating her as a boy and hiding it from her parents. Hard to believe, isn't it?"
>
> Blair was placed into an all-boys state home following an order from an activist judge after Blair's parents refused to affirm their daughter's gender dysphoria, Trump said. Eventually, Blair was returned to her parents and is now comfortable in the body God gave her.
>
> "We can all agree no state can be allowed to rip children from their parents' arms and transition them to a new gender against the parents' will," Trump said. "We must ban it and we must ban it immediately."
>
> But Democrats refused to stand.
>
> "Look, nobody stands up," Trump said. "These people are crazy, I'm telling you. They're crazy."

They didn't stand for any of the 7 achievements. So what do we get from this? Well, Trump can decide to prioritize lots of things as President. But what he prioritized was protecting innocent people from criminals and protecting innocent children from greedy child abusers. These things are popular with American voters. But Democrat

legislators wouldn't stand for them.

Let's get out of the tactical weeds, and look at strategy. An article by Elle Purnell from The Federalist talked about the big differences between the two political parties.

The big difference is that Republicans think that American citizens are their bosses, and Democrats thin that illegal immigrant criminals are their bosses. Trump proved it with his speech:

> [I]n Tuesday night's State of the Union address, President Donald Trump urged every member of Congress to "stand up and show your support" for the statement: "The first duty of the American government is to protect American citizens, not illegal aliens." Cameras panned to show nearly the entire left-hand side of the chamber awkwardly remaining in their seats. After two minutes of Republican cheering and Democrat scowling, Trump suggested that Democrats should "be ashamed of yourselves," and the cameras showed Rep. Ilhan Omar, D-Mogadishu, shouting angrily in response.

Another big difference between the parties is that Republicans think that people in the armed forces who take risks and pay a price to serve their country deserve to be honored. Democrats don't think that people in the armed forces should be honored.

The article notes:

> Throughout the address, Trump handed out medals to American heroes left and right: Medals of Honor to 100-year-old war hero Navy Captain Royce Williams and to Chief Warrant Officer Eric Slover, a pilot in the recent capture of Venezuelan dictator Nicolas Maduro.

I have to mention that Slover served with the US Army's 160th Special Operations Aviation Regiment (SOAR), a very prestigious unit that does all the flying for covert operations, including hostage rescues. I read an entire book about them called "The Night Stalkers". I read this book because I wanted to be more informed about them so that I could be more thankful and respectful about their deeds. This particular pilot Slover had both of his legs shot up by foreign security forces during the mission to deliver Venezuela from the tyranny of communism. He was standing on crutches.

Yet the Democrats would not stand up and applaud – for a Medal of Honor recipient. I doubt that Ilhan Omar and Rashida Tlaib even know what a Medal of Honor is! I've read three books about Medal of Honor recipients. It should be required reading for immigrants. How can you live in this country and not know anything about the sort of people who make it safe for you to live here? When I am in a grocery store, I always go up to people who have Vietnam War or Korean War caps on, to talk to them. I want to praise them for their actions in our noble wars against communism. Republicans are people who know history and who respect heroes in the armed forces.

So, why post something about this speech? Well, this might sound crazy to people who think that Trump is a bad guy with bad character, but I think they should watch the speech. The corporate news media has been carefully indoctrinating voters with left-wing stories about the Trump administration. But the speech put the lie to all of that. I highly recommend sending the speech to people you know ahead of the mid-terms. Now is the time to get people in the middle to be aware of what the Republican party actually stands for. Don't wait for the corporate news media to speak to your family and friends, they're not going to do it fairly. You will have to do it.

# New study: honeybee decision-making shows evidence of intelligent design

**Wintery Knight** · 27 February 2026 · Archived copy · Original

I wanted to announce to everyone that there is a Science and Faith conference in Dallas, Texas coming this weekend. And there's live streaming. I have watched all the videos from the previous ones. It's much better to watch and listen to them than to just listen to them, because of the slides. Anyway, one of the previous talks was about honeybees, and I blogged about it. BUT there is even more interesting design evidence in honeybees. Let's investigate.

So, in my last post, I talked about the design of honeybees.

But here is the latest on the honeybees, from Science and Culture.

First, here is the topic – bee selection of flowers for efficient collection of nectar:

> Animals are constantly faced with having to make behavioral decisions. An example is when they forage — searching for food. Bee behavior when questing for pollen and nectar has been a favorite subject for biologists to study. One reason is that rather than searching randomly for flowers, bees exhibit clear tendencies and preferences. Research has determined that bees use information about flower characteristics to make their foraging decisions.
>
> Various aspects of bee foraging have been the subject of experiments. There are a number of factors that affect their decisions on where and when to forage. Bees typically have to choose between "Several dozen flower species which all differ in reward and signal, and they may encounter several flowers with different signals per second of flight." Bees have been shown to be flexible, adjusting their decision-making behavior based on the conditions they encounter. One piece of information that bees use in foraging is the depth of the flower, which affects the time required to forage (called handling time). Flowers of shallow depth require less handling time, which can be viewed as a trade-off cost, and thus are more efficient. Other things being equal, bees generally prefer flowers of shallow depth with, therefore, reduced handling time. It has also been shown that bees prefer flowers that provide a greater reward (i.e., more nectar) if handling time is not a factor. Some experiments have shown that bees have a distinct preference for flowers with optimum concentrations of nectar. Bees also show a preference for continuing to forage on flowers of the same color, sometimes even when flowers of a different color offer superior rewards.

And here is the new study about this:

> A recent paper from the University of Sheffield in the UK studied foraging by honeybees (Apis mellifera), analyzing their decision-making process, including an assessment of their accuracy and efficiency.
>
> […]In the experiment, honeybees were trained to associate different colors with either a reward or punishment, and with a range of probabilities.
>
> […]Key findings from the experiment include that for tests which were intended to provide easy discrimination between reward and punishment, the bees made the correct choice significantly more often than mere chance would lead us to expect.
>
> […]The authors indicate that the study, "Unveils the remarkable sophistication and subtlety of honeybee decision-making." They also comment that the sophistication of honeybee decision-making has features in common with primates. That is all the more remarkable given the small size of their brains (less than 1 million neurons). These behaviors are largely controlled by a segment of the brain called mushroom bodies, which contain multisensory integration, learning and memory formation, and comprise about 40 percent of the brain neurons. In comparison, the brains of goldfish and hummingbirds are roughly 100 times larger. Despite the

> small size of the bee's brain, expert Lars Chittka has documented the significant repertoire of honeybee behaviors, many that involve decision-making.

Very good article, and shows evidence of design in animals. I am a bird person myself, but bees have wings, so I guess I can like them, too. Certainly they are cute and offer a great case for intelligent design.

By the way, I recently bought a whole bunch of books for one of my co-workers who has 5 kids. I decided that it would be good for the kids to be exposed to apologetics evidence. One of the books was about the design of the human body. So, if you have kids that are aged 8-12 or so, you might want to check this book out. It's never too early for kids to get serious about evidence that will help them choose and defend the truth.

And of course there is a new book for grown-ups that just came out written by a super-qualified engineer from the UK. I blogged about that one here.

# Has Lipscomb Academy in Nashville abandoned Christianity for Marxist ideology?

**Wintery Knight** · 4 March 2026 · Archived copy · Original

There's a big problem facing Christian families today. Thanks to decades of growing government spending and higher taxes, many Christian parents can't afford to keep one parent at home to homeschool their children. Most of the Christian parents I know both work. So how do these Christians parents educate their children? Many don't have enough money for anything except for public schools. But some turn to private Christian schools.

Here's an interesting story from The Federalist about a Christian school in Nashville, TN:

> Parents and staff at a Christian prep school in Nashville are upset about what they say is a trend away from biblical teaching and toward leftist ideology after Lipscomb Academy hired a principal who wrote his dissertation on school diversity policies.

This is a very expensive school for high-earning Christian parents. But what are Christian parents getting for all that tuition money?

Some of the parents have expressed concerns about leftist ideologies infiltrating the school:

> Lipscomb Academy has shifted to a more politicized, "diversity, equity, and inclusion"-influenced education, some Lipscomb parents and others connected to the academy including employees tell The Federalist. They asked not to be identified for fear of reprisal against their children and their positions with the school.

The problems seem to be related to the new leader of the school:

> These individuals claim the shift picked up when Brad Schultz was tapped to lead Lipscomb Academy. Schultz, whose 2013 doctoral dissertation was titled "Intentionally Diverse: A Historical Investigation of a Southern Private School's Ten-Year Diversity Initiative," began his tenure as Lipscomb's Head of School in June 2020 — just as race riots took off in Minneapolis and other U.S. cities.

The Christian parents I know want their children to have an accurate and defensible Christian worldview. So that means not only learning what the Bible teaches, but how it applies to every area of life. And it also means not just taking the Bible "on faith", but knowing how to disagree with other faiths and cultures using logic and evidence. It means being able to show objective evidence for the core claims of Christianity, such as the origin of the universe and the goodness of chastity, right to life, natural marriage, etc.

But what is Schultz concerned about in his dissertation?

> Schultz's dissertation relies on several critical theorists, including Antonio Gramsci, Frantz Fanon, Paulo Freire, and Max Horkheimer. According to its adherents, critical social theory aims to challenge systemic power structures on behalf of "oppressed" people.
>
> […]The dissertation expresses "concerns" that Northeastern Christian School's mission statement — "To help each child grow as Jesus did in wisdom, in stature, and in favor with God and man" — showed "signs of cultural invasion." The mission statement's "commitment to help students grow in favor with God" presents a "significant threat here of students being negatively influenced by a hidden curriculum," he wrote.
>
> "Is the school saying it holds the key to being in favor with God? If so, what is this saying to students who come to the school from different religious faiths or cultures?" Schultz wrote of the Christian school, which was "run and taught by members of the Churches of Christ."

> The dissertation also warned Northeastern was missing out on further "diversity" by turning away homosexual students and families. Schultz said the school uses "rules and disciplinary measures" to "prevent homosexual students and/or parents from 'accomplishing its educational and spiritual purposes.'"
>
> "As support for gay marriage continues to rise, the school's stance towards homosexuality and same-sex marriage is likely to come into question," Schultz wrote.

Do you think that a leader of a Christian school should be intimidated by what members other religions – like Islam – feel about the truth of Christianity? Do you think that a leader of a Christian school should be intimidated by what homosexuals and proponents of same-sex marriage feel about the Bible's teachings on those issues? I think the problem we are having today is that we have redefined Christianity to be about feeling good and being liked by non-Christians. Those were not concerns of Jesus, according to the Bible. But they are the concerns of people today.

We have a discipline called "apologetics" that teaches Christians how to be comfortable showing why they believe what they believe to non-Christians. But it takes effort to learn. It's not taught in most Christian homes, churches or Christian schools. So many Christians never learn how to challenge non-Christian ideas like Marxism and sexual immorality. And some of those unequipped people end up as administrators and teachers in Christian schools. And then those Christian schools don't produce students who go on to become Christian scholars like Stephen C. Meyer or Michael Licona or Fazale Rana.

In the specific case of Lipscomb Academy, they seem to value achieving racial diversity. They highlight that priority on Schultz's biography page. This is something Jesus did not prioritize. Jesus seemed to be more concerned with telling people the truth and then providing evidence for them to believe his truth claims, as with the healing of the paralytic.

The Federalist article has many more details. Please go read it.

And if you missed our episode of the Knight and Rose Show on this topic with Dr. Corey Miller, you might want to check it out.

Now let's flip over to Daily Signal and see what Tyler O'Neil has to say.

He writes:

> According to two Lipscomb Academy parents who spoke to The Daily Signal on condition of anonymity, the academy sent the new Code of Conduct to parents Feb. 24, requiring them to sign it by March 5 in order to keep their kids enrolled for the 2026-2027 academic year.
>
> […]"Families shall respect the confidentiality of administration, faculty, staff, and other students, and parents/guardians/families," reads a section on privacy. "Information about personnel matters, disciplinary actions, grades, or other student matters must not be discussed publicly or shared through social media, texts, email, or conversation."
>
> The privacy section demands that families not "publicly speculate or criticize personnel decisions or school matters."

Lipscomb Academy doesn't seem to like parents (their customers) complaining about the quality of the school.

Also note:

> Lipscomb reportedly threatened The Federalist with legal action when the conservative outlet started asking questions.
>
> "After The Federalist started looking into the allegations about the school's left-leaning turn, Lipscomb's general counsel sent a letter to Federalist Executive Editor Joy Pullmann warning that 'publication of statements known to be false or made with reckless disregard for their accuracy could expose The Federalist to

> potential liability,'" the outlet's M.D. Kittle reported.

Does this behavior sound like something Jesus would do? It sounds to me like something an atheist like Stalin would do. "Straight to the Gulag!" he'd say.

By the way, we have a forthcoming episode of Knight and Rose Show with Tyler O'Neil, so stay tuned to the podcast!

# Knight and Rose Show #73: Brian Miller: Fine-Tuning and the Multiverse Theory

**Wintery Knight** · 7 March 2026 · Archived copy · Original

Welcome to episode 73 of the Knight and Rose podcast! In this episode, Wintery Knight and guest host Terrell Clemmons welcome Dr. Brian Miller from the Discovery Institute to discuss the evidence for fine-tuning and the multiverse theory. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and guest host Terrell Clemmons welcome Dr. Brian Miller to discuss the the evidence for fine-tuning in physics and cosmology and the multiverse theory. They discuss how the laws and constants of nature suggest intentional design. Miller explains specific examples of fine-tuning and critiques the main naturalistic explanation for this data: the multiverse theory. He recounts his shift from skepticism to accepting design via evidence.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 73:**

**Speaker biographies**

Dr. Miller obtained a BS in physics with a minor in engineering from MIT and a PhD in complex systems physics from Duke University. His research focuses on thermodynamics, information theory, protein rarity, and the origin of life. Dr. Miller is a Senior Fellow and Research Coordinator for the Center for Science and Culture at the Discovery Institute. He helps manage the ID 3.0 Research Program and helped launch the biannual Conference on Engineering in Living Systems (CELS). He has contributed to multiple books and technical journals covering the debate over intelligent design, including The Mystery of Life's Origin: The Continuing Controversy and The Comprehensive Guide to Science and Faith.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Terrell Clemmons earned a BS in Computer Science from Clemson University and worked in software development until she hopped off the career track to be a full-time mom. She began writing on Christian living and apologetics in 2004 and joined Salvo magazine in 2007, where she now serves as Executive Editor. She has also worked with Ratio Christi and Anchorsaway apologetics ministries for youth.

# Bible study: the importance of truth in religion

**Wintery Knight** · 11 March 2026 · Archived copy · Original

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me the dream, and I will know that you can interpret it for me."

[10] The astrologers answered the king, "There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans."

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put them to death.

[14] When Arioch, the commander of the king's guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king's officer, "Why did the king issue such a harsh decree?" Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

"Praise be to the name of God for ever and ever;

wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king."

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, "Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him."

[25] Arioch took Daniel to the king at once and said, "I have found a man among the exiles from Judah who can tell the king what his dream means."

[26] The king asked Daniel (also called Belteshazzar), "Are you able to tell me what I saw in my dream and interpret it?"

[27] Daniel replied, "No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] "As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants desire to survive the King's wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: "The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.". The King replies: "Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery."

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God's miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people who do not even think he exists, and without assuming that they believe in the Bible. And we have to do it by focusing on *what is true.*

Early last week, I got a message from a friend who was interested in a girl that he met on an online dating service. She claimed to be a Christian. My friend explained why he was so interested in some of the evidences I outlined above. She was not impressed. She said “I prefer to show people Christianity is true by not judging them, by being compassionate, by introducing them to a fun and affirming community”. There was no emphasis on truth in her approach. In fact, any religious group could do those things and “establish” their religion as true, by appealing to feelings. But this is clearly not what the God of the Bible intends for people who seek him. He is a God of truth, and truth is established by logical reasoning and supporting evidence.

There are still people out there like the King who are looking for someone who can speak to them with authority. All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won’t always be the case, but it is the case for some people.

# Physicist Brian Miller presents scientific evidence for God on university campuses

**Wintery Knight** · 18 March 2026 · Archived copy · Original

I was already a Christian by the time I made it to university, but I had never seen the sorts of sophisticated arguments that could be presented for Christianity. Somehow, I stumbled upon a website called Leadership University, and that pointed me to a whole bunch of Christian professors who had written essays on a wide variety of topics. From there, I was able to locate actual lectures they had given to students on university campuses.

Although I grew up in a trashy communist country, I was still able to order campus lectures on audio cassette or VHS video tape. I got them from Veritas Forum, Integrated Resources, Access Research Network, etc. So I was able to listen to and watch lots of lectures by Phillip E. Johnson, Michael Behe, Walter Bradley, Henry F. Schaefer, J. P. Moreland and of course William Lane Craig. Some of these recordings were actual debates between a Christian and a non-Christian. That's how I got serious about Christianity.

There is just something about watching a Christian professor get up on stage at a secular research university and deliver a lecture to non-Christian faculty, graduate students and undergrad students. And then take questions – that's the key part that's so different from church sermons and vacation Bible school. In the campus lectures, you can see hostile questions from non-Christian thinkers being handled gracefully by Christian scholars. Sometimes I wonder if the reason I stuck with Christianity this far is because of the non-traditional way that I learned about it.

Anyway, what made me think about this? Well, it was this interesting article written by physicist Dr. Brian Miller. We just had him on the Knight and Rose Show, to discuss fine-tuning and the multiverse. He just did some talks at a different universities, and I wanted to share what he wrote and the video of one of the talks with you.

Here's what he wrote:

> I recently had the privilege of speaking at High Point University, ranked the best-run university in the country, and at Duke University, my alma mater, on the cumulative case for God drawn from cosmology, the origin of life, and the centrality of information in biology.
>
> I was joined by Dr. Rice Broocks, whose training in philosophy and history complemented my scientific expertise. Over the past several years, we have also addressed students together at several other universities, such as Berkeley and MIT, engaging in questions at the intersection of science, philosophy, and Christian thought. Last year, I spoke at the University of Washington, and the presentation, along with the Q&A, was recorded. The consistently positive response reflects a deep hunger among students to examine foundational questions of truth, meaning, and purpose.
>
> Dr. Broocks and I labored to create an atmosphere in which listeners from any philosophical or religious background felt respected and safe to share their ideas.

So, the key part is that when you are on a non-Christian university campus then you really have to know your stuff. Because people who don't agree with you are going to ask you questions, and this is in front of a live audience, and the recording is probably going on the Internet.

Brian listed some of the questions that he was asked:

- How can we infer that Earth was designed if we do not know the total number of planets? I addressed this question in a recent article (here).
- In what ways can evolutionary theory be integrated with faith, and which evolutionary claims conflict with traditional religious beliefs?
- To what extent is modern science consistent with various religious doctrines?

- If God is an all-powerful creator who is directly involved in the world, why does so much evil and suffering exist?
- What role does evidence play in Christianity, if religion is supposed to be grounded in faith?
- Why should anyone even pursue the ultimate truth? Isn't skepticism the easiest option?

Have you ever heard any Christian leader in a church take questions from a non-Christian? Have you ever heard a Christian leader in a church even interact with non-Christian views? Have you ever heard a Christian leader in a church explain why people who go to church just *assume* that the Bible is authoritative? Most people who grow up in the church never hear questions, because most leaders in the church don't know how to answer them. And that does send a message to young people about the sort of thing that Christianity is. As J. P. Moreland says, most Christians see Christianty as a "faith tradition". But Moreland says that Christianity is actually a "knowledge tradition". Young Christians dump Christianity because a "faith tradition" grounded in community is easily swept away when they arrive at university and have a new godless community. But if they were trained to see why Christianity is a "knowledge tradition", then maybe they would be a bit more resilient.

Anyway, back to Dr. Miller. Here's a lecture where Dr. Miller shares reasons and evidence for the core claims of his Christian worldview:

Here's the summary:

- evidence for an origin of the universe
- evidence for cosmic fine-tuning
- evidence for habitability fine-tuning
- evidence from the origin of life
- refutation of naturalistic alternatives

So, there is a "show your work" approach to Christianity that is going on outside of the church / family environment. That's how I learned about it, and I'm still taking Christianity seriously even nearing my wealthy early retirement years, where I don't have any felt needs. People who stick with Christianity over the long-term don't do it because of "needs" or "feelings". They choose it because it's true. Christianity actually makes life harder these days, because of the moral rules, the self-denial and the social disapproval. But real Christians like all that, because we want to suffer like Jesus suffered for obeying the Father. We like losing some of our autonomy for the sake of relationship and we like taking a loss to our reputations when we stick up for the Boss. Christianity is life on hard mode, and we like that. We want the deep vertical relationship more than we want the shallow horizontal relationships.

Let me know in the comments if you have any experience with campus lectures and debates contributing to your lasting faith.

# The secular left's hostility to conservative Christian parents

**Wintery Knight** · 20 March 2026 · Archived copy · Original

Our next guest on the Knight and Rose Show is Tyler O'Neil, who is the senior editor at Daily Signal. It's still in editing. Tyler is an expert on the SPLC, and monitors threats to religious liberty. Well, he had back-to-back articles this week exposing two different ways that the secular left showed their hostility to family integrity and parental authority. I thought it would be worth putting these together into a blog post, so you can read about them, too.

The first Daily Signal article was from March 18th, and it talks about a new program designed to indoctrinate young women in wokeness:

> The organization that sets the agenda for the 130,000 school counselors across the U.S. just promoted a left-wing activist program that advocates for transgender ideology and critical race theory, according to a new report.
>
> "While the American people are actively rejecting the harms of transgender ideology, the invasion of women's private spaces, and the culture of critical race theory, the American School Counselor Association is working overtime to install these very same radicalisms into our daughters," Alvin Lui, president of the conservative group Courage Is a Habit, told The Daily Signal.
>
> The American School Counselor Association, which counts about 42,000 of the nation's estimated 131,230 school counselors as members and which releases guidance for the entire profession, held a Feb. 19 webinar promoting the Lean In Girls program. The Sandberg Goldberg Bernthal Family Foundation, founded by former Meta COO Sheryl Sandberg, launched Lean In Girls as a leadership program for girls ages 11-15.
>
> […]The handbook's section on "Gender Inclusion" warns facilitators that "some teens in the program may identify strongly with being a girl, while others may be exploring their gender identity or may feel uncomfortable with the label 'girl.'" The section recommends resources from the Southern Poverty Law Center, the British LGBTQ nonprofit Stonewall, and GLSEN (which rebranded to GLISTEN in February).
>
> […]Courage Is a Habit also faults the handbook for promoting critical race theory, the idea that American society is systemically racist despite the progress of civil rights laws and that it requires fundamental change to root out "white supremacy."
>
> "Group facilitators are directed to rank themselves and each other on an intersectional hierarchy of oppression, a textbook critical race theory exercise that divides children by race, sexuality, and perceived victim status—all disguised as harmless 'mental health' support," the Courage Is a Habit report states.

The second Daily Signal article has to do with how secular leftists in government view the parents who pay their salaries:

> When the Biden administration turned its attention to concerned parents in the fall of 2021, the Central Intelligence Agency drafted a memo warning about white racial extremists recruiting women for "traditional motherhood" and "homemaking."
>
> The CIA produced an intelligence assessment focused on "women advancing white racially and ethnically motivated violent extremist radicalization and recruitment" on Oct. 6, 2021.
>
> […]The CIA warned about the "great replacement" theory, which it framed as extremist.
>
> "White REMVEs and their sympathizers have claimed in online posts that it is essential for white families to have as many biological children as possible to counter the rising birthrates among non-white populations, white REMVEs allege that this rise is a conspiracy, which they have termed the 'great replacement,'" the assessment states.

> The CIA discussed a specific organization—the identity of which has been redacted—and noted that this group "has lauded motherhood and homemaking as women's most important responsibility."

Now, I work with a fair number of conservative Christians. They love to read people like Russell Moore and David French and Tim Keller and JD Greear. If I had to summarize what their worldview is like, I would say that they are experts at Netflix, Star Trek, Disney and especially Star Wars. When I talk to them about these threats to religious liberty and parental authority, they say "I don't want to get involved in the culture war, I just love everybody". They just don't believe that corporations or governments could ever interfere with their ability to live out Christian life plans. They just "love everybody". But their taxpayer dollars are going to pay the salaries of powerful people who don't love them.

I think it's something that we all need to think about. You might not be interested in fighting the secular left, but the secular left is most definitely interested in fighting you. We should be learning from what happens to Christians in places like Canada, the UK, Australia, New Zealand, etc. and make sure that it never happens here. Part of that is going to be voting conservative, but part of that is surely convincing others to vote conservative, too. And you're not going to learn how to do that from Star Wars. Instead of feeding at the trough of popular culture like good little piggies, Christians are going to have to work a little harder and learn how to discuss policy issues.

# Terrell Clemmons and J. Budziszewski: Why smart people embrace delusions

**Wintery Knight** · 25 March 2026 · Archived copy · Original

Terrell Clemmons was a recent guest and guest co-host on the Knight and Rose Show. I noticed she has not one, but FOUR new articles on the Discovery Institute Science and Culture website. I waited until all 4 had been published to write about the series. It's about the intellectual journey of J. Budziszewski from nihilism back to Christianity. He is a professor of government and philosophy at the University of Texas at Austin.

Our regular host of the Knight and Rose Show (Desert Rose) *loves* Jay's books. She is using them for her D. Min thesis, which is about natural law. Jay actually has a new book out about 30 popular beliefs that are completely false. The book explains *why people believe* delusions and also offers suggestions for avoiding delusions.

The first article in Terrell's series is here. It talks about the new book:

> In 30 succinct chapters, Budziszewski addresses 30 delusions related to virtue and happiness, politics and government, family and sexuality, God and religion, even human nature and reality itself. He doesn't polemicize for "sides" on the controversial subjects nearly so much as help us think through falsehoods clouding our current milieu.

As soon as I read what the book was about, I wondered if he was going to talk about how people form their beliefs based on what is easy, convenient and popular with their social groups. And he does, as we will see.

Here is the second article. This one is about Jay's spiritual journey:

Terrell asks:

**After all that, how did you come to profess Christian faith once again?**

And here is part of Jay's answer that I liked:

> I hadn't *lost* my faith by a rational process either. I just thought I saw through it. In my milieu, all the smart people didn't believe in God. And I unconsciously wanted to believe I was one of the smart people. There were many other things that pushed me away from faith, but that's one example of my own motivated irrationality. Another is that I'd committed some sins. I didn't want to face God, so I stopped believing in him. That's irrational, too.

I've now spent over 27 years in the IT industry, including internships and summer jobs. I have met *so many people* who grew up in intact Christian homes, some who went to Christian private schools, who abandoned their Christian faith the minute they hit college. When I ask them what the arguments and evidence were that changed their minds, it is almost universally two things. 1) I wanted to be seen as smart by the new social group, and 2) I was away from home for the first time and didn't want to follow moral rules. That's it. I mean, part of it is that their entire Christian upbringing had never been grounded on a stitch of evidence, but those are the two reasons I get the most often.

Here's the third article. This one talks about how people suppress moral knowledge, which is something Jay did during his lost years.

Terrell asks:

**Speaking about things that are inherent to being human, you've also written that "the longing for truth, for purity, for lightness is indestructible," but that at the same time, "the fear of truth, of purity, and of lightness is also very strong." How do you see this play out in your observations of human interactions?**

And here is the part from Jay's response that I liked:

> Freud talked about the suppression of libido — his term for the sexual drive — and all the crazy things that he thought happened to us when libido is suppressed. But I don't think he knew the first thing about it. Because the drive I have in mind — this inclination to know the truth, especially the truth about God — may express itself in indirect or distorted ways when we suppress it. By suppressing it, I mean, for example:
>
> - I don't want to know the truth about God because I would have to change.
> - I don't want to know the truth about God because I would have to admit that I was wrong.
> - I don't want to know the truth about God because it puts me to shame.
> - I don't want to know the truth about God because he's so good that it scares me. I don't want him to be that good. I don't want him to love me that much, more than I love myself.
>
> We do suppress the desire for the truth, and the consequences of suppressing the desire for the truth are far more potent and powerful than the consequences of suppressing libido.

One of the Bible passages that I found so amazing as a kid growing up in a trash communist country was Romans 1. Romans 1 is the kind of chapter that has the ability to yank a kid out of the atheistic communism he is surrounded by (parents, teachers, government, etc.) and propel him to move to the reddest state in the United States of America. By any means necessary. You should read Romans 1 and make everyone you know read it. It is the "magic glasses" that turns the ship around. Whether you agree with it or not, it describes the way the world really is.

But aside from that, I just want to point out that many famous atheists agree with Jay about the suppression of truth. I wrote about a bunch of them in this old blog post from 2011. Wow! That was a long time ago.

And finally, the fourth article. This is about how morality is related to public policy and government.

Terrell asks:

**On your blog, you have called wokeness "status signaling," as opposed to "virtue signaling." What did you mean by that?**

And this is the part of his reply that I liked best:

> I saw a pair of bumper stickers on the right and left side of a back bumper. One said, "Save the laboratory animals," and the other said, "I'm pro-choice, and I vote." The driver wanted to save the little bunnies, and not have them hurt, for example, by having cosmetics put in their eyes for testing. But she didn't want to save the little humans. There wasn't much penetrating thinking about right and wrong there, but there was a very sharp awareness of what was acceptable in her milieu and of what attitudes would give her approval among people in it: "The people that *I* associate with would never say it's wrong to have an abortion, or that it shouldn't be a woman's choice. That's just not done."
>
> You can see this in Austin, a sort of ideological hothouse populated largely by woke professional classes. They're all imitating each other and imitating each other's attitudes. It's about conformism. It's much more about that than about conscience.

My friend Bonnie told me recently that she never met a person who believed more in "engineering belief". I engineer my own beliefs and the beliefs of others by making choices about what to consume, and meddling in what other people consume, too. So, for me, I don't watch anything on TV, streaming services, and new movies (unless they are war movies like Midway (2019) and Greyhound (2020). I was forced to watch the first Star Wars movies as a kid, but I've never seen any of the new ones.

On the other hand, I fill my head with good stuff like Shakespeare, Jane Austen, free-market economics and military history. If I want to build up another Christian, I buy them the books that I want them to read, like Thomas Sowell books, and then I give them rewards for reading them. Or, I take them to places and do activities where they

have a practical experience of gaining knowledge or solving a problem. This is how I build up their resistance to the sorts of social pressures that Jay talked about. And it works on other people. One of my friends loves Salvo magazine, so I bought her 25 back issues because it's her birthday this week. I'm trying to level her up.

I think that when it comes to anything in life, if it is important to you to believe it, then it should be important to you to show your work. And before you can show your work, you have to do your work. If you want to change your mind about something, the best thing to do is to read the best books you can understand and watch or listen to debates. And test it for yourself. That way, you can explain how you arrived at your beliefs. That process almost always makes you resistant to the surrounding culture. And that means you are one step ahead of the people who just believed whatever was easy and convenient.

Unfortunately, most people who grow up in Christian homes don't get the idea that the process of doing your work is important. We have to fix that.

# Bad news for liberty in Canada and Finland, but good news in America

**Wintery Knight** · 27 March 2026 · Archived copy · Original

I saw quite a few interesting stories about free speech and religious liberty in the news this week. It's always a shock to me to hear some Christian leaders say that Christians shouldn't care about policy and politics. Some even say "Jesus doesn't care about politics". I can only think that these people are naive and have small life plans. If a Christian is serious – i.e. has life experience and a big life plan – then he or she will care about policy and politics.

Here's the first scary story from Finland, reported by Tyler O'Neil in the Daily Signal. Tyler is actually going to be our guest on the next episode of Knight and Rose Show, which is coming out this Saturday morning.

He writes:

> Attorneys are warning about the "severe chilling effect" of the Finnish Supreme Court's ruling against Päivi Räsänen, a Christian member of Parliament who long faced hate speech charges for tweeting a Bible verse.
>
> The Supreme Court upheld Räsänen's acquittal for posting a Bible verse in 2019, but the 3-2 majority convicted her, along with Lutheran Bishop Juhana Pohjola, of hate speech for expressing their beliefs on Christianity and sexuality in a 2004 church pamphlet.
>
> […]"In order to protect the dignity and equality of homosexuals, it is necessary to exclude Räsänen's statements from freedom of expression by interpreting them as punishable hate speech directed at them [homosexuals]," the prosecution wrote.

Here's the second article about one such country – Canada. This is from the Catholic Register:

> Bill C-9, the Combatting Hate Act, advanced to the Senate tonight. The House of Commons adopted it with a 186-137 vote at third reading.
>
> […]Campaign Life Coalition (CLC), the political arm of the Canadian pro-life movement, was one of many groups that mobilized Canadians opposed to the amended C-9 by executing a petition campaign and by hosting a press conference on Parliament Hill on Feb. 13 alongside 4 My Canada, CitizenGo and Campaign Québec-Vie.
>
> David Cooke, a Christian pastor and CLC's campaigns manager, warned that "with the passage of Bill C-9 in the House, Christians and pro-life advocates will almost certainly face an entirely new level of hostility, as the door swings open to actual persecution under a cloak of supposed legality."

OK, now for some good news about a country where Christians have wise in their political activities, and benefit from good policy.

This is from the Tyler O'Neil in the Daily Signal again:

> During the COVID-19 pandemic, federal health agencies and the White House under President Joe Biden pressured social media companies to censor speech that contradicted the federal government's narrative, but two Republican attorneys general secured a consent decree Tuesday that will prevent the government from returning to that "Orwellian" strategy.
>
> […]The consent decree notes that the federal government "unlawfully pressured, coerced, induced, and encouraged major social media platforms to censor their posts" about the pandemic, the reports about Hunter Biden's laptop, and the 2020 presidential election.
>
> […]The consent decree, which will end the litigation from Missouri and Louisiana, binds the surgeon general,

> the Centers for Disease Control and Prevention, and the Cybersecurity and Infrastructure Security Agency from taking any actions "to threaten social media companies with some form of punishment (i.e., an adverse legal, regulatory, or economic government sanction) unless they remove, delete, suppress, or reduce, including through altering their algorithms, posted social-media content containing protected free speech."
>
> The decree will last for a period of 10 years, well past the next administration.

Well, how did we get this amazing consent decree? We got it from the voters who voted for Louisiana Attorney General Liz Murrill and Missouri Attorney General Catherine Hanaway. It was these two ladies who challenged the federal government to stop threatening social media companies unless they censor free speech that is critical of government policies. That's how we get good policy – we vote for it. We advocate for it.

By the way, Rose and I did an entire episode to about Christians taking politics seriously entitled "Does Jesus Care About Politics? Why Policy Matters". Please check it out.

And please check out our newest episode with Tyler O'Neil on free speech and religious liberty when it comes out tomorrow. After that one, we have an episode on health care policy, where Rose and I compare American health care to health care in other countries, and propose a policy that will make American health care much better.

# Knight and Rose Show #74: Tyler O'Neil: Religious Liberty and Free Speech

**Wintery Knight** · 28 March 2026 · Archived copy · Original

Welcome to episode 74 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose welcome Tyler O'Neil from Daily Signal to discuss the state of religious liberty and free speech in America. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Tyler O'Neil to address the state of religious liberty and free speech in America. They discuss how organizations such as the Southern Poverty Law Center demonize conservative Christians by equating them with extremists. O'Neil explores the SPLC's influence on corporations, government, and law enforcement. He critiques this bias against Christianity and encourages Christians to stand firm in the public square.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 74:**

**Speaker biographies**

Tyler O'Neil is the Senior Editor at The Daily Signal. He is the author of two books: "Making Hate Pay: The Corruption of the Southern Poverty Law Center" (2020) and "The Woketopus: The Dark Money Cabal Manipulating the Federal Government" (2024). A graduate of Hillsdale College, he is an Eagle Scout, husband, and father. He frequently covers topics like free speech threats, government weaponization against conservatives, and cultural issues, often testifying before Congress on these matters—such as in December 2025, where he highlighted attempts by leftist groups to silence him.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Why do so many atheist historians think that 1 Corinthians 15 is reliable history?

**Wintery Knight** · 1 April 2026 · Archived copy · Original

Which passage of the Bible is the favorite of Christians who like to defend the Christian worldview? I don't mean which one is most inspirational… I mean "which one is the most useful for winning arguments?" Well, when it comes to the historical Jesus, the most important passage has to be 1 Corinthians 15:3-7.

The tradition in 1 Corinthians 15 is an early creed that was received from the eyewitnesses Peter and John when Paul visited them several times in Jerusalem, as documented in Galatians 1 and 2, where Paul meets the eyewitnesses. And of course, Paul records his own eyewitness experience, documented in 1 Cor 15:8.

So, is this passage accepted as historically reliable by all ancient historians? Or only by the Bible-believing ones?

Here's something posted by Dr. William Lane Craig about the 1 Corinthians 15 passage:

> The evidence that Paul is not writing in his own hand in I Cor. 15.3-5 is so powerful that all New Testament scholars recognize that Paul is here passing on a prior tradition. In addition to the fact that Paul explicitly says as much, the passage is replete with non-Pauline characteristics, including, in order of appearance: (i) the phrase "for our sins" using the genitive case and plural noun is unusual for Paul; (ii) the phrase "according to the Scriptures" is unparalleled in Paul, who introduces Scriptural citations by "as it is written"; (iii) the perfect passive verb "has been raised" appears only in this chapter and in a pre-Pauline confessional formula in II Tim. 2.8; (iv) the phrase "on the third day" with its ordinal number following the noun in Greek is non-Pauline; (v) the word "appeared" is found only here and in the confessional formula in I Tim. 3.16; and (vi) "the Twelve" is not Paul's nomenclature, for he always speaks of the twelve disciples as "the apostles."
>
> Now the visit during which Paul may have received this tradition is the visit you mention three years after his conversion on the road to Damascus (Gal. 1.18). This puts the tradition back to within the first five years after Jesus' death in AD 30. So there's not even an apparent inconsistency with Paul's appropriating the language of the formula to encapsulate the Gospel he was already preaching during those first three years in Damascus.

Ancient historian Gary Habermas loves to read non-Christian scholars… and then he writes about what THEY think about Jesus in peer-reviewed articles, published in academic journals. Let's look at this one: *Dialog: A Journal of Theology, Vol. 45; No. 3 (Fall, 2006), pp. 288-297; published by Blackwell Publishing, UK.*

He writes:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: "However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul's."[3]
>
> (2) In addition to Paul's own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the

> proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all significant. Fuller attests to the unanimity of scholarship here: "It is almost universally agreed today that Paul is here citing tradition."[4] Critical scholars agree that Paul received the material well before this book was written.[5]

**This is important:**

> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul's use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus' resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).

He's an eyewitness (verse 8), and he met with the other eyewitnesses, James and Peter. 1 Corinthians is early. Galatians is early. The creed is extremely early – right after the events occurred. There was no time for legends to develop.

And atheistic / critical historians agree, the creed is reliable:

> Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it "indubitably goes back to the oldest phase of all in the history of primitive Christianity."[7] Joachim Jeremias agrees that it is, "the earliest tradition of all."[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even "in use by the end of 30 AD . . . ."[9]
>
> Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . ."[10] Similarly, Michael Goulder thinks that it "goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion."[11] Thomas Sheehan agrees that this tradition "probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion."[12] Others clearly consent.[13]
>
> Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul's reception of this report relatively soon after Jesus' death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.
>
> (3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, "Evidently the tradition of I Cor. 15.3 had been subjected to many tests" by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul's account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his

> firsthand, direct approval of their resurrection message.

Now, some of the people he lists are really biased against the supernatural, and they really hate the idea that the claims of Christianity exclude other religions. And yet they don't deny the historical reliability of 1 Corinthians 15, or that it is based on eyewitness testimony.

That's why when you watch debates about the historical Jesus, you see skeptical historians like Bart Ehrman, Gerd Ludemann, James Crossley, Michael Goulder, etc. accepting that the disciples thought they saw Jesus after his death. They're not just being nice to Dr. Craig when they give him that. They are forced to accept it, because it passes the historical tests. Every Christian ought to be aware of which passages of the New Testament are seen by the broad spectrum of ancient historians as "historical", regardless of their various biases. You can believe everything in the Bible. But when you debate non-Christians, you have to use the historical core of Christianity which successfully passes historical analysis.

You can see the creed used as evidence in the debate between James Crossley and William Lane Craig.

# New study: Adolescents have worse mental health after transgender treatments

**Wintery Knight** · 8 April 2026 · Archived copy · Original

Just last week, a new large-scale study was published about what happens to the mental health of adolescents who get transgender treatments. It was published in the journal Acta Paediatrica. The data comes from gender identity clinics in Finland. I waited a few days to see what the response from critics would be and it's been surprisingly muted. I always blog about studies that will help me to debate these issues, and I think this is a good one.

So, I looked at the Results section of the Abstract, and it says this:

> Gender-referred adolescents showed significantly higher psychiatric morbidity than controls both before (45.7% vs. 15.0%) and ≥ 2 years after referral (61.7% vs. 14.6%). Those referred after 2010 had greater psychiatric needs than earlier cohorts, both before (47.9% vs. 15.3%) and ≥ 2 years after (61.3% vs. 14.2%) referral. Among adolescents who underwent medical gender reassignment, psychiatric morbidity increased markedly during follow-up—rising from 9.8% to 60.7% in feminising gender reassignment and from 21.6% to 54.5% in masculinising gender reassignment. After adjusting for prior psychiatric treatment, all gender-referred adolescents had similarly elevated risks of psychiatric morbidity, with hazard ratios approximately three times higher than female controls and five times higher than male controls.

I say large-scale, because the study compared 1) 2,083 people who were referred to gender identity clinics in Finland before age 23 to 2) a control group of several similar people in the general population. And this was over a long period of time – 1996 to 2019. I think the abstract explains the findings pretty well. People who got referred to gender identity clinics for treatment had MUCH higher mental health problems than the general population.

I asked a nice lady on Twitter who works for SEGM (the Society for Evidenced Based Gender Medicine) for a good write-up on this study, and she pointed me to a Substack article by Benjamin Ryan, who specializes in this area. He had some interesting context about the study.

He writes:

> The Finnish study's four coauthors have published some of the strongest scholarship challenging the assertion that providing them to adolescents improves their mental health and is life-saving. All of these Finnish investigators were also coauthors of a paper published in 2024 that found that there was no independent, statistically significant association between taking cross-sex hormones and the rate of suicide deaths among youths attending gender clinics.

The 2024 article that he's talking about was in a different medical journal, BMJ Health. One of the four authors was actually one of the pioneers of gender transitioning treatment. She was all for it, until she got far enough into it that she realized that it wasn't working out as expected.

Sometimes, you do see studies where people report that they feel better about getting transgender treatment in the short term. But what really matters is the long term. And also, it is important to measure outcomes using objective measurements, rather than self-reported "satisfaction". Objective markers are things like doing well in school or holding a steady job.

The Ryan article has a nice summary of what we've found so far in the research:

> Systematic literature reviews—the gold standard of scientific evidence—have all found that the research backing the use of puberty blockers and cross-sex hormones to treat gender dysphoria in youths is weak and unreliable. It was due in part to Dr. Kaltiala's influence that Finland conducted its own systematic literature

> review of pediatric gender medicine. Given the review's findings, the nation has sharply restricted youths' access to gender-transition interventions.

I've blogged before about several countries that are pulling back from transitioning children. But here in America, the left isn't really driven by scientific studies. They are in some sort of mad rush to virtue signaling by celebrating actions that are not in the child's best interest. They want to prove how moral they are by tolerating the maximum number of behaviors. But some behaviors are harmful and should not be tolerated.

And this was the interesting part:

> The gender-dysphoric youths who did undergo gender-transition interventions arrived at the gender clinics with a much lower rate of previous use of specialist psychiatric care: 10 percent among natal males and 22 percent among natal females. But notably, two years or more after their first gender-clinic appointment, this group's use of specialist psychiatric care shot up, to 61 percent among the natal males and 55 percent among the natal females.

So, if you go ahead with the transition treatments, it made your mental health worse than when you started.

I think this is a good study to keep around when you have to debate this issue. Please continue to debate this issue, because we want to save these children from doing anything that will cause them harm in the long term.

# My recommended strategy for preparing Christian kids for college

**Wintery Knight** · 15 April 2026 · Archived copy · Original

In the last two weeks, I have been gathering information about the problem that Christians parents face when they send their Christian-raised kids to college. Specifically, I met some excellent Christian parents who seem to have done a great job of raising their kids in private Christian schools and had good consversations with them about policy and apologetics. Yet, these kids still dumped their faith and their conservatism in college. What to do?

Well, I can only go off of what I have seen from people in my workplace who were raised in red states, in intact married homes, in private Christian schools, and so on and then left the faith in college. And the problem seems to be twofold. 1) They don't want to have any "the Bible says" moral limitations on their pursuit of pleasure. And 2) They don't want to counter claims about the world that disagree with the Bible with "the Bible says".

There are varying degrees of going along with the secular left. Some kids are just desperate to rebel either in moral issues or in claims about reality. Some kids just have honest intellectual doubts about the Bible's teachings on moral issues or truth claims.

So, in this post, I thought it might be a good idea to look at how kids have pressure placed on them at college, and how to counter it.

So, on moral issues, usually any sorts of limitations on the pursuit of pleasure are going to be seen as "mean". Do you disagree with cohabitating before marriage? Oh, then you are mean. Do you disagree with same-sex marriage? Oh, then you are a bigot. Do you disagree with reckless sex leading to abortion? Oh, then you are anti-women.

How to deal with this? So, most students raised in the church either capitulate to this immediately, because that's easier, or they just hide their Christian convictions, because "the Bible says" isn't a good answer to "you're a mean bigot". So, in that case, it's probably a good idea to teach your children early on that it's possible for people to put pressure on you to agree with them about moral issues while still being wrong about those moral issues. For example, for abortion, you can defend your view using the science of embryology. For cohabitation, you should have a study or two showing that cohabitation has higher instability and worse outcomes for kids. For same-sex marriage, you can point out how removing marriage norms like gender complementarity impacts children.

But I also think that it's important to prepare children for the challenges to truth claims. And what I was thinking for this is that children need to be given a "clear case" where the secular and leftist opinions that dominate on campus are proven to be factually incorrect.

Regular listeners to the Knight and Rose Show will know that we urge all Christian apologists to add economics to the list of topics that they study for apologetics. A good grasp of economics is useful for being able to see that the dominant opinions on campus (socialism, communism, etc.) produce BAD results in the real world. You can even compare countries that went from capitalist to communism (e.g. – Venezuela) to countries that went from communist to capitalist (e.g. – Chile).

And what this does is that it makes it crystal clear to your Christian kids that not everything they hear on a college campus is correct. E.g. – when their same-age peers call them "mean" for opposing minimum wage hikes, those peers could be wrong. And when their college professors call them "mean" for opposing replacing nuclear power with solar and wind, they could be wrong too. It's possible that the people you meet on college campuses don't know how reality works.

Here is a nice recent article by David Harsanyi in the New York Post that makes the case for this second type of college preparation.

> In 2023, over 100 leading economists from around the world, including progressive darling Thomas Piketty, signed a letter warning that "far-right" Argentine presidential candidate Javier Milei's policies, which were "rooted in laissez-faire economics," would cause "devastation," spike inflation, expand poverty and worsen unemployment.
>
> Celebrated economists never penned any open letters warning that the preceding Peronists' or Kirchnerists' perverse blend of fascism, socialism and unionism would drive Argentina — once one of world's wealthiest nations — into destitution, unemployment, soaring inflation and bankruptcy.
>
> Under Milei, political scientist Ian Bremmer warned, "Economic collapse is coming imminently."
>
> Felix Salmon, then chief financial correspondent at Axios (now at Bloomberg), argued that Milei's "wrecking ball" policies would plunge Argentina into "a deep recession."
>
> When the United States provided Argentina with a $20 billion currency swap line last year, former New York Times columnist and Milei critic Paul Krugman argued that there's "no plausible scenario in which even $20 billion in US loans will save Javier Milei's failing economic strategy."

So, imagine your Christian student gets to campus, and the professors are telling them how wonderful socialism is and how well it works, and quoting all these famous leftist economists like Piketty and Krugman. It would really help them to know what these elites said about Argentina before Milei took over, because look at how wrong they were.

So here is what happened, starting with the $20 billion in US loans:

> Argentina only tapped around $2.5 billion of that funding, and then fully repaid the loan in January with interest, far ahead of schedule.
>
> Well, Argentina's 2025 GDP also blew past expectations, growing 4.4%, the highest in years.
>
> The International Monetary Fund expects the GDP will grow at similar rates in 2026 and 2027.
>
> Since Milei's party won power in 2023, inflation has dropped nearly 200 percentage points, plunging to the lowest level in eight years.
>
> it had a fiscal surplus for the second consecutive year in 2025, marking the first time since 2008 that it accomplished that feat — and the poverty rate dropped significantly in 2025, reaching its lowest level since 2018.
>
> The crisis Milei took on was stark: In the first half of 2024, around 52.9% of the population was living in poverty, with 18% in extreme poverty.
>
> Poverty fell 14 percentage points, to 38%, last year. It is at 31% now.
>
> Milei did all this the old-fashioned way.
>
> He removed price controls, got rid of tariffs and opened trade, privatized a slew of government-run agencies, cut red tape, weakened union monopolies, made major cuts in spending and eliminated an array of needless state jobs.
>
> In other words, all the usual stuff that free marketers preach will work — and experts warn us will bring on Armageddon.

Why is this important? Because this is an evidence-based refutation of economic views pushed by students and professors on campus. When your kids understand clearly their peers and professors are blabbing about things that are known to be false, they won't feel so much pressure to agree with them on moral issues or other truth claims that contradict Christianity.

I talked to some Christians about my idea. Some liked it and some didn't like it. The engineers all liked it. The ones who didn't like it didn't like the idea of treating Christianity as a knowledge tradition – a set of claims about the world that are true. They wanted to treat Christianity as something subjective – it's about my feelings, or it's about my family, or it's about my community. They wanted to insulate it from logic and evidence. But this fails because feelings, family and community are not going with the kids to college.

So, I recommend taking the truth-focused approach. That's why on the Knight and Rose Show, we cover topics like economics, energy policy, education policy, and so on. Our next show, which comes out this Saturday, is on health care policy. And in that one, we are again countering the teachings of the secular leftist elites by opposing government-run health care and promoting a free-market alternative. And we will do it with evidence.

By branching out into these other areas of knowledge, your children will understand that Christianity is seen by you as "knowledge". And when they compare what you taught them with what their peers and professors believe, they will say "well, I have reasons to doubt these people on other topics, so why would I have trouble doubting them on Christian worldview topics?". All the name-calling and peer pressure in the world isn't going to convince anybody that communism worked in Venezuela and capitalism failed in Chile.

I also do something similar with people who hate America's history when I bring up American's noble wars against totalitarianism, e.g. – the Korean War, the Vietnam War, the Marshall Plan, etc. Or our war against cruel Japanese imperialists and genocidal German socialists in WW2. That's another way that you can insulate your kids – by teaching them about all the good things that America has done. Take them to the museums and show them what America has done for other countries.

The key point is that your kids need some area where they have worked through the facts themselves, so they will not be easily moved by shaming and rhetoric.

# The Best State: Tennessee designates June as “Nuclear Family Month”

**Wintery Knight** · 17 April 2026 · Archived copy · Original

One of the reasons why we have 50 states in America is so that we have 50 little laboratories where we can run public policy 50 different ways and see which way works best. There are lots of ways to measure which states are best: tax rates, cost of living, crime rates, school choice, energy production, fiscal health, business climate, concealed carry laws, etc. And certainly social conservatives will want to live in a state that respects marriage and family.

Well, it’s hard to see how any state could ever beat Tennessee on that last criterion. Tennessee was already best in the nation on protecting the unborn. And their rock star attorney general Skrmetti recently won a landmark case protecting children from transgender activism at the Supreme Court. But now Tennessee is the best on marriage and family, too.

Here’s the latest news from Breitbart:

> Tennessee Gov. Bill Lee (R) signed a resolution that designates June, considered “Pride Month” by some, as “Nuclear Family Month,” noting that the nuclear family “is God’s design for familial structure.”
>
> The resolution states that “the nuclear family, consisting of one husband, one wife, and any biological, adopted, or fostered children,” has “been the bedrock of society” since God created the world.
>
> The nuclear family is also described as having been “the basic building block of Tennessee’s society throughout her formative years,” and as having “built the United States of America.”
>
> It continues to affirm that “the nuclear family built the United States of America and created prosperity within our nation[.]”
>
> The resolution also points out that “fatherless families are four times more likely to live in poverty than married-couple families,” and that children who grow up in homes without fathers “are ten times more likely to abuse chemical substances” and have mental health and behavioral problems.”

It’s very important to make these declarations, because they start conversations about these issues. In addition, secular leftists might want to move out of Tennessee, and Christians conservatives might want to move in. Tennessee has a lot of achievements in the area of social conservatism, like the one I mentioned earlier. And one other good thing is that declarations like this allow you to see what the secular leftist legislators really think. I bet a lot of rank and file Democrats think that Democrat legislators believe in marriage and family. But do they? Let’s see how they voted.

Rose send me an article about this from her favorite news source, Daily Wire, and they had some additional details that I thought were interesting. For example, they said this:

> The resolution easily passed the Republican-dominated state legislature, clearing the House 72-18 last year and passing the Senate 26-4 last month.

I asked Grok who voted no, and Grok confirmed that all the no votes came from Democrats. Why is this interesting? Because a lot of non-traditional Democrat women fancy that “some day” they will all have handsome, traditional husbands who will protect and provide for them in a permanent exclusive marriage. They think that they deserve such a marriage, that their voting for Democrats is compatible with that end result. But the people these women vote for DO NOT believe in marriage. They DO NOT believe in husbands. They DO NOT believe in children. They DO NOT believe in homes, home-making, fidelity or permanence. I see so many non-traditional women complaining that the secular leftist men they are attracted to (for permissiveness) cannot be trusted to act

like traditional men. They simply don't understand that they can't be non-traditional and vote non-traditional and just claim traditional men and traditional benefits after spending their whole lives voting against those men and those traditional male roles.

More from that article:

> Leftist organizations expressed outrage after Lee signed the resolution last week. The LGBT activist organization GLAAD called Tennessee lawmakers who passed the resolution "clueless."

That's what leftists really believe – but somehow, leftist young women vote for these people and then act surprised when they cannot find a man who takes marriage and parenting seriously. There just isn't a way for a self-centered narcissist who dismisses all the obligations of healthy relationships to attract a slave who will perform all of the traditional obligations of healthy relationships. The policies passed by Democrat legislators and lobbied for by Democrat-aligned activists destroy the supply of good men and make marriage risky and costly and unattractive to good men.

So what about Tennessee as a state?

> Tennessee was among the first states to ban gender procedures on children, prohibit schools from hiding children's gender "transitions" from parents, and crack down on drag queen performances in public or in settings where children are present.

I did an evaluation of Tennessee and other states when I got my green card and had to decide where to live. I had columns for Cost of Doing Business, Infrastructure, Economy, Business Friendliness, Cost of Living, Tax as a Percentage of Income, Family Structure, Laws against same-sex marriage, Pro-life protections for unborn babies, Self-defense against criminals, Concealed Carry laws, Fiscal Health, etc. I got the numbers from rankings by CNBC, Mercatus Center, Guns and Ammo, Pro-life groups, and so on. Overall, Tennessee came out #1, edging out Texas (#2) and Utah (#3). Since then, they have improved many of those numbers.

Let me show you some examples.

I used the 2015 Mercatus Center fiscal solvency ranking, which ranked Tennessee at #9. They did another ranking in 2018, and this time Tennessee was ranked #3. I did a quick check to see how Tennessee is doing today. One ranking has them at #3 and another ranking has them at #2.

I also rated all the states for gun rights and concealed carry. The Guns and Ammo rankings from 2015 had Tennessee at #23 for gun rights. In Guns and Ammo rankings from 2023, Tennessee is #8 for gun rights.

I also rated all the states for pro-life legislation. In 2015, Tennessee got ranked #18 by Americans United for Life. In 2025, Tennessee got ranked #6 by Americans United for Life.

So, if I had Tennessee at #1 in 2016 and since then many of their numbers have *improved*. The legislators in TN don't understand the meaning of "good enough". They hear about something bad that happened in another state or at the federal level and they think "we've got to pass a law so that it never happens here". It's important to live in a state that takes Christian and conservative values seriously. You don't want to be paying taxes to secular leftists to rule over you and ruin your life. They are stupid people and so they don't deliver good results.

# Knight and Rose Show #75: Improving Healthcare: A Christian Perspective

**Wintery Knight** · 18 April 2026 · Archived copy · Original

Welcome to episode 75 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose evaluate health insurance options in America, discuss moral concerns, and offer reforms to lower prices and improve quality. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose explore healthcare policy in America from a Christian perspective. They discuss moral concerns, such as stewardship of resources and impact on religious liberty. Health insurance options are evaluated, focusing on costs and access to care. Single-payer healthcare models in Canada and the UK are critiqued. Finally, they advocate for consumer-focused reforms including health savings accounts, price transparency, and competition.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 75:**

**Speaker biographies**

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Illustra Media's documentary on intelligent design in the fossil record is online

**Wintery Knight** · 21 April 2026 · Archived copy · Original

I must have given away dozens of those 3-DVD sets from Illustra Media that contained "Unlocking the Mystery of Life's Origin", "The Privileged Planet" and "Darwin's Dilemma". I wanted to send these to people as part of their "start doing apologetics" starter packs. Well, good news for my readers who didn't get a set from me. Now you can just watch the latest one for FREE on YouTube. I have all the parts (not the credits) linked below.

Here's part 1:

Here's part 2:

Here's part 3:

Here's part 4:

Here's part 5:

I checked to see what resolution they uploaded it at, and it's at 1080 pixel resolution – so very, very sharp.

If you have never seen an introduction to the argument for design from the fossil record, you won't find anything more gentle than this. A good follow-up to this would be this video on several "fossil record explosions" by Dr. Günter Bechly. Because it's not just the Cambrian explosion.

I just had a meeting with a bunch of my co-workers last week and I talked to a bunch of them about what they were doing to prepare their kids for college. Some of them had a good plan, and some of them had waited too long and kids were already lost to the secular left. So, it's very important to make sure that your kids have some sort of grounding in the evidence for intelligent design.

I would say that scientific evidence and a close study of economics are two of the best ways to insulate your child from the pressures they will face from the secular left at college. Don't rely on feelings and community when we have hard evidence available.

# James Tour, Stephen C. Meyer and John Lennox discuss “The Story of Everything”

**Wintery Knight** · 22 April 2026 · Archived copy · Original

Something very exciting just happened! By now, most people have heard about the new movie about intelligent design in the universe that is coming to theaters on April 30th through May 6. Well, I’ve been telling people at work about this movie and sending them links about various discussions about it with the people involved. The best discussion is this one led by Peter Robinson, and featuring James Tour, Stephen C. Meyer and John Lennox.

Here is the video:

I watched it in my “after cardio” after lifting weights on Tuesday. They covered 4 of the best scientific arguments for design: the origin of the universe, the cosmic fine-tuning, the origin of life, and the sudden origin of new body plans in the fossil record.

Here’s the description:

> Moving from the Big Bang and the discovery of cosmic beginnings, to the fine-tuning of the physical constants that make life possible, to the extraordinary complexity and information embedded in DNA, mathematician John Lennox, philosopher of science Stephen Meyer, and chemist James Tour, explores whether these developments point to blind, undirected processes—or to the activity of an intelligent mind. The trio challenges long-held materialist assumptions, revisits classic scientific debates, and reflects on what these questions mean not only for science but also for our understanding of human existence and purpose.

I noticed that our friend Terrell Clemmons has been publishing articles about the movie on the Science and Culture website.

She has three:

- The Story of the Discovery of the Beginning of All Things
- What Grand Design? On Stephen Hawking’s Loophole
- The Living Nano-Factory: Darwinists Ignore the Ultimate Information Enigma

These articles provide some helpful background to what you see in the discussion above, especially for beginners to the material.

Anyway, here’s a snip from her first article, which is about the origin of the universe:

> The self-existing-universe paradigm was discarded by the 1970s for the Big Bang model, which holds that the entire universe, including matter and energy and space and time (also called spacetime), began to exist at a zero point in finite history and has been expanding ever since. Until this zero point, nothing material existed.
>
> The human story of this 20th-century paradigm shift is fascinating, but the empirical findings that drove it are even more so. They are — dare I say — captivating. The Story of Everything, which we’ve been discussing here at Science and Culture Today, relates both the human narrative of the shift and the stunning discoveries that propelled it forward. The upcoming theatrical documentary relates more than just these developments, but that story alone is enough to captivate your mind with the wonder of it all.

I’ve always urged readers of this blog to present scientific evidence for creation and design as a series of discoveries made by real people. Discoveries that overturned the eternally-existing, not-designed views of the distant past. In that discussion I linked to above, they mentioned redshift and cosmic microwave background radiation. But they could also have added the light element abundance predictions – maybe those are discussed in the movie. The point

is that evidence piled up until it overturned the naive “eternal universe” view that is still held today by atheists who are holding out hope that the new science will all be reversed so they regain support their Old Time Religion.

Here’s a quote from the second article, which talks the naturalistic response to the evidence for the origin of the universe:

> In their 2010 book, *The Grand Design*, Stephen Hawking and Leonard Mlodinow set out to answer a big question: “Is the apparent ‘grand design’ of our universe evidence of a benevolent creator who set things in motion — or does science offer another explanation?”
>
> […]The thesis of *The Grand Design*, as stated in the closing chapter, is, “Because there is a law like gravity, the universe can and will create itself from nothing,” i.e., no designer required.
>
> The Story of Everything takes up Hawking’s and Mlodinow’s thesis on their own turf, so to speak. From the perspective of physics, does their “another explanation” add up to a viable case for the universe creating itself out of nothing?
>
> If you’ve never seen the Hawking-Mlodinow hypothesis refuted in a debate or lecture, you’re going to see it in “The Story of Everything”. Honestly, I don’t see how a law of nature – a description of the behavior of matter – can instantiate matter itself. Not to mention fine-tuning that allows the universe to support complex, embodied intelligence.

Here’s the third article, which talks about the biological information that has to be present in the first living system in order for it to perform the minimal functions of life:

> In the 1950s, James Watson and Francis Crick elucidated the structure of the DNA molecule and its information-bearing properties. From that starting point, scientists went on to discover how the chemical subunits on the “rungs” of the DNA “ladder” function like alphabetic letters in a language and how the information they bear directs protein synthesis in the cell.
>
> The Story of Everything, the upcoming theatrical documentary based on Stephen Meyer’s Return of the God Hypothesis, explains the marvelous information processing that operates inside the cell. For every protein molecule synthesized, the operations include deciphering and copying information from a specific segment of the DNA strand, lining up in correct sequence the required amino acids according to the segment’s specifications, and folding the resulting amino-acid chain into the exact shape necessary so that the molecule can perform its specific task in the cell. The process is comparable to a sophisticated factory production line, with everything running automatically according to preexisting coded instructions. Without it, or without the information that runs it, there would be no life on planet Earth. Zip. Nada. It must have been present, too, in Earth’s first life.

So, if you have not heard how the discovery of information in the cell suggests an intelligent designer, they will be telling you the story of the discoveries and the discoverers of it in the movie.

Does this sound like something you would like your friends and family to know about? It’s very strange to me that at a time when we are making all these scientific discoveries that pretty clearly show that the universe was created and was designed for life, that people are still believing whatever they like without evidence. We’ve got to do better than that! So make a plan to take you and yours to the movie – and share the movie trailer or the discussion video with your friends and family.

# Why social conservatives fail to reverse declining marriage and birth rates

**Wintery Knight** · 24 April 2026 · Archived copy · Original

I saw an interesting post on Katy Faust's Substack and I wrote a long comment to it. I sent the comment to three of my manliest male friends (police officer, and two software engineers who run their own very profitable companies). They said "publish as is". And I also sent it to a female co-worker, a female podcast co-host (Rose) and a very famous female Christian author. They all said "publish as is". So, I published as is.

Below is my published comment to Katy's article. Keep in mind, this was straight shoot from the hip, didn't link to any studies, didn't even proof-read it, with just fixing up the few typos that my female friends found. I am so happy with everyone who checked it over for me.

If you comment on Katy's blog, please be kind. Don't attack her personally. I hope I didn't attack her personally in my comment. I was just trying to address what I see as a failing strategy. Katy herself is excellent. I regularly give her books away to friends (and I just warn them about her anti-male bias).

One of helpful editors sent me a couple of images, so take a look at those first:

And:

**Here is the full text of my comment:**

Speaking as someone who is a visible minority, has had to navigate legal immigration by merit, and worked 27 years in the competitive private sector in the field of technology (FT100 companies), I have a different view of how we should approach the twin problems of declining marriage rate and declining birth rate.

First, we don't want to reduce male headship to "taking the initiative". Leadership, as seen in great leaders like Dwight Eisenhower, involves making plans and making decisions to achieve real results. Someone who is a good leader is not someone who merely takes the initiative. It is someone who knows how to get from point A to point B, who has a record of doing it, and who knows how to make other people want to participate in the plan by following the leader's decisions. Going up to a woman and starting a conversation is not leadership. It's convenient for the woman to be passive and avoid rejection and decide if they like the man based on first impressions and feelings. But it is not actual leadership. And it is not demonstrating the kind of leadership that women will want from a husband and father in the long run.

Again, taking Eisenhower as the model, leadership would be if a man is able to motivate a woman into a long-term effort in which she takes independent action to help him to achieve the plan that he thinks is important. For a Christian man, that higher goal would not be the woman's happiness, but serving God. A man's purpose for a relationship with a woman is leading her to serve God. Masculinity is NOT "when a man uses his strength to benefit women". (A social conservative once told me that was her definition of masculinity) Speaking as a non-white person, that view sounds exactly like slavery to me, and it implies that slaves who don't like being slaves are lacking in character – i.e. – less masculine. A man whose first priority is serving God is going to be very skeptical about signing up for a relationship where the strength that God has entrusted him with is taken away from God, and transferred to the woman for her happiness. It's not appealing to Christian men to disregard their goals for relationships and become a woman's slave instead.

Now onto why men are declining to approach and pursue. The root cause of men's disinterest in pursuing women is twofold. First, Christian parents and church pastors have not prepared women to resist secularism and leftism in the culture. The second concern is the changes to laws, workplaces, courts, etc. brought on by feminism.

What are the consequences of the widespread turn towards secularism and leftism in young women (according to

surveys). Well, they tend to be attracted to left-wing and immoral men. Men who don't judge, men who are permissive, men who don't hold women accountable. More and more young women don't value or choose chastity, pro-life advocacy, evidential apologetics, sobriety, frugality, etc. They aren't being taught to by Christian parents and pastors, because women are already seen as perfect for marriage. Nothing to fix. You won't find anything like Thomas Sowell economics, evidential apologetics, etc. in most Christian homes and churches. So, when good Christian men meet these women, they have to start from ground zero – and often after the women has lived out the secular feminist lifestyle through her late teens, her 20s, and sometimes even 30s and 40s. So no defenses to secularism and feminism get laid down in the years before college, and then these Christian women lose their faith and conservatism after a semester or two of college. Studies show that promiscuity is a risk for lower relationship quality and higher relationship instability. Relationship instability is already a big risk for women, who initiate 70% of divorces. The highest instability rate is for lesbians. This is because women naturally condition commitment on their feelings. Whatever we are doing right now, it's not preparing women to get over this tendency.

And it's not just avoiding moral and spiritual leadership. Studies on attraction show that many young women are looking for dark triad traits. Again, a few rounds with men who have these traits will make them very unattractive for good men who have kept themselves chaste and sober. The damage is more like student loan debt – it doesn't just disappear by spiritual conversion in the mid-30s. It stays on the books and requires work to eliminate. And the attempt by good men to choose the right woman for the job or lead the wrong woman into becoming the right woman is often dismissed as "controlling" or "judging" or "emotional abuse" or worse. This is not a good situation for a good man to get involved with. Young women are not trained to be led on moral and spiritual issues, and male leadership is seen as suspicious and even evil.

The second problem is underestimating the effects of feminism in laws and courts on men's incentives to marry. Most social conservatives can't admit or list the problems that are causing well-educated, high-earning, commitment-ready Christian men to decline to date and marry. That would be things like no-fault divorce, bias in domestic violence, handling of false accusations, bias in custody assignment, more severe sentencing of men, paternity fraud permissiveness, and so on. If these problems are even admitted, they are usually blamed on men failing to make women sufficiently happy. Men can name dozens of clear examples of society treating men unfairly. If a good man is weighing what to do with the fruits of his labor, then he is going to be looking at these problems. Even if these threats are not likely to get the good man, they are signs of widespread approval of bias against men – even among parents, pastors and social conservatives. Many good men will choose to just use their hard-earned millions for other things – like Christian ministry and mentoring. Jesus never married nor did he have children. Was he doing a good job of obeying God the Father when he decided to focus on other things instead?

The naive approach of hoping that men will somehow just disregard the influence of 6 decades of feminism on 1) women's character and choices and 2) the laws and courts has not worked, is not working now, and will never work. And just doubling down on making demands or shaming men is not going to make it work any better than it has been. Maybe we can start with a new definition of masculinity that is 100% opposed to the "masculinity is when men are women's slaves" definition. Let's make the new definition of masculinity this: "masculinity is when a man is able to disregard the attractiveness and sexual offers of women such that he is able to focus himself and the women around him on his higher responsibility to serve God".

After that, we can ask good men what they want out of marriage, and how they see the effects of feminism on 1) women's character and 2) the laws and courts, as deterrents to men marrying.

---

That's it for the comment. Let me know what you thought of it in the comments to this post.

We have a long way to go to reverse feminism and misandry inside the church… and also in the minds of some Christian social conservatives. Unfortunately, I can't think of a single prominent Christian leader who takes the concerns of men about dating and marriage seriously.

# Sean McDowell has had some amazing guests on his popular YouTube channel

**Wintery Knight** · 29 April 2026 · Archived copy · Original

Two of my friends alerted me to a bunch of recent shows posted on Sean McDowell's popular YouTube channel. I always like shows where there are discussions of evidennce – topics like economics and science are best for me. Well, Sean has had a bunch of good guests on good topics. The key thing about his recent shows is that he is doing 2-part shows. The first makes a positive case, and the second is about how to answer objections to that case.

The first guest is Dr. Stephen C. Meyer, and he talks about the origin of the universe:

And then there is a second show, where Sean talks with a Biola University philosopher about objections to the origin of the universe:

The second guest is Dr. Doug Axe. I met Dr. Axe way back at the Baylor Conference on intelligent design in April, 2000. He talks about the evidence for design in the origin of life, which is what his research is on.

Here is his "positive case" show:

And then here is the second show, where they discuss objections to the positive case:

So, if you watch both of these, you will really learn something about how to talk about this topic.

The third guest is Dr. Jay Richards. You might remember him, because we had him on the Knight and Rose Show. His topic was the fine-tuning argument. I am running into Christians at work who are just trying to learn this argument, so I hope this video helps them.

Here is the first show – the positive case:

And here is the second show, where they answer objections to the positive case:

By the way, if you like David Wood, he has a recent episode with David Wood about the biggest problem in Islam right now. Which is the biggest problem? I would say either the Islamic Dilemma or the research coming out on Quran variations. It looks like they go over a whole bunch of problems!

Finally, if you like listening to Sean McDowell, we had him on an episode of the Knight and Rose Show, where he talked about the fate of the Apostles. So if you missed that, then you can go back and listen.

# Atheist responds to case for intelligent design in “The Story of Everything” movie

**Wintery Knight** · 4 May 2026 · Archived copy · Original

I’ve put up a few posts about this new “The Story of Everything” movie that is available to see from April 30th to May 6th. My tickets are for tomorrow (Monday). Some of my friends went to see it on the weekend. One told me it sparked discussion about the big questions of life among her four children. But some people in my office were skeptical that such a movie could have appeal to non-Christians. So, today’s post will be very helpful.

Today’s post is a review of the movie from a website called TechSpective. The reviewer is Tony Bradley.

What caught my eye was this introduction about how the writer abandoned his faith:

> I should tell you upfront: I’m an atheist. I was born-again Christian as a kid, read the Bible end to end more than once, and eventually landed somewhere else entirely. I mention this not to pick a fight, but because it’s relevant to what I’m about to say about a documentary that opens in theaters today — one I might have dismissed without a second thought if I hadn’t spent an hour talking to the man behind it.

I do have a number of friends who are fairly high up in establishment Christianity. And I know how they explain their lack of interest in apologetics. It’s something along the lines of “Apologetics? That’s not very useful. People become Christians when it enhances their lives. It works for them when they are children, then it doesn’t work for them when they are in college and starting their careers, and then it does work for them again when they have kids. So don’t worry about apologetics, people who are raised in the church will come back to the church as soon as they have kids”. This is literally how most pastors and Christian leaders think. They are really happy with the status quo of people being involved in Christianity for emotional reasons, and then leaving it when it’s convenient.

And this also applies to their own kids, who they raised in married Christian homes and with regular church attendance. I’ve had Christian professionals in my office reject books by Dr. Stephen C. Meyer for their kids who were going off to study BIOLOGY and ENGINEERING at big universities. “Kids these days are more leftist than we were, and they just see religion differently. The main thing is that my two kids got accepted to Vanderbilt and Duke! Isn’t that great? They’re going to make a lot of money, and have a lot more kids, so I’ll have lots of grandkids.” So, even the Christians who are very smart and very good at their IT jobs – experts in technology – don’t know why the Christianity they believe in is true. It’s just what they were raised in, what makes them feel good. It’s their favorite brand of clothes, type of food or local sports team. We cheer for Christianity because we were born in the South. Rah, rah, Jesus.

Anyway, let’s see what this guy who left Christianity thought about a movie that makes truth the issue, for a change.

First, what he thinks that the movie is about:

> The Story of Everything is a new film anchored by Stephen Meyer, a philosopher of science with a Ph.D. from Cambridge. It makes an explicit, unapologetic case for intelligent design — the idea that discoveries in cosmology, physics, and molecular biology point not just to some vague designer, but to a system that has been conceived and engineered with intent.
>
> […]Meyer’s central argument — laid out in his 2020 book *Return of the God Hypothesis*, on which the film is based — isn’t “the Bible says so.” It’s that three major scientific discoveries of the past century create a serious problem for strict materialism: the universe had a definite beginning, the physical constants that make life possible are calibrated to a degree of precision that strains every probabilistic resource available, and the information encoded in DNA cannot be explained by the chemistry that carries it.
>
> That last point is where a technology background becomes relevant, and it’s what Meyer said fascinates him

> most. Inside living cells, the chemical subunits along the DNA molecule function like alphabetic characters in a written text — or like digital characters in machine code. The sequence is what matters, just like the sequence of characters in software. And here's the part that doesn't get enough attention: natural selection has nothing to select until a self-replicating system with a working genetic code already exists. The origin of that code is not a question Darwinian evolution actually addresses. It starts after the code is already there.

Then, what he thinks about the movie as an atheist:

> Meyer is not a preacher. He's a deeply credentialed philosopher and scientist with a recall of specific facts, sources, and counterarguments that's difficult to match. During our conversation, he cited papers, named researchers across multiple disciplines, engaged Hawking's quantum cosmology in technical detail, and pushed back on my objections with precision rather than deflection. He'd be a formidable person to debate. But our conversation wasn't adversarial — not remotely. He was curious, thoughtful, and didn't try to convert me or judge me for disagreeing. He was interested in the exchange, not just in winning it. That's rarer than it should be.
>
> Nothing about the film or our conversation fundamentally changed where I stand. But I came away with a much clearer picture of the actual argument — not a strawman version of it — and a better understanding of why serious, intelligent people find it compelling. That's enough of a reason to watch.

It would be wonderful if Stephen C. Meyer was the baseline of what it means to be a Christian. Wouldn't it be great if what you learned in church, Sunday school, VBS, etc. was literally the scientific evidence for a Creator and Designer. Sadly, that's not at all what Christians who are raised in the church typically learn. And that's because the people who are supposed to be teaching them don't know about these things either.

If you have not yet made plans to see the movie, you should by all means do so. Take your spouse. Take your kids. And when it's over, take them to a nice quiet restaurant with no distractions, and talk about the evidence, so other people can overhear your discussion. There is no point letting atheism take over the minds of the people closest to you, especially when atheists don't have the facts.

# Knight and Rose Show #76: Passing the Torch: Standing Firm in a Secular Culture

**Wintery Knight** · 9 May 2026 · Archived copy · Original

Welcome to episode 76 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview our protégé Ella, a promising young Christian standing firm in her convictions in secular Europe. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

**Podcast description:**

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

**Episode summary:**

Wintery Knight and Desert Rose welcome Ella, their protégé, to discuss her experiences as a young Christian in secular Europe. They explore how she moved from doubt to confident faith through apologetics. Ella shares her journey navigating university life, the workplace, and cultural pressures while mentoring the next generation. She offers practical encouragement for young believers seeking to live out Christianity with courage and conviction.

**Outline and transcript**

Here is a transcript of the show provided by TurboScribe AI. TurboScribe AI allows you to translate the transcript into many, many different languages. You can also export the transcript into many different formats, with optional timestamps.

**Episode 76:**

**Speaker biographies**

Ella is a student who lives in a very secular European country. She is currently completing her university degree and working part-time in the area that she is studying. She mentors young women in her church and is actively trying to influence her culture. Her long-term plan is to grow string and have an influence for Christ. Ella blogs at Ella Apologetics.

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

# Bettina Arndt explains why traditional men are declining to date and marry

**Wintery Knight** · 20 May 2026 · Archived copy · Original

Well, the last (maybe) episode of Knight and Rose Show is up and I'm starting to wind down the blogging and spend more time on my health, fitness, nutrition and playing all the games that I had been neglecting. But I'm still very active on Twitter. And I saw a great article on there from Bettina Arndt, who is a pretty famous men's advocate from Australia. This article will be helpful to traditional men living in a world of non-traditional women.

So, the first thing to do is link to the article and then give you my favorite part:

> If you want to understand why men are voting with their feet, you need to look not just at what marriage now costs them — and the costs are severe — but at what it delivers. Increasingly, what it delivers is a pretty dud deal.
>
> **The modern woman: a prospectus.**
>
> - They are the most miserable, anxious, and insecure cohort in living memory — hardly great marriage material.
> - Most married women go off sex — and the husband who objects is seen as the problem.
> - Many women don't actually like men very much. The more educated she is, the higher the contempt.
> - They've gone full throttle left — and three quarters of college-educated women won't even date a man who votes differently.
> - They've rigged the education system and colonised corporate and institutional life, turning universities and workplaces into man-repellent factories.
> - Yet their hypergamy (desire to marry up) is still running hot. Despite outnumbering men in education and careers, they demand a tall, equally high-status unicorn.
> - The modern female threat-detection system is hyperactive. Almost any male behaviour — silence, opinions, jokes, breathing — gets flagged as a red flag.
> - They're extremely well-versed in the lucrative economics of divorce, including a well-timed false allegation to eliminate tedious shared parenting.
>
> To examine more carefully what is going on here, let's start by looking at the latest addition to this sorry reckoning. I'm referring to the finding published in *New Statesman* last month: that many young women don't like men. A Merlin Strategy poll of young Britons aged 18 to 30 found three times more young women than young men held a negative view of the opposite sex. Only about 50% of women had a positive view of men compared to 72% of men feeling positive about women. For women under 25, it was even starker: only around one-third (35%) reported a positive view of men.
>
> This applies particularly to professional and managerial young women of whom just 36 per cent hold a positive view of men, compared with 61 per cent of working-class women. In other words, the contempt for men is most concentrated in educated, middle-class women — precisely the demographic that has benefited most from feminist gains and whose prospects are objectively the strongest.

By the way, there used to be a guy who would write on these issues who was pretty good – his name is Dalrock. And he wrote a great article about this exact issue of traditional men realizing that marrying a non-traditional woman is a bad deal:

> But there is another aspect to this, because women's past decisions to delay marriage also played a role in shrinking the pool of men who prepared to take on the role of provider.

> The first generations of women who decided to push out the age of marriage for the most part found that the same number of men still prepared to be husbands. But over time as the length of the delay increased, this weakened the signal women collectively sent to young men that respectable men will be sexually successful.
>
> It isn't just that young women are now astonishingly open about their intent to have sex with badboys in their prime and settle for a beta provider at the last minute, although that has to have an impact. It also isn't just that as a society we see married fathers as beneath contempt, although surely that's having an impact as well.
>
> Today an 18 year old man doesn't see the same incentive to knock himself out on education and career that men of previous generations saw. Today an 18 year old man sees that for the next decade or so his most effective sexual strategy is to focus on being the sexy badboy young women dedicate their sexual prime to, not patiently preparing to be the boring loyal dude who will pick up the tab*.

And another great article that I really liked about how marriage has changed from being a good deal for men to being a bad deal for men:

> Feminists and their enablers have slowly shaved off the value of marriage for men.
>
> Marriage for men no longer means:
>
> - Being the legally and socially recognized head of the household.
> - An expectation of regular sex.
> - Legal rights to children.
> - Lifetime commitment.
>
> As men came to accept each [change], additional [changes] were continuously made. Women chose to marry later in order to first have a degree. This older bride then came with a little extra attitude, maybe some student loan debts, and perhaps more expensive tastes. Again, the choice by men was to accept what was commonly on offer or avoid the transaction altogether.
>
> […]There's just one more small thing. It took her so long to find you that you can't reasonably expect her chastity to be perfectly in tact. I mean, it's mostly there, but it suffered a ding or two. Her virginity was gone to her first boyfriend, but don't worry it was very romantic and she still has fond memories of that special time. Not too long after that those jerks at the frat house did a number on her pride, but you can't hold that against her. She's a bright gal, and after that she learned how to hook up smart.

Sadly, Dalrock has stopped writing, and even taken down his blog to focus on his own wife and kids.

Now, when I think about Christian pastors and Christian leaders – and here I will include literally all of the people who are writing about relationships and marriage from a Christian perspective – they are all 100% clueless about how men are calculating the value proposition of marriage. The cannot name the threats facing men, and they blame women's bad choices on men. So, no one traditional or conservative is leading women to be marriage-ready.

If you must get into a relationship with a woman, I would screen the candidate for a worldview like my podcast partner, Desert Rose. If you can't get that level of apologetics knowledge and policy knowledge, forget about it. That's the bare minimum for marriage and kids now.

# Memorial Day: the 82nd Airborne's heroic stand at the La Fière Bridge

**Wintery Knight** · 25 May 2026 · Archived copy · Original

Despite being somewhat retired, I am keeping up with my reading on evidential apologetics and military history. You can always find out what I am reading in the "What I am Reading" page on this blog. Previously, I wrote a post about the top 20 heroic actions of the U.S. armed forces. The book I am reading now is "Nothing But Courage" and it described an action that I think is very suitable for a Memorial Day post.

The action I'm going to write about below happened in the days just after the D-Day invasion of France on June 6th, 1944. At that time, airborne units (parachute and glider) were being used to seize vital targets. There were two goals for this. To prevent German reinforcements from attacking the Allied forces on the beaches, and to allow the Allied forces to break out and seize objectives. One of the most important objectives being the nearby port of Cherbourg, which the allies could use to unload men and equipment to continue their advance.

First, a map where you can make note of the locations of Utah Beach, the city of Sainte-Mère-Église and the port of Cherbourg:

3840px-Map_of_the_D-Day_landings.svg
(Source: Map created by Philg88 and Hogweard, licensed under the Creative Commons Attribution 4.0 International license, I cropped the relevant part)

Basically, the 82nd Airborne are dropped west of Sainte-Mère-Église and their objective is to seize and hold the La Fière Bridge and Causeway. If the Airborne troops achieve their mission, then the Germans would no longer be able to approach Ste. Mère-Église from the west, or reach the roads needed to attack the invasion beaches.

Here is an closer map showing the beach and causeway, courtesy of Brooklyn Wargaming. This is the "after" map on June 9th. I cropped the relevant part of the map:

The Americans are deployed on the east side of the bridge and causeway, and you can see some troops on the west side to the north in an orchard. The audio book I'm listening to pronounces the name of the leader of that group "Timmies" but as you can see it's spelled Timmes. The key thing to note is that the bridge is tiny. The causeway is long and elevated. It's basically a shooting gallery with no cover for the attackers.

Since I can't paste the whole book in this blog post, I found a good article at Havok Journal to summarize what happened in the days before the attack across the bridge and causeway.

It says:

> 75 years ago, units of the American Paratroopers had already landed behind German lines in France. One such unit was the 505th Parachute Infantry Regiment (PIR), a seasoned element of the 82nd Airborne Division.
>
> […]In total, the U.S. Paratroopers numbered approximately 13,400, well below 10% of the invading land force on D-Day. "A" Company, 1-505 PIR represented a much smaller slice, but in the midst of the chaotic first 72 hours from 06-09 June 1944, theirs is a story worth telling. Led by First Lieutenant John "Red Dog" Dolan, "A" Company, and the rest of the 1st Battalion, 505 PIR quickly assembled 90% of their force and headed towards their objective, La Fiere Bridge.

The action starts on June 6th:

> […]Around daybreak, they managed to link in with a group of about 300 Paratroopers from the 508th PIR, including the Assistant Division Commander, Brigadier General James "Slim Jim" Gavin, and a contingent of 45 Troopers from the 507th. They converged on a *manior*, or manor, near the east side of the Merderet River and La Fiere bridge. The *manior* consisted of a farmhouse and surrounding buildings, barns, and pens.
>
> […]After consolidation on the *manior*…. They set up a 57 mm anti-tank gun brought in by a glider the morning of D-Day about 150 meters to the rear of the A Company element to provide supporting fires across the bridge.
>
> […]A Company's defenses near La Fiere bridge consisted of two, two-man bazooka teams set up near the

> marsh on the north and south sides of the eastern bridgehead. Bazooka gunner PFC Lenold Peterson occupied a position on the south side of the bridge with his assistant gunner, PVT Marcus Heim, Jr., while gunner PFC John Bolderson and assistant/loader PVT Gordon Pryne occupied the position to the north.

Shortly after 2 PM…

> […][A]rtillery and mortars began falling around the A Company fighting positions. As the indirect attack lifted, three French Renault tanks seized by Germans back in 1940 began creeping across the causeway towards La Fiere bridge and the A Co positions.
>
> […]In the ensuing melee, the A Co bazooka teams got to work. Springing into action both bazooka teams opened up on the tanks canalized on the causeway. Moving to exposed positions from their foxholes, the gunners and loaders put bazooka rounds on the first two tanks as fast as they could, eventually disabling both along the causeway, setting them on fire and killing the crews. The 57 mm anti-tank gun, put into action from the support by fire position, managed to destroy the third tank.

I like Private Heim's description of what he thought he was achieving:

"Our job was to be in the forward position with our bazooka and stop the Germans from using La Fiere bridge. This we accomplished despite the tremendous and continual firing by the enemy. When the Germans retreated, Peterson and I were still in our positions at the bridge, and as we looked around we could not see anyone so we moved back to our foxhole… We found later that of the few men holding the bridge, most were either killed or wounded… This was one of the toughest days of my life. Why Peterson and I were not wounded or killed, only the Good Lord knows why."

> […]As a result of their actions during the German attack, all four members of the two bazooka teams, all survivors of the battle despite their heroic actions, received the Distinguished Service Cross. After A Co and its supporting element destroyed the enemy vehicles, the Germans pulled back towards Cauquigny and set up their own defensive positions.

The defense of the east part of the bridge continued the next morning, with heavy losses:

> On the morning of the 7th of June, Another indirect barrage came in around 0800 and lasted for two hours. Around 1000, the Germans launched another attempt at taking back the eastern side of La Fiere bridge, and ran into A Co, along with B, C, and HHC of the 1-505th PIR. Two additional French Renault tanks and approximately 200 German soldiers began moving towards La Fiere bridge. Coming across the causeway, the bazooka teams, machine guns, and 57 mm anti-tank guns fired on the tanks, disabling the lead tank. At this time, the causeway road was littered enough with German tanks and the treeline, that the German infantry managed to get within 40 meters of the bridge and the A Co positions.
>
> After repulsing the counterattack on D-Day, the night indirect barrages, and the ongoing German assault, A Company was in bad shape. 1st Platoon lost their Platoon Leader, 2LT Oakley, which eventually found SGT William Owens, a squad leader, in charge of the 15 men from their platoon still capable of bearing arms. Due to suffering high numbers of casualties and running alarmingly low on ammunition, the will of some of the Paratroopers began to waiver. Many contemplated falling back to safer positions further east towards Saint Mere Eglise and requested to fall back. During this time, small unit leaders faced pressure from their fatigued and scared subordinates shifting their focus on self-preservation.
>
> […]In the bleakest moment for A Company on the morning of June 7th, SGT Owens sent Private Murphy as a runner to 1LT Dolan's position to let him know the platoon ran low on ammo and would not be able to hold their positions much longer. 1LT Dolan responded by telling Private Murphy, "No stay where you are." He then scribbled a note to Sergeant Owens, handed it to Private Murphy, and sent him back through the hail of

> gunfire. Sergeant Owens read the note, telling the platoon they would remain in place. Lieutenant Dolan's response to 1st Platoon's request to displace stated, "We stay. There is no better place to die."

However, it was at that point that the Germans decided to cease offensive operations. Despite their losses, the Americans cannot stop there, they have to take the other side of the bridge in order to hold it. But who is left to do the job at this point?

I found another article from HistoryNet for that part of the story (June 9th):

> Captain John Sauls crouched low behind a stone wall, the rest of G Company, 325th Glider Infantry Regiment, 82nd Airborne Division, strung out alongside him, as scores of shells rattled over their heads toward the Germans. Twelve M4 Sherman medium tanks, lined up on a ridge behind the soldiers, bombarded the opposite shore of the little Merderet River in Normandy. There, German troops had taken up defensive positions at the end of a 500-yard causeway–the only means of crossing the flooded plain beyond the swollen river. It was June 9, 1944, three days after D-Day, and the paratroopers were fighting to capture the La Fiére causeway.
>
> Mortars, Browning Automatic Rifles (BARs), bazookas and machine guns helped the tanks plaster the German positions. But what Sauls and his men really needed was a smoke screen. Even though heavy fire was being concentrated on the enemy, crossing that causeway, which offered no cover for its entire length, would be near suicide once the Germans opened up with their own weapons. Nevertheless, at 10:45 a.m. Sauls yelled out 'Go! Go! Go! and began running for all he was worth, never looking back to see if anyone followed him. The company was to split into two columns, one on each side of the macadam roadway, as soon as they crossed the narrow bridge that spanned the river. After traversing the flooded area, each column would then peel off left and right to roll up the enemy positions along the edge of the flood area.
>
> But Sauls' plan began to come apart as soon as the men started across the bridge. The Germans opened up with a barrage of mortar, artillery and machine-gun fire that transformed the narrow roadway into a gantlet of destruction. Men fell by the score; some rolled into the river and drowned. The fallen men began to clog the path, and the attack slowed. Soon 100 men were down. Those who were left dashed for what little cover they could find. Sauls, against all odds, had reached the far side, but when he turned around to signal his men into position, he found himself alone.

It's just such a difficult mission that a lot of very brave men died trying to accomplish it:

> One man in the lead platoon, Private Melvin Johnson, rose and began to run but was instantly killed, further paraIyzing the men. Then Lieutenant Frank Amino stood up and shouted, Follow me. Let's go kill some sons of bitches! and ran off with no more than a dozen men behind him. A weapons company tried to follow them, but weighted down by their equipment, they were too slow and were cut down one by one.
>
> A supporting Sherman tank advanced along the causeway but was soon disabled. Sergeant George Myers, in spite of a wound in the eye, dashed across, then fell from loss of blood. More and more men stopped to seek shelter when the fire became too much for them. As they crowded the edge of the exposed embankment, they left no room for those following them. Slowly, the bodies mounted and blocked the road.
>
> […]Squads, platoons and companies became hopelessly tangled as some men tenaciously made their way forward while others took cover, straggled back or just started shooting at the shoreline. The congestion increased casualties as some officers lost heart and took their men back while others, many severely wounded, braved fire to encourage their men to keep moving forward. Come on you bastards! Get up there! yelled Lieutenant Bruce Hooker, who had been shot in both legs.

One of the interesting characters from the book is General James Gavin, an orphan who was raised to be an officer from the enlisted ranks. He likes to parachute into battle with his men, leading from the front. After seeing how the

attack was getting bogged down, he commits his fresh reserve unit, which was the right decision.

Back to the HistoryNet article:

> Thinking that the battle was in danger of being lost, Gavin ordered Rae's company forward. Forming a flying wedge, Rae's 90 men bulled their way through the crowd and reached the opposite end of the causeway, believing theirs the first group to make it. By that time, enemy fire on the causeway had considerably lessened, allowing Lieutenant Lee Travelstead's heavy weapons company to cross almost intact and Ridgway to get out into the open to help clear the road of blasted vehicles–including the disabled Sherman. With the road open, a column of Sherman tanks began to cross the river, sweeping the opposite shoreline with thelr weapons and flushing the remaining Germans from cover.
>
> A heavy German counterattack threatened to push the still disorganized Americans back across the river the next day, but the assault was repulsed. By mid-afternoon, a linkup was finally achieved with Timmes' men, who were still defending their orchard.
>
> Thus ended the fight for the causeway at La Fiére. Laced with individual stories of both heroism and faintheartedness, the tale, with all its confusion, error and misjudgment, shows human strength and frailty in all its diversity.

I recognized a name from the HistoryNet post, too: Maj. Gen. J. Lawton Collins. I blogged about Maj. Gen. J. Lawton Collins before, in the context of the Battle of the Bulge. Basically, he disobeyed orders in order to stop the German armored offensive from reaching the Meuse river. Sometimes, you have to disobey orders to win the war. I blogged about how Lt. Cdr John Waldron did it at the Battle of Midway.

I also talked about Lt. Col Benjamin Vandervoort (who defended Sainte Mere Eglise) in my post about D-Day heroes. I'm learning the names of all of these heroic people, and it's just sad that American children don't learn more about these men in the schools.

Whenever I read about these people, I always think of 1) wanting to experience what they did in a tabletop wargame or computer wargame, and 2) I want to travel to museums or to the battlefield to pay my respects. But the first step is always to hear or read the story or watch a related video. All to properly respect the men who fought.

I have 82nd Airborne patches, a flag and a coffee mug, and I can sing their cadence songs. You can visit the Special Operations museum in Fayetteville, NC. I took a picture of a plaque that I found outside the museum (that's my foot at the bottom).

"Here am I, send me" Isaiah 6:8

# UK two-tier policing: white victim of Sikh stabber bled to death in handcuffs

**Wintery Knight** · 29 May 2026 · Archived copy · Original

Once in a while there is a story that goes under the radar of the corporate news media, because it exposes the bad results of their "good intention" policies. In this case, everyone in the secular left corporate news media is in favor of open borders, to increase diversity of skin. (There is no "diversity of thought" in these companies) So, what happens when their open borders policies produces a bad result? They don't cover the story. So I will.

Here is a good recent article about it from Breitbart:

> Sikh man who claimed to have been the victim of a racist attack has been found guilty of murder for the slaying of student Henry Nowak, the death of whom became notorious after it was revealed he was handcuffed by police and ignored while he bled to death.
>
> A murderer who lied to police about having repeatedly stabbed a teenager, and covered for himself by telling a "wicked lie" about his victim having committed racist abuse against him, has been found guilty by a jury at Southampton Crown Court in Hampshire, England this afternoon. Police welcomed the conviction, but also apologised for having believed the knifeman's lies, meaning Anglo-Polish victim Henry Nowak's last conscious moments were spent handcuffed explaining that he'd been stabbed, while being told he was making it up.
>
> […]The jury of eight women and four men started their deliberations at lunchtime on Wednesday and found 23-year-old Vickrum Digwa guilty of murder on Thursday afternoon. Digwa was also found guilty of carrying a knife in a public place. Digwa's mother, Kiran Kaur was also found guilty on her charge of assisting an offender by removing the murder weapon from the scene and stashing it at their family home.
>
> […]Digwa chased and stabbed Nowak five times, including twice in the back of the legs and once in the chest. After some time, a delay which apparently gave an opportunity for several members of Digwa's family to arrive at the scene, police were eventually called and told there had been a racist attack, with no mention of a stabbing.
>
> […]When officers arrived at the scene they arrested the now-dying Henry Nowak and ignored his protests at having been stabbed until it became impossible to ignore that he was drowning in his own blood.

Note that the full bodycam footage has not been publicly released, and the specific officers involved have not been publicly named. That's how the UK two-tier police hold themselves accountable. You can see right away from their response whether they accept any responsibility and whether anyone in the two-tier system will be punished.

Recall that police forces in the UK actively refused to investigate child prostitution and child rape gangs, because they were run by men of Middle Eastern descent. They didn't want to appear "racist" for investigating the raping of white children. White parents of the victims were ignored when they reported the crimes. Their attitude towards law-abiding taxpayers is that they need to be persecuted for disagreeing with the regime's policies. It's just like the East German Stasi – they spy on the private sector workers who pay their salaries and pensions to protect the regime's policies from criticism.

So how do the British two-tier police respond to criticisms of their failures?

Remember this story, reported by Fox News:

> London's Metropolitan Police chief warned that officials will not only be cracking down on British citizens for commentary on the riots in the U.K., but on American citizens as well.
>
> "We will throw the full force of the law at people. And whether you're in this country committing crimes on the streets or committing crimes from further afield online, we will come after you," Metropolitan Police

> Commissioner Sir Mark Rowley told Sky News.

I should say that Americans consider the UK to be a failed nation, at this point. Your health care system kills patients instead of treating them. You cannot even get your navy out of drydock to the sea. You are a poor, weak and stupid nation; ignorant about basic economics and lacking any objective moral standards. You've exchanged evidence-based Christianity for the blind faith of secular leftism. Americans view the UK as a third world shithole.

Public sector workers like Rowley would never be able to find work in the competitive American private sector. They typically have one useless undergraduate "Bachelor of Arts" degree and then a long, long resume of adult daycare jobs in the non-competitive public sector monopoly, where they are protected from being fired by their powerful labor unions. In America, we solve problems. We invent. We innovate. The UK is too weak to even drill in the North Sea for oil, and instead beg other stronger nations for energy.

This is what he does when questioned about his job performance:

> Sir Mark Rowley was caught on camera grabbing a reporter's microphone following a question about two-tier policing.
>
> […]A reporter from Sky News asked: "Are we going to end two-tier policing, sir?" – a reference to claims that forces have been tougher in their response to the far-Right riots than unrest at pro-Palestinian demonstrations or disturbances in the Harehills area of Leeds last month.
>
> Rather than respond to the question, Sir Mark grabbed the journalist's mic and threw part of it to the ground before walking towards a waiting car on Whitehall.

In the American private sector, he would be instantly fired. But, as Hayek says, godless psychopaths who have no integrity or objective moral standards always rise to the top of socialist regimes. And then the fascism becomes evident.

I noticed that the Steven Crowder Show, with Gerald hosting, did an excellent job of gathering the facts about the two-tier policing murder case, and putting it in context:

Just for clarification for new readers, I am a legal immigrant (by merit; advanced degree(s), exceptional ability, professional publication(s)) to the United States, my parents are West Indian, and I have very dark skin. So, I am the person the UK police would side with based on skin color and national origin. But I don't care – there are too many cases of them not doing a good job for their customers, the people who pay their salaries.

In contrast to the UK taxpayer living under incompetent law enforcement, I live in a small town in a red state and here we LOVE our law enforcement and also the state Bureau of Investigation. We love federal agencies like the US Marshals, ICE, CBP and especially the Civil Rights division of DOJ.

# Lt. Cmdr. John C. Waldron and the heroic charge of VT-8 at the Battle of Midway

**Wintery Knight** · 4 June 2026 · Archived copy · Original

I have been reading lots of books about the World War II battles in the Pacific theater lately, and I wanted to write a post about one of the heroes I found who was the most compelling to me. You may have seen him in the old 1976 Midway movie or the new 2019 Midway movie. But neither movie tells the full story. The man I am talking about is Lt. Commander John C. Waldron.

So, everyone knows the conclusion of the Battle of Midway. On June 4, 1942, Japan attacked the American-occupied island with carrier-based strike aircraft from 4 aircraft carriers, as a prologue to a planned amphibious landing. The Americans had broken the Japanese transmission code and were on site with 3 carriers (plus an airstrip on Midway) the morning of the attack. At the end of the first day, the Japanese had lost all 4 carriers, and the Americans had lost none, although Yorktown was heavily damaged. This (along with the defense of Guadalcanal) was a major turning point in the Pacific war. The Japanese would never again be on offense.

I like to blog about the story of John C. Waldron every year, and normally I use this old article from the Federalist that tells the story of John Waldron. But this year, I decided to use a different article from Warfare History Network, to maybe get a different angle on it.

So, their article starts with the key answer to the question – how were the Americans able to sink 4 carriers? And the answer is that when the squadrons of Dauntless dive bombers found the Japanese carriers, they were amazed to find that the the Japanese fighter cover was nowhere to be found. Why? Because 3 squadrons of these old and slow Devastator torpedo bombers had already attacked the Japanese carriers, without fighter escort. And they had pulled the superior Japanese Zero fighters out of position to low altitude, and exhausted their highly-effective 20 mm cannon ammunition.

The article says:

> The pilots of Bombing Squadron 6 could not believe what they were seeing on the morning of June 4, 1942. The squadron was about 150 miles northwest of Midway atoll when good visibility allowed the dive-bombers from the aircraft carrier USS Enterprise to make out three Japanese carriers almost 20,000 feet below. The light tan flight decks clearly stood out against the backdrop of the deep blue sea. A fourth carrier stood off in the distance. Most remarkable was the absence of any Japanese Mitsubishi Zero fighter planes. At a time when the squadron expected to be swarmed by Zeros, none were present.
>
> […]The dive-bombers were not the first American carrier-based planes to attack the enemy flattops. Three squadrons of torpedo planes had already made low-level attacks. The first torpedo squadron to find the carriers had been Torpedo Squadron 8.

The article is a magnificent explanation of the battle, but the key point for us to focus on is the sacrifice of the three torpedo squadrons, and especially VT-8 (Hornet's torpedo bomber squadron) which attacked first and had every single aircraft shot down with only one torpedo dropped that missed.

John Waldron was the leader of VT-8, which is the torpedo bomber squadron on the USS Hornet aircraft carrier. This squadron was composed of outdated and slow Devastator torpedo bombers, armed with the Mark 13 Mod 1 torpedoes, which malfunctioned at a very high rate.

I had Grok write up something for you about the plane and the weapon and here is the summary:

> The Douglas TBD-1 Devastator featured a top speed of about 206 mph (much less when laden). It carried a single Mark 13 aerial torpedo. By 1942, it was obsolete: slow, poorly armored, with weak defensive armament

> (usually one forward .30- or .50-cal and a rear .30-cal). Its low speed and limited maneuverability made it highly vulnerable.
>
> The Mark 13 torpedo was even more problematic. Early versions suffered severe reliability issues. A 1943 analysis of 105 drops at over 150 knots revealed: 36% ran cold (failed to propel), 20% sank, 20% had poor deflection (veered off), 18% had unsatisfactory depth performance, and only about 31% gave a satisfactory run—many with multiple defects. Drops required very low speed (~100 knots or less) and low altitude (~80 feet) from ~1,000 yards out for any chance of success, making the launching aircraft easy targets.

What I like about Waldron is that he is a native American. So, he is coming into the Navy as a kind of outsider. On the morning of June 4th, fighters, dive bombers and torpedo bombers all launched from the deck of the Hornet against the Japanese carriers, which had already been detected by US patrol aircraft:

> In the Hornet's ready room, the men of Torpedo 8 were up early to prepare for battle. Settling down into their comfortable chairs for briefings, the pilots found a memo from Lt. Cmdr. Waldron. His message concluded: "My greatest hope is that we encounter a favorable tactical situation, but if we don't, and the worst comes to the worst, I want each of us to do his utmost to destroy our enemies. If there is only one plane left to make a final run-in, I want that man to go in and get a hit. May God be with us all. Good luck, happy landings and give 'em hell."

The commander of Hornet's entire air group was a tall, handsome white pilot named Stanhope Ring. He is more known for attention-seeking than for skill as a pilot, due to his long career of administrative jobs. He decided to launch the entire airgroup to the WEST even though the Japanese carriers had been spotted SOUTHWEST of the Hornet. Waldron voiced his disagreement, but Ring would not listen to him. Eventually, Waldron just ordered his torpedo squadron to break from the main strike package, and all his pilots listened to him, and disregarded Ring:

> As the air group left the carrier, the torpedo planes stayed low while the faster bombers and fighters gained altitude. Early in the flight Waldron broke radio silence to continue his argument with Ring about the course to the Japanese carriers. A short time later Waldron turned his torpedo planes away from the rest of the air group. Before long the torpedo squadron was alone, separated from the rest of the air group in which it was to make a coordinated attack.

Just to be clear, disobeying Ring was a court martial offense, but Waldron was so intent on striking the enemy, that he had to do it. He could not be part of a strike mission that was not going to find the enemy planes, because of the leader's incompetence.

Ring's dive bombers and fighters went on a long flight without ever finding any targets. It is now called "Stanhope Ring's Flight to Nowhere". He landed back on the Hornet with all his munitions. But Waldron found the enemy carriers:

> With good visibility, the pilots were able to identify three enemy carriers surrounded by a strong escort of cruisers and destroyers. Waldron had taken his squadron directly to the Japanese carriers.

Waldron sent a contact report to Ring, but Ring's fighters and dive bombers did not acknowledge or change course to join up with Waldron's torpedo bombers. It's almost as if Ring couldn't admit that he had made a mistake, and would rather see the torpedo bombers fail than admit he was wrong. So, would Waldron attack alone, without escort? It would be certain death to do it. But this might be their only chance to make a difference. Even if it meant a court martial later – assuming he survived, which was highly doubtful.

Here's what he decided:

> Waldron now had to make a critical decision—strike immediately unescorted, or wait for other squadrons to arrive to make a coordinated attack. He decided to attack and wiggled his wings to signal his decision to the rest of the group. The squadron immediately joined up in attack formation and dropped to 60 feet. Moving the planes close together allowed for concentrated fire from the rear guns.
>
> […]Approaching the carriers from the east, Waldron headed for the southernmost flattop. Noticing strong antiaircraft fire some distance ahead, he switched to the centrally located carrier. The target was about 16,000 yards away when Japanese fighters suddenly appeared. As many as 30 Zeros swarmed at the torpedo planes from above and behind. One Devastator on the left side of the formation immediately went down in flames.
>
> […]Waldron's plane was hit shortly afterward and began to head toward the ocean with the left fuel tank ruptured and on fire.

The Devastators were shot down one by one until there were none left, and only one pilot survived and was later rescued. In the 1976 movie "Midway", Vice Admiral Nagumo, the commander of the carrier strike force, says: "They sacrifice themselves like Samurai, these Americans." That's not how the military is presented in schools and culture today, but that's how I see them, because I read the actual history!

Here's the clip:

The movie emphasizes an additional effect of the sacrificial strike: the Japanese carriers cannot steer into the wind to launch their own strike against the American carriers. They are too busy dodging the torpedo bombers.

But it wasn't just Waldron who sacrificed himself:

> In the aftermath of Torpedo 8's heroic attack, two additional torpedo squadrons located the Japanese carriers. Shortly after 9:30 am, Torpedo Squadron 6 from the *Enterprise*, under the command of Lt. Cmdr. Eugene Lindsey, attacked without fighter cover. At about 10 am. Torpedo Squadron 3 from the *Yorktown* attacked under the lead of Lt. Cmdr. Lance Massey. His escort group of six Wildcat fighter planes had been overwhelmed by Japanese Zeros.
>
> Like Torpedo 8, these squadrons staged heroic attacks, suffered terrible losses, and scored no hits. Of the 41 torpedo planes that participated in the attacks, only six survived. Like Waldron, squadron commanders Lindsey and Massey were killed in action.

And, as we foreshadowed, the attacks were not in vain:

> At about 10:20 am, Bombing Squadron 6 and Scouting Squadron 6 arrived from the *Enterprise* and dove toward the carriers *Kaga* and *Soryu*. Almost simultaneously, dive-bombers from the *Yorktown* attacked the carrier *Akagi*. Within five minutes all three Japanese carriers were burning as a result of direct bomb hits. The great battle once envisioned by the Japanese had now turned into a decisive American victory.
>
> The importance of the torpedo attacks on the outcome of the battle cannot be underestimated. The brave assaults caused the Japanese fighter cover to be pulled out of position and antiaircraft gunners to focus on the low-level attackers. The evasive maneuvering needed to defend against the torpedo planes may have prevented the Japanese carriers from launching additional fighter planes. All levels of the Japanese air defense network were either out of position or unprepared to meet the subsequent dive bomber attacks.

This is my favorite part – they got their reward in the end:

> In the aftermath of the battle, all 15 of the pilots who participated in the June 4 attack of Torpedo 8 were awarded the Navy Cross. The rear gunners received the Distinguished Flying Cross. On April 5, 1943, President Franklin D. Roosevelt awarded Torpedo Squadron 8 the Presidential Unit Citation. Praising the

> heroic attack, the citation concluded, “The loss of twenty-nine lives, typifying valor, loyalty, and determination, was the price paid for Torpedo Squadron 8’s vital contribution to the eventual success of our forces in this epic battle of the air.”

The names I remember from the Battle of Midway are the 3 leaders of the torpedo bomber squadrons: Waldron, Lindsey and Massey. I also remember McClusky for his decision to follow the racing Japanese destroyer despite being at “bingo” fuel levels. And I remember Brockman, the captain of the submarine Nautilus, whose attack caused that Japanese destroyer to have to stop to depth charge his submarine, and then race back to the carrier strike force at high speed, leading McClusky’s strike package to the main body.

You can learn more about the Battle of Midway in this helpful video:

This plaque at the United States Naval Academy Club honors the three commanders of the torpedo bomber squadrons:

Plaque honoring the Midway torpedo bomber squadron commanders

According to the Family Research Council, the plaque reads:

> The torpedo attacks of Waldron, Lindsey, and Massey had followed hard upon each other by luck. What was not luck, but the soul of the United States in action, was the willingness of the torpedo plane squadrons to go in against hopeless odds. This was the extra ounce of martial weight that in a few decisive minutes tipped the balance of history.

So, here is what I wanted to say about this.

John Waldron was not properly equipped by his organization to make a difference at Midway. His planes were too old and slow, his torpedoes almost never worked. His leader was incompetent and prevented him from leading others to find and attack the actual targets. The only way he could do something to his enemy was to disobey orders and go off on his own. If he had lived, he probably would have been court-martialed for insubordination. Everyone watching must have thought “what a waste of effort”. It was only later that it became evident to all that what he did was necessary for the second wave to succeed.

When I read this story, it immediately occurred to me that this is the problem that serious Christians are facing today. Instead of finding and fighting the real targets: atheism, radical feminism, communism, etc., all our forces have been sent on wild goose chases, so that now many Christian leaders are actually trying to promote the priorities of the secular left, e.g. – global warming, wealth redistribution, feminism, sexual immorality, open borders, critical race theory, etc.

My recommendation for Christians today is to focus their attention on studying the evidence in areas like science, economics and history, so that they can fulfill the mandate of 1 Peter 3:15 with authoritative teaching and appealing to “signs” (e.g. the origin of the universe, fine-tuning, the origin of life, etc.) in the same way that Jesus did. The main strike force is going in the wrong direction, and it falls to us to break off and strike the enemy alone.

# Meet four heroes of the D-Day invasion of Normandy on June 6th, 1944

**Wintery Knight** · 6 June 2026 · Archived copy · Original

I thought it might be a good idea to write up something about D-Day in order to help people understand some of our military history, and to put the spotlight on some real heroes. I don't regard artists, athletes, dancers, singers, actors, or other celebrities as heroes. It really alarms me that so many people know more about these fake heroes than they do about real ones.

**Weakness emboldens aggressors**

For one thing, many people don't understand how British and American libertarian isolationism made World War 2 into a much bigger mess than it needed to be. As historian Victor Davis Hanson explains in the lecture I linked below, the Allied nations were much stronger and better equipped than the Axis nations before the war started. The Axis nations developed better weapons after the war started. But Germany and Japan didn't think that the Allied nations would do anything if they were aggressive. We know this from their writings and correspondence. They thought that British and Americans were just too scared of war to stop them.

Germany and Japan tested their hypothesis out by re-arming and annexing territory from their neighbors. Britain and America were led by libertarian isolationists, so they didn't fight back. The aggressors correctly understood that libertarian isolationists didn't have the will to oppose them, even if they were weaker than the Allies. But the more they re-armed and annexed territory, the stronger they became. The Allied nations waited too long to confront them. And that's why World War 2 was much harder to win than it needed to be.

Here's a very good lecture about the causes of World War 2 by an actual military historian, Victor Davis Hanson:

So, that's the first point I wanted to make: libertarian isolationism causes wars. Although libertarians claim to oppose war, they actually cause war, due to their weakness in the face of evil. So who stops wars? People who favor a strong defense, and show a willingness to fight back against aggression are the ones who REALLY oppose wars. This is called "peace through strength", and you can see it in action in the Cold War, where Ronald Reagan defeated the Soviet Union by making their aggression costly.

**Heroes of D-Day**

My second concern was to promote the real heroes of D-Day, over the fictional heroes of movies, fiction, music,

dancing, sports, and other entertainment nonsense.

Here are the four heroes I chose:

- Major John Howard
- Lieutenant Colonel Benjamin Vandervoort
- Brigadier General Norman Cota
- Major Richard Winters

Let's take a look at each of them.

**John Howard**

Major John Howard led elements of the British 6th Airborne Division to take two vital bridges southeast of Sword beach. He did this in order to prevent German socialist counterattacks coming from the east. After they took the bridges, they had to repulse German tanks with nothing more than their useless PIAT (Projector Infantry Anti-Tank) grenade launchers. The PIAT was nothing more than a grenade launcher powered by a coiled spring. It was very inaccurate, and only effective to 50 yards. But that's all the British paratroops had to stop tanks, and they made it work. You can read about him in this book by Stephen E. Ambrose, entitled: "Pegasus Bridge: June 6, 1944". This New York Times article tells the story in brief. He also is played by Richard Todd in the famous movie "The Longest Day".

**Benjamin Vandervoort**

Lt. Col. Ben Vandervoort served with the 82nd Airborne Division. I read about how he lead an infantry attack against German Tiger tanks (!) and infantry in Stephen E. Ambrose's book "Citizen Soldiers: The U.S. Army from the Normandy Beaches to the Bulge to the Surrender of Germany". Ben Vandervoort broke his ankle during the D-Day landing, but he insisted that the medic just "lace it up tight" so that he could supervise the attacking and holding of Ste. Mere Eglise, southwest of Utah beach, against a vastly superior enemy force. This article tells about how he defended against elite German SS infantry and heavy Tiger tanks at Trois-Ponts, during the Battle of the Bulge. He was outgunned and outnumbered 20 to 1, and had just a few lightly-armed soldiers, two weak 57mm anti-tank guns and some bazookas. He is portrayed by John Wayne in the famous movie "The Longest Day".

**Norman Cota**

Brig. General Norman Cota is my favorite person in World War 2. At 51 years old, he nevertheless landed at D-Day, and rallied terrified Army Rangers to follow him up the bluff, by telling them that Rangers ought to lead the way. "Rangers Lead The Way" later became the motto of the Army Rangers. He always led from the front, demonstrating how to attack a German machine gun position in a farmhouse to a group of American soldiers who were pinned down. He actually grabbed a bunch of grenades and led the assault team against a heavy machine gun! You can read about him in this short article and in Stephen E. Ambrose's "D-Day: June 6, 1944: The Climactic Battle of World War II". He is portrayed by Robert Mitchum in the famous movie "The Longest Day".

**Richard Winters**

Major Richard Winters served in the 101st Airborne Division. Winters led an assault against a superior force of heavy machine guns and 105mm field guns. His tactics were so brilliant that they are still studied at West Point today. You can see Richard Winters and Carwood Lipton in the HBO "Band of Brothers" series, or read this book by Stephen E. Ambrose entitled "Band of Brothers: E Company, 506th Regiment, 101st Airborne, from Normandy to Hitler's Eagle's Nest", which is the basis for that series.

I hope this convinces you that military heroes are far more important than the "heroes" of fiction and entertainment. It's alarming to me that people invest more and have more respect for characters in Hollywood science fiction movies, and other such make-believe nonsense. We need to be rooted in reality. In reality, men who fight and die fighting evil to protect your freedoms are the real heroes. People who take military history seriously are able to give

respect and gratitude where it is due – a very important part of being a mature, moral human being.

# Are Mormon doctrines supported by philosophy, science and history?

**Wintery Knight** · 12 June 2026 · Archived copy · Original

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

**The scientific evidence**

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end."
> ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo*."
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

**Philosophical problems**

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

**The historical evidence**

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years

> too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

# UK gay couple found guilty of charges related to the death of 13-month-old boy

**Wintery Knight** · 16 June 2026 · Archived copy · Original

I have to blog about this, because I was around during the time of same-sex marriage becoming legal, and everyone pushing for gay adoption. Everyone put these blue stickers with yellow equal signs on their cars and asked "how would same-sex marriage affect your marriage". Big corporations dragged employees into sensitivity training. And then the Supreme Court redefined the word marriage to benefit adults instead of children.

So, here we are with this story from Human Events now:

> A UK gay couple has been found guilty of charges related to the death of 13-month-old Preston Davey. Former teacher Jamie Varley was found guilty at Preston Crown Court of murder, child cruelty, sexual offences, and possessing indecent images relating to Davey. Varley was in the process of adopting the toddler with his partner, John McGowan-Fazakerley, who was also convicted of allowing the death of a child, child cruelty, and sexual assault, per the Crown Prosecution Service.
>
> Just four months after being placed with the couple, Preston was rushed to Blackpool Victoria Hospital unconscious and in cardiac arrest. He could not be saved. Varley claimed the child had drowned in the bath, but prosecutors proved that his airway had been deliberately obstructed, per the BBC.
>
> […]The prosecution's case against Varley was built on evidence, including indecent images found on his phone, taken by the perpetrators of the victim, as well as the post-mortem examination, which ruled out the defendants' claims of drowning as the cause of death. The post-mortem found 40 external and internal injuries to Davey's body, some being consistent with "forcible penetration" and sexual abuse.

I thought this was interesting, because of what we know about UK law enforcement turning a blind eye to child sex-trafficking gangs run by men of Middle Eastern origin, because they did not want to be accused of racism by investigating the allegations. Could the the medical workers and social workers and law enforcement have been afraid of being labeled "homophobic", like the police was afraid of being labeled "racist"?

The UK Telegraph talks about that:

> Social workers and medical staff have been accused of missing a string of opportunities to spot the abuse suffered by baby Preston Davey before he was murdered by his adoptive father.
>
> > […]Preston was taken to hospital three times before he was killed, and each time, medical staff noticed bruises on his body. On one occasion, a hospital safeguarding team referred the matter to Lancashire Constabulary, but the matter was closed when a consultant said there was nothing to worry about.
> >
> > […]Social workers visited Preston at home several times before his death, but failed to notice that he was being mistreated and harmed. A post mortem examination identified more than 40 external and internal bruises, as well as injuries consistent with sexual assault.

This is the important part:

> Debbie Davey, Preston's maternal grandmother, has questioned whether fears of being accused of homophobia clouded social workers' judgment.

Remember, the UK is a country that prides itself on being feminized. They have free healthcare and open borders immigration and two-tier policing. Their state religion is "don't judge". Well, surprise, surprise. When good people

“don’t judge”, then children suffer at the hands of selfish adults. It doesn’t always look like this particular case, but there’s a lot of it going around, with practices like abortion, IVF and surrogacy, too. Everything is for the selfish adults, and no one cares about the children.

But this happens in the US as well, here’s a recent example:

Here is the latest news story from Christian Post:

> A same-sex Georgia couple who pleaded guilty to aggravated sodomy against their two adopted sons were recently sentenced to 100 years in prison without the possibility of parole.
>
> Zachary and William Zulock, a wealthy couple who adopted two boys with the help of a now-defunct Christian adoption agency, faced sentences for multiple other charges, including child molestation, sexual exploitation of children and incest, according to a press release from the Alcovy Judicial Circuit District Attorney Randy McGinley.
>
> “These two defendants truly created a house of horrors and put their extremely dark desires above everything and everyone else,” McGinley said.
>
> […]Judge Jeffrey L. Foster sentenced both men on Dec. 19 to a century in prison, followed by life on probation.

Again, there are a lot of people on the secular and religious left who would say that supporting these anti-child behaviors is not morally wrong. It’s just where we are as a society – people want to feel good and look good to others. No one is willing or able to take the reputational hit for standing up for kids. You could lose your job. You could get arrested by the police. You could be persecuted by LGBT or feminist activists. They want to silence and/or punish anyone who would dare to put children’s needs over adult needs.

These stories remind me of the Two Gay Dads story that I wrote about previously, where a white female progressive journalist did a fawning story about two gay dads and their new boy adopted from Russia. She titled her article, “Two Dads are Better than One”.  She was so proud of herself for being all affirming, tolerant and compassionate. Same-sex marriage is something to be proud of, she said, because children do better with two gay dads.

But then, the Sydney Morning Herald reported how this example of gay adoption went awry.

Excerpt:

> Standing before an American court convicted of the most heinous of child sex crimes, the double lives of Australian citizen Mark J. Newt0n and his long-term boyfriend Peter Tru0ng were laid bare.
>
> […]Moments later Newt0n was sentenced to 40 years in prison for sexually abusing the boy he and Truong, 36 from Queensland, had “adopted” after paying a Russian woman $8000 to be their surrogate in 2005.
>
> Police believe the pair had adopted the boy “for the sole purpose of exploitation”. The abuse began just days after his birth and over six years the couple travelled the world, offering him up for sex with at least eight men, recording the abuse and uploading the footage to an international syndicate known as the Boy Lovers Network.

So, back to the story from the UK that just happened. I see new stories about it from far-left sources like the BBC, the UK Guardian, Sky News, etc. I can guarantee you that the journalists writing about this think that they are in the right for supporting practices like abortion, surrogacy, IVF, gay adoption, etc. But when the results come out, they act as if these consequences are somehow completely disconnected from their advocacy. It’s insane.

# What you should know about Rupert Lowe's UK "Rape Gang Inquiry"

**Wintery Knight** · 17 June 2026 · Archived copy · Original

A new report on the UK child sex-trafficking scandal was privately funded because the UK government refused to investigate the child sex-trafficking gangs themselves. Why? Because they didn't want to appear "racist" to the unskilled immigrant population they've been taking in. In this post, we will get a link to the report, some of the details of specific cases, and then I will have some recommendations to Americans on how to avoid such problems.

I've been blogging about these stories for years on my blog. I just think that it is so important that we not take away the innocence of little girls just because of this mad desire for skin-color diversity and multiculturalism (diluting the majority of Christian beliefs in Western nations).

Anyway, here is a link to the report.

But since I know you're all busy, I'm just going to print the text of a tweet from a British pastor named Jamie Bambrick. I found this tweet through the excellent Nancy Pearcey, and you should follow her on Twitter.

Jamie says:

*Here are eight essential quotes from @RupertLowe10 's Rape Gang Inquiry.*

*1) This was a nationwide, not merely local, phenomenon.*

*"…that this was never a series of isolated local failures. It was a coordinated, nationwide pattern of organised child sexual exploitation that repeated in town after town, city after city, from the far north to the south coast."*

*2) The scale was enormous, more than anyone dared to think.*

*"The scale of the crimes committed is staggering. It has been previously established that, at the very least, 250,000 young white girls have been subjected to repeated rape, gang rape, trafficking, torture, pregnancy, forced Islamic conversion, and lifelong trauma. The true number is probably higher."*

*3) As has been reported, the vast majority of perpetrators were Pakistani Muslims.*

*" In court records and official inquiries, around 87% of those convicted in these group-based child sexual exploitation ('CSE') cases bore distinctively Muslim names… Dr. Taj Hargey, an imam with the Oxford Islamic Congregation, believes the true proportion of gang members who are Muslims to be around 95%."*

*4) Vulnerable girls were targeted using a consistent method.*

*"Organised networks of perpetrators built coordinated operations that transported victims between locations, supplied them with drugs and alcohol, recorded abuse for distribution and blackmail, and passed girls between multiple adult men."*

*5) The police, and other institutions, knew what was happening and ignored it.*

*"Police forces ignored repeated reports, criminalised victims instead of perpetrators, destroyed evidence, and allowed known rapists to walk free on bail. Social care services undermined protective parents, placed children in trafficking hubs inside children's homes, closed cases despite clear indicators of exploitation, and retaliated against whistleblowers. The NHS recorded genital injuries, multiple sexually transmitted infections in children as young as 13, pregnancies caused by rape, and suicide attempts, yet discharged victims back to their abusers without safeguarding referrals or trauma care. Schools observed older men collecting girls at the gates, heard disclosures of rape on school premises, and responded by excluding victims rather than protecting them."*

*6) Those in these institutions did so because they were afraid of being called 'racist'.*

*"Political correctness, fear of accusations of racism, and fear of losing electoral support from certain demographics have taken precedence over the protection of British children."*

*7) Parts of the foster and orphan care system became exploitation hotspots.*

*"Children's homes became trafficking hubs where staff failed to stop older men collecting girls at night. Local authorities often returned children to unsafe homes and placements despite repeated disclosures of grooming… Social care across England systematically enabled organised grooming and the rape of children. Children's services, local authorities, foster carers, children's homes, and independent units repeatedly returned vulnerable children to known risk."*

*8) Multiple offenders explicitly linked their treatment of these girls with their own religious and cultural beliefs, and the girls' white ethnicity.*

*"They were taken to houses, flats, restaurants, and hotels where they were raped repeatedly by groups of men, tortured, filmed for blackmail, and told they were "white trash" or "kuffar" who merited punishment."*

*There must be comeuppance for this, and it must involve the death penalty.*

I found many of the specific details from specific cases on this Twitter feed.

Here are a couple of examples and notice how useless and corrupt the UK police are:

> Only the police took any formal action, issuing "harbouring notices" to the men – official warnings stating they had no permission to associate with, contact, or house a vulnerable child. However, no further action followed. When Fiona's mother called the police to report her daughter missing and mentioned a history of abuse by Asian men, the call handler told her: "You can't describe them as Asian men because that's racist. You should just be glad your child is being taught a different culture." On one occasion, a police officer returned Fiona to the house where the abuse was occurring and told the men to "have fun with her." On another occasion, police instructed the abusers that if they could persuade Fiona to sign herself out of care, the police would stop bothering them.

> At age 14, she was gang-raped and beaten by three men who had locked her in a house. She was left covered in cuts and bruises, which alerted a friend. The friend told her own mother, who then contacted Michelle's mother. The police were called, but they claimed there was little they could do without more evidence. One of the gang members later forced Michelle to go to the police station with him to retract her statement. The police accepted him as her "appropriate adult" – a role normally reserved for a parent, close family member, social worker, or trained professional. The investigation was subsequently dropped.

> Scarlett was unlawfully excluded from school due to grooming-related behaviour and assigned a new school where the grooming gang operated. A multi-agency risk management meeting was eventually convened with children's services and the police's Missing from Home team. While the meeting was ongoing one of the police officers in attendance told Marlon to stop reporting his daughter missing. Marlon challenged this which resulted in the police officer shouting at him in front of all in attendance. The officer has since been dismissed. The social worker and manager present did not intervene but privately acknowledged he was right to continue to report his daughter missing. They refused to launch a formal complaint against the officer.

One of Michelle's friends, who lived in a care home, would be collected directly outside by the same gang. Care staff would call the police, but officers reportedly referred to the girls as "prostitutes" despite them being children. Both social services and the police, Michelle says, failed to understand the situation and believed the girls were engaging in the activity by choice. As a result, little was done to intervene. When she was abducted and went missing, no one came looking for her. A social worker once told her that, at age 14, she would be allowed to live with her 30-year-old "boyfriend" as long as they did not share a room.

Chloe personally knows at least twenty other girls from her area who were predated on by the Muslim gangs who abused her. The pattern was always the same: grooming, drugging, trafficking, abuse, and rape. Furthermore, Chloe describes being taken into mosques where imams would describe non-Muslims as "infidels" and preach that white women who dressed "inappropriately" were "free game."

Chloe believes that the local police, social services, NHS, and government were all fully aware of what was happening, including the racialised nature of the crimes, but that they did not intervene for two reasons: because they "could not be bothered with the paperwork," and because "they did not want to be seen as racist." Chloe blames these bodies, and their "major push for diversity," for her abuse.

And the victims were even arrested instead of the criminals:

> Following this, she wrote a post on Facebook alleging that she had been a victim of grooming gangs. The post went viral. Within half an hour, the police arrested her and she was sent to prison.
>
> Following her daughter's conviction, the family experienced sustained harassment and intimidation, particularly from one Muslim man. Sally reports repeated failures by the police to protect them. She believes her daughter was a vulnerable young woman who lied at times but was nevertheless groomed.

Here is one explanation of why the police looked the other way – "and even police officers":

> At age eleven, Sebastian was introduced by these abusive family members to a local café owner. The owner gave Sebastian free food, lifts in his car, and free cinema tickets to build trust and a sense of obligation. From there, they began prostituting Sebastian out to a number of people. These included seemingly respectable professionals such as estate agents, solicitors, care support workers for children, and even police officers. Even at boarding school, Sebastian was raped, assaulted, and groomed by staff and connected adults, with Sebastian's injuries often ignored by medical professionals. All of Sebastian's abusers were White British.

And it's important to remember how the leaders of the UK police repond to anyone who draws any attention to their failures, reported by Fox News:

> London's Metropolitan Police chief warned that officials will not only be cracking down on British citizens for commentary on the riots in the U.K., but on American citizens as well.
>
> "We will throw the full force of the law at people. And whether you're in this country committing crimes on the streets or committing crimes from further afield online, we will come after you," Metropolitan Police Commissioner Sir Mark Rowley told Sky News.

They're going to arrest Americans for posting about their failures online! We are the real villains who need to be investigated, arrested and imprisoned.

Remember, all these police and social workers are taxpayer-funded. So, they are there to serve taxpayers. But as you can see, the used their jobs as a way of feeling good about themselves for not being "racist". They saw their true customer as themselves "here is my chance to show the world what a good person I am, because I don't judge anyone". If this were the private sector, they would be fired for failing to serve customers. But it's the unionized public sector, so they don't care about customers. Customers are just prey.

This is a big reason why it's important for Americans to oppose unions of all kinds – but especially public sector unions. And definitely monopolies. Your liberty, safety and prosperity depend on the responsiveness and accountability of the people who sell you products and provide you with services. At least in America, conservative states and cities have great law enforcement. Because they are accountable to taxpayers.

And I also thought this was interesting:

Has any major American press outlet (CNN, CBS, The New York Times, The Washington Post, etc.) covered thr UK rape gang report put out by MP Rupert Lowe?

+2

No major American press outlet (such as CNN, The New York Times, or The Washington Post) has covered the recent independent report on UK grooming gangs released by MP Rupert Lowe.

Coverage of the report and the preceding parliamentary testimonies has primarily remained localized to British outlets, international financial publications, and alternative digital news platforms. BBC +4

Again, why would you expect the wealthy Epstein class of Democrat-donors to report on a scandal like this? They believe in diluting the majority who believe in Christian truths and Christian moral values with unskilled Muslim immigrants. It makes them feel good. And they just ignore the results. We vote very carefully to make sure that we have elected officials and police who are able to rationally ground moral values and duties.

# Discovery Institute has a sale on their high school biology and chemistry courses!

**Wintery Knight** · 24 June 2026 · Archived copy · Original

One of the challenges of the modern world is this ideology of naturalism (aka materialism). If kids accept this ideology – which is just a philosophical assumption, and not a conclusion of scientific inquiry – they will lose their rational basis for morality, their grounding for free will and personal responsibility, their grounding for ultimate meaning and purpose, and more. So, it makes sense to train the kids to reject it. With evidence.

One way to do that is to make use of these fun courses from Discovery Institute.

Here is the description I got from Dr. John West about the courses:

> For the 2026-27 school year, Discovery Institute Academy will again be offering both **High School Biology** and **High School Chemistry**. Starting in the fall, these high-quality online courses are designed especially for homeschool students. The courses will cover the fundamentals of biology and chemistry and will also introduce students to the powerful evidence of intelligent design in nature. The courses will include video lectures, readings, lab activities, assignments, and more. They are designed to make it easy to teach science to your kids!
>
> We know that different homeschool families have different needs, so we have three different options for each course:
>
> - **Tier 1** is the full deal. It includes the online course and activities + live instructional sessions each week with a science teacher who guides the course, grades assignments, answers questions, and provides feedback to students.
> - **Tier 2** includes the online course and activities + one weekly drop-in session where students can ask a science teacher questions.
> - **Tier 3** is self-paced and only includes the online course — no teacher.
>
> **Even if you don't have kids who can participate, can you help us get the word out to those who do?** You may have people in your sphere of influence who are looking for courses like these (grandchildren, church families, neighbors, etc.).
>
> These courses are a wonderful way to begin to raise up the next generation of scientists — scientists who understand that we and our universe are intelligently designed.
>
> *And, for a limited time, parents who use the codes **bio50** and **chem50** to register will get $50 off tuition!*
>
> **Find out more information about the courses at the Discovery Institute Academy website.**

This is definitely something to look into if you have high school age children and you intend for them to go on to university, especially if they are going to study a STEM field.

# For Independence Day, let's learn about George Washington and the Battle of Trenton

**Wintery Knight** · 4 July 2026 · Archived copy · Original

My favorite book about the American Revolutionary war by far is called "1776". It's written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington's line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington's retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington's army at White Plains, New York, British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan.  Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was

> surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

**Washington crosses the Delaware**

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their

> crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

**The Battle of Trenton**

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall

> decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.
>
> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

# Marco Rubio's case against communism and left-wing political violence

**Wintery Knight** · 17 July 2026 · Archived copy · Original

I know that everyone will be talking about Trump's prime-time speech today (Friday), but I always write blog posts the night before! So in this post, I just wanted to talk about Marco Rubio's amazing speech opposing communism, left-wing political violence, and far-left extremist terrorism. And I've got the best clip from the speech, so that you can get an idea of what was said without having to watch the whole thing.

This article from PJ Media talks about the left-wing political violence:

> Rubio began his speech by saying that the number one responsibility of any government *should* be to protect the people it represents.
>
> He went on to point out that for a long time, counterterrorism in the United States focused primarily on Islamist extremism, which was necessary, but that there had always been a blind spot when it came to extremist violence from the political left.
>
> […]Rubio went on to say that many people here in the United States dismiss acts of violence and terrorism if it benefits the left-wing cause and that it's time to put an end to that. He pointed to the George Floyd riots from the summer of 2020 and how media outlets called them "mostly peaceful" despite all the obvious violence and crime we saw with our own eyes, as well as other more recent examples, like Charlie Kirk's murder, assassination attempts on Donald Trump, violence against ICE officers, and a transgender individual shooting up an elementary school. He listed numerous examples from other countries as well.

And the writer says that this is the best part of the speech:

> This is a distinctive and unique evil. It has always been driven by a hatred, above all else, a hatred for civilization itself. It is a revolt of the worst against the best, a revolt of the weak and cowardly against the strong and the good. It's perpetrated by those who cannot build, who cannot create, who cannot achieve great things, and take their revenge upon the world for their own inadequacies, by seeking to destroy those who can.
>
> This is what radical leftism is. It may wear various different slogans and ideologies across place and time. They call themselves anti-capitalist or anti-imperialist, communist, anarchist, Marxist, but the fundamental character is always the same. It is a poisonous resentment cloaked in the language of equality, justice, and liberation; an overwhelming need to tear down what greater men have built; to wreck what is beautiful and what is right on behalf of people who are only filled with ugliness and have nothing else to offer.

And the clip! I can't believe I'm sharing something from the State Department Twitter account:

https://x.com/StateDept/status/2077753532409647185

And there was more in that clip – about communism. I found an article from Town Hall that had the words from that part of the speech:

> In a speech Thursday announcing a global crackdown on left-wing terrorism, Secretary of State Marco Rubio made exactly that argument: communism does not even work in theory. Socialism and communism, by their very nature, require the centralization of power, the destruction of the individual, and the abolition of private property, the very institution that has been instrumental to the development of the West and the greatest nations on Earth. Even as an abstraction, communism is the antithesis of nearly everything Americans have historically believed in.
>
> "One of the criticisms you sometimes hear of communism, for example, is that it sounds good in theory, but it

> never works in practice. That's actually not true," the secretary of state said. "Communism does not sound good in theory. The world it envisions for all of us is small, flat, grey, leveled of all exception, drained of all that is good and noble in the human soul. The world it envisions is a world without courage, a world without creativity or ambition, a world without heroes or glory or great causes to strive towards, a world without miracles, without myths, without men who rise above the rest to do incredible and extraordinary things. And the world communism envisions is a world without God."

Here is the whole thing:

If you want a good article about Trump's Thursday night speech, the best I have on a Thursday night is this article from The Federalist by Brianna Lyman. Keep in mind that she is only talking about ONE of the 10 or so points that Trump made about election integrity in his Thursday night speech.

There was also this one from PJ Media that talked about the actual declassification of election meddling intelligence.

And another from PJ Media about China hacking the files on 220 MILLION American voters.

Here's the full speech:

For more, you can probably find something about the de-classified reports Friday morning on Breitbart or The Federalist or PJ Media. As you can tell, I've completely given up on reading the corporate news media to find the latest news.

It's nice to see Trump saying that he's not signing the housing bill that Congress wants until he gets his Voter ID act passed. He's playing hard ball, but there are good reasons to. And good for him for going straight to the American people – bypassing the corporate news media.

(Image Source: Marco Rubio's Twitter account!)

# Building Christian Kids Who Can Stand Against Secular Culture: My Practical Plan

**Wintery Knight** · 21 July 2026 · Archived copy · Original

Recently, I have been meddling in the parenting plan of a friend who has a bunch of children, ages 5-12. She has been watching a lot of scholars talk about scientific evidence for a Creator and Designer, like James Tour and Stephen C. Meyer, and getting more and more concerned about whether her own children are going to keep their own faith as they go through the education system into the workplace. And make a difference for the Boss.

I reflected on how best to influence children and concluded that we need a two-pronged attack: (1) excellent books that shape their thinking and character, and (2) structured real-world experiences that build practical knowledge. Since I'm in a different state, my role is mainly shipping good books and celebrating their progress with them. Even asking the mom to ask them about their progress helps. The mom is taking care of giving them useful things to do, like taking them to see "The Story of Everything" and "Young Washington", teaching them to cook and build rockets, etc.

My plan is to build up their strength in testable areas, which will insulate them from the emotion-based arguments of the secular left in settings where peer-approval can easily overwhelm truth, unless truth is rooted in evidence.

I chose these areas:

1. economic policy
2. evidential apologetics
3. military history
4. classics*

* not the popular ones, but the ones with heroic characters and moral lessons.

**Economic policy**

For economics, I sent along a bunch of Tuttle Twins books. I don't like Connor Boyack's religion or politics, but he does a good job of teaching economics to children. And this is only a temporary measure until we can work our way up to Thomas Sowell, which will make them bulletproof against wokeness.

This is what I got them:

- Tuttle Rebuttals: 40 Responses to Popular Political and Economic Myths
- The Tuttle Twins Guide to Modern Villains
- The Tuttle Twins Guide to Inspiring Entrepreneurs
- Tuttle Twins Choose Your Consequence Combo
- Tuttle Twins Combo Pack (plus free workbooks!)

In economics, we look at other times and other places in order to learn what policies have worked and what policies have failed. So, all the pressure that kids will get from the culture to accept wokeness, socialism, social justice, etc. will roll right off them like water off a duck, because of the evidence.

**Evidential apologetics**

And then I got them books on evidential apologetics for kids:

- God's Crime Scene for Kids
- Forensic Faith for Kids
- Cold-Case Christianity for Kids

- Case for Christ for Kids
- Case for a Creator for Kids
- Case for Faith for Kids
- Your Amazing Body
- The Farm at the Center of the Universe
- The God Proofs: How Science Points to YOUR Creator
- Discovering Intelligent Design: A Journey into the Scientific Evidence
- Explore Evolution: The Arguments for and Against Neo-Darwinism

And the mom has the oldest one registered in the Discovery Institute biology course that I blogged about before.

The point of these books is to avoid the common and predictable fate that awaits most "church-raised" Christians when they hit university. Most Christian parents put a lot of faith in the church community and shallow social connections, but these things do not preserve faith in hostile environments like the modern university or the corporate workplace. A much better bet is to rely on hard evidence. Evidence that they've seen tested in formal. Academic. Debates.

**Military history**

And I got them a bunch of basic books on military history:

- Great Battles for Boys: WW2 Pacific
- Great Battles for Boys the Korean War
- Great Battles for Boys: WW2 Europe
- Great Battles for Boys The American Revolution
- Great Battles for Boys The Vietnam War

You can see that military history dominates my "What I am Reading" page. I wrote an entire separate post about why Christians should read military history.

Most of the children are girls, but military history does the job of increasing humility, patience, endurance, and gratitude for boys and girls. These are all character traits children need to counteract the victim mindset, the entitlement, and the lack of accountability that dominate social institutions. Espcially the schools that are run by woke teachers and administrators and the big corporations that are run by DEI hires and woke HR departments.

**Classical literature**

Finally, the classics. I was able to resist the bad parenting and secular leftism I was born into by immersing myself in classical literature and classical movies as a child. The classics are basically "design patterns" (software architecture patterns) for making good decisions within the moral framework of the universe.

So, some of my favorite books and movies are laid out in my "About WK" page, but these are the books I chose for the kids so far:

- **The Hobbit** ("Alone and unaided"): Readers learn how heroism can be found in people who don't look like heroes, and how to seize the initiative "alone and unaided" in order to solve problems without outside help.
- **The Scarlet Pimpernel** ("that part he played—the mask he wore… in order to throw dust in everybody's eyes"): Readers see the power of humility and strategy when defying tyrannical regimes. As I often say in my gameplay videos: "is this shot worth revealing my position to the enemy?"
- **Cyrano de Bergerac** ("I stand… not high it may be… but, I stand alone!"): Readers discover the nobility of personal integrity, avoiding peer pressure, and valuing excellence in everything over worldly approval or success.

- **A Man for All Seasons** ("When a man takes an oath, Meg, he's holding his own self in his own hands. Like water. And if he opens his fingers then — he needn't hope to find himself again."): Readers are reminded of the importance of personal integrity and keeping one's oath to God and conscience, even when it costs everything.
- **The Screwtape Letters** ("Our cause is never more in danger than when a human, no longer desiring, but still intending, to do our Enemy's will, looks round upon a universe from which every trace of Him seems to have vanished, and asks why he has been forsaken, and still obeys."): Readers gain insight into the spiritual significance of everyday experiences and the game of cosmic chess that is being played out.

She already had the Narnia series by C. S. Lewis and The Book of Virtues by William Bennett in the house.

One reviewer (Tom) also suggested that I add the Anne of Green Gables series, but I have not read those.

For the early classics, I'm not choosing "popular" classics or anything tainted by modern ideologies like secularism, leftism, feminism, etc. I'm aiming for books with heroic characters who can serve as role models.

See this recent First Things article that the mother sent me:

> The stories of heroes and their spectacular deeds are intended as a lesson, an exhortation, to the present. This is what the Greek word mythos ("discourse") generally means in Homer: It is not a narrative in the abstract, but virtually always implies some sort of persuasive agenda, usually an exhortation… Indeed, the heroic story is a stand-in for the father figure.
>
> This is what the classical is about, for Homer. It is not concerned with books as such, nor ideas in the abstract, critical thinking, or intellectual history. Great men are what is essential, not great books. The classical exists, in short, to produce people resembling the best of its characters.

Later on, I will send classics to warn them about flaws in human nature; Anna Karenina, Madame Bovary, Mansfield Park, Pride and Prejudice, Sense and Sensibility, etc. Basically, I am trying to take away the modern world's praising of narcissism, entitlement and lack of accountability with the left hand, while pushing forward heroic and self-sacrificial concern for others with the right hand. I'll add in Shakespearean plays like Macbeth, King Lear, Othello, Antony and Cleopatra, to get that theme of tragedy coming from the failure to distinguish appearance from reality. And Hamlet, of course, which is my favorite Shakespearean play. (By the way, Hamlet has *nothing to do with "indecisiveness"* – that's just postmodern relativists trying to avoid the real theme, which is how adult selfishness destroys the lives of children).

One reviewer (Drew) asked me to add a quick summary of what lessons are to be learned from these classics, so here is that:

- **Anna Karenina / Madame Bovary:** Readers witness the personal and familial destruction that follows when passion and self-fulfillment are elevated above relationship obligations and self-sacrificial commitment.
- **Mansfield Park:** Readers learn the quiet strength of moral conviction and humility triumphing over charm, social pressure, and compromised principles.
- **Pride and Prejudice / Sense and Sensibility:** Readers see the wisdom of valuing character over first impressions or fortune in mates, and the long-term blessings of self-control and prudent judgment.
- **Macbeth:** Readers confront the corrosive cost of unchecked ambition, the self-deception of "the ends justify the means," and the tragedy of abandoning moral order.
- **King Lear:** Readers learn how foolishness, vanity, and poor judgment in leaders and parents bring chaos and suffering, and the importance of choosing allies who have humility, loyalty and truth-telling ability.
- **Othello:** Readers are warned against the destructive power of jealousy, manipulation, and trusting appearances over truth and evidence.
- **Antony and Cleopatra:** Readers see the ruin that comes from prioritizing sensual passion and worldly glory over duty and self-mastery.

- **Hamlet:** Readers learn how adult selfishness and moral failure create chaos for the next generation, yet personal integrity and trust in divine providence offer a path out of despair.

Movies have a place, but books are *required*. I have a list of some of my favorite classical movies in the About WK page.

The goal of sending the children classics is to give them *the option of not acting according to the conventions of their culture*.

**Conclusion**

So that is my plan. That is what worked for me in my own life.

One last point. I have worked with many natural-born Americans in the IT sector who were either homeschooled or attended Christian schools for many years and then left the faith (and their conservative views) in college. They had great church communities. They had big social networks. And this approach of valuing community and social networks did not prevent them from losing their faith in college or in the workplace. They just went from doing what worked at home and at church to doing what worked at the university and at the corporate workplace. Their habit of forming many social connections actually put a lot of pressure on them to change their Christian and conservative convictions.

Related to that last point, I wanted to mention that Cyrano had a particularly big effect on me. Cyrano explicitly says that he prefers not to be friends with many different people. He only has one close friend – Le Bret. He says that *he prefers to have enemies.* In addition, many modern people are influenced by popular books, movies and TV shows that teach false ideas. Cyrano strives to study the best topics like poetry, literature and fencing. He values truth.

Here is an example of something memorable from Cyrano that helped me to not want to make too many social connections (church, social groups) that would influence me to compromise my core convictions:

And in French:

It's even better in the original French.

# What we learned from Rand Paul's release of the #FauciDiary

**Wintery Knight** · 28 July 2026 · Archived copy · Original

Well, this is the big story of the week, so I have to write something about it. Probably, no website has paid a higher price for reporting on inconvenient facts on topics like election integrity and pandemic deceptions than the Federalist. The Federalist is my first read every day. And they have a ton of articles about the revelations on pandemic handling found in Anthony Fauci's diary. Thanks to Republican senator Rand Paul, we can all see the truth.

So, this article from The Federalist is the best one stop shopping for understanding the diary.

Here is the list:

1. Covid Fatality Rates
2. Lab Leak Theory
3. School Closures
4. Covid Vaccines
5. Gain of Function Research

I'm going to pick the first one to see details. This is what the Fauci Diary says:

> In an entry dated Feb. 8, 2020, Fauci described a purported phone call he had with Tom Frieden, who served as President Obama's Centers for Disease Control and Prevention (CDC) director. According to Fauci, the two discussed "various aspects of the [Covid] outbreak."
>
> The then-National Institute of Allergy and Infectious Diseases (NIAID) director wrote that he and Frieden "are on the same page" in their assessment that the Covid-19 virus "is acting like a bad influenza in its transmissibility and that the denominator" of total diagnosed cases "is much greater than" currently reported figures. Fauci further noted that this would make the "case fatality rate (CFR)" — the proportion of people who die from a disease among the total number infected over a certain period of time — "more like 0.2-0.3 % rather than 2.0%."
>
> Put another way, the risk of dying from Covid among the general population is not as great as initially feared.

And this is what Fauci said in public – *including Congressional testimony under oath*:

> Under questioning from Rep. Michael Cloud, R-Texas, the then-NIAID director said that "the seasonal flu that we deal with every year has a mortality of 0.1 percent," and that "[t]he stated mortality over all of this when you look at all the data including China is about three percent. It first started off as two and now three."
>
> "I think if you count all the cases of minimally symptomatic or asymptomatic infection, that probably brings the mortality rate down to somewhere around one percent, which means it is 10 times more lethal than the seasonal flu. I think that is something that people can get their arms around and understand," Fauci said.

I want to contrast the diary revelation with what was reported by FactCheck.org in 2022:

> Conservative commentator Liz Wheeler made a series of false claims about Fauci in a January 2021 video titled "Fauci lied to you AGAIN."
>
> She claimed that he "lied" about the rate or ratio of people with confirmed cases of COVID-19 who had died, which we did not find to be the case.

Note that the author of that "fact check" has a worthless degree in journalism. Totally unqualified to report on

medical or even scientific issues. But still relied upon by big tech corporations as a measuring stick for deciding who should be banned for "misinformation" in search engine results and social media. These big tech corporations routinely alter their products in order to benefit the Democrat party and hurt the Republican party.

Let's just look at #2 on the list – the lab leak theory.

Here's what's in the Fauci Diary:

> Fauci was notorious for pouring cold water on the theory that the Covid-19 outbreak came as the result of a leak from the Wuhan Institute of Virology in China. But the newly released diary entries show Fauci himself acknowledged early on that the theory of the virus resulting from a Wuhan wet market — which he later appeared to parrot as the likely explanation, along with many others — lacked substantiation.
>
> In a Jan. 26, 2020, entry, Fauci noted that recent "epi data and genomic data" indicated that "the first infection was in early December and was not connected to the market." He went on to recall how the Chinese government had claimed "that there is no human to human transmission and all the original 27 cases were from the market."
>
> "Now we know the market was not the source, it was the amplifier. Having said that, somewhere the virus jumped from animals to humans," Fauci wrote (emphasis added).

And here is what FactCheck.org reported around the time Fauci wrote that:

> The latest conspiracy theories about the new coronavirus, which first led to an outbreak in Wuhan, China in late 2019, allege that the virus was man-made, rather than the natural result of people coming into contact with wild animals.

OK I have to stop there. I just want to say that I never got the peer-pressure-poke because I don't take experimental products from manufacturers who have a "no liability" clause. That's just common sense. But anyway, here are more articles from The Federalist. They are freaking pissed off about this. And so am I. The actions of the alarmists are undermining real science in the same way that false accusations of rape undermine the cause of real victims of rape. When these worthless degree clowns from the "fact checkers", the corporate news media and the big tech corporations lie to the public, (for attention and coercive control), then they cause the public to distrust real science. The secular left is therefore anti-science. They undermine science for myths.

# Democrat billionaire backing Charlie Hatcher against Andy Ogles in TN GOP primary

**Wintery Knight** · 3 August 2026 · Archived copy · Original

One of the few Congressmen with a perfect 100% score from Heritage Action is facing a primary challenger who is receiving a lot of funding from a green energy PAC bankrolled by a left-wing billionaire. I thought this was an important story to cover, because many Republican and libertarian voters love to complain about how Republicans don't vote conservative enough. Well, it happens because Democrats unseat the good ones during primaries.

Here's the story from Fox News:

> A clean energy super PAC bankrolled by a left-wing billionaire is pouring millions into an effort to unseat Rep. Andy Ogles, R-Tenn., as he wages a bid for re-election in Tennessee's 5th Congressional District.
>
> The Invest in Tomorrow Coalition super PAC had spent roughly $1.3 million on opposing Ogles and supporting his Republican challenger, Charlie Hatcher, Tennessee's former commissioner of agriculture, and recently bought another $700,000 worth of ads.
>
> The group has raised $6.7 million this year, making Ogles a sizable portion of their spending this cycle. A Fox News Digital review of FEC filings discovered that the super PAC is bankrolled by Chris Larsen, the California-based billionaire chairman of Ripple, which is described on its website as the "leading financial technology company that offers crypto solutions for businesses."

Charlie Hatcher is marketing himself as a "conservative Republican", but does this Chris Larsen person who is helping him sound like a conservative Republican to you? For one thing, he supports Kamala Harris:

> Larsen has donated $6 million to the super PAC since Feb. 2026. His latest $5 million donation to Invest in Tomorrow Coalition PAC is his second-largest single donation after donating $5,444,975 to Future Forward PAC in 2024 to support Kamala Harris's failed presidential campaign.

And Nancy Pelosi:

> Larsen has also donated over $1 million to the Jane Fonda Climate PAC, over $1 million between the Democratic Senatorial Campaign Committee (DSCC) and Democratic Congressional Campaign Committee (DCCC) and over $300,000 supporting Rep. Nancy Pelosi, D-Calif., among other six-figure donations to top Democratic campaigns and PACs.

So, you can make inferences from that about the politics of Ogles' challenger, Charlie Hatcher. By the way, by "clean energy" the PAC does NOT mean fracking and nuclear power. They are backing solar power, which is dangerous to birds and bats, including protected species of birds.

We don't have a voting record for Charlie Hatcher. But we do have one for Andy Ogles. And it's a perfect one! 100% conservative. I hope that Tennessee voters in the 5th district are smart enough to vote for the real conservative in this primary election.

There is no point complaining about how Republicans are not voting conservative, if you don't take the time to choose the conservative candidate during the Republican primary elections.

# The most conservative governor of Tennessee: Marsha Blackburn, John Rose or Monty Fritts?

**Wintery Knight** · 4 August 2026 · Archived copy · Original

Everyone is doing a great job of sharing clips of Francesca Hong, the current front-runner in the Democrat primary for Wisconsin governor. But what about the Tennessee governor? Some people are saying that Marsha Blackburn isn't as conservative as John Rose or Monty Fritts. Are they right? Let's take a look at the candidates and see who would be the most conservative governor of the great state of Tennessee.

Well, for Marsha Blackburn, there is a long track record, trending conservative. I get my "conservative score" from the Heritage Foundation, which is the largest and most respected conservative think tank. You might remember that we had a couple of their scholars – Jay Richards and Lora Ries – on our podcast.

And here is what they have for Marsha Blackburn:

- Session Score: 98%
- Lifetime Score: 88%

**State Senator**

When I think of Marsha Blackburn, I think of her leading the fight against an attempt to legislate a state income tax in Tennessee (they don't have one).

**U.S. House of Representatives**

In the U.S. House (2003–2019), she ranked among the most conservative members, backed the Tea Party movement, supported tax cuts, a balanced-budget constitutional amendment, and efforts to defund Planned Parenthood. I would say that her biggest concerns are tax cuts and pro-life. She also voted for the 2017 Tax Cuts and Jobs Act and has pushed to make those cuts permanent while introducing bills for across-the-board non-defense spending reductions. I like non-defense spending reductions, because I am a peace through strength guy. For example, I love that we are replacing our 40-year-old Ohio class ballistic missile submarines and our 40-year-old Los Angeles class attack submarines with newer models. I use these things in wargames, and the old ones we are not great against China and Russia.

**U.S. Senate**

When she got elected senator (2019-present), she helped repeal the military's COVID-19 vaccine mandate. Also good on border security and immigration enforcement. She supported requiring ICE to arrest and detain illegal immigrants who commit crimes. She has championed DNA/fingerprinting requirements at the border to combat child exploitation and trafficking. She voted to strengthen state and local law enforcement against criminal illegal aliens. And she has opposed CRT in schools, pushed to curb teachers' unions' political influence, and supported school choice. (More on the education issue in a minute – this is the big difference between the candidates)

**John Rose and Monty Fritts**

So, what about her rivals – John Rose and Monty Fritts. Well, I scanned the Tennessee Conservative and the Tennessee Star, and found some interesting new stuff has come out about John Rose this week.

Tennessee Star:

> Campaign finance records reviewed by ***The Tennessee Star*** reveal U.S. Representative John Rose (R-TN-06) donated to multiple Tennessee Democrats who were in favor of establishing a state income tax during the pivotal political fight between 1998 and 2002 that culminated in Tennessee passing a constitutional amendment banning the income tax in 2014.

> Rose donated at least $19,000 to Democrats between 1998 and 2010, with several of those Democrats involved in the unsuccessful 2002 effort to pass a law to establish a state income tax on ordinary earned income in Tennessee. Never in the history of the state has it imposed a tax on ordinary earned income, an aspect of the state's governance that many economists attribute as a key factor in its ongoing economic growth.

Blackburn led the successful fight to kill the income tax. Rose was writing checks to the Democrats who were trying to impose it.

But it's worse than that – he votes for Democrats in Democrat primaries:

> Election records reviewed by The Star also reveal Rose has participated in three Democratic primary elections since 2000.
>
> Rose's first recorded vote in a Democratic election occurred on May 7, 2002, when he completed a Democratic Party ballot during the DeKalb County primary election for county offices.
>
> Records show Rose next participated in Democratic electoral politics on February 10, 2004, during the Democratic presidential preference primary as Democrats sought to unseat former President George W. Bush, who nonetheless won Tennessee and cruised to reelection with comfortable majorities.

That right there disqualifies Rose, but there's still more below on education policy.

I should note that Tennessee Star also had a recent story about Rose's strange stock trading and tax returns.

But the real differentiator between Blackburn, Rose and Fritts is education policy. Tennessee has a weird fascination with public education and teacher unions, so much so, that even Republicans side with public schools and teacher unions, protecting them against accountability to parents. I remember in 2022, Beth Harwell, a left-leaning Republican, ran against Andy Ogles who I blogged about yesterday. She was a former speaker of the House in Tennessee, and was endorsed by the Tennessee Edcation Association – a teacher's union. So there is a lot of leftism among Tenessee Republicans on this education policy issue.

**Education policy**

My source for the information below is the Tennessee Firefly, which is an independent, non-partisan source for information on education policy. I care about school choice because I don't want poor children stuck in failing schools and I don't want parents having to pay teachers who just turn around and fund far-left teacher unions with their union dues. I certainly don't want public school teachers being paid more than they already get!

Here is what they say about the candidates on athat school choice issue.

**School Choice and Education Freedom Scholarships (EFS)**

Marsha Blackburn strongly supports expanding school choice – she likens the fight for school choice to her famous fight against the state income tax. She also supports expanding charter schools.

John Rose supports school choice but he also supports putting a public school teacher in charge of education policy AND increasing spending on public schools. Like Blackburn, he supports expanding charter schools.

Monty Fritts wants to end the school choice program, which is what the Democrat candidate also wants to do.

**Conclusion**

John Rose donates to Democrats, votes in Democrat primaries, is weaker than Blackburn on expanding school choice, and supports public education and teacher unions. Monty Fritts opposes school choice.

So, I think Blackburn is the best choice for conservatives. I'm delighted to see people like Robby Starbuck, Senator Bill Haggerty, Congressman Tim Burchett, Congressman Matt Van Epps, former Congressman Mark Green, and

the NRA Political Victory Fund.

Anti-woke warrior Robby Starbuck interviewed Marsha Blackburn:

If you're in Tennessee, make sure you get out there to vote for Marsha Blackburn on Thursday, August 6th. Find your polling location here. And be proud that Tennessee is rated #1 in the country for election integrity.
